Paragraph 4 of the report refers to the principal developments which have taken place as the result of the negotiations which we have had with some of our road competitors since we obtained our extended road powers in August last. The proceedings before the Joint Committee of both Houses of Parliament on the Railway Companies Bills occupied 37 days, and although the opposition to the Bills was very considerable, I am glad to say that Parliament recognised the merit of our case, and the Bills duly received the Royal Assent, with the exception of the one which was promoted by the Metropolitan Company. We immediately took active steps to avail ourselves of the new powers, and entered into discussions with our road competitors with the view of giving effect to a policy of co-operation. The result, I am pleased to say, has been most satisfactory, and I should like to take this opportunity of thanking those gentlemen who represented the omnibus undertakings for the friendly spirit in which they carried out the negotiations. The road services hitherto operated by us in the counties of Devon and Cornwall, and most of those in the same area under the jurisdiction of the National Omnibus and Transport Company, Limited, have been transferred to a new company which has been formed under the title of the Western National Omnibus Company, Limited, with an authorised capital of £1,000,000, and each of the promoting parties is contributing assets, or money of the same total value, so as to give it an equal interest in the new company with equal representation on the Board.

RAIL AND ROAD CO-ORDINATION.

You will, I am sure, realise the great benefits which should follow from this arrangement and the potentialities which it possesses. Wasteful competition will be avoided; the whole of the transport services, both rail and road, in the area served by the new company can now be co-ordinated so as to meet the requirements of the districts in the best possible way, with due regard to economy in working, and the opportunity will also be taken of reviewing the services now provided, in case it should be found advantageous, under the joint arrangements, to improve, or extend, the facilities already available. A similar arrangement has been made with the South Wales Commercial Motors, Limited, and I am confident you will agree with me that we have adopted the most sensible and businesslike way of meeting the situation. I should like to add that we hope to deal with these road problems in other parts of our system on much the same lines.

ROYAL COMMISSION ON TRANSPORT.

Paragraph 5 of the report refers to the appointment of a Royal Commission on Transport (under the chairmanship of the Right Hon. Sir Arthur Griffith-Boscawen): "To consider the problems arising out of the growth of road traffic, and, with a view to securing the employment of the available means of transport in Great Britain to the greatest public advantage, to consider and report what measures, if any, should be adopted for their better regulation and control, and, so far as is desirable in the public interest, to promote their co-ordinated working and development."

Preliminary evidence on behalf of the Railway Companies generally has been given by Sir Josiah Stamp, the chairman of the London Midland and Scottish Railway Company, and he has directed attention to the desirability of co-ordination between rail and road transport in the public interest, and has emphasised the differences which put road transport companies in an advantageous position as compared with the railway companies.

As has so often been pointed out, the monopoly theory, upon which legislative regulation and control of the railways has gradually been built up, has now largely disappeared, and in the present state of things the diversion of traffic from rail to road is artificially and unfairly stimulated, which, we maintain, leads to excessive national transport costs.

The Chairman then criticised the unfair distribution of the Road Fund Grants and pointed out that the railway companies between them maintain, in the aggregate, over 700 miles of public road throughout Great Britain, under the obligation which devolves upon them when they alter the gradients of highways in connection with the construction of bridges to carry the roads over the railway. Like the imposition of railway passenger duty, that was a liability in respect of which they ought to be given relief now that the conditions had changed so radically.

Sir S. Ernest Palmer, Bart. (deputy chairman), seconded the resolution, which was carried unanimously.

BRITISH AND GERMAN TRUST, LIMITED.

DIVIDEND OF 7 PER CENT.
NEW CAPITAL PROPOSALS.
REVENUE PROSPECTS FOR 1929.
MR. ALFRED WAGG'S REVIEW OF THE INTERNATIONAL SITUATION.

The third annual general meeting of the British and German Trust, Limited, was held, on the 28th ultimo, at the registered offices of the company, 41 Threadneedle Street, London, E.C.

Mr. Alfred R. Wagg, the Chairman of the company, presided.

The Secretary (Mr. D. H. Scott), having read the notice convening the meeting,

The Chairman said: Gentlemen,—You have doubtless already had an opportunity of studying the report and accounts, and with your permission I will take them as read.

INVESTMENTS AND LOANS.

You will see from the asset side of the balance sheet that the total of our investments and loans on mortgage on December 31, 1928, stood at £1,849,987 10s. 6d., as compared with £1,559,190 13s. 9d, at the close of the previous year. The increase is due to the investment of the balance of the proceeds of the issue of £750,000 Five per Cent. Debenture stock made in February, 1928, after repayment of the advance of £500,000, and to the reinvestment of profits realised on the sale of sundry securities during the year. Of this total the sum representing our loans on first mortgage to German companies is £946,594 10s. 8d., as compared with £970,041 at the end of 1927. The difference is due to the repayments made in accordance with the sinking funds provided when the loans were contracted.

I may say that the German members of your board keep a most careful eye upon the progress of the companies who have borrowed from us, and that their report upon the position of these loans is entirely satisfactory. The book value of our miscellaneous investments at December 31, 1928, was £903,392 19s. 10d., as compared with £589,149 3s. 6d. at the end of 1927. These securities are well spread geographically, and their aggregate market value to-day is substantially in excess of their book value. During the year 1928 profits on sales of investments amounted to £70,929 15s. 4d., and were carried to capital reserve. The board have thought it desirable to write off the whole of the discount and expenses of the issue of the Debenture stock, amounting to £68,668, and after doing so there remains on the capital reserve account a sum of £49,236 4s.

REVENUE.

The revenue account shows a balance of £52,298 1s. 2d., but as you will have seen from the report, on the basis of the income actually received during the year, the net revenue amounted to £62,452 2s. 9d., the difference being due to the effect of the change in the method of accounting authorised at the extraordinary general meetings held on April 17, 1928, and May 3, 1928. The full benefit of the proceeds of the Debenture issue was not realised in the year under review, as the final call which provided the surplus over the temporary advances was not received until the middle of April. On the basis of the present investments the revenue for 1929 should show a satisfactory increase over that for last year without taking into account any funds received from the proposed increase of capital, with which I will deal in a few moments.

In June of last year Sir Laurence Nunns Guillemard, G.C.M.G., K.C.B., joined the board. I take this opportunity of officially welcoming him as a colleague. His mature experience gained in different fields of activity is proving of great benefit to the Trust. Under the articles of association he retires and, being eligible, offers himself for re-election.

I am very glad to see that within the past fortnight, he has been elected a director of the Prudential Assurance Company.

As you will have seen from the report, Dr. Paul Millington-Herrmann has decided to retire. Dr. Millington-Herrmann has been associated with the Trust since its formation, and I need not tell you how much we regret his resignation. We wish him every happiness and good health in his retirement. I look forward to our connection with the Deutsche Bank being maintained by Dr. Paul Bonn, another member of the board of management of that institution, who will be proposed for election to the board at the end of this meeting.

INCREASE OF CAPITAL.

You will have seen from the papers sent to you with the report that the directors proposed to increase the capital of the company by the issue of £500,000 Five-and-a-Half per cent. Cumulative Second Preference shares, carrying the right to subscribe to 250,000 Ordinary shares at 200 per cent. The appropriate resolutions to give effect to this proposal will be submitted for your consideration immediately after this meeting at an extraordinary general meeting, which in turn will be followed by a class meeting of the Ordinary stockholders. The directors feel that further capital can be profitably employed by the company, and after careful consideration they have come to the conclusion that the proposed scheme is the most satisfactory way of finding such capital. The issue of the Second Preference shares, which will be covered practically twice on capital account and over three times on revenue account, will increase the funds of the company at once by approximately £500,000 and a further £500,000 will be received as and when the option on the Ordinary shares is exercised.

The issue will not be underwritten, and the expenses, other than Government stamp duty on the increase in capital, have been reduced to about 1 per cent. on the new money.

The directors propose to offer the Ordinary stockholders the right to subscribe one new Five-and-a-Half per cent. Cumulative Second Preference share for each £2 of Ordinary stock held. It is not proposed to make a public issue of the balance, which will be placed privately. Stockholders will be given an opportunity of applying for a further amount, should they desire to do so, but we cannot, of course, guarantee that we shall be able to meet their requirements in full.

Application will be made in due course to the Committee of the London Stock Exchange for leave to deal and for an official quotation.

The announcement of the scheme in the Press has aroused a good deal of interest, and we have already received indications of a considerable demand for the new shares.

If the resolutions submitted to the extraordinary general meeting of the company and the class meeting of ordinary stockholders are duly passed, notices will be sent out to-night enclosing application forms.

GENERAL CONDITIONS DURING 1928.

I now propose, with your permission, to say a few words of more general interest.

When reviewing the world's financial and economic developments during 1928, I feel that progress has been made, and that a greater measure of stability, the world over, has been attained. It is true that the unchanged conditions in Russia, and to a lesser degree the Chinese upheaval, continue to retard European recovery, but on the other hand greater monetary and economic stability has been characteristic of practically all countries which were engaged in the Great War. With few exceptions, the currencies of Continental Europe have now been stabilised, and in most countries the consequent readjustment of prices has begun to take effect. This can only benefit this country, whose industries will be gradually relieved of the handicap hitherto laid upon them by the depreciated exchange of their competitors in the world's markets.

The principal changes which have taken place in the world's capital markets, especially during the latter half of 1928, have been the gradual increase of London's importance as an international money centre, compared with that of New York, and the advent of easy money conditions in France, which has once more become an important source of money supply for international purposes, although for the time being this is mainly restricted to the short-term money market.

Whether this change is lasting or not is difficult to say, but it seems clear that the uninterrupted industrial expansion in America, coupled with increased speculative activity and the accompanying restrictive credit policy of the Federal Reserve Board, has at last begun to tell. This is shown by America's declining power to absorb foreign loans and the withdrawal of considerable amounts of short time money from Europe.

In fact, America has become a borrower of short-term money to quite an appreciable extent of late. London, on the other hand, seems to be rapidly regaining its pivotal position as the world's credit market, to judge from the increase in acceptance credits of the London Joint Stock Banks (which otherwise do not show a very considerable increase in turnover) and from the fact that the total of foreign issues during the latter half of 1928 has exceeded the total of New York. Against this, however, it is only fair to point out that this enhanced elasticity of the London money market may be partly caused by a contraction in production in the United Kingdom, accompanied by a release of funds otherwise tied up in industry.

SMOOTHER WORKING OF INTERNATIONAL CREDIT MACHINERY.

Another noteworthy feature of the past year, which still continues, was the improved smoothness with which the international credit machinery worked and the ease with which money flowed from one centre to another. It is not so long ago that apprehension was expressed about the amounts of short-term credit which Germany had taken up in the world's markets, and it was held at times that, if developments in America should cause considerable withdrawals, a very difficult position might arise in the Berlin money market. Contrary to these expectations very heavy American withdrawals have been promptly replaced by short-term money from France, England, Holland, and Switzerland, and although perhaps for a very short period some strain was felt in Berlin the situation very quickly readjusted itself. This aspect of the international situation reflects that growth of confidence between the different banking centres which from the investors' point of view is so desirable.

If I have dwelt at some length on the international aspect of things, it is because, with the growth of our available funds, we are now using a large proportion of our money outside Germany, and, as a result, are spreading our risks over a much larger area.

I was asked the other day, when yet another giant American trust company came into being, whether the investment trust movement was not being overdone, and whether I considered the present-day chances of profitable investment by trust companies warranted the enormous expansion in the number of these which has taken place recently. I should be inclined to say that, given good management, there is plenty of scope for new investment trust companies. I doubt if the uninitiated investor can find better employment for his money than the stock of a well-managed trust. His investments are selected for him by experts; he gets a larger spread of risk; and he enjoys the opportunity of participating in transactions which ordinarily are outside the scope of a private investor's activity.

THE SITUATION IN GERMANY.

To return for one moment to Germany, the remarkable compilation of facts set out in the last report of Mr. Parker Gilbert, the Agent-General for Reparations, which deals this time with the whole period from 1924–28, makes it almost superfluous for anyone to dwell in detail on Germany's economic development. It is unquestionably a record of inherent strength and rapid recovery. But it brings one to the burning question of reparations. I feel that it would not be right to discuss the various problems at issue while the committee of experts is sitting in Paris, but I would like to remind you of the real crux of the matter. Reparations—with minor exceptions—can only be paid in two ways: by the delivery of goods, or the performance of services, direct or indirect. It is true that Germany may defer the evil day by long-term borrowing, be it industrial, municipal, or State borrowing, but in the long-run the account must be settled by goods or services. In delivering goods or rendering services Germany must find herself in competition with the rest of the world. Although it seems a paradox, it is a fact that the former Allies clamour for goods from Germany (some of them unknowingly) while the majority of them have raised tariff walls high enough to prevent these goods from reaching their markets.

I now have pleasure in formally moving: "That the directors' report and accounts for the year ended December 31, 1928, submitted to this meeting be and are hereby received and adopted, and that for the year ended December 31, 1928, a dividend on the ordinary stock of 7 per cent., less tax, be declared, and paid."

Sir George E. May, K.B.E., seconded the resolution, which was carried unanimously.

Sir Laurence Nunns Guillemard, G.C.M.G., K.C.B., who retired under the Articles of Association, was re-elected as a director, and Dr. Paul Bonn was also appointed to the Board.

Messrs. Deloitte, Plender, Griffiths & Co. were reappointed Auditors.

The Annual General Meeting was followed successively by an Extraordinary General Meeting of the Company, and a Class Meeting of the Ordinary Stockholders, at which the resolutions authorising the proposed increase in capital were duly passed.

MANCHESTER SHIP CANAL COMPANY.
NEGLECT OF THE CANAL BY STEAMSHIP CONFERENCES.

The annual meeting of the Manchester Ship Canal Company was held, on the 21st ultimo, in the Houldsworth Hall, Manchester.

Mr. W. C. Bacon (chairman of the company) presided, and, in the course of his address, said: The year under review has been a difficult one for the company. We have had to meet a considerable increase in capital charges incurred in developing the resources of the port in order to meet the steady expansion of our trade. It is unfortunate that this additional financial burden coincided with a check in the steady upward trend of our business. When our trade improves, as I am confident it will, our present sacrifice will bear fruit. In a word, we have been assuring the permanent establishment of our prosperity. It is no doubt disappointing to all concerned that it has not been found possible to maintain the dividend of 5 per cent. which has been paid on the ordinary shares for the last few years. The position of the company, however, need cause you no undue concern. The company has attained its present position by its consistent policy of providing for the future, and it can only be by a continuance of this policy that progress can be maintained.

The result for the year of the whole of the company's undertakings showed a net revenue of £908,687, including £29,043 brought forward from the previous year. Deduct payments in respect of interest, rentals, and other fixed charges on loan capital amounting to £523,754, and there is left a balance available for distribution of £384,933.

The directors recommend the declaration of the following dividends (less income tax) for the year 1928: 3½ per cent. on the Manchester Ship Canal Corporation preference stock, £37,143; 5 per cent. on the preference shares, £199,994; and 3½ per cent. on the ordinary shares, £131,298; making a total of £368,435; leaving a balance to carry forward to next year's account of £16,498.

PROSPECTS.

Now as to the future. You may possibly have remarked that prophecy has been somewhat shy regarding 1929. Caution is certainly called for. The past year certainly did not justify its promising beginning. Although there was some prosperity in the lesser industries, it was not enjoyed by the basic industries. Unfortunately, the commodities principally responsible for the reduced imports for the whole country include some of our most important traffics, while the increase in exports did not extend to cotton yarn and manufactures, upon which much of the prosperity of this area depends. On the contrary, the export of cotton yarn and manufactures was considerably less. Cotton imports last year, as you know only too well, were depressed, but it is worthy of remark that, although the amount imported last year was less than that imported in the previous year, Manchester got a bigger proportion of the total coming to the United Kingdom. Already in the current season there has been an increase of over 100,000 bales compared with the corresponding period of last season. There would certainly seem to be some ground for modified optimism or, at the least, no grounds for unqualified depression.

CONFERENCE COMPANIES AND THE CANAL.

I have left to the conclusion of my speech to you a very important subject which I wish to mention this morning—that is, the neglect of the use of the Manchester Ship Canal by the Steamship Conferences. You all know that the large steamship companies in this country and elsewhere have conferences whereby liners plying for passengers and trade along the sea-routes of the world are governed and regulated. Your directors feel that hitherto the port of Manchester has not had the favourable consideration of the English Conference Companies to which it is entitled.

Whatever may have been the position hitherto, there is every facility to-day for cargo-carrying vessels of the largest type to use the Ship Canal safely. When I tell you that it is the practice, weekly and monthly, for steamships whose owners are in various conference groups, to load homewards, discharge their cargoes at the Manchester docks, and then, because of conference restrictions, leave the port light to load cargo elsewhere instead of loading in Manchester, you will, I am sure, be surprised, if not amazed. That, however, is the case.

This company has spent a large sum of money deepening the Ship Canal to 30 feet of salt water up to the Oil Dock at Stanlow, about half a mile from Ellesmere Port—that is, four miles from the entrance of the Ship Canal at Eastham. This facility has been designed to allow, amongst other things, conference steamers an opportunity of loading outwards from the port of Manchester as their last port of call.

The coal bunkering appliances at Ellesmere Port are of an unique character. Coal can be purchased and put on board as cheaply as, if not more cheaply than, at other competing ports.

The report was adopted, and at an extraordinary general meeting the borrowing powers of the company were increased by a further £500,000.

LEYLAND MOTORS, LIMITED.

SUBSTANTIAL INCREASE IN PROFIT.

PAYMENT OF ARREARS OF PREFERENCE DIVIDENDS.

The tenth annual general meeting of the shareholders of Leyland Motors, Limited, was held, on the 27th ultimo, at the head offices of the company at Leyland, Lancashire.

Mr. J. H. Toulmin, J.P. (the chairman of the company), presided.

The secretary (Mr. T. Phillips-Conn) read the notice convening the meeting and the auditors' report.

The chairman, in proposing the adoption of the report and the accounts for the year ended September 30, 1928, said: Ladies and gentlemen,—May I assume you will follow the customary practice and take the report and accounts as read? To-day we are very pleased to be able to submit to you accounts which, we think you will agree, are eminently satisfactory in every way.

The good work put in by our staff and the superiority of our products, combined with an excellent market, have wrought wonders. The accounts before you clearly show that the uniform progress of the last few years has not only been maintained, but accelerated.

INCREASED PROFIT.

The gross profit is £586,693, an increase of £190,959 on the figure for 1927, while the net profit (after making full provision for income tax, depreciation and all contingencies) is £405,988, against £233,842, an increase of £172,156.

The adverse profit and loss balance of £284,625 is now converted into a credit balance of £121,373, out of which it is proposed to pay the eight years' accumulated dividends up to December 31st last on the six per cent. cumulative preference shares, which will absorb the sum of £76,800 net (the tax already having been provided for by the company), leaving to carry forward £44,573.

The sums necessary for income tax and depreciation have, of course, unavoidably increased.

The amount owing to our bankers at September 30th last was reduced to £337,027, and a further considerable reduction has taken place since the date of the balance sheet you are now considering.

At to-day's date, the whole of the purchase money in respect of the Kingston factory has been paid. This property will shortly be conveyed to the company.

THE BALANCE SHEET.

Land, buildings, plant, furniture, patterns, drawings, etc., are less, compared with last year, by £34,386; in other words, the depreciation written off and sales of dwelling-house sites have exceeded the additional capital expenditure by that amount. The board are fully alive to the importance of keeping the works thoroughly up to date, and are taking all necessary steps. The sum of £37,734 was spent on new machinery during the year. It is your directors' intention to devote a somewhat larger sum this year for this purpose, so that our factories shall be as well equipped as any in the competition for business which lies before us.

"Stock in trade and work in progress" has increased by £44,521, a very moderate sum in relation to the greatly increased business with which the company is dealing.

Our "Trade and other debtors," compared with last year, are up by £154,993, while our liabilities to the bank and other creditor are down by £226,406, which are both movements in the right direction.

EIGHT YEARS' ARREARS TO BE PAID.

When replying to a vote of thanks to the directors and staff at the close of our last annual meeting, held on 29th February, 1928, I remarked we were hopeful that the financial result would enable a payment on account of dividends to be made in 1929.

Well, ladies and gentlemen, you will see from the report in your hands that our hopes have been realised. We feel that we are now in a position to recommend the payment of the whole of the arrears of the Six per Cent. Preference dividends, and a resolution to that effect will be submitted to you later on.

On account of the fact that dividends have been in arrears for several years, we have been under the necessity of inviting you, who are only holders of the Six per Cent. Preference shares, to these meetings. I do not think we have put you to any avoidable inconvenience. I trust you will carry away pleasant recollections of this meeting, because, much as we appreciate your help and forbearance, we sincerely hope that we shall never again be under the obligation of calling you to another annual general meeting.

While I am speaking about the pleasant subject of dividends, let me say, but without making any definite promise, we hope that it may be possible, later in the year, to pay something on account of the accumulated arrears of the Seven and a-Half per Cent. dividends.

REORGANISATION NOT RECOMMENDED.

You will recollect that a suggested scheme of reorganisation was put before you on 30th March, 1928. This was amended on 12th April. On 19th April an extraordinary general meeting was held, when the amended scheme was approved, but it was rejected at the meeting of the holders of the Six per Cent. Preference shares which followed.

Owing to a continued demand for some such scheme, modified proposals were tentatively submitted to you in a circular dated 19th May. A card vote was taken. As stated in my circular of 16th June, the voting was indecisive, and no further action was taken regarding any other alternative.

Such was the divergence of views expressed in the correspondence which naturally followed the issue of the circular to which I have just referred that the Board felt it would not be in the best interests of the company to pursue the subject further. That is still our view and we do not propose to put forward any further scheme of capital reorganisation.

FUTURE PROSPECTS.

Perhaps I may now say a few words as to the present position and prospects.

Our latest models have become well established. The double-decked 'bus, the "Titan," in particular stands in a class by itself, and has become very popular. Owing to the outstanding success of the "Lion" single-decked four-cylinder 'bus, we have decided to continue its manufacture with a number of important improvements.

Your directors are fully alive to the importance of investigating every new development in commercial-vehicle design, and the company's research department is always actively engaged in testing out new appliances and developing new ideas.

We started the present financial year with many more orders on our books than at the commencement of the previous year. The weekly returns of orders and deliveries have been very satisfactory up to date.

The steel foundry is fully employed and we have attained quite a reputation for high-class steel castings.

SOUTH AMERICA.

The deputy managing director was absent from our last meeting, being engaged on a business survey of the prospects in Argentina and some of the adjacent South American countries. Mr. Nixon confirms what others have reported publicly, that South America is a very rich continent, and he found that certain regions were developing very rapidly. Great Britain has been much interested in the progress of this continent, and has vast sums invested there. It is essential, however, to adopt progressive methods if we are to avoid retiring before the attack of organised scientific North American enterprise and salesmanship.

Since Mr. Nixon's visit our business in Argentina has improved, and there is no doubt that there is trade to be done in many directions. The Board are taking steps to develop the company's business in the South American market.

TAXATION.

During the financial year a very heavy additional tax burden has been placed on the industry—namely, the tax of 4d. per gallon on petrol. The receipts from this tax are, as you know, intended to provide the greater part of the money for the Government's scheme of derating manufacturing industry. We shall, therefore, as manufacturers, in due course receive some relief from this source.

During this period the railway companies have obtained their road powers enabling them to run passenger and goods vehicles on the roads. We have been entrusted with certain of their contracts.

APPRECIATION OF EMPLOYEES' SERVICES.

I feel sure you will not wish me to sit down without expressing the appreciation of the shareholders, and of the directors, of the excellent work which has been done by all the company's employees. The relationship between the management and the employees has continued to be most cordial. The motor industry is contributing materially to the solution of the unemployment problem. The number employed by us has increased during the past year by 750 and is now well over the 5,000 mark.

The Chairman then moved the adoption of the directors' report and statement of accounts as at 30th September, 1928.

The motion was duly seconded, and, after the Chairman had replied to certain questions put by individual shareholders, was carried by the meeting.

The managing director (Mr. Henry Spurrier) moved the dividend resolution, which was seconded and duly carried.

Mr. J. H. Toulmin, J.P., the director who retired in rotation, offered himself for re-election and was reappointed.

Messrs. Geo. A. Touche and Co. and Messrs. Davies and Crane were reappointed joint auditors to the company.

The proceedings then terminated.

ROLLS-ROYCE, LIMITED.

INCREASED BUSINESS AT HOME AND ABROAD.

The twenty-second annual ordinary general meeting of Rolls-Royce, Ltd., was held, on the 22nd ultimo at Derby, Lord Wargrave, the chairman, presiding.

The annual report and accounts were taken as read.

The chairman said that the issued capital at £813,787 remained as last year. Sundry creditors, including reserves for taxation, had decreased by £49,439. This reduction was principally due to arrears of taxation paid during the year. The consolidated reserve fund was increased by £50,000, allocated from the 1927 accounts, and a further allocation of £40,000 was proposed that year. On the assets side property showed a small increase of £9,378 after ample depreciation. Stock-in-trade and work in progress showed a decrease of £101,819. Sundry debtors were £71,370 less than a year ago. This was the result of repayment by Automobiles Rolls-Royce (France), Ltd., of a loan in connection with their Paris premises, which were their own property. Cash in hand and at the banks showed a decrease of £128,889, but this was offset by investments in gilt-edged securities of £327,652, which, together with cash in hand, amounted to £450,305, or £198,762 more than last year. That favourable cash position was principally the result of reduced working stocks and repayment of loan by Automobiles Rolls-Royce (France), Ltd.

YEAR'S PROFIT.

The profit for the year amounted to £185,769, which, including the carry-forward from the previous year, gave £216,064 for disposal. Their directors proposed to follow their inherently wise practice of building up reserves. They considered that a prosperous company like Rolls-Royce had an obligation to its staff over pensions, which, sooner or later, they must face. Their directors recommended a dividend of 8 per cent. and a bonus of 2 per cent., which would absorb £81,379. They proposed to allocate the balance as follows: Income-tax, £30,000; reserve fund, £40,000; carry forward, £64,685.

It was with great regret that he had to report the resignation of their managing director, Mr. Basil Johnson, owing to ill-health.

Mr. A. F. Sidgreaves, O.B.E., had been elected to the board, and appointed managing director. Mr. Sidgreaves, who was their general manager, and had for some time been sharing with Mr. Johnson the responsibilities of the administration, had a unique knowledge of the motor business, having been closely connected with it during the past twenty-six years, and had held responsible positions in the management of the company for over eight and a half years. Mr. Arthur Wormald, their general works manager, who had been with them since the inauguration of the company, had been elected to a seat on the board, and Mr. W. Cowan had been appointed as their general manager.

Their holding in Rolls-Royce of America, Inc., did not, and never had, appeared in their accounts as an asset. Their holding was in the common stock, which had not received a dividend since the inception of the company.

BRIGHTER PROSPECTS.

From reports received they were hopeful that 1928 would result in an improved position. The demand for Rolls-Royce cars had appreciably exceeded that of the previous year, not only in the home market but also in the export markets of the world. They had unquestionably achieved great success in practically every country in which motoring was possible, and laid the foundation for a still greater increase of business in the future. The Rolls-Royce car held its undisputed position as the best car in the world. During the past twelve months a further number of their new "F" aero engines had been fitted to a large number of experimental types of Royal Air Force aircraft, and were rapidly completing their tests, and a number of "F" engines had also been used in a flight of Royal Air Force Service machines intended for regular use in one of the permanent squadrons.

In order to obviate inconvenience and dislocation in future, it had been decided to close the financial year on December 31.

There could be no two opinions with regard to the national character of the property of Rolls-Royce, Limited. They had only to recall the invaluable services rendered by the company on land and in the air during the war to give proof to that statement. While they had no desire to interfere with the free market in their shares, they were determined that the voting control of a national industry like Rolls-Royce, Limited, must remain in the hands of British citizens. They were not preventing foreigners holding their shares, but simply from exercising voting powers.

The report and accounts were unanimously adopted.

At a subsequent extra-ordinary general meeting the directors' proposals to alter the Articles of Association so as to ensure that shares in the hands of foreigners should not carry votes was also adopted.

R.M.C. TEXTILES (1928), LIMITED.

A SUCCESSFUL START.

CAPITAL INCREASE APPROVED.

The first ordinary general meeting of R.M.C. Textiles (1928), Ltd., was held, on the 22nd ultimo, at the Hotel Cecil, Strand, London, Mr. J. M. Waterhouse (chairman and managing director) presiding.

The Secretary (Mr. J. M. Brandreth, A.C.A.) read the notice convening the meeting and the report of the auditors.

The Chairman said: Ladies and gentlemen, I have pleasure in rising to move the adoption of the report and accounts for the thirteen months ended 31st December, 1928, and I trust that you will recognise a satisfactory record in our first accounts. The net profits for the period, after making provision for all working and administrative expenses, amount to £28,861, less bank and other interest of £5,192, leaving a balance of £23,668, with which I beg to deal in the resolution to be proposed after I have made a few remarks on trading conditions and prospects.

Research work during the year has resulted in the production of a much more comprehensive range of high-grade fabrics for both ladies' and gentlemen's wear and suitable for every market. I believe that with this attractive and extensive collection of plain and fancy cloths, along with the increased facilities for producing at prices which compare favourably with inferior foreign goods, we have sound reasons for anticipating that we shall secure a sufficient share of home and foreign trade as will keep our organisation well employed at all times. Our company is unique in that it has its own distributive as well as productive side and is therefore less subject to market vagaries. As time passes it is certain that we shall be able still further to consolidate our position by exploiting the preparatory work hitherto done.

NEW SILK-WEAVING PLANT.

Large as is our production of fine worsted fabrics, we are opening up a promising trade by means of our new silk-weaving plant, which is already turning out excellent goods of a type appealing to the popular demand. These are made from the finer grades of yarn, which, I am glad to say, are gradually being reduced in price, thus assisting a broadening of demand.

We are now paying particular attention to the development of our vitally important merchanting section, and especially to the exploitation of foreign markets. European currencies have become stabilised and spending power increased. Negotiations have just been concluded for the expansion of the company's trade in France through union with an established Paris house. A little later we anticipate making a similar arrangement in Germany.

After considerable experiment and investigation, the Board has found it desirable to take over an established first-class modern dyeing and finishing business, which will achieve the dual purpose of making our organisation more self-contained—thereby making many economies—and of securing appreciable profits. You will no doubt be aware that a Government inquiry is proceeding in the matter of the safeguarding of our section of the textile industry. If Parliament sanctions the present application for safeguarding, we should share largely in any benefits which may accrue.

ELIMINATING UNNECESSARY MIDDLEMEN.

To summarise the position, I would say that the company intensively produces the highest class up-to-date fabrics at minimum cost. It has a unique and most promising distributive section operating the world over, and it is able to offer maximum value to its clientele by eliminating unnecessary middlemen. Our prices are highly competitive and meet the call of the times for first-class apparel at prices which are in consonance with the purchasing power of the public.

In conclusion, I believe that shareholders may reasonably expect a satisfactory return on their investments in this company, which is not engaged in an industry depending on the passing vogue, but in catering for the regular basic demand for clothing. There seem to be fairly good grounds, with the help of the developments already outlined, for assuming that the year 1929 should compare favourably with the year under review.

The report and accounts were unanimously adopted, and the final dividend of 7½ per cent., making 12½ per cent. for the year, was approved.

The Chairman, in proposing a resolution increasing the capital of the company to £250,000 by the creation of 400,000 additional shares of 5s. each, of which it was intended to offer 300,000 to the shareholders at the price of 5s. 6d. per share, said that the Directors had made sure of the profitable employment of the proceeds of the issue. It was reasonable to expect that total profits on the increased capital would not be less than £40,000 per annum, or sufficient to pay 16 per cent. on the whole capital.

The increase of capital was unanimously approved, and a cordial vote of thanks to the Chairman terminated the proceedings.

E.N.V. ENGINEERING COMPANY, LIMITED.

GRATIFYING RESULTS—10 PER CENT. DIVIDEND.

The annual general meeting of E.N.V. Engineering Company, Limited, was held, on the 21st ultimo, at Winchester House, London, E.C.

Mr. Charles G. Twallin (the chairman of the company) presided.

The Chairman : Ladies and Gentlemen,—As the directors' report has now been in your hands for some days, I suggest, with your kind permission, we may take it as read, and I will confine the few remarks that I wish to make to the position of the company and its balance sheet.

I think that you will agree with me that we have every reason to be satisfied with the position of this company, as disclosed by the balance sheet now before you.

As this is the first annual general meeting since the company was converted into a public company, I propose to take the items of the balance sheet in detail.

Looking at the assets side first, the amount entered for trade debtors is small compared with the size of the business of the company. It shows that we collect our money promptly, and that our accounts are in a very healthy condition. The few bad debts we make represent a very small percentage of our turnover, and for such contingency we have allocated a reserve, which in our opinion is quite adequate.

Cash at bank and in hand really needs no explanation.

Stock and work in progress : This item is valued on the certificate of our managing director, and I know no one in a better position to value it than Mr. Hukins.

The Machinery, Plant, etc., is up to date and kept in first-class order. We pride ourselves on the accuracy of the work we turn out, and to ensure that, it is essential that our plant is maintained in a high state of efficiency. Reasonable and adequate depreciation has been allowed for.

Freehold Land and Buildings : The figure here is based on the valuation made by Messrs. Alaway and Partners, plus certain additions which have been made, less depreciation on the buildings.

The buildings themselves have been well built, are up to date, and admirably suited for the purpose for which they are used. Negotiations are now in progress whereby provision is being made for extending our business as necessity demands.

The item down for goodwill is a real asset, as the name of "E.N.V." is a hall-mark of quality on gearing. May I remind you of the gruelling tests our gears were put to in the Le Mans 24-hour endurance race, in which case we supplied all of the gears in the winning car, and also in the Tourist Trophy races in Northern Ireland last year, when six out of the first eight cars to finish the course were fitted with our final drive gears. A further testimonial to the quality of our gears, camshafts, etc., is instanced by the demand we have for our products from the continent of Europe.

The expense incurred in increasing the capital and converting the business into a public company is included as an asset in the balance sheet, but on referring to the allocation of profits you will observe we recommend writing this off.

On the liability side there is nothing that calls for specific notice, except in passing I would point out that our trade creditors are not unduly large, having regard to the size of the business.

It should be borne in mind that the accounts before you cover a full year's trading to December 31, 1928, in spite of the fact that the shares were not put on the market until the autumn.

It has been suggested to us that it will be a convenience to shareholders if, in the future, instead of waiting for the completion of the year's accounts, your directors consider the advisability of paying an interim dividend. I would assure you that this matter has had our sympathetic consideration, and, subject to reasonable trade conditions, it is our intention to do this.

The directors' fees are fixed by the Articles of Association at £200 per annum each.

I should like to take this opportunity of testifying to the loyalty and co-operation of our managers, foremen and staff, and to say that the gratifying results disclosed by the balance sheet are due to their support, and also to the untiring efforts, energy and zeal of our managing director, Mr. Hukins.

Mr. Buskard now spends the whole of his time at the works in the capacity of works director.

I have pleasure in stating that our works are fully occupied, and that we have booked sufficient work to keep us going for some months ahead, and that our business generally is in a healthy condition.

I have much pleasure in moving :—

"That the directors' report and the accounts of the company for the year ended December 31, 1928, be and they are hereby approved and adopted."

Mr. Hugh Purdy seconded the motion, which was carried unanimously.

The chairman then moved : "That a dividend at the rate of 10 per cent., less tax, be paid to all shareholders on the register on February 12, 1929."

Mr. A. E. Hukins seconded the motion, which was carried unanimously.

The retiring director (Mr. Charles G. Twallin) was re-elected and the auditors (Messrs. Hackett, Radley and Johnson) were reappointed.

A vote of thanks to the chairman, directors and staff brought the proceedings to a close.

SELFRIDGE AND COMPANY, LIMITED.

ANOTHER SUCCESSFUL YEAR.

The twenty-first annual general meeting of Selfridge and Co., Limited, was held on the 28th ultimo, at the company's store, Oxford Street, London, Mr. H. Gordon Selfridge (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said : Another year has been spent by the men of business of this country in climbing out of the pit of difficulties and distress into which the Great War plunged us all. In this effort we cannot discover the least discouragement or faint-heartedness, but all recognise now that the recovery to even fairly normal conditions is a process requiring a much longer time than any of us who, with the optimism of inexperience of great wars and their after-clap, had thought possible.

To a great distributing business like this a vital factor is the buying strength of the members of the public. If the average individual finds his or her income reduced, no matter in what way, he has less to spend and his strength or ability to buy is, of course, accordingly reduced. For example : There are living in the small radius of 25 miles of this room between 9,000,000 and 10,000,000 people. If each of these finds his income diminished by so little, even, as 1d. a day, it means to the supplying division of London's commercial public a decrease in the expenditure of £38,000 to £40,000 each day.

We, here, are continually dissatisfied with the amount of our daily and annual returns, for, with the great throngs who make our store their daily or weekly buying headquarters, we could—if the purchasing strength of these customers were equal to their reasonable desires, or even to their pre-war abilities—easily double our returns.

But there has been some determined climbing done by British commerce during the past 12 months, and, as far as our own figures are concerned, they are comparatively the best we have ever shown. We are doing our full share of this climbing, and in this competition for increased annual returns we are inclined to feel that perhaps more than could ordinarily be considered as our proportion is coming our way. The balance-sheet has been before you for some days. It tells its own story and practically everything there is to tell.

WILLIAM WHITELEY, LIMITED.

The least agreeable item is the charge of £46,105 5s. 4d., which we paid under guarantee to William Whiteley, Limited, in respect of the year ended January 31, 1928. This is one of the temporary penalties of acquiring an old business which has demanded an enormous amount of effort in being reconstructed and brought reasonably up to date. This investment will eventually and before long prove a splendid asset to this house, but we have to go through a certain amount of loss before reaching a period of profit. This payment has, of course, reduced the sum usually used by us for writing down properties, etc., but, even so, a considerable amount has been so applied. We like the writing down of assets and always favour it rather than the payment up to the hilt in dividends. One keeps the money in the business and permits expansion and the other does not. The former is conservative, and in this, if in little else, we are extremely conservative.

Our large investment in the Selfridge Provincial Stores is also an asset of great future value. Conservatism insists, however, that it is wiser to retain the profits of these excellent businesses in their own treasuries rather than to declare them as dividends. We prefer greater and continually greater financial strength to increased dividends, all of which will make such of the shares of this business as are in the hands of the public, a permanent investment rather than a speculative one.

I may say of the year 1928 that the first six months were extremely difficult. We seemed to try as hard as ever, but the returns in several divisions failed to increase, and, of course, everything else being equal, returns are vital. In the last six months, however, we recovered handsomely, and, as you may have seen in our public announcements, we continually, month by month, broke previous highest records.

The Chairman having paid an eloquent tribute to the staff, the report and accounts were unanimously adopted.

The formal business having been transacted, a vote of thanks to the chairman, directors and staff terminated the proceedings.

BOVRIL, LIMITED.

STEADY GROWTH OF BOVRIL EXPORTS.

The thirty-second annual general meeting of Bovril, Limited, was held, on the 26th ultimo, at River Plate House, London, the chairman, Sir George Lawson Johnston, presiding.

The Chairman, in moving the adoption of the report and accounts, said that they were acquiring 311,470 6 per cent. £1 cumulative preference shares in Argentine Estates of Bovril, Limited, at par, and would be offering these to the public during the next few days at the price at which they obtained them, with their guarantee of dividend up to March 31, 1935, and he would only say that, so far as the Bovril shareholders' applications were concerned, they would avoid closing the lists till, at any rate, the first post on Monday morning.

As the offer for sale of the preference shares contained the necessary information, he would not repeat it there, but he would just say one thing with regard to the large area of land owned by the Argentine Estates of Bovril, Limited, and that was, that land in the Argentine had a habit of continually growing in value, and that some portions of the Entre Rios Estates which he bought for the Argentine Estates of Bovril, Limited, twenty years ago at $40 a hectare were being sold at four and five times that price. Of course, they were improving the estates by clearing and putting under Colony. In some cases, clearing and taking out tree roots cost more than the original price of the land.

GROWING BOVRIL EXPORTS.

During the war, the export of Bovril was restricted; for a period it was prohibited. However, with a special effort in 1919, they got their export sales up to pre-war figures. Each year since 1919 had shown an increased export of Bovril over its predecessor; 1928 again showed this continued advance in their exports.

In a competition recently promoted to encourage amateur advertisers, no fewer than 3,600 entries for Bovril advertisements were sent in. Some of the suggestions they had used in their publicity work, some they had not, although they had given a good deal of private amusement. One suggestion, accompanied by an appropriate sketch, showed a Bovril bottle knocking the letter "L" out of the word "Influenza." Another design depicted Samson reclining in his tent asleep, with Delilah standing beside him holding a large bottle of Bovril in her hand, listening to the voice of a Philistine outside urging her to "leave his hair, Delilah, but take his Bovril."

They were still keeping up their weekly, or, at any rate, fortnightly, change of slogan, and most of them must have seen a good many examples. Some of them might not have seen a new one now appearing on railway platforms which read : "Before the next (s)train, take Bovril."

The report and accounts were unanimously adopted.

SIR JAMES CRICHTON-BROWNE ON BODY-BUILDING.

Sir James Crichton-Browne, M.D., F.R.S., said there had never been a time when more nonsense about nutrition and foods and body-building was talked and written than the present. Only the other day he had come across what he would respectfully designate a bit of mischievous nonsense uttered by a learned Professor on the wireless, in which, referring to meat extracts, the learned gentleman, to use colloquial language, "damned the lot," and denied that they had any body-building power. Sir James thought the Professor must take a very narrow view of body-building, and must have forgotten, or overlooked, the experiments made with Bovril by the late Professor Thompson, of Trinity College, Dublin, and of Mr. Caldwell and Mr. Wallace. These led to the definite conclusion that Bovril had both an indirect and a direct nutritive value, the former being due to a better digestion and absorption of the food to which it was added, and the latter to a retention of nitrogen, which was furnished in part by Bovril and part by the ordinary food. It was demonstrated that the addition of Bovril to the food of animals and men was invariably followed by a decisive increase of weight.

Body-building, Sir James pointed out, was a very comprehensive term, and daily became more so.

The Chairman, in thanking Sir James for one of his unique speeches, said how delighted they all were to see that he had suffered no serious ill-effects from the railway accident he had been involved in.

Sir George added that they lived on very good terms, not only with their workpeople, but with their Union, and he would like to read them the postscript to a letter, dated February 14, from the Union Group Secretary, dealing with an Agreement covering the rates of pay and working conditions of their factory employees. It ran as follows :—

"We observe from this morning's papers that one of your directors, Sir James Crichton-Browne, was implicated in the train disaster at Alfreton, and would take this opportunity of hoping that no ill-effect follows his unpleasant experience."

JEREMIAH ROTHERHAM AND COMPANY, LIMITED.

"AN EXTRAORDINARILY GOOD YEAR."

The thirty-first annual general meeting of Jeremiah Rotherham and Co., Ltd., was held, on the 27th ultimo, at the Town Hall, Shoreditch.

Mr. Joseph Hockley, the chairman of the company, presided, and in moving the adoption of the report and accounts to January 15, 1929, said that last year he presided in the absence of Mr. Richard Bowden, who had met with a serious accident. Since then, in consequence of that accident and his advancing years, that gentleman had resigned from the board, but was present with them that day. The past year had been a very difficult one for their trade. The year started well, but May and June were very cold. Better weather in the second half of the year made up for that, and he was glad to be able to present results of what he considered would be regarded as an extraordinarily good year. The reduced profit was due to a slight decline in sales. The net profit was £64,068, which with the balance brought forward from last year of £72,641 made a total of £136,709.

After deducting the interim dividends paid on the Preference and Ordinary shares, there remained £107,709 to be dealt with, and out of this the directors recommended the following distributions : on the Preference shares at the rate of 5 per cent. per annum for the half-year ended January 15, 1929, absorbing £5,000, and on the Ordinary shares at the rate of 10 per cent. per annum for the half-year ended January 15, 1929, making with the interim dividend 9 per cent. for the year, absorbing £30,000. There then remained £72,709 to carry forward.

Dealing with the accounts generally, he said that they were in a position of financial strength upon which they could congratulate themselves. The past year had been a very difficult one, and the current year was also much of the same nature. It was not proposed to fill the vacancy caused by the resignation of Mr. R. Bowden yet, and that would reduce the amount of the directors' fees by £2,000 per annum, which would go to the benefit of the shareholders. As to the prospects of the current year, he did not desire to prophesy, but they knew that since the year began there had been a decrease in unemployment, and there had been greater activity in the big industries of coal, shipbuilding, cotton, and agriculture. The clouds seemed to be passing away and gleams of light showing.

The report and accounts were unanimously adopted.

CONQUISTADORES!

¶ It is a far cry since the adventurous days of the Spanish Conquistadores and their pioneer expeditions to the ancient American civilisations.

¶ To-day, a great and growing volume of overseas trade is transacted annually by the Republics of the New World, and unrivalled facilities for every description of modern banking business are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST, LONDON, EC2

NATIONAL PROVIDENT INSTITUTION.
RECORD NEW BUSINESS.

The 93rd annual meeting of the National Provident Institution for Mutual Life Assurance was held, on the 21st ultimo, at the Cannon Street Hotel, London.

The Hon. Vicary Gibbs (the chairman) said that the report submitted was evidence that the institution had made a most satisfactory start for the new quinquennium, progress being shown under all headings. As regarded new business, they had achieved another record by writing policies for new sums assured amounting to £1,511,950, carrying a new net annual premium of £52,253, and they had also received £187,914 as single premiums. Last year was evidently a good year for life assurance from the new business point of view, as he saw from an article in the "Economist" that in the case of the returns of twenty-eight of the leading life companies in every instance except one additions to previous figures had been recorded, the total showing a net increase for these offices of 11 per cent. The increase in the case of this institution amounted to over 27 per cent., so they had done substantially better than the average.

SATISFACTORY FEATURES.

The increase in new business in recent years had not been accompanied by any increase in expenses, for in the year ended November, 1923, when the new business amounted to only £1,089,503, the expense ratio was then £13 11s. 3d. per cent., against this year's figure of £12 8s. per cent.

Another satisfactory feature about last year's new business was that the increase was largely in policies payable at death only—what they termed whole-life policies. The bonus they were now paying on these policies—an initial flat bonus of 2½ per cent., increasing rapidly after the assured had reached his expectation—made them very attractive at all ages, but perhaps particularly in the case of lives advanced in years, for whom they quoted very low premiums as compared with the average market rate.

The mortality experience of the institution was again very favourable. The net rate of interest realised on the funds had again increased, being £4 14s. 2d. per cent., as compared with £4 13s. 7d. per cent. for the previous year. The premium and interest income both showed substantial increases. Their funds last year showed an increase of £197,000 in spite of the fact that they had paid away in cash bonuses nearly £200,000.

The report and accounts were unanimously adopted.

MAPLE AND COMPANY, LIMITED.
BETTER PROSPECTS FOR CURRENT YEAR.

The meeting of Maple and Co., Ltd., was held in London, on the 27th ultimo, Mr. Charles Clare Regnart (president) presiding.

The Chairman, in moving the adoption of the report and accounts, said that trade during the opening months was encouraging, and they were justified at one time in anticipating that they would have been able to show an increased profit for the year. Trade in London had been quite satisfactory and the profit equal to the previous year. Their South American business, however, had shown disappointing results—competition had been and was exceedingly keen, and the population was over catered for, particularly in the furnishing trade. It was some small consolation to hear that other large furnishing houses had been no more successful.

The net results attained, embracing the branches and foreign subsidiary companies, showed that net profits were less by £26,024 compared with the previous year. The board, however, felt they were justified in recommending the payment of a final dividend of 12½ per cent., making a total distribution of 15 per cent. for the year, necessitating, though it did, taking an amount of £12,848 from the carry forward of £61,782 which, as shareholders were aware, existed for the purpose of equalising dividends. The company's shipping trade, he was glad to say, showed signs of improvement—although 1928 did not benefit to any large extent from this source. Judging from the number of foreign orders they now had in hand, the current year should show a distinct advance.

It could not be too widely known and, therefore, the shareholders' assistance could be of the greatest value, that a large number of their customers took advantage of the company's deferred payment system—the whole of the vast stocks for that purpose being at the disposal of the public. All goods in their establishment were marked in plain figures and at prices considerably less than those offered by the ordinary hire purchase houses.

Last year shareholders were good enough to support a resolution to allocate £5,000 towards a staff benevolent fund. This, he would say, had been highly appreciated by the employees, and he felt confident that the shareholders would again willingly consent to that recommendation.

Mr. H. Stanley Wharton seconded the motion, which was unanimously approved.

CITY OFFICES COMPANY, LIMITED.
VALUE OF CITY FREEHOLD PROPERTY.

The annual general meeting of the City Offices Co., Limited, was held, on the 26th ultimo, at Palmerston House, Old Broad Street, London, Mr. E. M. Rodocanachi (chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The past year has again been a good one for this company, and, generally, business has been satisfactory in the South of England. The General Election will take place this summer, and is bound to have a disturbing effect on business, otherwise I look for increased prosperity this year, as there is distinct evidence of better trade and increased surplus wealth both here and abroad.

In conclusion, referring to the revenue account, this, he said, they would all agree, was most satisfactory. After calling attention to the chief differences in that account, he said that he told the shareholders last year the Board wished substantially to reduce the bank loan, which stood at £17,000 on December 31, before increasing the dividend, and that a reserve of this sort would be useful should the board decide to rebuild any of their freehold properties. The value of freehold property in the City of London and in Westminster was, in his opinion, bound to increase every 10 years, as history proved, because the supply was limited, and the demand increased each year. A given site in the City in Queen Elizabeth's reign was worth only a few pounds; in Queen Anne's reign it had increased considerably, and again in Queen Victoria's reign, until at the present time they heard of sales of freehold near the Bank of England at £85 per foot super., and £50 was quite a usual price in Threadneedle and Old Broad Streets. Taxation may, of course, come to deprive the owners of part of this increment, but where the supply was limited taxation could generally be passed on to the consumer, the tenant in the company's case. It had been so in the case of the enormous increase in rates. The company paid on rates in 1867, £2,613; in 1877, £6,413; in 1887, £6,877; in 1897, £8,398, in 1907, £9,695; in 1917, £11,204; in 1927, £19,782; whilst for the past year the figure was £18,802, the whole of which they had been able to pass on to their tenants. He thought, therefore, he was justified in saying that he believed in the future of freehold property, especially in the City of London, because he could see no reason why that class of property should not continue to increase in value every 10 years (with ups and downs, perhaps, during each decade), as it had done since Queen Elizabeth's reign.

The report and accounts were unanimously adopted

GENERAL INVESTORS AND TRUSTEES, LIMITED.
SUCCESSFUL RESULTS—INCREASED DIVIDENDS.

The twenty-second annual general meeting of General Investors and Trustees, Limited, was held on the 28th ultimo, at Winchester House, London.

Mr. Gerald T. Moody (the chairman) said that, in addressing the stockholders a year ago, he referred to the issue on bonus terms which the company had recently made to holders of ordinary stock. That issue was based on terms which would require the resulting money to be invested to yield upwards of 7 per cent. if the distribution on the ordinary stock was to be continued at 16 per cent., the rate paid last year. It must be a matter of satisfaction to all concerned that the progress of the company had been such as to permit them not only to maintain the dividend at 16 per cent., but to recommend an increase of 1 per cent., making 17 per cent. for the year on the ordinary stock, including that issued on bonus terms. In making this recommendation the directors had not been unmindful of those allocations of prime importance to all conservatively-managed investment companies, for they proposed to carry £17,000 to reserve account, making it £265,000, or 66 per cent. of the ordinary stock, to place a further £2,000 to staff superannuation fund, and to increase the carry-forward by more than £1,000.

For those who subscribed for and retained the bonus issue referred to, and who elected to sell the resulting stocks at present prices, the bonus was equal to a further dividend of approximately 19 per cent., free of both income tax and super tax, on the ordinary stock. The directors had no immediate intention of making a further issue on bonus terms, though he had no doubt they would give the matter their favourable consideration so soon as general conditions and expansion in revenue made such a course desirable in the interests both of the company and of its stockholders. They had issued £28,000 of 4 per cent. debenture stock during the year, the discount on issue of which had been provided from the balance arising from exchange of securities. A further £100,000 had since been placed, and it was not unreasonable to suppose that these issues would in time provide additional revenue available for distribution on the ordinary stock. Investments at or under cost figured in the balance-sheet at £1,504,951, and a valuation of these, 94 per cent. of which were quoted securities, showed a substantial surplus over the issued capital and reserve account.

The report and accounts were unanimously adopted.

PEARL AUTOMATIC MACHINES, LIMITED.
IMPORTANT NEW BUSINESS.

The Statutory Meeting of the Pearl Automatic Machines, Limited, was held on 26th ultimo, at Winchester House, Old Broad Street, London, E.C.

Sir T. J. Leigh Maclachlan, Kt., the chairman, who presided, said:—The accounts show the strong financial position of this company, the cash resources being sufficient for the company's requirements. The trader as well as the purchasing public is rapidly realising and beginning to take advantage of the labour-saving and economical help of automatic machines.

The prospectus stated that signed applications for over 17,000 machines had been received. You will be glad to know that the company has already completed signed contracts for 15,000 machines on which deposits have been paid and deliveries begun, and that negotiations for large numbers are expected by Mr. Lawrence, the managing director, to be completed within a few days, still leaving very large districts and many populous areas to be supplied. In all cases the machines are being delivered up to contract time, and in many cases before. This is indeed a wonderful achievement to have been brought about in such a short period, and could not have been done were it not for the fact that the Pearl automatic machine is compact, of good appearance and can be fixed in places where the majority of machines are not available.

The Pearl automatic machines have already been fixed in many of the leading thoroughfares in London, and contracts have been entered into with several institutions. The contracts already signed should provide the company with a gross income of over £39,000 per annum. The field of its operations is so large that at present we have only touched the fringe.

That the machines meet a public need can be proved by two illustrations. A battery of ten machines was fixed in one position, and in one week they served 3,003 customers; 80 machines placed in various parts of the West End and City showed average sales for the past week of over 16s. per machine. Your board are satisfied with the progress shown, and look forward confidently to the future.

In conclusion, the chairman said that he should mention that, since entering the room, he had had news of a further offer which had been accepted by the company, subject to contract. That new business would provide the company with an additional income of £25,000 a year.

A hearty vote of thanks to the chairman and directors closed the meeting.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 23, 1929:—

(000's omitted.)

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	8,028	From Revenue	26,351
Interest, &c., on Debt	800		
Sinking Fund	1,332		
Sundries	151		
Decrease in Debt	15,952		
Increase in Balances	88		
	26,351		26,351

The revenue for the week amounted to £26,351,200, as compared with £21,687,600 in the corresponding week last year. Property and Income-tax brought in £13,967,000 against £12,683,000, and Super-tax £2,060,000 against £2,780,000. Customs and Excise were higher at £3,050,000 and £5,734,000 against £2,822,000 and £1,723,000 respectively. Revenue to date amounts to £626,131,000, against £645,056,000 at this time last year, whilst expenditure at £668,365,000 compares with £685,736,000 a year ago. With five more weeks to run to the end of the financial year, there is a deficit of £42,234,000 as compared with £40,680,000 at this time last year. The National Debt was reduced by £15,952,000 as shown below:—

(000's omitted.)

	£		£
National War Bonds	− 500	National Savings Certificates	+ 300
Treasury Bills	− 20,902	Public Department Advances	+ 5,100
		Sundries	+ 50
	− 21,402		+ 5,450

The floating debt was reduced by £15,810,000 to £774,655,000.

FINANCIAL YEAR, 1928-29, April 1 to Feb. 23, 1929.

	£		£
Expenditure	668,364,565	Revenue	626,130,807

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follow :—

1929. ARRIVALS.	£	1929. WITHDRAWALS.	£
Feb. 22 Bars bought	7,453	Feb. 22—Sovs. for export	5,000
„ 23	nil	„ 23—	nil
„ 25	nil	„ 25—Bars sold	13,741
„ 26 Bars bought	413,000	„ 26—	nil
„ 27	nil	„ 27—Bars sold	3,439
„ 28 Bars bought	1,681	„ 28—Bars	15,472
		Sovs	2,000
Total	£422,134	Total	£39,652

Net arrivals, £382,482.

Messrs. Samuel Montagu and Company write as follows on February 27, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £150,503,734 on the 20th instant (as compared with £149,837,878 on the previous Wednesday), and represents a decrease of £3,402,581 since April 29, 1925—when an effective gold standard was resumed. About £706,000 bar gold from South Africa was available in the open market this week. The bulk—about £413,000—of this amount was secured by the Bank of England, as shown in the figures below, and the balance was disposed of as follows :—£110,000 for a special Continental order, £55,000 for India and £124,000 for the Home and Continental trade. There was a net influx of gold of £389,932 during the week.

It was announced in Prague on February 26th that a Bill would shortly be introduced to stabilise the Czechoslovakian currency. The rate of stabilisation is to be Cz.K. 33·75 to the U.S. dollar, thus fixing the gold contents at 44·58 milligrammes of fine gold and making the gold parity with the pound sterling Cz.K. 164·25.

Following are the balance of trade figures for India for the month of January (in lacs of rupees) :—

Imports of merchandise on private account	26,84
Exports, including re-exports, of merchandise on private account	30,33
Net imports of gold	1,31
Net imports of silver	1,02
Net imports of currency notes	...
Total visible balance of trade (in favour of India)	1,25
Net balance on remittance of funds (against India)	2,65

SILVER.

During the week under review silver has been steady and a fair demand was received from China until some hesitation was manifest owing to prices here rising rather above Eastern parities. India has shown some interest in the market, but quotations generally ruled above those which Bazaar operators were willing to pay. On the 25th instant the market rose sharply in response to a good Eastern demand, which, owing to scanty offerings, carried the rates to 26d. for cash and 26 1/16d. for two months' delivery, representing rises of 1/16d. and ¼d. in the respective prices. America and the Continent have contributed to the supplies and there has also been some reselling on China account, but the higher prices have not so far provoked any freedom of selling and the tone of the market in consequence remains steady. The following were the United Kingdom imports and exports of silver registered from mid-day on the 18th instant to mid-day on the 25th instant :—

IMPORTS.	£	EXPORTS.	£
Germany	23,237	British India	13,033
Other countries	8,220	Other countries	5,010
	£31,457		£18,043

Reports and Notices.

LEYLAND MOTORS LIMITED.—The report for year ended September 30, 1928, reveals an increased profit on trading, the gross profit being £586,694 against a gross profit of £395,734 for preceding year. The net profit is £405,999 against £233,842. Deducting an adverse balance of £284,625 at September 30, 1927 there is a credit of £121,373 available. Out of this eight years ended December 31, 1928 of 6 per cent. cumulative preference dividend are being paid, absorbing £76,800, thus leaving a credit of £44,573 to carry forward. The directors state that they do not propose to submit any further scheme for the reorganisation of the capital of the Company.

ROLLS ROYCE, LIMITED.—The report for the year ended October 31, 1928, shows that the company has had a good year, for net profits have expanded from £156,727 for year 1926-7 to £185,610 for 1927-8. The ordinary shareholders again receive 10 per cent. The sum of £30,000 is put to income tax reserve. The previous year this fund received an allocation of £20,000. The sum of £40,000 is put to reserve against £50,000 last year. The carry forward is increased from £30,294 to £64,685.

TILLING-STEVENS MOTORS, LIMITED.—The report and accounts for the year 1928 shows a profit of £81,105 (last year £24,899), adding the amounts brought forward there is a total available of £89,274. From this is deducted depreciation reserve £10,000 (last year same), reserve for contingencies £7,500 (last year same), reserve for taxation £9,500 (last year nil). In addition the preference dividend for the half-year to June 30, 1926 (£8,700), was paid on September 1, 1928, and the preference dividend for the half-year to December 31, 1926, is payable March 1, 1929, which leaves a balance of £44,862. A proposal is made to give preference shareholders the whole of their arrears and to enable the company to make a distribution to the holders of ordinary shares without unduly depleting the company's cash resources.

D. NAPIER & SON.—The Directors propose to distribute by way of return of capital to shareholders part of the funds invested outside the business (resulting largely from the realisation of the car stock). Whilst strictly the capital to be paid off should be that paid up on the 7½ per cent. and the 8 per cent. preference shares, since this ranks for repayment in priority to the ordinary capital, such a return of capital would hardly be acceptable to holders of these preference shares, which stand at a premium. They will, therefore, submit proposals (which if passed by all classes of shareholders will be subject to confirmation by the Court) for the return of 15s. per share of the capital paid up on the ordinary shares, leaving the preference capital unaffected. The outstanding debenture stock will be paid off at the same time. The company will still retain a sum in excess of the total issued preference capital invested outside the business in Government securities.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Field work remains in abeyance owing to the prolonged spell of severe wintry weather over the United Kingdom, so that crop conditions are unchanged. The heavy frosts, however, will greatly improve the seed bed. Native wheat was freely offered at most of the Statute markets and prices tend easier in sympathy with imported descriptions. In the floating and forward cargo section, prices have steadily fallen under pressure to sell Plate descriptions, due to increasing supplies and unsold cargoes afloat. Demand continues restricted by the suspension of transport on Continental

waterways, which are still in a frozen condition, the small inquiry being chiefly from Italy and France. North American sellers were reluctant to grant concessions, but are now being forced to come into line under competition from Argentina, and with improved crop reports, some attempt may be made to dispose of the large reserves on hand. Meanwhile, shipments continue on a liberal scale. Part cargoes of Australian afloat sold 47s. 9d., ditto February-10th March 48s. 6d. to Italy, and Rosafe, 63 lb. March, 44s.; ditto, 64 lb. afloat, 43s. 9d., both to France, all per 480 lb. c.i.f. terms. Feeding stuffs quiet, but Plate maize firmly held, reports of rain impeding harvest operations. Wheat easier. No. 2, Northern Manitoba, 52s.; No. 3 ditto, 51s.; No. 4 Manitoba, 49s. 6d.; No. 5, 45s.; No. 6, 39s. 6d.; Rosafe, 64 lb., 46s.; Barusso, 63½ lb., 46s.; Australian, 49s. 6d., all ex ship per 496 lb.; English, 9s. 7d.-9s. 10d. per 112 lb. Flour quiet. London standard grade, 39s. 6d.; town whites, 40s. 6d.; patents, 41s. 6d.-42s. 6d. per sack delivered in the Home Counties, with 6d.-1s. per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 36s.-38s. 6d.; Minneapolis, 36s. 6d.-38s. 6d.; Australian, 36s.-36s. 6d. ex store. On c.i.f. terms Manitoba top patents, February-March, quoted 35s. 6d.-36s. 6d.; export ditto, 33s. 6d.-34s. 6d.; Australian, 33s.-33s. 6d. per 280 lb. AMERICAN WHEAT MARKETS.

Reports of drought in India, coupled with sporadic revivals in export inquiry, were insufficient to counteract the effects of better weather news in America and heavy outbreaks of professional selling. The tendency throughout the week was downward, with occasional short-lived rallies. Quotations:—

Nearest Future.	Jan. 4, 1928.	Feb. 29, 1928.	Jan. 2, 1929.	Feb. 20. 1929.	Feb. 27, 1929.
Winnipeg (No. 1 Manitoba)—Cents per 60 lb.)	137	139	122	134⅞	130⅛
Chicago (No. 2 Winter)—Cents per 60 lb.	130⅜	133⅝	116⅜	128⅝	123⅛

Visible supplies of wheat in Canada at 84,164,000 bushels show an increase of 1,290,000 bushels as compared with the previous figure. Supplies a year ago stood at 75,209,000 bushels.

COAL.

Our Cardiff correspondent writes:—As a result of agreements with the tippers and trimmers for an extension of working hours, the congestion at the South Wales docks has been considerably reduced, and this week the number of vessels waiting loading turns has been reduced to about 60, compared with over 100 a fortnight ago. Overtime is being worked, and shipment is now almost continuous round the clock. In the absence of further frost, it is anticipated that conditions at the ports will again be normal in the course of the next two or three weeks. Notwithstanding the accumulation of stocks, the market has firmly maintained its recently improved condition, and for some qualities prices are even higher than they were a week ago. There is a broadening of inquiry, and the French, Italian and other railways are at present buying on a greater scale than they have done at any period during the past three or four years. Moreover, many new contracts have been arranged for backward positions, and a large proportion of the collieries are now well sold over the whole of the year. The following are the current approximate quotations:—Best Admiralties, 19s. 9d. to 20s. 3d.; seconds, 19s. 6d. to 19s. 9d.; best drys, 19s. 3d. to 19s. 9d.; Black Veins, 19s. 3d. to 19s 6d.; Western Valleys, 19s. to 19s. 3d.; Eastern Valleys, 18s. 6d. to 19s.; best small steams. 14s. to 14s. 3d.; cargo smalls, 12s. 6d. to 13s.; coking smalls, 14s. to 14s. 3d.; anthracite best large, 33s. to 35s.; Red Vein, large, 21s. to 25s. 6d.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 41s. to 43s. 6d.; stove nuts, 40s. to 42s. 6d.; rubbly culm, 10s. 9d. to 11s. 3d.; foundry coke, 25s. to 37s.; patent fuel, 19s. 6d. to 21s. 3d.; pitwood, ex ship, 25s. 3d. to 25s. 9d.

Our Sheffield correspondent writes:—The recurrence of the wintry weather has increased further the demand for house coal, deliveries of which are considerably in arrears. Business has also expanded in fuel for overseas and for industry. The working of collieries has greatly improved. Several idle pits in South Yorkshire have been restarted, and others are now working up to capacity. Prices are firmer all round. The improvement in the fuel market has extended to coke. Iron smelters are buying on a more liberal scale than for a long time, and there is a brisk overseas demand for foundry coke. Prices continue to stiffen. Best brands of blast-furnace coke are now 14s. and 14s. 6d. at ovens.

Our Glasgow correspondent writes:—The market position has not changed much. There is still little coal available and prices all over are fairly maintained. No official announcement has yet been made concerning the coal owners' new scheme. Shipping prices are approximately as follows (f.o.b. district ports):—Lanarkshire: Ell best, 18s. 6d.; splint best, 19s. 6d.; splint second, 18s. 6d. to 19s. 6d.; navigation, 18s. 6d.; splint second, 16s. 6d.; steam, 16s. 6d.; hartley. 18s. 6d.; trebles, 17s. 6d.; doubles, 16s.; singles, 14s. 6d.; pearls, 12s. 6d.; dross, 10s. 6d. Fife: screened navigation, 19s. 6d.; first-class steam, 18s.–18s. 6d.; third-class steam, 17s.; trebles, 17s. 6d.–18s. 6d.; doubles, 17s.; singles, 15s.; pearls, 13s. Lothians: Prime steam, 16s. 6d.; secondary steam, 16s.; trebles, 17s. 6d.; doubles, 16s. 6d.; singles, 14s. 9d.; pearls, 13s. Ayrshire: Unscreened navigation, 16s. 6d.; jewel, 18s. 6d.; steam, 17s. 6d.; trebles, 17s. 6d.; doubles, 16s. 6d.; singles, 14s. 6d.; pearls, 12s. 9d.; dross, 11s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Rather quieter conditions have developed in the iron and steel markets during the past week, but the general view has been that this is only temporary. The recent price advances in some descriptions of British materials and the difficulty of doing business with Continental steelmakers under the existing conditions of high prices and prolonged delivery have resulted in buyers adopting a reserved attitude. This, however, was only to be expected, and it is thought that more active business will develop within a week or two. The advance in the price of British pig iron has been maintained, although it has caused buyers to resort to a hand-to-mouth policy again. In the semi-finished steel department a considerable inquiry has been reported, and most of the business which resulted has gone to the British steelworks. In most of the districts in which Continental

1-4, Great Tower Street, London, E.C.3

semis are largely used British prices are now competitive. The demand for finished steel has become somewhat erratic, and the higher cost of raw materials, including pig iron, semis and scrap, has resulted in an advance in the price of some descriptions of British finished steel Export business has been irregular, but it is anticipated that certain overseas markets from which the demand has been disappointing will shortly begin buying on an improved scale.

Our Middlesbrough correspondent writes:—Pig Iron: The position regarding pig iron still continues to improve. The comparatively small output of pig iron is not equal to the demand, and iron of all descriptions is extremely scarce, and practically impossible to buy for prompt shipment. Cleveland iron is very scarce and quantities can only be purchased for delivery some months ahead. Notwithstanding, the makers have not increased prices, which remain on the following basis:—No. 1, 69s. 6d.; No. 3 G.M.B., 67s.; No. 4 foundry, 66s.; No. 4 forge, 65s. 6d. The hematite position is distinctly better, with iron scarce. Mixed numbers are quoted at 72s 6d., but the production is not equal to the demand; a further rise in price is anticipated, and possibly more furnaces on this class of iron will be put in to meet the demand. The steel trade still continues to improve, and practically no further business is being done with the Continent. Any imports arriving are under old contracts. The steelworks are busy on shipbuilding material, and orders for three new ships, totalling 30,000 tons, have been placed locally. In other directions the works still continue fairly busy, and prices remain on the following basis:—Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 5s.; steel rails, £8 10s. The ore market is distinctly strong, with prices increasing, and available supplies very scarce. Coke also is a firmer market, and best Durham blast-furnace coke is nearly 18s. 6d. per ton delivered.

Our Sheffield correspondent writes:—A further stiffening of the scrap market indicates increased production and improved outlook for steel, but the expansion is still mainly in the cheaper basic qualities. Basic steel scrap has gone up this week to 66s., and there is a ready market for all that can be obtained by the merchants. The export demand, too, is being maintained. Owing to the dearness of scrap makers of basic steel are finding it necessary to put up their quotations. The position of best acid steels, owing to the absence of substantial railway work, improves but slowly and ordinary lines of Sheffield steel are still quiet. The requirements of the automobile industry, although large, are rather disappointing, compared with recent years. Best tool steels are quiet, with a better demand for the less expensive qualities. The severe weather is affecting adversely all trades supplying tools and steel material for building and out-door occupations. Exports of tools and cutlery are rather brisk, whereas the home trade lacks vitality. Local sentiment is fairly optimistic.

Our Glasgow correspondent writes:—There is still no settlement of the dispute in the manufactured iron trade, which is now in its fourth week, and it is understood that the Ministry of Labour is endeavouring to secure a resumption of negotiations. Business in the heavy steel trade shows some expansion, and the demand is steady. The difficulties in obtaining supplies of semi-raw material from the Continent have not yet been overcome, and home makers are benefiting accordingly. Several very considerable orders have been placed with local structural engineers within the past few weeks, both for home and export, and the position in this branch of industry is at the moment satisfactory. Locomotive builders in Glasgow have not been fully employed of late; but the North British Locomotive Co., Limited, of Glasgow, have secured a contract for thirteen locomotives (the total value of which is approximately £100,000) for South Africa, of which early delivery is required. Within the past few days a number of shipbuilding orders have been placed in Scotland with yards on the Clyde, Forth and Tay. In the sheet trade, while plants are running at full capacity, the volume of new business placed is not quite satisfactory, but prices remain firm.

Our Cardiff correspondent writes:—In the South Wales iron and steel trade the market position remains, as a whole, quite good, and during the present week a number of tinplate mills have resumed operations. The recent increase in the price of steel bars, and also in the cost of coal, had induced manufacturers to consider the question of the advisability of raising the minimum price of tinplates above the present figure of 18s. per box, but at a meeting at Swansea on Tuesday a decision was reached to make no change at present. Galvanised sheets are easier at £13 10s. to £13 12s. 6d., compared with £13 12s. 6d. to £13 15s. per ton the previous week. There has been a further advance in heavy steel scrap, which was quoted at Swansea on Tuesday at 71s. to 72s. 6d. per ton, compared with 68s. 6d. to 70s. at the beginning of the year. Shipments of tinplates last week totalled 142,022 boxes, but increased supplies were received from the factories, and stocks totalled 260 319, compared with 257,312 boxes the previous week, and with 198,164 boxes at the corresponding period last year.

OTHER METALS.

Tin.—The market opened with a firm tone, due largely to reserved offerings, and an improvement in Eastern advices, but later sellers were more in evidence, and, with buyers somewhat indifferent, values receded. Stocks in London and Liverpool warehouses for week ended February 23rd amounted to 8,804 tons, compared with 2,776 tons at corresponding period last year. Dealings in standard cash were recorded at £220 5s. to £220 15s.; three months, £222 12s. 6d. to £222 and £222 15s. In the East 350 tons sold at £225 2s. 6d. ton c.i.f. terms.

Copper market active and prices further hardened sympathetically, with stronger advices from New York, and a brisk demand for forward dates, sellers adopting reserved measures. Standard cash sold £82 12s. 6d. to £82 13s. 9d.; three months, £83 12s. 6d. to £83 13s. 9d.

Lead.—Slight irregularity was noticeable at times, but a good turnover resulted at firm prices, though offerings proved adequate for requirements. Good soft foreign pig, March, sold £23 17s. 6d.; April, £23 17s. 6d. to £23 18s 3d: May, £23 17s. 6d., £23 16s. 3d. and £23 17s. 6d.; **June, £23 17s. 6d.**

Spelter remained quiet, but market about steady as sellers refrained from pressing. February sold £26 7s. 6d.; March, £26 3s. 9d.; April, £26 6s. 3d.; May, £26 8s. 9d.; June, £26 8s. 9d.

Antimony slow. English regulus, spot, £54 to £55; foreign ditto, spot, £38; February-March, £34 ton c.i.f.

Aluminium steady. Ingots and bars for home delivery, £95 ton.

Wolfram quiet. Straits quality, 18s. to 18s. 3d. per unit.

Quicksilver maintained. Spot, £22 5s. to £22 10s. per bottle.

Tin Plates steady. I.C. coke prompt and forward, 18s. to 18s. 3d. f.o.b. Swansea.

THE COTTON TRADE.

Liverpool, February 27th.

Since last week-end much more activity has been shown and prices are about 20 points higher than a week ago. The market is still waiting for something upon which to work, but in the meantime consumption is going on. Forecasts of the world's consumption of American cotton are in the neighbourhood of 15 to 15½ million bales. These figures of consumption mean a drain on reserves, which are below those of several years, and barely the average of the past eight to ten years. Attention will soon be paid to new crop prospects, and one or two things should be kept in mind. The sale of fertilisers is small, 20 per cent. below the normal, the seed is none too good, whilst the Mississippi, with an enormous amount of snow and ice in the hinterland, is less than 2 feet below flood level. Further rains, which delay farming preparations, are reported to-day from the Eastern belt. Spot sales for the week, 21st to 27th (inclusive), are 43,000 bales, of which

23,050 bales are American, 400 Brazil, 1,700 Argentine, 6,750 Peru, 8,650 Egyptian, 400 African, 1,750 East Indian and 300 sundries. Imports for the same period are 70,926, of which 48,838 American, 399 Argentine, 13,232 Egyptian, 3,796 African, 4,572 East Indian and 88 sundries. Quotations to-day are: American middling, 10.71; Egyptian Sakel., 18.15; Egyptian uppers, 12.55; Brazil fair, 10.91; Peru G.F. mod.-rough, 12.75; Peru G.F. smooth, 11.66; West African midd., 10.76; East African G.F., 12.45.

MANCHESTER, February 27th.

There has been a welcome improvement in demand. Inquiry in yarn and piece-goods has undoubtedly been stimulated by the hardening tendency in raw material rates, and buyers have displayed increased confidence in present values. In cloth for India a larger business has been offering than for some time back. Substantial buying has taken place in dhooties and other light fabrics for Calcutta, and useful support has come from Bombay and the up-country markets. Some merchants have purchased speculatively on a considerable scale. Although a little uncertainty exists with regard to trade for China, some very fair lines have been booked for Shanghai in greys and whites, and further orders have been placed for Singapore and Java. A little more activity has been reported for Egypt and South America, and the recent improvement in the offtake in home trade fabrics has been maintained. Inquiry in American and Egyptian yarns has broadened and the turnover has increased, but it has been exceedingly difficult for spinners to improve prices. The short-time movement in the Egyptian section has not yet brought relief, and some spinners are hampered by heavy stocks.

THE WOOL TRADE.

Our Bradford correspondent writes: The market is still suffering from the feeling of uncertainty caused by the recent decline in wool values, and although there are indications that users are beginning to take a little more interest in tops and yarns, the actual turnover is still very restricted. No doubt many are waiting for a lead from Coleman Street Wool Exchange next week, but it seems probable that London will only confirm what has already taken place in the primary markets. Merino wool seems to be approaching the stabilisation point, and at current rates is certainly not without attraction. Crossbreds, on the other hand, are still uncertain, and users are evidently waiting for a further readjustment of values to bring the lower qualities more into harmony with merinos. There has been more inquiry for merino tops and some fair orders have been booked, but spinners show little inclination to depart from their established hand-to-mouth buying. Crossbred tops are largely neglected and prices remain very irregular. Demand for yarn remains restricted and in the case of botanies offers are generally very low—mostly on a basis of about 3s. 6d. for 64's tops which, even allowing for the recent decline, is still unworkable. Crossbred yarns are very dull and quotations are nominal. Demand for piece-goods is less active so far as the home trade is concerned, but a moderate amount of business is being done on export account.

Facilities for Travellers in S. America

Travellers to Latin-American countries can obtain valuable facilities through the Bank of London & South America. With branches and agencies at all strategical points, this Bank issues letters of credit, renders status reports on South American firms, supplies a free Monthly Review of market information, and offers a complete international banking service between Great Britain and South America.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

Better news has come to hand this week from all the different selling centres in Australia, and at current values selling brokers are apparently prepared to meet the market. As there is still a very considerable weight of wool to sell, the policy now adopted is the right one. It is understood that there is a reasonable amount of Cape wool still to offer, largely owned by up-country speculators, and they are all waiting for values to recover to the level ruling at the beginning of the year. The probability is that they will have to wait a considerable time before such a recovery as this is realised. There seems to be far more speculative buying of the South African than the Australian clip. All sections continue to be fairly free buyers in Australia. Japan is still actively competing for the best wools, and there is also a fair measure of buying by Germany and the home trade, but France is still slack. Moderate prices have ruled this week at Melbourne for some well-known marks, and anyone buying to-day can apparently obtain good wool at reasonable cost. During the week the list of arrivals for the London sales which begin next Tuesday has been published, 114,000 bales being available. Puntas will be represented by some good quantities of new clip, and no doubt these will sell readily. New Zealand offerings will overshadow all the rest, practically 46,000 bales being available. There should be an excellent show of slipes and greasy fleece, probably the best display of any series this year. It is difficult to say how prices are likely to move, but most people are looking for an average fall of a good 5 per cent. It may be found necessary to carry forward a fair quantity, for most of the buyers are now landing considerable weights of wool from overseas. It is quite possible, however, that under the combined competition of home trade and Continental buyers a good buying spirit will be seen. There is a feeling that values have about touched bottom. Slightly lower values in London will bring that centre more into line with Australia, but there are indications of more interest in merino tops and if this continues no further serious fall is likely in that description of wool.

THE JUTE MARKET.

DUNDEE, February 27.

Prices of raw jute have fluctuated to some extent since the last report. Calcutta mills and shippers were eager buyers, which sent the value of First Marks to £40, but, with a cessation of business and speculators depressing the market for end of the month settlements, a return to lower prices resulted, and Firsts could again be bought at £38 10s. for good marks, March-April shipment. Spinners here have acted cautiously all the time, and their purchases have been confined mostly to secured parcels on spot and afloat which the holders were offering at much less than the rates quoted for shipment material. Daisee assortment rose to £35 for March-April shipment, but sales were taking place on the spot at £34, at which rate some sellers are willing to sell for shipment now. The spot supply has been considerably reduced in recent weeks, and sellers are becoming more reserved in offering. Shippers have been reluctant to offer to this market on account of the scarcity of material in India available for sale. Preparations for the sowing of the new crop are being commenced under what are described as favourable conditions. Already, sellers are indicating a price of £38 for August-September shipment of First Marks, c.i.f., the Continent. Jute yarns are very firm, but now quieter. Spinners are all asking 3s. 7½d. for common 8 lb. cops and 3s. 8½d. for 8 lb. spools, but so long as buyers are able to satisfy their needs from second hand sellers at ½d. less spinners are unable to obtain their quoted rates. They are well foresold, however, and are refusing to accept less. Twist is firm at 5⅞d. to 6d. for 3-ply 8 lb., and sacking yarns are raised to 4d. lowest for 24 lb. weft and 5⅛d. for 8 lb. chains. Rove is higher at £28 10s. wanted for 48 lb. and £18 10s. for 200 lb., while fine yarns are very firm. Carpet 14 lb. warp has been more freely purchased at 5⅞d. A good inquiry prevails for hessian cloth, but buyers are not keen to add to their already large purchases. A very good business has been done during the past month, however, and prices are very firm. According to width and weight 4 11/16d. to 4⅜d. is being paid for 10½ oz. 40 in. hessians and 3 9/16d. to 3⅝d. for 8 oz. The widths, 45 in. to 60 in., are very well sold, and difficult to obtain before June. Manufacturers on the whole, are satisfactorily placed, and orders are being refused owing to their inability to deliver in time. Linoleum hessians have improved as the result of a good business done, while heavy goods makers are slowly but steadily obtaining higher prices.

HIDE, LEATHER, AND ALLIED TRADES.

In spite of the slight improvement in the demand for leather, prices of domestic hides and skins were again easier at the auctions held last week. In Bermondsey all ox and heifer hides, together with cows, were unsold on account of the lowness of the bids, while in the provinces these goods sold on average at from 7d. to 7⅞d. for firsts and 6⅞d. to 7d. for seconds. Calf skins were a slightly better market for the lighter weights, but heavies were inclined to show further weakness. Sheepskins were also easier, wools and hogs being from 6d. to 1s. per skin cheaper. At the time of writing there seems to be a little more optimism in regard to the position of English hides, and it is expected that this week's sales will show more stability. In the foreign hide market a slight improvement is already noted in the face of rather more activity on the part of America, and to a lesser extent Russia. Prices have shown little alteration—Argentine ox being quoted at 9¼d.—but the marked depreciations which have been in evidence of late have ceased in regard to certain lines, with the result that more interest is to be noted. This does not mean to say that further fluctuations will not take place, as it is felt that dry hides, particularly, must go still further lower. The Chicago market is called as steadier, with packer hides unchanged from the previous week at 14½ cents. The demand for sole leather continues to show signs of further slight improvement, and some seem to think that bottom has been touched. At the same time, business continues to be confined to the smallest possible amounts, and no matter what inducements are held out to purchasers, bulk business is impossible to transact. With the bad weather experienced of late, it naturally follows there has been an increase in the demand for bends for repair purposes, while in addition the commoner grades suitable for manufacturing purposes show signs of looking up. Upper leathers are only in limited request, glace kid in both black and browns account for the best part of the business done. The unsettled state of prices for box and willow calf leathers makes consumers shy of placing orders for anything except to cover their immediate wants. Curriers report trade as quiet, with hardly any orders being received for export.

VEGETABLE OILS AND OILSEEDS.

Markets this week have been dull and only a small business has been done. Linseed oil is weak for lack of support. Current value is around £29 per tin naked ex Hull mill for spot and March-April delivery, later positions being at a small premium. Cotton oil is slow and unchanged. Crude Egyptian offers at £28 5s. and common edible at £31 15s. spot and March-April ex Hull, but fails to attract. Other soft oils are quiet and unchanged. In the oil-seed section linseed has been a declining market and more interest is in evidence at the lower level. Plate on spot at Hull is quoted £16 2s. 6d. and £15 17s. 6d. is reported paid for afloat and about represents the value of the distant position and February-March shipment. The quantity of linseed on passage to Europe has increased to 240,700 tons, an advance of 19,800 tons on the week, and compares with 282,000 tons a year ago. Little ispassing in cottonseed, £10 5s. being current nominal value of black Egyptian for shipment. For Sakellaridis on passage £9 15s. has been paid, and for Bombay, March-April £8 10s. Oilcakes and meals are in moderate demand and late prices are maintained.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There is an improvement in trade demand both here, and in the United States, which shows signs of dispelling the marked depression that has now prevailed for a prolonged period. Supply and demand now bid fair to become adjusted, as latest reports from Cuban sources point to the fact that yield from canes neglected during the period of restriction is decidedly deficient over a large area. With the exception of T.L. granulated, Messrs. Tate and Lyle raised quotations 3d. per cwt. There was quite a liberal offtake of home-grown granulated at full recent rates. Imported steadier. Messrs. Tate and Lyle's cubes now 25s. 9d. to 29s. 3d. as to quality; No. 2, also London and T.L. granulated, 22s. 10½d.; yellow crystals, 21s. 7½d.; home-grown granulated, 22s. 3d. to 22s. 6d. as to factory, and Cupar 22s. 9d. T.L. granulated sold 22s. 1½d.; Dutch J., 24s. 3d.; white Mauritius, 21s.-21s. 9d.; American pieces, good yellow, 18s. 6d. to 18s. 9d. Continental parcels for shipment unaltered. Foreign, 96 per cent., March, sellers, 9s. 3d.; April, 9s. 4½d. c.i.f. U.K. Fair sales in the terminal sections and market firm. Raw, July sold 9s.; August, 9s. 3½d.; December, 9s. 6d. White, March sold 12s. 3d., August 12s. 4½d. cwt. Cuban receipts last week 232,886 tons, as against 229,964 last year; exports 123,458, against 82,828; stocks, 820,593, against 709,706. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending February 23rd totalled 153,396 tons, compared with 93,901 at corresponding period last year.

TEA.—Indian auctions during the week totalled 48,655 packages being on a smaller scale than the preceding week. The auctions went off with a decidedly better swing and quite a steady market was experienced. A few finest autumnal parcels tended in sellers favour and cleared readily; 25,870 packages Ceylon were offered and met a fair general demand. Finest descriptions, which were in rather light supply, cleared readily at firm prices, but plain and medium sorts were occasionally easier. Of leaf kinds, orange pekoe were well competed for, partly on export account. Java and Sumatra auctions met with fair support at steady to rather easier prices. There is no improvement to note in the market for China teas.

COFFEE.—Market shows general stability and fair supplies in auction mostly cleared at full to rather dearer prices. Costa Rica sold readily. Good to fine bold colory at 155s. to 183s.; peas to 177s. 6d.; Kenya bold sizes reached 142s. 6d.; Kilimanjaro, 139s. 6d.; Uganda, 117s.

COCOA.—Market generally quieter during the week. Accra F/F March-May sold 46s. 3d. to 46s. 9d., 46s. 3d.-47s. f.o.b. Terminal: March sold 49s. 6d.-50s.; April, 50s. 6d.-51s.; May, 51s. 3d.; July, 52s. 7½d.; September, 53s. 3d.-54s.; December, 53s. 3d.

RICE.—Market quite idle and Eastern, also Spanish grain, unaltered The sale of 100 tons Egyptian is recorded at 19s. landed terms London, just arrived. Bran, steady quiet. Broken rice, dull.

BEANS.—In demand and strong features prevail for butters Madagascar new crop spot London sold 44s.; old, 40s.-41s.; afloat, "Clan Macintosh," at 40s. to 40s. 6d.; "Marechal de Gallieni," 40s. 9d. to 41s.; Rangoon haricots, March, sold 20s. 6d.; April 19s.; May, 18s. cwt. c.i.f.

PEAS.—Steady quiet. Japanese new crop spot 20s. 3d.; afloat 19s.-19s. 9d.; February-March sold 18s. 3d.; March-April, 18s. 1½d. cwt. c.i.f.

SPICE.—A quiet market for Pepper. Lampong, January-March, 1s. 4d.; March-May, 1s. 3⅝d.; May-July, sold 1s. 2½d.; August-October, quoted 1s. 1⅝d. Muntok, January-March, 2s. 2½d.; March-May, 2s. 2½d.; May-July, 2s. 1⅝d.; August-October, 1s. 10½d. lb. London stocks increased 165 tons on the week, mainly black. Malabar unaltered. Zanzibar cloves, spot, 1s. 4⅜d.; December-February, 1s. 5d. lb. Pimento unaltered. Sago flour afloat, 11s. 6d.; February-April, 11s. 7½d. c.i.f.; U.K.-Dutch Farina, 12s. 1½d. cwt. f.o.b. Tapioca and ginger unchanged.

FRUIT (dried).—Currants continue in quiet request and barely steady. Pyrgos quoted, 45s.-46s.; Patras, 47s. 6d.; choice, up to 51s.; Amalias, 46s.-46s. 6d.; Gulf, 49s.-52s.; Vostizza, 50s.-56s. Sultanas, steady, with old crop Australian chiefly inquired for. Medium to good Smyrna, spot, 37s.-45s.; Cretan, 40s.-70s.; Greek, 36s.-65s.; Australian old, 27s. 6d.-31s.; new, 33s.-15s.; Californian soda, bleached, 35s.-38s.; unbleached, 29s.; Cape unbleached, 33s.-37s.; bleached, 45s.-50s. Raisins, dull. Valencia quarter boxes, 50s.-53s.; Australian, 32s.-36s. Figs in better demand. Genuine new, spot, 28s.-32s. Dates maintained, with Siar in chief request. Hallowis new, spot, 28s.-30s.; Khadrowie, 23s.; Siar, 15s.-17s.

EVAPORATED FRUITS.—Market fully steady as stocks are in manageable compass, but business is slow to expand. Plums experienced a better movement, especially for medium sizes, but pears move off slowly and other descriptions without material change. Californian plums, 20's-30's, 65s.; 30's-40's, 57s.; 60's-70's, 43s.-43s. 6d. Australian pears range from 57s. 6d.-70s. as to quality. Apricots, South African new crop, Royal, 60s.-117s. 6d.; Cape, 72s. 6d.-82s. 6d.; Californian, new, 85s.-117s. 6d. Peaches, Californian choice, 50s.; extra choice, 53s.; fancy, 58s. Apples, Californian spot sliced, extra choice, 67s. 6d. Almonds, steady, but trading restricted. Mazagan, 142s. 6d.; Mogador, 140s.; Majorcas, 145s.; Bitter-Jordan, 185s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—Trading is adversely affected by the spell of cold weather, but arrivals of Californian were somewhat lighter and prices keep steady for all descriptions. Singapore pines quiet on spot, but forward parcels attract rather more attention, while there is also some inquiry for South African to arrive. Italian tomatoes in moderate demand on spot, but forward business checked by high-asking prices.

CANNED FISH.—Business continues restricted, and generally position unaltered. Portuguese clubs quoted 5s. per dozen tins. Lobsters: Best halves, 140s.-145s.; and quarters, 77s. 6d.-82s. 6d. Salmon steady. Red tall, spot, 42h. 6d.-45s.; pink, talls, spot, 26s.-27s. 6d.; halves, 32s.-34s. Japanese crab firmer and finest quality realises 97s. 6d.-100s.

CANNED MEATS.—Firm, and Ox Tongues realise extreme rate on scarcity, but lower prices are being accepted for lunch tongues. Danish cooked hams move off steadily at about 1s. 7d. per lb. for cases of 6 tins.

CONDENSED MILK AND MILK POWDERS.—Market steady as Continental supplies are held up owing to severe weather. Full cream sweetened English, spot, 45s.; Dutch ditto, 38s. 6d.; March-April, 38s.; machine skimmed, sweetened English, spot, 30s.; Dutch ditto, 25s.; March April, 24s.; all in 5 cwt. barrels. Powders: Spray F.O., 26 per cent., 2 by 56 lb. tins crated, prompt,

94s.; M.S. (1 cwt. cases), prompt, 40s., roller process F.O., 26 per cent., prompt, 78s. 6d.; M.S. ditto, 31s. 6d.; all net, duty paid ex wharf London. On the grocery side F.O.S., 21s.; M.S.S., 10s.; basis per case, usual packing. Danish cream, evaporated unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; sweetened condensed, 48 by 14 oz., 20s. per case.

HONEY.—Market continues firm with a good demand. Palish set Jamaica, 54s.; amber, set, 48s.; and manufacturing kinds, 42s. 6d.; Haitian, yellow palish, set, 50s; New Zealand sells readily, dark amber at 50s. 55s.; medium, 55s.-65s.; light, 65s.-85s.; whites and water whites, 65s.-87s. 6d. cwt.

RUBBER.

Market firmer, though attended by slight irregularity at times, and business proceeds with fair freedom. Sheet, spot, and February sold 1s. 1⅜d. to 1s. 1½d.; March, 1s. 1⅛d. to 1s. 0⅞d.; April, 1s. 1½d.; May, 1s. 1⅝d.; April-June, 1s 1⅜d. to 1s. 1½d.; July-September, 1s. 1⅛d. to 1s. 1¾d.; October-December, 1s. 2d. to 1s. 1⅜d.; January-March, 1930, at 1s. 2½d. to 1s. 2d.; January-June, 1s. 2d.; July-December, 1s. 2d.; and January-December, 1930, at 1s. 1⅞d. per lb. London stocks increased by 248 tons at 25,005, against 63,103 at same time last year; landings being 1,833 and deliveries 1,585. Liverpool stocks, 65 tons up at 4,151; landings, 316; deliveries, 251.

GENERAL.

JUTE.—Quiet and rather featureless. First February-March sellers, £34 10s.; March-April, £34 17s. 6d.; buyers, April-May sold, £35 10s. Lightnings, March-April, sellers, £33 7s. 6d. ton. Hessians very quiet.

HEMP.—Market for Manilla descriptions subject to some irregularity and prices were easier as shippers were more in evidence, and this, for the moment, proves a disturbing factor. J.2, April-June, quoted £36 15s.; K, ditto, buyers, £33 10s.; sellers, £34 10s.; **L.1, buyers, £33 10s.**; L.2, quoted, £28 15s.; M 1, £30 10s.; M.2, £27 10s. Flax quite a firm market, and, owing to closed navigation in the Baltic Sea, there is a mild run upon all spot parcels and prices move steadily against the buyer. Good qualities of flax tow also sought after and market very firm, but inferior grades remain dull. African and Mexican sisal unaltered. Manilla receipts for past week, 50,000 bales, against 21,000 last year; estimate for next week, 35,000; and following week 29,000. Shipments to U.K./Continent, last week, 5,000 bales; U.S.A., 10,000; Japan, 7,000; other countries, 5,000.

SHELLAC.—Market quiet. T.N. spot 195s.; May, 190s. cwt.; August 192s. 6d. to 194s. 6d.

COPRA.—A most dull and uninteresting market. Quotations largely nominal. F.M.S. Straits, February-March, Rotterdam, quoted £23 17s. 6d.; March-April, £24 2s. 6d.; April-May, £24 5s. South Sea, sun-dried, February-March, Rotterdam, £22 17s. 6d.; smoked ditto to Marseilles, 22 12s. 6d.; also February-March, Rabaul to Rotterdam, £23. Palm kernels, February-March, Hamburg, £19 6s. 3d.

MISCELLANEOUS.—Coconuts quoted 18s. to 20s. per 100. Coir yarn, Ceylon, £19 to £39 10s.; Cochin, £23 to £40 5s.; Ceylon bristle, £19 to £24 15s.; cinnamon leaf oil, 5½d.; citronella, Ceylon, 1s. 10d.; Java, 2s.

METROPOLITAN CATTLE.—February 27.

THE MONEY MARKET.

Conditions were a little easier this week, and, as a rule, money was obtainable at around 5 per cent. The market rate on three months' bills was a full 5¼ per cent., this being the rate needed to make the present 5½ per cent. Bank rate effective. On Tuesday the Bank of England again succeeded in obtaining the balance of the gold arrivals from South Africa, and the Bank return reveals

an increase of £573,281 in the Bank's gold stock, but to obtain the gold the Bank had to pay 84s. 10½d. per ounce, which is a little too near the Bank's selling price for comfort. The American exchange still keeps above the danger-point of $4.85, but the margin remains a small one, and early in the week a general feeling of nervousness was still apparent in the market.

* * *

As the week progressed the tone generally improved; for one thing money became more plentiful, for, as the Bank return reveals, bankers' deposits gained £7,143,224 during the week, largely as a result of a loss of £5,683,878 by Public Deposits. It would seem that this week Government disbursements more than balanced the steady influx of revenue. Next, the news regarding the American position has become more reassuring. It is becoming clear that New York banks are not inclined to take more European money for employment on the New York call market, and there is definite evidence that, as time deposits run off, the money so released is returning to London. A few weeks ago any foreign house in possession of dollars could find a ready use for them. To-day dollars are not so usable, unless, indeed, the foreign holder is prepared to lend them on the call market at his own risk.

* * *

It is this knowledge that has prompted some curiosity in the market as to the reasons for the steadiness of the New York exchange, and opinions have been expressed that the rate is being deliberately pegged at $4.85¼. No confirmation of these suggestions is forthcoming, and there seems no ground for placing any especial credence in them. This week there has been little business in dollars at all either way, and so little has occurred to move the rate up and down. From the standpoint of the Bank's gold stocks, the margin of safety is a small one, but as the demand for dollars has largely dried up, the market is coming to believe that it will prove sufficient.

* * * *

In short, the market is beginning to hope that the worst of the strain is now past. Of course, a rise in the New York rediscount rate would still profoundly modify the London outlook, but here again opinion in London is more hopeful. If it is true that foreign money is being driven out of Wall Street by the deliberate action of the American bank—and all the evidence points to this being the case—there is certainly good ground for hoping that an increase in rates in both centres will be avoided.

	Mar. 7, 1929.	Feb. 28, 1929.	Feb. 21, 1929.	Feb. 14, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate.....	5½	5½	5½	5½	4½ (Feb. 7,'29)
Banks' Deposit Rate..	3½	3½	3½	3½	2½ (Feb. 7,'29)
Discount Houses { Call	3½	3½	3½	3½	2½ (Feb. 7,'29)
Discount Houses { Notice.....	3¾	3¾	3¾	3¾	2¾ (Feb. 7,'29)
Market rate (3 months' bills)	5¼	5¼	5 3/16–¼	5¼	...

The period of anxiety, however, is not yet over, and another month must pass before it can definitely be said that no increase in rates need be feared. This month, too, will, apart from the main factor, be not too easy a period. It includes the end of the financial year and the Easter holidays, while at the end of the month, too, there will be a big turnover of funds in connection with Government repayments of maturing debt, and the final and big call due on the Treasury Bonds issued at the end of last year. In addition, the next three weeks will witness the final drive on the part of the tax collector. For these reasons, easy monetary conditions must not be anticipated, even though the recent tension is now slightly relieved.

NEW YORK MARKETS.

Our New York correspondent cables:—This week's Federal Reserve statement discloses a rise of $140 million in brokers' loans, the greatest increase being for demand loans. The member banks contributed to the rise, and borrowings at the Federal Reserve Banks are up on the week, but the latter rise is mainly due to seasonal causes. Bill holdings stand at a lower figure than a week ago, but there is little change in the Government security item, and the total credits of the reserve system are only slightly higher. The system reserve ratio is 69.7, showing a fall of 0.2 on the week, that for the New York banks being 77.3 (against 81.6 last week).

THE STOCK MARKETS.

The stock markets were dull as a result of monetary uncertainties and the reaction in New York, the tendency towards reduction of commitments being again in evidence. Gilt-edged lost ground, but a slight recrudescence in demand was experienced in home rails. In the industrial markets tobacco, gramophone and artificial silk shares, with certain exceptions, were subject to selling, and numerous investment securities, including bank and insurance shares, were lower on balance. Rubber shares were steady, but less active, while tea shares continued to decline and oils were reactionary. Kaffirs attracted little public interest, and dealings in Rhodesian mines were on a reduced scale.

THE COMMODITY MARKETS.

Trade reports this week indicate that activity has been well maintained. Supplies of coal for prompt shipment are scarce, and collieries are well booked for a few weeks to come. Activity in almost all branches of iron and steel is well maintained. Other metals are steady. The Liverpool cotton market is at last waking up, and prices have advanced. Manchester piece-goods are meeting with much better demand, both at home and abroad, but the American and Egyptian yarn sections still show little sign of improvement. Raw wool values, especially merinos, show signs of approaching a stable level, and Bradford topmakers are putting through some business, though the effect has not yet spread to spinners and manufacturers. The decline in hide values is now checked; there is a slightly improved demand for leather, and sections of the shoe trade are fairly well employed. Vegetable oils and oilseeds have declined. Wheat is slightly lower.

FOREIGN EXCHANGES.

The Foreign Exchange market was quiet, principal interest being centred in the dollar and the peseta. Sterling fell to within a fraction of the gold export point at 4.85 3/16, but the Montreal rate rose to 4.88. Paris gained three points at 124.24, while Brussels lost to the same extent at 34.96. Madrid was out of control and, after erratic movements, during which 33.10 was touched, the rate on Thursday was 32.80, against 31.85 last week. Berlin, after being 20.46, recovered to 20.45½. Stockholm touched 18.17, but settled down at 18.16½. The South American currencies were steady, though Buenos Aires lost 1/32d. at 47 2/32d. In the Far East the rupee was firm at 1s. 6d., but the yen again revealed weakness, being at one time below 1s. 9⅞d., but recovering on Thursday to 1s. 10 1/32d. Amongst forward rate movements, dollars were quoted at narrowed discounts of 3/32 cent and 5/16 cent for the two periods; the premium on forward Paris declined from 6 to 5 centimes for one month, and from 18 centimes to 15 centimes for three months. Brussels went to ½ centime premium for both periods. The silver market was steady, closing at 26d. for both spot and forward delivery as a result of a fair India and China demand. Hongkong remained unchanged at 2s. 0⅛d., but Shanghai gained ⅛d. at 2s. 7d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: London Midland and Scottish Railway, Southern Railway, Underground Electric Railways of London, Britannic Assurance, Refuge Assurance, Prudential Assurance, Scottish Widows' Fund and Life Assurance Society, United Kingdom Temperance and Provident Institution, Farmers' National Mortgage Institute of Budapest, Law Land, Courtaulds, Harrods, Associated Anglo-Atlantic Corporation, Golden Horse-Shoe Estates, and Spencer, Turner and Boldero. The railway situation is discussed in a leading article in the Stock Exchange section. The Prudential chairman's review dealt, *inter alia*, with the further reduction of the industrial expense ratio, and the distribution of the company's investments.

Mr LLOYD GEORGE'S PLEDGE.

THE big guns of the Conservative and Labour Parties have for some weeks been booming in the country, and on Friday of last week, at a luncheon to Liberal members and candidates, Mr Lloyd George sounded the tocsin and blazed the trail along which the Liberal hosts are to march to the battlefield. With the destructive criticism with which he opened his speech we do not propose to deal, although, if space permitted, we would break a lance with him over his attack upon the return to the gold standard, and range ourselves with him in his comments on recent blunders in foreign policy. It is, however, for a dramatic pronouncement of constructive policy that Mr Lloyd George's speech is notable. He gave to the country a definite pledge that, if the Liberal Party were elected to office in the coming election, they would "reduce the terrible figures of the workless in the course of a single year to normal proportions," and that not one penny would be added to the national or local taxation.

The pledge is startling in its boldness. The problem of persistent large-scale unemployment has been the tragedy of the last few years—the one vital problem for which nothing but petty alleviations have been found by any party in the State. This problem Mr Lloyd George now promises not merely to solve, but to solve within twelve months, and without adding one iota to the burden of rates or taxes. It is not unnatural that such a pledge by a political leader on the eve of a General Election should arouse scepticism among those whose experience of political pledges is at all considerable. But since unemployment is the great national question of the day, every contribution, from whatever quarter it is made, towards its solution demands the most careful and open-minded consideration from all who care for the country's welfare.

The first point to notice about Mr Lloyd George's pledge is that, although it is new and dramatic in itself, the proposals upon which it rests are not new. The methods by which Mr Lloyd George promises to remove abnormal unemployment are all to be found among the recommendations of the Liberal Industrial Inquiry. They comprise the reorganisation of transport, the intensive construction of roads and bridges, the clearance of the slums, accelerated housing schemes, quicker electrical development, large-scale telephone extension, land reclamation and drainage and afforestation. In principle all these measures were accepted by the Liberal Party a year ago. The one thing that is new about Mr Lloyd George's pronouncement is that he has staked his reputation by putting down in black and white the amount of employment that can be created and the length of time necessary for its creation. It is not possible to say precisely what is normal or abnormal unemployment, but a fair interpretation of Mr Lloyd George's pledge is that, in the space of one year, he will put between 500,000 and 600,000 idle workers into jobs. It is perhaps the time limit that is most startling. The schemes, he tells us, are ready. But it is possible for Mr Lloyd George, or anyone else, to cause Government departments to put them into operation so speedily that their progress at the end of twelve months could justify the hopes which he entertains? In the ordinary way we should reply that it is impossible, but we must confess that, where the personality of Mr Lloyd George is concerned, a prophecy would be rash. It is conceivable that the unrivalled driving force which created a great flow of munitions in war time could equally quickly and equally successfully tackle an equally big task in the days of peace.

If doubts are inevitable over the time elements of the programme, they are at first sight inevitable also on the subject of cost. On this side of the question Mr Lloyd George in his speech was not very explicit. He will save on armaments; "postpone Singapore until you have attended to England, Scotland and Wales." He will use the Road Fund for the roads; he will tax the betterment of site values upon the land to which value is given by the public expenditure on roads; he will expend on constructive works the public money which now has to go to bolster up the unemployment fund. Clearly, something very much more explicit than this is required if the country is to be persuaded that it is to get activity and prosperity without paying for it. But a full explanation both of the proposals and their finance is to be published next week, and we can only reserve judgment until full details are available.

While we await this further and fuller information we may content ourselves with making one or two general observations. In the first place, the critical and dangerous continuance of abnormal unemployment has brought us to a stage in which a bold vision and a vigorous constructive programme, such as have been definitely eschewed by the present Government, are necessary. Whatever criticisms may be levelled at Mr Lloyd George's programme it certainly does not lack in either vision or boldness. Nor do we think that in principle it is open to criticism. Times are critically out of joint, and the concentration of national resources upon employing the workless, not on "digging holes in the ground and filling them in again"—not, in other words, on relief works pure and simple—but on equipping the nation with assets which it requires, is statesmanlike in conception. Everything, however, depends upon the extent to which, and the speed with which, the principle is pressed, and the cost it will involve. If, for instance, to mention but one minor point, a big national loan is in prospect, what effect will be produced on the conversion prospects of the 5 per cent. War Loan, and in that way upon the course of the debt charges?

It is as unfortunate as it is inevitable that the vital question of unemployment should be made the shuttlecock of politics. It is not at the moment among the probabilities that at the next election the Liberal Party will climb from a tiny representation in the House to the largest party in the State, and it is, therefore, unlikely that Mr Lloyd George will have the chance of delivering the goods which he now promises. We hope, however, that, when the full details of his plan are available, they will be impartially studied by experts and politicians of all shades of opinion, and that all that is good and practicable in them will be adopted and put into force by any Government that the country may return to power in a few months' time.

MINORITIES.

THE most important item of business on the agenda of the Council of the League of Nations this week has been the problem of minorities, which has been raised by the representatives of two States members of the Council. It has been raised by the representative of Canada, Senator Dandurand, who himself belongs to a minority which is both linguistic and religious; and it has been raised simultaneously by the representative of Germany, Dr. Stresemann. Canada is one of those overseas countries in which the common adventure of ploughing virgin soil and planting new institutions on the new ground has happily created a sense of solidarity between diverse elements that might have remained asunder for centuries in the traditional atmosphere of the Old World. Germany is a country which has not had the best record in the Old World for the treatment of minorities in the past, which has had the tables turned on it in the Peace Settlement after the war of 1914-18, and which has now conspicuously mended its ways. The small Polish and Danish minorities that still remain within the frontiers of the Reich are at this moment probably as well off as any minorities anywhere. The other side of the picture is that the Germans themselves—who in pre-war Germany, pre-war Austria, and even pre-war Russia as far as the Baltic Provinces went, were a dominant nationality—have become a non-dominant minority in at least ten States on the new map of Europe: Estonia, Latvia, Lithuania, Poland, Czechoslovakia, Hungary, Rumania, Jugoslavia, Italy, Belgium. The treatment which these German minorities receive varies greatly according to the character and policy of the particular non-German State in which they happen to find themselves, but their aggregate numbers are so considerable that Germany evidently has a greater direct interest than any other permanent member of the League Council in seeing to it that this

problem shall be solved satisfactorily. Thus Germany and Canada both have special claims to speak—and it is to be hoped that the other members of the Council will give them a sympathetic hearing; for, on a broader view, a solution of this problem is a vital interest, not merely of this State or that, but of the world in general.

Why is it so necessary that the problem of minorities should be solved? Because the minorities themselves will be always with us in a world which is mapped out politically into a number of sovereign independent States, each aiming, within its own frontiers, at visible and tangible homogeneity—the kind of homogeneity that consists in uniformity of race or language or religion. For it is quite impossible to draw the frontiers between 50 or 60 sovereign independent States so neatly that those frontiers shall coincide exactly with the boundaries between racial, linguistic or religious groups. The nearest approximation to that ideal at the present time is probably to be found in the internal political map of the U.S.S.R., on which the most remote and backward Asiatic tribe has its own autonomous republic or province; but this is within the bosom of an all-embracing federal State, and even here minorities are not eliminated, though they are reduced to a minimum. In the nature of the case they cannot be eliminated completely, here or anywhere, because the boundaries dictated by administrative and economic (not to speak of strategic) necessity, can never exactly coincide with those which historical accidents have drawn between races, languages or religions. An irreducible " margin " must remain; and in so far as the men, women and children who constitute this " margin " are unhappy, or even uncomfortable, the existing frontiers will be unstable. Since instability of frontiers is one of the potent causes of war, it will be seen that a solution of the minorities problem is everybody's affair.

Fortunately the problem is not insoluble, as is proved conclusively by the fact that we can point to a number of minorities which are happy and comfortable in the world to-day. In Great Britain we have religious minorities like the Jews and Roman Catholics, linguistic minorities like the Welsh, and even racial minorities like the gypsies, whose position *vis-à-vis* Protestants, English-speakers and " Britons " of " Caucasian " race (whatever that may mean) is not a problem to-day. Similarly, no problem arises over the Bretons and Flemings in France, over the Basques in France and Spain, over the Catholics in Holland and Prussia. The region where the problem is acute is Eastern and Central Europe; for here national consciousnesses have emerged late in the day; they have taken identity and difference of language as their exclusive bases of association and disassociation; and this " linguistic nationalism " (so oddly different from the nationalism of Switzerland or Scotland, which binds the speakers of two or three languages together) has only succeeded in attaining " Statehood " in the peace settlement following the Great War.

This is the situation out of which there arose the treaties, clauses in treaties, and undertakings to the Council of the League whereby certain newly created or newly enlarged States in Central and Eastern Europe stand pledged to give equitable treatment to those racial, linguistic and religious minorities which were included within their frontiers on administrative, economic or strategic considerations (sometimes interpreted generously in the new or enlarged State's favour). In many cases the relative positions of the communities which were to constitute the minorities and majorities on the new political map of Europe were being reversed. The " top-dog " of yesterday was becoming the " under-dog " of to-day and to-morrow; the " under-dog " of yesterday was becoming his old master's master; and neither party could be expected immediately to forget and forgive the past—a past which had culminated in the intense bitterness of the Great War. In these circumstances, the representatives of the principal Allied and Associated Powers felt that they could not simply hand over the new minorities to the unfettered discretion of the new majorities, as represented by the Governments of the " successor States " of the fallen empires, without insisting on certain international guarantees. To have omitted to insist on these would not only have been flagrantly inhumane; it would also have been grossly irresponsible; for it was evident then, and remains evident to-day, that the new political map of Central and Eastern Europe could not be drawn without creating new minorities, and cannot be maintained without securing for these minorities certain minimum standards of well-being. Moreover, if the Principal Allied and Associated Powers had not fought and won the war the " Successor States " of the defeated empires could never have come into existence; and if the " Successor States " were to be overthrown by desperate revolts of the new minorties against intolerable conditions imposed by the new Governments without international restraint, then again the brunt of a fresh European catastrophe would have to be borne once more by the Principal Allied Powers. Thus the Principal Allied Powers, and the Council of the League of Nations after them, have been not only justified in insisting, but morally bound to insist, upon those international guarantees for minorities which are now in question.

The minorities problem is still with us after nine years, because these international guarantees have not so far been effective. This is now admitted by all unprejudiced observers, and the first step towards a remedy is to search for the causes of the complaint. The minorities treaties, clauses and undertakings were all placed under the auspices of the League of Nations. So was the mandates system, which, in spite of many difficulties, has certainly worked successfully on the whole. The arrangements which were inaugurated simultaneously for the protection of minorities nine years ago has so far virtually been a failure. To what is this unfortunate difference due?

First, is it due to differences of procedure? In supervising the working of the mandates system the Council of the League is advised by a permanent commission of experts, who are chosen for their individual merits and do not act as representatives of the States of which they happen to be nationals. The reports of this commission are considered by the Council as a whole, and the commission itself is kept informed by other reports which have to be rendered annually to it, as the representative of the Council, by the mandatory Powers. By contrast, the Governments that have signed minorities treaties are not under any obligation to report periodically on the working of these treaties. Instead of regular information, there are only *ad hoc* petitions presented by the minorities themselves or by private international organisations on their behalf; and the procedure for presenting petitions is so intricate that it is a miracle if the petitioner escapes being disqualified—while, even if the petition is successfully filed, that is usually the last that the petitioner himself ever hears about it. For in this case there is no permanent commission of experts, no publicity, and no consideration of cases by the Council as a whole. Any petition which runs the gauntlet of the preliminary stages is referred by the Council to an *ad hoc* committee of three of its members; this committee, if it finds the leisure, talks the business over in private with the Government (but not with the minority) concerned; and if it then recommends that no action should be taken, there the matter ends. There seem only to have been two occasions in nine years on which any other recommendation has been given! The pigeon-holes of the Secretariat at Geneva must be filled to overflowing with petitions that have come to grief on their long and difficult road. Yet the minorities that can boast even of rejected petitions are comparatively well off. The worst-treated minorities are afraid to attempt petitioning at all!

Clearly the procedure is bad, and there has been a steady tendency to make it worse as time has gone on. This is the immediate reason for the unsatisfactory working of the guarantees. But we must seek the motive which has led the States bound by minorities treaties to make a dead set against the effective working of the guarantees, and which has also led the Principal Allied Powers, in their present capacity as permanent members of the Council of the League, to connive at the stultification of solemn international obligations. The idol to which the minorities are being sacrificed is the fetish of sovereignty: the " divine right " of States, conceived as mystical abstractions or corporate personalities, to override the interests of mere flesh-and-blood men, women and children. Mankind to-day is martyring itself for this inveterate superstition as painfully as ever it martyred itself for the " divine right " of kings. The sacrosanct sovereignty of States is the stumbling-block in the way of implementing the minorities treaties. By the same token, it is the seed of future wars.

Can the peoples, and through the peoples the Governments, be made to see that the principle of sovereignty can only be upheld in the modern world on condition that it is not pushed to extremes? In concrete terms, can they be made to see that the effective working of the guarantees for the new minorities would be the best guarantee for the maintenance of the new frontiers? That degree of common sense is surely not too much to hope for. There is, however, the special difficulty that the existing minorities treaties, having arisen out of a particular emergency, are binding on certain States only; so that these States feel, not simply that their sovereignty is being impaired, but that they have been specially singled out for treatment which is not applied to other States that also have alien minorities within their frontiers. The natural impulse of Poland and her fellows is to offer their good will for the implementation of the minorities treaties on condition that similar obligations are accepted by all sovereign States in the world; and on grounds of equity there is something to be said for this attitude. On grounds of expediency, however, it is unacceptable; for the inevitable effect would be to postpone a solution of the problem *sine die*.

The decision of the Council to refer the whole minorities question to a committee of three of its members is on the whole satisfactory, provided that the committee infuse into their work the spirit of earnestness and determination which marked the debate in the Council. If such an investigation is honestly and ably carried out, the findings ought to provide a basis for the solution of a grave problem which has been neglected far too long.

THE PRICE OF PETROL.

THE recent rise of 2½d. in petrol has a dual interest—political and commercial. It is a reminder of the danger, of which we warned Mr. Churchill a year ago, of taxing a commodity because it is in a period of cheapness, and of relying on the results to finance a far-reaching scheme of domestic reform. It raises also public discussion of the position of the Government, which has a large holding in, and two representatives on the Board of, one of the oil producing companies. Clearly, the British Government of itself can do nothing towards controlling the price policy of the international oil combine; and it is absurd for a political leader to say, as was said this week: " If my Government were in power the rise in petrol would not be tolerated." The commercial aspects of the affair require much more detailed consideration. But before turning to a review of the position, we may be allowed two general observations. The first is that the oil companies have been guilty of very bad tactics in launching this increase upon the public immediately after their agreement with Russian Oil Products, Ltd., and in offering the public no reasoned explanation of their action. Secondly, our sympathy with the British motor industry is qualified by the fact that it has been favoured by abnormally low prices for petrol for some considerable time, and would still be enjoying very cheap petrol, if it were not for Mr. Churchill's tax.

It should not be forgotten that the price of petrol would have gone up last year in Great Britain if it had not been for a matter of domestic politics in the oil business. It is necessary to have in mind the situation in the American oil markets which dominate the world markets. There has been continued over-production of crude oil in the United States, but that, as experts have pointed out,* does not always lead to a fall in petrol prices. Petrol is not the only product of crude oil. The other products—kerosene lubricating oils, fuel oils—have to be sold and if the market for these products is weak and their prices fall, petrol will have to be increased in price to cover the deficiency, for it is obvious that the total receipts for all the crude oil products must somehow cover the total cost of producing, refining and marketing the crude oil. The price of petrol is therefore affected not only by the state of supply of the raw material, crude oil, but by the state of the demand for the other products of the crude oil. On an average the receipts from the sales of petrol represent rather more than 50 per cent. of the total receipts from all the products derived from the crude oil, but if a slump occurs in the market for fuel oil, for example (owing to the competition from cheap coal) petrol will have to bear the burden of making up a still larger proportion than the 50 per cent.

This is the situation which has developed at the present time. Fuel oil prices fell last year by about 35 per cent. Taking the export quotations for fuel oil in bulk at the Gulf ports of America, the market dropped from 2⅝ cents per gallon to 1⅝ cents per gallon. At the same time the price of petrol rose by about 45 per cent., the " U.S. Motor " grade being advanced for export from 7¼ cents per gallon at the beginning of the year to 10½ cents per gallon by August. In fact, a temporary shortage developed in the gasoline market and the internal prices for gasoline in America rose by 70 per cent. None of this rise was reflected in Great Britain, although the companies buying American gasoline for the British market were badly hit in consequence. The increase in the production of gasoline, however, in the second half of the year—arising partly from the larger supplies of crude oil and partly from the increased " cracking " of fuel oil—brought down the price of gasoline, but not to the extent of the previous rise. At the end of the year the export price for the " U.S. Motor " grade of gasoline was 8¼ cents per gallon and the present export price, fixed by the American Oil Exporters' Association, is 8½ cents per gallon. Thus the present quotation for American gasoline for export is 17 per cent. higher than the quotation ruling at the beginning of 1928. The recent rise in the price of petrol in Great Britain is apparently only keeping pace with the change in the American market, assuming that the cost of transportation has remained constant.

In point of fact the balance is still in favour of the petrol consumer in Great Britain seeing that the price of British petrol at the end of March last year was reduced by 1d. per gallon ex pump in London and the Home Counties areas and by 1½d. per gallon ex pump outside these areas. Why this reduction was made is not clear, but it brought the retail price of petrol ex pump in the London zone down to 1s. 0½d. per gallon, which was the lowest it has ever been in this country. The following table shows the highest and lowest retail prices since the war.

BRITISH PETROL PRICES " EX CAN."

	Highest.	Lowest.
1914	1/7	1/6
1918	3/3	3/0½
1919	2/9½	2/7
1920	3/9½	2/7
1921	3/5½	2/5½
1922	2/5½	2/–
1923	2/–	1/6½
1924	1/11	1/8
1925	1/7½	1/7½
1926	1/7½	1/5½
1927	1/5½	1/1½
1928	1/1½	1/1½

HIGHEST AND LOWEST RETAIL PRICES " EX PUMP."

1927	1/5½	1/1½
1928	1/1½	1/0½

About 80 per cent. of the petrol trade in this country is in the hands of the three large groups, Shell, the Anglo-Persian and the Anglo-American, the last being a subsidiary of the Standard Oil Company, of New Jersey. These companies, together with the National Benzole Company, agree upon prices to be fixed for the retailer and the public. The Russian Oil Products, Ltd., and a few other independent companies, undercut the " agreed " prices, and it has always been clear to the student of

* *See* Mr. E. H. Davenport's " The Price of Petrol " (London General Press 1s.) from which this argument is taken.

oil economics that any rise in petrol prices in this country would give a larger share of the trade to the Russian Oil Products, Ltd. Negotiations have, therefore, taken place from time to time between the big petrol companies and the Soviet oil agency. In this particular instance, the lead was taken by the Anglo-American Oil Company, which had a particular interest in seeing a rise in prices in this country, because it was being charged by its parent company upwards of 8½ cents per gallon for American petrol at the Gulf. The Anglo-American came to an agreement with the Soviet oil agency whereby the export of petrol from Russia to Great Britain was to be limited to approximately 200,000 tons, while the Russian Oil Products, Ltd., were left free to sell that quota at prices below the "agreed" prices. This agreement enabled the long-delayed rise in the price of petrol in Great Britain to take place. That briefly is the story; and although it does not altogether remove the suspicions of the consumer, the companies would have done well to tell it. Mr. Baldwin in the House of Commons on Thursday announced the Government's intention to invite the companies to give a full explanation, and made it clear, that he was not in any way prejudging the question of whether the rise was justified or not. The rulers of the oil world are under no compulsion, of course, to reply. But we think that there are many reasons why they would be wise to do so clearly and promptly.

If the petrol tax of 4d., and the ½d. which is added to cover the cost of its collection be deducted, the price of 1s. 2¾d. per gallon cannot be regarded as dear for a gallon of motor fuel having regard to the past level of petrol prices. That the increase in price will seriously damage the British motor industry, is, we think, an over-statement, because the cost of petrol is one of the minor items in the running cost of a motor vehicle. Even if the private motor car sections of the industry were to suffer somewhat from the rise in the price of petrol, another section of British industry is likely to benefit from dearer petrol. We refer to the coal industry. Petrol produced from British coal is already excluded from the petrol duty, but even with this preference the profit derived on the distillation of coal has previously depended on the sale of smokeless fuel rather than on the sale of the oil products. If the rise of 2½d. per gallon in petrol prices gives a stimulus to the distillation of British coal, the effect of the petrol companies' action will be to that extent mitigated. But with such ultimate consequences the public mind is not at present concerned, and, from a political point of view, the Government has to face the fact that the unpopularity of the petrol tax rises proportionately with every increase in the price of the commodity.

THE PRUDENTIAL.

THE progress and prosperity of the Prudential Assurance Co., Limited, are not merely of interest to the policy holders and shareholders, for their company is both the largest insurance institution and the largest corporation in the country; and its operations and their result as presented in the annual report may truly be said to be of national interest.

On December 31, 1928, the total assets of the company amounted to £219 million, and showed an increase of £10 million during the year. The total income during 1928 was £42 million. The company's vast ramifications are best illustrated by the simple statement that the number of life policies in force in both the ordinary and industrial branches is now 26 millions, so that, allowing for duplicates, almost one-half of the entire population is insured with the Prudential. The results in the life branches of the working of the year 1928 may conveniently be set out in comparison with those of previous years :—

Year.	New Business Sums Assured.	Premium Income.	Fund.
	£	£	£
1924	50,303,442	15,210,289	86,784,727
1925	47,593,623	15,883,871	94,991,727
1926	45,349,654	16,081,240	102,128,555
1927	53,735,678	16,593,151	108,216,335
1928	58,511,995	17,143,456	113,108,058

In the ordinary branch both the new sums assured and the total premium income are affected by the fact that in 1928 the company received in single premiums £1,147,000, compared with £677,000 in the preceding year. This accounts for the whole of last year's increase in new business, and also for the unusual jump in premium income. The industrial branch continues to show a large increase both in new sums assured and total premiums, although it may be remarked that new sums assured are still lower than in 1923. New business in this branch was probably adversely affected by the Widows' and Orphans' Pensions Act, while another factor mitigating against growth is the tendency for policies to be effected in the ordinary branch owing to the greater facilities now available for easy payments by monthly instalments. Further evidence of the gradually changing character of industrial business is to be found in the fact that whereas the average sum assured in respect of existing policies is about £17, the average sum assured for each new policy issued in 1928 was £27.

Coming now to the profits earned, an indication of these will be found in the following table :—

Year.	Expense Ratio.		Net Rate of Interest
	Ordinary Branch.	Industrial Branch.	Ordinary and Industrial Branch combined.
	Per cent	Per cent.	Per cent. £ s. d.
1924	12·5	27·86	4 17 6
1925	11·7	26·59	4 17 11
1926	11·0	25·90	5 2 3
1927	11·2	25·47	5 3 0
1928	10·8	24·89	5 2 11

Impressive though the progression in these figures is, the table does not measure the full achievement of the post-war years, especially in the industrial branch's expenses. The industrial branch expense ratio so recently as 1920 was 40·5 per cent. To-day it is 24·89 per cent. The saving thus effected in eight years means an additional profit of £2,670,000 per annum. Last year's saving has induced the directors to make yet another concession in the shape of the right to free paid-up policies after payment of one year's premiums.

The company makes an annual valuation of its liabilities on the basis of 3 per cent. net premiums, and the results of the last three valuations are compared as follows :—

	1926.	1927.	1928.
Ordinary Branch.	£	£	£
Surplus earned during the year	2,742,063	2,868,073	2,884,124
Brought forward from previous year	187,948	192,523	194,889
	2,930,011	3,060,596	3,079,013
Allocations :—			
To Bonuses to policyholders	2,014,936	2,130,396	2,365,902
,, Investment Reserve Fund	500,000	500,000	250,000
,, Shareholders' Account	222,552	235,311	261,368
,, Carried forward to next year	192,523	194,889	201,743
	2,930,011	3,060,596	3,079,013
Industrial Branch.			
Surplus earned during the year	4,624,586	5,203,614	5,444,404
Brought forward from previous year	255,868	259,256	264,847
	4,880,454	5,462,870	5,709,251
Allocations :—			
To Bonuses to policyholders	2,500,000	2,916,667	3,265,306
,, Investment Reserve Fund	500,000	500,000	250,000
,, Common Contingency Fund	250,000	250,000	250,000
,, Special Contingency Fund	250,000	366,667	483,333
,, Bonuses to Outside Staff	468,750	500,000	520,408
,, Shareholders' Account	652,448	664,689	663,632
,, Carried forward to next year	259,256	264,847	276,572
	4,880,454	5,462,870	5,709,251

The surplus in each case shows a smaller increase than before, possibly because the advance in the rate of interest earned is beginning to show inevitable signs of slackening. In both branches the allocations to policyholders are again increased, though it has been necessary to reduce the usual transfer of £500,000 to investment reserve fund to £250,000 in each case. The reversionary bonus in the ordinary branch is at the rate of 46s. per cent. for endowment assurances and 50s. per cent. for whole life assurances—compared with 44s. per cent. for all policies in 1927—and in thus differentiating between the two classes the mighty Prudential has not been too proud to follow the lead set three years ago by one of the smaller Mutual Offices, namely, the National Mutual. The industrial branch bonus is allotted at different rates for pre-1923 policies and post-1922 policies. For post-1922 policies, *i.e.*, all policies issued on or after January 1, 1923, a reversionary bonus of 34s. per cent. has been declared and the vesting period, originally 10 and then 5 years, has been entirely abolished. Thus all such policies, and all new policies hereafter, will for the first time share in profits on the same basis as ordinary branch policies. The administration of industrial assurance has passed another notable landmark.

The total sum transferred to profit and loss account was £925,000, sufficient to pay a dividend on the "A" shares of 18s. 6d. per share free of tax, compared with 18s. per share in 1927. It is worth noting that the shareholders' portion of profits, amounting in all to £8,330,000, was only £925,000, less than 12 per cent. of the total, while the policyholders receive £5,630,000 and the outside staff £520,000. It is idle to talk of nationalising the Prudential in face of such figures as these. The company has voluntarily nationalised itself.

Lastly, reference must be made to the now important fire and accident departments comprised in the general branch, from the profits of which a maiden dividend of 1s. per share, tax free, has been declared on the "B" shares. Since the "A" shares are entitled to a 25 per cent. interest in the divisible profits of the general branch, this declaration has automatically provided these shares with a further 4⅛d. per share, making a total of 18s. 4⅛d. per share. The "B" shares were first issued in 1919, and have therefore had a long period of waiting. The event provides an appropriate opportunity for analysing the general branch accounts rather more closely than we have been accustomed to do.

	1926.		1927.		1928.	
	Amount.	Percentage of Premiums	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums
Underwriting Profit :—	£	%	£	%	£	%
Fire	40,318	7·6	67,489	10·2	18,481	2·4

Income Tax	23,129	...	10,256	...	8,735	...
Total Net Surplus	– 24,431	...	– 397,935	...	33,137	...
Net Interest Earnings	64,967	...	72,251	...	93,320	...
Dividend	Nil	...	Nil	...	66,667	...
	64,967	...	72,251	...	26,653	...
Total Net Increase in Surplus Assets	40,536	...	– 325,684	...	59,790	...

The table clearly exhibits the disastrous results of the marine department, which necessitated in 1927 a draft on reserves to the extent of £500,000. The loss shown in 1928 merely represents the interest, etc., left in the account and it is to be hoped that the fund, which now amounts to nearly two years' premium income, is sufficiently strong not to require further support.

THE MERCANTILE BANK OF INDIA, Ltd.

Head Office : 15, Gracechurch Street, London, E.C.3.

Capital Authorised	£3,000,000
Subscribed Capital	1,800,000
Paid-up Capital	1,050,000
Reserve Fund and Undivided Profits	1,584,846

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and conducts every description of Banking Business in Connection with the East.

Fixed Deposit Rates will be quoted on application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.

Trusteeships and Executorships Undertaken.

JAMES STEUART, *Chief Manager.*

THE GAS INDUSTRY.

(BY A CORRESPONDENT.)

IT has been clear for some time that revision of the statutory requirements and limitations governing the gas industry is very much needed, not merely because those concerned in the development of the industry have been pressing for relief—though they have, in fact, continued to urge their claims upon the Board of Trade—but for the much stronger reason that a thorough overhauling of the existing legislative provisions and restrictions is called for in the public interest. A recent report from the National Fuel and Power Committee—the publication of which was noted in the *Economist* of January 19th last—admitted this to be the case. The passing of suitable legislation giving the gas industry greater freedom to develop along ordinary commercial lines is really a question of finding the necessary Parliamentary time. It was feared that nothing would be practicable in the lifetime of the present Parliament, but a short Bill, covering a few points as a first instalment of reform, has been introduced in the House of Lords by the Government with the intention that the measure should, if possible, pass this Session. Further reference will be made to this, but, first, it may be useful to summarise a few broad points as to the industry and the course of events which has led to the present position.

The uses of gas are now so manifold and widespread that it needs an effort of mind to recall that, in the early days, gas was manufactured simply as an illuminant. The gas itself was the single product, and the value of coke, tar, ammonia and other products was then held of no great account, with the consequence that their value went unrecognised by the many industries which took these raw materials. The legislation governing the manufacture of this single product—gas for lighting purposes—regulated what was then virtually a monopoly. It contained provisions intended to protect interests which, without them, might have suffered. This legislation had in view also operations much more restricted as to locality than are now practicable or desirable. Despite the sweeping changes which have since taken place in almost every feature of the gas industry—despite its enormous expansion and the alterations in its relations with other industries—obsolete legislative provisions have been allowed to remain in force and to operate by way of putting a drag on needed developments.

In the early part of the nineteenth century, when gas came into extended use as an illuminant, gas undertakings could not be incorporated under the Companies Acts because those were of later date. The method of establishing a company was by Royal Charter or special Act of Parliament—the Gas Light and Coke Co. was founded by Charter in 1812—and so the constitution of many gas companies took on an earlier and more rigid form than might have been adopted in later years. The clauses which became usual were standardised in the Gas Clauses Act of 1847, and this, as modified by a later Act of 1871, has remained the principal legislation regulating the industry. Severe limitations were laid down as to the amount of capital permitted, and the making of additions to it. The prices to be charged, the dividends allowable, and the amounts which might be put to reserve were also dealt with, but, as already indicated, there were no provisions for large-scale operations or joint working with

any allied industries. In course of time there came the development of gas supply for heat as well as light, and the development of trade in coke and residuals, such as tar, sulphate of ammonia, sulphuric acid, benzole, dyes and other products. There came into the field also other sources of light and heat, in particular electricity. This, being a later entrant, made its way untrammelled by the restrictions to which the gas industry remained subject. The position which thus developed was that gas had to enter into competition tied with monopoly bonds from which its competitors were free. That position has become more and more difficult, though the use of gas for various purposes, industrial as well as domestic, has continued to expand, contrary to expectations at one time freely voiced. The gas industry survived the war in a shattered state. The sliding scale regulating the relationship between the price of gas chargeable and the dividends distributable had been disorganised in its working owing to the changed level of all prices and expenditure. The market valuation of gas ordinary stocks had fallen 50 per cent. as compared with 1914. A revision carried out under the Gas Regulation Act of 1920 brought some relief, but a more complete overhaul and relaxation of needlessly hampering old restrictions has been admitted to be necessary by the report of the National Fuel and Power Committee already referred to.

The situation was summed up by Sir David Milne-Watson, the Governor of the Gas Light and Coke Co., at the annual meeting a few weeks ago. "We are hampered as an industry," he said, "by inadequate and old-fashioned methods of raising capital, restrictions which do not apply to our younger rivals; we are handicapped with limitations in the handling of our residuals; and we are limited with regard to working with allied industries. There are many other minor disadvantages under which we labour. The industry feels that it has a real grievance, and this has been fully recognised, I think, in the Committee's main report, where it is recommended that we should be allowed to adopt more up-to-date methods and bring ourselves into line with modern practice." Sir David Milne-Watson went on to refer to the promise of the Government to introduce a Bill giving effect to some of these recommendations, some only because, in the last Session of a Parliament, they could not expect to get a Bill dealing with all their grievances. The measure referred to has, as already mentioned, been introduced in the House of Lords. It was read a second time on the last day of February, and entered the Committee stage last Thursday. The amendments in the law proposed by its clauses do not by any means embody the whole of the recommendations of the National Fuel and Power Committee. The Committee indicated that the facilities, in favour of which it reported, could be granted without prejudice to the interests of consumers and other interested parties if the safeguards recommended were adopted, but, instead, those responsible for preparing the Government Bill have included only a selection, with the idea perhaps that these are so manifestly necessary that they will not be made the subject of prolonged discussion or real objection, which, in the present state of Parliamentary business, might imperil the passage of the Bill.

The Bill includes provisions (1) for simplifying the procedure in connection with increase of share capital and of loans, the Board of Trade being given power to make, in cases where there is no real opposition, orders authorising (a) the raising of share capital and (b) borrowing to an extent not exceeding paid-up capital; (2) for borrowing (without the formal order which must at present be obtained) up to half this amount; (3) for increasing the amounts which may be placed to reserve or special purposes funds, the new limit being calculated not by reference to share capital only, but share and loan capital; (4) for the making of orders authorising supply of gas to consumers just beyond a company's limits; (5) for extending the thermal system of charge for gas among the few statutory concerns which have not already adopted this basis; (6) for extending the powers of the Board of Trade to make "special orders" (after a local enquiry and with the approval of both Houses of Parliament) under the Act of 1920; and (7) for making some minor amendments.

On comparing the Bill with the Committee's recommendations it is at once apparent that the measure which the Government has offered is by no means a complete solution of the industry's difficulties. A pressing, but still unsatisfied, need is to implement that recommendation of the National Fuel and Power Committee which relates to greater facilities for gas undertakings to engage in joint working with one another and with allied industries, and thus to enable the gas industry to rationalise itself on obvious lines of sound economic progress.

THE FREEDOM OF AUTHORSHIP.

KNOWLEDGE and ideas are assets so intrinsically precious that attempts made by "authority," ecclesiastic or temporal, to restrict or coerce the free expression of opinion or the written dissemination of learning have always been justly regarded with suspicion, and in most cases have been vigorously opposed, by men of liberal minds. In a sphere in which standards are peculiarly fluid and susceptible of rapid changes, a wise rule for Governments is to pursue the policy of the maximum tolerance compatible with the preservation of "peace and good order." It is a principle which in many important directions has won recognition in England. A wide latitude in religious and political criticism has been very properly conceded under pressure of enlightened public opinion. The Acts which remain in the Statute Book relating to blasphemy and sedition are virtually a dead letter, for the simple reason that they were passed at a time when beliefs and circumstances alike were utterly alien to those of to-day. Were indictments to be brought, juries would not convict. Save in cases where it can be established that there is blasphemy so gross and offensive as to be likely to cause a breach of the peace, or that there is incitement to acts of a criminal nature, the contemporary critic of established religious or political doctrines is tolerably safe from prosecution. It is with feelings of grave doubt, therefore, that we view the recent activity of the Home Office in restricting the freedom of authorship in the highly debatable realm of morality. What were the merits or faults of the books in question is not the only point to be considered, for the maleficent effects of censorship of thought cannot be measured solely in terms of books actually seized and burned on their production; the mere fear of censorship may go far towards cramping knowledge and stultifying opinion; and it is of high social importance that we should see on what powers the Home Secretary is acting, whether the procedure is appropriate and equitable, and to what lengths his activity may be carried.

By the beginning of the nineteenth century the sale of obscene literature had been established by precedent as a crime under English Common Law, and such it remains to-day. In recent cases, however, action was taken by the Home Secretary under the Act of 1857 (20 and 21 Vict., Cap. 83), the history of whose passage through Parliament is interesting. Introducing the Bill, which was strongly opposed by Lord Brougham, its author, Lord Chief Justice Campbell, was at pains to make it clear that he was concerned solely to suppress the traffic (then rampant) in pictorial and written pornography, a defect in the existing law being that the Courts had no power to confiscate obscenities even on conviction of their vendors. In respect to books, he said, "the measure was intended to apply exclusively to works written for the single purpose of corrupting the morals of youth and of a nature calculated to shock the common feelings of decency in any well-regulated mind" (Hansard). On the strength of this assurance Parliament passed an Act which gives power to magistrates "upon complaint made on oath" to authorise the seizure by the police of "any obscene books, papers, writings, prints . . . kept in any house, shop, room . . . for the purpose of sale . . . or being otherwise published for purposes of gain." Upon seizure, the publisher shall be summoned to show cause why the articles should not be destroyed, with the right of appeal to Quarter Sessions against a magistrate's order for destruction.

It will be observed that this Act did not include any explicit definition of obscenity, however clearly Lord Chief Justice Campbell may have explained his intentions in the Upper House. The magistrates before whom the recent proceedings have been brought have accordingly had to rely on the ruling dictum of Lord Chief Justice Cockburn (Regina *v.* Hickling, 1868), who laid down the test of obscenity as: "Whether the tendency of the matter charged as obscene is to deprave or corrupt those whose minds are open to such immoral influences and into whose hands a publication of this sort may fall." It is difficult to imagine a more widely-drawn definition. Travelling far from his predecessor's "single purpose of corrupting," Lord Chief Justice Cockburn rendered theoretically, indeed legally, indictable much of the great literature of the world.

Given the Act of 1857, given the ruling judgment of 1868, the intervention of the Home Secretary as "authority" for the prosecution (*cf.* the status of the "Competent Military Authority" in trials under the D.O.R.A.), the exclusion as "irrelevant" of all evidence which the defence may seek to bring in the shape of testimony from educationists, publicists, churchmen or other persons presumably sensitive to current moral opinion, and, finally, given a right of appeal so limited as in practice to be almost nugatory—it is difficult not to feel that, as matters stand, conviction for literary obscenity is almost inevitable as soon as the Home Office sets the law in motion.

"I am not a literary censor. I have no qualifications for the post. It is my duty to call the attention of the Director of Public Prosecutions to the publication of indecent matter." Thus Sir William Joynson-Hicks on Tuesday, in answer to a Public Morality deputation, crystallised all the confusion of a legal position which is tolerable only so long as a Home Secretary entertains wholesome doubts as to his own accuracy in diagnosing indecency. On this matter, up to a point, there will be general agreement among persons posssesing what Lord Chief Justice Campbell described as "well-regulated minds"—if not on the absolute definition of obscenity, at least on the pragmatic utility of suppressing the sale of certain gross indecencies. Traffic in visual representations of the obscene is justly indictable on social grounds, and the same considerations may apply to certain notorious volumes of flagrant *erotica* collected by amateurs of literary "curiosities." With these Common Law, reinforced by the Customs and Post Office Acts, is competent to deal without need of the Statute of 1857. But beyond this point there appears to us to be more risked than gained by over-much zeal for restriction on the Home Secretary's part. To select suitable reading matter for children is the function of parents and teachers, not of the State. For the adult we decline to believe in the efficacy of salvation by ignorance.

As the law now stands, there is no restraint set upon meretricious vulgarity in print, with all its debasing influence on public thought and taste; yet an Anthony Comstock at the Home Office could secure the destruction of classic works of imagination to be found, we make bold to believe, in the library of every High Court judge. Publishers, who have to risk considerable sums in the production of a book, have no means of determining where the arbitrary intervention of "authority" will take place. On the basis of a recent decision, a theme, however unexceptionable its wording, may be indecent. To judge, again, from *obiter dicta* of the Home Secretary, with reference to Shakespeare, cheapness of price renders indelicacy illegal—a remarkable view in a democracy. The gravest danger, perhaps, is that the law, which tolerates a Sunday Press purveying to millions lurid details of theft, murder, incest, and rape, may be invoked to suppress sincere and original studies of psychology or physiology whose treatment offends some "taboo" of the pruriently-minded. If we are to have in England a wave of official hysteria against "obscenity" in books, it will undoubtedly be necessary for Parliament to amend the Act of 1857 and restrict severely Lord Chief Justice Cockburn's definition. Meantime we would urge upon the Home Secretary to remember that mankind has never ceased to mourn the destruction of the library at Alexandria thirteen centuries ago; that standards of taste in literature and morality are highly debatable and always changing; and that, above all, there are more important tasks for the Government than to turn books which would otherwise attract little attention into ridiculous *causes célèbres*.

Travel and Money

The far too common method—or lack of method—of carrying cash in bulk when abroad, is wholly unsatisfactory. Travellers are invited to consider the arguments of two leaflets issued by the Westminster Bank, *Points before Travelling*, and *Safeguards for the Traveller*, which will be gladly sent by the Secretary of the Bank on application.

Notes of the Week.

President Hoover.—On Monday, March 4th, Mr. Herbert Hoover was inaugurated at Washington as President of the United States, took the oath and delivered the customary address. It is a straightforward, quiet, dignified speech, with the two qualities that such speeches ought to have: a sense of responsibility and a sense of proportion. The President concentrates upon two great tasks: the promotion of respect for the law at home; the promotion of peace in international relations. The first of these tasks is hardly our concern, except to wish Mr. Hoover all success in attaining his aspiration in this as well as in the international field. As for his pronouncements in regard to that, they are very welcome. "The United States fully accepts the profound truth that our own progress, prosperity and peace are interlocked with the progress and prosperity and peace of all humanity."—"We ought in our own lifetime to find a way to permanent peace."—"I covet for this Administration a record of having further contributed to the advance of the cause of peace." These are indeed auspicious words in the mouth of a statesman assuming an office which, during the next four years, may confer on its occupant a greater power in international affairs than will be concentrated in the hands of any other individual. Nor is there much fear that the words will prove empty; for Mr. Hoover is a man of action, and in this same address he foreshadows some of the lines along which he hopes to act. Under his Administration the United States will make another, and this time a very determined, attempt to become a party to the Statute of the Permanent International Court; and though she will not do this without reservations, she will take pains to present her reservations in a form which the other parties will be able to accept. This fresh attempt to become a party to the World Court will be part of a wider policy of implementing "the Kellogg Pact." The acceptance of the Pact "should pave the way to the greater limitation of armaments, the offer of which we sincerely extend to the

world, but its full realisation also implies a greater and greater perfection in the instrumentalities for the pacific settlement of controversies between the nations. In the creation and use of these instrumentalities we should support every sound method of conciliation, arbitration and judicial settlement." Thus, Mr. Hoover holds out the hope that America, having taken the initiative in bringing about the treaty for the renunciation of war as an instrument of national policy, may likewise take the initiative in the next step forward. The essence of " the Kellogg Pact " was a profession of faith and a vow of high and difficult conduct. The next step is a fresh essay in international organisation—and Mr. Hoover has made his name as a great international organiser. But organisation, though indispensable, is not enough; and it is, therefore, still more important that Mr. Hoover has also shown himself a man of heart. " Abroad, to west and east, are nations whose sons mingled their blood with the blood of our sons on the battlefields. Most of these nations have contributed to our race, to our culture, to our knowledge and our progress. From one of them we derive our very language, and from many of them much of the genius of our institutions. Their desire for peace is as deep and sincere as our own." This is finely and generously said, and it comes from the heart. The response must be in kind. It is our business to put men in power in this country who share those feelings and speak that language.

The Upheaval in Mexico.—Last Sunday an armed insurrection against the present *régime* in Mexico broke out simultaneously in the State of Vera Cruz, which lies between the Federal Capital and the Gulf of Mexico, and in the State of Sonora, in the far north-west. Half-a-dozen States have been reported since to have joined in, and there is thus a prospect that Mexico may relapse into that condition of general civil war and chronic anarchy under which she suffered from 1910 to 1920 and out of which she has slowly been extricating herself since then. The immediate quarrel is between the two parties on whose co-operation the progressive reconstruction of the country has depended: the Agrarians, whose leader was the late ex-President and President-Elect Obregon, and the Labour Party, whose leader is Señor Morones, but whose interests have also been represented politically by ex-President Calles. The co-operation of these two parties, whose union was irresistible, was assured during the fruitful years of reconstruction by the personal friendship and mutual loyalty of Calles and Obregon. Obregon passed on the Presidency of the Republic to Calles, and Calles was on the point of handing it back to Obregon again, when Obregon—now for the second time President-Elect—was assassinated, as Calles' term of office was on the point of running out. It is this crime which is the origin of the present upheaval; for it brought to a head the latent antagonism between the peasantry and the urban proletariat which the friendship between Calles and Obregon had kept under. The peasantry, who constitute the vast majority of the population, were content to get the land; the urban proletariat—a small minority entrenched at the centre of political power—have aspirations of their own with which the peasantry do not sympathise. When Obregon was murdered the Agrarians at once maintained that the Labour Party were the instigators of the crime, while the Labour Party attributed the guilt to the Catholics, who had long been at war with the Calles-Obregon *régime*. The present outbreak at Vera Cruz is a revolt of the Agrarians against Labour, for President Gil, who fills the late President Obregon's place in Mexico City, is regarded by the Agrarians as ex-President Calles's nominee and tool. The fact, however, that the northern States, which are the stronghold of Catholicism, are joining in indicates that the Agrarians have Catholic support, and the present *régime* would find an Agrarian-Catholic coalition very formidable. This renewal of civil war in Mexico is a great misfortune not only for Mexico herself, but for the world in general—particularly for her most important neighbour, the United States. The last few years, during which Mr. Morrow has been United States Ambassador in Mexico City, have seen a remarkable current improvement in the internal condition of Mexico and in her relations with foreign Powers. We profoundly hope that this good work is not going to be undone.

Parliament and Whitehall.—In the House of Commons on Monday the Prime Minister made a statement of considerable importance with regard to the question of legislation by means of Departmental Order—a development whose implications and dangers were discussed recently in these columns (*Economist*, February 23, 1929, p. 383). Sir J. Marriott had suggested that all Statutory Rules and Orders issued by the Privy Council or by public Departments should be scrutinised by a Sessional Joint Committee before they acquire the force of law. Mr. Baldwin's considered reply was that the suggestion was impracticable, and that the powers of the Courts provided adequate safeguards against abuse by Departments of delegated authority. Amplifying his reasons for reaching this conclusion, the Prime Minister pointed to the fact that during the last three years the average number of Acts placed per annum on the Statute Book was 50.6, occupying 539 pages, whereas the average number of Rules and Orders issued was 1,409, filling 1,844 " more closely printed " pages. To examine this mass of detailed material, he argued, would be beyond the competence of a committee, even if it sat continuously, hearing evidence, throughout Session and Recess. The argument, however, is double-edged, since if an *ad hoc* committee be considered incapable of keeping pace with the formidable output of bureaucratic *fiats*, how much less chance has Parliament—i.e., the private member—of detecting in the 1,409 pages annually " laid upon the table " every clause calculated to wrong an individual. Nor can we agree with Mr. Baldwin that the Judiciary can be relied upon to redress grievances. Admittedly, if an Order can be proved to be *ultra vires*, the Courts will annul it. But the kernel of the case for strengthening the control of Parliament over Departmental rule-making is that by Clauses in Acts, such as the " power to remove difficulties " proviso in the Local Government Bill, the Judiciary is deliberately precluded from finding any Orders *ultra vires*, so wide and sweeping is the express delegation of authority by Parliament to the Executive. It may be that a Sessional Joint Committee is not the ideal machinery for solving this problem, but there is real need for a workable mechanism to be devised, whereby sufficient discretion in matters of detail may be allowed to the Departments without undermining the essential supremacy of Parliament as the sole depository of legislative power.

Air Estimates.—The net Air Estimates for 1929 total £16,200,000, compared with £16,250,000 last year. The reduction, however, is really fictitious, since the " super-cut," which is deducted from the sum of the individual items of expenditure, has been increased by £150,000 in order to discount at its very maximum the possible failure to mature of various liabilities for which provision is made. The true gross estimate shows an increase of £660,000, which is offset by larger appropriations-in-aid, chiefly from the Fleet Air Arm and from the Government of India. It is worth noting that the net diminution of £50,000 in the total Air Vote would be more than absorbed by the current increase in the price of petrol. The present strength of the Royal Air Force is 73 squadrons, to be raised to 80 in 1929; numbers on the establishment, on the other hand, show a decrease of 500, reflecting the policy of substituting civilians for airmen wherever advantageous. There is a net increase of £35,000 in the civil aviation vote, which now stands at £450,000 (net). Much public doubt has been expressed whether that sum is adequate, whether indeed we are not living in the past, when our defence estimates show a ratio of roughly 5 to 1 between the Navy and the Air Force votes. Sir Samuel Hoare's warning, that the progressive reduction of net Air Estimates cannot be expected to continue, is not perturbing, provided that severe retrenchment is undertaken in those branches of our armament which the art of war is beginning to outgrow.

Leon Trotsky.—The German Government, after anxious deliberation, have decided not to grant a visa to Leon Trotsky for entry into Germany. We do not wonder. He would be a formidable guest—formidable in himself and formidable in his extraordinary relation to the Russian Communist Party. Apparently the Russian Communist Party cannot do with either a Trotsky living or a Trotsky dead. If he is admitted dead, he is a martyr, instinct with the dynamic force which that noble army has at its command. If he is alive, he is a possible successor to Stalin, whom he far surpasses in brilliance and versatility and fame. Therefore, life-in-death in some really safe place of internment is the destiny for Trotsky which the present leaders of the Russian Communist Party find least inconvenient for themselves; and we venture to assert that, if a dead-alive-Trotsky does not exist already, he will have to be created. Some people declare that he has been created already. It was not, they tell us, the real Trotsky who was put on board that train from Moscow to Central Asia rather more than a year ago, and who latterly endured a stormy passage across the Black Sea in order to find a temporary haven in the Russian Consulate at Constantinople. It was, in fact, somebody playing Trotsky's part (though " playing " is perhaps not the right word)—a sort of commandeered " False Dmitri." Such things, no doubt, have happened before. For instance, when the generals of Alexander the Great were fighting for their master's inheritance, one of them retained the loyalty of the Royal Guards for years by nightly pitching the dead king's tent with all due pomp and parade but with no king inside. That kind of thing can be done—but we beg leave to doubt whether it is now being repeated.

The Indian Budget.—In following in the footsteps of Sir Basil Blackett, Sir George Schuster, India's new Finance Minister would be the first to admit that he had a difficult task, and his first Budget speech shows that his difficulties have not been eased at all by current circumstances. The 1928-29 Budget has apparently benefited from a windfall of 105 lakhs of rupees due to the concentration in that year of salt revenue which properly belonged to both the preceding and succeeding years. Apart from this, the year would have closed with a deficit of 75 lakhs, thus showing that the revenue lost by the remission of provincial contributions has not yet been replaced. Sir George is not proposing new taxation for the forthcoming year, but in announcing his decision he said, significantly, " If additional taxation proves to be necessary in the following year the need will have to be boldly faced. My present action is governed not by any fear of doing this, but by the desire to defer taking any step until I am quite certain, firstly, that it is necessary, and, secondly, what is the best direction in which to take it." Words such as these can only be regarded as a definite warning. Later in his speech Sir George Schuster had a certain amount to say upon capital expenditure by the Government upon railways and other public works which is not without interest to London. He means to get the course of capital expenditure under control, while at the same time recognising the unwisdom of abandoning expenditure upon productive works at a time when the state of trade is " at least somewhat below par." On the question of financing these works Sir George is at one with Sir Basil Blackett in raising as much capital as possible inside India, and he said pertinently that " if all the money which now goes to private imports of gold and silver could be made available for investment in productive undertakings India's needs for foreign capital might well disappear." At the same time, the London market will note that " it would be a far greater evil to hold up the proper development of the country merely for the sake of avoiding sterling borrowing within reasonable limits." He concluded with an allusion to India's " priceless possession of her credit with the outside world," and with a plea that no fears of political disturbance might arise such as to endanger the credit structure. It is clear that this and many other passages in his speech could have been delivered with equal pertinence in many other countries besides India.

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG, STOCKHOLM, MALMO.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - Kr.182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

Our Index Number.—The general level of wholesale prices moved upwards in February, our index number recording at the end of the month a rise of approximately 1 per cent. Changes in the group figures are summarised below:—

AVERAGE, 1927 = 100.

	Feb., 1928.	Nov., 1928.	Dec., 1928.	Jan., 1929.	Feb., 1929.
Cereals and meat	101·6	97·4	97·6	96·7	101·2
Other Foods	98·3	90·4	90·2	89·4	88·5
Textiles	104·1	102·3	101·7	101·3	99·9
Minerals	91·0	93·8	94·1	94·8	96·4
Miscellaneous	97·5	92·4	91·4	91·2	91·4
Complete Index	98·5	95·3	95·0	94·7	95·6

It will be observed that last month's rise was caused in the main by higher values for cereals and meat. The figure for minerals also showed an increase, whereas textiles and " other foods " declined. In the case of individual commodities, as will be seen below, price-changes last month had a somewhat wide range.

	Inc. (+) or Dec. (−) per cent. compared with Month Ago.	Year Ago.		Inc. (+) or Dec. (−) per cent. compared with Month Ago.	Year Ago.

Coco. oil	− 3·8	−11·8	Hides	− 6·7	−30·0
Tobacco	...	...	Leather	− 4·2	−25·0
			Petrol No. 1	...	+32·
Other Foods	− 1·0	−10·0	Petroleum Oil	...	...
			Fuel Oil	...	− 6·9
Cotton, A.	+ 3·8	+ 3·9	Linseed Oil	+ 3·2	− 7·1
Cotton, E.	− 1·4	+ 0·8	Tallow	− 1·3	+ 8·6
Cotton Yarn	+ 1·6	+ 1·6	Rubber	+18·4	− 8·1
Cotton Cloth	...	...	Soda crystals	...	...
Wool, Eng.	− 1·8	− 6·9	Sulph. ammon.	...	...
Wool, Aust.	− 2·3	−12·5	Creosote	− 4·3	−33·3
Wool tops	− 8·5	−21·8			
Silk	− 1·1	+ 6·0	Miscellaneous	+ 0·2	− 6·3

In the cereals and meat section notable movements, attributable in part to the severe weather, were advances in the price of bacon and potatoes. English mutton was also dearer; grain prices were mostly firm on balance; rice declined. Among " other foods " higher values for cocoa and coffee were offset by falls in the price of tea, cane sugar, cheese, and coconut oil. The textile group as a whole declined, cheaper wool, silk, hemp and Egyptian cotton counterbalancing increases in the price of American cotton and jute. The minerals group advanced as a result mainly of higher quotations for copper and lead. Coal prices were also firmer, and pig iron rose by 1s. a ton. In the miscellaneous group the

chief features were a sharp advance in rubber prices, and a further fall in the price of hides and leather. The following table gives the figures of our index number converted to a percentage of the average for 1913:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168·5	215·8	214·7	149·3	122·6	166·2
" 1925	168·4	204·2	194·6	139·8	126·2	160·9
" 1926	151·7	195·3	152·6	149·8	120·7	149·4
" 1927	147·6	202·2	157·0	125·1	116·1	143·7
" 1928	152·9	189·7	165·0	115·2	111·2	140·9
End Feb., 1928	149·9	198·8	163·4	113·8	113·2	141·5
" Jan., 1929	142·7	180·8	159·0	118·6	105·9	136·1
" Feb., 1929	149·3	179·0	156·8	120·6	106 1	137·3

Expressed as a percentage of the average for 1924, the index figure for the end of February was 82.6, the greatest decline since 1924 being shown in the textile group.

The Effects of Foreign Lending.—Continued interest in the discussions which have recently appeared in the *Economist* upon the subject of the export of capital is revealed by our correspondence columns to-day, in which we print letters by Mr. J. M. Keynes and Mr. Vaughan. Mr. Keynes asks how far it is true to say, as was said in the *Economist* a fortnight ago, that capital exports stimulate commodity exports. He suggests that 20 per cent. of the sums borrowed in London by foreign interests may be spent directly here, but asks us to trace what happens to the other 80 per cent. Mr. Vaughan addresses himself to the same problem, and suffers from none of the doubts which apparently assail Mr. Keynes on this point. The gist of his argument is as follows:—

To grant international consumer credit means a corresponding temporary increase in home exports. It is as if the home investor in foreign enterprise ordered goods from the home manufacturer and sold them abroad on credit. In point of fact, not a penny of currency, either cash or credit, actually leaves the creditor country in respect of a foreign investment; nor, therefore, is the volume of credit available for home industry diminished. In effect, the investor has simply poured his savings into home industry in the best possible way; as effective demand for its products; but he holds the foreigner in debit for it, because the latter receives the goods. Far from this causing a reduction of home industrial capital, it actually increases the capital value of exporting industries, and attracts to them financial capital for their development.

To return to the exercise which Mr. Keynes sets us, we would point out, first, that his figures of 20 per cent. and 80 per cent. are arbitrary (and we should be interested to see the calculations on which they are based), and, secondly, that tracing the various stages of the effect of an investment abroad is as difficult a task as tracing the course of a drop of sea water that rolls around the oceans of the world. Accepting, however, for the sake of argument, Mr. Keynes' figure, we would say that the 80 per cent. of the sterling sum subscribed, which is not used to purchase British goods directly, is sold for the currencies of those countries in which the borrowers do wish to spend it. The cumulative effect on the world's exchanges as a whole of such increases in the supply of sterling for sale is to make the pound cheaper, which involves the relative cheapening of goods whose price is expressed in terms of sterling; in other words, to stimulate British exports and to hinder our imports. In this way a net export surplus equivalent to the 80 per cent. is obtained; because the absorption of that sum in sterling bills requires either the appearance of fresh buyers of sterling (and ultimately of British goods), or the withdrawal of some who were previously selling sterling on account of trade transactions (that is, a diminution of imports), or both. Thus, though the effect of an export of capital cannot be exactly traced, we can be sure that, to the extent to which it is not manifested ultimately in an increase of exports, it will give rise to a diminution of imports, and our position as a manufacturing country makes it almost certain that the major part will be taken up by an increase of exports. Nor, we presume, does Mr. Keynes forget the gain to this country from the transport and insurance of even the original 20 per cent., and from entrepôt, financial and shipping services done in respect of purchases made in other countries, nor the subsequent demand created at a further stage, which tends to concentrate upon Britain with various degrees of directness—most directly in the case of loans to those countries which have tastes and traditions similar to our own. Moreover, just as Mr. Keynes recalls the direct effects of Railway Loans in the mid-nineteenth century, so he may see much the same thing going on in the case of investments, for instance, in British West African colonies. These are only tentative exercises in tracing Mr. Keynes' 80 per cent., a task which, to be performed adequately, would require a vast research and a volume from a pen of the calibre of Mr. Keynes' own.

A Higher Birth Rate.—The natural increase of population by excess of births over deaths, according to the recent quarterly report of the Registrar-General, was 199,827 in 1928, against an average annual increase in the preceding five years of 243,621. None the less, there has been a check to the steady diminution in the birth rate, which rose 0.1 per thousand to 16.7 per thousand in 1928, after attaining a record low level of 16.6 in the preceding year. The death rate of 11.7 per thousand in 1928 also compares favourably with a rate of 12.3 in 1927. This is partly attributable to comparative freedom from influenza in the early months of the year, and in view of the fact that the death rate from influenza has recently risen to over 5 per 1,000 in many districts, it is unlikely that 1929 will show such a favourable result. The infant mortality, at 65 per 1,000, was higher than in 1927, the lowest on record. Heart disease remains the principal cause of mortality among the population as a whole; respiratory diseases, exclusive of tuberculosis, rank second, and cancer third. Among the age groups from 45 to 65 cancer is the principal cause; from 15 to 45 tuberculosis. After 65 the biggest single cause of death is heart disease. The increasing preponderance of these causes of death is largely due to the fact that the further science progresses in controlling some fatal diseases the more persons are saved as potential victims of the remainder.

The De-Rating of Hospitals.—Colonel Gretton, supported by members of all political parties, has obtained a first reading for his Bill to relieve voluntary hospitals from local rates. When such a proposal was raised in the debates on the Local Government Bill, and later at question time, the Government definitely stated their inability to support a measure for the de-rating of hospitals in the life of the present Parliament. The chief ground of their objection seems to have been the alleged impossibility of fairly distinguishing institutions which would be de-rated from those that would not. The definition in Colonel Gretton's Bill is very comprehensive—" hospitals for the treatment of disease, sickness, accidents, deformity or other afflictions of persons, including convalescent homes, nursing institutions, sanatoria, infirmaries and other institutions of a similar character." Though the vagueness of the last phrase is excessive, and it is a little doubtful whether maternity hospitals are included (since pregnancy is not *per se* sickness), the Government has yet to show that the application of such a definition will cause more unfairness than is inherent in the present situation with regard to the rating of hospitals. The application of the Rating and Valuation Act (1925) has acted seriously to their detriment, as was shown a few weeks ago by the results of an inquiry made by the Central Bureau of Hospital Information. Complete replies covering 40,285 beds enabled the following conclusions to be made:—(1) That the English and Welsh provincial hospitals before revision were assessed at £63,000, or £1.56 per patient bed, on which a total of some £44,000 was paid annually in rates; (2) that the revised assessments under the Act of 1925 will amount to £95,000, or £2.36 per patient bed, the annual rates charge being raised to about £66,000. All that the Government has offered yet in mitigation of this hardship is a consultation which the Minister of Health had with the British Hospitals Association, on the basis whereof the Central Valuation Committee has been advised as to the framing of uniform rules for the assessment of voluntary hospitals; but if and when that committee recommends, its recommendations are binding on no one, and the time in which they would be immediately valuable has passed. Will Colonel Gretton be as successful in bending the Government to his will in this matter as he was recently in the matter of the Irish Loyalists?

Import Duties and Prices.—In their efforts to prove the unproveable, *i.e.*, that import duties do not artificially raise prices, our Protectionists resort to strange methods of arguing. We observe, for example, that, speaking in the City to a Conservative audience last week, Sir Stanley Machin produced what he called " a list of some of the safeguarded goods with the prices before safeguarding in 1925 and the import prices of 1927." The articles chosen for this comparison were clocks and watches, certain silk and artificial silk goods, leather and fabric gloves, and packing and wrapping paper; the 1925 and 1927 " prices " being placed in parallel columns, and the 1927 figures being, of course, the lower—proving (according to Sir Stanley Machin) " that foreign manufacturers have to cut their prices in order to enter our market." On this we would make three comments:—(1) That the figures given merely indicate the quantities of these goods registered for Customs entry at our ports divided into the declared values of these goods, showing therefore the average landed price of the goods actually imported in the respective years. There is nothing whatever to show that the goods imported in 1927 were proportionately of the same sub-classes or of the same qualities as in 1925. (In some instances we know they were not.) Therefore, the figures prove nothing to the point. (2) But even if this were otherwise, there had been a substantial decline in world wholesale prices as between 1925 and 1927, and when this is taken into account the reductions referred to are none of them specially striking. (3) The prices given by Sir Stanley Machin for 1927 are the prices *before the payment of the import duties*. The case of packing and wrapping paper serve to illustrate how this works out. The average " entered " value of imported packing and wrapping paper in 1925 was 24s. 2d. per cwt., and in 1927 22s. 4d.; but the corresponding prices of printing and writing papers (not dutiable) were 19s. 3d. and 17s. 8d. respectively. Obviously, therefore, there had been a fall in the price of *all* papers—the reason being a substantial drop in the world price of wood pulp. But observe that the benefit of this drop in prices of imported paper was not allowed to reach those many British industries to whom this " wrapping " paper is raw material. On top of the 22s. 4d. there had to be paid 16⅔ per cent. duty to the Treasury, making the 1927 price to the buyer, not 22s. 4d., but 26s.; or 1s. 10d. more even than the 1925 price, when it should have been 1s. 10d. less.

The European Steel Cartel.—Our Paris Correspondent writes: The chief business to be discussed at the meeting which is to take place on March 14th, between the representatives of the four countries comprised in the European Steel Cartel (Germany, France, Belgium and Luxemburg) will be the delicate question of Germany's maximum export quota. The detailed figures for 1928, which are now available, show that, while each of the four countries exceeded its agreed export quota throughout the year (with the exception of Germany in the last quarter), Germany's excess of foreign sales was out of all proportion to those of her three associates in the Cartel. The figures (in tons) are as follows:—

1928	Germany	France	Belgium	Luxemburg
1st Quarter	+1,956,000	+ 14,000	+ 78,000	+ 30,000
2nd Quarter	+ 547,000	+ 44,000	+ 86,000	+ 24,000
3rd Quarter	+ 676,000	+ 20,000	+ 110,000	+ 33,000
4th Quarter	+ 405,000	+ 177,000	+ 154,000	+ 52,000
Total excess	+2,774,000	+ 255,000	+ 428,000	+ 139,000

The comparative total output tonnage of the four countries during the same year was as follows:—

1928	Germany	France	Belgium	Luxemburg
1st Quarter	4,217,000	2,297,000	924,000	638,000
2nd Quarter	3,708,000	2,327,000	932,000	632,000
3rd Quarter	3,837,000	2,303,000	965,000	641,000
4th Quarter	2,750,000	2,460,000	1,000,000	660,000
Totals	14,512,000	9,387,000	3,821,000	2,571,000

The regularity with which the quota of each of the four countries was exceeded last year (with the single exception of Germany in the last quarter, which was due to exceptional causes), suggests that an all-round revision upwards of the export allowance of each party to the Cartel is already called for. In view of Germany's notably disproportional excess of steel exports (which should apparently involve her industrials, under the Cartel's rules, in very heavy penalties) the position of her representatives at next Thursday's meeting will presumably be somewhat delicate. German reports received in Paris are to the effect that some of the German industrials involved have been considering the possibility of their representatives denouncing the Cartel agreement. Denouncement, however, would be a double-edged weapon, and the German steel masters would probably hesitate seriously before liberating their Lorraine and Luxemburg brethren from their present engagements and setting them free to carry keen competition into what Germany regards as her own private spheres of influence. It is understood that, once the revision of the quota programme is settled, the associates in the Cartel will have to deal with the question whether Poland shall be admitted to membership. The fact that Germany and Poland have already come to a working agreement on the steel problem suggests that Poland's proposed admission will not raise serious differences of opinion among the existing members.

More Cotton Mill Amalgamations.—Our Manchester correspondent writes:—For some two or three weeks past there have been rumours on the Manchester Royal Exchange of pending mill amalgamations. The latest development is the report that a number of influential spinners in the Egyptian section, controlling about 3,000,000 spindles, have signified their willingness to form a combine of mills spinning Egyptian cotton. It is understood that the mills concerned are in a healthy position financially. It is also reported that three mills in Rochdale, having a total spindleage of about 270,000, are to amalgamate. These developments are being watched closely, and are definite evidence of the attempts being made by Lancashire mill directors to sink individualism and to work by combine methods.

Taxation and Savings.—In his address this year to the members of the United Kingdom Temperance and General Provident Institution, Mr Walter Runciman developed his theme of previous years on the question of the extent and nature of national savings. This year he dealt with the vital point of the relation between national savings and taxation, and, in the course of his speech, he found it necessary to animadvert upon the past financial policy of the Government. There is, of course, no question that income tax, super tax and death duties between them make heavy inroads upon the savings fund of the nation, and Mr Runciman admits that the present burden of taxation makes such inroads inevitable, and also agrees that some of the money collected in taxes is returned to the nation in the form of interest upon Government loans, and so becomes once more available for savings. Where he becomes more critical of the Government is in their appropriating capital receipts for current revenue, and more particularly in respect of their sinking fund policy. This criticism is supported by a detailed analysis of the debt items in the Budget, which is too long to be reproduced here. His main conclusions are two in number. The first is that, had " the unsound elements been removed from the Budgets of 1924-28, and the resulting gap in the revenue filled without absorbing savings, it would seem that the effect upon savings of the full sinking funds as originally provided would have been just about sufficient to counteract the evil effects of the heavy direct taxation." The actual gap he calculated is only £15 million. His next conclusion is based upon recent Government policy as it actually operated. Here he calculates that " there appears to have been a drain on savings to the extent of £200 million . . ., being an increase of £185 million over the loss of savings that would have occurred if the Budget had been soundly constructed." The implications of

these figures are many and complex, but we will content ourselves with pointing out that the more money the Government spends on behalf of the nation the less the nation has to spend or save for itself.

Britannic Assurance Co., Limited.—It would be an interesting subject to speculate as to the reasons why industrial life assurance is so largely identified with the provinces whilst ordinary life assurance is almost wholly administered from London. True, the two largest companies, the Prudential and the Pearl, have their head offices in London, but Manchester claims the Refuge and the Co-operative, while the headquarters of two more, the Britannic and the Wesleyan and General are in Birmingham. Of these provincial companies, none has been more progressive and successful than the Britannic, whose accounts for 1928 are now available. The report shows that in both the ordinary and the industrial branches there was again a substantial advance in premium income. The ordinary branch new business amounted to £2,520,333, compared with £2,162,554, but industrial new business declined from £8,274,905 to £6,807,482, although the latter figure is well above the 1926 level of new business. There has been a welcome reduction in the expense ratio from 14.6 per cent. to 13.1 per cent. in the ordinary branch and from 37.6 per cent. to 35.9 per cent. in the industrial branch, while the combined interest earnings have been maintained at a rate of £5 1s. 11d. per cent. net of income tax. In addition to the life business, a small but increasing fire and accident business is transacted, the whole of which is reinsured with the British General. The figures do not appear in the accounts, and the only information disclosed is to the effect that last year's premium income was £52,644 and that it contributed a profit of £2,851. The usual annual 3 per cent. net premium valuation has been made, and the comparative results of the past three years are as follows:—

	1926.	1927.	1928.

In the ordinary branch a reversionary bonus at the rate of 42s. per cent. has again been declared, and, although no provision in the industrial branch for this purpose appears in the table, the chairman announced at the meeting this week the directors' intention of introducing a profit-sharing scheme at an early date. As a preliminary to this the carry-forward in this branch has been almost doubled. In another part of his speech the chairman stated that during the year the Britannic has supported, in conjunction with other insurance companies, the flotation of a number of investment trust companies, and the balance sheet shows that ordinary shareholdings have risen from £870,000 to £1,200,000. Mr. Jefferson said that during 1928 no fewer than 72 new trust companies were formed, and expressed the view that there is a danger of that class of company being overdone.

Pearl Assurance Company.—In the course of his speech at the annual meeting of this company the chairman made an announcement of very great importance to the industrial branch policyholders and to the conduct of industrial insurance generally. The company has decided to inaugurate a scheme of profit-sharing for the policyholders in this branch, and proposals to that end will shortly be brought before the shareholders for their sanction. We are particularly interested in this decision, since a year ago we stated in these columns "that the position and prestige of the Pearl, as the second largest ordinary-cum-industrial office, makes it desirable that early consideration should be given to the question of instituting some sort of profit-sharing scheme for the industrial branch policyholders." The chairman made it plain that the event is the culmination of years of preparation, during which the actuarial reserves have been continuously strengthened. The present basis of valuation, namely a 2½ per cent. net premium valuation, is exceedingly strong, and the Pearl is the first industrial company to have attained such a valuation basis. There is, of course, nothing in the contracts of industrial branch policyholders to give them any rights in the matter of profit-sharing, and the policies are legally non-profit contracts. But the surpluses now being earned on these policies have grown to undreamed-of dimensions, and profit-sharing has now become a practical necessity. The Prudential has had for many years a scheme of this kind, and a year ago the Wesleyan and General inaugurated a profit-sharing plan also.

National Mutual Life Association of Australasia, Limited.—This company is one of the best known of the Colonial offices and has the distinction of transacting a larger proportion of its total new business in this country than any other of the Dominion offices. The new business in 1928 showed a further large advance from £8,234,713 to £9,807,845, the increase being assisted by a larger volume of single premium business and also by the fact that the triennial valuation was due to take place as at September 30, 1928. Of the total amount, the Board of Trade Returns for 1926—the last year for which the figures are available—indicate that in 1926 nearly 25 per cent. was transacted in this country, although, curiously enough, the annual report omits any mention of the proportion of United Kingdom business. The expense ratio is on a moderate scale, being at the rate of 15.1 per cent. last year, compared with 14.6 per cent. in the preceding year, excluding single premiums in each case. A feature of the Dominion offices is the high rate of interest earned on the funds, and, in the case of the National Mutual of Australasia, the report shows that last year this amounted to £5 10s. 11d. per cent. net, compared with £5 11s. 6d. per cent. net in the preceding year. The usual triennial valuation of liabilities has been made, and the actuarial reserves have been strengthened in order to put them on a 3 per cent. basis instead of, as heretofore, on a 3½ per cent. basis. The comparative results of the last two valuations are shown in the following table:—

	1923–1925.	1926–1928.
	£	£
Surplus earned during triennium	2,612,493	3,511,687
Brought forward from previous valuation	250,000	736,149
	2,862,493	4,247,836
Allocations:—		
To Bonuses to Policyholders	2,126,344	3,013,518
„ Strengthening of Actuarial valuation	...	1,234,318
„ Carried forward to next valuation	736,149	...
	2,862,493	4,247,836

The profits are allotted on a special plan, and the reversionary bonuses vary with the age and term of assurance. For whole-life policies the annual bonus just declared commences at 48s. per cent. and for endowment assurances commences at 44s. per cent.

Scottish Widows' Fund.—Interest in the 1928 report centres mainly in the results of the quinquennial valuation made as at December 31 last. In view of the approach of that event, it is natural to find that the business last year showed a substantial increase over that for 1927. In 1928 new life policies were issued for net sums assured of £3,173,220, compared with £2,664,189 in the year preceding. The expense ratio for the year worked out at 11.75 per cent., compared with 11.91 per cent. in 1927, and the net rate of interest earned was £4 13s. 6d. per cent., compared with £4 12s. 9d. per cent. As at December 31st last the life assurance contracts in force were represented by 78,924 policies, carrying a total sum assured and bonus additions of £53,372,761. The valuation was made on the same basis as before, except that the rate of interest assumed was reduced from 3 per cent. to 2¾ per cent., with the result that the reserves have been considerably strengthened. This reduction in the rate of interest does not, of course, affect the profits earned, though it does alter the incidence of their distribution. The surplus disclosed at the present valuation is much reduced by the increase in reserves, while the surpluses to be shown in succeeding valuations will be increased by reason of the larger profits thrown into surplus from interest earnings. The comparative results of the valuation just made and of the corresponding valuation made five years ago are as follows:—

	1919–23.	1924–28.
	£	£
Surplus earned during quinquennium	2,947,959	3,364,064
Special Reserves released	338,040	—
Brought forward from previous quinquennium	58,720	62,126
	3,344,719	3,426,190
Allocations:—		
To Bonuses to policyholders	2,869,593	3,344,943
„ Staff Pensions	63,000	—
„ Special Investment Reserve	350,000	—
„ Carried forward to next valuation	62,126	81,247
	3,344,719	3,426,190

Thus, in spite of the strengthening of reserves, the surplus earned shows a material increase during the last five years, and enables the society to distribute a reversionary bonus of 42s. per cent. per annum compound, compared with 40s. per cent. per annum compound five years ago. It will be observed that no credit has been taken during the last five years for capital profits realised, and the balance-sheet indicates that the market value on December 31st last of the Stock Exchange securities was greatly in excess of the book values. The hidden reserves of the Scottish Widows must now amount to a very large sum.

Maritime Insurance Co., Ltd.—This company is one of the very few in the marine insurance world which has succeeded in showing each year a profit on its operations. That this should be the case and that many other large and well-known offices transacting marine insurance should exhibit large and sometimes disastrous losses year after year is inexplicable to the layman. Even the expert is hard put to it to explain it, and his difficulty is increased by the company's method of presenting its accounts. For the account is modelled on that of fire insurance companies, and the claims are lumped together in respect of the underwriting year to which they relate, so that with the best will in the world it is quite impossible to make anything but a very general survey of the results. Thus for 1928 the premium income is slightly reduced at £365,590, and after meeting claims and expenses amounting to £383,589 and a reserve allocation, there remained for transfer to profit and loss account a sum of £15,000. This amount is the same as that transferred in respect of the year 1927. The profit and loss account shows a net interest income of £53,875, compared with which the dividend, costing only £24,000, appears to be very moderate indeed. The company is controlled by the Scottish Union and National Insurance Co., which owns the share capital.

Refuge Assurance Co., Ltd.—As at December 31, 1928, the total funds of this company amounted to nearly £43 million, and the premium income to £8,300,000. The Ordinary life branch, which is responsible for two-thirds of the totality, yielded an increased new business amounting to £6,377,442, but the Industrial new business was slightly lower at £16,952,369. Expenses are lower, though in the Ordinary branch especially the ratio compares not too favourably with other similar companies. In 1928 the ratios worked out at 16·1 per cent. and 37·3 per cent. for the Ordinary and Industrial branches respectively. The combined net rate of interest earned is at the high rate of £5 2s. 10d. per cent. The following shows the results of the last three annual valuations in both branches:—

Ordinary Branch.	1926.	1927.	1928.
	£	£	£
Surplus earned during the year	962,149	958,262	1,077,630
Brought forward from previous year	565,769	692,981	726,447
	1,527,928	1,651,243	1,804,077
Allocations:			
To bonuses to policyholders	751,443	832,316	880,636
„ sharepolders' a/c	83,494	92,480	97,849
„ investment reserve fund	—	—	100,000
„ carry-forward to next year	692,981	726,447	725,592
	1,527,918	1,651,243	1,804,077
Industrial Branch.			
Surplus earned during the year	37,128	42,839	567,024
Brought forward from previous year	21,630	29,752	37,571
	58,758	72,591	604,595
Allocations:			
To bonuses to policyholders	...	...	407,728
„ shareholders' a/c	29,006	35,020	52,152
„ investment reserve fund	...	...	100,000
„ carry-forward to next year	29,752	37,571	44,715
	58,758	72,591	604,595

A reversionary bonus of 44s. per cent. has been allotted to with-profit policyholders in the Ordinary branch, being at the same rate as that for 1927. For the first time in the Company's history Industrial branch policyholders, although their contracts are on a non-profit basis, will receive a share of the profits. The sum of £407,728 set aside for this purpose will be utilised in some cases to increase the sums assured up to the amount now offered in the latest prospectus, and in other cases to pay a bonus of 5 per cent. on claims arising after March 2, 1930. A remarkable feature of the Industrial branch valuation is the growth of the surplus from £43,000 in 1927 to no less than £567,000 in 1928. The abnormal increase must be due to the release of hidden reserves no longer required. The relatively small surplus in the Industrial branch has hitherto been a marked characteristic of the Refuge, but the 1928 surplus, which may be assumed to reflect the true position, now compares well with that shown by other industrial companies. The dividend has been raised from 42½ per cent. to 50 per cent.

UNITED STATES.—SECURITY MARKETS—MONEY—INDUSTRY—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 22.

TRADING in the security markets has been at a considerably reduced pace during the past week, as the hesitancy created by the uncertainties of the credit situation combined with a double holiday to cut down Stock Exchange business. Share prices, however, have rallied for four successive days, and approximately half the losses suffered since the decline began on February 5th have been made good. Whether the recovery will carry through to new high levels, as it did last December, or whether the rally was premature and a secondary reaction will follow remains to be seen. Now that another week has gone by without change in the New York Federal Reserve Bank's discount rate of 5 per cent., and with a further reduction of 91 millions in brokers' loans along with easier call money at 5½ to 6½ per cent., the tone of the market has noticeably improved. Among the banks and the more conservative sections of the Stock Exchange a spirit of caution still rules, based on the idea that the Federal Reserve Board will not be satisfied with the deflation already secured. The general public also is holding aloof

from the stock market, wishing neither to part with any more stocks nor to increase holdings. Professional traders, however, have been more bullishly inclined, and shorts have been forced to cover rather hurriedly.

Developments of the week in banking indicate that the astringent policy of the Federal Reserve authorities has been partially successful. Seasonal deflation in commercial demand for credit has about run its course, but the reduced loans on the Stock Exchange, amounting to nearly 200 millions for the fortnight, and receipt early in the week of some more gold, enabled the member banks to reduce their borrowings from the Reserve by 39 millions. At New York the reduction amounted to 71 millions. Sales of Government securities by the Reserve Banks were negligible, but holdings of bankers' bills continued to fall, the drop for the week being 35 millions for the system. Lower bill holdings, combined with the reduction in discounts, brought a decline in total Federal Reserve credit outstanding to $90,000,000, and the item is now only 187 millions higher than a year ago. Since brokers' loans in the New York district on February 20th were $1,748,000,000 higher than a week ago, it is apparent that in warning the member banks of over-expansion of credit the Federal Reserve authorities were less concerned about the position of the Reserve system than they were about the member banks. Discounts, it is true, at $865,000,000 are nearly double those of a year ago, but in view of the loss of $500,000,000 in gold in the period the position does not appear to be particularly alarming. These circumstances give rise to the prevailing belief that the Reserve authorities are less anxious greatly to deflate credit than they are to put a stop for a while to the rapid expansion which has taken place in recent months.

The rise in your Bank rate has effectually put an end to the gold movement from London, and bankers here believe that should rising money rates here again threaten the position of sterling a further rise in your Bank rate would take place. Unless the share market regains its old speculative vigour it is thought that there is a good chance of the New York discount rate remaining at 5 per cent., although in all probability some or all of the four Reserve Banks still on a 4½ per cent. basis will raise their rates, and some increases above 5 per cent. at interior institutions would not be surprising. Support was lent to this view during the week by approval by the Reserve Board of a uniform Reserve Bank buying rate for bills at 5 to 5½ per cent., the rate prevailing in the New York district. The movement to shift the burden of the bill market from Reserve Banks to commercial banks is proving successful, but rates are now above the discount level, and any further rise would be regarded as the signal for a change in the latter.

Business has been somewhat disturbed over the credit and share market situation. The small business man for the past year has had to pay moderately higher interest rates for money, but the larger concerns are not affected. They are not now and are not likely to become borrowers. On the contrary, they are heavy lenders in the call market. Most of their new capital issues have consisted of stock, and these issues have gone well in spite of high money rates, since they were put out on a rising stock market. Corporations as a whole would temporarily be the losers from a deflationist policy, since their earnings on surplus cash would diminish and they would find it more difficult to raise new capital. So far as consumer buying is concerned, that scarcely would be diminished unless a real bear market should set in.

Meanwhile the fundamentals of business are too sound to warrant belief in anything more than a temporary set-back. Commodity prices are not inflated, nor has there been any piling up of inventories. Wholesale prices, according to the Bureau of Labour Statistics index, rose a half of one per cent. in January, the index standing at 97.2 per cent., as against 96.3 per cent. for the same time last year. Most of the increase made during the month was in the farm products groups. Employment in January, according to the same Bureau, dropped six-tenths of one per cent. in January and pay-rolls decreased 2.9 per cent. as compared with December. The decline, however, was entirely seasonal, and it is noted that the level of employment in manufacturing industries in January was 3.9 per cent. higher than in the same month of last year. Pay-roll totals were 5.5 per cent. higher.

The Bureau of Labour Statistics weighted index, taking the average prices for 1926 as 100, is given below by groups:—

Publication of corporation earning reports for 1928 reveals greater improvement than had been anticipated. Some 250 of the leading corporations in the industrial, public utility and railroad fields earned approximately 17 per cent. larger profits last year than in 1927, and it is believed that the year will prove to have been the most profitable in history for American industry. Public utility companies made the best showing, with a gain of over 20 per cent. in net income. Industrials did about as well, however, with 17 per cent., and railroad profits rose by about 13.5 per cent. Certain sections of the textile industry, the rubber and type groups, and railroad equipment manufacturers failed to improve. The greatest expansion for any single industry was found in the oil company group, as was to be expected in view of the extreme depression in 1927. Corporate earnings for the first quarter of the current year are expected to exceed those of 1928, but the feeling is growing that a tapering off in activity will come by early summer. January earnings of the railroads are turning out to be above those of a year ago, and traffic continues to increase in the current month. The steel industry is maintaining its operating rate of around 90 per cent. of capacity, and prices have further stiffened. Building construction, however, is already slowing down somewhat, and the long-term outlook for money is not favourable for activity in this industry.

The Treasury is beginning to make plans for its March 15 financing. Income-tax collections are expected to amount to over $500,000,000, but the Treasury has to meet short-term maturities of $571,000,000 on that date and will need ready cash until the June collections. An issue of close to $500,000,000 is anticipated. Unless the Reserve rate goes up in the meantime, it is probable that the Treasury will be able to borrow for less than the 4½ per cent. paid on the last short-term issue.

FRANCE.—POLITICS—FINANCE—FOREIGN TRADE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

PARIS, March 3.

THE political atmosphere is again disturbed, and a further Ministerial crisis is more than possible. M. Poincaré is known to have taken more seriously than was at first realised the recent drop in his majority to half a dozen votes on the question of the re-reform of the provincial law court system. He is believed to be anxious to bring back into the Cabinet representatives of the Radical Party, whose four Ministerial colleagues withdrew as the outcome of the resolutions passed at the unfortunate Angers congress of the Party. MM. Daladier, Caillaux and other Radical leaders have been prosecuting an extremely active Opposition campaign during the past few weeks, and the Chamber has been kept in such a state of unrest that M. Poincaré appears anxious not to take the risk of carrying on with a majority that is subject to constant ebbs and flows. The return of Radical representatives to the Cabinet would almost certainly mean the elimination of any Minister belonging to the Marin group of 101 National Union deputies, but these, at the worst, might be expected to assume an attitude of benevolent neutrality towards the modified Cabinet on all vital questions. At the same time, the Radicals, by accepting the responsibilities of office, would be more or less effectively muzzled, and M. Poincaré would be less unfavourably handicapped for the apparently pending settlement of the reparations and inter-allied debt problems, which more than ever (next to individual and party ambitions) dominate the political situation.

The Chamber will to-morrow begin discussing the Supplementary Credits connected with the last financial year, which will involve the Government in danger on several points, not the least of which will concern the frequently postponed question of authorising certain of the religious orders to return to France. The question of whether the realised surplus of 3,000 millions odd, at the end of the last financial year, shall be dissipated forthwith, in order to enable the Government to remedy immediately certain of the more glaring inequalities in the incidence of taxation appears to have been shelved for the moment. It is unofficially announced that the Finance Minister proposes to create a special commission to study the best means of reducing the more unjustifiably onerous forms of taxation without compromising the equilibrium of the Budget. M. Poincaré is believed to be ready to accept the principle of the proposed fiscal reform and to favour a plan to allow the existing realised surplus for 1928, together with that which it is expected will be realised in 1929, to accumulate in readiness to be utilised by his successor in carrying out taxation reform on fixed and carefully considered lines.

The foreign trade returns for January show total imports to a value of 5,173,843,000f, against exports of only 3,701,892,000f, or a deficit balance on the month's exchanges of 1,471,950,000f. January was the eleventh month since the beginning of 1928, in which there was an adverse balance, the total deficit during the 13 months now totalling 3,574,000,000f. The detailed comparative figures are as follows:—

Imports.	1928	Month of January. 1929	Inc. or Dec. in 1929
Foodstuffs	918,937,000f	1,198,291,000f	+ 279,354,000f
Raw materials	2,702,418,000f	3,259,655,000f	+ 557,237,000f
Manufactured goods	456,656,000f	715,397,000f	+ 258,741,000f
Totals	4,078,011,000f	5,173,343,000f	+ 1,095,332,000f
Exports.			
Foodstuffs	527,829,000f	465,276,000f	− 62,553,000f
Raw materials	1,078,746,000f	1,034,562,000f	− 44,184,000f
Manufactured goods	2,413,143,000f	2,202,054,000f	− 211,089,000f
Totals	4,019,718,000f	3,701 892,000f	− 317,826,000f

The heavy deficit in January, as will be seen, was chiefly due to increased imports of raw materials for manufacturing purposes (as compared with the figures for January, 1928), which cannot be regarded as a pessimistic indication, in view of the present general economic situation here. At the same time, comparison of the totals for January and December show that on the month French exports fell off by over 1,000 million francs (3,701,892,000f. against 4,733,095,000f.), whereas the drop in imports on the month was only 39½ millions. The falling off in exports was common to all three classifications, and the rise in imports was distributed equally generally. The most serious indication, perhaps, is that exports of manufactured goods were 211 millions less than in January, 1928, while imports of foreign manufactured products were 258¾ millions larger. These returns, it should be repeated, are somewhat vitiated by the fact that French exports are calculated on f.o.b. bases, while imports are given c.i.f. values; neither do they take into account the large amount of invisible exports in the form of the French tourist traffic.

Coal-production figures for January, which are issued to-day, indicate a total output of 4,527,951 tons for 26 working days, as against 4,178,028 tons in December (24 working days). The average daily output was 174,152 tons with a total working force of 297,058, as compared with 170,863 tons per day in January, 1928, with 316,130 labour units engaged. The Northern coalfield produced in January a daily average of 113,868 tons, or 22,571 tons a day more than in 1913. The collieries in the Centre and South, where strikes have been in progress, showed results averaging 4,727 tons a day below their pre-war figure. The Lorraine coalfield, now included in France, furnished an average of 20,161 tons a day in January, in addition to the mines comprised within the old pre-war frontiers. The output of metallurgical coke by the colliery plants totalled 396,460 tons during the month, or 150,000 tons more than the monthly average in 1913. Delivery delays, owing to the frozen rivers and canals having been unutilisable by barge traffic, are hampering the trade in combustibles in the North and East. The demand for coal and coke remains lively, both in regard to industry and household consumption, as merchant stocks are threatening exhaustion. Large stocks still exist at the pits, but there is ground for expecting that the stimulus given to industry now that the spring is at hand will soon render it necessary to replace these with newly extracted combustible.

Iron and steel production in January were alike appreciably larger than in the previous month, the total output of iron being 905,000 tons, against 883,000 tons in December, and against a monthly average of 756,000 tons in 1913 (Alsace-Lorraine output included). The output of steel in January was 837,000 tons, against 828,000 tons in December and a monthly average of 581,240 tons in 1913. The number of blast furnaces in activity in January was 157 (with 66 ready for activity, or under reconstruction or repair), as compared with 190 in 1913 (Alsace-Lorraine plants included). The market for both iron and steel continues firm on the whole. There is a fairly active demand, and prices at the week-end remained without appreciable change. Export trade is steadier, the price fluctuations to be noted a fortnight ago having now practically disappeared.

GERMANY.—POLITICS—CREDIT—CAPITAL MARKET—FINANCE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, March 5.

THE Chancellor's attempt to form a "Great Coalition" Cabinet has failed. The programme was that the Social-Democrats, German-Democrats, Centre, and German and Bavarian People's Parties should support the Government on coalition principles without committing themselves to accept in their present form bills already submitted. The Centre representatives declared that their

party would probably be willing to re-enter the Cabinet on that basis, but the German People's Party declined to participate in any consolidation of the Government until pending Budget and taxation questions are settled. The Chancellor thereupon, with the approval of the President, decided that his Cabinet would remain in power with its present composition. This means that two portfolios, Communications and Occupied Territories, are provisionally managed. The formation of a firm Coalition Cabinet would perhaps have strengthened the German delegates' hands in the Reparation discussions; but it need not be assumed that the present anomalous Cabinet will fail in domestic legislation or that its days are numbered.

The money market situation continues to be strained. The February month-end settlements brought a heavy demand, and day loans on the 28th rose to 8-10 per cent., declined only by ½ per cent. in the first four days of March, and were to-day 7½-9 per cent. The private discount rate remains 6⅛ per cent. The unfavourable cash situation of the Republic and the impending further great demand for cash at the end of March influenced the market, and it is doubtful whether the various public funds from which the Republic borrowed at the end of the December quarter will be available to the same extent. Another factor in the money market is the 150 million marks liability on the Reparations industrial bonds. It was assumed that, as the Reichsbank in discounting counts 30 days in February, the discount portfolio increase in the last week of the month would be small, in order to save two days' interest to borrowers, and that advances would be correspondingly large; but, in fact, while advances increased by the very large sum of 259 million marks, discounts also increased considerably by 415 million marks. Normally, a great part of the advances would be paid back in the first days of the new month. It is stated that the repayments of funds abroad have almost ceased, and that some banks have of late again increased their foreign indebtedness; but the Reichsbank's return shows a further drop of 9 million marks in the legal-cover exchange reserve and a considerably larger sum, about 30 million marks, was lost from the free, unspecified, exchange reserve. Circulation rose to 4,553 million marks, as against 4,454 million marks at the end of January.

Home loans in February totalled 68 million marks, as against 34 million marks in January; foreign loans 161.4 million marks, against 27 million marks. The shares of the United States, Holland and Switzerland increased materially, and Holland also bought reichsmark fixed-interest securities. The price of capital at home has slightly risen this year. At the beginning of March the average yield of home loans, with nominal interest rates varying from 4½ to 10 per cent., was 7.8 per cent., as against 7.7 per cent. in January, and 6.8 per cent. in June, 1927. The average yield of German loans abroad is calculated at 7.05 per cent., as against 6.5 per cent. in June, 1927. Savings deposits in the savings banks at the end of 1928 are returned at 6,988 million marks, as against 4,667 million marks at the end of 1927, and 608 million marks at the end of 1924, one year after the currency stabilisation.

The Finance Ministry's return for the end of January shows on the ordinary budget a deficit of 32.2 million marks since the beginning of the financial year, on the extraordinary budget a deficit of 216.5 million marks. The deficit on the ordinary budget was reduced by the large taxation receipts of January. The status of both accounts, including the credit and debit carry-overs from the preceding financial year, is a deficit of 31.9 million marks.

The wholesale-prices index number for February 27th was 139.6, as against 140.0 on the 20th. The cost-of-living index for February shows 154.4, against 153.1 for January, and is the highest so far. Since October, 1928, the food group in this index has risen from 151.8 to 155.7. Bankruptcies in February numbered 806, against 829 in January; compulsory compositions 364, against 252. The high point of winter unemployment seems to be past. In the first half of February the number of unemployed rose by only some 50,000 to (provisional return) 2,300,000. The Prussian Trade Ministry's monthly report states that the trade decline (apart from seasonal influences, which, owing to the cold winter, were more marked than usual) continues, and mentions that orders are declining in the chemicals branch, which has, in general, done well of late. The official Institute for Study of Trade Fluctuations predicts a continuing trade decline for the next few months. The Institute is pessimistic about the trade prospect in the world generally, making an exception only for the United States. The Leipzig Spring Fair, as regards number of visitors, has been badly hit by the cold weather; but in other respects it will be a good average Fair. Fifteen per cent. more English visitors were expected than a year ago. The tendency of German firms is to exhibit better-quality goods.

Ruhr coal production shows signs of increasing. The iron and steel market is dullish, except for semi-products, for which there is a great demand. The pig-iron market is weak. The Prussian State, following the example of the Reich, is creating a holding company for its four mining and electricity companies. The export of Solingen steel wares in 1928 was 7,455 metric tons, the largest so far. The highest pre-war figure, in 1913, was 5,951 tons. The value in 1928 was 70,680,000 marks, against 38,325,000 marks in 1913. The proportion of sales to Europe and Asia is larger than before the war, to America much smaller.

The Government has rejected a demand made in the Reichstag for the imposition of a prohibitive import duty on foreign boots and shoes. The cotton manufacturers are campaigning for a revision of the commercial treaty of 1927 with France; but, in view of the fact that the German trade-balance with France has greatly improved since the conclusion of the treaty, the manufacturers are hardly likely to succeed. The gross value of textiles production in 1928 is officially estimated at 8,560 million marks, as against 9,360 million marks in 1927. The import of finished textiles slightly declined in 1928, whereas export had a value of 1,609 million marks, as against 1,489 million marks in 1927, and 1,325 million marks in 1925. Raw cotton import in 1928 was 462,982 metric tons, as against 590,705 tons in 1927; export, 110,810 tons, against 115,260 tons. The American proceedings against the Franco-German potash cartel have been settled out of court. The cartel has been recognised as a foreign organisation doing business in America, and, therefore, as lawful, but there is a prohibition against violating anti-trust legislation by fixing prices and differentiating between customers.

SWITZERLAND.—NATIONAL BANK—BUSINESS—MONEY—CAPITAL—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

GENEVA, February 16.

THE Swiss Federal Government has examined and approved the report and the 1928 accounts of the Swiss National Bank, the situation of which may be regarded as very prosperous. The profit reaches £275,930 compared with £270,126 in 1927. A sum of £22,355 will be paid to the reserve fund; £50,000 will be used in paying a dividend of 5 per cent., and £10,000 in paying an extra dividend of 1 per cent. The remaining sum—£193,575—will be paid to the Federal Treasury, which will distribute it as usual among the Cantons. In 1928, the bank notes circulation reached an average of £32,733,200 as against £31,951,520 in 1927, while the legal metallic reserve averaged £20,259,120, or 61.89 per cent.; the total reserve, including gold deposits abroad, securities and advances on securities, totalled £37,524,560.

The report notes that in 1928 business in Switzerland was more active than during any one of the past six years; this should be ascribed to the great improvement in the metallurgical and mechanical as well as in the watch-making industry, while, on the other hand, the persistence of fine weather had an excellent influence on the tourist traffic, the result being that the earnings and profits of all transport undertakings were much higher. Another consequence of general prosperity is the improvement in the financial position of the Federal Government and of the Federal Railways.

In regard to the monetary policy of Switzerland it was decided to continue the policy pursued during the past years with a view to maintaining the Swiss currency within the limits of gold value in comparison with the countries where the gold market is free. Monetary policy was further examined quite recently at a meeting of financial experts convened by Federal Councillor Mr. Musy, Chief of the Finance Department. The experts decided against the reintroduction asked by public opinion of the 5 f. and 10 f. notes which were put into circulation during the war and withdrawn a few years ago They were of opinion that the silver piece should be maintained, but its weight reduced to 12 grammes and its diameter to 31 millimetres. In spite of the general recovery, borrowings were less important than during the previous year. The Federal Government was not in need of capital and it repaid by its own means £1,944,000 worth of bonds due in September; the Federal Railways issued a loan of £6,000,000 at 4½ per cent. for repaying and converting a loan placed in 1918–19; the Cantons and Communes borrowed £4,235,800 as against £3,478,440 in 1927; and industrialists, transport undertakings and banks borrowed £5,159,200 compared with £6,562,000 the previous year, altogether £15,395,000 as against £20,040,444 in 1927. The Swiss market was furthermore in a position to lend £3,604,760 to foreign Governments and industries, compared with £9,430,400, the interests ranging from 5½ to 7½ per cent. The principal of these loans were placed by the Greek and Bulgarian Governments, and by the French Chemins de Fer du Midi, while several German industries borrowed together a sum of £2,120,000. The decrease in foreign borrowing has much relieved those Swiss financiers and statesmen who, during the past years, repeatedly insisted on the danger the exportation of Swiss capital was constituting for the country.

Imports in 1928 amounted to £109,787,213, as compared with £102,551,762 in 1927, and exports increased from £80,929,983 to £85,377,430. Exports to Great Britain showed a very slight decline; imports from Great Britain rose from £7·6 million in 1927, to £9·1 million in 1928. The British Industries Fair brought many Swiss orders to British firms.

GREECE.—BRITISH CAPITAL—BANKERS' REPUTATION—PUBLIC FINANCE—INTEREST—FOREIGN TRADE—ITALIAN BANK IN GREECE.

(FROM OUR CORRESPONDENT.)

ATHENS, February 22.

A REPRESENTATIVE of the Prudential Assurance Company of London arrived here some days ago for the purpose of expressing verbally to the Government the complaints of his company at the obstruction systematically put by Governmental departments to the task of certain companies with which the Prudential is closely allied and the syndicate of Greek banks to carry out electricity and transportation works in Athens and the Piræus. Doubts are expressed, however, as to the effectiveness of this step, for the open war declared against these companies by the responsible Minister and the Press has created a very delicate situation, which it is now extremely difficult to improve. The facts that the contract for these works was concluded at the time of the dictatorship of General Pangalos, and is considered unduly favourable to the contracting companies, together with the inevitable expenses and annoyance for the public occasioned by the change of the electric current and the execution of the transportation works, have produced an ill-feeling against the contractors—a psychological ground, moreover, cleverly exploited to the detriment of British interests by certain influential foreign competitors. Hence the daily increasing Press attacks on the Power and Traction, and the unfriendly attitude of the present Government, not only in the case of that company but towards British interests generally. The unfriendly feelings of the authorities were clearly shown also in the course of the negotiations concerning the issue of the Public Works Loan, and in a recent speech of Mr. Venizelos (delivered by him in Parliament on the occasion of the ratification of the agreement with Seligman and Company of New York for the issue of dollar bonds up to $54,000,000, against this loan), in which several misstatements and unjust criticisms concerning Hambros Bank were contained.

A committee of the managers of Greek banks has recently visited the Prime Minister to submit to him various demands on behalf of the banking community, and to formulate some remarks of a more general character touching the economic interests of the country. The attention of the Premier was particularly drawn to the ill-effects of the right given to the authorities to inquire at the banks regarding private deposits, a policy which has resulted in a flight of capital from the country. The necessity of amending the law concerning the obligatory employment of reservists, in the light of the corresponding measures adopted by other countries, was also emphasised to him. Further points raised by the Committee in the course of their discussion with the Prime Minister was the taxation of joint-stock companies, which is heavier than in any other country, and which, by allowing investigations to be carried out by tax officials, violates banking secrecy, and, consequently, shakes confidence; it was further pointed out to him that every care should be taken, by inspiring confidence, to encourage the return of Greek funds which have migrated to other countries where they find all sorts of facilities and protection. In this connection Mr. Venizelos was reminded that the large commercial deficit of the country is normally set off by the invisible exports, which, with a terroristic tax *régime*, are diminishing every day. Mr. Venizelos promised that banking secrecy will be respected and that all the necessary measures will be taken with a view to restoring confidence and attracting the capital so badly needed for the economic reconstruction of Greece. It remains to be seen how far the promises of the Premier will be translated in facts.

Public revenue for the first nine months of the current financial year amounted to Drs. 6,317 million, against estimated revenue for the whole year of 11,115 millions and receipts for the corresponding period of last year of Drs. 6,023 million. Expenditure for the same months reached Drs. 4,780 million, against an estimated amount of Drs. 11,115 million for the whole year and expenditure of Drs. 4,436 million for the same period of the previous year. Receipts from the revenues assigned for the service of the public debt totalled in 1928 a sum of Drs. 3,973 million, showing an increase of Drs. 172 million over those of 1927. The National Debt amounts to Drs. 38,155 million, with a proportion of Drs. 6,000, or £16, in round figures, per head of population. The latter, according to the recent census, is 6,205,000 souls. As the American Senate has recently passed the Bill ratifying the agreement concerning the funding of the war debt of Greece and the granting of a loan to her of $12,167,000 for the settlement of the refugees, the National Debt will increase by $32,497,000.

A recent law provides that the contractual rate of interest on civil and commercial transactions cannot exceed

by more than 4 per cent. the discount rate of the Bank of Greece—amounting at present to 9 per cent. On the other hand, the legal and overdue rate is fixed at 3 per cent. above the official rate. Imports for the first eleven months of 1928 amounted to Drs. 11,461 million, and exports to 5,097 millions, as compared with imports of 12,602 millions and exports of 6,037 millions for the year 1927. The United States of America come first with 16 per cent. and Great Britain second with 14 per cent. of the imports. As regards exports, Germany is first with 25 per cent., the U.S.A. second with 20 per cent., Italy third with 17 per cent., and Great Britain fourth with 13 per cent. of the total. The Banca Commerciale Italiana founded recently an associated bank in Greece with an authorised capital of 60,000,000 drachmas, of which 15,000,000 have been paid up. The new bank has its registered office at Athens and branches in Piræus, Salonika and Cavalla.

SOUTH AFRICA.—POLITICS—GERMAN TRADE TREATY—NEW COMPANIES—COST OF LIVING—PUBLIC DEBT.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, February 3.

THE last session of the present Parliament opened on the 25th January. Apart from various formal statements, the Governor-General's speech referred to the signing of the Trade Treaty with Germany and of the Kellogg Pact, the early convening of a joint sitting to deal with the Representation of Natives in Parliament Bill, and the provision of funds for the investigation of the problem of the obtaining of oil from coal. At the opening sitting General Smuts gave notice of his intention to move a motion of no confidence in the Government. The debate on this latter motion has occupied a large part of the time of the House to date. No business except that possessing immediate importance is to be brought before the House this session.

The Government is experiencing the usual troubles of moribund governments. It is divided and again subdivided. (By the way, the Prime Minister has definitely declared for the Labour Party of his colleague, Col. Cresswell, and against the National Council Party.) It has disappointed some of its friends and given handles to most of its enemies. Nevertheless, the latter hardly hope for a definite defeat of the Pact. A more probable and perhaps more satisfactory result would be such a condition of balance amongst parties as would render re-alignments necessary. At present several partitions depend on differences of personality rather than of opinion. Certain politicians, however, are busy with tones and language which may prejudice the formation of any fresh alliances.

General Smuts, speaking at Ermelo, suggested that the Trade Treaty with Germany arose out of a desire on the part of the Government to "show off." It seemed good to the Government, in an attitude typical of immaturity of experience, to make a treaty just to prove its independence. The suggestion does little credit to the South African parties to the Treaty, but a good many people think General Smuts' powers of penetration have not misled him. Meantime the Government inform us that agreements with other nations are under consideration. It is believed in some quarters that the Government will attempt to adopt the Treaty without submitting it to the Senate. If this is done, it is likely that the constitutional legitimacy of the procedure will be tested at law. In other quarters it is believed that the Government will realise that the Treaty would please certain individuals at heavy cost to the country; in this case some more or less ungraceful retreat might be made. Support for the former view is derived from the fact that it is proposed not to submit the Kellogg Pact to the Senate, although that body would be certain to approve of it.

During 1928, approximately 700 limited companies were registered in Pretoria, having a total capital of £13,160,000. About 600 were "private" companies, having a total capital of £3,437,000; 78 were "public" companies, with a total capital of £4,500,000; 12 were "foreign" companies with a capital of £1,700,000; the South African Iron and Steel Corporation was constituted under a special Act (No. 11 of 1928) with a capital of £3,500,000. Two hundred and seven companies with nominal capitals amounting in all to £4,294,000 went into liquidation; 160 companies increased their capital by £5,500,000 in all, whilst 21 companies reduced their capital by £1,500,000. Of the new companies 57 proposed to engage in mining, 42 in "finance," 60 in land development and exploration, and 27 in some branch of industry; the 474 "commercial" companies include a number whose business is not disclosed by the title of the company.

The "Cost of Living" is again attracting notice and a further commission of inquiry is talked of. Such a commission might attract some attention to the general principles and also ventilate some important details, but the present level of prices in South Africa can quite safely be attributed to small-scale enterprise, to tariff policy, and to railway rates to the interior. It is doubtful, however, whether any Commission or Commissioner will risk public opprobrium by preaching too powerful a sermon from that text.

On the 31st March, 1928, the Public Debt of the Union amounted to £238,926,064, of which sum £4,472,828 was in Union Loan Certificates and £10,075,189 in Treasury Bills. The increase since the 31st March, 1927, was £7,450,117. Of the total of £239 millions 63·4 per cent. is external debt, and 36·6 per cent. internal, these figures showing a further movement of public securities from overseas to South Africa. The average debt is £138 per European head, and £30 17s. per head of total population. The average interest charge figures (per European and per head of total population) are respectively £6 5s. 6d. and £1 8s. 1d. gross, and £1 17s. 6d. and 8s. 5d. net after deduction of interest received from the railways, the post office and on various balances. The productive debt is 79·2 per cent. of the whole.

Letters to the Editor.

THE EFFECT OF FOREIGN LOANS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In an article on Free Trade and Protection published in your issue of February 23 you write as follows:—"Capital exports stimulate commodity exports—a statement which will be supported by all, only with a variety of emphasis and qualification." It will, I think, be helpful if you will develop this point a little further, explaining by what chain of causation the result follows.

Where the borrower borrows expressly for the purpose of making purchases in this country, as was often the case with the railway loans of the mid-nineteenth century, the connection is obvious. It is also arguable that any loan gives a fillip to international trade, from which we shall benefit roughly in the proportion which our trade bears to the trade of the world. Let us suppose, for the sake of illustration, that 20 per cent. of the sums which we lend abroad—and I should think that this proportion is higher than the truth—leads more or less directly to exports in the manner described above. But what about the remaining 80 per cent.? The train of causation by which this leads to commodity exports is what I should like to see explained in detail.—Yours, etc.,

J. M. KEYNES.

46 Gordon Square, Bloomsbury, February 26, 1929.

[Reference to this letter is made in a Note of the Week.—ED., *Econ.*]

TO THE EDITOR OF THE ECONOMIST.

SIR,—There seems to be much misapprehension regarding the true meaning of "capital import" and "capital export."

It appears to be a general assumption that it is the advent of financial capital which creates employment and causes production. If this were so, then we should expect the wealthiest countries to have the last unemployment; while the amassing of wealth would lead to a solution of our gravest social problem. But there is no ground for such expectations. The truth is that financial capital is not the *cause* of production and employment, but the *means* to bring the real causative factors into effect. The real cause of production is effective demand for consumable things; this produces demand for the production of physical capital means of production; and this second demand requires and attracts financial capital for the purpose of producing these means of production. It is essential to recognise that financial capital is not productive apart from real or physical capital, and that unless the primary condition of effective demand for consumable things is present no amount of increased financial capital will cause increased employment and production. This is made manifest in the present situation in this country. We have no lack of financial capital; the rate of profit has been on the up-grade; the consequent amassing of credit has been absorbed in a Stock Exchange boom. Yet we fail to employ our labourers, and our rate of production is not satisfactory.

Another false assumption is that "capital invested abroad" means a diminution of the amount of industrial capital available for home use. The truth is exactly the contrary. "Capital export" is one of the many misleading terms in economics. So far as the country which exports the financial capital is concerned, this capital export is simply the granting of consumer credit to the country which imports the capital. For, considered as the direct or indirect customer for the former country's goods, the latter country consumes the value of the credit lent to it, although it may use that credit for capital purposes. To grant international consumer credit means a corresponding temporary increase in home exports. It it as if the home investor in foreign enterprise ordered goods from the home manufacturer and sold them abroad on credit. In point of fact, not a penny of currency, either cash or credit, actually leaves the creditor country in respect of a foreign investment; nor, therefore, is the volume of credit available for home industry diminished. In effect, the investor has simply poured his savings into home industry in the best possible way—as effective demand for its products; but he holds the foreigner in debit for it, because the latter receives the goods. Far from this causing a reduction of home industrial capital, it actually increases the capital value of exporting industries, and attracts to them financial capital for their development. Does anyone really imagine, for instance, that the so-called "export of capital" from this country during the last century deprived British industry of the necessary financial capital for development? Has the post-war foreign investment of America impoverished American industry?

But what is the effect of "importing capital"? It is obvious that, since international credit is consumer credit, the receipt of this credit is beneficial to the borrowing country only in so far as that country did not previously possess the financial means to develop its resources. Thus we find the import of financial capital is most desired and needed by those countries which are farthest below the mean world level of industrial development: Russia, China, India, South America, etc. On the other hand, capital import into an industrially advanced country like Britain will bring no benefit at all. We do not need consumer credit in respect of foreign goods to enable us to construct the means of production, because we have the means to construct or produce all the value we want. The import of foreign capital hither can be regarded as beneficial to us only on the assumption that we have not the means to develop our own resources to meet a pressing world demand for our goods.

It is also a mistake to think that more exports can be pushed out of this country by increasing the volume of financial capital in this country. British exports depend on foreign purchasing power that is specific to British goods. But this specific foreign purchasing power is no other than British credit—sterling bills in the foreigner's hands. This is the operative, generating cause of British exports. The richest country in the world will not buy our goods except as it acquires British purchasing power; nor will the poorest country fail to buy them, directly or indirectly, if it possesses British credit. And there are only two ways by which more British bills can reach foreign hands: by increased imports; and by increased export of British capital (the granting of consumer credit). As to the first, it can be done only by increasing British consumption. Increased consumption will increase imports; and increased imports will place more British bills in foreign hands. Thus British demand for consumptibles, even when it finds its first expression in a demand for foreign goods, is really an indirect demand for the products of British industry.

As to the second way of placing sterling bills in foreign hands, namely, by capital export, this cannot be a permanent solution of the problem of increasing exports, because the interest on the capital causes a complication. For whereas the total value of goods exported in respect of exported credit is limited to the amount of the latter, the interest on continuously exported credit is cumulative, and this returning interest credit serves to nullify the effect of capital credit export in stimulating the export of goods. A country which has been for many years exporting capital credit in this way eventually finds itself receiving annually more interest than it is exporting of capital credit. This is the position of this country at present; which position, by the way, is a standing proof of the fact that every export must have its corresponding import. For we are now being compelled to import more goods than we export, to the tune of £350 million per annum, because some time ago we exported (by granting consumer credit) more goods than we imported. This is a back swing of the trade balance with a vengeance.

But to-day we are also up against another problem. Some of the countries to which we in the past granted consumer credit for capital purposes have now developed their resources so far that they have begun to do the same thing, notably America. America is now exporting credit and accumulating interest claims on other countries, as we have been and are doing; and other countries are preparing and striving to follow suit. Britain and America are now creditor countries; which implies that some other countries must be debtor countries. But no country will be content to remain in a debtor position indefinitely after it has developed its resources; while the foreign exchanges always operate powerfully towards equilibrium in international indebtedness. How are we going to meet this international striving for creditorship, which is certain to grow as the world develops industrially?

Is it not manifest that we, as the first country to develop industrially, are already entering into the shadow of this world struggle? A question which has recently become prominent is that of the apportionment of the world's gold. Is not this part of the far larger and more important problem of international indebtedness?—Your faithfully,

E. LLEW. VAUGHAN.

BANK RATE POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—My friend, Mr. Mason, has not followed or restated my opinions correctly; but in any case I cannot understand why he should object to the statement that the Baldwin Treaty was a gold debt treaty, seeing that the principal and interest have to be paid in gold dollars. I agree with him that the gold standard must be maintained, and that the present depression of trade and public credit is largely due to wasteful and excessive national expenditure; but I am not inclined to withdraw or modify any portion of the argument which I presented to your readers in my letter on Bank Rate Policy.—Yours faithfully,

FRANCIS W. HIRST.

London, March 6, 1929.

ITALY AND DIVORCE.

TO THE EDITOR OF THE ECONOMIST.

DEAR SIR,—I read in your issue of 16th inst. in the article "The Pact of the Lateran" the following inquiry: "Are we to understand that in Italy, henceforth, divorce and re-marriage will be legally impossible?" To which I would reply that divorce and remarriage have always been legally impossible in Italy and will continue to be so. In this no change is made in existing conditions, as Italy is one of the few countries where no divorce law has ever existed. The main change which the Concordat makes in the existing law is that a church marriage henceforth becomes a legal marriage without the need of a separate ceremony, as heretofore, of civil marriage before the mayor. Civil marriage, however, will continue to be celebrated for those who desire it—non-Catholics or others.—Faithfully yours,

OLIVIA ROSSETTI AGRESTI.

Associazione Fra Le Società Italiane per Azioni,

February 19, 1929.

[Inquiries in official quarters support the correctness of our correspondent's contentions.—ED. *Econ.*]

Books and Publications.

A STUDY OF SOCIAL THEORIES.

THE subtitle to Professor House's book on "The Range Social Theory"* is "A survey of the development, literature, tendencies and fundamental problems of the social sciences." In a work extending to nearly 600

* "The Range of Social Theory." By Floyd N. House. (New York) Henry Holt and Co., 1929. $3.60.

pages, and including a full index, the author has made "The range of social theory itself an object of reflective scrutiny." His reflections are based on a study, which must have been wide indeed, of the literature of his wide subject. There is scarcely a page which does not refer to several learned works. A large proportion are American. This is essentially a book of reference, and the service which it may render is to present within moderate compass summaries of all kinds of theories and ideas bearing upon social evolution. This, rather than the expression of views of his own, appears to be the writer's purpose, though he does in places state his own opinion.

After treating of (1) geography and social differentiation, Professor House turns to (2) human nature and collective behaviour, and (3) conflict and social control, and concludes with a couple of chapters on (4) the trend of social theory. Perhaps rather too much attention is given to verbal distinctions and questions of classification, but a reader who overcomes the feeling of being lost in a maze may be helped by this work.

A LEGAL DIGEST.*

SOME ten years back the issue was commenced in volume form of reports of law cases reprinted from "Lloyds List." Perhaps to a greater degree than most publications of the kind, these appeal to business readers. While shipping litigation forms the backbone of the series, it covers also the decisions on many commercial matters such as arbitration, sale of goods (including both c.i.f. and f.o.b. contracts) and most classes of insurance. Cases on bills of lading, the Carriage of Goods by Sea Act, and charter parties are also included. Published in serial parts from time to time, the contents of the volumes themselves necessarily are not classified, and at intervals, therefore, digests have been issued. These, by bringing together the decisions of a few years under alphabetical headings, provide a useful review. Digest No. 3, covering the period of about three years from the beginning of 1925, has now been published, and presents in summary form a record of many decisions of note on shipping and commercial questions.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Gold and Central Banks. By Feliks Mlynarski. (New York) The Macmillan Company. $2.00.

A study, by the Vice-President of the Bank of Poland, of the question of gold policy as it confronts central banks to-day. His principal conclusion is the urgent need for international co-operation.

Bankers' Balances. By Leonard L. Watkins. (Chicago) A. W. Shaw Company.

This study of the effects of the Federal Reserve System on banking relationships won the triennial prize of the Chicago Trust Company.

"Fairplay's" Annual Summary of British Shipping Finance. Compiled by "Fairplay," 51–56 Palmerston House, 51 Bishopsgate. 10s. 6d. net.

An invaluable book of reference on all matters connected with shipping. It includes tables of lines, cargo-lines and cargo-boat earnings for some twenty years past; tables of recent coal and oil prices; details of the principal shipping companies, and of British marine insurance companies; details of vessels sold in 1928, and a variety of other information.

The Study of Economic History. By J. H. Clapham. (London) Cambridge University Press, Fetter Lane. 1s. 6d. net.

This is Dr. Clapham's inaugural lecture as Professor of Economic History in the University of Cambridge.

Money Making in Stocks and Shares. By Sydney A. Moseley. Third Edition. (London) Sir Isaac Pitman and Sons, Ltd, Parker Street, Kingsway. 7s. 6d. net.

The third edition of this popular guide to investment and speculation for amateurs has been brought thoroughly up to date.

The Liberal Year Book for 1929. (London) Liberal Publication Department, 42 Parliament Street. 1s. 6d.

In addition to a large collection of miscellaneous information this work of reference contains a simple "guide to Parliamentary procedure"; the biographies of Liberal members and candidates; and the results of all parliamentary elections since 1918. There is also a useful section on registration and election law.

Rules and Regulations of the Stock Exchange, 1929. (London) Edward Satterthwaite, New Court, Throgmorton Street. 1s.

This compilation of the Stock Exchange rules is admirably indexed.

The Post Office London Directory for 1929. (London) Kelly's Directories, Ltd., 186 Strand. 55s.

This directory is indispensable to business offices. It includes a large-scale map of London, a street directory, commercial and trade directories, and a directory of private residents. There is also a suburban section.

Exercises in Economics. By Alfred Plummer. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 2s. net.

A book of questions, accompanied by short answers, intended to enable the beginner to test his ability to apply his knowledge of economics to concrete problems.

Topsy Turvy. By Vernon Bartlett. (London) Constable, 10–12 Orange Street. 5s. net.

A collection of short stories of post-war Europe.

Bankers' Magazine, March, 1929. (London) Waterlow and Sons, Ltd., London Wall, E.C. 2. 2s. 6d. net.

This issue includes articles on "Bankers and Industry" and "The Rise in the Bank Rate."

The Round Table. March, 1929. (London) Macmillan and Co., Ltd., St. Martin's Street. 5s.

Articles in this number include: "The British Commonwealth, Freedom of the Seas"; "Towards Industrial Renaissance"; "Great Britain: The Political Temperature."

Australian Wool Annual. Vol. I. 1927-28. Edited by D. B. Copland with a Foreword by Sir George Fairburn (Melbourne). Reviews. Proprietary, Ltd., Henty House, 499, Lit. Collins Street. 17s. 6d.

An extremely elegant, illustrated publication which contains *inter alia* articles on "Wool Prices: Influences Affecting Them"; "The World Supply and Demand for Wool"; and "Climatic Control of Wool Production."

Britain's Pledge. By Ramrai M. Munshi. (Bombay) D. B. Taaporewalla Sons and Co. 1s.

A draft bill, with commentary by its author, for the amendment of the Government of India Act.

India, March, 1929. (London) "India" Publications, Ltd., 19 Charing Cross Road. 1s.

An illustrated monthly magazine devoted to Indian affairs.

Prospettive Economiche. By Giorgio Mortara. (Milan) Universita Bocconi.

These four further volumes in the series already frequently noted in these columns deal respectively with iron, copper, land and sea transport.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2.

Government of Northern Ireland: Seventh Annual Report of the Ministry of Agriculture, 1927-28. Cmd. 92. 2s. 6d. net.

Air Estimates for the Year 1929. 4s. 6d. net.

Memorandum by the Secretary of State for Air to accompany Air Estimates for 1929. Cmd. 3274. 3d. net.

Memorandum on the Board of Education Estimates, 1929. Cmd. 3275. 6d. net.

The Stock Exchange.

HOME RAILWAYS POSITION.

THERE never was a time when a sound understanding of the railway position was more essential on the part of the investor and the general public, or the true facts were so difficult of interpretation as at the present moment. The detailed reports of the four great lines, and the very full reviews given by the chairmen at the companies' meetings, have thrown an abundance of light on the events of the past year, which stands revealed, not merely as a period of unusual difficulty, from which the railways emerged much more creditably than had at one time been anticipated, but as a definite historical landmark in post-war railroad administration. During 1928 the new system foreshadowed in the Railways Act of 1921 came, for the first time, completely into operation, under conditions which provided a searching test of its efficiency. Simultaneously, the whole basis of that system—the possession by the railways of quasi-monopoly powers—was shaken by the challenge of a new and "uncontrolled" method of transport, and Parliament reached a memorable decision to implement the expressed desire of the companies to seek their future prosperity, not in destructive competition, but in self-interested future co-operation with the road services.

A statistical picture of the year's operations is given in the following table:—

	London Midland and Scottish Railway.	London and North-Eastern Railway.	Great Western Railway.	Southern Railway.	Total—Four Group Railways.
	(£.000)	(£.000)	(£.000)	(£.000)	(£.000)
Railway Receipts—1928	73,870	54,113	30,486	23,019	181,488
Compared with 1927	− 3,947	− 2,614	− 1,297	− 584	− 8,442
Railway Expenditure—1928	58,945	43,331	24,476	18,447	145,199
Compared with 1927	− 2,512	− 2,779	− 535	− 757	− 6,583
*Ancillary Businesses—Receipts—1928	8,388	7,311	5,042	3,497	24,238
Compared with 1927	− 129	− 263	− 254	+ 27	− 619
Ancillary Businesses—Expenditure—1928	8,642	7,407	4,932	2,696	23,677
Compared with 1927	− 201	− 149	− 73	− 7	− 430
Net Revenue from All Sources‡—1928	16,271	11,278	7,057	6,394	41,000
Compared with 1927	− 1,040	+ 10	− 767	+ 175	− 1,623

* Including road transport, steamboats, canals, docks, hotels, collection and delivery services.
‡ Including joint lines, and miscellaneous receipts *less* charges.

All the four lines suffered a considerable loss in gross revenue last year, the L.M.S. showing a falling off, as compared with 1927, of 5.1 per cent. in railway and 1.5 per cent. in ancillary receipts, the L.N.E. of 4.6 per cent. and 3.5 per cent. respectively, the G.W. of 4.1 per cent. and 4.8 per cent., and the Southern of 2.5 per cent. in railway with a gain of 0.8 per cent. in ancillary receipts. In every case, however, significant economies were achieved in expenditure, so that the L.N.E., after being £2,877,483 down in gross receipts, was £9,738 up on the final reckoning, while the Southern transformed a gross decline of £556,038 into a net gain of £174,861. The G.W. recovered £784,664 of a gross loss of £1,551,468, and the L.M.S. £3,034,669 of a total falling-off of £4,074,539. The figures take account in every case of the savings accruing as a result of the 2½ per cent. "cut" in wages and salaries in August last.

Three significant features of these results will call for detailed subsequent examination—the heavy decline in receipts, the remarkable extent of the savings effected, and the striking divergencies in the experience of individual railways. For the present, however, attention may be concentrated on the task of putting the 1928 figures into their true perspective. The next table, accordingly, shows the total net revenue, and the manner of its distribution in 1923 (the first year of grouping), 1925 (the least "abnormal" subsequent year), 1927 and 1928:—

Railway Revenue.
(000's omitted.)

	Net Revenue (before debenture interest).				Year's Revenue available for ordinary dividends.			
	1923.	1925.	1927.	1928.	1923.	1925.	1927.	1928.

Four Groups	—	—	—	—	−1,108	−6,938	+72	+163

† 3½ per cent. paid also on "A" ordinary.

Rightly to understand these figures, it must be remembered that when the "Big Four" groups came into being in 1923 there were two distinct factors calculated to make for economy in future operations. The first was the increased efficiency resulting from "rationalisation," regarding which the sponsors of the 1921 Railways Act had been so eloquent, and the second the catching up of the serious arrears of maintenance and equipment which had accumulated, not merely during the wartime period of Government control, but also during subsequent years, when the then separate railways were reluctant to purchase new stock some of which might have to be scrapped under the "standardised" requirements of grouping. For the latter purpose, among others, the railways had at their disposal no less than £60,000,000 provided by the State under the Railways Act. The Great Western, which had fewer "assimilation" problems than any other line, was first off the mark, but by the latter part of 1924 all the groups were pushing forward with far-reaching plans of development. The Coal Stoppage of 1926 held up some of these schemes for the time being, but five complete years have now elapsed since the amalgamations came into being, and the investor is naturally inclined to ask where are the visible fruits of the policy.

The answer is that the fruits are, in fact, being reaped at the present moment. The rolling-stock position is better as regards quantity, quality and efficiency than at any previous time, and the reduction in expenditure of over £7,000,000 on the four group lines in the last twelve months alone—in spite of the fact that normally only 40 per cent. of railway expenditure varies with the volume of traffic—shows how far the movement has gone.

Why, then, were the net earnings of the four companies last year 10 per cent. below the level of 1923? The reasons for this disappointing position are of crucial

importance, not primarily for the light they throw on the results of 1928, but because they afford a clue to the whole railway outlook for the next few years. Conditions in 1923 were somewhat abnormal, as a result of the stimulus given by the Ruhr occupation to the " heavy " trades of Great Britain—railway users *par excellence*—but the situation has subsequently changed profoundly to the railways' disadvantage, partly as a result of the long drawn-out depression in those trades, partly by the emergence of formidable road competition, and partly, it must be admitted, by the dissipation of a considerable share of the £60,000,000 " compensation money " from the Government in the payment of dividends, from 1923 to 1926, at a level disproportionate to that of current earnings. The two former factors—bad trade and road competition—will be discussed in greater detail in a succeeding article, but it may be well here to record the opinion that the distribution from reserves of £26,000,000 (a conservative figure) in payment of dividends, between 1923 and 1926, has been shown by events to have been a most unfortunate policy. It has deprived the railways of resources which would have been of indispensable service in increasing their efficiency under the present difficult conditions, it has reduced interest receipts by amounts which are certainly not negligible from the ordinary stockholder's point of view, and it has accomplished nothing more than the postponement of the evil day of dividend reductions. Most railwaymen would readily confess to an honest error of judgment in this respect, and would urge that in 1926, at least, the policy was forced upon them by outside circumstances. An end was, happily, put to the practice in 1927, but its consequences should certainly not be overlooked in considering the contemporary state of railway finance.

The railways, therefore, can point on the one hand to a significant reduction of working costs, while on the other they are confronted by difficulties which, while not necessarily permanent in character, cannot possibly be expected to disappear in a relatively short time. The net result is not that the economies of grouping are non-existent, as is frequently asserted, but that they have been swallowed up, in the words of the L.M.S. chairman, " by reduced rates and charges and by a loss of traffic partly due to the effects of road competition, but largely to the effects of depression in the iron and steel and other 'heavy' industries." The implications of this statement may better be understood when it is pointed out that the reduction of railway expenditure in 1928, as compared with the year before amalgamation, amounted to over £8,000,000 on the L.M.S. alone. This year's ordinary dividend on that line absorbed £3,332,085. The whole of the reduction in the expenses is not, of course, attributable to amalgamation, lower prices and better equipment having played a part, but the investor may well ask himself what would have been the position to-day of the junior stockholders in many of the weaker pre-grouping companies, had the Railways Act not been placed on the Statute Book.

There, for the present, we propose to leave the matter, and to give next week a further analysis of the main factors which should guide the judgment of the contemporary investor in home railway stock. The position of the individual companies will form the subject of a final article.

AMERICAN INTEREST IN BRITISH SECURITIES.—II.

(BY OUR NEW YORK CORRESPONDENT.)

AN earlier article described the growth, and the present dimensions, of America's interest in British securities. It is necessary now to endeavour to understand why American capital is flowing into British enterprises and to appreciate the likelihood of the permanence of the tendency. For this purpose an idea of the implication of the change in the United States from a debtor to a creditor nation is essential. Pioneering work, the building of the railroads, development of natural resources, colonising and building of the country generally, although accomplished by native resourcefulness and enterprise, were nevertheless dependent on the entry of foreign capital, by far the greater portion of which was borrowed from Great Britain. As the country developed national income increased rapidly; but so great was the field for expansion that, throughout the past century and into the present, all American capital found employment at home. Little or no attention was given by American investors, big or little, to foreign securities, those of Mexico and Canada excepted.

After the first decade of the present century, however, the tide began to turn. Former outlets for the investment of new capital began to close up. Railroad building ended, mine development reached the limit of consuming capacity, and virgin agricultural lands disappeared. Meanwhile, business operations, partly through the formation of the great trusts, had become so profitable that investment capital began to accumulate rapidly. New enterprises, such as the motor industry, sprang up and absorbed large amounts of capital, but they provided merely temporary relief.

The war, naturally, greatly accentuated these tendencies. Before America itself entered the conflict the change of the nation to creditor status was hastened by sale of its manufactured and agricultural products abroad in exchange for American securities owned abroad and for foreign securities. America's participation in the war slowed down the movement for a time, all the available savings of the country being required by the Government, although much was reloaned to the Allies. Following the setback entailed by the severe post-war depression, the accumulation of capital through increased efficiency of production and economies reasserted itself. Foreign loans began in earnest, and soon reached the high total of $1,000,000,000 a year. By 1927 America was lending other nations $1,500,000,000 (gross), and last year's foreign borrowings were nearly as large.

A glance at the picture of the rising national income makes it easy to understand how America has been able to pay off her large foreign indebtedness and, in turn, become a lender. According to the National Bureau of Economic Research the *per capita* income in 1850 was only $51; in 1926 it had reached $770. In the 65 years from 1850 to 1915 the advance in *per capita* income was from $51 to $326 a year—*i.e.*, by $275. In the years 1915-1926, however, the increase was as much as $444. Even allowing for the war-time rise of prices, the recent rate of increase has been very rapid. Figures of individual and corporate net income, as shown by the Bureau of Internal Revenue, are also illuminating, although net income, as reported to the tax-gatherer, leaves out a great deal of the country's actual income. Below is a table of personal incomes since 1913; the slowing down in the increase since 1924 was largely the result of increase in exemption allowances:—

Year.	No. of Returns.	Net Income.
1913	357,598	$3,900,000,000
1924	7,369,788	25,700,000,000
1925	4,171,051	21,900,000,000
1926	4,138,092	21,960,000,000
1926*	4,075,542	21,565,000,000
1927†	4,122,242	22,573,000,000

* Returns filed up to Aug. 31, 1927.
† Returns filed up to Aug. 31, 1928.

Corporate incomes were affected by the trade setback in 1927, but nevertheless show a considerable increase in the past seven years:—

	Total No. of Corporations.	Corporations Reporting Net Income. Number.	Net Income. (Thous. Doll.)
1916	341,253	206,984	8,765,909
1924	417,421	236,389	7,586,652
1925	430,072	252,334	9,583,684
1926	455,320	258,134	9,673,403
1926*	412,763	248,892	9,212,264
1927†	452,853	249,847	8,068,201

* Returns filed up to Aug. 31, 1927.
† Returns filed up to Aug. 31, 1928.

Even if the rate of increase in America's national income should slow down considerably in the next few years, there is no reason to anticipate a check to the movement of capital into foreign securities. America at present has more than enough for her own needs, and the low yields at which the better grade shares and bonds are selling is a force impelling capital to look across the water. The excess of merchandise exports over imports continues at around $1,000,000,000 a year.

The change from debtor to creditor has come so quickly, as such things are measured, that as yet only a small percentage of investors has much real knowledge of the businesses which foreign securities represent. But a new factor has come into the situation. The development of the investment trust has been one of the interesting phenomena of the past year. These huge aggregations of investment capital, which have been springing up almost daily, are enabling the investor to entrust his funds to those in a position to investigate the conditions attaching to any stock. It is too much to expect that all the trusts will be well managed, but many certainly are, and are placing an appreciable portion of their funds into foreign securities.

It is natural, of course, that in the early stages of a foreign investing movement British securities should be favoured. The investing public has great faith in the soundness of British business and British finance. Moreover, Great Britain was the first of the European nations to set its financial house in order and to return to the gold standard. Blind acceptance of everything which happened to have a British origin would, of course, be unwise, and, fortunately, the Stock Exchange is taking due precautions in the listing of British securities. Ultimately, most of the securities now finding a ready market on the Curb will find their way to the Stock Exchange, while other issues will fill the gaps on the smaller Exchange.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 19.	March 21.

WITH prices trending downwards everywhere and the international money situation not yet allowing nervousness to be shaken off, interest was at a low ebb. A sudden and short-lived recrudescence of boom conditions in New York a week ago passed without affecting London, and the " Hoover Boom " was conspicuous by its absence. A number of well-known shares might have looked cheap, at any rate by comparison with their prices at the end of January, were it not for the general feeling that they might go lower still before the tide turned. It was said, moreover, that dealers were discounting the risk of another rise in Bank rate. The " House " was more cheerful for a time on Wednesday, but the public refused to hear the voice of the speculative charmer, and the tone became irregular once again.

The market for gilt-edged securities was quiet and cautious—possibly over-cautious. Supplies of money were adequate in Lombard Street, but fears of a 6½ per cent. Bank rate caused attention to be directed rather towards events in America. The Bank obtained £593,000 of bar gold in the market by paying a high price, but the New York exchange continued to be none too firm at an uncomfortably low level. Four per cent. Consols and Funding Loan were among the British stocks tending further to lose ground, despite a hardening tendency in mid-week, when a certain shortage of stock was experienced in some quarters. War Loan, however, had a slightly better tone. Indian loans were quiet in response to the prevailing tendency, and dullness was common to most Dominion stocks, new and old.

Business was again restricted in the foreign market, though price changes were not as a rule extensive. French loans received some support, and Hungarians were firm, but Greek scrip was sold, while Turkish Unified failed to maintain an early advance. Mexican bonds were depressed on the news of a fresh revolutionary outbreak, and Brazilians tended to weaken. Chinese bonds lost ground, but Japanese, though quiet, were generally steady.

Home rails had a slightly improved appearance, in response to a moderate investment demand. The traffic returns published during the week continued to reflect the unfavourable meteorological conditions (and, possibly, being *gross* figures, the concessions in heavy traffic charges under the de-rating scheme), but the impression given by

LONDON ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

the Southern Railway meeting was on the whole favourable. Fluctuations in foreign railway stocks were generally not extensive, though quietness again pervaded the market. Argentine rails were firm on satisfactory traffic returns, and, among Brazilians, San Paulo rallied after initial weakness. Canadian Pacific was irregular. Beira Railway came on offer.

The industrial markets made a poor start to the new account, in the absence of news calculated even remotely to justify any fresh extension of speculative commitments. The open position showed a further reduction at the carry-over from the last account. Although Imperial Tobaccos received some support as the week progressed, tobacco shares generally were influenced by entirely hypothetical reports of increased duties in next month's Budget. The artificial group was dull to a degree, with the exception of Snia Viscosa, the conservative finance evidenced by the report of this concern being well regarded in the market, The leading gramophone shares were offered in New York, H.M.V., however, being an exception to the prevailing tendency on bonus reports. Match shares were dull before the publication of the Kreuger and Toll report for 1928, and the secured debenture issue (discussed on a later page). General Electrics declined on the new capital offer, but subsequently rallied. The latest rebellion was naturally a bear point for Mexican issues, Mexican Light and Power being especially affected. Following the increased price of petrol, motor shares failed to maintain last week's position in the forefront of the market, Rolls-Royce coming on offer. Cable stocks were idle. Marconi gained ground in irregular fashion, but Radio fell on profit-taking after the report. Dealings in bank shares were on a restricted scale, with a downward tendency, and declines were frequent in insurance shares.

Rubber shares were less active than of late, though the tone was steady to firm, with considerable buying support on any reaction, and some evidence of Continental interest. After a smart recovery on Monday, the commodity became irregular. Price movements in tea shares continued unfavourable, particularly among the higher-denominational issues, the week's commodity auctions revealing an easier tendency for all but the finer grades. Oil shares were reactionary, in view of the Press campaign against higher petrol prices, uncertainty as to the position under the Russian agreement, profit-taking after last week-end's rise, and liquidation from the Continent and America. Eagles were weak on the Mexican insurrection, and most of the leading concerns were of interest only to the professional.

The mining markets were unsettled, though the lack of public interest was reflected in reduced business rather than lower prices. Rand shares as a whole were disproportionately affected by unfavourable reports on the future of West Springs, while Modder "B" were sold on last week's report. Diamond shares had an initial appearance of strength, under the lead of De Beers deferred, but failed to retain outside attention. Rhodesian shares were less active. No extensive variations were recorded in the tin share market, beyond an advance in London Syndicate, and weakness in Patino. Coppers were unsteady, in sympathy with the extensive daily fluctuations of the metal, and Mexican mines were marked down on the political news.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Stocks have been selling at lower prices this week, thanks to the weakened technical position which followed the attempt to discount the inauguration of Mr. Hoover as President, and to the sharp advance in call money rates to 12 per cent. At that price there is a scarcity of funds for dealings, and brokers fear the advent of even higher rates and an increase in the Federal Reserve discount rate. Average prices are now about ten points below the peak of early February, and the public has practically left the market to the professionals. Apart from buying special stocks, the latter have been merely betting on day-to-day changes in call money rates. No easing of the situation is expected before the tax date, when the Treasury borrows money from the reserve banks and seasonal influences make for a reduction in money rates. Copper stocks have been strong, reflecting heavy production at rising prices for the metal, and favourable company announcements. Utilities are also holding well, and some hardening in railroad shares has followed statements of January earnings, which are 30 per cent. higher than a year ago.

35 Utilities	103·3	128·3	128·3	180·6	184·6	201·3	207·2
Total, 410 Stocks	104·7	134·1	130·3	178·9	182·8	184·4	190·5
Average Yield on 50 Industrial Common Stocks	4·21%	5·12%	3·32%	4·42%	3·44%	3·90%	3·24%

In view of the importance of Wall Street movements at the present time, special interest attaches to the following cabled figures from the Standard Statistics Co. showing the average price of 50 industrial common stocks (1926=100):—December 31st, 207.7; February 28th, 216.6; March 1st, 218.0; 2nd, 217.3; 4th, 214.8; 5th, 213.5; 6th, 210.4. The recession is an instructive commentary on the conditions described above by our New York correspondent.

PARIS.

Business on the Bourse has been slow, in view of the drain on available funds by increases of capital and the tendency of professionals to hold off till the political situation has cleared. French stocks showed powers of resistance, though certain bank, chemical, engineering and electricity shares were adversely affected. Motors have reacted, but coppers, Penarroya, De Beers, and, notably, phosphate shares all show improvement. Rubbers are rising again. Among Mexicans, realising has been in progress of Banque Nationale du Mexique and Bons Huerta.

BERLIN.

The *Frankfurter Zeitung's* stocks index for March 1st was 128·25, compared with 129·92 a month before. A week ago the Bourse closed firm; short sellers bought in, and there were heavy foreign buying orders. Artificial silk and electrotechnical stocks led the upward movement, with an unexpected recovery in motor-car securities, which have of late been depressed. The new week began in uncertainty through fear of unfavourable developments in the international money market, but business on Monday was active and firm later. Tuesday's Bourse, influenced by Wall Street reports and the Mexican revolt, was very dull and weak, though steel and coal stocks remained relatively firm. On Wednesday and Thursday a moderate recovery took place, with Reichbank shares prominent.

AMSTERDAM.

Owing to the higher money rates and on the expectation that the Netherlands Bank will increase its official rate, the tendency on the Bourse was undecided, and the volume of transactions remained restricted generally. Industrials and artificial silks weakened, but sugars improved, and oils were firm on the statement that Royal Dutch was concerned in the agreement with Moscow. Rubbers and tobaccos were steady, and there was some activity in shipping shares, while mines advanced, but the bond market was dull.

INVESTMENT NOTES.

The Royal Dutch-Shell Group and Russia.—The announcement of an agreement between the big petrol companies and Russian Oil Products regarding the marketing of Russian petrol in Great Britain has been followed by a statement by the Shell group correcting certain expressions of optimism in the Moscow Press. The Shell group declares (1) that the Russian Oil Products will not be given an equal share of the British market with other companies, (2) that the agreement does not provide for the sale of Russian petrol or crude oil to any companies of the Royal Dutch-Shell group, (3) that so far as other products are concerned the agreement does provide for compensation to the owners of Russian oil properties, the price having been fixed purposely below the world market price so that the difference may be applied towards compensation. The chairman of the Soviet Oil Syndicate has, however, come forward to contradict every item in the Shell statement, except the first, in regard to which he affirms that the Russian Oil Products never put forward any demand for an equal share of the British market with the other petrol companies. The share which the Russian Oil Products is to receive in the petrol market is, we understand, fixed at 200,000 tons, which is under 10 per cent. of the trade. With regard to the question of compensation for former owners of Russian oil properties, it would appear that the petrol agreement was made between the Soviet Oil Syndicate and the Anglo-American Oil Company, and that the Shell were parties only to an agreement to purchase kerosene which was fixed at a rate below the market to allow the Shell to set aside the difference in a fund for the compensation of former owners of oil properties in Russia. The Shell apparently refused to deal except on those terms, but the Soviet Oil Syndicate appear to deny all knowledge of what the Shell intend to do with the difference between the purchase price and the world market price. How the compensation will be paid remains to be seen. The contradictory statements made by the Shell group and the Soviet Oil Syndicate may perhaps be harmonised in the light of this information.

Stock Exchange "Majorities."—Dealings are now taking place in what are known as "Stock Exchange majorities," that is, the Stock Exchange forecasts of the coming election results. The speculator who feels so inclined can buy or sell any one of the parties' "worth" as estimated at the current market rate. Incidentally, the popular gamble at the moment is a "buy" of the Liberal Party's stock, the market price of which has risen at a greater pace than that of Labour, as the following figures show :—

	Conservatives.	Labour.	Liberal.
"Par Value"*	405	161	43
Market price, February 23rd	292–297	250–255	62–67
" " March 5th	277–281	259–263	74–78

* *I.e.*, the present number of seats held in the House of Commons.

The buyer of Liberal stock at 78 is entitled to receive in £'s whatever is the excess of the Liberal polls above 78, and will lose the difference if the result is below 78. There is not yet an active market in "majorities," but it is obvious which way the political wind is blowing in the "House" in Throgmorton Street.

Kreuger and Toll.—The offer for sale of $10,000,000 of this company's debentures, particulars of which are given on a later page, marks an important step in the history of one of the most remarkable companies in the world. Established in 1911 as a Swedish trust company, Kreuger and Toll is financially interested in a variety of economic activities, including iron mining, real estate, and banking, but its importance to the investor lies chiefly in its position as the largest stockholder in the Swedish Match Company, and the latter's subsidiary, the International Match Corporation. As we showed in a recent article in the *Economist* (April 28, 1928, p. 857) the organisation of the Swedish Match Company is literally world-wide, and is still being extended. This policy is reflected, naturally, in the accounts of Kreuger and Toll, the total of whose balance sheet has risen in the twelve months ended December 31, 1928, from 248 million kronor to 363 million kronor. The net profits of the company and its two subsidiaries in the last two years have been :—

	1927. Kronor.	1928. Kronor.
Aktiebolaget Kreuger and Toll— Net profit	18,737,795·50	19,853,869·69
N.V. Financieele Maatschappi Kreuger and Toll— Net profit at rate of Kr. 150 per Fl. 100	13,253,428·08	36,168,920·40
Swedish American Investment Corp.— Net profit after deduction of dividends paid during the year	5,648,283·99	3,034,407·98
Total	37,639,507·57	59,057,198·0

The actual increase in the parent company's profits is higher than the above return suggests, since the 1928 figure is arrived at after allowing for interest on participating debentures, due in July next. The dividend is maintained at 25 per cent., on a capital increased by a bonus issue of 30 per cent. last May, and the carry forward increased by 3,603,869 kronor. The reserve fund amounts to 133,700,000 kronor, against a capital of 65,000,000 kronor in shares and a like amount of participating debentures. The Swedish Match Company, in pursuance of its policy of obtaining the right to manufacture and sell matches in different countries, has attained the dimensions of a large-scale international Government financier. As its interests, however, are predominantly industrial, it has been deemed advisable that Kreuger and Toll, rather than Swedish Match, should hold the large amounts of Government securities which have been received against advances made to the authorities concerned. To finance this operation, $10,000,000 5 per cent. secured sinking fund debentures of Kreuger and Toll are being offered, forming part of $50,000,000, the balance of which is being offered simultaneously in America and other countries. The company is also about to offer 16,250,000 kronor participating debentures to existing holders at a premium of 500 per cent. The secured sinking fund debentures are four times covered as to principal and 5¾ times as to earnings, on the basis of last year's results. Their appeal to the investor is enhanced by the option granted to holders of every $500 debentures to subscribe for eight American certificates, each representing 20 kronor of the company's participating debentures, at $45 per certificate.

British Assets Trust.—One of the most successful of the Scottish investment trust companies—and the Scottish have often shown better results than the English—is British Assets Trust, Ltd., which has recently issued its report for the year to January 15, 1929. This company increased its share capital last year by the issue of £450,000 preference stock and 200,000 ordinary shares of 5s. (bringing the total share capital to £2,600,000) and the loan capital by £400,000 (to £2,620,804). A year ago the Company reported that the valuation of its assets showed a large surplus over capital reserve funds and carry-forward, and that this surplus had been increased by a further £600,000 as at January 15, 1928. The present report repeats its modest statement of a "large surplus" over the valuation of its assets, and adds "that a valuation as at January 30, 1929, showed an appreciation

during the year of over £1,000,000 after allowing for discount and expenses of the new issues." This is an astounding result which few investment trust companies of similar capitalisation could equal. The actual net surplus derived from the sale of securities during the year amounted to £305,452, which was applied to the capital reserve. The general reserve fund stood at £550,000 and the capital reserve fund at £700,000. The total reserves and revenue balance amounted to nearly 300 per cent. on the ordinary share capital, then consisting of £400,000 in 5s. shares. The balance-sheet is, of course, no criterion of the financial strength of the Company, because there is an enormous " hidden " reserve created by the market appreciation in its investments. The Company, *inter alia*, owns the Second British Assets Trust, which in turn has a very large surplus on the book value of its assets. The earning position of the Company is shown in the following figures:—

	Gross Revenue less Income Tax, etc.	Expenses.	% on Capital.	Deb. Int., Pref. div. etc. (less tax).	Revenue avail. for Ord. Stock.	% Earned Gross.	% Paid Gross.
	£	£		£	£		
1926-27	177,313	13,339	42	96,671	66,303	27·63	20
1927-28	232,900	17,632	43	129,029	86,239	30·80	20
1928-29	271,195	22,162	42	163,481	107,714	44·38	20

It will be seen that a relatively small proportion of the earnings is being paid out in dividends, but it must be remembered that capital bonuses have been a recurring feature of the British Assets distribution policy. In February, 1928, for example, one new share of 5s. was allotted at 15s. per share in the proportion of one for every seven shares held. This year the directors announce that one new share of 5s. is being allotted at par to ordinary shareholders in the proportion of one new share for every 16 shares held. At the present price of 42s. 6d. cum final dividend of 6d. (15 per cent., making 20 per cent. for the year), the ordinary shares yield only 2.38 per cent .on dividends, or 5.28 per cent. on earnings, but having regard to the fact that the rights to two new shares on bonus terms are valued in the market at 2s. per share, the actual return on the shares at 42s. 6d. is 2.38 per cent. in dividends, subject to tax, and 4.76 per cent. by way of capital profits not subject to tax. For the wealthy investor who is paying large sums to the Government in super-tax a holding in British Assets Trust is in the nature of a godsend.

Wolsey.—In our issue of last week (page 440) a correspondent gave various reasons suggesting that the recent icy weather is likely to benefit the hosiery trade next July or August rather than at the present time. In any case, such a company as Wolsey, which closes its financial year on December 31, will not show the effect for another twelve months. In spite, however, of the mild weather of last autumn, profits rose once again, and an increase in dividends from 5 to 7½ per cent. is now recommended. The " B " ordinary are vendors' shares, which were written down from £1 to 1s. in 1922, but still rank for dividend with the " A " ordinary on the basis of their former nominal value:—

Years ended December 31.	1926.	1927.	1928.
	£	£	£
Net profit	114,885	154,449	167,818
Preference dividends	75,000	75,000	75,000
No. of times covered	*1·5*	*2·0*	*2·2*
"A" ordinary Earned	3·9%	7·9%	9·2%
"A" ordinary Paid	5%	5%	7½%
"A" ordinary Amount	39,635	39,635	59,453
"B" ordinary dividend	10,365	10,365	15,547
To general reserve	Nil	25,000	10,000
Increase or decrease in carry-forward	−10,115	+ 4,449	+ 7,818

This year the whole of the share premium account, amounting to £63,958, has been used to write down machinery, plant, and fixtures, which now stand at £449,290. A striking reduction in the cash holding, from £167,111 to £29,926, with a rise of £79,302 in stock-in-trade, may conceivably be attributable to the mild autumn. The general reserve amounts to £160,000. The policy, announced only a year ago, of identifying the Wolsey trade mark with silk and artificial silk has been fully justified, in the directors' view. Wolsey " A " shares at $1\frac{1}{16}$ offer a yield of £7 1s. 2d., if the 7½ per cent. dividend is maintained.

Courage and Co.—The 1928 accounts of Courage and Co. suggest that the purchase of Farnham United Breweries, involving the transference of actual brewing operations to its Alton brewery, has given very satisfactory results. Profits have risen by 34 per cent. on the year, and though the 150,000 new ordinary £1 shares, issued in 1927 at 35s. premium, rank for a full year's dividend for the first time, a special bonus of 2 per cent. is recommended in addition to the 23 per cent. paid on the ordinary capital since 1926. The apparent fall in profits a year ago may, however, have reflected the decision to charge the expenses of the brewery acquisition and of the new issue of shares entirely against the 1927 profits:—

Years ended December 31.	1926.	1927.	1928.
	£	£	£
Profits	421,914	378,682	508,725
Debenture interest	38,000	38,000	38,000
Net earnings	383,914	340,682	470,725
Preference dividend	20,000	20,000	20,000
Ordinary Earned	33%	26·7%	36%
Ordinary Paid, less tax	23%	23%	25%
Ordinary Amount	253,000	277,000	312,500
To reserve accounts	97,000	44,000	130,754
Increase or decrease in carry-forward	+13,914	− 318	+ 7,471

Reserves as shown in the balance sheet aggregate £930,229, a fall of £54,127 in spite of the allocation of £130,754 to various reserve accounts. Evidently the company has been spending liberally from its brewery premises and licensed houses rebuilding reserve, for that account shows a net fall of £117,000, taking into consideration the £50,000 allotted to it from profits. But whereas freehold and leasehold houses (which might with advantage be shown separately) are valued at £36,805 more, the valuation of the breweries, etc., is down by £36,490. Further, the share premium reserve account is reduced from its original figure of £262,500 to £200,000. Perhaps the directors are following the wise policy of using this fund to write down fixed assets, but such changes might well be made clear in the annual report. The same comment applies to a £50,000 bank loan, appearing among the liabilities but not otherwise mentioned. Fuller information will doubtless be obtained at next Monday's meeting. The £1 ordinary shares are priced at $3\frac{15}{32}$, yielding £7 4s. on the current dividend rate.

Massey-Harris.—The annual report of Massey-Harris Co., Limited, the largest manufacturers of farm implements in the British Empire, and one of the oldest of Canadian industrial organisations, shows a satisfactory increase in net profits:—

	1926.	1927.	1928.
	$	$	$
Operating income	3,005,220	3,866,601	4,072,916
Net income*	1,995,768	2,149,274	2,710,919
Less preference dividends	846,293	846,293	846,293
Transfer to surplus	1,149,475	1,302,981	1,864,626

* After deduction of interest, reserves for accounts and foreign exchange, pensions, insurance and depreciation.

The directors announce an important scheme of capital reorganisation. The 7 per cent. preferred shareholders are offered repayment in cash at 110, or an exchange into 5 per cent. preferred stock callable at 125 and convertible into ordinary stock on a share for share basis. At the same time, the ordinary shareholders are offered the right to purchase one additional common share for every two shares held at $60 per share. There are at present 483,596 common shares outstanding, and the disclosed net earnings, after deduction of preference dividends, work out at $3·85 per share, or $4·35 per share if the saving of 2 per cent. in interest on the $12,089,900 preferred stock is added. At $92 the rights on the old common shares are calculated to be worth about $11. The rise in the prosperity of Massey-Harris has been one of the features of the Canadian industrial boom.

Baltimore and Ohio Railroad.—According to the preliminary profit statement of this company, total operating revenue decreased by 3.76 per cent. in 1928, but as corresponding expenses were reduced 7.32 per cent. there was a rise in net operating revenue from $59,911,005 to $64,267,813, notwithstanding that passenger-miles fell from 844 to 768 millions and freight ton-miles from 20,841 to 20,243 millions. Traffic conditions during the first half of the year were less favourable, but from July onwards there was an increase in the volume of freight, though not in passengers. After taking into account rents, income from investments, and all charges against income, the balance of earnings available for dividends and other purposes amounted to $29,100,931, the largest net income in the history of the company, and an increase of 28.58 per cent. over 1927.

Years ended December 31.	1927.	1928.
	$	$
Net earnings	22,633,345	29,100,931
Dividend on 4% preferred stock	2,354,528	2,354,528
Common stock earned	11·10%	12·43%
Common stock paid	6%	6%
Common stock amount	10,964,491	12,911,275
Increase in surplus	9,314,326	13,835,128

The total surplus now stands in the balance sheet at $103,905,106, and in addition the reserve for taxes, insurance, operation, etc., amounts to $15,252,017. An increase of $7,049,022 in investment in road is reported for 1928, and a net increase of $871,793 in investment in equipment. Readers of the *Economist* will remember that we published an article three weeks ago in connection with the request by this company for permission to control the Reading and the New Jersey Railroads. The company's common stock, at its present London price of 133 per $100 share, offers a yield of £4 10s. 2d. per cent.

Modder B.—Our mining correspondent writes:—From the production standpoint the results of this Eastern Rand enterprise for last year differ little from those of 1927. The crushing of an increased tonnage was accompanied by a decline in average yield, giving a slightly reduced net profit. Once again the appropriation account receives a credit from claim property account, the net amount being £27,750, as against £34,250 last time. Even so, the maintenance of the dividend rate entails a further, though small, draft upon the carry-forward. Our usual table is appended:—

	1926.	1927.	1928.
Ore milled ……tons	792,000	804,000	830,000
Yield per ton ……dwts.	7·8	7·7	7·5
Costs per ton ……	18/5	18/2	18/3
Profit per ton ……	15/-	14/8	14/-
Total working profit ……£	595,110	588,800	580,280
Dividends ……£	560,000	560,000	560,000
Rate per cent. ……	80	80	80
Carried forward ……£	373,970	373,450	356,050
Ore reserves ……tons	2,461,780	2,273,320	1,814,800
Value ……dwt.	7·4	7·4	7·5

In last year's note we emphasised the point that the major development programme of the mine was almost completed. The consulting engineers now observe that " the areas remaining to be proved are not extensive and are of doubtful value "; although it is hoped that the upper leaders will open up a considerable tonnage of low-grade ore. In these circumstances a large proportion, if not the bulk, of the handsome dividends being paid must necessarily be regarded as in the nature of a return of capital.

CAPITAL ISSUES.

THE tide of new issues is flowing as strongly as ever, this week's total, despite the absence of government or municipal borrowing, being £9,067,831, exclusive of conversions. The total for the year is now £77,893,730, against £153,838,410 for the corresponding period of 1928. Among the more important issues, that of *Kreuger and Toll* is discussed in an earlier Investment Note. The offer had interesting and attractive features. Brewery companies were prominent, two offers being made of 5½ per cent. redeemable debentures, *Watney Combe Reid* obtaining slightly more favourable terms than *Barclay, Perkins* for a much larger issue. The latter is acquiring control of Style and Winch, while Watney Combe has purchased Huggins and Company and is concluding negotiations for the acquisition of an unnamed business. Yet another £2 million issue was made, in the form of 7 per cent. preference shares, by *Montague Burton*, a multiple bespoke tailoring business previously in private hands, the whole of the ordinary shares going to the owners of the old company. Dividends were covered barely three times by 1928 profits. The speculative element involved in all low-temperature carbonisation issues attached to that of *Parent Coal Carbonisation Trust*, which has secured the services of a Ruhr engineer with a secret process. *British Quarrying Company* made a straightforward issue of debentures and participating preference shares to " rationalise " seven road-stone quarries in different parts of the country, the combined profits of which have remained steady for several years. Nearly half the purchase price was payable in cash. An issue by *Kolster-Brandes*, the offspring of an American radio business, proved highly popular, possibly owing to an option on 200,000 £1 shares at 1½. *Morgan Squire and Company* (1929) is a " good medium class " drapery and fashion store at Leicester, which after several years of rising profits is launching out under the auspices of Swears and Wells. Advantage will be taken of road-transport development by the *Trowbridge Tyre and Rubber Company* (1929), capitalised wholly in 5s. shares. The uncertainties inherent in such an issue are not lessened by the fact that past results are not accurately ascertainable. The *London and Provincial Sporting News Agency*, whose so-called " blower service " for commission agents has shown very variable profits during the six years of its existence, appealed for public support for its " vast " organisation. Of the purchase consideration—attributable wholly to goodwill—£42,500 was payable in cash. *Menuphone Publicity* exploits advertising devices, but has cautiously limited its profit estimate to the first year's working. *Viborita Gold Mines* is apparently acquiring, and re-financing, a property which may have considerable potentialities, but has not achieved financial success in the past.

Watney, Combe, Reid and Company, Limited.—Issue at 99 of £2,500,000 redeemable 5½ per cent. debentures, 1940-59, a floating charge on the whole undertaking subject only to £4,358,702 3½ per cent. perpetual first debenture stock outstanding. The sum of £83,000 annually will be applied to redemption by purchase or drawings at par. Share capital consists of £1,684,939 5 per cent. cumulative first preference, £3,185,410 4 per cent. preferred ordinary, and £3,185,410 deferred ordinary stock. At June 30, 1928, assets exceeded liabilities by £9,580,852, and profits have been, after paying first debenture interest:—1924-25, £1,198,489; 1925-26, £1,135,116; 1926-27, £1,188,180; 1927-28, £1,212,929. Proceeds of this issue will be applied in paying off temporary loans and financing the purchase of a further brewery business.

Kreuger and Toll Company (a limited liability company incorporated under the laws of Sweden).—Offer for sale at 98 of $10,000,000 (£2,050,000) 5 per cent. secured sinking fund debentures, 1959, part of a total issue of $50,000,000. Principal and interest are payable in United States gold coin or at holder's option in sterling at £102 10s. per $500. A semi-annual cumulative sinking fund will operate by purchase at or below 105 or drawings at 105; the company has the right to redeem at any time at 105 on notice. Issued capital consists of kr. 65,000,000 in "A" and "B" shares, together with kr. 65,000,000 participating debentures. The new debentures carry an option on participating debentures.

Grace National Bank

Special Representative

148 Leadenhall St. London, E.C.3.

Proceeds of this issue and of kr. 16,250,000 participating debentures simultaneously offered to existing debenture- and shareholders will be applied towards acquiring from Swedish Match Company and/or International Match Corporation approximately $78,000,000 par value securities. Foreign government securities equivalent to not less than 120 per cent. of the par value of the present issue will be pledged as security for it. Net earnings, including no income from securities now acquired, have been: 1926, $7,981,325; 1927, $12,409,605; 1928, $21,025,988.

Montague Burton, Limited.—Issue at par of 2,000,000 £1 7 per cent. cumulative preference shares. The company takes over an existing clothing and tailoring business, with 364 retail shops, with net assets valued at £2,256,924 excluding goodwill. The purchase price is £2,087,835 12s. 8d., payable as to £87,835 12s. 8d. in cash and £2,000,000 in 10s. ordinary shares. Profits for year ending March 31, 1928, were £419,091.

Parent Coal Carbonisation Trust.—Issue at par of 1,200,000 10s. 8 per cent. cumulative participating preference and 1,200,000 1s. deferred ordinary shares, the former entitled to one-quarter of the remaining distributed profits. The company acquires the rights for Great Britain of a low-temperature carboninsation process, and will erect installations and form subsidiary companies for special coal areas. The purchase price is £327,500 in cash; vendors have applied for shares to the value of £255,000. Working capital is estimated at £340,000.

British Quarrying Company, Limited.—Issue at par of 250,000 £1 7½ per cent. cumulative participating preference shares and £300,000 7 per cent. first mortgage debenture stock 1935-58. Vendors and promoters receive 133,196 "A" and 308,035 (out of 318,604) "B" £1 ordinary shares. The preference shares are entitled to a further 2½ per cent. after the "A" shares have received 8 per cent. and the "B" shares 10 per cent. The debenture stock is redeemable by purchase at or below 102½ or annual drawings at 102½ by a 1½ per cent. cumulative sinking fund. The company amalgamates seven established road-stone quarries, valued at £702,252 excluding goodwill. The purchase price is £808,660, payable as to £392,429 in cash, £133,196 in "A" and £283,035 in "B" £1 ordinary shares. Combined profits, before certain deductions, have been:—1923-24, £88,810; 1924-25, £86,724; 1925-26, £83,913; 1926-27, £87,415; 1927-28, £85,613. Working capital is estimated at £120,000.

Barclay, Perkins and Company, Limited.—Offer for sale at 98 of £500,000 5½ per cent. mortgage debenture stock, 1940-65, a first specific mortgage on licensed properties valued at £753,156 and a floating charge on remaining assets, subject to charges in favour of £1,450,000 3½ per cent. mortgage debenture stock and £345,130 5 per cent. mortgage debenture stock, 1937-77, outstanding. A 1 per cent. cumulative sinking fund will be applied by purchase or drawings at par. Share capital consists of 756,000 £1 10 per cent. cumulative preference and 1,710,109 £1 ordinary shares. Net assets are valued at £6,192,186, and profits, before charging debenture interest, have been (to March 31):—1926, £327,282; 1927, £313,804; 1928, £347,124. Proceeds of this issue will be used to redeem £34,669 5 per cent. debenture stock and to finance in part the purchase of Style and Winch, Limited.

Kolster-Brandes, Limited.—Issue at par of 350,000 (out of 1,300,000) £1 ordinary shares. The company has acquired the right to exploit in the British Isles, the British Empire (except Canada, Australia, and New Zealand) and Europe all inventions belonging to an American radio corporation, taking over the company previously exploiting their inventions. The purchase consideration is £750,000 in shares. The remaining 200,000 shares are under option.

Morgan Squire and Company (1929), Limited.—Offer at par of 200,000 10s. 8 per cent. cumulative preference and 200,000 (out of 400,000) 5s. ordinary shares. The company acquires a Leicester drapery and furnishing business, founded in 1831. Net assets are valued at £154,086, excluding goodwill. The purchase price is £172,500 in cash (£18,414 for goodwill). Profits have been (to end January):—1926, £15,623; 1927, £17,544; 1928, £24,454; 1929, £25,886. Proceeds of present issue and proposed mortgage will amount to £67,500. Swears and Wells, Limited, is subscribing for a further 100,000 ordinary shares and obtaining an option on the remaining 100,000 at par.

Trowbridge Tyre and Rubber Company (1929), Limited.—Issue at par of 550,000 (out of 700,000) 5s. ordinary shares. The company acquires a business, founded 21 years ago, specialising in the manufacture and sale of solid and pneumatic tyres for commercial vehicles. Net assets acquired are valued at £70,522, excluding goodwill. The purchase price is £60,000, payable as to £25,000 in shares and £35,000 in cash. Past profits are estimated only, as the tyre business was part of a larger undertaking. Working capital is estimated at £85,593.

London and Provincial Sporting News Agency (1929), Limited.—Issue of 470,000 (out of 800,000) 5s. ordinary shares. The company acquires a news agency giving to commission agents communication facilities with racecourses. The purchase consideration is £125,000, payable as to £42,500 in cash and £82,500 in shares, attributable to goodwill. Profits have been (to December 31st):—1923, £34,628; 1924, £27,050; 1925, £14,392; 1926, £33,443; 1927, £13,937; 1928, £15,737. Working capital is estimated at £52,000.

Menuphone Publicity, Limited.—Issue at par of 475,000 (out of 1,000,000) 4s. ordinary shares. The company exploits patent menu-holders and telephone index stands in Great Britain, Northern Ireland and the Irish Free State. The purchase consideration for rights and contracts is £20,000 in cash, £80,000 in shares, and an option on the remaining 125,000 shares at par. Working capital is estimated at £50,000.

Viborita Gold Mines, Limited.—Issue at par of 240,000 (out of 520,000) 5s. shares. The company acquires rights and interests in an alluvial gold-bearing property in Colombia, at a purchase price of £61,000 in shares, paying also the liabilities of the vendor company and winding-up expenses. Working capital is estimated at £50,000.

Rugby Gas Company.—Offer for sale by tender of £25,000 5½ per cent. perpetual debenture stock (minimum price, par). Issued stock capital amounts to £148,004, and loan capital to £26,750. Net revenue for 1928 was £10,050; interest on loan capital, including present issue, requires £2,801.

The directors of **Saint Raphael Casino and Hotels, Limited,** announce that in consequence of the death of the vendor and guarantor the contracts cannot be carried out in their existing form. They have therefore decided not to go to allotment and to return all cheques for applications. Steps are being taken to carry the matter through as soon as fresh arrangements have been completed. (A summary of the prospectus appeared in this column last week; our figures have now been readjusted.)

Particulars of the following have been issued for public information only in connection with Stock Exchange "introductions":—**Celestion, Limited;** issued capital £103,007 in £1 7½ per cent. cumulative participating preferred ordinary and £150,000 in 5s. deferred ordinary shares, the former entitled to one-fourth of the surplus profits after payment of 10 per cent. on the deferred; acquires the business of a radio company, with net assets £81,190 (excluding goodwill), for £54,000 in cash and £100,000 in deferred shares; profits have been: 1926-27, £11,063; 1927-28, £51,744; 1928 (10 months), £51,744; a further 130,000 preferred ordinary shares are under option. **Brotex Cellulose Fibres, Limited;** issued capital £700,000 in £1 7½ per cent. non-cumulative participating preferred and £206,000 7s. in 1s. ordinary shares, the former entitled to three-tenths of the surplus profits; acquires world rights, a freehold farm, and all other assets of a company cultivating an agricultural plant with various potentialities, for a consideration of 600,000 preferred and 3,600,000 ordinary shares; a further 600,000 ordinary shares are under option. **D. Gestetner, Limited;** issued capital 350,000 £1 7 per cent. cumulative preference and 650,000 10s. ordinary shares; manufacturers of duplicating and office printing machines; established in 1881, recent dividend distributions having been: 1925-26, £51,840; 1926-27, £82,560; 1927-28, £98,059. **London, Border and General Trust, Limited;** issued capital £900,000 5 per cent. cumulative preference and £600,000 ordinary stock, with £500,000 4½ per cent. debenture stock, 1959-64, now to be issued. **British and German Trust, Limited;** issued capital £600,000 5 per cent. cumulative preference and £400,000 ordinary stock, with 500,000 £1 5½ per cent. cumulative second preference shares now to be issued; ordinary dividends have been: 1926 (May, date of incorporation, to December), 4 per cent.; 1927, 5 per cent.; 1928, 7 per cent. **Manchester Trust, Limited;** issued capital £100,000 in £1 6 per cent. cumulative preference shares and £39,060 8s. in 1s. ordinary shares; incorporated in 1912; no dividend has been paid on the ordinary shares. **Grand Union Canal Company;** issued capital £2,159,542 ordinary stock, together with £730,634 3 per cent. and £397,359 5½ per cent. perpetual debenture stock; £250,000 6 per cent. preference stock is now issued at 102. **Kelvin Investment Trust, Limited;** issued capital 80,000 £1 ordinary shares; incorporated in October, 1928.

Pending Issue.—British Dardelet Threadlock (D.D.G.) Corporation, Limited, will issue next Tuesday 295,000 £1 "B" ordinary shares at par. The company acquires patents and rights for the British Empire relating to a tight-locking screw thread.

OIL OUTPUTS.

ANGLO-ECUADORIAN OILFIELDS, LIMITED.—The production for February is cabled as 12,024 tons.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The results for the month of February are as follows:—Production of oil, 31,880 tons; deliveries, 30,430 tons.

THE ATTOCK OIL CO., LIMITED.—Production for February, 49,945 barrels.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended February 27th:—Venezuela, 36,873 barrels; Trinidad, 20,149 barrels; total, 57,022 barrels.

HAMILTON'S OIL CONCESSIONS (ROUMANIA), LIMITED.—Production for month of February, 5,320 tons (37,240 barrels).

LOBITOS OILFIELDS, LIMITED.—The production of the Peruvian company for February is cabled as 25,268 tons.

THE MEXICAN EAGLE OIL.—The production for the week ended February 23, 1929, was 146,000 barrels.

VENEZUELAN CONSOLIDATED OILFIELDS, LIMITED.—Total production for week ended March 2, 3,381 barrels (483 tons).

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during February 28,800 tons; oil purchased during February from other companies 35,500 tons.

COMPANY MEETINGS, &c.

LONDON MIDLAND AND SCOTTISH RAILWAY COMPANY.

A YEAR OF EXTREME DIFFICULTY.
REASONS FOR REDUCED RECEIPTS.
LARGE SAVINGS IN EXPENDITURE.
NEGOTIATIONS WITH ROAD UNDERTAKINGS.
SIR JOSIAH STAMP'S EXHAUSTIVE REVIEW.

The Sixth Annual General Meeting of the London Midland and Scottish Railway Co. was held, on the 1st instant, at Euston Station, London, N.W.

Sir Josiah Charles Stamp, G.B.E. (chairman of the company), presided.

The Secretary (Mr. Owen Glynne Roberts) having read the notice convening the meeting,

The Chairman, who was received with cheers, said: Ladies and gentlemen,—We have, this year, issued a condensed statement of the financial results, and only those asking for the full accounts, either before or at this meeting, have been supplied with copies. The printing and distribution of the full accounts involve considerable expense, and it is found that the short summary has met the wishes of the general body of stockholders who are interested in the broad results of the year's working, though, of course, each is entitled to the full statements on request.

REVISED FORM OF ACCOUNTS.

The form of accounts submitted this year has been altered, but the figures published in the 1927 accounts have been rearranged in order to permit of proper comparisons. The old form was designed in 1911, and the changes since then owing to the Railways Act of 1921 and other new circumstances have resulted in the new form agreed with the Minister of Transport, under the powers vested in him. For the sake of those who are interested in the full form of accounts I may mention that the chief alterations are in :—

No. 8 Account.—The joint line results previously shown in three separate accounts are now brought together in one amount in this account, with an analysis in abstract "J."

Certain charges for rents, interests, etc., previously included in account No. 9 are transferred to account No. 8, so that the total of this account represents the "Net Revenue" in the sense used in the Railways Act of 1921.

No. 10 Account.—An important change is the transfer from this account to a separate account, No. 16, of the receipts and expenses from collection and delivery of rail-borne traffic.

Balance-sheet.—Fuller details are shown of the renewal funds and the investments.

RESULTS OF THE YEAR'S WORKING.

RAILWAY RECEIPTS.

The losses in traffic receipts for the year were extremely severe, and were, shortly :—

	£	%
Passenger traffic	696,000	or 2.3
Freight traffic—		
Merchandise, Class 7 and upwards	1,394,000	,, 5.9
Merchandise, Classes 1 to 6	585,000	,, 8.1
(approximately the old "other minerals" section)		
Coal, coke, etc.	1,325,000	,, 8.9
Livestock	7,000	,, 0.8
Total	£4,007,000	,, 5.2

The reasons for the decline in passenger traffic are threefold :—

(1) Industrial depression,
(2) Road competition, and
(3) Reduced fares to conserve traffic against further losses to the roads.

The first two of these contributory causes I will deal with separately at a later stage, and, as regards the third, the company, in common with the other companies, greatly widened its cheap travel arrangements by revision of fares and extensions of ticket availability. While this has attracted a considerable number of passengers who would not otherwise have travelled by railway, it has also involved a transfer of passengers from ordinary to cheap fares. The policy pursued has, however, resulted in a less decline of revenue than if the old arrangements had continued.

On long-distance traffic we have had increased receipts and the analyses of our earnings show that the losses are mainly in the areas suffering from trade depression, though there have been very heavy losses to the roads in certain areas. For example, passenger receipts are greater between London and such towns as Birmingham, Belfast, Leicester, Nottingham, Manchester, Glasgow and Edinburgh in each case, but the receipts from the industrial towns to Blackpool show the opposite result.

LOWER SEASON TICKET RECEIPTS.

Season ticket receipts fell by £243,000, a heavy loss, but those from workmen increased by £26,000, with 5,000,000 additional passengers. The lower workmen's fares in operation in many cases from January 1, 1928 (an exceptional decrease being the Birmingham and Coventry return fare 1s. 9d. to 1s. 2d.), apparently caused a certain amount of transfer from ordinary passengers.

The reasons for the loss of freight train revenue are, shortly, bad trade and road competition, with the emphasis on the former, but one other factor is the new method of charging in operation from January 1 under which rates are calculated on the throughout mileage as if the mileage were continuous on one railway, and for this purpose the shortest working distance is assumed to be the route used. This statutory requirement has resulted in reduced rates in many cases. While it is difficult to isolate this factor it is thought that it represents about from 1 to 2 per cent. of the freight receipts as a whole, and probably amounts to £500,000, equal to one-half of 1 per cent. on our ordinary stock. In this respect, therefore, it is not so much a loss of receipts or traffic as a reduced rate of charging by which the community benefit.

COAL TRAFFIC.

The coal traffic was particularly bad, and, ignoring the year 1926, realised £700,000 less than the previous worst year since amalgamation—1925. The very serious decline was checked about the end of August, and in the current year the receipts are better than in the corresponding period of 1928, but the improvement has so far only partially made good the loss in that year as compared with 1927.

The national coal output fell 5.6 per cent., but the heaviest decreases were in the areas in which we are most concerned—those dealing with the home trade—and largely reflect the depressed state of the heavy industries. That is further illustrated by the reduction in production of pig iron by 9½ per cent. and steel ingots and castings by 6 per cent.—the chief cause of the reduction in mineral receipts. While 1927 was a good year for iron-ore traffic the fact that our carryings in 1928 fell by 532,000 tons, or 11 per cent., has consequences far beyond a loss of £77,000 in receipts from that traffic.

As evidence that it is not for the most part road competition which has brought about the decrease, I would point out that our diminution in total tonnage carried was 9,500,000 tons, and in the heavy classes of traffic which are seldom dealt with on the roads about 9,000,000 tons.

RAILWAY EXPENDITURE.

You will have seen from the summary accompanying the report that the savings amount to £2,511,517, and I would like to repeat them here.

	1928	1927	Decrease
	£	£	£
Maintenance and Way and Works	7,761,550	7,945,081	183,531
Maintenance of Rolling Stock ...	10,052,896	10,704,888	651,992
Locomotive Running Expenses ...	14,219,642	15,283,707	1,064,065
Traffic Expenses	21,302,840	21,685,619	382,779
General Charges	2,126,328	2,130,569	4,241
Rates	2,343,295	2,555,306	212,011
Miscellaneous	1,138,886	1,151,784	12,898
	£58,945,437	£61,456,954	£2,511,517

This decrease of £2,500,000 does not include the railway working portion of the £418,500 gained by the deduction of 2½ per cent. from salaries, wages, and fees since August last.

Arising out of the expenditure savings which I have quoted there are a few matters of general interest to which I should like to refer. Of course, when we have a decreased traffic we expect to spend less money, but only about 40 per cent. of expenses varies with the traffic and the utmost we can expect on the lower mileage run would be less than £1,000,000.

The further reduction in expenditure is explained by lower prices of materials and by actual economies in working, which are the fruition of the effects of amalgamation and the special efforts which have been made by the officers to consolidate the undertaking; for instance, closing one workshop to concentrate in another gave a net saving of £30,000 per annum and the rearrangement of another £90,000 per annum. The striking increase in the availability of locomotives is seen from the figures circulated, and the rolling stock position is better than at any previous date alike as regards quantity, quality and efficiency. There is a marked reduction in the cost of permanent way and locomotive and carriage and wagon work. There are many contributory factors, including reduced price levels, but the multitude of these unit savings plays a material part, and the reduction of annual railway expenditure on this line, compared with the year prior to amalgamation, is over £8,000,000.

ECONOMIES OF AMALGAMATION.

You will now have some measure of the answer to a question that is often put in a derisory way—"What are the economies of amalgamation?" You are equally entitled to ask, "What has become of them?" The answer is, "They have been offset by reduced rates and charges and by a loss of traffic partly due to the effects of road competition, but largely to the effects of depression in the iron and steel and other heavy industries."

It may be asked whether the savings effected have brought the expenditure down to a level which may be regarded as a new standard, and to that, while the answer is broadly "Yes," there are a few qualifications. The most obvious of these is that of price levels, and it is hardly probable that with a revival of trade prices will not rise. With an increase of traffic that portion of the expenditure which varies with the volume will also increase, though as I have explained that is the lesser part of railway outlay.

On the other side, the reductions secured in 1928 were greater in the latter part of the year, and continuance of expenditure at recent levels will effect further reductions.

In the abstract of general charges there is an item "Superannuation and benevolent funds, pensions, etc., £1,519,000." I ought to make clear that this item represents almost entirely the statutory or customary payments which have become conditions of service, and have under the terms of the Railways Act of 1921 practically the force of statute. At a time when retrenchments are being undertaken it is inevitable that this outlay should be heavy, and it must be regarded as consequential on the reductions in the salaries and wages bill. For the last two years an analysis of this expenditure shows :—

Contributions to	1928 £	1927 £	Inc. or (Dec.*) £
Superannuation fund	1,032,000	1,048,000	*16,000
Other benevolent funds	309,000	313,000	*4,000
Direct payments of gratuities and pensions	178,000	129,000	49,000
	£1,519,000	£1,490,000	£29,000

The first two items are specific legal obligations, and the third, which alone shows an increase, is mainly in respect of semi-legal requirements, which were abnormal in 1928 owing to the retrenchments mentioned.

Attention is also directed to the reduction of £212,000 in "Rates." Railway profits form the basis of the local valuations, and the reductions of these profits in recent years have their correlative, though delayed, effect on the rates paid. Certain critics of railways who were silent when the railway valuations were ascending now dislike the profits system of valuation, particularly when profits are made on the road instead of the rail, for then they cease to be rated. This loss of rates falls on the general ratepayer and not on the road user.

RAILWAY NET RECEIPTS.

The net effect of the loss of traffic receipts and the reduction in working expenses before reckoning the 2½ per cent. salaries and wages deduction of £418,500 is a reduction in the profit of £1,435,000, or 36 per cent. of the gross loss.

Other Businesses: Net Receipts, Collection and Delivery.—For the first time a separate account of collection and delivery is available, and it will be seen that, regarded as a separate business, there is a debit balance of £716,000 for the year 1928. This is not really a loss, for economy accrues to the company out of these services. The steady clearance of the goods depôts by the company's vehicles and the corresponding collection of inwards traffic enables the depôt accommodation to be used with the utmost economy. Were it not for this the existing accommodation would be most inadequate, and we should be obliged to spend large sums in providing additional wagons, sidings, and depôts, and in operating expenses. At present the same wagons run daily between, say, London and Birmingham, but that could not be done if each trader collected or delivered his own traffic and took full advantage of the time we are required to allow him to do so.

The position is not dissimilar to that of the Post Office, and anyone can imagine the great additions which would be necessary to the post offices and their staffs if each customer called for his letters and parcels.

Docks.—The loss of £127,000 on dock working reflects the depressed state of the coal industry. The company's docks at Garston, Grangemouth and Ayr handle 70 per cent. of our total dock tonnage and are provided mainly for coal traffic.

Hotels and Catering.—This account continues to show a healthy condition, and the extension of the refreshment car services on excursion and ordinary trains has a further value in obtaining passenger traffic. Special attention has been directed to the improvement of hotels in Scotland, and the policy was threefold—to provide attractive accommodation for holiday purposes and for visitors from abroad as part of the "Come to Britain" movement; to obtain railway revenue from visitors; and, of course, hotel profits. The hotels at Gleneagles and Turnberry in particular have raised the prestige of British hotelkeeping all over the world.

IMPROVED STEAMBOAT RECEIPTS.

The improvement of £36,000 in the net receipts from steamboats is satisfactory, and the result is the best yet experienced, notwithstanding a reduction on the Goole and Continental services. The Irish traffic was appreciably better, but the chief factor was the fusion of the Fleetwood and Heysham services with Belfast, made possible through the amalgamation. Moreover, the fact that the steamers on each service were nearing the end of their useful life for the Belfast traffic made a close investigation imperative, and it was decided to concentrate the traffic upon Heysham and construct larger vessels of the most modern type to carry the Irish traffic of both English ports. It was not without much thought that the Fleetwood service, run for over 50 years, was transferred, the risk of altering a well-established service being evident, but the dominating factors were the greater suitability of Heysham for direct transfer of passengers between rail and boat, its capacity for extension and the economy of the concentration. The economies anticipated are being fully realised, and there has, in addition, been an increase in the gross traffic. At the same time we are improving the position at Fleetwood by concentrating further efforts and expenditure on the development of other traffic, particularly fish.

NET REVENUE.

The total net revenue amounts to £16,271,000, and in the circumstances the decrease compared with 1927 of £1,040,000 is not discouraging.

It falls short of the standard contemplated by the Railways Act, 1921, by £4,056,000, the present figure of standard revenue being £20,327,000. The position falls to be reviewed by the Railway Rates Tribunal in the next couple of months.

The actual results of the year and those contemplated by the Act of 1921 may be summarised thus :—

	1928 Net Revenue	Standard Revenue
Per cent. of total capital receipts	3.80	4.75
Per cent. of ordinary capital after meeting all pre-ordinary interest and dividends	3.61	7.87

You will see, therefore, that a reduction of the net revenue below the standard by about 20 per cent. reduces by over 50 per cent. the ordinary stockholders' proportion of the standard revenue.

THE REQUEST FOR NET FIGURES.

There has been a revival of the request for the publication of net revenue figures at monthly periods.

While this further representation has been given full consideration, it serves to confirm the opinion of your board that, taking a wide view of the general interest, the advantages of that course are largely illusory and counter-balanced by the serious difficulties and certainty of misunderstanding involved.

The publication of gross figures has always been a valuable branch of national statistics giving general information as to the course of trade. They were never intended to be the organ of the day-to-day market valuation of railway stocks, and I know of no practical method which would serve that purpose satisfactorily.

BALANCE SHEET.

The amounts held by the company in respect of the staff superannuation and pension funds and savings bank have increased by £1,189,000 to £32,199,000, and on the other side of the balance sheet it will be seen that the cash and liquid resources amount to the

substantial sum of £31,078,000, there being a reduction of £612,000 on the year.

FRUITION OF IMPROVED METHODS.

Turning now from the accounts of the past year I should like to speak upon a few general topics, the first being the fruition of improved methods. These relate to the quantity and maintenance of plant, widening of tracks, working of terminals, shunting, and marshalling of trains, to which special attention has been directed.

The "Royal Scot" type of locomotive has been so successful that experiments with higher boiler pressure will be undertaken this year, and for this purpose the company are having built in this country a locomotive on the Schmidt-Henschel principle, using steam at 850 lb. pressure. This system has been very fully tried out abroad, and it is hoped that the tests under L.M.S. conditions will give valuable information. A number of "Sentinel Cammell" steam coaches, which are employed chiefly on certain Scottish branches and local services, will, it is hoped, prove useful and economical; the results are being carefully watched. In view of the improvements made in internal combustion engines using heavy oil, experiments are being made on a section of the line with a short train driven by a "Beardmore Diesel" engine with electrical transmission. The preliminary results are promising. We have also been experimenting in a number of other directions—for example, the "Ljungstrom" and the "Garratt" types of locomotive—and the whole of the arrangements for scientific research and experimentation in all directions are undergoing complete overhaul.

MERCHANDISE TRAFFIC CONTAINERS.

The use of containers for merchandise traffic is proving of great advantage in giving a door-to-door service with the minimum of handling. In December, 1927—the first month after the acknowledged establishment of the container—1,168 container loads were dispatched from our stations; for December, 1928, this had grown to 2,273 loads, the revenue therefrom having increased four and a half times to upwards of £10,000. Even yet we are scarcely beyond the initial stages of this development, which is opening up several new phases, such as the minimization of breakages hitherto common with brittle goods by railway, and the year 1929 promises greater progress. On the completion of further orders placed, our total stock of containers will be over 1,300.

There have also been extensions of the railhead distribution system, while comprehensive schemes for linking up by road outlying districts with railway centres are being introduced.

ADMINISTRATION.

We much regret the death of Mr. R. M. Wilson, who was a member of our Scottish committee since the amalgamation, and was formerly a member of the Highland Railway board. It has not been considered necessary to fill the vacancy. Mr. S. H. Hunt, vice-president, retired at the end of 1928, after valuable services with the former London and North Western Railway Co. and the amalgamated company extending over 46 years. Mr. F. G. Evans, formerly the secretary, has been appointed to succeed Mr. Hunt as vice-president, and Mr. O. Glynne Roberts has succeeded Mr. Evans as secretary.

DE-RATING.

The Government, as part of their local government reform proposals now before Parliament, have formulated a scheme under which, from October 1st next, there will be a remission of 100 per cent. of local rates paid by agriculture and 75 per cent. of local rates paid in respect of factories, workshops, coalmines, etc., railways, canals, and docks. The railway undertakings thus partially de-rated are required to set apart the whole of this reduction in local rates for the payment of rebates to certain specified traffics, and from December 1, 1928, these rebates have been anticipated by payments out of moneys voted by Parliament. The experiment is one which will be watched with close interest, and if it succeeds in permanently stimulating the industries concerned it is bound to assist railway revenues. Only in that indirect way, however, will the railways be affected, as no portion of the reduction in local rates will accrue to them in relief of their expenditures.

STATE OF TRADE.

In the directors' report for 1927 it was thought desirable to point out that there were no strong indications that the heavy trades were improving materially. The course of trade in 1928 was, in fact, even worse than appeared probable a year ago, and particularly from March to August the freight traffic receipts were extremely bad. Since August there has been, not an increase, but a progressive reduction in the rate of decrease, and it is hoped that this tendency will continue. It is most marked in the raw materials traffic, which would first reflect improved trade, and if the next few months continue to show increasing minerals traffic we can count on having passed the worst period. To some extent the loss is attributable, directly or indirectly, to the extension of road competition. While there are obvious difficulties in examining the several hundred million transactions of the company in one year and deciding the relative effect upon them of the competing roadways and of the state of trade, it is clear that the loss owing to the former cause is important.

We often make it clear that our objection is to the levy upon the general body of rate and tax payers in aid of one form of commercial transport, but our opponents distort the objection by narrowing it down to the amount of local rates paid by the railways for current highway expenditure—roughly "a mere £1,600,000" to them. If the Government started a newspaper and gave it assistance from public funds, other privately-owned newspapers would, obviously, have a grievance, but their owners would hardly agree to measure their disability by the proportion of the subsidy paid out of their pockets, or be reassured by a grudging assent that they also could buy copies of the State-backed paper.

THE RAILWAY CASE.

The railway case so often stated is:—

(1) Motor traffic does not bear its economic costs;

(2) Commercial motor traffic does not bear its fair share of the charges paid by motor users and is, therefore, doubly subsidised;

(3) The public generally bear the subsidy, though the private car may assist, and the railway companies' share in that public burden is a less important point.

The attention of the stockholders is again directed to this disability, which the new road powers have only partially relieved, because its national importance is often overlooked, and while the directors will continue to urge their views upon the Government, it is a matter in which the stockholders can aid in securing equitable treatment.

The position of road competition in this country is not unique, though it is, perhaps, more aggravated than in those European countries where the State concern with railways is not merely to regulate them. The United States position is more comparable, and there, with immense national prosperity, the railways are suffering severely from the same cause. In 1928 their passenger traffic was the lowest for 20 years, and it has fallen by one-third since the peak year, 1920, a loss worse than ours in proportion. Passengers can now travel from New York to San Francisco by omnibus, there being two services starting from each end daily. But, as in this country, the real loss is in short-distance traffic, though in regard to goods traffic the prosperity of trade with the high proportion of long hauls in the United States has obscured the loss in the total figures. It is, however, quite clear in practice, since, for example, virtually the whole of the freight traffic previously carried between New York and Philadelphia is now on the road. To regain this traffic the American companies are now adopting collection and delivery methods similar to those in operation here. In other respects the American problem is akin to ours, and one question already receiving attention is to what extent the railway companies can abandon unprofitable sections and transfer the traffic to the roadways.

ROYAL COMMISSION ON TRANSPORT.

A short time ago the Government appointed a Royal Commission with very wide terms of reference to report upon transport questions. The investigations will doubtless take a considerable time, but I understand it is intended to issue an interim report on road transport, and the views of the railway companies on these particular aspects were recently submitted, the evidence being given for the railway companies by Mr. Thornhill, our chief legal adviser, and myself. We laid emphasis upon (*a*) the community of interests established by the Railways Act, 1921, between the railway companies and the public and traders of the country; (*b*) the difficulties which rail transport has in meeting the competition of unregulated and subsidised road transport; (*c*) the adverse effects upon the railway industry; (*d*) the repercussions upon the public and the traders, particularly the heavy industries, which must depend in a great measure upon the railways for their transport requirements; and (*e*) the need for regulating road transport and making it carry—as rail transport does—the burden of its economic costs. It was urged that the adoption of a policy on these lines is not only justified from the point of view of fair treatment to our own State-regulated and self-supporting industry, but is one which would influence effective co-ordination of rail and road transport and the giving of the most efficient national transport services at the least economic cost.

ROAD POWERS.

As you know, our application for road powers last year met with a better fate than that of the old L. and N.W. and Midland Companies in 1922, but we had to meet strenuous opposition during the passage of our Bill, the struggle before the Select Committee lasting no less than 37 days. It became law in the autumn, and we immediately attacked the question as to the best way in which we could use our new powers.

Investigations confirmed the view that it should be our first policy to co-operate with existing road transport undertakings to the greatest possible extent consistent with our own and the public interest, and our officers fully appreciate the necessity for exploring every reasonable alternative before putting forward proposals involving heavy capital expenditure upon road transport equipment to compete with existing undertakings possibly with large initial losses and with the inevitable result that the congestion upon the roads would be intensified, the cost of upkeep of roads increased, and our contributions for such upkeep greater. But your board is determined that the company shall in one way or another share in the road business.

NEGOTIATIONS WITH ROAD TRANSPORT UNDERTAKINGS.

As to the progress made, and dealing first with the passenger side, active negotiations are proceeding with the road transport undertakings over the whole of our area, both municipal and independent; arrangements have been made with certain corporations and negotiations with others are in various stages towards—we hope—equally promising results. You will all see the reason why I cannot be more explicit on this point.

As to goods traffic, our first policy is to utilise to the full our existing assets and convey goods by rail where this is possible and convenient, but where the traffic can better be taken on the road and the rail facilities are inadequate or inappropriate we intend to develop that traffic on the road wherever it can yield us a profit.

THIRD-CLASS SLEEPING CARS.

Specially designed third-class carriages capable of being used either for day traffic or for sleeping purposes at night were introduced in September.

This new facility has been extensively used, and, although until there is experience of summer traffic any expression of opinion regarding its value must be provisional, the revenue earned has so far well justified their introduction.

WESTERN HIGHLANDS AND ISLANDS TRANSPORT SERVICES.

During the summer your directors had to deal with a situation of some difficulty in the Western Highlands. The arrangements between the Government and the Steamship Co. which for years had carried on the mail and general services had broken down, and a Select Committee of the House of Commons had been unsuccessful in getting any substituted proposals until Coast Lines, Limited, stated that they would be willing to submit a scheme if the railways would participate. While in the ordinary course as a commercial proposition we should not have been attracted by the prospects in this area, we felt that the presence of our terminal facilities upon the coast line gave us a position of some responsibility on grounds of public policy, and if our proprietors were reasonably secured against actual loss it was our duty to do all we could from a national point of view to prevent a serious situation arising in that area. Accordingly we agreed to be interested equally with Coast Lines, Limited, in a new company which has taken over the fleet of the old company and entered into a contract with the Government. Under these arrangements with the Government we believe that we shall secure a return throughout the contract of 6 per cent. upon our investment, any surplus above this being divided between the company and the Government in relief of their payments.

At the same time the arrangements have included an immediate reduction of rates in that area, and although we are not optimistic as to the extent to which such reduction will stimulate traffic we believe that everything reasonable that can be done for these isolated parts of the kingdom is now assured. The new company is not a statutory company, and has air powers which may in course of time be useful in the development of some of the services.

TILBURY AND DUNKERQUE SERVICE.

The great industrial north has long felt the need of an independent outlet to the Continent, and this was facilitated by the Nord Railway o. France by means of an agreement with them and an independent French shipping company for a service between Tilbury and Dunkerque.

A nightly service in each direction was inaugurated in May, 1927, and this enables business men on both sides of the Channel to economise their time by travelling entirely out of business hours.

Taking into account the time usually required to develop a new service of this kind, the results attained so far may be regarded as satisfactory. It is interesting to note that during the first seven months of the operation of the service over 38,000 passengers were carried, and that in the corresponding period of last year over 60,000 passengers used the route. The figures of parcels and mails show an even more gratifying result. The general cargoes, too, with the Midlands, have shown an upward trend.

The steamers berth alongside the trains on each side of the Channel, and in the very severe conditions prevailing this winter, the services have been maintained with the utmost regularity.

The route is undoubtedly increasing in popularity, and we are confidently looking forward to still better results from this venture.

STAFF CO-OPERATION.

Twelve months ago I spoke at some length on the growing disposition of the two parties actively concerned in our great industries to approach closer together in consultation and concerted effort, with the object of advancing our mutual interests. I also explained in some detail the co-operation scheme just previously launched on our own railway.

Though much of interest and encouragement might be said to-day about the development of that movement generally, and on our railway in particular, I cannot take up much of your time with that theme, but I think I ought to tell you this much, that the leaven of good will and helpfulness lodged in the minds of our officers and men a year ago is quietly but surely spreading, and is working with pronounced effectiveness. I will content myself by saying without details that, having carefully watched the progress of the movement, I have reached the very definite conviction that a substantial advance has been made along right lines, and that a continuance of these friendly co-operative activities will add materially to the satisfactory and successful working of this great railway undertaking.

I must make a special reference here to the agreement we were able to reach in July last with the trade union leaders, by which they undertook that railway employees should contribute to the heavy losses suffered by the companies a sum of 2½ per cent. of their total earnings. That deduction is also being made from the pay of all the officers, as well as from the earnings of other ranks who were not represented by the trade unions in the negotiations. By these arrangements the railways will receive assistance at the rate of just under £3,000,000 a year, the share of this company being rather more than £1,000,000 It would, of course, be an unpardonable ignorance of human nature to suggest that this deduction from earnings was welcomed by anybody who had to make the surrender, but it will be on record in railway history to the enduring credit of all concerned that the judgment and foresight of the trade union leaders prompted them to negotiate such a settlement, and that their constituents loyally acquiesced in the action of their leaders.

The spirit of co-operation which has been in evidence on the railways cannot, perhaps, be quoted as the foundation or the inspiration of this wage agreement; but it would be less than justice not to acknowledge the undoubted influence of that new spirit in making possible an arrangement so unprecedented in scope and character.

DIFFICULTIES OF THE YEAR.

Having reviewed the salient points on the accounts in your possession and dealt in as brief a manner as possible with conditions and affairs affecting your undertaking, I ought to tell you that looking at the year as a whole it has been one of extreme difficulty for your officers. The first day of the year was the "Appointed Day," fixed by the Railway Rates Tribunal, from which the standard charges and the relevant exceptional rates sanctioned under the provisions of the Railways Act, 1921, were to operate. These charges were aimed at producing the standard revenue already referred to, but as events turned out a more difficult year in which to realise that end it would be hard to imagine.

The factors which have made the task of securing the standard revenue quite impossible have already been mentioned—extraordinary trade depression with one resultant—an abnormal unemployment figure and the privileged competition which is maintained against us and our inability, by reason of our legislative regulation, to combat it effectually.

The weather during the holiday season was such that, had normal circumstances obtained, we should have had a very successful year of passenger traffic, and yet it has been impossible to secure anything further than the results placed before you.

ORGANISATION CONSOLIDATED.

On the other hand, the efforts of the officers and their staffs have been directed to obtaining the utmost revenue possible from old and new sources. Every one is keenly alive to the necessity of adequately serving the travelling public and the trading community. Our organisation has been consolidated, improvements have been effected in rolling stock equipment and accommodation for dealing with traffic, and many of the provisions made in previous years are now realising the results for which expenditure was incurred otherwise the economies which have been made could not possibly have been achieved. Given an increase in trade we are fully prepared for successfully dealing with a greater volume of business.

Regrettable accidents in the closing months of 1928 and in the early period of the current year resulted in a loss of life which we greatly deplore, and these events call for my comment. I can assure the proprietors that the provision of improved safety appliances receives our constant attention, and every reasonable opportunity is taken of adopting the latest developments where, after examination by the company's officers, they are found to be desirable in the interests of safety on the railway; a very large sum has been expended during the past 15 years with the aim of directly or indirectly improving the safety of the line and to prevent accidents happening. We are also not without anxiety to secure that if accidents should unfortunately occur their consequences shall be minimised.

ELECTRICALLY LIGHTED TRAINS.

A great deal of attention has been directed to the gas lighting of trains. The proprietors will be interested to learn that all new stock built or purchased for many years back is electrically lighted, and the elimination of gas-light fittings has been expedited by the conversion to electric light of vehicles which still have a substantial period of usefulness, and by the extensive building of new carriages, a policy which is being continued. At the present time less than one quarter of the stock employed in the main line services is fitted with gas lighting; the bulk of gas-lighted stock is in use on local services or held in reserve for peak traffic or holiday periods.

A further step towards ensuring safety of passenger travel has been taken by the construction of vehicles in steel. When an existing order for construction has been completed we shall have upwards of 500 vehicles constructed wholly of steel—for many years past we have used only steel underframes for carriage stock.

In all the circumstances of this difficult year the net results, moderate as they are, can, I think, be regarded as satisfactory.

Ladies and gentlemen, I now beg to move "That the report now read, with the statement of accounts, be received and adopted."

I shall ask the deputy-chairman to second that resolution, and then I shall be pleased to hear any comments which shareholders may desire to make. (Cheers.)

Mr. E. B. Fielden, M.P. (deputy-chairman), seconded the resolution.

SHAREHOLDERS' REMARKS.

Mr. E. C. McAdam congratulated the directors and officials on the great economies which had been effected and expressed the hope that those economies would continue during the current and succeeding years. He raised a number of points on the accounts and suggested the setting up of a sales department as a means of obtaining fresh business. He also suggested that the company should use the spare land which it had at different places for the provision of motor-car parks or garages, which, he thought, would produce considerable revenue.

Mr. J. J. Rowley supported the suggestion of a sales organisation, and said that he thought that if privilege tickets were issued to stockholders a considerable increase in revenue would result.

Mr. Max N. Bingen requested that further consideration should be given to the question of publishing monthly net earnings, such as was done by all the big railway systems in America.

Mr. Noel asked if any profit was made on the Tilbury and Dunkerque steamboat services.

THE CHAIRMAN'S REPLY.

The Chairman, in reply, said that he was very glad to hear Mr. McAdam's appreciation of the striking results of the efforts of the officers in securing the economies which he had mentioned. He would point out that very substantial reductions had been made in the cost of superintendence throughout the whole of the departments of the line since the amalgamation. He did not think he could add to what he had already said about the publication of monthly net earnings, but he would remind Mr. Bingen of the differences between American conditions and theirs. The railway profit from the Tilbury-Dunkerque service would come indirectly from the new traffic which it was hoped that this service would create, rather than directly from the actual steamers. The points which had been raised about the operation of the line would be looked into by the officers. They already had the question of providing garages under consideration.

The resolution was carried unanimously.

The dividends, as recommended, were declared; the retiring directors (Sir Alan Garrett Anderson, K.B.E., Mr. James Hamilton Houldsworth, Mr. Charles Ker, LL.D., C.A., General the Hon. Sir Herbert Alexander Lawrence, G.C.B., Mr. Frederic James Ramsden, Sir Thomas Royden, Bart., C.H., Mr. Douglas Vickers, and Mr. Alfred Harold Wiggin) were re-elected; and the retiring auditor (Mr. Frederic D. Morris) was reappointed.

A cordial vote of thanks to the chairman concluded the proceedings.

SOUTHERN RAILWAY COMPANY.

IMPROVED NET RESULTS—ROAD SERVICES.

The annual general meeting of the Southern Railway Company was held, on the 6th instant, at the Cannon Street Hotel, London, E.C.

Brig.-Gen. the Hon. Everard Baring, C.V.O., C.B.E. (the chairman), said that in the past year they carried altogether 306,673,000 passengers, there being an increase as compared with 1927 of nearly 8,000,000 passenger journeys. In the electrified area passenger journeys increased by no less than 6,000,000 and their receipts by £213,000. Outside the electrified area, although they had an increase of nearly 2,000,000 passengers, their revenue decreased by about £200,000. A very large proportion of this loss was due to the competition of the private motor, and it was difficult to know what they could do to recover this traffic. In order to compete with the motor coach and local omnibus services outside the electrified area they had, in common with the other railway companies, been compelled to offer a large number of reduced fare facilities throughout the country. By this means they had increased the number of passengers carried, but they had not succeeded in avoiding a loss in revenue. Goods train receipts showed a decrease of 9½ per cent., whereas the tonnage carried declined by 6 per cent.

The total results of the working of the railway and other ancillary businesses was that, while the total receipts had fallen away by £556,000, the expenditure had decreased by £763,000, thus giving an increase in net receipt of £207,000. This result had been achieved partly as a result of the decreased price they had had to pay for coal; by a reduction of £112,000 in rates and taxes; by the agreement arrived at with the railway trades unions in July last under which a deduction of 2½ per cent. had been made from all salaries and wages, which accounted for about £108,000; and, lastly, by the considerable economies effected in nearly every department, which they hoped would be of a permanent nature. They had £2,144,000 available for dividend on the ordinary stocks, an increase of £30,000, and there would be an increased carry forward of £30,000 after paying the same dividend on the deferred stock as was paid for 1927. He was sanguine enough to believe that if trade recovered, and if they got their fair share of the traffic, they would yet earn the standard net revenue contemplated under the Act of 1921.

Referring to the proposed new Charing Cross bridge, the chairman said that there was no doubt the site on the river bank suggested for the station would provide a fine frontage, with all the space required for sidings, offices, platforms, etc., and if it were part of a far-reaching scheme for the improvement of London and of national advantage, the shareholders would be justified in giving their consent to the proposal, but that consent would only be asked for by the directors provided the conditions and undertakings they had demanded were granted.

The Bill giving the company powers to operate road services obtained the Royal Assent on August 3rd last, and they were now in conjunction with other railway companies, in active negotiation with a large number of omnibus companies throughout the country. With regard to the goods traffic, here again they were working out a scheme of railhead distribution and collection throughout the area they served. This, of course, would necessitate a certain amount of expenditure in the establishment of garages, warehouse accommodation, and the like. They expected to have some of those railheads in operation within the next few months.

Having mentioned, with regard to goods traffic, that a scheme of railhead distribution and collection throughout the company's area was being worked out, the chairman said that on Sunday last they inaugurated the last stage of the two extensive schemes of electrification that had been taken in hand since the formation of the Southern Railway in 1923. Altogether they or the constituent companies had spent upon electrification up to the end of last year £10,500,000, but only £6,000,000 of this had been charged to capital. They had electrified 270 route miles and 748 track miles, so that over 13 per cent. of their total track mileage had now been dealt with. Obviously, they must wait some time before they reaped the full benefit of these schemes, but he was able to say that, after allowing interest upon the whole of the expenditure and bringing to debit the whole of the running and other costs involved, there was a very considerable profit.

With reference to the Channel Tunnel, the Prime Minister had announced that he proposed to appoint a Committee to examine the whole question, not only on its military side, but also with regard to the economic aspect. He (the chairman) did not consider it was within the company's province to go into the question of whether such a tunnel would be of advantage from a national point of view—that was for the Government to decide—but it would no doubt be necessary for them to go closely into the many serious problems which would confront the Railway Companies.

The report was adopted after considerable discussion, and at a special meeting the company's Parliamentary Bills, including one empowering the company to provide air transport services, were approved.

UNDERGROUND ELECTRIC RAILWAYS COMPANY OF LONDON, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

The annual general meeting of this company was held, on the 7th inst., at Caxton Hall, London.

The Right Hon. Lord Ashfield (the chairman) presided, and in the course of his speech said:—I do not propose to review once again the accounts and statistics of the operating companies. I may sum up their position in a few words. The year 1928 has, on the whole, been the best year which we have so far experienced, and the results attained so far as the common fund companies are concerned cannot be unsatisfactory to you.

We may ask ourselves whether we may count on the position, built up by many years of abstinence on your part and effort on ours, remaining stable and affording a secure basis upon which to build a larger enterprise and to achieve a still better result in the future. There are several factors which demand and deserve your consideration.

London continues to expand and to draw to itself additional population. The built-up area has now overlapped on all sides the boundaries of London County, and is reaching out in long stretches of houses to the twelve-mile limit from the centre. The problem of planning for the amenities and conveniences of these new colonies grows yearly more difficult, and the distribution of the people healthily and pleasantly over wide tracts of country at such a distance from the heart of things turns upon the provision of rapid transit facilities, which mean, in truth, more underground railways. I cannot, therefore, fear any stagnation of London which would depress our transport industry unless we stifled it ourselves by failing to provide by further facilities for the continuous growth in the number of passengers. So far, therefore, as receipts are concerned, I can foresee nothing which need induce us to pause or to have doubt as to our future.

EXPENSES.

When I turn to expenses, the situation is not quite so certain. The principal element of cost is wages. The wages bills represent 61 per cent. of our total operating expenditure. We have always shared our prosperity with our employees, and even when we were unable to pay anything like adequate dividends we have not failed to maintain our wage levels at and even above those paid in comparable businesses. In the last five years, although the index number for the cost of living has fallen from 180 to 167 points, we have slightly increased the average wage paid to our staff; the percentage increase being 6 per cent. We have achieved this result by two means. We have received better service from our staff, and for this I would make full acknowledgment, and we have enabled that better service by putting at their disposal the best equipment and machinery that we could obtain. From 1924 to 1928, in five years, we have increased the car mileage run by trains, omnibuses and trams from 227 to 274 millions of miles, or by 21 per cent. Yet the number of persons employed has only increased from 41,700 to 43,500, or by 4 per cent. In this last year our services have expanded by 6 per cent., yet our staff has been kept practically stationary. Paying, therefore, as we do, as good or better wages than any other transport undertaking, we should be entitled to expect what we have, a contented and loyal staff.

COAL AND PETROL.

Then we are dependent upon two commodities for the power which keeps our transport facilities moving: coal for conversion into electricity, and petrol. So far as coal is concerned, we are enjoying favourable terms at this time, having made extensive contracts at a time when coal was relatively cheap. Our power houses are being re-modelled and re-equipped with machinery which will add appreciably to their efficiency, and although there is a tendency for the price of coal to harden once again, it cannot lead, I think, to an advance in our working costs, for the measures which we have already taken should be sufficient to counteract any rise that can be anticipated.

With petrol it is different, and I hardly know what to say. The recent increase of 2½d. per gallon affects us seriously. Our contract for supplies was not unfavourable, at any rate on a comparative basis, but since our price is adjusted in relation to the current market price, we shall have, this year, to find another £200,000 to meet our petrol bills, assuming, as I must, for want of any real information or understanding of the situation, that no further advance in price will occur. It is exceptionally regrettable that there should have been any action by way of taxation to add to the price of petrol. The present tax of 4d. per gallon bears hardly upon our undertakings. It represents a burden of £400,000 a year to be met out of 1d., 2d. and 3d. fares, since our average receipt per passenger for 1928 is less than 2d. We feel the burden the more in that the proceeds of the tax are being diverted from any gain or purpose in which we can share. We are compelled to reiterate our view of the unfairness of this taxation, and we can only hope that the Chancellor of the Exchequer will be able to afford us relief in the forthcoming Budget—a relief to which we are clearly entitled.

THE ACCOUNTS.

Referring to the report and accounts of the Underground Company, you will see from the revenue account that the income from your investments amounted to £1,118,473, which is an increase of £160,170 compared with 1927, due primarily to the increased dividends paid by the common fund companies. Miscellaneous receipts amounted to £35,325, or £28,782 more than last year, so that the total income of your company was £1,153,798. Expenditure amounted to £68,277, representing a decrease of £11,724, principally as the result of a reduction in general interest, and the net receipts were, therefore, £1,085,521, or £200,676 more than in 1927. The final balance carried to the balance sheet is £709,401. In August last an interim dividend of 3 per cent. was paid on the 5,549,435 £1 ordinary shares which had been issued up to the end of the half-year, and your directors now recommend that a final dividend of 4 per cent. be paid on the 7,010,340 £1 ordinary shares outstanding on 31st December last. This will make a dividend at the rate of 7 per cent. for the full year as against 5 per cent. for last year, but it should be borne in mind that the amount of the ordinary shares outstanding was varied during the year under review. This will leave a balance of £262,504 to be carried forward to next year's accounts, or £92,743 more than the amount brought in from last year.

As you will have observed by the weekly traffic returns, our earnings have considerably decreased. The increased cost of petrol is too large an amount to be altogether ignored. But in spite of all drawbacks and uncertainties I am not inclined to take a pessimistic view of the future. Recent past experience leads me to hope and believe that the same success may attend our efforts this year as has fortunately waited upon them during the past few years, and that in spite of increased expenses and increased taxation we may, by increased efficiency and by increased traffic in the months still to come, be able to show as good results next year as those which I have been privileged to place before you to-day.

The report and accounts were adopted.

BRITANNIC ASSURANCE COMPANY, LIMITED.

ANOTHER SUCCESSFUL YEAR.

INDUSTRIAL BRANCH BONUS—PRELIMINARY ANNOUNCEMENT.

INFLUENZA EPIDEMIC SHOWS THE VALUE OF LIFE ASSURANCE.

The sixty-third annual ordinary general meeting of the shareholders of the Britannic Assurance Co., Limited, was held on Friday, March 1st, at the chief offices, Broad Street Corner, Birmingham, Mr. J. A. Jefferson, F.I.A. (chairman), presiding.

Mr. Jefferson, in moving the adoption of the report, said :—

Ladies and gentlemen,—Perhaps you will be good enough to allow me to assume the directors' report and accounts as having been read. (Agreed.)

Before dealing with the actual figures I would like to refer to some features of interest that have arisen during the period under review. Our hopes that 1928 would show a general improvement in trade for the country have not been realised, although undoubtedly the trend of events has been towards a gradual improvement, and I really do feel convinced that slight as the evidence may appear upon the surface, we have, nevertheless, been gradually tending towards the goal so devoutly hoped for by all of us.

AMALGAMATION SUCCESS.

The year 1928 was the first complete year's experience we had of working since the British Legal amalgamation, as, of course, the actual physical taking over of that company was in September, 1927, and I can only reiterate what I have said before on this subject, namely, that the board still considers the amalgamation has been a success from every point of view. When speaking previously on this subject I had a good deal to say about the staff of the British Legal, because in an amalgamation of this kind it is a matter of the utmost importance that the good will and loyal co-operation of the staff should be secured, and I can say quite emphatically that we have an excellent asset in the ex-British Legal staff, because now that they have had over twelve months' association with us we feel we have fully obtained their "good will." In this connection it will, no doubt, interest you to know that of the original British Legal staff taken over by us, 48 have been granted pensions under our pension scheme, and 69 who had not complied with the conditions of our pension scheme, and who could never hope by reason of old age or infirmity to comply with those conditions, have been granted gratuities on retirement, whilst no fewer than 92 have been promoted to supervisory positions in this company. Whilst dealing with this matter I will refer to just two germane items appearing in the accounts. In the first place you will notice we have written off £100,000 from the cost of purchase of the British Legal, as against £70,000 last year—leaving the goodwill item standing in the balance sheet at £150,000, and I am sure you will agree with the soundness of the directors' policy in seeing that this item disappears as an asset as early as possible. The other item to which I would refer is the proposed allocation of £100,000 to the trustees of the staff pension fund. The desirability of this transfer will be obvious to you from the figures I have given as to the pensions granted to ex-British Legal representatives, and also bearing in mind the fact that our own staff are coming on to the pension fund in increasing numbers.

SOUND INVESTMENTS.

The investing of the company's funds engages my particular attention, and during the year under review a sum of no less than two and a half million pounds has been dealt with. The valuation of our Stock Exchange securities by our auditors has disclosed such a healthy position that the directors have considered it quite unnecessary to make any transfer to investment reserve fund. As a matter of fact, our assets are worth more than the amount at which they stand in the balance sheet, and therefore the investment reserve fund is available to meet any possible future depreciation.

We have, during the year, supported the flotation of several investment trust companies, where they were connected with one or other of the well-known insurance companies. Whilst on this subject I may say that I do feel there is a danger of this class of company being somewhat over-done, and in 1928, I believe, seventy-two new trust companies were formed with many millions of capital, and many have been floated since. Obviously, competition amongst them will be such that unless managed with considerable ability difficulties may be experienced in giving as satisfactory returns to the shareholders as some of the latter may be hoping for. I am not, of course, referring to the older companies which have well established connections, and have had the advantage of a period when very profitable investments could be made. It will no doubt interest you to know that recently we have acquired a substantial holding in the Midland Trust Co. of this city; a company which has been established over thirty-two years, and I have been offered and accepted the charmanship, and I am hoping the connection will be mutually advantageous.

I have dealt somewhat generally with the question of investments because arising directly therefrom is the subject of the interest yield we obtain.

INVESTMENT YIELD.

For several years now I have at these meetings uttered a warning in respect of the growing tendency towards a gradual reduction in the gross rate of interest earned by our funds; the reason obviously being that it is not possible to-day to invest new money at the high rates obtainable a few years ago and at the same time retain the same margin of safety, which, of course, is ever to be borne in mind. To show how well founded these warnings have been I may say that since 1923 our gross rate has gradually gone down year by year from £5 17s. 6d. to £5 11s. 11d. The net rate during the same period has followed the same trend, except that, of course, there has been a slight fluctuation owing to a reduction in the rate of income tax, and even at the present time it is only in the relief we may be able to obtain from the Chancellor of the Exchequer that I can see any real possibility of our combating a still further gradual reduction in the rate of interest earned in the years to come. This matter of yield is perhaps the most important factor in deciding the rate of bonus to our with-profit policyholders in the ordinary branch, and this is self-evident to all of you when you consider that we are valuing on a 3 per cent. basis, whilst the funds are earning practically 5 per cent., or, in other words, we have an interest profit margin of 2 per cent. on our mean funds in the ordinary branch, which funds amount to approximately 5¾ millions.

Each year in deciding the rate of bonus the board has always been influenced as much by a consideration of the future outlook as by the actual surplus made in the year under review. I would remind you that on more than one occasion I have referred to this aspect, namely, that "It is the defined policy of the board to declare only such a rate of bonus as, so far as it is humanly possible to foresee, can be maintained." In this connection you will remember that the avowed object of setting up the ordinary branch contingency fund, amounting to £50,000, was solely for the purpose of ensuring the maintenance in the future of the highest rate of bonus ever declared by us in the past. Such a policy makes for stability—a characteristic which perhaps more than any other is so essential in a life assurance contract. As a matter of interest, may I point out that even to maintain the same rate of bonus each year costs a progressive company an ever-growing amount. For instance, for the year 1927 the cost of the £2 2s. bonus was £163,160, as against £182,667 this year—an increase in cost of nearly £20,000 for the same rate of bonus.

Of the £197,810 carried forward into 1929 out of the total surplus, the sum of £93,539 appertains to the ordinary branch, as against £60,854 carried forward from the previous year, and from this you can see that we could have increased our rate of bonus had we been concerned only with the immediate present, but, as already stated, we prefer to adopt a cautious policy.

INDUSTRIAL BRANCH BONUS.

As already stated, out of the total carried forward £93,539 is in respect of the ordinary branch, and this leaves a carry forward of £104,271 in respect of the industrial branch, as compared with £52,276 for 1927. The object of this large increase in the carry forward is one upon which it gives me the greatest possible pleasure to make a preliminary announcement. Having regard to the present very stringent bases of valuation, arrived at only after many years of effort in conserving our resources, and having regard to the surplus we are now able to show, the directors feel the time has arrived when they may consider some scheme of bonuses to clients in the industrial branch. We have not yet formulated a scheme, and you will doubtless realise that the whole question requires our most careful consideration in order that we may be sure the scheme does justice to all concerned. We shall give the profit-sharing scheme our careful attention, and I hope in due course to be able to make an announcement on the subject.

I know that this announcement will please our outside staff as much as the policyholders who will directly benefit by the scheme, and we sincerely hope, as a result, we shall obtain a much larger inflow of new business, which, of course, will be pleasing to everybody.

As regards the future I have ever been an optimist, and I trust I always shall be; and just as there is no smoke without fire, so I believe from the reports in the press of an increase in the coal export trade and from the reports received from our own representatives that 1929 holds out brighter prospects than we have had for some years. Frankly, I believe the country is just about turning the corner. In our progress towards the goal so desired by all, I feel this grand old country is going forward step by step in real solid progress rather than by the leaps and bounds of a fictitious boom.

At a previous meeting I referred to the heavy drain on the resources, not only of this company but of the country as a whole, caused by these recurring influenza epidemics. Our staff at chief office has been, and still is, suffering heavily from sickness. However, ours is a business which must go on without cessation, so we are carrying on as well as possible under the circumstances. Our claims department in particular has been working at high pressure, and you will understand the reason when I tell you that already our death claims in the industrial branch are £35,000 in excess of those of the corresponding period of 1928. Again I say that our great medical profession has a tremendous field for research in trying to stamp out this scourge.

SATISFACTORY FIGURES.

We are proud of the report and the figures we are privileged to place before you. Our funds are now over sixteen and a half millions, and the increase in funds, exclusive of capital paid up, is £1,420,052—the largest ever recorded. The total income now exceeds £4,681,000—over two and a half times that of 1918—and has increased by over £352,000, which is the largest increase we have made with the exception of the boom year of 1920.

Of our total claims paid during the year, amounting to £1,574,570, no less than £637,897 has been paid to policyholders who are alive and able to enjoy the fruits of their foresight in the years gone by.

In the ordinary branch we have created another record, inasmuch as we have for the first time written over two and a half millions in new sums assured, and increased the premium income by £129,387 to over £993,000. I am disappointed that this figure falls just short of enabling me to announce a further milestone in the history of our progress.

In the industrial branch there is a satisfactory increase of some £155,000 in our premium income, which amounted for the year to over £2,850,000. Our debit is really solid, so that when the trade of the country becomes more normal we hope to be able to report even bigger increases.

STEADY GROWTH OF GENERAL BRANCH.

In our general branch, which we all look upon as the baby of the family, you will notice the premium income amounted to £52,644, an increase of £13,540 over the previous year. Despite the fact that it is perhaps the Cinderella of our activities, I think you will agree that the steady growth in our premium income is a good augury for the future. Our relations with the British General, which underwrites and manages the whole of this business for us, remain as cordial as ever, and I have good ground for believing that Mr. Norman Walker and his colleagues are so satisfied with their association with the Britannic that they would be sorry to sever the connection.

With regard to the valuation, I shall leave this subject to Mr. Laing's capable hands to enlarge upon. I would just like to refer, however, to the fact that as regards the British Legal business the small surplus shown in both branches is not in any way on account of the unprofitableness of that business, but simply because we are gradually strengthening the bases of the valuation to the utmost capacity of the funds in an endeavour ultimately to have the whole of the business valued on lines identical to those of the Britannic.

I will now ask you to turn to the revenue account in the ordinary branch. In this branch our claims by death amounted to just over £116,000. Our payments under maturing policies have increased by over £87,000 to £342,017.

Surrenders have also increased by £20,000, and the policyholders have also surrendered reversionary bonuses representing a cash value of over £16,000. An increase in these latter items, I submit, simply reflects the condition of affairs for 1928.

The total amount paid away to our policyholders in this branch represented over 54 per cent. of our premium income, and I would ask you to bear this in mind when considering the figure I have mentioned as to our increase in premium income.

Dealing now with the expenses of conducting this branch, I am pleased, indeed, to be able to report a total reduction in ratio of over 1½ per cent. The total expense ratio for 1928 is just over 13 per cent., which compares quite favourably with the ratio of most of the offices.

Turning now to the industrial branch revenue account, our premium income is over £2,850,000, and if 1929 is as favourable as we hope it is going to be, then our premium income in this branch will exceed the three million mark by the time we meet you again next year.

The claims in this branch follow very much the lines reported in regard to the ordinary branch. Claims by death are some £17,000 less than in 1927, whereas claims under maturing policies, amounting to £295,881, show an increase of over £78,000, whilst surrenders show a big proportionate increase of over £21,000—the amount paid under this heading being no less than £56,000. This last item reflects very clearly the adverse conditions affecting many of our policyholders during the past twelve months, since the bulk of these surrenders have been granted for the purpose of maintaing the premiums on other policies in the families concerned.

In regard to the expenses, here again I am able to report a substantial reduction; and at this juncture I would like to make it quite clear that when I say I report a reduction in expenses with pleasure, I do not for one moment want to convey the impression that we have in any way reduced the individual earnings of our outside staff. This is the last thing the directors desire, but as our business grows it is possible to adopt certain measures of reorganisation and administration not formerly practicable. The result is that, whilst we are able to announce a substantial reduction in our total expenses, at the same time we are able to state that the average earnings of our outside staff have actually increased. Our total expense ratio in this branch is 35.9 per cent., as against 37.6 per cent. for 1927, which, we think, is a very satisfactory reduction indeed.

Turning now to our balance sheet, it is my custom to draw your attention to any outstanding features, and I will therefore briefly state the main fluctuations that have occurred under the various headings of our assets. Mortgages have increased by over £111,000, and again this is mainly on account of our house purchase scheme. You will doubtless be interested to know that up to the end of last year we had helped over seven thousand people to buy their own houses.

Loans on parochial and other public rates have increased by over £66,000, whilst loans on company's policies have increased by nearly £15,000. This latter item, like the item of surrenders, not only shows the trend of the times, but also shows the value of a policy of assurance in time of trouble.

ORDINARY STOCK HOLDINGS.

There has been a small decrease in British Government securities of over £51,000, due to the maturity of certain series of National War Bonds. Indian and Colonial Government securities have increased by practically £180,000, and I am a great believer in supporting our Colonies, because I have such strong faith in their future. Foreign Government securities have increased by practically £55,000, and you will notice that well over one million pounds, or a big proportion of our savings for the year, has been invested in practically equal proportions in debentures, preference and ordinary stocks.

House property, you will notice, has gone up by £42,000, and this again is solely on account of our growing practice of buying our branch offices. Cash in hand and on current account shows the rather large amount of over £242,000; but let me assure you that this was not on account of any slackness in investing our money, because within a week or two of the end of the year more than this amount had been invested.

TRIBUTE TO EMPLOYEES.

As is customary, our report ends by the directors tendering their sincere thanks to the inside and outside staffs, and as I have said on previous occasions this is not a mere formality on our side, but our thanks are offered in all sincerity. We, as a board, realise that many of our men have passed through the most trying times, but as I said in a New Year's message to the field staff, all the obstacles have been overcome by reason of the true Britannic spirit which permeates our company.

VIEWS OF MR. J. MURRAY LAING.

Mr. Murray Laing, in seconding the resolution, expressed his satisfaction with the strength of the company's financial position as disclosed by the latest valuation, which had been made on the most approved actuarial standards. The preliminary announce-

ment made by the chairman regarding the proposed inauguration of a profit-sharing scheme in the industrial branch marked a new era for the company.

On the subject of the claim experience, Mr. Laing pointed out that the effects of the present influenza epidemic served to emphasise the supreme value of a good life policy. No better method of guarding against the disastrous consequences to a dependent family caused by the untimely death of the breadwinner existed than that afforded by life assurance, because the risk, which was too great for the individual to bear alone, could be borne with comparative ease when spread over a large body of persons, and this, to put it very simply, was the basic principle of life assurance.

The claim rate of the company had been well within the "expectation" both in the industrial and ordinary branches, and this was a feature of the highest importance in assisting the company to improve the benefits offered to the public. This satisfactory position was largely due to the careful selection exercised in the acceptance of business.

Turning to the ordinary branch, Mr. Laing strongly supported the chairman's remarks in regard to the decision of the directors to repeat the previous year's excellent bonus of £2 2s. per cent. He thought that an office such as the Britannic, which made a distribution of surplus to policyholders every year, hardly got the credit which was given to an office which made quinquennial distributions only. He illustrated this by pointing out that the amount distributed to policyholders during the past five years represented nearly three-quarters of a million in cash, as compared with less than £300,000 in the preceding quinquennium. Such a large proportionate expansion in so short a space of time afforded solid ground for hopefulness in regard to the future.

Mr. Laing referred to a recent development in the ordinary branch. He said that, whilst a policy which grew annually by the addition of bonuses possessed undoubted attractions to many persons, yet there was a large class whose needs were more immediately pressing, and to whom a policy giving the maximum protection at the outset for the money expended was more suitable. To meet this class the company had recently decided to issue policies for sums of £1,000 and upwards, the premiums under which had been reduced to the lowest minimum. These policies did not share in profits, but gave much bigger immediate protection than was possible in the case of a participating policy. For instance, at age thirty the premium for a whole life participating policy of £1,000 was £23 17s. 6d.; for a similar premium a sum assured of £1,422 could be secured under the latest table. Already the gratifying response made had satisfied the directors that there was a growing demand for such a policy. This was but a further evidence of the efforts of the company to keep pace with the times.

The report and accounts were unanimously adopted. Mr. J. Murray Laing was unanimously re-elected a director of the company, and Messrs. Flint and Thompson re-elected auditors to the company.

Votes of thanks to the directors, officials, and the inside and outside staffs of the company for their loyal and efficient services throughout the year, and to the chairman for presiding, terminated the proceedings.

SPENCER, TURNER AND BOLDERO, LIMITED.

The thirty-fifth annual general meeting of this company was held on February 28th, at 18 Duke Street, Lisson Grove, London.

Mr. John Boldero (the chairman) said that, looking back over many years, they had had some fat years and some lean ones, but the great majority had been good average years, and such, he considered, 1928 had been. The season opened in a very promising fashion, but just when it should have broadened and grown it rather seemed to deflate. With regard to the board's decision to make a cut in the dividend on the ordinary shares, he would point out that their financial distributions had always been on a very conservative basis as was shown by the reserves which they had accumulated. For the last two years, however, they had been perfectly frank in pointing out that they had divided slightly more than they had made, and so had reduced their carry-forward—a step which he thought was justified at the time as an exception. This year they had determined to take their courage in both hands and work again on the road of paying rather less than the actual profit made. They had actually made £900 less than was sufficient to pay 9 per cent. on the ordinary capital, so that they decided to continue their donation of £1,000 to the provident fund and to pay a dividend of 8 per cent. for the year, increasing the amount carried forward by £2,186.

The report and accounts were unanimously adopted.

HARRODS LIMITED.

EXCELLENT RESULTS—PROMISING OUTLOOK.

The thirty-ninth annual general meeting of Harrods Ltd. was held on the 4th instant, at the company's premises, Brompton Road, London, Sir Woodman Burbidge, Bt., C.B.E. (chairman and managing director), presided.

The secretary (Mr. R. H. Griffiths) having read the notice convening the meeting and the report of the auditors.

The chairman, in moving the adoption of the report and accounts, dealing with the figures in the balance sheet, said the net profit for the year was £775,156, as compared with £721,751 for the previous year. Those results would have been still more favourable but for the fact that they had brought only to the credit of their profit and loss account the gross interim dividend from D. H. Evans, amounting to £29,839. The final dividend on D. H. Evans ordinary shares had been declared, making 25 per cent. for the year—amounting to £44,759—which would be included in next year's accounts. The gross profit on trading showed a satisfactory increase of £95,000. The board proposed the payment of a final dividend of 15 per cent. (making 20 per cent. for the year), carrying forward £116,033.

In regard to the item shares in subsidiary and allied companies, there were 54,000 Harrods (B.A.) deferred shares of 1s. each, which stood in the balance sheet at cost price of £2,700, whereas the market value to-day was over £350,000. (Hear, hear.) The company was in an exceptionally strong financial position. The investments in British Government securities and cash totalled £1,928,397, a reduction of £245,914, due to the cash payment of £298,000—being 16s. per share and expenses on the 298,000 shares in D. H. Evans. Shareholders would no doubt agree with him that their business was built on a foundation as solid as a rock.

IMPROVEMENTS.

Further changes had been made within the last year in certain of the departments by the introduction of new fixtures and fittings. Those departments they had already completed fully justified the new expenditure, and this was evidenced by the appreciation and response of their customers as shown in their increased trade. When their whole scheme was carried into effect and all the improvements contemplated were made, for comfort, convenience, and shopping facilities they would have a store without equal in this country, or any other country in the world.

The results of Kendal Milne, their Manchester branch, for the past year showed an increase in trade, and they had served a record number of customers. These increases evidenced the popularity of Kendal Milne. This was especially the case if they had regard to the unsatisfactory conditions in the cotton industry which had prevailed throughout the year. They trusted the efforts now being made to consolidate and strengthen the position of this important industry would be crowned with success, and that they might soon realise revival in that trade. The directors were fully convinced that their present store was not adequate to meet the reasonable needs of their growing business, and give to their customers the convenience and facilities that present-day shopping demanded. For these and other good reasons they had decided to erect a new store in place of the old buildings immediately opposite their main store in Deansgate. They had secured the whole of the magnificent island site, with an area of about 35,000 square feet. They were considering the plans, and proposed commencing the building next year. To meet the whole of the expenditure for building, equipment, and the extra stock required they had the funds available, so that it would not be necessary to issue any fresh capital.

The business of Dickins and Jones, Ltd., also maintained a satisfactory progress. They were able to report not only increased trade and net profits, but also an increased rate of dividend on the ordinary share capital. The net profit for the year was £125,632, against £123,133 last year, an increase of £2,500, and the dividend on the ordinary shares was increased to 12 per cent., against 10 per cent. last year.

OUTLOOK FOR THE CURRENT YEAR.

As to the business outlook for the current year, with regard to the trade of the country generally—this was distinctly promising. In regard to their own business, after what he had put before them and had said of the position and progress of the business, they would expect him to view the possibilities of the current year with optimism. They were continuing to reap the benefit of their departmental alterations. They were serving more customers now than they had ever done in the history of the business, and what was more important, they were giving constantly better service.

Sir Harry K. Newton seconded the resolution, which was carried unanimously.

The formal business having been transacted, a vote of thanks to the chairman, directors and staff terminated the proceedings.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

LARGE INCREASE IN NEW BUSINESS.

RESERVES CONSIDERABLY STRENGTHENED.

The 115th stated annual meeting of the Scottish Widows' Fund and Life Assurance Society was held in the society's office, Edinburgh, on Tuesday, March 5, 1929, the Right Hon. Lord Kinross, K.C. (chairman of the ordinary court of directors), presiding.

The chairman, in opening the proceedings, expressed his regret—which would be shared by all present—that the President, Lord Rosebery, was unable to be present and take the chair.

The secretary read the notice convening the meeting and the minutes of the 114th annual general court, held on March 1, 1928, which were approved; and the report and accounts were taken as read.

In moving the adoption of the report and accounts, the chairman referred with great regret to the death of Sir Henry Cook, W.S., the senior member of the ordinary court of directors, and the Hon. Lord Trayner, LL.D., one of the extra-ordinary directors of the society. He also stated that the directors had elected as an ordinary director the Marquess of Linlithgow, K.T., who has been an extra-ordinary director and vice-president since 1910; also that an extra-ordinary court of directors had appointed the Very Reverend Sir George Adam Smith, Principal of Aberdeen University, who has for many years been one of the extra-ordinary directors, to be a vice-president in place of Lord Linlithgow.

NET NEW ASSURANCES OF £3,173,000.

Continuing, he said: We are glad to report that the new business of 1928 considerably exceeded that of 1927, which itself showed a large increase over that of the previous year, 1926. We granted last year new life assurances to the total amount of £3,362,000, of which £189,000 was reassured with other offices, leaving net assurances of £3,173,000. The gross amount exceeded that of 1927 by £383,000, and the corresponding increase in the net amount after deduction of reassurances was £509,000. The single premiums received amounted to £89,165, including those payable in respect of deferred annuities, and the new annual premiums to £119,194.

REVENUE ACCOUNT.

Our revenue account shows a satisfactory increase in our premium income, which exceeded £1,750,000 sterling, and in our interest income, both gross and net, and the gross rate of interest, reckoned on the entire funds, has increased by 1s. 6d. per cent.

I referred last year to an unwelcome increase in surrenders. I am glad to say to-day that not only has the increase been checked, but we are able to point to a very considerable fall in this item, which it is our aim to keep as low as practicable. This drop may of course be partly accidental, but it is, I hope, at least partly due to special measures which we have taken with the object of preventing unnecessary surrenders.

Our death claims must always show fluctuations from year to year, and last year there was an upward swing to £1,282,120, which is about £147,000 in excess of the previous year. But the claims were satisfactory in their incidence and well within the amount provided for, so that favourable mortality again showed a considerable contribution to surplus.

TOTAL INCOME AND OUTGOINGS.

The total income of the year amounted to £3,130,573, and the total outgoings to £2,414,863, showing an excess income amounting to £715,710, of which £712,648 falls into the life assurance fund, increasing it from £26,834,908 to £27,547,556. As we are now thinking quinquennially, it may be of interest to state that during the last five years the funds have increased from about 24¼ millions to 27⅛ millions, or by about 13½ per cent. The mode of investment of this great sum is shown by the balance sheet.

From this you will see that, while we still hold a large amount in British Government securities, we have made further progress in our policy of reducing this item as opportunity offers, and reinvesting in securities of a wider range and yielding a higher rate of interest. The effect of this process is to be seen in the increase of the overhead rate of interest to which I have already referred.

SOUNDNESS OF THE ASSETS.

While we are amply satisfied as to the soundness of the assets, and indeed keep them under constant review, it is our custom at each quinquennial investigation to appoint a committee of directors to overhaul the assets and report specially upon them to the members.

You will see that the committee's report is entirely satisfactory, and it is confirmed by the auditor, who certifies, in the restrained language laid down by Act of Parliament, that the assets are in the aggregate fully of the value stated. The market values, in fact, show a considerable surplus over the balance-sheet figures, and this surplus forms an inner reserve which not only helps to keep up our rate of interest—a very important factor in the working of our business—but also supplies a comfortable buffer against the possible depreciation of prices in the future. The members will appreciate that ample reserves not only make for financial strength, which must be our first consideration, but also conserve our future profit-earning power. We have borne this in mind in valuing our liabilities as well as our assets.

We have valued the liabilities on the same basis as regards mortality tables as in 1923, and, as before, only the pure or net premiums have been taken into account, the whole of the loading being reserved as a provision for expenses, contingencies and profits. But on this occasion the net rate of interest assumed and anticipated in the valuation is 2¾ per cent., as compared with 3 per cent. on previous occasions, and by the adoption of the lower rate the reserves have been considerably strengthened.

RECORD SURPLUS.

These stronger reserves having been made, and our general reserve fund of £350,000 maintained in addition, there remains a surplus of £3,034,247, which is the largest for any five years in the history of the society. This surplus has enabled us to declare a bonus for the past five years at the very high rate of £2 2s. per cent. per annum, calculated—as you must not forget—not only on the sums assured, but also on existing bonuses, so that the actual rate of bonus addition, if reckoned on the original sums assured alone, ranges from £2 2s. per cent. for recently effected policies up to about 5 per cent. per annum, or 25 per cent. for the quinquennium, on the oldest cases. This bonus will absorb the sum of £2,953,000, leaving an undivided balance of £81,247 to be carried forward.

25 PER CENT. HIGHER BONUS.

The rate of bonus we have now declared is nearly 25 per cent. in excess of the pre-war rate, and is even higher than the rate which we declared five years ago, although on that occasion the bonus was partly provided out of a special source, and accordingly the rate was then regarded as, and frankly stated to be, at a special rate, a repetition of which was not to be expected. We, however, then went on to say that we were not without hope that it might be possible at the next investigation—that is, the one just concluded—to declare a bonus somewhat higher than the pre-war rate, and you will admit that in this matter we have been better than our word.

As the quinquennium wore on and we examined the results of each year, we felt justified in making gradual increases in the rate of intermediate bonus, which is allowed under our liberal regulations, not only in the case of claims, but also in case of surrenders of policies during the quinquennium. Now that the results of the full period are available, they must, I think, be as gratifying to our fellow-members as they are to the directors themselves, for we are able to point to the strongest reserves, the largest quinquennial surplus, and the highest rate of compound bonus in our history.

Bonuses depend upon surplus, and the surplus depends upon conditions current from time to time, so I shall not be so foolish as to indulge in prophecy. But having made the high reserves which are so necessary to support the maintenance of a high and greatly increased rate of bonus, we have every hope that the rate we have declared for the past five years, high though it is, is one that we shall be able to maintain in the future—unless there should be some considerable change in conditions, such as would affect all offices in common. We have, therefore, had no hesitation in fixing the same rate—£2 2s. per cent. compound—for the intermediate bonus to be allowed in respect of claims and surrenders arising during the current year.

RESIGNATION OF MR. LIDSTONE.

It is a matter of great regret that our manager and actuary, Mr. Lidstone, whose ability and skill have contributed in large measure to the successful results of the quinquennium, is forced on grounds of health to resign his post; his position in the insurance world is one of outstanding eminence, and the society in its time has had no more loyal and devoted servant. I am glad to be able to inform you that we are not going to lose him altogether, and that, after a period of well-merited rest, he will join the Board as an ordinary director.

We have appointed Mr. Sharp, our present secretary, to succeed him as manager and actuary. From our knowledge and experience of Mr. Sharp's ability and capacity we are confident that he possesses the qualifications necessary for this responsible post, and I am sure you will be glad, as we are, that we have been able not only to make the principal appointment, but also all the consequential ones from within our own service.

In conclusion, I will only repeat what we have said in our report, that we can with complete confidence say to-day, as we said five years ago, that we believe the society was never in a stronger position or the bonus prospects more favourable.

The report and accounts having been unanimously adopted, the retiring directors re-elected and the auditor re-appointed, the thanks of the meeting were accorded to the directors, agents and officials for their services during the past year, and the proceedings terminated with a cordial vote of thanks to the chairman.

THE PRUDENTIAL ASSURANCE COMPANY, LIMITED.

FAVOURABLE RESULTS OF THE YEAR.
VALUES OF THE PROFIT-SHARING SCHEME.
PROGRESS IN ALL DEPARTMENTS.
SIR EDGAR HORNE ON THE POSITION AND PROSPECTS.

The annual general meeting of the Prudential Assurance Co., Ltd., was held on Thursday, 7th March, 1929, at the chief office, Holborn Bars, London.

Sir Edgar Horne, Bart., the chairman of the company, presided.

The secretary, Sir George May, K.B.E., having read the notice convening the meeting and the auditors' report,

The Chairman said : Ladies and Gentlemen,—

The 80th annual report gives the results achieved by the Prudential during the year 1928.

GENERAL BRANCH BUSINESS.

The steady progress of the general branch was continued. The combined premium income from all classes, excluding marine, was £1,386,130—an increase of £150,684 over the preceding year.

The loss ratio for the fire, accident, employers' liability, and miscellaneous sections combined was only 47.3 per cent. of the premium income. The expense ratio for the same sections was 41.4 per cent., making a total outgoing of 88.7 per cent. for these sections.

The premiums written in 1928 in the marine insurance section of our business amounted to £367,589, and the fund at the end of the year was £697,088, which, in our opinion, will be ample to meet all claims under the accounts which were open at the end of 1928.

ORDINARY BRANCH RESULTS.

In the ordinary branch the sums assured written under new policies issued in 1928 amounted to £17,401,000, about £500,000 more than the corresponding figure for 1927. The new annual premium income produced by this business was £1,072,977, and in addition we received £1,146,810 by way of single premiums.

The total premium income in this branch for the year 1928, including purchase-money for annuities, was £11,884,527, and the net interest income was £4,029,754. The total amount paid out under claims, surrenders and annuities during the year was £11,062,244, or rather more than £500,000 in excess of the corresponding figure for 1927.

INDUSTRIAL BRANCH RESULTS.

In the industrial branch the number of new policies issued was 2,219,712, assuring a total sum of £58,511,995, that is an increase of 157,646 policies, and £4,776,317 in amount over the new business figures for 1927. The total premiums received during the year amounted to £17,143,456, or £550,002 more than in the previous year, and the amount received by way of interest was £5,796,993, after deduction of tax.

The claims and surrenders, including bonus, amounted to £11,613,501, or £1,988,252 more than the similar item of last year.

The total expenses of the industrial branch were £4,267,852, or 24.89 per cent. of the premiums received, this being more than one-half of one per cent. lower than last year's rate.

SURPLUS.

The total surplus for the year was £9,050,197, made up of £261,933 from the general branch, £3,079,013 from the ordinary branch, and £5,709,251 from the industrial branch.

GENERAL BRANCH PROGRESS.

It is just ten years since we started to transact general branch business, and during that period we have built up a substantial income, whilst at the same time making a careful selection of risks and building up reserves. We believe that by so conserving our resources we have acted in the best interests of everybody concerned, but the time has now arrived when it is no longer essential to devote the whole of our profits to strengthening reserves, and we have, therefore, decided to pay a first dividend.

You will remember that at the end of 1927 the necessary notice was given in order to terminate our agreement with the Royal Exchange Assurance in respect of marine insurance business on 31st December, 1928. We have come to a mutually satisfactory arrangement with them, whereby they will continue to act for us in all matters relating to risks written by them on our behalf before that date.

After a very thorough survey of all the factors involved, your directors decided to continue to write this class of business, but only to accept risks for which reasonable rates of premium can be obtained. I am pleased to say we were able to come to an arrangement whereby, as from 1st January, 1929, Mr. G. Garfield Sharman underwrites marine risks on our behalf.

ORDINARY BRANCH PROGRESS.

During the past year there has been a considerable expansion in the business which we have secured in connection with group schemes of death benefits and staff schemes to provide pensions for employees. We are able to offer these benefits on advantageous terms and thus meet what is becoming to an ever-increasing extent a necessity of the business community in this country.

The rate of reversionary bonus declared upon the original sums assured, namely, £2 6s. per cent. upon the participating endowment assurances in this branch, is an increase of 2s. per cent. over that declared for 1927, whilst the rate of £2 10s. per cent. to whole life participating policies is 6s. per cent. greater than that declared for 1927.

INDUSTRIAL BRANCH PROGRESS.

In the industrial branch, in spite of the large amount of unemployment, which unfortunately prevailed during the year, very good progress has been made. The increase of half a million in the premium receipts is not in itself a complete index of the work done because the claims have increased by nearly two millions, and claims mean cessation of premiums. At the same time, however, the payment of over five and a half millions under maturing endowment assurances during a period of distress due to unemployment must have been not only a great assistance to the assured, but also a practical example of the value of life assurance in general and a Prudential policy in particular.

REAL VALUE OF PROFIT-SHARING SCHEME.

As claimants all over the country find the sums assured under our policies substantially increased by bonus, the real value of our profit-sharing scheme is more and more appreciated. This year £3,265,306 of the surplus has been allocated as bonus to industrial branch policies. This amount has enabled us to increase the reversionary bonus from £1 2s. per cent. of the sum assured to £1 14s. per cent., and also to make this and all previously declared reversionary bonuses vest immediately instead of after five years as heretofore. The bonus on policies issued before 1923 has also been increased at certain durations, and the period for which it is guaranteed has been extended from 12 years to 14 years, except in the Irish Free State, where the guarantee is for one year only, as the conditions there prevailing are such that the business does not yield so high a rate of profit.

REDUCED EXPENSE RATIO IN INDUSTRIAL BRANCH.

We have again been successful in reducing the expense ratio in the industrial branch, and since industrial companies have not only to comply with many statutory requirements from which ordinary companies are exempt, but also to maintain an agency organisation for the weekly collection of premiums, an expense ratio of under 25 per cent. is therefore a notable example of what has been achieved by our methods of organisation.

When it was evident that there was a further fall in the expense ratio in this branch, the directors decided to grant free policies to holders of industrial branch policies in Great Britain and Northern Ireland on which premiums have been discontinued after 31st December, 1927, and after payment of one year's premiums, provided age 10 has been attained. We also guarantee that the amount of free policy shall never be less than the proportion of the sum assured under the original policy that the number of years' premiums paid bears to the total number payable under the policy.

NEW JUVENILE TABLE.

The directors during the year have issued a new juvenile table which not only provides the full statutory sums assured, but also incorporates an endowment amount which, having regard to the death cover provided and the reversionary bonus additions, we are confident will compare favourably with the results obtained from National Savings Certificates.

INVESTMENTS.

The investment and financial side of our business, with its ever-increasing responsibility, has received, as usual, the unremitting care and attention of your directors, and there is every reason for congratulation on the general results obtained during the past year.

We have made no marked change in our investment policy during the past year. As in the immediately preceding years, we have for the most part sought outlets for our new money in securities giving a higher yield than that obtainable from the trustee group. You must bear in mind that the proportion of our funds in the trustee type of security rose to an unusually high figure a few years ago on account of our large participations in Government war-time borrowings, and or present policy is therefore in the nature of a logical corrective of this position.

DISTRIBUTION OF INVESTMENTS.

The distribution of our investments over Great Britain, the Colonies and foreign countries is as follows :—

Home securities, 64½ per cent.

Indian and Colonial securities, 12¼ per cent.

Foreign securities, 23¼ per cent.

You will see that the proportion invested in foreign securities has once again risen, the present figure comparing with 20½ per cent. a year ago. The new investments in this group are mainly European, as the comparatively low yields and additional income tax practically preclude a British company from investing to any great extent in U.S.A. bonds. It is interesting to notice that although the proportion of British securities has slightly diminished, the amount so invested has actually increased, the total now being £109,724,003 against £105,826,356 last year. Our holding of British Government securities has, however, been reduced from £68,595,880 to £66,895,995, but even now this latter figure is more than 39 per cent. of our total Stock Exchange securities.

The net rate of interest on our total life funds, viz., £5 2s. 11d. per cent., is almost identical with that of last year; this fully bears out what I said last March, in seconding Mr. Thompson's resolution, viz., that there were definite signs that we were approaching a peak in our interest rate, unless or until there was some reduction in the present high rate of income tax.

PRUDENTIAL APPROVED SOCIETIES.

The Prudential Approved Societies continue to play their part in the administration of the National Health Act, and during 1928 paid out to or on behalf of their members £4,699,400. The number of persons admitted to membership of the societies during the year was 274,691, of whom 118,043 were men and 156,648 women.

It is interesting to note that the general experience since the war has been increasing rates of sickness but decreasing rates of mortality, factors which both tend in the same direction, namely, to increase the cost of sickness benefits. In spite of this, however, we were able to grant during 1928 a sum of £520,204 as additional (non-cash) benefits; of that sum £349,907 was expended in meeting the cost of dental treatment to members.

As we all know, sickness is seasonal in its incidence, but the severity of the influenza epidemic during the past few weeks is indicated by the fact that whereas the number of new sickness and disablement claims received by the Prudential Approved Societies in December, 1928, averaged 16,000 per week, the average for the 7 weeks commencing 6th January last was 33,372 per week, and for the week ended February 23rd the actual number was 44,873.

OFFICE ORGANISATION.

I cannot speak too highly of the excellent spirit which prevails amongst the staff, who have efficiently maintained and extended the company's wide connection in face of the acute difficulties arising from the abnormal amount of unemployment during the past two or three years.

CONCLUSION.

In conclusion, I venture to think that this, the 80th report, shows that we are still young and vigorous, flexible, full of initiative, and prepared to take advantage of all opportunities which present themselves. The future is bright and full of possibilities; under our profit-sharing scheme our policyholders will benefit in the main by our progress, and this is as we would have it, for our aim has always been to give them an increasing share of our prosperity.

I now beg to move : "That the report of the directors and accounts certified by the auditors be received and adopted," the statutory report of the auditors having been previously read to the meeting.

VIEWS OF MR. FREDERICK SCHOOLING.

Mr. Frederick Schooling, F.I.A. (deputy-chairman), in seconding the motion, said : My first duty—and it is a very pleasurable one—is to congratulate our chairman upon the honour which has recently been conferred upon him by His Majesty the King. (Applause.) We all feel that it is a fitting tribute to the wholehearted way in which Sir Edgar has devoted his time and abilities to the service of the public, whilst at the same time finding opportunity to play an important part in the business life of the community.

With regard to the industrial branch, as a result of the decrease in costs, combined with increased interest revenue, we are now giving an annual bonus in the industrial branch of exactly the same kind as is given in the ordinary branch, and at a rate which a few years ago would have been considered highly satisfactory for large policies of £1,000 or more, subject to annual premiums. (Applause.) That is to say, small policies with premiums of 1d. per week are getting each year bonus additions at rates comparable to those obtainable on big policies owned by wealthy people. (Applause.)

You may know that last year we were favoured by a visit from H.R.H. the Duke of York, who, whilst here, took the opportunity of effecting a penny a week policy—(laughter)—which, of course, is in force and will be entitled to an immediate bonus. The Duke is aged 33, and the sum assured under his Prudential industrial policy is £7 2s., which, if our present rate of bonus is only maintained—we hope it will be increased from time to time—will in 20 years amount to £9 10s. 3d. and in 40 years to £11 18s. 6d. I am sure we all hope that no claim will arise on that policy until long after the 40 years have expired. (Laughter and applause.)

Our ordinary branch figures are large, but the benefits under our policies are such as to justify even greater results, for we are able to compete for business amongst all classes of the community. That we have attained some measure of success among the more wealthy classes is evidenced by the fact that our new business in policies for sums assured of £500 and upwards was about £7,500,000.

SIR WILLIAM PLENDER'S REMARKS.

Sir William Plender, Bt., G.B.E. : Mr. Chairman, permit me at the outset to congratulate you on the well-merited honour which His Majesty the King has conferred on you, which will, I am sure, afford much gratification to all the members of this company, and add not a little to the pleasure with which they see you occupying the post of chairman, which was held by your late father for so long a period. I should like to identify myself with the remarks that you have made as to the grievous loss which the company has sustained in the deaths of the late chairman, Mr. Thompson, and of Sir John Paget Mellor, and I would add the name of Sir William Lancaster, who, although having retired from the board eight years ago for reasons of health, will long be remembered in connection with his exceptional period of association with the company, extending over 62 years.

The balance sheet now before the meeting is the fortieth to which my firm has added a report with regard to the investments. The balance sheet at the 31st December, 1889, when we were first called in, showed the total assets at about 10 millions sterling. They are now 219 millions.

There can be few, if any, institutions which have shown such marvellous growth in the space of 40 years, which, I venture to think, would not have been possible but for the enlightened policy which has been pursued by the company in the facilities and privileges granted to the industrial policyholders as the prosperity of the company expanded. (Applause.) The latest instance of this is your recent determination to grant free policies to industrial branch policyholders when only one year's premium has been paid on their policies if the assurance is discontinued and provided the age of 10 has been reached.

In regard to the investments, with which I am principally concerned, they show an increase in the year of almost 10 millions, and I have pleasure in stating that the same care with regard to their custody continues to be observed, to which I have so frequently alluded. The average net rate of interest earned on the combined assurance funds, exclusive of reversions, is stated by the actuary in his report to be £5 2s. 11d. per cent., which is a convincing testimony of the judgment and skill of the board and management in selecting investments. (Hear, hear.) I may conclude by stating that the securities of, or guaranteed by the British Government, held by the company at 31st December, 1928, reach a total of no less than about 67 millions sterling. (Applause.)

The resolution was passed unanimously, and the formal business having been transacted, the usual votes of thanks concluded the proceedings.

REFUGE ASSURANCE COMPANY, LIMITED.

SATISFACTORY PROGRESS.

BONUS TO INDUSTRIAL BRANCH POLICYHOLDERS.

INCOME EXCEEDS £10,000,000.

ASSETS £42,866,260.

The sixty-fifth annual ordinary general meeting of the Refuge Assurance Company, Limited, was held, on the 4th instant, at the Chief Office of the Company, Oxford Street, Manchester. Mr. J. Wilcock Holgate (the chairman of the Company) presided.

The secretary (Mr. John W. Moss) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, which were taken as read, said: Gentlemen, before proceeding with the business of this meeting it is my sad duty to refer to the loss we have sustained since our last annual meeting through the death of our late chairman, Mr. James S. Proctor.

Mr. Proctor, who was a grandson of the founder of the Company, commenced his commercial career with this office at an early age, and during the whole of his life-long connection he maintained to the full the traditions of his predecessors, possessing, as he did, a thorough knowledge of the business, having passed through all the phases of the Company's operations. He entered the service of the Company in 1890, was appointed a director in 1907, and held successively the positions of joint general manager and joint managing director, being elected chairman in 1922, a position which he retained to the time of his lamented death.

Mr. Proctor was president of the National Amalgamated Approved Society, having been connected with this institution from its inception, and he took a keen interest in the activities of the society. He was also a vice-president of the National Conference of Industrial Assurance Companies and Collecting Friendly Societies, and a member of the executive of the Association of Industrial Assurance Companies and Collecting Friendly Societies, in all the affairs of which he rendered willing and useful service.

We and many of our large staff will miss him, both as a personal friend and business colleague we held him in the highest esteem. He was an exceedingly approachable man, possessed of a kindly and attractive personality, and he brought to bear upon the Company's affairs a sound judgment, the outcome of his many years' experience. He will not only be missed from our own boardroom, but also from the councils of those many committees of which he was a member.

I am sure we all desire to offer our sincere sympathy to the members of his family in the sad bereavement which has befallen them.

It has become customary at our annual meeting, before presenting the report and accounts, to make some observations on the general industrial conditions prevailing during the year under review, for it must indeed be apparent to all that a business of the magnitude of the Refuge reflects very quickly—in fact, almost instantaneously—any variations or changing conditions in the commerce and trade of the country.

Our late chairman in his speech last year ventured to express the hope that the process of recuperation from the far-reaching and devastating effects of the calamitous upheaval of 1926, of which some slight evidence was provided in the industrial position of 1927, would continue, and that the year 1928 would see the return of a more prosperous condition of affairs. This hope, unfortunately, has not fully materialised, for it must be admitted that the trade of the country as a whole has not yet substantially improved. There may perhaps have been some improvement in certain directions, but the great employing, wage-paying industries of iron, coal and shipbuilding, and the enormous exporting textile trades have again experienced a period of very serious depression, the outcome of which will be felt for a considerable time. Though one cannot point to that definite indication of trade revival so much desired, there are schemes and plans of far-reaching importance to the whole nation being discussed by the great industrial trading undertakings of the country, the continuance and prosperity of which are of such vital importance to many millions of our population; and if the hopes and aspirations of those who are working in these directions are fulfilled, then I am sure with time and patience we shall see the return to an industrial peace and prosperity which will be reflected throughout the length and breadth of the land, and we look forward to seeing in 1929 some tangible results of the labours of these captains of industry, representing both the employer and the employee.

Dealing now with the report, I think we can regard 1928, notwithstanding the adverse conditions to which I have just made reference, as a year of satisfactory progress in all the different branches of the Company's operations; and it is with pleasure that your board present for your approval the report and accounts for the period in question. I feel that I am very fortunate, on this the first occasion on which I have had the honour of presiding over this meeting as chairman of the Company, in being in a position to refer to such eminently gratifying results.

The total premium income amounted to £8,335,127, an increase of £508,700 over that of the previous year, and the total net interest income was £1,964,952, showing an increase under this heading of £164,510. The total assets now stand at £42,866,260, showing a record increase of £3,589,632. The amount paid in claims by death or maturity during the year was £3,868,535, or more than £12,000 each working day, and the total sum paid under this head since the inception of the Company is now £56,977,564. After the transfer of £200,000 to the investments reserve funds the aggregate surplus shown by the valuations of the two branches of the Company's business is £2,208,672, which includes £764,018 brought forward from the previous valuation. It is proposed to allot £1,288,365 to the policyholders, and to carry forward unappropriated the sum of £770,307.

INDUSTRIAL BRANCH.

It is with pleasure we again report that this important branch of the Company's business continues to make excellent progress, ndicating the great confidence of the industrial population of this country in the Refuge for its fair treatment, generous dealings, and prompt payment of its claims, features which have always been characteristic of the Company.

The new business consisted of 918,603 policies, assuring the sum of £16,952,369. The premium revenue was £4,632,782, an increase of £251,365 over the corresponding figure for 1927, and the net ncome from investments, after deduction of income tax, was £669,803, showing a net yield of £5 3s. per cent. on the entire assets of the branch, both invested and uninvested, this figure being the same as that of last year. The death claims amounted to £1,536,923, and £256,076 was paid to policyholders under matured endowment assurances. The claim ratio was 38·70 per cent., showing a decrease of 2·17 per cent. as compared with the previous year. The industrial branch fund now amounts to £13,222,558, having increased by £1,501,470 during the year.

You will recollect that last year reference was made to the operation of the Arrears Liquidation Scheme which had been formulated to assist the policyholders in the payment of arrears which had accumulated as a direct consequence of the coal stoppage, and it was observed that the very substantial increase in the premium income of the industrial branch for that year was partly owing to the successful application of this scheme. It is necessary to have regard to this fact when comparing the increase in the premium income for 1928 with the corresponding figure for the preceding year.

INDUSTRIAL BRANCH VALUATION.

The valuation of this branch has again been made on the basis of the English Life Mortality Table No. 8, Males, with interest at 3 per cent. for all classes of policy except adult single whole-life assurances by weekly premiums, and infantile whole-life assurances by weekly premiums not exceeding one penny, which are valued at 3½ per cent. As regards these policies, the valuation has been further strengthened, the percentage thrown off the office premiums before valuation varying from 35 per cent. upwards, and providing a net positive liability in every case. The remaining policies, including the whole-life assurances by monthly premiums, have again been valued on a strict net premium basis.

This valuation marks the close of a stage in the development of a definite programme to which I shall later refer in more detail, and the effect is to set free for distribution in accordance with this programme, the sum of £504,595, out of which it is proposed to allocate to the policyholders the sum of £407,728, and to the shareholders £29,652, and to declare a dividend of 7½ per cent., absorbing £22,500, the balance of £44,715 being carried forward unappropriated.

The number of industrial branch policies existing at the valuation date was 6,161,677, assuring the sum of £82,568,469, and the average duration of the policies was 10½ years.

BONUS TO POLICYHOLDERS IN THE INDUSTRIAL BRANCH.

The issue of the improved tables in 1923 and again in 1927 raised the important question of discrimination between the old and the new policyholders, and it was recognised that for many reasons it was undesirable that this discrimination should persist.

With the object therefore of remitting all policyholders to a common—and that the most favourable—basis, steps were taken to build up the necessary reserves to enable this to be done, these steps being taken in addition to and in conjunction with the policy of systematic strengthening of the valuation reserves which has been carried out by the Company during recent years. In the development of this programme a stage has now been reached at which a beginning may safely be made in the direction of giving old policyholders the benefit of the more favourable terms now offered to new assurants, and the sum of £407,728 is being allocated for application in this direction.

The present accounts represent a landmark in the progress of the Company in that, for the first time, policyholders in the industrial branch take a proportion of the profits for the year, notwithstanding that policies in this branch are in form non-profit. We are justified in feeling very proud of the position we have reached, and I need not add that it will remain our constant endeavour not only to maintain but to increase still further the benefits we can offer to the insuring public.

ORDINARY BRANCH.

This branch has again contributed its quota to the substantial progress the Company has achieved, a fact which indicates the favour in which our policies are held by the assuring public. The number of policies issued in the year was 49,160, assuring the sum of £6,377,442, the annual premiums payable thereon being £450,257 and the single premiums £96,872. A very limited number of single-premium policies was issued by means of immediate loan on what is known as the super-tax saving plan, the total sum assured under this head being £31,500. The premium revenue for the year was £3,702,345, an increase of £257,335 over the previous year, and the net income from interest, after deduction of tax, was £1,295,150. The net rate of interest earned on the entire assets of the ordinary branch is well maintained at £4 15s. 8d. per cent., as compared with £4 15s. 10d. per cent. the previous year. Payments under the head of claims amounted to £2,075,490, of which £652,013 was paid in respect of deaths, and £1,423,477 to policyholders under matured endowment assurances. The ordinary branch fund now amounts to £27,677,034, showing an increase during the year of £1,892,778.

An interesting feature in the balance sheet is the reduction in the item of outstanding premiums, which is less than the corresponding item in 1927 by £29,203, a reduction of nearly 25 per cent.

ORDINARY BRANCH VALUATION.

The ordinary branch has again been valued by the O^{m} Table of Mortality in conjunction with interest at 3 per cent. Only the net premiums corresponding to the ages at entry have been taken into account, and on this stringent basis, and after transferring £100,000 to the investments reserve fund, the gratifying surplus of £1,704,077 has emerged. As the surplus brought forward from the previous valuation was £726,447, the actual profit for the year is £977,630, after making the transfer to which I have referred. It is proposed to maintain the reversionary bonus at the present rate of £2 4s. per cent. on with profit policies, absorbing £880,637, and to allocate £97,848 to the shareholders, the balance of £725,592 being carried forward unappropriated.

The total number of ordinary branch policies existing at December 31, 1928, was 529,976, assuring the sum of £60,501,567, including bonus additions of £6,024,514.

MORTALITY.

The light mortality experienced in both branches during the year is evidence not only of the care exercised by the Company in the selection of lives proposed for assurance, but also of the favourable weather conditions prevailing during the period, and the consequent freedom from epidemic of any serious nature. Life assurance and meteorology are not usually supposed to have much in common; yet an intimate and a very important connection exists in the fact that certain climatic conditions at certain times of the year inevitably exert a certain effect on the claims of the Company. It seems unfortunate that the popular belief as to what constitutes healthy weather is not always borne out in fact; for example, it will be found that a rainy summer is accompanied by relatively fewer deaths than the hot, dry season usually regarded with such satisfaction.

The past year was noteworthy for the fact that throughout its course the prevailing weather conditions were of the type most favourable to the general health of the community. The effect is reflected in our claims for the year; in the industrial branch the amount paid in respect of claims by death increased by only £5,056, whilst in the ordinary branch the corresponding amount was less than in 1927 by £73,312. This result is the more satisfactory in view of the economic conditions prevailing during the period, and which might have been expected to have exercised an adverse effect on the mortality of our members.

EXPENSE RATIO.

As a measure of the cost of conducting the business of life assurance it is usual to consider the ratio between the total expenses for the year and the premium income. This ratio is, of course, an average figure which makes no attempt to distinguish between the heavy expenses incidental to the first year of a policy's existence, and the very much lighter costs of the subsequent administration of the contract, and it must not therefore be understood as representing the amount absorbed in expenses out of each premium paid by an individual policyholder throughout the duration of his contract. It is, as you know, the declared object of the Company to exert every effort to reduce to the absolute minimum the costs of the administration of our organisation, consistently with efficiency and equity, and in respect of the year of account I am very glad to be able to report a slight reduction in the expense ratio in each branch of the Company's activities. In the ordinary branch the ratio has fallen from 16·16 per cent. in 1927 to 16·14 per cent., and in the industrial branch from 37·68 per cent. to 37·26 per cent.—the lowest in the history of the Company. It is interesting to record that the steady reduction in our expense ratio during the last few years has been accompanied by a substantial increase in the average earnings of our field staff.

INVESTMENTS.

The fact that the success of a life office depends to a substantial degree upon the skilful handling of its investments will lead you to anticipate some reference by me to this important aspect of our business.

I have already drawn your attention to the fact that our assets now amount to £42,866,260, showing a record increase of £3,589,632 during the year. When, in addition, it is realised that an amount very considerably in excess of this increase in the funds becomes available for reinvestment each year, it will afford some indication as to the magnitude of the task devolving upon your Board in selecting suitable outlets for the investment of the Company's funds.

Turning to the balance sheet, I would draw your attention to the fact that, of the principal classifications of investments, those relating to railway and other debentures and debenture stocks, mortgages on property within the United Kingdom, and railway and other preference and guaranteed stocks are the ones to which, in the order named, the largest additions have been made during the year, a considerable proportion of the amount advanced on mortgages on property being due to the operation of the Company's house purchase scheme. It is also worthy of note that the amount invested in British Government securities has slightly advanced, and now stands at just over £10,000,000.

The amount of interest (less income tax) received during the year was £1,964,952, giving a net yield on the total assets of the Company, invested and uninvested, of £4 18s. per cent., compared with a yield of £4 18s. 1d. per cent. in 1927. Applying the income to the life assurance funds only, we get a net yield of £5 2s. 10d. per cent., as against £5 2s. 11d. per cent. for the preceding year. I think that all indications suggest that it will gradually become increasingly difficult to maintain the rate of interest which has been obtainable during recent years and at the same time retain those elements of safety and stability which are so essential to the finances of an assurance company. This country is by degrees emerging from its post-war uncertainties and difficulties, and its credit is slowly, but surely, being enhanced. It follows inevitably that the yield obtainable on gilt-edged and other first-class securities will react to the changing conditions, and gradually fall to a lower level.

As already stated, we have added £200,000 to the investments reserve funds, bringing those funds up to £1,100,000. You will, I am sure, be gratified by this addition, made despite the fact that the realisation of investments during the year has again in the aggregate resulted in a substantial profit, which, as hitherto, has been utilised in writing down the book values of our securities; and also, that taking market values as our basis on December 31st as regards Stock Exchange securities, and after making generous

allowance for all known and contingent losses on investments other than Stock Exchange securities, the margin by which the actual value of our investments exceeds the amount at which they stand in the balance sheet has again been considerably increased during the year, leaving the augmented investments reserve funds intact.

NATIONAL HEALTH INSURANCE.

In connection with the Company's participation in the scheme of National Health Insurance, an event of considerable importance to Refuge contributors took place in the early part of the year in the decision of the members of the National Amalgamated Approved Society—with which, as you are aware, this Company is associated for National Health purposes—to keep the funds of the Society relating to women members separate from those relating to the men, and to treat the Society for valuation purposes as if it consisted of two branches, one for male members and the other for female members. The financial effect will not be apparent until the commencement of the new additional benefit period in July, 1931, but it is anticipated that this decision will not only operate to the advantage of the members, but will also enable the Society to add still further to the efficient administration of a scheme which has come to constitute an important feature in the social fabric of the community.

On behalf of the Society, the Company administers the National Health Insurance of a membership of over 650,000 persons. In the course of the year 1,234,000 payments of benefit were made, amounting to £759,941, including £78,681 in respect of maternity benefits. The number of new members admitted to the Refuge section of the Society was 44,160.

During recent years a disquieting feature of National Health Insurance has been the very heavy and increasing number of claims on the sickness funds of societies throughout the country. The management of the National Amalgamated Approved Society have therefore been compelled to institute a closer system of sickness visitation, and it is anticipated that the introduction of this system will prove of real service to genuine claimants, in addition to exercising an excellent effect in the elimination of claims which are not only medically unjustifiable, but also definitely detrimental to the interests of the general body of insured members.

GROWTH OF THE COMPANY.

It is interesting and very encouraging to look back over the history of the Company, and to observe the steady growth of our business year by year. Fifteen years ago our total income was £3,741,599; it is now £10,310,975. In the same period our total assets increased from £10,000,000 to £42,000,000, and whereas in 1913 we paid in claims the sum of £1,470,458—or nearly £5,000 each working day—in 1928 the corresponding amount was £3,868,535, representing a sum of over £12,000 paid out in claims each working day. In 1913 we declared a reversionary bonus in the ordinary branch of £1 14s. per cent.; in 1928 our bonus has increased to £2 4s. per cent. in the ordinary branch, absorbing £880,637, whilst, in addition, the sum of £407,728 is allocated for division in the form of increased benefits amongst policyholders in the industrial branch. Progress such as this is, of course, gratifying evidence of the public confidence in the Company. It is at the same time evidence of the tradition of the Company for dealing generously with its policyholders, and for securing for them the maximum of insurance benefit their premiums will provide. Never in our long history have our rates of premium been increased; on the contrary, the benefits secured by the successful management of the Company have at once been passed on to the policyholders, either in the form of increased bonuses, or by the issue of new or revised tables. Further, in times of industrial distress, such as we have experienced on so many occasions during recent years, every effort has been made to enable policyholders to maintain their policies in force, involving the Company in many instances in the provision of months of free insurance.

People are inclined, I think, to take their life assurance policies for granted, and to overlook the enthusiasm, the high degree of technical skill, and the unremitting attention to detail essential to the successful management of a life assurance institution. The ever-increasing expansion of the business affords an illuminating proof of the value of the work carried out by the staffs of life assurance organisations in taking insurance into the homes of the people, and so securing for them a protection which, left to themselves, they would never have made an effort to provide.

TRIBUTE TO THE STAFF.

This meeting would indeed be incomplete without a sincere expression of our real appreciation of the efforts exerted by our staff during the past year in assisting to achieve the very excellent results presented to you to-day, and which have been secured despite the many difficulties, both for the management and the staff, to which I have already referred.

Like many other progressive concerns, we have our own staff organisations, constituting the medium of contact between each individual employee and the Company, and I am glad to be able to report that the good feeling which has existed for so long continues. It is pleasing to know that in the many discussions which have taken place there has been a desire by all the responsible parties to see both sides of any question under review. I am sure we all hope these cordial relations will continue, because they tend to bring about that spirit of helpful co-operation between management and staff which must of necessity be beneficial to all concerned.

Gentlemen, I have now much pleasure in moving the adoption of the annual report and accounts.

The report and accounts were adopted. Messrs. William Proctor Smith and James Wilcock Holgate were re-appointed directors of the Company.

Messrs. Walton, Watts & Co. were re-appointed auditors.

The meeting terminated with a vote of thanks to the chairman.

GOLDEN HORSESHOE ESTATES COMPANY, LIMITED.

MINING PROPERTIES ACQUIRED BY LAKE VIEW AND STAR, LIMITED.

Presiding at an extraordinary general meeting of the Golden Horseshoe Estates Company, Limited, on the 7th instant, in London, Mr. F. H. Hamilton (chairman) said the contract which they had to approve provided for the sale to the Lake View and Star, Limited, of the Golden Horseshoe's mining properties with the exception of its cash, tailings, etc., for 900,000 fully paid shares in Lake View and Star, Limited. Of the advisability of the principle of such a fusion, which had been recommended by two Government Commissions, there was, he thought, not a shadow of doubt. Under the arrangement their company would own one-third of the issued capital of Lake View and Star, and had the right to claim from that company free of cost any plant or stores at present their own property, which might be considered necessary for the new tailing plants it was proposed to erect to treat their 2½ millions accumulated tailings. They had, also, the right to nominate two directors to the board of Lake View and Star. When the amalgamation was given effect to the Lake View and Star would own a large mining area of nearly 1 square mile in extent. Over one million tons of ore were already developed, which, including the ore so far opened up in the Chaffers lease, was estimated at about 36s. per ton, and it was believed a large tonnage of definitely higher grade could be rapidly obtained.

EXTENSIVE ORE RESERVES.

The active scheme of development which the Lake View and Star proposed to carry out, on the recommendation of Dr. Maclaren, should provide extensive ore reserves for many years. It was proposed to double the present Lake View and Star plant when the fusion was accomplished and there seemed no reason why, under the new conditions, working costs should not be brought down to between 20s. to 25s. per ton. The management would be disappointed if, when in full working swing, the reserves would not reach an average assay value of 38s. per ton.

In the shares of the Lake View and Star which they were receiving they would possess an asset of great demonstrable value, presenting in addition very attractive possibilities of considerable appreciation. Their other assets included cash to the value of over £100,000, and their accumulated tailings which, under the conditions which they proposed to work them, should yield very considerable net profits recoverable over four or five years.

TRIBUTE TO GOVERNMENT OF WESTERN AUSTRALIA.

In conclusion, he paid tribute to the valuable assistance the Government of Western Australia had rendered to the mining industry, not alone in the money guarantees which they had afforded, but in particular to its whole attitude and sympathy with the mining industry of late years. That attitude emboldened them to believe they would witness in Western Australia an improved order of things characterised not by lower wages but by higher outputs and consequently lower costs, factors which should react favourably on the interests of legitimate mining investments in that country.

The resolutions sanctioning the contract were unanimously adopted and the proceedings closed with a vote of thanks to the chairman.

UNITED KINGDOM PROVIDENT INSTITUTION.

MR. WALTER RUNCIMAN ON NATIONAL SAVINGS.

The Annual Meeting of the members of the United Kingdom Temperance and General Provident Institution was held on Wednesday, March 6, at the Cannon Street Hotel, London, E.C.

The Right Hon. Walter Runciman, M.P. (Chairman of the Institution) presided.

The Chairman, in presenting the report and moving the adoption of the balance sheet said: Ladies and gentlemen,—Amongst the facts of life and the habits and institutions of our people which directly concern us, I drew your attention three years ago and again in 1927 and in 1928, to the growth in the numbers of small investors in this country and the immense sum of nearly £2,000,000,000 held by them visibly and beyond all doubt. This movement, which had grown remarkably during and after the war, has not exhausted itself. Building societies are doing more business than ever before and their advances are now up to £200,000,000. Insurance institutions are issuing more and more policies. Trustee saving banks record another increase in deposits. National Savings Certificates maintain their popularity. Friendly societies' capital and reserves which were about £50,000,000 in 1911, are now over £93,000,000. Life insurance is not yet the invariable habit of the householder, but amongst the thrifty folk who grasp at happiness by means of a small house, a small car and a small family we may hope that instinct and intelligence may lead them more rapidly to the substantial policy. We are still an under-insured people, making too small a provision for the contingency and misfortune of death.

GOVERNMENT CREDIT.

How far has taxation reduced the capacity of the British citizen to save is a pertinent question which induces me to turn to another region of our recent investigations, namely, the value and standard of British national credit—a subject of universal interest.

The assertions made by me in 1928 were, as I anticipated, quite well founded and the final finance accounts of 1927–28 confirm all our conclusions. Let me repeat that events have shown that the sinking fund for the redemption of the National and War debt has proved to be illusory; we are no farther forward now than we were then: the debt is as large as it was, and the amount of revenue mortgaged to the payment of interest on the debt is no less than it was. Consequently the recovery of British credit is still slower than the recovery of the credit of every other Power, except Chili and China. A real, active, and not merely a nominal sinking fund could have in the past four years brought us on to a 4¼ or a 4½ per cent. basis and secured us huge economies in the annual service of the debt. Unfortunately, our hopes have not, and my forebodings have, been realised. So much the worse for everyone.

NECESSITY FOR SAVINGS.

Savings made by men and women in this country have long been a source of much of our industrial and financial strength, and it has been out of savings that we have built up the stupendous British investments abroad which last year brought no less than £285,000,000 of interest to Great Britain from overseas. Our whole future as a trading and industrial people depends on our power to save, for without savings we cannot extend our activities nor even keep pace with the requirements of a growing population.

Now, when we come to consider the whole field of savings, we are brought face to face with a remarkable fact; namely, that although the savings of the small investor have grown remarkably in the last few years, there has been a serious curtailment in the savings of the wealthier classes. The President of the Royal Statistical Society has estimated that in the year 1924 the country's new savings amounted to £300 million. In 1907 the country's new savings reached a figure of £260 million, and allowing for the increase in price-level that has taken place since that date, present savings should be 88 per cent. more, or £480 million, if they are to be as effective as the £260 million saved in 1907. Accordingly, we arrive at the startling conclusion that the real or effective savings of the people in 1924, namely £300,000,000, marked a decline of 40 per cent. since pre-war days.

THE BUDGET AND SAVINGS.

Undoubtedly the greatest single instrument in the country for wisely increasing or unwisely dissipating the nation's savings is to be found in the Budget, which disposes of over £800 million or 20 per cent. of the national income of £4,000 million. In order to estimate the effect of recent Budgets upon the savings of the people, it will be necessary to consider the items of revenue that discourage savings and to set against them such items of expenditure as encourage savings.

First, it is not fully realised how serious an inroad upon savings is made by the present methods of collecting revenue. Consider the death duties. By means of this tax a large volume of past savings is collected into revenue. The total yield of these duties in the four years 1924–28 was £265 million. Another tax which makes great demands upon savings is the super-tax or surtax. In the four years under consideration, no less than £258 million was collected by this tax, and practically the whole of this sum represents money that would have been saved.

A more difficult point is raised in income tax. In the years 1924–28 the average taxable income (before making allowance for abatements and children's reliefs, &c.) was about £2,300 million per annum. Of this total, some 40 per cent. may be estimated as applicable to incomes of £2,000 per annum and over, making £920 million, which may be divided into two portions, say, £440 million attributed to incomes of £5,000 and over, the remaining £480 million being applicable to incomes between £2,000 and £5,000.

If we take the tax at the full rate on the £440 million of incomes over £5,000 per annum and tax at half the full rate on the £480 million of incomes between £2,000 and £5,000 per annum, we shall have a conservative estimate of the amount of potential savings taken from income tax payers. The rate of tax was 4s. 6d. in 1924–25 and 4s. in the other three years, so that our estimate of the depletion of savings for the four years reaches £560 million taken from the tax payers in reduction of savings by this amount.

It may thus be estimated that the three great direct taxes took £1,083 million of potential savings from the pockets of the people in these four years.

But this is not all. Revenue was also collected by means of sales of assets (the realisation of past savings) totalling £55 million; loans made to the Allies and the Dominions out of past savings were repaid to the extent of £15 million and the proceeds swept into the Exchequer. These two items reach £70 million, making an imposing estimated total of £1,153 million, by which the Government's methods of obtaining revenue tended to reduce savings in the four years 1924–28.

It may be conceded at once that in collecting a total revenue of £3,000 million (excluding Post Office receipts) in the four years, the Treasury would have found it difficult not to trench heavily upon savings. It is to the Debt items that we must look for any stimulus given by the Government to the free savings of the people.

Some portion of the sums expended by the Government in these four years for interest and sinking fund must be set off against the loss of potential savings involved in items of taxation that we have considered. How much? The interest payments of the four years amounted to £1,344 million, of which £133 million went to foreign creditors, leaving a balance of £1,211 million at home. The disposal of this sum was outside the control of the Government, and no means are available for deciding how much of it was saved. Certainly a large proportion of it may be set off against the reductions of savings caused by the revenue collections.

Such portion of the interest as was handed over to wealthy individuals or to business concerns may be assumed to have been used in part to pay income tax, partly to make savings, and partly for spending in the ordinary course of business. A very large proportion of it must, however, have been *spent* in the same way as any other income.

If, say, two-thirds of the total interest payment of £1,211 million were either returned to the Government by way of taxation or else saved, we arrive at a figure of £800 million for the portion of the interest payment in 1924–8 that may be set off against the reduction of savings caused by taxation.

When we come to the sinking fund expenditure, we are on surer ground. This is at the will of the Government, and we ought to be able to rely on it (if it is made effective) to stimulate savings to the full.

The total of sinking fund provision was £173 million, but we must deduct from this figure £20 million paid to America and not available for the British public, leaving a net figure of £153 million.

£800 million from debt interest and £153 million from the sinking fund make a total of £953 million, and if this be deducted from the £1,153 million by which the taxation of these four years absorbed potential savings, we get a balance of £200 million as a estimate of the final amount by which the Government's activities curtailed savings in the four years 1924–28.

Now let us see what would have happened if the Budgets of these four years had been all that they appeared to be; if the sinking funds had been fully effective in their purpose of stimulating savings and there had been no deficits.

SAVINGS REDUCED BY RECENT BUDGETS.

	£	
The total amount provided for sinking fund in these four Budgets as originally drafted was	220	millions
On sound principles of Budget making, a reserve should have been set up to provide for the accruing interest on Savings Certificates which was not being paid, making a further	48	,,
We have assumed above that interest payments on the debt may be allowed to the credit of savings to the extent of	800	,,
Giving a total of	1,068	,,

This figure may be set against the estimate of £1,083 millions of potential savings taken from the people by the three great direct taxes in the same period—it is £15 million short. If, therefore, the unsound elements had been removed from the Budgets of 1924–28 and the resulting gap in the revenue filled without absorbing savings, it would seem that the effect upon savings of the full sinking funds as originally provided would have been just about sufficient to counteract the evil effects of the heavy direct taxation.

DRAIN ON SAVINGS.

Actually there appears to have been a drain on savings to the extent of £200 million. Let us see again how this was made up:—

	£	
It has been seen that the 1924–28 Budgets, if soundly constructed, would have involved an estimated loss of savings of	15	millions
To this must be added deficits totalling	47	,,
Sales of assets reached a figure of	55	,,
Repaid loans from Foreign Governments swept into revenue amounted to	15	,,
Unpaid interest on Savings Certificates for which a reserve fund should have been set up amounted to	48	,,
The principal repaid to America which went out of the country totalled	20	,,
Making our total of the drain on savings	200	,,

being an increase of £185 million over the loss of savings that would have occurred if the Budgets had been soundly constructed.

Even apart from £47 million of deficits, the unsound elements in the Budgets amounted to £185 million, less this £47 million—namely, £138 million.

An increase of £138 million in the volume of capital seeking employment in those four years would undoubtedly have greatly augmented the demand from private sources for sound constructional projects in Great Britain, and for the development of the world's resources abroad in the form of increased foreign investments Unfortunately, British Government finance has intensified our industrial difficulties and relatively weakened our national wealth.

This potent influence on the volume of savings is of prime interest to insurance institutions, for we are really organs for the encouragement and defence of savings, and the less there is available in the pockets of the people for life insurance premium the slower must be the spread of the insurance habit and the less will be the provision made against future contingencies and the sudden and sometimes crippling demands of the Death Duties collector.

COURTAULDS, LIMITED.

NEW PRICE LEVEL ESTABLISHED.
COMPANY'S PRODUCTS IMPROVED IN QUALITY AND VARIETY.
ENCOURAGING PROSPECTS IN THE WEAVING BRANCH.
MR. SAMUEL COURTAULD'S INTERESTING SURVEY.

The sixteenth ordinary general meeting of Courtaulds, Limited, was held, on the 7th instant, at the Cannon Street Hotel, London, E.C.

Mr. Samuel Courtauld (the chairman) presided.

The secretary (Mr. Ernest Kettle) read the notice convening the meeting and the report of the auditors.

The directors report and accounts were taken as read.

The chairman said: Ladies and gentlemen, I beg to move "That the report of the directors dated February 14, 1929, and the balance sheet of December 31, 1928, now submitted, be, and the same are hereby received and adopted, and that a final dividend on the ordinary shares for the year ended December 31, 1928, of 10 per cent. (ten per cent.) free of income tax (making with the interim dividend already paid 15 per cent. total for the year, free of income tax) be declared and paid."

Ladies and gentlemen: Before putting the motion, I will follow my annual custom of giving you my view of the present state of our business.

Our weaving branch has had its usual hard struggle against competition of all kinds, but I am glad to say its trading results are somewhat better than in 1927, and its present prospects are distinctly encouraging; this, we hope, may prove to be a good omen for the other and much larger branch of our business.

"RAYON"—NEW GENERIC NAME.

Before saying anything about the present position of this other branch, I must tell you that we recently decided to adopt the word "rayon" as the new generic name for artificial silk. We have long felt that the word "artificial" implied a stigma on this wonderful new textile product, besides being responsible for a certain amount of misdescription and confusion. When you consider that varieties of this new material are already being made with fibres finer, and at the same time stronger, than real silk, when you consider also that the price of the new yarns is on the average lower than that of any of the staple textile yarns except cotton, you will agree that the reputation of "rayon," as we shall now call it, should no longer appear to depend in any degree upon its resemblance to something else.

The word "rayon" was officially adopted a few years ago in the United States—it is, in addition, now used in all American schools—and it has made a good deal of headway in this country in the trade and in the press. So when we felt the time was ripe for a change, we decided that it would be best to adopt the word which was already in wide use. I believe that there is a good prospect of this word being adopted for official purposes in this country; and, furthermore, artificial silk makers on the continent are sympathetically considering the adoption of this—or a phonetically similar—name for use in their respective countries.

TRADING CONDITIONS.

Turning now to our own rayon (or artificial silk) business, I must warn you that the picture I have to put before you is a mixed one—mixed as regards the trading history of the past year—and indefinite as to the future. We started 1928 under good conditions, with steady sales and a possibility of increased production, though you may remember my pointing out at our last meeting that it was impossible for turnover to increase in 1928 as it had done the year before, for 1927 started with large stocks in hand while in January, 1928, shelves were comparatively bare. I also said that we could not forecast the course of business beyond August, and that this course would be mainly determined by the weight of new production which might be put on the market in the autumn; if this weight exceeded the demand, the industry would certainly be faced with a difficult time.

In England and Europe generally this difficult time has certainly arrived again; production has overtaken consumption, and the inevitable consequences have followed; loss of confidence on the part of buyers, curtailment of orders, a lowering of prices all round, and widespread dislocation of business from which we have not yet recovered.

PRODUCTION, PRICES AND COMPETITION.

Such readjustments are inevitable from time to time, and it is certain that they can never be effected without some jolts, but on this occasion the disorganisation has been unusually pronounced, and in my opinion to a great extent unnecessary. We have experienced periods of excessive production before, but this is the first occasion on which we have seen large weights of yarn from diverse quarters offered at prices well below any possible true cost. The explanation can only be that a number of new producers have been so short of cash with which to carry on their operations that they have incontinently thrown their production—good, bad and indifferent—upon the market at any price which it would fetch. We may leave them to find some way of retracing their steps if they can. (Hear, hear.)

The fact that much of this production has been indifferent, not to say bad, in quality, is doubly unfortunate in that it must cause trouble and disappointment to the manufacturer who turns it into fabrics and to the public which uses them, and every fresh crop of trouble of this kind gives our commodity a bad mark and causes a set-back to the industry at large. These things need not have happened if newcomers had not started so light-heartedly without sufficient resources either in capital or in experience; they would not have been in such a hurry to see something coming into the exchequer, and in the long run their prospects would have been distinctly more pleasing than they actually are. If the trade could not absorb the total output of the country at the old price level—which I doubt—cuts could have been made with greater deliberation, with more uniformity, and upon a less drastic scale, and the market would not have been unduly upset.

Personally, I am not convinced that the trade could not have consumed the whole of this output at the prices prevailing at the beginning of last year, for, if an article has not proved intrinsically too dear, price-stability is the one thing above all others needed by the user to promote the growth of his own business and thereby increase the consumption of the materials he buys. This, indeed, is the outstanding truth which needs to be realised by everyone who has a hand in the direction of this industry.

INTRINSIC WORTH OF RAYON.

As to the intrinsic worth of rayon, I believe that even at last year's prices it would still offer by far the most profitable field to the manufacturer of textile fabrics, and the best value to everyone who handles it, including the ultimate consumer. But the possibility of selling at the old prices has gone by; once they have dropped it is very difficult to raise them again; at present one can hardly foresee such a shortage coming about as would make higher prices a possibility, and even if possible they might not again be desirable from our point of view.

Now that the fall has taken place, and the new price-level is established, we believe that another period of development will follow; but meantime valuable months have elapsed with sales restricted by the nervousness of buyers, and although we are beginning to see signs of reapproaching confidence, and hope to see an increased volume of business coming along soon, we cannot count on this with certainty. And I must point out to you that the reduction of our selling prices in December by an average of over 15 per cent. has cut a very big slice off our margin of profit.

THE IMPORT DUTIES.

I think I might say at this stage that uncertainty as to the result of the coming General Election seems to have something to do with the general want of confidence, and of course the artificial silk duties are constantly in our minds. I do not profess to know what attitude any alternative Government may take towards them. I am not a party man myself, and hold no rigid views on the question of Free Trade *versus* Protection; I do not think that any sacred principle is involved, and I feel that fiscal questions ought not to be party matters at all. Also, I can say that this company never asked to have the duties imposed, but once they were put on, in the modified form finally adopted, we, like others, naturally made the best of them, and the *import* duties undoubtedly resulted in a great expansion of the rayon industry in this country. (Hear, hear.) From 1926 to 1928 our own sales and production expanded by over 40 per cent., and the production of the country as a whole by at least 100 per cent. This refers to the production of rayon yarn only; there is no doubt that the corresponding increase in the use of it (which is largely for the export trade) represents a still greater increase in the number of people employed in weaving, knitting and otherwise manipulating the yarn, for it takes many more people to turn a given weight of rayon into a fabric than it does to make it in the first place.

DANGERS OF REMOVAL.

Now I feel bound to say, and I say it deliberately, that, in my opinion, the withdrawal of the measure of protection afforded by the present artificial silk duties to all branches of this greatly expanded industry would be a first-class calamity from the point of view of all those engaged in it to-day. We with our unequalled resources would certainly put up a stiff fight against foreign competition, but I sincerely believe that there are many who would go under. When I tell you that the average wages in the rayon industry in the three largest producing continental countries are from 40 per cent. to 60 per cent. below ours in England, it will be obvious to you that foreign competition is not just a bogey, but a matter to be seriously weighed by members of all parties alike.

The difference in the wage factor is now a serious matter; the lower the margin of profit the more serious does it become, and, unless there were compensations at home, we should be compelled to take into account such an advantage offered by manufacture on the Continent, which under certain circumstances might be enough to deflect abroad our main stream of development. Certainly I should hesitate a very long time before agreeing to further extensions in this country if I heard that the import duties on artificial silk were to be abolished.

CONDITIONS ON THE CONTINENT.

Now to return to our own business, we find that conditions on the continent of Europe are as disordered as they are here, with some rayon makers selling at or under cost price, and very few working with any profit worth speaking of. The change did not come about so quickly as in England, as signs of weakness made themselves manifest in certain quarters very much earlier than they did here. Under these circumstances production has not been pressed to its fullest extent either at Calais or at Cologne; in some degree both places are marking time and waiting for the renewal of confidence which we hope will not be delayed much longer; for here also we see signs of returning stability.

POSITION IN U.S.A.

Now I have left to the last the territory of which I can give you the most favourable account, that is, the United States of America. Prices there were maintained at the 1927 level throughout the whole of last year, and there was some increase in the weight sold. It might have been more but for the influence of the weakness in Europe, which always makes itself felt across the Atlantic after an interval. Since our report was printed I have learned that certain American producers have lowered their prices, and that the Viscose Company has followed suit.

This is only what we expected, and it was no doubt foreseen by the trade in general. At any rate, the news of the reductions, which are less drastic than in Europe, does not seem to have been accompanied by any great market upset, and there seems good reason to hope that the transition to a lower and stable price level will take place without any serious falling off in the volume of business, which should soon begin to expand again at a reasonable rate. This is the best we can look for, for the possibilities do not allow of any sensational improvement.

CURRENT YEAR'S PROSPECTS.

Now I hope you will not complain because my account of the state of the industry may be rather confused, for that is exactly what the conditions themselves are. Briefly, in America the outlook seems to be settled but not especially brilliant, while conditions in Europe are still very difficult; while we hope these will improve, any rapid improvement is far from certain. And I must remind you once again that our margins of profit are reduced everywhere; the very best we could hope for during the current year would be for expanding output and sales to compensate for this reduction in the margins, but the recent state of uncertainty in England and the rest of Europe has had a depressing effect upon markets, from which they can hardly recover in a moment.

CONTINUED TECHNICAL PROGRESS.

If we now turn our eyes for a moment away from the commercial side of our business, with its rather stormy outlook, and consider the technical aspects, we shall find much more cause for satisfaction. Our technical progress during the year has been continuous and widespread, and we have no fear of losing the leading place in the industry which we have held in the past. The yarns which we make are always increasing in variety and improving in quality, and this is reflected in our own weaving department, which is continually expanding its range of the highest-class fabrics while more and more replacing real silk by rayon; many experts now consider the best rayon fabrics to be superior in most respects to anything made of the natural fibre, and indeed the extent to which fine rayon yarns have displaced real silk during the last two years is remarkable.

Beside the fine varieties of ordinary viscose which have had an increasing success during the past year, we have made progress with the new strong yarn manufactured under the Lilienfeld patents, to which we have given the name "Durafil." This yarn

has made a favourable start; we are already supplying it commercially in small quantities, and it is meeting with a good reception. The plant is being increased, but progress at this stage is necessarily slow, and growth cannot be great during the current year.

Our acetate yarn is also making its way and is reputed to be second to none in quality, and we shall increase our output of this class of rayon as required. Though there are undoubtedly uses for it, these lie, on account of its high cost, mainly in the field of specialities, and there is every prospect of viscose continuing to be the staple article of the future. At any rate, it is fairly safe to say that nothing has yet been discovered in relation to the acetate —or any other—process to shake this belief.

ECONOMICAL MANUFACTURE.

While improving our products in quality and variety, we have by no means lost sight of the important question of costs. Apart from unavoidable differences in wages, I believe we are manufacturing in England to-day as cheaply as anyone in the world, and we are continually improving and simplifying our methods with a view to economy, though, as I have had occasion to point out before, nothing very drastic in this direction can be looked for as the field of possible economies still remaining is small. I must ask you not to be unduly alarmed by claims which we hear made occasionally relating to much cheaper processes, extraordinary economies in labour, etc.; you can rely on it that we know as much about that side of manufacture as anybody, and we shall not spend many sleepless nights on account of such tales; in fact we believe our competitive strength to be greater than ever. (Hear, hear.)

THE BALANCE SHEET.

If you will now look at the balance sheet, I will explain a few of the figures.

The first figure I have to draw your attention to is "Creditors, etc," £3,865,262. Under this head you will notice that reserves are provided for taxation and contingencies, and in connection with this I may mention that it has been considered desirable that any reserves which may be no longer required for taxation should be retained as reserves for contingencies.

The next figure, "Capital reserve account," £514,337, requires a little explanation. During the year our Canadian undertaking was transferred to a Canadian company, at a capitalisation in excess of the value appearing in our books. The surplus arising has been credited to capital reserve, while the corresponding shares are included at par in the item "Investments in and advances to rayon (artificial silk) and allied companies" on the other side of the balance sheet.

Turning now to the other side, you will see that property, plant, etc., are up by about £900,000. This is accounted for by the completion of the machinery at Wolverhampton, and expenditure on our acetate works.

The next important increase is in the "Investments in and advances to other rayon (artificial silk) companies." Part of it represents the shares in the Canadian company already mentioned, and the remainder advances in connection with the completion of the works at Calais and Cologne.

Cash at bankers is less than last year; the money has partly been used for the financing of the above-mentioned Continental companies, and partly invested.

In conclusion, I would like to express my thanks once again to all our administrative and working staffs—men and women—and to put it on record that in my opinion 1928, in respect of technical progress and the quality of the products manufactured, marks an advance on any previous year within my own memory. (Applause.)

Mr. S. Stanley Bourne (deputy-chairman) seconded the resolution.

The Chairman: Before putting the resolution to the meeting I shall be pleased to answer any questions to the best of my ability.

SHAREHOLDERS' QUESTIONS.

Mr. Williams: There are one or two questions which I should like to ask. The first question is, why is there no specific sum allocated in the balance sheet for the depreciation of buildings, plant, stocks-in-trade and investments. The second question is, what sum has been allocated for the depreciation of these items; and the third question is, why is there no profit and loss account accompanying the balance sheet? The fourth question is, how much of the £3,865,262, which forms the item "Creditors, six months' preference dividend accrued and reserves," on the liabilities side of the balance sheet is due to creditors only; and the last question is, how much of the total sum of £9,888,263 on the assets side of the balance sheet as "British Government securities and other investments" is invested in British Government securities?

The Chairman: Are there any other questions?

Mr. Morrison: In addition to the questions which have already been put, may I ask whether there is any reason other than that it may not be good for shareholders to know how wealthy they are, why the revenue from investments and the trading revenue should not be shown separately? The directors' report and the chairman's speech are, as usual, informative rather in appearance than in actual fact—a condition to which shareholders of this company are well accustomed. But, Mr. Chairman, I think the board might perhaps pay some attention to the change in feeling which is taking place among investors generally. Industrial companies to-day have become such great organisations that their affairs are of interest to circles far outside their immediate shareholders. Organisations such as Courtaulds have an effect on the social and economic lives of the countries in which they operate such as to cause an increasing desire for knowledge of their operations, scope and prospects among a very large circle of people. I consider this is a very justifiable desire, and I suggest, Mr. Chairman, that it would be a wise thing for the board to recognise this interest which is being taken.

THE TECHNICAL SIDE.

I should like to say something on the technical side, and I speak here quite as a layman seeking information. We have seen during the past year or so certain references to the linking up of the trade or industry in an international sense. It would be very interesting, I am sure, to everybody to learn how far that linking up has gone, and what its future possibilities are. You referred, Mr. Chairman, to the dislocation which, in your opinion, was unnecessary. Is there any possibility that by a further linking up of these international interests amongst big producers the disturbance of the industry by "bulls in the china shop" can be eliminated or reduced by a further closer working between the big producers?

On the question of quality you, sir, have referred to the very low quality produced by so many of your competitors. During the last few months there has been some mention of standards of quality, and I should like to know whether it is possible for a company such as Courtaulds, in conjunction with its associate, to lay down international standards for qualities. If such standards could be laid down and accepted by the trade generally, it would either compel these new producers to manufacture up to the standard or to go out of business altogether.

There is one other point, Mr. Chairman, to which I would like to refer. That is, when you speak of the increased consumption which has taken place, and which we all anticipate will go on, whether you as a board would look at the abnormal difference in value of the article as it is produced and sold by the manufacturer, and that same article as it is purchased by the consumer. I feel that if anything can be done by which that abnormal margin can be produced—that is, distributing profits—that the result would be a fall in the price of the article which would create an extension of demand that would amaze even the board of Courtaulds.

CHAIRMAN'S REPLY.

The Chairman, in reply, said: The questions put by the first shareholders were very largely connected with the form of the accounts. For instance, he asked why we did not show a separate profit and loss account. The account is shown in the form in which it has appeared for the last 15 years or more. We are not the only people who issue a combined account like this, and I do not think that the question has been put to us before. The amount of the profit is certified by the auditors, but that has always been taken to be satisfactory. (Hear, hear.)

Then he asked why no specific sum was allocated for depreciation. The two figures at the top of the right-hand side of the account have already had depreciation deducted, and in the report we mention the charging of depreciation of buildings, plant, stocks-in-trade and investments. That is the form in which we have always done it. The depreciation deducted from the property and plant is the full amount allowed by the Revenue Authorities in this country. That is the plan which we have always pursued, so that the values appearing are already written down before we announce the profit. We think that that is a more straightforward way of doing it than by announcing a profit and then saying that it is subject to depreciation. We do not consider it a profit until depreciation has been deducted. (Hear, hear.)

The item of creditors, etc., and reserves in respect of taxation and contingencies is a sum which we have always found to be convenient to keep together in one figure like this, and I do not think that there is any sufficient reason for altering our method. With regard to the amount of British Government stocks included in the investment item, over 90 per cent.—nearly 100 per cent., in fact—is in British Government securities. (Applause.)

The first question asked by the second shareholder was also about the accounts—why the revenue from investments and the trading income are not shown separately. That is the kind of thing which we do not want to tell everybody too exactly. There are many people who would like to know exactly what we make from every branch of our operations; it would be extremely useful information to them, and it would not serve any practical purpose to set it out here; so we like to leave them guessing. (Laughter and applause.)

This same shareholder raised one or two quite interesting points with regard to further co-operation between different producers. That is a thing which we are always studying, and I think that gradually, perhaps, the big producers are getting closer together, but it is an extremely difficult and intricate question. All that I can tell you is that it is a matter of which we do not lose sight—in fact, it is one of our main preoccupations. Curiously enough, the question of standardisation is also one of which we have thought a great deal during the last twelve months or so. As a matter of fact, there has been an international bureau started, to which most of the big producers in Europe are parties, to work on this question and to see whether it is possible to arrive at any standards.

Then he touched on the question of the difference in value between what we get for the article and what the public pays for it. He is treading there on very delicate ground, and I think I would rather keep off it. The distributing trades are our very good friends, and I should be very sorry to say anything here in criticism of their methods. (Hear, hear.)

The resolution was then put to the meeting and carried unanimously.

The Chairman next moved the re-election of Mr. F. J. Nettlefold and Mr. J. S. Addison as directors.

This resolution was seconded by Mr. S. A. Courtauld, and unanimously approved.

Mr. Stanley Bourne (deputy-chairman) proposed the re-election of the other retiring director, Mr. Samuel Courtauld. In doing so he said that he was sure that the shareholders would have no hesitation in re-electing Mr. Courtauld.

Sir Thomas P. Latham, Bart., seconded the motion, and it was unanimously adopted.

VOTE OF THANKS.

Mr. I. B. Davidson: Mr. Chairman, Ladies and gentlemen, it is again my privilege to move a resolution which I have been asked to propose on many previous occasions. I will read it: "That Messrs. W. Elles-Hill and Co., and Messrs. Price, Waterhouse and Co. be and they are hereby re-elected joint auditors of the company for the year 1929." Having proposed that resolution, which will be seconded in due course, may I be permitted once again to voice our feelings of thanks to the chairman and the board for the wonderful progress the company has made in the past year, and for the splendid balance sheet they have been able to place before us. A great many of us came to this meeting to-day almost prepared for anything (laughter), but, despite this, through the mist of pessimism and doubts for the future my own opinion is that we shall witness for this great and wonderful business a continuation of the brilliant expansion of the past.

These ups and downs are not new, they have happened before, and, probably, will happen again. But after listening to our chairman to-day, as we have all done, with great interest and care, we do see behind his address the wonderful way in which these gentlemen have built up this business, prepared for the future, and for the fight which was bound to come, in view of the number of small artificial silk concerns which have been springing up on all sides. What will happen to these small concerns in the future time alone will show. Personally, I would rather be a shareholder in Courtaulds than in one of these smaller concerns (laughter).

THREE MAIN FACTORS.

What have we, the shareholders, in Courtaulds, to look forward to? In my opinion, there are three main factors—the product, the men, and the future of the industry. As to the product, that can be summed up in one word—"Courtaulds," and we will leave it at that. The "men"—the men are there, seated at the board table, and they have shown in the past and will show in the future what they can achieve, and, therefore, we can leave the business and our own particular interests in the company, to be looked after by them, safely leaving the control in their capable hands. As to the future, when you consider (I think I am right in what I am going to state, for I have endeavoured to find the exact position, and I do not wish to give you any inaccurate information)—when you consider that the proportion of Rayon compared with cotton is about 3 per cent. it is obvious to everybody that rayon is pushing every year further and further into the uses for which cotton is now used, and that so long as our lady friends continue to purchase this beautiful article of adornment, I think the future can speak for itself.

A GREAT BUSINESS.

We know, as I have said before, that we have a great business. Look at the balance sheet and study it, and you will find there is only one word to describe the business—it is stupendous, and certainly it ranks as one of the finest in the whole of the British Empire. I will not further labour these points, but will content myself by asking you to accord your sincere thanks and admiration for the successful labours of the chairman and the board. I hope all of you will go away from this meeting more than satisfied with all that they have done, and with every hope that this business will continue to prosper as in the past. I personally believe this will be the case.

I am only a small shareholder, and I have held my shares for 16 years. I, along with my friends, have always regarded our holdings as an investment, for I do not look on Courtaulds' shares as speculative or gambling, but I regard the company as a sound commercial undertaking controlled and guided by a very sound body of business men. I have the greatest pleasure in proposing that a hearty vote of thanks be given to the chairman and the board. (Applause.)

The motion for the re-election of the auditors having been seconded by Mr. F. G. Brenton, was carried, and the vote of thanks to the chairman and the directors was unanimously accorded.

The Chairman: I thank Mr. Davidson for his appreciative remarks, and you, the shareholders, for the kind vote you have passed, and for your attendance here to-day.

The proceedings then terminated.

LAW LAND COMPANY, LIMITED.
ANOTHER SUCCESSFUL YEAR.
COMPANY'S BEST REPORT.

The forty-sixth annual general meeting of the Law Land Co., Limited, was held, on the 6th instant, at the offices of the company, 30 Norfolk Street, Strand, W.C., Col Sir Courtenay T. Warner, Bt., C.B. (chairman of the company), presiding.

The secretary (Mr. H. H. Sparke) having read the notice convening the meeting and the report of the auditors,

The Chairman said: I presume you will allow me to take the report as read. It is a good report: the best, I think you will agree with me, that we have ever issued. For some years past each new report has shown results better than the last, and I think we may now congratulate ourselves on the company's affairs being in a very sound and prosperous condition.

Our year's rent roll, at £221,873, is about £2,000 in advance of that for the previous year, and, after adding £6,938 to the leaseholds redemption account and including the £11,633 brought forward from last year, we have an available balance of £86,208—an increase on the previous year of about £1,700. Out of this the interim dividend on the ordinary shares and the year's dividend on the preference shares have been paid and £21,700 has been added to the reserve. On the last occasion we put £28,400 to this account and paid a 4 per cent. bonus in preference shares. We now propose to pay half the bonus in cash—cash which would have otherwise been transferred to reserve.

DIVIDEND AND BONUS.

As you will have gathered from the report, we recommend on this occasion a final dividend of 10 per cent. on the ordinary capital, making, with the interim dividend paid in September last, 9 per cent. for the year, a cash bonus of 2 per cent. and a bonus in preference shares of two such shares for every 100 ordinary shares. The reserve account will then stand at £253,000, and the leaseholds redemption account at the amount stated in the balance sheet, viz., £119,673.

This is all, I think, I need say with regard to the report. I should now like to give you an idea of what your directors think of the outlook for the future. You will have observed that for some time past we have been keeping a rather large amount of capital in more or less liquid form. This we have considered advisable as we have been hoping to find a property which we could acquire and which would yield a reasonable return without the risk of depreciation. We have, however, in the course of our inspections and investigations formed the opinion that the inflated prices and high rentals which appear to be asked throughout London are unlikely to be maintained, even with the hoped-for improvement in trade. You will, therefore, I am sure, agree with our policy in employing our surplus cash to the best advantage whilst keeping it available in the event of our being able to find a permanent investment of the class which is in accordance with our traditions.

We have also to bear in mind that new buildings are continuing to be erected in our midst, and we must be prepared to spend a good deal of money to keep our buildings supplied with up-to-date requirements and up to that high standard at which we have always aimed and which has enabled us to keep fully let in spite of the competition to which I have referred. This entails each year a heavy outlay.

LETTING DEPARTMENT.

Our letting department, which, as you know, is in charge of our assistant manager, Mr. A. S. Ford, has had another very successful year, to which no doubt our system of maintaining our buildings at the highest state of efficiency has very largely contributed. Mr. Ford has renewed or effected fresh tenancies yielding an annual income of £32,000. I, therefore, do not regret the heavy bill for repairs as the harmonious working between the two departments—one spending and the other revenue producing—will, I feel sure, enable us to show you an improving net rental years by year. It has never been our policy to extract the last farthing in the way of rent from our tenants, and we are now reaping the benefit of this, since we can renew the leases made many years ago and which are now expiring, at an increased rental, or, at any rate, at no lower rental, and have also kept that invaluable asset, the goodwill of our tenants.

I consider our success is very largely due to the close and expert watch which our secretary, Mr. H. H. Sparks, keeps over all departments in our business. When I tell you that when he first came to the firm the rent roll was £27,000 per annum and now, as you see, it is £222,000 per annum, you will appreciate how much we owe him and his assistants. I see our general manager is due to retire from the board; if you re-elect him I expect he will, as in past years, make some reference to the work of the staff generally.

The report and accounts were unanimously adopted.

ASSOCIATED ANGLO-ATLANTIC CORPORATION, LIMITED.

PROFIT DUE TO LEGITIMATE ENTERPRISE.

SUBSTANTIAL EXPANSION FORESHADOWED.

The annual general meeting of the Associated Anglo-Atlantic Corporation, Ltd., was held, on the 7th instant, at Winchester House, Old Broad Street, London.

Mr. Henry S. Horne, the chairman, presided.

The secretary (Mr. F. C. Cahill) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, dealt first with the figures in the balance sheet. In particular he emphasised the fact that, in connection with the figure of £728,523, representing unquoted investments, that the unquoted investments to which he had referred last year, and which constituted the control of valuable industrial situations, still remained in the balance sheet at the nominal figure of £1. In accordance with the policy of assisting in the scientific co-ordination of certain companies engaged in the cement manufacturing industry, the Board had, however, acquired other interests which had absorbed a sum in excess of £500,000. They were confident that those acquisitions would in due course amply demonstrate the wisdom of their plans of constructive and sound development in regard to that particular industry.

THE NEWSPAPER INTERESTS.

As to the quoted investments, figuring at £1,161,255, the Corporation's newspaper holdings had not materially changed. His forecast of a big expansion in earnings of a year ago had been amply fulfilled, and he was more confident than even last year that it was reasonable to anticipate continuing expansion having regard to the growth of the field of advertising. As to the Carmelite Trust, for the formation of which the Corporation were responsible, the Board knew that the confidence placed in it would be justified, and in that connection he would refer to the operation carried out recently, jointly with the Trust, in offering for sale 3,000,000 ordinary shares and 375,000 deferred shares in Anglo-Foreign Newspapers, Limited. That company had been formed as a result of the most careful inquiry and investigation by experts, and the offer for sale had been an enormous and unqualified success. Despite the short period of the Company's existence, important and immediate revenue-earning properties had already been acquired on favourable terms, and others were the subject of negotiation. The Company was already on a revenue-earning basis, and its field for development was considerable.

As to the interest in the Anglo-Newfoundland Development Company, every report went to show that as a result of the active development of its mineral rights that company possessed a great future; it was only a matter of time before the segregation of its mineral rights would take place, and what a year ago might have been termed a "prospect" had now become a definitely proved mine.

AMERICAN AND CANADIAN INTERESTS.

It had been possible, as a result of the support of powerful interests, for the Corporation to carry out its original policy of co-operation with American interests with great advantage. He was a great believer in America and American industrial concerns, as also in the enormous future opportunities of Canada as a field for profitable investment. That country, in his opinion, stood on the threshold of truly wonderful development. The Board, accordingly, had invested a considerable sum in the British Columbia Power Corporation, which they were confident would prove an asset of ever-increasing value and income to the Corporation. Generally, he thought that results proved that the employment of their funds had provided the Corporation with increasingly valuable assets.

PROFIT AND DIVIDEND.

The profit figure of £384,749 was one of which the directors and the shareholders might well feel proud; it was equivalent to approximately 38½ per cent. on the capital, and it was a net figure computed not only after charging depreciation on a generous scale, but without in any form or shape writing up values from last year. The directors recommended a dividend of 15 per cent. on the ordinary shares and a dividend of 55 per cent. on the deferred shares, transferring £100,000 to general reserve and leaving £93,743 to be carried forward.

Dealing with the general situation, the Chairman said the Board anticipated that if there were no unexpected adverse developments in industry or world politics they would be able to place before the shareholders next year a statement of added strength and an even more comprehensive programme, as they had several further important businesses on hand.

The report and accounts were unanimously adopted.

FARMERS' NATIONAL MORTGAGE INSTITUTE.

BUDAPEST, HUNGARY.

SUCCESSFUL RESULTS OF THE YEAR.

COUNT HADIK'S SURVEY.

The forty-ninth annual general meeting of the Farmers' National Mortgage Institute, Budapest (Hungary), was held on February 14, 1929. Count Hadik presided, and, presenting the directors' report, noted with satisfaction the great progress achieved in the course of the past year. He recalled the pernicious effect of the inflation period which has paralysed the activities of the institute for several years, but was glad to say that in less than a year the reorganised institute afforded striking evidence of its necessity and its success.

RESULTS OF FIRST YEAR.

The following data show the results achieved in the first year of the reconstruction of the institute.

The institute placed mortgage-bonds for two million dollars in America, and the value thereof was lent to its customers in the form of amortisable long-term loans. The total amount of loans granted by the institute on December 31, 1928, was 16,329,240 pengös. Loans were granted, secured by mortgaged real estates upwards from 60 dollars, and no discrimination whatever was made between smaller and larger borrowers, as the chief aim of the institute is to provide farmers, according to their legitimate needs, with accommodation at the easiest terms. This is illustrated by the fact that 80 per cent. of the loans granted represents credits under 2,000 dollars each. The careful credit policy of our institute is demonstrated by the fact that the loans granted amount only to 27.5 per cent. of the estimated value of the mortgaged property. Apart from mortgage loans the institute granted credits to the amount of 2,634,000 pengös, which will be transformed later on into mortgage loans.

CO-OPERATION WITH FINANCIAL INSTITUTIONS AND MINISTRY OF AGRICULTURE.

In order to widen the field of co-operation our institute entered into agreement with 135 provisional financial institutions which are bound to grant credits on the altruistic lines prescribed by our institute, and every attention is paid to the fact that the agricultural community should be provided with cheap and sufficient accommodation in the provinces. To this effect the institute rediscounted agricultural bills of the said provincial institutes of

9,835,594 pengös. We have also granted credits for cattle-feeding purposes within the scheme worked out by the Ministry of Agriculture for 3,623,000 pengös. We are the Hungarian trustees of the American loan of the Protestant Central Credit Union of Hungary. The proceeds of the Protestant loan has been paid into our institute and from the proceeds we have already paid out up to the end of 1928, for approved loans to the churches and parishes, 4,151,064 pengös. In accordance with the above figures the total amount of loans granted by our institute has increased from 2,737,373 to 38,636,856 pengös during the past year.

LAND ALLOTMENT ACTIVITIES.

The institute resumed its land allotment activities, practised so successfully in the pre-war years, and at the end of 1928 there were 13 such allotment schemes in operation. We took also an active part in the formation of the institute for the carrying of the financial part of the Hungarian Land Reform and shall co-operate in this work.

INTEREST OF AGRICULTURAL COMMUNITY.

The interest of the agricultural community in our institute is shown by the fact that the founders' share capital has increased by 263,950 pengös. Savings deposits and deposits on current accounts have increased from 668,667 pengös to 12,018,349 pengös during 1928, and the bills portfolio has increased from 1,060,576 to 13,459,194 pengös.

NET PROFITS.

Net profits amounted to 124,272 pengös, comparatively a small figure, but Count Hadik reminded the meeting that the aim of the institute is not profit-making but to help the farmers in their struggle out of the world-wide agricultural crisis, and finished his interesting review amid the cheers of the general meeting; the report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 2, 1929:—

(000's omitted.)

Expenditure	£	Receipts.	£
Supply Services	7,030	From Revenue	25,033
Interest, &c., on Debt	5,396		
Sinking Fund	1,784		
Sundries	299		
Decrease in Debt	10,308		
Increase in Balances	216		
	25,033		25,033

The Ordinary Revenue for the week amounted to £25,033,100, as compared with £24,767,500 in the corresponding week last year. Property and Income-tax was higher at £17,248,000, against £13,305,000, but Super-tax was lower at £2,410,000, against £3,080,000. Customs and Excise amounted to £1,877,000 and £1,219,000, against £1,482,000 and £1,012,000 respectively. Ordinary Receipts brought in £19,600, as compared with £233,000, but Special Receipts were nil, against £3,541,500. The total Revenue to date amounts to £651,163,900, as compared with £669,823,900 at this time last year. Expenditure amounts to £682,873,900, against £704,269,100. The deficit to date is therefore £31,710,000, as compared with a deficit of £34,445,200 for the corresponding period last year. The National Debt was reduced by £10,308,000 as shown below:—

(000's omitted.)

	£		£
National War Bonds	— 250	National Savings Certificates	+ 200
Treasury Bills	— 14,198	Public Department Advances	+ 4,400
Sundries	— 460		
	— 14,908		+ 4,600

The floating debt was reduced by £9,790,000 to £764,865,000.

FINANCIAL YEAR, 1928-29, April 1 to Mar. 2, 1929.

Expenditure	£	Revenue	£

Total		£596,996	Total		£11,000

Net arrivals, £585,996.

Messrs. Samuel Montagu and Company write as follows on March 6, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £150,897,002 on the 27th ultimo (as compared with £150,503,734 on the previous Wednesday), and represents a decrease of £3,009,313 since April 29, 1925—when an effective gold standard was resumed.

The bar gold available in the open market this week amounted to about £805,000, of which about £593,000 was secured by the Bank of England, as shown in the figures below. Home and Continental trade requirements absorbed £94,000, India £60,000, and the Straits Settlements £54,000. There was a net influx of gold of £570,581 during the week.

SILVER.

Although prices have shown some fluctuations during the week the steadiness of the market has been maintained. China has again been the chief operator, and besides making some re-sales, has supported the market by purchasing silver, presumably as a counterpart of operations in yen exchange, which has continued to show weakness. The Indian Bazaars have worked both ways, but offerings from the Continent have been small. America has been more disposed to buy than to sell. The news that another revolution had broken out in Mexico naturally gives rise to some speculation as to its effect on silver, as, in view of the position occupied by Mexico as a producer, a prolonged struggle is obviously likely to prove an important factor. It is to be hoped, however, that the trouble will not be of long duration, as events in the past have shown the enduring ill-effects of such civil strife on the commercial interests of the country.

The following were the United Kingdom imports and exports of silver registered from mid-day on February 25th to mid-day on March 4th :—

IMPORTS.	£	EXPORTS.	£
Mexico	187,904	France	7,624

Reports and Notices.

The Hon. H. C. Hull has resigned from the board of the Consolidated Diamond Mines of South-West Africa, Limited. Sir Ernest Oppenheimer, M.L.A., has been elected chairman of the company.

Mr. H. E. Hyett, who has recently resigned from the British, Foreign and Colonial Corporation, Ltd., has been appointed general manager of the Charterhouse Investment Trust, Limited.

Mr. Walter McDermott and Mr. A. E. Ford have joined the board of Mawchi Mines, Limited.

The Millom and Askam Hematite Iron Co., Limited, announce that iron ore shipments at Almeria from their Alquife mines for the month of February totalled 29,500 tons.

Barclays Bank Dramatic Society will give performances of "Ambrose Applejohn's Adventure" at the Arts Theatre, near Leicester Square Tube Station, for six nights commencing Monday next, March 11. The proceeds will go to the funds of the Bank Clerks' Orphanage. Tickets are on sale and can be obtained through any branch of the Bank.

BANKS.

THE BRITISH AND POLISH TRADE BANK (DANZIG).—Considerable expansion is shown in the profits for 1928. The profit and loss account shows that the sum brought into the accounts from 1927 was 2,585 gulden. Interest, etc., produced 546,732 gulden. Commission amounted to 92,049 gulden. Profit of foreign exchange stocks, &c., amounted to 87,370 gulden, making total receipts 728,736 gulden, which compares with 495,883 gulden for 1927 and 32,739 gulden for 1926. From these receipts 463,344 is deducted for expenses, including taxes, and 21,167 gulden was utilised to write down buildings, etc., leaving a profit of 241,640 gulden for 1928, against 174,189 gulden for 1927, and a loss of 171,603 gulden for 1926. The share capital of the bank is unchanged at 3,000,000 gulden. Deposits have increased from 43,195,417 gulden to 6,665,800 gulden. Balances at banks are higher at 802,270 gulden, against 513,823 gulden at the end of 1927. Cash amounts to 179,592 gulden, against 106,007 gulden. Balances at clearing banks amounted to 271,084 gulden at the end of 1928. Balances abroad stand at 2,619,702 gulden, against 2,531,754 gulden twelve months ago.

S. JAPHET AND COMPANY, LIMITED.—The Balance Sheet dated December 31, 1928, shows total assets £16,464,228, which compares with total assets of £13,350,102 on December 31, 1927. Cash in hand is higher at £468,257, compared with £437,995. Cash at call is also higher at £2,202,970 against £1,835,180 at end of 1927. The holding of Treasury Bills and other British Government securities has increased from £1,021,509 to £1,140,960, and Colonial Foreign Government and other securities are higher at £696,061 compared with £556,178. Bills discounted stand at £886,126 against £693,888; advances are at £3,579,575 against £3,221,247; acceptances have risen from £5,426,388 to £7,306,372. With regard to liabilities, share capital has increased from £1,000,000 to £1,250,000; reserve is higher at £600,000 compared with £400,000; deposits have risen from £6,523,714 to £7,307,856.

MISCELLANEOUS.

SINCLAIR IRON COMPANY, LIMITED.—We are informed by the secretary of Sinclair Iron Co., Limited, that the requisite number of acceptances have been obtained from shareholders of that company, and notice has been received that the merger will now proceed.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.—The arrangements made by the P. & O. Company to meet the needs of holiday-makers during the coming spring and summer are on a more extensive scale than in previous years. Beginning at Easter with the maiden departure from London (March 28th) of their new oil-burning turbo-electric ship "Viceroy of India," reduced summer return fares to Gibraltar, Tangier, Casablanca, Melilla and Marseilles will be available on each weekly boat from London up to September 13th. Reduced summer fares, London to Egypt, will be in operation between April 26th and August 16th, and will apply to the return journey from Port Said up to September 16th. Fourteen days' holiday need cost, at sea and ashore, no more than £20 to £25, including hotels, many of which quote special rates for P. & O. passengers. Fifteen cruises will, during the summer, be made by the "Ranchi," "Ranpura" and "Viceroy of India." The "Viceroy of India," with few exceptions, provides a single-berth cabin for every passenger.

C. AND E. MORTON, LIMITED.—The profit for 1928 was £124,463, as compared with £100,380 for 1927. The ordinary shareholders receive 19 per cent. for 1928, against 15 per cent. for 1927. The carry-forward is £31,657. It is proposed that the company's capital, while remaining the same in amount as at present, shall consist of 400,000 7 per cent. cumulative preference shares of £1, 225,000 8 per cent. cumulative preferred ordinary shares of £1, and 450,000 ordinary shares of 10s. The new preferred ordinary shares, which will be issued as fully paid to the holders of the ordinary shares in the proportion of one preferred ordinary share to every two ordinary shares held, will rank for dividend after the 7 per cent. preference shares and the existing voting rights of holders of the latter shares will remain undisturbed. The scheme further provides for the repayment in cash to the ordinary shareholders of paid-up capital to the extent of £225,000 (being 10s. per share).

MARCONI INTERNATIONAL MARINE COMMUNICATION COMPANY.—Gross receipts for 1928 were £905,816, against £912,640 for 1927. The net profit shows a steady expansion, having been £83,576 for 1924, £118,979 for 1925, £126,132 for 1926, £179,730 for 1927, and £193,420 for 1928. Ordinary shareholders receive 15 per cent., against 12½ per cent. for 1927. The sum of £36,689 is carried forward, an increase of £13,011 on the previous carry-forward.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday Evening.

Climatic conditions have taken a milder turn, but the land is not yet in a fit state to resume ploughing operations. Reports of standing crops appear favourable, despite the recent spell of severe frost. Liberal supplies of native wheat at the principal country markets proved difficult to sell, and prices tended easier in sympathy with the decline in imported varieties. The floating and forward cargo section displayed dull features, and values continued on a downward course under pressure to market Plate descriptions, and larger offerings from North America. Australians were also more readily obtainable now that Indian wants are apparently satisfied. Argentine supplies continue to receive chief attention, being still the best value for price, and shipments from this source were again on a liberal scale. Better prospects of the new crops in North America may encourage sellers to dispose of liberal reserves on hand, particularly in the United States. These are a depressing factor in the general situation, while increased competition will no doubt be felt from Canada when the spring movement is resumed. Cargoes of Australian afloat sold 47s. 1½d., Rosafe 64 lb. afloat 43s. 6d. per 480 lb. c.i.f. Feeding stuffs quiet, but rates

firm, especially for Plate maize, owing to wet weather in Argentina impeding harvesting, also the movement of grain to the shipping ports.

Wheat easier. No. 2 Northern Manitoba, 51s. 9d.; No. 3, 50s. 3d.; No. 4 Manitoba, 49s.; No. 5, 44s. 6d.; No. 6, 39s. 6d.; Rosafe, 64 lbs., 45s. 9d.; Barusso, 63½ lbs., 45s. 9d.; Australian, 49s. 3d.; all ex-ship, per 496 lbs. English 9s. 6d.-9s. 9d. per 112 lbs.

Flour dull. London standard grade, 39s. 6d.; town whites, 40s. 6d.; patents 41s. 6d.-42s. 6d. per sack delivered in the Home Counties, with 6d.-1s. per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 35s.-38s., Minneapolis, 35s. 6d.-38s.; Australian, 36s.-36s. 6d. ex-store.

Maize dearer. Plate landed, 44s. 6d., ex-ship to arrive, 43s. 6d.; February-March, 43s. 9d.; March-April, 41s.; new April-May, 39s. 6d.; May-June, also June-July, 39s.; No. 2 yellow American, 42s. 3d. landed; No. 2 white flat African, 43s. 3d. landed, per 480 lbs. Yellow maize meal, £11 10s. ex-wharf; Hominy chop, £9 per ton.

Barley steady. Californian, ex-ship, 45s.-52s.; Chilian Chevalier, 48s.-58s.; Australian, 45s.-49s.; Smyrna, 44s.-47s. per 448 lbs. Algerian/Tunisian, ex-ship, 34s. 6d.; Canadian feed, 32s. 6d., ex-ship to arrive, 33s. landed; No. 3 Canadian Western, 36s.; No. 2 Federal American, 30s. 9d. ex-ship to arrive, per 400 lbs. English malting, 10s.-12s. 6d.; feed, 9s. 3d.-10s. per 112 lbs.

Oats, fully steady. Plate landed, 26s. 3d., ex-ship to arrive, 25s. 6d.; March 25s. 6d; black Plate landed, 25s. 3d.; mixed Canadian feed landed, 22s. 3d.; Chilian white, 32s. landed; German landed 29s., ex-ship to arrive, 28s. per 320 lbs. English 9s. 4d.-10s. per 112 lbs. Scotch landed, 30s. per 336 lbs. Irish black, 26s. 6d. per 320 lbs.

AMERICAN WHEAT MARKETS.

Wheat was firm during the early part of the week, under the influence of unfavourable weather reports, better export demand, and bear covering. Less favourable advices from Liverpool produced a reaction which was checked by hopes of farm relief under the Hoover régime. Later there was a fall owing to an increase in visible supply figures and pressure of bear selling. The close was slightly lower in the week. Quotations:—

Nearest Future.	Jan. 4, 1928.	Feb. 29, 1928.	Jan. 2, 1929.	Feb. 20, 1929.	Feb. 27, 1929.	Mar. 6, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.)	137	139	122	134⅞	130½	128⅝
Chicago (No. Winter)— Cents per 60 lb.....	130⅝	133⅝	116⅝	128⅝	123½	121½

Visible supplies of wheat in Canada at 84,712,000 bushels show an increase of 548,000 bushels as compared with the previous figure. Supplies a year ago stood at 75,851,000 bushels.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.
Estimated sales of home-grown wheat—				
1 week to March 2	Cwts. 312,567	Cwts. 252,969	Cwts. 257,874	Cwts. 241,707
24 weeks to March 2	7,119,697	6,612,717	8,976,976	10,073,169
Average price of English wheat per cwt.	s. d. 9 9	s. d. 9 6	s. d. 11 10	s. d. 11 8

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1929.	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.

THE COAL TRADE.

Our Sheffield correspondent writes:—Demand for house coal has been maintained this week and there is a marked scarcity of best qualities. The inquiry for coal for export and industrial purposes is fairly heavy. The market for coke has developed further strength. The larger consumption recently for central heating has caused a scarcity of blast-furnace sorts and there is a prospect of additional furnaces being put into blast. The price is firm at 14s. 6d. at ovens. Producers of Durham foundry coke are talking of higher prices, notwithstanding the poor home demand. Quotations for same time have been from 18s. 9d. to 22s. at ovens.

Our Glasgow correspondent writes:—There is still a strong demand for all classes of coal, and though the output is being increased a little by the reopening of a number of pits, supplies are still short. It is virtually impossible to arrange for prompt supplies, while the collieries are well booked for two or three weeks ahead. Shipping prices are firm at round the following, which are f.o.b. district ports:—Lanarkshire: Ell best, 19s. 9d.; splint best, 19s. 6d.; splint second, 18s. 6d. to 19s.; navigation, 18s. 6d.; navigation second, 16s.; steam, 16s. 6d.; Hartley, 18s. 6d.; trebles, 17s. 6d.; doubles, 16s.; singles, 14s. 6d.; pearls, 12s. 6d.; dross, 10s. 6d. to 11s. Fife: Screened navigation, 19s. 6d.; first-class steam, 18s. to 18s. 6d.; third-class steam, 17s.; trebles, 17s. 6d. to 18s. 6d.; doubles, 17s. to 17s. 6d.; singles, 15s.; pearls, 13s. Lothians: Prime steam, 16s. 6d.; secondary steam, 16s.; trebles, 17s. 6d.; doubles, 16s. 6d.; singles, 14s. 9d.; pearls, 13s. Ayrshire: Unscreened navigation, 16s. 6d.; jewel, 18s. 6d.; steam, 17s. 6d.; trebles, 17s. 6d.; doubles, 16s. 6d.; singles, 15s.; pearls, 12s. 9d.; dross, 11s.

Our Cardiff correspondent writes:—The strength of the Cardiff steam coal market is being well maintained. Supplies for prompt shipment continue scarce and most of the large coals obtainable are now realising round about 20s. per ton, the dearth of supplies and the pressure of immediate demand having obliterated the differences between the normal prices and the various qualities of large coals. The market for small descriptions is also strong and quotations have ruled up to 14s. 6d. for best bunker and coking descriptions and up to 13s. for ordinary cargo qualities. The congestion at the docks is being steadily relieved, but it is hoped that the temporary arrangement for the extension of working hours on the day and night shifts will be continued till normal conditions have been restored at all the South Wales ports. The Portuguese State Railways have placed a contract for 120,000 tons of small coal on the basis of c.i.f. prices ranging from 21s. 7d. to 21s. 11d., according to port of delivery. It transpires that there is a project afoot in France for the establishment of a syndicate representative of a number of the leading French importing firms for the purchase and distribution of all the anthracite coals exported to France between the ports of Caen and Dunkirk from the pits of the Amalgamated Anthracite Collieries, Ltd., but inquiries in South Wales show that in the absence of Sir Alfred Cope in the United States negotiations in regard to it are being delayed. The following are the current approximate quotations:—Best Admiralties, 20s. to 20s. 6d.; seconds, 19s. 9d. to 20s.; best drys, 19s. 9d. to 20s. 3d.; Black Veins, 20s. to 20s. 3d.; Western Valleys, 19s. 9d. to 20s. 3d.; Eastern Valleys, 19s. to 19s. 6d.; best small steams, 14s. to 14s. 6d.; cargo smalls, 12s. 6d. to 13s.; coking smalls, 14s. to 14s. 6d.; anthracite best large, 33s. 6d. to 35s.; Red Vein large, 22s. to 26s.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 41s. to 43s. 6d.; stove nuts, 40s. to 43s.; rubbly culm, 10s. 9d. to 11s. 3d.; foundry coke, 25s. to 37s.; patent fuel, 19s. 6d. to 21s.; pitwood, ex ship, 27s. to 27s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Trading in the iron and steel markets has been somewhat dull this week. Nevertheless, the undertone is good and the general feeling is that, although there may be a quiet period for a time, there are prospects of a good spring demand developing. The pig-iron market is now settling down to the recent price advances and buying has been taking place on a moderate scale. There is a likelihood also that additional furnaces will be put into operation in some of the pig-iron producing districts. In the semi-finished steel department there has been a good inquiry, but the actual volume of buying has not been large. The Continental steel works are offering little material for reasonable delivery, and there is also a considerable difference between British consumers' and Continental sellers' ideas of price. The strengthening in the prices of British semi-finished material has to a certain extent checked buying, but, nevertheless, by far the largest part of the business transacted in this material has gone to the home works, which are probably better off for orders of this description than they have been for many years past. In the finished steel department the demand on the whole has been rather quiet, but British works are busy against old contracts, and there has been some increase in the inquiry from overseas markets which it is expected will result in business. The advances in this market which have been due to the higher cost of raw materials are expected to have only a temporary effect upon the volume of trade when the usual spring-buying movement develops.

Our Middlesbrough correspondent writes:—The recent improvement in both the pig iron and the steel trades is well maintained. Pig iron of all descriptions is scarce. There is a keen inquiry for Cleveland iron, and substantial contracts have been entered into which will further curtail the iron available for the market. Prices are unchanged on the following basis:—No. 1 Cleveland, 69s. 6d.; No. 3 G.M.B., 67s.; No. 4 Foundry, 66s; No. 4 forge, 65s. 6d.; but in view of the demand it would not be surprising if prices are shortly increased. East Coast hematite is also scarce, the price for mixed numbers being fairly firm at 73s. Prompt iron is difficult to obtain, and should the present demand increase it is anticipated the price will also have to be increased. With regard to manufactured iron and steel, the increased activity still continues, and local works are working to much greater capacity, although possibly not to full capacity. Owing to the absence of foreign competition, more orders for semis are being placed with home works, while also the inquiry from abroad is expanding. The steelworks are busy on shipbuilding material, while also orders for other specifications are improving. Meantime prices are on the following basis:—Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 5s.; steel rails, £8 10s. The ore market is very firm, and best rubio is now called about 23s. per ton c.i.f. Tees, but supplies are extremely limited. Blast-furnace coke is also a firm market, with supplies scarce. For good quality delivered blast furnaces 18s. 6d. to 18s. 9d. is being asked.

Our Sheffield correspondent writes: The recent improvement in the position of basic steel appears to be extending to the better qualities of steel, and makers of the latter are booking orders for cast and forged material more freely than for a long time. The present month appears to be opening rather auspiciously. There are more open-hearth furnaces working to-day in the Sheffield district than at any time last year. The only really weak spot in the situation now is the absence of substantial railway work, and that may be regarded as a temporary condition. The position of and the outlook for the iron trade fail to improve although producers are enforcing the higher prices of foundry pig. Work continues scarce at the light foundries and at the malleable iron works. Fairly good business is being booked by the makers of engineers' small tools, and orders from the automobile industry maintain a good level. The demand for wood-working tools is moderate and the same may be said of the cutlery and electro-plate branches.

Our Glasgow correspondent writes: The improvement in the iron and steel industry which has been noticeable for some little time still steadily continues in almost every branch. A settlement has been reached in the manufactured iron trade dispute in so far that the matter has been referred to arbitration and operations at the Lanarkshire works, which had been closed for four weeks, were resumed in the beginning of this week. There is considerably more activity in the steel works and, as further shipbuilding contracts and locomotive orders have been placed in this district within the past few days the outlook for makers of materials required in these industries is encouraging. Supplies of Continental semis are still very limited and prices continue to advance, so that competition in this branch is at the moment negligible. Although sheet makers are finding a very restricted demand for both black and galvanised sheets, the tonnage placed within the past week shows a slight increase, and as order books are well filled, makers are able to maintain prices at recent levels.

Our Cardiff correspondent writes:—The Welsh tinplate market remains quiet, although the Continent and the Far East have bought fair quantities during the past week. In view of the increasing costs of production it is considered probable that the proposal to raise the minimum prices of tinplates will be revived. Prices on the Swansea Metal Exchange on Tuesday were nominally unchanged at 18s. to 18s. 3d. per basis box; there was no variation also in the prices of galvanised sheets, tinplate bars, or tin; but scrap and spelter were quoted slightly higher. Shipments of tinplates from Swansea last week totalled 114,566 boxes, compared with 142,022 boxes the previous week, and stocks have further increased to 276,878 boxes, compared with 183,689 boxes in the corresponding week of last year. The tinplate manufacturers are considering the advisability of superseding the present scheme for the regulation of output through periodical stoppages by another for the pooling of the current volume of business and its distribution between manufacturers on a quota basis.

OTHER METALS.

Tin.—Despite slight irregularity at times, the market displayed fairly steady features, Eastern advices being maintained, and here sellers showed rather more reserve, though operations were on a moderate scale. The closing tone, however, was easier. Stocks in London and Liverpool warehouses for week ending March 2nd amounted to 9,354 tons, compared with 2,956 tons at corresponding period last year. Dealings were recorded in standard cash at £219 15s.-£220 5s. and £218 15s., with three months, £223, £220 5s. and £220 10s. In the East, business was reported on the basis of £225 5s. to £224 ton c.i.f. terms.

Copper experienced a slight set-back at opening on profit taking, but values recovered as offerings were readily absorbed, and a firm tone governed the market. Standard cash sold £82 15s.-£83 10s.; three months, £85-£83 10s., £84 15s. and £84.

Lead slightly irregular, but business proceeded with fair freedom, and tone firm. Good soft foreign pig, March sold £23 12s. 6d., £23 8s. 9d. and £23 18s. 9d.; April £23 13s. 9d., £23 7s. 6d. and £24; May, £23 15s., £23 10s. and £24; June, £23 15s. to £24 2s. 6d

Spelter in fair demand, but values easy on liberal offerings March sold £26 8s. 9d. to £26 2s. 6d.; April, £26 7s. 6d., £26 8s. 9d., £26 5s.; May, £26 8s. 9d.-£26 6s. 3d.; June £26 12s. 6d., £26 8s. 9d.; July, £26 12s. 6d., £26 10s., £26 11s. 3d. ton.

Aluminium steady. Ingots and bars for home delivery, £95 ton.

Antimony dull. English regulus quoted £54 to £55, foreign spot, £38 to £38 10s.; March-April, £33 10s. per ton c.i.f. terms.

Quicksilver steady. Spot £22 5s. to £22 10s. per bottle.

Tin Plates steady. I.C. coke, prompt and forward 18s. to 18s. 3d. per box f.o.b. Swansea.

COTTON TRADE.

Manchester, March 5th.

The trade position has become more cheerful, and in certain quarters a larger business has been done than for a long time back. From the point of view of prices the position is sounder, and there is less fear of lower values. A large business has undoubtedly just been done in piece goods, and producers are now in a position to present a stiffer front to customers. An extensive turnover has recently taken place in light cloths for India. Useful sales have also been recorded in prints and fancies. More encouraging advices have been received from China, and a steady business continues to be done in bleached shirtings and grey staples. There has also been more activity for the remaining minor outlets. There are few signs of healthier conditions in the American yarn section. Most buyers of Egyptian yarns have operated from hand to mouth, and organised short-time working has not yet brought the desired relief.

Liverpool, March 6th.

Prices to-day are 23 to 34 points higher than a week ago; the near positions are the strong. March shows 34, May 31, October 24 and January 23 points advance. A considerably increased volume of business has been put through, and the market has at last shaken off the lethargy which has characterised it so long. Figures are beginning to attract the attention which they deserve. The advance has been persistent, and has revealed a shortage of contracts. Last week world spinners' takings of American cotton amounted to 340,000 bales, against 231,000 bales for the same week last year, while total takings to date are over 400,000 bales more than at the same period last season The Garside Cotton Service, commenting upon the consumption in America, says that if American consumption be maintained into May world consumption may be well over 15¼ million bales for the season. Crop news is not good, as farm work has been delayed by heavy rains. Hester estimates sales of fertilisers for the past seven months at 1,187,000 tons, against 1,728,000 tons for the same period last year. To-day there was considerable profit-taking by recent purchasers. Spot sales for the week February 28th to March 6th (inclusive) are 49,000 bales, of which 28,590 are American, 1,200 Brazil, 1,750 Argentine, 4,500 Peru, 9,600 Egyptian, 2,400 African, 950 East Indian, and 10 sundries. Imports for the same period are 84,579 bales, of which 49,588 are American, 517 Peru, 20,724 Egyptian, 759 African, 12,400 East Indian, and 591 sundries. Quotations to-day are: American Middling, 11.01; Egyptian Sakel, 18.55; Uppers, 12.74; Brazil Fair, 11.21; Peru G.F. Mod.-Rough, 13.00; Smoooth, 11.96; West African Middling, 11.06; and East African G.F., 12.65.

WOOL TRADE.

Our Bradford correspondent writes: The postponement of the first day's sale in London this week caused great disappointment. Spinners and manufacturers in the West Riding and on the Continent are awaiting with more than ordinary interest the result of the auctions in Coleman Street, as they look to the current series to give some indication of the true position of the raw material. Reports from the primary markets certainly suggest that demand is more general and that values of merinos are stabilising on the lower level now ruling, and if the sales in London confirm the belief that bottom has been touched, it will encourage users to operate with more confidence and in larger weights. Already a fair amount of business has been put through in merino tops, many spinners being of the opinion that nothing is to be gained by waiting, and quotations are much steadier than at any time during the last month. Crossbreds are still erratic, but it should be noted that in New Zealand this week wool has been taken more freely and prices of crossbreds are reported to be about ½d. per clean lb. higher than those ruling last week at Wanganui. There is, however, a good deal of irregularity in quotations for crossbred tops, and the same applies to yarns. As regards merino yarns, there has been a certain amount of speculative buying, but prices are very unsatisfactory and there is no bulk buying. Particulars against old contracts are also slow in coming to hand.

COLONIAL WOOLS.

(from a correspondent.)

The commencement of the second series of London sales has been delayed one day by fog, but the results of the auctions held have been quite as good as could be expected. All sections did some useful bidding, the average decline being a good 5 per cent. If values remain around Wednesday's level, and there is no big weight to carry forward, neither buyers nor sellers will have any reason for dissatisfaction. Even yet there is less confidence among wool users than for quite a long time, and it is very difficult to find out the real reason. The Safeguarding Inquiry has been both blamed for the depression and credited with helping to bring out such improvement as has taken place during the past fortnight. Within that period there has been quite a considerable turnover in wool and tops in Bradford, and no doubt the business done has been the outcome of the development of the opinion that wool is now approaching an attractive price. The total quantity available (114,000 bales) is not excessive, and as the sales proceed there should be some good offerings of both merinos and crossbreds, particularly the latter. New Zealand always furnishes the best wools at the January and March series, and as the Puntas are all new clip, they should appeal to the Continental section. There is quite a reasonable prospect of an encouraging series, and the fact that values have

fallen to a level which corresponds to those in Australia should help good clearances to be made. Large quantities of wool and tops have been sold to Russia. The reports of the trade done appear to have been somewhat exaggerated, but it is a fact that about 2,000,000 lb. have been sold, and this, along with the other business done, has helped to improve the outlook. If only spinners and manufacturers were participating more definitely in the developments which have actually taken place, the tone of the market would improve very quickly. The standing of the raw material is, however, fairly good.

HIDE, LEATHER AND ALLIED TRADES.

The general position in the hide market is rather steadier as the severe declines so long reported appear to have been checked. Tanners, however, are *buying very cautiously*, and there are fairly large quantities of market hides under salt which must have depreciated in value. Best ox hides are now wroth from 7d. to 7⅞d. per lb., and *seconds* 6⅝d. to 7d. A feature of business has been that large quantities of cow and bull hides have been sold on export account. Calfskins remain steady, but woolskins have fallen 3d. to 6d. each. Oversea hides are rather firmer, and under the active buying of the United States Argentine ox have sold at 9⅝d. In saladeros it is significant to know that at the Leibig auction in Antwerp last week, 35,000 Colon Paraguay hides all sold, Colon ox making from 8⅜d. to 8⅝d. Dry River Plates have improved in value, although tanners are not buying largely. B.A. Americanos are quoted at 13½d. and Becorros at 13d. Africans are steadier, dry salted Capes in first and seconds making 12½d.–11½d. Australians are firm at origin although European buyers are not interested in the market. Cables from Chicago report a steady market with best heavy packer steers selling at 14½ cents, and other classes a cent down on last week's quotations. As shoe manufacturers are receiving more orders they are coming into the market more freely for sole leather at the reduced prices now offered. Bulk business is, however, absent but merchants are now throwing out feelers as to future supplies. Light bends are going to the shoe centres in larger quantities, and repairers are accounting for fair supplies of wet salted bends at reduced prices. There is little movement in upper leathers owing to instability of prices. Box and willow calf are selling in small parcels, at lower prices, and glacé kid in black and colours is also wanted for spring shoes. Kip curriers are still rather slack, but report indications of improvement. The shoe trade is rather better, the centres making ladies' and children's shoes being now fairly well off for work.

VEGETABLE OILS AND OILSEEDS.

Markets have an easy tendency and are only moderately active. Linseed oil is in poor demand, and is easier, current value being around £28 15s. per ton, naked, ex Hull mill for spot and March-April delivery, with *later positions at a small progressive* premium. Cotton oil continues slow, present value being for crude Egyptian £28 and common edible £31 10s. ex Hull for spot and March-April. Palm kernel oil is lower, at £35 10s., but with prices of other seed oils are unchanged. In the oilseed section there has been some little demand by crushers for Plate linseed on passage and early shipment, but supply is in excess of demand, and prices are definitely easier. Plate on passage to Hull has been done at £15 15s., and this remains the approximate value; also for Ferbuary-March shipment. Some seed intended for the Continent has been re-sold owing to the inability to receive delivery. The quantity of linseed on passage to Europe is 238,000 tons, or slightly less than last week. Cotton seed is lower, but demand is poor. Black Egyptian to Hull has been done at £10 1s. 3d., March and April loadings. Soya beans are dull. Demand for oilcakes continues fair and late prices are maintained.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—A generally quiet tone was apparent respecting movement in spot goods, but quotations were 1½d. to 3d. up for British refined and home-grown granulated. Trade buyers, however, still manifest interest in the more distant deliveries of British varieties. The market, without doubt, now rests on much better foundations than seemed possible a little time back, the flaccid appearance giving place to more cheerful conditions. Steady progress continues in the matter of marketing a liberal production in Cuba, and *which receives* every assistance by virtue of the fact that invisible supplies scarcely exist in the full sense of the term, and this necessitates continuous steady absorption of offers put out by producing countries and proved the antiseptic to the marked downward move. Improving signs are also in evidence, according to cables from Java, and for the small quantities of old crop still available from second-hand sellers a substantial premium is easily obtainable. Up to 15⅜ guilders has been paid for whites, March shipment, ex go-down, with further buyers, sellers asking 15⅝. From second-hands, white May-June held for 13¼, and more distant 17½ guilders. Continental parcels for shipment mostly held for previous prices, but interest on U.K. account reduced to a minimum. Raw refining descriptions sparingly offered and firm. B.R.B. crystals, April shipment, to Bombay/Karachi, sold 12s. 6d. c. and f. Terminal sections steady, moderate dealings. Of raw, May sellers, 9s., August sold 9s. 4½d.-9s. 6d.; December 9s. 7½d., 9s. 8½d.; white, March sold 12s. 6d., May quoted 12s., August buyers 12s. 3d., December quoted 12s. 6d., January sold 12s. 8½d. cwt. Cuban receipts last week totalled 243,759 tons, against 222,598 last year; exports 113,124, against 80,093; stocks 948,995, against 851,113. Central workings 163 tons, as compared with 170 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending March 2nd totalled 152,755 tons, against 89,032 last year.

COFFEE.—There is a good demand for all the finer qualities, and a firm tone governs the market. Medium descriptions meet a fair movement. Some attractive samples of new crop Costa Rica were on offer during the week at public sale. Kenya, bold, sold 128s., with fine colory up to 151s. Costa Rica, bold colory fancy, reached 176s.; others from 128s. to 156s. Colombian, fine bold greenish, 127s. 6d.

COCOA.—Market irregular with a moderate spot demand Accra F/F March-May sold 46s. 3d. to 46s. 6d., and April-June 47s. 6d. to 47s. f.o.b. Terminal, April sold 50s. to 50s. 4½d.-50s.; May, 51s. 1½d. to 51s. 6d.-50s. 3d.; July, 52s. 10½d. to 53s. and 52s.; September, 53s. 7½d. to 54s. 1½d and 53s; December, 53s. 1½d. to 53s. 6d. and 52s. 6d.

TEA.—Indian auctions of 47,770 packages came to a fair market steady progress being made with most descriptions, and prices in the main showed *little or no alteration*. Finest autumnal tippy teas commanded full rates, but common tended against sellers. Ceylon auctions of 25,200 packages met a fairly good demand, and all the better kinds sold at recent rates, but common and plain liquoring mostly ¼d. to ½d. lb. lower. Java and Sumatra auctions fair demand at steady to easier prices. New season's China in rather better request at steady prices. Keemuns sold 1s. 8d. to 2s., Ichang 1s. 9d. Landings in London during last month 36,948,087 lb., against 33,458,079 at same time last year, deliveries 32,904,717, against 35,989,387; stocks 237,459,158, against 233,415,788.

RICE.—Market idle. Two Stars old crop, spot, London, 13s. 6d.-13s. 9d.; new, 14s. 3d. cwt. c.i.f. A steamer cargo 5/6,000 tons Saigon meal, May-June, to Liverpool, sold £6 7s. 6d. ton c.i.f.

BEANS.—Steady quiet. Madagascar butters, afloat steamer "Clan Macintosh," sellers, 41s. 6d.; per "Marechal Gallieni," 42s. Rangoon haricots April 15th, sellers, 19s. 4½d., April 19s., May 18s. cwt. c.i.f. London.

PEAS.—Steady with fair inquiries. Japanese afloat sold 19s. 3d. 19s. 9d. as to position, January-February, 18s. 7½d., February-March sold 18s.-18s. 6d., March-April 18s. 5½d., and buyers c.i.f. London. Dutch firms unaltered.

SPICE.—Pepper fully steady, but trade rather quiet though buyers are in evidence with regard to forward positions. Lampong, spot, 1s. 5½d.; black Singapore, 1s. 5d.; Muntok, 2s. 3½d. Malabar quite nominal. Lampong, January-March, quoted 1s. 4½d.; March-May, 1s. 4d.; April-June, 1s. 3d.; May-July, 1s. 2⅞d.; August-October sold 1s. 1½d. Muntok, white, January-March, quoted 2s. 2½d.; March-May, 2s. 2⅜d.; April-June, 2s. 2⅜d.; May-July, 2s. 1⅜d.; August-October, 1s. 11d. lb. London stocks reduced 6 tons on the week. Tellicherry, January-March, value 150s.; February-April, 149s.; March-May, 148s. Aleppy, January-March, sold 150s. cwt. c.i.f. Cloves steady, unaltered. Sago flour and topioca nominally unaltered. African ginger, spot, 52s. 6d. cwt.

FRUIT (Dried).—Currants steady, with a good demand for smalls. Pyrgos quoted 45s.; Patras, 47s. 6d.; choice up to 51s.; Amalias, 46s.-46s. 6d.; Gulf, 48s.-51s.; Vostizza, 49s.-56s. Sultanas dull. Medium to good Smyrna, spot, 41s.-54s.; Cretan, 40s.-72s.; Greek, 38s.-65s.; Australian, old, practically cleared at 27s. 6d.-35s.; new, ranging from 33s.-51s.; Californian soda, bleached, 35s.-38s.; unbleached, 29s.; Cape, unbleached, 33s.-37s.; bleached, 45s.-50s. Raisins: Valencia steady, but Capes and Australian difficult to vend. Valencia quarter boxes, 50s.-55s.; Australian, 32s.-36s. Figs in good demand. Genuine new, spot, 28s.-33s. Dates steady, with a fair business in Siar. Hallowie, *fruits: Market very steady*, with improved inquiries for plums, pears and apricots, but apple rings move off slowly. Californian plums, 20's-30's, 65s.; 30's-40's, 57s.; 60's-70's, 43s.-43s. 6d. Australian pears range from 57s. 6d.-70s. as to quality; Lake County, good, 67s. 6d.-70s. Apricots, South African new crop, Royal 60s.-117s. 6d.; Cape, 72s. 6d.-82s. 6d.; Californian, new, 85s.-117s. 6d. Peaches, Californian, choice, 50s.; extra choice, 53s.; fancy, 58s. Apples, Californian, spot, sliced, extra choice, 65s. Almonds quiet and tendency easier. Mazagan, 140s.; Mogador, 140s.; Majorcas, 142s. 6d.; Bitter-Jordan, 185s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—Consumption has been restricted by the recent spell of severe wintry weather, but with milder conditions now prevailing some improvement in demand is anticipated. Pears were offering at attractive rates on spot, but firm for shipment parcels. Other descriptions being steady. *Singapore pines in slow request at about late rates*, little interest being evinced in shipment parcels, which are steadily held. Italian tomatoes steady, with a moderate spot trade.

CANNED FISH.—Business in sardines continues restricted. Portuguese clubs quoted 5s. per dozen tins. Lobsters steady. Best halves 140s.-145s., and quarters 77s. 6d.-82s. 6d. Salman maintained, but business small. Red tall, spot, 42s. 6d.-44s. 6d.; pink talls, spot, 26s.-27s. 6d.; halves, 32s.-34s. Japanese crab firm, and finest quality 97s. 6d.-100s.

COMMERCIAL TIMES—WEEKLY PRICE CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

THE
PRUDENTIAL
Assurance Company Limited

THE BALTIMORE & OHIO RAILROAD COMPANY

OFFICE OF THE PRESIDENT.

To the Stockholders of

Baltimore, Md., February 28, 1929.

THE BALTIMORE AND OHIO RAILROAD COMPANY:

In order that you may be informed as promptly as may be of the results obtained from the operation of your property for the year ended December 31, 1928, the President and Directors submit herewith a condensed income statement, compared with the preceding year, together with balance sheet, as of December 31, 1928, and certain other general information which it is thought will be of interest.

The Annual Report in the customary form will be prepared and forwarded later to those stockholders who have or may advise the Secretary of the Company of their desire to receive a copy.

The net income for the year available for dividends and other corporate purposes, after the payment of interest, rentals, taxes and other fixed charges, was ..... $29,100,931.

This was an increase of $6,467,586, compared with 1927, and was the largest net income in the history of your Company.

After paying the 4 per cent. dividend upon the Preferred Stock there remained ..... $26,746,403, equal to $12·43 per share on the common stock outstanding. Dividends at the rate of 6 per cent. were declared on the common stock outstanding during the year, after which there remained from the year's operations to be carried to profit and loss $13,835,128. The total accumulated surplus of your Company on December 31, 1928, was $103,905,106·21.

During the year there was an increase in investment in road of.....		$7,049,022
New equipment was acquired at a cost of	$6,030,213	
and old equipment retired in the amount of	5,158,420	
Resulting in a net increase in Investment in Equipment of		871,793
Total		$7,920,815

The additional equipment consisted of one especially heavy passenger locomotive of the "President" type and three heavy freight locomotives; these engines built to demonstrate new features were constructed at the Company's Mt. Clare Shops; also 10 new, all-steel baggage and mail cars, 2,200 all-steel box cars and certain miscellaneous pieces of equipment. In order to effect the more economical operation of local passenger service, 13 additional gas-electric motor cars and 3 gas-electric car trailers were purchased.

One hundred and eight locomotives, 4 passenger train cars, 3,707 freight train cars, 423 pieces of work equipment and 2 units of floating equipment, no longer suitable for modern and efficient service, were retired during the year.

On December 17, 1928, a new passenger terminal in the Chanin Building at 42nd Street and Lexington Avenue, New York, was placed in service. From this station direct access is had to the subway, Grand Central Terminal, and various hotels. To and from this station the train connection motor coaches are operated to trainside at the Jersey City Terminal. Passengers may board and leave the coaches within the building.

Traffic conditions during the first six months of 1928 were not as favourable as during the preceding year; the first half of the year showed a decrease in revenue of $12,164,633, of which $10,692,460 was in freight earnings. Beginning with and subsequent to July, however, there was an increase in the volume of traffic, so that at the end of the year the decrease in total operating revenues had been reduced to $9,263,386, of which $6,356,000 was on account of freight, or 3·12 per cent. Passenger traffic continued to decrease, the loss in such revenue for the year having been $2,574,577, or 9·79 per cent.

The reduction in operating revenues of	$9,263,386
was more than offset by a reduction in operating expenses of	13,620,194
Resulting in an increase in net revenue of	$4,356,808

Transportation expenses decreased $4,860,803, or 5·57 per cent., and consumed 34·81 cents of each dollar earned in 1928, compared with 35·47 cents in 1927. This was accomplished notwithstanding the reduction in gross revenues and increases in rates of pay granted through arbitration in 1928 and increases granted in 1927, not fully reflected in that year.

The operating expense ratio in 1928 was 72·86 per cent., as compared with 75·65 per cent. in 1927.

The property has been well maintained and was in good physical condition at the end of the year.

The Management commends the Baltimore and Ohio service to the shareholders and through them to the general public, and solicits their co-operation towards securing a greater proportion of the business moving to and from the territory which it serves. The assistance given by the shareholders in the past has been most helpful, and it is hoped this co-operation will be continued and extended where opportunity may offer.

DANIEL WILLARD, President.

THE MONEY MARKET.

At the beginning of the week the market was feeling extremely nervous as to the outlook regarding bank rate and the American exchange, and by Tuesday market rate had firmed up to $5\frac{3}{8}$-$\frac{7}{16}$ per cent., or only $\frac{1}{16}$ per cent. below bank rate. The American exchange at that time was weak, and it was feared that the balance of the new gold on offer on Tuesday could be taken at a slight profit

by American buyers. *Fortunately*, on Tuesday, the pound improved sharply to $4.85\frac{3}{8}$, and the bank was consequently able to secure £221,000 of gold at a price of 84s. $10\frac{3}{4}$d., or $\frac{1}{8}$d. below the price it had to pay last week. On Wednesday the pound underwent a further improvement to $4.85\frac{7}{16}$-$\frac{1}{2}$.

* * * *

These developments have for the moment removed all fears of further gold losses to America, and the market consequently became much more cheerful. Three months bills on Wednesday could only be bought with difficulty at $5\frac{3}{8}$ per cent., while the gilt-edged market also presented a firmer tone. Market opinion once more inclined to the view that a $6\frac{1}{2}$ per cent. bank rate need no longer be feared, though these hopes are qualified by the knowledge that the period of anxiety is not yet over. For this reason the general policy is still one of caution, and dealings in bills have shrunk to a comparatively small volume. Despite the recent improvement, the outlook is still obscure, and it is feared that the recent opportune improvements in sterling have been largely caused by good fortune, which cannot be relied upon in the future. No evidence can be found in support of the suggestion that operations by the Banque de France have been supporting the pound against the dollar, and the chief hope of relief as a result of Continental developments is that gold shipments from Germany may ease the strain on the sterling-dollar exchange. It is possible that rates in Berlin and Amsterdam will shortly have to be raised. This will check gold shipments from Germany, but inasmuch as increases in these rates will be a reflection of last month's increase in London, and so will reinforce London against New York, they will assist rather than impede the efforts now being made to maintain the present situation.

* * * *

The Bank return shows an increase of £3,651,000 in public deposits, which is balanced mainly by an increase of £2,138,000 in discount and advances. As the reserve has only risen by £324,000, the proportion has fallen by $1\frac{3}{32}$ per cent.

	Mar. 14, 1929.	Mar. 7, 1929.	Feb. 28, 1929.	Feb. 21, 1929.	Previous Rate and Date Changed.

The monthly statement of the nine English clearing banks reveals a decline of £32 million in deposits between January and February, which is possibly due to the influx of revenue. The recent rapid expansion in acceptances has also come to an end.

	Oct., 1928.	Nov., 1928.	Dec., 1928.	Jan., 1929.	Feb., 1929.
Capital and reserves	130·8	130·8	130·8	130·8	130·8

Total assets	2,065·9	2,083·1	2,154·5	2,172·8	2,139·0

Bank "cash" has fallen from £269 to £255 million, or by £14 million. As regards other assets, the market has lost £11.7 million of call money, while discounts are lower by £14 million. It must be remembered that between the New Year and the end of February the volume of Treasury bills outstanding fell by £50 million, so that the Bank figures show that they are still taking their share in holding and financing outstanding commercial bills. The same applies to the assistance they are giving to borrowers generally, for advances have risen by a further £11 million. Taken as a whole the February banking figures confirm the view that the rise in Bank rate was not accompanied by a definite restriction of credit.

NEW YORK MARKETS.

Our New York correspondent cables:—Sentiment in the share market is helped by easy money, incidental on banking preparations for the tax date and temporary Treasury borrowing to meet interest and maturing notes; a firmer tone is anticipated late next week. No important gold shipments are expected following the current arrivals of about $12 million from Germany and Argentina. Tax payments are likely to exceed last year's totals. The week's reduction in discounts and the rise in the Federal Reserve ratio explain the failure to change the discount rate. The New York ratio is 80.6, that of the system 70.7, with the total Reserve credit down by $43 million here and by $46 million for the system. Local banks cut brokers' loans by $117 million, but out-town banks and corporations made up all but $20 million of the difference.

THE STOCK MARKETS.

The improved sentiment regarding the monetary outlook produced a better tone in the stock markets, after the week had opened in dull conditions. Gilt-edged recovered sharply, home railways were better, and a firmer tone obtained for investment securities generally, though there was no marked accession of business in industrials. Rubber shares again attracted no more than a medium of interest, and the downward trend of tea share values continued. Oils were more active after a dull start. Kaffirs were sparsely dealt in, but a moderate activity centred round particular Rhodesian counters, while copper shares were active on a noteworthy mid-week increase in the price of the metal.

THE COMMODITY MARKETS.

The recent strength of the coal market has been maintained in most districts, and the outlook is *favourable*. Pig iron is quiet, but there is a fairly steady home demand, whilst the steel position is more satisfactory than for some time, Continental competition having practically ceased. Liverpool raw cotton prices have advanced, and this has caused some nervousness in Manchester. There have, however, been fairly steady purchases of piece-goods. Wool prices are now more reasonable, so that more business has been done in tops and yarns, and Bradford is also experiencing the usual seasonal demand for piece-goods. Raw jute is fluctuating according to the weather prospects for the new crop, but yarns and piece-goods, though quiet, are steady. Wheat prices are firm.

FOREIGN EXCHANGES.

Rather more activity was evident in the Foreign Exchange market last week. Measures taken to discourage the holding of dollars in New York by foreign banks, and the anticipation in some quarters of a rise in the Bank rate here caused a recovery of the New York exchange after early weakness; but when it was announced on Thursday that no change had been made, sterling reacted. The rate on Thursday was $4.85\frac{5}{16}$, after touching $4.85\frac{9}{16}$. Montreal rose two points to 4.90. Paris was a shade better at 124.25. After being 92.72, Milan gained 6 points at 92.60 as a result of raising the Bank rate to 7 per cent. The peseta again fluctuated widely, but steadied later and finished at 32.30 after reaching 33.18. Lisbon improved to $108\frac{1}{4}$. Amsterdam was erratic, but practically unchanged on balance at $12.11\frac{7}{8}$, after sinking to $12.12\frac{3}{8}$. Geneva touched $25.24\frac{1}{2}$, but recovered. Stockholm lost a point at 18.20. Of the South American exchanges, Montevideo again lost a little at $50\frac{1}{4}$d. and the premium for 90 days Lima on London fell to $19\frac{1}{2}$ per cent. No change occurred in the Far East, after some hesitation in the yen. The silver market was quiet and prices remained practically unchanged. Hong Kong was unmoved at 2s. $0\frac{1}{8}$d. but Shanghai lost $\frac{1}{4}$d. at $26\frac{1}{4}$d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Foreign and Colonial Corporation, General Electric, Marconi International Marine Communications, Joseph Nathan, Vine Products, B. Morris and Sons, and Walkers, Parker.

TRADE TROUBLES AND REMEDIES.

To an extent rarely, if ever, paralleled in the past, the columns of the daily Press have been occupied this week by summaries of documents dealing, from one angle or another, with the single problem of unemployment. On Monday the Balfour Committee on Industry and Trade concluded its four years' work with the issue of its Final Report*; on Tuesday came an Interim Joint Report on Unemployment from the Melchett-Turner Conference; on Wednesday there was published the promised explanation† of the plans whereby Mr Lloyd George, if returned to power, would implement his recent pledge to reduce unemployment to normal proportions within one year. Taken together, these three publications form an impressive addition to the growing list of theses on a question whose gravity needs little emphasis. Viewed in relation to each other, they provide an interesting indication of the reactions created by the problem on different minds.

The Final Report of Sir Arthur Balfour's Committee, supplemented by the six volumes of Interim Reports previously issued, represents the results not simply of an inquiry into causes of and remedies for unemployment, but of an attempt, backed with the authority of the Government, at a national stock-taking. At the same time, though the Committee's task was to survey and report on "the conditions and prospects of British Industry and Commerce, with special reference to the export trade," the Report points out that the problems of production and trade are but the problems of employment and unemployment viewed from a different angle, and that, in seeking means to ensure "the fullest participation of British trade in the markets of the world and the improvement of the productive capacity and efficiency of British industry," the Committee's "ultimate object" was necessarily "to ensure sufficient and continuous employment," so that the underlying question of increasing the amount of available paid work "runs like a thread" through the whole of their findings.

In diagnosing the causes of the severe under-employment from which the country has suffered consistently for eight years, the Committee has reached conclusions which are, in the main, re-echoed by the Melchett-Turner Conference, and which should command general agreement. The growing tendency towards economic nationalism, the industrialisation of agricultural countries, the impoverishment and loss of purchasing power caused by the war and the collapse of currencies, the increase of tariffs and trade barriers—these and other factors have combined to restrict British trade in overseas markets. In addition, British industry has not yet fully succeeded in adapting itself to the needs of a world economy thus radically altered. In medical terms, we are suffering from an industrial "disfunctioning," whose visible symptoms are to be found in unemployment which threatens to become chronic in the basic industries normally providing occupation for a large proportion of the working population.

It is only when the doctors proceed to recommend treatment for the disease that divergence of opinion begins to appear. The Balfour Report—leaving out of account for the moment its appended Memorandum of Reservations—may be said to represent non-politically the school of economic "sound conservatism." Having recorded its inability to discover a "single sovereign specific for all the difficulties" of British industry (a wholly excusable failure, be it said), the Committee admits that in its seven-volume survey it has done no more than describe facts and make "certain recommendations, some giving rise to practical action, others deprecating forms of action which we believe to be harmful. The net result is a multiplicity of findings, some positive and some negative." It is difficult to summarise such findings or to disentangle from their multiplicity a single central idea. The truth is certainly emphasised that the country can only buy its necessary food and raw materials by exporting British products and services; that the maintenance of a high standard of living is dependent upon the export trade; and that an increase in the export of capital is necessary to stimulate our commodity exports. On the controversial issue of Protection the Committee disagreed, a minority demanding the repeal of the McKenna and "Safeguarding" duties, while the majority considered the results to be "inconclusive," but recommended that a time limit for such duties should be set, with reconsideration of the industry's claims one year before the duty's expiration. In general, however, the salient impression left by the perusal of a great medley of findings is that the majority of the Committee were, above all, reluctant to depart further than could be helped from the principle of *laisser faire*—a reluctance which went far to leading the Committee to an over-complacent view of the situation and prospects. Having stated that "the only real cure for unemployment is the expansion of production and trade," the Report ends, it is true, with a plea for the thorough re-conditioning of British industry, accompanied by the recognition of the fact that this presupposes an active will to reorganise and the power to reorganise, based on adequate means of access to the necessary financial and technical resources. The necessity for drastic processes of financial reconstruction and rationalisation is frankly admitted. On the other hand, "we are profoundly convinced that the first steps . . . must come from the industries themselves. We do not believe that any of our principle basic industries have been so weakened . . . as not to have the power within themselves to take the first measures towards their own regeneration." The functions of the State should be limited to "general economic policy" calculated to "ease the difficulties of the transition."

Given this viewpoint, it is not surprising that the forms of action "deprecated" in the Report should somewhat overshadow the constructive recommendations. Collective purchase of raw materials is considered to offer no advantages; any departure from the gold standard is to be condemned; the financial needs of industry are for the most part adequately met by the banks; long-term credits should be provided by private enterprise, and the Government's export credit scheme should be wound up in 1931. Finally, though the fact is faced that rationalisation "in its early stages may involve an actual increase in the number wholly unemployed," the Report comments discouragingly on the possibility of providing publicly (save within very narrow limits) productive work to occupy those whom reorganisation displaces from employment, but whom "we may be confident that in the long run the industries which have regained their prosperity will be more than able to re-absorb."

The complacency of such a long view as this is small comfort to those who may be faced with several years' unemployment while the transition is taking place, and the inclusion of such minor enthusiasms as warm commendation for fuel research, study of scientific marketing, and joint consultation between employers and employed does not save the Report—for all that much of its caution is wise and its garnered data of high value—from being in sum a rather insipid pronouncement. For proposals of greater constructive vigour, bearing more directly on the immediate needs of the situation, we must turn, not indeed to the Minority Memorandum appended to the Balfour Report (a Memorandum embodying a mere statement *in vacuo* of Labour political doctrine), but to the Melchett-Turner Joint Report, and Mr Lloyd George's pamphlet.

Of these two documents, the first has a special interest in that it embodies the views, not merely of a group of progressive employers, but of representatives of the General Council of the T.U.C. At one with the Balfour Committee in emphasising the need for industrial "rationalisation," the Joint Report recognises that the existing degree of unemployment—apart from the temporary aggravation likely to be caused by "long run" remedies of economy in labour—calls for other measures than mere industrial "self-help." To mitigate the hardship of displacements, it is suggested that, *in so far as circumstances* allow, industries should create Labour reserve funds out of profits to assist displaced workers. The State, however, is allotted a large constructive part to play: "a national programme should be evolved and put into operation without delay" [illegible]

* Cmd. 3282. H.M. Stationery Office. Price 5s. 6d. net.

† "We can Conquer Unemployment." (London) Cassell & Co., Ltd. 6d. net.

order to place " national credit behind trade depression," trade facilities should be reinstituted under more liberal conditions, and export credits further extended; a State development fund should be created to finance " important national schemes "; employment of younger men should be stimulated by encouraging workers over 65 to retire by means of augmented pensions; consideration should be given to the question of raising the school leaving age; funds for assisting emigration should be largely increased and found by loan instead of out of revenue; a Crown Colonies development committee should stimulate the placing of orders for plant in Britain. In addition, apart from relief measures in the mining areas, the Conference urges that work schemes, such as the construction of roads, bridges and harbours, should be further extended.

As an interim statement, this Joint Report shows both courage and imagination on the part of its signatories. The proposals clearly need further elaboration in detail, and, in particular, with regard to " work schemes " and the *rôle* to be assigned to the " State development fund " the Conference—possibly by design—has been guilty of a certain vagueness. This criticism at least can no longer be levelled at Mr Lloyd George. His pamphlet, whose contents we review in greater detail on a later page of this issue, is confined deliberately to an elaboration of an immediate *ad hoc* policy of national development, whose essential feature is the proposition that " in the present stagnation the Government must supply that initiative which will help to set going a great progressive movement." In other words, *pari passu* with reorganisation of individual industries by the joint efforts of employers and employed, and as a condition precedent to the full success of such reorganisation, there must be a mobilisation of employment by the State.

From the largely negative attitude of the Balfour Committee at one end of the scale, to the almost aggressively positive proposals of " We Can Conquer Unemployment " at the other, the quest for a solution of the unemployment problem traverses a wide range of theory, involving highly controversial issues. For our part, we are conscious of the limits which must be set to extensions of the State's sphere of activity in industry. Yet can the community, as such, afford to neglect any method which holds out the promise of alleviating a social evil whose moral and physical effects, unchecked, will be a disastrous heritage for the future? For good or ill, the unemployment question is bound to be the cardinal issue at the General Election. Those who have the country's best interests at heart, and who see obvious dangers in hasty short-cuts to a solution of our industrial troubles, will do well to realise that less is likely to be lost by a certain boldness in attempting to deal with an intractable situation than by a caution which the electorate will condemn as callousness and history assess as lack of statesmanship and vision.

THE INTERNATIONAL OUTLOOK.

For the past ten years two incompatible systems of international relations have been in competition for mastery; and the same statesmen in the same countries have been promoting both systems with even-handed inconsistency. With one hand they have been preparing for perpetual peace, with the other hand for periodical war. This is a situation which has occurred before, on the morrow of great wars in the past; and usually it has ended in an eclipse of the vision of peace as soon as the memory of the last war has had the acute edge of its horror blunted by the passage of years. Thereafter, the system of preparedness for war has usually gained the upper hand until it has duly resulted in war again. History seems to show that, in previous cases, the interval between the end of one great war and the beginning of the next crop of wars has been one of about thirty years. On this analogy, we in our generation are now entering on the decisive middle decade, in which it will become clear whether the Covenant of the League of Nations and the Locarno Agreements and the Kellogg Pact are mere transitory reactions to the Great War of 1914-18, or whether they are what we hope: the firm foundations of a system of universal and enduring peace. At this moment, we cannot tell. We can only see that the inconsistency between the two series of diplomatic activities becomes more glaring. The French and British Governments negotiate the " naval compromise " with one another while they are negotiating the Kellogg Pact with the United States; the Senate at Washington votes the Kellogg Pact and the cruiser Bill in rapid succession. This simultaneous construction of the peace system and the war system cannot go on indefinitely—sooner or later one of them is bound to oust the other and take the whole field for itself. Ten years hence we shall know which is going to prevail; but we are still in the dark to-day. We simply have the feeling that the wheel has reached a dead point, from which a comparatively small impulsion might suffice to set it moving either forward or backward.

This international situation lends exceptional interest to those changes of *régime* in a number of leading countries which either have just occurred or may possibly occur in the near future. In the United States, President Coolidge has just been succeeded by President Hoover; in Great Britain, a general election is to take place less than three months hence; in France, Monsieur Poincaré may succumb to the parties of the left; in Germany, Herr Stresemann is threatened by the parties of the right. In these changes, or possible changes, there is certainly sufficient potential energy to set the wheel of international affairs moving decisively towards peace or towards war during this fateful decade on which we are entering now. In some or all of these four great countries, will new men bring new measures? If we cannot answer that question at present, we can at any rate foresee what the main international issues confronting the American, British, French and German Governments are going to be in the immediate future.

President Hoover has already stated the main international issue which confronts his Administration in a passage in his inaugural address, which we quoted last week. He has to bring into being the practical arrangements which are necessary in order to make the Kellogg Pact workable as far as the United States is concerned. For it is evident that a pledge to renounce the use of war as an instrument of national policy cannot be left in the air. National policy will remain a living force so long as there is a national organisation and a national consciousness; and when the old, disastrous instrument for giving effect to it has been renounced, new instruments of a different nature will have to be found if the pledge is to be carried out. Mr Hoover himself has expressed it, the " full realisation " of the Kellogg Pact " implies a greater and greater perfection in the instrumentalities for the pacific settlement of controversies between the nations." The new Administration has lost no time in making a fresh attempt to negotiate the adhesion of the United States to the statute of the Permanent International Court; and it may be expected to be active in extending the network of arbitration and conciliation treaties between the United States and other countries individually—a line of approach towards permanent peace in which the State Department at Washington has always been in the van. These are the obvious positive measures for the United States to take now, and Mr Hoover is likely to push them forward with energy and vision. In this field there is much for American statesmanship to do, since the United States is not a party to those already existing arrangements for implementing the Kellogg Pact which are provided in the League Covenant. But perhaps the most difficult problem which Mr Hoover will have to solve is presented by this very fact that the League of Nations is the organ through which the Kellogg Pact will be implemented by the majority of the States which have become parties to it; for though the United States is not a member of the League, the League machinery cannot be employed effectively for the implementation of the Kellogg Pact unless the United States refrains from placing obstacles in the way of it. The problem for American diplomacy during Mr Hoover's Administration will be to find some way of assuring League members a free hand for implementing the Kellogg Pact through the League machinery without committing the United States to active obligations towards the League which might be construed as a first instalment of membership.

In concrete terms, this means the achievement of an understanding between the United States and Great Britain regarding the rules of international police operations at sea in a public war—that is, in a war waged in order to put restraint upon a party to the Kellogg Pact which has broken its pledge. It is to be hoped, of course, that a would-be pledge-breaker may be restrained from crossing the Rubicon by the pacific use of organised international pressure through the channels of diplomacy and public opinion. If, however, a State does actually resort to war as an instrument of national policy in violation of its word, it is essential that it should be prevented from using the instrument successfully for this unlawful end; and prevention might require the waging of a public war against the private war-maker as an instrument of international police. If the private war-maker were a member of the League, the duty of waging the public war would devolve upon other League members, including Great Britain; but the use of British sea-power in these circumstances presupposes a previous agreement between Great Britain and the principal party to the Kellogg Pact which is not also a member of the League; that is, the United States.

This brings us face to face with the main international issue which will confront whatever Ministry the General Election brings into office in this country. To what use, in future, are we going to put the British Navy? For two centuries before we became parties to the League Covenant and to the Kellogg Pact, the British Navy was used for making private war an instrument of British national policy, and during those centuries it was the most effective national weapon in the world. In pledging ourselves to a system of organised permanent international peace, have we clearly and definitively accepted the implication that henceforth the British Navy must be used only for the larger purpose of making public war an instrument of international police? Until we can honestly say to ourselves and make it evident to others that we have changed our naval policy in this way, there can be no Anglo-American understanding, and, therefore, no comprehensive arrangements for implementing the Kellogg Pact. The change of policy which is required of us is very great, and very difficult to make, because it means departure from a tradition which has been consecrated by sentiment and success. Yet unless we make it, and make it without mental reservations, we shall jeopardise the existence of the British Empire as well as the peace of the world. There, indeed, is an international issue large enough to occupy the next British Government's mind.

In France, Monsieur Poincaré's successors will have to face a somewhat similar issue in the matter of armaments on land. During the past ten years France, on the basis of the four European peace-treaties, has built up for herself a system of national security based on the command of superior military force. She has kept her late Continental adversaries more or less isolated while she has surrounded herself with Continental allies. She has kept her late adversaries disarmed, while she has armed herself and her allies as no nations have ever been armed before. Yet, under the conditions of the modern world, such security is as precarious as it is momentarily effective. For in the modern world, *la guerre* (the French themselves first said it) has become *la guerre totale*—the mobilisation of the sum total of the belligerent people's energies and resources; and in this same modern world, with the increasing pace of scientific invention, there is no longer any stable military currency in which energies and resources can be invested. Invest in " man-power " and in heavy artillery to-day, and to-morrow you will find that their military value has been depreciated to vanishing point by poison gas and aircraft; invest in aircraft, and you may conceivably find it depreciated to an equal degree by the unsuspected inventions that the day after to-morrow will bring forth. Under modern conditions the only security in which national energies and resources can be invested without the certainty of immediate depreciation is the organisation of permanent peace. The task of Monsieur Poincaré's successors will be to " convert " their present national investment from war-security to peace-security before their existing war-stock loses its value.

As for Herr Stresemann's possible successors in Germany, we hope that he will have none; for, in the international situation which we have rapidly reviewed, the policy of patience is the policy in which Germany ought to persevere; and there is no German statesman so capable as Herr Stresemann himself of carrying that policy through, with a stout heart, in the reasonable hope that the long frost may end at last in a thaw.

BUDGET PROSPECTS.

There seemed a while ago to be two reasons why this year's Budget should be looked forward to with more than usual interest by the country as a whole. The taxpayer had allowed himself to argue that a Government on the eve of an appeal to the country would strain every nerve to produce a popular Budget; while the student of politics had felt that Mr Churchill was *not* the man to lose what may be his last chance for the time being of stamping his name upon the financial history of the country. But as Budget day draws nearer it is seen more and more clearly that hard financial circumstances are such as to make it very difficult for the Chancellor to do anything that will be either very popular or very dramatic.

Although there is scarcely a fortnight to go before the end of the financial year, surprises are still possible, and forecasts of the outcome of the present year's accounts, as of next year's proposals, cannot be more than tentative. But at least it is possible to survey such information as is available, and to form some opinion as to what it will be practicable for the Chancellor to do. We cannot tell which way the cat is going to jump, but we can guess what sort of take-off it will have.

Let us glance first at the state of the national ordinary accounts at March 9th last, and compare the position with that recorded at the corresponding time last year.

EXCHEQUER RECEIPTS AND EXPENDITURE.

	Apr. 1, 1927, to Mar. 10, 1928.	Apr. 1, 1927, to Mar. 31, 1928.	Apr. 1, 1928, to Mar. 9, 1929.	Revised Estimates, 1928–29.
	£	£	£	£
I. *Receipts:*				
Inland Revenue	369,285,000	418,083,000	349,475,000	396,250,000
Customs and Excise	234,733,000	257,880,000	238,062,000	261,405,000
Other ordinary revenue	90,494,795	97,455,000	87,328,216	95,248,000
Total ordinary revenue	694,512,795	773,418,000	674,865,216	752,903,000
II. *Expenditure:*				
Interest and Management of National Debt	308,873,283	313,816,000	307,453,317	304,000,000
Total ordinary expenditure	653,146,341	697,119,000	641,044,807	678,952,000
III. *Self-Balancing Items:*				
Post Office	52,050,000	56,800,000	52,200,000	57,314,000
Road Fund	19,212,015	19,666,000	21,130,933	21,300,000

It will be seen that up to March 9th roughly £675 million had come into the Exchequer from ordinary revenue; to this we must add a day's revenue, £2 million odd, to make the periods exactly comparable, and subtract £13 million, the proceeds of realising the currency note reserve, which is the chief item under the head "special receipts." Then, raising this figure in the proportion of 773 to 695, we see that on the basis of last year's events the Chancellor can reasonably expect an ordinary income of £739, plus the £13 million already referred to, which is only £1 million short of his revised estimate of £753 million. Treating expenditure in the same way, we can forecast an outgo on ordinary account of £684 million, which exceeds estimates by £5 million. To the foregoing expenditure we must add sinking fund payments, for which the Budget provided £65 million, on account of which only £52 million have been paid up to date, as compared with £63 million a year ago. Some allowance must be made for the increased yield of taxes which has been shown in the last few weeks, but it would be unwise to put it at more than £3 million, so that if Mr Churchill keeps his Budget promise with regard to sinking fund we can expect, on the whole, a deficiency on revised estimates which may be as high as £3 million, arising chiefly from over-assessment of the yield of income and super taxes, and from considerable under-estimation of the cost of national debt service.

Mr Churchill budgeted for a surplus of £14½ million, which was reduced by over £3 million through concessions made during the passage of the Finance Bill, and by £2½ million of supplementary estimates already included in the quoted estimate of £679 million. On this basis of calculation, it will be further reduced to £6½ million. No peculiar sources of income other than those already allowed for are apparent, although there is always the bare possibility of some minor windfall. To this surplus must be added the £4 million brought forward from 1927-28. The following are the estimates already issued:—

	1928-29	1929-300
Army	41,050,000	40,545,000
Navy	57,300,000	55,865,000
Air Force	16,250,000	16,200,000
Civil, Revenue and Post Office (gross)	292,894,863	308,563,759
	407,494,863	421,173,759

Mr Churchill has therefore to provide, for supply services, £13,678,896 more than he budgeted for in 1928. De-rating, of course, is responsible for most of the increase.

The Chancellor has already stated, in his Budget speech of last year, his intention of applying £355 million to national debt service, that amount being £14 million less than was provided for the current year, but there is no expectation of any large change in the remaining Consolidated Fund vote. The apparent result is a small reduction of expenditure, but as the total includes the gross Post Office estimate, the increase of £796,000 in which can be ascribed to the natural growth of the service and is therefore self-balancing, the net result is a diminution of expenditure by over a million pounds. On the basis of present taxation yield as estimated above this should produce a surplus of between £9,500,000 and £10,000,000. Mr Churchill will also have an accumulated surplus of some £11 million, but on the other hand he can count on no such windfall as the £13.2 million which he received this year from the currency notes reserve, and there are Supplementary Estimates to be thought of. Next year, moreover, the cost of de-rating will be approximately doubled, and £8 million with which to face a prospective charge of £30 million is scarcely the great "mass of manœuvre" which Mr Churchill promised to mobilise to carry out his schemes. Yet so soon before a General Election he must think twice about any augmentation of the tax burden. The circumstances are such, indeed, that one may almost pardon the cynic who suggests that Mr Churchill may ride for a fall, relying either on a return to power or on leaving an uncomfortable legacy to his successor.

Two things may be guessed from Mr Churchill's recent pronouncements: that he cannot reduce, though he may attempt to reform, the present taxes on motor vehicles or the petrol duty, and that he is relying on an appreciable increase in the yield of the present staple taxes. In this expectation he is probably not far wrong, since the prospects of trade have improved and he may find it possible to forecast more than the usual rise in receipts from certain imports. The influenza epidemic may have caused a considerably augmented yield of death and estate duties. On the other hand, the dislocation of a General Election diminishes the earning power of the country.

On balance of all considerations one may expect Mr Churchill somehow to elude the necessity for increasing taxation. But is it possible that he can find means to effect a reduction? Sixpence off income tax means over £24 million to the Exchequer, which is more than can possibly be spared, so that we can rule that out of the question. Incidentally, relief in direct taxation in these days is not by any means necessarily an asset at a General Election. The same also applies, probably, to motor vehicle duties and petrol tax, though a few concessions costing a million or so might be valuable to the Government. A penny off the petrol duty would reduce the yield by about £3,500,000. It is among the food, drink and tobacco duties that a Chancellor seeking a popular budget is wont to gambol. Twopence off tea would cost between £2,500,000 and £3,000,000, a halfpenny off sugar about the same, a halfpenny an ounce off tobacco about £4 million. It is possible that Mr Churchill, with an eye to the hustings, may elect any one of these remissions. A halfpenny a pint off beer, costing £10 million, would be altogether too expensive, and a poor bait to the women's vote. The Betting Duty has been the most disappointing in yield of any of our taxes, and while Mr Churchill is unlikely to retrace his steps, he is likely to reform the provision under which the duty is levied. He will be bound to insert in the Finance Act clauses to upset the recent judicial decision in the House of Lords to the effect that totalisators are not liable to betting duty, and it is possible that he may face the problem of the street bookmaker. We need not expect humbug from Mr Churchill, and no party is anxious visibly to court the aid of the bookmaking fraternity.

It seems, then, a reasonable deduction that no big changes will be found when the Budget is opened. We are not inclined to envy Mr Churchill his dual task of satisfying the electorate and of providing full and sufficient finance for the far-reaching de-rating measure, which has so substantially mortgaged his future revenue. His ingenuity will be tested to the uttermost; but let us not forget that it has come successfully through even more severe tests in the past.

THE WORK OF THE LEAGUE COUNCIL.

(BY A GENEVA CORRESPONDENT.)

THE main business of the League of Nations Council which has just concluded was, of course, the general debate on minorities. The report of the Committee of Three Members of the Council, including Sir Austen Chamberlain, will be awaited with close interest, and the crucial discussion will take place when their report is ready, presumably for the next Council meeting in June, which is to take place in Madrid. Meanwhile it is fair to say that there has been a considerable amount of exaggeration regarding the so-called negligence of the Council in this matter, and, while the debate showed perhaps a tendency to throw more weight on the obligations of the minorities towards the States than on the obligations of the States towards the minorities, it would be idle to pretend, after following for some years the continuous stream of cases dealt with by the Council and the controversies which they have involved, that there is any clear ground for the frequent assumption that all the faults, or indeed that more than 50 per cent. of the faults, are on the side of the States, still less on the side of the League. The linking up of the minorities question—as Dr Stresemann did, though with considerable tact—with Article 19 of the Covenant, which deals vaguely with the possible revision of inapplicable treaties, certainly does not indicate on the part of the minorities a very firm determination to throw themselves into the lives of the States to which they are attached. It looks more like a form of more or less concealed irridentism. It is equally true to say that the minorities are too often made the sport of political interests between Governments, and it is doubtful whether a cautious variation of League procedure—which is the most that can be expected—will make any substantial difference, unless the two parties directly concerned—that is to say, the States and the minorities within their borders—change the whole spirit in which they approach the problem.

Another subject of general importance and interest was the resolution adopted on the proposal of Sir Austen Chamberlain concerned the note, addressed by the United States Government to the signatories of the Statute of the Permanent Court of International Justice and also to the League, relating to America's membership of the Court. In this note the American Government suggested that a further informal exchange of views ought to lead to an agreement satisfactory to all parties, and the Council decided to request the Committee of Jurists, now in session for the purpose of considering any possible amendment to the Court statute, to consider the present situation with regard to the accession of the United States and to make any suggestions for facilitating such accession. This Committee includes Mr Elihu Root, the famous American jurist, who was on the committee which drew up the original statute of the Court, and the main point at issue is to find some formula which will meet the American attitude with regard to advisory opinions of the Court.

The American Government originally laid down as one of its reservations that the Court should give no advisory opinion on any questions upon which the United States had or claimed an interest without America's consent. This was the stumbling block at the conference of States signatory to the Court statute, and it is on this point that America now suggests that some other satisfactory formula might be found. It is, therefore, within the competence of the Committee now sitting to discover and recommend a formula which will permit of America joining the Court. It is a matter of general agreement that America should be put in no inferior position by reason of her non-membership of the League, but it is also equally important that America should not be given a privileged position, more especially as the power of the Council (or Assembly) to ask for advisory opinions is one of the elements of increasing value in the settlement of international disputes. The Committee of Jurists is expected to find a solution, and this optimism is based on the fact that Mr Root is a member of it. He has already put forward a practical plan. Every individual member of the Council associated himself with the hopes expressed by Sir Austen Chamberlain that a successful solution would be found, and it was decided to send the minutes of the discussion to the United States Government.

As usual, the Council considered the work done by the League through its various committees, and took a considerable number of decisions. One of the more important of these related to a report from the Financial Committee on financial assistance for States victims of aggression. It takes the form of a draft convention, upon which the Committee has been at work for nearly three years. Its object is to provide machinery by which the Council of the League may authorise financial assistance to members involved in war or threat of war; the aim is to aid a member in favour of whom the League has decided to enforce the convention, to reinforce its credit by the guarantee of all other members. The convention contemplates that a loan would be obtained in the ordinary way in the money market, and that the Government concerned should itself contract such a loan on the general security of its revenues. It would be helped in so doing by the moral and material support of an international guarantee provided by the other signatories of the convention. This guarantee would cover the full service of the loan. The advantage to the guaranteed Government would be the moral support of the League and the consequent classification of the loan as one issued under the auspices of the League; the market value of a guarantee at a moment when the borrower's credit was weak; the signatories' promise of access to their markets, etc. The guarantors would only become liable in the contingency that the borrowing Government itself was unable to meet its loan charges.

In order to limit this contingent liability the guarantors are protected by a maximum limit on the total annual service guaranteed; a limit of the maximum annual liability; the primary responsibility of the borrowing Government; the provision for a reserve, and the requirement of a unanimous decision of the Council before a guarantee is given in any individual case. The draft convention is to be submitted to all States Members of the League in preparation for the examination by the Assembly at its next session. The plan goes far beyond the limits of a purely financial technical question, as it offers guarantees for security, increases considerably the choice of measures open to the Council in times of crisis, and is an additional deterrent to any country meditating attack on another. Sir Austen Chamberlain gave support to the general principle, and went out of his way to draw attention to the fact that the British Government was one of the first to do so when the proposal was initiated several years ago by Finland. Clearly, one of the essential requirements for the successful adoption of such a scheme is the co-operation of the greatest possible number of countries.

The Council decided to forward to all States, recommending them to their attention, the conclusions of the Economic Committee on the most-favoured-nation treatment in Customs matters. Numerous decisions were taken on Mandates, Health and other subjects, and from many aspects the March Council meeting has been useful and important.

LINEN AND FLAX.

(BY AN IRISH CORRESPONDENT.)

The continuance of depression in the linen industry of Northern Ireland has given rise to a demand for "Safeguarding," which has recently been sponsored by the Northern Ireland Premier. In the following article an Irish correspondent shows the extent to which the recent troubles of the industry have been due to the high price of flax—a condition which a linen import duty could not alleviate.

As regards the supply of flax, it is undoubted that the linen industry has been adversely affected by the high prices which have been ruling during the past year. The predominant factor in connection with the recent rise in the price of flax has been the reduction in the supply from Russia and the Russian Secession States. The following table gives the quantity, value and average price per ton of flax imported into the United Kingdom during the past three years, and shows a decline of

practically 50 per cent. in the 1928 supply of flax from the Baltic States as compared with 1926:—

Country.	1926.			1927.			1928.		
	Quantity.	Value.	Av. price per ton.	Quantity.	Value.	Av. price per ton.	Quantity.	Value.	Av. price per ton.
From:	Tons.	£	£	Tons.	£	£	Tons.	£	£
Russia ...	1,779	129,700	72·9	799	58,738	73·5	679	63,320	93·3
Estonia ...	5,091	343,062	67·4	3,044	233,344	76·7	1,930	177,827	92·1
Latvia ...	16,526	1,084,841	65·6	12,729	827,511	65·0	9,303	854,038	91·8
Netherlands ...	1,886	166,291	88·2	2,432	199,494	82·0	1,654	181,800	109·9
Belgium...	10,817	1,415,057	130·8	16,397	1,501,026	91·5	12,303	1,346,975	109·5
Other Countries	2,802	194,659	69·5	4,705	367,972	78·2	3,201	274,909	85·9
Total ...	38,901	3,333,610	85·7	40,106	3,188,085	79·5	29,070	2,898,869	99·7

There was also a decrease from 7,599 tons in 1927 to 4,319 tons in 1928 in the imports of flax tow or cordilla into the United Kingdom.

This reduction in imports of flax from abroad came at a time when Irish supplies of flax were exceptionally low. The Northern Ireland flax crop in 1927 amounted to less than five thousand tons, and, with the exception of the years 1921 and 1922, was the smallest on record. Prices rose to over 16s. per stone—fully 100 per cent. above the pre-war level—and, as a consequence, there was in 1928 an increase from 26,334 acres to 37,248 acres in the area under flax. It may be doubted whether this area will be maintained in 1929, despite the growing demand on the part of the linen industry that an increased area of flax should be sown in Ireland. Although there has been an appreciable decline in acreage since before the war—the area under flax in Ireland in the years 1909-13 averaged 55,014 acres, as compared with 43,322 acres in 1924-28—it appears that the proportion of Irish flax to the total flax supply of the linen industry is almost the same as in pre-war years.*

Years.	Total net supply of flax.†	Irish production.	Irish production as % of total.
1912–13	55,408 tons	13,945 tons	25·2 per cent.
1926–27	27,527 ,,	6,575 ,,	23·9 ,,

† Including imported flax tow or cordilla.

Prices for the 1928 flax crop in Northern Ireland have been substantially lower than those realised for the 1927 crop. The average price for the last quarter of 1928 was 11s. 4½d. per stone, as compared with 15s. 1d. per stone in the corresponding period of 1927. At the same time, the 1928 price was still 49 per cent. above the 1911-13 average, and flax shows a higher percentage increase above the pre-war average than any other crop sold off Ulster farms. The extremely wide fluctuations in the price of flax which have been experienced during recent years have, however, interfered with any considerable extension of the area under this crop. The following table shows the average price of flax in the last quarter of each of the past five years:—

Last Quarter of	1924.	1925.	1926.	1927.	1928.
Average price of flax per stone	19/8½	11/4½	8/3	15/1	11/4½

The period of the year at which the price obtained for the previous year's crop is likely to exercise the greatest influence upon farmers in determining the area they will sow in the coming season is during March and April, yet in each of the past eight years—with the exceptions of 1924 and 1927—the price has tended to fall in these months.

As producer of approximately only one-quarter of the flax used in the Irish linen industry, the Irish farmer finds that the price he obtains for his flax is determined by the price at which Continental flax can be obtained by the spinners. He may even discover—as was his experience earlier this winter—that Russian flax is quoted at a higher level than Irish flax, although admittedly Irish flax is of superior quality to Russian. Until some of the speculative features of flax growing in Ireland have been removed a permanent extension of the area devoted to this crop can hardly be looked for.

The question of the provision of an adequate supply of flax seed of high quality is a further problem confronting the industry. At present the bulk of the flax seed sown in Ireland is obtained from Holland or from the Baltic. A considerable amount of research work has been done in an effort to propagate new and higher-yielding strains of flax seed. An improved variety known as "J.W.S." seed has been in existence for a number of years, but up to the present only a small supply of bulk seed has been made available for distribution to farmers, largely owing to the difficulty of saving flax seed in this country. Arrangements have recently been made, however, for the propagation of this seed in Canada, and the Empire Marketing Board has given a grant for this purpose. It is hoped that an adequate supply of "J.W.S." seed will soon be available for distribution to farmers in Ireland, and that a substantial increase in the yield of flax will be obtained. During recent years yields of flax have shown a tendency to fall. To some extent this decline in yields has doubtless been due to the intervention of the war years, when difficulty was experienced in obtaining supplies of reliable seed, but it appears undoubted that one of the most promising ways of increasing the supply of Irish flax is by means of an increase in the yield per acre.

* Based on figures given in the 59th Report of the Flax Supply Association.

GROUP PENSION SCHEMES.

(BY A CORRESPONDENT.)

THE social conscience of every first-class country to-day is fully committed to the idea of pensions or retirement allowances of some kind for all industrial workers who have attained the normal age for superannuation, generally placed at 65. There has been a good deal of experimentation and grouping in attempts to find the best means of accomplishing so desirable an object, and a good deal of financial loss and distress has accompanied the various plans tried by many employers, mutual benefit associations, and other groups before the particular plan upon which in many cases reliance had been placed was found to be unsound.

In Great Britain the pension movement applied to industry was very early adopted, and, in the main, it has worked well so far as the restricted class to which it applies is concerned, but until recently it has seldom been granted to all workers in an industrial enterprise extending from the well-paid managerial staff to the ordinary common labourer. It has been left to the State to supply the means of livelihood in old age for those who have spent their lives in industry, and whose income has never been sufficient to allow them to accumulate even the barest competence.

Meanwhile, as has happened in the case of life assurance, problems have arisen across the Atlantic which have, in the opinion of a great many employers, made it imperative that a more scientific plan for old-age pensions should be worked out. Such plans as had been in effect in the United States and Canada were largely modelled on older English plans, but a few years' experience made it clear that such plans, to be sound and capable of extension to workers of every grade, must be radically revised. This led to studies which have ushered in a new and broader conception of the *rôle* which service pensions should play in industry, and this new conception, with suitable adaptations, is to-day making great strides in the more progressive industries of this country.

It may be said with the utmost assurance that a pension plan, to fulfil the social, economic and industrial purposes for which it is created and to react to the complete satisfaction of both employer and worker, must have one quality and should have another: It must be contractual, and it should be contributory. If all the study which has been given to pension plans had disclosed nothing beyond these two points it would still have been worth while.

Until recently, practically every pension plan in the country has contained these or similar words: "The right is reserved to alter, amend or wholly to withdraw the plan," usually without notice and whenever the judgment of the board find such action necessary. Boards have rightly hesitated to take action which would bind their successors in far distant years with liabilities of incalculable amount. To get away from this liability, and, at the same time, institute a pension plan that would enjoy the workers' confidence, it was obviously necessary that the contract should be made, not between employer and worker, but between employer and some institution whose business it is to make such contracts, in other words, a life assurance company. It is still possible to "alter, amend or withdraw" such plans even when made by a life assurance company, if such action seems advisable, but with the vital difference that such withdrawal does not affect the pension benefits which have already been provided.

Experience has shown that such contractual pensions, if they are to realise all that is hoped from them by employers and by the more intelligent workers who are able to appreciate their benefits, should also be contributory. Something for nothing is seldom properly valued. And, from the larger point of view, while there is an implied obligation on employers in this age to assist their workers towards a means of existence when their active working days are over, there is a greater obligation on the worker to do something for his own old age, and the group pension, as the system is called, provides an unsurpassed means by which the contributions of both may be conserved and mobilised to accomplish the desired end.

The contributory pension has another advantage, and in this respect it typifies, in the opinion of many students of old-age problems, the greatest advance that has been made. The old difficulty in pension plans, even where they were solvent and were paid for, was that workers had to remain practically all their lives in the service of one enterprise to receive the pension. This is not a desirable situation. A worker may often benefit himself, his industry and the nation by a wise change of employers. What has been needed is some means by which such a worker could accumulate pension benefits and not lose them by making such a change. This has been accomplished, to an admirable extent, in the contractual contributory, group pension plan.

Group pensions are really the extension of the group assurance idea to a retirement system. They are annuities written on a mass scale, and such plans should be so written that the worker's rights should be non-forfeitable to the extent, at least, that he should never lose any benefit from contributions out of his wages by reason of changing or losing his employment. In all probability the principle will in time be adopted of making the worker an outright annual gift of the deferred annuity purchased by his own contribution for the year and that of his employer. In some of the plans so far instituted the worker is given the employer's contribution after three years' service. In England a method viewed with favour is to give the pension purchased by the employer's contribution on a 15-year basis, that is, an employee leaving after two years' operation of the plan would be given two-fifteenths of the cash value of the employer's contributions, and so on. In many other plans, of course, the employee only receives back his own contributions unless he remains in the service until the actual pension age, almost invariably 65, is reached.

Where an employee leaves his employment it should be provided that he should have the following options: (a) The right to a return of the sum of his contributions, with or without interest. (b) The right to continue as a contributor—his then past employer's contributions, of course, ceasing. (c) The right to a paid-up annuity, to begin upon his reaching the age for retirement, based upon the amount of his contributions to date, without further contributions.

In the event of a contributing employee's death it should be provided (a) if his annuity has not been begun, then the sum of his contributions should be paid to his beneficiaries, with or without interest, or (b) if his annuity has begun, then the sum of his contributions, less the amount already paid to him, should be paid to his beneficiaries either with or without interest.

In Great Britain many employers have hesitated to investigate the subject of group pensions because of a feeling that a plan which promises so much must of necessity be costly. Many have feared that the cost of pensions in respect of past service of older employees would make the cost of a group pension scheme prohibitive. Happily this is not the case, because means for funding the past service pensions have been worked out in such a manner that the total load has been considered by many British employers and institutions to be well worth the price.

Practically all the group pension plans so far instituted in this country have combined group assurance and group pensions, and experts consider this the ideal method. Workers, especially at the younger ages, appreciate the assurance more than a pension, which to them appears too far off to matter. It may be said in broad terms that under such a plan the large assurance is usually equal to one year's earnings of the worker.

A system of group pensions combined with group assurance will cost the employer between 2½ and 3 per cent. of his pay-roll, including substantial pensions in respect of past service of his workers. To the employee the cost will be the same. This means that for a contribution of not more than 3 per cent. of earnings the employee gets life assurance amounting to his earnings for one year, plus a retirement pension amounting to 1 per cent. of his year's earnings multipled by his years of service. Thus a worker retiring after 40 years' service secures a pension of 40 per cent. of his average annual earnings. Such a scheme is adaptable to cover all employees in the average manufacturing or trading enterprise. In many instances it will be found desirable and at the same time economic to provide a larger pension for the salaried staff. Many schemes applying to salaried staff provide pensions equal to 2 per cent. of salary

NATIONAL BANK OF COMMERCE 1929 IN NEW YORK

multiplied by number of years of service, thus giving the retired employee a pension more in accord with the requirements of the scale of living to which he has been accustomed. For instance, an employee retiring with 40 years of service would receive a pension of 80 per cent. of average salary, 35 years' of service would provide a 70 per cent. pension, 30 years 60 per cent., and so on. On a 2 per cent. plan the usual employee's cost is 5 per cent. of salary, and the cost to the employer, including substantial pensions in respect of past service, will approximate from 4½ to 5½ per cent. of the pay-roll.

It is recognised that the cost of a pension plan must not exceed its value judged from the standpoint of keeping an organisation efficient by the retiring of its superannuated workers and making room for younger and more efficient men and women. Industry to-day is paying many hidden pensions. Hundreds of old workers are retained whose retirement would greatly increase the efficiency of the organisations on which they are now a drag. A well-conceived and properly drawn pension plan is clearly the best cure for this evil.

Notes of the Week.

Mr Lloyd George's Pledge.—The pamphlet, to which reference is made in a leading article, issued by Mr Lloyd George in amplification of his pledge that, if returned to power, he would reduce the "figures of the workless in the course of a single year to normal proportions" without adding "one penny to national or local taxation," is an unusual and to the economic student a somewhat embarrassing "cross" between an expert report and an electioneering leaflet. We rise from its perusal feeling that there is little to add to the comments which we made last week on Mr Lloyd George's speech. A bold attack on unemployment is overdue. The fundamental conception that it is better to employ the workless in building reproductive assets for the nation rather than maintain them in impoverished idleness is sound. To what extent can the conception be translated into reality? The pamphlet sets out, with great precision, the estimated number of unemployed workers who could be absorbed by schemes of work, as follows:—

	Within the First Year from the Scheme's start.	Within the Second Year from the Scheme's start.
Roads and Bridges	350,000	375,000
Housing	60,000	60,000
Telephone Development	60,000	60,000
Electrical Development	62,000	62,000
Land Drainage	30,000	30,000
London Passenger Transport	24,000	24,000

It is proposed in two years to spend £145 million on road improvements, the necessary capital to be raised by a road loan secured upon the increasing income of the Road Fund, which would provide interest and amortisation. For the acceleration of housing, capital would be raised as hitherto by local authorities. On telephone development an additional expenditure of £30 million in two years is recommended, on electrical development £24 million, and on London Tube schemes £17 million. For these three forms of development capital would be raised in the ordinary way of business with the assistance, possibly, of reduced interest at the State's expense. Land drainage would be a net additional cost to the Exchequer, but against that must be set the estimated saving of £30 millions a year to the Unemployment Insurance Fund, plus a large increase in ordinary tax receipts as the result of improved industrial activity. Baldly stated, this is Mr. Lloyd George's plan, which deserves careful study unbiassed by political prejudices. If we are not yet wholly convinced of its practicability, it is because we still doubt gravely whether its author has not transcended the limits, both in extent and speed, of what can be attained. We should like, for example, a more exhaustive explanation of how the difficulties of willingness, capability, and accommodation involved in mobilising an army of road workers are to be overcome so speedily, how demand for telephones is to be equated with the artificially enlarged supply, and, in general, whether so sweeping an acceleration of expenditure will not lead to awkward repercussions on prices. Above all, ready though we are to concede that the present situation calls for a concerted policy of treatment on the part of Government, we should be glad of further assurance that the medicine will, as Mr Lloyd George hopes, continue to act after the first stimulus is over. To predict that, by concentrating in two years expenditure which would otherwise be spread over twenty, the nation can be guaranteed a "snowball" prosperity thereafter, involves large and questionable assumptions, even if in the meantime industry as a whole sets its house in good "rationalised" order. On all these questions we hope more light will be thrown before election day.

The Eight Hours' Convention.—Sir Arthur Steel-Maitland's defence at Geneva of the British Government's policy with regard to the Washington Convention on Hours of Labour, answered some questions only to raise fresh points of mystification. He explained that Britain's demand for a revision of the Convention was actuated by a sense of the dangers of ambiguity in international law. The Convention lacked clarity in many respects. What, he asked, was the proper interpretation of "hours of work," of "a week," and of "intermittent work"? What were the limits of overtime as applied to railways and of "exceptional cases" in their application to such trades as building. The London Conference of Ministers of Labour had, it was true, reached a measure of agreement on these difficulties, but a fresh obstacle to British ratification had arisen through the fact that the Law Officers of the Crown had given an opinion that the London Conference interpretations were inconsistent with those which a British Court of Law would place on the Convention. Moreover, assuming the correctness of the Law Officers' opinion, if the Convention were ratified without revision, not only would Great Britain be prejudiced by laxer interpretation of its provisions in other ratifying countries, but a number of our industrial agreements, e.g., those based on a 5-day, 47-hour, week, would have to be abrogated. Thus stated, the case for clarifying and, indeed, strengthening the Convention is weighty, but it is deplorable that the British Government should have taken over nine years to make up their mind, in Sir Arthur Steel-Maitland's words, to "put all their cards on the table." Why, it may be asked, was the urgent need of revision not mooted till a year ago, and then only in vague terms? For what reason had another year to elapse before the points in respect to which revision is judged necessary were explained with any sort of precision? The meeting of the Governing Body of the International Labour Office has ended, after two days of fruitless debate, with the British proposal neither rejected nor accepted, and with little prospect that anything definite will be done until the Convention comes up automatically for revision next October. If the British Government cannot but be suspected abroad of having followed a policy of calculated vacillation and evasion in a matter in which every British interest demanded energy and resolution in furthering international standardisation, they have only themselves to thank.

The Proposed Reparations Bank.—The communiqué issued by the Committee of Experts, setting forth a suggested "Plan of a Bank for International Payments," is clearly more than a *ballon d'essai*, and the Committee is equally clearly at work on a project of the greatest public significance. But the communiqué itself is in many respects so vague that considered judgment of the scheme under discussion must be suspended until a great many gaps in our present knowledge of it have been filled in. Since the ambiguities of the statement of necessity lend themselves to a variety of interpretation, we hope that the Committee will at the earliest possible stage enlighten the public as to essential features of the scheme. Foremost and in particular the world will look for elucidation of the proposal which would appear to aim at linking up the great issues of the day in the sphere of international finance, the reparations problem, and the central bank and gold problems, by creating a new institution whose concern they will be. Here the field of conjecture is enormous, and, pending a further statement by the experts, the puzzles are not a few. In other respects, too, judgment must, in the present stage, be tentative. To some extent, apparently, the proposed institution would merely replace existing agencies, such as the office of the Agent-General, and, we presume, the Transfer Committee; but the scheme goes very much further than this, proposing as it does, to confer on the new institution the financing of reparations in kind, the co-ordinating rôle in the marketing of German Reparations Bonds and the receipt from existing central banks of "both clearing and investment deposits," if that is considered desirable. We take it that each of the central banks of the creditor countries, as well as the Reichsbank, would place a certain volume of gold and of foreign exchange at the disposal of the new institution, thus creating deposits which could be utilised for the purpose of financing deliveries in kind. Thus, presumably, the accounts of the various banks would fluctuate in amount relatively to one another, while transfer from one central bank account to another would leave the mass of gold, foreign exchange and earning assets at the command of the new bank unchanged. The gold and foreign exchange pool so created would presumably be more efficacious in overcoming pressure on the exchanges arising from transfers than temporary loans which are possible even under present circumstances, simply because such a pool need not be organised *de novo* on each occasion of pressure, whilst its very existence would as a known and existing factor in the situation help to keep the ship on an even keel. In so far as the new institution provided a meeting ground for the discussion of central bank policy and furnished machinery by which the divorce between the political and economic aspects of the transfer problem could be painlessly effected, the step would be very welcome. For more light we must wait. But it is necessary to remember that the Experts' discussions of machinery are academic unless and until they have solved the formidable problem of the totality of Germany's payments.

The League and War Finance.—In an article on a previous page of this issue a Geneva correspondent discusses the debates at the recent Council meeting of the League of Nations on the scheme for financial assistance to members of the League who may become involved in war. The Council commended this scheme, which was originated two years ago on the initiative of Finland to the consideration of all members of the League. The scheme is of no small importance as a step in constructive effort to reach the final goal of international security. Or to put the matter another way, it has the practical aim of making warlike aggression a more formidable undertaking for any Power. The scheme, which is described by our correspondent, has from the start had the support of Sir Austen Chamberlain and the British Government, and we trust that this support will not in any way be lessened on account of the criticisms which have this week been levelled against the scheme in certain responsible papers. These criticisms seem to us to proceed upon an insufficient understanding of the proposal. It is an essential point that the scheme for financing, or rather for guaranteeing the war finances of a State which is subjected to aggression, can only be put into force by the unanimous vote of the League Council, on which, of course, Great Britain has a permanent seat and a permanent vote. It is difficult to see, therefore, how, under the scheme, Great Britain can be involved in a position seriously antagonistic to her interests. For should such an occasion arise, the British representative's hostile vote at the Council meeting would be sufficient to prevent the scheme being put into force.

The League and Gold.—It will be recalled that at its December meeting at Lugano the Council of the League of Nations approved the suggestion of the Financial Committee that a special committee should be appointed "to examine into and report upon the causes of fluctuations in the purchasing power of gold and their effect on the economic life of nations." It was suggested that this special committee should consist of eight or nine persons, including a few members of the Financial Committee, and for the rest other persons of international authority. At the March Council meeting at Geneva last week the Financial Committee reported that it was in a position to propose to the Council the names of some, but not of all, of the members of the Special Committee, and it therefore decided to await the June session of the Council before submitting a complete list. Happily this does not mean that preparations for this important investigation are at a standstill. On the contrary, preliminary work is going on. The Financial Committee reported that good progress has been made in the collection of data, and the work is being actively continued. Thus the ground is being cleared for a real start in June.

The Outbreak in Mexico.—The news from Mexico is still obscure. Fighting is now going on all over the country. Roughly, the Government forces hold a central position, while the insurgents are scattered round the periphery. In a country of vast distances, with a network of communications radiating in wide meshes from the capital, the respective geographical positions of the combatants give the Government an advantage; and, indeed, Señor Calles' forces seem to be making good use of their interior lines. On the other hand, the great scale of the country and the paucity of communication make it very difficult for the Government to stamp out the insurrection promptly, even if it has the upper hand. Mexican insurgents are more easily defeated than put out of action; and this factor of time is on the insurgents' side; for, the longer the fighting goes on, the more temptation there will be for the Catholics—who have been under arms in the north for several years—to come into the arena on the Agrarian insurgents' side. Meanwhile, the decisive factor in this new outbreak of the Mexican civil war may be the attitude of President Hoover's administration; and the new President has lost no time in making it absolutely clear that the United States, while remaining neutral, will continue, in all proper ways, to support the existing Government, and will refrain from giving any countenance or encouragement to its opponents. This means, in effect, that the Mexican Government will, and the Mexican insurgents will not, be able to buy munitions from the United States—and this advantage, together with the interior lines, may give Señor Calles the victory in the end, even if in the meantime the insurrection spreads further than at present.

Chinese Peace in the Balance.—With the return of spring, the various commanders or groups of commanders of the Chinese armies paying allegiance to the central Kuomintang Government are beginning to manœuvre for position *vis-à-vis* one another. If one were merely to forecast the immediate future on the analogy of the immediate past, it would be difficult to prophesy smooth things; for the lists are certainly set for a renewal of the civil war; and if fighting were really to break out again between Nanking and Hankow and Canton and Honan, then Chang Chung-Chang would have a good chance of re-establishing himself in Shantung, the three Mandarin provinces would go their own way—or the Japanese way—and the national unity restored last year with so much labour and suffering would have proved ephemeral. Fortunately, there are also other signs of the times. There is now a civilian public opinion which is making itself practically felt, however faintly at first, and the rival Nationalist generals seem to have a feeling that they cannot outrage this opinion with impunity. There are limits to the degree of misrule which any people will stand; and the Chinese, though long-suffering, have mysterious but effective ways of bringing the powers-that-be to heel when they have made up their minds that the limit has been reached. Another sign of the times is the Nanking Government's request to Sir Frederick Whyte to become their political adviser, and Sir Frederick Whyte's acceptance on condition that the post shall be onerous but honorary. A distinguished Western publicist and man of affairs, holding this position in China at this time, may achieve great things—for Sir Frederick is appointed in a purely private capacity. He does not represent the British Government, and will not look to them for support; so that he will not have to contend against the disability of being identified, in the Chinese

mind, with the régime of "the unequal treatment" and of the ascendancy of the foreign Powers. He may therefore hope to possess the friendship and goodwill, as well as the trust and respect, of the rival Chinese leaders; and a foreign adviser in that happy relationship with them all may succeed in persuading them not to carry their rivalries once again to the disastrous length of civil war.

Naval Estimates.—Estimates for supply services in 1929-30 have been completed with the publication of the Navy Estimates and an explanatory memorandum by the First Lord of the Admiralty. The net total is £55,865,000, which is £1,435,000 below the Estimates for 1928-29. It is, however, greater than the naval expenditure in either 1923 or 1924, years of higher prices than to-day. Increases are shown in the non-effective votes, thanks to the automatic advance in the amount of pensions, and the assumption by the Admiralty of the entire charge of the production of charts requires an addition of £37,900 on the scientific research vote, which is offset by an equivalent saving in civil service votes, but a policy of economy in small things is certainly reflected in the reduction of all the other votes, with the exception of that for the Fleet Air Arm, which is up by £220,000 to provide two new flights, and of the provision for works and buildings, whose increase by £102,700 reflects the expanding cost of the Singapore Base. So far the latter charge has been almost entirely borne by Dominion Governments, but Mr Bridgeman warns us that the cost to Navy Votes must largely increase during the next few years. The amount proposed for new construction is £8,621,626, or £1,008,231 less than in 1928. The reduction is due, not to any curtailment of the programme, but to the fact that by the provisions of the 1925 programme fewer cruisers building this year will be at a stage requiring large payments, and to the very conservative estimation of the cost of new construction, as an incentive to economy. The new programme for 1929 includes three cruisers, one flotilla leader, eight destroyers, six submarines, one netlayer, and six sloops. The tonnage of the new cruisers has not yet been stated. It must be confessed that the Naval Estimates are disappointing; no hint is given of any expectation that international agreement on naval armaments might reduce the immense burden of the Navy to this country, let alone a lead in naval disarmament. The "absence of any disturbing feature in the general naval position," which Mr Bridgeman admits, was expected to bear better fruit than this.

Overseas Trade in February.—In comparing this month's trade returns with those of a year ago allowance must be made for the fact that this February was a day shorter. Even so the returns are a little disappointing after those of January, though they are not sufficiently reduced to prevent the combined figures for the two months from presenting a satisfactory appearance:—

MONTH OF FEBRUARY.

	1929.	Increase or Decrease compared with 1928.		Increase or Decrease compared with 1927.	
	£	£	%	£	%
Imports	91,349,354	−7,503,012	− 7·6	−2,508,059	− 2·7
British Exports	55,664,975	−1,571,173	− 2·7	+2,727,575	+ 5·2
Re-exports	10,300,896	−1,363,993	−11·7	− 505,825	− 4·6
Total exports	65,695,871	−2,935,166	− 4·3	+2,221,750	+ 3·5
Excess of imports over total exports	25,383,483	−4,567,846	−15·3	−4,729,809	−15·7

FIRST TWO MONTHS.

	1929.	Increase or Decrease compared with 1928.		Increase or Decrease compared with 1927.	
	£	£	%	£	%
Imports	207,418,890	+8,172,951	+4·1	− 16,352	
British exports	122,544,582	+5,565,701	+4·8	+14,185,334	+13·1
Re-exports	20,111,578	−1,860,096	−8·5	− 556,581	− 2·7
Total exports	142,656,160	+3,705,605	+2·7	+13,628,753	+10·8
Excess of imports over total exports	64,762,730	+4,467,346	+7·1	−13,645,105	−17·5

Retained imports of raw materials for the two months together contain some satisfactory elements. As the following table shows, imports of several raw materials, including iron ore and cotton, have substantially increased as compared with the corresponding period of last year, but unfortunately in many cases the increase is largely attributable to January. February imports of iron ore, cotton, flax, hemp and jute, timber and rubber were slightly below those of February, 1928. On the other hand, linseed, wood pulp and raw silk imports were higher. Imports of wool, hides and petroleum are badly down:—

SOME LEADING RAW MATERIAL IMPORTS.
(Quantity Retained.)

	First Two Months. 1927.	1928.	1929.
Iron ore tons	477,065	777,425	807,312
Wood and timber, soft sawn loads	417,327	291,389	392,462
Cotton, raw centals	3,836,828	2,091,054	3,592,319
Wool, sheep's and lambs' centals	1,472,488	1,443,574	1,326,362
Silk, raw lbs.	174,481	271,387	277,372
Flax, hemp and jute tons	89,765	88,228	94,998
Cotton seed tons	93,809	122,179	133,672
Flax or linseed tons	34,709	50,211	55,125
Petroleum, crude thous. gals.	92,644	74,171	53,475
Hides, wet cwts.	97,138	94,531	67,980
Hides, dry cwts.	105,106	153,538	62,013
Wood pulp tons	204,471	146,639	231,025
Rubber centals	400,591	113,437	383,694

Export figures show less recession. It is evident from our concluding table that, where improvement was recorded in January it has been maintained, except in the case of wool tops:—

SOME LEADING EXPORTS.

	First Two Months. 1927.	1928.	1929.
Coal tons	8,265,735	7,912,331	8,362,661
Pig iron tons	13,990	48,486	79,147
Railway material tons	35,465	118,035	100,152
Total of iron and steel manufactures tons	471,084	649,221	801,266
Total machinery tons	75,718	93,793	96,178
Cotton yarns lbs.	30,165,500	29,385,600	30,630,900
Cotton piece goods sq. yds.	621,098,900	653,606,000	705,412,100
Wool tops centals	60,464	59,176	55,906
Woollen tissues sq. yds.	22,934,300	24,613,400	22,414,000
Worsted tissues sq. yds.	7,954,600	6,763,400	10,737,200
Linen piece goods sq. yds.	12,061,300	13,965,500	11,925,800
Boots and shoes doz. prs.	131,572	166,189	132,957
Leather cwts.	61,242	78,529	50,829
Paper and cardboard cwts.	785,932	751,716	794,078
Locomotives tons	1,462	4,427	5,879
Motor cars and chassis number	8,133	4,828	7,345

February figures taken alone, however, reveal a slight decline in exports of coal and of locomotives, while those of railway material, woollen tissues, linen piece-goods and boots, shoes and leather continue to be below last year's level. The most noticeable increases on the year to date are those in the exports of pig iron, worsted tissues and motor cars respectively. While it would be rash to deduce much from a single month's returns, it is disappointing to find no more ground for encouragement in the February figures. It is, however, possible to take some comfort in the thought that the check may have been a temporary one due to the abnormal weather.

Conditions in South China.—Our Hong Kong correspondent writes:—The comparative ease with which the New Year settlement was arranged and the absence of any serious failures augur well for the coming year. Prosperity is, of course, still a long way off, and until the Nanking Government is able to acquire control of the administration of the whole country military adventurers will continue to ply their trade. But as regards the South the outlook is much brighter, and the opening up of the provinces of Kwangtung and Kwangsi by the construction of motor roads is making the task of government very much easier than it was when the rivers were the only channels of communication. During January there was a brisk movement of cargo from Hong Kong to Canton and the West River ports in view of the inauguration of the new Customs Tariff. There has, however, been nothing approaching a panic to rush goods through in time, such as existed in the North, and there has been no nervousness as to the effect of the increased duties on trade generally. Local dealers have accepted the new order quite calmly, but they are under no misapprehension as to the precise value to be attached to the Nanking guarantee of the abolition of likin. A concrete example of the attitude of the provincial authorities has come to light within the past few days. A shipment of 1,000 bags of sugar reached Canton after February 1st, and the importer tendered the appropriate duty under the new scale. Further duties were demanded, but the importer refused to pay, as he maintained that the new tariff consolidated all surtaxes. At the moment the cargo is held up, and an official of the Foreign Office has issued a statement, for the benefit of all other importers, to the effect that the Chinese Government is not concerned as to what any individual may think about the injustice of collecting several taxes on imports. The statement continues that the Foreign Powers have seen fit to concede to the Nationalist Government complete Customs autonomy, and that term connotes the right to levy such duties and to collect such taxes as it judges proper. It is possible, of course, that Nanking may dissociate itself from this ruling, but it is powerless to prevent it being put into effect. The fact remains that Customs autonomy has been achieved, and however much the conditions on which it was gratified may be abused Chinese officials are fully confident that the Foreign Powers will never make any attempt to regain control. During 1928 there were approximately 700 shipping casualties on the Chinese coast, 500 steamers being involved. A good proportion of the accidents were due to grounding, and little damage resulted, but there were 229 steamers in collision and six steamers totally wrecked. In view of the heavy claims which have arisen marine insurance companies are discussing the question of increasing rates where Chinese steamers are concerned. Many of the casualties have occurred when uncertificated officers have been in charge, and as the Chinese mercantile marine has no Board of Trade, or the equivalent, to regulate it, the navigation of a steamer is often left in incompetent hands. A few weeks ago there was a serious disaster, during night time, at the outer entrance to Hong Kong harbour, resulting in the loss of 400 lives. This steamer was officered by a European captain and a European chief officer, but at the time the vessel struck a Chinese officer was in charge of the bridge. The captain had left orders to be called on sighting the light, but apparently his instructions had been neglected. The night was clear, and the lighthouse keeper was able to watch the steamer's course. Owing to faulty communication with the shore wireless station, valuable time was lost in summoning help, and ultimately only about a score of those on board were saved. At the inquiry which followed there was no direct evidence which could assist in determining the cause of the disaster, and the jury confined themselves to a recommendation for the improvement of the existing arrangements for rescue work.

The Effects of Foreign Lending.—At the risk of wearying our readers we are constrained to return once more to the question of the effect of capital exports on British trade, a subject on which three further letters will be found in our correspondence columns to-day. A "Student of Economics" it will be seen, basing his conclusions not on imaginary suppositions but on what "is likely to correspond or could correspond with reality," supports strongly our view that capital exports lead in fact to subsequent exports of commodities. Even when capital exports do not take the immediate direct form of shipments of British goods, he holds that "the development of so-called 'new' or backward countries (by capital loans) tends very strongly to stimulate international trade, and in this trade it may be expected that Great Britain will obtain a share probably more than corresponding to her proportion of the international trade of the world." Mr Frank Morris also agrees with us in the main issue, but suggests that if we are "borrowing short" in order to "lend long" we risk creating an "unsatisfactory position" entailing dangers to our gold reserve. In answer to this criticism we give below, for the past five years, the figures of our real Trade Balance, as estimated by the Board of Trade, and of the annual total of capital issues in London, as compiled by the *Economist*, destined for abroad. This total, of course, will require to be reduced by the amount of foreign money annually placed for long-term investment in British securities—a sum probably not inconsiderable—and it must be remembered that a proportion of the issues made in London is subscribed by foreigners. Apart from these factors, however, the figures for 1928 suggest that, whatever may have been the case at an earlier period, recent developments are such as to allay Mr. Morris's apprehensions.

	Board of Trade Figures of Real Balance of Trade. (In Million £'s).	*Economist* Figures of Overseas Lendings. (Million £'s)
1924	+ 86	124·7
1925	+ 54	77·2
1926	+ 9	101·6
1927	+114	148·3
1928	+149	105·5

Mr J. M. Keynes returns to the attack, and, concentrating upon one of the points in our reply to him last week, asks whether we overlooked the fact of our return to gold. On no other supposition can he accept our contention that even if British lending abroad did not lead directly to the placing of orders for British goods (a fact which Mr. Keynes pre-supposed *ex hypothesi*) increases in the supply of sterling for sale must, in the last resort, always tend to stimulate British exports by cheapening relatively the price of goods quoted in sterling. In following Mr. Keynes last week into realms of somewhat abstract theory, we did not, of course, overlook the existence of the gold standard. Admittedly gold points restrict, but they do not destroy, the tendencies which we described. Further, when exchange threatens to break the gold point, the discount rate policy imposed by the gold standard comes into force, with its effect upon the internal price level. In normal circumstances the variations in relative prices possible through restriction or expansion of credit are commensurate with those which would occur under a free currency system. Incidentally, we would refer Mr. Keynes to the conclusion reached by the Balfour Committee (Final Report, p. 44), that: "The advantages derived from the export of capital in the past are clear. . . . Full employment in our exporting industries, having regard to their character and extent, can only be attained in the near future if there is a substantial increase in the export of capital."

Iron and Steel Production in February.—The improvement in iron and steel production recorded in the last few months was continued into February for, in spite of the shorter month, steel production was higher than in any month since March, 1928 (and, if the number of working days be taken into account, was higher than in any month since May, 1927), while pig iron production, though less in volume than in previous months, was at a higher daily rate than in any month since June, 1928. There has, however, been a reluctance to blow in fresh furnaces, and the number of furnaces in operation increased by one only during the month, three furnaces having suspended operations and four having been blown in. The unequal rate of increase of pig iron and of steel has naturally led to increased demands for scrap with a consequent substantial rise in price. It is therefore expected that additional blast furnaces will be blown in during March. In spite of the short supplies of pig iron few increases in price have been registered, and the price of Cleveland No. 3, for example, remains at 67s., to which it was advanced by 1s. per ton on February 14th last. The production of pig iron in February amounted to 519,600 tons, compared with 563,900 tons in January and 550,800 tons in February, 1928; the daily rate of production was 18,557 tons in February, compared with 18,190 tons in January and 18,993 tons in February, 1928. Steel production amounted to 782,900 tons in February, compared with 764,600 tons in January and 764,400 tons in February, 1928. Imports of iron and steel amounted to 160,000 tons, and were the lowest in

any month since January, 1924, when imports were beginning to increase after the very low level caused by the Ruhr occupation. The lowness of the imports is probably accounted for in part by the bad weather experienced on the Continent during February, which interfered with shipping from the Port of Antwerp. Although some decline in imports was expected, owing to the pre-occupation of Continental works with their home market and foreign markets other than Great Britain, the substantial decline registered in February does not accurately reflect the measure of the decline. Exports of iron and steel in February amounted to 380,100 tons, compared with 421,200 tons in January and 317,000 tons in February, 1928. In spite of the increasing scarcity and the rise in price of scrap, exports of scrap in February amounted to 37,100 tons, after having been 47,400 tons in January. Imports of scrap, on the other hand, amounted to only 3,400 tons, since the export of steel scrap is prohibited, or strictly controlled by all other steel-producing countries.

Shipping Freight Index Number.—Our Index Number of whole-cargo shipping freights for the month of February works out at 124.1, a figure representing a fall of 2.7 per cent. in comparison with January. A year ago the index number stood at 109.7, against 140.2 in the corresponding month of 1927. The recent movements of the various groups in the index are summarised below:—

AVERAGE, 1898–1913 = 100.

	Average, 1913.	Feb., 1928.	Dec., 1928.	Jan., 1929.	Feb., 1929.
European Waters	110·0	105·5	122·1	119·2	122·7
North America	113·1	106·4	131·3	128·6	125·1
South America	123·4	106·2	125·6	125·2	121·5
India	106·3	112·4	126·8	123·7	117·4
Far East and Pacific	117·4	114·0	127·4	126·2	122·0
Australia	127·9	113·9	156·7	142·4	136·2
Total	116·3	109·7	131·7	127·5	124·1

The month's changes in the index of each group and subgroup are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home Trade	106·6	+12·5	South America—Outwards	92·2	− 2·7
Bay—Outwards	132·1	+ 1·8	South America—Homewards	150·8	− 4·6
Bay—Homewards	140·3	...	India—Outwards	122·1	− 2·1
Mediterranean—Outwards	143·1	− 2·9	India—Homewards	112·7	−10·4
Mediterranean—Homewards	107·3	− 3·1	Far East, etc.	122·0	− 4·2
North America	125·1	− 3·5	Australia	136·2	− 6 2

The best feature of the month was the activity of chartering in the Near Continental coal trade. Outward freights to Southern Europe, on the other hand, were barely maintained, and homeward quotations on the more distant overseas routes all had a declining tendency, freights from India being notably weak. The volume of business last month was only moderate for this season of the year, and demand for grain space from the Plate and elsewhere was somewhat disappointing. Expressed as a percentage of the average for 1913, the total figure of our index number for February works out at 106.7, as compared with 109.6 in January and 94.3 a year ago.

The British Beet Sugar Subsidy.—The latest analysis of the beet sugar subsidy indicates that since the beginning of operations under the legislation of 1925 the total cost to the taxpayers, up to the end of the present month, and including on that basis a small part of estimated rather than actual outlay, has been approximately £12 million. In all 600,000 acres have been cultivated for this purpose. The subsidy is on a ten years' programme of 19s. 6d. per cwt. for the first four years, which have now elapsed; 13s. for the next three, which is the present period of the beginning of the tapering subsidy; and 6s. 6d. for the last three. Although strongly criticised by certain schools in Parliament, the Government, most of the Labour members, and one or two Liberals have defended the subsidy on the ground that it brought a new industry to the countryside, gave an alternative occupation, and had certain agricultural advantages. The farmers have complained that the terms they are able to obtain from the factories, although so far regulated by the governing Act, should be improved; while financial critics have urged that the dividend distribution of some of the factories has been too substantial, having regard to the fact that the whole enterprise depended on a heavy contribution from public funds. Apparently owing to the adverse climatic and agricultural conditions in 1927 the total acreage under beet fell off; but during the past year there was a revival. It is admitted, however, that, as the subsidy tapers, the additional land to come under cultivation for this purpose will probably be restricted. In some quarters pleas are being advanced for reconsideration of the scale of the subsidy, the hint being that parts of the industry at least may not, as the promoters of the subsidy hoped, be able to get on their legs effectively during the subsidy period. But it would probably be very difficult to get any Government favourably to entertain such a request. Nearly six years of the period are still to run; the taxpayers have already provided £12 million; and the ultimate aggregate cost, even when allowance is made for the reduced rates, will be undeniably considerable.

More Short Time in Lancashire.—Our Manchester correspondent writes:—Although the cotton trade position in Lancashire remains deplorable, there was some surprise at the end of last week when it was announced that the State of Trade Committee of the Master Spinners' Federation had decided to recommend users of American cotton to curtail production on an organised scale. The proposal is that the mills should be stopped on Saturdays and Mondays during the month of April, thus reducing output from 48 to 35 hours per week. This recommendation has been made in view of the falling away in yarn prices and the sharp rise in the price of raw cotton. It is stated that the suggestion is intended only as a temporary measure with the object of preventing undue accumulation of stock and generally improving the position of spinners, which for some time past has been most unsatisfactory. The voting papers have to be returned to the offices of the Federation in Manchester not later than Thursday, the 21st instant, and it is expected that the result of the ballot will be announced on the following day. Although the depression in this section of the trade remains very acute, there is some doubt as to whether the members will support this action to the extent of 80 per cent., which is necessary if the scheme is to be put into operation. In the meantime, the short-time movement in the Egyptian spinning branch of the industry continues, the curtailment being equal to 33 per cent. amongst the members of the Bolton Master Spinners' Association. It is estimated that, owing to many spinners being outside that organisation, the restriction means that total output is about 75 per cent. of full capacity. This short-time scheme has now been in operation three weeks and there are indications of spinners obtaining some relief, as in certain directions stocks are being reduced. The question of the policy of the Government in finance as it affects trade and industry has recently been receiving the attention of the leaders in the cotton industry. The matter first gained prominence at the annual meeting of the Oldham Master Spinners' Association, which represents the American section, when the President, Mr Fred Mills, suggested that it was time an inquiry was made by a Government Committee or a Royal Commission into the manner in which the basis and course of national credit was decided, and its effect on the industries of the country. The Parliamentary Committee of the Master Spinners' Federation has now discussed the question, and it has been decided to make representations to the Prime Minister for the appointment of a Royal Commission. Further than that, the British Economic Federation will hold a conference in London on April 3rd to discuss the question of national policy in finance, and at that conference the Master Spinners' Federation will be represented by three leading men.

International Cotton Statistics.—Our Manchester correspondent writes:—In trade circles there is always considerable interest in the statistics relating to consumption and stocks issued by the International Cotton Federation, and the half-yearly figures published this week have attracted much attention. During the six months ended January 31st last the world consumption of American cotton was 7,613,000 bales, against 7,181,000 bales in the previous half-year and 8,226,000 bales in the corresponding six months of last year. This total was rather larger than expected, and had a bullish influence upon prices in New York and Liverpool. A feature of the returns is the increased consumption of East Indian cotton, the total for the first half of this season being 2,574,000 bales, against 2,220,000 bales in the six months ended July 31st last, and 2,303,000 bales in the half-year ended January 31, 1928. With regard to Egyptian the consumption during the first half of this season was 497,000 bales, against 467,000 bales in the second half of last season, and 489,000 bales in the six months ended January 31, 1928. With sundries, the total consumption throughout the world of all kinds of cotton during the half-year ended January 31, 1929, was 12,772,000 bales, against 12,553,000 bales in the previous half-year and 12,987,000 bales in the half-year ended January 31, 1928. With regard to mill stocks of cotton, the total of American qualities throughout the world on January 31st last was 2,958,000 bales, against 2,112,000 bales six months earlier, and 2,867,000 bales on January 31, 1928. The figures for East Indian are 1,216,000 bales on January 31st last, against 1,728,000 bales on July 31st last year and 969,000 bales on January 31, 1928. With regard to Egyptian, the total on January 31st last was 182,000 bales, against 170,000 bales six months earlier and 183,000 bales on January 31, 1928. Mill stocks of all kinds of cotton on January 31st last were 5,257,000 bales, against 4,787,000 bales on July 31, 1928, and 4,882,000 bales on January 31, 1928. It is evident from these statistics that spinners during the past half-year have tended to increase their stocks. This is rather surprising in view of the trade depression and the expectation of difficulties in financing supplies. It is anticipated that the world consumption of American cotton this season will be fully 15 million bales, and, as the growth is rather less than 14½ million bales, there is bound to be a fair reduction in the carryover at the end of next July.

The Halifax Building Society.—The Halifax Building Society, whose first report has just been issued, stands towards building societies in almost the same relation as does the Prudential to the life insurance world. It was formed by the amalgamation, on February 1, 1928, of the Halifax Permanent and the Halifax Equitable Building Societies, which were even then the two largest societies in the country. The total assets at January 31st last amounted to £54,155,040, compared with £46,981,512 at the time of the amalgamation. Advances on new mortgages were granted during the year to the total of £10,214,528, mainly to assist borrowers to buy or build houses for their personal occupation, £40,570,655 being owed upon mortgages by 106,896 members at the striking of the balance sheet. It is noteworthy that 81 per cent. of the total outstanding mortgages are for less than £500 each, and indeed the average amount owing on all the Society's mortgages is only £379. The soundness of the security chosen is indicated by the absence of any entries in the statutory schedule of mortgages which have been twelve months in possession. Additional security to depositors and shareholders is given by the large volume of liquid assets, which totalled £12,987,127 on January 31st, including £5,017,572 in cash at banks. Though share liability increased during the year by £7,356,791, deposits show at decline of £411,271, probably thanks to the comparatively unattractive rate of interest, which is apparently nearly 1½ per cent. below the 5 per cent. paid on shares. The society's liquid investments bring in slightly over 4½ per cent., and mortgages about 6 per cent. The ratio of management expenses (other than those of the amalgamation) to total share and deposit liability is about 0.52 per cent. It will be seen that the profit margin on which the society works is not high, but nevertheless £228,038 has been added during the year to the reserve fund, which now stands at £1,689,239.

Transvaal Output in February.—The output of gold of the mines of the Transvaal for February amounted to 815,284 ozs. of fine gold. For February, 1928, the output was 816,133 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1923.	1924.	1925.	1926.	1927.	1928.	1929.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

	218,578	215,843	216,362	216,628	214,415	211,592	208,473	213,427	217,725

The number of natives employed in all branches of mining showed an increase in February.

Sun Life Assurance Co. of Canada.—The growth of this company has been phenomenal, and to-day with assets of approximately £100 million sterling, less than one-half of those of the Prudential, the company transacts each year nearly three times the amount of new business. For the first time a definite indication has now been furnished that progress towards great financial strength has been no less rapid, and the company's hidden reserves are stated to amount to approximately £20 million, in addition to which there is an undivided disclosed surplus of £11 million. How has this wonderful result been attained? Put briefly, the answer is to be found in the fact that at the end of 1927 41 per cent. of the total assets were invested in ordinary shares—a far higher proportion than in the case of the foremost British exponents of the ordinary share investment policy. In his address at the annual meeting, the president, Mr T. B. Macaulay, gave a detailed exposition of the company's investment policy, which has been its distinguishing characteristic. The limits of the company's investments are prescribed by the Dominion Insurance Act, and to this Act Mr Macaulay paid a remarkable tribute, on the ground that its provisions steered a clear course between unwise freedom on one side and hampering restrictions on the other side. It appears that under this Act life assurance companies are permitted to invest first in mortgages up to 60 per cent. of appraised value, in all kinds of Government securities, and in bonds, in preferred stocks of corporations which have paid dividends for the preceding five years, and lastly and most important, in common stocks of corporations which have paid dividends at a rate not less than 4 per cent. per annum for the preceding seven years. During the last few years the course of corporation finance has been rather in the direction of redemption of bonds by stock issues, and consequently the company has found itself compelled to invest a very large proportion of its rapidly increasing funds in common stocks. Mr Macaulay stated that the average interest rate yielded by these investments had mounted steadily year by year, and that, for instance, the actual cash yield

in 1928 of all common stocks purchased in 1923 represented a return greater by 2.38 per cent. of the purchase price, than the dividends paid at the time of purchase, while the average value of the rights and bonuses during the intervening five years had amounted to a further 0.38 per cent. per annum. Amongst the company's innumerable holdings the most important are the Montreal Light, Heat and Power, American Telephone and Telegraph, General Electric, and Commonwealth Edison. It is to be noted that the Dominion law automatically excludes stocks of companies not having a reasonable record of dividend paid, and of prosperity; but the Sun Life is able to pursue the process of elimination much further than that by confining itself to corporations into whose history and prospects it has first made an exhaustive study, and generally to corporations supplying some product or service essential to the life of the community and dominant in their particular sphere of operations.

Scottish Provident Institution.—In advance of the publication of the annual report the directors have announced the rates of bonuses to be distributed as a result of the quinquennial valuation made on December 31, 1928. The Scottish Provident maintains two separate classes of with-profit policyholders. In the whole-life assurance class the system of allocating bonuses is a peculiar one. No bonus is allotted at all until the policyholder has survived to the time when the premiums paid, accumulating at 4 per cent., equal the sum assured. When that time is reached the bonus on the occasion of a first profit-sharing is allotted in the form of a percentage of the sum assured for each year of the whole duration of the policy, and the arrangement is, therefore, in effect a semi-tontine. On this occasion the policies sharing for the first time will receive a reversionary bonus of 30s. per cent. per annum for the full period of their duration (less the war years 1914-1918), this rate comparing with 28s. per cent. five years ago. Policies sharing for the second time will receive a reversionary bonus of 35s. per cent. per annum for the quinquennium, compared with 30s. per cent., and a new class of policyholders who have already shared at least twice will receive on this occasion a reversionary bonus of 40s. per cent. per annum for the quinquennium. In the endowment assurance class the bonus is allotted on the more usual plan of a reversionary addition calculated on the original sum assured and existing bonuses. For the quinquennium 1924-1928 the reversionary bonus in this class will be at the rate of 40s. per cent. per annum compound, compared with 38s. per cent. compound for the preceding quinquennium. Interim bonuses for the current quinquennium have been fixed at the same rates as those declared for the past quinquennium.

London Life Association.—An analysis furnished with the annual report of the constitution of the new life business enables some interesting comparisons to be made. The table which follows exhibits the details of the last two years' business:—

	£	£
Life Assurances:—		
Reduction of Premium Fund	406,539	685,059
Reversionary Bonus Fund	752,324	799,715
Non-Profits	1,047,704	1,018,151
	2,206,567	2,502,925
Annuities:—		
Immediate	4,352 p.a.	4,041 p.a.
Deferred	70,671 p.a.	91,936 p.a.
	75,023	95,977

The reduction of premium fund comprises policies on which the profits are applied solely to reduce the premiums, and practically the whole of the increase of the year was due to this fund. An unusually large proportion of the total business is transacted on a non-profits basis, and the association issues each year an increasingly large number of deferred annuity policies, mostly, it is believed, in connection with superannuation schemes, of which it has made a speciality. The changing character of the life assurance business is evidenced by the fact that, at the end of 1927, some 55 per cent. of the total liability was on account of the reduction of premium fund, 25 per cent. for the reversionary bonus fund, and only 20 per cent. for non-profit assurances, whereas the above table shows that, of the new business, nearly 50 per cent. is now non-profits. The working of the year has had a successful outcome, for the net rate of interest has increased by 1s. 6d. per cent. to £4 12s. 5d. per cent., while the expense ratio is little different at 5.6 per cent.—this exceptionally low figure being due to the fact that no commission is paid for new business introduced. The usual annual valuation discloses the following results, which are compared with those of 1926 and 1927:—

Reduction of Premium Fund.	1926.	1927.	1928.
	£	£	£
Surplus earned during the year	165,253	143,601	153,361
Investment profits realised	23,572	37,156	25,523
Brought forward from previous year	14,337	20,982	33,450
	203,162	201,739	212,334
Allocations—			
To Bonuses to Policyholders	26,916	18,144	21,244
„ Strengthening of Valuation Reserves	76,462	115,365	121,044
„ Provision for Increase in rates of reduction of premium	50,000	...	...
„ Reserve Fund	28,802	34,780	22,631
„ Investment Reserve Fund	...	...	13,138
„ Staff Superannuation Fund	20,982	33,450	34,077
„ Office Premises	203,162	201,739	212,334
„ Carried forward to next year			

The rates of reduction of premium have again been increased by three, and a complete revision of the terms for new entrants and of their future rates of reduction is foreshadowed:—

Reversionary Bonus Fund.	1926.	1927.	1928.
	£	£	£
Surplus earned during the year	102,528	121,649	128,536
Investment Profits realised	4,957	8,639	6,666
Brought forward from previous year	11,203	12,691	7,751
	118,688	142,979	142,953
Allocations:—			
To Bonuses to Policyholders	79,940	90,846	108,675
„ Strengthening of Valuation Reserves	...	33,874	...
„ Provision for increase in rates of reduction of premium	...	...	...
„ Reserve Fund	20,000	...	...
„ Investment Reserve Fund	6,057	10,508	8,972
„ Staff Superannuation Fund	...	...	4,868
„ Office Premises	12,691	7,751	20,438
„ Carried forward to next year	118,688	142,979	142,953

The reversionary bonus has been increased from 38s. per cent. compound to 40s. per cent. compound, and in this class also it is proposed shortly to publish a revised table of premium rates adjusted to take account of the most modern experience. A study of the report leads to the conclusion that the financial position of the combined offices, the London Life, Clergy Mutual, and Metropolitan, is a strong one. The surplus resources are stated to amount to £1,390,000.

Marine and General Mutual Life Assurance Society.—This society is the smallest amongst the mutual life offices though founded three-quarters of a century ago. During the past few years there has been some evidence of a quickened progress assisted by a relatively large volume of single premium business. The total of the 1928 new business was £380,911, which, though less than that of the previous year, was above the level of the 1927 figure. The net rate of interest earned last year was £4 17s. 11d. per cent., while the ratio of expenses to premium income worked out at 15.5 per cent., being in both cases the same as the corresponding rates in 1927. The year just closed marks the completion of four years of the current quinquennium, and it is interesting to observe that the average net rate of interest earned during these four years was £4 17s. 6d. per cent., compared with £4 8s. 11d. in the corresponding part of the preceding quinquennium. The additional 8s. 7d. per cent., if maintained in 1929, means that the surplus at the coming valuation from interest alone should be some £90,000 greater than at the 1924 valuation. In his speech at the annual meeting the chairman referred to the Government life insurance scheme conducted for many years by the Post Office and recently discontinued. The new business transacted by the Post Office scheme, he said, amounted only to about £11,000 per annum, as compared with a total of £145 million per annum for all the life assurance offices. The miserable failure of the Government scheme may seem remarkable when it is considered that every Post Office throughout the country is available for life assurance, but the chairman pointed out that the life offices' results were secured because of the unremitting efforts of their inspectors and agents, whereas the Post Office scheme wholly lacked the driving force of a sales organisation. The public requires to be cajoled and persuaded to take out life policies. It rarely effects policies on its own initiative. That has been the position in the past, but, slowly though surely, circumstances are changing, and the great hope for the future is that the gradual spread of the knowledge and unique advantages of life assurance will result in a greatly increased volume of business in return for the present effort and expense.

At the meeting of the Royal Statistical Society, on the 19th instant, Dr E. C. Snow will read a paper on "The Limits of Industrial Employment."

Oversea Correspondence.

UNITED STATES.—MONEY—STEEL ACTIVITY—FEDERAL RESERVE POLICY.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 28.

THE new month begins with the customary lively flurry in call money rates, but with the stock market paying little heed to what it regards as merely temporary hardness in the money market. Call money fluctuated between 8 and 10 per cent. all week, closing at the higher figure, as against 6 and 6½ per cent. in the previous week. While the increase at first glance seems very large, it must be remembered that our call market is now running on such a narrow margin of reserve that as little as $5,000,000 added to or taken from the market affects the rate appreciably. One thing in the rather foggy situation here is clear enough: that is that money rates are going to be firm for some time to come. In the absence of a severe enough decline in the stock market to upset business confidence, any hope of really easy money in the next few months is bound to be disappointed.

The new Administration at Washington has under it a firm foundation of prosperity, and the corner-stone undoubtedly is lack of inflation in the commodity markets. Some indications of speculation in spots may be seen, but in the opinion of superficial observers at least, the situation will not become really dangerous until the exuberance of the share market overflows into commodities. The sharp advance in copper metal may be a straw in the wind, but most likely the advance is justified on the basis of supply and demand. Some speculative buying is undoubtedly taking place, but the fact remains that the large producers have been unable to supply enough copper to keep the price within reasonable limits, although they have tried to do so. In the past week the price here has risen a cent and a half a pound.

Activity in the steel industry has seldom been so pronounced at this time of year. Operations are on a theoretical 90 per cent. of capacity basis, which, because of the difference in real and apparent capacity, means as they are able. Prices, meanwhile, are holding firm. The motor industry is feeling the stimulus of spring-demand and is increasing its production. January output set a new high record for the month. Affairs are not going so well with the oil trade. The leading factor in the industry, the Standard Oil Co. of New Jersey, is proposing that all drilling operations be suspended for two months. The important companies are taking the proposal seriously, although opposition is bound to spring up.

In addition to the bull market in coppers, a fillip was given to the share market by the capital readjustment plan of the United States Steel Corporation. It is proposed to pay off approximately $271,000,000 of the Corporation's 5 per cent. bonds, which will obliterate all the funded debt of the corporation proper, although some $200,000,000 in bonds of subsidiary companies will remain outstanding. The money for the retirement of the bonds will be obtained from shareholders, who will be offered additional common shares. The amount of new shares and the price have not yet been stated. Authorised capital stock will be increased from 7,533,000 shares to 12,500,000 shares. Only enough stock will be sold at this time to take care of bond retirement, and probably not much over 1,000,000 shares will be issued, say at the rate of one new share for each six outstanding. The new stock if sold at around $150 a share would give the corporation nearly all it needs for bond purposes, and the balance is available from Treasury funds, recently increased by the receipt of $30,000,000 tax refund.

It is apparent that the Federal Reserve Board has once more failed to stem the flow of money into the stock market with half-way measures. Bullish sentiment has gained momentum during the week, and the bull party is talking enthusiastically of its "victory" over the banking authorities. As this is written the Dallas Reserve Bank announces a rise in its discount rate from 4½ to 5 per cent., leaving three institutions, those at Kansas City, Minneapolis and San Francisco, on the lower basis. It had been expected that increases in rates by interior institutions, and probably by all those still on the 4½ per cent. rate, would be made.

The rise at Dallas no doubt was a reflection of local conditions. For the past three or four years the Dallas Reserve authorities have complained that the banks in the district were, in effect, using Reserve Bank credit to bolster up their own capital. Little headway in the campaign of moral suasion instituted by the Reserve Board last month was made in the Dallas district, and the bank's reserve ratio at 58 per cent. for this week is the lowest of all the twelve banks. It compares with a system average of 69.9 per cent., and with a New York ratio of 81.6 per cent. An immediate cause of the increase in rate seems to have been the rising rates for bankers' acceptances. Cotton factors and dealers have been obliged to pay around 6⅜ per cent. to finance transactions by means of cotton bills, and they have found it cheaper to go directly to the commercial banks for loans. This has brought an expansion of member bank credit and forced the member banks to increase their discounts at the Federal Reserve Bank.

Following a reduction of nearly $200,000,000 in loans since early February, the account rose $30,000,000 this week. The gain, however, was entirely due to larger amounts placed at Wall Street's disposal by corporations and foreign lenders. Money clearly leaves Wall Street when the call rate is lowered to 6 per cent. or so, and it comes back with 8 and 10 per cent. money. That the rise in loans was not larger was due in part to the small volume of new flotations and the abundance of short covering in shares. Stock prices have regained all their losses which followed the Reserve Board's warning on credit, and in the popular view are now beginning to discount the "Hoover prosperity."

Prosperity we undoubtedly have, and the market probably will discount it. In banking quarters there is no quarrel with that, but it is felt that prosperity would last longer if a little deflation took place now and then. However, the incoming administration at Washington, it is believed, will favour an easy money policy. Hoover is regarded as an expansionist, and Secretary Mellon is a business man who believes in cheap money. Both will listen closely to the protests of business men over a firm money policy before favouring higher discount rates. Business men, of course, are saying that business is good and there is no good reason for change. They cannot be expected to take the economist's view, that a stitch in time will save nine. Meanwhile the Administration's ideas necessarily will have much weight in framing central banking policy, and if the warnings already given do not turn the scale the inflationary tendencies in the share market probably will simply have to run their course, even though, as some fear, commodity inflation will come before it is over.

It is now learned that Hoover will call a special session of Congress for April 10. No legislation is likely to be considered then, however, other than that dealing with farm problems. Some sort of " farm relief " measure will no doubt be passed. Hoover made his promises before election, but just what his ideas on the subject may be are not generally known. The financial district, while disliking the idea of Governmental interference with the free play of economic forces, does not expect that any risky experiments will be made.

The Treasury is about to announce its tax date financing plans. Banks have been notified that an issue of approximately $500,000,000 of Treasury obligations will be sold. The high interest rates which the Treasury must pay suggest that only short-term issues will be sold, and yields on existing notes and certificates indicate that the Government will pay around 4½ per cent. for its money.

GERMANY.—REPARATIONS—GOLD EXPORT—BANKS—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, March 12.

THE Reparation Committee's suggested plan of a bank for international payments has not been very well received here. The bank, it is reasoned, is designed to be primarily an institution for regulating transfers, and the admission of a need for regulation indicates that there is to be no material reduction of the present standard annuity. A reduction is the only thing in which Germany is much interested. The view of most Germans who have so far expressed themselves publicly has been that, if the annuity were to be heavily reduced, Germany could surrender the so-called "transfers protection "; that is, could absolutely undertake to transfer, whether in cash or in kind, the whole sum. In this case she could not default without proclaiming State bankruptcy. The creditor countries would be freed from their present responsibility for the transfers and from the possible compulsion provided for by the Dawes Plan to reduce or suspend the internal reichsmark payments, and, further, the first and chief obstacle to commercialisation would disappear. Theoretically, this German attitude has its flaw; for if the ability to transfer 2,500 million marks is in doubt there is no guarantee that the transfer of the 1,000 or 1,250 millions, which Germans considered reasonable, would be feasible; indeed, the Dawes Committee did not venture to express the view that any transfer, however small, would be possible. In practice, however, Germans were simply hoping for a bargain, the essence of which would be that, in exchange for monetary relief, they would consent to rid the creditors of a possible cause of embarrassment. The bank plan, it is reasoned, means that the Experts regard some form of transfer regulation as being permanently necessary, and this, in turn, must mean that the new annuity will be high. Independently of that, financial circles do not favour the notion of confusing Reparations with the other " war debts " referred to in the Committee's communication and with general exchange and currency questions.

The sub-committee of the Inter-State Conference entrusted with submitting a plan for constitutional reform has rendered a report, which is too detailed, and too much qualified by minority opinions to be summarised satisfactorily here. The sub-committee's chief suggestion is that there shall be two classes of German States; firstly, States of the present character, that is, the South-German States and Saxony, which should be somewhat more closely attached to the Federal system; and, secondly, States created out of the present Prussian provinces, united with the neighbouring small North-German States. The second class of States would have common legislation and administration. The Prussian Government would disappear.

After the development of the exchange market in the last two months and after the Reichsbank's heavy loss from its legal-cover exchange reserve and its free exchange holding, the sale of 46 million marks of gold, the first such sale since May, 1927, caused no surprise. As already reported from here the Reichsbank preferred to sacrifice gold without waiting for the complete exhaustion of its exchange holdings. Had it waited, it might have been compelled to export gold at an inconvenient juncture. The Bank's return for March 7th shows a drop in the gold reserve by 46,104,000 marks to 2,682,829,000 marks, and a corresponding increase in the legal-cover exchange reserve by 37,552,000 marks to 127,938,000 marks. As the gold reserve on deposit in foreign central banks declined only from 85,626,000 marks to 73,058,000 marks, it appears that the greater part of the sold gold is taken from Berlin. The dollar and sterling, which during the greater part of 1928 were below par, have this year steadily risen. The Reichsbank's intervention in the exchange market had little effect. The passive foreign-trade balance, demands for interest and amortisation of foreign loans, Reparation cash transfers, and, of late, heavy withdrawals for voluntary repayments of foreign short credits and funds, which far exceeded the receipts from long-term foreign loans, are the causes of this change. Whether further gold export is to take place will depend mainly upon developments in New York, but should the dollar go higher arbitrage sales of German gold may begin; and it is even possible that the Reichsbank will be compelled to raise its discount rate. At present the status in the matter of reserve is satisfactory; owing to the decline in circulation the gold cover for notes rose in the first March week from 59.9 to 61.8 per cent.; combined gold and exchange cover from 61.9 to 64.8 per cent. The dollar is slightly weaker since the sale of gold, sterling a little firmer.

Money continues relatively dear. The demand from public bodies continues, and new sales of Reich treasury bills this month are possible. The payment of industrial-bonds interest and the purchases of exchange have also affected the market. The private discount rate was last week put up to 6¼ per cent. To-day's day-loan rate was 6½-8½ per cent., month loans 7½-8½ per cent. The quotations of home industrial debentures have sharply fallen. The reports for 1928 of three of the " D " banks show:—

(Millions of Marks.)

	Gross Profit.		Nett Profit.		Dividend % Unchanged.
	1928.	1927.	1928.	1927.	
Deutsche	128·0	129·1	23·8	23·5	10
Disconto	71·3	70·0	15·4	15·4	10
Dresdner	78·9	77·2	13·4	13 1	10

The balance sheets show large increases under the heading of Creditors, in great part foreign. The Darmstaedter Bank's annual report has not yet appeared.

The wholesale price-index number for March 6th is 140.1, as against 139.6 on February 27th. Railway Corporation's car-loadings in February were considerably behind those of February, 1928 and 1927. The Labour market shows no improvement. The home steel market has not improved, and export is active only in semi-products and wire rods. The steel trade Press is pessimistic about the prolongation of the international steel, tubes, and rails agreements, and of the home syndicates. The fates of the international and home combines are connected. The question of prolongation of the International Steel Sartel after September 30th is apparently not to be considered at Brussels this week. The home Tubes Syndicate is threatened with dissolution owing to impending competition by Krupps, an outsider, whose present plans of construction would mean a tubes output equal to about 25 per cent. of the whole German demand. Dissolution of the Tubes Syndicate is provided for in the event of such outside competition. There is, further, doubt whether the German A.-Products Syndicate, which controls rails, will be renewed; and also doubt about the Ingot Steel Syndicate (*Rohstahlgemeinschaft*), which expires on November 1st. Steel experts are already speaking of a coming non-syndicate time. It seems likely that if the native syndicates lapse Germany will withdraw from the international combines. Net export of heavy iron and steel in January was 243,000 metric tons, as against a monthly average in 1928 of 219,000 tons. The Hansa Shipping Co. reports net profits in 1928 of 3,457,147 marks, against 2,802,314 marks; dividends unchanged 10 per cent. The Opel-Werke, the chief German manufacturers of cheap cars, has, according to report, been sold to General Motors at a price of 125 million marks for 80 per cent. of the 60 million marks capital. The number of motor vehicles in Germany on January 1st is returned at 1,034,300, whereof 389,000 private cars, 133,000 lorries, and 351,000 heavy cycles. The Potash Testing Board reports an increase in total sales in 1928 of 14.69 per cent., in sales to abroad 20.06 per cent. Potash " rationalisation " measures have had great success; with increasing output, the number of manual employees fell between 1922 and 1927 from 48,999 to 21,267.

ITALY.—DEBT REDEMPTION—PUBLIC EXPENDITURE—LEVEL OF TAXATION.

(FROM OUR CORRESPONDENT.)

TURIN, March 5.

AN interesting explanation of the torpid state of Stock Exchange quotations in Italy and the difficulties experienced here in the return to prosperity have been given in the February number of *Rivista Bancaria*, by Signor Mazzauchelli. Put in a nutshell, the thesis, which has been much discussed, is that the State must increase taxation so as to divert into the exchequer private income which would have been expended, on condition that the exchequer does not spend it, but devotes it to the amortization of public debt. The external war debt is in Italy amortized through the instrumentality of a special fund, into which the German war indemnities are paid. The amortization of the internal public debt is provided for by another special fund, consisting mainly, in addition to various miscellaneous items, of the yearly surpluses of the Budget. Now the opinion is gaining ground that the reduction of public debt must not be limited to the possible surpluses; but that a special increase of taxation should be enacted. Signor Mazzuchelli maintains that the extraordinary prosperity of the United States in after-war years is not to be attributed to plentiful national resources or to the inventiveness of industry, which having always existed, cannot explain the new phenomenon, but to the big reimbursements of public debt which convert a part of current income from expenditure to productive channels. In the same way the rapid recovery from the revaluation and stabilisation in France and Belgium is explained by the same authority as a consequence of the outpouring of taxation money into the capital market through the amortization process. Tax first and amortize next: this is the new financial creed. Some cold water is perhaps thrown on the theory by a perusal of the figures of public income and expenditure. I quote, from the public treasury accounts, the usual double set of figures for the last seven years, adding for comparison's sake the last pre-war year (in milliards of lire).

	Budget.			Treasury Accounts.		
	Revenue.	Expenditure.	+ or −	Incomings.	Outgoings.	+ or −
1913–14	2·57	2·73	− 0·16	2·62	2·87	−0·25
1922–23	19·16	22·21	− 3·05	27·50	40·73	−13·23
1923–24	20·98	21·40	− 0·42	26·15	28·91	−2·76
1924–25	20·69	20·27	+ 0·42	22·41	19·50	+2·91
1925–26	21·29	20·82	+ 0·47	21·50	18·79	+2·71
1926–27	21·45	21·01	+ 0·44	20·28	19·53	+0·75
1927–28	20·07	19·57	+ 0·50	19·06	20·59	−1·53
1928–29 (*)	10·82	10·78	+ 0·04	10·45	12·07	−1·62

* Seven months from July 1, 1928, to January 31, 1929.

As I have repeatedly explained, the first " budget " set of figures is the rational one, because it contains all the revenue, which has gone into the exchequer on the current year account, and the rest, usually small, which remains to be cashed at the end of financial year; and on the expenditure side, all sums expended and remaining to be spent on the year's appropriations. To study the yearly variations of the budget results severally year by year this is the set of figures at which we must look. The second " Treasury accounts " set of figures is also useful because it pictures the *de facto* incomings and outgoings of the exchequer, without distinction as to the appropriation year. In the second set sums are registered when they come in or are paid, even if they refer to a previous year.

The first set proves that equilibrium has come to stay and has not been shaken even by the revaluation crisis. The second set indicates that some expenditures which were budgeted for in past years, and were not paid in the appropriation year (e.g., public works only just completed) are now falling due. The exchequer, which in 1924-25 to 1926-27 paid less than was appropriated, must now pay the arrears. It seems that the present Finance Minister, Senator Mosconi, is accelerating payments of arrears. As arrears are also a debt, their payment reduces public debt just as much as extinction of consols; and if payment is made to creditors for public works or goods sold to the State it should have on the money market about the same effect as reduction of public debt.

It seems doubtful whether it is possible, at the present time, to increase taxation appreciably in order to reduce on a grand scale public debt proper, as distinct from reduction of arrears. Professor Mortara, in the chapter on Finance in his forthcoming *Prospettive Economiche*, has pointed out that public revenue which appears to have decreased from 21.3 milliards in 1925-26 and 21.4 in 1926-27 to 20.1 milliards in 1927-28 has really increased, if we reduce all figures to the present stabilised lira, from 15.8 milliards in 1925-26 to 17.2 in 1926-27 and to 20.4 in 1927-28. This is a portentous increase of taxation of 29 per cent. in three years. Taxes, apparently stationary, are much more hard to pay than before revaluation. It is therefore very difficult further to increase taxes on the top of such a hidden increased pressure of public expenditure on national income. Mortara's guess at the proportion of public (State, local and corporations) taxation to the national income is to-day 24 per cent. against 12.5 per cent. in 1913-14. Probably there is no other country in the world which has so gallantly faced the consequence of the post-war world in which we live. Italians pay 24 per cent. on an average individual yearly income of £23-£24; the British 24 per cent. on £80; Frenchmen 22 per cent. on £47; Germans 18 per cent. on £51; Americans 7 per cent. on £152. As the burden of taxation diminishes with the increase of income, we are bound to conclude that Italian taxpayers cannot easily bear further taxes. Senator Mosconi's programme of reduction of public expenditure is not only the best suggestion for the reduction of the national debt, but the best also for creating a margin for savings, which is the only road to prosperity.

HOLLAND.—MONEY—CAPITAL—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, March 4.

THE increase of the official London discount rate to 5½ per cent. has greatly influenced both the bill market and the money market here. A considerable amount of capital found its way to London and was reflected in the rise of sterling. It was only by support on the part of the Netherlands Bank that the guilder rate was prevented from reaching the export gold point. Our central bank at once liquidated large amounts of sterling in the form of bills, thereby greatly reducing both the items foreign bills and miscellaneous accounts. On February 4th the value of the foreign bills held by our national bank was still 205 million guilders, compared with 166 million on February 8th. The miscellaneous accounts dropped from 34 million to 27 million, while the gold supply remained unchanged. The value of the notes in circulation consequently shrank from 808 to 774 million. This diminution promoted a firmer tendency in the money market, so that rates increased considerably. The rate for " prolongation " even rose to 5½ per cent., while the rate for private discounts rose above the level of the official rate, viz., 4½ per cent. As a result a greater call was made on the Netherlands Bank, causing the value of the Dutch bills held by the Bank to increase from 59 to 67 millions on February 18th, while the amount of money lent also showed a sharp advance. The high rate of interest is evidenced by the average rate for " prolongations " during the month of February, which was 4.78, compared with 4.47 in January, 1929, and 3.79 in February, 1928.

Although on the Stock Exchange a rise in the Netherlands Bank rate for discounts is anticipated, the position

of the Bank is at present nevertheless considered sufficiently strong, so that there is no fear of an immediate advance. In this connection the fact that the entire Dutch dollar loan of $40 million is to be redeemed by April 1st is also important. For a considerable part of this loan no provision has yet been made; consequently the coming redemption will have a depressing effect on the dollar rate.

The firm tone of the money market has had little influence on the Exchange here. It is true that business was limited, but the market was not really dull. The figures regarding the issues market do not correctly represent the extent of the activity on the market or of the money taken up. In addition to the usual issues there were, in fact, various stocks introduced or negotiated, but for the amounts furnished by Dutch investors as buyers of these stocks no figures are to hand. This is all the more regrettable seeing that this category has become considerably greater of late. During February there were also several important issues, American being most prominent. The sensational rise in the price of copper led to the introduction of certificates of 10 ordinary shares of the Nevada Consolidated Co. at $51 per share, and of certificates of 10 shares of the Kennecott Copper Corporation at $79 per share. The International Nickel Co. of Canada, Limited, likewise offered a number of shares at $68 each. The briskness conspicuous at the commencement of 1929 has increased this month. Whilst 61 million guilders new capital was called for last month, this month no less than 100.9 million (excluding conversion loans) have been taken up, compared with 60.3 in February, 1928. The aggregate of the conversion loans was 2.9 million guilders. The issues for which applications were invited were confined to only a small variety, including "Industry," which accounted for not more than 79,616,925 guilders. It appears that during the past month Dutch stocks absorbed 61.8 million and foreign stocks 39 million, so that the comparison was approximately 1.6 to 1, as compared with 7 to 1 a year ago.

The value of Dutch imports for January last was 233,250,889 guilders, of the exports 152,191,563, and of the import balance 81,059,326.

For January of the years 1926-1929 these figures were as follows:—

	1926	1927	1928	1929
		(In millions of guilders)		
January—				
Imports	205·1	188·0	216·3	233·3
Exports	121·6	135·1	139·5	152·2
Import balance	83·5	52·9	76·8	81·1

The weight of imports and exports during the past three years was as follows:—

	Imports.	Exports.
	(In metric tons).	
1927	2,035,568	1,095,422
1928	2,068,142	1,122,225
1929	2,346,966	1,223,094

Half the increase in the weight of the imports is due to the increased imports of the minerals and metals group and not of the other groups of articles manufactured from these materials. The same applies to exports. The value of imported industrial products increased from 82.5 million guilders in January, 1928, to 89.2 in January, 1929; the value of these products exported increased from 56.7 million in January, 1928, to 68.1 in January, 1929.

CZECHOSLOVAKIA.—POLITICS—GOLD STANDARD—TRADE RETURNS.

(FROM OUR CORRESPONDENT.)

PRAGUE, February 27.

CZECHOSLOVAK politics are at the moment in a state of flux. The retirement of the Premier, Dr. Anton Svehla, was no surprise, on account of his continued ill-health, but it was difficult to find a successor who would combine his prestige and ability with the necessary popularity among the Coalition parties. The choice of Dr. Frantisek Udrzal, Minister of National Defence, was the best. He is highly respected for his sincerity and matter-of-factness, and as he also belongs to the Czech Agrarian Party, his appointment involves no Cabinet issue; in fact, it removes a number of personal differences which were well-known; and, by the retention of Dr Sramek as Deputy-Premier, secures the continued support of the Czech Clericals. Dr. Udrzal had not been in office more than a few days before changes in the Cabinet personnel were brought about, arising not from his appointment, but from party reasons. Dr. Gazik, Minister of Unification, and Dr. Milan Hodza, Minister of Education, both resigned. The latter's retirement from politics is of great significance, for he was a man of great influence and ability in the Agrarian Party. The present Coalition may continue in power for a few months longer, but it is clear that there is little unity among its members. Undoubtedly, if the last local elections (November, 1928) had not dealt such a heavy blow at the Czech and Slovak Clericals, so that they fear a new appeal to the country, the change would not be long delayed; in such a case, present events seem to point to a return of the Socialists to the Government.

It is because the Agrarians have such control of the political situation in this State that the economic discussions of the Little Entente representatives at Bucharest recently have amounted to so little. Resolutions as to examination of transport and traffic questions which are the joint concern of the three States, etc., do not hide the fact that attempts to develop an economic *entente* have failed. Jugoslavia charges this State with impeding its import of Jugoslav pigs, while the Czech Agrarians are ever on the alert lest their own industrials will obtain reductions and concessions at the expense of agricultural interests.

For the last few years the average quotation of the Czechoslovak crown has been 33.75 to the dollar; that is, it has had an actual value of 44.58 milligrams of fine gold. Its stabilisation has been assured from 1921, and in a currency Bill shortly to be laid before Parliament it is proposed to give the crown (Kc) a direct relation to gold instead of the present indirect relation *via* the dollar. It is not expected that gold currency proper will be introduced, as in France, but a gold exchange standard, similar to the system about to come into force in Switzerland. The steady progress made in this respect during the past ten years is due to Ministers Rasin and Englis, and to the Governor of the National Bank, Dr. Pospisil. Last year an amortisation fund of 414 million Kc., or 9 per cent. of the national debt, was established from capital levy contributions and direct State payments.

Trade returns for January, though showing an increase on those for the corresponding month last year, leave an unfavourable trade balance of 285 million Czechoslovak crowns, as shown by the following figures:—

	Imports.	Exports.	Balance.
	(In million Kc's.)		
January, 1928	1,315·5	1,551·4	+ 235·9
January, 1929	1,692·1	1,407·0	− 285·1

Among the imports for last month are included 212 million Kc. for raw materials, so that a favourable reaction in increased exports of manufactured articles is to be looked for later. Exports of finished goods declined in January by 54 million Kc., though imports of the same increased by 171 million Kc., which is explained by the greater purchasing power of the population.

Reports from the savings banks and other deposit institutions show that the general tendency towards thrift, which is so marked a characteristic of the Czech, is being continued. The last official reports from the insurance companies, those issued for 1927, show an increase in funds during that year from 4,640 to 5,330 million Kc., that is, 15 per cent. The extension of the State subsidy for building has given that industry a new impetus, though it is not to be expected that the boom of the past few years will continue in the future. Reports from coal, iron, automobile and most of the other leading industries are favourable.

CANADA.—BUSINESS—THE NEWSPRINT INDUSTRY—RAILWAYS—PARLIAMENT—ESTIMATES—ST. LAWRENCE WATERWAY.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 27.

BUSINESS conditions remain very satisfactory, although it is quite clear now that the purchasing power of the rural community, especially in the West, is lower than it was last winter. It is true that the car-loading figures for the

SUN LIFE ASSURANCE COMPANY OF CANADA

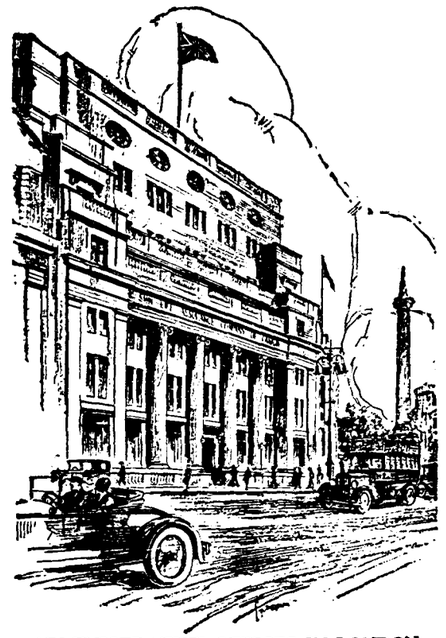
A TOWER OF STRENGTH

1928

Assurances in force (net) - An Increase of £84,025,000	£389,777,000
New Assurances Paid for - An Increase of £23,185,000	£90,666,000
Total Revenue - - - - - An Increase of £9,336,000	£30,675,000
Surplus earned during the Year - - - - - -	£8,273,000
Payments to Policyholders and Beneficiaries - - -	£10,615,000
Surplus and Contingency Reserve - - - - - An Increase of £1,881,000	£13,754,000
Funds at December 31st, 1928 - - - - - - An Increase of £17,209,000	£97,445,000
Rate of Interest earned on mean invested assets (net)	£6. 11s. 7d.%

DIVIDENDS TO POLICYHOLDERS INCREASED FOR NINTH SUCCESSIVE YEAR

The Company has also inaugurated the practice of paying a Special Maturity Dividend on participating policies, ten or more years in force, terminating by death or maturity.



ADMINISTRATIVE OFFICES IN LONDON
2-3-4 Cockspur Street

EXTRACTS FROM DIRECTORS' REPORT

... After deducting amounts re-assured, the total assurances in force now amount to £389,777,246, an increase of £84,025,737. Policies in force number 633,240, and in addition 136,293 certificates of assurance are held by employees of corporations and firms under the group plan.

While every field of operation contributed its full share to these impressive advances, the rapid development of our business in Great Britain and the United States is especially noteworthy. The generous reception of our Company in countries served by powerful domestic institutions is particularly gratifying, as testifying to widespread appreciation of our record and services.

... The amount paid to policyholders since organization, together with the amount at present held for their security or benefit, exceeds the total amount received from them in premiums by £22,884,293.

The strength and resources of the Company have been still further enhanced.

The net rate of interest earned on the mean invested assets, after making provision for investment expenses, has risen to 6.58 per cent. Dividend increases, bonuses and stock privileges, accruing on many of the Company's holdings, contributed substantially to this gratifying result.

A net profit of £2,266,202 has been realized from the redemption or sale of securities which had risen to high premiums.

The securities listed in the assets have been valued at figures substantially below the values placed on them by the Government. This under-valuation of our securities represents an important safeguard against possible adverse market fluctuations, additional to the reserves specifically provided against that contingency.

We are again able to report that on the bonds and preferred stocks listed in the assets not one pound, due either as interest or as dividend, is in arrear for a single day; while the dividends accruing to common stocks exceed by approximately one million pounds those payable on the same stocks at the time of purchase.

The surplus earned during the year, based on the values given in the accounts, amounted to £8,273,442.

£2,054,794. has been deducted from the already heavily marked-down value of securities, as additional provision against possible fluctuations, increasing the amount so set aside to £4,109,589.

The special amount set aside as a liability to provide for unforeseen contingencies has been maintained at £2,568,493.

£3,251,165 has been paid or allotted as profits to policyholders during the year.

After making all deductions and allocations, £1,881,774 has been added to the undivided surplus, bringing the total over liabilities, contingency accounts, and capital stock to £11,186,067.

The continued prosperity of the Company enables your Directors to announce, for the ninth successive year, a substantial increase in the scale of profits to be distributed to participating policy-holders during the ensuing year.

In addition, your Directors have inaugurated the principle of granting a Special Dividend on participating policies maturing after having been in force ten years or longer. This new bonus will enable policyholders or beneficiaries whose withdrawal is occasioned by the maturity of policy contracts, to participate in the accumulated surplus which it has not as yet been considered prudent to divide.

The effort to provide life assurance at the lowest net cost obtainable has been increasingly appreciated. Our policyholders will be gratified by this further evidence of our desire that the Company's prosperity shall be fully shared by its members.

SUN LIFE ASSURANCE COMPANY OF CANADA

HEAD OFFICE - MONTREAL

week ending September 15th, placed at 65,516 cars, show gains of 1,471 and 829 cars respectively in comparison with the figures of the previous week and the parallel week of 1927, but the aggregate for the year up to the same date is only 411,308 cars, as compared with 438,780 cars for the corresponding period of the previous year. These figures reflect a decreased movement of merchandise, but they are partly accounted for by the fact that a much larger proportion of the crop of the year 1927 was not marketed in the autumn months, but was left over to swell the carloadings of the early months of 1928.

Western members in the House of Commons have asserted that there is a great deal of unemployment in the urban centres of the prairies, and it is prevalent to a certain extent in the Eastern towns and cities, but the general level of industrial operations is satisfactory. The motor industry has the prospect of a very busy year, the structural steel mills are well provided with orders, and both the woollen and cotton textile plants are working nearer capacity than they have been for some time. The boot and shoe trade is also showing considerable improvement, and the promise of another large programme of new construction offers an auspicious outlook for firms dealing in builders' supplies and hardware. On every side there is evidence of confidence in the economic outlook for Canada. The Montreal Harbour Commission has decided upon improvements which will cost ten million dollars in anticipation of a steadily growing volume of business. Again, several large American chain-store organisations have entered the Canadian field, and have incorporated themselves under the Canadian law with Montreal as their headquarters.

Conferences between the leaders of the newsprint industry and publishing interests have been continuing steadily for the purpose of securing an agreement for price stabilisation at a profitable level, and to-day the Montreal *Star* announces that a settlement has been achieved through the signing of an agreement between the producers and the publishers which fixes a price of $55.20 per ton and restricts the output of the Canadian newsprint mills to a 75 per cent. basis. The new agreement does improve the prospects of the industry, and the stocks of newsprint companies have reacted favourably to the news.

The Canadian National Railways has just made public a statement of its earnings and expenses of the calendar year 1928, the figures with the comparative data for the previous year being as follows:—

	1928.	1927.
	$	$
Gross earnings	276,631,921	248,716,374
Expenses	218,248,343	203,315,684
Net earnings	58,383,578	45,400,690

The figures accordingly show that, while gross earnings increased 11.22 per cent., there was an increase of nearly 13 millions in net earnings, which is equivalent to 28.60 per cent. A further satisfactory aspect of the report is that, during 1928, the operating ratio of the system was reduced from 81.75 per cent. to 78.89 per cent. These figures are very encouraging to the defenders of the State-owned system, although it is admitted that, owing to the abnormally heavy yield of the Western crop, 1928 was a particularly favourable year for the earnings of the C.N.R. However, it is planning a very extensive programme of expansion. Not only has it secured a half interest in the railways of the Peace River country, in conjunction with the Canadian Pacific Railways, but Mr. Dunning, the Minister of Railways, announced in the House of Commons on February 22nd that the directors had decided to acquire some minor systems in Eastern Canada. In addition, it has its very substantial programme of new branch-line construction in Western Canada, which has been involving it in controversies with the Canadian Pacific Railway. But the Department of Railways at Ottawa has apparently been exercising its gifts as a mediator between the two companies with considerable success. Mr. Dunning at any rate informed Parliament that a satisfactory compromise had been reached in connection with their competing claims for charters, except in one instance, which was still the subject of conferences. On account of this compromise the C.N.R.'s branch line programme has been curtailed to 701 miles, which will involve an expense of about 28 million dollars. Some of the proposed branches will merely shorten or improve existing routes, but the longest are colonisation and development roads which will open up new territory for settlement. Most of them are in the two prairie provinces of Saskatchewan and Alberta; one branch in Saskatchewan will run into a new district north-west of North Battleford which is now well settled, and another will provide a direct link between Saskatoon, the commercial metropolis of Saskatchewan, and Fort Churchill, the tidewater terminus of the new Hudson Bay Railway from which steel is now only about 36 miles distant.

The Government has now received the petition of right filed by the minority stockholders of the Grand Trunk Railway, who are seeking authority to test their rights in the courts of Canada and will give it careful consideration. It raises very complicated legal questions and its appearance is credited with inducing the Government to postpone the submission of its plan, which was forecast for the present session of Parliament, for the recapitalisation of the Canadian National Railways.

The Federal Parliament continues to make rapid progress with its business, and it is now predicted that the budget will be produced before the end of the financial year, March 31st. Nothing but a few minor adjustments of taxation and tariff are predicted, and it is therefore unlikely to arouse much controversy. Once it is disposed of there will remain comparatively little important business to be tackled, and the way should be clear for the closing of the session by the middle of May.

The Government estimates for the fiscal year 1929-30 call for total appropriations of $391,507,840, an increase of some $6,000,000 over the aggregate for the current fiscal year. But before the session ends supplementary estimates will probably add another $20,000,000 to the estimates and produce the very substantial increase of at least $25,000,000. The increase is spread over most of the departments, which all claim to need more funds for expanded activities, and the only notable decrease is in the interest requirements for the public debt, which are cut by $3,500,000 as the result of the redemption of maturing loans from current revenues and the flotation of refunding loans at lower rates.

On February 25th the House of Commons debated the thorny problem of the St. Lawrence Waterway on the resolution of a Conservative private member to the effect that the Government should immediately conclude a treaty with the United States for its construction and undertake the Canadian part of the project as a public enterprise. The debate produced an interesting announcement from Premier King. He intimated that, like everybody else, his Government regarded the recent decision of the Supreme Court of Canada about the respective jurisdiction of the Federal and provincial authorities over water powers as nebulous and unsatisfactory, and saw no prospect of getting any more helpful verdict from the Privy Council. So they had decided to abandon the idea of any further reference to the law courts and to seek an equitable settlement of the conflicting claims by a conference with the governments of Ontario and Quebec which will be held as soon as the session ends. The United States Government has been notified of the plan and has acquiesced in it.

The Dominion Bureau of Statistics has recently altered its base for commodity price quotations, and will hence-forth take the base 1926 as 100. On this basis the January figures showed no change as compared with the December, being 94.15 for both months. While there were important price changes, the upward and downward movements tended to counter-balance one another: 99 price quotations were higher and 63 lower, while 340 were unchanged.

Letters to the Editor.

THE EFFECT OF FOREIGN LOANS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In reply to my inquiry for an explanation as to *how* foreign investment stimulates exports, in those cases in which it does not directly lead to additional purchases of British goods by foreigners, you reply:—"The cumulative effect on the world's exchanges as a whole of such increases in the supply of sterling for sale is to make the pound cheaper, which involves the relative cheapening of goods whose price is expressed in terms of sterling; in other words, to stimulate British exports and to hinder our imports."

This seems to me to be quite a correct account of what would happen if we were not on the gold standard. Is it that you have overlooked the fact of our return to gold? For the possible changes in the price of sterling within the gold points are insignificant in their effect on the prices of goods. Moreover, it is impossible that sterling should be cheaper than it is now—so long as we remain on the gold standard.

Your argument does not make sense, therefore, unless your meaning is that foreign investment stimulates exports by driving us off the gold standard. But this, I take it, is not your meaning. So I still await an answer to my question.—Yours, etc.,

J. M. KEYNES.

[This letter is referred to in a Note of the Week.—ED. *Econ.*]

TO THE EDITOR OF THE ECONOMIST.

SIR,—In considering the connection between capital exports and commodity exports it appears clearly necessary to distinguish between immediate reactions and ultimate reactions.

The immediate trade phenomena corresponding to an increase in the export of capital may be either an increase in exports or a decline in imports, including invisible items in both cases. Experience seems to show that, so far as Great Britain is concerned, the widest fluctuations are on the side of exports. Moreover, the tendency seems to be for variations from year to year in commodity imports and exports to be in the same direction, an increase in the export of capital, taking the form of a greater increase in exports than in imports, and *vice versa* in the case of a decrease in the export of capital. No doubt the correspondence in the movements of imports and exports may be partly accounted for by the fact that the quantity of imported raw materials required is to a substantial extent dependent upon the state of the export trade, as well perhaps as by general price movements; but I think it would be difficult to show that the quantity of goods imported for consumption is on the whole smaller when the export of capital is increasing than at other times. Imports of some goods (*e.g.*, manufactures competing with British goods) may be less, but the general level of imports for consumption is probably at least maintained.

The inference is that fluctuations in the export of capital from Great Britain are as a rule particularly closely connected with corresponding movements in the export of commodities and in invisible exports. The connection may not be one of cause and effect, as it seems just as likely that the export of capital may be a resultant as that it is a determinant of the commercial movements. The Balfour Committee (see their Final Report, p. 264) in fact regard the falling off in the export of capital since the war as "to a greater extent a result than a cause of the falling off in the export trade." As regards the ultimate reactions of the export of capital, it seems difficult to regard the development of the world as tending otherwise than to give a strong impetus to commodity exports. One can, of course, imagine this country as paying for its imports entirely by its invisible exports—such as interest on capital invested abroad in the past. But there is no suggestion that this is likely to correspond or could correspond with reality. Where capital exports take the form of British plant and machinery it may often be expected that the original purchase will give rise to a stream of later orders for purposes of replacement or extensions (as notably, for example, in the case of the British railways in Argentina). But apart from this, the development of so-called "new" or backward countries tends very strongly to stimulate international trade, and in this trade it may be expected that Great Britain will obtain a share probably more than corresponding to her proportion of the international trade of the world. Many of the countries in question produce foodstuffs and raw materials of which large quantities are required by Great Britain, and they need manufactured goods. The existence in many cases of regular shipping lines to this country, and of commercial and financial houses established in both countries, is likely materially to facilitate the export trade in British goods to the newly developed countries.

It must, of course, be admitted that the volume of the British export trade is to a great extent dependent upon general forces which control the volume of international trade of the world. The spirit of national self-sufficiency bolstered up by tariffs may at times do more to check the growth of international trade (and consequently it may be of British trade) than the development of new countries by overseas investment can do to expand it.

I enclose my card, and remain, yours, etc.,

STUDENT OF ECONOMICS.

London, March 11th.

[This letter is referred to in a Note of the Week.—ED. *Econ.*]

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your very lucid explanation in last week's notes of how an export of capital is always reflected in increased trade leaves no room for criticism on the main issue. Nevertheless there are certain by-products resulting from a foreign loan of sterling to which I think attention should be drawn.

Consider the particular case which you discuss of a foreign loan of which 20 per cent. is spent in this country and 80 per cent. converted into dollars and spent by the borrowing country in the U.S.A. Now assume that America takes over the sterling, invests the same in short-dated securities in our market, and thus indirectly promotes trade. Clearly your major proposition remains unchallenged. But what has actually happened? We have *lent long* and *borrowed short*, and thus put it in the power of the U.S.A. to deplete our gold reserves whenever the speculative position or other circumstances render such procedure desirable. Furthermore, our trade position has not been improved, since it is fair to assume that the sterling available for the foreign loan would otherwise have been employed internally in the same way as the short loans acquired by the U.S.A. in this country are utilised.

I am inclined to think that something of that nature has been going on for a considerable period, and if that is so you may agree that an unsatisfactory position has been created with little compensating advantage. Again, this view may offer an explanation of why our foreign loans, taken over a period, have exceeded our estimated exportable surplus. I have not access at the moment to all the figures for the last few years, and it might be of interest if you would summarise these for the benefit of your readers. If these figures confirm my conclusion they would offer an additional reason why foreign loans are, in certain circumstances, to be deprecated.—Yours faithfully,

FRANK MORRIS.

Constitutional Club, Northumberland Avenue,
March 12, 1929.

[This letter is referred to in a Note of the Week.—ED. *Econ.*]

LACE AND SAFEGUARDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In an article on the subject of lace and Safeguarding in your issue of March 2nd, you base certain conclusions hostile to the policy of Safeguarding upon results which you claim have occurred in the Lace Industry. The conclusions you reach are derived, in part, from certain figures quoted by Lord Plymouth, namely, the total imports of lace into the United States from France and the United Kingdom in 1927, a total of £712,000. You then tell us that the trade returns show that British-made lace sent to the United States in that year amounted to well over £400,000, and that, therefore, the volume of French lace imported into the United States that year did not exceed £300,000.

If you will refer to Lord Plymouth's speech (delivered in the House of Lords on November 21, 1928) you will find that the figure of £712,000 which he quotes, applied to machine-made lace only, whereas the figure of £400,000 which you deduct therefrom covers all kinds of lace. As a matter of fact, Lord Plymouth's figure is made up of imports into the United States from the United Kingdom to the amount of £90,000 only, while those from France amounted to £622,000. This alone appears to invalidate the arguments which you put forward, but a closer examination of French exports of lace into the United States is still more illuminating. The United States imports of French machine-made lace in 1924 amounted to $7,251,000; in 1927 they were substantially less than half that amount, namely, $3,020,000.

Now, in all arguments on the British lace trade the decline in exports and in re-exports is laid at the door of the lace duty. Many controversialists take the figures of re-exports as they appear in the Trade and Navigation Returns and tell us

that this is the figure to which they have sunk. Sir Arthur Steel-Maitland's statement gives us, as you point out, a total re-export trade in lace for 1927 of £873,000, which again you point out to be a decline of nearly 50 per cent. Does not this figure bear a very striking relationship to the decline in United States imports from France, which show a decline of more than 50 per cent.?

The persistent testimony of our merchants to which you refer may be perfectly correct as to the serious losses which the lace trade has suffered of recent years, but is it not abundantly clear that these losses arise from causes very far removed from the lace duty?—Yours truly,

DOROTHY JACOBS, Secretary.

Empire Industries Association,
26 Abingdon Street, Westminster, S.W. 1.
March 4, 1929.

[We are obliged for the correction. Lord Plymouth's U.S.A. figures related only to "machine-made" laces. To this extent the form of our argument needs qualifying, but there is no ground whatever for the suggestion that of the £822,000 (cotton machine-made laces) even the major proportion came through British ports transhipped under bond in order to get to the U.S.A., and our main argument still stands. It is true that French exports to the U.S.A. fell from 7¼ million dollars to 3 million dollars (1924-27), but the same Returns show that the corresponding United Kingdom exports fell from 1,432,032 dollars to 439,814 dollars—a much heavier percentage decline. —ED. *Econ.*]

Books and Publications.

AGRICULTURAL ECONOMICS.*

IN a country where the bulk of the population live within the shadow of the factory wall or within sound of the traffic's daily rumble, it is perhaps not surprising to find agricultural and rural problems relegated to positions of minor importance, or overshadowed by an urbanisation of outlook amongst students of sociological phenomena. Whether we regard ourselves as a nation of shopkeepers or as employees in the world's workshop, it is worth while remembering that there are still one and a quarter million of people actively engaged in some branch or other of the farmers' calling; that the country still produces some £225 million worth of foodstuffs, and that the economic activities associated with the welfare of an industry of such importance are as deserving of attention from scientific minds as the maze of parallel problems created by the industrial revolution.

While the importance of agricultural economics is now readily admitted, however, it can hardly be said that there is general agreement as to its scope, and particular value attaches, therefore, to this work of Professor O'Brien's, which is an attempt not only to beat the bounds of the subject, but also to indicate the nature of the problems which have legitimate place within the pale. Justification for the publication of such a work is found not only in the relation of agricultural economics to the general science, but also in the neglect which is apparent in the application of scientific knowledge generally to agricultural practice. While intensive efforts have been made to apply the advances made in the natural and physical sciences to the improvement in the quantity and quality of the agricultural output, the fact that agriculture is a business as well as a science has been neglected both by students of the subject and, to some extent, by those responsible for public policy in regard to the assistance of agricultural production.

The severe economic depression of recent years has no doubt been largely responsible for the awakened interest in the need for close study of the causes underlying agricultural prosperity. The contribution made to the literature of the subject, so far as this country is concerned, are to be found mainly in the pages of scientific journals and certain official publications. The time is ripe, therefore, for some attempt to present within the covers of one book a summary of the researches and the scattered publications which have already taken place.

Professor O'Brien has done his task well, and it would be entirely misleading to say that his book is merely a boiled-down version of the work of other writers. The author's conception of agricultural economics is a logical application of general economic principles to the peculiar circumstances of the agricultural industry. It is assumed, therefore, that readers of the book will have a preliminary acquaintance with the technique of the economist; he will need to understand, for example, such terms as "elasticity of supply," "the economic lag," "instantaneous lag," and "instantaneous costs," and "utilities of time, place and possession." To those familiar with economic nomenclature it will be apparent that this assumption of knowledge on the part of the reader has enabled the author to dispense with a good deal of exposition in elementary economic theory, with considerable advantage to the concise and yet adequate statement of his argument.

The general thesis of the work proceeds from the rather free description of agricultural economics as the science of agricultural prices, and the treatment adopted involves discussion, first, as to the causes which affect the prices of agricultural products in general, and the causes which affect the prices of particular agricultural products. The chapters under these headings contain most suggestive discussions on such matters as the trade cycle in agriculture, the elasticity of demand for agricultural produce in relation to purchasing power of the community, the possibilities for stimulating consumption by advertisement, the economic significance of the law of diminishing returns, the value of cost accounting in agriculture, the size and layout of farms, the causes which affect particular items of farming costs, the influence of systems of land tenure upon costs, and the analysis of marketing functions in their relation to costs of production. Considerable space is devoted also to the economic significance of the relations which exist, or which may be contemplated, between the State and the industry.

The work throughout is exceptionally well annotated with references to existing publications, and the book may be welcomed as a timely contribution to the literature of the subject, particularly for those whose interest is of the new-born order and whose immediate need is a competent guide to give them a general survey of the ground to be covered, whilst pointing out at each stage of progress where digressions may be most profitably undertaken.

MARKETING ENGLISH GRAIN.*

NUMBER 18 of the admirable series of Economic Reports published by the Ministry of Agriculture, deals with the marketing of wheat, barley and oats in England and Wales. The organisation of the trade in imported grain is described, but the chief importance and interest lie in the description and discussion of the methods by which home-grown grain is marketed. The proportion of total supplies of each of the three grains which is produced at home varies widely, being 22 per cent. of wheat, 56 per cent. of barley and 85 per cent. of oats. In the case of wheat, a point is emphasised which is commonly overlooked. It is reckoned that not more than 30 per cent. of home-grown wheat is made into bread, the remainder being used, in about equal proportions, for biscuit-making, blending and scaling flours and feeding stock (mainly poultry). Justice is done in the Report to the efficiency of the service rendered by merchants who keep the country regularly supplied with wheat, and to the narrowness of the margins on which this immense business is financed. The tendency for the manufacture of cereal products to become concentrated in larger units is pointed out, and it is suggested that, as a result, "the balance of bargaining power has gone against the seller." The establishment of a recognised system of grading for home-grown grain is the chief proposal made.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Survey of American Foreign Relations, 1928. By Charles P. Howland. Oxford University Press. 24s.

This is the first volume of a series inaugurated by the Council on Foreign Relations. It is proposed to select each year those topics which either have been thrown into high relief by some sort of culmination, or have reached a stage of temporary arrest which allows of deliberate examination. The principal sections under which the chapters in the present volume are grouped are: American Foreign Policy; The United States as an Economic Power; The United States and the League of Nations; Financial Relations of the United States Government after the World War and Limitation of Armament.

Double Taxation and International Fiscal Co-operation. By Edwin R. A. Seligman. (London) Macmillan and Co., Ltd., St. Martin's Street. 8s. 6d. net.

Professor Seligman gives a clear and interesting account of the progress that has been made in dealing with the question of double taxation, and concludes with further suggestions.

Wirtschaftstheorie und Wirtschaftsbeschreibung. By Robert Liefmann. (Tübingen) Verlag Von J. C. B. Mohr (Paul Siebeck). 1.80m.

A discussion, by a distinguished German economist, of the scope of economic theory.

Political Handbook of the World, 1929. Edited by Malcolm W. Davis and Walter H. Mallory. (New York) Council on Foreign Relations, 25, West 43rd Street. $2.50.

This handbook gives a summary of the party programme, the Government and the Press of each of sixty-four countries. It is unfortunate that this useful publication makes (on p. 80) an erroneous entry regarding the *Economist*. It is indicated that Financial Newspaper Proprietors, Ltd., are the proprietors of this journal. This is not the case. As stated in these columns, that company owns 50 per cent. of the voting shares, the other 50 per cent. being held by a separate group of individual shareholders. Moreover, adequate provision has been made to secure the complete editorial independence of the *Economist*, and independent trustees have been appointed with the power of veto on the transfer of voting shares.

Mergers and the Law. (New York) National Industrial Conference Board Inc., 247, Park Avenue. $3.00.

A valuable discussion of American anti-trust law and its working.

Some Aspects of Rationalization. By Sir Mark Webster Jenkinson. (London) Gee and Co. (Publishers), Ltd., 6, Kirby Street.

This is a full discussion, within the limits of a short paper, of the essential of rationalization.

The Future of the Railways. By Ashley Brown. (London) Simpkin Marshall, Ltd., Stationers' Hall Court.

A pamphlet of practical suggestions for increasing the efficiency of British railways.

The Companies Act, 1928—*As It Affects the Business Man.* By Sir Mark Webster Jenkinson. (London) Gee and Co. (Publishers), Ltd., 6, Kirby Street.

This is a reprint of an address delivered to the members of the Rotherham Chamber of Commerce.

Un' Indagine Sulla Dinamica della Distribuzione dei Reddite. By Francesco Antonio Rèpaci. (Bari) Tipografia Cressati.

A discussion of recent changes in income distribution in Italy.

The Economic Journal, March, 1929. (London) Macmillan and Co., Ltd., St. Martin's Street. 6s. net.

This unusually interesting number contains articles on "The German Transfer Problem," by J. M. Keynes; "The Economic Effects of Variations of Hours of Labour," by Lionel Robbins; "A New Study of British Foreign Investments," by Sir Robert Kindersley; and "Output per Head in U.S.A. and U.K.," by G. L. Edwards.

Journal of the Royal Statistical Society, Part I, 1929. (London) Royal Statistical Society, 9, Adelphi Terrace. 7s. 6d.

This number contains Mr. Flux's inaugural address on "The National Income."

The Banker, March, 1929. (London) Eyre and Spottiswoode, Ltd., 9, East Harding Street, Fleet Street. 2s. 6d.

This interesting number contains, *inter alia*, articles on British-American Banking Relations, and Labour, Reparations and Trade Recovery.

Report of the Superintendent of Insurance of the Dominion of Canada for the Year ended December 31, 1927. Vol. II., Life Insurance Companies. (Ottawa) Department of Insurance.

This volume contains an immense mass of information, including legal decisions in 1927, particulars of premium income, valuation of policies, amount of insurance effected, in force and terminated, details of insurances, companies, etc.

Traffic Tables for use from January to June, 1929. (London) Fredc. C. Mathieson and Sons, 16, Copthall Avenue. 1s.

Gives highest and lowest prices of stocks, together with classified traffic receipts of British and South American railways for each week during the first half of 1927 and 1928.

Nitrate Facts and Figures, 1929. Compiled by E. T. Tatham. (London) Fredc. C. Mathieson and Sons, 16, Copthall Avenue.

A useful manual of statistics relating to Chilean nitrates and nitrate companies.

Manual of Argentine Railways for 1929. By Sir Stephen Killik. (London) Effingham Watson, 15, Copthall Avenue. 2s. 6d. net.

Unusually full details of the respective Argentine railways are given in this little handbook. There is also a useful map.

Sub-standard Lives and Their Assessment in Life Assurance. By Jehangir J. Cursetji. Published by the author, Oriental Life Assurance Co., Ltd., Post Box No. 148, Bombay. 3s. 6d.

A short pamphlet for the guidance of insurance companies.

Gramophone Companies, Mid-February, 1929. (London) Fredc. C. Mathieson and Sons, 16, Copthall Avenue. 1s.

Contains particulars of the capital, dividends and prices of stocks of all gramophone companies.

Mobilizing Mutual Benefit Associations for Health. By Magnus Alexander. Published by the American Public Health Association.

A reprint from the American Journal of Public Health.

Operazioni di "Portafoglio Estero" e "Corso" dei Cambi. By Guiseppe Ingo Papi. (Rome) Tipografia delle Terme, Piazza delle Terme 6.

A short work in Italian on the working of the foreign exchanges.

The Stock Exchange.

TRUSTEE SECURITIES.

THE question whether the law as regards trustee securities is not ripe for revision has, in recent times, been brought into public prominence by numerous developments, two of which deserve special notice. We refer to the controversy regarding the investment qualities of Australian stocks, and the post-war decline in revenue of the British railways. In both cases the status of certain issues held largely by trustees has been affected, and the resulting discussion has tended to spread over the *terrain* of trustee investment as a whole. The effect of the Trustee Acts is, of course, to divert a portion of the stream of capital into a limited range of investments, the intention being not necessarily to secure the "trust funds" against the possibility of capital depreciation, but to safeguard the annual income and relieve the trustee himself of personal liability for losses. We do not propose, in the present article, to discuss the wide economic issues involved in the concentration of capital resources along lines which must necessarily be arbitrary, but to confine ourselves to the more practical question whether the present Trustee List might not advantageously be extended, in response to changed conditions in the investment markets as a whole.

The present position is governed by the terms of the Trustee Act of 1925, which consolidated previous legislative measures. Under its terms, a trustee is limited to investment in:—(1) British Government funds, including stocks guaranteed by Parliament; (2) Bank of England stock; (3) India Government stock; (4) London County Council, Metropolitan Board of Works or Metropolitan Water Board stock; (5) the debenture, rent charge, guaranteed or preference stock of the home railways which are paying a dividend on their ordinary stock, or any stock of a railway or canal leased to one of the home railways; (6) the debenture stock of Indian railways, the interest on which is guaranteed by the Indian Government, Indian railway annuities, and Indian railway ordinary stocks on which a fixed or minimum dividend is guaranteed by the Indian Government; (7) the debenture, guaranteed or preference stocks of water boards which are paying a dividend of not less than 5 per cent. on their ordinary stock; (8) stocks of home corporations with a population exceeding 50,000, and all County Council stocks; (9) Colonial Government stocks authorised under the Colonial Stock Act; (10) any stocks authorised by rules of the Supreme Court. The Act of 1925 cleared up a few doubtful points, such as the eligibility of Northern Ireland stocks, and the eligibility, under certain conditions, of bearer securities, but otherwise made little change in the position laid down under earlier Acts.

The approximate nominal value of the securities comprised in the Trustee List has been computed by a firm of London stockbrokers as shown below, the totals being based on the Stock Exchange Official List, and therefore excluding a number of home corporation and water board stocks which have not received a quotation:—

Trustee Securities in the London "Official List."

	January, 1913.	January, 1923.	January, 1929.
	£	£	£
British Funds	983,756,082	5,417,643,697	6,112,659,721
Trade Facilities' Stocks	...	...	38,830,000
Corporation and County Stocks	187,701,803	225,135,372	270,845,089
Public Boards and Waterworks	48,804,317	53,216,951	54,763,241
Dominion and Colonial Government Stocks	319,734,003	463,254,388	655,930,891
	723,729,901	732,034,740	859,934,248
British Railways	52,232,837	62,785,131	52,466,310
Indian Railways			
Total	2,315,958,943	6,954,070,279	8,045,429,500

Omitting the large, and abnormal, war-time increase in British Funds, the expansion in the total since 1913 has been very small, and since 1923 has been, on the average, no more than 2.6 per cent. per annum. Actually, since that date, the supply of Dominion and Colonial Government stocks has been increased by £192.7 million, Corporation stocks by £45 million, Public Boards and Water Works stocks by £1.5 million, and Home Railway stocks by £127.9 million.

The firm whose estimates we have quoted makes the important point that, as trustees generally prefer not to hold too large a proportion of British Funds in their portfolios, on account of the relatively low yield offered (except in the case of 5 per cent. War Loan) a considerable proportion of trustee funds is, in fact, drawn into Colonial Government securities, whose only effective rivals are the Home Corporation stocks. There is a good deal of popular misapprehension as to the terms of the Colonial Stock Act of 1900, which brought loans of Colonial Governments, under certain conditions, into the trustee fold. It is often imagined that the Colonial Stock Act affords real protection for the investor, that all Colonial prospectuses are examined by officials of the Treasury, and that none is allowed to appear until the Treasury has fully assured itself of the necessity of the loan and of the soundness of the security behind it. It is even imagined that, in the event of default, the British Government would be bound to come to the rescue of the investor. All these beliefs are fallacious. The Colonial Stock Act merely lays down that the Trustee Acts shall include any Colonial stock which has been duly registered in the United Kingdom and which has observed whatever conditions have been prescribed in Treasury orders. The pertinent Treasury order in force is one of December 6, 1900, which declares that the Colonies shall provide by legislation for the payment out of their revenues of any sums which may become payable to stockholders under any judgment, decree or rule or order of the Court in the United Kingdom, and that the Colonial Governments shall formally agree that any Colonial legislation which appears to the British Government to alter any of the provisions of the stock to the injury of the stockholder, or to involve a departure from the original contract in regard to the stock, will properly be disallowed. This order does not provide for any guarantee of Colonial Government securities by the British Government.

It has recently been suggested that the provisions of the Colonial Stock Act should be left untouched, but that the effective preference which Dominion stocks enjoy should be modified by the admission, on their merits, of a new range of securities to the Trustee List. The following are mentioned in this connection: the debentures and preference stocks of electric supply and gas companies, which are earning 5 per cent. on their ordinary share capital; the preference shares of the new Communications Company and the debentures of the Cable Companies; the debentures of investment trust companies which have a capital of £1,000,000 or more, are earning more than 5 per cent. on their ordinary stocks, and regularly publish a list of their investments; and debentures of canals, docks and other public boards which are earning 5 per cent. on their ordinary share capital.

While there is obviously much to be said for the principle involved, there is room for considerable divergence of view as to detail, which only a thoroughly expert and representative body could settle. We would suggest, however, that the reform of the present system might go further, and, having considered such anomalies as the exclusion of the debenture stocks of the London Power Company, the Manchester Ship Canal, and the Port of London Authority, in face of the inclusion of the home railway preference stocks, might inquire as to the effect of the provisions which make trustee status depend on the payment of dividends. Under the terms of the Trustee Act, for example, the prior charges of the home railways are included only if the railway company concerned has paid a dividend on its ordinary stock for the last ten years at the rate of 3 per cent. This has been modified by an order of the Court, which admits such stocks if the railway company has paid *any* dividends, however small, on its ordinary stock. The effect has been that, in 1926 for instance, more than one British railway has been forced to pay dividends out of reserves in order to maintain its trustee status at a time when conservative finance would have dictated a husbanding of cash resources. Sound investment canons would suggest that *earnings*, not dividends, should be the future criterion of fitness to be included in the list.

Such changes as these would require legislative action, and could only come into force after prolonged discussion. The Treasury could, however, consider in the meantime whether action might not profitably be taken under the powers it already possesses to enforce certain reforms upon Colonial borrowers. Already the Australian Commonwealth and States have begun to furnish in their prospectuses more adequate information as to their financial position, but the Treasury might go further and prescribe that no loan of a Colonial Government should be admitted to the Trustee List if the Budgets of that Government had not balanced during the three preceding financial years; if revenue surpluses had not been applied to the reduction of debt; and if adequate sinking funds were not maintained for the repayment of loans. Finally, the suggestion of a firm of brokers that a Committee be set up, charged with the duty of reporting to the Treasury each year its suggestions for stocks to be included in the Trustee List, deserves serious consideration. It goes without saying that any measure likely to increase the confidence of the investment world generally in the intrinsic merits and stability of trustee securities would be of the utmost benefit both to trustees and beneficiaries. The impartial consideration by a competent body of the question of revising the scope of the list would be welcomed on all sides at the present day.

HOME RAILWAY POSITION.—II.

IN an earlier article we showed that the "Big Four" railways of Great Britain succeeded in offsetting a falling-off of over £9,000,000 in gross receipts last year, as compared with 1927, by reductions in expenditure to the extent of £7,000,000. We now propose to examine the receipts and expenditure figures for 1928 in a somewhat more detailed fashion.

Few things in this world are more difficult to interpret than railway statistics, or contain more traps for the unwary. Possibly this fact is reflected in the experience of the London, Midland and Scottish Railway, which, having furnished its stockholders on this occasion with a summary (omitting, among other things, the company's balance sheet) and an intimation that the full accounts would be forwarded on request, is understood to have received applications for the latter from only a few hundreds of its 300,000 proprietors. In these conditions it may be well to distinguish, at the outset, four leading factors in present-day British railway administration which will serve as guiding threads in the subsequent statistical labyrinth. In the first place, the railways, being "common carriers," are under a statutory obligation to move all traffic offered them, with the exception, broadly, of wild beasts and dynamite. In the second, only about 40 per cent. of railway expenditure varies with the volume of traffic moved. Thirdly, when the railways are competing with other agencies, so long as a particular traffic yields even the smallest of margins over the out-of-pocket expense of moving it, good policy requires that it should be moved, even at a "cut" rate. Contributions, however small, are welcome, which help to relieve the proportionate burden of "fixed" expenditure. Fourthly, the Railways Act of 1921 ordained that the level of future charges should be such as would provide the railways with a "standard" net revenue equal to that of 1913, with certain adjustments. The system thus postulated came, theoretically, into force for the first time last year.

Bearing these principles in mind, we may proceed to examine the detailed figures for the past two years. The main features as regards receipts are set out in the following table:—

RAILWAY RECEIPTS, 1928.

(Percentage comparison with 1927 shown in brackets.)

(000's omitted.)		London Midland and Scottish Railway.	London and North-Eastern Railway.	Great Western Railway.	Southern Railway.	Total—Four Railways.
PASSENGER TRAFFIC:—						
Ordinary Passengers	Number	221,519 (− 1·9%)	147,407 (− 1·2%)	102,324 (+ 0·1%)	148,214 (− 1·1%)	619,464 (− 1·2%)
	Receipts £	18,612 (− 2·4%)	11,778 (− 1·8%)	8,670 (− 1·8%)	11,212 (− 1·3%)	50,272 (− 2·5%)

* Including parcels under 2 cwt. and excess luggage, other merchandise by passenger trains, and mails and parcels post.
† Assuming 600 journeys per season ticket per annum.
‡ Including miscellaneous receipts.

Taking the figures for the four lines as a whole, passenger receipts, which accounted for 44 per cent. of the total, fell off by approximately 2 per cent. last year, the L.N.E. being the most seriously affected, while the Southern regained on workmen's and season tickets rather more than its losses on ordinary passengers. In the evidence supporting their Road Transport Bills last year the railways intimated that they were suffering severely from motor vehicle competition. Their reaction towards it, last year, was governed by the third principle we mentioned above—they greatly increased their cheap fare facilities, deeming it preferable to reduce their margin

over out-of-pocket expenses than to lose further traffic to the roads. There are, however, numerous objections to the indefinite continuance of a " rate war " with competing transport agencies. It is a costly method. It has a limited usefulness as applied to the *shorter-distance* traffic, where the economic competition of road transport is at its maximum. As the railways' experience on the goods side amply proves, it is an exceedingly difficult matter to withdraw anything in the nature of an exceptional facility once it has been granted. Above all, the conception that road and rail transport are necessarily competitive rather than complementary is bound to be productive of loss to *all* the agencies concerned, and, ultimately, to the community. For this reason the use made by the railways of their new road powers will be watched with keen interest during the next few years.

The heaviest loss of revenue last year, however, arose on the goods traffic side, where new road competition was a less important factor than the depression of British trade generally. The decline in revenue from coal traffic may be read in conjunction with the drop of 5.7 per cent. in the British coal output last year, but the 5 per cent. decrease in revenue in Classes 7 and upwards (mainly " general merchandise "), which accounted last year for nearly half the total goods receipts, would seem to have exaggerated the recession in general trade. The Board of Trade's indices showed a drop of only 0.6 per cent. in British production as compared with 1927, a decline of 2.9 per cent. in imports (in terms of volume), and an increase of 2.3 per cent. in British exports, as compared with a decrease of 5.2 per cent. in railway receipts from general merchandise, and of 6.5 in receipts from all goods train traffic.

The railways, as we showed last week, were able to offset a large part of the falling-off in their revenue by very considerable reductions in expenditure. The distribution of these economies is shown below:—

RAILWAY EXPENDITURE, 1928.

(Percentage comparison with 1927 shown in brackets.)

(000's omitted.)	London Midland and Scottish Railway.	London and North-Eastern Railway.	Great Western Railway.	Southern Railway.	Total—Four Railways.
	£	£	£	£	£
MAINTENANCE:—					
Way and Works	7,762 (− 2·3%)	5,988 (− 0·2%)	4,019 (+ 1·0%)	3,392 (+ 2·2%)	21,161 (− 0·3%)
Rolling stock	10,053 (− 6·0%)	8,502 (− 9·3%)	4,082 (− 0·5%)	2,900 (− 3·8%)	25,537 (− 6·1%)
RUNNING EXPENSES:—					
Locomotives	14,220 (− 7·0%)	10,263 (−10·9%)	5,534 (− 5·9%)	4,289 (−10·2%)	34,306 (− 8·4%)
Traffic	21,303 (− 1·7%)	15,098 (− 3·0%)	8,187 (− 1·3%)	5,773 (− 1·8%)	50,361 (− 2·1%)
General Charges	2,126 (− 0·2%)	1,267 (+ 1·0%)	966 (+ 1·1%)	716 (− 0·7%)	5,075 (+ 0·2%)
Rates	2,343 (− 8·2%)	1,652 (−13·2%)	1,301 (− 7·0%)	940 (−10·6%)	6,236 (− 9·7%)
Other Expenses	1,139 (− 1·2%)	561 (+11·0%)	387 (− 0·3%)	437 (− 1·3%)	2,524 (+ 1·2%)
Total Railway Working Expenses*	58,945 (− 4·1%)	43,331 (− 6·3%)	24,476 (− 2·1%)	18,447 (− 4·0%)	145,199 (− 4·4%)

* These totals are struck, in the case of the L.M.S.R and G.W.R., before allowing for reductions in expenses amounting to £418,501 and £180,591 respectively, as a result of the 2½ per cent. cut in wages and salaries from August last. The total for the S.R. is apparently arrived at *after* allowing for a saving of about £108,000, and that of the L.N.E.R. after allowing for an undisclosed amount under that heading.

Broadly, about three-fifths of the railways' annual bill is attributable to running expenses (including station staffs) and one-third to maintenance. Last year's savings were demonstrably greatest in the matter of rolling stock, which cost less to move and to maintain. The heavier locomotives introduced in recent years are now, literally, pulling their weight. The L.M.S. saved £90,000 last year by rearranging one of its workshops, and £30,000 by completely closing another. The L.N.E. has reduced the multiplicity of pre-amalgamation standard engine types to no more than ten so far as *new* locomotives are concerned. The same line is now able to erect a 12-ton open goods wagon in 12 minutes at a wages cost of 19s., against a previous figure of 62s. The average number of locomotives " eating their heads off " while awaiting repairs, again, has been considerably reduced on all the railways.

Outside the main revenue-producing activities of the railways are certain ancillary services, the net results of which, from the financial point of view, are shown in the succeeding table:—

NET RECEIPTS FROM ANCILLARY BUSINESSES, 1928.

† Small net profit made in 1927.

Railwaymen are not, as a rule, unduly enthusiastic over the results of these ancillary services. Their interests are subordinated to those of railway operation, with certain exceptions, such as the Great Western docks in South Wales, or those of the Southern at Southampton and the North Eastern at Hull and elsewhere. They are, in fact, regarded as " feeders " of the various lines, and apart from this contributive value—which is doubtless considerable—they do not earn anything like an economic return on the large amount of capital invested in them. This policy has an obvious relevance to current problems, since the road services to be carried on under the new powers obtained last year will fall into this ancillary group. Will they be expected to pay their way, or will their rates and fares be " cut " in pursuance of the " contributive " policy applied to other non-railway services?

The main conclusions of this survey may now be briefly set out. The results of 1928 deserve very careful consideration by all railway stockholders, since neither the drop in gross revenue nor the savings in expenditure can be explained away under the heading of abnormality. Both are the outward and visible sign of underlying conditions which will endure for some little time to come. The *extent* of last year's fluctuations is significant from the dividend point of view. Had gross receipts, on the one hand, maintained the 1927 level the ordinary stockholders would have been in a decidedly comfortable position. Had expenditure, on the other hand, fallen by no more than normal proportions, in relation to the decline in receipts, there would have been very little available in the way of net revenue for the ordinary stockholders. Future receipts depend on a variety of factors—the state of trade, the use made of the new road powers, the level of fares, the national policy as regards road-construction and road transport rating, and, finally, the possibility of *remunerative* changes under the Standard Revenue provisions of the 1921 Act. The last question will be discussed in a concluding article next week, when the position of each of the individual companies will be considered. As regards future expenditure, Sir Josiah Stamp's declaration that last year's savings had brought expenditure to a level which might be regarded broadly as a new standard—subject to price changes, traffic variations, and the cryptic comment that " continuance of expenditure at recent levels would effect further reductions "—represents the limit of the extent to which most railwaymen are willing to commit themselves at the moment.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 19.	March 21.

FOR several days dullness continued to rule. Little business was done, save for some activity in American and Canadian stocks, and the market was still falling, jobbers being reluctant to take stock on their books after their experience of overnight losses during the past five weeks. The coming heavy call on the new Treasury Bonds showed itself as a growing factor in the gilt-edged market, and the General Electric situation, described in a subsequent " Investment Note," had a disturbing effect all through the " House." But monetary uncertainty was the real power at work. Tuesday's improvement in sterling, though it caused some little surprise, was more than welcome, and with the movement continuing on Wednesday and with news circulating that steps were to be taken in fresh directions by American banks towards cutting off supplies of credit in New York, that afternoon saw a timely rally which gave promise of being more substantial than any that has occurred since February 7th.

The gilt-edged markets opened, like other sections of the " House," in a dull condition, but proved decidedly sensitive to the improvement in the monetary atmosphere. By Wednesday the " House " had made up its mind that the possibility of an immediate rise in Bank rate might be dismissed, and a smart recovery in British funds found dealers carrying little stock on their books. The subsequent recovery in quotations was thus disproportionate to the moderate amount of business done. Funding Loan and Three and a Half Per Cent. Conversion Loan gained ⅞ on the day, Five Per Cent. War Loan 1 1/16, Four per Cent. " Consols " ¼, and Four and a Half per Cent. Conversion Loan ¼. Indian Loans, which had been steadily falling away, shared fully in the improved conditions. The movement was less noteworthy, however, among Dominion and Colonial stocks, which had been much less extensively affected by the earlier marking down.

The foreign market reflected the betterment in other parts of the " House." The Chilean Loan opened at par to ¼ premium. Greek bonds rallied perceptibly, but the outstanding feature was the widespread recovery of Chinese issues on the welcome news that the Finance Ministry was transferring the salt revenues for the payment of the loans secured on them.

The better tone of markets came opportunely for Home Rails, which had been marked down all round despite the absence of a sustained volume of selling. The traffic returns for the week, showing a small decline in gross revenue on each of the four lines, were charitably interpreted, and Midland and Scottish led the rise with the gain of a full point, though Underground stocks were quiet and unaltered. An analysis of the financial position of the four group companies is given in a leading

article on an earlier page of this issue. The tone of the Foreign Railway market became steadier, though dealings were on quiet lines.

The somewhat unexpected improvement in sentiment caused a certain bear covering in Industrials, though business showed no fundamental tendency to expand. H.M.V. reached a new high level, after the Marconiphone announcement, assisted by the activity of Victor and Radio. General Electric was weak on the " British share " agitation (discussed in a subsequent Investment Note), but firmed on the authorisation of the capital scheme at Wednesday's meeting. Marconi was better, but Cables remained quiet and uninteresting. Courtaulds made some recovery in the artificial silk group, but other textile companies failed to shake off their earlier dullness. The motor group was weaker in the early dealings. Newspaper shares were quiet. Swedish Match had a steady appearance, but Kreuger and Toll were easier. Newspapers were quiet, breweries irregular, and shipping shares slightly harder after being sold early in the week. Excited dealings took place in Kolster-Brandes £1 shares, which touched 32s. 6d. premium on Thursday. Bank shares remained dull, but selling of insurance shares was less in evidence.

Support for rubber shares was noticeably lacking at the beginning of the week, and with business tending to run on " retail " lines, a certain marking down of quotations occurred. The February figures of American rubber consumption, which were well above current expectation, produced a slight improvement, but few noteworthy price changes resulted. The demand for tea at the commodity auctions was firmer than last week, but there was no corresponding movement in the share market, where values continued to trend downwards. Interest, public or professional, in oil shares, was of the smallest dimensions at the beginning of the week, and with Amsterdam selling Royal Dutch and Paris selling Eagles a heavy tone pervaded the whole market. The movement was reversed, however, on Wednesday, by reason of the improved monetary outlook, a decline in the daily crude production of the United States and the adoption by the Continent of a buying rôle.

Kaffirs continued to attract rather less than their due share of public attention. A moderate amount of selling made prices easier all along the line on Monday and Tuesday, while the better tone of later days was reflected rather in the cessation of selling orders than in any marked accession of business. Crown Mines showed little response to the favourable report. A decline in De Beers brought in moderate British and American buying. Congo Borders came into the limelight on the latest borehole results, and American demand produced a further rise in Roan Antelopes. Tin shares were dull and dispirited in sympathy with the course of commodity prices, London Syndicate relapsing after showing some resistance to the prevailing tendency. The extraordinary rise in the price of copper in mid-week was reflected in the strength of Tinto and Tharsis. Arizona Copper spurted before and after the announcement of the sale of the company's holdings of Phelps Dodge shares at a price yielding about 40s. per Arizona share.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The market has broken out of its rut, in anticipation of another week's grace and no change in the discount rate. The bond market is still weak, but Secretary Mellon's advice to buy bonds now helped shares also, by the belief that peak money rates were at hand, speculators jumping to the conclusion that no change in the discount rate was likely. Copper shares are still the most active, on the price advance to 20 cents, with a further rise expected. Steel shares are also higher, on the capacity rate and better prices for products. Rubbers are buoyant, there being talk of an increase in tyre prices, and motors are responding to February's record output Brokers' loans are down by $20,000,000, reflecting scattered liquidation early in the week and sagging prices Utilities are holding well, and oils have improved. Record first quarter trade earnings are in sight, but there is little prospect of a relief from dear money, which is still checking bullish sentiment.

PARIS.

In addition to the realisations brought about by the need of liquid funds for subscribing to the increases certain businesses are making to their capital, some subscribers for new shares are covering themselves by starting to sell for the account a corresponding quantity of old shares, so as to provide against a possible fall after the assimilation of the two. The consequence is a flow of liquidation, which affects prices all the more because the eventual buyers are none too anxious to take delively, with the monetary situation in London still rousing apprehension and the political atmosphere in France not yet clear. That the latter preoccupation is secondary is, however, shown by the resistance of Rentes. Chemicals, engineering and electrical stocks, phosphates, rubbers, and not least bank shares have lost ground.

BERLIN.

A week ago stocks were being depressed by the Reichsbank's gold exports and by unfavourable rumours about the Reparations Conference and Cabinet troubles. In spite of cheaper money, the new week began with a further decline, though there was buying of shipping stocks. Prices continued to fall on Tuesday, and business was dull. Loans were sold, and valorised " new-owned " paper-mark bonds fell to 11.50. Wednesday again was dull and uncertain, but Thursday saw a general rise, with home loans firmer.

AMSTERDAM.

The general undertone of the Bourse remained dull, business being restricted by the monetary uncertainty and by the unfavourable position of the Netherlands Bank, and industrial reacted sharply. Though they moved irregularly, there was good interest in tobaccos on the results of the Amsterdam auction of Sumatra tobacco. Rubbers weakened, and sugars were dull on lower Cuban prices. Russian oil shares were firm, but Royal Dutch reacted. The Bourse was steady on Thursday. The money market was firm, with the private discount rate 4 9/16 per cent., and prolongation 5 per cent.

INVESTMENT NOTES.

General Electric " British Share " Issue.—The restriction of the voting rights of shares held by foreigners is a common feature of company law and practice in most countries. The Swedish Match group, for example, in order to comply with the requirements of Swedish law, makes its foreign issues in the form of " B " shares, carrying one-thousandth of a vote per share, as distinct from " A " shares, which carry one vote per share and are held by Swedish subjects. The American buying of British securities has caused a number of important British companies to take steps to prevent control passing out of British hands. Among the first of such companies was the General Electric Company. In September, 1928, the General Electric altered its articles of association for the purpose of disfranchising foreign shareholders. After defining the expression " foreigner " and " foreign corporation," its articles of association now prescribe that: " No vote shall be given at any general meeting of the company by a foreign corporation or corporation under foreign control or by any person who holds the shares, in respect of which he proposes to vote, directly or indirectly for a foreigner or a foreign corporation or a corporation under foreign control." It is surprising that no great objection was taken by American shareholders to this far-reaching change. Indeed, Sir Hugo Hirst has stated that the big American buying of General Electric shares took place after the disfranchisement had been passed, and that the American holding of the company's ordinary capital now exceeds 60 per cent. The General Electric Company has, however, taken a step further, which has exasperated American shareholders, annoyed Stock Exchange dealers and brokers, and incurred the disfavour of responsible authorities. The company proposes to redeem its outstanding £3,249,600 7 per cent. debenture stock, which has constituted a heavy charge on the company's profits, by an issue of ordinary shares, and for this and other purposes the capital has been increased by the creation of 1,600,000 new shares of £1. These new shares are called " British ordinary shares," and are to be issued subject to the condition that they shall not be registered in the name of or transferable to or held on behalf of any foreigner, foreign corporation or corporation under foreign control. In all other respects they will rank equally with the existing ordinary shares. It has emerged that 1,500,000 of the new British shares have been sold to the British Foreign and Colonial Corporation at 40s., and that this financial house is offering them to the British public at 42s. At the time the announcement was made the ordinary shares were standing at about 62s. 6d., and the present price is 52s. 6d. Judged by equitable standards, little can be said for a proposal which allows one class of shareholder to make a profit by subscribing to new shares on " bonus " terms while another—the foreign holder—is precluded from subscribing. The directors may, of course, argue that the American buying carried the market price of the shares far above their intrinsic value. Indeed, the highest price recorded in the official list of the Stock Exchange this year was 81s. 3d. and the lowest 44s. 3d. With dividends at the present rate of 10 per cent., subject to tax, it may be agreed that 42s. is a reasonable price at which to offer the shares to the public (why a financial house is called in as intermediary and allowed to make a profit of 2s. per share, less expenses, is not clear), but the invariable practice of British companies in issuing new shares at a price substantially below the market price is to make the offer to shareholders only, without differentiating between one class of shareholders and another. Would it be tolerated if the General Electric proceeded to declare dividends of 15 per cent. on all " British " shares and 10 per cent. on the foreign shares? It is to be hoped that the General Electric precedent will not be followed by other British companies. It must be borne in mind that the foreign investments of this country are of enormous value, and that if foreign companies began to differentiate in the same manner against British shareholders, the value of British investments abroad would be jeopardised. The Stock Exchange Committee—which has earlier given a ruling that members of the Stock Exchange, and the public dealing in shares quoted on the Stock Exchange, are entitled to reasonable protection against having *bona fide* transactions upset by retro-active company resolutions—will not, doubtless, overlook the wider implications of the present development. It is, of course, in the highest degree desirable that the London Stock Exchange should remain an international market and not be merely a market for British investors.

Stock Exchange Committee.—In March, writes a " House " correspondent, the choice is made of the thirty members of the Stock Exchange who comprise the Committee for General Purposes. It usually happens, on such an occasion, that some question is before the House on which opinion is divided. To-day, however, the Stock Exchange is, as a House, at unity with itself, though one point has recently emerged from the domestic side of House politics that has evoked no little discussion. Put briefly, the proposal is that there should be two classes of members—one class of which should hold Nominations, while the other should not. Under the existing constitution of the Stock Exchange, it is necessary for every candidate who becomes a member to acquire a Nomination, the value of which has ranged during the past few years from a £5 note to £2,000, and at the moment stands at about £1,250. It is the settled policy of the Stock Exchange Committee, however, to admit each year a certain number of candidates drawn from those clerks who have served four years in the Stock Exchange, and to endow this number—twenty-five, as it is now—with the rights of membership without calling upon them to acquire a Nomination. Those who maintain that membership of the London Stock Exchange should always be worth several thousands of pounds, as compared with the existing and fluctuating value that prevails, contend that until the membership of the Stock Exchange is strictly fixed within a specified number, it is impossible to anticipate that membership can become of real and permanent worth. A scheme has been laid before the Committee, urging the creation of two classes of members, one of which, on a failure, would have a Nomination, while the other would not. The Stock Exchange Committee has given the proposal serious and not unsympathetic hearing, but has held over its consideration until after the present month. One member of the present Committee is retiring, and his place will be taken by Sir Herbert Ellissen. This makes up the thirty seats, and the election is complete without a contest. The work of the Stock Exchange Committee is done without payment or consideration, but the demands made upon a member's time and energies are considerable. There are still a number of Stock Exchange Committeemen who regard their posts as being a pleasant variation of club life. Retired from active business, but unwilling to sever City connections, they retain their seats on the Committee, although out of touch with the requirements of modern business, and having little but experience and leisure to recommend their retention of the responsible positions they hold. On the other hand, the successful Stock Exchange member, who is engaged actively in business, and who would make an ideal member of the Committee, finds himself far too much

occupied to give up the time and thought necessary if he is to take Committee duties seriously. How to surmount the difficulties surrounding the manner in which the best men can be attracted to serve on the Committee is a constant theme. The proposal is frequently put forward that members of the Committee should be remunerated in some tangible manner—although here again the busy member could scarcely be compensated for the time he gave up to Committee work, except at a rate which shareholders in the Stock Exchange might certainly object to pay. The days are long past when the House was regarded as a close corporation, whose domestic affairs held no interest for the public. It is almost unanimously held in the Stock Exchange that the interests of members and of clients are so closely interwoven that few, if any, matters of consequence can happen in the House without affecting the public.

The Rayon Position.—Mr. Samuel Courtauld's address to shareholders last week was, as usual, a reasoned and informative review of the rayon position which, despite its traditionally cautious tenor, suggested ample confidence in the future of the industry. This clearly rests not upon the condition of the market at any particular time, but upon the intrinsic merit of the commodity, and Mr. Courtauld is quite definite in his view of rayon from this angle. Yarns are always increasing in variety and quality, he declares, and, according to expert opinion, the best fabrics are now being made with fibres finer and at the same time stronger than silk. This statement refers to the higher grades, but nevertheless suggests that the adoption of the generic name " Rayon " (*vice* " artificial silk ") is contemporaneous with an important development in the status of the world's new textile. It affords, moreover, an indication of some of the influences which have had such an important effect on the state of the rayon market and the position of viscose *vis-à-vis* cellulose acetate. The development of fine viscose yarns, to which Mr. Courtauld first referred in 1927, has evidently had much to do with the fact that, while in the latter part of last year the yarns of the leading cellulose acetate manufacturer were reduced in price by 30 per cent. and over, Courtauld's viscose yarns were reduced by approximately 15 per cent. only. The disappearance of the large premium, grade for grade, previously commanded by cellulose acetate, in conjunction with the general decline in prices, adequately explains the falsification of many profit estimates. Mr. Courtauld stated that the output of the company's own acetate yarn would be increased " as required," but that, in his opinion, viscose would continue to be the staple product of the future. As regards the market position and outlook, Mr. Courtauld adopted his customary cautious attitude, but admitted that, on the basis of the newly established price level, another period of development was anticipated. This attitude seems justified as regards the industry as a whole, but the outlook for those companies unable to keep pace with technical advances is uncertain to a degree.

American Celanese and Snia Viscosa.—The 1928 accounts of the Celanese Corporation of America are disappointing, having regard to the anticipations roused by the directors' previous report. A reduction in the operating profit from $4,036,389 to $4,012,895 and an increase in the deductions (which include income tax, depreciation and inventory adjustment) combine to produce a decline in net income from $2,754,071 to $2,356,976, notwithstanding that owing to the replacement of bonds by preferred shares a charge amounting in 1927 to $127,259 does not recur. As the result of the year's operations the earned surplus is increased by $740,895 to $2,074,506, subject to the preferred participation amounting to about $74,000. The report states that sales of yarn and fabric were substantially larger and that the cost per pound was lower, but refers to the effect of the price cuts which took place in November, 1927, and August, 1928. As the capacity of the plant was doubled in March the impression is confirmed that to maintain results in this industry in the face of reduced prices is a matter of exceptional difficulty. The reductions which came into force in August, 1928, will, of course, apply during the whole of the current year, even if no further concessions are necessary as the result of the more recent reductions made by the American viscose producers. The directors state, however, that sales and deliveries were highest at the end of the year, and are continuing at record levels. In this connection it is interesting to note that additions to the Board during 1928 seem to indicate close co-operation with Montgomery Ward and Sears Roebuck, the great U.S. chain store concerns. In accordance with the 1927 expansion programme, output capacity will be still further increased during the current year. The balance sheet position is sound, and as regards liquid resources the company is well provided. Current assets at the date of the balance sheet amount to $20,510,631 (including inventories $6,929,378) against current liabilities of $1,361,143 and new construction requirements estimated at $4,750,000. The company, however, has still some way to go to justify the present price of £9 for its 1,000,000 common shares of no par value:—

	Profit from Operations.	Net Income.*	Percentage of Charges to Operating Profit.*	Earned per Share on Common.
	$	$		$
1926	1,458,517	1,082,012	25·8	Nil
1927	4,036,389	2,881,331	28·6	1·5
1928	4,012,895	2,356,976	41·2	0·67

* As the Bond Issue outstanding in 1926 and 1927 has been replaced by preferred stock, the bond service has been eliminated in order to give a satisfactory basis for comparison with the 1928 results.

Among the large European producers, an improved position is recorded by Snia Viscosa. The net profit reported is 72,228,898 lire, which it is intended to retain in the business. The amount earned on the shares of 120 lire is approximately 8 per cent., the present London quotation being round 25s. (equal to 116 lire). The 1927 profit was 20,099,399 lire, but this result was adversely affected by changes in the value of the lira, and is consequently not comparable with the 1928 figure.

Hongkong and Shanghai Banking Corporation.—The accounts of this important Eastern bank show that the net profit in 1928 declined by $809,226, but the usual dividend of £8 per $125 share was nevertheless fully earned. No additions are recommended to the already strong sterling and silver reserves, which amount to £6,000,000 and $14,000,000 respectively, but $750,000 is to be applied to writing down bank premises, of which the present valuation is $19,169,641 (£1,936,932).

Years ending December 31.	1926.	1927.	1928.
	$	$	$
Net profits	14,158,067	14,239,288	13,430,062
Directors' remuneration	50,000	50,000	50,000
Dividend (£8 per $125 share)	12,456,724	12,676,923	12,643,679
To silver reserve	650,000	500,000	...
To bank premises account	1,000,000	1,000,000	750,000
Increase or decrease in carry-forward	+ 1,343	+ 12,365	− 13,618

The bullion holding has been raised to $8,687,039 from $1,949,225 at the date of the last balance sheet, and with cash increased by $13,958,142, cash and bullion together are now equal to approximately 18 per cent. of the total liabilities. Acceptances have risen by $1,066,963, but other items mostly show a small decline. The present price of the shares is £136 ex dividend, offering a yield of £5 17s. 7d. per cent.

Victor, H.M.V. and Marconiphone.—The Gramophone Company (H.M.V.) has concluded an agreement with the Marconi Company whereby it acquires the Marconiphone Company, as well as the right to use Marconi patents in the field of public entertainment and education. The Marconi Company will receive cash and shares in the Gramophone Company. This announcement is the more interesting since the Gramophone Company is a subsidiary of the Victor Talking Machine of America, which has now been acquired by the Radio Corporation. The 1928 report of Victor Talking discloses larger sales but a smaller operating profit, although the net profit, after including other income, is substantially the same as before:—

	1927.	1928.
	$	$
Sales	46,886,842	52,054,419
Operating profit	3,228,791	7,854,179
Other income	1,472,422	2,017,693
	9,701,214	9,854,872
Less depreciation	1,576,691	1,654,654
Taxes	855,000	876,000
Surplus	7,269,523	7,324,018

It is estimated that these earnings, assuming that all the $6 preferred stock is converted into common shares, will show, together with the estimated profits of Radio Corporation, earnings of about $3.16 per share for the new Radio common stock after the proposed merger.

Swan, Hunter and Wigham Richardson.—The earnings of this Tyneside shipbuilding firm recovered last year more than half the ground lost in 1927. At the turn of the year the yards were not employed to their full capacity, but a large and varied volume of work was in hand:—

Year ended December 31.	1926.	1927.	1928.
	£	£	£
Profit	212,524	140,122	183,437
Debenture interest and sinking fund	14,742	14,742	14,742

Ordinary { paid	7½%	4½%	7%
Ordinary { amount	128,330	128,330	128,330
Increase or decrease in carry-forward	+ 22,062	− 50,340	− 7,025

Examination of the balance sheet does not add much to previous knowledge. " Work in progress at cost, less instalments thereon " has come down sharply from £323,946 to £47,351, a possible explanation being that large payments, perhaps for the Singapore dock, fell due before the end of December, a view confirmed by a rise in the holding of cash and bills from £646,266 to £986,226. Investments in associated and other companies, which constitute two-fifths of the gross assets, stand at £2,169,551, a fall of £118,880 on the year. On the liabilities side " loans, employees' deposits, etc.," are down from £366,590 to £325,579. This and other items might well be subdivided for clearness' sake. Visible reserves aggregate £1,378,320. At 25s. the ordinary £1 shares yield exactly 6 per cent.

Norddeutscher Lloyd A.G.—The North German Lloyd Co. retains unchanged for 1928 its 8 per cent. dividend. The results are fairly satisfactory if allowance is made for the heavy expenditure incurred without any return upon the two 46,000-ton ocean liners, " Europa " and " Bremen," and the full year's dividend payable on an addition to the share capital which was made only in November. The gross profit, including carry-over, was 46,561,000 marks, against 40,144,000 marks in 1927. Administration costs, taxes and social contributions accounted for 12,631,000 marks against 11,092,000 marks, while there was allowed for depreciation, almost entirely on seagoing ships, 15,590,000 marks against 15,668,000 marks. The profit and loss account shows the following position:—

Years ended December 31st.	1926.	1927.	1928.
Net profit—marks	6,933,000	11,735,000	13,468,000
Dividend on ordinary shares—%	6%	8%	8%
Amount of dividend—marks	3,900,000	10,000,000	12,800,000

In view of the additions made to the fleet in service—the latter, according to the American prospectus, totalling 782,000 gross tons in November, 1928, as against 723,000 gross tons at the end of 1927—the increase in gross profits is moderate. German shipping returns in general, however, indicate that the period of most rapid expansion and increased dividends has ended for the present. Interest on the company's American loans requires 4,150,000 mark against 1,649,000 marks in 1927. The balance sheet shows an increase in the valuation of seagoing ships from 156 million marks to 165 million marks, and in payments on account of new tonnage from 64 million marks to 84 million marks. " Participations " have risen from 9½ million marks to 25½ million marks. On the liabilities side increases are shown in capital from 129 million marks to 165 million marks, in legal reserve from 17 million marks to 22½ million marks, and in creditors from 27 millions to 31 millions. The decline in cash holdings indicates that the large investments in constructions and participations were not fully financed by the capital increase. The prospect for 1929 is somewhat impaired by the fact that as a result of the autumn shipyard strike the two new ocean liners will be in service some months later than was originally planned.

Hamburg-America Company.—The Hamburg-America Company's dividend for 1928 is reduced by 1 per cent. to 7 per cent., mainly on the ground of adequate writing-down of tonnage. Gross takings increased in 1928 by 7½ per cent., the average capacity of the fleet by 5½ per cent. Gross profits were 59,696,621 marks, against 49,462,110 marks, but this increase is in great part due to a changed method of booking social burdens. The profit and loss account shows:—

Year ending December 31st.	1926.	1927.	1928.
Net profit—marks	5,720,000	12,044,000	11,561,000
Dividend on ordinary shares	6%	8%	7%
Amount—marks	3,870,000	11,600,016	11,200,014

The balance sheet shows shipping in service at 240,200,570 marks, and instalments paid on pending constructions at 34,737,876 marks, as against 228,340,747 marks for both items in 1927. The fleet, including some 70,000 tons of the Stinnes Line, is returned at 990,000 gross tons, to which will be added 122,700 tons of new constructions. The large investments account for a decline in liquidity, cash and bank deposits being 19,083,798 marks against 29,594,491 marks in 1927. On the liabilities side the reserve is 18,235,000 marks as against 16,923,293 marks. The company last year paid off 2,100,000 marks of its 6½ per cent. American loan of 1925; but the $10,000,000 bank-syndicate credit contracted for new constructions has raised the long-term liabilities from 28,990,276 marks to 80,765,276 marks. Short-term liabilities declined from 20,398,723 marks to 10,246,836 marks.

English Electric.—A post-war combine that has fallen on difficult days, the English Electric Company carries forward a debit balance of £433,516 to 1929, besides having cumulative preference dividends in arrear to the extent of £147,535. The meeting on Monday next will show whether the directors consider that the time has come for a re-arrangement of capital. No mention of policy is made in the current report, which thus contrasts with the previous one, when a long statement included the disclosure that any scheme of reconstruction would involve a revaluation of assets, and that the board thought it advisable to concentrate " in the first instance " on the more pressing problems of economy. In the following table the 1926 profit is not comparable with the later figures, since in 1927 a more rigorous method of charging depreciation was adopted, which is largely responsible for the size of the debit balance.

Years ended December 31.	1926.	1927.	1928.
	£	£	£
Profit	10,244	*Dr. 12,237(b)*	96,292 (c)

Provision for taxation	...	63,000	...
Carry-forward	*Dr. 78,591*	*Dr.399,899*	*Dr.433,516*

(a) Including £9,007 written off expenses of debenture issue.
(b) After charging £88,494 additional depreciation on tools, patterns, drawings, etc.
(c) After charging actual expenditure during year on tools, patterns, drawings, etc.

As before, the auditors sign the consolidated balance sheet "subject to the sufficiency of depreciation." Goodwill, patents, issue expenses, etc., aggregating £448,753, have not yet been written off, and the only reserves amount to £175,433. Creditors are down from £1,313,956 to £1,056,990, but debtors are up by some £66,000, and a sharp fall has occurred in stocks and work in progress. The company has at least set a good example by the pains it has taken to clarify its annual statement.

William Hollins.—The report for 1928 reveals that, for the third year in succession, earnings have shown progressive expansion. The purchase of the share capital of the Seedhill Finishing Company in July last may have contributed to the improvement:—

	1926.	1927.	1928.
	£	£	£
Net profit	125,473	139,435	153,446
Preference dividend	18,000	18,000	18,000
Ordinary { Earned	9·3%	10·3%	10·6%
Ordinary { Paid	7¼%	8%	8½%
Ordinary { Amount	86,673	86,673	107,950
To general reserve	20,000	25,000	25,000
Increase in carry-forward	800	9,761	2,496

The balance sheet discloses a liquid position, stocks, debtors and cash totalling £1,367,736, as against creditors £154,050, employees' deposits £28,745, and final dividend requirements £76,200. During the period more than £220,000 has been expended on improvements and additions, all provided out of the company's resources. With regard to the increased dividend, the chairman stated, at the last meeting, that the board felt that it was better to pay a steady dividend and to maintain it than to pay a larger dividend one year and have possibly to reduce it later. The shares are quoted a little below 26s., and yield over £6 10s. per cent.

British Metal Corporation.—In the metal trade of this country the British Metal Corporation, which was organised in 1918 to safeguard the non-ferrous metal interests of British manufacturers, has already attained an important position. The company has holdings in importing, producing, smelting and distributing companies and in particular is interested in the Burma Corporation and the National Smelting Company. The progress of its trading in the last three years is shown in the following table:—

	1926.	1927.	1928.
Ordinary capital	£981,000*	£900,000	£900,000
Net profits	131,791	195,454	194,452
Preference dividends	—	54,000	54,000
Available for ordinary capital	131,791	141,454	140,452
Per cent. earned (subject to tax)	13·43%	15·72%	15·61%
Per cent. paid (subject to tax)	8%	10%	10%
Added to reserves	50,000	50,000	100,000†

* The capital was re-arranged at the end of 1926, being divided into ordinary and preference shares.
† Including £40,000 from contingency reserve.

It will be seen that the company is earning over 1½ times as much as it is paying out in dividends. In the last two years it has suffered from falling metal prices, except in the case of copper, but in view of the recent improvement in the price of lead and tin, its trading prospects for the current year are distinctly improved. The balance sheet is strong, the surplus of current assets over current liabilities being £1,758,649. The shares are quoted in the official supplementary list of the Stock Exchange at £2 1/16, and yield £4 17s. per cent., or 7.5 per cent. on earnings.

Rand Deep Levels.—Our mining correspondent writes: The reports for 1928 of three of these undertakings are now available. The least encouraging is that of the Durban Roodepoort, whose working profit of £19,800 was almost identical with that of the preceding year. Interest, etc., absorbed £9,200, and the balance was applied towards capital expenditure, totalling £17,650. Provision of £19,950 for debenture redemption has entailed an almost corresponding expansion in the indebtedness (£34,200) to the Central Mining Corporation and the Rand Mines. The cash position shows a deficiency of £30,100 irrespective of contingent liabilities in connection with miners' phthisis. At 1,488,600 tons, value 7.3 dwts., the ore reserves display an expansion of 434,500 tons in quantity, with a small decline in value; the tonnage represents approximately three years' supply for the mill. The plan accompanying the report indicates that the area remaining to be developed is becoming restricted, and that some arrangement in respect of dip ground will become imperative before very long. From £63,250 in 1926 the net profit of the Geldenhuis Deep shrank to £29,100 in 1927 and £15,400 last year, a good proportion of the latter amounts consisting of sundry revenue. For each of the past two sessions 2½ per cent. has been paid, the bulk of the amount last time coming out of the carry-forward, miners' phthisis absorbing £13,440. At 760,300 tons the ore reserves represent less than a year's supply; but in this connection it should be noted that last year less than 20 per cent. of the tonnage mined was drawn from reserve blocks. The net cash assets amount to £72,600, disregarding the outstanding liability of £77,070 in respect of miners' phthisis. The shares stand at about 4s. 6d. With the Rose Deep the position is much the same. During the past three years the working profits have been £84,700, £49,300, and £28,900 respectively; dividends have declined from 6¼ per cent. to 5 per cent. and lastly 2½ per cent. As capital expenditure in 1928 called for £13,400, the carry-forward had to be drawn upon to some extent. Further outlay is envisaged during the current year. Net cash and investments amount to £94,300; outstanding balance in respect of miners' phthisis, £73,300. Owing to the opening up of the southern section of the mine the reserve position is slightly better at 922,700 tons, of which 652,300 tons are available. Subject to labour and other conditions, some improvement in profits is forecast for the current year, but the margin is obviously limited.

Canadian Pacific Railway.—The position of this historic company—which retains a significant British shareholding interest—continues to reflect the healthy state of Canadian agriculture and industry. Gross earnings from railways and lake steamers increased last year by 14 per cent., while the net amount available for dividends much more than regained the loss of ground of 1927:—

	1926.	1927.	1928.
	$	$	$
Gross earnings: Railways and Lake Steamers	198,025,591	201,145,751	223,039,297
Working expenses	153,080,464	161,630,180	177,344,845
Net earnings	44,945,126	39,515,571	51,694,452
Special income	11,056,270	11,876,560	12,677,683
Total income	56,001,397	51,392,131	64,372,135
Fixed charges	14,676,358	15,378,867	15,308,698
Surplus	41,325 038	36,013,264	49,063,437
To pension fund	600,000	600,000	750,000
Available for dividends	40,725,038	35,413,264	48,313,437

The company has paid the usual 10 per cent. in dividends on the common stock, but as net available earnings were equal to 16 per cent. the surplus carried forward has been increased by $9,484,937 to $14,892,257. The common stock at 252xd yields a shade under 4 per cent.

CAPITAL ISSUES.

Apart from one foreign government loan, prospectus issues during the week were less substantial than of late, though hardly less numerous, aggregating £4,353,500, excluding conversions, against £155,555,110 in the corresponding period of 1928. *Chile* was responsible for a quickly over-subscribed £2 million issue at 94½, redeemable by 1962 and giving a flat yield of £6 6s. 11d. per cent. The loan, which is required for public works, is not specifically secured, but the bonds will be secured equally with any future borrowing which may be charged on revenue. Two-thirds of the whole issue of the *Compass Investment Trust*, an S. Japhet and Co. flotation, whose prospectus was otherwise colourless, were taken by inside interests. *India Tyre and Rubber Co. (Great Britain)*, the fifteen months' old offspring of an Ohio firm, made an issue of participating preferred and shilling deferred shares at a premium. The Renfrewshire factory is operating 24 hours a day, including Sundays, and will reach full production next month, but obviously future earnings must depend largely on the price of rubber. *British Dardelet Threadlock (D.D.G.) Corporation*, which is to exploit British Empire rights for a tight-locking screw granted by a successful French company, proved a highly popular speculation. Something out of the common was provided by the *Albanian National Brewery*, a company which, under the chairmanship of an ex-British Minister to the country, has obtained a 99-year virtual monopoly, protected by a safeguarding duty, to provide Albania with beer. The terms on which the Minister of Public Works and Agriculture granted the original concession to the promoters are, unfortunately, not stated. *Curzon Brothers and Maxims* represents the amalgamation of two multiple-shop tailoring businesses, and the absorption of a few other small shops, in anticipation of an annual saving of £7,000. The prospectus, otherwise straightforward, is ambiguous concerning payments for stock-in-trade. *Genval* is a speculative attempt to exploit natural springs near Brussels, and in spite of the publicity afforded by a contract with the Phospherine Co., its prospects are mainly dependent on the degree of success of the inevitable advertising campaign. In the prospectus of *Associated Fisheries*, acquiring a wholesale fish business, options are prominent, nearly two-thirds of the purchase price apparently represents goodwill, and the public is asked to subscribe 36⅔ per cent. of the capital in return for 12 per cent. of the equity. *De Lavaud Free-Wheel Differential* is a typical patent issue, exploiting a device well reported on but not tried out commercially. The result of another 5s. share issue, *Roadway Time Tables*, was not publicly announced; its expectations of profits were mainly based on advertising revenue from a "Bradshaw" of the road, a field in which it could scarcely expect a monopoly. Finally, a curious prospectus appeared for *Couéism*, which offered to the investor little more than a hope that profits would respond to the famous formula.

Chilean Government Six Per Cent. Sterling Loan.—Offer at 94½ of £2,000,000 6 per cent. sterling bonds to bearer, part of a present issue of approximately $20,000,000. Principal and interest are payable at holder's option in London in sterling or in New York in dollars ($4.8665=£1), without deduction of Chilean taxes. The bonds are to be redeemed by 1962 by a 1 per cent. accumulative sinking fund applied half-yearly by drawings at par, or the Government may redeem them at any time on three months' notice. The proceeds will be applied to the construction of public works.

Compass Investment Trust, Limited.—Issue at par of 75,000 £10 shares, to be converted when fully paid into £6 of 5½ per cent. cumulative preference stock and £4 of ordinary stock.

India Tyre and Rubber Company (Great Britain), Limited.—Issue of 400,000 (out of 625,000) £1 7½ per cent. cumulative participating preference shares at 21s. and 1,600,000 (out of 2,500,000) 1s. deferred shares at 2s. 6d., the former entitled to one-fifth of the remaining distributed profits after payment of 7½ per cent. on the deferred. The company was formed in 1927 to manufacture and sell in the British Empire (except Canada) tyres, tubes, and other rubber products, under licence from an American company. Net assets before present issue were valued at £142,710, and profits (December 6, 1927-December 31, 1928) were £30,945, less depreciation. A dividend at the rate of 8 per cent. on the issued 125,000 preference shares and of 17½ per cent. on the issued 500,000 deferred shares has been declared. Present issue is intended for repayment of temporary loans and for development purposes.

Grace National Bank
Hanover Square, New York, U. S. A.

We undertake the investment of funds in U. S. Government Bonds, Ban Acceptances and American securities for our banking correspondents.

Special Representative

148 Leadenhall St. London, E. C. 3.

British Dardelet Threadlock (D.D.G.) Corporation, Limited.—Issue at par of 295,000 (out of 480,000) £1 "B" ordinary shares, entitled to seven-tenths of the distributed profits. The company acquires patents and rights for the British Empire relating to a tight-locking screw thread. The purchase consideration is £325,000, payable as to £20,000 in cash, £120,000 in £1 "A" ordinary shares and £185,000 in "B" ordinary shares, and a royalty. Working capital is estimated at £239,000.

Albanian National Brewery, Limited.—Offer at par of 800,000 (out of 1,600,000) 5s. ordinary shares. The company acquires the sole concession for 99 years to manufacture beer in Albania. The purchase price for that and for a freehold brewery site is £74,000 in cash and £150,000 in shares. Working capital is estimated at £40,000. The remaining 200,000 shares are under option at par.

Curzon Brothers and Maxims, Limited.—Issue at par of 594,000 (out of 800,000) 5s. ordinary shares. The company acquires and amalgamates a chain of established retail tailoring and outfitting businesses. The 41 leasehold establishments, together with a factory and a warehouse, to be acquired are valued at £99,715. The purchase price is £99,500, payable as to £48,000 in cash and £51,500 in shares. The issue will provide about £75,000 for working capital, out of which the company will purchase the stocks of the businesses at a sum estimated at £40,000. Combined profits have been:—1925-26, £30,146; 1926-27, £33,200; 1927-28, £34,160.

Genval, Limited.—Issue at par of 1,350,000 (out of 1,500,000) 2s. ordinary shares. The company acquires mineral water springs and bottling works in Belgium, valued at £39,560, with the benefit of certain agreements. The purchase price is £40,000, payable as to £25,000 in cash and £15,000 in shares and a royalty. Working capital is estimated at £53,000.

Associated Fisheries, Limited.—Issue at par of 200,000 (out of 300,000) 10s. 7½ per cent. cumulative participating preferred ordinary and 200,000 (out of 3,000,000) 1s. deferred ordinary shares, the former entitled to one-fifth of the remaining distributed profits. The company acquires the whole issued capital of a fish merchanting business founded in 1889, and will acquire a controlling interest in similar businesses. Net assets exclusive of goodwill are valued at £59,253. The purchase price is £145,000, payable as to £55,000 in cash and £90,000 in deferred shares, and an option on 550,000 unissued deferred shares at 1s. 6d. Profits have been:—1926, £24,284; 1927, £27,730; 1928, £40,960. Working capital is estimated at £35,000. A further 250,000 deferred shares are also under option on the same terms.

De Lavaud Free-Wheel Differential, Limited.—Issue at par of 380,000 (out of 800,000) 5s. shares. The company acquires patent rights in a free-wheel differential for Great Britain, Northern Ireland and the Irish Free State, and a one-fifth interest in rights throughout the world, with a sub-licence to use certain free-wheel patents. The purchase consideration is £85,000, payable as to £40,000 in cash and £45,000 in shares. Working capital is estimated at £40,000. A further 140,000 shares are under option at 6s.

Roadway Time Tables, Limited.—Issue at par of 320,000 (out of 800,000) 5s. shares. The company will exploit the copyright and publishing rights in a new motor coach and bus time table, acquiring a business previously engaged in the preliminary work. The purchase consideration is £50,000, payable as to £12,000 in cash and £38,000 in shares. Working capital is estimated at £45,000.

Conéism, Limited.—Issue at par of 1,000,000 (out of 1,500,000) 1s. ordinary shares. The company acquires the existing Coué Institute, with all rights, assets, and concessions, and will extend its work. The purchase consideration is £59,450, payable as to £34,500 in cash and £24,950 in shares. Working capital is estimated at £8,000.

Bognor Gas and Electricity Co.—Offer for sale by tender of £35,000 new consolidated stock (minimum price, 102), ranking for a maximum dividend of 7 per cent. equally with existing stock now receiving this rate.

Pending Issues.—Central Argentine Railway Co., Limited, will issue on Monday next £3,000,000 5 per cent. redeemable debenture stock, 1967-87, at 94½

Salerni Coupling, Limited, will issue on Monday 1,500,000 2s. shares at par. The company acquires world rights, outside America, for a patent gear-changing device.

Particulars of the following have been issued for public information only in connection with Stock Exchange "introductions":—**Fairey Aviation Co., Limited**; issue of £300,000 8 per cent. first mortgage debenture stock, 1940, at 99 and 300,000 10s. ordinary shares at 10s. 6d.; acquires an established business of aircraft manufacturers, with net assets valued at £787,485, for £325,000 in cash and £350,000 in shares; profits have been (1926-27) £125,363, (1927-28) £160,192; working capital is estimated at £166,000. **Sika (Africa), Limited**; issued capital 40,000 10s. (5s. paid) 10 per cent. cumulative preference and 80,000 1s. ordinary shares; exploits rights in waterproofing compounds for the Union of South Africa and Rhodesia. **British, Foreign, and Colonial Corporation, Limited**; issued capital 1,540,000 (out of 4,000,000) 5s. ordinary shares; incorporated in 1910 to carry on all descriptions of banking, mercantile and financial business; 10 per cent. dividends were paid for the last three years.

Sulphide Corporation, Limited.—During the four weeks ended February 23, 1929, 11,180 tons of Central Mine ore, together with 1,778 tons of slimes, were milled at the Central Mine, producing 2,030 tons of leady concentrates (including 67 tons from the de-leading plant), which assayed 51 ozs. silver, 66 per cent. lead, together with 3,024 tons of zinc concentrates, assaying 7 ozs. silver, 4 per cent. lead and 50 per cent. zinc per ton and 226 tons special slimes, assaying 9 ozs. silver, 13 per cent. lead and 5 per cent. zinc per ton.

Burma Corporation, Limited (*incorporated in India*).—During the month of February, 37,939 tons of ore were mined, including 2,765 tons of high-grade ore. 28,500 tons of ore were milled in the treatment plant, producing 9,300 tons of leady concentrates. 12,731 tons of lead-bearing material, including 3,290 tons of high-grade ore, were smelted in the blast furnaces, producing 6,205 tons of hard lead for treatment in the refinery. Refinery products were 6,506 tons refined lead and 618,141 ozs. refined silver. Of silver production 12,121 ozs. were recovered from the treatment of copper matte. Zinc plant produced 4,950 tons zinc concentrates, assaying 8.79 ozs. silver, 5.69 per cent. lead and 51.4 per cent. zinc. In addition to the above, 750 tons copper matte were produced from the treatment of accumulated smelter by-products and 5,228 tons copper ore. 100 tons of refined antimonial lead were also produced. Included in the tonnage of refined lead is 302 tons recovered from the smelting of copper ore.

COMPANY MEETINGS, &c.

BRITISH FOREIGN AND COLONIAL CORPORATION, LIMITED.

RECORD PROFITS—CONDITIONS IN U.S.A.

The seventeenth ordinary general meeting of the British Foreign and Colonial Corporation, Limited, was held, on the 11th instant, at B. F. C. House, Gresham Street, London, Mr F. A. Szarvasy (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The year again shows satisfactory progress in our activities, and the profits earned are the highest in the history of the company. We have now attained one goal in our programme—namely, that with the allocation made out of 1928 profits our reserve account will stand at a figure equal to the issued capital. We were able to achieve this and recommend a dividend at the rate of 10 per cent. for the fourth successive year, having concurrently increased the salaries and bonuses paid to our staff.

You have received with the accounts a circular offering 460,000 shares at a premium of 1s. 9d. per share. Based on the figures shown in the circular, issuing these shares in the manner indicated is equal to approximately a 10 per cent. dividend on your shares. The company's capital will now stand at a round £500,000, and if the current year's results justify it, as I hope they will, I trust that within a year from now our reserve fund will again be equal to our capital.

The accounts presented disclose a liquid position with ample cash resources, and, on the whole, they are drawn in a conservative manner. I trust, in view of some very important business which we have in hand, that the current year will be equally satisfactory, unless, of course, unforeseen circumstances should supervene.

CONDITIONS IN AMERICA.

In trying to estimate business conditions in 1929 one of the most important commercial factors to consider is the U.S.A., since that great country is playing an increasingly influential part in European business, the fortunes of war having turned her from a debtor into a creditor country. One must adopt new standards of measurement and be prepared to discard old methods as you would scrap useless machinery.

The fact that most of the leading spokesmen of labour have recognised that the maintenance of a high scale of wages pre-supposes a high scale of production has given American industry a new orientation, and has led to the creation of a nation of mass consumers in which the employer is mindful of the workers' rights and sentiments and of paying not the lowest wages to which labour can be squeezed down, but the highest wages compatible with the proper and successful conduct of business.

The nation as a whole has learned that to promote the common welfare is not to pull the successful down, but to try and pull everyone up; not to take away from some, but to add to all. They have observed that the mathematics of prosperity consist not in division, but in multiplication.

The maladjustments which were largely the consequences of war conditions have been, or are being, gradually adjusted, and, apart from monetary conditions, one can see no menacing clouds on the horizon as far as general progress and prosperity of the States are concerned.

Looking at statistical data, one is impressed mainly by the constantly increasing car-loadings and by the fact that industrial earnings are on a higher level than they have ever been before. There seems to be no superfluity of manufactured articles in stock, and, so far, at least, there has been no speculation in raw commodities. The basic conditions, therefore, seem to be sound.

FUTURE COURSE OF SECURITY PRICES.

The past few years have witnessed an accumulation of wealth almost unbelievable. In face of this encouraging condition of affairs and the pleasing picture which it reveals, one cannot help being somewhat astonished at the pessimistic forecasts and the cautious note sounded regarding the future course of security prices by so many important American bankers and financiers.

The reason seems to be in the apprehension that the credit structure of American banking is being overstrained, and the high volume of "brokers' loans" is instanced as the danger point in the situation. I am afraid that those who attach such overwhelming importance to the comparatively high figure of brokers' loans have not perhaps examined conditions sufficiently closely to realise that the trend towards consolidation in industry has produced a state of affairs in which the utilisation of credit from banks has taken a different form from that which one was accustomed to see.

What I mean is that many small individual producers and distributors have found it necessary either to sell out to the larger units or to fail; that an increasing amount of surplus capital will go into the securities of the larger units instead of being employed in originating small individual enterprises, or in the participation in local partnerships; that the financing of enterprises is being accomplished more and more through what are popularly called brokers' loans, but which are to a very considerable extent only an altered form of commercial loans.

Remove this bugbear of brokers' loans by regarding it in its proper light, and the horizon clears at once.

I personally see no reason why, if it is realised that the high figure of brokers' loans does not in itself necessarily represent over-speculation, there should not be a greater abundance of credit made available in America (to which the elastic Federal reserve system lends itself admirably), and that thereby easier money conditions should not be brought about to the benefit of America itself and to the relief of Europe generally.

In throwing out this hint I am not oblivious to the fact that in certain securities speculation is rampant, but it is up to the banker to discriminate against the collateral he accepts and to vary his rates and margins accordingly, as has been the habit in the London Money market as far back as I can remember.

AMERICA'S PROBLEMS.

How America will ultimately solve the problem of gathering interest on her loans, of increasing her export trade, of being the main supplier of many raw materials to the world, and yet be hemmed in by high tariff walls, refusing to purchase manufactured articles from outside, remains to be seen. As is well known, her tourist traffic represents a considerable expenditure, and as long as there are art treasures, wonderful pictures, tapestry, silver and old furniture to be bought in Europe there exists a further counterweight. But how long is this going to last? Here is one of the problems which American industrialists will sooner or later have to face seriously.

Generally, it seems likely that the wave of prosperity in America will continue for the major portion of the current year, and that, on the whole, should exercise a beneficial influence on European business.

FAVOURABLE OUTLOOK IN GREAT BRITAIN.

If I have spoken in somewhat optimistic terms about the situation in America, I do not want to imply that conditions in Great Britain have not also taken a favourable turn. During the last two years the 10-year-old struggle of "who is to pay for the War?" has found at least a partial solution. The capitalist has paid and is paying to the extent to which the cost of living has risen in comparison with pre-War figures, and the worker paid mainly during the period of partial inflation following the War through having to accept a standard of living lower than that ruling pre-War. To some extent this condition still prevails, but the warfare is no longer carried on in the acute form of strikes and lock-outs. The one visible sign, however, that conditions have not finally settled down is our unemployment problem, which does not lend itself to treatment as in the United States, because fundamental conditions are different.

We have made great progress in what is commonly called the rationalisation of our industries, and many schemes are now being matured, the fact having been recognised generally that unrestricted competition is not an unmixed blessing, and that to co-operate with your competitor is not a sign of weakness, but a sign of advancement of civilisation.

What is disturbing business with us is the uncertain monetary outlook, brought about partly in any case by the resumption of our position as an international money centre, and by trying to apply old remedies to a new set of conditions.

The raising of the Bank Rate hardly ever failed to achieve its object before the war, but in the peculiar and special set of circumstances of the international money market which prevail to-day I am afraid that a further rise in our Bank Rate may conceivably have little or no effect in bringing relief.

If the moneyed classes are afraid of the advent of a Socialist Government and wish to export capital, or if favourable opportunities for increasing their capital are found in other countries, the fact of sterling being at a discount will not stop such operations, and unless other central banks are prepared to co-operate with us and make their resources available for the common good, a further rise in our Bank Rate might only result in a general rise in the official discount rates of other countries and would, therefore, remain without effect.

Apart, therefore, from the special set of circumstances which I have mentioned, and which may have a disturbing effect on trade and security values, I think that the current year will, at any rate, not prove to be a bad one.

The report and accounts were unanimously adopted.

At an extraordinary meeting which followed, a resolution providing for alterations in the articles of association was unanimously agreed to.

MARCONI INTERNATIONAL MARINE COMMUNICATION COMPANY, LIMITED.
ANOTHER YEAR OF PROGRESS.

The twenty-ninth ordinary general meeting of the Marconi International Marine Communication Co., Limited, was held at the Connaught Rooms, Great Queen Street, Kingsway, London.

The Right Hon. F. G. Kellaway, P.C. (deputy-chairman and managing director), who presided, said: There is a total of £215,597 available for distribution. On October 17th last an interim dividend of 7½ per cent. was paid, which absorbed £89,454. There is thus left for appropriation a sum of £126,143. It would be possible for your directors, as you will see, to recommend a final dividend of 10 per cent., making a total of 17½ per cent. for the year and leaving a carry-forward of something under £7,000. We have, however, decided, in accordance with the policy which has been pursued during the past four years, not to recommend a distribution up to the hilt of the whole amount available. The experience of the past few years has emphasised the necessity for conservative finance in all companies which depend to a considerable extent, as your company does, on the prosperity of the shipping industry.

A GOOD RECORD.

During the 29 years that your company has been in existence the dividends paid have averaged nearly 7½ per cent. per annum for the whole period. As the company was operated at a loss for the first nine years, and in the tenth year paid no dividend, I think you will agree that an average of 7½ per cent. is a good record.

In November, 1924, the board of the company was reorganised and I became managing director, and I should like to call attention to the progress which has been made. In 1924 the profit was £83,576; in 1925, £118,979; in 1926, £126,132; in 1927, £179,730, and in 1928, £193,420.

As you know, the improvement in the position of our parent company has been even more remarkable. I do not suppose there are many other industrial concerns in this country whose position has shown so striking an improvement in the past four years as has been shown by the Marconi International Marine Communication Company and Marconi's Wireless Telegraph Company. This continuous and gratifying improvement in the position of both companies has not been obtained by increasing charges. On the contrary, when charges have been changed the changes have been downwards.

The year 1928 has been one of preparation for the new order of things that comes into force at the end of 1929. Designs of ship wireless telegraph and telephone apparatus have been made to meet the new requirements, and this year they are being offered to our clients at prices which, I am glad to say, approximate very closely to the standard figures for spark outfits.

The year 1928 was particularly interesting from the technical point of view because of the practical tests made in every sea and on every class of ship of the Four-second Auto Alarm Device. The reports from nearly 1,000 ships equipped with this apparatus have been carefully analysed by a specialist staff, and we are satisfied that the auto alarm device of your company's design has an efficiency of not less than 90 per cent., with prospects of improvement as further experience is gained. I dare say that all business men, and shipowners in particular, would wish that human efficiency stood at so high a figure. The wireless direction finder—a voluntary fitting that has captured the imagination of the progressive shipowner—is being employed to an increasing extent.

THE OUTLOOK.

As for the prospects for the current year, reports reach us on all hands of increased activities in shipbuilding and improvements in freights. A very safe guide to the state of business in the shipping industry is found in the returns of ships laid up unemployed. For the vessels in which your company is interested, the average in the spring of each of the last three years has been roughly 6 per cent. laid up, whilst at the present moment the comparative figure is 5 per cent.

Apart from these considerations, your company has begun the present year with a large number of orders in hand for execution, promises of many more, and the prospect of less adverse effects from reduced wastage through sales of ships abroad and for breaking up.

I should like now to make a reference to an announcement which appeared in Saturday's papers that the Gramophone Company ("His Master's Voice") has acquired the Marconiphone Company. The public may rest assured that the arrangements which have been made between the Marconi Company and the Gramophone Company will increase the volume of employment in this country, and will strengthen our technical resources. Had I not been satisfied on these two points I would not—attractive as the proposition was from the financial point of view—have agreed to entertain it.

The report and accounts were unanimously adopted.

GENERAL ELECTRIC COMPANY, LIMITED.
CAPITAL INCREASE APPROVED.

An extraordinary general meeting of the General Electric Co., Limited, was held, on the 13th instant, at Magnet House, Kingsway, London, for the purpose of considering the following resolutions: (1) That the capital of the company be increased to £7,600,000 by the creation of 1,600,000 new shares of £1 each; (2) that the new shares be called "British ordinary shares," and that they be issued only subject to the condition that they shall not be registered in the name of or transferable to or held on behalf of any foreigner, foreign corporation, or corporation under foreign control as defined by the articles of association of the company for the time being, but that in all other respects (including participation in profits and surplus assets of the company and voting rights) they rank equally with the existing ordinary shares of the company; and (3) a further resolution modifying the articles of association of the company.

Sir Hugo Hirst, Bt. (chairman and managing director of the company) presided.

The Chairman, in the course of his speech, said: We have called this meeting in order to submit for your approval (1) a resolution in favour of increasing our ordinary share capital by £1,600,000, and (2) confining such issue to British subjects.

REASON FOR INCREASE OF CAPITAL.

The reason for this increase of capital is primarily due to our desire to redeem the outstanding debentures as soon as possible—at any rate in September, 1931, the date when we have the power of redemption. I have not ceased to regard a Seven per cent. debenture a blot on the balance sheet of a company such as ours, and I have been waiting for a favourable opportunity to efface them from our accounts.

By redemption, and occasional purchases when they were offered in the market, we have reduced the debentures by approximately £400,000, and we now desire to have the necessary means at our disposal to redeem the balance without weakening the cash resources of the company, which are essential for the development of this great and expanding business, and I do not think there can be two views on the soundness of this policy

As to the second resolution, I regret that this has apparently given umbrage in some quarters, and I am particularly sorry that for the first time in our long and peaceful history any financial scheme proposed by this company should be unfavourably commented on. I believe that this criticism is entirely due to a misunderstanding of our aims and our objects. I do hope and believe that if the newspapers which commented upon it adversely this morning will carefully study what I say in this address, they will readjust their views.

BRITISH CHARACTER VITAL.

The G.E.C. has always been regarded as an essentially British concern, and has derived no small amount of its strength from the co-operation it received from British shareholders, both in home and Empire markets. It is, therefore, absolutely vital that, apart altogether from control, its British character should be preserved, and therefore its shareholders should include in their number a considerable percentage of subjects of the British Empire. We need them, as our experience teaches us what great part they play towards securing continuity of employment for the company's 25,000 workers, whose well-being and happiness we claim plays an important part in our management. Every shareholder is a potential customer.

It is for these reasons, and for these reasons only, that it is proposed to confine the present issue to the British public. The American public, who before long may hold practically all our ordinary shares issued, are barred from giving us this help by their protective fiscal legislation.

The shareholders will, I am sure, agree with me that the result of this issue will be for the utmost benefit of the company. We shall have in hand £3,000,000 to pay off our debentures. This, on a dividend of 10 per cent., which I have every reason to believe will continue to be paid by this company, means, at 40s. per share, a cost to us of 5 per cent. The debentures bear 7 per cent., and this will be a saving to the ordinary shareholders of £60,000 per annum. We shall have an additional £1,500,000 to reserve, the security of the preference shareholders will be enhanced by the removal of £3,000,000 debentures at present standing in front, and the addition of £3,000,000 behind them. And, lastly, we shall have a large additional and permanent body of British shareholders to preserve and maintain the traditions of this great and prosperous company.

There is no national or anti-national feeling, there is no personal interest concerned in it: it is simply what we consider for the best of the company.

The resolutions were carried by a large majority.

VINE PRODUCTS, LIMITED.
SATISFACTORY RESULTS IN A YEAR OF DIFFICULTIES.

The annual general meeting of Vine Products, Limited, was held, on the 12th instant, at Winchester House, Old Broad Street, London, Sir Reginald Brade, G.C.B. (the chairman) presiding.

The secretary (Mr W. L. Specketer) having read the notice convening the meeting and the report of the auditors,

The chairman first referred to the loss sustained by the company in the death of the late chairman, Mr Louis Campbell-Johnston. Dealing with the balance sheet, the chairman called attention to the strong financial position, the liquid assets being about £417,000, as against creditors of only £70,000. It was proposed to pay a final dividend on the ordinary shares at the rate of 35 per cent. per annum, making a total of 30 per cent. for the year, to write off special advertising account £12,171, to place to general reserve £20,000, and to carry forward £13,828. With the addition of £20,000, the reserve would now amount to £138,773. For a company to have such an amount to the credit of reserve in a period of less than three years, after having written off the whole of the preliminary expenses, must give considerable satisfaction to the shareholders. (Hear, hear.) Shareholders would doubtless consider the result of the year's trading satisfactory, but he would like them to know something of the difficult conditions in spite of which such a result had been achieved, as it would show them the vitality of the business and the strength of the company's position in the trade.

ADDITIONAL DUTY.

In the Budget of 1928 an unexpected additional duty of 6d. per gallon was added to the 1s. duty imposed in 1927. Having regard to the fact that the company's wines appealed principally to those who could not afford any imported wine, the Board had felt that the additional duty could not be passed on to the consumer without the risk of curtailing consumption, and the fact that a large proportion of the tax had been borne by the company accounted for a certain diminution in the profit, which diminution would have been greater had they not been able to recoup themselves in other directions.

The taxation two years in succession of a British product was unwise; taking other fiscal burdens into consideration, British wines were now being taxed at a higher rate per gallon than Dominion wines of a similar strength. The Government should remember that the British wine industry had a history of at least two centuries, and that many years ago taxation had had to be repealed on account of damage the industry suffered.

He might mention that during last year the consumption of imported wines decreased by no less than 3,500,000 gallons, or 20 per cent., partly due to increased taxation in 1927, but undoubtedly accentuated by the bad economic conditions and general depression prevailing. The further taxation of British wines had been advocated in the Press on the ground that they displaced imported wines; as a matter of fact, that could not be so, as the additional 6d. per gallon duty had prevented any increase in British wine consumption. Their company, too, was certainly the largest buyer and distributor in this country of Dominion wines, and there should be no antagonism between the two sections of the wine trade.

COMPANY'S PRE-EMINENT POSITION.

During 1928 a few new companies had been formed for the purpose of making British wines, but competition was no new thing to the company; prior to the formation of the companies to which he had referred there had been, and still were, upwards of 100 British wine makers in the United Kingdom. That had not prevented the company from rising to its pre-eminent position, achieved by the excellence of its matured and standardised products, the result of twenty-six years' scientific production. In their own interests their customers were unlikely to forsake an article of such established reliability, realising the risk of handling wines of unproved stability. As regarded the Dominion wine side of the business, the market had suffered again from the dumping of Australian sweet wine. The sales of South African wines had, however, been very satisfactory, realising prices well above the Australian level. There was no doubt the port style wines of South Africa represented the best imported wine value ever placed on the British market.

On the whole they could certainly say that their Dominion wine trade prospects during 1929 were much brighter.

With regard to their home wines, they had, as he had told them, during 1928 greatly perfected and enlarged their equipment, and therefore, with better industrial conditions and improved employment, they hoped for the continuance of their prosperity.

The chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr. John Davie, C.A., and the chairman having replied to questions, it was carried unanimously.

JOSEPH NATHAN AND COMPANY, LIMITED.
IMPROVED RESULTS—VITAMIN "D" DEVELOPMENTS.

The twenty-ninth annual general meeting of Joseph Nathan and Co., Limited, was held, on the 12th instant, at the Glaxo House, 56, Osnaburgh Street, London.

Mr. Alec Nathan, the chairman, presided.

The Secretary (Mr. Fred. C. Randall, M.C., F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—I feel that you will agree with your directors' views that the accounts before this meeting show, both in the balance sheet and in the profit and loss account, a gratifying improvement over last year.

Continuing, the Chairman said that with the proposed allocation of £5,000, the reserve now reached the highly satisfactory figure of £25,560, while cash in hand and bills receivable were up £9,000 at £83,000. The reduction of £6,800 in dividends received was in part due to a rearrangement of the accounts of the subsidiary companies, which would now all close on the same date. From the net profit of £61,216 they were paying a full year's dividend on the preferred ordinary capital, transferring £5,000 to reserve, as mentioned, placing £3,500 as provision for income tax, and carrying forward £9,383. As to an ordinary dividend, the directors felt that their duty was still to strengthen the financial resources of the company by building up reserves.

VITAMIN D.

Continuing, he said: Generally, all departments are in a healthy state. In regard to your main proprietary, Glaxo, there has been an important development. This has been made possible by the separation and concentration of a tasteless and odourless Vitamin D. The chief problem we had to solve was to find out the precise quantity of Sunshine Vitamin D to be added. Feeding trials lasting over two years had to be carried out before we were able to arrive at the correct quantity. It has met with a gratifying reception and approval of both doctors and nurses. We look forward with assurance to its future success.

Though Vitamin D, as a separate entity, has only been before the members of the medical profession for a few years, it has now an assured future. Its uses are manifold. It is necessary for everyone's good health, young and old alike, and it is the one vitamin which is usually deficient in one's everyday diet. Holding this view, we are proud to be able to state that we have been the pioneers in both the production and marketing of **Vitamin D**, not only in this country, but also in several export markets. **Last** year it was stated that Vitamin D Ostelin preparations had become an appreciable item in the company's business. For this year one can confirm that statement with greater emphasis, and also state that the future prospect for these preparations is bright. Among the latest boats to be fitted with Nathan's Iron Cow are the new Duchess boats for the Canadian Pacific Steamship Company, the new motor ships of the New Zealand Shipping Company, Ltd., and nine steamers of the P. and O. branch line.

SEVENTY EXPORT MARKETS.

In a recent speech the Prince of Wales commented upon the necessity for local knowledge if success is to be attained in export markets. From our own experiences in trading in foreign markets we can most heartily endorse the remarks of His Royal Highness. For many years past we have ourselves been particularly engaged in building up and strengthening our foreign connections, and we are now working in no less than 70 export markets. To attempt merely to sell the product or preparation which has been acceptable at home is only to court failure. Each country is an individual—success is attained only by building up a *personnel* knowing the customs, desires, and peculiarities of the country, and by having a staff which is resident in the country, perfectly familiar with the trading customs, and speaking the language as natives. Such an organisation we have endeavoured to build; the measure of our success has been the expansion of our export business. We are proud, and justly proud, of our export organisations. Apart from our Australian and New Zealand houses, we have unique organisations for a firm of our size, both in India and the East and throughout South America.

In South America we have no less than five of our own offices, and are fully represented in thirty different countries. With this highly organised export staff we have not only been able greatly to increase our export trade, but also to assist other manufacturers to sell their products successfully.

It is some satisfaction for the immense amount of effort and work which your directors devote to their duties for them to be able to present to you results showing steady improvement, and, while naturally one wishes to be safe in one's optimism, there is evidence that your company's business is moving towards more prosperous and more stable times.

The report and accounts were unanimously adopted.

WALKERS, PARKER AND COMPANY, LIMITED.

SUCCESSFUL RESULTS—BONUS RESUMED.

The annual general meeting of this company was held on the 14th instant at Winchester House, London, Mr. George Strachan Pawle, J.P., D.L. (the chairman), presiding.

The Chairman said: It may be in your recollection that when we had the pleasure of meeting you here at our general meeting last year I did not follow the usual course of comparing the various items in the balance sheet as a basis for my remarks, because the figures for the past year and comparison with those of the previous year are so clearly set forth that any further reference is unnecessary, beyond the agreeable fact that our net profit on trading comes out at £29,454 16s. 3d., against £20,991 8s. 3d. in 1927, which enables us to pay our regular 10 per cent. and also to resume the 3d. per share bonus which we had to drop on that occasion. I feel, however, that it should be made quite clear to you that this year there is again no provision for income tax, as owing to the favourable position in which we stand with the Revenue authorities, owing to their method of valuing our stock, we have still to our credit, as it were, the statutory loss referred to at our last meeting. At the same time, any questions you may wish to put to me about any details in these accounts will be welcomed and fully answered.

HISTORY OF COMPANY.

On this occasion I think some reference to the 150 years' history of Walkers, Parker and Co. is called for, to enable you to fully understand our actual position at the present time.

In the year 1881 the actual paid-up capital of the old private firm stood at £400,000, while deposits amounted to £75,000, making a total of £475,000. Please remember the assets which were acquired by the present company in 1888 for a cash payment of £502,000, were, in fact, the accumulations of undivided profits made during the period of 100 years by the partners in the private firm. This policy of accumulating profits has been pursued by the board ever since the present company was reorganised in 1893, with the result that our assets to-day foot up to £813,000, as you see in the balance sheet, while our actual liabilities are :—

Creditors; Interest accrued on debentures dividend now payable, less tax	£78,000
Making our net assets	£735,000

against our capital account of £260,000 in shares and £298,000 in debentures = £558,000.

I should mention that our stock of lead included in the £146,000 is taken into our balance sheet at £10 per ton basis for pig lead, the market price on December 31st last being £22.

Beyond this I would point out that £298,000 of the capital here represented is irredeemable, and bears interest at the low rate of 4½ per cent. Taking, then, this investment of capital as £735,000, the profit we divide to-day shows a return of *under 6 per cent.* on the money employed in our business. On previous occasions your board have been severely criticised for these capital accumulations, while in recent years shareholders have agitated for distribution in the form of cash or bonus shares. Indeed, you will recollect that, in defending our policy, not only I, but Sir John Mann, impressed upon you the necessity of this conservative finance, owing to the severe competition in the lead trade, which has reduced manufacturing profits to a minimum. Now it is said, and one may be bold enough to believe, that a revival of trade is on the horizon at last. However that may be, one thing is certain, that shareholders will no longer be content to see their capital and capital accumulations employed in business bringing in such a low return.

The lead industry as a whole is a large and should be a profitable one, but the actual manufacturers of lead products are deprived of their fair share of profits owing to intense competition here and abroad. Our trade is not alone in this respect, as you all know, and so the demand has arisen for the policy of rationalisation, which means, I take it to be, the elimination of all waste effort and the concentration of production and distribution where it can be most profitably carried on. Gentlemen, the world does not stand still. You may say that this is a discovery which has at last dawned upon the directors of Walkers, Parker and Co., but I have shown you that not only have we steadily pursued a policy which has weathered all the trade storms of 150 years, but we are now in a position, through our accumulation of savings, to render our company and our friends in the lead manufacturing trades every facility for carrying out a system of mutual co-operation, which wiser heads than mine have recently perfected in other important industries.

EFFORTS FOR PROMOTION OF TRADE AGREEMENTS.

On this occasion I would specially bring to your notice the efforts made by my colleagues in promoting agreements in trade circles. They have, besides their daily routine of work, had to hammer out agreements and settle numerous and complicated questions which constantly arise and must arise between parties which, however amicably disposed to each other, have each their own point of view to consider. We all long for peace and goodwill in the world, but until quite recently nobody has been able to produce a scheme by which Labour and Capital can combine to create not only a better understanding between these two great productive powers, but with a consideration for the mutual benefit of producer and consumer.

It has been our earnest desire to carry on the traditions of the firm we have the honour to serve, and if in the future a more enlightened policy, with a greater vision, is likely to appeal to you in the changed and changing times, we can confidently say that we leave you with a goodly heritage. If and when we are able to put before you any proposal for bringing into effect the ideas now perhaps lightly sketched in these remarks, I can promise you that our only effort will be to further your interests, and that no consideration for the individual claims of your directors will influence their judgment in entering into any arrangements which they at some future time may be able to recommend for the benefit of the shareholders.

The report and accounts were adopted.

B. MORRIS AND SONS, LIMITED.

SOUND FINANCIAL POSITION.

The annual general meeting of B. Morris and Sons, Limited, was held, on the 13th instant, at Winchester House, Old Broad Street, London.

Mr W. Somers L. Schuster (the chairman) said that the profit for the year was less by £4,299. The year 1928 had not been an easy one as far as the smaller independent companies in the tobacco trade were concerned. What with the aftermath of the coal strike, bad trade in the North and Midlands, and the very extensive advertising of the bigger firms they had been confronted with a very difficult problem, but the 7 per cent. they were paying was, after all, nearly 10 per cent. on the old ordinary capital, and, considering the record which the company had had for the last 40 years, he did not think the shareholders had much reason to complain. The capital of the company had never been in a more liquid state. They had ample freehold premises, a good stock of well-selected tobaccos, and ample cash resources. If one took the difference between creditors and debtors, their tobacco at home and in bond, and their cash and investments they would find that they equalled the whole issued capital, and left the freehold premises, plant and machinery, and goodwill as a premium on the ordinary shares.

Mr A. J. May (managing director) said that their trading had undoubtedly been affected by the fire at their London factory, and the cigar trade had not been quite up to the usual standard. Cigar manufacturing was a very large portion of their business and it was not easy to increase sales when the yearly consumption of cigars remained practically stationary. The high rate of duty on raw material was one of the chief causes of the depression in the cigar industry. One of these days he hoped they would have a lower rate of duty, and there should be a good future for the cigar trade when they were able to sell at lower prices by reason of a lower duty. In the tobacco section of their trade they were hopeful of doing more business than last year.

162 Branches in Finland

CAPITAL AND RESERVES: Fmk.417,000,000.
TOTAL ASSETS (31/12 28): Fmk.2,934,742,000.

KANSALLIS-OSAKE-PANKKI
(National Joint Stock Bank)

HEAD OFFICE: HELSINKI (HELSINGFORS), FINLAND
Established 1889.

They were continually endeavouring to progress, and he could safely say that the bulk of their business to-day was being done on productions introduced in the last few years. Their resources were spread over a large number of various lines, a policy which had earned good dividends for years and resulted in a sound financial position.

After making full allowances for current dividends, preference capital, creditors, and the amount written off to advertising in 1929, a surplus of assets over the par value of the ordinary shares was disclosed of £37,000.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 9, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	7,545	From Revenue	23,701
Interest, &c., on Debt	1,130		
Sinking Fund	620		
Sundries	816		
Decrease in Debt	13,467		
Increase in Balances	123		
	23,701		23,701

The ordinary revenue for the week amounted to £23,701,300, as compared with £24,688,900 in the corresponding week last year. Property and Income Tax was lower at £12,820,000, against £13,169,000, but Super Tax at £3,260,000 was £260,000 higher. Customs and Excise amounted to £2,689,000 and £1,072,000, against £2,436,000 and £960,000 respectively. Ordinary receipts brought in £233,600, as compared with £213,900, and special receipts £1,650,200 against nil. The Revenue to date amounts to £674,865,200, as compared with £694,512,800 at this time last year. The excess of Expenditure over Revenue to date is £18,120,000, as compared with £21,461,600. The National Debt was reduced by £13,467,000, as shown below :—

(000's omitted.)

	£		£
Public Department Advances	— 2,140	National Savings Certificates	+ 100
National War Bonds	— 200		
Treasury Bills	— 11,227

				Sovs.	18,000
Total		£237,871	Total		£34,998

Net arrivals, £202,873.

Messrs. Samuel Montagu and Co. write as follows on March 13, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £151,473,325 on the 6th inst. (as compared with £150,897,002 on the previous Wednesday), and represents a decrease of £2,432,990 since April 29, 1925—when an effective gold standard was resumed. In the open market this week about £382,000 bar gold from South Africa was available. India took about £39,000, the Continental trade £70,000, and the home trade £50,000; the balance was secured by the Bank of England. There was a net influx of gold of £222,872 during the week.

SILVER.

The week has seen no movement of importance in silver prices, and a quietly steady tone has been maintained. The Indian bazaars show few signs of activity, but China has taken some interest in the market, and fresh buying has been recorded for this account, although re-sales have also been made by the same quarter. American operators have worked both ways, but on balance have been rather buyers. The market continues narrow, and with none of the factors most concerned exhibiting any decided attitude towards silver, there is, at the moment, nothing to indicate the likelihood of any appreciable departure from the present level of prices.

The following were the United Kingdom imports and exports of silver registered from midday on the 4th inst. to midday on the 11th inst. :—

IMPORTS.	£	EXPORTS.	£
Irish Free State	20,000	Germany	15,000
British West Africa	11,575	Netherlands	75,470
Canada	31,070	Egypt	24,095
Other countries	2,083	Irish Free State	12,058
		British India	30,644
		Other countries	10,506
	£64,728		£167,773

Reports and Notices.

The National Provincial Insurance Co., Limited, announces that Mr. William Melville Codrington, M.C., has been appointed to a seat on its board of directors at head office.

The directors of the Scottish Equitable Life Assurance Society have appointed Mr. Kenneth K. Weatherhead, M.A., F.F.A., to be joint assistant actuary to the Society along with Mr. B. B. Maxwell, F.F.A., the present assistant actuary.

Mr. Edwin Gray, having resigned the chairmanship of the Yorkshire Insurance Co., Ltd., through ill health, the directors have elected Sir James Hamilton chairman, in addition to his present position of managing director. Mr. J. O. M. Clark has been elected to a seat on the head office Board.

BANKS.

ANGLO-INTERNATIONAL BANK, LIMITED.—During 1928 the current business of the Bank has shown steady development, whilst substantial progress has been made in the liquidation of the affairs of its predecessors. The net profit for 1928 was £103,085, compared with £80,448 for 1927. Brought in from 1927 £52,447, making available balance £155,532. Proposed to place to premises amortisation £10,000, contingency reserve £125,000, carry forward £20,532.

BANK FOR RUSSIAN TRADE, LIMITED.—The following is the balance sheet for December 31, 1928, compared with 1927:—

Liabilities.	Dec. 31, 1927. £	Dec. 31, 1928. £	Assets.	Dec. 31, 1927. £	Dec. 31 1928. £

RAILWAYS.

BEIRA RAILWAY COMPANY, LIMITED.—The Report for the year ended September 30, 1928, shows total receipts £314,565 against £245,149 for preceding year. Apart from fixed charges, the company has made provision of £15,000 for pension liability. Reserve for taxation, £20,000. Out of the available balance of £115,734, the directors recommend a dividend of one shilling and sixpence per share less tax be paid, requiring £45,000; that £50,000 be placed to reserve, and £20,734 carried forward. The chairman, at the general meeting, on March 13th, said there was no difference between Beira Railway Chartered Scrip and Beira Railway Mozambique Scrip.

MISCELLANEOUS.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.—The directors have entered into a provisional agreement with the directors of The Niger Co., Limited, and Messrs. Lever Bros., Limited, whereby, subject to the early completion of certain further arrangements, the businesses of this company and The Niger Co., Limited, will be amalgamated as from May 1st next by transferring the whole of their assets and liabilities, with certain specified exceptions, to a new company in which this company and The Niger Co., Limited, will have equality of interest and control. The arrangement is subject to the approval of the shareholders of the two companies within the present month. At the request of the chairman of Messrs. Lever Bros., Limited—who hold practically the whole of the share capital of The Niger Co., Limited—and of the chairman of the Niger Co., Limited, Sir Robert Waley Cohen has agreed to become the first chairman of the new company.

PINCHIN, JOHNSON AND COMPANY.—The net profit for 1928 was £422,796, which compares with £327,942 for 1927, but the latter included a non-recurring capital profit of some £26,000. The ordinary dividend of 30 per cent. absorbed £233,450. This dividend is the same as for 1927, but it absorbed £160,240. The sum of £67,000 is put to reserve against £55,000. The carry-forward is increased from £52,273 to £80,103. Reserves stand at £1,134,545 against £273,063. Cash is at £855,647, against £271,575. Investments in associated companies are at £493,580 against £117,446. Holdings of British Government and other trustee securities are at £146,640 against £106,756. The directors have decided to issue to ordinary shareholders one new £1 ordinary share for each three ordinary shares held. Meeting at Hotel Cecil, Strand, on March 25th, at 11.30 a.m.

SOUTH AFRICAN GOLD TRUST.—Our mining correspondent writes: The full text of the accounts indicates last year's results to have been better than might have been inferred from the increase in the dividend. The profit of the operating concern, the New Gold Trust, amounted to £197,800, as against £97,850. Of the former total, £47,100 is required for depreciation on investments, or £30,000 more than in respect of 1927, and £30,000 as against nil is applied to reserve, raising the fund to £50,000. There remains sufficient to provide a final dividend of 7 per cent., making 9½ per cent. for the year, as compared with 7½ per cent. for 1927. In these circumstances the South African Gold Trust—who made a departure in announcing an interim dividend of 5 per cent.—is able to declare a final of 10 per cent., carrying forward the increased balance of £22,300. In respect of 1927 there was one distribution of 12½ per cent. On the basis of the past year's dividends, and allowing for the 2s. included in the price, the yield shown is rather over 8½ per cent. No material changes have occurred in the balance sheet items of either of the companies.

OIL OUTPUTS.

TAMPICO OIL, LIMITED.—The total production on the company's properties in Mexico during February was 20,811 barrels, in respect of which the royalty due to Tampico Oil, Limited, amounted to 1,561 barrels.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended March 6th: Venezuela, 35,082 barrels; Trinidad, 24,353 barrels; total, 59,435 barrels. Production for February: Venezuela, 138,936 barrels; Trinidad, 81,758 barrels; total, 220,694 barrels. Deliveries for February: Venezuela, 121,567 barrels; Trinidad, 113,991 barrels; total, 235,558 barrels.

THE UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, March 6, 1929, amounted to 2,534 tons.

THE BRITISH BURMAH PETROLEUM CO., LIMITED.—A cablegram has been received from Burma reporting the production of crude oil by this company for the month of February, amounting to 35,111 barrels.

MEXICAN EAGLE OIL.—The production for the week ended March 2, 1929, was 153,000 barrels.

VENEZUELAN CONSOLIDATED OILFIELDS.—Production for week ended March 9th, 2,786 barrels (398 tons).

VENEZUELAN OIL CONCESSIONS.—Production for the week ended March 9th was 119,182 metric tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday Evening.

A spell of fine open weather during the past week over the United Kingdom has permitted the resumption of ploughing operations, and preparations for the spring seed bed are in full swing, the ground being in good condition after the severe frosts. Supplies of native wheat were on a lighter scale, and prices show a hardening tendency in sympathy with the improvement of imported descriptions. Trade generally, however, made quiet progress, as buyers appear reluctant to follow the upward trend. In the floating and forward cargo section demand was somewhat restricted by the higher limits imposed by sellers. North American grades, in particular, were reservedly offered at harder rates, and expectations of Russian buying in the near future tended to strengthen sellers' hands. Meanwhile, consumptive requirements are being covered by increasing arrivals, both here and at the chief Continental ports, and with continued large Argentine shipments buyers were not encouraged to enter the market at this juncture. Feeding stuffs exceedingly quiet, and, with regard to new crop La Plata maize, sellers are more inclined to meet the market in order to stimulate trade. Part cargoes of Australian afloat sold at 46s. 3d. to 46s. 6d.; No. 3 Northern Manitoba, 47s.; and No. 4 Manitoba, 45s. 6d. per 480 lbs. c.i.f. terms.

Wheat firmer. No. 2 Northern Manitoba, 51s. 9d.; No. 3, 50s. 9d.; No. 4 Manitoba, 49s. 6d.; No. 5, 45s. 3d.; No. 6, 40s.; Rosafe, 64 lbs., 46s. 6d.; Barusso, 63½ lbs., 46s. 6d.; Australian, 49s. 6d., all ex-ship, per 496 lbs. English, 9s. 6d.-9s. 8d. per 112 lbs.

Flour steady. London standard grade, 39s. 6d.; town whites, 40s. 6d.; patents, 41s. 6d.-42s. 6d. per sack delivered in the Home Counties, with 6d.-1s. per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 35s.-38s.; Minneapolis, 35s. 6d.-38s.; Australian, 36s.-36s. 6d., ex-store. On c.i.f. terms, Manitoba top patents March quoted 35s. 6d.-36s. 6d., export ditto, 33s. 6d.-34s. 6d.; Australian, 33s.-33s. 6d. per 280 lbs.

Maize. Near positions steady, but distant rather easier. Plate landed, 45s.; ex-ship to arrive, 43s. 6d.-43s. 9d. as to position; March-April, 40s. 9d.; new April-May, 39s. 3d.; May-June, also June-July, 38s. 9d.; No. 2 yellow American, 42s. landed; No. 2 white flat African, 43s. landed per 480 lbs. Yellow maize meal, £11 10s. ex-wharf; Hominy chop, £9 7s. 6d. per ton.

Barley quiet. Californian ex-ship, 45s.-52s.; Chilian Chevalier, 48s.-58s.; Australian, 45s.-49s.; Smyrna, 44s.-47s. per 448 lbs.; Algerian/Tunisian ex-ship, 34s. 6d.; Canadian feed, 32s. 6d. landed; No. 3 Canadian Western, 35s. 9d.; No. 2 Federal American, 30s. 3d. ex ship to arrive, per 400 lbs. English malting, 10s.-12s. 6d.; feed, 9s. 3d.-10s. per 112 lbs.

HARRISONS & CROSFIELD LTD
East India Merchants.
Shipping and Insurance Agents.
Dealers in all Classes of Eastern Produce.
1-4 Great Tower Street, London. E.C.3

Oats quietly steady. Plate landed, 26s. 3d.; ex-ship to arrive, 25s. 6d.; March, 25s. 6d.; black Plate landed 25s. 3d.; mixed Canadian feed landed, 22s. 3d.; Chilian white, 32s. landed; German landed, 29s.; ex-ship to arrive, 28s. per 320 lbs. English, 9s. 4d.-10s. per 112 lbs. Scotch landed, 30s. per 336 lbs. Irish black, 26s. 6d. per 320 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928-29, 1927-28, 1926-27, 1925-26:—

	1928-1929.	1927-1928.	1926-1927.	1925-1926.
Estimated sales of home-grown wheat—				
1 week to March 9	Qrs. 240,677	Qrs. 281,322	Qrs. 214,744	Qrs. 234,420
25 weeks to March 9	7,432,264	6,894,039	9,191,720	10,307,589
Average price of English wheat per cwt.	s. d. 9 9	s. d. 9 7	s. d. 11 8	s. d. 11 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

Weeks ended.	Quantities Sold.			Average Price per Qwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1929.	Qrs.	Qrs.	Qrs.	s. d.	s. d.	s. d.
Mar. 2	312,567	183,167	74,491	9 9	10 4	9 8
Mar. 9	240,677	159,989	58,472	9 9	10 3	9 7

Mar. 10, 1928	281,332	181,514	73,871	9 7	10 8	10 6

AMERICAN WHEAT MARKETS.

Keener export buying and unfavourable weather reports kept prices up during the early part of the week. Later weather reports were better and there was some commission home selling, but frequent rallies were induced by reports of crop damage, stronger demand, and forecasts of favourable farm legislation, so that the close was firm at a slight advance on the week.

Nearest Future.	Jan. 4, 1928.	Mar. 14, 1929.	Jan. 2, 1929.	Feb. 27, 1929.	Mar. 6, 1929.	Mar. 13, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.)	137	141	122	130⅛	128⅝	132½
Chicago (No. Winter)— Cents per 60 lb.	130⅜	138½	116⅝	123⅛	121½	125⅛

Visible supplies of wheat in Canada at 86,251,000 bushels show an increase of 1,539,000 bushels as compared with the previous figure. Supplies a year ago stood at 77,095,000.

THE COAL TRADE.

Our Sheffield correspondent writes:—The export market for coal is scarcely so strong as it has been and sales of household fuel have fallen off. Business is, however, brisk on the whole, and the outlook may be regarded as more favourable than at any time last year. Demand for steam coal for industrial purposes is steady, but there is a weakness in small fuel. The position of coke continues to gain strength. Consumption at the British blast furnaces is now on a large scale, and there is a good export demand. Best qualities fetch 14s. 6d. at ovens; South Yorkshire steam coal is quoted at 16s. 6d. at pits.

Our Glasgow correspondent writes:—The market all over is still strong. The collieries have little or nothing available for this month's shipment, and a good many of them are fully booked up further ahead. Shipping prices are firm round the following, which are all f.o.b. district ports:—LANARKSHIRE.—Ell best, 19s.; splint best, 19s. 6d.; splint second, 19s.; navigation, 18s. 6d.; navigation second, 16s.; steam, 16s. 6d.; Hartley, 18s. 6d.; trebles, 17s. 6d.; doubles, 16s.; singles, 14s. 6d.; pearls, 12s. 6d.; dross, 10s. 6d.-11s. FIFE.—Screened navigation, 19s. 6d.; first-class steam, 18s.-18s. 6d.; third-class steam, 17s.; trebles, 17s. 6d.-18s. 6d.; doubles, 17s.-17s. 6d.; singles, 15s.; pearls, 13s.; 16s. 6d.; trebles, 17s. 6d.-18s.; doubles, 16s. 6d.; singles, 14s. 9d.; pearls, 13s. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 18s. 6d.; steam 17s. 6d.; trebles, 17s. 6d.; doubles, 16s. 6d.; singles, 15s.; pearls, 12s. 9d.; dross, 11s.

Our Cardiff correspondent writes:—There has been no relaxation this week in the strength of the Cardiff coal market, notwithstanding greater shipment activity. According to the official returns of the Great Western Railway Co. the quantity of coal shipped in the week ended March 9th totalled 655,645 tons, compared with 641,144 tons in the previous week and 543,330 tons in the corresponding week last year. The docks continue to be well supplied with tonnage and collieries are finding it very difficult to satisfy the demand over the next few weeks. Under these conditions quotations for spot parcels have further advanced, and a large number of collieries are now obtaining 21s. per ton f.o.b. over the next two or three weeks. Even for some of the Monmouthshire coals these prices have been paid, while best Admiralty descriptions are in some cases ruling up to 21s. 6d. per ton. Small coals are participating in the price improvement, and the best grades are quoted up to 15s, with even inferior qualities ruling between 12s. 6d. and 13s. Furnace coke is quoted at between 21s. and 22s. 6d. for shipment, and foundry coke between 27s. 6d. and 37s. At the annual meeting this week of the South Wales Coalowners' Association, it was reported that the associated output at 40·8 million tons was 2·2 million tons less than in 1927, but that the assured output for the present year was 44·8 millions. The following are the current approximate quotations:—Best Admiralties, 21s. to 21s. 6d.; seconds, 20s. 6d. to 21s.; best drys, 20s. to 20s. 6d.; Black Veins, 20s. to 20s. 6d.; Western Valleys, 20s. to 20s. 3d.; Eastern Valleys, 19s. 3d. to 19s. 9d.; best small steams, 14s. 6d. to 15s.; cargo smalls, 13s. to 14s; coking smalls, 14s. 6d. to 15s.; anthracite best large, 33s. 6d. to 35s.; Red Vein large, 25s. to 27s.; machine made cobbles, 40s. to 43s. 6d.; French nuts, 42s. to 44s.; stove nuts, 40s. to 43s.; rubbly culm, 10s. 9d. to 11s. 6d.; foundry coke, 27s. 6d. to 37s.; patent fuel, 20s. to 21s.; pitwood, ex-ship, 27s. 6d. to 27s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—

The quieter conditions which recently developed in the iron and steel markets have continued, but general confidence is expressed that this is only temporary. Both English and foreign works appear to be comfortably situated as regards orders. Business with the Continent has been made more difficult by the attitude of Continental manufacturers who are holding off the market pending the result of this week's meeting of the European Steel Cartel. The home demand for British pig-iron is steady and sufficiently important to enable the producers to maintain their recent increase in prices. In the semi-finished steel department a fair business has been transacted. The quotations of British producers show a tendency to advance, partly owing to the increased cost of raw materials, and partly owing to the fact that quotations for Continental material show no inclination to recede, so that there is very little advantage from the point of view of price in buying foreign steel. Business in finished material has been spasmodic, and on the whole rather quiet, but there has been a good inquiry in the market and it is expected that the export demand will shortly broaden.

Our Middlesbrough correspondent writes:—The chief factor in local market conditions is the scarcity of pig iron for anything like prompt delivery. Pig-iron makers are well sold for a month or two ahead, and it would appear that the make will have to be increased by the lighting up of additional furnaces. Works, however, are inclined to wait and see whether the recent improvement is going to be maintained before doing this, while the increase in prices of ore and coke is a big factor. The scarcity of these two commodities will be accentuated when more furnaces are put into blast. The price of hematite mixed numbers is firm at 73s., with makers asking 73s. 6d. Cleveland iron is on the basis of 67s. for No. 3 G.M.B. The position here is again strong, owing to the limited output. Notwithstanding this, the impression is that there will be no immediate rise in price. Basic iron is scarce, and local steelworks had to import from other districts to supplement their own make. As regards the steel trade, although none of the works are working to full capacity, they are certainly showing more activity than for some time. The Continental competition has practically ceased, while the inquiry for export is decidedly better. Prices remain unchanged on the following basis, subject to the usual rebates: Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s 6d.; iron bars, £10 5s.; steel rails, £8 10s. The iron ore market is very firm, with best rubio at 23s., while coke is also a firm market, and sellers are now asking 19s. delivered works.

Our Sheffield correspondent writes:—Business in ordinary steel lines is rather quieter, both in the home and export markets, but makers of specialities are very busy. Large tonnages of stainless steel have been booked lately. There is activity in special forgings. Demand for steel for automobiles and cold wrought material is being maintained on a large scale. There is now a pronounced scarcity of basic steel scrap of which a considerable tonnage is going to countries on the Continent, chiefly Poland. The price of this material continues to rise, and is 12s. higher than a year ago. To cover the consequent increase in the cost of producing basic steel, makers have advanced their rates for finished and partly finished material. British firms have lately succeeded in winning a considerable amount of trade in marine forgings from Germany and Belgium. For a good many years these countries have been under-selling the home steel makers in shafting in various British shipyards, but British prices now approximate the foreign ones and less business is going abroad. The pig-iron market is firm, but consumption keeps at a low level owing to the quietude of the foundries. In the softer basic steels, Continental competition now scarcely counts, and British furnaces are getting most of the business. The tool, cutlery and electro-plate branches are quiet. The outlook for steel and iron is believed to be brightening, and there is no lack of confidence in local industrial circles.

Our Glasgow correspondent writes:—Business in the pig-iron market remains quiet and transactions small. In terms of an arrangement come to last week by the members of the Scottish Ironmasters' Association, prices have been slightly advanced, to-day's quotations being 72s. 6d. for No. 3 Foundry and 75s. for No. 1 Foundry, both f.o.t. makers' works. In the steel trade generally, inquiries are more numerous, and there is now a steady business being done in shipbuilding materials. Among contracts announced this week is an order for a New Clan Liner to be built by the Greenock Dockyard Co., Limited, and engined by Messrs. John G. Kincaid & Co., Limited, also of Greenock. The increased demand for semis is maintained and Continental prices and deliveries are not competitive. Tube makers in the West of Scotland are all well employed. There is no change in the position in the sheet trade.

London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1.

Our Cardiff correspondent writes:—The inauguration of the new pooling scheme has created a more settled position in the tinplate trade, and on the Swansea Metal Exchange on Tuesday it was reported that inquiries were broadening, particularly from the Continent. In view of the increasing cost of coal and scrap there is a revival of the proposal for increasing the prices of tinplate bars. Heavy steel scrap shows an increase since last week from 72s. 6d.-75s. to 75s.-76s., and mixed iron and steel scrap from 65s.-66s. to 66s.-68s. 6d. The prices of tin-plates and galvanised sheets are nominally unchanged. Shipments of tinplates last week totalled 117,624 boxes, compared with 114,566 boxes the previous week, but as there was a slight increase in the supplies received from works the stocks further increased from 276,878 boxes to 292,706 boxes.

OTHER METALS.

TIN.—The standard market opened with a steady tone, but with quiet support accorded; values subsequently gave way on selling pressure, combined with lower Eastern advices. The closing tone was firmer, however. Stocks in London and Liverpool warehouses for week ending March 9th were returned at 8,253 tons, compared with 2,693 tons at corresponding period last year. Standard cash changed hands at £220 15s. to £218 5d. and £220, and three months £222 to £219 12s. 6d. In the East, sales were recorded at £225-£225 7s. 6d., £222, and £222 15s. per ton c.i.f. terms.

COPPER.—Quieter conditions prevailed in this market, and with pressure to sell forward positions, opening values showed slight irregularity and weakness. Later values responded to higher American advices and active dealings here. Standard cash sold at £82 5s. to £86 8s. 9d.; three months £83 12s. 6d., £83 2s. 6d. and £87 15s. ton.

LEAD was in liberal supply, but tone firm, with a fair business passing. Good soft foreign pig, March, sold £23 12s. 6d.-£23 5s., and £23 15s.; April, £23 12s. 6d., £23 15s.; May, £23 10s. to £23 17s. 6d.; June, £23 16s. 3d.-£23 11s. 3d. and £23 17s. 6d.

SPELTER met a good demand, and with moderate offerings prices advanced. March sold at £26 2s. 6d. to £26 12s. 6d.; April £26 10s. to £26 15s.; May, £26 10s. to £26 15s.; June, £26 11s. 3d. to £26 18s. 9d. ton.

ALUMINIUM steady. Ingots and bars for home delivery quoted £95 ton.

ANTIMONY dull. English regulus, £54 to £55; foreign spot, £38; March-April, £32 15s. ton, c.i.f. terms.

QUICKSILVER steady. Spot, £22 5s. to £22 10s. per bottle.

WOLFRAM quiet. Chinese also Straits quoted 18s. 6d. to 19s. per unit c.i.f.

TIN PLATES quiet. I.C. Coke quoted 18s. to 18s. 3d. per box, f.o.b. Swansea.

COTTON TRADE.

LIVERPOOL, March 13th.

Spot sales for the week 7th to 13th (inclusive) are 36,000 bales, of which 23,250 are American, 350 Brazil, 600 Argentine, 4,250 Peru, 6,150 Egyptian, 850 African, 450 East Indian, and 100 sundries. Imports for the same period are 43,416 American, 1,424 Brazil, 378 Peru, 16,532 Egyptian, 1,876 African, 8,272 East Indian, making a total of 71,898 bales. Quotations to-day are American Middling, 11·08; Egyptian Sakel, 18·90, Uppers, 12·97; Brazil Fair, 11.28; Peru G.F. Mod-Rough, 13.00; Smooth, 12.03; West African Middling, 11·18, and East African G.F. 12·20. Prices on the week show an advance mainly owing to the strength of the statistical position being realised. The Spinners' Federation estimate the consumption of American cotton for the half-year ending January 31st at 7,613,000 bales, and the Garside Cotton Service yesterday estimated the February consumption of cotton in U.S.A. at 594,000 bales. This approaches very nearly the record for U.S.A. per day, being 27,630 bales against 27,700 bales in March, 1927. Fears of an increase in the Bank Rate caused some

liquidation, and a slight reaction from the highest prices reached on Monday when May was quoted at 10·99 and July 10·98. Weather news is none too good, rains being much too prevalent east of the Mississippi, and fears are expressed that the increase in acreage may not be quite so large as looked for.

MANCHESTER, March, 13.

The tone of the market during the past week has continued firmer, but trade has been rather less active. Some nervousness has arisen with regard to the recent advance in raw material rates, and it is recognised that at the higher prices there will be every inducement for farmers to plant a big acreage in America this Spring. India has provided a very fair cloth inquiry, but dealers on the other side are slow in raising limits and most of the contracts have been for limited quantities in light fabrics and fancies. The better news from China continues and steady buying has taken place, especially in bleached shirtings. Useful support has also been given by Singapore. There has not been any general activity for the Near Eastern and South American outlets. Fine goods have attracted attention for the Continent. Steady buying has taken place in goods suitable for home consumption. American yarns have moved off quietly and there are loud complaints from spinners with regard to prices. It is proposed to stop the mills on Saturdays and Mondays during April, but it is doubtful whether the ballot on this recommendation will be carried. Rates in Egyptian yarns have been firmer and some spinners have sold a little more freely.

WOOL TRADE.

Our Bradford correspondent, writes :—The general tone of the market is more cheerful, and although there is no big volume of business in any section, more interest is being shown in quotations and some buyers are disposed to cover rather more distant requirements than has been the practice hitherto. This applies more particularly to merinos, the opinion being that at to-day's prices the finer qualities, both in tops and in yarn, are not without attraction. The firmer tendency in the primary markets is undoubtedly influencing users, the majority of whom do not expect to see lower values in the near future. Topmakers are also taking their cue from the overseas markets, and although it is difficult to make more money, quotations are certainly firmer, and sellers are not prepared to consider offers which would have been accepted a fortnight ago. The outlook for crossbreds seems to be rather uncertain, especially in the finer qualities. There is a feeling that fine crossbred tops are relatively dear compared with merinos, and users both at home and abroad seem to be waiting for some further readjustment of values in these descriptions. In the same way, current prices of most by-products are considered to be out of harmony with wool and tops, but in this case the comparatively small production is helping to maintain prices in face of a somewhat restricted demand. More interest is being shown in Botany yarns, and a fair amount of speculative buying has been indulged in during the last week or two. Prices still leave much to be desired, but spinners are offering stronger opposition to the very low offers which have been general in recent weeks. Crossbred yarns are quiet. In the piece goods section the usual seasonal demand has received a fillip from the warmer weather, and a considerable amount of business is being put through on home trade account. The bulk is for quick delivery, and activity is expected to continue right through till Whitsuntide.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The progress of the second series of London sales has been somewhat hindered by fog, but at the sales held competition has been good and the opening level of values maintained. The cost of practically all classes of raw material is now reasonable, and both home and Continental buyers have been prepared to operate freely. The only wools that seem to hang fire are the speculators' lots. Most of these have cost more than is being bid for them, with the result that there are considerable withdrawals. All straight growers' clips are meeting with most encouraging competition, making prices fully equal to those ruling at the beginning of the series. Considering the quantity of crossbreds available these are selling very well indeed, the clips offered being well grown and in good light condition. Bradford is the principal operator in this description, France taking considerable quantities of 56-58's, whilst there is some competition for medium sorts by Germany. Considering that most firms in this country are receiving big quantities of direct imports, it is encouraging to see crossbred wool moving so freely into users' hands. The offerings of slipes have been better this week than last, up to 25d. having been paid for really good parcels of halfbred lambs. These wools are selling anywhere from 24d. to 25d., a price which is scarcely likely to be exceeded for some time. No large quantity of scoureds has been offered except from Victoria, and these seem to be selling at prices which correspond to those realised for other classes.

The selection of merinos is not particularly good, there being no really important offerings from any part of Australia. There are, however, some very good Tasmanian wools to be catalogued, and some New England greasies. The latter are making very different prices from those realised twelve months ago. On two occasions some nice lines of South African farmers' clips have been catalogued, these selling readily at market prices, 19½d. to 20½d. in the grease being paid for some of the best lots. The Orange Free State wools offered last Tuesday met with good Continental competition and sold up to 21½d.

JUTE TRADE.

DUNDEE, March 13.

Some fluctuation is taking place in prices of raw jute, which is created to a large extent by the weather prospects for the sowing of the new crop. The new crop reports will have a more important bearing than usual this season, as a larger suuply will be required to satisfy the world's needs. New mills are being erected in Calcutta and will probably be working by the time another season commences on July 1st, while the Calcutta Mills have decided to work an extra six hours per week beginning on that date. In other producing centres, especially the Continent of Europe, the output of jute fabrics has gradually increased in recent years, and it is estimated that an additional million bales will be needed in the course of a season. It seems probable, therefore, that the keen demand for the fibre will help to maintain prices at a comparatively high level, and great interest will be centred in the supply. What effect the increased production will have on prices of the finished article cannot be conjectured, but there is no doubt that competition will be keen. With cheap labour and their raw material grown at their doors the Calcutta Mills have an undoubted advantage over other producers. The available supply for sale of the present jute crop appears to be very small. Shippers are not offering to this market nor to the Continent, so that any prices mentioned are for secured lots which holders would sell at much under the rates prevailing in Calcutta. First Marks and Lightnings are nominal at £38 10s. and £36 10s. respectively, for March/April shipment. Daisee assortment is offered at £34 10s., threes at £33 5s. and fours at £31 5s., while Tossa assortment is quoted at £36 10s., threes at £35 15s. and fours at £33 10s. to £34, March/April. Some small lots are being bought on spot, in which position prices are 5s. to 10s. lower than those named for shipment. Jute yarns are quiet, but prices are steady in consequence of the favourable manner in which spinners are foresold. The value of common 8 lb. cops is 3s. 7d. to 3s. 7½d., and 8 lb. spools are 3s. 8d. to 3s. 8½d. Twist is steady at 5⅞d. to 6d. for 3-ply 8 lb., and Rove is slow at from £28 to £28 10s. for 48 lb., and £18 to £18 10s. for 200 lb. Sacking qualities are very firm at 4 1/16d. to 4⅛d. for 24 lb. weft, and 5 1/16d. to 5⅛d. for 8 lb. chains. Fine yarns are quiet but firm, and a good deal of business has been transacted in carpet descriptions at from 5⅜d. to 5½d. for 14 lb. warp. Cloth business is very quiet. Buyers appear to be satisfied for the present. Any transactions are for small lots for delivery as early as can be given. Manufacturers, however, are well foresold, and are displaying no undue anxiety to secure fresh orders. Prices are firm at from 4 11/16d. to 4⅝d. for 10½ oz. 40 in. hessians, and from 3 9/16d. to 3⅝d. for 8 oz. Linoleum hessians are slow, but firm, and heavy goods are steadily but slowly improving.

HIDE, LEATHER AND ALLIED TRADES.

The hide market is gradually becoming stabilised, although confidence is by no means fully restored, so that tanners are still reducing input. At most of the provincial auctions ox hides have advanced ⅛d. to ¼d. per lb., best hides now realising from 6½d. to 7½d. per lb. Calfskins are also in better demand, and are advancing in price. Woolskins are steady at previous rates, with pelts firm. Foreign hides show an improved tone, but enquiries have resulted in a firm tone at origin which has checked business somewhat. Argentine hides show a better demand, best frigorific hides now realising 9⅜d. c.i.f., with Montevidoes at the same price. Saladeros are firmer, Bovril ox selling at 8⅜d. and Uruguays at 9⅜d. African dry hides are selling better, and dry Capes in first and seconds are offered at 12⅜d. and 11⅜d. respectively. Australians, Brazils and West Coasts have all slightly hardened, but there is as yet little trade passing. Latest cables from Chicago report the packer market as steady, with best heavy steers selling still at 14½ cents. There is a slight improvement in the demand for sole leather, as shoe manufacturers are now coming into the market for small quantities. Light bends are still bad sellers, but there is a better trade doing in medium weights of wet salted for manufacturers' and repairers' use. Prices are not yet stable, and buyers are picking up bargain lots at below cost of production. Stocks, however, are dwindling, and any increase in the demand will at once firm up values all round. The bad state of the tanning trade has been shown by the loss last year of about £150,000 by one of the biggest tanning concerns in Bermondsey. The fluid nature of prices has affected the demand for light leather, and sellers of willow and box-calf report a slow business. Glace kid in black and brown is still popular, the lower grades meeting with the best demand. Kip leathers are slow, and very few curriers have enough orders on their books to keep all hands employed.

VEGETABLE OILS AND OILSEEDS.

Markets are only moderately active. Linseed oil met with some demand at the lower level of values, but is now quiet and values somewhat higher at £28 15s. per ton naked ex-mill for spot and March-April delivery. Crude cotton oil has been in substantial request, and is steadier, current values being for crude Egyptian £28 5s., and common edible £31 10s. ex Hull spot and March-April. Soya and palm kernel oils are easier. In the oilseed section linseed is in fair demand in near positions. For Plate on spot at Hull £15 15s. has been accepted, and this is about current value for seed on passage and shipment to April. The quantity of linseed on passage to Europe is 205,700 tons, or 22,300 tons less than a week ago. Cottonseed is steady, but not very active. For black Egyptian on spot £10 2s. 6d. is demanded, and seed for March and April loadings has been done at £9 17s. 6d. Oilseed cakes and meals are in fair request and prices generally are unchanged.

OVERSEAS TRADE RETURNS.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market produced no new feature to-day. General tone continues steady with regard to spot goods, but very little new business arises, as trade buyers are busily engaged in taking delivery of parcels purchased previously. Deliveries from British refineries, also home grown factories, are on an extensive scale. The market now seems to rest on a safe basis, and though a prolonged period of very low, not to say unremunerative, prices is naturally unpleasant to producers, it must result, sooner or later, in purifying the position and clearing the substratum of much of the decaying refuse of over-production. Previous quotations stand good for both British refined and home-grown granulated. The slow sale attaching to white Mauritius is difficult to explain, as some very attractive parcels, both with regard to colour and grain, are obtainable at 21s. to 21s. 3d., indeed very cheap sugars. Raw refining kinds quiet and barely steady. Continental parcels for shipment, scarcely worthy of comment. There is nothing new to note in the Java position. Total shipments thence during last month reach 185,750 tons, against 118,350 same time last year, of which British India took 87,000 against 63,000, China 31,000 against 16,000, Japan 18,000 against 18,000, Europe 11,000 against 2,000, and Port Said for orders 15,000 against nil. Terminal sections steady, quiet. Of raws, May sold 8s. 10½d., August 9s. 4½d., December 9s. 6¾d.,

THE HALIFAX

THE WORLD'S LARGEST BUILDING SOCIETY.

GREAT INCREASE OF BUSINESS.
TOTAL ASSETS - £54,155,000.

ANNUAL REPORT OF THE DIRECTORS

to be presented to the Shareholders at the Annual General Meeting of the Society, to be held at Halifax, on Monday, the 25th day of March, 1929.

The Directors have great pleasure in submitting to the Members the Annual Statement of Accounts, shewing the operations of the Society during the financial year ended the 31st January, 1929.

The business of the Society for the year has been highly satisfactory, and there have been large increases in the Funds and Membership.

On the 1st February, 1928, the Halifax Permanent Building Society and the Halifax Equitable Building Society were legally united under the name of "The Halifax Building Society," and the Statement of Accounts now presented covers the transactions of the Society for the first year from the date of the amalgamation.

ASSETS.—The Total Assets at the end of the year amounted to £54,155,040 5s. 2d., an increase of £7,173,558 2s. 1d.

RESERVE FUND.—The Reserve Fund, after providing for all interest and bonus allotted up to the date of the account, stands at £1,689,238 19s. 4d., being an increase of £228,038 0s. 6d.

INCOME.—The Income for the Year, exclusive of investments realised, was £30,683,773 10s. 10d.

MORTGAGES.—The amount advanced upon new mortgages during the year was £10,214,528 12s. 7d., mainly upon the security of dwelling-houses acquired by borrowers for their personal occupation.

The new Borrowers number 20,936, shewing an average of only £483 per new mortgage completed. The total amount now due upon Mortgages is £40,570,655, an increase during the year of £2,456,670, and the total number of Borrowers is 106,896, an increase of 9,396.

Of this total 81 per cent. are in respect of Mortgages where the debt does not exceed £500, and the average amount owing on all the Society's mortgages is only £379 each. The Mortgage Accounts are in an entirely satisfactory condition, and there are no properties of borrowers in the possession of the Society to be reported in the statutory Schedule.

SHARE AND DEPOSIT FUNDS.—The amount standing to the credit of the Investing Shareholders and Depositors is £52,465,801 5s. 10d., being £6,945,520 1s. 7d. of an increase during the year.

PROFITS.—The gross profit of the year, after payment of all expenses and Income Tax, amounted to £2,459,564 7s. 5d., and after providing for all interest due to Depositors and Shareholders up to the date of the Account, there remains a surplus profit of £414,875 2s. 9d.

The Directors recommend that there shall be distributed in addition to the interest, a bonus of £1 10s. 0d. per cent. upon the sum standing to the credit of Paid-up Shareholders, Class 1, and a bonus of £2 10s. 0d. per cent. to the Subscription Investing Shareholders upon the total amount paid by them up to the end of the preceding year.

This distribution will make a total yield to the Paid-up Shareholders in Class 1 of £5 per cent., and to the Subscription Shareholders of £6 per cent., both interest and Bonus being free from Income Tax.

They also recommend that the sum of £15,000 be granted to the Staff Superannuation Fund and that £30,000 be written off Office Properties Account.

The new Accounts opened during the year numbered 79,297, and the total number of Shareholders and Depositors accounts open at the end of the year was 361,967, an increase of 32,743.

NEW BRANCHES.—New Branches have been opened at Baildon, Basingstoke, Bedford, Billingham, Chapel-en-le-Frith, Cheadle, Colne, Exeter, Farnham, Ilkeston, Luton, Maidstone, Norwich, Salisbury, West Hartlepool and High Wycombe.

NEW OFFICE PREMISES.—New and permanent office premises, staffed by the Society, have been opened during the year at Cleveleys, Croydon, Edinburgh, Glasgow, Hull, Liverpool, Manchester, Morley, Oldham and Stockport.

GENERAL.—The Directors very greatly regret to report the loss to the Society by the death of Sir William Ramsden, J.P., on the 22nd October last. He had been a Director of the Society since 1910, and served as President from 1921 to 1925, and from January, 1927, to the date of his decease. His long continued and devoted services during this period were of incalculable value to the Society.

In his place Sir Enoch Hill, J.P., the Vice-President, was elected President of the Society.

The Directors desire to congratulate the Members and Officials upon the remarkable expansion of the business of the Society during the past year, as revealed by the Statement of Accounts, and also upon the fact that the Society has still further strengthened the predominant position it has held for many years as by far the largest Building Society in the World.

ENOCH HILL, President.

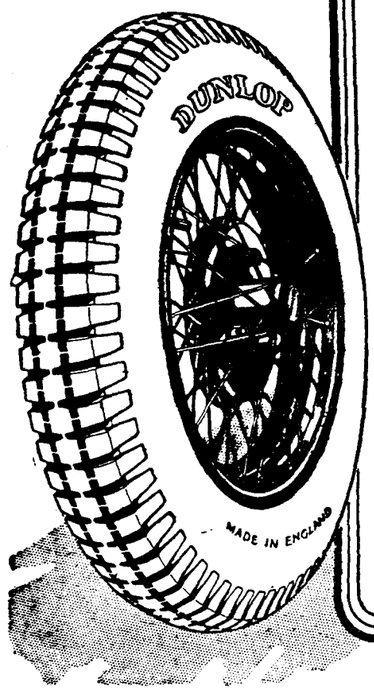
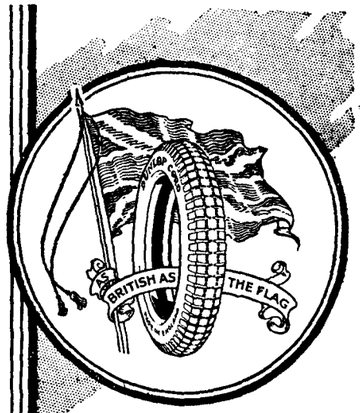
"The bending of the wall"—

might be the title of a "crook" play, but here it describes something that happens to tyres. Bending or "flexing" goes on all the time a pneumatic tyre is working. Take a piece of cardboard, a piece of steel or a piece of wire. Bend them slightly, and you will find that you can repeat the bending over and over again until the materials break. But if you bend them *excessively* breakage occurs more quickly. Tyre 'walls' will stand more bending than the cardboard or the steel or the wire, but they will break unless they are supported by adequate air pressure.

Air in a Pneumatic Tyre is a free insurance policy. It is a vital element which alone makes possible the pneumatic principle. The "air doses" for the varying tyre sections are given in Dunlop literature available at any Dunlop Service Depot.





The Dunlop Triple-Stud Tread is your safeguard and the most efficient of non-skids.

DUNLOP

C.F.H. 999

Preliminary Notice.

An issue will be made on Monday next (March 18th)
BY THE

CENTRAL ARGENTINE RAILWAY LIMITED

OF

£3,000,000 Five per Cent. Redeemable Debenture Stock, 1967-87, at 94½ per cent.

Interest will be payable half-yearly on the 1st May and 1st November. The first payment, which will be for a full half-year's interest, will be made on 1st November, 1929.

The Stock will be repayable at par on the 1st May, 1987, but the Company reserves the right to redeem all or any part of the Stock at 102½ per cent. and accrued interest on any interest date after the 1st May, 1967, on three months' previous notice by the Company. In case of voluntary liquidation of the Company the Stock is repayable at £102 10s. per cent.

The Stock, when registered, will be transferable in amounts of £1 or multiples thereof.

The proceeds of the issue will be applied towards repayment of temporary advances from the Company's Bankers, the prosecution of various new works under construction by the Company, the acquisition of further rolling stock, and for the general purposes of the Company.

The net receipts, after deduction of fixed charges for the past four years, have been as follows:—

1924/1925	1925/1926	1926/1927	1927/1928
£2,597,712	£2,485,677	£3,297,461	£3,696,480

The annual charge for interest on the present issue of Five per Cent. Redeemable Debenture Stock is £150,000.

Prospectuses and forms of Application can be obtained this (Friday) afternoon at the Company's Offices, 3a, Coleman Street, E.C. 2, or from Messrs. Greenwood & Co., 28, Austin Friars, London, E.C. 2, or the Company's Bankers, Westminster Bank Limited, 41, Lothbury, E.C. 2.

COPIES OF THE OFFER FOR SALE ARE NOW AVAILABLE.

1,500,000 British Ordinary Shares of £1 each
of

The GENERAL ELECTRIC COMPANY, Ltd.

will be offered for sale at 42/- per share, on Monday next, March 18th, 1929,
by

THE BRITISH, FOREIGN & COLONIAL CORPORATION, LIMITED,
B.F.C. House, Gresham Street, E.C. 2.

THE OFFER FOR SALE WILL SHOW—

That the shares rank equally with the existing Ordinary Shares of the Company for dividends and all other rights.

That the published net profits of the Company, after providing for full depreciation, have been as follows:—

For the year ended March 31st,	1924	£395,930
" " " " " "	1925	584,588
" " " " " "	1926	629,016
" " " " " "	1927	584,382
" " " " " "	1928	611,839

and that the results for the current financial year will be quite up to the standard of the last three years.

That the net Assets of the Company at the date of the last Balance Sheet were	£7,292,101
to which should be added the proceeds of the present issue	3,000,000
Total	£10,292,101

That the Company was established in 1900 and is one of the largest manufacturers of electrical appliances of all kinds.

That the issued Share Capital of the Company is **£7,353,645.**

Copies of the OFFER FOR SALE and APPLICATION FORMS may be obtained from THE BRITISH, FOREIGN AND COLONIAL CORPORATION, LIMITED, B.F.C. House, Gresham Street, E.C. 2; and Bankers, MIDLAND BANK, LTD., Threadneedle Street, E.C. 2, and Branches; LLOYDS BANK, LTD., 20, King William Street, E.C. 4, and Branches, and MARTINS BANK, LTD., 12, Abchurch Lane, E.C. 4, and Branches, or the Brokers to the offer:

white, March 12s. 3d. to 12s. 3¾d., May 11s. 9¾d., August 12s. 3¾d.-12s. 4½d., December quoted 12s. 4½d. cwt. Cuban receipts last week totalled 244,250 tons, against 201,730 last year; exports 158,700, against 100,630; stocks, 1,032,540, against 912,670. Centrals working 163 tons against 171 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending March 9th amounted to 140,644 tons, compared with 87,164 at corresponding period last year. U.K. imports last month 189,328 tons, against 132,921 at same time last year; consumption 163,320, against 116,698.

COFFEE.—The market continues to show general stability, and sustained absorption constituted a feature during the week. Kenya, bold sizes, sold 123s. 6d. to 147s.; peas, 126s. to 140s. Uganda, bold dull grey, 112s. 6d. Arusha, good bold colory, 129s. to 131s.; peas, 132s. 6d. to 134s. 6d. Kilimanjaro, bold, 117s. to 129s. 6d. Colombian, bold dull colory, 127s. 6d. Costa Rica, bold, from 134s. to 169s.; fancy, 183s. 6d.

COCOA.—Market generally quiet during the week. Accra F/F March-May, sold, 45s.-44s. 9d.; April-June, 46s.-45s. 6d., f.o.b. Terminal.—March, sold, 48s. 3d. to 48s.; May, 49s. 6d.; July. 51s. to 50s. 6d.; September, 52s. to 51s. 3d. and 51s. 9d.; December, 51s. 6d.

TEA.—Indian auctions during the week totalled 50,984 packages, which came to quite a good market in the main. Best autumnals and tippy teas were wanted and cleared at full prices, but brown and stalky mediums tended in buyers' favour. Later, a firm market, and common ¼d. to ½d. up. Southern Indian a shade easier in most cases owing to quality marking a falling off. Ceylon sales of 19,337 packages engaged active competition at firm to dearer rates. Improvement in quality was marked in many instances and much appreciated by buyers. Java and Sumatra met a good demand at firm prices. China teas met an improved sale and very fine Keemuns sold up to 3s., also fine Oolongs and supplies are now in narrow compass. Siftings at 5d. to 6d. per lb. meet with attention.

RICE.—Market dull and Burma grain weak. Two stars March-April, 12s. 10½d. c.i.f. London, S.Q. to Cuba, double bags, 13s. 3d.; Spanish to London, 18s. 6d.

BEANS.—A subdued tone characterised this market, but prices held together very well. Madagascar butters afloat steamer "Clan Macintosh," also per "Eugene Erossos," sellers, 40s. 6d. Rangoon haricots, April 15th, 19s.; April, 18s. 6d.; May, 18s., cwt. c.i.f. London.

PEAS.—A quiet but steady market. Japanese afloat 19s. 6d. to 21s. as to position. February-March, 19s. 6d.; March-April, 19s. 3d.; April-May, 19s., cwt. c.i.f.

SPICE.—Pepper market firm with fair inquiries. Lampong May-July, sold, 1s. 3⅜d.; August-October, 1s. 2⅝d.; Muntok, white, March-May, 2s. 2¾d.; May-July, 2s. 2¾d.; August-October, 1s. 11½d. lb. London stocks increased 42 tons on the week. Tellicherry, January-March, quoted, 154s., with sales in Aleppy, March-May, to New York at 152s. cwt. c.i.f. Cloves dearer. Zanzibar, spot, sold, 1s. 5½d.-1s. 6d.; March-May, sellers, 1s. 6d. lb. African ginger, spot, London, 51s.; March-May, steamer, 45s. cwt. c.i.f. Tapioca and Sago flour unaltered.

FRUIT (Dried)—Currants firm with improved inquiries. Pyrgos quoted, 45s. 6d.-46s. 6d.; Patras, 47s. 6d.; choice, up to 51s.; Amalias, 46s.-46s. 6d.; Gulf, 47s. 6d.-50s.; Vostizza, 49s.-57s. Sultanas attract more attention. Medium to good Smyrna, spot, 27s. 6d.-35s.; new, ranging from 34s.-50s. Californian soda, bleached, 34s.-36s.; unbleached, 28s.-29s.; Cape, unbleached, 33s.-37s.; bleached, 45s.-50s. Raisins, slow of sale, but Valencias steady. Quarter boxes quoted 50s.-55s.; Australian, 32s.-36s. Figs quieter. Genuine new, spot, 28s.-29s. Dates continue in fair request. Hallowie, new, spot, 28s.-30s.; Khadrowie, 23s.; Siar, 15s.-17s.

EVAPORATED FRUITS.—With available stocks in manageable compass the market continues very steady for all descriptions, plums tending dearer, while there was a fair trade in force. Pears and apricots being in chief request. Californian plums. 20's-30's, 65s.; 30's-40's, 56s.-57s.; 60's-70's, 43s.-43s. 6d. Australian pears range from 57s. 6d.-70s. as to quality; Lake County, good, 67s. 6d.-70s. Apricots, South African new crop, Royal, 60s.-117s. 6d.; Cape, 72s. 6d.-82s. 6d.; Californian, 85s.-117s. 6d. Peaches, Californian, choice, 50s.; extra choice, 53s.; fancy, 58s. Apples, Californian, *spot, sliced, extra choice, 64s. Almonds quiet, but* generally steady. Mazagan, 140s.; Mogador, 140s.; Majorcas, 142s. 6d.; Bitter-Jordan, 185s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—A return to milder climatic conditions has improved trade prospects, but demand at the moment is still largely measured by immediate wants. Prices generally are maintained, although slight pressure is shown on certain lines. Forward quotations remain steady, but with slow support accorded. Singapore pines move off slowly, both spot and forward, but South African find a fairly ready sale, and distant shipments reservedly offered. Tomatoes sold quietly on about former.

CANNED FISH.—Sardines quiet except for some inquiry for best quality. Portuguese clubs quoted 5s. per dozen tins. Lobsters slow of sale. Best halves, 140s.-145s., and quarters, 77s. 6d.-82s. 6d. Salmon quiet but fully steady. Red talls spot, 42s. 6d.-44s. 6d.; pink talls spot, 26s.-27s. 6d.; halves, 31s. 6d.-34s. Japanese crab firm and finest quality, 97s. 6d.-100s.

CANNED MEATS.—Demand slow but Ox tongues realise firm rates on restricted offerings. Lunch tongues steady and forward business increasing. Danish cooked hams also move off freely at about 1s. 7d. per lb. for cases of 6 tins.

CONDENSED MILK AND MILK POWDERS.—Spot steady but forward, parcels again the turn in buyers' favour. Full cream sweetened English spot, 45s.; Dutch ditto, 38s. 3d., March-April, 37s. 6d. Machine skimmed sweetened English spot, 30s.; Dutch ditto, 24s., March-April, 23s. 6d., all in 5 cwt. barrels. Powders: Spray F.C., 26 per cent., 2 lb. by 56 lb. tins, crated, prompt, 92s.; M.S. (1 cwt. cases), prompt, 40s.; Roller process F.C., 26 per cent., prompt, 78s.; M.S. ditto, 31s.; all net, duty paid, ex-wharf London. On the grocery side, F.C.S., 21s.; M.S.S., 10s., basis per case, usual packing. Danish cream: Evaporated unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d. Sweetened condensed, 48 by 14 oz., 20s. per case.

HONEY.—Market firm with a good demand. Good pale Jamaica on the spot quoted 55s.; light amber, 47s. 6d.; and manufacturing grades, 45s. New Zealand dark amber quoted 50s.-55s.; medium, 56s.-65s.; light, 65s.-85s.; whites and water whites, 65s.-87s. 6d. cwt.

RUBBER.

Business again conducted quietly, and prices are barely steady. Sheet, spot and March, sold 1s. 0⅜d., 1s. 0⅝d., 1s. 0⅜d.; April-June, 1s. 1d.-1s. 0⅜d., 1s. 0⅜d.; July-September, 1s. 1¼d., 1s. 0⅞d.; October-December, 1s. 1⅜d., 1s. 1¼d. To New York, sheet, March-April, 1s. 0⅜d. lb. c.i.f. American Questionnaire figures for last month: Arrivals, 64,538 tons; consumption, 40,690; quantity afloat, 63,825; stocks, 90,558 tons. London stocks increased by 479 tons on the week at 25,920, against 61,920 at same time last year; landings amounted to 1,854; deliveries, 1,375. Liverpool stocks reduced 119 tons on the week, landings being 81, deliveries 200, stocks 4,136.

GENERAL.

JUTE.—Firm but quiet. Firsts March-April sold £34 12s. 6d.; £34 7s. 6d.; April-May, £34 15s.; May-June, £35 10s. to £35 2s. 6d. Lightings, March-April, sellers, £33 10s. ton.

HEMP.—Manila grades still sparingly offered and prices gradually move upward, while there is some revival in spinning demand. J.2, April-June, quoted £38; K. 34s. 10d.; L.1, £35; L.2, £30 10s.; M.1, £31 10s.; M.2, £28 10s.; F, £64; S.1, £63; S.2, £55; S.3, £44; H, £35; G, £40; C.2, £35; C.3, £31 10s. ton. Sisal quiet but steady. Mexican receipts last week, 11,000; deliveries, 11,000; stocks, 49,000. Manila receipts last week 33,000 bales, against 25,000 last year; estimate for next week 35,000, and following week 29,000. Shipments to U.K. last week 4,000 bales, Continent 8,000, U.S.A. 14,000, other countries 6,000.

SHELLAC.—Steady quiet. T.N. spot 195s., May 187s. 6d. August 192s. 6d. cwt.

COPRA.—Market quiet and rather featureless. Straits to Rotterdam, March-April, quoted £23 3s. 9d.; April-May, £23 7s. 6d.; May-June, £23 10s.; June-July, £23 17s. 6d. Dutch East Indies, March-April, £22 18s. 9d. Ceylon, March-April, £24 10s.; May-June, £24 12s. 6d. South Sea, sun-dried, March-April, £22 10s. To Marseilles, smoked, South Sea, March-April, £22 7s. 6d. Palm kernels to Hamburg, March-April, £18 18s. 9d. ton.

MISCELLANEOUS.—Coconuts quoted 18s. to 24s. per 100. Coir yarn, Ceylon, £19 to £39 10s.; Cochin, £23 to £40 5s.; Ceylon bristle, £19 to £24 15s.; cinnamon leaf oil, 5½d.; citronella, Ceylon, 1s. 11d.; Java, 2s.

SCOTTISH FINANCE COMPANY LIMITED

announces that the issue for subscription at par of

1,500,000 SHARES OF 2/- EACH

in

THE SALERNI COUPLING LIMITED

will be made next week.

The Capital of the Company is £300,000, divided into 3,000,000 shares of 2s. each.
The Prospectus will show that:—

1. **The Salerni Coupling entirely removes the difficulty of changing gears either up or down at any speed, infallibly, silently and without shock, prolongs the life of the engine and materially reduces running costs, provides all the advantages of "coasting" without the loss of engine-braking, and weakness and defects of "free-wheel" mechanisms. Can be included in the transmission system at a trifling cost.**
2. **The Company secures a contract for the sale of a minimum of 50,000 Couplings in the first year, rising to 100,000 a year, which will show 20 per cent. on its capital, issued and under option. A deposit of £12,500 in cash has already been paid on this account.**
3. **Mr. Salerni, the Inventor, takes the post of Technical Adviser for five years, and Mr. Geo. W. Watson, M.I.Mech.E., M.I.A.E., becomes Consulting Engineer.**

BANKERS.

LLOYDS BANK, LIMITED, City Office, 20, King William Street, London, E.C. 4, and Branches.
THE NATIONAL BANK OF SCOTLAND, LIMITED, Head Office, Edinburgh, London, and Branches.

BROKERS.

ISSUING HOUSE.

SCOTTISH FINANCE COMPANY, LIMITED, 3, London Wall Buildings, London, E.C. 2, and 14, St. Vincent Place, Glasgow, C. 1.

Prospectuses are now available, and may be obtained from the Bankers, Brokers and Issuing House as above.

THE HALIFAX

THE WORLD'S LARGEST BUILDING SOCIETY.

GREAT INCREASE OF BUSINESS.
TOTAL ASSETS - £54,155,000.

ANNUAL REPORT OF THE DIRECTORS

to be presented to the Shareholders at the Annual General Meeting of the Society, to be held at Halifax, on Monday, the 25th day of March, 1929.

The Directors have great pleasure in submitting to the Members the Annual Statement of Accounts, shewing the operations of the Society during the financial year ended the 31st January, 1929.

The business of the Society for the year has been highly satisfactory, and there have been large increases in the Funds and Membership.

On the 1st February, 1928, the Halifax Permanent Building Society and the Halifax Equitable Building Society were legally united under the name of "The Halifax Building Society," and the Statement of Accounts now presented covers the transactions of the Society for the first year from the date of the amalgamation.

ASSETS.—The Total Assets at the end of the year amounted to £54,155,040 5s. 2d., an increase of £7,173,558 2s. 1d.

RESERVE FUND.—The Reserve Fund, after providing for all interest and bonus allotted up to the date of the account, stands at £1,689,238 19s. 4d., being an increase of £228,038 0s. 6d.

INCOME.—The Income for the Year, exclusive of investments realised, was £30,683,773 10s. 10d.

MORTGAGES.—The amount advanced upon new mortgages during the year was £10,214,528 12s. 7d., mainly upon the security of dwelling-houses acquired by borrowers for their personal occupation.

The new Borrowers number 20,936, shewing an average of only £488 per new mortgage completed. The total amount now due upon Mortgages is £40,570,655, an increase during the year of £2,456,670, and the total number of Borrowers is 106,896, an increase of 9,396.

Of this total 81 per cent. are in respect of Mortgages where the debt does not exceed £500, and the average amount owing on all the Society's mortgages is only £379 each. The Mortgage Accounts are in an entirely satisfactory condition, and there are no properties of borrowers in the possession of the Society to be reported in the statutory Schedule.

SHARE AND DEPOSIT FUNDS.—The amount standing to the credit of the Investing Shareholders and Depositors is £52,465,801 5s. 10d., being £6,945,520 1s. 7d. of an increase during the year.

PROFITS.—The gross profit of the year, after payment of all expenses and Income Tax, amounted to £2,459,564 7s. 5d., and after providing for all interest due to Depositors and Shareholders up to the date of the Account, there remains a surplus profit of £414,875 2s. 9d.

The Directors recommend that there shall be distributed in addition to the interest, a bonus of £1 10s. 0d. per cent. upon the sum standing to the credit of Paid-up Shareholders, Class 1, and a bonus of £2 10s. 0d. per cent. to the Subscription Investing Shareholders upon the total amount paid by them up to the end of the preceding year.

This distribution will make a total yield to the Paid-up Shareholders in Class 1 of £5 per cent., and to the Subscription Shareholders of £6 per cent., both interest and Bonus being free from Income Tax.

They also recommend that the sum of £15,000 be granted to the Staff Superannuation Fund and that £30,000 be written off Office Properties Account.

The new Accounts opened during the year numbered 79,297, and the total number of Shareholders and Depositors accounts open at the end of the year was 361,967, an increase of 32,743.

NEW BRANCHES.—New Branches have been opened at Baildon, Basingstoke, Bedford, Billingham, Chapel-en-le-Frith, Cheadle, Colne, Exeter, Farnham, Ilkeston, Luton, Maidstone, Norwich, Salisbury, West Hartlepool and High Wycombe.

NEW OFFICE PREMISES.—New and permanent office premises, staffed by the Society, have been opened during the year at Cleveleys, Croydon, Edinburgh, Glasgow, Hull, Liverpool, Manchester, Morley, Oldham and Stockport.

GENERAL.—The Directors very greatly regret to report the loss to the Society by the death of Sir William Ramsden, J.P., on the 22nd October last. He had been a Director of the Society since 1910, and served as President from 1921 to 1925, and from January, 1927, to the date of his decease. His long continued and devoted services during this period were of incalculable value to the Society.

In his place Sir Enoch Hill, J.P., the Vice-President, was elected President of the Society.

The Directors desire to congratulate the Members and Officials upon the remarkable expansion of the business of the Society during the past year, as revealed by the Statement of Accounts, and also upon the fact that the Society has still further strengthened the predominant position it has held for many years as by far the largest Building Society in the World.

ENOCH HILL, President.

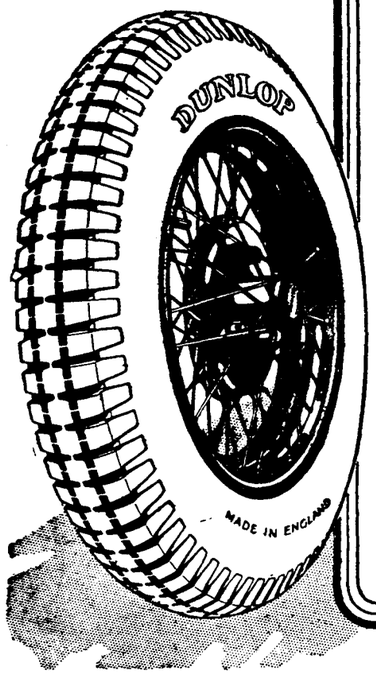
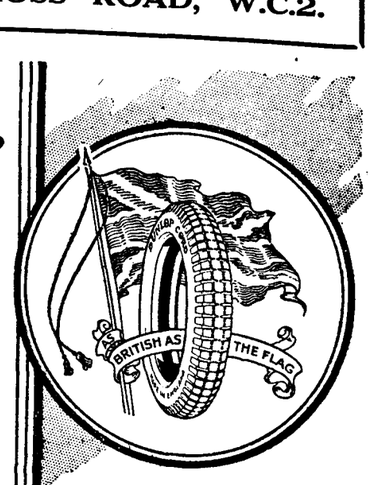
"The bending of the 'wall'"

might be the title of a "crook" play, but here it describes something that happens to tyres. Bending or "flexing" goes on all the time a pneumatic tyre is working. Take a piece of cardboard, a piece of steel or a piece of wire. Bend them slightly, and you will find that you can repeat the bending over and over again until the materials break. But if you bend them *excessively* breakage occurs more quickly. Tyre 'walls' will stand more bending than the cardboard or the steel or the wire, but they will break unless they are supported by adequate air pressure.

Air in a Pneumatic Tyre is a free insurance policy. It is a vital element which alone makes possible the pneumatic principle. The "air doses" for the varying tyre sections are given in Dunlop literature available at any Dunlop Service Depot.





The Dunlop Triple-Stud Tread is your safeguard and the most efficient of non-skids.

DUNLOP

C.F.H. 999

Preliminary Notice.

An issue will be made on Monday next (March 18th)

BY THE

CENTRAL ARGENTINE RAILWAY LIMITED

OF

£3,000,000 Five per Cent. Redeemable Debenture Stock, 1967-87, at 94½ per cent.

Interest will be payable half-yearly on the 1st May and 1st November. The first payment, which will be for a full half-year's interest, will be made on 1st November, 1929.

The Stock will be repayable at par on the 1st May, 1987, but the Company reserves the right to redeem all or any part of the Stock at 102½ per cent. and accrued interest on any interest date after the 1st May, 1967, on three months' previous notice by the Company. In case of voluntary liquidation of the Company the Stock is repayable at £102 10s. per cent.

The Stock, when registered, will be transferable in amounts of £1 or multiples thereof.

The proceeds of the issue will be applied towards repayment of temporary advances from the Company's Bankers, the prosecution of various new works under construction by the Company, the acquisition of further rolling stock, and for the general purposes of the Company.

The net receipts, after deduction of fixed charges for the past four years, have been as follows:—

1924/1925	1925/1926	1926/1927	1927/1928
£2,597,712	£2,485,677	£3,297,461	£3,696,480

The annual charge for interest on the present issue of Five per Cent. Redeemable Debenture Stock is £150,000.

Prospectuses and forms of Application can be obtained this (Friday) afternoon at the Company's Offices, 3a, Coleman Street, E.C. 2, or from Messrs. Greenwood & Co., 28, Austin Friars, London, E.C. 2, or the Company's Bankers, Westminster Bank Limited, 41, Lothbury, E.C. 2.

COPIES OF THE OFFER FOR SALE ARE NOW AVAILABLE.

1,500,000 British Ordinary Shares of £1 each
of
The GENERAL ELECTRIC COMPANY, Ltd.

will be offered for sale at 42/- per share, on Monday next, March 18th, 1929,
by
THE BRITISH, FOREIGN & COLONIAL CORPORATION, LIMITED,
B.F.C. House, Gresham Street, E.C. 2.

THE OFFER FOR SALE WILL SHOW—

That the shares rank equally with the existing Ordinary Shares of the Company for dividends and all other rights.

That the published net profits of the Company, after providing for full depreciation, have been as follows:—

For the year ended March 31st,	1924	£395,930
" " " " " "	1925	584,588
" " " " " "	1926	629,016
" " " " " "	1927	584,382
" " " " " "	1928	611,839

and that the results for the current financial year will be quite up to the standard of the last three years.

That the net Assets of the Company at the date of the last Balance Sheet were £7,292,101
to which should be added the proceeds of the present issue 3,000,000
Total £10,292,101

That the Company was established in 1900 and is one of the largest manufacturers of electrical appliances of all kinds.

That the issued Share Capital of the Company is **£7,353,645.**

Copies of the OFFER FOR SALE and APPLICATION FORMS may be obtained from THE BRITISH, FOREIGN AND COLONIAL CORPORATION, LIMITED, B.F.C. House, Gresham Street, E.C. 2; and Bankers, MIDLAND BANK, LTD., Threadneedle Street, E.C. 2, and Branches; LLOYDS BANK, LTD., 20, King William Street, E.C. 4, and Branches, and MARTINS BANK, LTD., 12, Abchurch Lane, E.C. 4, and Branches, or the Brokers to the offer:

First Collateral Trust Gold Bonds	**$30,000,000**	**$15,000,000†**

† 4½% Bonds due 1959 Series "A."

Consolidated Investment Corporation of Canada was incorporated 11th February, 1929, under the laws of the Province of Quebec, with powers to invest and re-invest its resources in government, municipal, public service and industrial bonds and shares, to participate in underwritings, to organise or assist in organising companies and syndicates, to act as managers, and to engage in public service, financial, commercial and other undertakings. The policy of the Corporation will be to distribute its investments and operations over a broad range of enterprises both domestic and foreign.

The preferred shares will be preferred as to capital and will carry the right to cumulative preferred dividends at the rate of 5 per cent. per annum payable quarterly, by cheque or warrant in Canadian funds, but will not be entitled to further participate in the profits of the Corporation. The preferred shares now being issued will be cumulative from March 1st, 1929. Preferred shares will be transferable on registers kept in Montreal and Toronto.

Preferred shares will be redeemable as a whole or in part at the option of the Corporation on any dividend payment date on sixty days' notice at 105 plus accrued and unpaid dividends to date of redemption. In the event of voluntary liquidation of the Corporation holders of preferred shares shall be entitled to receive 105 for their shares plus accrued and unpaid dividends and in the event of enforced liquidation such holders shall be entitled to receive par plus accrued and unpaid dividends, in either case prior to any distribution to holders of any other class of shares of capital stock.

No modification of the priorities, privileges and limitations affecting the preferred shares and no increase in the authorised amount thereof and no sale of the Corporation's undertaking shall be made except with the consent of the preferred shareholders expressed by the vote of the holders of at least three-quarters in value of the preferred shares represented at a meeting called for that purpose at which holders of not less than a majority of the then outstanding preferred shares are represented. Except as aforesaid the preferred shares carry no voting rights unless and so long as dividends to the extent of 7½ per cent. or more on the preferred shares are in arrears and unpaid, in which case the preferred shareholders will have one vote per share.

A non-detachable warrant will be attached to each certificate for preferred shares now to be issued entitling the holders to receive, without additional cost, on surrender of such warrant, from Montreal Trust Company (on the record date of the first dividend on the common shares declared by the directors of the Corporation, or, at the option of the directors of the Corporation, at an earlier date) one fully paid common share for each preferred share represented by such certificates. In the event that the warrant becomes exercisable by reason of the declaration of such dividend, the shares represented by such warrant will carry the dividend so declared. If any such preferred share is called for redemption but not otherwise the holder will have the right to detach the share warrant.

Additional non-detachable warrants will be attached to the certificates for this issue of preferred shares giving holders of such preferred shares upon application and presentation to Montreal Trust Company, on or before February 15th, 1934, of their preferred share certificates, with such warrants attached, the right to purchase from the Corporation at $30 per share one common share without nominal or par value, for each two preferred shares then held by them respectively. At any time before February 15th, 1934, the directors of the Corporation, at their option, may declare such non-detachable warrants exchangeable for negotiable warrants on presentation to Montreal Trust Company of preferred share certificates for detachment and cancellation of the share purchase warrants attached thereto. Provision will be made for the issue of negotiable fractional warrants. If any preferred share carrying this common share purchase right is redeemed on or prior to February 15th, 1934, the holder thereof will be entitled, notwithstanding the call for redemption, to exercise this right in respect of such preferred share at any time before the redemption date.

An appropriate adjustment in the number and price of shares purchasable as aforesaid and in the number of common shares represented by warrants shall be made in case the Corporation's common shares shall be sub-divided or combined into a different number of shares.

In the event of the reconstruction of the Corporation (otherwise than by the increase in the amount or number of its authorised or outstanding preferred or common shares, or by sub-dividing or combining the common shares which the Corporation will reserve the right at any time to effect) or in the event of the merger or amalgamation of the Corporation or the sale of its assets as an entirety the Corporation shall be entitled on not less than sixty days' notice to terminate the share purchase right, but this right may be exercised at any time prior to such termination.

Scrip certificates to bearer have been issued for the shares now being issued, and these certificates will be exchangeable for the company's definitive certificates in due course. Notice will be given in the press when the Scrip Certificates, with the form endorsed thereon duly completed, may be lodged for exchange for the definitive certificate at the office of Wood, Gundy and Company, Limited (Incorporated in Canada), 14, Cornhill, London, E.C. 3.

The 30-year first collateral trust gold bonds 4½ per cent. Series "A" carry non-detachable warrants entitling holders to receive common shares (without additional cost) at the rate of 10 such shares for each $1,000 principal amount of bonds. Holders of such bonds will also be entitled to purchase on or before 15th February, 1934, additional common shares at $30 per share, at the rate of 5 such shares for each $1,000 principal amount of bonds. Under the terms of the trust deed there will be initially pledged with the trustee under the first specific lien of the deed marketable securities (or cash) having a current market value of not less than $18,750,000. The bonds will be additionally secured by a floating charge on all other assets of the Corporation. The bonds are redeemable at par on 15th February, 1959, or prior to that date in whole or in part on 60 days' notice at any time at 105 and accrued interest.

Messrs. Wood, Gundy and Company, Limited, by contract dated February 13th, 1929, have agreed to purchase from the Corporation the entire present issues of $15,000,000 30-year First Collateral Trust Gold Bonds 4½ per cent. Series "A" and $10,000,000 preferred shares together with 1,374,990 common shares of no par value for the net sum of $32,000,000 in cash. Ten common shares have been subscribed for by the applicants for the charter, have been allotted to them and are fully paid. Messrs. Wood, Gundy and Company, Limited, are paying all the incorporation and organisation expenses and the cost of placing the said $15,000,000 4½ per cent. bonds and $10,000,000 preferred shares, including the cost of printing the debentures and the initial cost of impressing the certificates (in denominations of ten shares each or less) for the preferred shares with the British Government stamp. Mr. James H. Gundy and Mr. William E. Wilder are directors and shareholders in Wood, Gundy and Company, Limited, and, therefore, interested in the above mentioned contract. No other contract (except in the ordinary course of business) has been entered into by the Corporation. Copies of this contract, together with the Letters Patent and bylaws, will be available for inspection at the offices of Messrs. Slaughter and May, 18, Austin Friars, London, E.C., for seven days from date of publication of this statement, during the ordinary business hours.

The Corporation was incorporated on the 14th February, 1929, and no dividends have been paid on either class of shares.

Provisions to the following effect are included in the charter or bylaws of the Corporation:—

For management expenses of the Corporation during each financial year, the directors may set aside out of the income of the Corporation for such year a sum equal to not more than ¼ of 1 per cent. of the Corporation's total funds.

Of the sum set aside in each financial year or period, the directors shall meet and discharge all the management expenses of the Corporation during such year or period, including the remuneration of the directors, who shall be entitled to receive (in such proportion and manner as they may agree, and failing agreement equally) as their remuneration for their services during such year, or period, any balance of the sum so set aside remaining after payment of all the other management expenses. The shareholders of the Corporation, in general meeting, may vote the directors further remuneration for their services. Provided, however, that no remuneration shall be paid to the directors for their services unless and until the first dividend is declared and paid in respect of the outstanding common shares of the Corporation's capital stock. The directors may from time to time appoint one or more of their body to the office of managing director at such remuneration (whether by way of salary or commission or participation in profits or partly in one way or partly in another) as the directors may think fit.

For the purpose of the last preceding paragraph, the expression "Management Expenses" shall mean and include rent of offices, rates and other ordinary office expenses, salaries or remuneration of the secretaries, managers, clerks and other employees, directors' ordinary remuneration and generally all ordinary management and administrative expenses of the Corporation, but shall not include directors' travelling expenses, managing director's remuneration (if any), auditors' fees, legal expenses, commission or brokerage payable on purchase, sales or changes of securities and investments, cables, income or other taxes or expenses of or in connection with any issue of the Corporation's shares or securities.

Each director during his tenure of office shall own absolutely in his own right at least one common share of the capital stock of the Corporation, and shall not be in arrears of any calls thereon.

The directors are authorised to borrow money and obtain advances upon the credit of the Corporation from any bank, corporation, firm or person, and upon such terms, covenants and conditions at such time in such sums as the Board of Directors in their discretion may deem expedient.

HONGKONG AND SHANGHAI BANKING CORPORATION

ONE HUNDRED AND THIRTEENTH REPORT OF THE COURT OF DIRECTORS to the Ordinary Yearly General Meeting of Shareholders, held at the City Hall, Hongkong, on Saturday, 23rd February, 1929, at Noon.

TO THE PROPRIETORS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION.

Gentlemen,—The Directors have now to submit to you a General Statement of the affairs of the Bank, and Balance Sheet for the year ending 31st December, 1928.

The net profits for the year, together with $3,411,430·90 balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to $16,841,492·51.

The Directors recommend writing off Bank Premises Account the sum of $750,000.

After making this transfer, deducting the Interim Dividend of £3 per share, paid on 7th August last, viz., £480,000 at 2s. 0⅛d. = $4,726,153·85, and Remuneration to Directors, there remains for appropriation $11,315,338·66, out of which the Directors recommend the payment of a Final Dividend of £3 per Share, viz., £480,000, and a Bonus of £2 per Share, viz., £320,000, amounting in all to £800,000, which, at 2s. 0⅛d., the rate of the day, will absorb $7,917,525·77.

The Balance, $3,397,812·89, to be carried to New Profit and Loss Account.

The Sterling equivalents of the Assets and Liabilities are shown at 2s. 0⅛d., the rate ruling on the last day of the year.

BRANCHES AND AGENCIES.

A Sub-Agency of the Bank was opened at Kowloon on 2nd January, 1929.

DIRECTORS.

Mr. Nellage S. Brown has been elected Chairman for the year 1929, and Mr. W. H. Bell has been elected Deputy-Chairman.

Mr. D. G. M. Bernard, Mr. A. MacGowan and Mr. P. W. Massey resigned their seats on leaving the Colony, and Mr. J. A. Plummer, Mr. B. D. F. Belth and Mr. B. Lander Lewis were invited to join the Board.

These appointments require confirmation at this Meeting.

Mr. H. P. White, Mr. T. G. Weall and Mr. W. H. Bell retire in rotation, but being eligible for re-election, offer themselves accordingly.

AUDITORS.

The accounts have been audited by Mr. C. Bernard Brown, A.C.A., and Mr. John Fleming, C.A., who offer themselves for re-election.

A. H. COMPTON, Chairman.

Hongkong, 5th February, 1929.

A. C. HYNES, Chief Manager. G. E. TOWNS, Chief Accountant. A. H. COMPTON, NELLAGE BROWN, W. H. BELL, Directors.

We have audited the above Balance Sheet with the Books, Vouchers and Securities at the Head Office and with the certified Returns from the Branches and Agencies made up to 31st December, 1928, with the exception of certain distant offices where the year is closed on 31st October or 30th November.

We have obtained all the information and explanations we have required. In our opinion such Balance Sheet is full and fair, and properly drawn up so as to exhibit a true and correct view of the Corporation's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Corporation.

Hongkong, 5th February, 1929.

C. BERNARD BROWN, JOHN FLEMING, } Chartered Accountants. Auditors.

SUMMARY OF THE ANNUAL REPORT OF THE AMERICAN TELEPHONE AND TELEGRAPH COMPANY FOR 1928.

Improvements in Service.

The annual report of President Walter S. Gifford, of the American Telephone and Telegraph Company, is devoted as much to the service rendered to the public as to the financial facts of the Company and the Bell System.

In discussing the service improvements in the Bell System, which comprises the American Telephone and Telegraph Company and the operating companies covering the United States, Mr. Gifford says:—

Long Distance Service.

"The most striking development in the telephone business in the United States during 1928 has been the increased use of the telephone for long-distance calls. While this use has been undoubtedly stimulated by general business activity and the rate reductions made in 1926 and 1927, the increased speed and improved quality of service have been the largest contributing factors.

"The total number of messages handled over the long-distance lines of the American Telephone and Telegraph Company was 18 per cent. in excess of those handled in the previous year. For the longer distances, such as between the Atlantic and Pacific Coasts, the increase has been 100 per cent. The country is becoming 'long-distance minded' and is acquiring a new telephone habit.

"Improvement of service—an essential factor in this growth in long-distance usage—is in turn dependent upon adequate and dependable facilities. With this in mind, the Company began some years ago the construction of long-distance toll cables. At the beginning of 1925 the investment in the long lines plant and equipment of the American Telephone and Telegraph Company was $140,000,000. At the end of 1928 the investment was $262,000,000, and it is planned to spend more than $80,000,000 for additional facilities in 1929.

"At the same time that the number of long-distance telephone messages has been increasing, the other services furnished through the use of the long-distance plant have been steadily growing. Chain broadcasting on a national scale, which has become such an important factor in the life of the nation, is making extensive use of telephone wires for the interconnection of broadcasting stations located throughout the country.

"Press associations, manufacturing enterprises, commercial and banking houses, are making more and more use of networks of circuits leased for their own exclusive use between widely separated points. The majority of these circuits are operated as telegraph or typewriter circuits, although many are for telephone use.

"In eight of the principal cities, offices are maintained for the transmission of pictures by wire, and during 1928 arrangements were made with the telegraph companies by which facsimile telegrams and messages are sent over this telephoto system."

Transatlantic Service.

"The volume of transatlantic telephone business continues to increase and has at times overloaded the radio-telephone facilities. A short-wave channel is now in use supplementing the long-wave channel.

"The increasing use and further development of transatlantic telephony will require further facilities. During the year the research engineers of the Bell Telephone Laboratories perfected a means of making a transatlantic telephone cable. This cable, when constructed and laid, will not only substantially increase the facilities for transatlantic communication but will also provide a circuit of maximum reliability. In the meantime, radio-telephone transmission is being further developed and more transatlantic radio channels are planned.

"There is also under way the establishment of a short-wave channel between the United States and the Argentine which should meet the initial requirements for telephone communication between the two countries."

Service Movements.

"During 1928 there was further definite improvement in local exchange telephone service. Operating errors, including those made by the users as well as those of the operating forces, were reduced 10 per cent.

"The telephone calls that failed of completion on first attempt were reduced by 3 per cent., meaning a better handling of more than 150,000,000 calls a year.

"Toll and long-distance service has shown further improvement. The average length of time for handling a call was 1·2 minutes, as compared with 1·5 minutes in 1927 and 2·6 minutes in 1925. At the present time about 95 per cent. of all toll and long-distance calls are handled while the calling party remains at the telephone, as compared with 90 per cent. a year ago and 70 per cent. in 1925 With this improvement in speed there has been continued gain in the clearness of voice transmission.

"About 750,000 calls a day are for 'Information.' In some cases, information operators must have ready access to as many as a million names and addresses. Better equipment and improved methods have produced a better handling of these calls. The more rapid toll service makes it necessary that 'Information' furnish subscribers' numbers in distant cities, and plans are now under way which will make it possible for information operators to increase the numbers which they can furnish immediately to as many as 5,000,000.

"The general quality of service in our business offices continues to improve. In many, it has been found advantageous to remove the counters and install desks at which each customer receives more personal attention. In the larger cities additional offices have been opened in an effort to bring them within easy reach of all customers. Transactions between customers and business offices approximate 100,000,000 a year.

"Primarily as a convenience to the public, time-of-day service has been established in a number of places, including several large cities.

"During the year 4,235,000 telephones were connected and 3,485,000 were disconnected. The elapsed time between application and installation or move was reduced 5 per cent. The companies aim ultimately to install or move all telephones by appointment on the dates requested by subscribers.

"These measurable improvements in service, as well as many others, in 1928 have been effected with due regard to every practical economy in operation."

THE MONEY MARKET.

Rather more hopeful conditions prevailed this week, and money consequently was a little easier. On Tuesday the Bank of England managed to secure £894,200 of the new gold available in the market, this being the biggest acquisition in any one operation since the rise in the Bank rate. Moreover, the price paid for Tuesday's gold was 84s. 10½d., or ½d. less than the price paid in the

previous week. It was this news that imparted a better tone to the market, and stimulated a keener demand for bills. The " market rate " on three months' bills has fallen slightly to 5 5/16-3/8 per cent., with the Continent paying a fraction less.

* * * *

The money market is not exempt from the general rule that when confidence is lacking, opinion often flies to extremes. There is a feeling in some quarters that just as last week's pessimism was overdone, so, this week, too many are taking a more hopeful view than is warranted by the facts. It is significant, too, that Paris has this week held a more pessimistic opinion of the international monetary situation than has either London or New York. This last fact, perhaps, has its compensations, for whatever may be the truth of recent rumours, there is no question that the Banque de France is in a position to take action, which would have a very considerable effect upon the relation between the pound and the dollar.

* * * *

This view places the London situation in a more hopeful light, but it must be remembered that the whole position is extremely difficult to gauge, so long as it is masked by the rapid inflow of revenue. In a fortnight's time, when the new financial year will have opened, the outlook may be much clearer, if only because it will be possible to see the weight of the international factors, unobscured by the seasonal stringency of money in London. Market rate, too, will be a better test of the position in a fortnight's time than it is to-day, for next week the three months' bill will be the favourite end-of-June maturity, and the rate is consequently likely to be lower than the current situation warrants.

* * * *

Another point to be remembered is that the end of March will witness a substantial movement of money, due to dividend payments and maturities of Government debt on the one hand, and to the final call on last December's Treasury Bond issue on the other hand. In one sense, it is fortunate that this year Easter falls at the end of March, for this coincidence enables these big transfers to be made at a time when the market will be inactive.

	Mar. 21, 1929.	Mar. 14, 1929.	Mar. 7, 1929.	Feb. 28, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate.....	5½	5½	5½	5½	4½ (Feb. 7,'29)
Banks' Deposit Rate..	3½	3½	3½	3½	2½ (Feb. 7,'29)
Discount { Call	3½	3½	3½	3½	2½ (Feb. 7,'29)
Houses { Notice.....	3½	3½	3½	3½	2½ (Feb. 7,'29)
Market rate (3 months' bills)	5 9/16 - 5/8	5⅝	5½	5½	...

So far as the outlook can be measured at all before the end of the month, it would seem that sterling is holding its ground, and even at times gaining a little. This is all to the good, for at the moment time is on the side of the pound. Extreme optimism to-day is no more justified than was the extreme pessimism of ten days ago, and if the market could stabilise both its opinion and its rates, it would be of distinct use at the present juncture. At the moment the omens are favourable, but it would be wrong to say that the period of anxiety had passed.

NEW YORK MARKETS.

Our New York correspondent cables:—Governor Young's address on credit was interpreted to mean that no immediate change in discount rate would be made. From this the market derived some encouragement, but yesterday's quarter per cent. rise in the bill rate and the tightness of money in other sections of the market increases the probability of an early change, beginning, possibly, in Boston or Chicago. Call money stands at nine to ten per cent. Time rates are firm at eight per cent,. and bills are a full five-eighths per cent. above discount rate, leaving the Reserve rate further than ever behind the money market. This week's Federal Reserve statement shows a further reduction in bills and member banks 'discounts. The ratio is 71.7 against 70.7. Brokers' loans are up by $146 million, an unexpectedly large rise.

THE STOCK MARKETS.

The stock markets were irregular, with only a moderate business passing. Gilt-edged stocks improved initially with the rise in the New York exchange, but lost ground as the American monetary outlook became more uncertain. Home rails were better, reflecting the better trade outlook and a favourable movement in traffic figures. Among industrials, " Anglo-American " stocks were an uncertain quantity, but motor shares again came into prominence. Rubber shares declined on the fall in the price of the commodity below 1s. a pound, but tea shares were stronger, and a more hopeful view was taken of the oil outlook. Considerable interest was attracted to base metal shares by extensive movements in the commodity markets, and Rhodesian issues were again conspicuous by their activity.

THE COMMODITY MARKETS.

Though there is nothing outstanding in this week's reports, they suggest that inertia is gradually being shaken off, even in the more stagnant markets. Coal stocks are inadequate to meet immediate shipment demands, and prices are consequently firm, but not much forward business is being done. Iron and steel markets, though quiet, are firm, and some anticipate increased activity after Easter. The price of tinplate bars has again been raised, owing to dearness and scarcity of raw materials, but the minimum price of tinplates has not yet risen. Other metals are firm. There has been some fluctuation in raw cotton, and prices show a slight decline on the week. The Manchester market is in consequence rather unsettled; Indian demand for piece-goods is disappointing, but other outlets, including the home market, have been favourable. There is some increased activity in Bradford cloths. The timber trade has suffered from the bad weather. In the hides and leather market some improvement is at last perceptible, and rather more orders are being received by shoe manufacturers. Oilseeds and their products are in poor demand. Wheat has tended slightly but steadily downward.

FOREIGN EXCHANGES.

The market displayed considerable activity, a slightly more optimistic feeling being evident as a result of the brighter outlook for sterling generally, as well as in appreciation of the active steps taken by the New York authorities to discourage the retention of foreign money in the New York call loan market. From 4.85 5/16 last week sterling improved to 4.85⅝ on 19th inst., principally on New York offerings of dollars. It eased off later, to close at 4.85⅜, but maintained a stronger undertone than has been apparent for some weeks. Forward dollars were in better demand at 1/16 cent discount for one month and 5/32 cent for three. Canada showed distinct improvement at 4.87⅛, but the market remained nominal and dealings were of an erratic nature. Paris further depreciated to 124.29, with forwards 10 and 18 centimes premium for the one and three months' periods. Brussels was offered up to 34.96¼, while Italy lost its previous gain and closed 92.73. Holland fluctuated within narrow limits, and closed at 12.11⅞. Spain was erratic, improving to 31.50, but being subsequently offered at 32.50. The close was 31.90, with forwards in exceptionally strong demand at 10½ for one month and 28 for three. Switzerland moved with the dollar, but German marks were higher at 20.46, notwithstanding the heavy gold shipments to America. Forward narrowed to ½ pfennig and 1 pfennig discount. Silver closed easier at 25 13/16d. for spot and 26d. for forward delivery. Hong Kong was 2s. 0⅛d., and Shanghai 2s. 6 7/8d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Australasia, National Bank of Egypt, Anglo-International Bank, Scottish Provident Institution, River Plate Trust Loan and Agency, English Electric, City of London Electric Lighting, Achille Serre, London and Thames Haven Oil Wharves, and Dickens and Jones. Economic conditions in the Austrian Succession States were discussed by the Chairman of the Anglo-International Bank. Mr. W. L. Hichens described the economies effected in working expenditure by the English Electric Company.

THE MENACE OF TRADE RESTRICTION.

The North-Western Free Trade Union is to be congratulated upon its enterprise in holding this week at Manchester a non-party conference on Free Trade. From all points of view the conference was welcome and successful. It was timely in that it gave to the country a needed warning of the attack on our fiscal system which has to be repelled at the polls in a few weeks' time; and it was serviceable in that it produced a large number of important pronouncements from responsible spokesmen of varied and representative industrial and economic experience. Mr J. L. Tattersall and Mr Tom Garret dealt very effectively with the cotton industry's interest in wanting Free Trade; the cases of iron and steel and woollen textiles were effectively put by a number of speakers; Sir Robert Newman, the Conservative M.P. for Exeter, pleaded the agricultural case against industrial protection; Mr Harold Cox and others travelled over a wide field and emphasised fundamental but easily forgotten points in the case against trade restriction. All this refreshment for the short public memory is useful. But of all the points emphasised at the conference we are inclined to select for the most urgent attention of Free Traders the stern warnings of Sir William Milligan and Mr J. M. Robertson that the present attack on our existing fiscal system is one that must be defeated here and now, unless we are to abandon hope of the maintenance of Free Trade.

Protection, said Sir William, " is a disease like tuberculosis. Once you have got it, it is extraordinarily difficult to get rid of it." Mr J. M. Robertson, in less picturesque but equally forcible terms, uttered the warning that the tariff party was gradually strengthening its hold every year, and, unless the electors killed the tariff doctrine at the next election he had begun to suspect they would never be able to do so afterwards. The suspicion, we agree, is by no means ill-founded. Apart from the " McKenna " duties, the unobtrusive encroachments of " Safeguarding " (albeit confined so far to relatively unimportant trades) have already resulted in a numerically formidable list of Customs dues levied at our ports; the " Safeguarding " procedure is being exploited in an attempt to rush through, on the eve of the dissolution, a protective tariff for wool textiles, an industry of major importance; Mr Baldwin has promised the iron and steel industry, whose products are an essential factor in our whole national economy, that the same procedure shall be available to pronounce upon its claims for a duty. In short, if the Conservative Party is returned to power the fact must be faced that the country will have elected a Government whose inner conviction are those of " whole-hogging ' Protectionists, and whose avowed intention (however careful they may be disingenuously to profess aversion from a so-called " general " tariff) is, in Sir L. Worthington-Evans's words, to make the present " Safeguarding " machinery " less expensive and obstructive." With the Primrose path thus cleared for every claimant industry, great or small, what hope is there of our avoiding such an increase in " Safeguarding " duties that our fiscal system will be in fact, if not in name, essentially Protectionist? And if such duties are imposed, will the forces of Free Trade be able, before irreparable harm is done to the country's interests, to overcome, in the struggle for their repeal, the vested interests which each new tariff creates?

The danger of established duties winning acquiescence in the supposed interests of " stability of policy " is amply illustrated by the attitude of the Balfour Committee to the whole tariff question. The section of the Committee's Final Report dealing with British Customs policy in relation to competitive power starts with the unquestionable proposition that for this country the tariff problem is dominated by the governing condition of " the essential dependence of Great Britain on external trade." The Committee was unanimous (save for the two Socialist members who were unable on general grounds to sign the Report) that since " we are an island people dependent for life and employment on the free inflow of imports," revenue alone must be " the main objective of any conceivable British Customs tariff." The arguments that Great Britain should adopt Protection either (1) to provide a weapon for tariff negotiations, (2) to compensate the Dominions for preferential tariffs in our favour, or (3) to equalise conditions of labour cost as between this country and the countries in which imports originate, were examined by the Committee and decisively rejected as impracticable and not apposite to our circumstances.

Thus far the Committee was of one mind, and it may be surmised that their unanimous endorsement in these general terms of the whole basis of the case for Free Trade proved a serious disappointment to the present Government's hopes. But when the Committee, having pointed so unerringly to the only " conceivable " British tariff policy, turned to examine the " Safeguarding " and " McKenna " duties, an illuminating divergence of view at once became manifest. A section of the Committee, in the light of all the available evidence of the duties' effects, found no warrant for the belief that such departures from Free Trade policy could enable us to attain the object which the whole Committee recognised to be essential to our national well-being—increase of exporting power. Both the " Safeguarding " and the " McKenna " duties were pronounced by this section—with unimpeachable logic—to be opposed to what the Committee, as we have seen, unanimously held should be the governing condition of British tariff policy. Their repeal was roundly recommended " in the national interest."

With these conclusions, whose validity we wholeheartedly endorse, another section of the Committee was unable to agree. The results, it is true, of the " McKenna " and " Safeguarding " duties, regarded as means to " strengthen the position of the British manufacturers in the home market," were admitted even by these members of the Committee to be " inconclusive." Nor did they seek to disguise their recognition of the possibility of these forms of Protection causing " serious prejudice by an increase of prices to consumers," a possibility which led them to recommend that the Board of Trade should be furnished with special returns of " prices, production, employment, and costs " in protected industries and should " exercise continual vigilance " over their working. At the same time, they were not in favour of the immediate repeal of the duties. The reason given (the quotation refers specifically to the " McKenna " duties but appears to indicate equally the view of this section of the Committee on " Safeguarding ") is worth committing to memory by all Free Traders.

> " It appears to us that the really valid justification (for non-repeal) is that the duties are in existence without giving rise to any substantial dissatisfaction, and that consequently, in the interests both of trade stability and of revenue, they should not be disturbed without adequate reason in each case."

Here, crystallised in the conclusions of a body of men who start by frankly admitting that we live only by the free flow of imports, is the *vis inertiae* which, as we have said, constitutes a grave danger when once a duty has been established. The whole history of Customs barriers goes to show that it is far easier to erect a tariff wall than to demolish it when built. " Substantial dissatisfaction " cannot readily be mobilised against the *status quo*, and every interest which has succeeded in entrenching itself behind fiscal " shelter " will be quick to utilise the argument that " disturbance " of settled tariffs is prejudicial to trade.

As the Free Traders on the Balfour Committee cogently pointed out, the result of each fresh experiment in " Safeguarding " Protectionism is to create " new ' sheltered ' industries working and trading under the special protection of the State, but living on the overseas supplies of food and materials that have to be paid for by the ' exposed ' industries working on a competitive basis in the markets of the world." Let this inequitable " shelter " at others' expense be extended to cover one or two of our major industries, and there will inevitably follow a self-defensive *sauve qui peut* on the part of the remainder to share in the spoils. The prime need of reorganising our industries, increasing their efficiency, and bringing down our general costs of production, so as to enable us to compete successfully in the world's markets, will be forgotten behind the decep-

tive security of a tariff wall rendered more difficult to pull down by every extension of its scope. In a few weeks' time the electorate will have the opportunity to decide whether that wall shall be built. It is of paramount importance that they should realise that the forthcoming General Election may well be the last chance successfully to repel the attack on Free Trade and to prevent the Protectionist party "*digging in*" on ground from which, at the end of another Parliament, it would be doubly difficult to dislodge their hold. A crucial battle is pending. Free Traders must sharpen every weapon in their armoury.

ANGLO-AMERICAN RELATIONS: A CONSTRUCTIVE PROPOSAL.

SINCE we emerged from the catastrophe of 1914-18 our eyes have remained fixed on the international landscape, scanning the horizon anxiously for the portents of peace or war. In moments of depression when we are affected by the gloom of these still lowering skies, we sometimes yield to the despairing thought that mankind is unteachable by anything but first-hand experience; that "plus ça change, plus c'est la même chose"; and that the next generation will duly make the next war, as our generation made the last. Yet there is one difference in the international situation since the war which may work our salvation, for our anxieties are not now either blind or dumb. Public opinion is concerning itself with this vital problem in a much more intelligent and systematic way than ever before. It is reacting to a danger which it now realises vividly, not by the old ostrich method of hiding its head in the sand, but by the human method of frank and friendly public discussion across the frontiers. It is remarkable and encouraging to see how organised intelligence and goodwill is now learning to come to the rescue whenever a diplomatic crisis containing the seeds of war arises. But public opinion, to be effective, requires a lead; and the greatest of public service is a lead from some statesman who knows what he is talking about, has thought out a definite line of action, and does not hesitate to speak openly and sharply to his fellow-men.

In the issue of *Foreign Affairs*, which was published in New York on Thursday, March 14th, a lead of just this kind has been given by a statesman particularly well qualified to advise upon what is perhaps the most delicate international problem of to-day. This problem is stated in the title of the article: "Anglo-American Relations and Sea-Power." The writer is Mr John W. Davis, the former American Ambassador in London. His exposition is a shaft of light illuminating dark places at just the moment when there is a prospect of our getting to work again on both sides of the Atlantic to clear Anglo-American relations up.

In this article, Mr Davis first analyses "those specific matters which seem most likely to tax the friendly feelings of the two peoples"; then he concentrates attention on one of them which is susceptible of treatment here and now; and finally he offers a practical suggestion for policy, which he bases, realistically, upon the actual additions to the structure of international relations which have been made since the Great War.

The specific sources of friction which Mr Davis finds are three: "first, commercial rivalries in Latin America, the Far East and elsewhere, and the struggle for raw supplies"; second, inter-ally (or, rather, inter-associate) debts; and, "third, the problems, psychological, legal, and technical, connected with naval power." Perhaps he rather minimises the first—for when he points out that there are no current territorial controversies between us, and that we are one another's best customers, an English reader will feel a certain sinking of the heart as he recalls that this was equally true, in 1914, of Great Britain and Germany. And we may as well face the fact that the United States in the 20th century is likely to be a much more formidable economic "competitor" of Great Britain than Germany was in the latter part of the 19th century—if we are foolish enough to look at the situation in competitive terms. Undoubtedly, the United States is destined to play, during this century, substantially that part in world economy which Great Britain played during the last century; and she will do it on a scale which will put our economic achievements into the shade. We have to adjust ourselves to this, and that is not easy; but it is certainly not impossible; while on the other hand, a refusal on our part to make the possible and necessary adjustment would court political and economic disaster. The solution, of course, is to be found in the fact that as the volume of America's economic activity rises, the total volume of world-production and world-trade will rise as well. In the 20th century world there is room for both Americans and British to do their business if they do it not in hostile competition, but in friendly co-operation; and it is for us to set the tone, because it is we who have to make the adjustment through our having been the first in the field. We can certainly do this—which it is indeed our vital interest to do—if we have the will; but then we must see to it that the solution of the economic problem has a fair field. There must be no "queering of the pitch"; and this is where the naval problem comes in. The danger is that a temporary discomfort and soreness, arising out of the economic problem in the background, may express itself in naval terms. Mr John W. Davis naturally does not deal with this point, for it can only be dealt with effectively on our side. He simply postulates that, tactically, the naval problem is the first thing to clear out of the way—and here he offers suggestions, which should be read and marked as carefully on this side of the Atlantic as on the other. We need not recapitulate his concise and able review of the Anglo-American naval controversy in the past—except to say that he shows the same clear understanding and sympathetic appreciation of the British position as he does of the American. We want to concentrate attention upon the essence of his argument; and this is that, since the end of the Great War, there have been changes in the system of international relations which turn the postulates of the historical Anglo-American controversy into anachronisms.

There cannot be a controversy without a basis of common ground. The common ground in the Anglo-American controversy was that, when a state of war existed anywhere in the world, the countries of the world automatically fell into two precise categories, and two only, that is: "belligerents" and "neutrals." The controversy turned upon what the respective rights of belligerents and neutrals should be. There was no dispute as to whether the two categories existed; and, indeed, there could not be, because at that time the classification corresponded to the real facts. The essence of Mr Davis's argument is that the Kellogg Pact (and he will doubtless allow us to add the Covenant of the League as far as State members of the League are concerned) has made the old categories as much out of date as, let us say, the invention of steamers made sailing-ships, and so has cut away the ground from under the feet of the old-fashioned controversialists on both sides. For, under the new conditions created by the Pact, if war breaks out, there are presumably not two categories of countries, but three, none of which correspond to the "belligerents" and "neutrals" of the old-fashioned classification. First of all, there is the violator or violators of the Pact. It may not be possible to establish forthwith who these are; but the presumption is that the breach of the peace must have been caused by one or other of the nations under arms. Then there is the direct victim or victims of the violation (i.e., those of the parties under arms that may prove to have been forced to take up arms in self-defence). In a general way, these two categories do correspond collectively to the old-fashioned category of "belligerents"—though they are now vitally, if only potentially, differentiated from the moral and juridical points of view, whereas the old-fashioned belligerents were *morally* and juridically on a precisely equal footing from the standpoint of the old-fashioned "neutrals." Indeed, the scrupulous avoidance of any differentiation between one belligerent and another was the very definition of "neutrality"—and this fact indicates how remote from neutrality is the position of the third category of countries in war-time, under the dispensation of the Kellogg Pact. Under this dispensation, if a breach of the peace occurs, the parties to the Pact who do not find themselves at war, can no more be "neutral" than the King of England can be "neutral" when a breach of the peace occurs among his subjects. Just as the King's Majesty is affronted and his lawful interest injured when his peace is broken, so (to quote Mr Davis) "the breach of [the Kellogg Pact], or the approaching probability of its breach, is a cause of concern to all the signatories whose covenant is or is to be broken."

From this premise, Mr Davis draws a practical conclusion which, to our minds, offers a solution of the Anglo-American naval problem. "The nations thus affronted," he continues, "may—nay, they must be expected to—consult together for the protection of their common interest; that common interest is the preservation of peace; consultation is idle unless it leads to a concert of measures of some sort—economic, diplomatic, or what-not—of a co-operative character. . . . The resulting co-operation might . . . at first, be *ad hoc*"; but Mr Davis points out that "one of its first consequences undoubtedly would be that of making neutrality under the assumed circumstances immoral."

Through what sort of procedure should such co-operation be put into effect? With the sure touch of the practical statesman, Mr Davis puts his finger on a case in which the United States has already undertaken to act in a certain way in concert with other nations in pursuance of a certain treaty, when there is danger of a breach of the peace; and he proposes, in effect, that this procedure, which, in the case in point, has a regional limitation, should be adopted without regional limitation in pursuance of the Kellogg Pact. "The United States," he says, "should accept what the Treaty for the Renunciation of War may be said to imply, viz., that all the nations whose treaty is broken, or threatened so to be, have a mandate to concert measures to prevent the breach or to repress it; that there must be introduced, in short, into the rest of the world the principle established for the Pacific area by the Four-Power Treaty of 1921, that of 'joint conference . . . for consideration and adjustment.'" This is clearly the natural line of approach for the American people; for the Treaty of 1921 embodies an American scheme of insurance against war in a particular field of international relations, in which the Americans then already felt that they were concerned. If the logic of the situation has now made them feel that they are concerned in insurance against war all the world over, and if they have expressed this feeling in sponsoring the Kellogg Pact, then the natural way for them to give practical effect to the Pact is to apply the procedure of the Four-Power Treaty on a world-wide range.

We, in this country, could wish nothing better than to enter into an arrangement with the United States on these very lines; for the implications of such an arrangement, as they are brought out by Mr Davis, would remove one great anxiety from our minds. It might come to be understood "that, in the event of constabulary action against a covenant-breaking State, the navies of the two countries will act together, or at least that, as a result of diplomatic consultation, neither will be used to protect the trade, in-bound or out-bound, of an outlaw State." But if the Americans are to contemplate renouncing their traditional claim regarding "neutral rights" against the mandatories of an international police-operation, we have to respond by renouncing our traditional claim regarding "belligerent rights" if ever we find ourselves at war under the old conditions. "On the basis of such an understanding, however informal, it would not be unreasonable to expect Great Britain to agree that if she were engaged in an old-fashioned 'private war'—a war, let us say, in which, though she might not be the aggressor, it could not be clearly established, nevertheless, that her adversary had broken the Covenant of the League or the Locarno Treaties or the Kellogg-Briand Pact—she would not attempt to interfere with the fullest freedom of sea transit by all nations not engaged in the war."

Here is a fair offer in clear, practical terms. Mr Davis has struck a trail which may lead both nations out of the wood.

THE FRENCH NEWSPAPER PRESS.—I.

(BY A PARIS CORRESPONDENT.)

LIKE Germany, France possesses no newspaper organisation comparable to the Rothermere or Berry groups in England, or to the Hearst and other American combinations. Syndication of news by individual newspapers is unknown, and both newspapers and journalists are so efficiently organised for protective purposes that no Paris news agency is permitted to furnish any general service of metropolitan news to any journal in the capital itself. With the exception of an excellent supply of international political news, no French newspaper attempts to utilise anything which English or American newspaper conductors would regard as more than a skeleton news service. For the vast majority of French newspapers the source of a very large proportion of the general foreign news supply of the world is London, whence it is transmitted to Paris by the resident correspondents and published either under London or original date lines.

The commercial methods of French newspapers, for the rest, are so widely different from those practised in England and America that it is impossible to institute any real comparison between the French newspaper industry and that of Great Britain. Further, French newspaper owners maintain practically impenetrable secrecy, not only as to their circulations, but as to the volume and especially as to the nature of their advertising revenue. Nearly all French newspaper undertakings have their ownership vested in limited liability companies—almost always of the "private" kind. Even in the three cases in which newspaper shares are quoted on the Paris Bourse—the *Petit Parisien*, the *Temps* and the *Petit Journal*—balance sheets are published only by two of these papers. The excessive degree to which the French carry the doctrine of the sacredness of *la vie privée*, even in ordinary business life, is one of the main reasons why it is so difficult for the foreigner to arrive at an exact comprehension of practically any aspect of French life.

France is as well supplied with periodical publications as any country in the world, and their general intellectual value is above the average. In Paris alone there are 2,500 daily and weekly publications of all kinds, plus another 2,000 in the provinces. Practically each of these belongs to a separate owner, like French house property. Mass production of "periodical" literary pabulum, on the lines made popular by the purveyors of the *Tit-Bits* and *Answers* class of weekly periodical in Great Britain, does not exist in France.

The Paris daily newspapers (morning and evening) now number 56—before the war there were over 100—and there are between 230 and 240 others in the provinces. All these may be characterised as *journaux d'opinion*—which still constitute an influential factor in French life, although they seem to have almost died out in England—and may be accepted as wielding a powerful influence over all those interested in politics and finance—which in France means the entire population. There are also in Paris about 200 "political" weeklies (plus 232 weeklies devoted solely to finance and investment).

The provinces possess over 1,500 weekly papers, which correspond in general form to the English provincial weekly, but differ from the latter by reason of the fact that in France the local weekly newspaper *is, above all* else, a ceaselessly active organ of political propaganda, not merely at election time, but throughout every week of the year. French newspaper "families," like those of the inhabitants, are generally small, and each morning, evening or weekly newspaper, as a rule, is under separate proprietorship.

Competition between newspapers, as it is understood in England, is practically non-existent. Insurance schemes and football competitions have never been even dreamed of. Newspapers of all kinds seek public favour

by their individual merits and appeal. The average French journal follows its own *petit bonhomme de chemin*, regardless of what others are doing.

Distribution is leisurely and primitive. "Let well alone" seems to be the motto of the French newspaper conductor, and he refuses even to think of the enormously costly fleet of delivery vans which is common in London. The *Temps*, which is an institution in every well-bred Paris home, is distributed to subscribers in the capital by hand, and to retailers by men and women on foot and by boys on bicycles, supplemented by a few carts. Evening papers cannot be obtained in many parts of the city until a couple of hours after publication. Even the result of the Grand Prix is not of sufficient importance to inspire a single special edition, and the name of the winner is made known only in the regular six o'clock editions, 2½ hours after the great race.

There is only one firm of wholesale newsagents in Paris—the great Hachette concern of booksellers, publishers, newspaper distributors and transportation agents. "Hachettes" have a practical monopoly of the news-agency business in France. They, and they alone, supply practically every metropolitan periodical publication to the whole of the railway bookstalls, newspaper shops, street kiosks and other retailers throughout France, the colonies and the rest of the world. No new French publication can hope to come under the eye of the French public unless its conductors are prepared to pay the firm its regular scale rates for undertaking the distribution of it, this payment being entirely supplementary to the firm's ordinary trade profit derived from acting as wholesale newsagents. All attempts to set up any kind of competition in newspaper distribution have hitherto failed. Two London firms, who attempted to share with Messrs. Hachette the distribution of English journals in Paris, were, within the past few years, driven off the field.

Another enormous factor in the French newspaper world is the Agence Havas, which occupies a unique position as the principal furnisher of foreign news to the French Press and the recognised channel used by the Government for official and other announcements designed for distribution by the newspapers. What is not generally known outside France is that the Agence Havas, powerful as it is as the leading French news agency, occupies an immensely more important and profitable position as the holder of a quasi-monopoly over newspaper advertising business in France. It is an open secret that several of the more important Paris advertising agencies, although trading under quite different titles, are actually subsidiaries of the Agence Havas. Its ramifications, indeed, as in the case of most of the leading French commercial and industrial undertakings, are innumerable.

The importance of the Havas factor in French newspaper economy lies in the fact it holds exclusive advertising agency rights (except as regards purely local advertisements) over probably the majority of the provincial newspapers, and certainly over most of the more important of them. Some years ago these were reported to number over 800. Many French newspapers sell much of their advertising space on yearly contracts, by which the agent guarantees to pay for one, two or more columns of space per day, which he handles on the "farming" principle. When, as often happens, the advertising agency is in close relations with a news agency, part of the payment for the advertising space is made in kind, the newspaper concerned accepting the news service instead of cash. This interlocking system, whereby various interests combine for mutual profit, is probably carried to a greater extent in France than in any other country.

It is also quite a common practice with French newspapers, both in Paris and the provinces, to hand over their financial news columns, in return for sums that are based on the journal's importance, to the absolute control of advertising agencies. In some cases the exclusive right to make use of that section of a newspaper devoted to financial matters is directly acquired by a bank or some other financial or other organisation, which is thus furnished with an invaluable means for influencing investors. The revelations connected with the recent *Gazette du Franc* scandal furnished unquestionable evidence as to the extent to which this practice prevails, even amongst Paris newspapers.

The French press, indeed, has developed this means of revenue to such an extent that the sale of "publicity inserted in customary and reserved portions of the paper, at rates which are known to everybody," which is the French way of describing the sale of editorial columns for sometimes distinctly questionable commercial purposes, is now regarded as entirely legitimate. The curious thing is that, although everybody is aware of these practices, no section of public opinion appears to regard as in any way questionable this utilisation of what everybody proudly insists is "an absolutely free and independent Press."

INDUSTRIAL LIFE ASSURANCE—A REVOLUTION.

THERE has recently occurred a revolution in the conduct of industrial life assurance. As is the habit of revolutions in the economic sphere, unlike similar manifestations in the political world, the event has passed unnoticed by the press. The public in general are probably not even aware that it has happened. Three of the largest offices transacting industrial life assurance, namely, the Pearl, the Britannic, and the Refuge, have announced their intention to institute for industrial policyholders a profit-sharing scheme. Although the announcement has been made almost simultaneously by these three offices, the history of this latest and highly significant move goes back many years.

It is to be clearly understood that industrial life policyholders have no kind of legal right to any participation in profits. The contracts are all of them issued on a non-profit basis, and at the time when the majority of those now existing were first effected the profits earned in respect of the business were extremely small, and any profit-sharing was quite out of the question. The first move was made by the Prudential as far back as 1907, when the company decided to set aside a modest sum for distribution to its industrial policyholders. This scheme, though temporarily suspended during the war period, has grown in importance ever since, and the amounts now divided in this way are both absolutely and relatively very much greater than at the first beginnings 20 years ago. This action of the Prudential, and the fact that its size constituted it a natural leader in the business, has virtually forced the other offices to follow suit. The process has naturally been a gradual one, for the offices have had to cope with a great many difficulties, and profit-sharing has had to wait upon a due strengthening of actuarial reserves. Of all the factors that have contributed to the inauguration of profit-sharing, none has been so important as the immense saving in expenses since the war. These savings have been reflected in continually increasing surpluses, which, indeed, are now on a scale never before contemplated, and are such as to confer on the policyholders at least a moral right to some participation in them.

In view of the announcements by the three companies above referred to, it will be appropriate briefly to survey the progress of the business since the period immediately preceding the war. The following table, therefore, sets out the new business and the assurance fund in 1912, in 1920, and in 1928 for each of the four leading offices in the business:—

	New Business.			Assurance Fund.		
	1912.	1920.	1928.	1912.	1920.	1928.
Prudential ...	16,907,186	52,265,142	58,511,995	37,207,843	59,244,233	113,108,058
Pearl	17,501,434	20,647,125	20,434,324	4,427,272	9,137,013	24,236,925
Britannic.....	4,621,010	6,402,040	6,807,482	1,723,469	3,126,602	9,371,162
Refuge.....	12,593,010	11,331,058	16,952,369	2,366,698	4,572,994	13,222,558

Although the intervening period has been the same, it will be seen that the progress of the new business has been unequal between 1912 and 1920 and between 1920 and 1928, but part of the explanation is to be found in the fact that 1920 was a boom year. The figures relating to the assurance funds exhibit the commanding position held by the Prudential, although it will be observed that the other three offices have increased their funds during the 16 years at a greater proportionate rate even than the Prudential. More important, from the point of view of our survey, will be a comparison of the respective profit-earning capacities of the various offices at each of these three points of time. These are most clearly expressed in the form of the ratio of expenses and commission to premium income on the one hand and on the other hand the rate of interest earned on the life assurance fund each year after deduction of income tax. The relevant figures are set out in the following table:—

	Expense Ratio %.			Net Rate of Interest Earned %.		
	1912.	1920.	1928.	1912.	1920.	1928.
				£ s. d.	£ s. d.	£ s. d.
Prudential	38·5	40·5	24·9	3 14 8	4 9 0	5 7 7
Pearl	44·7	45·5	34·1	3 10 1	3 15 2	4 19 0
Britannic.....	40·5	47·4	35·9	4 6 3	4 6 8	5 3 7
Refuge	48·7	49·7	37·3	3 17 3	4 5 4	5 10 6

Regarding first the expense ratios, the effect of the war is clearly seen in the fact that, in spite of the growth of business between 1912 and 1920, the expense ratios in the latter year were in all cases slightly higher than in 1912. The whole of the improvement, therefore, has occurred in the last eight years, and it has been very great indeed. In this respect the Prudential deserves the greatest possible credit for having succeeded in reducing its expense ratio from 40½ per cent. to under 25 per cent. In particular the "block" system of collection has been introduced, the whole of the country has been mapped out into thousands of different blocks, and each block has been assigned to an agent responsible for the whole of the collections in his particular area. The old system, whereby one street has been canvassed perhaps by half-a-dozen agents of the same company, has been abolished, with the result that is seen in the table before us. The upward progression in the rates of interest earned is also impressive, and if we were concerned here to institute comparisons between the different offices it would be interesting, for instance, to learn the reason why the rate of interest earned by the Pearl has been throughout so much lower than that of its competitors.

Although these three companies—the Pearl, the Britannic, and the Refuge—have announced their intention to institute profit-sharing, only one of them, namely, the Refuge, has set aside a definite sum out of its 1928 profits, and in the case of this company the amount allocated is £400,000 out of a total profit for the year of £570,000, equal to 70 per cent. of the total. To show the effect of the profit-sharing scheme of the leading office, we give below an analysis of the surplus earned in 1928 by the Prudential and of its allocation:—

	£
Surplus earned during year.....	5,444,404
Brought forward from previous year	264,847
	5,709,251
Allocations:—	
To Bonuses to policyholders.....	3,265,306
„ Reserves.....	983,333
„ Shareholders	663,632
„ Bonuses to outside staff.....	520,408
„ Carried forward to next year	276,572
	£5,709,251

If, instead of the expense ratio actually incurred and the net rate of interest actually earned last year, the company had spent 38.5 per cent. of its premiums and had earned £3 14s. 8d. per cent. net interest, as was the case in 1912, the surplus of the year would have worked out at about £1¾ million in a place of nearly £5½ million earned. The illustration is a sufficient indication of the growth in profit-earning capacity.

In the publication, "Labour and the Nation," which is the official programme of the Labour Party, there appears a reference to industrial life assurance in the following terms:—

> The system of industrial life insurance needed to safeguard the worker against the risks confronting him, and through which he too often to-day is shamelessly exploited—these and other fundamental necessities are too vital to the welfare of the nation to be organised and exploited for private profit. Without haste, but without rest, with careful preparation, with the use of the best technical knowledge and managerial skill, and with due compensation to the persons affected, the Labour Party will vest their ownership in the nation, and their administration in authorities acting on the nation's behalf.

The Labour Party is too late. The nationalisation of industrial life assurance has already been accomplished voluntarily by capitalist corporations.

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG, STOCKHOLM, MALMO.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - Kr.182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

THE VALUE OF SMALL SAVINGS.

[In an article in the "Economist" of February 23, 1929, we examined the available evidence of the rate of "small" savings, and reached the conclusion that, however valuable morally and socially the encouragement of thrift may be, "small" savings are a relatively unimportant factor in the supply of fresh capital for the maintenance of our industrial economic structure. The following article, contributed by a correspondent in close touch with the National Savings Movement, deals critically in detail, though not in general, with the views which we expressed.]

While it is probably true that only a comparatively insignificant part of the fresh capital continually being raised by industrial means is directly supplied by small savings, it does not necessarily follow that small savings have only a trifling economic value. In qualification of the conclusions drawn by the *Economist* from the fact, among others, that in the years 1923-27 the withdrawals from the Post Office Savings Bank exceeded the deposits by £17 million, it may fairly be pointed out that this period included the exceptional labour troubles and acute industrial depression of 1926, a year in which the excess of withdrawals over deposits was no less than £8½ million. Moreover, the figure of £17 million was arrived at by excluding the interest credited to depositors during those years, amounting to no less than £33 million. A proportion at least of the withdrawals would certainly represent interest earned by deposits and the difference between deposits and withdrawals will not actually represent the net amount saved during the period.

There are also two further forms of savings bank which may be mentioned. The large joint-stock banks now have special savings bank departments for the accumulation of small savings on terms similar to those offered by the Post Office and the trustee banks. No separate figures are made public of the activities and of the results achieved by these savings bank departments, and it is doubtful whether they attract any great amount from the "small saver" in the strict sense of the term. The second savings bank of which no mention was made is the Birmingham Municipal Bank, founded in 1919. The figures published by this bank show a steady increase in the balances due to depositors in the savings bank department, the total at March 31, 1928, standing at over 9 million pounds, or approximately £10 per head of the population of Birmingham. The increase in depositors' balances during the year 1927-28 was no less than £1,269,000, while interest allowed to depositors during the year was £272,000. There was, therefore, a net increase in deposits, excluding interest, of practically one million pounds.

Moreover, what is the function of a savings bank? Is it not for the accumulation of small savings until they become sufficiently large to be invested else-

where or used in some other fashion? It is admittedly doubtful whether any large proportion of the withdrawals from the savings banks are re-invested in Stock Exchange securities, but anyone who has been in close contact with the better class artisan and the small shopkeeper, who form an important section of the " small savers," is well aware of the fact that savings are frequently accumulated in the savings bank or in National Savings Certificates for the special purpose of buying or setting up a small business, or, still more frequently, for the purchase of a house. Such savings, although they may not have much direct effect on the problems of international trade, undoubtedly have an economic effect. Even when savings are used for a more transitory purpose, such as higher education for a child, better furniture for the home, or even for a good holiday in the summer, they are helping to raise the standard of living and to improve the status and mental outlook of the saver. The National Savings Committee have emphasised continually the necessity for wise spending as well as for saving.

But the indirect effects of this saving and wise spending go much deeper. The buying of houses and furniture, the setting up of small businesses, all tend to stimulate useful and profitable production, and so indirectly will tend to provide (out of the further profits so created) a further surplus for investment in productive industry. In fact, it is hardly too much to say that wise spending is even more important than saving.

In arriving at the total amount of small savings there are several items which can only be vaguely conjectured. The report of the Chief Registrar of Friendly Societies on the activities of building societies throws some light on one important item, that of house property. The balance due to the building societies on mortgages in 1926 amounted to 171 millions. Detailed figures published in the report show that of 109 millions due on mortgages to 32 large societies 77.8 per cent. was in respect of mortgages of £1,000 and under. The same proportion of the total for all societies is £133 million, which we may take as an approximate figure of the total balances due on mortgages of £1,000 and under. Each individual mortgage is in respect of property the price of which has been paid in part by the owner, and it is not unreasonable to assume that, on the average, the balances due on mortgages do not represent more than half the value of the property, the other half having generally been raised by the purchaser out of his savings. The total balance due on mortgages was 25 millions more than in the preceding year, advances during the year amounting to 36 millions. Taking the same proportion of this, viz., 77.8 per cent., we have a figure of £28 million advanced on small mortgages during the year. It is reasonable to assume that practically the whole of these advances were in respect of small houses purchased by the occupiers, and in most cases a substantial deposit will have been paid by the purchaser out of his savings. Assuming that on the average mortgages were for two-thirds of the purchase price, we arrive at a figure of £14 million paid as deposits on the purchase of houses. These deposits will, as a rule, have been paid by savings withdrawn from savings banks, from Savings Certificates or from deposits with the building societies themselves.

There is, therefore, reasonable ground for assuming a withdrawal from savings banks and kindred organisations of savings amounting to no less than £14 million in a year —and that year, 1926, a year of most acute industrial disturbance—and the reinvestment of those savings in house property. Such a transfer of savings would more than account for the excess of withdrawals over deposits in the savings banks even in that disastrous year.

Taking these various factors into consideration, we need not be despondent about the apparent falling off in small savings in some directions, but may reasonably assume that the savings banks and kindred organisations are fulfilling the important duty of taking charge of small savings until they become sufficiently large to be suitable for investment elsewhere. The old proverb, " Take care of the pence and the pounds will take care of themselves," is as true to-day as ever it was.

THE SLUM PROBLEM.

The vagueness of the discussion that followed, in Parliament and in the Press and elsewhere, on the recent decision of the Government to cut a second slice off the existing housing subsidies showed how few people there are who have at their finger-tips a considered policy for providing the right quantity and the right quality of houses that the country now needs. Ten years ago the cry, and it was a good cry then, was for houses and more houses, never mind how high their class. For ten years houses have been built under all sorts of schemes, and now the post-war eagerness has melted away. Unemployment has ousted housing from the forefront of election programmes. And yet, when stock is taken of what has been achieved, it appears that, though higher up the scale the end of the job is in sight, the evils of the slums have literally been scarcely touched. If in other respects we are coming near to the pre-war housing position, it is the more necessary at this critical point, when post-war enthusiasm is waning, not to let ourselves slip back into the old habit of acquiescing in the existence of slums. Far from accepting them as blots, but inevitable blots, what if the country sets itself a time-limit in which to wipe them out? Is the idea as visionary as at first it sounds?

Mr E. D. Simon, who has just published a very timely book* on this subject, is known far beyond the borders of his own City of Manchester as a practical authority on housing reform. To his detailed experience, gleaned from the day-to-day work of his own Corporation Housing Committee during its most difficult post-war years, he adds an outstanding capacity for visualising needs and possibilities over a wide area and an extended period of time. His statements are measured, his references documented, the frontiers of his subject rigidly defined. Equipped with these qualities, his recent treatise on the slum problem emerges as a perfectly definite policy, costs weighed, time limit indicated, such as a government, given the goodwill of the local authorities, might adopt lock, stock and barrel, as a complete and self-contained programme of housing reform.

The book is divided into two parts. In Part I the author surveys and analyses the present position. Post-war building has, he thinks, already satiated the abnormal demand for houses rented at 15s. and over, and is within measurable distance of meeting the demand for houses rented at between 10s. and 15s. This has not, and is not likely, however, to relieve pressure on houses rented at less than 10s. a week, which pressure is, in fact, expressed to-day in the persistence of unrelieved overcrowding on slum property. Slum clearance schemes he regards as no remedy, rather as the final concomitant of a constructive effort for the provision of new houses at rents which compete with those of the slum property to be cleared. Reconditioning is a palliative for which there is perhaps greater scope in some parts of the country than there is in Manchester, where a policy of reconditioning was pushed to its structural limits before the war. What, then, are the possibilities as regards a new advance towards such provision of lower rented houses as will stimulate an effective " filtering up " of slum tenants? This is the question which he attempts to answer in Part II. He is convinced, in the first place, that salvation lies only through the method of the subsidy; but it must be a subsidy scientifically adjusted to give maximum returns for a minimum of cost. His first string is a measure of de-rating affecting all houses rented at less than 20s. and affording cumulative relief down to a flat-rate assessment for those below 10s., in order that the minimum standard new house may not be penalised as against the lower rented slum property. This would of necessity involve a direct or indirect charge upon the national exchequer. Additional subsidies should be based not on the type of house but on the needs of the tenants, and should take the form of a family rent allowance. He tentatively suggests that an abatement of 1s. per week per child for every family in receipt of an income of 60s. or less would cost some £5 millions per year, and would in effect be the cheapest way of attaining a definite minimum standard of housing. Together with the existing

* " How to Abolish the Slums." By E. D. Simon. Longmans Green & Co. 4s. 6d. net. (Paper cover 2s. 6d.) Pp. xi–146.

Wheatley subsidy, it should enable every family to pay for a standard minimum house. Such, in bare outline, are his major proposals, though they are qualified and expanded in directions which space forbids us to indicate.

Indubitably he has put his finger on the spot in pointing out that whereas the very rich man pays in rates about 1 per cent. of his income, the rates on the cheapest types of post-war houses represent some 10 per cent. of the income of the lower-paid workers. Ultimately it is as true here, though on different grounds, as it is in the case of industry that the traditional rating scheme fails to take account of that ruling principle of good taxation, ability to pay. Some measure such as the one he suggests is sure to be adopted in the end. The problem of reimbursing local authorities for loss of rates has been shown in the last few months not to be insoluble. Whether Mr Simon is on equally firm ground in advocating a rent allowance for children is more questionable. Critics might remind him of the danger of any policy which might conceivably encourage breeding from the least fit section of the people. But this is the only place where he fails to show that he is fully aware of, and ready with an answer to, the possible criticisms that his proposals might raise.

The book supplies just that stimulant which a great body of public opinion, vaguely feeling after better things, needs in order to concentrate its ideas. It provides the data for clear thinking. By stressing facts scarcely realised yet in this connection, that by about 1950 the population of this country is likely to become stationary and therefore that each year, if the rate of building is maintained, a smaller percentage of the houses built will be required for new families and a greater percentage will be available for replacing dilapidated houses, it gives a new and unexpected hope. Collating the evidence of inspectors in new housing estates, Mr Simon has laid once and for all, one would think, the old bogey that most slum-dwellers will take slum habits with them wherever they go. And he has done a service in pointing out so succinctly that we are approaching a housing crisis of a particularly subtle kind. His plans for meeting it form a unity which should encourage administrators to regard the problem of the slums as a manageable problem. The ordinary citizen is thus entitled to ask: " If manageable, why not managed? "

Notes of the Week.

The By-Elections.—The by-election results announced up to the time we go to press are cold comfort for the present Government. In East Toxteth the Conservatives retained the seat, but only by a majority of 3,129 votes, against 9,519 in 1924—the contest on each occasion being three cornered. The Conservative poll shows a drop of 7,447, the Labour a decline of 57, and the Liberal an increase of over 2,000. For the first time in the history of this constituency a Conservative candidate is returned by a minority vote, Mr. Mond's poll of 9,692 comparing with an aggregate vote of 12,769 for the other two parties combined. The loss of the Eddisbury Division of Cheshire, where, in a straight fight, a Conservative majority of 1,669 has been turned into a Liberal majority of 1,292, is even more discouraging for Mr Baldwin's supporters, and suggests not only that Liberalism is far from being a spent force in politics, but that, even in the rural constituencies, the tide is setting against the Government more strongly than might be thought. Finally, the result of the triangular contest at Bath is far from being an encouragement to Conservatives. The seat, recognised as almost impregnably " safe," was held, indeed, by the Government, but the Conservative poll fell from 16,067 to 11,171, and the majority from 7,267 to 3,916. The Liberal vote in this constituency was 1,545 lower at 7,255, and the Labour poll up by 2,445 at 6,359. Yet another minority member is thus returned. The moral of these three by-elections seems to be that Mr Baldwin's essentially negative attitude, exemplified once more by his Leicester speech on Thursday night, is unlikely to secure a working majority for his party at the General Election.

The Petrol Case.—The statement issued by the petrol companies—Anglo-American Oil, Anglo-Persian Oil and Shell-Mex—in response to the Prime Minister's enquiry, is satisfactory as far as it goes, and it is difficult to see what more the Government can expect. The actual costs of producing crude oil are never exactly ascertainable, because allowance must be made for so many intangible expenses, such as drilling failures, depletion of properties and general prospecting. It is therefore impossible for the petrol companies to present exact costs as manufacturing companies in other industries can do. The best that can be expected is to have comparative market prices of the manufactured article in America and Great Britain. These figures are contained in the petrol companies' statement in adequate detail. They show that the cost of landing and delivering in Great Britain a " commercial " grade of motor spirit purchased at the market price of 9¼ cents per American gallon in bulk at U.S. ports is 1s. 2d. per Imperial gallon. This figure includes the petrol tax of 4d. and inland distribution costs of 2¼d.—a reasonable estimate. The retail price of this commercial grade is 1s. 5d. inside the London zone and 1s. 5½d. outside, but allowing for the garage or dealer's margin of 3d. and for rebates given to big commercial users, the average price realised by the petrol companies is stated to be 1s. 1½d. or 1s. 2d. per gallon, according to the zone. These calculations relate to commercial spirit, but this is said to represent the major portion of the trade. On this basis the petrol companies would still be conducting the bulk of their trade, even after the recent rice of 2¼d., at a loss or without profit. The fact is that the Anglo-American Oil Company is the only one of the three which is actually buying its supplies from America. The Anglo-Persian draws its supplies from Persia, and the Shell from all over the world. The Anglo-American does not specifically state that it is paying 9¼ cents for U.S. gallon for its " commercial " spirit, but the passing of its interim dividend in respect of 1928 showed that it was feeling the pinch pretty severely. The general case of the three companies is that the dumping of Russian petrol into Great Britain had forced prices below the level of world values, and that the recent agreement with the Soviet oil agency, which terminated the " price-war," had allowed a return towards the " world-level of prices which in the long run is essential to the maintenance of supplies for the British market." When it is appreciated that the annual consumption of motor spirit in Great Britain amounts to more than 2,500,000 tons (or 750,000,000 gallons) it becomes obvious that the maintenance of the big petrol companies' supplies is a very important matter. The Soviet Government and the " independents " together could not do more than supply fifteen per cent. of the requirements. We are, in fact, dependent upon the good will of the petrol companies for the life-blood of our transport system. It is not, perhaps, a happy thought, but the Government would do well to face it.

Marshal Foch.—With the death of Ferdinand Foch, Marshal of France, a great figure, perhaps the greatest, of the World War has passed from the scene. In measuring his military achievements with those of his predecessors in command of the French army it must be recognised that unity of command, achieved at the Doullens Conference almost exactly eleven years ago, gave him an opportunity vouchsafed to no other general on the Allies' side. To say this, however, is not to detract from his pre-eminence as a soldier and as a personality. The history of 1918 is still vivid in living memory. Convinced that success could be attained only by a war of manœuvre, Marshal Foch proved the truth of his conviction by a masterly conception of strategy which earned him the undying glory, not only of winning victory for the Allied cause, but of shortening the war itself. Those who knew him intimately testify to the many endearing qualities of an unassuming, humorous, and essentially sympathetic character. If proof were needed of his outstanding greatness as a commander-in-chief it is to be found in the simple fact that he was the only man to whom the Allied Governments consented to entrust their combined forces. In his ability to command such confidence, Marshal Foch, so far as it lay in the power of

any one human being, was the architect of victory. France, mourning one of her greatest servants, does not mourn alone.

Monsieur Poincaré Survives.—Last week Monsieur Poincaré succeeded in carrying three motions of confidence through the Chamber—two on Thursday the 14th and one on Saturday the 16th, or, rather, after dawn on Sunday morning. The debate on Saturday related to a matter for which the Government had *technical rather than* political responsibility: the mortality in the French Army on German occupied territory during the recent spell of severe weather. On the other hand, the debate on Thursday turned on what is perhaps the deepest and certainly the most characteristic controversy in modern French politics: the question of Secularism. In general, we may take it as established that, in France, secularism has come to stay; and if the debate on Thursday had turned on the general issue the anti-clericals in the Chamber would have polled a majority that would have included Monsieur Poincaré himself. Many Frenchmen, however, are hostile to the Catholic Church, not so much on principle but because they regard loyalty to the Church as being irreconcilable with loyalty to the State. They are patriots first and anti-clericals incidentally; and it follows logically that the perfect French patriot ought to drop his anti-clericalism in any situation where it can be demonstrated that this international Church is working in the interests of French nationalism. Now in one field this exceptional situation has existed at least since the sixteenth century—one might almost say since the Crusades. In several quarters of the world Roman Catholic missions *in partibus infidelium* have been carried on under the protection of the French State and to a large extent through the agency of French nationals. These missions have propagated, not only the Catholic Faith, but the French language, French culture and French political prestige; and in return they have been consistently supported by the French Government—whether or not the Ministry of the day happened, in home politics, to be of a secularist complexion. As a French secularist patriot once wittily put it, "Anti-clericalism is not for export." But the *mot contains* an awkward implication; for if French Catholic missionaries are still to be exported for the benefit of their mother-country, they must first be manufactured, and where can that be done except on French soil? In other words, French Catholic missionary congregations must have seminaries, headquarters, recruiting stations and bases of operations at home; and the law which aroused such a storm in the Chamber last week, before Monsieur Poincaré carried it through, was precisely a law for granting such indispensable privileges to nine selected missionary bodies. The law has now passed, but the dilemma remains; for while these facilities in France are essential to the congregations if they are to work for France abroad efficiently, the grant of them is undoubtedly a breach in the solid ramparts of secularism at home—and nobody knows better than the Catholic Church how to use such footholds to the best advantage. Thus the French secularists are torn in two directions. There is an issue here which is much bigger than the mere question of how many weeks longer Monsieur Poincaré is to remain in power.

The Closing of Madrid University.—When students intervene in politics it is a symptom that their elders are in some way failing to discharge their civic responsibilities; for other things than politics are normally uppermost in young people's minds, and they do not take political action unless politics are forced on their attention by something obviously and gravely amiss. This can be illustrated by the history of Europe from 1815 to 1848, and from the more recent histories of Russia, Egypt and China. We now have another illustration from Spain; and we judge that the Spanish Dictator's collision with the students of the University of Madrid is of much worse augury for his regime than his previous collision with the officers of the Artillery Corps. The Dictator himself takes the symptom seriously, to judge by the drastic character of his measures of repression as compared with the rather trivial provocation which the students offered him. What the students did was to go on strike from the university courses and to demonstrate in the streets, and it is significant that the professors and the university authorities refrain from condemning their conduct. The Dictator's first step was to set the police on the students, with drawn sabres. He has now gone so far as to close the University of Madrid for a year and a half, and to order all students who are not residents of Madrid to leave the city immediately. The Chancellor and Chapter of the University have been dismissed, and their functions have been handed over to a Royal Commission. Other commissions have been appointed to deal with several technical schools—some in the capital and some in the provinces. Proceedings against the professors are reserved until these commissions have presented their reports. This action is a far more serious blow to the national life of Spain than the disbandment of the Artillery Corps. Spain could well dispense with part of her present army, now that she has happily come to the end of the Moroccan War; but the University of Madrid is a vital intellectual organ of the Spanish nation; and this organ is now to be atrophied at a time when the nation needs—and knows that it needs—to make up intellectual arrears. We prophesy that this last act of the Dictatorship will arouse a more formidable opposition than any that it has yet encountered. Incidentally, this opposition will be stimulated by economic conditions—for the university is one of the sources of the prosperity of Madrid, and the Madrid Chamber of Commerce is already reported to be contemplating a petition to the Government to reverse its decision in the interests of trade. The Spanish Dictatorship is getting into deep waters.

The Future of East Africa.—On Wednesday, March 13th, a debate on the report of the Commission on Closer Union of the Dependencies in Eastern and Central Africa was opened in the House of Lords by Lord Lugard. The opener is the most distinguished living authority on Tropical African administration. His first-hand personal experience covers practically the whole of the latest phase of African history; this experience has been acquired not only at first-hand, but in the practical task of administration; and at the same time, Lord Lugard has retained the mental attitude of a detached observer. Thus, on this occasion, a statesmanlike report was reviewed by a statesmanlike mind; and Lord Lugard's speech should be read widely by his countrymen, in whose hands lies the ultimate responsibility for the wise and right development of these vast African dependencies of the British Empire. Lord Lugard pointed out that the principal issues involved extended far beyond any single colony or group of dependencies; and he suggested that the report might play the same historic *role* in the constitutional development of tropical territories as the famous Durham Report has played in the development of Dominion Status. Accordingly, he urged the Government to take as a pattern the procedure which was to be adopted on the presentation of the Simon Commission's forthcoming report on the Government of India: The proposals of the Government on the African Report should be submitted to a Joint Committee of all parties in both Houses, and a delegation representative of every section of opinion in Africa should attend the Committee and present the whole gamut of local views. Further, Lord Lugard recalled the famous pronouncement which the Imperial Government made in 1923, to the effect that the trusteeship for the native population was the Imperial Government's paramount obligation, and that the existence of this paramount obligation made the grant of "responsible government" out of the question within any period of time that need be considered. On this question he exhorted the tiny minority of white settlers—who, of course, want "responsible government" here and now, on a franchise confined to them—to refrain from forming a hasty judgment. Later in the debate, Lord Davidson expressed a pious belief that "the principles of the settlers were precisely the same principles as were advocated in the report." That remains to be seen—and meanwhile Lord Plymouth, in replying for His Majesty's present Government, intimated that there was no intention of taking action on the report until after the General Election. He also intimated that the present Government still held to the principles set forth in the Declaration of 1923. That is an important point; for if that declaration is definitely accepted by all parties as an agreed and permanent basis of British policy in Tropical Africa, then the future discussion of the Commission's Report can proceed on concrete and constructive lines.

Milk Prices.—In view of the unusual asperity which characterised the annual price discussion last September, between producers and distributors of milk, the report which the Food Council has just presented to the Board of Trade will be read by the public with keen interest. The *casus belli* was the demand of the producers for improved terms, which, they contended, need involve no increase in price to the consumer. In the ultimate settlement, the farmers gained most of what they asked, but only at the expense of an increase in the retail price, which was to be 7d. per gallon for eight months, and 6d. for four months, whereas winter prices had only been charged for six months in 1927-28. The public was on the whole sympathetic to the farmers' demands, but, like the farmers themselves, saw no reason why it should foot the bill. The Food Council, with the aid of a Government threat of compulsory powers, secured trading accounts representing about one-third of the sales of milk in Greater London, and, after adjusting the results, has produced an analysis which is distinctly disquieting. A small group of five private firms, submitting accounts for the year 1927, made a profit of almost 50 per cent. on their capital. The other groups' accounts relate in part to the abnormal year 1926, and, except in the case of a further five private firms, representing again a very small proportion of the total sales, whose profits on capital amounted to 34 per cent., the rate of profit is not given, but judging by the rate of profit on sales, it must have been very substantial indeed. The Food Council then proceeds to calculate the probable sales and profits for 1928-29 on the basis of winter prices for eight, seven, and six months respectively, and reaches the conclusion that there is no justification for charging 7d. a quart for more than seven months. A glance at the table below suggests that this conclusion is probably conservative, especially as the Council points out that where accounts are available for 1927-28 they show much more favourable results than those on which the bulk of the table is based:—

	Net profits in periods covered by accounts.		Estimated net profits in 1928–29 if retail prices of 7d. per quart is charged during:					
	£	% on sales.	8 months. £	8 months. %	7 months. £	7 months. %	6 months. £	6 months. %
2 Co-operative Societies	63,784	10·8	76,427	12·9	68,725	11·6	61,023	10·3
5 Private firms, 1926 & 1926–27	3,397	3·9	3,285	3·8	2,480	2·9	1,675	1·9
6 Limited companies, 1926 & 1926–27	119,790	2·1	148,816	2·6	80,006	1·4	11,196	0·2
6 Limited companies, 1927 & 1927–28*	223,670	3·9	182,470	3·1	124,561	2·1	52,852	0·9
5 Private firms, 1927	3,657	6·4	2,785	4·8	2,225	3·9	1,665	2·9

* Estimated.

The Food Council itself issued a report in 1926, moved thereto by the distributors' action in charging 7d. per quart in September, in which it expressed the hope that in future winter prices would only be charged from October to March. This hope was fulfilled for two years, but now that the dairymen have suddenly demanded two extra months of winter prices, involving higher prices than any charged since 1923-24, and increasing their own margin by nearly ½d. per gallon, the Food Council seems prepared to concede them one extra month in recognition, perhaps, of difficulties caused by the abnormal frost. That the Council's verdicts have weight is shown by the announcement of the co-operative societies that they intend to begin summer prices on the 1st of April instead of on the 1st of May. None the less it is doubtful whether the light of publicity alone can be relied upon to give the consumer all the protection which he needs against price-fixing by powerful trade associations. The Food Council does its work of investigation well. Means have yet to be found whereby to make its decisions uniformly effective.

Civil Estimates: Rating Relief.—A White Paper has now been issued explaining Class X of the Civil Estimates under the title of Exchequer contributions to local revenue, etc. These are all new items compared with original estimates last year, and consist of railway freight rebate, £2½ million; private mineral railways local rates grants, £27,000; and a grant of £13·2 million to rating authorities in respect of loss of rates for the latter half of the coming financial year, in consequence of rating relief to industry and agriculture. It is apropos of this third large item that we would call attention to the confusion and mystery surrounding the finance of de-rating. In the Financial Memorandum attached to the Local Government Bill the cost of the reduction of rateable values was reckoned at £24 million per annum for England and Wales, and £3.2 million for Scotland; these figures included the relief to railways. The Civil Estimates now provide for, roughly, £1½ million more than this. So far, so good. But the Local Government Bill imposes other new charges for which provision does not yet appear to have been made. Additional and supplementary grants to local authorities were estimated in the Memorandum at £2,330,000 in the first full year; it is possible that a proportionate allowance for this has been included in the new estimate, though it certainly does not appear so from the meagre explanation given in the White Paper; and if it is included, why could the fact not have been made clear? There are also to be new grants of at least £5 million a year for England and Wales, and £750,000 for Scotland, which appear nowhere in the published estimates. Where are the £3 million for the half-year, and the administrative expenses of the upheaval, to come from? The Local Government Bills, indeed, provide for an annual raid on the Road Fund to the tune of £3 million, but that is no reason for omitting these new grants from the Budget estimates, and only illustrates the confusion into which the national finances are thrown when a fund created for a specific purpose is used as an extraordinary source of revenue for ordinary expenditure.

Employment in February.—As was to be expected, the volume of employment in this country during February was affected by the severe weather which set in in the middle of the month. The improvement recorded during the first two weeks of the month was followed in the latter part of the month by heavy increases in the numbers of unemployed in trades dependent upon weather conditions, such as the building trade, public works contracting, brick, tile, cement and artificial stone manufacture, canal, river, dock and harbour services, and all branches of the mining group of industries, other than coal mining. An improvement in employment was recorded in many industries unaffected by the weather. There was a substantial increase in the numbers employed in coal mines, while pottery, pig iron manufacture, general and marine engineering, shipbuilding and ship repairing, the textile trades other than cotton and carpet manufacture, the clothing trades, boot and shoe manufacture, and shipping services also showed improvement. According to the *Ministry of Labour Gazette*, among the 11.9 million workpeople insured under the Unemployment Insurance Acts of Great Britain and Northern Ireland, the percentage unemployed (wholly and partially) at February 25th was 12.2. This compares with 12.3 per cent. at January 21st, and 10.4 per cent, at February 20, 1928. The total number of registered unemployed at February 25th was approximately 1,430,000, as compared with 1,434,000 at January 28th, and 1,139,000 at February 27th, 1928. The following table gives the

monthly movements in the unemployment percentage for some years past:—

PERCENTAGE UNEMPLOYED AMONG INSURED WORKPEOPLE IN GREAT BRITAIN AND NORTHERN IRELAND.

	1922.	1923.	1924.	1925.	1926.	1927.	1928.	1929.
End of—	%	%	%	%	%	%	%	%
January	16·2	12·7	11·9	11·5	11·0	*12·0	10·7	12·3
February	15·7	11·8	10·7	11·3	10·4	10·9	10·4	12·2
March	14·6	11·1	9·9	11·1	9·8	9·8	9·6	...
April	14·4	10·9	9·7	10·9	9·1	9·4	9·6	...
May	13·5	10·7	9·5	10·9	*14·3	8·7	9·9	...
June	12·7	11·3	9·4	11·9	*14·6	8·8	10·8	...
July	12·3	11·5	9·9	11·2	*14·4	9·2	11·7	...
August	12·0	11·8	10·6	12·1	*14·0	9·3	11·7	...
September ...	11·9	11·7	10·8	12·0	*13·7	9·3	11·4	...
October	12·0	11·7	11·1	11·4	*13·6	9·5	11·8	...
November ...	12·4	11·5	11·0	11·0	*13·5	9·9	12·2	...
December ...	12·2	10·7	10·9	10·4	*11·9	9·8	11·2	...

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

Since the above figures were compiled there has been, during the early part of March, a marked decline in unemployment, the total number registered unemployed having fallen to 1,268,000 on March 11th. This compares with 1,071,700 at the corresponding date last year.

Cost of Living.—There was a rise in the cost of living during February. At March 1st the index number of the Ministry of Labour stood at 66 per cent. above the level of July, 1914. This compares with 65 per cent. a month ago and 64 per cent. a year ago. The following table shows the monthly movements of the index figures over a number of years:—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All Items. (Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1921.	1924.	1925.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%	%
January ...	85–90	165	77	80	75	75	68	67
February ...	90	151	79	79	73	72	66	65
March.....	90	141	78	79	72	71	64	66
April	90–95	133	73	75	68	65	64	...
May	85–100	128	71	73	67	64	64	...
June	100	119	69	72	68	63	65	...
July	100–105	119	70	73	70	66	65	...
August	110	122	71	73	70	64	65	...
September..	110	120	72	74	72	65	65	...
October.....	115–120	110	76	76	74	67	66	...
November ..	120–125	103	80	76	79	69	67	...
December ..	120	99	81	77	79	69	68	...

For food alone the index stood at 57 per cent. at March 1st as compared with 56 per cent. at the beginning of February, and 55 per cent. a year ago. The increases recorded were largely due to the effects of the very severe weather experienced during February.

Dominion Status.—A Dominion, in the mathematician's phrase, can only be defined by extension; if we want to know what the Dominions are we must first know what are Dominions. The peculiar functions and properties of Dominions have to be discovered in what is common to the members of the list. But the conclusion must conflict with the existence of a single legal, international structure, and as the international status of the Dominions develops, their status in law expands in interest. The Rhodes lecture, delivered last Friday by Mr J. H. Morgan, K.C., Professor of Constitutional Law in the University of London, was valuable in providing a lawyer's answer to the question: What is Dominion status? The key to Mr Morgan's view is his insistence on the maxim, laid down and applied by the Judicial Committee of the Privy Council, the Imperial supreme court, that the Crown is one and indivisible throughout the Empire. The King can indeed sign treaties for Canada alone, make laws for Canada alone, but as King in Canada and not as King of Canada. His ancestors in the Hanoverian succession, down to Queen Victoria, were Kings of two places, Hanover and Great Britain; to-day, no longer two sovereigns in one man, George V. is one sovereign over many places. It follows that in his external sovereign acts he cannot promise for one of his Dominions what he forswears for another. Mr Morgan emphasised this proposition with two illustrations. Dominions have now the power to possess accredited Ministers to Foreign Courts, but the recognition of a foreign sovereign lies exclusively with the King, on the advice of the British Secretary of State for Foreign Affairs. Thus a Dominion could not take upon itself to recognise a *de facto* government in China or Mexico, or the Soviet Union, until it had been recognised by the British Government. Even more pregnant is the proposition that "if war was declared by the King on the advice of his Ministers in Downing Street, nothing short of a Declaration of Independence could achieve the neutrality of a Dominion." The tenor of recent debates in their Parliaments suggests that certain elements in the Dominions are not prepared to accept such a subordinate status and insist on the right of abstention, and therefore of secession on the occasion of war. The refusal of the present Government to acknowledge the proposition is shown by its action in signing the Locarno treaties, not in the name of the whole Empire, but for Great Britain alone, and in the first instance without consultation with the Dominions. Locarno might land us in a war in which the Dominions had no desire to participate, but in which they were legally involved. Whether Mr Morgan is wholly right or not, it is plain that the organisation of the British Empire in its external and intra-Imperial affairs needs clarification and amendment. At present it requires little cynicism to suggest that in international affairs the cumbersome process of consultations with the Dominions is only employed when long delay is convenient. The problem of Dominion independence is linked with that of separating internal affairs from those with international implications—not necessarily more difficult than seems to have been solved in the days when the Secretaryship of State was divided into a Secretaryship for Northern and one for Southern Affairs. At least it seems certain that if the continuance of the British Empire is to be reconciled with the growing independence of its parts, we shall have to implement our promise to abandon war.

South Wales Coal Trade Losses.—A Cardiff correspondent writes:—All the audits of trading results in the coalfields of the United Kingdom during recent months show an improving financial position. In the South Wales coalfield the audit for the three months ended last January records a trading loss of only £222,148, equivalent to 5.54d. per ton on an output of 9,631,630 tons, compared with a loss of £755,153, or 1s. 6.25d. per ton on an output of 9,931,971 tons in the preceding three months. These are the least unfavourable figures for many quarters issued by the Conciliation Board under the agreement entered into on the termination of the national stoppage in 1926, and compare satisfactorily with the debit balance of £216,776, equivalent to 4.41d. per ton on an output of 11,788,224 tons in the three months ended April, 1927. The detailed returns show for the three months ended last January an increase in the average realised pit head price to 13s. 2.26d. per ton, compared with 12s. 9.62d. per ton in the preceding three months, and with the lowest figure of 12s. 8.95d. per ton under the present agreement touched in the quarter ended July, 1928. Even more encouraging than this increase in price is a decrease in the costs of production of about 8d. per ton. The expenditure per ton raised, amounting to 13s. 7.80d., compared with 14s. 3.87d. in the previous three months, and with 14s. 8.50d. per ton in the corresponding period ended January, 1928. The explanation of this decrease in costs of working during a period when there was an actual fall in the quantity of coal produced is to be found in the fact that one of the effects of the wholesale closing down of pits last year was to bring the supply into closer relation to the demand, and that during the period covered by the audit there was a slight expansion in the volume of the export trade. The total losses under the present agreement amount to £4,684,966, and the deficiency represented by the actual trading losses and the sacrifice by the owners of their prescribed nominal share of the net proceeds of the industry reaches the enormous figure of £10,870,608. In view, however, of the improved position of the industry there is now a reasonable expectation that the audit for the three months ended April will, for the first time during the past two and a half years, show a trading profit.

The European Metallurgical Cartels.—Our Paris correspondent writes:—The representatives of the French, German, Belgian and Luxemburg steel concerns, which form the European Steel Cartel, decided at their quarterly meeting last week to increase their maximum export total by 2,000,000 tons during the ensuing three months. This decision was reached in view of the fact that, during the past twelve months, all four parties to the international agreement, as set forth in the *Economist* for March 9th, were compelled, under pressure of the largely increased demand for steel, to exceed their respective maximum quotas. Germany's demand to be allowed to increase her fixed maximum quota was refused by the other representatives, in view of the excessive extent by which she exceeded her maximum last year. The scale of fines for exceeding the fixed export quotas, which it had been suggested should be revised upwards, was left without modification. The question of the admission of Poland to the Cartel was left over until the next quarterly meeting, which will take place in June. The delegates to "Erma," the international rail agreement organisation, following a preliminary meeting in Paris, at which they discussed the renewal of the agreement (which would otherwise expire on March 31), have decided to renew it for a further six years. No communiqué was issued after the meeting, but it is understood that complete agreement was reached between the British and the Continental producers, and that certain concessions were made by the former. The scale of fines for exceeding the export quota fixed in respect of each of the groups in the organisation starts from 20s. per ton. The members of the zinc producers' Cartel, who recently came to an agreement, covering a period of six months, have held a second meeting to examine the conditions in which the agreement shall operate, and to fix definite arrangements. A communiqué issued at the end of the meeting stated that the producers were agreed that the improvement in the situation justified a slowing down in the rate of reduction of production, which rate had been previously fixed at 10 per cent. The rate has now been reduced to 7 per cent., with the understanding that if, for some time, demand continues good, this reduction obligation will be removed.

The Trade in Agricultural Machinery.—The Imperial Economic Committee has published, in its eleventh report (H.M. Stationery Office, 6d. net), a survey of the trade in agricultural machinery which offers one more illustration of the urgent need for international co-operation to secure greater uniformity of statistics. The committee has succeeded in selecting groups of products which offer tolerably comparable figures for the various exporting countries, but there is evidence that these groups give an unduly pessimistic view of Great Britain's position. A further drawback is that, for the bulk of the report, the latest statistics available were those for the abnormal year 1926, though such figures as are available for 1927 and 1928 suggest that this makes less difference than might have been imagined. Of the four chief exporting countries, the United States, Canada, Germany and Great Britain, the last-named was the only one which had not substantially increased its exports of agricultural machinery since 1913, and the United Kingdom's share in 1926 of the total exported by these four countries was less than 8 per cent. Europe, which took nearly two-thirds of British exports (excluding prime movers and tractors) in 1911-13, took only 38 per cent. in 1927, whereas the proportion taken jointly by British South Africa, Australia, New Zealand and India rose in the same period from 9.7 to 34.6. Europe still remains the best market, but 41.1 per cent. of her imports come from the United States and 30.1 per cent. from Germany. Total imports into Europe in 1926 amounted to £5,047,000; imports into South America in the same year amounted to £4,276,000, of which 74.2 per cent. came from the United States, whose total exports of agricultural machinery exceeded those of the other three countries combined. Russia formed a substantial market, taking £1,695,000 of machinery, of which 75.8 per cent. came from Germany. Germany's share in the European market, excluding Russia, amounted to 30.1 per cent., but her exports to the New World formed a very small proportion of the total. The Committee scouts the idea that the preponderance of the United States and Canada in this trade is due to their large home markets, observing that, while a home market is admittedly an advantage, "it is a mistake to assume that foreign markets, even with approximately similar climatic conditions, will demand duplicates of the local patterns. The market ultimately goes to the country which most closely satisfies local requirements both in design, in service for repairs, and in methods of sale." Steps in this direction are already being taken by British producers, but there is still much to be done, and the Committee utters a warning that foreign competition is likely to be more severe than before the war.

Leather and Shoe Trades.—A correspondent writes:—The quiet conditions prevailing in the leather and kindred industries are shown by the latest Board of Trade figures. For instance, the export of boots and shoes made of leather and other materials was valued at £430,982 for February, 1928, and fell to £360,069 for the corresponding month of the present year. The net imports of footwear—after deducting re-exports—for the Februaries of 1928-29 were valued at £291,094 and £218,473. Exports of British sole, dressed, and other sorts of light leather were valued at £711,834 and £443,437 for the two Februaries of 1928-29 respectively—a serious decline which shows the poor purchasing power of customers overseas, and the uncertainty in prices, which, of course, has checked business in leather all over the world. Imports of dressed leather also dropped considerably last month, as compared with February, 1928, the figures for February, 1928, being £819,286 and £484,243 for February, 1929. In undressed leather the decline is even greater, the value for February, 1928, being £1,021,199, as against £475,445 for February of the current year. The uncertain condition of the tanning industry is shown by the fact that imports of wet hides for February, 1928, were valued at £298,425, and dropped to £135,821 last month. In the import of dry hides the figures are even more striking, the value for February, 1928, being £538,007 and dropping to £254,733 for February, 1929. At time of writing, however, values of hides show some signs of stabilisation, and if this turns out to be the case, it will mean a return of confidence, which will do much to pull the allied trades out of the slough of despond in which they have been floundering for the past six months.

American Cotton Crop.—Our Manchester correspondent writes:—On Wednesday last the United States Government published the final report on the cotton crop for the season 1928-9, the amount ginned being given as 14,269,000 bales, against 12,955,000 bales a year ago, and 17,755,000 bales in 1926. The statement published this week was rather below expectations, and, on the figures becoming known, prices in New York and Liverpool advanced several points. It should be mentioned that, on December 8th last, the Government estimated the crop at 14,373,000 bales, and up to January 15th the amount ginned was 13,892,000 bales. During the last few weeks there has been increased speculative interest in cotton, especially in the New York market, and a leading operator bought freely at the end of February, but it is understood he took his profit, which was not very great, last week-end. Owing to big world consumption the statistical position of the article has recently been stronger, and the visible supply is declining from week to week. On the other hand, traders anticipate that at present prices farmers will make every effort to produce a big growth this summer, and there is every expectation of a fair increase in the area under cultivation. The extent of the growth will depend upon the weather later on, but it is recognised that, if higher prices are to be avoided, there will have to be an indication of a yield of not less than 15 million bales. Recently heavy rains in the belt have delayed farm work, but drier conditions are now reported.

An American Bank Merger.—The news of the impending merger between the Hanover National Bank and the Central Union Trust Co. of New York shows once more that American bankers are not unmindful of the advantages of large-scale operation as practised in Great Britain. The new company will have net deposits of $400,000,000, which, while still small when judged by the standards of the "Big Five," nevertheless bring this institution well into the front rank of American banks. The new combination, too, seems likely to be a well-balanced one, the Central Union Trust Co. supplying the "city" and foreign element, and the Hanover National Bank the country connections. In one sense there is no question of the new organisation being in any way comparable with a large British bank, if only because of the absence in America of the British system of branch banking. In this particular case, the Hanover National Bank only possesses eleven branches; it is not clear that these branches have power to carry out every kind of banking business. The strength of the Hanover National Bank clearly lies in the fact that it acts as New York correspondent for numerous up-country banks. It must be remembered that while such up-country banks all preserve their nominal independence, in many cases their relations with their New York correspondent are very close indeed, so close as to resemble the relations between a parent and its offspring. In fact, the distinction between the British system of many branch banks under a common ownership and control and the American system of families of banks is at times a fine one. This both emphasises the need in this country of a better knowledge of the actual operation of the American banking organism, and also adds to the importance of mergers such as the one discussed above.

Employers' Liability Assurance Corporation. — The shares of this company have recently weakened, partly on account of fears as to the outcome last year of the American casualty business, in which it is heavily interested. The 1928 accounts are reassuring, for although the profit in this section is lower, it is still substantial, and the decline has been more than made up in other directions. Nearly 90 per cent. of the total premium income of £7,493,000 is derived from the general department, which is understood to be preponderatingly American casualty business; and, so long as the company's business is not more diversified, fluctuations of fortune must naturally occur on a greater scale than is usual with other composite offices. During last year the total premium income expanded by £924,000, practically the whole increase being due to the General department. The unfortunate experience of the company's subsidiary, the Merchants' Marine, has been responsible for a serious drain on resources in recent years. The investment has now been written down from an original cost of £750,000 to £125,000, and, including a transfer last year of £165,000 from general reserve, an investment reserve of £290,000 is now available to meet eventualities. The complete results of the past two years are set out below:—

	1927.		1928.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
	£	%	£	%
Fire	64,482	16·1	45,053	11·0
Accident	— 6,153	— 1·7	33,587	9·0
General	275,847	4·7	225,715	3·4
	334,176		304,355	
Adjustment of Exchange	9,329		15,771	
Profit from Investments	22,174		20,469	
	365,679		340,595	
Taxes	190,213		147,843	
	175,466		192,752	
Written off Merchants' Marine Investment	125,000		...	
Total Net Surplus	50,466		192,752	
Excess of Cost of Dividend over Interest Earnings	59,274		57,958	
Net Increase in Total Resources	— 8,812		134,794	

The dividend, at the rate of 80 per cent., is the same as in each of the preceding seven years, and the higher cost is due to the issue at 80s. last December of an additional 100,000 shares at £1, with 5s. paid up. This issue was made as part of an arrangement whereby the share capital of the two American subsidiaries was transferred to American Trustees, and the original amount of £870,000 sunk in this investment was repaid in cash. This sum will be fully remunerative during the current year, and may be expected to reduce the gap between cost of dividend and interest earnings from nearly £60,000, to about £30,000. At the present price of 80s. the shares yield 5 per cent. net of income tax—a high return for an insurance share.

Provident Association of London, Limited.—Although this company transacts ordinary life assurance business, its principal activities are connected with the issue of what are known as Bond Investment Policies. These policies are in reality sinking fund assurances and their purpose is mainly to act as collateral security for the mortgage of house property. The Association has, in fact, made a speciality of assisting the middle classes to purchase, by the aid of mortgages, their own houses. In this sphere it has done, and is doing, a very useful work with great success. At the end of last year in respect of total funds of £10,355,000, no less than £5,678,000 was outstanding in respect of advances to policyholders. During 1928 the Association granted advances upon house property to the amount of £863,000, this figure being a large increase on the 1927 total of £670,000. An interesting analysis of the advances during 1928 is furnished in the report, and from this it appears that the total of £863,000 advanced was in respect of 1,950 borrowers, the average amount of each advance being £443. The rate of interest charged on the advances is 5 per cent., so that the annual liability of the borrowers in respect of interest is £43,000. According to the surveyor's reports, the annual income from properties mortgaged amounts to £86,000, and this is said to be sufficient to meet the whole of the interest payable, the rents, rates, taxes and repairs, and a substantial part also of the yearly payments required for premiums on the policies mortgaged as collateral security. It may be mentioned that advances for purchase of house properties are granted to policyholders of one year's duration to the extent of 80 per cent. of the purchase money, and after 5 years 100 per cent. of the purchase money is advanced subject to certain qualifications.

British and Foreign Marine Insurance Co., Limited.—The adverse experience of marine insurance, which has been common to so many companies, is in no way reflected in the accounts of this Liverpool marine institution, for in each of the last five years, from 1923 to 1927 inclusive, the company has earned a profit, even though in some years the amount has been small. The form of accounting used by the company is that known as the "Liverpool" plan, whereby each underwriting account is kept open for two years and thereafter balanced by a transfer to suspense account charged with the function of meeting the third and subsequent years' claims. The underwriting results of the last five completed underwriting accounts are shown below:—

Year.	Premium Income.	1st and 2nd Year Claims & Transfer to Suspense Account.	Expenses.	Surplus.
	£	£	£	£
1923	589,465	451,080	118,646	19,739
1924	592,961	455,558	123,395	14,007
1925	489,382	343,807	92,015	53,560
1926	469,493	366,979	96,462	6,052
1927	502,387	385,100	93,152	24,134

The new underwriting account of 1928 shows a large increase in premium income from £502,387 to £611,729. The experience so far holds out promise that a fair amount of profit will emerge when the account is closed at the end of the current year. The claims and expenses have together absorbed £250,271, leaving a fund of £361,458, equivalent to 59 per cent. of the premiums. The corresponding fund at the end of the first year of the 1927 account was 56 per cent. of the relative premium income. The normal dividend of £2 10s. per share has been maintained and will cost £134,000, and this will be met out of the interest income, which has risen to £137,594. The company is controlled by the Royal Insurance Co.

Merchants' Marine Insurance Co., Limited.—In conspicuous contrast with the consistent profit record of the British and Foreign (whose accounts are reviewed elsewhere) is the devastating experience of the Merchants' Marine. How it happens that two such companies (and there are other examples) working in the same field, each presumably with much the same opportunities, should produce such diverse results it were hard to explain. The outcome of the 1927 underwriting account as shown in the report for 1928 is another serious loss amounting to £175,776. The following table sets out the results of the last five underwriting accounts:—

Year.	Premium Income.	1st and 2nd Year Claims and Transfers to Suspense Account.	Expenses.	Deficit.
	£	£	£	£
1923	446,401	484,695	46,706	85,000
1924	395,466	450,985	45,734	101,253
1925	335,557	388,656	43,644	96,743
1926	325,939	472,049	41,301	187,411
1927	396,295	533,169	38,902	175,776

The effect of the loss on the 1927 account has been to increase the profit and loss debit balance to £301,281. The directors have taken drastic steps in the hope of bringing about an improvement, and the 1928 account in the first year of its history certainly inspires some hope that their efforts may meet with a measure of success. The 1928 premiums amounted to £367,999, and, after meeting expenses and first-year claims, there remains a sum of £230,435, equivalent to 63 per cent. of the premiums, wherewith to enter the second year, compared with 58 per cent. in each of the past two years. So far as the policyholders are concerned their contracts are protected by the guarantee of the Employers' Liability, by whom the company is controlled. In addition to the marine department, there is a small fire and general business, which produced last year a premium income of £62,058 and yielded a profit of £5,000.

Oversea Correspondence.

UNITED STATES.—MONEY—TREASURY BORROWINGS—INDUSTRY.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 8.

While the attention of the financial community was temporarily diverted to the inauguration of President Hoover, the forces working for a tight money market gained further ground. Call money rose to 12 per cent., and even that rate, the highest in effect since the beginning of the year, did not draw much money this way. The last week in February and the first half of March are a period of heavy demand for credit. Money rates are often firm in early spring. The farming country makes its yearly settlements around March 1st, and interior banks withdraw funds on deposit in New York. Corporation dividend and interest payments are large, this year totalling close to $500,000,000. Activity in building and other industries rises with open weather and more credit is needed. Finally, preparations by the banks, corporations and individuals for income tax payments on March 15th have an astringent effect on outstanding credit.

The New York Stock Exchange is now operating on a small margin of call money. Small deductions or additions to the supply affect the rate in marked fashion. Speculative Wall Street, however, had counted on any rise in the call rate above 8 per cent. attracting plenty of money. Failure of the 8 per cent. renewal rates of the past few days to bring in money, and the consequent necessity for stock traders to raise their bids to as high as 12 per cent. for accommodation, first caused surprise. Finally, however, the feeling grew that the Federal Reserve Board's influence was becoming real, and the more hasty at once jumped to the conclusion that an immediate rise in the discount rate would take place.

The stock market, which last week made a great show of "discounting" the incoming administration, and talked glibly of a great "Hoover bull market" which would make the "Coolidge bull market" look insignificant, found itself overbought on inauguration day and sold off sharply. The decline was extended a great deal further by high money, and at the moment the market is a trifle steadier on the passing of another week without change in the discount rate. However, prices after recovering all the early February loss are now about 10 points below the recent peak. Sentiment remains as confused as ever, with the majority expecting a further decline but no real bear market.

It is fair to presume that the current high money rates could not exist without co-operation on the part of the member banks with the Federal Reserve banks. At this time corporations are unable to place more credit into the call money market; instead commercial borrowing has been rising steadily for the past three weeks. Member banks, meanwhile, are doing their best to refrain from increasing their loans in the call market in an effort to conform to the wishes of the Federal Reserve authorities. The resultant high money rates and the decline in share prices is, for the moment, increasing the chances of the Reserve banks of regaining control of the money market. But in the best banking quarters there is a good deal of doubt of eventual success without firmer steps being taken, and taken shortly. Certainly the spectacle of 12 per cent. call money, good commercial paper commanding 5¾ per cent., time money tight at 7¾ per cent. and a bill rate of 5¼ per cent. seems curious alongside a 5 per cent. bank rate.

The week's reports of the Federal Reserve banks throw no great light on the situation. The system has continued to allow its bill holdings to decline, a drop of $30,000,000 being shown for the week of March 6th. Holdings of Government securities were only nominally smaller, and the member banks increased their borrowings by 37 millions. These changes brought a net increase in total reserve credit outstanding of only $4,000,000. The total is, however, $243,000,000 above a year ago, and around $500,000,000 higher than what was considered a normal figure before last year. All the increase in discounts was accounted for by the member banks in this district, but it probably was due to making good the withdrawals by interior correspondents. New York lost gold to the country during the week, and although its reserve ratio dropped from 81.6 per cent. to 77.3 per cent., it remains the highest in the system.

Brokers' loans are rising. After a net decline of $50,000,000 in February, for the New York district, last week brought a gain of $30,000,000, and this week there was a rise of $140,000,000. A month after the Federal Reserve Board issued its warning to the member banks and to the stock market, credit in use on the Stock Exchange has risen to within $22,000,000 of a new high record. Still, the feeling prevails that no immediate discount rate action is likely. The feeling is less pronounced than it was, chiefly because this week the Treasury announced its financing programme for March 15th, and with borrowing out of the way some people feel that the Treasury, which has opposed a higher discount rate, would be more favourable to a restrictive policy.

The Treasury is having to pay 4¾ per cent. on the nine months notes announced for March 15th, as compared with a 4¼ per cent. rate paid last December and a 4¾ per cent. rate paid last autumn. A year ago, however, the Treasury was able to borrow at 4¼ and 4⅜ per cent., but it was criticised vigorously because, after cutting a close corner, the Reserve discount rates were raised, in April and May, from 4 to 4½ per cent., and the new issues went to a considerable discount. The high rate being paid at this time probably is significant of nothing more than that the Treasury wishes to give the banks a fair chance, since similar Treasury notes are selling on about a 4.60

per cent. yield basis. The Treasury on March 15th will have to meet maturing obligations of $559,831,000 and interest payments of $60,000,000. The new issue is for but $475,000,000, so that an increase in income tax collections evidently is expected.

Although the corporation tax rate has been reduced from 12½ per cent. to 12 per cent., annual reports submitted to date indicate that profits were about 14 per cent. higher in 1928 than in 1927. Individual earnings probably also were higher, and the Government stands to collect more tax money. First-quarter earnings in the current year are bound to be higher in the main than for the same period of last year. Already the steel industry has reached an operating rate of between 90 and 95 per cent. of theoretical capacity, which means close to actual effective capacity. Prices continue to grow firmer and demand broadens. Copper and mining companies generally are producing at full capacity, and copper metal is firmly established at 19½ cents a pound, the highest prices in five years. Motor production so far this year has increased 10 per cent. over 1928. Estimated output for February of 468,000 cars and trucks, including Ford, sets a new high record for the month.

FRANCE.—POLITICS—FOREIGN TRADE—PRICES—PRODUCTION—BOURSE.

(BY OUR CORRESPONDENT.)

PARIS, March 20.

THE attacks of the Radicals against the Government are continuing, but these do not now appear likely, for the moment, to attain even the level of success that recently resulted in M Poincaré's majority being brought down to the nominal one of six votes. Majorities of 46 and 68 votes have this week confirmed the belief that the Ministry commands sufficient support, independent of a single Radical vote, to enable it to carry on. Owing to Radical obstruction, the new Rent Bill, which it was hoped to being into operation with the coming quarter day, has had to be postponed, and for the same reason progress with other measures is slow.

In response to the clamour from all parties for some immediate measure of fiscal reform, to remove the more glaring anomalies in taxation created by years of desperate expedients to keep the wolf from the Treasury door, the Government has promised that this shall be dealt with in the Budget Bill, which is to be laid before the Chamber in May. A large section of opinion urges that part at least of last year's realised surplus of £24,000,000 odd shall be utilised for taxation relief. M Chéron takes the view that such a course would be a palliative only, and that the whole question should be dealt with comprehensively. Reform of the inequalities in taxation on yield from securities may possibly form part of the 1930 Budget Bill. The main lines of M Chéron's programme include modification of the land tax, the extension to all forms of taxation of the recognition of the principle of lightening the burden on taxpayers who have family obligations, the prudent replacement of the tax on turnover by one on production (as already in operation in regard to meat and coal), the "perfecting" of the luxury tax (which the Minister insists cannot reasonably be suppressed), the lowering of transport taxes on foodstuffs, and the reduction of succession duties on small estates passing in direct line.

The taxation problem is assuming even greater importance here than in Great Britain owing to the fact that French manufacturers, as shown by the wholesale prices index figures below, have now lost the export premium they possessed during the long vicissitudes of the franc and have to face keen competition, unaided by this artificial support. Last year's foreign trade returns left this country with an adverse balance of 2,101 millions, imports having exceeded exports by just over 4 per cent. This, although apparently serious, was really negligible, seeing that in pre-war days France normally had an adverse balance of from 20 to 25 per cent. The January figures, however, when imports exceeded exports by 1,472 millions, or 40 per cent., were much more significant, particularly when it is noted that imports of foreign manufactured goods were 258¾ millions more during the month and exports of French goods of the same kind 211 millions less. Exports of traditionally French products, such as yarns, piece-goods, dresses and *lingerie*, are being particularly hard hit in the foreign market by German and Swiss competition. The French manufacturer's problem, now that he is again forced to compete on equal terms, is to find the means to bring down his cost of production and recover his lost foreign markets. In January France sold 30 per cent. less of her products to the United States, 20 per cent. less to Germany, and 10 per cent. less to Great Britain, as compared with January, 1928, while the United States increased her sales to France by over 33 per cent., Germany by over 30 per cent., and Great Britain by nearly 10 per cent.

The general index figure for French wholesale prices at the end of February is returned by the Statistique Générale at 652, or a rise of 8 points on the month and of 15 since December, the figure for which was the same as for February, 1928. This figure is the highest recorded since November, 1927, but is still 202 points below that returned for July, 1926. The detailed figures (based on 100 as representing prices in July, 1914) are as follows:—

	Articles.	End of month of Dec.	Jan.	Feb.
General index figure	45	637	634	652
French products	29	631	639	648
Imported products	16	646	651	658
Foodstuffs (general figure)	20	589	599	611
Vegetables	8	590	616	629
Meats	8	579	580	590
Sugar, coffee, cacao	4	607	605	617
Raw materials (general figure)	25	679	683	687
Minerals and metals	7	609	610	627
Textiles	12	762	775	772
Various	12	673	672	672

The principal rise was one of 17 points in ores and metals, but the marking up of meat and vegetable prices, owing to the arctic weather, was also appreciable. The most notable feature of the return, however, is that at the end of last month the prices of native French and imported products were represented by index figures that left goods of foreign origin only 10 points dearer than native goods, which is a closer approximation than has hitherto been reached. Worked out into gold, the French figure for February is equivalent to 130.4, as compared with 142 in England at the end of January, 139 in Germany, 143 in Switzerland, 146 in Holland, 122.4 in Belgium, and about 135 in Italy. The retail price figure for Paris at the end of February (based on 13 articles in common use, nearly all of French origin) is returned as 602, as against 522 in February, 1928, and 585 in February, 1927.

Industrial production in January is given a general index figure of 136, as compared with 134 in December, 132 in November, and 116 in January, 1928. Of the seven categories of industry covered by these figures, which are based on 100, as representing production results in 1913, motor-car manufacture maintains its long lead with a general figure for January of 692, against 599 last March, when this industry was first included in the list. Textiles lost another point in January, and dropped to 97, or three points below their 1913 level. Engineering (154) and metallurgy (132) have each a slightly improved figure, but building, although a substantial amount of work appears to be in hand throughout the country, is four points below its pre-war situation, although still 29 points better than in January last year. Railways, notwithstanding improved receipts (due to increased fares, which have been cancelled out by additional taxation) had scarcely as good a volume of traffic in January as in the corresponding month of last year, the number of wagons loaded per day being only 59,584, as against an average of 60,426 in January, 1928. Shipping figures for January, although substantially below those for December, show inward cargoes totalling 4,138,000 tons, against 3,563,000 tons in January, 1928, and outward cargoes of 3,534,000 tons, against 3,147,000 tons in the corrseponding month of 1928.

Iron and steel production figures for January, which are now available, show appreciable increases in the output of both staples, and set up entirely fresh monthly records for this country. The total output of iron during the month was 837,000 tons, against 828,000 tons in December, 763,000 tons in January, 1928, 673,000 tons in January, 1927, and 559,000 tons, the average monthly output in 1913 (Alsace-Lorraine plants included). The total output of steel was 905,000 tons, against 882,000 tons in December, 809,000 tons in January, 1928, 805,000 tons in January, 1927, and a monthly average of 749,000 tons in 1913 (Alsace-Lorraine plants included). The number of blast furnaces in activity at the end of January was 157, compared with a monthly average of 190 in 1913.

Bourse quotations for leading industrial and financial issues suffered a slight setback during February. The figure for 52 French shares giving a fixed yield, which in January touched 86 (as compared with 100 in 1913), having steadily moved up from 80.4 at the beginning of 1928, dropped to 84.5 at the end of February. The figure for shares in French companies yielding variable dividends (based on 100, representing the 288 quotations as they stood in 1913), and which had an index figure of 334 in February, 1928, are for last month returned at 548—a rise of 5 points on the month, and indicating an improvement of 10 per cent. on their 1913 quotations.

GERMANY.—BUDGET—CREDIT.

(FROM OUR CORRESPONDENT.)

BERLIN, March 19.

THE Finance Bill, containing the Budget for 1929-30, was last week read to the Reichstag and is now in the hands of the Budget Committee. As the Bill could not become law before the end of the financial year, an emergency Bill, authorising the Government to spend until June 30th on basis of the 1928-29 Budget, had to be presented. In Committee the authorisation to make one-quarter of a year's expenditure was altered to one-fifth. The Budget is not likely to be disposed of before June, and its fate is doubtful. The Cabinet insists upon a deficitless Budget, and will resign if it does not get its way. The four parties which are associated with the Government, though they have not bound themselves to support it, have not come to an agreement, and are not at present conducting any formal negotiations. The chief difficulty lies with the German People's Party, which has declared against any addition to taxation, and holds that the whole deficit which would result if its demand were conceded could be covered by cutting down expenditure. It has behind it all the central industrial, commercial, and banking associations which have so far expressed themselves. The opposition German Nationals also oppose new taxation, but profess to hold that the Government, in view of the Reparation position, should have "the courage" to put through a Budget with a deficit. This is, of course, a wrecker view, and there is strong suspicion that the People's Party, without wishing to go so far, is influenced by the desire to demonstrate to Paris that the Finances are hopeless. The Socialists wish the Budget to pass, though they do not approve of all of it, and have announced that they reserve their judgment on the increase in the beer excise duty. The Centre stands for an inter-party agreement, but would oppose any reduction of social expenditure; and the German-Democrats, also in general friendly, desire a practical policy of reduction of expenditure. The People's Party declares that its anti-taxation programme is not presented as an ultimatum, but it shows no sign of weakening.

Dr Hilferding's plan for additional taxation has not been changed. As already reported, the total is 379 million marks, that is 165 million marks from beer, 90 million marks from spirits, 20 million marks from the inheritance tax, and 104 million marks from the property tax. The beer tax, as Dr Helferding pointed out, is still low, being about one-fifth of the British, while the spirits tax is one-fourth of the British. The Reichsrat rejected the Cabinet plan (which fulfils a promise made last year when the wage-income-tax was reduced) to cut down slightly the income tax rate on medium incomes. The Reichsrat changes are not very important, but this will have the effect of delaying the passing of the Budget by the Reichstag.

The real question is whether the new taxes will be voted, or will be rejected with the result of a Cabinet resignation. The third course, a sufficient reduction of expenditure to make new taxation unnecessary, is hardly practicable. The People's Party, which insists on it, has put forward no concrete scheme. It is true that expenditure might be greatly reduced if the proposed general scheme of central and local administrative reform were put through; but without that, and in the short time available, a heavy reduction seems to be prevented by the circumstance, above referred to, that by far the greatest part of the federal expenditure is, by its nature, practically fixed. The net expenditure of the Republic is 9,825 million marks. Entirely or practically irreducible are the items:—

	Millions of Marks.
Reparations	1,540·5
Internal war burdens	270·6
Military and war pensions	1,671·7
Financial administration	514·9
Service of debt	435·5
Subventions	3,470·9
	7,904·1

Of the remaining sum, which is less than 2,000 million marks, 690 million marks go for social purposes, 255 million marks for economic purposes, 750 million marks for defence, and only 125 million marks for general administration; that is, for President, Legislature, and the Ministries of Foreign Affairs, Interior, Industry, Labour, Food, and Communications.

A Budget with a deficit is out of the question. Apart from objections of policy, it is impossible to float a long-term loan, and the Government's need of short-term credit for existing and impending liabilities is already too great. The Finance Ministry has had to arrange for a 150 million mark credit from the commercial banks, which will be repaid in April when the quarterly tax payments come in. The cash position is bad, in part because expenditure in the second half of the financial year normally exceeds revenue, but mainly because of the carrying-over from year to year of extraordinary-Budget deficits, which it was optimistically expected could be covered out of long-term loans. The proposal that for this purpose the Republic should dispose of Railways Corporation preference shares is rejected by Dr Helferding on the grounds that this would hamper the reorganisation of the railways after the Reparation charge is paid off, and further that, in the present position of the capital market, the shares would depreciate.

As the attempt made here to spread panic about the Republic's finances may have some effect—as is, indeed, designed—abroad, it may be said that there is no good reason why the proposed taxes should not be voted. The additional taxation of consumption is very small, the addition to the inheritance and property taxes is infinitesimal. All the new taxation is only some 6 marks per head of population, and it is only 1 mark per head if the additional Reparations liability, which was foreseen, is ignored. A report accompanying the Budget shows that on July 1, 1928, nearly 1,200 million marks credits had been given to agriculture, shipping, housing, and other interests, part of these credits to individual industrial concerns which had no claim on the State; and that further 800 million marks had been guaranteed (in addition to a 400 million mark dividend guarantee for Railways Corporation shares) to other interests. Losses, which will not be made good, have already been suffered on some of the guarantees to private interests.

Money last week remained relatively dear. Preparations for the quarterly settlement began earlier than usual. This week, day loan rates declined, being to-day 5-7⅛ per cent. Month loans have been dear, and the private discount rate remains high at 6⅛ per cent. The Reichsbank's return for the second week of March shows a very small

THE MERCANTILE BANK OF INDIA, Ltd.

Head Office: 15, Gracechurch Street, London, E.C.3.

Capital Authorised	£3,000,000
Subscribed Capital	1,800,000
Paid-up Capital	1,050,000
Reserve Fund and Undivided Profits	1,584,846

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and conducts every description of Banking Business in Connection with the East.

Fixed Deposit Rates will be quoted on application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.

Trusteeships and Executorships Undertaken.

JAMES STEUART. *Chief Manager.*

decline in discounts, and a new heavy drop of 60 million marks in the legal-cover exchange reserve, which is down to 68 million marks. The fourth of the " D " banks, the Darmstaedter und National, announces a 12 per cent. dividend, unchanged. The gross profit was 82,932,515 marks, as against 80,785,555 marks in 1927; net, 16,710,349 marks, against 16,270,553 marks. By adding 5,000,000 to the special reserve, the combined general and special reserve is brought up to 60,000,000, or 100 per cent. of the capital. Turnover increased 30 per cent., deposits 33 per cent. The bank seems to be in a very strong position. About one-third of deposit liabilities are to foreigners; 24.6 per cent. are in foreign currencies, and these are covered as to 62 per cent. by liquid foreign-currency assets. Over 81 per cent. of total balances with banks are held with firms abroad.

BELGIUM.—COAL INDUSTRY—RAILWAY RATES —INDUSTRIAL ACTIVITY.

(FROM OUR CORRESPONDENT.)

LOUVAIN, March 16.

THE position of the coal industry in Belgium has greatly improved since the beginning of the winter. The most visible sign is the diminution of coal stocks, which fell from 1,800,000 tons in January, 1928 to 977,000 tons at the end of January, 1929. This, the latest available figure, does not yet show the influence of the extremely cold weather, which increased the demand for fuel and gave a feverish turn to the market. At the same time, transport was paralysed, and the cold weather interrupted the washing of coal, while influenza prevailed among the workmen and hence output decreased. Thus fuel prices are beginning to rise. Although the position has been abused by some sellers, the increment is generally moderate, amounting to about 10 francs (1s. 2d.) per ton. Foreign competition is likely to prevent any exaggerated increase in prices.

Apart from these purely temporary influences, some permanent factors are at work to bring about improvement in the coal industry. Rationalisation has increased the output per man. It was 525 kg. per working day in 1913 and fell to 461 kg. in 1924. The average production of 1927 rose to 517 kg.; in the last four months it appears to have reached about 565 kg. This is less than in Great Britain, where it is about 1,050 kg., but one ought not to lose sight of the fact that Belgian coalmines work their coal by washing, sorting and blending it, so that, though hands are more numerous, much more profitable prices can be obtained.

In 1928 five amalgamations of coal companies were registered, and eight pits of small value were closed. Notwithstanding this, there is actually a shortage of labour. Further, the " Comptoir des Charbons," which was founded at the end of 1928 in order to rationalise selling, has started operating; it groups all the Belgian coal mines, exclusive of those of the Liege basin, which are of little importance.

Recently, under the patronage of the Société Générale de Belgique two companies were created which will improve the position of mines extracting gas coal in the district of Mons. They are the Carbonisation Centrale (subscribed capital amounting to 75 million francs, or £420,000), which controls the best coke-furnaces and recovering apparatus, and the Carbochimique (capital 150 million francs), which will manufacture chemical fertilisers from by-products. It will principally make sulphate of ammonia by a process resembling the Haber process used by the Germans. The position of Belgian collieries has been distinctly improved by general activity of the fuel-consuming industries and particularly of the heavy metal trades. The output of cast iron and steel keeps on progressing, and the blowing in of blast furnaces now in construction will raise it still higher.

Finally, the competition of German coal has slackened a little in consequence of a rise in the Ruhr costs resulting from an increase in wages.

In Belgium transport, especially of fuel, was very defective in February, and still is so. The railways are short of trucks, as much rolling stock has been held up by the cold weather. A request for a loan of trucks was addressed to France and to Germany; Germany immediately sent 1,800 trucks. On March 1st railway goods rates were raised 10 per cent. and passenger fares 5 per cent. Probably it will be necessary later on to increase the rates again.

Economic activity remains very satisfactory throughout the country and every day new businesses are created. At Louvain the building of Philips's new works began this week. The Boerenbond (League of Peasants), who enjoy enormous financial power, are going to build a big slaughter house for the preparation and tinning of pork. This is a line in which Belgium has not hitherto engaged. The Boerenbond, whose endeavours are usually successful, have prepared this project carefully in every detail. In the textile industry the situation is mediocre. For the rest, Belgian industry is really active and sufficiently prosperous in spite of unavoidable difficulties. The Legislative Elections, which will take place at the end of May, are important enough to give rise to a certain anxiety, especially as regards the financial situation.

SWEDEN.—PRODUCTION—TRADE BALANCE— CAPITAL EXPORT—STOCK EXCHANGE.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, March 16.

A FINAL review of 1928 shows that the great labour conflicts only temporarily checked the very favourable economic development of recent years. For the first quarter the *Svensk Finanstidning's* index-number fell from 117 to 78 (1923/4=100), but in the second and third quarters it rose again to 115 and 114 respectively, the latter figure being higher than the corresponding 111 of 1927, despite the fact that the dispute in the iron mines was not concluded until the end of August. For the fourth quarter the figure rose to 129, compared with 117 in 1927. The average for the whole year was 110, compared with 115 in 1927, though these figures scarcely give a fair representation of the development of production during the year as a whole. We shall come nearer to the truth if we ignore the abnormal conditions of the first quarter and compare the three last quarters of the last two years. For this period the volume of production for 1928 was 120 and for 1927 it was 115.

The effects of the labour conflict are naturally most clearly seen in the output of iron ore, which did not exceed 71 per cent. of the 1923-4 production, as against 164 per cent. in 1927. Pulp suffered next in order. The index-number sank from 134 to 117 and the decline affected all kinds except wet mechanical. The output of paper was reduced surprisingly little—from 126 to 122—i.e., only 3.3 per cent. as compared with 14.5 per cent. for pulp. Finally, as regards the sawmills, production was even increased from 97 in 1927 to 100 for 1928. If it is possible to observe, as a rule, expansion during 1928 in the industries affected by the labour disputes, this is true also, though in a higher degree, of other important industries. Most pronounced, is the recovery in the iron and steel industry. During the year as a whole production increased by no less than 14 per cent., an improvement which mainly affected finished goods, though also to a considerable extent semi-manufactured goods. In the engineering industries exports, which amounted on the average in 1923-4 to Kr. 133 million, reached Kr. 201 million in 1927 and Kr. 259 million in 1928.

As a result of the quickening of output during the autumn, the trade balance was much more satisfactory than could have been expected at an earlier stage. As against the estimated excess of imports of Kr. 200 million, the actual figure was only Kr. 143 million. Even this figure is much worse than that of 1927, when there was a favourable balance of Kr. 34 million. A closer analysis of import and export figures shows that this movement of the trade balance was due mainly to the labour disputes. It is true that imports increased considerably, both of capital, raw materials, semi-manufactures and foodstuffs. But this increase may be regarded as the natural result of the economic progress of the country and its increased prosperity. As seen against the background of expanding exports it is in no way disquieting.

The contrast with 1927. if we consider the effects of these developments on the money market, was striking. Whilst the volume of credit in the latter year sank by Kr. 218 million, it was increased in 1928 by Kr. 159 million, and whereas the balance of payment in 1927 showed an improvement of no less than Kr. 200 million, in 1928 the position was worse by Kr. 37 million.

A material change in exports of capital is evidenced in 1928. Taken over the whole year the net export of capital rose from 46 millions in 1927 to 65 millions in 1928, but quarter by quarter there was a sharp decline. Gross exports fell from 208 millions in 1927 to 190 millions in 1928. It may be regarded as fairly certain, however, that this movement is merely of a temporary nature, for Sweden has in the course of her rapid economic progress of recent years reached a position in which the export of capital is a perfectly normal feature. As Sweden formerly imported capital, this is a valuable and reliable gauge of what the post-war expansion has really meant. Import of capital still continues—to quite a large extent, in fact—but even if it stopped altogether there is little doubt that there would still be a margin for export, given a reasonably normal freight revenue and a not too adverse trade balance. As the revenue from freights tend to rise with the growth of Swedish shipping and the adverse trade balance is likely to diminish and even to be transformed into an active balance, it is probable that the export of Swedish capital will continue as a factor of importance.

The intimate connection with the international money market to which these movements give rise, cannot of course fail to influence the Swedish money rate. Thus the rising tendency in foreign discount rates, coupled with a growing demand on the home money market, resulted in 1928 in successively rising money rates. The Riksbank had at the beginning of the year reduced its discount rate to 3½ per cent. and its rediscount rate to 3 per cent., but it was compelled to increase the discount rate to 4 per cent. in May and to 4½ per cent. in August, at which time the lower rediscount rate was also withdrawn. The effective increase was therefore 1½ per cent.

The growing confidence in investments constituted the deciding factor in the course of stock exchange values. It frequently happens that independent initiative is lacking almost entirely and that the Stockholm Exchange confines itself to registering the changes which have taken place on foreign exchanges in Swedish securities. But even if every allowance is made for this a very material improvement can be recorded for 1928. The " A " list shares rose in all by 818 million kronor, as against 598 million kronor in 1927. If the shares affected by quotations abroad are disregarded the increase of the remainder is found to be 364 million kronor, as against 326 millions in the previous year. This slowing-down of the pace as compared with earlier years is wholly due to the labour conflicts. The long drawn-out strike in the iron mines caused the Grängesberg shares to fall 7 million kroner, against a rise of 69 millions in 1927. If this concern is also left out of the calculations the increase in all other shares quoted becomes 372 million kronor, as against 257 million kronor the year before. These figures gives a fairly reliable indication of the general improvement during 1928, and this improvement is the more encouraging, as the figures given include those for timber, pulp and paper mills, which industries suffered from prolonged labour troubles in the early months of the year.

INDIA.—BANKING—RAILWAY PROFITS— COASTAL SHIPPING.

(FROM OUR CORRESPONDENT.)

CALCUTTA, February 21.

THE increase in the Bank rate to 8 per cent. was unexpected, unwelcome and, in the opinion of those in control of the Imperial Bank, whose hand was forced by Government, unjustifiable; indeed, the announcement of the increase was accompanied by a joint intimation that Government accepted the sole responsibility for the policy pursued. The objection taken to the procedure adopted is that, having allowed the Imperial Bank to borrow nine crores against inland bills at 7 per cent., Government made the new rate applicable not only to further borrowings, but to the nine crores already advanced, a step not only without precedent, but one not heretofore deemed permissible under the provisions, extremely elastic though these may be, of the Act governing the issue of emergency currency, with the object of defin-reacted sharply on Government securities, and creates a new and formidable obstacle to financing by the Government of its heavy capital commitments without further recourse to sterling borrowing. As a result, two reforms may be demanded—first, a revision of the Act governing the issue of emergency currency, with the object of defining with greater precision the rates of interest payable by the Imperial Bank on the advances made against inland bills; and, second, the establishment, at the earliest possible date, of a Reserve Bank, unifying the control of currency and credit, and freeing both from the supervision of the India Office.

The appointment of a Banking Commission, to survey the whole field of Indian banking organisation, commercial, agricultural and industrial, has been decided upon, and, unless the Blackett Bill is revived and reaches the Statute Book before the initiation of this inquiry, it is quite inevitable that the issues to be considered in establishing such a Bank will be included in the terms of reference. Taking all factors into consideration it appears desirable, if practicable, to make a further endeavour to place the Reserve Bank Bill on the Statute Book before the Banking Commission is appointed. On the point of principle, the desirability of a Reserve Bank commands general recognition, the sole obstacle to action being a difference of opinion concerning the composition of the Board of Governors—a difference it should not be beyond the competence of the new Finance Member, who approaches the whole question free from previous discussions and commitments, to remove, thus freeing the new Banking Commission to investigate those many and important aspects of the Indian banking problem which the Hilton Young Commission made no endeavour to probe. Until banking facilities are extended, especially rural and industrial facilities, economic progress here will remain subject to severe limitations, crippling to domestic and foreign trade alike. In relation to agriculture, scientific research is of recognised importance, but a need no less urgent and important is to equip the cultivator financially to effect improvements already known to be desirable but which are not being brought into operation chiefly because the financial stranglehold of the moneylender renders them impracticable. Similarly, the lack of industrial banks is hindering the establishment and expansion of industries capable of manufacturing commodities essential to India, but which are not at present being produced either in India or abroad—as, for instance, cheap, standardised agricultural implements, which are badly needed in the fields, and will ultimately be required in numbers large enough to occupy factories dotted throughout the country. It is often too readily assumed that industrial expansion can occur in India only at the expense of imports, but no assumption could be further from the truth. Displacement will occur in some cases, one commodity, in such instances, however, disappearing from the import list only to make room for another. Thus, while local manufacture has recently made India less dependent on imported railway wagons, there has been a compensating increase in the imports of motor vehicles, the demand for which is limited at present only by the small mileage of motorable roads; and such examples could be multiplied. More often new industries will, however, spring up, as in the case of agricultural implements, to meet wants now either dormant or only just emerging into industrial importance. But to foster such industries, industrial banks are essential.

Railway profits, as disclosed in the railway budget, remain on a high level, and, to this extent, State management, which is being steadily extended, has been amply justified, eliminating unnecessary competition, reducing rates and fares, building up large reserves, making adequate provision for depreciation, embarking on impressive programmes of improvement and extension, and, this

year, making a start in the direction of increasing the wages of the lower grades of railway employees. More could be done in all these directions, were the railways not under obligation to pay substantial contributions in relief of general taxation, the taxpayer under this arrangement obviously profiting at the expense of travellers and traders, as well as the railway employees. The justification lies in the fact that for many years the taxpayer was called upon to bridge railway deficits.

The Coastal Shipping Bill is being proceeded with, supplemented by a Bill designed to abolish deferred rebates, Government opposing both measures. Despite all indications to the contrary, the promoters of these measures will not be either surprised or greatly disappointed if they fail to place them on the Statute Book, subject, however, to Government evolving alternative measures which will give India's infant mercantile marine a chance of developing by freeing it from the rate wars which have heretofore prevented indigenous shipping companies from securing more than a negligible percentage of the coastal shipping trade. Although the Viceroy has plainly indicated his desire to find a *via media*, no alternative proposals have yet been formulated; nor is it easy to evolve a scheme free from the reproach of discrimination.

ARGENTINA.—MONEY—CROPS—AMERICAN PENETRATION.

(FROM OUR OWN CORRESPONDENT.)

BUENOS AIRES, February 16.

MONETARY conditions in Argentina, though they have not as yet shown any direct reaction to the recent rise in the Bank of England rate, are decidedly firmer in respect to loanable capital, and it is possible that higher rates will be successfully demanded ere the month is out. For general business at the present time discounts and advances are nominally unchanged at 6 per cent. to 6½ per cent., current account advances being charged 7 per cent., but there are clear indications of a more pronounced demand for money, together with possible restrictions in the sources of supply. It is the reaction on the American market that is likely to affect Buenos Aires, since it is now evident that Argentine loans, national, municipal or provincial, will not be placeable in New York at anything like the favourable conditions ruling during the first half of 1928. Cordoba province is likely to be shortly in the market for a loan of $72,000,000 paper, and the Province of Buenos Aires proposes to sell, through the intermediary of the Provincial Bank, bonds bearing interest at 6 per cent., to a total of $13,000,000 paper. The minimum issue price is fixed at 93, and this method of marketing a loan that will be strictly internal is contrasted favourably by the Argentine press with the methods of Cordoba province, wherein reliance is placed on finding the money abroad and no minimum price of issue quoted in the bill, on the grounds that its omission will make for keenness in competition on the part of the tenderers. There has also been some talk of a national conversion loan to take advantage of the present high quotation for all national securities, but it may be doubted whether the matter will be carried any further, seeing that during the last fortnight there has been a general decline of approximately fifty cents in local bonds, which is probably the precursor of further depreciation. In a word, the Argentine monetary position is not quite so clear as it was when the year opened, nor can the fact be overlooked that exchange has also moved a little against Argentina, with the cable rate for sterling now at 47 5/16d., and the rate on New York 104.60, banks' drawing. The Continental rates also reflect the same tendency, with the exception of the Spanish peseta, now quoted at 6.11 to the Argentine gold dollar after having touched 6.24. In view of the arrangement between the Argentine Government and a consortium of Spanish bankers, covering proposed sales of Argentine produce to the Peninsula, the question of the peseta exchange becomes important, though as yet barely one and a half million dollars paper has been used out of the credit of fifty million, as buyers in Spain still find Argentine wheat prices too high, notwithstanding that on this side lamentations concerning the low price of wheat are very general. Compared with a fortnight ago, quotations have risen a little, spot wheat being $9.80 paper per 100 kilos, with $10.00 for April delivery. Maize and linseed are practically unchanged at $9.45 spot and $8.25 for May delivery in the case of maize, and $15.60 spot and forward for linseed.

There are no official estimates of the maize crop yet published, but private estimates, working on the knowledge that damage by drought has not been as severe as was feared a fortnight ago, now speak of an exportable surplus in the neighbourhood of 5,000,000 tons, which may be considered as equivalent to a fair to medium harvest. Indeed, the general demand for Argentine produce continues reasonably constant, and, notwithstanding the immense crop of linseed secured this year, buying orders from Europe and the States are important and continuous.

Some alarm has been felt in Argentine export circles at the wholesale nature of the proposals brought forward in the United States in respect to the tariff charges to be imposed on Argentine produce. As yet none of these extreme suggestions have been adopted, and it is evident to anyone able to read between the lines that a powerful body of American opinion interested in the expansion of manufactures and exports is opposed to any such changes. During 1928 the United States took Argentine produce to a total value of $99,962,000 U.S., while their shipments hither reached the record sum of $178,708,000 U.S., which latter figure places America at the top of the list where Argentine imports are concerned. The steady and purposeful penetration of American industrial finance has again been exemplified by the purchase of the Atlas Light and Power Company. Satisfactory enough to the shareholders of that concern though this transaction may be, it certainly circumscribes the Argentine market for British electrical material. Before the War this market was divided between British and German interests, whereas now American and German interests predominate, with the balance in favour of America. Cereal shipments are heavy, but the market for ocean freight remains steady at 25s. San Lorenzo/U.K./Continent February-March loading, with 23s. 6d. Bahia Blanca to U.K./Continent March loading. Linseed freights to the United States are firmer at $7.25 gold Santa Fé to Philadelphia.

Letters to the Editor.

BRAZIL'S BORROWING STATUS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The article in your issue of February 23rd on "Brazil's Borrowing Status" is bound to impress the more as it is written in dispassionate language and displays a large array of figures. But I wish to be allowed to express the opinion that its figures are not convincing, and its conclusion is unacceptable.

In order to show that "not only will Brazilian development not bear comparison with that of the leading 'new' country of the world (U.S.A.), but that she is actually less advanced than her South American neighbours in the so-called A.B.C. group" (Argentina and Chile, although Chile is not a *neighbour* of Brazil), your article quotes figures which show that, after all, the U.S. are *not* the leading country, but are far behind Argentina as regards exports and railways and still are behind Chile as regards exports. The little table below, drawn up with the figures of your article, shows my point more clearly:—

Per 1,000 inhabs.	Argentina.	Chile.	U.S.A.
Exports.....	£14,920	11,950	8,200
Railways ...	Kms. 3·55	2·05	3·40

This contradiction alone, between what your figures actually show and what your article purposes them to show, should have been sufficient indication that the criterion chosen, *i.e.*, the mere percentage of population, is a wrong one. Commercial advancement is not to be judged by the export figures alone, but by the total of internal and external trade, and your article has no reference to the industrial development of Brazil, *which* is incomparably larger than that of any other Latin-American republic, and is responsible for a considerable internal trade. As for railway construction, it is simply unfair, to say the least, to compare a country like Argentina, whose extensive plains are the ideal of the railway constructor, with a country like Brazil, the principal part of which is a large table-land falling abruptly over the coast, so that railways that are to connect the hinterland with the ports must climb mountains some 3,000 ft. high. Besides, you might have mentioned that Brazil has a highly developed system of navigable rivers and a mercantile fleet which is incomparably larger than those of Argentina and Chile put together.

It is strange, anyhow, that, while applying that criterion of percentage of population to trade and means of transport, your article, when dealing with the total of public debt, does not point out that the indebtedness of Brazil *per capita* is ridiculously small in comparison with that of any of the larger and more prosperous Latin-American republics. As for the yield of the British capital involved, I am afraid that your figures again are against your pessimism. Taking into account only the nine "representative stocks," which you quote in order to demonstrate that "Brazilian credit has recently improved, but is still viewed with a certain conservatism among British investors," I have worked out a mean yield which amounts to a little over £6 14s. 2d., and I do not believe that any investor could consider it but as an excellent average for investments in any country.

The plan for the defence of coffee prices may certainly be criticised, and has been criticised in Brazil itself in the same way, and for the same reasons, as the Stevenson plan for the defence of rubber prices was criticised in England—but it has worked well up till now, and, like the English plan, should be given a chance to show its efficacy. Anyhow, it is exaggerated to say, as has often been repeated, that "Brazil's whole economic structure is precariously based on a single commodity (coffee)." It is the same confusion of export trade with production. If, up till now, Brazil has found easy and remunerative markets for its coffee output, as before for cotton and sugar, why should it drop its cultivation and exploitation? But coffee is not the only exportable produce of Brazil, nor even the largest item in its agricultural production (*vide*, for instance, page 75 of the report just published by the Department of Overseas Trade), which includes more than twenty important articles, each one of which might be developed, like rubber, sugar, cocoa, tobacco, cotton, oil nuts, fruits, into a very remunerative export trade.

Finally, there is also much exaggeration in your geographical considerations. But even if only the large table-land, which includes the whole of the States of Rio Grande do Sul, Santa Catharina, Parana, Sao Paulo, Minas Geraes, half of Goyaz and of Rio de Janeiro, were temperate enough (and in Parana there was plenty of snow last year), this represents much more temperate lands than the whole of the four or five richest and most advanced countries of Europe. With that nucleus of temperate country we can afford to wait for the future, when we will be then in a position more thoroughly to exploit what can be considered as our "empire," *i.e.*, that fabulous wealth of forests which your—here very generous—estimate puts at over 60 per cent.!

As to the "all-important question" as to how far the institutions typical of "Western" civilisation are applicable to a country lying mainly in the tropics, etc., etc., you may rest assured that neither the London capital market, nor any other capital market, will be called upon to consider it, because Brazil has made up its mind a long time ago that it will live like the other large countries of its continent, be it "Western" civilisation or not.—I remain, Sir, yours faithfully,

JOAQUIM EULALIO,
Brazilian Consul-General.

Brazilian Consulate-General, Aldwych House,
Aldwych, London, W.C. 2.,
March 9th, 1929.

[The Brazilian Consul-General's letter emphasises the main contention of our article—that Brazil ought to develop the vast and varied resources of her territory, in the way of rubber, sugar, cocoa, tobacco, cotton, &c., and so avoid the dangers of reliance, as to nearly three-fourths of her export trade, on a single commodity, the selling price of which is artificially controlled. It is, of course, with the figures of export and not of home trade that the British holder of Brazilian securities is chiefly concerned, since exports alone finance the payment of his annual interest. Our criticism of certain aspects of the national policy was offered, it is needless to say, in a spirit of entire friendliness towards Brazil.—ED. *Econ.*]

THE EFFECT OF FOREIGN LOANS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I thank you for your comment on my letter, which carries the argument a step further. In answer to my question as to how foreign lending on our part indirectly stimulates British exports in those cases where it does not do so directly, you reply that (amongst other things) it causes a tendency for gold to flow abroad, which in turn leads to a rise in bank rate, and it is this rise in bank rate which stimulates exports. I think that exporters (who have not been as grateful as, on your theory, they should have been for the recent rise of bank rate) would like to have it explained in what way a higher bank rate improves their competitive position in foreign markets. For, on the face of it, it is a paradox that an increase in one of the items of their costs of production should have this effect. Since you think my method a little abstract, I suggest that you might illustrate your reply by reference to the benefits accruing from a higher bank rate to one or another of our leading export industries—for example, textiles or coal or the iron and steel trades.

Yes; I had noticed that the Balfour Commission agree with you—which makes it all the more important that the details of the argument should be elucidated.—Yours, etc.,

J. M. KEYNES.

46, Gordon Square, Bloomsbury, March 18, 1929.

[Let us recapitulate. This discussion on the effect of foreign loans was started by our statement (with qualifications) that capital exports stimulate commodity exports. Mr. Keynes then suggested that only 20 per cent. of the proceeds of foreign loans was spent directly in this country, and asked us to trace the other 80 per cent. Without accepting these arbitrary figures, we traced, in reply to Mr. Keynes, a number of the links in the long chain of effect. Mr. Keynes next fixed upon the exchange link, and suggested that our argument was destroyed by the existence of the Gold Standard. Our further reply to Mr. Keynes mentioned discount rate movements as a further detail in the story. In now asking us to specify particular exports which are assisted by a rise in bank rate, Mr. Keynes takes us far away from our starting point and at the same time misinterprets our case. We naturally did not suggest that higher interest on bank loans is calculated *per se* directly to lower production costs in industries burdened with this form of indebtedness. Our contention is that if our export of capital failed to stimulate quickly enough a compensatory export of goods—so that a condition of "overlending abroad" might be said to have arisen—the resulting movement of discount rates would tend to lower sterling prices in general, and thus to enhance British competitive power in foreign markets.—Ed., *Econ.*]

TO THE EDITOR OF THE ECONOMIST.

SIR,—It may interest your readers to have a concrete example to illustrate the reply you have given to Mr. Keynes.

Take the case of a loan to India. The Bank here with which the loan is deposited will have instructions to transfer a portion, if not the whole, to an Indian Bank in the form of rupees. To do this, it must go into the exchange market and use the pounds to buy rupees. These will be in the form of bills which have been drawn by English shippers on Indian importers to pay for cloth or other exports to India. As, however, there is another use and demand for such bills by those who owe money to Indian nationals to pay for the tea and produce imported from India, the bank's action will have the effect of raising the price of these bills, or, in other words, of raising the price of rupees expressed in pounds. Those in touch with the Indian business as I have been, realise that at all times there is a volume of business under negotiation far in excess of what will normally be booked, and that there are always in the hands of shippers offers, many of which come very near to the point at which they can be accepted. So that as soon as the Indian exchange improves as the result of the bankers' purchases, offers from India, which on, say, Is. 4d. basis for the rupee were too low, become at Is. 4⅛d. basis possible of acceptance; and it is my experience that on the rising of the rupee exchange to a very slight extent, a larger volume of business is arranged. The action of the banker in bidding up the price of rupee bills induces, by its effect on the exchange, transactions which would not otherwise take place, and brings into existence more of these bills, and so the transfer of substantial funds to India induces the trade in goods which represents this transfer.

If the movement of the exchange goes beyond the gold points and gold is sent instead of goods to represent the loan, the Bank of England intervenes, and by raising the discount rate both makes it desirable to dispose of stocks of goods more freely abroad and to India and less desirable to continue the importations which cause the competing demand for the bills in question. Financial houses are prepared for even smaller margins than are usual in the goods trade, either to take up bills that are redundant or create bills for which there is a demand, in order to reverse this action and secure a profit on the exchange moving back.—Yours truly,

GILBERT BEARD.

Reform Club, Manchester.
March [illegible], 1929.

GAS INDUSTRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I congratulate you very warmly on the interesting article you published on the gas industry in your last issue. I quite agree that the present Bill as it passed the House of Lords is by no means a complete solution of the industry's difficulties.

These can only be met by a comprehensive measure, carrying out the recommendations of the National Fuel and Power Committee. It is, however, recognised that this would need legislation of a controversial nature on a very considerable scale, and for this I am afraid the time available is inadequate.

Those interested in the gas industry, however, must keep their requirements prominently to the front, so that they may be deal with by some Government at an early date.—Yours faithfully,

V. S. STEPHENS.

Books and Publications.

AMERICAN ECONOMIC IMPERIALISM.*

IT is a commonplace that economic jealousies and rivalries provide the main dangers to the peace of the world, and that few international problems more urgently demand solution than those occasioned by the scramble for raw materials and markets. The intensity of the feelings they arouse in small but highly influential circles is often not shared nor even suspected by the average man who is most likely to suffer by their outcome. To extend as widely as possible some knowledge of the main forces at work in the world of international trade will therefore always be essential in the promotion of world peace. Professor Benjamin H. Williams has made a notable contribution to this cause in his work on the economic motives which have influenced the foreign policy of the United States of America. It is an eminently lucid account of the political aspects of American investment and commerce overseas, the manner in which the State has sought to safeguard the prosperity of its citizens indulging in these activities, and the lengths to which it has gone in such attempts. On several occasions the world at large has regarded American action in its relations with smaller powers, notably in Latin America, with an undisguised cynicism which the phrase "dollar diplomacy" well indicates. An excellent feature of the present work is the same balanced and judicial attitude which the author has displayed in dealing with these aims and methods. The utmost frankness is essential if a book of this sort is to have any value, and Professor Williams has acquitted himself admirably in preserving this attitude throughout. He has, moreover, planned his book less as a connected history of foreign policy than as a classification of the various types of action which the development of foreign policy exhibits, such as political encouragement to capital exports, capital embargoes, tariffs, shipping policies, and the various forms of protection afforded by the Department of State to investors—from ordinary legal and diplomatic action up to financial supervision and armed interference. This arrangement, aided by the clear style in which it is written, makes it an admirable introduction to a complex and difficult subject. For the English reader it is specially valuable for the insight which it gives into the American outlook on world commerce in general and on British policy in particular (the recent controversies over rubber and oil may be instanced). But its main value must lie in its emphasis on the need for a saner international atmosphere and for a realisation of the political dangers of shortsighted policies imposing protective tariffs and other obstacles to world trade, an emphasis all the more effectively provided by allowing the facts to speak for themselves with a minimum of moralising comment.

EXPERIMENTS WITH HANDWRITING.*

SINCE publishing his book on the "Psychology of Handwriting" Mr. Sandek has made a deeper and more elaborate study of the subject, and in the present book has given us a wonderful collection of results from experiments which he made in order to prove his theory. His researches have led him to exclude all mystical and metaphorical methods as uncertain, while the new method can be depended upon for accuracy. The twenty-six years of work which he has devoted to this study have yielded results which have never before been possible nor even attempted. He has gone to all countries for investigation and taken unlimited pains to prove every statement.

Mr. Sandek says that he expects hostility from those of his colleagues who are unwilling to see their results subjected to expert criticism, but it would seem impossible to ignore such a mass of evidence as he brings to bear on the subject. He finds that visual memory is one most powerful help in learning to write, and a child begins to learn writing from the moment he looks at and pays attention to printed matter.

This he has proved by the examination of 2,000 children, some in remote farming communities in U.S.A. who had never gone to school nor had any reading or writing lessons at home. On being given a test in block letters they were ably to copy it without understanding a word, and to make it legible, but if given script to copy with up and down strokes the same children were hopelessly muddled and could not reproduce it.

The chapter on Authentic and Spurious expression is particularly interesting and enlightening. Auto-suggestion he considers the most dangtrous and potent power which rules our psychical life. The author diagnoses and illustrates in a supplement enclosed in the cover of the book several interesting handwritings, specially those written under any stress, such as the writing of Lord Grey in his note on the eve of the war to the French and German Governments about the neutrality of Belgium, in which the author points out many signs of the emotion he felt as well as the restraint he imposed on himself.

In the matter of wishing for any reason to disguise handwriting he points out the fallacy of thinking that the substituting of one hand for the other is a disguise, and he gives interesting examples of Nelson's writing with his left hand, which became, after some years of practice, exactly the same as that with his right.

He also says that the influence of bad writing materials on handwriting is greater than the loss of any of the sensory or physical organs. This is specially a doctrine of the author's, and is as yet unknown in the literature of the subject.

Probably the most remarkable results of his methods will be found in the detecting of forgeries and of dishonesty in general. He had signal success in studying material from 14 English firms for this purpose, and out of 73 handwritings he diagnosed dishonesty in 14 cases, and was correct in each case—a very useful and practical help. All students will be grateful to Mr. Sandek for his thrilling and valuable book, and the deep study he has given to it.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

War as an Instrument of National Policy. By James T. Shotwell. With an Introduction by Professor Gilbert Murray. (London) Constable, 10-12 Orange Street. 15s. net.

A history and discussion of the Paris Pact by a distinguished American is a welcome contribution indeed to the history of international relations. Professor Shotwell divides his treatment into three sections, one dealing with the historical background of the Pact; one tracing its diplomatic history, and the last, which in view of the author's qualifications is likely to be of the greatest popular interest, devoted to a discussion of the Pact.

Post-War Monetary Stabilisation. By Gustav Cassel. (London) Oxford University Press, Warwick Square, 12s. 6d. net.

These three lectures, delivered by Professor Cassell in the United States, deal respectively with "Inflation and Stabilisation of Currencies," "The Stabilisation of the Value of Gold," and "The New Gold Standard."

Strukturwandlungen der Deutschen Volkswirtschaft. Edited by Dr Bernhard Harms. In two volumes. (Berlin) Verlag von Reimar Hobbing.

This monumental work constitutes a complete survey of modern German economic life. Each chapter represents a lecture by an expert, originally given before the *Deutsche Vereinigung für staatswissenschaftliche Fortbildung*, and between them they cover almost every economic development of post-war Germany.

The Law of Master and Servant. By Francis Raleigh Balt. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 10s. 6d. net.

A very thorough and learned treatment of the subject. Though the book is intended for students and legal practitioners, the author has aimed at making it intelligible also to the layman.

The History of Taxation in North Carolina during the Colonial Period. By Coralie Parker. (London) Oxford University Press, Warwick Square. 20s. net.

This monograph, which is well documented and has a good bibliography, begins with a survey of the English colonial system. The remainder of the book is divided under the heads: Quit-rents; Customs Duties; Poll Tax; Land and Miscellaneous Taxes; and Local Taxes.

Problems of Peace. Lectures delivered at the Geneva Institute of International Relations, August, 1928. (London) Oxford University Press, Warwick Square. 10s. 6d. net.

A collection of lectures, on important aspects of the activity of the League of Nations, by such authorities as Professors Mantoux, de Madariaga and Brierley, Sir Arthur Salter, and Lord Olivier.

Freedom of Association. Vol. IV. Published for the International Labour Office, by P. S. King and Son, Limited, 14 Great Smith Street, London. 5s.

This volume deals with the history, legal status and organisation of trade unionism in Italy, Spain, Portugal, Greece, Yugoslavia, Bulgaria and Rumania.

We Can Conquer Unemployment. (London) Cassell and Co., Ltd., La Belle Sauvage. 6d. net.

This publication receives notice in a leading article in our issue of March 9th.

Common Sense about the Surtax. By Geoffrey Hutchinson. With a Foreword by the Right Hon. Walter Runciman, P.C., M.P. (London) Victor Gollancz, Limited, 14 Henrietta Street, Covent Garden. 3s. 6d. net.

The author opposes the surtax on the ground of the deleterious industrial reactions which he believes will follow from it.

Hertfordshire County Records. Sessions Books, 1619 *to* 1657. *Volume V.* Compiled by William Le Hardy. (Hertford) Charles E. Longmore, Clerk of the Peace Office.

This volume deals with all county records of the period indicated, except sessions rolls, which were dealt with in the first three volumes of the series. All subjects mentioned in the original records have been noticed.

The 100 *Best Investments.* 19th Annual Volume. (London) British, Foreign and Colonial Corporation, Ltd., B.F.C. House, Gresham Street. 2s. net.

In addition to very full particulars of a hundred selected investments, this useful handbook has three introductory articles, and a table for calculating yields.

The Anglo-American Year Book, 1929. Edited by H. Russell Amory. (London) American Chamber of Commerce in London, Inc., Aldwych House, Aldwych. 15s. net.

This is a reference book on Anglo-American institutions and business. It contains a section on the taxes of each country as affecting the citizens of the other; a commercial directory; a summary of Anglo-American trade in 1928, and various other useful features.

The Year Book of the Czechoslovak Republic, 1929. Edited by Bohuslav Horák. (Prague) "Orkis" Fochova, 62.

This pleasantly illustrated little book is apparently intended for continuous reading, rather than as a work of reference. It does, however, contain a certain number of statistics in convenient form.

Archiv für Eisenbahnwesen, Marz-April. (Berlin) Verlag von Julius Springer.

Countries, other than Germany, to whose railways articles are devoted in this issue are: China, Belgium, Schleswig-Holstein, Palestine, Austria.

The Position of Foreign Minorities in Germany. By Martin Dachselt. Preface by Adolf Grabowsky. (Berlin) Carl Heymanns Verlag.

An *apologia* for the treatment of minorities in Germany.

La Moneda Española. By Aurelio Ribalta. (Madrid) Imprenta y Encuadernacion de Julian Espinosa. Caracas 10.

A small pamphlet in Spanish on the monetary system and monetary problems of Spain.

Prospettive Economiche. By Giorgio Mortara. (Milan) Università Bocconi.

Here we have, bound in one volume, the complete collection of studies which have been noted separately in these columns for several months past.

Die Rumanische Nationalbank. By Dr Xenofon Netta. (Leipzig) A. Deichertsche. Verlagsbuchandlung Dr Werner Scholl.

This is a very detailed treaties, in German, on the National Bank of Rumania.

Confederación Argentina Commercio de la Industria y de la Producción. Memoria del Consejo Directivo. (Buenos Aires) Compañia Impresora Argentina, Alsina 2049.

BRITISH CONTROL—THE G.E.C. AFFAIR.

Sir Hugo Hirst has wisely bowed before the storm raised by the proposed issue of General Electric shares on bonus terms to British subjects only. The American shareholders, having appointed a "Protective Committee," sent a diplomatically worded cable to Sir Hugo Hirst asking for a postponement of the issue pending friendly negotiations. Sir Hugo cabled back his acceptance, the issue was withdrawn, and the applications for shares, which had already poured in from British subjects, were returned. Meanwhile a renewal of American buying, assisted no doubt by "bear" covering, caused the shares to recover from 52s. 6d. to 61s. 3d., which makes the attempt to issue shares at 42s. to the general British public instead of to shareholders, appear all the more extraordinary. A new financial plan has been formulated by Sir Hugo Hirst, but until he has settled with the representatives of the American shareholders nothing is likely to be announced. It may, however, be regarded as certain that the General Electric will not now issue shares at £1 below the market price without allowing all shareholders to participate *pari passu* and in advance of the outside public. Meanwhile a number of reflections are suggested on the broader issue involved in the General Electric "attack" on foreigners—the question of British control of British companies.

A number of important companies besides General Electric have been faced with this problem. In December last year the directors of the Marconi International Marine Communication Company stated that, in view of the foreign buying of their company's shares, they considered it of national importance that "any danger of the company passing under foreign control should at once be removed." In this case the articles of association were altered to secure that not more than 25 per cent. of the total number of the issued shares at any time outstanding should be under foreign control and that the directors should be natural-born British subjects. The General Electric, it will be recalled, went a stage further by disfranchising foreign held or controlled shares altogether. The Imperial Airways Company also altered its articles last year, so as to preclude any possibility of foreign control. Another company which has now followed the General Electric example is Burma Corporation. This is a somewhat peculiar case, because the terms of the lease, under which the Burma Corporation holds its property from the Indian Government, specifically require that the corporation shall remain under British control and that certain of its officers must be British. The proposed alteration to the corporation's articles of association takes the following form:—

> No foreigner or foreign corporation or corporation under foreign control shall in respect of his or their shares in the company be entitled to any vote either in person on a show of hands or by proxy on a poll at any general meeting of the shareholders of the company; and
>
> Every transfer of any share in respect of which the transferee claims to be entitled to a vote must contain or be accompanied by a declaration as follows, namely:—
>
> (*a*) Where the transfer is not to a corporation a declaration by the transferee (1) that he is a British subject and (2) that there is not any arrangement under which he will hold the said shares or any of them in trust for or in any way under the control of any foreigner or foreign corporation or any corporation under foreign control; or
>
> (*b*) Where the transfer is to a corporation a declaration by some principal officer of such corporation, duly authorised by such corporation to make the same, that such corporation is not a foreign corporation, or a corporation under foreign control, within the meaning of Clause 1 hereof, and that to the best of his knowledge there is no arrangement under which the transferee is to hold such shares or any of them in trust for, or in any way under the control of, any foreigner or foreign corporation, or any corporation under foreign control, within the meaning of Clause 1 hereof.

The same question has been raised in the case of the Canadian Pacific Railway Company. An amendment was recently introduced into the Ottawa House of Commons by the Railway Committee requiring all stock issues to be first approved by the Federal Railway Commission. The object of the amendment was to ensure control of the Canadian Pacific Railway remaining in British hands. Mr Beatty, the president of the company, stated that 18 per cent. of the ordinary stock was held in Canada, 48 per cent. in Great Britain, and 30 per cent. in the United States. Of the combined preferred and common stocks 70 per cent. was held in the British Empire and 24 per cent. in the United States. This particular amendment was defeated because there was general agreement that the company could best look after itself in the matter of retaining British control.

The City of London is compelled to regard these questions from the point of view of an international money centre. Every step taken to rouse national animosities is therefore embarrassing and a restriction upon the trade of the City. The Stock Exchange, as we pointed out last week, is not a market for British investors only, but for investors throughout the world. It is the practice of the Committee of the Stock Exchange to make it a condition of granting a quotation for shares that the transfer of fully-paid shares should not be restricted by the articles of association. If, therefore, a company feels that it must protect itself against foreign control the Committee of the Stock Exchange would prefer to see the shares held by foreigners disfranchised rather than the transfer of shares to foreign holders prohibited or restricted, so that dealings in the shares can remain unrestricted.

But even total disfranchisement of foreign-held shares does not satisfy the holders of extreme "nationalist" views. If, say, American investors have acquired shares to the extent of 80 per cent. of a company's total share capital it may be argued that they have some moral claim to a voice in the management of the company. We cannot believe, however, that American investors who buy British shares *with full knowledge of this disfranchisement* have any equitable claim to a voice in the management. They are buying with their eyes open, and they must be prepared for the consequences. The view put forward by Sir Hugo Hirst that a company gains strength from the consciousness that its shareholders are users of its products and are interested in its welfare, loses force when a company's zone of operations is no longer confined to a particular locality but has reached the widespread scope of the General Electric.

A compromise between total disfranchisement on the one hand, and restriction upon share transfers on the other, may be found in the Swedish method of limiting the voting rights of shares held by foreigners to one-thousandth of a vote per share. The Swedish case is not exactly parallel, because Swedish Match and other large industrial companies have made issues of shares on foreign markets and have created for that purpose the "B" class of share ranking *pari passu* with the Swedish-held "A" shares except as regards voting rights. The "B" shares, in practice, have always been a wider and better market than the "A" shares. Whether it be practicable to make two markets in British shares quoted on the London Stock Exchange may be questioned. From the City point of view the ideal solution would be for a company to avoid the question of control altogether. If a company is so important nationally that control should be vested in British hands, Parliament should protect it by legislation.

There is always the broad national consideration that no step should be taken by British companies to deter foreign investment in Great Britain. The purchase of British securities by foreigners brings strength to the sterling exchange and helps to increase the amount of capital that we have available for foreign investments. Two years ago, when we made a special examination of this question in the light of contemporary evidence at Somerset House, we came to the conclusion that the investments of foreigners in British industrial concerns were not very extensive. In the last twelve months, however, American buying of British securities has developed to a surprising extent. Indeed, if Sir Hugo Hirst's action had caused New York to retaliate, and if American operators had sold British securities heavily on the London Stock Exchange, it is quite conceivable that the sterling exchange would have suffered, gold would have flowed out, and Bank rate would have necessarily been advanced. National interests as well as those of the Stock Exchange make it desirable that dealings in British securities should go on as far as possible without the disturbing issue of British control being raised.

HOME RAILWAY POSITION—III.

There are many reasons why a scrutiny of the most recent results attained by individual British railways is calculated to interest the discerning investor. Perhaps the most relevant is the well-known principle that, while in an active market the worst stocks are usually overvalued, in a depressed market the best are almost invariably undervalued. Day-to-day quotations for Home Rails on the Stock Exchange are liable to err, not merely because, through no fault of the investor, up-to-date traffic information is confined to gross rather than net figures, but also because it is natural, in a time of difficulty, to regard all railway stocks as coming under "the same condemnation." A few moments' consideration, however, will suggest a dozen explanations of the undoubted fact that no two railways can ever enjoy a precisely identical experience, in good times or bad. It is our intention, therefore, to round off our survey of the conditions which affected *all* the trunk railways last year, by calling attention to various points of divergence between the position of individual companies, which are of sufficient cumulative significance to afford a *prima facie* case for informed discrimination by the careful investor.

Apart altogether from differences in management, geographical position, or nature of traffic, it is obvious that extremely varied ingredients went to make up the four railway groups which six years' experience has succeeded in fusing into more or less coherent and self-contained organisations. We are merely stating what all railwaymen have freely admitted for years past, in pointing out that the London and North-Eastern was called on, from 1923 onwards, to carry a generous proportion of the less prosperous pre-amalgamation lines of the country, and the London and Midland and Scottish by no means avoided a similar responsibility. For the Great Western, however, the problem scarcely existed, and the Southern, despite popular ideas to the contrary, took over a number of companies whose position was more likely to improve than to deteriorate as time went on. Further, as the amalgamation terms were settled, in all important cases but one, by agreement between the companies concerned, it was inevitable that bargaining-power as well as earning-power should play a part in the ultimate apportionment of "group" stock. Now, after six years, it is possible to ascertain the manner in which the arrange-

ments have worked out. We have already declared our view that, had grouping not come about, the ordinary proprietors of many of the less happily situated companies would have been faced with a decidedly serious situation to-day.* The table on the previous page shows how much the holder of £100 nominal of junior stock in each of the most important pre-amalgamation companies has actually received in dividends—on the basis of the merger terms—in 1923 and 1928 (a relatively satisfactory and a difficult year respectively), as compared with his actual receipts in 1913.

The table will repay close scrutiny, though space forbids the mention here of more than a few of the conclusions suggested. Former stockholders in the companies making up the Southern group have fared, relatively, best of all, next in order coming the Great Western, the Midland and Scottish and the North-Eastern groups of holders. Of the more famous pre-war securities, North-Westerns and North-Easterns have fared worse than Great Westerns, both in times of moderate prosperity and of adversity. Preferred ordinary stockholders absorbed into the Midland and Scottish have been much more fortunate, in time of trouble, than their opposite numbers in the London and North-Eastern. The terms of settlement—as was, perhaps, inevitable whatever the basis adopted—have not worked out equally well for all concerned, and one may, without casting stones, while congratulating former holders of, say, Chatham second preference, offer a word of sympathy to their colleagues who held Great Eastern ordinary, or the stocks of certain pre-amalgamation companies north of the Border. The figures do not afford a conclusive answer to the question whether a lower all-round basis of capitalisation might not, in some cases, have been advantageous when amalgamation took place, but they do at least suggest that fluctuations in dividends as between good and bad times tend frequently to be more severe under the new than under the old dispensation.

The Railways Act of 1921 did not merely provide for the grouping of the main British railways; it involved the re-designing of the whole freight classification, and instructed a body known as the Railway Rates Tribunal to draw up a system of passenger and freight charges which would provide the railways with a "standard net revenue" equivalent to that of 1913, with certain adjustments. In view of the onerous nature of the preliminary work, the system did not come completely into force until January 1, 1928, so that last year was the earliest period in which a trial could be made of its efficiency. The following table shows how the actual net revenue of recent years has compared with the present "standard revenue," and how last year's ordinary dividends and earnings contrast with "standard" earnings, on each of the four group lines:—

ACTUAL REVENUE AND "STANDARD REVENUE."
(000's omitted.)

		London, Midland and Scottish Railway.	London and North-Eastern Railway.	Great Western Railway.	Southern Railway.
		£	£	£	£
Net Revenue	1913	18,606	13,378	7,115	5,788
	1923	18,629	13,185	7,678	6,092
	1925	16,589	9,235	6,531	6,266
	1927	17,311	11,268	7,824	6,220

"Standard" Earnings on Ordinary Stock		*7·87%*	*5·0% / 4·12%*	*7·96%**	*5·0% / 2·85%*

* Allowing for £467,835 of additional consolidated ordinary stock, which will rank for dividend in 1929.

The Southern, it will be seen, is the only company in sight of earning its "standard revenue" at the present time. The Great Western's net revenue last year fell approximately 15 per cent. short of the "standard" level, that of the Midland and Scottish 20 per cent. and that of the North-Eastern nearly 24 per cent. The Railway Rates Tribunal will meet shortly and consider such adjustments of charges as will, in theory, enable the "standard revenue" to be earned. In practice such a policy may be feasible on the Southern, if the ordinary course of trade does not itself bring about the desired result, but on the other three lines the attainment of the "standard revenue" by any adjustment of rates and fares cannot, from the investor's point of view, be regarded as practical politics during the next few months. The railways may be relied on to explore all possible avenues for such action, but the scope for *remunerative* changes is limited, since the prosperous industries of Great Britain are, as a rule, in a position to utilise alternative forms of transport in proportion as railway charges are revised against them. The same remark applies to a good deal of passenger traffic, while the "heavier" industries, which are most dependent on railway facilities, are in too depressed a condition to bear any significant increase—having, in fact, been lately the recipients of special freight concessions under the Government's derating scheme. Before the new system of charging came into being, 70 per cent. of the total railway-moved merchandise traffic was carried at "exceptional rates," and as the latter, whether applied to goods or passenger traffic, are merely the corollary of competition, their disappearance, or even their significant reduction, is highly improbable under any scheme of rate-control, so long as present economic conditions obtain.

We may conclude, therefore, that any substantial and early increase in the net revenue of the railway companies must be obtained either by an improvement in British trade activity from without or by further economies in expenditure from within. How far is a trade revival likely to benefit the several groups? Data bearing on this and other questions will be found in the next table:—

RAILWAY TRAFFIC AND FINANCE.

* i.e., "Merchandise, Classes 1 to 6." † Including "Contingency Fund."

The figures showing "distribution of earnings by traffic" reveal that the Southern stands out sharply from the other three groups by reason of its relative "independence" of goods traffic. Its future, therefore, is likely to depend more on its own exertions and less on circumstances outside its control (such as the contemporary state of British industry) than that of the other three companies. The London and North-Eastern, on the other hand, has most to gain by an industrial revival. Even in a "bad" year it obtained nearly 63 per cent. of its railway receipts from goods traffic, against 59 per cent. and 56 per cent. on the Midland and Scottish and the Great Western respectively.

* *See* the *Economist*, March 9, 1929, pages 507-8.

In a year of severe depression in the "heavy" industries it drew one-third of its whole railway takings from—in the main—the coal, iron and steel industries; as compared with 27 to 28 per cent. in the case of the other two groups mentioned. The latter would also, of course, obtain very considerable benefit from a recovery of prosperity in these trades. The "trend of traffic" figures show that all the companies (except the Southern) have been compelled to run an enhanced number of train miles to retain a reduced number of "originating" passengers over the last six years, while the reduction in loaded goods train miles has been less than proportionate to the falling off in "originating" tonnage. The visible signs of increased external competition are here apparent, and the investor will discover much that is suggestive in a close comparison of the *relative* movements of the figures for each company. Some idea of the amounts at the disposal of the various managements for renewals, &c., and of the general financial position of the groups may be obtained from the selected balance sheet items given in the table, which, incidentally, reveal the strength of the internal finances of the Great Western, and, next in order, the Midland and Scottish. In a minor, but not unimportant, context the investor will scan future reports for evidence of reductions in "stocks of stores and materials," in which some £22½ million of railway capital is locked up to-day, against £20 million in 1923.

What, finally, is the degree of security offered by the debentures and stocks of the four leading railways to-day? Taking each class as a whole, every railway debenture holder may regard himself as reasonably well covered on the basis of the figures given in our table, though there is a substantial difference in this respect between the position of, say, the Great Western and the London and North-Eastern. The position, however, is not quite so strong as in 1923. The "junior" preference stockholders have a closer personal interest in the absence of any further decline in net revenue. The prospects for ordinary stockholders are more difficult to prophesy. Their dividends are likely to fluctuate considerably for some years to come. Probably the most concise method of summing up their prospects is by saying that, if receipts remained constant, every fresh "economy" which reduced railway expenditure by 1 per cent. of last year's total would provide the wherewithal for an extra ½ per cent. dividend on Midland and Scottish ordinary, Great Western ordinary, and Southern deferred, and an extra 1 per cent. on North-Eastern preferred. An increase of 1 per cent. in railway receipts, supposing no change in expenditure, would make possible a further ¾ per cent. dividend on each of the former, and a further 1¼ per cent. on the latter stock.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 9.	April 11.

Relief was felt at the strategic withdrawal of the General Electric issue, and a three-weeks account opened on Monday in relatively cheerful fashion. On the absence of further enlivening influences, however, business fell away into idleness, until outside the mining markets activity worthy the name was difficult indeed to discover. Such confidence as was given on Tuesday by the Bank's acquisition of new gold was more than offset later by current talk of an increase in the New York re-discount rate. A speech by the Minister of Labour, drawing attention to a notable fall in the unemployment figures, and the unwonted spectacle of a rise in railway traffic returns, duly exercised their temporary effect, but neither indicated necessarily anything more than our release from recent severe weather conditions. In general, no one is anxious to increase his commitments for the present.

The gilt-edged market reflected every change in the prevailing monetary breeze. On Monday the strength of the American exchange produced a sizeable recovery in quotations, while on Tuesday nervousness as to American prospects outweighed satisfaction over the Bank's pur-

chase of £894,200 of bar gold in the market, and on Wednesday a certain amount of selling was in evidence, on rumours of a coming increase in the New York Federal Reserve rate. Business in all cases was of narrow dimensions. The Five per Cent. War Loan, after nearly reaching 102¼, relapsed to 101$\frac{11}{16}$. The Three and a Half and Four and a Half per Cent. Conversion Loans were even more notably affected by monetary uncertainties. Indian Loans were in better demand early in the week, and were subsequently less affected than British stocks by unfavourable influences. A moderate business in Dominion and Colonial stocks had no marked effect on quotations.

Foreign bonds showed, under the conditions, a gratifying degree of firmness, with a fair business passing. A number of European loans improved, and Turkish Unified had a sharp rise (followed by profit-taking) on the news that payment was to be made on the coupon on April 5. Support was forthcoming also for Chinese bonds, and, to a less degree, of Mexican, on that Government's further successes over the rebel forces. Brazilian bonds, however, were quiet to dull.

Home Rails had a better tone than for some time past, and though dealings were never on a large scale all the group stocks improved in quotation. The traffic figures published on Wednesday were notable as revealing an increase in gross revenue, as compared with a year ago, on all the lines except the Midland and Scottish (which showed but a small decline). The investment possibilities of the " group " stocks are discussed in a leading article on an earlier page. Influential buying caused an improvement in Underground Electrics at the beginning of the week. The foreign railway market attracted wider interest than of late. A steady demand was experienced for Argentine Rails, encouraged by a satisfactory week's traffic figures, while San Paulo and Leopoldina were in evidence among Brazilians. Rumours of negotiations between Leopoldina Terminal and Brazilian Traction have been contradicted. Canadian Pacifics were irregular, without much change on balance.

Industrials had no decided tendency, the appreciable price fluctuations which occurred from day to day tending to obscure the paucity of actual business. American-quoted stocks were an uncertain quantity on the rapid changes in the Transatlantic speculative temperature. Columbia Graphophones suffered in Tuesday's reaction, and H.M.V. failed to maintain a fresh rise. Radios were reactionary, and General Electric lost ground after a substantial recovery on the abandonment of the " British share " issue (discussed in an earlier leading article). The motor manufacturing group was among the most active in the House, Ford Motors rising on prospects of the early flotation of Continental subsidiaries, while Leyland and Napier were strong. The Imperial Chemical dividend (described in an " Investment Note ") did not satisfy the more optimistic operators, who were inclined to afford less than its meed of attention to the substantial strengthening of the reserve position. Nitrates were in demand, by reason of the betterment in the outlook indicated by recent developments. Dullness again obtained in match issues. Newspapers improved, and breweries were better, pre-Budget fears being less in evidence. Rayon shares also strengthened, and Marconi and cable stocks were strong. Among the sensational movements of the week was a jump from £9 to £11, on Wednesday, in the sixpenny shares of Calgary and Edmonton Lands, on the report of an offer for the oil rights. Insurance shares were irregular, but bank shares showed a hardening tendency.

Dealings in rubber shares were dominated by the weakness of the price of the commodity, especially on Wednesday, when the " spot " quotation fell ½d. to 11$\frac{3}{8}$d. Little selling of shares was recorded, but dealers marked down stock somewhat extensively. The sagging tendency of tea shares in recent weeks was arrested, a strengthening of demand for the commodity at the week's auctions imparting a steady tone throughout the list. The more cheerful feeling in the oil share market forms the subject of a subsequent " Investment Note." Paris buying was evidenced by the firmness of Eagles.

The mining markets provided most of the week's quota of excitement. Kaffirs, as usual, were on the margin rather than at the centre of interest. East Geduld and its controlling house, Union Corporation, moved up on rumours that the latter's forthcoming report will mention favourable developments, but Modder Easts were sold from Johannesburg. Among diamond shares, De Beers continued their steady improvement. Rhodesian copper shares again blazed into activity, Rhodesia Katangas, Loangwas, Congo Borders, and Bwanas recording gains typical of numerous companies in the list. Base metal shares generally reflected the stirring movements in the commodity markets, though most rises were inevitably followed by profit-taking. Tin shares at one time joined in the upward movement, but as the metal lost ground speculation lost its edge, and quotations receded, with Patino heading the few exceptions to the tendency.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Money is tight, and speculative enthusiasm has been somewhat chilled. The share market is irregular and dealings have been largely on professional account. Pools have operated with fair success but have been jumping rapidly from one stock to another. The rise in copper prices to 23 cents per pound has given the copper group a buoyant tone, quotations being talked higher. Other mining issues are also good. The bull market in rubbers has been halted by a sudden drop in the price of the commodity. Steels move forward on the certainty of record-breaking earnings in the first quarter. Motors are irregular, although output is at record level. The market as a whole has no position-direction of movement after its brisk rise last week.

PARIS.

At the last settlement the shares of the principal companies that are increasing their capital went ex rights. The backwardation being fixed at a rate below that corresponding to their market price, very substantial funds were put at the disposal of the market by syndicates desirous of exploiting this difference, and the price of money was reduced to 2¾ per cent. This apparent ease did not stimulate the Bourse at all, and the week was entirely uninteresting. Rentes and Banque de France were firm. Coal shares were decidedly prominent. Coppers did not benefit by the rise in the metal, but Penarroya mounted in sympathy with lead. De Beers were sought after. Rubbers reacted appreciably. A 2,300,000,000 francs loan at 4½ per cent. is to be issued on behalf of the Ville de Paris, and the price of issue is likely to cause a fresh fall in the price of long-term money.

BERLIN.

Thanks to easier money and a better outlook for a settlement of the Budget controversy in the Reichstag, stocks closed last week fairly firm. The new week began with a general rise, buying orders coming from Paris and London. Electrical manufacturing companies were the centre of the upward movement, and the two leading artificial silk stocks also benefited. Foreign buying continued on Tuesday, when the rise in non-ferrous metal prices in London sent up the stocks of copper and zinc companies. In general Wednesday was firm, though there was some foreign selling. On Thursday chief interest lay in Reichsbank, and otherwise the market was dull.

AMSTERDAM.

The better monetary outlook created a firmer tone, especially for industrials. Interest, however, remained restricted, and early in the week business showed less animation. Artificial silk shares advanced sharply. Sugars were firm on favourable dividend reports, but tobaccos were easier owing to the tendency of the Sumatra tobacco auctions. Later on the tone became weaker. The money market was easier, with the private discount rate 4⅜ per cent.

INVESTMENT NOTES.

Oil Shares.—The publication of the petrol companies' statement coincided with a rise in oil share prices. The two events were not necessarily connected. The better sentiment has been created rather by the news of a further fall in the daily average production of crude oil in America and a fresh attempt to tighten up " restriction." The operators in Oklahoma have agreed to restrict production for that State to 650,000 barrels a day, against a previous level of 728,000 barrels a day. The carrying out of this local restriction was responsible for the considerable drop in the last two weeks in the daily average production of the United States. Meanwhile, the American Petroleum Institute has taken further action. It has adopted a recommendation that, from April 1st, the output of crude oil in the United States, Mexico and North and South America be restricted so as not to exceed the average daily production of 1928. Regional committees of producers have been appointed to study the means of carrying out this far-reaching scheme of restriction. In some States legislation may be necessary, and it will no doubt be a long time before practical steps can be taken, but it is considered a hopeful sign that the big producers in Venezuela should have agreed to restrict their output. No change has occurred in crude oil prices, but there has been a hardening of gasoline prices. The next meeting of the Conservation Committee of the American Petroleum Institute will be held on March 27th, when the reports of the regional committees will be considered. The Standard Oil of New Jersey has made the suggestion that drilling should be stopped for two months throughout the country. The purpose of the restriction campaign in America is being watched by the oil share market with no little interest, but opinion is somewhat sceptical of its success.

The Rise in Copper.—The notable recent strength of certain of the base metal markets, especially copper and, to a less degree, lead, has been reflected in share values on the Stock Exchange. What appeared to be temporary strength in the copper situation just before the end of last year, due mainly to a shortage of blister copper through the Chilean earthquake, has developed into a rise equalled only during the days of the war. Since December 31st the price of electro has risen nearly £30, is now some £10 above aluminium, and may conceivably go to £125 before many weeks are past. Prices of manufactured copper have been raised in a like proportion, while brass is now dearer than for some years past. The effect on the quotation of some of the leading Stock Exchange counters is shown below:—

	Shares fully paid.	Price. Jan. 1. 1929.	Price. March 1. 1929.	Price. March 21. 1929.	Yield at present price.
	£				£ s. d.
Rio Tinto	5	62½	63½	63	4 0 0
Tharsis	2	4½	6⅝	6⅝	3 0 9
Mount Lyell	1	1⅞	2½	2⅜	5 14 9
Namaqua	2	⅝	1⅛	1⅛	Nil
Anaconda	£50	£23¾	£29	£33¾	2 1 9
Arizona	5/–	1	1⅛	1⅛	3 5 0

Tharsis has this week declared a dividend, for 1928, of 10 per cent., against 8½ per cent. for 1927. The rise in Arizona is due not only to events in the copper market, but also to last week's announcement of the sale of the company's holding of Phelps Dodge shares at a price yielding about 40s. per Arizona share. The present position as regards the metal is governed by the fact that although the American Copper Exporters, Incorporated, set out to eliminate speculation and control the copper quotation, a very extensive bull account is open on the standard market, the daily sessions in London having recently been little more than a scramble to buy warrants. In America the position has been, on the confession of the leading producers, completely out of hand, and in spite of efforts to stem the rush of buying by successive price advances, consumers have continued in their policy of purchasing every ton of copper on which they could lay their hands. For nearly twelve months reserves of refined copper in America have stood at a dangerously low level, and consumption has exceeded 80,000 short tons per month. Latterly this figure has approached 100,000 tons, and since refinery production cannot be increased at a moment's notice there are grave fears of a famine in the summer months. In this lies the reason for the present heavy buying in the United States, which, coupled with a wave of speculation on the London market, has forced up the price well beyond the safety limit. Taking a longer view of the future, however, it may be assumed that mine production throughout the world will be pushed to the utmost limits, and that, even if the refineries cannot give the world more refined copper, reserves of blister will increase. This should in due course give a pause to consumers' desire to increase their holding, for it will mark the beginning of a downward movement. Consumption, too, is bound to fall off at the present inflated price, and signs of this are already evident in this country.

Vickers.—Disappointment has been expressed in some quarters that Vickers' profits, which rose by 50 per cent. in 1927, apparently fell away by some 3 per cent. last year, but this is a misreading of the figures. With the formation of Vickers-Armstrongs and the Metropolitan-Cammell Carriage, Wagon and Finance Company, Vickers has now become entirely a holding company. As a proportion of accrued profit on work-in-progress at December 31, 1928, was to be retained by Vickers under the agreement for sale to Vickers-Armstrongs, the latter is unable to distribute any dividend, preference or ordinary, but after writing £12,968 off formation expenses and transferring £105,000 to renewals fund, it has £64,765 to carry forward. If Vickers be credited with 97 per cent. of this carry-forward, in proportion to its holding of first preference Vickers-Armstrong shares, the decrease in Vickers' profits is

turned into an increase. The company, further, is following the sound policy of including in its profit figure dividends declared by subsidiaries making profits, but deducting the losses of the less fortunate concerns, the latter amounts being written off the book values of the shares in and loans to the companies concerned:—

Years ended December 31.	1926.	1927.	1928.
	£	£	£
Net profit, after payment of debenture interest	562,284	992,985	939,903
Dividend on preferred 5% stock	37,500	37,500	37,500
Dividend on 5% preference shares	37,500	37,500	37,500
Dividend on 5% (tax free) cumulative preference shares	343,190	343,190	343,190
Number of times covered	*1·4*	*2·6*	*2·5*
Ordinary — Earned	4½%	17½%	15½%
Ordinary — paid, less tax	Nil	8%	8%
Ordinary — amount	Nil	262,730	262,730
To reserve fund	200,000	238,211	250,000
Increase or decrease in carry-forward	−55,907	+73,853	+6,982

The balance sheet, drawn up in a new form on the lines of the Companies Act, 1928, is lucid and informative to a degree, and suggests that when, in due course, the provisions of that Act become compulsory on all companies, many balance sheets will be far more illuminating documents than they are to-day. Investments in Vickers-Armstrongs are valued according to the book values of the fixed assets at the time of transfer, with the result that the £5,206,800 of ordinary shares in the latter concern are written down to less than nothing. Effect has been given to the agreement with Cammell, Laird, dated December 17, 1928, and shares to the nominal value of £3,251,150 in Metropolitan Cammell, the new wagon company, stand at £2,721,813. The remaining investments are separated into their different classes, and the basis of valuation in each case is explained. The reserve fund and the carry-forward aggregate £967,704, against £708,722 a year ago. Conversion into a holding company explains the disappearance of allowance for depreciation, but this year £125,000 is set aside for income tax. The balance sheets of Vickers-Armstrongs and of Vickers and its subsidiaries (excepting Vickers-Armstrongs and Metropolitan Cammell) are published in the same clear form. But not even the most lucid accountancy will enable the outside observer to estimate the true probable earning power of Vickers for the next year or two. The current year's results will in their turn be complicated by the creation of the English Steel Corporation, the share allotments of which are recorded in the next note. The present price of Vickers' ordinary shares, of 6s. 8d. denomination, is 11s. 6d., at which the dividend yield is £4 12s. 8d. per cent, less tax, and the yield on earnings 9¼ per cent.

English Steel Corporation.—It is announced that this new steel combine is to have a capital of £8,000,000, divided into £1 shares, 2,000,000 7 per cent. cumulative preference and 6,000,000 ordinary. In return for the assets it acquires, shares will be allotted as follows:—To Vickers-Armstrongs (for works at Sheffield, Manchester and Elswick), 1,285,815 preference and 3,272,031 ordinary; to Vickers (for the shares of Taylor Bros. and Co., Manchester), 95,975 preference and 404,946 ordinary; to Cammell Laird (for works at Sheffield and Penistone), 599,539 preference and 2,033,149 ordinary. It was part of the original agreement that the value of fixed assets should be satisfied by the allotment of ordinary shares, preference shares being allotted in respect of liquid assets. In fact, therefore, Cammell Laird is contributing 35⅝ per cent. of the fixed and 30¼ per cent. of the liquid assets. As all shares carry one vote, Vickers, through Vickers-Armstrongs, will hold the ultimate control. The new company will eschew shipbuilding, nor will it manufacture armaments except for Vickers-Armstrongs or Cammell Laird. The *Economist* discussed the importance of the merger in a leading article on December 22, 1928 (p. 1149), and the financial details, as then known, in an "Investment Note" the following week (p. 1224).

Imperial Chemical Results.—The published profit statement of Imperial Chemical Industries discloses the highly satisfactory phenomenon of an increase of £921,018 in earnings, which last year totalled £5,488,243, before deducting income tax, against £4,567,225 in 1927. The statement does not reveal to what extent this expansion of 20 per cent. in receipts is due to improved trading, and to what extent to the acquisition of new interests. It will be remembered that the company was incorporated in December, 1926, as a fusion of Brunner Mond, the United Alkali Company, Nobel Industries and British Dyestuffs Corporation. In 1927 the company obtained control of Cassel Cyanide, Casebourne and Co., Union Acid and Oliver Wilkins and Co., while last year its interests were further extended by the control of Elliott's Metal, Tees Salt, British Copper Manufacturers, and Welsbach Light Company. The present appropriation of profits is distinctly conservative. Some £275,540 is required for income tax account; £1,000,000 is placed to general reserve (against £408,977 a year ago); preference dividends require £1,194,550 (against £1,145,501); a total of £2,991,200 paid in dividends of 8 per cent. and 1¾ per cent. (less tax) on the ordinary and deferred shares respectively (the 1927 dividend rates being unchanged in both cases); and the amount carried forward is increased by £26,953 to £109,633. Certain capital transactions of first-rate importance are to be inferred from the company's statement, regarding which fuller information should certainly be forthcoming in the report, or at the meeting on April 18th. All that is at present disclosed is that considerable appreciation took place, in 1927 and 1928, in the value of investments held by the company's subsidiaries, and the share transferred to the company, "through distributions of assets on liquidations," was sufficient to allow of the latter's writing off the whole of its preliminary expenses of £1,260,953, making "certain appropriations," the nature of which is not revealed, and —with share premiums and last year's allocation—raising its reserves to over £11,000,000, as compared with £700,000 at December 31, 1927. The financial position is so obviously strong that a full disclosure of the operations in question will be calculated to enhance rather than to diminish the company's prestige.

Associated Portland Cement.—The report of the Associated Portland Cement Company, which controls British Portland Cement, is much more satisfactory than would appear from the published figures. The directors refer to keen competition and lower selling prices. In point of fact, for five months of last year there was a price-cutting war between the Associated group, the Horne group of companies and other independent companies. This was brought to end in November, when the Horne group and the independents joined the Cement Manufacturers' Association. In spite of the price war the Associated was able, by reducing its costs and increasing its turnover, to increase its net profits by 10 per cent., as the following figures show:—

	1926.	1927.	1928.
	£	£	£
Ord. capital	2,257,215	2,500,000	3,000,000

Carried forward	131,509	139,286	140,006

* After depreciation, debenture interest, and sinking funds.

The earnings shown in this table do not bring out the real strength of the Associated group's trading position. In the last five years the group has been engaged in reconstructing plants out of revenue. After an expenditure in this period of about £4,500,000 the Associated and British have now completed their rebuilding programme, with the exception of the reconstruction of the Swanscombe works, which will be ready in a few months' time. Their working costs have thus been considerably reduced, and it will not be necessary to set aside such large sums in future for depreciation. In the five years ending December, 1929, the two companies will have allocated to depreciation £3,315,000 apart from sinking funds. Last year the net profits of the British, after allowing for

preference dividends, but adding back depreciation of £250,000, amounted to £503,000, of which 75 per cent. (£377,000) belonged to the Associated. If this sum is added to the Associated net profits, after deduction of preference dividends of £240,720 and if the depreciation of £265,000 is also added back, the total earnings of Associated in 1928 are found to be £882,000, or 29 per cent., on the ordinary capital of £3,000,000. Actually real earnings were even higher because sinking funds of £144,000 were allowed for in arriving at this figure. The balance sheet of the Associated shows a strong position, the surplus of current assets over current liabilities amounting to £1,137,606. Investments, which include over 75 per cent. of the British Portland ordinary capital of 1,680,000 shares, and loans, amounted to £2,478,330, against £1,975,526 in the previous year. At the present price of 29s. 3d. cum dividend the ordinary shares yield 5.7 per cent. on the basis of last year's dividend of 8 per cent. The company's prospects for 1929 will no doubt be reviewed by the chairman at the general meeting on March 27th.

Crown Mines.—By contrast with some of its neighbours, writes our mining correspondent, this—the biggest of the Central Rand consolidations—presents an eminently satisfactory annual statement. Decrease in grade, due chiefly to the treatment of a larger proportion of development ore, has been counteracted by expansion in the tonnage milled. As a result, the working profit is almost identical with that of 1927. The reduction in the dividend rate arose partly from the larger capital expenditure, this absorbing £285,300, as against £251,800; taxation, &c., on the other hand, required £154,000, in place of £163,980, leaving £346,200 to be carried forward, or £32,000 more than brought in. We contrast the results of the past three years:—

	1926.	1927.	1928.
Tonnage milled	2,611,000	2,508,000	2,611,000
Revenue per ton	26/11	28/1	27/10
Working costs per ton	18/11	20/4	20/5
Profit per ton	8/0	7/9	7/5
Total working profit £	1,047,530	970,690	969,090
Dividends £	553,840	623,070	507,680
Rate per cent.	60	67½	55
Ore reserves tons	9,710,430	10,224,740	10,962,250
Average dwt.	6·5	6·5	6·7

The performance of an additional 12,300 ft. of development (total, 99,700 ft.), provided a net increase in the ore reserves of three-quarters of a million tons, accompanied by some improvement in the value. A gratifying feature of the developments was the "excellent" grade disclosed by the main reef-leader—the principal ore body—in the deeper portions of the mine to the south of the South Rand dyke. Heavy capital expenditure has to be envisaged for the current and two following years; subseuently, other things being equal, higher dividends should be practicable. On last year's rate the gross yield is about 8½ per cent.

East Rand Proprietary.—The Stock Exchange took a mildly favourable view of the 1928 report, emphasing the repayment of the balance of the debenture debt and the adequacy of the company's supply of native labour. There was also, as will be seen from the table given below, a relatively considerable expansion in the profit and in the ore reserve tonnage. The former feature is attributable to the crushing of an increased tonnage for a slightly higher average yield; the latter to the performance of an additional 10,000 ft. of development.

	1926.	1927.	1928.
Tons milled	1,577,500	1,586,500	1,685,700
Revenue per ton	21/5	22/0	22/3
Costs per ton	20/7	21/6	21/1
Profit per ton	−/10	−/6	1/2
Total working profit £	68,260	112,540	96,340
Ore reserves tons	2,414,450	3,130,000	3,624,000
Value per ton dwt.	6·6	6·4	6·4

The working profit set out above was supplemented by £17,300 sundry revenue, less £10,600 debenture interest, directors' fees, and the like. Expenditure on excess development absorbed nearly £35,000; debenture redemption, including the balance due on March 1st last, £89,600; £221,400 remains to be carried forward, or £23,400 less than brought in. The year's capital outlay amounted to £171,000, leaving a balance of £123,900 still in hand. With a considerable amount of work yet to be accomplished, this sum is not likely to prove any too much. Nothing further will be required for debenture interest; on the other hand, it is proposed to set aside £10,000 per annum towards the heavy liability in respect of miners' phthisis. Development in the East Rand property last year was attended with mixed results, low values rather predominating. Completion of the resampling of the Cinderella section showed that the reserve taken over at the time of the amalgamation was 400,100 tons, value 6.1 dwt. Both in respect of quantity and value this falls appreciably short of the estimate.

The Trustees and Managers, and the Committee for General Purposes of the Stock Exchange announce that no "Stock Exchange" sweepstakes or mutual subscription funds on horse races and other similar events are officially recognised or promoted, and that they accept no responsibility for the administration or conduct thereof.

CAPITAL ISSUES.

Four large prospectus issues and a pre-Easter crowd of smaller offers made their appearance during the week, aggregating £7,892,250, and bringing the total for the year to £95,127,050, against £164,478,100 for the corresponding period of 1928. The *Central Argentine Railway Co.* made a substantial issue of debentures, the lists for which were closed at 1 p.m. on the second day. Interest charges on the company's debentures (including the present issue, which offered a yield of £5 6s. per cent.) were covered five times by the revenue of the last financial year. Five-sixths of a £1½ million issue by the *London and Holyrood Trust*, which has a strong board, go to inside interests. A well-known concern, *Provincial Cinematograph Theatres*, now controlled by Gaumont British Picture Corporation, offered £1½ million of debentures, giving a flat yield of £6 7s. 7d., or over 6½ per cent. allowing for redemption at latest date. A further £750,000 were reserved for future issue. Assets valued at over £5 million will be available for these debentures, and profits for each of the last two years cover interest charges roughly five times. A sound issue of £1,000,000, 6 per cent. debentures at 102, with redemption at 105 in or before 1973, was made by *Hambleden Estates*, a new company formed to acquire the freehold and leasehold properties of W. H. Smith & Sons; a further £700,000 was already issued to nominees of the latter firm, but the whole was well secured and provided for by the certain nature of the income receivable. An Edinburgh issue of debentures, not underwritten, by an eighteen-months-old trust company, the *Second Scottish Eastern Investment Trust*, completed the list of important prospectuses, the remainder being of the moderately or highly speculative order. *Waste Food Products* needs no introduction; it requires £175,000 to complete one factory and to acquire, extend, or erect others. Its profit estimates are imposing, but past profits are not disclosed. *Salerni Coupling* quickly obtained over-subscription for a patent issue, in which options at a large premium were prominent. An attempt to develop a business carried on successfully for the last five years on a small capital is represented by *Berry's Insulating and Building Products*, specialising in articles for which there is stated to be a large demand in the building and allied electrical trades. The original founder of the business has no reason to be dissatisfied with the terms of its conversion into a public company; whether the new business can earn profits on a capital of £175,000 at all comparable to those it earned on £10,002, time alone can show. The manufacturers of a home dry cleaner regard the possibilities of their product as sufficiently great to call for the formation of a separate export

company, *Thawpit Exports*, and the further formation of separate companies in many countries" is foreshadowed. The prospectus might well have included a statement of past trading results at home. *Automatic Trade Mark Machine* and *Harper Automatic Machine Manufacturing* companies broke the recent lull in this class of issue; neither waited to see whether its patent applications were granted before making its appeal to the public. The *Vortex Silencer* was awarded gold and silver medals for efficiency at Auto Cycle Union trials in 1927, and production on a large scale is now to be attempted. The whole purchase consideration is attributable to patent rights. *Walls and Highley Theatres*, formed to amalgamate the Fortune and Aldwych theatres in London, must, by its nature, be subject to wide trading risks. *Transmutograph* acquires the benefit of patent applications, not yet granted, in a commercial advertising device for which a great future is predicted, though it enters a highly competitive field. Lastly, *Ralph Alcock and Sons* is floating a public company to exploit a new type of spring, which certainly has already attracted important users. In contrast to the usual practice, it was noticeable that the results of a number of the above issues were not hurriedly disclosed in the daily Press.

Central Argentine Railway Company, Limited.—Issue at 94½ of £3,000,000 5 per cent. redeemable debenture stock, 1967-87, carrying a floating charge with the right to convert into 4 per cent. stock at any time at par, and repayable at par in 1987 or at 102½ after 1967. The issued share capital amounts to £43,694,468; 5 per cent. notes, totalling £1,985,700, are repayable in 1933. Receipts, less interest on loan capital, have been:—1924-25, £2,597,712; 1925-26, £2,485,677; 1926-27, £3,297,461; 1927-28, £3,696,480.

London and Holyrood Trust, Limited.—Issue at par of 150,000 £10 shares, to be converted when fully paid into £6 of 5 per cent. cumulative preference and £4 of ordinary stock. The company carries on investment trust business.

Provincial Cinematograph Theatres, Limited.—Issue at 94 of £1,250,000 (out of £2,000,000) 6 per cent. first mortgage debenture stock, a specific charge on fixed assets and on shares in associated companies, and redeemable by a 1½ per cent. cumulative sinking fund; repayable at any time at 105 or at 102½ in 1958. Issued share capital amounts to £3,200,000. The company was formed in 1909, and owns, controls, or manages 113 picture theatres, dance halls, and restaurants. Surplus assets at January 31st were valued at £3,992,352. Profits, before certain deductions, have been (to January 31st):—1925, £246,731; 1926, £249,422; 1927, £287,683; 1928, £369,611; 1929, £380,948.

Hambleden Estates, Limited.—Issue at 102 of £1,000,000 (out of £1,700,000) 6 per cent. first mortgage debenture stock, a specific first charge on property and on a £1,000,000 6 per cent. debenture of W. H. Smith and Son, Ltd., and repayable by 1973 at 105 by a cumulative redemption fund or after 1929 at 110. Issued share capital amounts to £1,000,000. The company acquires the freehold and leasehold properties, valued at £1,711,855, on which the business of W. H. Smith and Son is carried on. Net rents receivable, plus interest on the £1,000,000 debenture, will provide £172,000 for service of this issue.

Second Scottish Eastern Investment Trust, Limited.—Issue at 95 of £250,000 5 per cent. debenture stock, 1960-70. Issued share capital amounts to £750,000, and £114,615 terminable debentures, ranking *pari passu* with this stock, have been issued. The company was incorporated in 1927. Balance on £17,427.

Waste Food Products, Limited.—Issue at par of 175,000 new £1 ordinary shares, ranking *pari passu* with 125,000 already issued, entitled to an 8 per cent. preferential dividend, and to 55 per cent. of the remaining distributed profits after payment of 8 per cent. on 500,000 1s. deferred shares. The company was formed in June, 1928, and has acquired certain businesses and world rights. The present issue will provide capital for extensions, &c., including the purchase of a further business for £55,000 (£5,477 for goodwill), and involving expenditure of £132,500; approximately £19,000 should remain as working capital out of the proceeds.

Salerni Coupling, Limited.—Issue at par of 1,500,000 (out o 3,000,000) 2s. shares. The company acquires patent rights, for the world outside America, in a coupling device for gear-changing, and the benefit of a sales contract. The purchase consideration is £100,000, payable as to £60,000 in cash and £40,000 in shares, an option on 250,000 shares at 3s., and a royalty. Working capital is estimated at £70,000. A further 350,000 shares are also under option on the same terms.

Berry's Insulating and Building Products, Limited.—Issue at par of 528,000 (out of 700,000) 5s. ordinary shares. The company acquires the share capital of a business engaged in the manufacture of insulating materials, with assets valued at £80,100, excluding goodwill. The purchase price is £98,000, payable as to £55,000 in cash and £43,000 in shares. Working capital is estimated at £63,600.

Thawpit Exports, Limited.—Issue at par of 500,000 (out of 700,000) 5s. shares. The company acquires exclusive manufacturing and selling rights, patents, and trade marks in all countries except Great Britain, Northern Ireland, Irish Free State and Channel Isles, of two dry-cleaning preparations. The purchase consideration is £50,000, payable as to £25,000 in cash and £25,000 in shares. Working capital is estimated at £75,250. Promoters receive 20,000 shares and an option on the remaining 80,000 at par.

Automatic Trade Mark Machine Company, Limited.—Issue at par of 300,000 5s. 8 per cent. preferred ordinary and 600,000 (out of 1,100,000) 1s. deferred shares, the former entitled to one quarter of the remaining distributed profits after payment of 8 per cent. on the deferred. The company will manufacture, distribute, and deal in automatic machines. The purchase consideration is £39,000, including £6,900 in cash for an existing business and £7,100 in cash and £25,000 in deferred shares for certain world rights, &c. Working capital is estimated at £65,000.

Vortex Silencer Company, Limited.—Issue at par of 500,000 (out of 750,000) 4s. shares. The company acquires patents for Great Britain and Canada and a patent application for the Irish Free State relating to a silencer, with options concerning foreign patents. The purchase consideration is £45,000, payable as to £20,000 in cash and £25,000 in shares. Working capital is estimated at £45,000. The remaining 125,000 shares are under option at par.

Walls and Highley Theatres, Limited.—Issue at par of 95,000 (out of 110,000) £1 8 per cent. cumulative participating preference and 95,000 (out of 400,000) 1s. ordinary shares, the former entitled to one quarter of the remaining distributed profits. The company acquires controlling interests in two theatre companies, with net assets valued at £20,210. The purchase consideration is £14,700 in preference and £8,537 10s. in ordinary shares, plus £6,712 10s. in ordinary shares for the benefit of agreements with authors and artistes, and the company purchases £26,210 debentures in one company for cash.

Transmutograph, Limited.—Issue at par of 830,000 (out of 1,300,000) 2s. ordinary shares. The company acquires a licence for the United Kingdom to manufacture and sell an electric luminous advertising device. The purchase consideration is £34,000, payable as to £17,000 in cash and £17,000 in shares. Working capital is estimated at £46,000. The remaining 300,000 shares are under option at various premiums.

Ralph Alcock and Sons, Limited.—Issue at par of 800,000 (out of 1,500,000) 2s. shares. The company acquires rights to manufacture and sell a patent spring in Great Britain and Northern Ireland, together with two existing businesses valued at £9,276. The purchase consideration is £25,000, payable as to £5,000 in cash and £20,000 in shares, an option on 500,000 shares, and a royalty. Working capital will suffice for erecting and equipping an additional factory.

Harper Automatic Machine Manufacturing Company, Limited.—Issue at par of 150,000 (out of 300,000) 10s. ordinary shares. The company acquires an existing business of automatic machine manufacturers, and the benefit of six patent applications, for £60,000, payable as to £10,000 in cash and £50,000 in shares, and an option on 20,000 shares at par. Profits have been:—1926 (6 months), £484; 1927, £4,062; 1928, £10,221. Working capital is estimated at £37,000.

West Hampshire Water Company.—Offer for sale by tender of 2,500 £10 5½ per cent. preference shares (minimum price, £10). Issued share capital amounts to £120,195, and loan capital to £49,996. Net revenue for year ended June 30, 1928, was £13,797. Debenture interest requires £2,498, and dividends on preference shares (including present issue) will amount to £3,719. Reserve fund is £11,500. The company supplies an area of some 125 square miles.

Particulars of the following have been issued for public information only in connection with Stock Exchange "introductions":—**Consolidated Investment Corporation of Canada** (incorporated with limited liability under the laws of the Province of Quebec); issued capital 100,000 $100 5 per cent. cumulative preferred shares and 1,375,000 common shares of no par value, together with $15,000,000 4½ per cent. first collateral trust gold bonds, 1959. **Pentland Investment Trust, Limited**; issued capital 50,000 £10 shares, to be converted when fully paid up into £6 of 5 per cent. preference and £4 of ordinary stock. **De Vere Hotels, Limited**; issued capital 400,000 5s. ordinary shares, together with £90,000 7 per cent. debenture stock; originally incorporated in 1912; profits have averaged £21,426 over 5 years, less debenture interest. **Eclipse Automatic Devices, Limited**; issued capital £50,000 in 2s. shares; acquires exclusive licence to manufacture and sell patent lubricating pumps in the British Empire (except Canada), France and her dependencies, for £20,000 in shares and a royalty. **Brownlac, Limited**; issued capital £100,000 in 5s. shares; will manufacture synthetic shellac. **Second Scottish United Investors, Limited**; issued capital £450,000 5 per cent. cumulative preference and £300,000 ordinary stock; issue of £434,090 5 per cent. debenture stock, 1958-63, at 95; incorporated in January, 1928. **General Engineering Development Trust, Limited**; issued capital, £150,000 in 5s. shares; formed in 1924 as a trust company engaged in general, engineering and development business, and, *inter alia*, to acquire and deal in patent rights and inventions. **International Proprietaries, Limited**; issued capital, 225,000 shares class "A" stock and 112,500 shares class "B" stock, all of no par value, the former entitled to $2.60 per share, payable quarterly, and one-fifth of the surplus up to an annual maximum of 80 cents; incorporated in Canada, 1928; formed as a holding company to acquire shares of J. C. Eno, Limited, and similar companies.

SAN FRANCISCO MINES OF MEXICO, LIMITED.—Operations for February:—Ore treated, 23,580 tons; lead concentrates produced, 2,020 tons; zinc concentrates produced, 3,606 tons. Estimated net smelter returns, $276,080. Operating expenses, $115,402. Estimated operating profit, $160,678. Office Note.—The return includes a minus adjustment of $1,107, being excess of valuations of products over realisations in respect of previous months.

BROKEN HILL, LIMITED.—For the month of February the production was as follows:—32,033 tons of crude ore were treated, assaying 14.4 per cent. lead, 8 ozs. silver per ton, and 19.5 per cent. zinc, producing 7,200 tons lead concentrates, assaying 64 per cent. lead, 22.5 ozs. silver per ton and 8.2 per cent. zinc; also 5,410 tons zinc concentrates, assaying 49.6 per cent. zinc, 2.5 per cent. lead, and 3.2 ozs. silver per ton. 6,050 tons dump slimes were treated, assaying 10.5 per cent. lead, 6 ozs. silver per ton and 15.9 per cent. zinc, producing 320 tons lead concentrates, assaying 56 per cent. lead, 30.5 ozs. silver per ton and 12.5 per cent. zinc; also 1,750 tons zinc concentrates, assaying 46.6 per cent. zinc, 4.6 per cent. lead and 5 ozs. silver per ton.

COMPANY MEETINGS, &c.

NATIONAL BANK OF EGYPT.

SUCCESSFUL RESULTS OF THE YEAR.

DIVIDEND INCREASED TO 18 PER CENT.

The twenty-ninth annual general meeting of the shareholders in the National Bank of Egypt was held on Thursday, March 21st, at the head office of the Bank, in Cairo.

Sir Bertram Hornsby, C.B.E. (the Governor), presided.

DIRECTORS' REPORT.

The directors' report was as follows :—

The directors present to the shareholders the balance sheet and profit and loss account for the year ending December 31, 1928.

The gross profit for the year, after providing for depreciation on the Bank's buildings and furniture, for rebate of discount, and for doubtful debts, amounts to

	£	s.	d.
	1,127,579	10	7
After deducting from this sum :—			
For directors' fees 14,000	0	0	
For current expenses 461,957	8	2	
	475,957	8	2
there remains	651,622	2	5
In conformity with Article 49 of the Bank's statutes a dividend of 4 per cent. is payable on the share capital	120,000	0	0
After this distribution there remains	531,622	2	5
Adding to this the balance brought forward from last year	210,172	10	4
the amount available is	741,794	12	9
The directors consider it prudent to allocate to special reserve for contingencies a sum of	100,000	0	0
which leaves	641,794	12	9
From this amount the directors recommend the payment of an additional dividend of 14 per cent. on the Share capital which will absorb	420,000	0	0
and to carry forward the balance of	221,794	12	9

The total dividend for the year will thus be at the rate of 18 per cent., equivalent to £1 16s. 0d. per share. An interim dividend of 8s. having been paid on September 3, 1928, there remains to be distributed the balance of £1 8s. 0d. per share.

ADLY YEGHEN,
H. E. BARKER,
Directors.

B. HORNSBY,
Governor.

REPORT OF THE AUDITORS.

We have examined the books of the National Bank of Egypt and in our opinion the above balance sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs as shown by the books. We have also verified the cash, notes and securities at the head office and at the Cairo and Alexandria branches, and have found the same correct. The London returns have been audited and certified by Messrs. Deloitte, Plender, Griffiths and Co., chartered accountants.

THE GOVERNOR'S SPEECH.

EGYPT'S PROSPERITY.

SUDAN TRADE FIGURES.

The Governor, addressing the shareholders, said :—Gentlemen,—From the balance sheet and profit and loss account which are in your hands, you will see that the gross profit, at £1,127,579, is slightly less than that of 1927; but, on the other hand, expenses being £42,000 less, the net profit of £651,622 is nearly 37,000 more than last year.

In view of these satisfactory results your directors have decided to recommend an increase of 1 per cent. in the dividend, which, if you approve, will therefore be at the rate of 18 per cent., as against the 17 per cent. paid for the last few years.

BALANCE SHEET ITEMS—ASSETS.

On the assets side of the balance sheet the total of our advances at £13,790,000 shows a marked increase as compared with the figure of £11,930,000, at which they stood last year. Of these advances, £5,900,000 are covered by merchandise, chiefly cotton, and £5,800,000 are covered by stocks and shares, the corresponding figures for last year being £4,921,000 and £4,498,000. These increased advances are the result of a larger demand for accommodation from our customers on account of the greater activity of the cotton market; they fall to be repaid as the season draws to a close.

Our holding of foreign bills at £4,965,000 shows an increase of £2,250,000 over last year, arising also from the active state of the cotton trade. The bulk of these bills bear the acceptance of first class banks and they form an asset of great liquidity. Our holding of British Treasury Bills is not comprised under this heading, but is included under that of Government securities.

Our local bills discounted show little change. They represent in part commercial bills and in part what are in reality advances to landowners for the purposes of their cultivation. We should have no difficulty in increasing this latter category but for the fact that it is not our practice to lend a larger sum than the borrower can conveniently repay out of the proceeds of his crop.

LIABILITIES.

On the liability side of the balance sheet you will see that the account of the Egyptian Government stands at £18,800,000. Of this amount, £8,000,000 were on deposit for fixed periods. Our deposits from the public, at £16,000,000, are lower by £900,000 than they were a year ago. This is explained by the fact that the figure of December 31, 1927, was swollen by deposits of a temporary character at our London agency, which were withdrawn after the close of the year.

The note issue calls for no special comment. The average issue for the year was about £27,700,000, against £28,600,000 in 1927, but the figure is affected by the withdrawal in the latter year of our notes from circulation in Palestine.

The maximum and minimum for the last five years were as follows :—

	£E.	£E.
1924	42,400,000	26,900,000
1925	41,900,000	28,700,000
1926	35,300,000	25,300,000
1927	33,600,000	24,400,000
1928	33,900,000	22,300,000

PROSPEROUS STATE OF THE COUNTRY.

I am happy to state that the prosperity of the Bank is only one indication of the prosperous state of the country in general. The cotton crop of the current season 1928–29 is estimated at about 7,500,000 centars and is selling freely at prices which are remunerative to growers.

I referred last year to the surplus of funds in the country seeking investment and the consequent rise in the value of local securities. This movement continued during 1928 and it is now difficult to obtain any fixed interest security at better than a 5 per cent. yield. The ordinary shares of certain of the larger companies are capitalised on an even lower basis, which indicates an optimistic outlook for the future on the part of buyers.

Four years ago I drew your attention to the remarkable increase in the percentages of coupons of the Egyptian Unified and Privileged Debt paid in Egypt, as given in the annual reports of the Caisse de la Dette. In 1927 these percentages were 68 and 58 respectively, as against 16¾ and 7½ in 1919. Though considerable purchases of these bonds have of later years been made on behalf of the Egyptian Government, the private holding has been largely extended; in either case the transfer of securities to this country from abroad represents an accretion to the public fortune.

Another indication of prosperity may be found in the great activity which still continues in the building trade. Visitors to Cairo and Alexandria are invariably impressed by the large and handsome buildings which have been erected of late years and by the improvements which have been effected in these two towns.

COMPARATIVE FIGURES OF IMPORTS AND EXPORTS.

I make no apology for again submitting to you the figures of Egypt's foreign trade for the last five years. In accordance with past practice each year is made to run from September 1st to August 31st, so that, as nearly as possible, it may cover a complete cotton crop.

You will see that whereas the season 1926–27 resulted in an excess of imports over exports of some £E2,500,000, the situation has been entirely reversed in 1927–28, exports showing an excess of about £E2,750,000. It is to be expected that the figures for the current season will not be less favourable.

Sept. 1st–Aug. 31st	Imports. £E.	Exports. (inc. re-exports). £E.
1923–1924.....	47,440,590	64,109,696
1924–1925.....	56,257,511	67,592,808
1925–1926.....	55,973,075	52,855,630
1926–1927.....	48,230,223	45,823,035
1927–1928.....	51,565,388	54,310,983

In the course of the year the Government decided to put into operation various projects which will increase the material and moral welfare of the country. The proposed programme of irrigation works will, when completed, add considerably to the resources of the country, and by bringing more land into cultivation will provide an outlet for the energies of the ever-growing population. In the meantime the capital expenditure involved should benefit the trade of the country.

In 1930 expires the last convention binding Egypt to its present customs system which, as you know, is on an "ad valorem" basis, the rate in general being 8 per cent., subject to higher rates for a few articles and to lower rates for certain others regarded as prime necessities. The Government is now studying the whole question of the modifications whether of principle or of detail which the interests of the country seem to require. From the point of view of trade and commerce, the essential requisite is that the system should be simple in itself and practical in its application.

SUDAN TRADE FIGURES.

There is a steady growth in the foreign trade of the Sudan, as may be seen from the subjoined figures of imports and exports for the last five years :—

	Imports. £E.	Exports. (inc. re-exports). £E.
1924	5,474,910	3,830,171
1925	5,437,727	4,168,364
1926	5,574,401	5,190,505
1927	6,155,314	5,229,419
1928	6,436,206	5,947,026

The chief item on the export side is cotton from the Gezira, valued at £E.3,600,000, as against £E.3,200,000 in 1927. Other items of importance are gum and hides. Apart from goods imported on Government account, cotton piece goods take first place among the imports, and are followed by tea, sugar and tobacco, which seems to show that the native of the country is developing new tastes and habits.

The rains were satisfactory to the extent that sufficient maize was grown to meet local consumption without the necessity of recourse to importation. On the other hand, there was no surplus available for export.

DIRECTORATE

Since the close of the year our colleague in London, Lord Cullen of Ashbourne, has tendered his resignation, which we have accepted with the greatest regret, and we take this opportunity of expressing our thanks for the wise counsels which his long experience in the City of London has so admirably qualified him to give. In his place we have nominated Sir Otto Niemeyer, who has played such an important part in international finance. I shall in a moment submit this nomination for your ratification.

The director who retires by rotation this year is Mr M. C. Salvago, who offers himself for re-election.

In conclusion, the directors wish to express their thanks to the sub-governors, the managers and the staff for their services during the past year.

THE BANK OF AUSTRALASIA.

SUCCESSFUL YEAR—INCREASED PROFIT.

SATISFACTORY EXPANSION IN BALANCE SHEET.

The ninety-fifth annual general meeting of the proprietors of the Bank of Australasia was held, on Thursday, March 21st, at the office of the Corporation, 4, Threadneedle Street, London, E.C.

Mr. T. R. Johnson presided.

The Manager (Mr. Edmund Godward) having read the notice convening the meetng,

The Chairman said: Ladies and gentlemen, I presume that, following our usual practice, you will take the report and statement of accounts as read. If that is agreed, we will turn at once to the balance sheet. The total figures show an increase of £3,024,000, of which the increase in the capital and reserve fund accounts for £1,100,000, and I think you will agree that the expansion in our balance sheet is satisfactory, particularly as a very liquid position is disclosed. Specie, bullion, Government notes, cash balances, and loans at call, show an increase of £740,578, and at balance date were 19 per cent. of our liabilities to the public. Our position in Australia in this respect still compares very favourably with that of any of the other banks.

YEAR'S PROFIT.

As regards the profit account, the gross profit is greater by £76,157, but as charges of management are up by £15,320—largely due to the opening of new branches, and increased salaries due to arbitration awards—and rates and taxes both in the Dominions and London are up by £39,700, the increase in net profit is brought down to £21,133. This result is not unsatisfactory when it is remembered that parts of Australia, notably New South Wales and Queensland, were affected by severe drought conditions during the year under notice.

It is just eleven years since I last occupied the chair at a general meeting of the Bank, and it may interest the shareholders if I very briefly compare the position in October, 1917, with October, 1928.

The capital was £2,000,000, as compared with 4½ millions. The reserve fund was £2,905,000, compared with £4,450,000, and this does not tell the whole story, for, in 1920, £1,000,000 of the reserve fund was capitalised. Deposits in 1917 were £20,891,000. In October last they had reached £33,876,000. On the assets side, British Government securities were £1,142,884, as compared with £3,641,294, and other investments have also increased. Advances on securities and other assets were £20,219,000, including bills receivable, whereas, in October last, they had reached £31,564,000, without bills receivable, which alone stood at £3,300,000.

On the capital, increased to four and a half millions, the shareholders will receive, to-morrow, the final half-yearly dividend at the rate of fourteen per cent. per annum, and I would repeat what has been said from the chair on many previous occasions, that over and above the subscribed capital on which the dividend is declared, there is a large amount of other capital in the form of reserves, set aside from time to time, employed in the business of the Bank, and, taking this into account, it is quite evident that we are not making more than a fair trading profit.

The report gives a list of new branches opened, and I should like to mention that the new chief office in Brisbane has been brought into use during the year. Having seen the new building in the course of construction, I can assure you that the Bank is worthily housed in the capital of Queensland.

In Melbourne our principal office is in course of enlargement, and, at the present time, the superintendent and his staff are occupying temporary premises. A contract has been arranged which will provide three additional floors and afford much-needed room for expansion.

THE BRITISH MISSION.

Australia's financial policy has, from time to time, both at home and abroad, been subject to some criticism, and this may have influenced the Commonwealth authorities in their decision, early last year, to invite four prominent business men, nominated by the British Government, to proceed to Australia as a Mission with the following terms of reference, viz.: "To confer with the Commonwealth and State Governments, with the Development and Migration Commission and the leaders of industry and commerce in Australia, on the development of Australian resources, and on any other matters of mutual economic interest to Great Britain and the Commonwealth, which may tend to the promotion of trade between the two countries, and the increase of settlement in Australia."

THREE OF THE CONCLUSIONS OF REPORT.

None of the members of the Mission had previously visited Australia and, their selection having been approved by the Commonwealth Government, they sailed from Marseilles on August 31, 1928, and landed at Fremantle on September 25th last year. The work of this Commission, therefore, commenced before the close of our financial year now under review, and, although their report was not issued until January 7, 1929, I make no apology for briefly referring to it. The report is summarised, and I mention three of the conclusions, viz.:—

"(1) The indispensable condition of the promotion of trade between Great Britain and Australia and of the increase of settlement in Australia is the prosperity and absorptive power of Australia itself.

"(2) The present financial position of Australia is sound in the sense that her national income and sources of public revenue are amply sufficient to pay for her Government and to provide for the service and repayment of her public debt. But,

"(3) Australia has, in past years, spent too much unprofitably on development schemes which have been undertaken either without sufficient regard to their probable financial and economic results or without adequate preliminary investigation of the schemes themselves. She has been mortgaging the future too deeply, and would do well to restrict her expenditure of borrowed money for development, notwithstanding the inconveniences that must follow from deflation, and to leave the field more widely open for private enterprise."

This latter conclusion follows, opportunely, the views expressed last year by our colleague, Mr John Sanderson, who is away from this meeting through a visit to Australia on business. Presiding a year ago, he said: "The adequate development of such a vast continent as Australia must always require expenditure of capital, but so long as it be reproductive expenditure, wisely administered, and accompanied by sufficient increase of production in the country districts, one need not be too greatly concerned about the result."

It may not be out of place to emphasise these words to-day and to note that country districts were particularly mentioned as the quarter from which increased production should be expected; for the fact cannot be ignored in the Dominions that the services of every new loan from abroad must be met by increased exports, and this can only be accomplished by an increase in the primary products of the soil.

UNIFICATION OF GAUGES.

In a supplementary memorandum, the Commissioners refer at length to the much-discussed railway question, known as the "Unification of Gauges," and ask whether this important work should not be seriously taken in hand with a view to early completion.

It must be admitted that action in this direction has not moved rapidly, but it should be remembered that the Trans-Continental Railway from Kalgoorlie, in Western Australia, to Port Augusta, in South Australia, a distance of over 1,000 miles, and opened for traffic in 1918, was constructed to the standard gauge, and Western Australia is preparing for the widening of the railway track from Kalgoorlie to Fremantle, from 3 ft. 6 in. to 4 ft. 8½ in.

On the other side of the Continent, New South Wales is busy strengthening the line from North Grafton to Kyogle—where the gauge is at present to standard dimensions—by laying heavier rails suitable for heavy and fast traffic. Queensland, on the other hand, is altering her 3 ft. 6 in. gauge south of Brisbane to join up with the new railway still to be completed from Kyogle northwards via Richmond Gap, so that, when the new bridge over the River Clarence at Grafton is completed, it will be possible to convey both passengers and goods by through trains from Sydney to Brisbane without a break of gauge.

Seeing that the development of Australia depends, to a considerable extent, upon good means of communication by railway and road, I have referred to the unification problem as being of real interest to this Bank and similar institutions.

WEATHER CABLE FROM SUPERINTENDENT.

We have received the following weather cable from the superintendent: "Season conditions coastal and agricultural areas Australia satisfactory, but inland pastoral districts badly need rain, particularly West and South-West Queensland. New Zealand prospects good."

I now beg to move the adoption of the report, and when the resolution has been seconded, if any proprietor has any question to ask, I will endeavour to answer it.

The Rt. Hon. Lord Aldenham seconded the resolution, and, no questions being asked, it was put to the meeting and carried unanimously.

RE-ELECTION OF DIRECTORS.

The Chairman: We now come to the re-election of directors, and the first name is that of Lord Aldenham, our senior director. I have very much pleasure in moving his re-election.

The Rt. Hon. the Earl of Midleton, K.P., seconded the motion, which was unanimously adopted, and Lord Aldenham briefly acknowledged his re-election.

The Chairman next moved that Mr Kenneth Goschen be re-elected a director.

Lord Aldenham seconded the motion, which was unanimously agreed to.

The Chairman further moved the re-election of Mr Horace Peel as a director, which was also seconded by Lord Aldenham, and passed unanimously.

On the motion of Mr J. H. Butterworth, seconded by Mr Jones, Messrs Deloitte, Plender, Griffiths and Co. were reappointed auditors.

VOTE OF THANKS TO STAFF.

The Chairman: It is now my gratifying duty to propose a vote of thanks to the staff in Australia, New Zealand and London, for their services rendered during the past year.

I visited New Zealand and Australia in 1927 on other business, but I was very glad to have the opportunity of meeting the superintendent and some of his principal officers and of visiting all the branches in Melbourne, Sydney, Brisbane, Wellington and Auckland. I can testify, therefore, from personal observations, to the good work the Dominion officers are doing.

As regards London, Mr Godward—whom many of you know—with his staff, has carried on the work of the head office and West End branch in a most successful manner.

I move this resolution with great pleasure, and should like to ask a shareholder to be good enough to second it.

Mr Welch seconded the vote, which was unanimously accorded.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Mr A. Hood: Sir, May I, on behalf of the shareholders, offer to you and to the other directors a vote of thanks? What impressed me very much in your speech was your reference to the position of the Bank eleven years ago. Comparing the present position with that prevailing at that time, I think we shall all agree that the business of the Bank must have been built on a very solid foundation I propose a vote of thanks to the Chairman and the other directors.

Mr Butterworth: I have very much pleasure in seconding the vote proposed by Mr Hood. I think it is fully deserved, and I hope—indeed I am sure—every shareholder will agree with me.

The proposition was carried with acclamation, and a brief acknowledgment having been made by the Chairman, the proceedings then terminated.

THE SCOTTISH PROVIDENT INSTITUTION MUTUAL LIFE ASSURANCE.

LARGE INCREASE IN NEW BUSINESS.

HIGHLY FAVOURABLE QUINQUENNIAL RESULTS.

The ninety-first annual general meeting of The Scottish Provident Institution was held in Edinburgh on Wednesday, March 20, 1929.

Mr Alexander Maitland, K.C., in the chair.

The Chairman, in moving the adoption of the report, said:—

REPORT FOR THE YEAR 1928.

We are glad to report that the net new business completed, £2,789,885, is over £329,000 more than in 1927. This, naturally, brings an increase in the new premium income, the figure for the past year being £191,241 against £122,226 for the previous year—an improvement of £69,000. You may remember that in 1927 we increased our annuity rates, or, in other words, reduced our price, for annuities. The public response thereto is shown by the figures under the heading of annuities. 378 Bonds were granted, in respect of which the large sum of £331,498 was received in single payments and £1,522 16s. 3d. in annual premiums—a total increase of nearly £200,000 over the 1927 figure. The satisfactory feature in doing this business is not so much the profit we may earn as the connections formed, which we anticipate will prove new sources of life assurance business. The total receipts, including net interest, at £2,485,328 show a satisfactory increase of over £320,000. The mortality experience, at 73 per cent. of the "expected" claims, has been favourable, and maturing endowment assurances at £314,055 show, as is to be anticipated, an increase over the corresponding claims of former years. The total claims paid in the year were £1,253,664 as against £1,228,190 for 1927. It is pleasing to report an increase in the funds of nearly £682,000 for the year, one of the largest increases we have ever reported—and this after writing off from certain securities the sum of £100,362 in connection with our investigation. The rate of interest realised on the total funds, including the reserve fund, at £4 14s. 8d. net, shows an improvement of 2s. 5d. per cent. Our expense ratio at 16·1 per cent. of the premium income is practically identical with the ratio of the previous year, and cannot be regarded as extravagant, looking to the low rates of premium which we charge. As a percentage of the total receipts it shows at 7·81 a slight decrease.

QUINQUENNIAL INVESTIGATION.

After referring to the loss sustained through the death of Sir James Hodsdon, the Chief Medical Officer, and Mr. Robert W. Dundas, W.S., Director, and intimating the resignation from the Board of Mr James Graham Watson, the former Manager, and Mr D. Douglas Maclagan, the Senior Director, the Chairman proceeded to deal with the results of the quinquennial investigation, and in the course of his remarks said that a valuation on the usual stringent basis disclosed a surplus of £2,088,425, of which £1,619,795 arose on the common fund, £468,077 on the endowment assurance fund, and £553 on the capital redemption fund.

BONUSES ON WHOLE LIFE POLICIES.

On whole-life policies (common fund), entitled to participate, the following bonuses had been declared:—

(*a*) to policies sharing for the first time, £1 10s. per cent. per annum, for the full period of their duration, less the years 1914-1918;

(*b*) to those sharing for the second time, £1 15s. per cent. per annum, for the quinquennium;

(*c*) to those which have already shared at least twice, £2 per cent. per annum, for the quinquennium.

This absorbed £1,010,286 of the surplus on the common fund. Of the balance, £342,450 was reserved in respect of policies not yet entitled to participate, and £267,059 was retained as an additional reserve to provide for the valuation on the present basis of new business at the revised premium rates.

ENDOWMENT ASSURANCE BONUS.

Endowment assurances (special fund) received £2 per cent. per annum (compound), for the quinquennium. This absorbed £446,876 of the surplus of this fund, the balance of £21,201 being carried forward.

A PROUD RECORD.

After commenting on the highly favourable results of the investigation, referring to the recent reduction in the premium rates for whole-life assurance and explaining the necessity for the special reserve in connection therewith, the Chairman concluded:

We enter upon a fresh quinquennium with a record of which we may well be proud, and with a distinctive system so peculiarly suited to meet the need for protection arising out of present-day conditions that we are confident it will appeal to an ever-increasing section of the insuring public. I would again remind our policyholders that as members of a mutual association they can perform no more useful service than that of recommending the institution to their friends. Before formally putting the motion for the adoption of the report I would acknowledge on behalf of the directors, and speaking as a representative of the members, the services of the officials at head office and branches, and the staffs under their control. The report submitted affords ample testimony to the value of these services, and to the loyalty with which all concerned have co-operated in producing such satisfactory results.

The motion was seconded by Professor E. M. Wedderburn, and carried unanimously.

The directorate was thereafter constituted.

Mr Francis More, C.A., was reappointed auditor.

On the motion of Mr A. Douglas Haddon, Hawick, thanks were voted to the directors, and to the chairman on the motion of Mr Alfred Shephard, W.S.

ANGLO-INTERNATIONAL BANK, LIMITED.

YEAR'S PROGRESS—CONDITIONS IN SUCCESSION STATES.

The third ordinary general meeting of the Anglo-International Bank, Ltd., was held, on the 15th instant, at Winchester House, London, General the Hon. Sir Herbert A. Lawrence, G.C.B. (the chairman) presiding.

The Secretary (Mr. J. Back) read the notice convening the meeting and the report of the auditors.

The Chairman said: During the past year your board has continued to be engaged in liquidating the affairs of our predecessors and in building up the business of the bank. I am glad to be able to say that, although, as I mentioned last year, the process of liquidation is bound to be protracted in view of the widely-spread international interests of our predecessors, a considerable advance has been made; but until the liquidation is nearer completion your directors feel it expedient, whilst devoting close attention to the development of the business, to adhere to their policy of consolidating our position.

THE ACCOUNTS.

I will now refer to the principal items in the report and accounts, which are in your hands. The cash in hand and with bankers, money at call and balances with bankers abroad amount to £807,000. Adding to this British Government securities and Treasury bills, the total of our immediately available cash resources is brought up to £1,338,000. As regards other investments, which chiefly comprise holdings in banks of first-class standing on the Continent, you will observe that we are pursuing the policy, mentioned to you at our last meeting, and have further reduced this item during the year from £978,000 to £751,000. At the same time we have maintained our valuable Continental connections, and the shares remaining in our possession are valued at market or purchase price, whichever is lower.

We are continuing to develop the acceptance branch of our business, taking precautions to ensure that risks are well spread in regard to both countries and commodities, and you will note that acceptances and guarantees have increased since the previous accounts were laid before you from £2,637,000 to £3,147,000. Further indications of the expansion of business are to be seen in the increased figures for deposits, and for advances to customers.

The profits for the period under review amount to £103,000, which, together with the sum of £52,500 brought forward from 1927, brings the total amount standing to the credit of profit and loss account to £155,500. Of this amount it is intended, in order to strengthen our position, to place £10,000 to premises amortisation, and £125,000 to contingency reserve, leaving a balance of £20,532 4s. 4d., which your directors propose to carry forward.

PROGRESS IN SUCCESSION STATES.

As a large portion of the bank's business is with the Continent, I should like to give you a short survey of the economic conditions prevailing during the past year in the countries in which we are chiefly interested. Our colleague, Sir Henry Strakosch, has recently submitted to the Finance Committee of the League of Nations a memorandum which contains some striking figures regarding the progress achieved in the Succession States. These figures show that the foreign trade returns of the Succession States have increased in steady progression from the equivalent of $1,870,000,000 in 1922 to $2,944,000,000 in 1927. This is a clear indication of the great advance which has been made in the past few years.

The financial policy of nearly all the Succession States has been characterised by a strengthening of, and an increased tendency to co-operation between, central banks. The process of stabilisation and currency reform has now been nearly completed, and is a very satisfactory feature of the general situation. On the other hand, industrial enterprises have, on the whole, had a hard struggle to exist, and this was to be expected during a period of readjustment. There is still a serious amount of over-industrialisation, due to the desire of each politically independent State to be self-supporting in industry, and a reluctance to recognise that their territories together form an economic entity. The progress towards economic co-operation has, therefore, been slow, but it is the earnest hope of all friends of these new countries that the present year will see a more rapid advance in this direction.

The chairman, having reviewed the situation in the individual countries of Central Europe, concluded by moving the adoption of the report and accounts.

Sir Harry Goschen seconded the resolution, which was carried unanimously.

The retiring directors (General the Hon. Sir Herbert A. Lawrence, G.C.B., Mr Julian Day, M.C., Mr Zoltan Hajdu, Sir Gordon Nairne, Bart., and Mr Kunes Sonntag) were re-elected, and Messrs Deloitte, Plender, Griffiths and Co. and Messrs. Binder, Hamlyn and Co. were re-appointed auditors.

CITY OF LONDON ELECTRIC LIGHTING COMPANY, LIMITED.

INCREASED SALES—REDUCED TARIFFS.

The ordinary general meeting of the City of London Electric Lighting Co., Limited, was held, on the 20th instant, at Falcon House, Aldersgate Street, London, E.C.

Mr. J. B. Braithwaite (the chairman) said that under the London Electricity (No. 1) Act, 1925, the Electricity Commissioners had fixed the company's standard price to private consumers at 3·069d. per unit and for street lighting at ·794d. per unit. The consumers' benefit during the three years which had elapsed since the passing of the Act had amounted to nearly £600,000. The company retained £86,651, and the addition of that amount to the special reserve raised it to £185,095. He hoped that in 1932, when the standard dividend would be reduced to 7 per cent. on the ordinary capital, the company would be able to increase the ordinary capital sufficiently to maintain the present cash distribution to shareholders.

ELECTRICITY AND GAS PRICES COMPARED.

In the past year the company's output showed an increase of 8,400,000 units, as compared with an increase in the previous year of 5,000,000 units, so that, in spite of the fact that they had only one square mile of territory to serve, the increase in business was progressive from year to year. They were continually endeavouring to reduce their tariff in various directions. In 1921 the average price charged was 4·37d. per unit, and this had been gradually reduced to 2·23d. in 1928—a reduction of 49 per cent. They were sometimes told that gas companies reduced their prices, but electricity companies did not reduce theirs. It was therefore interesting to point out that this reduction of 49 per cent. compared with a reduction of 38·57 per cent. in the case of the gas companies in the period 1920–28.

The lighting load in 1928 showed an increase of 1,450,424 units, or 5 per cent., as compared with the previous year; the power load, an increase of 5,337,284 units, or 16·35 per cent.; and the heating load an increase of 1,327,057 units, or 14½ per cent. It was satisfactory to see that each class of load was increasing, but the power and heating loads were far outstripping the lighting load, and this was a good augury for the future.

The gross revenue from private consumers showed a reduction of £7,417 in spite of the increased output. That was due to the reductions made in their tariff, especially perhaps to the reduction made last year of the maximum rate on the lighting scale from 6d. to 5d. per unit. They also reduced their charges for power supply. Although there was this reduction in the receipts, there was a still greater reduction in the expenses. A year ago he reported a reduction of £65,000 in generating costs, &c., and this year the generating and distribution expenses showed a reduction of £32,595. The net result on the revenue account was an increased profit of £45,501. This had been achieved owing to the policy they had adopted for some years past of scrapping all plant that was inefficient or obsolete in any way and replacing it with the most up-to-date plant that could be obtained.

YEAR'S RESULTS SUMMARISED.

There had been an increase of 4,768 kw. in their connections, raising the figure to about 100,000 kw.; an increase of over 8,000,000 units in their sales of electricity; an economy of £32,595 in their generating and distribution expenses; a reduction of the average price paid by their consumers to 2⅞d. per unit; an addition of £45,989 to their reserves available for capitalisation; and, after adding £11,831 to the benevolent fund, £2,830 to the provident fund, making the necessary allocation to the "A" and "B" sinking funds, setting aside £31,694 for the co-partners, providing the statutory dividend of £120,000 for the ordinary shareholders, and adding £9,250 to the contingency fund, they were still able to carry forward £7,656.

So much for the results of the past year, but shareholders would naturally say that that was all past history, and would ask, What of the future? They had begun the year well. They had had a prolonged cold spell, accompanied with a good deal of fog, and as a result they already had an increase of over 6,000,000 units as compared with the corresponding period of last year. Then 1928 did not get quite the full benefit of their latest economies in generation and distribution for the entire year, so that they should gain something there.

The Central Electricity Board, as he stated a year ago, had appointed the company's Bankside power house as one of its "selected generating stations." This should lead to interesting developments, owing not only to its favourable situation for economical generation, but also to its central position in the London area, and, indeed, for the South-East England scheme as a whole, which extended from Peterborough to the South Coast. He thought, therefore, they might look forward hopefully to the future.

The report and accounts were adopted unanimously, and a dividend of 10 per cent. on the ordinary shares for the year was approved.

ACHILLE SERRE, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The twenty-third annual general meeting of the shareholders of Achille Serre, Ltd., was held, on the 20th instant, at the registered offices of the company, Blackhorse Lane, Walthamstow, London, Mr Eugene A. Serre (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The balance sheet which we present this year is transitional, inasmuch as it does not show the final figures of the cost of our removal nor a detailed statement of the value of our new assets. At the end of the present year it will be possible to lay before you a clear statement, including a revaluation of our buildings and plant, which will be carried out by Messrs. Fuller Horsey Sons and Cassell, but I will now refer to the items one by one, so that you will understand the present position a little more clearly.

On the credit side we have a new item under the heading of "Debentures and interest owing to December 31st last, £153,643 15s. 5d." This, as you know, refers to part of the Debenture issue which was sanctioned for the purpose of purchasing and equipping these works. Sundry creditors at £75,632 11s. 9d., compared with £36,729 2s. 7d., show an increase of nearly £40,000, but this increase is chiefly accounted for by amounts due for labour, materials and plant in connection with the fitting up of our new works, and is included in the expenditure on these works to the date of the accounts.

Another fresh item is the new reserve fund of £2,500, and if you approve and pass the resolution it will be increased by a further amount of £2,500, making a total of £5,000. The amounts under the headings of "Securities realisation fund" and "Equalisation of dividends fund," remain the same. On the debit side the value of the old works and plant and the amount expended on the new works are shown separately, but, as I have already explained, the whole of our assets will be revalued before the end of this year, and for the moment no further comment is necessary.

YEAR'S PROFIT.

Turning now to the general profit and loss account, you will note the directors' remuneration has increased by nearly £1,200. National Health Insurance, for the first time on record, has cost us over £5,000 for the year. The principal alteration, and the one which accounts for the decrease in our net profits, is interest paid on debentures, £7,680 16s. 5d. After providing for all these items and taking credit for transfer fees and income from investments, we have, including the amount brought forward, a net profit of £23,796 3s. 3d.

I should like to point out, however, that the net business profit amounts to £43,584 16s. 7d., as compared with £46,844 14s. 10d. for the previous year. If we had not had to bear the burden of the extra tax on petrol, to which I will refer later, our business profit for the year would have been practically the same.

PROTEST AGAINST PETROL TAX.

The actual increase we had to pay owing to the imposition of the tax on petrol was over £2,100, and I should like to take this opportunity of protesting strongly against this tax. Hydro-carbons are the raw materials which we use in our business, and yet under the present method of collecting the petrol tax we cannot obtain a rebate for the quantity we use for cleaning purposes. In my opinion it is an iniquity to tax the raw materials used by manufacturers, and I claim that hydro-carbons are as necessary to dry cleaners as cotton is to the Lancashire mills. Representations are now being made to the Chancellor of the Exchequer by the London Chamber of Commerce, and possibly we may obtain some relief, as we have done in the past when a similar tax was imposed.

We now come to the divisible profit, and this, including £4,287 0s. 10d. brought forward, is reduced to £23,796 3s. 3d., owing principally to the interest paid on the debenture issue which has been used to purchase our new works, and to equip them.

It must not be overlooked that the amount of the debenture issue has not yet been productive, because we could not reap the benefit of our improved facilities for dealing with work until the installations were complete and in running order.

The profits made during the year at our old works have therefore had to provide the Debenture interest, which reduced the amount of profit available for general distribution. It is too much, of course, to expect to derive the full benefit of our removal for some little time to come, but we are getting our new home in order very quickly, and it will not be long before these very fine new works of ours are as perfect as experience and organisation can make them. We could not work economically in the works which we have vacated, but there is no doubt that when our new organisation is complete, possibilities of very considerable reductions in our working costs will be found.

Mr W. S. Argent seconded the resolution, which was carried unanimously.

ENGLISH ELECTRIC COMPANY, LIMITED.

"SUBSTANTIAL AND PROGRESSIVE IMPROVEMENT."

The tenth ordinary general meeting of the English Electric Co., Limited, was held on the 18th instant, at the Connaught Rooms, London.

Mr W. L. Hichens (the chairman), who presided, said: Unlike 1927, no provision had to be made in 1928 for exceptional losses, and the loss for the year had been reduced by over £100,000 to £33,600. As the trading profit for 1927 was £66,000 better than in 1926, the improvement was substantial and progressive. It might not be maintained at the same rate; but, if prices did not fall further and the same volume of orders were secured, the company should continue on the upgrade. If the electrical industry expanded during the next few years, improvement should be more rapid.

The company had secured an important share in foreign business. Among the orders secured through the Power and Traction Finance Co., the 45,000 k.w. power station near Athens would probably be in operation in June, and the 65,000 k.w. station near Budapest was progressing satisfactorily. The Power and Traction Co. had other schemes under consideration, notably two hydro-electric schemes in Scotland.

The improved results of 1928 were due to the important economies introduced in the latter part of 1927, but there was still room for improving equipment and cheapening manufacture and design. By annual redemptions the first debentures had been reduced from £744,600 to £701,000, and the debenture stock of Williams and Robinson from £132,114 to £120,346. The sinking fund for the latter stock had increased from £78,768 to £89,719, and would in two years cover the stock then outstanding. While sundry creditors and credit balances were down by £257,000, stocks, work in progress and debtors had decreased by £248,000. It was hoped to reduce the stocks still further. The general and special dividend reserves of Willans and Robinson had been transferred from sundry creditors to capital and other reserves.

Fixed assets had been reduced by £18,000, but considerable expenditure had been incurred on new plant and machinery, which had been offset by the provision for depreciation and the sale of certain surplus plant. The allowance for depreciation had been raised by about £6,000. As in 1927 all the expenditure on tools, patterns, and drawings had been charged to revenue. There had been a net reduction of £38,000 in investments. The improvement was, therefore, not confined to reduction in the loss.

The report and accounts were approved.

RIVER PLATE TRUST LOAN AND AGENCY COMPANY, LIMITED.

MR JAMES ANDERSON ON CHANGING INVESTMENT CONDITIONS.

The forty-eighth ordinary general meeting of the River Plate Trust Loan and Agency Co., Limited, was held, on the 18th instant, at the offices of the company, 52 Moorgate, London, E.C., Mr. James Anderson (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net profits for the year, after providing for all charges, amounted to £339,302, an increase of £11,143 over those of the year preceding. This increase in the profits was the more satisfactory in view of the addition of £200,000 to the "B" share capital. Towards meeting the additional dividend charge, there were this year additional net profits of £11,143. The board proposed to place £53,237 to reserve, bringing it up to the even sum of £1,175,000.

MORTGAGE OPERATIONS.

On the assets side of the balance sheet the first item, loans on first mortgage of freehold properties, £1,975,673, showed a reduction from last year of £110,911, loans repaid having been in excess of the new loans granted. The demand for loans had been very quiet, and for the present there seemed little prospect of an early improvement. The gradual falling off in their mortgage business had continued for a good many years past. The years of war which had impoverished this country had brought prosperity to the Argentine; old loans had been paid off and new applications had not come forward in sufficient volume to take their place. It was in anticipation of such a contingency that, in the palmy days of the mortgage business, the board had built up a large reserve to assist the revenue when income from mortgages fell off.

There was still a great field in the Argentine for mortgage operations. That business was, however, being more and more taken over by the National Mortgage Bank, a Government institution which, with no share capital to pay dividends on, could offer facilities with which other lenders of money found it difficult to compete. There were, however, borrowers who preferred to deal with companies such as theirs offering advantages which could not be obtained from the Government institution. That was preventing any very rapid

decline in the volume of loans outstanding. They might accordingly still have before the company a paying business in mortgages for many years to come.

THE INVESTMENTS.

The total of the investments at the close of the year amounted to £3,485,128, an increase of £132,000, entirely in general investments and representing for the most part a transfer of assets from mortgages to investments. When their mortgage business was in full swing, the company's investments in London represented little over 10 per cent. of their total assets. At the present time they were 60 per cent., which showed how, by force of circumstances, the company had become more of the nature of an investment trust company than a mortgage company. It was gratifying that the change had been brought about without prejudicially affecting profits. In selecting investments the board's first care was safety of the principal, and then the rate of interest or dividend yielded. The question of a possible increment of market value was a consideration, but not the principal one; it was a steady income the board were looking for, and not the hope of a quick turnover. The preponderance of the investments was in the nature of prior charges having a fixed income. The company's assets were worth to-day considerably more than the figure at which they appeared in the balance sheet, and the capital, reserve fund and undistributed profits were all intact.

As to the outlook for the current year, it was quite satisfactory. The Argentine Republic was on the crest of a wave of prosperity, and, so far as one could judge, the company's profits for the current year were likely to be as good, if not somewhat better, than those set out in the accounts then presented.

Mr Philip W. Carr seconded the resolution, which was unanimously adopted.

DICKINS AND JONES, LIMITED.

"EMINENTLY SATISFACTORY RESULTS."

The twenty-ninth annual general meeting of Dickins and Jones, Limited, was held, on the 21st instant, at 29, Argyll Street, London.

Sir Woodman Burbidge, Bt., C.B.E. (the chairman), said he was sure it would be agreed that the past year's results were eminently satisfactory, reflecting as they did the steady growth of trading and net profits which had followed the rebuilding of the main premises in Regent Street, while the accounts revealed a strengthening in the position.

The profit for the year amounted to £125,632, as against £123,133 for the previous year, and the directors recommended a balance dividend at the rate of 14 per cent. per annum, making 12 per cent. for the year, against 10 per cent. last year. The reserves amounted to £218,823, apart from the preference shareholders' special reserve fund and the Hanover House employees' investment and bonus fund.

The rate of turnover of the average stocks showed an improvement as compared with previous years, and they had thus been able to keep before the public the most fashionable and seasonable merchandise. Considering the position of the company, he thought it would be agreed that the confidence he had expressed in the past had been quite justified. There had been a steady increase in the volume of business and the number of transactions, and the total of their trading had exceeded previous records. It was also satisfactory to note that year by year they continued to record an increase in the number of their open accounts, showing that to their old and valued clientele was being added a steady flow of new and regular customers, which indicated that the discriminating purchaser was becoming appreciative of the quality and excellent value to be obtained by shopping at Dickins and Jones.

As to the future, the improvement in the basic industries which was gradually becoming apparent was hopeful, and the continuance and increase of the good feeling between employers and employed which had been manifest during the year should help to produce a healthier tone in trade. These matters should reflect in the well-being of the dry goods store, and he hoped that next year's results would show progress as satisfactory as that of past years.

The report and accounts were unanimously adopted.

LONDON AND THAMES HAVEN OIL WHARVES, LIMITED.

"STEADY GROWTH AND DEVELOPMENT."

The thirty-first annual general meeting of the London and Thames Haven Oil Wharves, Limited, was held, on the 19th instant, at Winchester House, London, the Rt. Hon. Lord Kylsant, G.C.M.G. (the chairman) presiding.

The Chairman said that the history of the company constituted a remarkable record of steady growth and development, and the accounts presented might be fairly said to represent a further high-water mark of progressive attainment.

He desired to emphasise once more that the company did not deal in any way with the products it handled, and that it was, therefore, in no way responsible for, or concerned with, the price of petroleum or of petroleum products. The company carried on purely and simply a handling business as wharfingers, blenders, refiners, &c., owning the largest depot of the kind in the world, and placing its facilities and experience at the disposal of any responsible trader at charges which insured his goods being handled not only as efficiently as possible, but more economically than he could handle them himself. The unique position the company occupied to-day was due to this, and to the impartiality and secrecy with which operations for their clients were conducted, together with the far-sighted policy of always keeping ahead of the requirements of a rapidly developing trade.

The Compagnie Industrielle Maritime, the French company in which the Thames Haven Co. was interested, also continued steadily to progress, and to establish itself in the goodwill of the trade it served and of the French nation, of whose industrial activities it formed a not unimportant part. Their relations with the French company continued to be of the most cordial description, and their confidence in its management and prospects remained unabated.

The decision of the Minister of Transport, given during the year, that there should be no change in the limit beyond which low-test petroleum ships should navigate the Thames, whilst causing the board no surprise, had been a matter of much gratification. The company had been accused of being monopolists and barring progress, but its position had been vindicated, and after 26 days of an exhaustive enquiry the existing arrangements for the Trade had not been found wanting. The board looked forward to continuing usefully to serve the Trade, and both here and in France to maintain and enhance the high traditions of the past.

The report and accounts were unanimously adopted; a final dividend and bonus, amounting to 10 per cent., were declared; and the usual votes of thanks were passed.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 16, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	5,957	From Revenue	29,114
Interest, &c., on Debt	769		
Sinking Fund	505		
Sundries	1,529	Decrease in Balances	514
Decrease in Debt	20,868		
	29,628		29,628

The ordinary revenue for the week amounted to £29,114,400, as compared with £20,104,600 in the corresponding week last year. Property and Income Tax showed an increase of £2,304,000, and Super Tax an increase of £1,590,000. Customs receipts were £1,849,000, against £1,452,000 a year ago, but Excise receipts were only £1,775,000, as compared with £4,905,000 a year ago. Ordinary receipts brought in £64,400, as compared with £6,100, and Special receipts £1,140,000, against nil. The Revenue to date amounts to £703,979,600, as compared with £714,617,400 at this time last year. The excess of Revenue over Expenditure to date is £2,234,000. At this time last year Expenditure exceeded Revenue by £9,053,000.

The National Debt was reduced by £20,868,000 as shown below :—

(000's omitted.)

	£		£
Public Department Advances	— 4,300	Treasury Bonds	+ 50
National War Bonds	— 602		
Treasury Bills	— 15,616		
Sundries	— 400		
	— 20,918		+ 50

The floating debt was reduced by £19,925,000 to £731,560,000.

FINANCIAL YEAR, 1928-29, April 1 to Mar. 16, 1929.

Messrs. Samuel Montagu and Co. write as follows on March 20, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £151,704,273 on the 13th instant (as compared with £151,473,325 on the previous Wednesday), and represents a decrease of £2,202,042 since April 29, 1925—when an effective gold standard was resumed. In the open market this week about £1,022,000 bar gold from South Africa was available. The Bank of England secured the bulk of this amount—about £894,000—as shown in the figures below, and the balance was absorbed by the requirements of India and the Home and Continental Trade. There was a net influx of gold of £736,976 during the week.

SILVER.

Silver prices have moved only within narrow limits. Support has been given by China, but this quarter has again worked both ways, for selling on China account was responsible for a fall of 1s. 8d. in the cash and $\frac{3}{16}$d. in the two months' quotations on the 16th instant, although the lapse was in part attributable to a lack of demand. The Indian Bazaars have shown some disposition to acquire silver for prompt shipment, but their interest has been rather restricted to the lower prices, and some orders have in consequence proved inoperative at a subsequent advance in rates.

America has been rather inactive and has only been inclined to work moderately in both directions.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 11th instant to mid-day on the 18th instant :—

IMPORTS.	£	EXPORTS.	£
Netherlands	10,300	Egypt	19.888
Irish Free State	16,400	China	58,780
Other countries	4,965	British India	31,351
		Other countries	10.683
	£31,665		£120,702

Reports and Notices.

The Hon. Edmund W. Parker has been elected chairman of the board of directors of the Union Bank of Australia, Limited.

Messrs. J. and A. Scrimgeour beg to announce that their offices have been removed to 3 Lothbury, London, E.C. 2.

City of Cape Town 4 per cent. municipal loan £178,050.—The Standard Bank of South Africa, Limited, announce the numbers of certain debentures for repayment at par on July 1st.

The offices of the Bartholomay Brewing Co. (of Rochester), Limited, have been removed to 1 and 2 Gracechurch Street, E.C. 2.

BANKS.

THE YOKOHAMA SPECIE BANK, LIMITED.—The accounts for the half-year ended December 31, 1928, as presented at the meeting of the shareholders, held in Japan on March 9th, show net profit for the past half-year of 17,346,622 yen, including 8,281,611 yen brought forward from the preceding half-year. Distributed as follows:—To reserve fund, 3,000,000 yen; to dividend, 5,000,000 yen; to balance carried forward, 9,346,622.43 yen. The rate of dividend declared was 10 per cent., as on the previous occasion, and the amount placed to reserve was again 3,000,000 yen, which brings the total reserve to 105,500,000 yen. It will be noticed that the amount carried forward has again increased by over a million yen.

NATIONAL BANK OF INDIA, LIMITED.—Report for year 1928 shows net profits amount to £530,829, as compared with £541,099 for 1927. Interim dividend at the rate of 20 per cent. per annum free of income tax has been paid. The directors recommend a further dividend at the same rate, adding £50,000 to reserve fund, writing £30,000 off House Property Account, adding £50,000 to Officers' Pension Fund, leaving £277,328 to be carried forward, against £276,499 brought in. The balance sheet is fully summarised in another column. The meeting will be held on April 2nd, at the Wesleyan Hall, Bishopsgate, London, at noon.

MINES.

RAND MINES, LIMITED.—The report for 1928 discloses a profit of £526,190, which compares with £673,970 for 1927. Government and provincial taxes absorbed £33,738, against £38,776. The dividend is again 100 per cent. The net amount expended on investments in 1928 was £289,004, against £44,630 in 1927. The surplus to be carried forward is £897,792, against £1,205,286, the decline being chiefly due to expenditure on investments. The reserve account stands at £2,303,167, an increase of £228,849 compared with end of 1927.

MISCELLANEOUS.

CANNING TOWN GLASS WORKS, LIMITED.—The second annual report shows a net trading profit for 1928 of £33,406 (last report November 5, 1926, to December 31, 1927, £14,927), adding £2,000 realised on investment account, and £7,427 brought forward, there is £42,833 available. The directors propose to write down certain items included in buildings, plant and machinery £5,000, transfer depreciation reserve account £5,000, transfer to general reserve £7,500, and the payment of a dividend of 5 per cent. (payable April 30th) £14,349, leaving £10,984 to be carried forward. Cash and bills receivable are higher at £31,618 against £10,165. Bank loan has been reduced from £35,500 to £30,000. It is proposed that the shares, which are at present 9d. each, should be consolidated into shares of 5s. each.

INCORPORATED ACCOUNTANTS' EXAMINATIONS.—The next examinations of candidates for admission to the Society of Incorporated Accountants and Auditors will be held on April 29th, 30th, May 1st and 2nd, in London, Manchester, Cardiff, Leeds, Glasgow, Dublin, Belfast, Cape Town, Johannesburg and Durban. Women are eligible under the Society's regulations to qualify as Incorporated Accountants upon the same terms and conditions as men. Particulars and forms are obtainable at the offices of the Society, Incorporated Accountants' Hall, Victoria Embankment, W.C.2. These will be the first examinations held since Incorporated Accountants' Hall (formerly Astor House) was opened by H.R.H. The Duke of York.

NESTLÉ AND ANGLO-SWISS CONDENSED MILK COMPANY.—The profit for 1928 is Frs. 23,614,314.82, to which must be added the balance brought forward from 1927 of Frs. 5,088,841.98. The board propose to allocate 1,000,000 francs to statutory reserve, also 10,000,000 francs to provident and pension funds, and 6,500,000 francs to special reserve. The preference shareholders receive 8 per cent. The ordinary shareholders receive 5 per cent. and a further dividend of 7 per cent., making 12 per cent. for year. The carry-forward is Frs. 6,210,961, of which the board shall distribute, on July 1, 1929, and January 1, 1930, the amounts required for the payment of the half-yearly dividends on the preference capital, which will require £160,000, or about Frs. 4,040,000. The issued ordinary capital of the company is to be increased from Frs. 80,000,000 to Frs. 97,500,000 for the purpose of absorbing Peter, Cailler, Kohler, Chocolate Suisses S.A.

MAYPOLE DAIRY COMPANY, LIMITED.—The report for 1928 shows a net profit of £533,254, against £531,418 for 1927. The sum of £10,000 is again put to reserve and £10,000 is put to provident fund as last year. The dividend on the deferred shares is again 17½ per cent. for the year. The carry-forward is increased from £176,503 to £196,816. The directors state that conditions for the past year continued to reflect the general industrial depression prevalent in many of the important centres where the company has branches; on the other hand, in some districts considerable improvement has been evident during the latter part of the year. The directors add that this progress continues to be well maintained this year. The meeting will be held at Winchester House, London, on March 25th at noon.

SAVOY HOTEL LIMITED.—The trading profit for 1928 was £236,002, against £229,062 for 1927. The ordinary shareholders receive 12½ per cent., against 10 per cent. for 1927. The sum of £50,000 is put to reserve and £5,000 to staff superannuation and benevolent fund. A provision of £30,000 has been made for alterations at Claridge's Hotel. The directors continue to pursue the policy of maintaining all the company's properties at the highest possible state of efficiency.

LONDON BRICK COMPANY AND FORDERS.—The Directors report that by the extension of sales over a wider area the full production of bricks during the year 1928 has been marketed. Reductions made in the selling prices have been set off by the increased quantities delivered which have enabled the profits to be maintained. The total revenue for the year amounted to £334,113, which compares with £326,745 earned in the previous year. The ordinary dividend for 1928 is 20 per cent., absorbing £175,000. This compares with a dividend of 25 per cent. for 1927, absorbing £150,000. The sum of £125,000 has been put to general depreciation reserve account, as compared with £75,000 last year; there remains a balance of £1,330 to be added to the amount carried forward, which will then stand at £220,000. The businesses of Plowman's Brickfields, Arlesey Brick Co. (Bearts), and Hicks and Company Fletton, have been acquired and the companies liquidated. The share capital in Itter's Brick Company, and a controlling interest in the shares of Beebys Brick Company, have also been acquired. These purchases, together with extensions being effected, will bring the company's productive capacity up to 1,000,000,000 bricks per annum. Meeting at Connaught Rooms, Great Queen Street, Kingsway, London, on March 25th at noon.

MANCHESTER SHIP CANAL.—Mr Ernest Latimer has retired from the position of managing director of the company, but retains his seat on the board of directors. Mr F. A. Eyre, secretary and accountant of the company, has been appointed general manager. Mr Matthew Kissane, assistant secretary, has been appointed secretary. Mr. H. O. Whitelegg, assistant accountant, has been appointed accountant. Mr Herbert Mends Gibson retains his position as chief superintendent and will, as heretofore, control the commercial section, including development of traffic and tolls rates and charges. Mr William Browning retains his position as traffic superintendent in charge of the administrative work of the Ship Canal and Docks. The latest traffic figures are: February, 1928, £105,747; February, 1929, £105,845; increase, £98. Total for two months: 1928, £221,405; 1929, £221,624; total increase, 1929, £219.

ISLAS DEL GUADALQUIVIR S.A.—Following the approval by the board of this company of the report of the Consultative Committee, the appointment of which was announced in the press on November 12, 1928, a circular will shortly be published in the press addressed to the holders of founders' shares, together with a notice convening an extraordinary general meeting for the purpose of obtaining the sanction of shareholders to an increase in the capital of the company, in accordance with the recommendations of the committee. If the increase in capital is authorised by the meeting it will take the form of an offer to holders of founders' shares. The publication of the circular is rendered necessary by the fact that all the company's founders' shares are of bearer denomination.

THE ASSOCIATED GAS AND ELECTRIC COMPANY.—We are informed that the Associated Gas and Electric Company has concluded a contract to acquire control of the General Gas and Electric Corporation, and upon consummation of this transaction the gross earnings of the Associated System will exceed $70,000,000, which will place it among the seven or eight largest power groups in the United States.

THE BENGAL IRON COMPANY, LIMITED.—We are informed that the usual half-yearly dividend on the preference shares will be paid on April 2, 1929. The result of the year's working to March 31 will not be as satisfactory as that of the previous year. This is partly due to falling off in orders for sleepers and pipes, and partly to the fact that the Railway Board are not now entering into long-term contracts as formerly. This leads to irregular employment of labour and to increased working costs. While orders for pipes and sleepers have been disappointing, the demand for pig iron has been fairly good. The board anticipate that the profit-sharing arrangement with the Indian Iron and Steel Co., Limited, will show a net result approximating that of last year.

THE "FINANCIAL NEWS," LIMITED.—The report just issued shows that profits for 1928 were £93,546, after providing for income tax. This compares with a profit of £77,437 for 1927. The ordinary shareholders receive a dividend of 175 per cent. for 1928, which compares with a dividend of 25 per cent. for 1927. The carry-forward is increased from £115,738 to £130,854. Copyright and goodwill remains at £198,232. There is a secured loan of £243,000, which did not appear in 1927 balance sheet. Investments in Government stocks are at £12,849, while trade investments are at £23,812. Investments in the 1927 balance sheet totalled £119,365. Debtors are at £43,163, against £28,739. Reserve account, being profit on investment realisations, stands at £81,958. The new address of the company is 20 Bishopsgate, E.C.2.

OIL OUTPUTS.

THE MEXICAN EAGLE OIL COMPANY, LIMITED.—The output for the week ended March 9, 1929, was 159,000 barrels.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended March 13th:—Venezuela, 35,417 barrels; Trinidad, 20,161 barrels; total, 55,578 barrels.

VENEZUELAN CONSOLIDATED OILFIELDS.—Output for week ended March 16th, 2,744 barrels (392 tons).

VENEZUELAN OIL CONCESSIONS.—Output for the week ended March 16th was 120,868 metric tons (previous week ended March 9th, 119,182 metric tons).

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions during the past week continued favourable for outdoor work, and with the land in good condition farmers were busily occupied in ploughing and sowing operations. Native wheat was in small supply at the principal Statute markets, and prices were kept at a fairly steady level. A moderate business resulted in imported descriptions, but the tendency is weaker in sympathy with the forward position. In the cargo section buyers manifested little interest as present wants are largely covered by increasing arrivals at the chief European ports. Despite lighter shipments of late, Argentine qualities were freely offered at rather less money, and which imparted a weaker tone to the market generally, although North American shippers refrain from pressing owing to variable weather reports. Additional moisture is apparently needed in Canada to ensure proper germination of the new sowings, but United States advices are more favourable in his respect. Steamers of No. 2 Northern Manitoba afloat sold 49s., No. 3 46s. 7½d., No. 4 45s. 6d., Rosafe 64 lb. afloat 43s. 7½d., and a part cargo of West Australian ditto at 46s. 7½d., the latter to the Mediterranean, all per 480 lb. c.i.f. terms. Feeding stuffs quiet and trend of values lower, Plate maize being difficult to vend, as prices are considered too high compared with other feeding stuffs.

Wheat.—Quiet and easier in sympathy with forward weakness. No. 2 Northern Manitoba, 51s. 6d.; No. 3, 50s. 6d.; No. 4 Manitoba, 49s. 6d.; No. 5, 45s. 3d.; No. 6, 39s. 6d.; Rosafe, 64 lb., 46s.; Barusso, 63½ lb., 46s.; Australian, 49s. all ex-ship, per 496 lb.; English, 9s. 6d.-9s. 8d. per 112 lb.

Flour dull and easier. London standard grade, 37s. 6d.; town whites, 38s. 6d.; patents, 39s. 6d.-40s. 6d. per sack, delivered in the Home Counties, with 6d.-1s. per sack less for deliveries in the London districts. Of imported, Mantioba patents range from 34s. 6d.-37s.; Minneapolis, 35s.-37s. 6d.; Australian, 35s. 6d. ex store; Australian, 32s. 6d.-33s. per 280 lb.

Maize easier for near positions. Plate, landed, 43s. 9d.; ex ship, to arrive, 42s. 6d.; March-April, 39s. 6d.; new April-May, 38s. 6d.; May-June, also June-July, 38s.; No. 2, white, flat, African, 43s., landed, per 480 lb. Yellow maize meal, £11 10s., ex wharf; Hominy chop, £9 7s. 6d. per ton.

Barley dull. Californian, ex ship, 45s.-52s.; Chilean Chevalier, 48s.-58s.; Australian, 45s.-49s.; Smyrna, 44s.-47s. per 448 lb.; Algerian/Tunisian, ex ship, 34s. 6d.; Canadian feed, 32s. 6d., landed; No. 3 Canadian Western, 36s.; No. 2 Federal American, 30s., ex ship, to arrive, per 400 lb.; English malting, 10s.-12s. 6d.; feed, 9s. 3d.-10s. per 112 lb.

Oats quietly steady. Plate, landed, 26s. 3d.; ex ship, to arrive, 25s. 3d.; March, 25s. 3d.; black Plate, landed, 25s.; mixed Canadian feed, landed, 22s. 3d.; Chilian, white, 32s., landed; German, landed, 29s. 3d.; ex ship, to arrive, 28s. per 320 lb.; English, 9s. 4d.-10s. per 112 lb.; Scotch, landed, 30s. 9d. per 336 lb.; Irish, black, 27s. 6d. per 320 lb.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.
Estimated sales of home-grown wheat—				
1 week to March 16	Qrts. 229,446	Qrts. 285,040	Qrts. 216,412	Qrts. 188,338
25 weeks to March 16	7,672,941	7,179,079	9,191,720	10,495,927
Average price of English wheat per cwt.	s. d. 9 8	s. d. 9 9	s. d. 11 7	s. d. 11 5

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

Weeks ended.	Quantities Sold.			Average Price per Qwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1929.	Qrts.	Qrts.	Qrts.	s. d.	s. d.	s. d.
Mar. 9	240,677	159,989	58,472	9 9	10 3	9 7
Mar. 16	229,446	141,451	64,058	9 8	10 2	9 8
Mar. 14, 1925	343,228	134,335	82,044	13 5	11 6	9 9
Mar. 20, 1926	188,338	147,083	47,910	11 5	9 0	8 9
Mar. 19, 1927	216,412	120,408	56,486	11 7	10 11	8 0
Mar. 17, 1928	285,040	133,515	70,075	9 9	10 8	10 7

AMERICAN WHEAT MARKETS.

There has been a downward tendency in wheat prices most of this week, owing to consistently favourable weather reports, together with an inactive demand. Occasional rallies due to less good weather news were offset by renewed commission house selling, until Wednesday, when there was a slight rise as a result of improved export demand. Quotations:—

Nearest Future.	Jan. 4, 1928.	Mar. 21. 1928.	Jan. 2, 1929.	Mar. 6, 1929.	Mar. 13, 1929.	Mar. 21, 1929.
Winnipeg (No. 1 Manitoba)—Cents per 60 lb.)	137	142⅜	122	128⅛	132½	129⅜
Chicago (No. Winter)—Cents per 60 lb.	130⅜	141½	116⅜	121½	125½	123½

Visible supplies of wheat in Canada at 86,783,000 bushels show an increase of 532,000 bushels as compared with the previous figure. Supplies a year ago stood at 76,931,000.

THE COAL TRADE.

Our Sheffield correspondent writes:—Although prices of export coal are weaker the position of the market continues strong, and supplies are on the short side, although the pits are working well. The industrial demand is steady at former prices, while sales of house coal have fallen off. Stocks generally are low, and deliveries in arrears. Coke is none too plentiful owing to the increased demand, and prices are firm. Coking slacks are scarce. South Yorkshire best steams are quoted at 19s. to 20s. f.o.b. Blast-furnace coke is quoted at 14s. 6d. at ovens.

Our Glasgow correspondent writes:—There is still very little coal available for shipment before the middle of April, and the collieries have no difficulty in maintaining prices. Slightly easier rates are quoted for forward business, but not much new business is being arranged, as foreign buyers and exporters both are anticipating still lower prices, and are consequently holding off meantime. There was a meeting of the coalowners' committee on Monday in connection with the new scheme of control that is being arranged, but it is understood that no definite arrangements were come to regarding the actual working of the scheme. It appears that while over 90 per cent. of the collieries in Fife, the Lothians, and Ayrshire have given their consent to the scheme, replies have still to be received from a number of the Lanarkshire collieries, and nothing is likely to be done until these are received. Shipper's prices are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 19s.; splint best, 19s. 6d.; splint second, 19s.; navigation, 18s. 6d.; navigation second, 16s.; steam, 17s.; Hartley, 19s.; trebles, 17s. 6d.; doubles, 16s. 6d.; singles, 14s. 6d.; pearls, 12s. 6d.; dross, 10s. 6d.-11s. FIFE.—Screened navigation, 19s. 6d.; first-class steam, 17s. 6d.-18s.; third-class steam, 17s.; trebles, 17s. 6d.-18s.; doubles, 16s. 6d.-17s.; singles, 14s. 6d.; pearls, 12s. 9d. LOTHIANS.—Price steam, 16s. 6d.-17s.; secondary steam, 16s.-16s. 6d.; trebles, 17s. 6d.; doubles, 16s. 6d.; singles, 14s. 6d.; pearls, 12s. 9d. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 18s. 6d.; steam, 16s. 6d.; trebles, 17s. 6d.; doubles, 16s. 6d.; singles, 14s. 6d;. pearls, 12s. 9d.; dross, 11s.

Our Cardiff correspondent writes:—The South Wales coal market has firmly maintained its strength during the present week, and the prospects are that prices will continue to be dominated by collieries for several weeks to come. Next week the pressure will probably be accentuated by an effort on the part of shippers and shipowners to get tonnage away before the Easter holidays, and immediately after the holidays the market will have to face a situation in which it will have been deprived of at least half a normal week's production. Merchants are complaining of great difficulty in obtaining even small parcels to complete shipments, and what current transactions are taking place are mainly through contractors. Except in a few cases there has not been this week any further rise in f.o.b. prices, and no important contracts have been placed for forward deliveries. The joint audit of the coalfield for the three months ended last January shows a loss of £222,148, equivalent to 5.54d. per ton, compared with £755,153 in the preceding three months. The following are the current approximate quotations: Best Admiralties, 21s. to 22s.; seconds, 21s. to 21s. 6d.; best drys, 21s. to 21s. 6d.; Black Veins, 20s. 6d. to 21s.; Western Valleys, 20s. to 20s. 6d.; Eastern Valleys, 20s. to 20s. 3d.; best small steams, 14s. 6d. to 15s. 6d.; cargo smalls, 13s. 6d. to 14s.; coking smalls, 14s. 6d. to 15s. 6d.; anthracite, best large, 33s. 6d. to 35s.; Red Vein, large, 25s. to 27s.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 42s. to 44s.; stove nuts, 40s. to 43s.; rubbly culm, 10s. 9d. to 11s. 6d.; foundry coke, 27s. 6d. to 37s.; patent fuel, 20s. to 21s.; pitwood, ex ship, 27s. 3d. to 27s. 6d.

IRON AND STEEL.

We extract the following from the Weekly Report of the London Iron and Steel Exchange:—The quiet conditions recently noticed in the iron and steel markets are not expected to improve much before the Easter holidays. Nevertheless, the undertone of the market is

Thieves, Ancient and Modern.

THE CHATWOOD SAFE

Has a strong deep hold upon Bankers and those with treasure to protect.

It gives a feeling of confidence that only work of quality can give.

The protection lies in the strength of the defence, while the design embodies the experience of the past and the knowledge of the present.

What The Chatwood Safe has it holds, for delivery only to the keeper of the key.

It is the cheapest safe that can be bought having regard to the contented security offered.

THE CHATWOOD SECURITY

THE CHATWOOD SAFE CO. Limited, Bankers' Engineers, SHREWSBURY, ENGLAND.

sound, and there was a general note of confidence at the weekly meeting of the London Iron and Steel Exchange. Although orders are not coming forward in the tonnages of recent weeks, the works are fairly well provided with contracts booked in the early part of the year. A fair business is passing in British pig iron; the advances recently made have become stabilised, and producers are talking of still further increasing their prices. Buying, however, has been on a somewhat limited scale as regards tonnages, although there has been a fair volume of small orders. In the semi-finished steel department conditions remain practically unchanged, with the Continental works quoting the prices which have been ruling of late, and which cannot be regarded as competitive in the interior districts of this country. As a result users are still obtaining most of their requirements from the British producers of semi-finished steel, and consequently the prices of the latter have been slightly advanced. The demand for finished steel materials has been somewhat irregular, as the overseas markets for the most part, while closely watching the position, have not placed the amount of business expected. It is anticipated, however, that these conditions will alter soon after Easter, and that export buying on a good scale will begin.

Our Middlesbrough correspondent writes :—Market conditions remain firm. Pig iron of all descriptions is scarce, and works have already secured fairly large forward contracts. Prompt iron is very scarce. Cleveland is still on the following basis : No. 1 foundry, 69s. 6d.; No. 3 G.M.B., 67s.; No. 4 foundry, 66s.; No. 4 forge, 65s. 6d. Sellers are asking a premium of 1s. 6d. per ton for contracts for delivery over the second half of this year. The steady demand for hematite has been maintained, and the export trade is better. The average price for mixed numbers is 73s. 6d., with 74s. for No. 1 quality. There is nothing fresh to report as far as the steel trade is concerned; the works continue moderately busy, with fairly good order books for some months to come. Prices remain on the following basis, subject to the usual rebates : Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 5s.; Steel rails, £8 10s. The ore market is still very firm, with best rubio at 23s. per ton c.i.f. Tees. Prompt supplies of coke are very scarce, with the result that prices have increased. Good Durham blast-furnace quality delivered furnaces is now very firm at 19s., with some makers asking 19s. 6d.

Our Sheffield correspondent writes :—Recent advances of Midlands pig-iron prices are now well established, and a new arrangement for securing uniformity in delivered quotations has come into operation. The country is divided into zones, each consisting of a group of localities, and there are fixed prices for these zones based on distances from sources of supply. For the Sheffield zone the minimum quotation is 67s. 6d. Lincolnshire foundry is quoted at 65s. and basis at 62s. on trucks. The steel trade continues busy on basic steel, materials for the motor industry, forgings and castings of a special character, and cold-wrought material; but the demand for ordinary competitive lines is patchy and generally unsatisfactory. Keen competition from other centres of the country is being experienced. Business with collieries is picking up, but the position still leaves much to be desired. Steel scrap continues to be scarce and dear, owing to the activity of the basic steel branch. The demand for tool steels is steady, but fails to expand. Additional business is being obtained from the shipbuilding industry. Cutlery and plate are quiet, but the condition of the tool branch is fairly good. Prices of materials used for steel making are still rising.

Our Cardiff correspondent writes :—On the Swansea Metal Exchange on Tuesday it was announced that the South Wales tinplate bar manufacturers had increased their minimum from £6 2s. 6d. to £6 6s. 3d. per ton. This is the second increase since the middle of February, when the minimum was raised from £6 to £6 2s. 6d. The rise in imported bars has been even greater, for these are now quoted at £5 17s. 6d., compared with £5 12s. 6d. last week and with £5 10s. at the beginning of the year. The cause of the increase in the price of the local bar is stated to be the scarcity and dearness of steel scrap, some grades of which are now quoted up to £28 per ton, compared with £26 15s. early in January, and the advance in the prices of coal and other raw materials. No change has yet been made in the minimum prices of tinplates, but it is anticipated that it will be raised in the course of the next few weeks. Shipments from Swansea last week totalled 129,719 boxes, compared with 117,624 boxes in the previous week, but deliveries into warehouses have increased, and stocks have been brought to the record high figure of 308,550 boxes.

OTHER METALS.

TIN.—The market for tin displayed firmer features, buyers showing more disposition to operate, and sellers reserved in face of stimulating Eastern and American advices, a feature being the demand for forward positions. Movements, however, were attended by a good deal of irregularity at times. Stocks in London and Liverpool warehouses for week ending March 16th totalled 8,454 tons, against 2,534 tons at corresponding period last year. Dealings were recorded in standard cash at £222 10s., £222-£226, and £222 17s. 6d., three months £222-£227, and £223. In the East, sales were reported at £224 to £227, and £225 per ton c.i.f. terms.

COPPER market continued active and strong at a further sharp advance, while influenced by higher New York cables, but profit-taking imparted irregularity. Near positions were reservedly offered, but business resulted in three months at £94 15s., £99, £96 10s., and £98 18s. 9d., with cash at £96 10s. to £97 7s. 6d. per ton.

LEAD active and firmer. Good soft foreign pig, March, sold, £27 to £27 17s. 6d., April, £28 15s., £29 10s., and £27 17s. 6d.; May, £29, £29 15s., £26 10s., £28 15s.; June, £28, £30, £27 5s., £28 15s.; July, £30 to £27 18s. 9d.

SPELTER firmer, but irregular, with dealings on a liberal scale. March, sold, £28 17s. 6d. to £27 17s. d6. and £28 7s. 6d.; April, £29 5s., £27 17s. 6d., and £28 1s. 3d.; May, £29 to £27 15s., and £28 5s.; June, £28 3s. 9d., £26 15s., and £28 7s. 6d. ton.

ALUMINIOUM steady. Ingots and bars for home delivery, £95 ton.

ANTIMONY easier, English regulus, £54 to £55; foreign spot, £37 10s. to £38 ton.

WOLFRAM steady. Chinese, also Straits, qualities, 21s. 6d. to 21s. 9d. per unit c.i.f.

QUICKSILVER steady. Spot, £22 5s. to £22 10s. per bottle.

TIN PLATES maintained. I.C. coke prompt and forward, 18s. to 18s. 3d. per box, f.o.b., Swansea.

COTTON TRADE.

LIVERPOOL, March 20, 1929.

In the earlier part of the week under review the market fluctuated within small compass and on Saturday reached the high level of 10.98 for July delivery. It was followed on Monday by a wave of selling from both New York and Liverpool, which caused a decline of some 25 points from the high level. The final ginnings figures published to-day of 14,269,000 in running bales, equivalent to 14,450,000 in 500-lb. bales, was considered bullish, and prices quickly advanced some 20 points. The whole of the gain was, however, not held, and prices on the week show a decline of 2 to 6 points. Weather news has been fairly good. Spot sales for the week, 14th to 20th (inclusive), are 37,000 bales, of which 19,990 are American, 600 Brazil, 500 Argentine, 4,750 Peru, 5,050 Egyptian, 3,550 African, 2,350 East Indian, and 210 sundries. Imports for the same period are 54,790 bales, of which 40,707 are American, 665 Peru, 11,270 Egyptian, 79 African, 1,593 East Indian, and 476 sundries. Quotations to-day are : American Middling, 10.92; Egyptian Sakel., 19.15; Uppers, 12.95; Brazil Fair, 11.12; Peru, G.F. Mod-Rough, 13.00; Smooth, 11.87; West African Middling, 10.97; and East African, G.F., 11.90.

MANCHESTER, March 20.

The market during the past week has been unsettled. Wider fluctuations have occurred in raw material rates and buyers have been afraid to commit themselves to contracts of importance. Cloth demand for India has been very disappointing. Trade abroad is being adversely affected by political unrest, and, owing to limited clearances in the bazaars, replacement buying is very restricted. An encouraging inquiry has been met with for China, and good news has been received with regard to the auctions in Shanghai. Manufacturers have bought very fair lines in grey and white shirtings. Steady support has been met with from Singapore, with rather increased activity in printing and finishing styles for the Near East, South America and the West Coast of Africa. Generally favourable reports have come to hand from the home trade section. In American yarns for home use there has been some irregularity in quotations, and buyers have purchased sparingly. Some fair orders have been secured in Egyptian counts, and rates are firmer, but many firms report serious losses.

WOOL TRADE.

Our Bradford correspondent writes :—A general lack of activity continues to characterise the market, and neither spinners nor manufacturers show much confidence in the wool position. Many importers who refrained from buying heavily during the first part of the season are now operating extensively in the belief that wool is not likely to be much, if any, cheaper. Users, however, are influenced by the machinery position more than by the state of the raw wool market, and apparently they prefer to continue operating on hand-to-mouth lines rather than indulge in speculative buying on forward account. Tops are meeting fairly general inquiry, but the actual turnover leaves much to be desired. Although prices obtainable in Bradford are still below the primary markets in many qualities, concessions on quoted rates can be got in some cases. Really good standard types are steady at recent rates, most top-

makers being unwilling to accept lower prices in view of the difficulty in regard to replacement. There has been a certain amount of speculative buying in Botany yarns at very much cut prices, but particulars are slow in coming to hand. Crossbred yarns are quiet and prices remain irregular. The usual seasonal demand for piece goods is being experienced, and business both on home and export account shows considerable expansion.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

In some respects the second series of London sales are closing in a more satisfactory fashion than was originally anticipated. A good deal of uncertainty has existed with regard to crossbreds, particularly as these have predominated in the catalogues throughout the series. Before the auctions began prices for tops in Bradford were unsatisfactory compared with the primary cost of the raw material, but as the opening level for crossbreds was below the close of the January series this paved the way for excellent competition, and during the latter part of the series in particular the home trade has been a very extensive buyer, topmakers operating freely in 40's to good 50's qualities. Continental competition has not been so much in evidence this week, though France has bought the bulk of the greasy half-breds and crossbred pieces. The offerings of New Zealands have included a large proportion of half-breds, home trade and Continental representatives taking these freely at around prices corresponding with those established at the opening, which means a decline of 1d. to 2d. per lb. compared with January. The record price for slipe lambs is 25½d., which was paid for WME 56-58's. Slipes have not figured as prominently in the catalogues as last series, and there has been very little of combing length. Considering the latter fact prices have been about on a parity with January rates. Owing to French competition scoured halfbred slipe lamb pieces have realised up to 27½d., though these were in heavy condition and were not free of kemp.

During the last few days the merino offerings have been of a miscellaneous character, though a feature of this description this series has been the offering of some exceptionally fine Tasmanian clips. ENC/Ross met with strong competition from home trade and French manufacturers, though the latter took the major portion. The top lot realised about 75d. clean. This was of exceptionally fine quality. Home trade spinners have operated in Victorian wools of 70's to 74's quality of warp length and quite superior style. The price paid has been up to 31d., which is equivalent to 48d. clean scoured. Several of the Geelong wools have fared much less satisfactorily, being mostly withdrawn at around 40d. clean. Importers' wools have naturally fared the worst throughout the whole series, and including interest and other charges will involve the owners in loss unless better prices are ultimately forthcoming.

HIDE, LEATHER AND ALLIED TRADES.

The hide position is gradually approaching stability, and tanners are showing more confidence, as market hides all sell as offered. Best ox have slightly advanced in price, and may be quoted at 6¾d. to 7d. per lb., with seconds 6¾d. to 7d. per lb. Calfskins are also firmer, best selections making from 7¾d. to 14d. at last week's Bermondsey auctions. Wools sold from 5s. to 12s. 6d., and hoggs from 5s. to 16s. each. Oversea hides are also steadier, but chagrin is felt that some foreign merchants are already asking higher prices, in spite of the tanners' large holding of finished leather and reluctance to buy hides. Argentine fregorifics—used by European sole tanners—continue steady, and ox have sold at 9 5/16d. Last week 16,000 Colon hides were sold at 9½d.-9⅝d. for heavy, and 9d. to 9 1/32d. for light—these prices showing a ¼d. reduction on last prices obtained. Dry hides are more in request, and B. A. Americanos are now fetching as high as 13 1/16d. and M. V. Americanos 14¾d. Dry salted Capes are selling at 10½d. to 9½d. for firsts and seconds respectively. Latest cables report the Chicago market as steadier, with best heavy steers selling at 14½ cents. Although shoe manufacturers are in receipt of better orders for footwear—especially makers of ladies' shoes—business in sole leather is for small parcels for immediate delivery. Prices are still rather fluid, but tanners, whilst willing to meet the market, are refusing the "sporting offers" of certain buyers. Medium weights of wet salted bends and repairers' bends have sold better of late, but repairers' stock is quiet, as the fine weather affects their business. Curriers are still none too well off for orders for kip leathers, but deliveries of willow and box calf are regularly made at reduced prices. Patent is still a good seller, and there is quite a fair demand for glacé kid in black and brown shades.

THE TIMBER TRADE.

The wintry conditions did much more harm than was anticipated. Deliveries of sawn deals, battens and boards into consumption were very poor, whilst the building trade, the chief consumer, was slack, the employment percentage among London's unemployed skilled operatives amounting to 24.8. Since the warmer weather, however, trade has been brighter, and now that the winter is over better opportunities are forthcoming for the making up of lost time in building trade operations.

To spot timber sellers the redeeming feature of February wintry conditions was a smaller import of European sawn building woods, following large receipts of the first few weeks of the year. Even now stocks are large, which has altogether upset the views of the majority of the trade, who anticipated that holdings would be getting low about this time, and a few weeks before the opening of the new season. Flooring boards are particularly heavy in supply, but for these the demand has been exceptionally good considering the time of the year.

The turnover of the Russian cut to the United Kingdom to buyers here created surprise in North of Europe shipping centres, not only on account of the c.i.f. prices, but also the larger quantity of goods that Russia had to offer for this year's delivery. Yet Finnish and Swedish sales for this coming season's shipment are larger this year than last, more trade being done on the Continent, while United Kingdom business has not been much lower. It is reported in the *Bank of Finland Monthly Bulletin*, just to hand, that according to an investigation made by the board of the Finnish Saw Mill Owners' Association this year's lumbering in Finland should be reduced by 75 million cubic feet, "equivalent to 300,000 standards" (the writer makes it 454,545 standards), from last year's exports. From the consumers' point of view restrictions on any such scale as those given above are much too drastic, and as sales up to date are above those of 1928, and prospects are brighter this year, if but little, it is to be hoped that Finnish millowners will reconsider their decision and take a brighter view of the United Kingdom and Continental markets.

The hardwood market has shown little activity this month. Mahogany logs have decreased in import, stocks in first hands being small and values firm, if not so strong as shippers consider they should be. Indian teak is arriving very slowly, and is very dear, but it seems that supplies of Europe quality at shipping ports are low, as they are here, so that prices are likely to remain strong and the inevitable substitutes brought still more into requisition. All other hardwood logs—little in stock, small in demand—are firm in value. American hardwood lumber also is firm, with not so much coming forward, whilst an improved consumption is reported from the States. Higher values of States lumber should have the effect of stimulating the demand for home and Colonial woods, of which comparatively little is in demand.

VEGETABLE OILS AND OILSEEDS.

Markets generally are very quiet, and the easy feeling is accentuated if anything. Trade in linseed oil is very slow, and although crushers have met the market and prices are lower consumers are not much in evidence. Continental linseed oil for forward delivery is again offering, most of the mills abroad having been able to resume operations, as conditions on the waterways have improved. Current value is about £28 10s. per ton, naked, ex Hull mill, for March, with later positions at a small premium. Cotton oil is neglected, crude Egyptian offering at £28 and common edible at £31 10s., ex Hull, without response. In the oilseed section, demand for linseed is restricted to near positions, which are at a discount, and for Plate on passage £15 11s. 3d. and April-May £15 12s. 6d. have been accepted. The quantity of linseed on passage to Europe has undergone further diminution, and is 22,000 tons less than last week. Cottonseed is steady, but in slow demand. Black Egyptian, March loading, is reported done at £9 17s. 6d. Oilcakes are in fair demand at unchanged prices.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—No new development crept into the general situation and a quiet state of affairs predominated, due in a great measure by the near approach of the Budget announcement. Meantime, trade buyers are largely occupied in taking delivery of March parcels, purchased previously. Raw refining kinds remain dull. Previous quotations were repeated for British refined, and also home-grown. Imported descriptions fail to command much support. Continental parcels for shipment continue largely nominal. Terminal sections steady, with fair dealings. Of raws, May quoted 8s. 9¾d.; August, fair lines, sold, 9s. 3¾d.; December, quoted, 9s. 7½d.; white, March, sold, 12s. 6d.; May, sellers, 11s. 9¾d.; July, 12s. paid; August, sold, 12s. 0¾d.; December, 12s. 5¼d. cwt. Cuban receipts last week, 249.692 tons, against 261,491 last year; exports, 141,694, against 162,033; stocks, 1,134,600, against 1,046,370. Central workings, 163 tons, against 168. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending March 16th totalled 139,537 tons, compared with 80,463 at same time last year.

For Life Assurance.

AMP

The Australian Mutual Provident Society is mutual. That is to say, all divisible Surplus, without deduction, belongs to the Policy-holders themselves and is distributed yearly. Moreover, the Society, established in 1849, has been for many years the largest and most prosperous British Mutual Life Office. Why is this? Because it offers to Assurers the Acme of Security and Profit, and because its satisfied members are its best advertisement. Why are policies with the A.M.P. Society so profitable? Because while its premium rates are below the average, it possesses in a unique degree the combination of a low expense rate, a high interest return and a favourable mortality experience. The A.M.P. Society should be covering you. You will be sent full particulars on application.

EVERY YEAR A BONUS YEAR.

Assets: £70,000,000. Annual Income: £10,000,000.
New Business for 1927: £15,397,528.
Cash Surplus for One Year (1927): £2,895,454.

ROBERT THODEY, F.I.A. Manager for the United Kingdom.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY
Established in Australia, 1849.

LONDON OFFICE: 73-76, King William St., E.C.4.

TEA.—Indian auctions during the week totalled 45,029 pkgs. Competition was carried on with animation, and a firm market resulted. All the attractive liquoring teas cleared readily at full recent rates, while common and low medium were well sought after and advanced ¼d. to occasionally ½d. per lb. Good qualities of Southern Indian sold well, but inferior tended against sellers. Ceylon auctions of 19,621 packages met with very brisk biddings, as a decided improvement in general run of quality was much appreciated by buyers and prices responded. Common and low-medium grades advanced ¼d. to ½d. per lb., and finer from 1d. to 2d. and occasionally 3d. There is a fair demand for China descriptions. Java and Sumatra met a good demand at firm to dearer rates.

COFFEE.—Market quite steady and there is a fair trade doing, especially in qualities with liquor. Business is assisted by the fact that importers continue to show willingness to meet the market. Costa Rica fine bold coloury, sold, 165s.; fine mid, 142s.; peas to 161s. 6d. Belgian Congo, good bold coloury, sold, 126s.

COCOA.—Spot market dull unaltered. Forward positions quiet. Accra: F/F, April-June, sold, 44s. 6d.; mid crop, 42s. 9d.; and October-December, 45s., f.o.b. Terminal: May, sold, 48s. 9d. to 49s. 6d. and 48s. 6d; July, 50s.; September, 51s. 6d.-51s. 7½d. and 51s.; December, 51s. to 51s. 6d. and 50s. 9d.

RICE.—This market remains without improvement. Two Stars March-April, London, 12s. 9d.; April-May, 12s. 10½d. Spanish, oiled, March-April, 18s. 9d. cwt.

BEANS.—Market firm and there is a fair inquiry for spot and near-at-hand parcels. Madagascar butters, new crop, spot, London, sold, 43s. to 44s. as to sample; afloat steamer "Clan Macintosh," 40s. 6d. to 41s. This steamer is due on Tuesday next. Rangoon haricots, re-sales of spot, London, made at 34s. Parcels afloat steamer "Yorkshire" changed hands at 28s.; March shipment, 21s. 6d. to 22s.; April 15th, 20s. to 20s. 6d.; all April, 19s. 6d. to 20s. 6d., cwt. c.i.f. London.

PEAS.—An active and buoyant market was witnessed. A factor for the upward move was to be found in reports from near Continental countries of extensive damage to potatoes in silos, over a large area, particularly Germany and Belgium. Kiln-drying is being resorted to in order that the damaged crop may be utilised for pig-feeding. Japanese crop, 1927, sold, 22s. 6d. to 23s.; new crop, 23s. 6d. Parcels afloat steamer "Keemun," sold, 20s.; per "Delagoa Maru," at 20s.; per "Ningchow," to Liverpool, at 20s.; February-March, sold, 19s. 9d. to 20s. 3d.; March-April, 19s. 6d. to 19s. 9d.; April-May, 19s. 3d., c.i.f. London. Very few first-hand offers of Dutch received. Marrowfats, prompt, quoted, 23s. 6d.; imperial blues, 22s. 6d. to 23s.; small blues, 21s. to 21s. 3d., f.o.b. There is more attention now paid to Maple varieties.

SPICE.—Pepper market disclosed general quietness. Lampong January-March, sellers, 1s. 4d.; March-May, 1s. 3½d.; May-July, 1s. 2½d.; August-October, sold, 1s. 1¾d.; Muntok, white, March-May, 2s. 1½d.; August-October, sold, 1s. 10d. lb. London stocks on the week increased 29 tons. Pimento, August-October, sellers, 120s., cwt. c.i.f. Sago flour, tapioca and ginger, unchanged. Cloves firm, quiet.

FRUIT (Dried).—Currants firm with a better demand. Pyrgos, quoted, 45s. 6d.-47s.; Patras, 47s. 6d.; choice, up to 51s.; Amalias, 46s.-46s. 6d.; Gif, 47s. 6d.-50s.; Vostizza, 49s.-53s. Sultanas, steady. Medium to good, Smyrna, spot, 38s.-54s.; Cretan, 42s.-72s.; Australian new ranges, from 32s.-50s.; Californian soda, bleached, 34s.-38s.; unbleached, 28s.-29s. Rasins, quietly steady. Valencia, quarter boxes, quoted, 48s.-53s.; Australian and Cape, neglected. Figs in small supply. Genuine new, spot, 28s.-29s. Dates move off steadily. Hallowie, new, spot, 25s.-30s.; Khadrowie, 21s.-23s.; Siar, 14s. 6d.-16s. 6d.

EVAPORATED FRUITS.—An improved demand was dealt with for Californian plums and large sizes tend dearer, with limited supplies available. Forward parcels also firmer, and sellers reserved. Apricots and apple rings move off slowly, while other descriptions showed no material change. Californian plums, 20's-30's., 65s.; 30's-40's, 56s.-47s.; 60's-70's, 43s.-43s. 6d. Australian pears range from 57s. 6d.-70s. as to quality; Lake County, 70s.-95s. Apricots, South African, new crop, Royal, 60s.-117s. 6d.; Cape, 72s. 6d.-82s. 6d.; Californian, 85s.-117s. 6d. Peaches, Californian choice, 52s; extra choice, 54s.; fancy, 58s. Apples, Californian, spot, sliced, extra choice, 64s. Almonds, quiet and tendency weaker. Mazagan, 137s. 6d.; Mogador, 135s.; Majorcas, 140s.; Bitter-Jordan, 185s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—Inquiries are more numerous on favourable climatic conditions, and prices were maintained for all descriptions. Lower-grade peaches are moving off more freely at attractive prices, but pears and apricots remain firm on light offerings. Loganberries, quiet, but fruit salad is selling fairly well. The Australian new pack is offering at reasonable rates. Singapore pines, dull on spot, and forward business still checked by firm selling limits, while forward parcels of Hawaiian are reservedly offered. Tomatoes in moderate request at generally steady rates.

CANNED FISH.—Sardines in better request, but best quality still scarce. Portuguese clubs, quoted, 5s. per dozen tins. Lobsters sell readily. Best halves, 140s.-145s.; and quarters, 77s. 6d.-82s. 6d. Salmon in fair demand and full steady. Red talls, spot, 42s. 6d.-44s. 6d.; pink talls, spot, 26s.-27s. 6d.; halves, 31s. 6d.-34s.; Japanese crab, firm, finest quality selling at 97s. 6d.-100s.

CANNED MEATS.—Move off slowly at late rates, but ox tongues firm on scarcity. Lunch tongues steady and forward demand maintained. Danish cooked hams also in good request at about 1s. 7d. per lb. for case of 6 tins.

PRELIMINARY NOTICE.

Multidoor Limited

(DISPLAYED SALES).

Capital - - £200,000

divided into

800,000 Shares of 5/- each.

The Subscription List will open on Tuesday, March 26th, 1929, for an issue at par of

580,000 Shares of 5/- each.

Directors:

Lt.-Col. WILLIAM MARSHALL TICKLER, M.C., Torrens House, North Common Road, Ealing, London, W. 5. (Managing Director, T. G. Tickler, G.m.b.H., Lubeck, Jam Manufacturers), Chairman.

HENRY DOBSON JACOBSEN, 80 Bedford Street, Liverpool (Managing Director of Barker and Dobson, Limited, Chocolate and Confectionery Manuacturers).

CHARLES GORDON MAYNARD, Springfield, Northaw, Herts. (Managing Director of H. E. Davenport, Limited, Chocolate Manufacturers).

SYDNEY WILLIAM MILLER, Elmfield, Oulton Broad, Suffolk (General Sales Manager, A. J. Caley and Sons, Limited, Norwich, Chocolate Manufacturers).

The Hon. MONTAGU PARKER, 31 Prince's Gardens, London, S.W. 7 (Director, English China Clays, Limited).

ARTHUR McKENZIE, Grosvenor House, Park Lane, London, W. 1 (Chairman of Lavell and Co., Limited, Multiple Retail Confectioners), Managing Director.

The Prospectus will show that:—

1. The MULTIDOOR is a specially attractive sales machine catering for all kinds of goods, and has many advantages over other machines.

2. The Company has secured the services of Mr. Arthur McKenzie as Managing Director, whose technical knowledge will prove a valuable asset to the Company.

3. Arrangements have been made for a regular delivery of machines on satisfactory terms.

4. Contracts have been concluded for the hiring of 1,967 Multidoor Machines producing a rental of £45,547 per annum.

5. Additional revenue will accrue from the sale of illuminated advertisements on the machine.

6. The net profits from all sources are estimated at over £82,000 per annum.

Prospectuses are now available from:—

Bankers:

MIDLAND BANK LIMITED, Theobalds Road Branch, W.C. 1,; Head Office, and all branches.

Brokers:

JAS. FLOWERS & SONS, 4, Copthall Court, London, E.C. 2., and Stock Exchange.

And from the Issuing House:

WOODGER INDUSTRIAL TRUST LTD., 62, London Wall, London, E.C.2.

ISLAS DEL GUADALQUIVIR S.A.

AN EXTRAORDINARY GENERAL MEETING of Shareholders of this Company will be held at the Registered Offices, at No. 2, Calle de Canalejas, Seville, Spain, on the 15th day of April, 1929, at 11 a.m., in accordance with the following Agenda:—

1. Read, discuss and approve Minutes of last Meeting.
2. Increase of Capital.
3. Issue of Bonds.
4. Modification of the Articles Nos. 2, 5, 10, 13, 15, 28, 36 and 39 of the Articles of Association.

Shareholders who desire to attend the Meeting should deposit their Shares before the 12th day of April, 1929, with one or other of the undermentioned, viz.:—

BANCO INTERNACIONAL DE INDUSTRIA Y COMERCIO, Madrid and Seville;
BANCA MARSANS, S.A., Barcelona;
S.A. ARNUS-GARI, Barcelona;
BANCO COMERCIAL DE BARCELONA, Barcelona;
MIDLAND BANK LIMITED, London, Threadneedle Street and Branches;

when they will receive in exchange a card of admission to the Meeting, with Proxy Form endorsed.

Shareholders depositing Founders' Shares in accordance with the foregoing provisions will also receive Letters of Rights and Underwriting Letters which, in the event of the necessary Resolutions being passed at the General Meeting, will entitle them to subscribe in proportion to their holdings of Founders' Shares for the new Ordinary Shares which will be issued by the Company and to participate in the underwriting of the issue if they desire to do so.

SEVILLE, 18*th March*, 1929.

The publication of this circular, which is not an invitation to subscribe, is rendered necessary by the fact that all the shares of the Company are in Bearer form.

CIRCULAR TO THE SHAREHOLDERS.

Since the date of the last General Meeting your Company acquired a property named Isla Minima, adjacent to the Company's lands on the River Guadalquivir, comprising about 5,000 acres of the best land in the district, with extensive farm buildings and a small irrigation pump thereon. The purchase price of Pts. 3,700,000 included four River Steamers, landing stages at Seville and at San Lucar, and a perpetual concession to navigate the River Guadalquivir, which, in view of the large amount of produce from the Company's lands that will have to be transported in later years, should prove of considerable value. With this latest addition the Company's property consists of 58,679 hectares (about 145,000 acres), of which 47,879 hectares are freehold, and the balance of 10,800 is held under a perpetual concession convertible into freehold on completion of partial reclamation.

The Company has in addition secured a five years' option to acquire a 50 per cent. interest in the St. Augustine Corporation, Ltd., which has purchased at a favourable price approximately 20,000 acres of land in the vicinity of the Company's estates. The option price is based on the cost of the land acquired with interest to the date of exercise of the option.

The position of work accomplished and of material in stock up to date is as follows:—

About 24,800 hectares in Zones I and II have been protected by banks. The main drains and all valve stations in Zone I, covering 13,900 hectares, have now been constructed and in respect of some 1,800 hectares thereof, conversion to irrigation is practically complete. The whole of this area of 1,800 hectares has been leased to 210 colonists who, with their families, comprise approximately 1,500 people, at rentals of Pts. 400 per hectare. Almost all of Zone I and 3,960 hectares of Zone II have already been ploughed.

The Company has an Irrigation Pump at Marmol, with a capacity of 1,600 litres per second, and a Drainage Pump at Ermita, with a capacity of 4,000 litres per second. A second Drainage Pump at Puntal, and a relay Irrigation Pump for Marmol at Los Pobres, are in construction.

Office accommodation, staff houses, canteen and mess, stores, temporary huts and 195 colonists' houses have been erected.

Fifty-six kilometres of narrow-gauge railway covering part of Zone I have been constructed, and this railway is served by six locomotives and 221 trucks. A sum of Pts. 900,000 has already been spent in the purchase of 32 kilometres of metre gauge railway, together with sleepers, points, etc., which it is proposed shall run from Dora to Reina Victoria, replacing part of the existing narrow gauge line, which will later be relaid in Zone II.

Forty-three kilometres of roads and bridges have been constructed in Zone I.

Excavating machinery, comprising six Ruston draglines, 14 Western graders and 17 caterpillars, and Agricultural machinery, comprising 14 mechanical windlasses, 70 motor tractors, 51 cultivators, 65 sowing machines, together with harrow and seed drillers, ditchers, reaping, binding and threshing machines, and motor transport, acquired at a cost of Pts. 4,345,000, is on the site and available for the Company's agricultural and engineering requirements.

In October last the Board invited some of the larger Shareholders, and others possessing specialised knowledge of the business carried on by the Company, to review the work which has been carried on in the past and to collaborate with the Board in deciding the future programme.

The Committee was composed as follows:—

Mr. E. R. DEBENHAM (*Chairman*).
Mr. A. BALLINGAL.
Mr. R. LUSCHER.
Mr. E. RECHNITZER.
Mr. C. WEHRLI-THIELEN.
Colonel H. W. WOODALL, C.I.E., M.Inst.C.E., M.Inst.M.E.
Mr. F. H. E. BRANSON, of Messrs. Linklaters & Paines.
Dr. J. A. HANLEY, Principal of Cirencester Royal Agricultural College.
Sir BASIL MAYHEW, F.C.A., of Messrs. Blackburns, Barton, Mayhew and Company.

The material before the Committee included detailed reports on the Agricultural, Engineering, and Financial aspects of the Company's undertaking, prepared by:—

Dr. J. A. HANLEY, Principal of Cirencester Royal Agricultural College.
Mr. ERNEST LATHAM, F.C.G.I., M.Inst.C.E., M.Inst.M.E., of 36, Victoria Street, S.W. 1; assisted by
Mr. J. E. B. POTTER, A.C.G.I., A.M.Inst.C.E., and
Messrs. BLACKBURNS, BARTON, MAYHEW & CO., Chartered Accountants, of Alderman's House, Bishopsgate, E.C. 2.

The Committee have made a full Report to the Board, signed by all members except Colonel Woodall, who was prevented by ill-health from attending the meetings of the Committee.

The Reports of the Committee and Experts disclose that the early stages of the development of the Company's undertaking have been attended by unforeseen difficulties, and those errors of judgment which occur in almost every new enterprise of this description, and the Experts have come to the conclusion that, if the programme envisaged by the Committee is carried out as a whole:—

(1) There is nothing to prevent the draining, cleaning and irrigation of the property from being successfully achieved.
(2) By suitable development and cultivation the bulk of the 145,000 acres of land comprised in the Company's property can ultimately be brought into a condition in which its productivity will approach, and may even exceed in some respects, that of lands in Valencia on which irrigation farming is already being carried out, and which at present command prices in the neighbourhood of Pts. 15,000 per hectare, say, £200 per acre.
(3) An estimate has been prepared showing that the cost of constructing the necessary banks, drains and irrigation works would average about £18 per acre. Expenses other than direct engineering costs are not included in this figure.
(4) The Engineers, to whom the records made over a period of time by the Officers of the Company have been submitted, are satisfied that a sufficient supply of fresh water throughout the year, suitable for irrigation purposes for Isla Minima, Zone I and part of Zone II, comprising the 20,000 hectares involved in the new programme, is available from the River Guadalquivir at points suitable for the erection of pumping stations and giving adequate command over the Company's lands, and the works now being carried out by the Government and private enterprise are designed to provide further supplies from which the Company should be able to arrange for its requirements as they increase.

The following is a summarised extract of the Committee's recommendations:—

(*a*) As a result of the opinions expressed in the Experts' Reports, the Committee recommend that the development should be undertaken by areas; the first area being brought as nearly as possible to a state of complete development before operations are commenced in the next, which can best be achieved by concentrating in the first place on Zone I and part of Zone II of the property and Isla Minima, which together comprise about one-third of the total area. If this programme is put into operation without undue delay and strictly adhered to, and the necessary funds are provided, three years' work at a cost of Pts. 41,950,000 will give the Company 8,000 hectares of land producing crops under a complete irrigation system and 5,000 hectares of cultivated land to which, together with a further 7,000 hectares of partially prepared land, the irrigation system can readily be extended.
(*b*) The Company should, at the earliest suitable moment, make arrangements to provide for the above requirements, and for the payment of its existing liabilities amounting to approximately Pts. 9,000,000, consisting in part of bank overdrafts and partly of the unpaid balance of the purchase price of Isla Minima and another estate.
(*c*) As a step towards raising the required finance, the Company should create Pts. 30,000,000 in Ordinary Shares, carrying 7 per cent. non-cumulative interest in priority to the Founders' Shares and one-third of the equity.
(*d*) The necessary steps should be taken to qualify the Company to apply to the Spanish Government for a concession, to enable it to avail itself of the subsidies prescribed by law. The Committee understands that, according to the Ley de Marismas of the 24th June, 1918, the Spanish Government may be expected to grant the Company 50 per cent. of all Capital Expenditure it may incur on reclamation, and that, under a law of the year 1911, the Government may also be expected to make a grant of 50 per cent. of Capital Expenditure on irrigation and to advance a further 40 per cent. of such expenditure at a very favourable rate of interest. It is also understood that the Government is disposed to extend to undertakings promoting colonization the provisions of an existing law which authorises a grant of 50 per cent. of Capital Expenditure on houses in urban areas.

The Board readily accepts these recommendations, and proposes to invite the Committee to continue to render to the Company the valuable assistance which it has rendered by its Report. In view of the national importance of the enterprise and the favourable attitude already taken up by the Government, the Board is confident of obtaining the above subsidies as soon as the necessary detailed projects can be prepared for submission to the Ministry concerned.

In order to provide the Capital necessary for carrying into effect the recommendations of the Committee, the Shareholders will be invited to sanction the creation of 300,000 Ordinary Shares of Pts. 100 each, entitled as a class to a non-cumulative dividend at the rate of 7 per cent. per annum, and to a participation to the extent of 33⅓ per cent. in the surplus profits of the Company after provision has been made for the service of the Debentures and for the amounts payable on the Preference Shares, and Pts. 30,000,000 of 6 per cent. Mortgage Debentures.

While it is obviously not possible, at this stage, to give accurate estimates of future gross receipts, or profits, year by year, it may be stated that, during the early development period, earnings must necessarily be restricted, but should be gradually rising as irrigation farming is extended and the colonists year by year improve their land, so as to obtain, after a few years of their tenure, the maximum results with a corresponding increase in Revenue to the Company.

The numerous applications by colonists during the last year for leases of irrigated land even before irrigation was actually completed largely exceeded the area available at the end of the year and confirm the Board's expectations that many of the emigrants annually leaving the Spanish ports for foreign countries can be diverted to the Company's property. Official statistics of emigration show that in the years 1922 to 1925 the number of emigrants averaged over 100,000 per annum, while the Company's land can only absorb a maximum of 20,000 families on the whole of its area.

The policy of the Company will be to secure the best possible conditions and returns to the Colonists. The Company will retain the sale of irrigation water and should, by bulking, grading, preparing, and marketing the produce of the colonists' crops, derive additional revenue from these sources.

In view of the large ultimate increment in values of the land and its productivity foreshadowed by the Experts' Reports, Shareholders should be amply compensated, in future years, for the absence of dividends in the early stages of the development of the Company's property.

On the basis of a valuation of £200 per acre which should, according to the Experts' opinion, be ultimately attainable and assuming that 125,000 acres will remain available for irrigation farming, after elimination of inferior lands and deduction of the land required for houses, drains, irrigation canals, roads and railways, the total value of the Company's land would amount to £25,000,000.

The engineering cost of converting this land to irrigation taken at £18 per acre will be £2,250,000, to which should be added the cost of housing, say, £1,000,000, the cost of railways, roads, overhead charges, etc., which may be put at £900,000, and the amount already expended on the acquisition and development of the Estates, making together, say, £5,500,000. The value of the equity should therefore be equal to £19,500,000, which shows a surplus value of about £21 per Ordinary Share (assuming the whole of the 300,000 Ordinary Shares are issued), and £65 per Founders' Share. In the above figures no account has been taken of any subsidies to be obtained from the Government, which will therefore go to increase the value of the equity.

Of the Debentures and Ordinary Shares above referred to, the Board proposes to issue forthwith 200,000 Ordinary Shares of Pts. 100 each and as required, Pts. 15,000,000 of 6 per cent. Mortgage Debentures.

The balance of 100,000 Ordinary Shares and Pts. 15,000,000 6 per cent. Mortgage Debentures will be held in reserve for future issue should necessity arise.

When the necessary Resolutions have been passed at the meeting of Shareholders the 200,000 Ordinary Shares will be offered at 105 per cent., share for share, to the Holders of the 200,000 Founders' Shares.

Shareholders are particularly requested to attend the meeting in person, or to sign and send the form of proxy to the Company's Bankers so as to ensure the necessary quorum.

On liquidation of the Company, the assets would be divided as follows:—

(*a*) In redemption of the Debentures at par with accrued interest.
(*b*) Payment of the amount paid up upon the Preference Shares of 500 Pts.
(*c*) Half of the surplus assets remaining, up to Pts. 500 per Preference Share, to be paid to the Preference Shareholders.
(*d*) Payment to the Ordinary Shareholders of Pts. 100 per Ordinary Share, and, in addition, 33⅓ per cent. of the assets then remaining.
(*e*) The residue to be divided equally amongst the Founders' Shares.

The Non-Cumulative Participating Ordinary Shares will confer on their holders one vote for each complete ten shares held.

Holders of Founders' Shares will receive, on depositing their shares with the Company's Bankers, letters of rights enabling them to take up, share for share, the Non-Cumulative Participating Ordinary Shares to be now issued.

Special application forms will be provided for applications by holders of Preference Shares, and the general public, whose applications will be considered.

The proposed issue of 200,000 Ordinary Shares has been underwritten for a commission of Pts. 4 per Share, but holders of Founders' Shares who desire to participate in the underwriting can do so, share for share, to the extent of their holdings, provided they deposit their Shares in accordance with the conditions set out in the Notice convening an Extraordinary General Meeting of the Company for the 15th day of April, 1929, and in due course complete and return the form of underwriting letter which will be issued to them against such deposit to the Bankers with whom they deposit their Shares not later than the 12th April, 1929.

The Company will also pay a brokerage of one-half per cent. on allotments made in respect of applications bearing the stamp of a Banker, Broker, or other approved agent.

J. SOTO REGUERA,
Vice-President.

Seville, 18th March, 1929.

COMMERCIAL TIMES—WEEKLY PRICE CURRENT.

CONDENSED MILK AND MILK POWDERS.—Market easier. Full cream, sweetened: English, spot, 45s.; Dutch, ditto, 38s.; April-June, 37s. 6d. Machine skimmed, sweetened: English, spot, 27s. 6d.; Dutch, ditto, 23s. 6d.; April-June, 23s., all in 5 cwt. barrels. Powders, Spray process, F.C. 26 per cent., 2 by 56 lb. tins, crated, 88s.; M.S. (1 cwt. cases), 40s; Roller, ditto, F.C. 26 per cent., 77s. 6d.; M.S., 30s., all nett, duty paid ex-wharf London. On the Grocery side: F.C.S., 21s.; M.S.S., 10s., basis per case, usual packing. Danish cream: Evaporated, unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d. Condensed, sweetened, 48 by 14 oz., 20s. per case.

HONEY.—Spot supplies remain in short compass with a good demand at advancing prices. Importers have mostly withdrawn and forward offers very scarce. On the spot, white Jamaica, is almost unobtainable, pale amber selling at 48s.-50s. Small supplies of manufacturing grades realised up to 46s. New crop, March-April shipment, pale amber, sold, at 42s. 6d.; and f.a.q., 38s.-40s. New Zealand sells readily, dark amber, quoted, 50s.-55s.; medium, 55s.-65s.; light, 65s.-85s.; whites and water whites, 65s.-87s. 6d. cwt.

RUBBER.

Prices took a further slight dip, as there is nothing much in the nature of buying interest shown just now, while sellers are well to the fore. Sheet spot and March sold 11⅞d. to 11¼d.; April-June, 11⅞d. to 11⅞d. and 11⅜d.; July-September, 1s. 0⅛d. to 11⅜d.; October-December, 1s. 0⅜d. to 11⅜d.; January-December, 1930, 1s. 0⅜d. To New York, European estate sheet, March-April, sold, 11¼d.; April-May, 11⅝d. per lb. c.i.f. London stocks, 522 tons higher on the week, landings being 2,067, deliveries, 1,545; stocks, 26,442; against 61,033 at corresponding period last year. Liverpool stocks, 36 tons lower; landings, 122; deliveries, 158; stocks, 4,100. Straits shipments, first half March, 23,000 tons.

GENERAL.

JUTE.—Market generally steady. Firsts, March-April, Hamburg, quoted, £33 2s. 6d.; April-May, sold, £33 15s.-£33 12s. 6d.; May-June, £34 ton. Hamburg stocks, 114,318 bales, against 107,263 last year, being a decrease of 10,089 on the fortnight.

HEMP.—There was a slightly steadier tone observable in the section for Manila. There was quite a fair inquiry, partly on covering account, which caused sellers to adopt more reserved measures. J.2, April-June, quoted £36 10s.; K, buyers, £32 10s.; K, May-July buyers, £33; L.1, April-June, £33 15s.; sellers, L.2, £29 10s.; M.1, at £30, and M.2, quoted £27 ton. New Zealand more or less nominal. African Sisal No. 1, March-May, £40, sellers; No. 2, £38 ton c.i.f. Manila receipts for the past week, 38,000 bales, against 24,000 last year; estimate for next week, 31,000, and following week, 32,000. Manila shipments during last week amount to 9,000 bales, U.K./Continent; 6,000, U.S.A.; 16,000, Japan; and 2,000 other countries. Stocks are 5,000 bales higher on the week at 219,000.

SHELLAC.—Market dull. T.N., spot, 192s. 6d.; May, 186s.; August, 191s. cwt.

COPRA.—Market continues quiet. Straits, sundried, April-May quoted £23 7s. 6d.; May-June, £23 10s.; June-July, £23 12s. 6d.; Dutch East Indies, April-May, £23 2s. 6d.; May-June, £23 5s.; Ceylon, March-April, £24 5s.; South Sea kiln-dried to London, March-April, £22 2s. 6d., and Marseilles, £22 2s. 6d. Palm kernels dull. To Hull, March-April, £18 16s. 3d.; ditto to Hamburg, £18 16s. 3d. ton.

MISCELLANEOUS.—Coconuts quoted 18s. to 24s. per 100. Coir yarn, Ceylon, £19 to £39 10s.; Cochin, £23 to £40 5s.; Ceylon bristle, £18 10s. to £25; cinnamon leaf oil, 5½d.; citronella, Ceylon, 2s.; Java, 2s.

THE MONEY MARKET.

THOUGH conditions proved difficult this week, as much as 6 per cent. being paid for money on Tuesday, the general tone of the market has become much more hopeful. The reason is that there are at last definite signs that the 5½ per cent. Bank rate is proving effective. The first of these signs was the report last week that £2,000,000 in gold had been imported from Holland, a

shipment which had the instant effect of forcing the Dutch Bank rate up from 4½ to 5½ per cent., or into line with London. This was followed on Monday by the news that the Bank of England had acquired £976,000 of new gold. The origin of this gold is not disclosed, but it is assumed that it represents part of the Dutch shipments of the preceding week. It is thus possible that the remainder will soon pass into the hands of the Bank, though now that the Dutch rate has been raised the Netherlands Bank may decide to hold it in London earmarked on its own account. This week it was also announced that £1,000,000 in sovereigns was on its way from Australia to the Bank of England, while next week, and also the week after, there will be £800,000 in gold available in the market, while in the second week there is also due an additional £500,000 in sovereigns. If all these expectations are fulfilled, the Bank will be able to make a substantial addition to its gold stocks within the next few weeks.

* * * *

Meanwhile, this week's news from America is of definite importance. It is now quite clear that foreign money is in practice debarred from the New York call market, simply because the foreign lender now has to lend at his own risk. Foreign money is thus leaving America, and the 20 per cent. call rate registered on Tuesday is simply a famine rate offered in desperation for money that is no longer there. The following day there came an unofficial report of still greater moment. This was that the Reserve Banks are now insisting that for every loan made in the New York call market, bankers should also buy a proportionate volume of acceptances.

* * * *

This would mean not only that still further pressure is being applied to Wall Street, but that the demand for acceptances will increase. This would tend to reduce the discount rate on acceptances, and so decrease the likelihood of an increase in the Reserve Banks' own rediscount rates. Thus all the American news is favourable. Falling stock prices, a severely rationed call market, and support to the acceptance market, all point to the American situation being brought under control, and this news, coupled with that of the Bank of England's fresh gold acquisition, arouses the hope that the corner in London has at last been turned.

* * * *

It is now possible to take stock of the situation. Market opinion, in its anxiety over London's position *vis-à-vis* New York, has been a little prone to neglect London's position against the rest of the world. Now it is clear that during recent months the real struggle has not been so much between New York and London as between New York and the world. Until two months ago London was ranged against New York, and had to bear the full brunt of the American attack. The institution of the 5½ per cent. rate in London has not only helped to bring the struggle to an end, but has also brought London from a defensive into an attacking position.

	Mar. 27, 1929.	Mar. 21, 1929.	Mar. 14, 1929.	Mar. 7, 1929.	Previous Rate and Date Changed.

Market rate (3 months' bills)	5 5/16 – 3/8	5 5/16 – 3/8	5⅜	5¼	...

The change in London's position has been a gradual one, which has not been easy to detect, but it is now possible to see that this is so. Except the dollar, most foreign exchanges have latterly been in favour of London, and the Dutch gold shipments of last week are by themselves conclusive proof. It is thus at last possible to take a more hopeful view of the outlook, and to believe that the time is near when recent fears of a 6½ per cent. Bank rate in London can be safely abandoned.

NEW YORK MARKETS.

Our New York correspondent cables:—A ½ per cent. decrease in the bill rate is due largely to foreign buying. The money market is far out of line with the discount rate, which is expected eventually to rise to 6 per cent.; heavy liquidation this week may mean a postponement of action. Local banks are borrowing again now, but they were well out of the Reserve Bank last week. There is a great outcry among stock traders against the Reserve and member banks; best banking circles are regretting that drastic measures had to be taken, but they were regarded as unavoidable under the circumstances of delayed action —better late than never. Business is maintained in the steel industry at virtually full capacity, and railroad traffic is growing. There is optimism at the prospect of an agreement in the oil trade for world curtailment.

THE STOCK MARKETS

The break in Wall Street produced few untoward developments in London. The tone of the investment markets improved on the Bank of England's unexpected but welcome accession of gold, gilt-edged quotations enjoying a measurable recovery, while home rails were in better demand. "Anglo-American" stocks inevitably reflected Transatlantic liquidation, but though other industrials were dull and heavy, no wide movements in prices were recorded. Idle conditions ruled in the rubber share market, but oil shares were moderately active. The "Johnnies" reports produced few changes in Kaffirs, but Rhodesian shares were dull on events in New York, as were other base metal counters.

THE COMMODITY MARKETS.

Coal prices in Scotland show signs of becoming easier, but elsewhere they are firm. Changes in the iron and steel trades are in the direction of greater activity and the tone is good. Other metals, except tin, are steady. Raw cotton is again down, but the unevenness of the markets for cloth has prevented this from having any marked effect on Manchester trade. Wool prices are at last considered to be on a sound basis, though this development has not yet been followed by much increase of activity in Bradford. The jute trade is quiet. Hides, leather and their products are showing more signs of activity than they have for some time. Wheat has declined sharply.

THE FOREIGN EXCHANGES.

Sterling on New York remained steady, with a firm undertone throughout the week, around 4.85⅜. The close was 4.85 5/16, with forwards unchanged at 1/16 cent and ⅛ cent discount. Canada further improved to 4.87⅛ on 26th instant, but reacted to 4.88½ at the close. Paris improved to 124.17, and Brussels was also better at 34.95½, and Italy at 92.70. The Dutch Exchange appreciated to 12.10 consequent upon the raising of the Bank rate to 5½ per cent., but reacted later. Spain fluctuated around 32.00, closing at 32.07. Forwards were in more offer, being 9 and 25 cents premium for one and three months. Switzerland was offered at 25.23½ at one time, but improved later to 25.23, while forwards moved from a premium to a small discount. Among the Scandinavians the only movement of note was a slight appreciation in Stockholm from 18.17½ to 18.16¾. Reichsmarks were 20.46. Japan was in good demand at 1s. 10 3/32d., with more activity apparent than recently. Buenos Aires was weaker at 47¼d., as was Rio at 5 27/32d. Lisbon was better at 108. After considerable fluctuations, silver closed at 26 1/16d. for spot and 26⅛d. for forward delivery. Hong Kong was 2s. 0⅛d., and Shanghai 2s. 0⅞d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Mercantile Bank of India, Chartered Bank of India, Australia and China, the Eastern Bank, London Life Association, Trade Indemnity Company, the Employers' Liability Assurance, Newcastle-upon-Tyne Electric Supply, British Insulated Cables, Midland Electric Corporation for Power Distribution, Powell Duffryn Steam Coal, International Automatic Telephone, Salt Union, Radiation, Associated Portland Cement Manufacturers, Pinchin Johnson, Vickers, Mengkibol (Central Johore) Rubber British Aluminium, Mazawattee Tea, and *The Financial News*.

STOCKTAKING.

WELCOME always in that for many thousands of the "gainfully occupied" it represents the first chance in the year to taste—away from factory and office—the breath of spring, Eastertide on this occasion comes as a boon to be the more appreciated after a severe, influenza-laden winter, and as an opportunity, which we ought not as a nation to neglect, for a moment's calm consideration. Coinciding closely with the vernal equinox, with quarter-day, and with the conclusion of "stock-taking" in many branches of our commercial life, the Easter holidays this year are a peculiarly apt occasion in which to pause and reflect, not merely on the way in which the year is beginning to shape, but also on the great decisions which the nation has to take within a few short weeks.

Looking back over the past quarter, what conclusions and hopes can we deduce from the course of events? Abroad, the year has so far brought both good and ill. It has seen the world's prospects of peace enlarged by the decision of the United States to ratify the Kellogg Pact, and by her new approach to membership of the World Court. The Lateran Pact has ended for Italy the long-lived "Roman question"; reconstruction and the tranquillisation of political tension in Central Europe have made further progress. On the debit side of the account there have to be set the outbreak of civil war in Mexico and renewed hostilities threatening once again the internal order of China, whose troubled affairs seemed earlier in the year to be well on the way to being composed. In Jugo-Slavia a dictatorship has to be added to a list which Spain has shown signs of desiring to shorten. The protracted Conference of the Experts in Paris has reminded us that an end to the Reparations question has yet to be found. When the field of foreign affairs is thus summarily reviewed, it is difficult to speak more encouragingly of 1929 than to say that if it has not brought a solution of any of the major problems of international politics, it has at least not witnessed any serious crisis endangering the world's precarious stability.

It is with our domestic situation and problems that circumstances force us to be mainly pre-occupied. Here, too, there are developments of the past quarter to be set on both sides of the ledger. The recovery, slow and painful though it has been, of his Majesty the King has been a matter for unfeigned rejoicing on the part of the whole nation. The course of trade, on the other hand, has been watched with an anxiety deepened by the continued severity of unemployment, and the knowledge that a year ago Easter was a critical turning-point from which a serious recession began to take effect. In our Monthly Supplement, published with this issue of the *Economist*, we examine in some detail the present tendency of industry. The verdict is "open." Tentative, but encouraging, signs of improvement, not only in the coal industry, but in a number of directions, are discernible, but there is as yet no quite convincing evidence of a movement or of an expansion which seems certain to be sustained.

In the financial sphere, the rise in Bank rate on February 7th from 4½ to 5½ per cent. frustrated hopes that, despite last autumn's heavy gold losses, and the continuance of speculative activity in Wall Street, dearer money in this country could, after all, be avoided. Inevitable though it was, the Bank's decision caused disappointment in industrial circles, and the course of New York money rates has since been anxiously watched, lest an increase in the Federal Reserve Bank's rediscount rate should be the precursor of a further rise in rates in London. Recent developments in New York have done much to allay apprehensions on this score, although all danger is not quite past.

Looking back over other developments of the quarter, it is difficult to be wholly satisfied that all is being done that might be done to reorganise British industry and raise its productive efficiency uniformly to the maximum attainable. The cotton trade, it is true, has taken a notable step forward through the formation some weeks ago of the Lancashire Cotton Corporation. The wool textile industry, on the other hand, divided in its own counsels, has been content to let the pressing needs of "rationalising" its costs of production wait upon the upshot of a defeatist and ill-considered application for a protective tariff. The coal trade, it is to be feared, has allowed a helpful gain in exports at the expense of a frost-bound Europe to obscure to some extent its internal shortcomings in organisation and the need to press forward amalgamations and schemes for better-regulated selling. Finally, turning to the relations between capital and labour—another aspect of the vital "reorganisation" issue—we have to recall the grave disappointment occasioned by the employers' reception of the proposals contained in the Melchett-Turner report, and to take what comfort we can from the fact that new discussions are afoot. In fine, the impression left by the past three months' events is that industrially we have tended on the whole to "drift along."

Politically, the same appearance of "drift" is to be recorded, with the important difference that here the stream is carrying us unmistakably to a weir, beyond which the state of the water cannot be predicted. The House of Commons has spent the quarter yawning over a Local Government Bill which aroused little enthusiasm and provoked less criticism than its failure to deal adequately with the Poor Law issue deserved. Outside Parliament, Mr. Lloyd George has succeeded in galvanising Liberalism by his dramatic schemes for providing work for the unemployed; the leaders of the Labour Party have endeavoured with some skill to combine the *rôle* of persuasively "reasonable" Statesmen with that of authorship of "Labour and the Nation"; Mr. Baldwin, in the part of Fabius Cunctator, promises for the end of April a battle-cry that shall rouse the Conservative legions to the discomfiting of both the invading Punic hosts. Meantime, the electorate, still in the main apathetic, shows signs of being awakened from apathy by growing impatience with the Government's delay in producing a constructive policy for the future. At Boston, North Lanark and Eddisbury the portion of the forces of Fabius has been that of Lake Trasimene. Examining the voting at last week's five by-elections, in which the Government lost three seats, we find that out of a total poll of 127,824, only 47,184 votes, or 37 per cent. of the total, were cast for Conservative candidates, the Liberal poll being 39,172, and the Labour aggregate 37,927. The Conservative vote fell by 35 per cent., the average number of votes per candidate declining from 14,510 in 1924 to 9,439 this year. The average Labour vote per candidate rose from 8,269 to 9,482, and the Liberal vote from 7,178 to 7,834, or (excluding North Lanark, where there was no Liberal candidate in 1924) to 9,171. In 1923, it may be recalled, when the Conservative poll amounted to 38 per cent. of the total votes cast, the Conservatives secured only 258 seats. Their percentage in last week's contest suggests that the results of that year may well be repeated more or less at the forthcoming General Election, unless—and here, of course, big uncertainties creep in—the incalculable chances of triangular fights, with a greatly increased electorate, favour unexpectedly Mr. Baldwin's fortunes.

In his speech last week at Leicester the Prime Minister referred to this journal as an organ strongly supporting one particular shade of political opinion. We would assure Mr Baldwin, and our other readers, that the views expressed in these columns are not those of any single political party. Endeavouring to further the general interest, as we see it, we are not concerned to canvass votes for the Government or for either of the two Oppositions. What we chiefly hope to-day is that the electors will use their Easter holiday not only for recreation and careless enjoyment, but also for a little quiet thinking about the country's needs both politically and industrially. But we have the right to demand that the leaders of all three parties shall determine in this lull before battle not to exploit the capacity of a democracy such as ours to be confused and misled by propaganda and passion, but to deem those whose suffrages they seek worthy at least of having clear, detailed and intelligible programmes laid clearly before them for their consideration and choice.

THE POLICE AND THE CITIZEN.

After a long, patient and searching investigation the "Royal Commission on Police Powers and Procedure" has published a Report, which has the merit of being unanimous and is in many ways reassuring to the public mind. We are told that the Commission has formed a very favourable opinion of the conduct, tone and efficiency of the police service, and that its general level of competency is higher than it was; that corruption in the force has been greatly exaggerated and arises mainly out of laws which are out of harmony with public opinion; that certain charges of deliberate trickery in dealing with accused persons have not been proved, and that there is no credible evidence of such treatment as could properly be described as "third degree methods."

These findings are very satisfactory, and in so far as the Commission was set up as a jury to try the police force of the country on a charge of corruption and dishonesty, the Report may be read definitely as a verdict of not guilty. But the Commission had much more to decide upon than the honesty of policemen, and the really difficult judicial act that it had to perform turned on the treatment of accused persons and witnesses who may develop into accused persons—and in particular on the statements that such witnesses were invited to make to the police and the use that may properly be made of such statements in the trial. This is an extraordinarily difficult subject, and if we read the Report of the Commission aright it caused the members of the Commission no little searching of heart and trouble of mind. The problem of these statements touches at one end the laws of evidence which, properly regarded, were outside the territory to be covered, and at the other the liberty of the individual and the limits of police investigation. In spite of the recommendations, unanimously made, it does not appear that the Commission, after all the evidence had been heard and the whole enquiry completed, was really settled in its mind or altogether happy in its convictions. We none of us like the thought of hampering the police by instructions which will enable a criminal, who ought to pay the penalty, to escape; but we all of us hate the thought of a British citizen, perhaps uneducated, frightened, friendless and unprotected, giving away his liberty or his life in secret to a police officer convinced of his guilt before the statement has begun.

On this question of the admissibility of statements made by an accused person before his trial the law is complicated and very difficult; but the principle, as set out in the Report, is that a statement is admissible if it is true, but "any form of threat or inducement prior to its being made introduces so great a risk of unreliability that any statement made under threat or inducement has come to be treated as necessarily inadmissible." Whether there has been "threat or inducement" is for the judge to decide, and as the statement has been made without the presence of witnesses, and as the prisoner will almost certainly say that he was "threatened or induced," and as the police will with equal certainty say that he was not "threatened or induced," it must be a matter of the greatest difficulty for the judge to decide how it was in fact obtained. For the guidance of the police His Majesty's judges have drawn up a set of rules known as the Judges' Rules for the proper interpretation of the law, and with great respect to the high authority on which these rules are based they are a very masterpiece of confusion and ambiguity. Some of the rules refer to "a person in custody" and others to "a prisoner," and as both phrases appear to refer to the same person we start with a breach of an elementary rule of draftsmanship, that in one document the same thing should always be called by the same name. The third rule says that "persons in custody" should not be questioned without the usual caution being administered, the obvious implication being that once the caution has been given they may be questioned and cross-examined. The seventh rule, on the other hand, lays it down that "a prisoner" must not be cross-examined and no questions should be put to him except for clearing up such points of ambiguity as whether an hour mentioned is a.m. or p.m., and he may only be questioned sufficiently to clear up the ambiguity. Rule two says that "when a police officer has made up his mind to charge a person he should first caution such person before asking any question or any further questions as the case may be," so that under this rule the man may be questioned, and until the police officer has *made up his mind* he may be questioned without a caution. Making up one's mind is a vague term. We may be almost determined on a line of action, practically convinced that we are going to adopt a line of action, but still our mind is not made up; and a police man acting on this rule may have got a man well into the toils of the law before warning him that what he says may be used in evidence in court. Altogether the rules are very unsatisfactory; they are interpreted in different senses in different police stations, and it is clearly impossible for any judge on the bench to decide exactly the circumstances in which any given statement was made. He cannot know what questions, if any, were put, what stage of weariness and exhaustion the prisoner reached during the examination (the Report calls this a very real danger), or what view the officer who obtained the statement took of his duty and his examining rights. The Commission itself is in doubt, but records a "disturbing impression" that Scotland Yard regards itself as "a thing apart to which the restraints and limitations placed on the ordinary police do not or should not apply"—perhaps the most damaging and critical sentence in the whole Report.

These, then, appear to be the facts: that the rules governing statements are ambiguous and hard to interpret; that they are, in fact, very variously interpreted by the police; that Scotland Yard thinks itself to be in a privileged position with special rights and special privileges; that the protection of a prisoner begins at the moment when a police officer says to himself, "I have now made up my mind"; that the circumstances in which any particular statement was obtained, the fairness or unfairness of the methods employed to get it, the language even in which the statement was made, are all extraordinarily difficult to ascertain.

What conclusion, then, is a layman anxious for the fair administration of justice to come to? He sees the dangers, and he knows that during the last few years the number of statements produced against prisoners on trial for murder has greatly increased. He knows that under English law, evidence in open court must be given in accordance with the rules of evidence, that every question is heard by the judge and jury and the prisoner's counsel, that his reaction to every question and the answer he gives to it are watched and noted, and that all improper questions can be objected to and disallowed. This protection is the prisoner's right, and whether he be innocent or guilty he is equally entitled to it. But when the prosecution comes into court with a prisoner's statement or confession already made and signed and produces it against the prisoner, it is in effect giving the man's evidence for him before he ever gets into the box, and the evidence so given has been obtained without any of the safeguards of legal advice, publicity and laws of evidence that the law has provided for him. He may have been cross-examined in secret and in secret badgered into admissions that put the noose round his neck before ever he comes into the court. That is the possibility that makes the man in the street distrust these statements and confessions, and we have no doubt that the uncomfortable feeling of the plain layman finds some echo in the minds of those who constituted this Commission. If the statements of accused men must be produced in evidence we should like to have them limited to such statements, and such statements only, as are made in the presence of the prisoner's legal adviser.

FLEETS AND POLICY.

It is the custom of the Admiralty to lay yearly before the House of Commons a command paper giving particulars of the relative naval strengths of the great Powers. The current issue of this comparative statement* of the composition of fleets serves as a useful, if unpalatable, reminder that, whereas the size and character of battle squadrons is regulated by the Five-Power Naval Limitation Treaty signed at Washington in 1921, the construction of every other class of naval vessel is still subject to no law except that of international rivalry and competition. The failure of the Geneva Conference in 1927 gave scope, except in the sphere of capital ships, for apprehensions that the world might be burdened with a fresh race in naval armaments. With two years still to elapse before the next Conference on limitation of armaments is due to be held, it is of interest to see from the Admiralty's command paper how far those apprehensions are on the way to being realised.

So far as capital ships are concerned, the return shows that, with the exception of the "Ersatz Preussen," a vessel of 10,000 tons displacement armed with 11-inch guns building in Germany, no battleship or battle-cruiser has been laid down, or is scheduled as "projected," in the world since the laying down of the two British battleships —the "Nelson" and the "Rodney"—commenced in 1922 in accordance with the provisions of the Washington Treaty and completed five years later. Neither France nor Italy availed themselves of their right under that Treaty to lay down one battleship each in 1927, and the present strengths of the Five Powers in capital ships are as follows:—Great Britain, 20; U.S.A., 18; Japan, 6; France, 9; Italy, 4. Future scrapping and replacement is so arranged under the Treaty that by 1941 Great Britain and the United States will each have 15 post-Jutland ships, against nine post-Jutland ships sanctioned for Japan.

The successful issue of the Washington Conference in respect to capital ships was due primarily to the fact that it regulated a political problem and a conception of naval strategy which the layman in every country could understand. A battle fleet is an easily contrasted combatant force with two potential functions: (i) to protect a belligerent's coast from hostile aggression, (ii) to carry offensive operations into an enemy's water. The object of the Washington Treaty was to restrict all battle fleets to the first of these two functions, and so to limit them in numbers and size of units that it would be difficult for them to execute the second. The delicacy and complexity of the combatant mechanism of a battle fleet gives naval commanders a strong distaste for high strategical adventures. The Treaty, therefore, excited no "expert" apprehensions or prejudices. In all countries, lay opinion, rendered uncertain of the future value of capital units by the inconclusive "battleship *versus* submarine" controversy, eager for some relief from naval expenditure, and in no mind to contemplate the possibility of future wars between Grand Fleets, gave the Treaty a warm welcome.

It is because it lacks the common political denominator of the battleship issue that the problem of cruiser limitation has hitherto been insoluble. To Great Britain a considerable cruiser strength is generally recognised to be a matter of national security. From the "expert" point of view, the strength that constitutes security has, until recently, been calculable. If the operations at sea during 1917 and 1918 proved anything, it was that our ability to secure essential imports is contingent on our ability to place the entire Atlantic trade in convoy. The forces necessary for that purpose have up to now been considered not to be large. Some 50 cruisers, of which at least half can be armed merchantmen, and about 100 destroyers, have until recently been held sufficient. But this estimate of an adequate defensive force for commerce has hitherto been based on the assumption that the form of attack against which Great Britain would have to provide would be an attack by submarines—an assumption made reasonable by the naval strengths of the Continental Powers of Europe and the tendency of their naval policies. To what extent is that assumption still justifiable?

Before an answer to that question can be given, it is necessary to trace briefly the indirect consequences of the Washington Conference in a sphere other than that of battle fleets. The Five-Power Treaty, it may be recalled, defined as a "capital ship" (subject, as such, to the Treaty's regulation) any vessel of war whose displacement exceeded 10,000 tons, and the calibre of whose guns exceeded 8 inches. Unhappily, in such matters maxima tend to become the standard, and the Admiralty's return, giving the comparative cruiser strengths and building plans of the Five Powers, shows only too clearly the emergence of the debatable "8-inch gun" type of cruiser. In 1923, Japan—the armament of whose cruisers laid down in 1920-22 had been 5.5-inch guns—laid down two cruisers armed with 8-inch guns, of 7,100 tons displacement. In 1924, Great Britain laid down five 10,000-ton 8-inch gun cruisers, France began to build a similar vessel, and Japan repeated her previous year's programme, with the addition of two 10,000-ton ships. Next year two cruisers of this tonnage and armament were laid down for the Australian navy, one for France, two for Japan and two for Italy. Since 1925 Great Britain has built one 10,000-ton 8-inch gun cruiser, and has three building, the United States have eight under construction to be completed in 1929-31, Japan has six building, France three, Italy none. In addition the United States have 15 cruisers of this large, heavily armed type "projected."

It will thus be seen that from the aspect of convoying Great Britain's Atlantic trade a new problem is rapidly arising. However unthinkable politically the outbreak of hostilities between X and Y may be, from the "experts'" angle it remains an unalterable rule of naval strategy that every mercantile convoy must be escorted by a force equal to any force that may be sent to attack it. But it

* Cmd. 3277. H.M. Stationery Office. Price 2s. net.

is one thing to make provision against an attack by submarines, and quite another to secure the vital avenues of sea-borne commerce against attack on the high seas by concentrated squadrons of heavily armed 10,000-ton cruisers.

The Geneva Conference broke down, it has been said, on the impossibility of finding a formula to equate the 8-inch with the 6-inch gun. The cause of the failure was, in fact, more substantial. In asking for the right to build 25 " maximum type " cruisers, the United States preferred a demand, acceptance of which would have entailed either the formal abandonment by Great Britain of the principle (mutually desired in theory) of cruiser parity with the United States, or a building programme intolerable in itself and which would have raised our total cruiser strength (including a reasonable allowance of smaller, strictly " defensive " craft) to a figure which the United States regard as unacceptable.

For the decision to lay down five " maximum type " cruisers in 1924, the British Government bears a grave responsibility, for which the simultaneous programmes of France and Japan in this class of construction offer small excuse. The result is to be seen in the United States' decision to construct a formidable squadron of what the " experts," rightly or wrongly, regard as a primarily " offensive " type of ship. To build ship for ship against the United States in the 10,000-ton class would be on Great Britain's part an act of national madness, and it is satisfactory that in the 1927 and 1928 programmes three 8-inch gun ships (of 8,400 tons) originally planned should have been dropped, and that the First Lord should have announced in the House of Commons on March 14th that of the three new cruisers provided for in the current year's replacement programme, two at least will carry only 6-inch guns. It is important, however, that we should do more than refuse to be drawn into a building contest with the richest nation in the world. We must think out clearly the implications of the position which is developing, and recognise that if the United States carry out their full cruiser plans, the classic " expert " view of naval " security "—*i.e.*, a force adequate for every contingency—must be jettisoned in favour of another conception. Our naval defence of trade must be supplemented by a political defence. A rule of war must be sought which gives the greatest possible immunity to private property at sea. The traditional British doctrine of " contraband " has been enforceable in the past only by overwhelming naval strength. Apart from the fact that stubborn adherence to that doctrine constitutes, as we have repeatedly emphasised in these columns, the most serious obstacle to agreement with the United States to limit cruiser construction, the desirability of revising our views of maritime rights in war is doubly reinforced by the fact that, given our threatened inferiority in " maximum type " cruisers, those long-cherished views are now inimical to our own material interests.

THE FRENCH NEWSPAPER PRESS.—II.

(BY A PARIS CORRESPONDENT.)

THE practical effectiveness of the alliance between the French newspapers and the distributing and advertising organisations has been strikingly shown for some months past in the homeric conflict that is still proceeding between M. François Coty and the rest of the French newspaper owners. Nothing of the kind has ever been witnessed in any other country in the world.

In February, 1926, under pressure of economic factors, practically the whole of the French newspaper owners formed themselves into what is called the " Fédération Nationale des Journaux Français " for the defence of their mutual interests. The moving spirit of the new organisation was (and still is) M. Jean Sapène, a civil engineer whom M. Bunau-Varilla, the proprietor of the *Matin*, many years ago, placed at the head of the commercial side of his newspaper. Like Herr Hugenberg, in Germany, M. Sapène is now also the principal figure in his country's film industry. One of the first acts of the new body was to pledge all its members, under substantial penalty clauses, not to allow any of their newspapers to be sold at less than 25c. per copy.

Early in 1928 M. François Coty, who has made an enormous fortune in the manufacture of perfumery, conceived the idea of publishing a daily paper which should be free of the party, political, financial and other fetters which, in his opinion, have made the expression " a free Press " a misnomer in France. He was already the owner of the *Figaro* and the *Gaulois*, but these journals did not give him a sufficient platform to reach the greater public whom it was his ambition to influence. He proposed to produce a full-sized daily journal, to be called *L'Ami du Peuple*—Marat's old title, although M. Coty is by no means a sympathiser with revolutionary doctrines—and to sell it at 10c. in Paris and 15c. in the provinces.

Two days before his new paper was due to appear the large newspaper printing firm who were to produce it suddenly notified him that they would be unable to carry out their contract. MM. Hachette, who had signed a contract to act as sole distributors and to advertise the paper throughout the country (in consideration of a payment of 550,000f. (£4,400), of which two-thirds was paid in advance) simultaneously announced that they must decline to distribute the paper.

Some weeks later M. Coty's new paper appeared, but was boycotted by every retailer in the country. They asserted that they had been told by all the other newspapers to take the choice between selling *L'Ami du Peuple* and the certainty of having their supplies of all the rest cut off. This threat was actually carried into effect in some cases, particularly in connection with the boulevard kiosks. M. Coty's efforts to induce the Paris Municipal Council, the proprietors of the boulevard kiosks, to intervene proved vain. Advertisers were systematically informed, before their orders were accepted, that if they advertised in *L'Ami du Peuple* their announcements would not be allowed to appear in the other newspapers.

Nothing daunted, M. Coty organised a scratch distribution service all over the country, and with such success that the circulation of *L'Ami du Peuple* within six months reached 800,000 copies a day, while " outside " advertising, and particularly " smalls," grew to such an extent as to justify 10- or 12-page issues on several days of the week, whereas the average Paris daily seldom exceeds six pages.

Judgments given by the Tribunal de Commerce a few weeks ago awarded M. Coty 200,000f. as damages against the printers, 500,000f. against MM. Hachette and 1,200,000f. and costs " jointly and severally " against the National Federation and 38 of the editors or managers of the leading newspapers. A counter-action entered against M. Coty for alleged " unfair competition " in selling his newspaper at 10c. per copy was dismissed with costs. Notice of appeal was given. Meanwhile the boycotts continue. M. Coty, however, is apparently well satisfied with his success. Shortly before Christmas he issued an evening edition of *L'Ami du Peuple*, which he claims has already a steady sale of over 400,000.

The point ostensibly at issue is whether, in present conditions, it is possible to make a commercial success of a standard-sized daily paper sold at less than 25c. The National Federation insists that it is impossible to produce the average 6-page newspaper now in vogue at a prime cost below 23c., and that the price at which they sell to the retailers averages 18c. per copy. Seeing that 25c. paper represents only 5c. gold, which was the price of the average French daily before the war, and that newsprint in France is now eight to nine times its pre-war figure (or nearly twice its gold cost in 1914), while labour, taxation, overhead and other production costs have also swollen enormously, the surprising thing is that a sale price of 25c. should be regarded as economically sound, in view of the fact that the advertisement revenue of the average Paris journal is not comparable with that enjoyed by British newspapers.

M. Coty claims that he can sell his newspaper without loss at 10c. because he applies to newspaper production the improved methods which have brought him an enormous fortune in his perfumery business. Unfortunately, neither party to the quarrel has submitted accounts for independent inspection. One of the National Federation's chief arguments is that M. Coty did not enter the newspaper field with commercial motives, but with a view to utilising his admittedly large fortune to preach an individual brand of policy.

Exactly what degree of prosperity the average French newspaper enjoys it is difficult to estimate. The *Petit Parisien*, which is generally credited with having the largest circulation, was understood to have yielded a net income before the war of about £160,000 a year. In 1926 the net profits were only 1,444,000f. and 30f. per share was distributed. For 1927 a dividend of 75f. per share was paid, and it is reported that for the past year this will be increased to 90f. per share. The capital of the company is small, and consists of 24,000 ordinary shares of 125f. nominal (which would represent £120,000 at the time the company was formed in 1884, but which is now equivalent, owing to the drop in the franc, to only £24,000), plus 70,000 *parts*, or founders' shares, ranking *pari passu* with the ordinaries for dividend. On March 2 the ordinaries were quoted on the Paris Bourse at 1,700f., and the *parts* at 1,530f.

The *Petit Journal*, which has a nominal capital of 27,500,000f., has of recent years lost its proud position as the possessor of " the largest circulation in the world," and has paid no dividend since 1922, when 10f. per 500f. share was distributed. In 1926 the preference shares received 23f. 50c., representing cumulative dividends for the previous three years. The shares are now quoted at 170. The *Temps*, which is the only other French newspaper whose shares are quoted on the Bourse, for the past three years has paid dividends of 10 per cent. on its 500-franc shares, which are quoted at 4,850f.

Circulation figures are difficult to ascertain, but the following estimates are regarded by experts in advertising as approximately near the facts: *Petit Parisien*, 1,600,000 copies per day; *Le Journal*, about 1,000,000; *L'Ami du Peuple* (morning edition), 800,000—900,000; *Matin*, 800,000; *Humanité* (the official Communist journal), 800,000; *Echo de Paris* (Nationalist), 600,000; *L'Ami du Peuple* (evening), 400,000. With the exceptions of the last-named and of the *Intransigeant* (Henri Rochefort's old tribune, which has been developed into a very fine property since the war and usually devotes three of its 10 or 12 pages to " small " advertisements), the Paris evening newspapers have small circulations.

Several of the other morning papers are credited with circulations in the neighbourhood of 200,000. *Excelsior*, the only Paris daily approximating to the English picture-daily type, claims 185,000. The *Œuvre* and the *Quotidien*, of which M. Jean Hennessy, now Minister for Agriculture and the head of the great Cognac firm, is the principal shareholder, may be placed in this class. The *Journal des Débats*, although it still has considerable influence, lost much of its circulation, curiously enough, when it reduced its sale price, some time before the war, from 15c. (which was then regarded as a high price for a newspaper) to 10c. It is significant of the paradoxical general situation that the *Temps*, which was sold at 15c. before the war, is now only 40c., or less than a pre-war halfpenny. Many of the other dailies which are often quoted by English correspondents, and which represent the official opinions and aspirations of important sections of opinion, have microscopical circulations and are practically void of advertisements, and cannot be described as " commercial newspapers " in any sense of the word.

In the provinces, individual ownership is also the rule. Most of the leading provincial dailies, which have circulations of from 200,000 to 350,000 copies, print from 10 to 20 distinct editions, all issued from the same office but mostly sent out under separate local titles. They are well filled with news, and articles signed by well-known names are a feature. Their advertising revenue is large. These papers usually comprise six small pages of wretchedly inferior paper, crowded with matter printed from exasperatingly small type.

The only organisation approaching a " combine " in France is what is known as " La Presse Régionale," a company with a capital of 3,350,000f. and some 12 subsidiaries, which owns or controls 14 provincial dailies (some of which print from 10 to 15 editions each) and 30 to 40 weeklies. The company's objects are avowedly religious (that is, Roman Catholic), social and patriotic propaganda. It acts as common buying agency for all its journals, but commercial interests are quite a secondary consideration.

The editorial and business staffs of the French newspapers are, from the English point of view, excessively large, and journalists' salaries are in most cases incredibly small. The minimum salary for whole-time staff men of two years' experience (mostly working seven days a week) was fixed in 1926 at 1,200f. (£9 14s.) per month. Speaking generally, French newspaper salaries have been increased since 1914 by the co-efficient of 3, so that they are now equivalent in gold to about three-fifths of their pre-war amount. French journalists have a similar professional status to that of doctors and lawyers, but it is difficult to understand how they can live on their pay.

A QUARTER'S NEW CAPITAL.

RECENT political discussion with regard to the possibility of floating big Government loans adds interest to our examination of the new issues made in the first three months of 1929. The first quarter is usually the most active of the year, but, even so, this year promises a larger total of new issues in London, British Government borrowings excepted, than any other since the war. In reading the following table it must be noticed that there has been no cash subscription to Treasury funds to compare with £87 million under this head last year.

(Million £'s.)

	First Quarter.		Whole Year.	
	British Government.	Total.	British Government.	Total.
1913	Nil.	50·3	Nil.	196·5
1914	Nil.	97·6	332·5	512·5
1920	7·5	135·1	37·5	367·5
1921	17·0	63·4	202·3	389·0
1922	211·9	286·2	369·6	573·7
1923	43·8	86·3	77·5	271·4
1924	*Dr. 1·3*	36·0	13·7	209·3
1925	4·6	47·6	45·6	232·2
1926	5·4	75·0	4·6	230·7
1927	68·2	144·8	66·0	335·1
1928	85·8	169·0	83·9	369·0
1929	1·9	96·9	...	...

Conversion operations are naturally not included in the total, and the £1,900,000 for British Government represents a gratifying excess of sales over encashments of National Savings Certificates. In the next table the most noticeable changes from previous years are the continued dwindling of corporation loans, the revival of in-

terest in foreign railways and the further advance of the section "Mines, Finance and Exploration."

IN MILLION £'S.

	Total.	British Government.	Foreign and Colonial Govt.	British Colonial and Foreign Corpn.	Foreign Railways.	Mines, Finance, and Exploration.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1919	1,017·4	805·8	14·8	2·9	...	15·3	18·3	160·3
Total whole year, 1920	367·5	37·6	12·0	46·5	1·1	10·3	18·9	241·1
Total whole year, 1921	389·0	202·8	79·5	23·9	·6	2·4	16·9	62·9
Total whole year, 1922	573·7	369·7	72·9	20·0	14·8	9·4	17·4	69·5
Total whole year, 1923	271·4	77·7	95·8	4·8	5·4	15·5	7·7	64·5
Total whole year, 1924	209·3	13·7	90·6	18·8	1·0	12·7	2·3	70·2
Total whole year, 1925	232·2	45·6	30·7	25·3	3·8	18·0	19·1	89·7
Total whole year, 1926	230·7	4·7	54·6	49·2	8·2	26·9	6·2	80·9
Total whole year, 1927	355·1	66·0	67·5	37·9	5·4	33·2	11·0	134·1
1928—1st quarter ...	169·0	85·7	22·7	3·0	1·0	16·7	2·2	37·7
2nd " ...	75·7	*Dr 0·5*	14·4	10·0	Nil	11·0	0·6	40·2
3rd " ...	45·9	*Dr 0·9*	11·4	4·0	Nil	6·5	0·3	24·6
4th " ...	78·4	*Dr 0·5*	7·6	9·4	2·1	15·5	5·6	38·7
Total whole year, 1928	369·0	83·8	56·1	26·4	3·1	49·7	8·7	141·2
1929—1st quarter ...	96·9	1·9	27·2	·3	3·8	21·2	4·9	37·6

When these changes are analysed further it will be seen that Mines must not be credited with responsibility for the increase, but rather the large figure of £20,280,600 for "Exploration, financial and investment trusts," which, with the exception of £2,017,500 subscribed for Kreuger and Toll debentures, is almost exclusively made up of investment trust issues. This movement, which is one of the most significant features of the Stock Exchange to-day, is of great value from the national point of view, since it offers to the small investor enlarged opportunities of investing his savings in productive enterprise; care, however, must be taken in computing the new capital available for industry or governments to avoid duplication by deducting from the total of new issues all subscriptions which are merely reinvested.

ANALYSIS OF NEW CAPITAL APPLICATIONS.

	Total for First Quarters of Years.

Manufacturing & Miscellaneous	9,388,100	7,466,100	12,351,400	14,116,800
Total ...	75,028,400	144,888,400	169,043,800	96,953,000

In the above table several items call for comment. The figure for Colonial Government loans is the sum of three abnormally large issues, namely, £7,840,000, subscribed for Australian Commonwealth 5 per cent. stock (the same amount as in the first quarter of last year), £6,650,000 lent to the Government of New Zealand and £9,100,000 to the Government of India at the beginning of the year. There had been some doubt whether the terms of the Australian loan were sufficiently attractive in view of the suspicion which has been cast on the financial structure of that Dominion, but the issue was successfully covered. One small loan raised by the Corporation of Wakefield was the only contribution to the corporation group. It may be that that form of investment is sated, or possibly that there is considerable further scope for national improvement through this medium. Two big issues have been made by the Buenos Ayres and Pacific and the Central Argentine Railways to enliven the foreign railways group, which had been rather inactive in the last few years. £3,930,855 paid for ordinary shares in Shell Transport and Trading accounts for the big rise in the Oil item. The increase in the Electric group is a sign of the times, and included £2,985,000 for the London Power Company. The heading Hotels, Theatres and Entertainments refers chiefly to cinema enterprises, which were unusually active last year.

But it is towards the two groups "Patents and Proprietary Articles" and "Manufacturing and Miscellaneous" that chief lay interest, and possibly criticism, will be directed, and so we have analysed them further, as follows:—

PATENTS AND MANUFACTURING AND MISCELLANEOUS ISSUES ANALYSED.

	£
1. Food, Drink and Tobacco ...	1,804,875
2. Textiles and Clothing ...	5,295,000
3. Newspapers and Publicity ...	1,306,250
4. Radio and Electrical Equipment ...	1,378,780
5. Motor Car Accessories ...	1,007,000
6. Gramophones ...	1,235,000
7. Coal Products ...	765,000
8. Quarrying and Building Materials ...	1,019,500
9. Wholesale and Retail Trade ...	564,750
10. Automatic Machines ...	1,442,500
11. Chemical, Engineering and Miscellaneous ...	4,211,545
	£20,030,200

It is unprofitable to analyse the last item more closely; the largest single issue which it includes is £620,000 in preferred and deferred shares offered by the India Tyre and Rubber Co. (Great Britain), which might have been classed with motor-car accessories. Textiles and Clothing include nearly a million pounds for artificial silk, and £2,000,000 preference shares issued by a combined chain store and manufacturing firm of ready-made clothiers; while a single tobacco issue of £1,025,000 quite outweighs £779,875 for food and mineral waters. £995,000 for Associated Newspapers is the staple of item 3. Criticism might quite fairly be directed towards the total of a million and a half for automatic machines. There undoubtedly is a future for this form of retail trade, but some of the ten ventures represented in the total must rest on prospects of the most speculative kind. However, they have not been disappointed in their requests for capital. In an industry where everything depends on getting the public accustomed to making purchases in this way, by a systematic and widespread distribution of machines, it would seem that the future would lie rather with a few large organisations than with a multitude of small firms such as these. On the whole, however, there is no evidence that any considerable proportion of new capital is being dissipated in ultra-speculative or wasteful enterprises.

A further table shows the destination of the new capital raised in the first quarters of a number of past years:—

DESTINATION OF NEW CAPITAL.

	First Quarters of Years.					
	1913.	1925.	1926.	1927.	1928.	1929.
United Kingdom—	£	£	£	£	£	£
Government	Nil	4,600,000	5,455,100	68,253,800	85,761,000	1,900,000
Other ...	7,542,000	32,815,000	39,708,300	47,651,200	48,646,000	56,220,000
	7,542,000	37,415,000	45,163,400	115,905,000	134,407,000	58,120,000
British Possessions—						
Government	7,626,600	822,000	8,134,000	5,380,600	17,930,100	23,590,000
Other ...	14,327,500	6,530,300	6,541,400	15,135,900	3,672,600	2,801,100
	21,954,100	7,352,300	14,675,400	20,516,500	21,602,700	26,391,100
Foreign countries—

	20,848,600	2,838,500	15,189,600	8,466,900	13,034,100	12,441,900
Grand total	50,344,700	47,605,800	75,028,400	144,888,400	169,043,800	96,953,000

This shows a definite alteration of the direction of overseas investment from foreign countries in favour of the Dominions and Colonies, but it must be remembered that the total lent to the Empire included three large Government issues, which may not indicate any general increase over the whole of the current year. Plainly, although London is no longer unique as an international financial centre she is losing little, if any, ground to New York. Of course, the ultimate direction of international investment is not precisely shown by new issue figures, since a portion of them is subscribed by foreigners, and at least one recent issue (Kolster-Brandes) went at once to a big premium on heavy American buying, as Ford Motors did just before Christmas.

The following table shows some of the most important issues during the quarter:—

Date of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, End March, 1929.
1929.		£		
Jan. 3	Govt. of India 4½% Loan, 1958–1968...	10,000,000	91	87
9	New Zealand Govt. 4½% Stk., 1948–1958 ...	19,510,000 (a)	95	1½—⅝ dis
16	Commonwealth of Australia 5% Stk., 1945–1975 ...	8,000,000	98	¼ dis
Feb. 13	Roumanian Stabilisation 7% Loan, 1937–59 ...	2,000,000	88	1½—¾ dis
Mar. 12	Chilian Govt. 6% Bds., 1962 ...	2,000,000	94½	¾—½ dis
6	Watney Combe Reid 5½% Debs., 1959	2,500,000	99	½ dis—¼ pr.
6	Barclay Perkins 5½% Debs., 1940–65...	500,000	98	¼ dis—par
Feb. 6	London Power 5% Debs., 1972.....	3,000,000	99½	¾—½ pr.
5	J. Sears and Co. 7% Cum. Pref.	2,000,000	Par	21/3

(a) £12,510,000 for Conversions.

Current prices do not show particularly in favour of these issues, but that has been due not so much to lack of response on the part of investors as to the increase in money rates—an increase reflected in the general depreciation of fixed interest-bearing securities.

AMERICA AS AN EXPORTER.

(BY A CORRESPONDENT.)

ONE of the many disconcerting circumstances which exporters to overseas markets have encountered in recent years has been the increasing impact of United States competition. American exports, always very large, used to be welcomed, except by agriculturists, since they consisted for the most part of food and raw materials, in which the manufacturers of older countries found valuable auxiliaries, offering no competition with their own activities. But of recent years the older manufacturing countries have been finding more and more branches of activity in which the United States shows signs of beating them at their own game. If Great Britain intends to set seriously to work in an endeavour to recover her overseas markets it is important that she should ask herself the question: What exactly is happening to the export trade of the United States, and what developments in it may be expected in the future? The future of United States foreign trade touches us the more poignantly in that we are under an obligation to pay that country an increasing annuity over the next fifty-six years. The amount of that annuity, which began in 1923 at $23 million, and is now $27 million, will reach $175 million by 1984. The interest charge amounts, in 1929, to a further $134 million. Everything which affects the balance of payment of the United States is, therefore, a matter of acute interest to Great Britain.

The list of countries which import more from the United States than from any other single country is very long, and includes the United Kingdom, Canada, Japan, Germany, France, Spain, Italy and Hungary. Attention has recently been drawn* to significant changes which are taking place in the order of importance to the United States of her principal customers. The United Kingdom still heads the list, but her percentage has fallen from 26.2 in 1910-14 to 17.3 in 1927, while Canada, which in 1927 took only 0.1 per cent. less than the United Kingdom, was a very poor second to her in 1910-14 with only 14.5 per cent. Germany still comes third, but with only 9.9 per cent., as against 14.0 per cent. in the pre-war period. These changes are typical. All the older industrial countries, with scarcely an exception, are taking a diminishing proportion of United States exports, while those countries in which industrial activity is comparatively backward are playing an increasing part. This change in the direction of American foreign trade is the direct consequence of a change in its nature. While raw cotton still ranks first, it accounts for a smaller proportion of the total; machinery, automobiles, cotton manufactures and chemicals, on the other hand, constituted a bigger proportion in 1927 than in 1910-14. The United States, that is to say, having embarked on her transformation from an exporter of food and raw materials into a leading exporter of manufactures, finds her products more welcome in those countries which are still in need of external supplies of the manufactured appliances of production than in old industrial centres, where the chief demand is for food and raw materials.

Those traders who have already felt the force of American competition in the markets of the British Empire and South America might reasonably suppose it to be well under way. But an examination of the available data suggests that American manufactured exports, so far, have been the merest wavelets compared with the tide that is to come. The keynote of American success in manufacture is large-scale production, and in certain industries—of which cotton manufacture is the most conspicuous—the productive capacity of the country far exceeds the consuming power of the home market, so that increased exports are essential if the plant is to be economically worked. Rationalisation, with its increase in the output per worker, has given rise to an unemployment problem which can only be solved in the same way, while the automobile industry is being more and more nearly threatened with saturation point in the home market. Evidently, the United States is bound to make a vigorous effort to increase its export markets; circumstances suggest that it is likely to meet with a substantial measure of success.

Dr. Bowley estimated, in a recent issue of this Journal, that from 25 to 30 per cent. of the production of the United Kingdom was for export. Now in 1925 the net output of manufacturing industry in the United States was $26,778 million; the output of mines and quarries amounted to $5,678 million; of agriculture, less $981 million spent on fertilisers and feed, $12,050 million; while a rough estimate of the output of forests and fisheries amounts to $1,183 million, making a rough total of $45,689 million. Exports of domestic merchandise amounted to $4,819 million. A deduction of $500 million for the cost of conveying them to the ports leaves $4,322 million as the value at the place of manufacture of exported merchandise. This is a generous estimate, since in arriving at a figure of $500 million the total revenue from inland transport has been allocated in almost equal proportions between commodities for home use and for export, whereas the position of the chief manufacturing centres suggests that exported goods would incur the heavier charges. Deducting a further $212 million as a rough allowance for the imported raw material content we get a final figure of $4,110 million. This represents some 9 per cent. of the total net output of the country. In respect of manufactured goods alone an official estimate places the proportion of exports at from 7.6 to 8 per cent. of the total output. Contract this with the estimates of 25 and 30 per cent. respectively for Great Britain, and it becomes sufficiently evident that the United States as an exporter of manufactured goods is still an infant, though with formidable potentialities. A particularly good instance of this is afforded by the iron and steel trades, which in 1927 contributed a smaller proportion of United States exports than in 1910-14. At present these industries export less than 5 per cent. of their output, and the United States ranks only fifth among the steel exporting countries of the world. A preliminary confirmation of the obvious inference that this state of affairs is not likely to last long is to be found in the formation by the United States Steel Corporation and the Bethlehem Steel Corporation of the Steel Export Association of America, registered under the Webb-Pomerene Act, which exempts from the Anti-Trust Laws associations formed for purposes of export only.

*Department of Overseas Trade. *A Review of the External Trade of the U.S.A.* H.M. Stationery Office. 1s. 6d. net.

Another influence which must tend in some degree to increase American exports of manufactured goods is the increasing extent to which American capital is being used in the development of new and renascent countries. This export of capital, which there is every reason to suppose will continue to increase, is bound sooner or later to be embodied in corresponding exports of American goods.

When, finally, the American genius for salesmanship is taken into consideration, it seems that the stage is set for a great increase in United States competition in world markets. Nor do we find it easy to accept the soothing view offered in the Report above quoted, that this expansion will be advantageous to ourselves by opening up new areas and increasing the demand for our own products, for it is difficult to suppose that the country which was the first in the field would not also be the first to take advantage of any such development in the market.

There is, however, one serious obstacle to the smooth working out of this programme. As an American speaker has observed: "A so-called favourable trade balance is merely a measure of the extent to which the country enjoying it is not receiving payment," and for the United States to obtain the increased volume of export trade which she needs, while retaining her present tariff, would mean that the rest of the world was largely living on her willingness to forego, *ad infinitum*, repayment of her foreign loans. It is stated in the Report that "Exporters have had to exercise considerable tact and skill in cultivating markets whose own export trade has been seriously curtailed by the high tariff now ruling in the United States." As a result of this, there is said to be a growing body of opinion among Americans engaged in export trade in favour of less stringent tariffs. If, as seems inevitable, this is to be one postulate of keener American competition abroad, the prospect can be viewed with very much less anxiety than the first superficial glance would suggest.

Notes of the Week.

The Political Campaign.—The first round of the political battle ends with the Easter holidays. The second and last opens with the resumption of Parliament and the introduction of the Budget on April 15th, and will continue without a breathing space during the six or seven weeks remaining before polling day. Unprejudiced observers are bound to admit that at the end of the first round Mr. Lloyd George is leading on points. The two remarkable Liberal victories at Eddisbury and Boston cannot be dismissed as meaningless, even by those who realise most clearly that individual contests of this kind may be very misleading. It is, in fact, clear that Mr. Lloyd George, with his pledge and his plans for reducing unemployment, has stirred the public imagination, less, perhaps, because of their merits or by the conviction which they carry, than by the contrast which they make with the policies of the other two parties. Mr Baldwin, in his Leicester speech, his last pre-Easter pronouncement, confined himself mainly to destructive criticism of Mr Lloyd George's schemes; Mr Ramsay MacDonald has not yet selected the items of a definite Labour programme from that complex and comprehensive brochure, "Labour and the Nation." And so, while his opponents hesitate, Mr Lloyd George goes ahead and is working upon the obvious temper of the country, which is at the moment intolerant of the negative or the nebulous in political policy. Mr Lloyd George ran a considerable risk, perhaps, in producing his programme early enough to allow his opponents full time to criticise and counter it. But, as the big Albert Hall demonstration on Tuesday night showed, he is standing very stoutly to his guns; he has set a Liberal revival in motion, and there is no reason to suppose that the impetus will not be sustained. If the estimate of the Stock Exchange is any guide, it may be no idle boast of Mr Lloyd George that he will have in the next Parliament a sufficiently strong following to force the next Government to "get on" with his unemployment schemes or "get out."

The National Accounts.—The accounts of public income and expenditure very often behave unexpectedly in the last few weeks of the year, giving the Chancellor the laugh over the prophets. This year he is doubly fortunate, since in the last two weeks revenue has been remarkably large, as the following table shows:—

EXCHEQUER RECEIPTS AND EXPENDITURE.

	Fortnight ending Mar. 24, 1928.	Fortnight ending Mar. 23, 1929.	Apr. 1, 1928, to Mar. 23, 1929.	Revised Estimate, 1928–29.
I. RECEIPTS:	£	£	£	£
Inland Revenue	31,434,000	38,403,000	387,878,000	396,250,000
Customs and Excise	13,471,000	12,368,000	250,430,000	261,405,000
Other Ordinary Revenue	4,259,513	6,602,331	93,930,547	95,248,000
Total Ordinary Revenue	49,164,513	57,373,331	732,238,547	752,903,000
II. EXPENDITURE:				
National Debt Service ...	2,526,172	2,226,215	309,679,532	304,000,000
Consolidated Fund Services	2,922,344	4,216,007	20,750,063	22,400,000
Supply Services (excluding Post Office)	20,526,218	21,192,714	338,250,148	353,765,000
Total Ordinary Expenditure	25,974,734	27,634,936	668,679,743	680,165,000
Sinking Fund	1,050,001	2,137,000	54,077,609	65,000,000

It will be seen that in the fortnight following our last summing up of the National Accounts, ordinary revenue was greater by some £8 million than in the corresponding period of last year, and ordinary expenditure about £2 million greater. Payments to the Sinking Fund were also up by £1 million. Of the increase in receipts £7 million came from Inland Revenue, both income tax and estate duties showing increased yields. The recent drive against the small income-tax payer appears to have wrung water from that stone. On account of sundry loans £6 million was received, but there was a corresponding windfall of £5 million last year. On the expenditure side the interest on the National Debt is proving a costly item, while the increase under Consolidated Fund Services arises from larger payments to Local Taxation Accounts. These figures call for a slight revision in our previous estimates. On the basis of data then available, we forecast a surplus of £6½ million in this estimate. Only £3 million was allowed for greater revenue receipts than in the last weeks of 1928-29, and were it not for the incidence of holidays in the last week of the financial year it would appear that, making allowance for abnormal expenditure as well, the estimated surplus should be substantially raised. The excess of all receipts over outgo is at present £7,481,200, compared with £658,200 at this time last year, but Mr. Churchill has considerable leeway still to make up in the Sinking Fund Account. We are still assuming that he will carry out his promise of applying £65 million to debt reduction.

The Coalfields.—The Lord Mayor of London has decided to close the Mansion House Fund for the relief of distress in the mining areas on April 30th next. Up to the present £770,000 has been received from a generous public, and the pound-for-pound grant from the Government raises the total to £1,540,000. Conceivably a fresh appeal may be needed later on, but that is all the more reason why it is better that a time-limit now should be set to the flow of subscriptions. Great services are being rendered by the fund, especially to the children, and the money available will suffice to continue them for a considerable time, as well as to provide for additional activities, probably concerning the young unmarried men, which the Lord Mayor's central committee has now under consideration. Meanwhile, little has been heard about the taking of official action on the report, dated January 29th, of two chief medical officers of the Ministry of Health, who were sent to make a thorough investigation in South Wales. A criticism in this report which has not received its due share of attention concerned the Bedwellty and Pontypridd Unions, where payment of outdoor relief, they said, "is based upon the needs of the wife and children only, the man being offered relief in the workhouse. It seems to us that this practice cannot be regarded as regular unless the man does enter the workhouse, and that, if an able-bodied man whose family they relieve is in fact at home, the Guardians should set him to work and not exclude him in calculating the amount of relief required." It was from these two areas that most of the alleged cases of virtual starvation have in the past been reported. Seeing that the Bedwellty Union is administered by commissioners specially appointed by the Ministry, there above all a mistaken policy, which must have involved great suffering, ought not to have been allowed to continue for so long. As for general conditions, the report fulfilled the expectations of those who have had opportunity to form private judgments. It discredited wild statements that irresponsible people have made; grave anxiety, for instance, is not warranted on the score of mortality rates. But the inspectors marked an increase in the occurrence of rickets, in their opinion the first manifestation of physical deterioration. They found that the diet in the households of unemployed men comprised little beyond bread, butter or margarine, sugar, jam, tea and bacon in limited quantity, and they saw no fresh milk; but "the dangers to be apprehended from the continued use of such a diet can be obviated without serious difficulty" by the supply of extra nourishment, as is actually being done by the Lord Mayor's Fund. The report closed with searching references to the "more intangible features of the situation." It supported transference as the only right policy, deprecating the initiation of local relief works as likely to counteract the inducements to leave the area. At the present time pits are reopening in some parts of South Wales, but the effect of the restarting of any one colliery is extremely localised, and there will still be many districts where, unless work can be found for them elsewhere, "a large number of men must remain exposed to the demoralising effects of idleness."

Reparations.—Easter arrives to find the Expert Reparations Committee reaching a crucial stage. The early weeks of the life of the Committee were spent mainly upon questions of devising machinery of a nature that would make an ultimate settlement more palatable than it would otherwise be to some of the parties concerned. This stage has now reached its conclusion, and the Committee are now finding themselves up against their main problem—the number of annuities Germany is to pay, and the amount of each annuity. So far, little definite news has emerged, and this is all to the good, for the last thing conducive to success is that the Committee's deliberations should be advertised abroad. This much, however, is clear. The French wish the annuities to be big enough to permit of their share leaving over a substantial margin for actual reparations after providing for their own annual payments in respect of their war debts. It would appear, too, that the Continental participants in the discussion have not the same objection to payments in kind—*e.g.*, in coal—that British interests entertain. The Committee's main task is clearly to reconcile these various points of view that arise, not only between Germany and her creditors, but also between the creditors themselves. Certain broad facts, of course, must already be apparent to the members of the Committee, the most prominent of which is that whether the payments take the initial form of cash or commodities, in the long run they can only be made in kind. To a certain extent the creditor nations still have to cross their main fence, which is that if Germany is to pay reparations she must be permitted to develop an export surplus, and the creditor nations, including the ultimate creditor America, must consent to receive it. It was always known that a complete settlement would be neither easy nor quick; but we entertain the hope that, with the grave consequences of failure clear before their eyes, the exceedingly strong Expert Committee will contrive to succeed, if given a fair field by politicians, Press, and public opinion.

The American Secretaryship of State.—The office of Secretary of State at Washington has become one of the most important, and not the least arduous, posts in the field of international relations—contrary to the expectation of the Fathers of the Republic. For in styling this officer "Secretary of State" without qualification, the authors of the Constitution seem to have implied that his responsibilities as Foreign Minister would sit upon him so lightly that he would be free to serve as a sort of general ministerial factotum. That expectation was falsified from the outset, and the Secretary of State's departmental duties have steadily grown heavier from decade to decade, until to-day it is a very formidable burden indeed that Mr. Stimson is taking over from Mr. Kellogg. Fortunately, Mr. Stimson has been admirably exercised, by his previous career, for carrying this burden successfully. As a private practitioner of the law, as well as in politics both national and international, Mr. Stimson has been associated for many years with Mr. Elihu Root. He has also been in close personal relations with Mr. Roosevelt. He has already held Cabinet office as Secretary of War in the Cabinet of President Taft. He has fought in the Great War in the American Expeditionary Force in Europe. He has acquired experience of Latin American affairs by performing a very important special mission in Nicaragua for President Coolidge. He has since acquired experience of colonial administration by serving as Governor-General of the Philippines, and it is from this post that he has been called now to Washington. His action in Nicaragua proclaims him a realist, while his friendships, as well as his policy in the Philippines, mark him out, nevertheless, as a man of liberal outlook. It is seldom that the Foreign Office of a great country is directed by a statesman of such varied and far-reaching experience, and the world, as well as President Hoover, is entitled to expect great things of Mr. Stimson in his new position. It is unfortunate that he should be greeted by the "I'm Alone" incident as he is in the act of stepping into the State Department; but we take it for granted that he will show his ability by disposing of this incident, in concert with Sir Esmé Howard, very quickly. There are greater affairs than this for the two Governments to discuss during the next few years—and in this matter a high standard has been set to the new Secretary of State by his predecessor in office, Mr. Kellogg. Mr. Kellogg's name will always be associated with a great act, grandly conceived and simply done. The implications of "the Kellogg Pact" are immense; and, if all goes well in international affairs, they will work themselves out over a span of many generations. It is Mr. Stimson's privilege to keep in motion the ball that Mr. Kellogg has set rolling.

The New American Immigration Quotas.—Under the American Immigration Restriction Act of 1924 it was provided that immigration into the United States from all non-American countries should be subject to maximum annual quotas. This provision raised the problem of how the total maximum figure for annual immigration was to be apportioned between the different countries, and two methods of apportionment were laid down. In the first instance, the respective quotas of the different countries were to be made proportionate to the numbers of foreign-born persons of those respective nationalities who were resident in the United States in the year 1890, as determined by the census of that year. The year 1890 was deliberately chosen because it ante-dated the major part of the immigration from Southern and Eastern Europe, and there was a desire to differentiate against immigrants from those regions in favour of immigrants from Western and Northern Europe, who were felt to be more readily assimilable. This basis, however, was obviously open to criticism, and it was only applied as an interim measure. As a permanent basis, the Act of 1924 provided that the maximum total figure for annual immigration should be 150,000, and that the annual quota of any nationality was to be "a number which bears the same ratio to 150,000 as the number of inhabitants in Continental United States in 1920 having that national origin . . . bears to the [total] number of inhabitants in Continental United States in 1920." In other words, the quotas were to be based on the respective volumes of immigration not merely during the generation ending in 1890, but during the whole period, ending in 1920 and beginning in the seventeenth century, during which immigration had been

taking place. The interim quotas on the first basis were proclaimed by President Coolidge on June 30, 1924. The permanent quotas on the second basis were proclaimed by President Hoover last week; and it is interesting to compare the respective quotas of the three countries that head the list:—

	1924.	1929.
Great Britain and Northern Ireland.....	34·007	65·721
Germany	51·227	25·957
Irish Free State	28·567	17·853
Aggregate quotas of these three countries...	113·801	109·531

It will be seen that, while the aggregate of these three quotas has slightly diminished, the British quota has increased very greatly at the expense of the German and the Irish. It may also be noted that the new system does not seem to secure the general object which is desired so effectively as the old did; for under the new system the third largest quota is the Polish (with 6.524) and the fourth the Italian (with 5.802), while under the old system the third was the Swedish (with 9.561) and the fourth the Norwegian (with 6.453).

The Italian Elections.—In considering the Italian elections which took place last Sunday, March 24th, we must distinguish between the method on which the selection of candidates is made under the new electoral law and the question whether, within the framework of this system, a free vote has been given. As for the system, it may be described briefly as "occupational," in contrast to the geographical basis of constituencies in countries where the English or Anglo-French system of representative parliamentary responsible government prevails. Under the new Italian system, the first stage is the nomination of 1,000 candidates by a number of "nation-wide" occupational organisations, to which quotas of nominations are arbitrarily assigned in proportion to their supposed relative importance in the general community. Out of these 1,000 primary candidates the Fascist Grand Council selects 400 "deputies designate"; and the electorate then votes either for or against these 400 *en bloc*. It is here that the question of free voting comes in, for it is obvious that the only alternative are an all-Fascist Chamber or a revolution—and if there seemed a likelihood of the 400 being rejected and not accepted *en bloc* the Fascist Militia might have something to say. Not that this theoretical possibility arose in practice on this occasion. Far from it. The figures speak for themselves. Between 89 and 90 per cent. of the total electorate voted; and, of those who voted, 98 per cent. voted for the 400 "deputies designate," which is another way of saying that they voted for Signor Mussolini. In democratically governed countries these figures will create such a ludicrous impression that we may be in danger of ignoring the interesting and important issue involved in the substitution of occupational for territorial constituencies. This experiment is not logically bound up with Fascism, and it may have its value for democracy in an age when the increase in the scale on which social life is lived has turned the old local constituencies—as they still exist in Great Britain or France or the United States—into rather meaningless entities. For the good democrat, in these hard times, *fas est etab hoste doceri.*

Another War Cloud in China.—In China, as in Mexico, all men of good sense and good will, be they foreigners or natives of the distracted country, have one common fundamental desire: that troubles should cease and that stability should come to stay. A few weeks ago the well-wishers of Mexico were disappointed by a fresh outbreak of civil war; and this week the well-wishers of China seem doomed to suffer the same disappointment, for the fresh cloud of civil war which has been gathering for some time on the Yangtse is now reported to have burst. In other words, hostilities are reported to have broken out between General Chiang Kai-shek, the President of the All-China (or would-be All-China) Kuomintang Government at Nanking, and the clique of generals from Kwangsi (the south coast province west of Kwangtung), who at present control the middle section of the Yangtse Basin, with their headquarters at Hankow. Chiang accuses the Kwangsi generals of treason against the Nanking Government to which they nominally pay allegiance. The Kwangsi generals retort that Chiang has been packing the Nanking Government with his own nominees; and both they and the Cantonese have now been stung to fury by the arrest of General Li Chai-sum when he was on his way from Canton to Nanking to attend the Kuomintang Congress there. If there is another outbreak of civil war the *tertius gaudens* will, very justly, be Feng Yu-hsiang. Significantly, Feng has already issued circular telegrams castigating both factions; and if the present spell of peace and unity is wantonly brought to an end by the folly of Feng's colleagues, it is conceivable that the Chinese people may turn to Feng as a possible saviour of society. For one thing is certain. The Chinese people, of all classes and in all provinces, are intensely eager for stability and reconstruction; and the old mood of helplessness or cynical toleration, which was the War Lord's charter of misrule, is rapidly passing away. Chinese public opinion has become self-conscious and vocal, and has learned how to translate its desires into action not only effectively but rapidly. On this account we are optimistic on the whole about the outlook in China as well as in Mexico. Even if the worst occurs and the Yangtse Valley once again becomes a theatre of civil war, we do not believe that this will result in an undoing of all the constructive work of the past year and a return to the anarchy which prevailed from 1911 to 1927. On the contrary, it may very well excite a revolt of public opinion which, in the end, may actually make the restoration of stability come more quickly. Meanwhile, it is noteworthy that the work of placing China's relations with foreign Powers upon a new footing continues to make headway, in spite of fresh alarums and excursions in Chinese internal affairs. It looks as though the news that the Nanking Government has arrived at a permanent settlement with Japan may be announced simultaneously with the news that the Nanking Government has again gone into temporary dissolution. Incidentally, a settlement of the Shantung question would strengthen the hands of Feng Yu-hsiang, for, where and when the Japanese troops go out, it is Feng's troops that are most likely to march in.

The Case of the "I'm Alone."—The shelling and sinking of the British smuggling schooner "I'm Alone" by a United States coastguard patrol ship, apparently on "the high seas," raises a complicated set of issues. We cannot feel much sympathy for fellow-countrymen who have made it their profession to break the laws of a friendly country—and this in a matter which the people of that country regard as being of vital import for their social welfare. At the same time, it is a sound moral rule of thumb that one should "make the punishment fit the crime"; and gunfire, resulting in the sinking of a ship and the loss of the life of one of her crew, does seem an excessive punishment for the crime of smuggling, even if the smuggler disobeyed a previous warning to heave to. Moreover, there is the juridical question of where the incident occurred. Under the Anglo-American Liquor Convention of 1924, the British Government, while refraining in principle from conceding any extension of the three-mile limit of territorial waters, agreed that United States Government vessels might search private vessels flying the British flag, under suspicion of liquor smuggling, up to a distance of one hour's steam from the coasts of the United States. This was a friendly concession on the British side to a reasonable request on the American side; and the service done to the United States Government was the greater, inasmuch as the agreement with Great Britain opened the way for the State Department to negotiate a series of similar agreements with other countries. Thus, in this matter, the United States and Great Britain are each under a moral obligation to treat one another with consideration; and we may take it for granted that the incident of the "I'm Alone" will be settled in this spirit between the British Ambassador in Washington and the new Secretary of State, Mr. Henry Stimson. The incident has, however, two morals which are not unconnected with one another. The first moral is that, through the modern conquest of space and time (which may be only just at its beginning) a number of traditional juridical conventions, which worked well enough under the old conditions, need a thorough overhauling and reconsideration; for instance, the old distinction between "territorial waters" and "high seas." The second moral is that, in a world in which international law, such as it is, has gone into the melting pot, the only safe rule of the international road is the outlawry of war. It is encouraging to note that nobody on either side of the Atlantic seems to have been fatuous enough to suggest that the sinking of the "I'm Alone" is a *casus belli*. Yet it would have been a first-class *casus belli* until a very short time ago. Witness the consequences of the nineteenth-century incident of the lorcha "Arrow," or the origins of the eighteenth-century "War of Jenkins's Ear." For all his folly, man does at last yield to the logic of facts.

Local Government Bill: Lords' Amendments.—Consideration was given last Friday by the House of Commons to the amendments made by the Lords in the Local Government Bill, and the occasion provides a good opportunity for taking stock of the latest changes which the Bill has undergone. They are not very large. The preamble has been amended, and a new clause added, to ensure that "one-man workshops" receive the benefit of de-rating; this was necessary, but in default of a centrally controlled system of valuation does not yet make it certain that borderline cases will be treated uniformly throughout the country. Lord Dawson of Penn's amendment to provide that, when making provision for hospital accommodation in discharge of its new functions, each county council or county borough council shall consult with a committee representing both the governing bodies and the professional staffs of the local voluntary hospitals, was met with the jibe from Mr Greenwood that the Government had accepted the principle of syndicalism, and with some doubts of its legal effectiveness, but was generally welcomed. The provision made for agreement between the poor law authorities and benefit societies or funds for the payment by the latter of the expenses incurred in maintaining their members in poor law institutions, was accepted by the Commons. The only amendment rejected, indeed, was one to substitute the applicability of the Agricultural Wages Act to the occupier's wages as the test whether his house should or should not be rated at its value for non-agricultural purposes, in place of occupation by virtue of agricultural employment. The principle that a man can carry around with him rating privileges associated with the mere nature of his employment was too much for the Government to swallow. But they must have a good digestion to be able to accept so smoothly the provision which they had firmly rejected in the House of Commons for the alteration of the latest date for the preparation of town-planning schemes from the end of 1938 to the end of 1934. That was a welcome change, but the Lords' most valuable achievement was the further safeguarding of the rights of an elected Parliament against the bureaucracy. The clause giving the Minister power to remove difficulties by Order, which was severely criticised from all sides, and was modified at the third reading stage, has been further weakened by the provision that although the Order shall come into force at once it shall expire after a limited period, unless it receive the positive confirmation of both Houses. Thus the need for rapid action in emergencies and democratic scruples are both satisfied.

Lancashire Cotton Corporation.—Our Manchester correspondent writes:—According to an official announcement, the Lancashire Cotton Corporation, Ltd., has received requests from 107 mills for valuation, so that the Corporation can state the terms on which the companies can be absorbed. It is also stated that firm offers have been made for 15 concerns and the valuation of the other 92 mills is now proceeding. This week there has been considerable interest in the announcement of the first meeting of shareholders called to consider a definite proposal from the Corporation, the company being the Ace Mill, Limited, Hollinwood. The directors are in favour of accepting the terms put forward, but particulars will not be definitely divulged until April 3rd, the date of the meeting. The Ace Mill, Limited, has a capital of £400,000 in £1 shares, of which 160,000 are 10 per cent. preference shares, with 7s. 6d. paid up, and 240,000 £1 shares fully paid. The mill contains about 120,000 spindles. It is significant that the chairman of the company is Mr A. W. Brierley, one of the executive officers of the Lancashire Cotton Corporation, Ltd. This shareholders' meeting is causing great interest, as it will be the first opportunity of dealing with a definite offer from the Corporation. In this case an important factor is that the ordinary shares are fully paid, and in the circumstances the shareholders have nothing to lose; it is quite possible, unless the purchase terms are favourable, the owners may decide to carry on in the hope of a change for the better in the state of trade. The difficulties of spinners of American yarns in Lancashire do not decrease At the end of last week, however, it was announced that the ballot on organised curtailment of production had failed to show the necessary majority in favour. The actual figures have not been given by the Masters' Federation, but it is understood that whereas, according to the rules the owners of 80 per cent. of the spindles have to vote in favour of such a course of action to put it into effect, the returns showed only about 60 per cent., and in trade circles the vote was considered very unsatisfactory. The result does not mean that spinners are improving their position in any way, but is rather an indication that employers have lost faith in short-time as a remedy for their troubles. In this instance the proposal was that the mills should be stopped on Saturdays and Mondays during April, but the Masters' Federation has now decided not to make any further recommendation to the members.

Australian Coal—and British.—A correspondent writes:—The crisis in the Australian coal trade has a special interest from a British point of view because it involves not only the matter of competition in bunker coals in the Indian and South Pacific Oceans, but the possibility of developing a coal shipment trade from the Old Country to Australia itself. There are both State and private mines in Australia, mostly in New South Wales. Before the war a considerable export trade was done, coal being shipped for bunkering and industrial purposes to the Pacific Coast of South America, even as far North as Central America, to South Africa, and to a few coaling stations in the Indian Ocean. Since the war Australia has exported coal to 22 different countries. That was in the period 1919-26, when, for the greater part of the time, British coal was scarce and very costly. In recent months, with our coal abundant and cheap, and our shipping freights very low, the Australian export trade has been lost. Not only so, but it is found that our coal can be delivered in Australia at a price below the bare cost of the Commonwealth coal. The Prime Minister of South Australia points out that the people of his Colony can save 10s. a ton by importing British coal. Those of Western Australia might save more, for Australian bunker coal is quoted as high as £2 10s. per ton. The New South Wales costs, at the pits, are more than 100 per cent. higher than in 1913, and the freights from Newcastle to other ports in Australia are exceedingly high, as are the port charges and dockers' wages. Sir Arthur Duckham, who has been over to Australia as a member of the Special Economic Commission, says the position of the mining industry is so acute that he hesitates to suggest a remedy. He says the mines have not only to face the competition of imported coal, but that their costs are such as to prevent the development of the Australian iron and steel and related industries. The fact is that mining wages are far too high, and the cost per ton far above competitive levels. The industry, therefore, is faced with the question of either drastically cutting its costs or going out of business. The

Commonwealth Government has appealed strongly to the industry to reduce its costs, and offered to subsidise the trade if only the miners will accept some substantial reduction of wages. The men are stubborn. Their union refuses to make concessions. The Government has decided to appoint a Royal Commission to represent jointly the Governments of the Commonwealth and of New South Wales, to deal with the entire coal trade situation. The Commonwealth Prime Minister, Mr. Bruce, complains strongly of the attitude of Labour, of the high costs of mining, the loss of export trade, and the price of coal. Added to the high cost, there is the uncertainty of delivery owing to strikes or strike threats. Meantime, a few cargoes of British coal are being shipped to Australia. At several ports in the Commonwealth our coal can be delivered 10s. and 15s. cheaper than the New South Wales coal.

A New Diagnosis of Unemployment.—Before the Royal Statistical Society, on Monday, March 19th, Dr E. C. Snow read a paper entitled, "The Limits of Industrial Employment," which attempted to exhibit the relationship between unemployment and the decline in the growth of population, and to deduce a warning to the industrial community to draw in its horns lest our difficulties should be accentuated by further over-production. Dr Snow began by showing that not only is population increasing less rapidly than at any previous period of the industrial age, but the increase is concentrated on the highest age-groups. He then applied "consumption factors" for the various age-groups in order to obtain figures of total consumption demand, his conclusion being that the consumption power of the country is now increasing only one-half as fast as in 1906, and that in ten years' time the annual increase will be further reduced to less than one-half its present scale. Since industry is always tending to expand, and is basing its expansion on obsolete ideas of the growth of demand, over-production is, and will be, the inevitable result, the evil effect on employment being multiplied as the rebuff reverberates through the complicated industrial strata topped by the production of consumers' goods. The greater the extent to which a country's labour resources are devoted to manufacturing industry, the worse will be the results of the alleged excessive industrial expansion, and Dr Snow adduced figures to show that for this reason Great Britain is far more vulnerable than any other country of comparable size. "We do not need," said Dr Snow, "new factories or new machinery or equipment at the same rate as before." His theory, which is curiously akin to the "over-saving and under-spending" analysis of Mr J. A. Hobson, was aptly described at the meeting as an inverted Malthusianism. Dr Malthus declared that the population was increasing faster than the means of subsistence, and that unless measures were taken to check the growth of population it would be painfully checked by famine, disease and natural disaster. Now Dr Snow assures us that the means of subsistence are increasing faster than the population, and that unless measures are taken to check the increase of output it will be painfully checked by unemployment. Dr Malthus was proved wrong, chiefly because he failed to allow sufficiently for the increased output which the increased population itself made possible; and we believe that Dr Snow will be proved wrong because he fails to allow sufficiently for the increased consumption per head likely to attend increased output. His figures of demand by age-groups are not absolute qualities but ratios in which a given demand is distributed. Until the poorest surfeit with too much, there are no absolute limits to the potential demand of human beings for goods of consumption. Over-production is always over-production at a price, but prices cannot be regarded as immutable and elasticity of demand is not always zero. We agree with Dr Snow that over-production in individual industries is evil, and that manufacturers, before embarking on large schemes of expansion, should look carefully to the potential markets, but we adhere to the orthodox economic view that, rationally financed and organised, there are no definite limits to industrial employment.

Scottish Provident Institution.—As is usually the case during the closing year of a quinquennial period, the 1928 new business of this institution shows a large advance, the net amount having risen from £2,460,787 to £2,789,886, equivalent to an increase of 13 per cent. Moreover there was a substantial increase in the number of new annuity bonds granted, the amount of single premiums received in respect of these having advanced from £136,000 to £331,000. The cost at which the business was conducted was again 16.1 per cent. of the premium income. We have so often pointed out before in this connection that the crude percentage of premium income is little real guide to the actual cost of administration. This is particularly true in the case of the Scottish Provident, where not only are the whole life with profit premium rates unusually low, but also an exceptionally large proportion of assurances were originally effected by limited payments, many of which have now ceased to be payable and therefore yield no income against which to measure expenses. The classification of the assets in the balance sheet shows that the tendency to reduce the holdings in British Government securities has been continued. On this occasion the feature of most interest is the fact that the holdings in the year from £706,000, equal to 3 per cent. of the total assets, to £1,984,000, equal to 9 per cent. of the total assets. It is becoming evident that part of the prolonged and persistent rise in price of ordinary shares is to be explained by institutional buying on a large and increasing scale. Included in the annual report is a statement of the results of the quinquennial valuation made as at December 31, 1928. The figures relating to this valuation, and also to the preceding valuation five years ago, are set out below:—

	1919–1923.	1924–1928.
	£	£
Surplus earned during quinquennium ...	1,527,348	1,953,776
Brought forward	366,295	327,710
	1,893,643	2,281,486
Allocations:—		
To bonuses to policyholders	1,380,389	1,550,413
,, strengthening of actuarial reserves...	...	267,059
,, Transferred to Capital Redemption Fund	20,779	...
,, Written off securities or transferred to investment reserve	164,765	100,363
,, Carried forward.....	327,710	363,651
	1,893,643	2,281,486

The rates of reversionary bonus declared were announced in these columns a week ago, and it will be sufficient to say here that they vary in the whole life class from 30s. per cent. per annum to 40s. per cent. per annum, and in the endowment class the rate is 40s. per cent. per annum compound. As is well known, the special characteristic of the institution's whole life with profit policies is the peculiar profit-sharing arrangement. Under this arrangement bonuses are not allotted until the accumulations at 4 per cent. interest of the premiums paid reach the amount of the original sum assured. Although the rates of bonus have been increased in both classes, the amount required for the whole life assurance class on this occasion shows a decline on that of five years ago, whereas the opposite is the case in the endowment assurance class, thus showing that the institution's new business has been of recent years predominantly in the form of endowment assurances.

Oversea Correspondence.

UNITED STATES.—MONEY—STOCK EXCHANGE—CAPITAL ISSUES—REPARATIONS BANK.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 15.

THE financial picture continues to be one of contrasting colours. It is made up of expanding business activity, rising corporation earnings, absence of inflation in commodity prices and high money rates. Naturally, business optimism is tempered by the fear that an active stock market will raise money rates to a point at which trade will have to suffer, or at least will maintain present levels until the pressure extends to industry. So far the tight money market has not had much effect on business. By maintaining discount rates at 4½ to 5 per cent., the Reserve Banks have made accommodation available to commercial borrowers at 5 to 5½ per cent., which seems low compared with the average stock market rate of 7 and 8 per cent. Business men are uneasy, however, lest the Federal Reserve authorities, in another effort to bring about liquidation of loans on stock exchange collateral, raise discount rates. Stock market traders also for the most part rather expect higher rates, but many are confident that the Reserve authorities are too completely without control of the money market to stop the bull movement. Early this week a wave of pessimism as to the money outlook swept over the financial district, but it has now given place to more confidence.

Another week has passed without change in discount rate. It may be that action was merely postponed until the Treasury financing was out of the way, but at any rate the week's statement of the Reserve Banks shows an improved position. Member banks were able to reduce their borrowings by 34 millions. The drop at the New York bank was 46 millions. Government security holdings increased slightly and bills continued to decline. These changes reduced the total of Reserve Bank credit outstanding by 46 millions, and the reserve ratio rose from 69.7 to 70.7 per cent. The local bank's ratio jumped from 77.3 to 80.6 per cent., virtually the same as last year.

Money rates during the week have been distinctly easy. Call money was plentiful at 5½ to 6 per cent., but the low rates were recognised as temporary. They resulted from the piling up here of funds to meet the tax date turnover in interest, dividends and tax payments. To-day the Treasury retires 572 millions in short-term certificates and places a new issue, of which 475 millions were offered. Over-subscription amounted to about 50 millions, but allotments have not been announced. Meanwhile Secretary Mellon has predicted larger income-tax collections for the quarter than were turned in last year on March 15. Corporate and individual earnings were larger, which should offset the lower corporation tax. In all probability tax payments will total over $600 million.

To meet its immediate obligations, such as retirement of the short-term notes and interest payments of 60 millions, the Treasury borrowed between 150 and 200 millions at the Reserve Bank, pending collection of the income-tax checks. This will make money easy for a few days. The banks have allowed their reserve balances at the Federal Reserve to run down in anticipation of the Treasury overdraft, but as the Treasury pays it off, money rates should harden again. Doubtless, by the end of next week the share market again will worry about high money and the discount rate.

The temporary ease in money has not helped fixed-interest-bearing securities. In fact, Government issues have sunk to the lowest prices for several years. In view of the depressed state of the bond market, Wall Street was greatly interested in an interview given by Secretary Mellon this week in which he gave it his opinion that bond prices were at bottom. That was naturally interpreted to mean that the Secretary thought the money market had reached its peak. Read in conjunction with another statement made a few days previously, in which he said that he would not interfere with the Federal Reserve Board's decisions on discount rates, the financial district found it difficult to avoid the conclusion that it was being given a tip. But it is becoming wary of statements from high places on the money outlook. Out of the confusion one fact emerges, which is that money is dear and is likely to remain so for some time.

New financing remains surprisingly high in view of dear money, and the proportion of bonds to shares has increased in the past fortnight. Last week, new flotations amounted to over 210 millions, about half being bonds, and there was a sharp gain in foreign issues. This week the total is lower at 137 millions, with 79 millions in bonds. In general, coupon rates have not been raised to any great extent, and the scarcity of good bonds, together with the necessity which insurance and certain other investing companies are under to invest in bonds, is making a fair market for such issues as do come out. Nevertheless, the popular mode of corporate financing is now with shares, and that is one reason why business expansion has not been halted by high money rates.

Broker's loans declined this week by 20 millions and are now 42 millions below the peak of $5,669,000,000 reached on February 6, according to Federal Reserve Board calculations. Member banks here drew in their loans by 113 millions, but out of town banks and corporations made up most of the deficit. Loans to brokers in this district made by "others"—which includes money from corporation treasuries, foreign balances and private funds—now make up more than half the total, at $2,800,000,000. Loans for New York member banks are only $1,000,000,000. The proportion of demand to time loans is growing. Demand loans now amount to $5,149,000,000, against $478,000,000 for time loans. It is the overwhelming proportion of demand money in the market and the large amount lent by corporations that are causing misgivings on the part of the more cautious element, but it is doubtful whether corporations will withdraw any considerable amount for more than a day or two. Reduction in loans for their account is apt to be gradual.

Some interest has been aroused in the reported plan of the reparations experts for an international bank to handle reparations payments and international debts. Bankers here prefer to await more detailed information before expressing opinions, but in general the scheme is considered good, even though it has novel features. The gold clearing house feature is particularly well liked by those who have studied central banking problems. Much hope is held out here of an early settlement of the whole reparations problem.

FRANCE.—COMPARATIVE TAX BURDEN—FOREIGN TRADE—REVENUE.

(BY OUR CORRESPONDENT.)

PARIS, March 26.

THE vexed question of the comparative burdens of the French and the British taxpayer has again been raised, and in a rather interesting form, by M. Pierre Lemy, vice-president of the Paris Chamber of Commerce. M. Lemy takes exception to a statement recently made in Paris by Mr Herbert Williams, M.P., to the effect that the British taxpayer is called on to pay rather more than double the amount of taxation levied on his French brother. Mr Williams appears to have taken the total amount of local and national taxation raised in Great Britain and France respectively, and divided it, in each case, by the figure representing the population. The British total for 1927-28 he places at £881,420,000, and the French total at 50,650,000,000 francs (roughly, £408,500,000), the latter including, as well as local and State taxation, the amount raised through the Caisse d'Amortissement for debt extinction purposes. These figures, divided by that of the respective populations, Mr Williams suggests, show that the British pay £20 12s. per head in taxation, and the French only £10 2s. 8d.

M. Lemy's argument is that this method of comparison is fallacious, as it does not take into account the respective national incomes of the two countries, out of which alone the money to pay taxation must come. Sir Josiah Stamp calculates that the British national income in 1926 amounted to between £3,700,000,000 and £4,100,000,000; a *Times* estimate placed it for 1925 at £3,800,000,000; Professor Gini (1925) at £3,940,000,000; and Professor Baudhoin (1927) at £4,000,000,000. The French national income in 1925, according to the *Times*, was 107,000,000,000 francs, according to Professor Gini 150,000,000,000 francs, to the *Revue Politique et Parliamentaire* 130,000,000,000, and to Professor Baudhoin 146,000,000,000 francs. The estimate of the *Revue Politique*, M Levy suggests, is probably the more exact, as it was arrived at after taking into account the bases afforded by the total taxation paid (51,650,000,000 francs),

which worked out at 39 per cent. of the national income. Taking £3,800,000,000 as representing the British national income, the amount of taxation paid in Great Britain would represent 23 per cent. of the total income. M. Lemy argues that, as the national income in France works out at about 3,200 francs per head, or £25 12s., and as out of this the Frenchman contributes 39 per cent. to the State, whereas the British citizen, with an average income of £86 11s. per head, pays only 23 per cent. of it in taxation, the Frenchman is really shouldering twice as heavy a taxation burden as his English fellow sufferer. "If the British and French had to pay the same amount of taxation per head," M Lemy asserts, "the Frenchman would have only £5 a year left to live upon, while the Englishman would still have £55 8s. available for that purpose." It is to be regretted that anything like exact estimates of either French taxation totals or French national income are necessarily impossible for want of reliable data.

The foreign trade returns for February record imports to the value of 5,162,237,000 francs, while exports were only 4,117,941,000 francs, leaving an adverse balance of 1,044 millions, following one of 1,472 millions in January. February was the twelfth month since the beginning of 1928 which has been marked by an excess of imports. The adverse balances during 1928 were in several cases fractional, however, the total deficit for the year amounting only to 2,102 millions, whereas that for the first two months only of 1929 has reached 2,516 millions. The detailed comparative figures are:—

Imports.	First two months of 1928.	First two months of 1929.	In 1929 Difference.
	Frs.	Frs.	Frs.
Foodstuffs	1,846,309,000	2,367,412,000	+ 521,103,000
Raw materials	5,547,344,000	6,502,735,000	+ 955,391,000
Manufactured goods	1,036,859,000	1,465,433,000	+ 428,574,000
Total	8,430,512,000	10,335,580,000	+ 1,905,068,000
Exports.			
Foodstuffs	1,062,498,000	930,924,000	− 131,574,000
Raw materials	2,235,023,000	2,094,808,000	− 140,215,000
Manufactured goods	5,127,866,000	4,794,101,000	− 333,765,000
Total	8,425,387,000	7,819,833,000	− 605,554,000

The increase in imports and the decrease in exports, it will be noted, has been common to all the categories, but the most striking modification has been the increase of imports of manufactured goods, which were 41 per cent. larger during the first two months of 1929 than in the corresponding period of last year. Tonnage figures have now become consistent with values, exports during the two months having dropped 198,000 tons, while imports show an increase of 1,440,601 tons. The fact that one-half of the increased imports consists of raw materials and that February showed an appreciable improvement in the situation affords ground for the presumption that the position may improve as soon as these raw materials have been transformed into manufactured goods.

While the country at large is apparently impoverishing itself by buying from the foreigner more than it is selling to him, the State continues to accumulate larger and larger sums from taxation. The revenue returns for February record total recoveries, from all sources covered by the General Budget, amounting to 2,755,777,000 francs (exclusive, of course, of the revenue from taxation allocated to the Caisse d'Amortissement and the yield from the tobacco monopoly, and also of the yield from Posts, Telegraphs and Telephones, which is included in an independent Budget). Of this total 2,717,071,900 francs was derived from "normal and permanent sources," as compared with 2,545 millions in February, 1928, and 2,428 millions in February, 1927. Direct taxation produced only 286 millions during the month, but this is to be explained by the much closer method of collection now in force, which has left a much smaller total of outstanding direct taxation than was usual in years gone by. Indirect taxation (which in this country includes the stamp and registration duties and the various taxes on securities, motor cars, &c.) yielded 2,421,925,000 francs for the month, or over 200 millions more than in February, 1928.

The Poincaré policy of super-balanced Budgets continues to produce substantial results. The total yield from indirect taxes and monopolies in January was over 436,500,000 francs in excess of Budget estimates, and in February over 374,000,000 francs more, so that, on the first two months of the year only, M. Chéron has realised a surplus of some 810 millions (equivalent to £6,500,000 in round figures). It is not yet possible to state exactly the amount of the realised surplus arising from the Budget for 1928, but enough is known to show that it will prove to be appreciably larger than the figures first announced. During January it was officially stated that the total yield for the year, as far as was then ascertainable, would prove to have been 3,268 millions more than had been anticipated in M. Poincaré's Budget estimates, drawn up in the middle of 1927, which provided for a purely nominal surplus. It is now known that this total will be largely exceeded, and that, although the final figures are not yet available, the surplus will be at least 4,629,421,000 francs. Allowing for various items of supplementary expenditure which will have to be provided for, and taking into account a number of annulments of credits voted but not utilised during the year, there appears to be ground for expecting that M. Chéron will be able to count on a clear available surplus of at least 2,000 millions. How much of this will be utilised for reduction of some of the admittedly inequitable over-assessed forms of taxation, which it is promised shall be revised downwards under the 1930 Budget, and whether anything will be left over for debt reduction, which is theoretically the destination of all realised Budget surpluses, remains to be seen.

GERMANY.—CREDIT—FINANCES—INDUSTRY—FOREIGN TRADE—AGRICULTURE.

(FROM OUR CORRESPONDENT.)

BERLIN, March 25.

THE money market position has somewhat improved, and the end-of-March settlement is looked forward to without anxiety. The immediate cash needs of the Republic have been provided for. The outflow of funds to abroad seems last week to have slackened. That this happened in spite of high New York rates seems to be due to the fact that America's short-term claims have probably shrunk to small dimensions, although there is still a very heavy short-term indebtedness to West European countries. The advance in the Netherlands Bank rediscount rate has so far had no visible effect. Although the Republic has secured cash for its March-end needs, its new loans will have to be paid back out of April quarterly tax receipts; and after that, at least before the end of June, the same unsatisfactory cash situation will probably recur, and, indeed, keep on recurring until a long-term loan can be floated for payment of the extraordinary budget liabilities. For exchange there was last week a reduced demand, and the dollar weakened a little, but rose again to-day. Sterling was steady at a little above the rate of a week ago. The month-loan rate continued last week at around 6⅜-8 per cent., and there was a considerable demand; but the day loan rate declined by about 1 per cent., and was to-day 4-6½ per cent. The banks have apparently supplied themselves abundantly with cash by rediscounting; but there is likely to be a sharp rise in day rates at the end of the month. No further sale of gold is reported. The Reichsbank shipped 36 million marks in gold to New York to replenish its deposited reserve, and this, taken together with the extreme shrinkage in the legal-cover exchange reserve, seems to indicate that the Bank considers a further sale of gold may be necessary in the near future. The gold reserves of all the issue banks on March 7th totalled 2,749 million marks, as against 1,997 million marks on the same date of 1928; combined gold and exchange reserves (legal-cover exchange only) 2,960 million marks against 2,209 million marks.

No progress in the Federal taxation controversy can be reported. Federal tax receipts in February totalled 604 million marks as against 1,107 million marks (including quarterly payments) in January and 611½ million marks in February, 1928. In the lapsed eleven months of the financial year taxation yielded 8,522 million marks cut of 8,862 million marks estimated for the twelve months. Direct taxes yielded 5,873 million marks out of 6,060 million marks estimated, and Customs and taxes on consumption 2,649 million marks out of 2,802 million marks estimated, whereof the Controlled Revenues (Customs, tobacco, sugar, beer and spirits) yielded 2,604 million marks out of 2,760 million marks. The yields of the tobacco, sugar and beer taxes exceeded in the eleven months the whole year's estimate, but Customs, with 1,033 million marks, fell short of their proportional share, the year's estimate being 1,200 million marks. The remaining Reparations tax, that on railway transport, yielded 331 million marks out of 340 million marks estimated for the year. Should March tax receipts be on the level of those of March, 1928, the year's realised revenue will be around 9,055 million marks, or 193 million marks more than the estimate.

The wholesale prices index number for March 20th is 139.3 as against 139.9 on the 13th. Agricultural products are 132.9, Colonial goods 125,4, industrial raw and half-manufactured materials 134.5, industrial finished goods 158. Wages continue to increase, though very slowly. The winter unemployment wave seems to be receding. At the end of February 22.3 per cent. of trade union members were fully employed, as against 10.5 per cent. in February, 1928.

Ruhr coal production has been rising for the last five weeks, and in the last reported week reached the high average figure of 403,710 tons a day. Production of iron and steel is fairly well maintained, though below the high figures of a year ago. February pig-iron output was 981,695 metric tons against 1,122,384 tons in February, 1928, ingot steel 1,269,874 tons against 1,323,499 tons, rolling-mill products 864,801 tons against 942,344 tons. The output of tinplates in 1928 is returned at 135,779 metric tons against 128,357 tons in 1927, and 83,052 tons in 1913; export at 34,789 tons against 29,589 tons and 760 tons respectively. The export of machinery to East Europe continues to rise; Russia, Poland, the new Baltic States and Danzig took machinery amounting to 232 million marks in 1928, against 198 million marks in 1927 and 70 million marks in 1924. Export of agricultural machinery to these countries has been declining since 1926, but this is due to a heavy drop—to about one-fifth—in Russia's purchases. Export to all countries in 1928 of electrotechnical wares, that is, cables, lamps, telephones, wireless apparatus, meters, &c., shows a large increase.

No first-hand statement has been made here as to the reported artificial silk price agreement, embracing Courtaulds, Vereinigte, Glanzstoffe, and Snia Viscosa, or (according to another story) embracing also the Milan Soie de Chatillon. The trade Press speaks of uncompleted negotiations in Paris. It is reported that the acetate artificial silk concerns of the Continent are coming to a price agreement, the ground being that their production this year will greatly increase, and that production costs will be cut as a result of new processes and of new means of exploiting by-products. The German Viscose-Silk Price Convention came to a temporary end in January, and at present competition prevails, and home prices—it is affirmed—are too low to yield a profit. Statements by the Bemberg, the Enka (Holland) and other companies are optimistic as to the future. The Vereinigte Glanzstoffe is reported to have rationalised its works successfully, and the Bemberg company is proceeding with the construction of new works at Siegburg, in the Rhineland. The New York story that I.G. Farbenindustrie will follow the example of Glanzstoffe and Bemberg by establishing its own artificial silk works in the United States is not confirmed here. The German concerns report an increasing demand for high-quality artificial silk; and to that they attribute the fall off in 1928 of imports, which have been largely of lower quality.

Both imports and exports in February show considerable declines, due partly to the shortness of the month, partly to the severe frost, and, as regards imports, partly to the trade slackness. Imports are the lowest since November, 1926. The greater part of the decline in exports falls to manufactured goods, but exports of machinery was more than maintained. The adverse balance (commercial wares only) is 96 million marks, as against 283 million marks in January. The adverse balances in February and January, 1928, were 305 and 495 million marks respectively:—

	February.	January.	Jan.-Feb.
	Marks	(000's omitted).	
Imports:—			
Livestock	8,842	12,080	20,922
Foodstuffs	279,574	404,238	683,812
Raw and half-manufactured materials	546,051	688,151	1,234,202
Manufactured goods	182,386	214,645	397,031
Commercial wares	1,016,853	1,319,114	2,335,967
Gold and silver	7,183	12,891	20,074
Totals	1,024,036	1,332,005	2,356,041
Exports:—			
Livestock	1,380	1,297	2,677
Foodstuffs	48,373	65,392	113,765
Raw and half-manufactured materials	210,803	247,352	458,155
Manufactured goods	712,765	790,685	1,503,450
Commercial wares	973,321	1,104,726	2,078,047
Thereof Reparation deliveries	52,260	68,885	121,145
Gold and silver	3,990	3,070	7,060
Totals	977,311	1,107,796	2,085,107

The combined farmers' associations have handed in a petition demanding State measures of support, including higher duties on grain, flour, potatoes, meat, dairy products, sugar, and fruit, the establishment of a Federal Grain Board, which will fix prices and keep them stable, compulsion to mill home grain, reduction of taxes, and better credit facilities. The long- and short-term debts of agriculture on December 31st are officially estimated at 11,720 million marks, the annual interest liability at 1,049 million marks. Only 2,800 million marks represents valorised old debts; the remainder is new. The rapid growth of agricultural indebtedness is being emphasised in connection with the Reparation Conference. It is, however, not stated how far the farmers have counter claims. According to another official report, a good deal of the newly borrowed money went on mistaken investments.

NATIONAL BANK OF COMMERCE 1929 IN NEW YORK

HUNGARY.—MINORITIES—BUDGET FOR 1929-30 —FOREIGN TRADE—TARIFFS.

(FROM OUR CORRESPONDENT.)

BUDAPEST, March 17.

THE decision of the Council of the League at Geneva to refer the whole question of minorities to a committee for investigation was received with satisfaction here. It should be remembered that more than three million Hungarians live under the sovereignty of the neighbouring "Successor States," and Hungary cannot be indifferent to their welfare. The long protracted dispute of the Hungarian Optants who lost their properties by the application of the Roumanian Agrarian Reform did not come before the Council at its last session, as direct negotiations are still in progress. It is asserted that the representatives of the Governments of Hungary and Roumania will meet in April in Vienna to conclude their business. Foreign Press rumours that Roumania offered a lump sum of 100 million gold Kronen for compensation have not been denied, and it is rumoured that the Hungarian claim is about 150 million. It seems that there is a reasonable hope for settlement in the near future, although difficulties still exist. It would be in the interest of both countries to solve that long-delayed affair, which certainly does not contribute to the political and economic understanding of the countries concerned.

On March 13th the Finance Minister, Dr Wekerle, introduced the Budget for 1929-30, and met with a favourable reception in the House of Deputies. The Budget was drawn up in a conservative manner, fully maintaining the principles of the reconstruction scheme of the League. The revenue is estimated at 923 million pengös, leaving a surplus of 2.2 million. Considering that revenue in the last fiscal year amounted to 961.4 million, there is every reason to believe that receipts will substantially exceed estimates, and that there will be a considerable surplus to be used for public works and investments. The Budget includes among the ordinary expenditure 30 million pengös for various kinds of capital investments, the most notable of which is the spending of 15.4 million for road-making, bridges, etc. The service of the national debt amounts to 92.7 million pengös, the charges arising out of the Trianon Treaty to 7.5 million. The salary of the State employees and pensions amounts to 475 million, which is a very high figure considering that it represents 52 per cent. of the total gross expenditure. The high proportion of the salaries and pensions is explained by the fact that many thousands of the civil servants who fled from the Successor States were either maintained or pensioned at the charge of the Treasury. The cost of the national defence amounts to 150 million, including a sum of 44 million for military pensions. The costs of the fiscal administration are estimated at 7 per cent. of the total revenue.

The Finance Minister pointed out in his Budget speech that the first consideration of the Government is to ensure the equilibrium of the Budget, and expenditures were therefore carefully considered. Several Finance Bills were introduced in order to relieve the country from the onerous tax burden. It is fortunate that the land tax is going to be reduced, because the agricultural community is in a difficult position, partly because of the low prices of agricultural products, partly because of the high industrial tariffs which adversely affect the rural population. Perhaps the most favourable feature of the Budget is the lower estimate for Custom receipts, amounting to 128.6 million, as against 148.1 million realised in the past fiscal year. The yield of direct taxes is estimated at 181 million, stamps and dues at 101.5 million; the unpopular turnover tax figures with 26 million less than in the past fiscal year at 115 million, excises are to bring in 101.6 million, salt and tobacco monopoly 184 million. Non-tax revenue is estimated at 111.3 million.

The Budget of the State enterprises balances at 509.2 million pengös, with a surplus of 1.3 million. The receipts of the State railways are estimated at 314.8 million, those of the Post Office at 112.7 million. There are 18.7 million pengös included within the ordinary expenditures for capital investments, of which 11.2 million are for railways and 5.4 million for the Post Office, etc. All State enterprises showed considerable progress during the past year, and their efficiency is constantly improving owing to the renewal of their plant. Rumours of a foreign loan for the reorganisation of the State railways were categorically denied by the Finance Minister.

The corrected figures for foreign trade in 1928 are now available. Imports amounted to 1,189 million pengös, as against 1,146.8 in 1927; exports totalled 818.7, as against 800.5 in the previous year. Thus the adverse balance increased from 346.3 in 1927 to 370.3 million pengös in 1928. However, the situation is more promising as the big grain surplus of the bumper wheat harvest of 1928 still awaits export. It is asserted by prominent agricultural experts that the high industrial tariffs involve a burden of two pengös per quintal of wheat, the price of which is now about 26 pengös. The protection of home-made jute sacks alone inflicts a charge of about 30 pengös per quintal, and often renders flour export impossible in the competitive areas. It is true that Austria, Czechoslovakia and Germany, with their protective agricultural duties, cause much difficulty to the natural trend of Hungarian exports, but this applies more to live-stock exports than to grain and flour. An analysis of imports reveals that in spite of the reduced textile duties Hungary has imported cotton and woollen cloth and yarn to the value of 178.2 million only, as against 210.1 million in 1927, whereas the imports of raw cotton increased from 15 million to 23 million. The deficit of Hungarian foreign trade is eagerly discussed in the domestic press. The press and also the politicians are beginning to realise how the high prices of industrial products, artificially kept up by tariffs, are damaging the economic recovery of the country. It is estimated that wholesale prices of the protected industrial commodities are some twenty per cent. higher in Hungary than they are abroad. A thorough revision of the tariff system, with due regard to the agricultural interests of the country, is in preparation, and no doubt will improve materially the economic conditions of Hungary, including its capacity to export.

RUSSIA.—AGRICULTURE—CREDIT—INDUSTRY —FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

March 18.

ALTHOUGH the winter crops, according to official report, have suffered no damage, the prospect of a good harvest this year is impaired by failure to fulfil the official sowing programme. The area under cultivation was to be 7 per cent. larger than in 1928, but new reports show that there has been difficulty in supplying seed corn, and that in some districts spring sowing will be belated. The Government has been obliged to make further tax concessions to the peasants, from which in general the *sredniaki*—farmers of medium prosperity—are to benefit. Further, communes which execute the official plan of December 15th for increasing the yield will receive a 10 per cent. abatement in the agricultural tax. In order to prevent the division of farms tax exemptions are to be granted to large families. At present 35 per cent. of farms—classed as "poor"—are entirely exempted from the agricultural tax; and the yield in 1929-30 is to decline to 375 million roubles, as against 400 millions in 1928-29. Brigades of factory workmen are being organised to assist farmers at times of pressure. The supply of manufactured goods to districts which produce a grain surplus, and which, therefore, determine the fate of the State buying-up campaign, is being increased at the cost of a 30 per cent. reduction of the already insufficient supply to the towns.

The credit system, for seasonal reasons, improved after the turn of the year. In January, total circulation fell from 2,028 to 1,922 million roubles; bank credits declined; and industrial-commercial bank deposits increased. In February State Bank circulation increased from 1,065 to 1,083 tchervonetz-roubles, and Finance Commissariat circulation from 927 to 946 million roubles, whereof 735 million roubles were treasury notes, the remainder coins. Prices continue to rise, though slowly. The wholesale-prices index number on February 1st was 1,772 (1,000 in 1913), against 1,768 a month earlier; retail index (1 in 1913), 2.18, against 2.16. The indexes show the price-rise to be confined to agricultural produce; but other reports complain that retail prices of manufactured goods have risen sharply in many towns, in particular Moscow. Since the visit of M. Scheinmann, director of the State Bank, to New York, the official Press has been even more optimistic as to the prospect of getting American capital. Complaints are made that the peasants obdurately refuse to subscribe to State loans. It is alleged that large sums are hoarded in the country. The newest savings banks report, however, shows that at the beginning of the current business year only 4.7 per cent. of deposits belonged to peasants, whereas 33 per cent. belonged to the much less numerous official class. Between October, 1925, and October, 1928, the number of savings bank accounts increased from 817,735 to 3,825,931, and deposits from 33,493,400 roubles to 314,832,800 roubles.

The value of industrial output in the first four months (October-January) of the current business year is returned at 19.6 per cent. higher than in the corresponding part of 1927-28. Production in the finishing industries is increasing more rapidly than in the heavy branches. Owing to this, and in spite of a large recent increase in imports, there is likely to be a severe shortage of materials late this year. The Council of Labour and Defence complains that individual concerns have much too large stocks of materials, the effect of which is to tie up working capital and add to the credit strain on the banks; and the Council has ordered measures to be taken for the realisation of these stocks.

The official Press is reassuring Communist stalwarts on the vexed question of industrial and commercial concessions, declaring that in spite of the ordinance of last autumn increasing the scope of concessions, it is not intended that the foreign share in Russian business shall ever attain appreciable dimensions. The domains which, according to this ordinance, foreigners may enter number 16: railways; canals; glass; potash; cement; leather; wood; paper-pulp; textiles; land amelioration and irrigation; electro-technical production; metallurgy; works in the Dnieper electric-power district; machinery; mining; generation of electricity; and municipal services, such as gas, tramways, and drainage. Coal output has declined, and the production cost is rising. Pig-iron production has increased this year; but the programme for the first four months of the business year has not been fulfilled. Oil output in January was 1,095,800 metric tons.

The Government has published new plans for increasing the output of the mechanical branches, among them for establishment, entirely with native resources, of a works capable of producing 100,000 motor cars a year. The mechanical branches all report great increases in production, as compared with last year. In some branches production exceeds threefold or fourfold that of before the war. But the compulsion felt by directors of these undertakings to fulfil at all costs the ambitious official programmes is having an increasingly bad effect upon quality. The agricultural machinery output is this year to be four times that of 1913; but the official *Ekonomitcheskaya Zhizn* reports that farmers complain of the low quality of agricultural machines manufactured by Russian works. Serious complaints are also made about home-produced electrical apparatus. The agreement come to in October with the American General Electric Co. for delivery of goods has been supplemented by a new agreement, whereunder, according to Soviet account, Russia will be entitled to use G.E.C. patents, and will be supplied with G.E.C. designs (except for electric lamps and electric porcelain). The construction of three oil pipe-lines is being considered.

Imports in January (European frontiers) were 51,800,000 roubles, exports 52,200,000 roubles. In the first four months of the business year, export (also European frontiers) was 231,600,000 roubles, and import 218,600,000 roubles. Export was about 11 per cent. higher than in the same months of 1927-28; import about the same. The chief feature in import is the increase in raw materials. The total agricultural export shows a decline, but agricultural export other than grain increased; and there was a large increase in the export of industrial products. The detailed trade report now published for the last completed business year shows a large increase in the total import of machinery and factory equipment, but a decline in import of agricultural machinery, from which German manufacturers suffered most. In export there was a heavy fall in foodstuffs, but a large increase in raw and half-manufactured products. Export over both European and Asiatic frontiers was 774 million roubles, against 1,273 million roubles (as officially estimated) for the present area, in 1913. The group figures (for European frontiers only) are:—

	1927–28	1926–27
	Roubles (000's omitted)	
Export—		
Foodstuffs	197,826	328,978
Raw and half-manufactured materials	414,580	339,527
Livestock	3,216	3,181
Manufactured goods	20,219	6,554
	635,841	678,240
Import—		
Foodstuffs	68,011	30,268
Raw and half-manufactured materials	443,095	381,617
Livestock	4,471	2,622
Manufactured goods	304,509	209,302
	820,086	623,809

The export of matches is rapidly increasing, being 2,223,000 roubles in 1927-28, against only 43,000 roubles in 1926-27. The German Match Sales A.G., which is the selling syndicate of the match industry, complains that this export constitutes dumping, and that it is conducted at a heavy loss to Russia. The Russian Press, in fact, admits that at home matches are one of the dearer commodities. Export of matches to Germany in 1927-28 had a value of 315,000 roubles against nothing in 1926-27; to Great Britain 1,018,000 roubles, against 37,000 roubles.

CANADA.—THE FEDERAL BUDGET—TAXATION AND TARIFF CHANGES—PRICES.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 6.

The annual Federal Budget was submitted to the Canadian House of Commons on March 1st by Mr. Robb, the Finance Minister. As the fiscal year was not completed, many of his estimates could only be of a provisional character. However, he forecast for the current year revenues totalling $454,942,000, and as he placed the expenditures for the same period at $385,160,000, he claimed a net surplus of $69,782,000, which is admitted on all hands to be a very satisfactory showing. A sum exactly equivalent to this amount had been applied to the reduction of the national debt, which Mr. Robb estimated would at the end of the fiscal year stand at $2,22[illegible],068,000. He also took credit for a reduction of the debt during the last six years by $226,708,000, which had meant a saving of about 16¼ million dollars in annual interest charges. He was able to give a very roseate survey of the Canadian National Railway's financial position and declared that in 1928, after paying all interest charges with the exception of those due to the Government, it would show a surplus of at least 7 million dollars. But he also revealed what a serious drain the system had been upon the national exchequer, offering figures to show that between 1920 and 1927 the Federal Government had made good annual deficits of the C.N.R. to the amount of 202 million dollars without taking any account of interest due to itself and in addition had provided capital loans to the company to the tune of roughly 165 million dollars.

Mr. Robb fulfilled a general expectation by not announcing any sweeping changes of taxation or tariff duties. The most important change was the reduction of the sales tax by one-third of its present rate; it will henceforth have an average rate of about 2 per cent. He also made a beginning of the abolition of the so-called "nuisance taxes"; the tax on insurance premiums other than life and marine will disappear, and with it will go the taxes on steamship and railway tickets and on cables and telegrams. He also proposed an adjustment of the tax on sales and transfers of stock by replacing the

present flat rate of 3 per cent. by a graded scale of four divisions as follows:—

	Tax.
Stocks valued at $3 or less ...	1 cent per share.
,, ,, from $4 to $20 ...	2 cents ,, ,,
,, ,, from $20 to $100	3 ,, ,, ,,
,, ,, above $100 ...	4 ,, ,, ,,

The change in this tax has avowedly a dual purpose—to simplify collection and to discourage speculation in the "penny" mining stocks, which has been responsible for a series of wild gambles in recent years. But the fraternity of mining brokers dislike the change exceedingly, as they assert that under the new plan of taxation it will be almost impossible to make a market for the "penny" stocks, because if a stock is selling at 3 cents the Government will claim one-third of the sale price. They point out that such rich mines as Lake Shore and Sherritt-Gordon were at one time "penny" stocks and that the effect will be to discourage mining enterprise. So deputations have begun to descend upon Ottawa from the mining exchanges and the Finance Minister is being urged to modify the rate of the impost on the low-priced stocks.

Mr. Robb also announced a series of some thirty tariff changes, which he asserted were the result of the investigations and recommendations of the Tariff Advisory Board. The most important change is the imposition of a new duty of half a cent per pound on copper rods, which have hitherto entered free. This duty is the direct consequence of an application to the Tariff Advisory Board by the Eugene Phillips Co., of Brockville and Montreal, which complained that the American Copper Export Association was practising an unfair discrimination against it by charging it higher prices for copper bars than it exacted from its American competitors, and the avowed object of the new duty is to compensate for this alleged discrimination. There are to be some downward cuts in the duties on machinery and equipment utilised for the mining and fishing industries. Mr. Robb declared that in all these changes the British preference, which he characterised as the keystone of the Government's fiscal policy, had been carefully safeguarded, and he estimated that they would entail a revenue loss of approximately 25 million dollars. But he also predicted that the coming fiscal year would show such a general expansion of revenue that at its close there would be found to have been no diminution of the aggregate yield of taxes as compared with the present year, and that he expected to be in a position to redeem in cash a loan of 60 million dollars which matures on August 1 of this year.

Discussing the trade situation, he claimed that the statistics of foreign trade for the first ten months of the present fiscal year showed a favourable balance of 154 million dollars, exports being estimated at 1,187 and imports at 1,033 million dollars. He argued that the series of commercial treaties which the Government had concluded with different foreign countries had resulted in a great stimulation of trade with them. He pointed out that while sufficient time had not elapsed to justify a final judgment upon these treaties, the trade figures for the fiscal year 1927-28 showed that Canada's exports and imports to and from countries giving her most-favoured-nation treatment were respectively 165 and 103 million dollars, which almost doubled the corresponding figures for the fiscal year 1921-22, placed at 82 and 57 million dollars respectively. Mr. Robb also dealt with a statistical aspect of the trade problem and declared that no method had been yet devised for the accurate determination of the destination of Canada's exports. The difficulty was particularly acute in regard to grains, which constituted one-third of the Dominion's exports.

In his speech Mr Robb made no direct reference to trade relations with the United States, but he did interpolate some cryptic observations, which are generally taken both here and in the U.S. as being addressed to Washington. "It is," he said, "our desire to trade freely with any and all who are willing to trade freely with us. What may or may not be possible in this particular depends necessarily in some measure on the purchasing power and fiscal policies of other countries. The policy of this administration is not a high tariff policy; it is a low tariff policy. Its policy is to encourage production at home and the marketing of our excess of production abroad. In applying this policy both domestic and international factors must be considered." Mr Robb then added that the Tariff Advisory Board was prosecuting the investigation of several larger fiscal problems which involved the consideration of whole tariff schedules and the inter-relation of many important Canadian industries, and he added this observation—"While these inquiries are being pursued opportunity will be afforded for considering the possible effect on trade of changes being proposed in the tariff schedules of other countries, should they be implemented by legislation."

Commodity prices showed a slightly upward tendency last month and the index figure of the Dominion Bureau of Statistics on the base 1926=100 was 95.7, as compared was 94.5 in January. 109 price quotations were higher, 48 lower, and 345 unchanged. The stock markets have been rather listless during the past fortnight, and the speculating public seems to have lost some of its enthusiasm. Price fluctuations have been within moderate range and the Bureau of Statistics Investors' Index of industrial common stocks for the week ending February 28th was 287.5, as compared with 280.0 for the previous week. The mining market has shown greater briskness and as the result of the rise in the price of copper there has been an upward movement in most of the copper stocks. The weighted index of the 17 most popular mining stocks for the week ending February 28th was 124.7, as compared with 121.7 for the previous week.

SOUTH AFRICA.—POLITICS—GERMAN TREATY —PUBLIC FINANCE.

(FROM OUR CORRESPONDENT).

JOHANNESBURG, February 27.

On Monday, February 25, a division was reached in the joint sitting of the Senate and the Assembly to consider the two native Bills (the Natives Representation in Parliament Bill and the Coloured Persons Rights Bill). The voting on the Coloured Persons Rights Bill was: Ayes, 74; Noes, 69. The position has thus provided an illustration of the working of Section 152 of the South Africa Act. The Section was designed to curb the enthusiasm of extremists on either the English or Dutch sides by providing that any Bill proposing to alter the rights of native voters in the Cape or the rights of equality of both languages must be passed by two-thirds of the total number of both Houses. These Bills would at present require 117 votes, and in the next Parliament will require 126 votes (after effect has been given to the last Delimitation). As the Natives Representation in Parliament Bill thus failed to pass, the Prime Minister did not proceed with the Coloured Persons Rights Bill. General Smuts has published a statement once more advocating agreement between the parties, and setting out afresh the view of the South African Party. The statement points out that Section 152 of the South Africa Act renders national agreement an almost indispensable precedent to any disturbance of the position of the native voter in the Cape. It is in the highest degree unlikely that any party is going to achieve such a sweeping success as to command two-thirds of both Houses. General Smuts suggests that his party's co-operation was rejected by the Government in order that the latter might be able to appropriate the credit for a "solution" when appealing to the electors. If so, the Government has courted and sustained a heavy defeat. The prevailing sentiment of the country may be anti-native, but many strong passive believers in that sentiment are nevertheless not blind to certain important practical considerations. The native is getting wiser, and he is getting stronger. General Smuts reiterates his statement that such questions as the franchise are not of immediate political importance, while economic aspects of the native problem are pressing harder day by day. The suggestion is made for another National Convention, and should the South African Party be returned at the election in June this procedure will be adopted. If the present Government are returned the same course may appear to them equally inevitable.

At the time of writing, the German Treaty is before the House of Assembly. Mr Beyers (Minister of Mines and Industries) moved its ratification. He is an extremely able man, perhaps not well known outside this country. He defends unpopular proposals in the slashing style of the man who not only knows his subject but disdains support and despises opposition. He trounced the suggestion of anti-British feeling on the part of the Government. He made at least one sound point when he said that many opponents of the treaty already bought German and other foreign goods merely because they were cheaper. The speaker also discounted the threat of retaliation from Britain, saying that there were no grounds for retaliation. The Opposition, led by Mr Jagger, objected that, apart from sentimental considerations appealing to the Britisher, the treaty is bad business because it gives something for nothing and slights a good customer to favour an unimportant one. Meanwhile a new body of objectors has arisen—the various engineering societies here suspect that one clause in the treaty would enable Germany to object to specifications calling for British standards. If this be true, then the work and policy of years is in danger in a matter which goes far beyond political considerations into the realms of established everyday technical practice.

There has been a renewal of the complaints in regard to the business methods of British firms. There have been renewed allegations that British manufacturers do not study the market, that their publicity is inadequate and not of a high standard, and that they are backward in seeking business which is actually on offer. A good deal of this discussion has arisen from the fact that in response to an advertisement by the Johannesburg City Council, only one British car agent tendered for the order for a new car for the Mayor. This single incident has caused a surprising amount of disturbance.

The Government published yesterday the estimates of expenditure to be defrayed from the Revenue funds during the year ending March 31, 1930. The estimates provide for an expenditure of £29,696,780, against £28,584,682 in 1928-29. Pensions account for £600,000 of the increase, whilst subsidies to the provinces account for £116,000. In the latter connection it may be said that the claim at the time of union that economy of administration would result is now regarded merely as a piece of amusing history. Allowing everything possible for changed ideas and natural growth, economy has not resulted from union.

The railway strike in Rhodesia is providing that country with a very bad advertisement as well as inflicting heavy immediate loss. The rains prevent very much reliable road transport. The cause of the argument is the question of the restoration of a cut in wages agreed to some years ago. At the time of writing the strike seems to be collapsing. Wages and cost of living in Rhodesia are higher than in the Transvaal.

Letters to the Editor.

THE DEMAND FOR STEEL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The extraordinary contrast between the expansion of the U.S.A. consumption of steel since 1913 and that of the rest of the world should occasion some hesitation in the acceptance of the statement that "it is unlikely that demand will again exceed capacity (for steel production) unless some new uses for steel are discovered."

According to the Survey of the Metal Industries issued by the Committee on Industry and Trade, the 28,000,000 tons of steel available for internal consumption in U.S.A. in 1913 expanded to 43,700,000 tons in 1925, while that of the next six steel producing countries rose by only 600,000 tons from 22,600,000 to 23,200,000 tons. The world's production of steel ingots and castings in 1925 was 89,150,000 tons, an increase of 14,000,000 tons over 1913, the whole of which increase was both *produced and absorbed* by the U.S.A. In recent years, some important increase of consumption has taken place outside America (mainly in Germany), but the U.S.A. consumption in 1928 reached 50,000,000 tons.

It seems highly improbable that there has been "a permanent and profound change in the world's economic scheme" which has brought about a cessation of the expansion of steel consumption in the world except in the U.S.A. Neither is an explanation to be found in the price factor. More favourable British prices may bring to this country a larger share of *present business* than it has had in recent years, but low Continental prices have not expanded the world consumption as it should have been expanding. Before the war, the rate of expansion outside U.S.A. was approximately 1¼ times that within the States.

Unfortunately statistics are not available which would help us to discover where the primary demand outside U.S.A. is failing. The requirement for steel for war purposes is less, but that for the motor and building industries is more, than before the war. Replacements and maintenance depend upon general prosperity. The numerous schemes of construction initiated by Governments, etc., since the war may be assumed to have maintained steel consumption for these purposes at a higher level than before the war. The only remaining type of demand for steel for new developments seems to be that for works or enterprises of only local interest, those costing a few thousand pounds as distinct from those costing hundreds of thousands.

The inferences, therefore, are that the smaller capitalists throughout the world exercise an important influence at all times upon the demand for steel, and that in the aggregate the fluctuations in their demands, coupled with the effect upon transport, etc., determine the prosperity or depression of the heavy industries. It would be useful if statistics could be obtained to check these inferences. They are supported by the consumption contrast already mentioned, America's smaller capitalists being scarcely affected by the post-war concentration of capital. Furthermore, in this country, according to Mr. McKenna, there has been a decrease in "demand deposits" compared with "time deposits," which latter he describes as "money for which no trading use can be found at the moment." Is it possible, then, to trace the fall in the demand for steel to the lack of adequate organisation for bringing these "time deposits" into effective use by the men throughout the world whose schemes for local developments have been in abeyance for ten years? The implication that the men worthy of trust and the opportunities for developments are to be found only in the U.S.A. can hardly be accepted.

Uses for this money at home for purposes which will revive the demand for steel are unlikely to be extensive until the forward movement has begun abroad, where openings exist for the mechanical developments which increase productivity. The types of developments which should be supported are those prompted by responsible individuals for personal profit, because those of Governments are limited by the taxable resources of the community. Much might be done by co-operation between large-scale investors, responsible local individuals and British industrialists generally, with the world-wide correspondents of the British banks as primary sources of information as to suitable openings for this co-operation.

An investigation of the contrast in steel consumption which is revealed by modern statistics may also show that the downward trend of a trade cycle is due to the inaction following the temporary exhaustion of the resources of local capitalists, and that this can be minimised by the co-operation of financial interests in this country. The influence of the latter might be so exercised that work in particular areas might be initiated or delayed in order to maintain *in the aggregate* a more or less continuous advance in the demand upon the heavy industries. In other words, insofar as they are due to this cause, the recession and depression of a trade cycle in one area might be compensated by recovery and prosperity in another, influenced and organised by British interests, as the result of previous sustained surveys of the various openings and of co-operation with the leaders of local communities.—I am, etc.,

H. W. GRIFFIN.

ADMINISTERING PROTECTION.*

IT is quite impossible to give in a limited space any idea of the administrative and technical complications involved in keeping the tariff machine in something approximating to working order, as these are revealed by the annual reports of the United States Tariff Commission. The standing orders of that Commission are staggering. A small part of them requires it to investigate and report

* Twelfth Annual Report of the U.S. Tariff Commission. (Washington, D.C.) U.S. Government Printing Office. 25 cents.

upon " the administration of the Customs laws " and their " fiscal and industrial effects," upon the relations between the rates of duty on raw materials and finished or partly finished products, upon " the effects of compound and *ad valorem* specific duties," upon " all questions relative to the arrangement of schedules and classifications of articles in the several schedules," and upon " the volume of importations compared with domestic production and consumption, and conditions, causes and effects relating to competition of foreign industries with those of the United States, including dumping and cost of production." All this it does, and very much more, and it is hardly to be wondered at that the report contains a plaintive section setting forth the difficulties encountered in the process. An example of one such difficulty, encountered last year for the first time, is the case of a commodity produced in two European countries at entirely different costs, production in both cases being controlled by a cartel. If the country where cost is higher is the principal competing country the duty must be fixed on that basis, whereupon the cartel has only to restrict its American sales to the product of the other country and the effect of the duty is nullified. Problems like this abound, and may well serve as a warning to people who think that " put a duty on it " is a simple order, easily understood and executed.

To secure the maximum aid from experts the Commission has organised itself into separate divisions. In order to avoid the danger that the members of the economics division might begin to function when it was too late for their advice to be effective they were assigned this year the investigation of some half-dozen commodities, the list of which is headed by peanuts and onions. These expertly prepared reports are not yet to hand, but statisticians who are addicted to the *post hoc ergo propter hoc* line of argument will find plenty of tables showing imports, before and after a change in duty, of such key commodities as " hit and miss " rugs or cherries, sulphured or in brine. Small wonder that the Commission reports that it has recently been obliged to increase its staff of experts.

" BURDETT."*

Edited by the Secretary of the Share and Loans Department and published under the sanction of the Committee of the Stock Exchange, " Burdett " is too well known in financial and business houses to need commendation. Good wine needs no bush. An effort has been made in the 1929 volume, now available, to retard increasing bulk by greater condensation of contents, with the result that though the proportion of new companies, 613 in all, exceeds that of any year since 1911, only 21 additional pages are this time required. The special articles on company law deal with recent legal decisions and contain explanatory references to the 1928 Act. A useful innovation for facilitating comparison is the reduction to sterling of all the figures given in the Dominion and Colonial and the British and Foreign Finance tables. The article on income tax has been re-written, the Act transferring the currency note issue to the Bank is summarised, and particulars of the National Debt sinking funds of 1875, 1923 and 1928 are included. Figures also are inserted for the first time showing the working results of each of the four grouped railway companies since the date of amalgamation.

BOOKS RECEIVED.

Liberalism and Some Problems of To-Day. Edited by H. L. Nathan and H. Heathcote Williams. (London) Victor Gollancz, Ltd., 14 Henrietta Street, Covent Garden. 10s. 6d. net.

This volume is composed of chapters on various important political and international problems, by such prominent Liberals as Sir John Simon, Sir Herbert Samuel, Mr. Philip Kerr, Mr. W. T. Layton and Mr. H. D. Henderson.

*The Stock Exchange Official Intelligence for 1929. 60s. net. London. Spottiswoode, Ballantyne & Co., Limited.

Scambi Internazionali e Politica Bancaria. By Prof. Attilio Cabiati. (Torino) Fratelli Bocca, 3 Via Carlo Alberto.

This second and very much enlarged edition of an Italian treatise on foreign trade and foreign exchanges is very welcome. It starts out with a restatement of the Ricardian theory of comparative costs, and the thesis of the book is that this theory remains valid in the case of trade between countries with inflated currencies.

Geldtheorie und Konjunkturtheorie. By Friedrich A. Hayek. (Vienna and Leipzig) Hölder-Pichler-Tempsky, A.G. Rm. 6.25.

A treatise in German on the place of monetary theory in the theory of business cycles.

Die Agrarreformen der Österreich-ungarischen Nachfolgestaaten. By Dr Heinz Haushofer. (München) Südost-Verlag Adolf Dresler.

A critical account, in German, of agrarian reforms in the Succession States.

Industrial Psychology. Edited by Charles S. Myers. (London) Thornton Butterworth, Ltd., 15 Bedford Street. 2s. 6d. net.

This is a collection of monographs, by a number of research workers, on various problems in industrial psychology. Several of the contributions deal with the question of choice of occupation.

Industrial Relations Programs in Small Plants. (New York) National Industrial Conference Board, Inc., 247 Park Avenue.

A critical discussion of the activities of small American plants in connection with financial incentives; housing; health and safety work; recreation; organised training and education, &c.

The Case of Benn versus Maxton. (London) Ernest Benn, Ltd., Bouverie House, Fleet Street. 5s. net.

A debate, by correspondence, between Mr. Benn and Mr. Maxton, which is nothing if not lively.

Gold and the Future. By W. L. P. Knight. (London) Headley Bros., 18 Devonshire Street. 7s. 6d. net.

The thesis of this incoherent work is stated as follows :—" That all issues of public currency should be secured against an equal value of actual commodities. That is all."

Relief for the Ratepayer. By Sir Kingsley Wood. (London) Ernest Benn, Ltd., Bouverie House, Fleet Street. 1s. 6d. net.

A popular explanation of the Local Government Bill.

The Realist. Vol. I, No. 1. April, 1929. (London) Macmillan and Co., St. Martin's Street. 2s. net.

This first issue of a new monthly review includes articles on : " The Progress of the Novel," by Arnold Bennett; " Pascal," by Aldous Huxley; " Science and the Farmer," by Sir Daniel Hall; " What is Individuality? " by Julian Huxley.

Tea Producing Companies, 1928-29. The Indian Tea Share Exchange, Winchester House, E.C.2. 2s. 6d. net.

This new edition covers 231 companies and has been brought up to date at the middle of February, 1929. Full particulars are given of each company, including crops, profit and dividends for the past four years.

Rubber Facts and Figures. March, 1929. (London) F. C. Mathieson and Sons, 16 Copthall Avenue, E.C.2. 2s. net.

SHAREHOLDERS AND CONTROL.

A WEEK ago we discussed some of the main issues involved in the General Electric Company's proposal to exclude its American and other non-British shareholders from participation in an issue of new capital on bonus terms. Sir Hugo Hirst has undoubtedly troubled the City waters, and much more is likely to be heard of the principles at stake, whatever the settlement reached in this particular case. We do not propose to go further, for the moment, into the question whether foreign control, as distinct from ownership, is desirable, of British concerns having a quasi-national importance. We are concerned rather with a tendency affecting investors of all nationalities—the tendency, that is, of post-war finance to limit the effective sphere of control exercised by shareholders over the affairs of the companies of which they are, legally, the proprietors. There may be, in practice, much to be said for arrangements which ensure the retention in British hands of control over the ultimate fortunes of companies such as General Electric, Imperial Airways, and Burma Corporation, while leaving the right of share *ownership* open to all comers. There is much less to be said for the practice of whittling away the rights of shareholders generally, which has, unfortunately been prominent in a number of recent cases.

The theory of the matter, as embodied in the Companies Acts, is quite clear. Under British law, shareholders are a representative democracy, electing their " Cabinet " by rotation, and possessing, in their articles of association, a written constitution which can be varied by internal " legislation " at any time. Certain safeguards are laid down for the protection of minorities, such as the requirement of a three-fourths majority for any alteration in the articles, but for the most part the underlying assumption of the law is that ultimate power lies with the majority of shareholders, who regularly exert that power through the appropriate machinery. In other words, while capital ownership and *management* are sharply differentiated, under the British system of limited liability, no such distinction is made between ownership and *control*. It has, consequently, been popularly assumed, up to the present, that any financial interest desirous of becoming the arbiter of a company's fortunes must first obtain more than fifty per cent. of its capital. How far is this assumption borne out in practice?

Some few months ago we had reason to investigate the Somerset House files of a number of famous companies in the course of an inquiry into the ownership of British capital. Certain of the results have an obvious bearing on the questions we are now considering. Our researches suggested that the proprietors of British companies were, as a rule, a scattered body of small holders, the £152 million of issued ordinary and preference capital of some eighteen companies coming within our survey being parcelled out among more than 500,000 individual shareholders, each possessing, on the average, no more than £300. Even more significant, however, was the evidence in the matter of large holdings. We extracted from the shareholders' list every example of an individual holding of £10,000, nominal, or over, and calculated the proportion of the total capital thus controlled by the most influential proprietors. The following state of affairs was revealed :—

Large Shareholdings in British Companies.

Company.	Total Shareholders.	Number of shareholders each owning £10,000 or more.	Percentage of total capital held by shareholders in Column (3).
(1)	(2)	(3)	(4)
Large-size Companies :—			
Imperial Tobacco	77,200	233	43·0
Courtaulds	28,200	57	26·2
Anglo-Persian Oil	17,100	4†	13·1†
Brunner Mond*	26,200	66	31·4
Vickers	46,400	30	4·8
Dunlop Rubber	51,600	162	20·3
Cunard	14,000	39	30·4
Companies of Moderate Size :—			
General Electric	10,100	11	10·3
Spiller's Milling	8,300	20	21·5
Phœnix Assurance	8,500	18	26·2
Ebbw Vale Steel	7,800	15	29·8
Bass	1,900	21	59·8
Marconi's Wireless	24,600	7	3·8
English Sewing Cotton	9,700	3	2·7
Debenture Corporation	2,000	9	12·2
Cairn Line	2,900	8	20·1
Rover Company	8,300	None	...
Savoy Hotel	2,400	1	1·6

* Subsequently merged in Imperial Chemical Industries.
† Excluding British Government's holding.

There is no reason to doubt that the above eighteen concerns afford a reasonably representative sample of the whole field of company finance. It is common knowledge that many of them are associated with definite financial or administrative interests, who have exercised a predominating influence on their fortunes for years past. Yet only in one case do large shareholders deem it necessary to hold anything like a fifty per cent. interest, and they seldom hold as much as 25 per cent. of the issued capital.

That such a state of affairs is possible reflects less on the present state of company law than on the attitude of many British shareholders. Investors, as a rule, have doubtless better motives than those which inspired certain purchasers of Irish railway stock who were desirous merely of utilising the free transport facilities provided for the annual Dublin meeting. There is, nevertheless, a certain force in the allegation that shareholders are apt all too readily to assent to any proposals put up to them, so long as their dividends are not touched. In other words, " the party in power " on the board of any company can, in ordinary circumstances, rely far more extensively on the inertia of their constituents, as a factor in deciding how far they can safely go, than can any British Government, *vis-à-vis* its electors. Experience goes to show that boards of directors fail to carry their proposals only when some determined outside shareholding interest raises the standard of rebellion, and goes to considerable expenditure of time and money to *mobilise* the thousands of small shareholders whose votes are the real controlling factor. Geographical conditions are a further powerful factor making for inarticulacy of shareholding opinion. Altogether, if company control tends too often to be in the hands of an oligarchy, rather than of the democracy which the authors of the British legal system clearly had in mind, an explanation must be sought in the essential difficulty of organising a changing and widely scattered body of small holders, who do not know, and have probably never seen, each other, and who possess no closer visible bond of union than the receipt of dividend cheques or annual reports.

Of late years, however, there has been observable on the part of certain boards of directors a desire to translate into *de jure* terms the element of control which, as we have seen, contemporary conditions seem to give them *de facto*. The practice of issuing preference shares carrying no voting rights, except when their dividends were

in arrear (*i.e.*, when their investment status had already been prejudiced) was by no means unknown before the war, but has become increasingly prevalent of late. Debentures, of course, have rarely possessed any voting rights whatever, their holders being looked upon rather as creditors than as proprietors of their respective businesses, though this assumption may well call for revision if the precedent of regarding *earning power* as the real ultimate security of a debenture (as in recent iron and steel company reorganisations) is at all widely followed in the future. Recent methods of capitalising new concerns, especially by the issue of " shilling deferred " shares backed by participating securities of higher denomination, lend themselves readily to discrimination between " insiders " and " outsiders " in the matter of voting power. A glance at the list of prospectus issues during the last year or two will reveal numerous examples similar to that of Blue Bird Oil Importers, where inside interests put up 14½ per cent. of the original paid-up capital, and obtained 54½ per cent. of the total voting power, or of Safetex Safety Glass, where insiders put up 16½ per cent. of the original capital and received 67½ per cent. of the voting power. An instance, though doubtless an extreme one, of the extent to which shareholders may be persuaded to relinquish their rights of control in an existing concern, provided their dividends are unaffected, is furnished by the resolution passed at the Home and Colonial meeting on February 21st of this year, under which the shareholders agreed, in effect, to allow the owners of " privileged " shares, representing less than 5½ per cent. of the total issued capital, to control 50.1 per cent. of the total voting power, although the chairman of the company declined to divulge the identity of the interests to whom those shares would be allotted.

Examples need not be multiplied, nor can it be denied that history affords certain, though not very numerous, instances of shareholders successfully resisting proposals —as, for instance, in capital reconstructions—which appeared to them undesirable in one way or another. The 6 per cent. preference shareholders of Leyland Motors, for example, refused to assent to a scheme for wiping off dividend arrears at a time when the company was earning the equivalent of 18 per cent. on its ordinary capital (apart from such arrears), and a few months later received an intimation that their accumulated dividends would be paid in full out of profits and the capital reorganisation proposals be dropped entirely. Nor would we deny that a case may, at times, be made out for privilege in the matter of voting power, on grounds, possibly, of " national " expediency, as in the case of the General Electric Company, or the Burma Corporation, or on other grounds—as, for instance, if public policy requires that other than purely commercial considerations shall affect a company's conduct. In general, however, discrimination and " shareholders' inertia " alike are calculated to leave open the door for abuses, which may be the more serious at a time like the present, when the need for " rationalisation " of industry is being urged in many quarters, and when the alleged reluctance of some industries to submit to the process is a subject of comment. The admirable paper read this month at Leeds by Sir Mark Webster Jenkinson*, a prominent advocate of the policy, who has been closely identified with the reorganisation of Vickers, points out that " rationalisation " is frequently impeded owing to the difficulty of safeguarding the rights of different classes of shareholders, of writing off lost capital and raising fresh resources, and of convincing " the majority of those engaged in trade " of the necessity for and the advantages of consolidation. In all these respects a more active interest on the part of the shareholders concerned, before, and not after, irretrievable damage has been done, would have beneficial results.

How best to bring about such a result is a question to which no categorical answer can be given. Legislation against " plural voting," on the lines of the Bill introduced in France last year, would be undesirable, if only for the reason that it would attack a symptom of the present condition of affairs, rather than its root causes, which, as we have endeavoured to show, have somewhat far-reaching physical and psychological, as well as legal, aspects. A wider publicity in all matters connected with company finance may be, in the long run, the most effective form of treatment, and for this reason the provisions of the new Companies Act, making for greater detail and clarity in published accounts, are to be welcomed as a first—though no more than a first—instalment.

* " Some Aspects of Rationalisation." (London). Gee and Co.

THE " JOHNNIES " GROUP IN 1928.

(BY OUR MINING CORRESPONDENT.)

As a whole, the Rand gold-producing subsidiaries of the Johannesburg Consolidated Investment Co. last year maintained their positions fairly well. Two of the concerns paid increased dividends, two the same as before, and one was under the necessity of making a relatively substantial cut. Variations in the ore reserves, however, were mainly in the direction of contraction—in some cases accompanied by improvement in value.

With the leader of the group, the Government Areas, the ability to increase the dividend rate is attributable partly to further reduction in the amount required for capital expenditure, last year's appropriation being only £10,200; but the carry-forward was drawn upon to the extent of £28,500. The Union Government's share of the profits represented no less than £1,434,200. Results in the less valuable north-eastern area of the mine proved somewhat better than in 1927; the changes in the ore reserve figures are mainly due to a reduction of three inches in the estimated stoping width.

Langlaagte Estate has a generally satisfactory story to tell. Some increase in the tonnage milled was accompanied by an appreciable advance in the revenue per ton; and although costs also rose, the net outcome was an expansion in the profit permitting the distribution of 2½ per cent. more than for either of the two preceding periods. Miners' phthisis, at £26,400, showed a small increase; but capital expenditure absorbed only £3,600 in place of £36,100. The ore reserve figures are quite good. Unfortunately the mine is approaching the stage of completed development.

By the treatment of an expanded tonnage at a slightly lower cost ratio, the New State Areas put up an appreciably higher profit than before. The difference was more than absorbed by larger requirements on the part of the Union Government, together with increased capital outlay and debenture redemption, the latter item absorbing £99,400 as against £64,500. At £41,750 the carry-forward is £17,500 less than a year ago. Shareholders will note with satisfaction that last year's capital expenditure is described as abnormal. The debenture debt now stands at £326,550.

Appended is a five-year contrast of the results of the six principal companies:—

	Ore Crushed.	Results per Ton.			Working Profit.	Divs.	Ore Reserves.	
		Yield.	Costs.	Profit.			Tonnage.	Value.
Govt. Areas—	Tons.					%		Dwt.
1924	1,874,000	42/1	17/5	24/7	2,309,700	65	10,970,000	9·1

† Including 10 per cent. special.

On the part of that disappointing proposition, the Randfontein, the effect of further expansion in the tonnage of ore treated at a somewhat lower cost ratio has been more than offset by decline in grade, the profit indicating a fresh and accentuated shrinkage. The net sum available has once again been insufficient to cover the requirements for capital expenditure and debenture redemption, the balance forward being £49,300 down at £180,300. There still remain £616,760 of bonds to be cleared off.

The chief points of interest in connection with the Van Ryn Deep relate to the upper leaders. Last year over one-third of the area stoped was in these ore bodies, " and this percentage will increase from year to year." Mining operations are being facilitated by the " packing " of the old workings with residues. Maintenance of the dividend has entailed a draft upon the carry-forward.

The position of the Witwatersrand Gold, whose discouraging outlook was referred to in last year's article, has failed to improve. It is significant that of the 1928 available balance of £28,200 nearly one-half was required for miners' phthisis liability.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 9.	April 11.

EVENTS in London and New York followed anything but a parallel course. While extensive selling was taking place on Wall Street, the London Stock Exchange was, if anything, rather more cheerful. News that the Bank had bought nearly £1,000,000 in foreign gold coin, though the operation was believed to be of a special character, gave a slight fillip to investment securities on Monday afternoon. Later, the effect of the Wall Street collapse was instructive. Apart from bringing down " Anglo-Americans," this development tended to strengthen Government, railway and similar stocks, and markets reacted speedily to the suggestion that means had at last been found of curbing American speculation. Industrials, however, remained flat, for there was no new inducement to buy, and the holidays loomed ahead, with the General Election beyond them.

Apart from the effect of the customary withdrawal of currency for the holidays, and of end-of-the-month money market requirements, the monetary news of the week was favourable, so far as it went, and some recovery ensued in gilt-edged quotations. Five per cent. War Loan gained $\frac{5}{16}$ in a short period on Monday, on the news of the Bank's accession of gold, and Three-and-a-Half per Cent. Conversion Loan was prominent on the following day, with Victory Bonds and Funding Loan also showing appreciable gains of ground. Dealings in India Loans were on a moderate scale, mainly at unchanged prices, while Dominion and Colonial Loans maintained the decidedly even tenour of their way.

The foreign markets opened with a tendency towards scattered liquidation, but became steadier as the week progressed. Chinese Loans were sold after their recent improvement, on fears of a renewal of civil warfare. Brazilian Bonds showed further weakness at the start, but subsequently received a certain amount of support. Among European issues, Greek Loans were dull, the Six per Cent. scrip falling to 4 discount, while German Seven per Cents. reflected conflicting views of the Reparations outlook.

A slight investment demand arose for Home Railway stocks as the week progressed, the origin of the movement being the improved general outlook, as evidenced by another batch of favourable traffic returns. No brisk business was done, but North-Eastern stocks were bought to a moderate extent, and the other groups showed small gains on balance. Interest was again lacking in Underground issues. Foreign rails were quiet, the dividend announcements, on the same lines as a year ago, being in accordance with market expectations. San Paulo weakened slightly, despite the maintenance of its dividend and bonus, and the Argentine stocks were irregular,

with a downward tendency. Canadian Pacifics came, of course, within the orbit of Wall Street liquidation, losing 12 points during and after London official hours on Tuesday.

Industrial shares were, naturally, dull all round, the three-weeks' account for once maintaining its traditional character. The reduction of the open position to quite moderate proportions, however, obviated any possibility of dramatic developments at all resembling those of New York, though "international" counters inevitably had a weak appearance. H.M.V. and Columbia were among the sufferers in the gramophone group, and match shares further reacted. Imperial Tobacco came on offer, and Dunlops were sold on rumours of a decline in the dividend. The Cunard figures (discussed in a later "Investment Note") came somewhat as a shock to the market, causing a fall of 2s. 6d. in the shares, but other shipping securities were not affected. A tendency to take profits in motor shares was in evidence, though Leylands, exceptionally, enjoyed a sharp recovery after the early selling. Dealings in rayon shares were on a small scale, and prices irregular, while general textile shares again attracted no large amount of public interest. Associated Electrics stood out strongly against the prevailing dullness in their group. Nitrates were heavy, Lautaros losing ground. Iron and steel quotations were lower where changed, and breweries were a heavy market. A small amount of business resulted in numerous fractional declines in bank share values, but gains and losses approximately balanced in the insurance share market.

Rubber share dealings opened under the depressing influence of a fresh fall in the price of the commodity, but the harder subsequent tendency of prices checked any further marking-down of share quotations. Dealings, however, were in few cases sufficiently numerous to test the level of prices, the whole market having a decidedly idle appearance. Business in tea shares ruled also on scanty lines, but the firmer tone of the tea auctions served to check an incipient tendency towards easier values. Oil shares were less widely affected by New York's weakness than might have been expected, dealings having a fair amount of animation, with strong buying of Anglo-Persians a leading feature.

The "Johnnies" group reports (dealt with in a leading article) did little to stir opinion regarding Kaffirs either way, apart from inducing a certain amount of selling of Van Ryn Deep and Randfontein. Rhodesian copper shares were much more directly influenced by developments in America—whence has come most of the impetus of recent activity—all the leaders being affected. Last week's excitement in the copper market having quite subsided, movements in share values were uninspiring, prices shading off all round. Other base metal shares moved downwards in sympathy with commodity prices, Patino again losing ground in the tin group, while further selling took place of London Tin Syndicate.

FOREIGN STOCK EXCHANGES.

NEW YORK.

After experiencing the worst break of recent years, share prices recovered sharply. Month-end settlements were partly to blame, with call rate as high as 20 per cent., but the principal factor was the deliberate intention of the banks to starve the stock market into submission, and, while the banks sent money to the Exchange when a 20 per cent. rate was reached, they did so merely to avoid the panic which seemed imminent; holders were dumping stocks at any price, brokers were calling for more margin, and the banks were marking down the collateral given by brokers on loans. The confusion of trading in an 8,000,000 share session accentuated the decline and made it easier for professionals on the floor of the Exchange to sense the proper time to try for a rally. Confidence is now somewhat restored, but in the best quarters money is thought likely to remain high for some time, so that a renewal of the advance is scarcely justified from levels which are not really far below recent weeks. All classes of stocks suffered in the selling, with the high-priced issues showing the sharpest drops, while the recovery was most pronounced in Coppers, Utilities, and high earners. Bonds are suffering owing to dear money.

PARIS.

Unfavourable influences at home and abroad, such as have been referred to for some weeks past, continue to exercise a depressing effect on quotations. Moreover, the closing of the Bourse on the day of the funeral of Marshal Foch, to be followed immediately by the Easter holidays, played a part in restricting business. Further falls have taken place in most directions. Rentes, on the other hand, remain firm, adapting themselves to the probable level of the large loans which are to be issued by the Ville de Paris and certain colonies. Turkish bonds, on which payments will be resumed at the beginning of April, are very well supported. Among miscellaneous shares, Citroën and, in a less degree, Lautaro Nitrate, are the only ones to show substantial improvement.

BERLIN.

With easier money and a report, not confirmed, that Dr. Schacht had submitted a favourable Reparations annuity proposal to the Berlin Cabinet, the market at the end of last week was active and rising. On the 22nd the upward movement took an almost stormy character, and, helped by foreign buying, it continued on the following day, though profit-taking led to a reaction later. The cash market, which has long been neglected, showed signs of a revival. The current week opened with realisations and considerable declines, which were followed by some recovery. Tuesday's market was at first reserved on the New York market report, but later a general rise occurred, continuing into Wednesday, with foreign buying in evidence.

AMSTERDAM.

On Friday and Saturday last the Bourse remained dull owing to the weakened position of the Bill market, high money rates, and lower New York prices. The Netherlands Bank increased its official discount rate on the 23rd from 4½ to 5½ per cent., and the share market on Monday was irregular in consequence. Industrials remained at the same level, but rubbers reacted appreciably on a fall in the price of the commodity. Tobaccos were dull, sugars and oils easier. Quotations in the bond market were lowered. The money market was firm, the private discount rate being raised to 4⅞-5⅛ per cent., and 5¼ per cent. charged for prolongation.

INVESTMENT NOTES.

A Quarter's Trust Companies.—Issues on behalf of investment trust companies account for a growing proportion of the total capital raised in London, our usual quarterly analysis of which appears this week on page 675. Their aggregate for the past three months is constituted as follows, only those concerns which are strictly investment trusts, and not land, property, or finance companies, being included:—

	£
Prospectus issues.....	11,269,500
Allotted to "insiders" ..... (over)	6,050,000
Available to public..... (under)	5,219,000
Issues to shareholders only	5,853,396
Total	£17,122,896

These figures speak for themselves. The extent to which "the directors are already aware of applications for" a large proportion of the issues is not generally realised. The subscriber to an investment trust must necessarily give what is largely a blank cheque to the directors, but the figures suggest also that the majority voting control is usually in the hands of the inside interests, who take up the shares in priority to the general public. The conduct of the most reputable trust companies is, of course, beyond reproach, but the investor will always be well advised to give a close regard to the auspices under which new trust companies are formed, since they are, for practical purposes, the best criterion on which to judge of the attractiveness of a new trust company investment. The following table showing the fifteen companies, averaging more than one a week, which have made issues to the public this year, may therefore be of interest:—

	Total Issue.	Allotted to "Insiders"	Auspices or Origin.
	£	£	
Aberdeen, Ceylon & Eastern Tr.	250,000	125,000	Aberdeen Trust group.
Clyde & Mersey Inv. Trust ...	1,250,000	1,000,000	(Glasgow).
Compass Investment Trust	750,000	500,000	S. Japhet and Co.
English and International Tr.	1,000,000	750,000	International bankers (including Schroder and Co.).
Foreign Railways Inv. Trust...	2,100,000	...	Lord St. Davids and others.
London and Holyrood Trust...	1,500,000	1,250,000	Lord Bearsted and others.
Monks Investment Trust	600,000	400,000†	Im Thurn group.
Nat. Dom. & Gen. Inv. Corp.	150,000	75,000	
Nineteen Twenty-Nine Inv. Tr.	1,000,000	700,000	Lord Bearsted and others.
Scottish National Trust	144,000*	...	(Scotland).
Second Scottish National Trust	144,000*	...	
Third Scottish National Trust	144,000*	...	
Second Scottish East. Inv. Tr.	237,500*	...	(Edinburgh).
Tr. Co. of London & Scotland..	1,000,000	750,000†	British Assets Trust, Anglo-American Debenture Corp. etc.
Winterbottom Trust	1,000,000	500,000	Winterbottom Book Cloth Co., Grange Trust, etc.

* Debenture stock. † At least.

The Aberdeen, Ceylon and Eastern Trust announced that it would give special attention to tea and rubber investments, and the Foreign Railways Investment Trust, 84 per cent. of whose issue was left with the underwriters, "particularly but not exclusively" invests in the securities of foreign railways. The scope of the remaining thirteen companies is of a general character; the prospectus of the Nineteen Twenty-Nine Investment Trust stated that special attention would be given to Irish applications.

Cunard Steam Ship Co.—The report of this company proved a disappointment to the Stock Exchange, which had anticipated an increase in profits, if not in dividend, on account of the savings which the company had made in its fuel bill. The net profits were £550,478, as compared with £659,748 in the previous year. The directors do not give any specific reason for the decline except that cargo rates were lower, freight earnings showing some decrease, and that the strike of wharf labourers in Australia had caused great dislocation to the Australian and New Zealand services. It must be assumed that competition in the passenger transport business was exceptionally severe, seeing that, in spite of the lower cost of fuel oil—which had been estimated to show a saving to the company of over £500,000—the gross income was lower by £126,000. The following figures show the trading results over the past three years:—

	1926.	1927.	1928.
	£	£	£
Ordinary capital	4,456,209	5,570,261	5,570,261
Gross income.....	3,057,366	3,339,713	3,213,600
Depreciation and overhead expenses...	2,156,846	2,386,537	2,408,078
Debenture interest	356,390	275,782	245,052
Debenture issue expenses	27,800	17,646	10,000
Net profits	516,329	659,748	550,478
Pref. dividends.....	135,000	135,000	135,000
Balance	381,329	524,748	415,478
Ordinary earned %	8·56%	9·42%	7·46%
Ordinary paid %	6·0%	7·5%	7·5%
Transfer to reserve	100,000	100,000	Nil
Carried forward	183,709	190,688	188,396

It will be seen that the 7½ per cent. dividend was not quite earned and that no transfer was made to the reserve fund, which in the previous years received £100,000. The balance sheet actually shows an excess of current liabilities over current assets amounting to approximately £400,000. Moreover, total assets as at December 31, 1928, are about £1,000,000 lower at £19,538,292. The item of Steamships and Shipping Investments stands at £14,763,316, as compared with £15,434,864 in the previous year, and Freehold and Leasehold Properties at £639,170, as compared with £666,897. These items presumably contain large hidden reserves on account of the generous depreciation which has been allowed in former years. In spite of this the book value of the ordinary shares works out at 27s. 2d., which is actually above the market price. At 26s. 9d., the ordinary shares return a yield of £5 11s. 9d. on the basis of last year's dividend.

African and Eastern—Niger Merger.—We announced in our issue of March 16th that the directors of the African and Eastern Trade Corporation, the Niger Co. and Messrs Lever Brothers had entered into a provisional agreement for the merger of the businesses of African and Eastern and Niger. It is understood that a new company, to be called United Africa, Limited, is to be formed to amalgamate the trading interests of the two companies, that its capital will consist of £14,000,000 in £1 ordinary shares divided equally into two classes, "A" and "B," and that Sir Robert Waley Cohen is to be its first chairman. The African and Eastern are to take 6,500,000 "A" shares for their undertakings and liabilities other than Africa House in Kingsway, London, and Hampden House, while the Niger Co. are to take 6,500,000 "B" shares for their undertakings and liabilities, with the exception of their debenture liabilities and their interests in Lever Brothers, in certain plantations and land in the Belgian Congo, and some investments in tin-mining companies. The share and debenture-holders of the Niger Co. have already approved the scheme, and a meeting of the African and Eastern shareholders is called for this week, when Sir Robert Waley Cohen will no doubt give further details of the merger. The capital of the African and Eastern consists of £7,366,165 in 3,366,165 6 per cent. preference shares and 4,000,000 ordinary shares of £1, while that of the Niger Co. consists of £4,750,000 in 3,500,000 preference shares and 1,250,000 ordinary shares of £1. The debenture capital, guaranteed by Lever Brothers, which has not been taken over, consists of £5,414,680. After deducting all liabilities and the preference share liability the book value of African and Eastern ordinary shares at the date of the last published balance sheet, viz., December 30, 1927, excluding the property in London and Liverpool, was £6,767,191, while that of the Niger Co. ordinary

shares, excluding the debenture liabilities, was £6,687,175 as at June 30, 1928. This rough calculation shows how the two companies could come together on an equal basis. Until further information is given as to the rights of the two classes of shares, " A " and " B " of United Africa, it is not clear how the allocation of profits is to be divided as between the two companies. The Niger Co., which for some years before 1924 traded at a loss, showed, for the year ending June 30, 1928, a trading profit, less depreciation and preference dividend, of £316,572 (not allowing for interest on debentures which are not taken over). African and Eastern net profits for the year ending September 30, 1927, less preference dividend, amounted to £221,037, but as the company passed its interim on the ordinary shares in respect of 1928, these figures are probably no criterion of the present trading position. The combined total of Niger and African and Eastern net profits on this calculation amounts to £537,609, which seems out of proportion to the capital of the new company, United Africa, of £13,000,000. No doubt Sir Robert Waley Cohen will throw some light on this point at the general meeting this week. Mr. D'Arcy Cooper, chairman of Lever Brothers, has already stated that the merger will enable great savings to be effected in overhead expenses, and that unnecessary establishment charges in West Africa will be eliminated. Both companies trade with the natives of West Africa and buy native produce for export—palm kernels, palm oil, ground nuts, cotton lint, hides, mahogany, etc. Both have established a large number of retail trading stations, each complete with motor transport and river equipment. Clearly, the avoidance of duplication of trading equipment in future will mean an immense saving for the two companies. There appears to be a clear case for amalgamation, and the directors may be justified in declaring that the merger will prove to be of benefit to the whole trade of West Africa.

Powell Duffryn Steam Coal.—The Powell Duffryn Co. has recently shown its faith in the future of the South Wales coal industry by buying up independent South Wales collieries which have gone into liquidation. Were an eventual recovery to come about, Powell Duffryn would consequently be in the forefront of the industry. By its purchase of Stephenson, Clarke and Co., coal factors and distributors, the chairman in his annual speech claimed that it had merged production and marketing on a scale never previously attained in the coal trade, though he demanded " a broad and enlightened policy " for the industry as a whole if full prosperity was to return. In fact, he expressed his belief that nothing less than a central organisation of the whole country for regulating output to meet demand would suffice. Meanwhile, the company's working loss last year was £35,656, before charging interest totalling £196,149 on debentures and notes. In 1927 a small profit was made, but then the company had the advantage of the period of relatively good trade immediately following the coal stoppage. Nothing is paid on the first and second preference dividends, which are non-cumulative, and the holders of these shares may regret the distribution of a wholly unearned ordinary dividend in 1926:—

Years ended December 31.	1926.	1927.	1928.
	£	£	£
Profit, after charging debenture interest, &c.	*Dr. 118,810*	28,775	*Dr. 231,805*
Transfer from general reserve	25,000	...	...
6% preference dividend	7,478	7,478	...
6% second preference dividend	5,047	5,047	...
Ordinary dividend { rate	2½%	...	...
Ordinary dividend { amount	63,466	...	...
Increase or decrease in carry-forward	−169,801	+16,250	−231,805

The authorised share capital was increased by £2,500,000 in March, 1928, to provide for the purchase of the Great Western Colliery Co. There were actually issued to shareholders in that company 259,883 £1 shares, but the £1,350,000 6 per cent. notes, 1935, subscribed for as part of the same plan by J. Henry Schröder and Co. are convertible into ordinary shares, as are also £450,000 6½ per cent. new Great Western Colliery debentures. Presumably the other £1,350,000 6 per cent. notes, redeemable in 1953, which make their appearance without comment, are connected with the purchase of the Lewis Merthyr collieries, but here the balance sheet is unnecessarily reticent. The developments have caused " investments in, and loans to, associated companies " to grow from £1,312,727 to £3,632,355. Reserves have fallen from £683,418 to £579,123, cash is down from £111,312 to £4,434, the carry-forward of £23,900 from 1927 has become a debit balance of £207,905, and there is a bank overdraft now of £320,771. Against these unwelcome movements may be set the directors' statement that there has been a substantial increase in the demand for coal since the beginning of this year, so that two of the four idle collieries belonging to the company have been reopened. The joint ascertainments for the whole South Wales coalfield, published ten days ago, showed that the loss per ton for the three months ended January 31st was approximately 5½d., against losses of 1s. 4d. to 1s. 6¾d. in the four previous quarters. The outlook for Powell Duffryn depends largely on the possibility of consolidating and extending the ground gained recently by the South Wales steam coal industry as a whole.
