Debenhams.—The accounts to January 31st last are the first issued since the purchase of practically the whole ordinary capital of the Drapery Trust. How far the increase of £228,350 in profits is attributable to this acquisition can only be conjectured, but the shares issued to finance the transaction call for an extra £157,952 in dividends. Shareholders in Debenhams Securities, which holds all the " A " and " B " ordinary shares of Debenhams, will note that the latter receive some 76 per cent. for 1928-9, against 66 per cent. in 1927-28:—

The valuation of London properties, on which apparently it is not thought necessary to provide depreciation, is altered only by the expenditure of some £80,000 during the year, but investments in trading companies have grown from £1,045,028 to £3,352,796, mainly owing to the Drapery Trust deal. With £327,131 received from share premiums, visible reserves now amount to £1,422,670, but though the position is still entirely liquid the cash item is down from £166,651 to a mere £16,318. Since the date of the balance sheet £3,000,000 5 per cent. first mortgage debenture stock has been issued at 96 to provide for repayments and improvements, and, as the report points out, the terms of the issue can be regarded as advantageous considering the subsequent rise in money rates, the issue being actually made on the morning of the rise in Bank rate. The directors indicate that the various controlled businesses, which have " on the whole " made steady progress, are capable of considerable expansion and development. The junior shares dealt in on the Stock Exchange, the 10 per cent. preferred ordinary, are obtainable around 27s. 6d. ex dividend, offering the yield of £7 5s. 5d. per cent., less tax.

Newcastle-upon-Tyne Electric Supply.—Although the area served by this company is suffering from prolonged depression in its chief industries, coal and shipbuilding, profits were fully maintained in 1928, and the 6 per cent. dividend was earned, in spite of the 770,000 £1 ordinary shares issued in June, 1927, ranking for a full year's dividend for the first time. The 925,000 ordinary shares issued in November last at 3s. 6d. premium do not rank for dividends on this occasion. The company's connections continue to increase at the rate of about 30,000 H.P. per annum. In 1928 expenditure on plant renewals and improvements rose from £39,717 to £60,426, and additional capital expenditure on works from £169,056 to £318,811.

Years ended December 31.	1926.	1927.	1928.

From the reserve for special depreciation, to which premiums received on share issues are credited, £409,074 was taken last year to write off completely debenture issue expenses; the reserve now amounts to £761,359. As the present issued share and loan capital (including the final call on the new shares after the date of the balance sheet) exceeds £10,000,000, visible reserves are not large. Probably the share issue accounts for the improved liquidity of the balance sheet position; temporary loans are reduced from £348,895 to a mere £45,397, and cash at bank (none last year) amounts to £148,014, though " debtors " have fallen from £246,054 to £219,959 and " creditors " have advanced from £330,217 to £397,498. The company, of course, will benefit materially from any future revival of the heavy industries of the Tyne. At the meeting the chairman disclosed that output had increased, though not very greatly, up to the latest date this year for which he had information, as compared with the same period of 1928. The ordinary shares, which have lately received a good deal of attention, stand around 24s. 9d., and yield £4 17s., less tax.

American Telephone and Telegraph.—The net earnings of the American Telephone and Telegraph Company rose by almost 10 per cent. in 1928, before deduction of interest on bonds, debentures, and other indebtedness. The stated policy of the company is to pay reasonable and regular dividends only, and, for part of the new capital needed, to offer additional stock to its stockholders on favourable terms. Accordingly the dividend on the common stock for 1928 was kept at $9.00 per share, though $12.11 was earned, and $185,863,000 of stock was offered at par to existing stockholders in June last. Expenditure for plant amounted to $428,700,000, the largest total ever expended in one year, and 798,592 telephones were added to the number owned and operated by the Bell System, with which at the end of the year 19,200,000 telephones in the United States were inter-connected. The most striking development of 1928, according to the report, was the increased use of the telephone for long-distance calls, the number of which increased by 18 per cent., while over the longer distances, such as between the Atlantic and Pacific Coasts, the increase was 100 per cent. About 95 per cent. of all toll and long-distance calls are now handled while the caller remains at the telephone, a standard which the post office telephones in Great Britain cannot approach. The achievements, technical and financial alike, of this company deserve the attention of everyone who is interested in the controversy between the advocates of public and of private ownership of utility services.

Years ending December 31.	1927.	1928.
	$	$
Revenue	216,524,824	235,781,978
Expenses	66,140,930	70,513,929
Interest on bonds, debentures, etc.	21,768,984	22,097,558
Net income	128,614,910	143,170,491
Dividends on capital stock { earned per share	11·89	12·11
Dividends on capital stock { paid per share	9·00	9·00
Dividends on capital stock { amount	97,379,934	103,821,440
Carried to surplus	31,234,976	39,349,051

The reserve for depreciation and contingencies amounts to $106,619,402, the surplus (including stock premiums) to $317,405,415, the two aggregating nearly one-quarter of the issued stock and loan capital. At its present price of $223 per share the common stock yields only £4 0s. 9d. per cent., but its real attraction is the prospect of further offers of stock at or near par.

Rand Mines.—The less favourable market conditions prevailing last year are reflected in the results of this Kaffir finance company, the profits from share realisation having been a negligible quantity. No change is made in the dividend rate, but it absorbed rather more than the net earnings. The company's portfolio has, on balance, been appreciably expanded, now standing at £2,572,000, as against £2,339,500. The results of the past three years are summarised below:—

	1926.	1927.	1928.
	£	£	£
Dividends on shareholdings	431,830	436,360	419,330
Sundries	115,800	121,600	123,640

Carried forward	1,126,060	1,205,290	897,800

† Including forfeited dividends refunded.

The new purchases included City of Durban Deep, Daggafontein options, and New Modders; also considerable blocks of Trinidad leaseholds and Tocuyo Oilfields; the realisations, Crown Mines, East Rands and Ferreira Deeps. Satisfactory progress is reported in respect of the Anglo-Spanish Construction Company (Railway). On the basis of the recent dividends Rand Mines 5s. shares at 3⅛ yield about 8 per cent.

International Nickel of Canada.—This former subsidiary of the International Nickel of New Jersey now controls its original parent, together with the Mond Nickel Co. and the International Nickel, Inc. (of Delaware), which was formed in 1928, and conducts the operations of the united concerns in America. The report of the Canadian company for 1928 covers the period before the Mond fusion occurred, but the exchange of position with the New Jersey company took effect two months before the end of the year, and the figures are therefore comparable with those previously shown by the New Jersey company. Owing to a 52 per cent. advance in the world's purchases of metallic nickel and a 35 per cent. advance in the company's sales of monel metal and rolled nickel the total income for the year is nearly doubled at $16,706,594 (against $8,985,625 in 1927) and the profit is more than doubled at $12,399,317 (against $6,064,544). The 6 per cent. preferred dividend absorbed $557,034 and the common dividend (which aggregated $2.50 for the year, having been raised from 50c. quarterly to 75c. quarterly with the August distribution) took £4,331,095, leaving a balance to be added to the surplus of $7,511,187—rather over 60 per cent. of the year's profit. The surplus, including the premium realised on the sale of 262,066 common shares during the year and the surpluses which formerly figured in the accounts of the New Jersey subsidiaries, is thus raised from $18,863,503 to $33,166,648. On the shares issued in exchange for New Jersey Nickel, but excluding those issued in exchange for Mond, the book value at December 31, 1928, works out at $7 per share, and on a similar basis the year's earnings represent $1.05 per share, which would compare with about $0.5 for 1927. The smelter ran throughout the year exclusively on ore from the Creighton mine, but, of course, the principal factor in the future of the concern lies in the Frood disclosures, the rational exploitation of which was the *raison d'être* of the absorption of Mond Nickel,

in whose property part of the reef lies. The development of the International's Frood mine was commenced in 1924, and the directors state that the completion of the programme is now assured without further financing. At the date of the balance sheet current assets amounted to $34,080,070, against current liabilities of only $3,616,595. It is estimated that both mine and smelter will be in operation by late in 1930. A few figures are given regarding the Frood ore, but it is stated that the management are unable to report exact tonnages or metal content. Reasons are given for anticipating a continued expansion in the demand for nickel—a matter, obviously, of special importance in view of the large content of copper-nickel ore in the Frood and Frood Extension.

Islas del Guadalquivir, S.A.—The latest progress circular of this company, in addition to announcing the purchase of another property of 5,000 acres and of a five-years' option on a 50 per cent. interest in a company owning another 20,000 acres, sets out the terms of an offer which the directors propose to make of 200,000 (out of 300,000) ordinary shares of 100 pesetas each (forthwith) and 15,000,000 pesetas (out of 30,000,000 pesetas) of 6 per cent. mortgage debentures (as required). The ordinary shares will be entitled to a non-cumulative 7 per cent., and participation in one-third of surplus profits after the service of debenture and preference shares, and will be offered at 105 per cent. to holders of the existing 200,000 founders' shares. The new capital is required to finance developments recommended by a committee of the larger shareholders and others possessing expert knowledge, presided over by Mr E. R. Debenham. The latter's report to the board is described as having revealed "that the early stages of the development of the company's undertaking have been attended by unforeseen difficulties and those errors of judgment which occur in almost every new enterprise of this description." Nevertheless, according to the experts," there is nothing to prevent" the company achieving its purpose if various conditions are fulfilled. Steps are to be taken to qualify the company for the receipt of various subsidies from the Spanish Government, but if no account is taken of this possibility the cost of carrying out the company's programme is estimated at approximately £5,500,000, the chief constituents in the total being:—Engineering cost of converting 125,000 acres to irrigation, £2,250,000; housing, £1,000,000; railways, roads, overhead charges, &c., £900,000; together with the amount already expended on acquiring and developing the estates (apparently about £1,350,000). On a valuation of £200 per acre, the company's land would eventually be worth £25,000,000, leaving an "equity" of £19,500,000, equal to about £21 per ordinary share, and £65 per founders' share. These figures, of course, are of the nature of prospectus estimates, pure and simple, and time alone will show how closely they are borne out by facts. Meanwhile, particular interest has been aroused by the statement that the engineering experts who examined the company's property and records are satisfied that a sufficient supply of fresh water is available for irrigation purposes from the River Guadalquivir. Our correspondent who visited the property last year recorded his impression that the river water, at the point at which the estates are situated, was tidal, non-drinkable, and, presumably, not suitable for irrigation. (See the *Economist*, July 7, 1928, page 21, and July 21, 1928, page 127.) It was also intimated that a project was afoot for obtaining fresh water from mountain reservoirs some miles away. A fuller statement on this matter would be welcomed. For the present, however, the company's most recent statement suggests no reason for significant modification of the opinion formerly expressed by our correspondent—that the investor should take a conservative view of shares whose main basis is an anticipated appreciation of land values.

Canadian Pacific Railway.—The full report for 1928 (preliminary figures from which were given in an Investment Note in the *Economist* of March 16 last, page 586) shows that net railway earnings, at $51,694,451, were the largest in the company's history, as a result, mainly, of the large crop handled under favourable harvesting conditions, and to the improvement in Canadian business generally. Working expenses were equivalent to 77.43 per cent. of gross earnings (against 80.36 per cent. in 1927), and net earnings to 22.57 per cent. (against 19.64 per cent.). Much the largest share of the company's earnings is derived from freight traffic, which accounted for nearly 75 per cent. of last year's gross receipts, against 15½ per cent. from passengers, 1½ per cent. from mails, and 8 per cent. from sleeping cars, express, and miscellaneous traffic. Transportation expenses represented 42 per cent. of the total expenditure, and maintenance 45 per cent. The effect of the bumper harvest was seen in an increase in the volume of grain transported, from 259,979,845 bushels in 1927 to 395,753,732 bushels last year, while a rise in the tonnage of manufactured articles, from 9,994,083 tons to 11,354,476 tons, reflected the activity of Canadian industrial plants. The total ton-mileage of 18,287 millions showed an enhancement of 12½ per cent. The balance-sheet position is strong, "investments and available resources" standing at $160,296,650, while "working assets" total $93,773,506, as compared with $79,848,068 a year earlier. Application has been made to the Dominion Parliament for authority to construct new branch lines having an aggregate length of approximately 1,200 miles.

We are officially informed that at the first meeting of the Committee for General Purposes of the Stock Exchange elected for the year 1929-30, Mr. Archibald Henry Campbell was elected chairman, and Mr. Herbert Francis Chamen deputy-chairman.

CAPITAL ISSUES.

Capital issues this week amounted to £1,403,500, bringing the total for the year 1929 to date up to £96,953,050, excluding conversions, as against £169,043,750 for the corresponding period last year. At a time when the investing public is not feeling at all disposed towards fresh commitments, it has been asked to subscribe to the development of four new inventions. *Metduro* has been formed to exploit an invention relating to a liquid plastic substance which can be moulded into any shape, which is fire-proof, water-proof, acid-proof and oil-proof, and which can be used for a variety of trades and industries. This is one of the developments of Metropole Gramophones, and is believed to have a big future, but, of course, the issue was frankly speculative. The inventor is receiving £27,000 in cash and a contract for five years at a salary of £7,500, together with £2,500 in ordinary shares of 1s., these obligations being taken over by Metropole Developments for £40,000 in preference and £27,000 in ordinary shares. *Multidoor* proposes to manufacture a machine which contains glass fronted compartments in which 6d. and 1s. goods can be displayed. The purchase price is £40,000, payable as to £10,000 in cash and £30,000 in 5s. shares, together with a call at 1s. premium on 40,000 shares of 5s. for 18 months. An option has also been given to the underwriters on 60,000 5s. shares on the same terms, while 580,000 shares at 5s. are offered to the public. *"J.M." Motor Fenders* is formed to develop a patent fender or buffer for motor vehicles. The motor-car business is itself speculative enough, but this proposition runs a double risk. To the public 940,000 shares of 2s. each are being issued at par and 260,000 shares are allotted fully paid to the vendors, who receive also £10,000 in cash. *Automatic Record Players* intends to exploit an invention permitting gramophone records to be changed automatically. The vendors receive £25,000 in cash and 350,000 shares of 2s. The remaining 850,000 shares of 2s. are offered to the public. This is the sort of invention which is most advantageously financed by private capital. It becomes increasingly strange that the public should be induced to subscribe money to pay inventors and promoters hard cash for inventions which ought first to be commercially tried out. *British Automatic Refrigerators* appeals for £132,000 to develop the business of Thomas Hall and Sons, Rotherham, manufacturers of refrigerators, who receive £72,500, of which £42,500 is paid in deferred shares of 2s. It appears that 175,000 deferred shares are being allotted to the promoter. *Metropolitan Housing Corporation* has been formed to acquire the share capital of the Metropolitan United Estates, which owns property chiefly in South-East London. After completing the purchase of properties acquired and paying the preliminary expenses, £290,000 will be available for the purchase of further properties. The net income to be derived from properties acquired shows a return of 11 per cent., and on the assumption that the remaining funds will provide a similar return the directors hope to pay initial dividends of 7½ per cent.

Metropolitan Housing Corporation, Limited.—Issue at par of 475,000 (out of 1,000,000) £1 shares. The company acquires an existing firm, founded in 1926 and carrying on business as owners of property in the Metropolitan area. Net assets are valued at £287,426. The purchase consideration is £175,000 in shares. The balance of the capital will be employed in acquiring other similar properties.

Grace National Bank
Hanover Square, New York, U. S. A.
Commercial Banking. Execution of orders in New York for European banking correspondents.
Special Representative
148 Leadenhall St. London, E. C. 3.

Metduro, Limited.—Issue at par of 450,000 (out of 550,000) £1 7 per cent. cumulative participating preference and 450,000 (out of 3,000,000) 1s. ordinary shares, the former entitled to an extra 1 per cent. (to a maximum of 3) for every 1 per cent. paid on the latter. The company acquires and exploits an invention relating to a liquid plastic substance, which can be moulded without pressure, solidifies rapidly under heat, and possesses other qualities. The purchase price for the invention and the services of the inventor for five years is £40,000 in preference and £27,000 in ordinary shares. After purchase of a factory and equipment, working capital, including premiums on 350,000 ordinary shares privately subscribed for at 5s., will exceed £450,000.

Multidoor, Limited.—Issue at par of 580,000 (out of 800,000) 5s. shares. The company will sell, rent and work sales machines. The purchase price for three provisionally protected inventions and other patent rights is £40,000, payable as to £10,000 in cash and £30,000 in shares, an option on 40,000 shares at 1s. premium, and a royalty. The remaining shares are under option on the same terms.

British Automatic Refrigerators, Limited.—Issue at par of 240,000 (out of 340,000) 10s. 10 per cent. participating preferred ordinary and 120,000 (out of 800,000) 2s. deferred ordinary shares, the former entitled to one-third of the surplus profits distributed. The company acquires a refrigerator-manufacturing business, valued at £47,000, and the net assets and goodwill of another company, including the benefit and patent applications (valued at £40,000) and contracts in hand. The purchase price is £72,500, payable as to £30,000 in cash and £42,500 in deferred shares. A further 175,000 deferred shares are allotted to the promoter. After expending £25,000 on extensions, working capital is estimated at £51,000.

"J.M." Motor Fenders, Limited.—Issue at par of 940,000 (out of 1,200,000) 2s. ordinary shares. The company acquires an existing business, with premises and patents. The purchase consideration is £36,000, payable as to £10,000 in cash and £26,000 in shares. Working capital is estimated at £60,000.

Automatic Records Player, Limited.—Issue at par of 850,000 (out of 1,200,000) 2s. shares. The company acquires patent rights in a gramophone accessory. The purchase consideration is £60,000, payable as to £25,000 in cash and £35,000 in shares. Working capital is estimated at £40,000.

Particulars of the following have been issued for public information only in connection with Stock Exchange "introductions":—**Cavendish Furniture Company, Limited; issued capital** 500,000 £1 8 per cent. cumulative preference and 1,500,000 1s. ordinary shares, guaranteed as to capital and dividends by the British and Colonial Furniture Co., Limited (Jas. Woodhouse and Sons); will establish furniture stores for the supply of goods principally on the hire-purchase system. **British National Petroleum Refineries, Limited**; issued capital 800,000 1s. shares, holds a lease of premises in Kent, on which an oil refinery plant has been erected.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, March 20, 1929, amounted to 2,209 tons.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended March 20th:—Venezuela, 33,134 barrels; Trinidad, 16,444 barrels; total, 49,578 barrels.

THE MEXICAN EAGLE OIL.—The production for the week ended march 16, 1929, was 158,000 barrels.

WORKING PROFIT, TRANSVAAL. The total estimated working profit of the gold mines of the Transvaal for the month of February, 1929, amounted to:—Witwatersrand, £952,622; Outside Districts, £38,320; Total £990,942.
The estimated working profit in January, 1929, was:—Witwatersrand, £1,051,548, Outside Districts, £43,527, Total, £1,095,070.

COMPANY MEETINGS, &c.

THE MERCANTILE BANK OF INDIA, LIMITED.

SATISFACTORY RESULTS FOR THE YEAR.
16 PER CENT. DIVIDEND MAINTAINED.
PROSPECTS FOR CURRENT YEAR.

MR J. M. RYRIE'S REVIEW OF FINANCIAL AND TRADE CONDITIONS IN INDIA AND THE EAST.

The thirty-sixth annual general meeting of the shareholders of The Mercantile Bank of India, Limited, was held on the 26th instant, at Winchester House, Old Broad Street, London, E.C.

Mr J. M. Ryrie (the chairman) presided.

The chief manager (Mr. J. Steuart) having read the notice convening the meeting and the auditors' certificate,

The chairman said: Gentlemen, I will if you permit me, take the directors' report and the accounts as read. (Agreed).

Before proceeding I may mention that, in a letter I have received from Mr Shelford, he asks me to apologize for his absence here to-day, but as he is in Switzerland with members of his family who are recovering from illness you will, I am sure, understand that he is unavoidably detained there.

It is with profound regret that I have to record the great loss we have sustained by the death on July 3 last of Sir David Yule, who had been a director of the bank for 23 years, and joined the Board when we acquired the business of the Bank of Calcutta, of which he was the chairman. It is not only on account of his wide interests in India and ripe experience of that country that we miss Sir David, but for the valuable assistance and advice he gave us at all times and for his invariable geniality and sound judgment.

In succession to Sir David Yule, however, on the Board we have been fortunate in securing the services of Sir Thomas Catto, who is not only closely associated with Messrs. Andrew Yule and Company, of Calcutta, and Messrs. Yule, Catto, and Company, of London, but who, I may say, has a world-wide experience of finance and commerce.

MERCANTILE BANK OF INDIA (AGENCY), LTD.

The only other important matters of a domestic nature I need mention are that, as mentioned in the directors' report, we have registered a company in India under the name of The Mercantile Bank of India (Agency), Limited, so that we may undertake the duties of executors and trustees in the East, our Articles of Association already giving us power to undertake such duties in this country; and that our important new building at Singapore is nearing completion, the bank indeed being already in occupation of part of the premises they will occupy while we are hopeful of letting the remainder of the building to good tenants upon satisfactory terms.

The extension of our operations to Ipoh in the Federated Malay States is also mentioned in the directors' report, Ipoh, I may mention, being already a tin and rubber centre and of growing importance.

FINANCIAL AND TRADE CONDITIONS IN 1928.

Though it is true that the past year did not come up to expectations, and therefore may be said to have been disappointing on the whole, there was further recovery from the devastating effects of the war and which must leave their mark for some time to come. We were fortunate in having a steady bank rate of 4½ per cent. throughout the year in spite of the heavy movements of gold that took place and the high money rates ruling in the United States, as this helped to maintain a steady price level and inspired confidence. I do not believe that a reduction in the bank rate, with the consequent tendency to inflation, would have been of any assistance to trade, and, with comparatively cheap money here, the prestige of London as a financial centre has been maintained, as evidence of which there was a large increase in the item of acceptances appearing in the balance sheets of London banks generally. Then taking invisible exports into account, there was a balance of trade in our favour of £149,000,000 last year, which compares with £114,000,000 in 1927, and oversea issues of capital amounting to £143,000,000. The results of the good work done by the National Savings Committee are also encouraging, as the sales of savings certificates during last year were at the rate of a million a week, the amount remaining invested in these certificates at the end of the year, including interest, being £485,000,000.

It is in some of the staple industries of the country that depression continued, coal and cotton being the really dark spots, but, as the result of what is called rationalisation, which means not only amalgamation but the co-operation of all interested in the production and distribution of a particular commodity, with a view to meeting the serious competition our manufacturers are now confronted with in the markets of the world, we can, I think, look forward to an improvement in these and other industries similarly placed. It is this competition that is the cause of our unemployment problem and the failure hitherto of industry generally to recognise the altered conditions, though, of course, industry in this country is handicapped by high taxation resulting largely from the heavy expenditure upon social services.

INDIA.

So far as the political situation in India is concerned, I cannot record any improvement, and, in view of the marked division between Hindus and Moslems, it is difficult to see how the Statutory Commission can report in favour of any further advance in the direction of meeting the demands of the Extremists. The recent resolution passed unanimously in the Chamber of Princes indicates the difficulties of the problem. In spite, however, of the fact that the interests of trade are ignored by most of the Indian politicians, and of serious labour troubles, fomented by the growing Communist element, the financial position is unimpaired, as, while the most recent Budget estimates show a small deficit, this is due to the complete remission of provincial contributions and is to be met out of the revenue reserve fund. There is to be an inquiry into banking facilities, and if these can be extended under suitable organisation I should expect to see less hoarding of gold and silver. No further move has been made towards the formation of a reserve bank, so that the control of credit, currency, and exchange remains the responsibility of Government. The critics of the 1s. 6d. rupee are more inclined to accept the situation, and, with stability in both exchange and commodity prices, the trade of India is now more or less normal, but competition grows and profits are reduced. Money was dearer than in 1927, the Imperial Bank of India rate having averaged 6·20 per cent., with 7 per cent. the highest and 5 per cent. the lowest rate.

TRADE FIGURES.

The figures relating to the trade during the calendar year 1928, for which I am indebted to Mr. Lindsay, the Trade Commissioner, compare favourably with those for 1927. The total imports of merchandise at £185,000,000 show very little change, but the exports increased from £244,000,000 to £253,000,000. The imports of gold increased from £12,000,000 to nearly £16,000,000, while the imports of silver declined to a small extent. The balance of trade, therefore, in favour of India was over £42,000,000, compared with £37,000,000 in 1927, the net transfer of funds against this balance of trade amounting to over £26,000,000, consisting almost entirely of purchases of sterling in India by the Government. A feature of the year was the sale of 26,000,000 oz. of silver by the Government, and this was carried out with little or no effect on the market. The monsoon last year was good except in the United Provinces, and, as I have said, the total exports for the year increased.

INDUSTRIAL ACTIVITIES.

As compared with 1927 there were increased shipments of cotton, and, with higher prices, there was a substantial increase in the value of these shipments, the bulk of which unfortunately go to Japan and China to be turned into goods which compete successfully throughout the East with not only goods manufactured in Lancashire but those produced in the Indian cotton mills. The shipments of raw jute did not vary much from the previous year in quantity, but with some advance in prices the value increased, and the same remarks apply to jute goods. There was a falling off in the quantity of tea shipped from India, but some increase in the shipments from Ceylon, and, with lower prices, the value of the Indian shipments declined by about £4,000,000. The shipments of ground-nuts increased from 427,000 tons in 1927 to 686,000 tons last year. A feature of the import trade was the large imports of wheat, from Australia particularly, the imports of American cotton in 1928 being quite small. The total value of imports of cotton piece-goods at £39,750,000 shows a decline of £1,500,000 when compared with 1927, while, including cotton yarn, the value of the imports from the United Kingdom declined from £34,000,000 to £33,000,000, those from Japan falling from £8,000,000 to £6,500,000. As I have said, imports generally were more or less stationary, a hand-to-mouth policy being the order of the day pending more settled conditions.

MALAYA.

If in referring to the trade of British Malaya I said that last year was one of the worst ever experienced, I should not be exaggerating, but, with the average price of rubber at under 10d. against over 1s. 6d. in 1927, and with a fall in the average price of tin from £289 to £227, it is not surprising that trade generally suffered. It was, of course, first, the announcement that an inquiry was to be held into the question of restriction, and, secondly, the intimation that the restriction regulations would cease entirely, instead of being gradually withdrawn, on November 1st last that brought about the disastrous decline in rubber.

The value of the total exports of British Malaya last year amounted to £98,000,000, as compared with £123,000,000 in 1927, the figures relating to imports being £100,000,000 and £115,000,000 respectively. The gross shipments of rubber, which include the bulk of the rubber produced in the Dutch East Indies, are put down at 409,000 tons, valued at £36,000,000, the corresponding figures for 1927 being 371,000 tons and £61,000,000, which practically accounts for the fall in the value of the total exports. I may mention here that shipments of rubber from Ceylon at 57,000 tons compare with 55,000 tons in 1927, but, of course, the value was much less. The exports of tin from Malaya in 1928 are given as 97,000 tons, valued at £22,000,000, the corresponding figures for 1927 being 81,000 tons and £23,000,000. There was a further decline in the value of cotton piece-goods and yarns shipped from the United Kingdom to Malaya, the figures for last year and 1927 being £1,900,000 and £2,400,000 respectively, and the import trade generally was difficult and unprofitable, as the result largely of the decline in the price of rubber and the consequent reduced purchasing power of the people.

BURMA AND SIAM.

There were good crops of rice in both Burma and Siam, over 2,900,000 tons being exported from Burma and 1,500,000 tons from Siam, the lower prices ruling in the first half of the year advancing in the second half, a feature of the rice trade last year being the competition of Saigon rice in markets usually supplied by Burma and Siam. An embargo existed on shipments from Burma to Japan throughout the year, while the anti-Japanese boycott completely stopped shipments to that country from Siam in the second half of the year. Though I am pleased to say we escaped entirely, heavy losses were made in Burma as the result of failures among the Chinese rice dealers, and, speaking generally, I am afraid it was not a profitable year for anybody in either Burma or Siam, the import trade of both countries failing to keep pace with the exports. At about £20,000,000 the total exports from Siam were nearly £2,000,000 less than in 1927, the imports also showing a decline in value.

I am indebted to Sir Edward Cook, the financial adviser, for a copy of his report on the Siamese Budget for 1928-29, and from this I find a substantial surplus is promised for the third year in succession, the surplus being utilised not only to meet capital expenditure on railways and irrigation projects, but for the reduction of debt. The currency position is of exceptional strength in view of the large reserve held against the note issue, and, apart from a catastrophe, there is no risk of the Government failing in its undertaking to maintain the gold exchange value of the Tical, the regular balances of trade in favour of Siam each year enabling her to build up the reserve held abroad in gold which can be used to support the exchange position in case of need.

JAVA AND MAURITIUS.

At over 3,000,000 tons the shipments of sugar from Java again increased, but, as the production in other countries likewise increased, the value of sugar declined steadily throughout the year, and, like Malaya, Java suffered also from the low price of rubber. But Java is not so dependent on rubber as Malaya, as she produces tea and coffee, among other produce, and tin, while, owing to an increase in her rice crop, part of which is actually exported, she is now less dependent on Burma, Siam, and Saigon for her supplies of food. If, therefore, I include Sumatra, where the oil palm is coming to the front, the economic position of the Dutch East Indies may be said to be satisfactory, and there is a growing market for imports.

Of Mauritius I am sorry to say I cannot give you a good account, as, owing to the serious fall in the price of sugar, our friends there are passing through a very difficult time, the prosperity of the island depending almost entirely upon the price obtained for the crop of sugar. The crop last year at 250,000 tons was better than the estimate at the beginning of the season, but the proceeds realised were substantially less than the sum obtained for the smaller crop in 1927, and many planters are unable to meet their obligations. The position is so bad that, to assist the industry, the Government have been asked to provide a further loan of £450,000, though of the loan of £375,000 granted to the planters in 1926 there is £330,000 still outstanding. At 1s. 6d. exchange the exports from Mauritius in 1928 were valued at £3,500,000, which is £690,000 less than in 1927, while the imports, which slightly exceeded the exports, show a reduction of about £430,000. The fall in imports, however, was welcome, as the bazaars were overstocked and competition severe, while failures among the dealers were again numerous.

CHINA.

Though it is too soon to estimate how far the National Government will succeed in establishing its authority throughout China, and there are many uncertain factors bearing upon trade, the conditions prevailing last year certainly show improvement, though the present quarrel between Nanking and Hankow is disturbing, and the massing of troops on both sides shows that the decision to disband the armies has not been carried out to a large extent. By treaties with the various Powers, fiscal autonomy has been granted to China, but the recent increase in the tariff has disorganised business in the meantime, and it remains to be seen if, as promised by the Government, likin is abolished. But the increase in the Customs receipts from H.K. Taels 68,687,000 in 1927 to H.K. Taels 82,332,000 in 1928 is an indication of how trade goes on in China in spite of civil war.

Then, largely owing to the demand from China—though this is not necessarily a sign of prosperity—the price of silver was maintained, in spite of the sales made by the Government of India, the fluctuations having been even narrower than in 1927, the highest and lowest quotations being 28⅞d. and 26 11/16d. respectively, with 26¾d. the average. The variations in China exchanges therefore were again moderate, the Shanghai tael fluctuating between 2s. 10 7/16d. the highest rate touched, and 2s. 6¾d., the lowest; while the Hong-kong dollar did not go above 2s. 1 13/16d. or below 2s. 0¼d. The value of the total British imports into China last year at £21,000,000 compares with £14,500,000 in 1927, and, due partly, no doubt, to the anti-Japanese boycott, the value of cotton piece-goods exported from the United Kingdom to China, including Hong-kong, increased from £3,800,000 in 1927 to £6,400,000 in 1928.

THE ACCOUNTS.

I will now turn to the accounts, which have been in your hands for some days, and which I hope you will consider satisfactory. In spite of a larger turnover, the net profit, you will notice, is nearly £7,000 less than in the previous year, and about the same as in 1926; but it will be found that our neighbours have had the same experience, and I attribute this reduction in profits chiefly to the suicidal competition that continues between the exchange banks in India. I referred to this competition last year, and said that, after taking into account brokerage and our heavy expenses, the margin of profit on our exchange operations was disappearing, and I regret to say that, as the result of our operations in the past year, I can see no improvement in the position, which is such that, but for our local business, we should lose very little by declining to do any exchange business. As this state of affairs exists more particularly in India, the time has come for the British exchange banks at any rate to make some effort to co-operate, and I hope it will not be long before something is done in this direction. I need hardly say it is not for the purpose of placing our constituents at any disadvantage that I make this suggestion, but solely for the purpose of providing the banks with a margin of profit consistent with the risks and expenses they have to bear and the services they render.

ALLOCATIONS.

In spite, however, of the reduced profit, we have no hesitation in recommending what I may call our usual dividend of 16 per cent.

for the year, while you will see that, as before, we allocate £85,000 to the reserve fund, officers' pension fund, and to writing down freehold banking premises, the only difference here being that, to bring the reserve fund to an even £1,450,000, we add only £30,000 to that fund this time instead of £35,000, and increase the amount used for the purpose of writing down the item of freehold banking premises from £35,000 to £40,000, in view particularly of the further expenditure we have to meet upon our new building at Singapore.

The balance sheet, I think you will agree, presents a satisfactory and liquid position. The only liability that did not appear in the previous balance sheet is the item loans payable £1,600,000, but this is largely offset by the increase of £1,055,000 in bills receivable, and the increase of £160,000 in loans receivable, and advances on the other side of the account, while you will notice a further decline of £949,000 in our liability under the head of current, fixed deposit and other accounts, this being due, as before, to dear money in India. There is a slight increase in cash in hand and at bankers, including bullion, but on the whole our resources have been better employed than in the previous year, the reduction of £800,000 in Government and other stocks indicating this, and the increase of £112,000 in acceptances on account of customers is a satisfactory feature.

TRIBUTE TO STAFF.

That is all I have to say about the past year except that, on behalf of my colleagues on the Board and myself, I wish to thank the staff in London and at our branches in the East for their good work and the close watch they keep over the interests of the bank. I am, of course, in more or less daily touch with Mr Steuart and Mr Crichton, not to mention Mr Linton, and I am indebted to these gentlemen for the assistance they give me in carrying out my duties. To the heads of departments and the rest of the staff at the head office our thanks are also due, while to our managers in the East and the staff working under them, both Europeans and those engaged locally, we are particularly indebted, for it is at our branches that much of our business is initiated, and these gentlemen are often called upon to carry out their work under trying conditions of climate.

CURRENT YEAR'S OUTLOOK.

As at the beginning of each year recently optimistic views as to an improvement in trade have been general, while disappointment has followed, I feel that it is necessary to be cautious in referring to the outlook for the current year; but as the disappointment has been largely due to extravagant hopes and failure to appreciate that, in order to meet the ever-increasing competition, reorganisation was necessary, there is encouragement in the fact that progress is being made in that direction. There has been further stabilisation of currencies, the relations between capital and labour have improved, the recent improvement in the coal industry is a good sign, and, though the unemployed figures are still high, there has been a reduction in these lately, and, as there has always been a certain amount of unemployment, we cannot hope to see this disappear entirely. The fact that other countries, even America, have large numbers of unemployed is often overlooked, and as the subject has become a party question in this country our position is made to seem worse than it is.

The monetary situation at the moment, due to the wild gamble in stocks and shares in America, certainly gives cause for some anxiety, but we can rely upon the Bank of England to do all in its power to prevent any disturbance to trade. Then the coming Budget and, more particularly, the approaching General Election, are unsettling factors in the position, and until these are events of the past we cannot look for any real activity.

PROSPECTS IN INDIA.

So far as India is concerned, as usual much depends upon the monsoon, but the most disturbing feature at present is the frequency of labour troubles, which break out without any apparent provocation, and unless the Communists, whose business it is to foster strikes, are suppressed I am afraid we shall not see the end of these troubles. In the meantime, however, trade may be described as normal, if I except the cotton mill industry, which was thrown back last year by a prolonged strike from which it has not yet recovered. The estimate of the cotton crop is below that of the previous season, from which there was a large carry-over, but stocks are being liquidated, and there should be some increase in both the volume and value of exports this year. The jute crop is estimated at 10,000,000 bales, and, with steady prices, shipments should be maintained, though I ought to mention that the prosperous Calcutta mills propose to run their machinery for 60 hours per week from July 1st. Tea is in a healthy position after the recent drop in prices, and as consumption tends to increase I should not expect to see any falling off in the quantity exported from either India or Ceylon, provided the crop does not suffer from bad weather. In the import trade generally I do not look for any marked improvement, though, if the price of cotton were stabilised for a time and the cost of the manufactured article reduced, I feel sure our friends in Lancashire would find an increased demand for their goods.

RUBBER AND OTHER INDUSTRIES.

In British Malaya, which has come through a period of difficulty as the result of the removal of all restrictions upon the export of rubber remarkably well, there is a more hopeful feeling all round, and, though the price of rubber and tin is a very important factor in the position, I look for an improvement in trade generally there. Then it is a sign of progress and a desire to be not entirely dependent upon rubber to hear that not only the cultivation of oil palms but tea also is being developed in Malaya.

The estimated exportable surplus of rice from Burma and Siam at 2,800,000 and 1,300,000 tons respectively is lower than last year; but at the present reasonable level of prices there should be free exports, particularly as the Saigon estimate is also lower. The termination of the anti-Japanese boycott should be helpful to Siam, and China will want rice, if finance can be arranged; but, with a good crop of her own, India will not require to import so much as last year.

Of Java I can only say that, in spite of a large crop of sugar, estimated at 3,250,000 tons, the present low price of this commodity, together with the equally low price of rubber, does not point to any improvement in the situation; and in Mauritius it will be some time before the position improves, and not until a marked rise in the price of sugar takes place.

In China, together with Hong-Kong, if I may judge by the improved position of last year, and provided there is no resumption of military operations and the new tariff is fairly administered, I think we can look for a further gradual improvement in the trade of the country, which, of course, is capable of great development under settled conditions. I hope, therefore, that when we meet you again next year we shall be able to present you with accounts no less satisfactory than those I am about to ask you to approve and adopt.

THE DIVIDEND.

I have now to propose: "That the report of the directors with the audited statement of accounts and balance sheet at December 31, 1928, presented to this meeting, be and the same is hereby received, approved and adopted, and that a final dividend on the 'A,' 'B,' and 'C' shares of this bank of 8 per cent. be paid, making 16 per cent. for the year, less income tax, as recommended in the report, be and the same is hereby confirmed."

I will ask Sir Thomas Catto to second this resolution, but before I put it to the meeting I shall be happy to answer any questions which any shareholder may wish to ask.

Sir Thomas S. Catto, Bart., seconded the resolution, and, no questions being asked, it was put to the meeting and carried unanimously.

Mr P. R. Chalmers: I have great pleasure in proposing "That Mr J. M. Ryrie and Sir Thomas S. Catto, Bart., the directors retiring from the Board in rotation, be and are hereby re-elected directors of this bank." Mr Ryrie, of course, is our invaluable chairman, and you have just heard what he has said in welcoming Sir Thomas Catto to our number.

Mr C. J. Hambro seconded the motion, which was unanimously adopted.

On the proposition of Mr R. G. Bamford, seconded by Mr A. Muirhead, Messrs Cooper Brothers and Co. and Messrs W. A. Browne and Co. were reappointed auditors of the bank.

Mr J. Sutherland: Before we separate, gentlemen, I should like to propose a very hearty vote of thanks to our chairman, not only for his able management of the affairs of the bank during the past year, but also for his excellent survey of conditions in the East and the activities of the bank in general.

The vote was seconded by Mr P. E. Gourju and unanimously accorded.

The Chairman: On behalf of my colleagues and myself in the first place, and—as I am sure the speaker intended to include our staff—on behalf of our loyal staff in the second place, I thank you all for this very kind vote of thanks, and I should like to thank the proposer for his very kind reference to our work.

The proceedings then terminated.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

REVIEW OF A DIFFICULT YEAR.

SIR MONTAGU CORNISH TURNER ON THE OUTLOOK.

The seventy-fifth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia and China was held on the 27th instant at the Bank's premises, 38 Bishopsgate, London, E.C.

Sir Montagu Cornish Turner (chairman) presided.

The Chief Manager, Mr. W. E. Preston, read the notice and the auditors' report.

The Chairman said: I greatly regret that the results for 1928 have proved disappointing and less favourable than we anticipated at the commencement of the year. Just as trade conditions at home proved, in the working out, to be less favourable than anticipated, and the expected and hoped-for improvement in trade generally petered out as the past year progressed, so in the East our hopeful anticipations have not been realised. I cannot say that there has been a great decrease in the volume of trade, but it has been a difficult time for merchants and bankers, especially in India and China, the causes for which I shall presently with with.

India, as we know, has been for some months greatly disturbed by political turmoil, entirely detrimental to the interests of the country. Added to this various disastrous strikes, fomented, we believe, by outside evil influences, have occurred in the railways, the mills and other basic industries. These strikes have done more to prejudice the prosperity of India than any depression in the markets of the world which are consumers of Indian goods. At the present time firmness tempered with good judgment is required to prevent further mischief.

In my speech last year I referred to the absurd and excessive competition amongst the Exchange Banks to secure the business offering at nearly every trade centre in the East, with the result that exchange margins have been cut to vanishing point.

From every point of view this is deplorable and disastrous. It is true that the number of Exchange Banks both in India and China is much in excess of trade requirements, but to my mind there is no sense in working for nothing and taking risks merely to secure business. There should be limits fixed beyond which business should be refused. I trust that an improvement will be made in this respect in the near future.

GENERAL TRADE POSITION OF INDIA.

As regards the trade of India generally, there was a balance in favour of India of some 9 million sterling for the 9 months ending December, 1928. For the first two months of the year a favourable balance was shown in January, but in February an adverse balance of some 117 lakhs of rupees. This adverse balance was due chiefly to the import of wheat from Australia and Canada, which is now in course of development. India normally imports about 50,000 tons of foreign wheat, and the unusual imports which are now taking place are due to (1) partial failure of the monsoon in the North-West Provinces and Punjab, (2) the restriction of the area under cultivation, and poor crop for last year, (3) the higher standard of living amongst Indians in the big towns in the North of India; for what rice is to Eastern and Southern India wheat is to Northern India, and in case of failure of the monsoon, not only is there no balance of wheat in the country for exports, but, as is the case now, large imports are necessary.

In the Punjab the crop for last year was 20 per cent. below the normal, and in the United Provinces 7 per cent. The average crop in the Punjab and the United Provinces is about 9 million tons, of which 8 million tons are consumed in the country. At the present moment, we believe, some 800,000 tons have arrived or are in course of transit, from Australia and Canada to India, so that for this month there is likely to be again an adverse balance of trade. This 800,000 tons wheat represents a sterling value of about £8,000,000. Had wheat been available for export bills would be offering to that extent.

INDIA'S COTTON CROP.

The cotton crop for all India is estimated round about 6,000,000 bales, and exports up to date from Bombay and Kurrachee are in excess of those for last year by some 350,000 bales. Indian mills will also be consuming more if the insane policy of strikes in Bombay comes to an end through sheer exhaustion. I regret to say that there is no sign of improvement in the Bombay mill industry, which would seem to need drastic handling, but with a strike lasting for more than six months no result but disaster could be possible.

Exports of jute and tea have been quite up to the normal, and we should say that both the jute mill and tea industries are in a very healthy condition.

A noticeable feature in the export trade of India has been the increased shipments of ground nuts, which now exceed one million tons.

As regards imports of yarn and piece goods, it appears that though Manchester still maintains its hold on the trade in white goods, Japan is increasingly supplying India's requirements for unbleached and coloured piece goods.

The increase in the sales of coloured goods from the Continent and Japan is undoubtedly due to the cheaper cost of production in those countries.

With cost of production in the United Kingdom on the present basis, sales of Manchester goods must suffer. The purchasing power of India is little, if any, above what it was in pre-war days, and, in view of this, India can hardly be expected to be in a position to purchase the same quantity of goods at higher prices.

Admittedly Manchester goods still hold their own when quality, compared with price, is concerned, but when the purchasing power of the consumer is small, price is a much more important factor than quality. It is, therefore, of prime importance that the question of cost should be seriously and efficiently tackled by the Lancashire mills. I welcome, therefore, the movement initiated by the Lancashire Cotton Corporation, Limited, and wish it all success.

BURMAH AND CEYLON.

In Burmah, trade conditions, with the exception of timber and oil, have been decidedly unsatisfactory. The foreign demand for rice was weak and prices accordingly dropped, and as a corollary the piece-goods market sagged and importers suffered.

In Ceylon the cloth bazaar has also suffered, its buying power being curtailed by the lower prices obtained for the principal exports, tax and rubber, especially the latter: but at the moment the outlook is hopeful.

STRAITS AND F.M.S.

As regards the Straits and F.M.S., the chief feature of interest has been the effect of the withdrawal of the restriction scheme connected with the rubber industry. The anticipation of this withdrawal caused, perhaps, even more trouble and anxiety than when the restriction actually came to an end in November: but it meant this, a reduction in price for spot rubber from 1s. 8d. per lb. to the lowest limit of 7¾d. in November. That such a decline in price of the commodity eventuated without a great catastrophe, although, of course, difficulties have been created, is a remarkable testimony to the soundness of the trade. With the price of rubber at about 1s. a lb. and practically on rock-bottom basis, the outlook is healthy. The American consumption has increased, the world's consumption should increase, and with the economies effected and likely to be effected in the working of estates, we can look foward to the prospects of the rubber industry with confidence.

The output of tin also showed an increase and the price has dropped about £20 per ton, as compared with prices for the two preceding years.

As regards imports, the fall in the price of rubber has naturally reacted on the consumption of imported goods, but not to the extent anticipated, and the general evidence is that normal trading in the bazaars has recommenced.

The boycott of Japanese goods continues locally amongst the Chinese section of the community in the Straits. This is to the advantage of imports from Europe.

The outlook generally in Malaya for the coming year seems much brighter than was anticipated some months ago.

CHINA.

Now about China, there has been a remarkable recovery during the past year. Civil war has stopped, and there are distinct signs of a will to peace on the part of the generals and party leaders who control the various areas in that vast country. They have been sitting round the same table for some months and the Government at Nanking is now formally recognised as a Central Government representing the whole country. With the general desire for peace amongst its leaders backed up by the powerful Chinese banking and commercial interests I cannot believe that the present movement of troops will lead to anything like the recurrence of civil war. China is in a state of transition from civil war to settled civil government, and in that process troubles of minor magnitude are bound to arise. With the partial restoration of internal order there has been an immediate improvement in trade, the Customs figures showing an increase of Tls. 8,000,000 for the past year. Business in North China and Manchuria has been fairly good on the whole, and one of the outstanding features in that sphere has been the huge import of flour from Canada.

JAPAN.

In my speech last year I referred to the effects of the financial crisis of 1927 in Japan, when several banks had to go into liquidation; an interesting sidelight on the events which then took place is that 567 banks have since participated in various amalgamations, and the net decrease in the number of banks of all kinds is no less than 317. At the end of 1926 the number of banks of all kinds operating in Japan proper amounted to the formidable total og 1,704, and there is little doubt that the weeding-out process country as a whole.

Trade and economic conditions in Japan showed no improvement during the past year, and the adverse balance of trade was approximately Yen 122,000,000. The agitation in the Press and in certain financial circles for the lifting of the gold embargo still goes on, resulting every now and again in a wild gamble in Yen, but no authoritative statement has yet been made by the Government of definite plans for the removal of the embargo—other than that it can only come about when the stabilisation of the country's finances has been completed and on a settlement of the China problem.

BALANCE SHEET ITEMS.

Turning to the balance sheet the item of bills of exhange and Treasury bills shows a reduction of £5,945,666, as compared with 1927. But of this amount over £2,000,000, is accounted for by the sale of Treasury bills held in India, proceeds of which were remitted to London. Against this we have an increase in cash £999,000, and an increase in loans and bills discounted of £2,277,000. Sundry assets also show an increase of £81,000. On the liability side loans payable show a reduction of £2,639,000.

In conclusion, I desire to express the thanks of the board to Mr Preston, our chief manager, and his fellow managers at head office, Mr Bruce and Mr Miller, for their untiring and ceaseless attention to the interests of the bank. I would also thank, on behalf of the board, the managers abroad and the entire staff, home and foreign, for their loyal and devoted efforts to serve, in the best possible manner, the interests of the bank.

The report and accounts were unanimously adopted.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION, LIMITED.

LARGE INCREASE IN PREMIUM INCOME.

The forty-eighth ordinary general meeting of The Employers' Liability Assurance Corporation, Limited, was held, on the 27th instant, at Hamilton House, Victoria Embankment, London.

Sir Joseph Broodbank (the chairman) said that the Corporation had again made a large and satisfactory increase in total premium income, which had been obtained in every country where they were established. The fire account showed an increase of £6,920, and, while the resulting profit was not as large as last year, it was still quite good. The accident account, which last year showed a loss of £6,153, this year had resulted in the substantial profit of £33,586.

The general account showed the large increase of £900,488, the largest portion of which, £659,475, was from business in the United States of America. He wished to emphasise that their American business, which was by far the largest portion of the total, had shown a substantial average profit for at least the last ten years. Their business in Canada, while showing a large increase, had again resulted in a loss.

The amount carried to profit and loss account was £435,111, and, after providing for the usual dividend of 4s. per share, free of income tax, there was carried to the general reserve fund £134,793—the largest sum they had carried forward since 1920, which was the last of the boom years after the war. As to the associated companies, in December last the shares of their two American subsidiary companies were sold.

With regard to the Clerical, Medical and General Life Assurance Society, they had this year established a record, and had passed the £2,000,000 mark of new life business for the first time in their century-old history. It was one of the most prosperous life offices in the kingdom. Its bonuses increased every quinquennium, and it was expected that the next distribution to be made in 1930 would prove to be the record one to the benefit of both the policyholders and the Corporation as shareholders.

In conclusion, the chairman said that, taken as a whole, the Corporation had a fine business—widespread over the whole world—and they had a high reputation which was international. Their finance was perfectly sound and healthy, and they had a competent staff to organise and administer the business.

The report was unanimously adopted.

EASTERN BANK, LIMITED.

DIVIDEND OF 9 PER CENT.

The nineteenth annual general meeting of the Eastern Bank, Limited, was held, on the 27th instant, at the offices of the bank, 2 and 3, Crosby Square, London.

Mr J. S. Haskell (chairman of the company) said: The profits for the year, including the amount brought forward, amount to £164,469 19s. 8d. After carrying £25,000 to the reserve fund, thereby increasing it to £450,000, and writing down premises and furniture by £5,000 to £189,576 11s. 2d., we are able to recommend a final dividend of 5s. per share, which, with the interim dividend paid in October last, is equal to a distribution of 9 per cent. for the year, the rate maintained during each of the seven preceding years.

INDIA.

India was once more blessed with a good monsoon. The figures relating to her trade in 1928 show an improvement upon those of 1927. Thus the imports and exports of merchandise during 1928 amounted to £186,000,000 and £253,500,000 against £185,000,000 and £245,000,000 in 1927. The imports of gold and silver in 1928 amounted to £15,800,000 and £10,800,000, against £12,300,000 and £11,300,000 in 1927. Thus there was a visible balance of trade in favour of India of £42,350,000 in 1928 against £37,500,000 in 1927. As regards the share of this country in India's trade the figures for 1928 show a contraction of both imports and exports in comparison with those of 1927. Of the decrease in imports cotton goods accounted for £500,000. This particular decrease is, to say the least, unfortunate if regard be had to the leeway it is necessary to make up in order to attain figures approaching those prevailing before the war.

There is, however, ground for hope. Competition such as has now to be faced in India and elsewhere can only be met by combined effort. That effort is to be made, at any rate by a section of the Lancashire cotton trade, by a scheme of rationalisation which has been conceived under most favourable auspices. The scheme must necessarily take time to yield appreciable results. There is, however, every reason for believing that ultimately substantial results will be attained. 1928 was in certain respects a trying year for India. It was marked by strikes in various industrial centres, particularly Bombay, where there was a stoppage of some six months in the cotton mill industry. The sinister feature about the strikes throughout India has been the Communistic influence in their inception and conduct.

Communism is not of indigenous growth in India. It is a foreign importation. The Public Safety Bill recently re-introduced into the Legislative Assembly, which provides in effect for the deportation of Communists who have come from without and the forfeiture and control of Communist funds remitted to India, would go far towards cutting off the importation.

CEYLON AND IRAQ.

The prosperity of Ceylon depends in the main upon rubber and tea. The prices of both these commodities in 1928 were lower than in 1927, that of rubber being considerably lower. With an increase in the price of rubber, offset it is true by a small decrease in the price of tea, the prospects of Ceylon are brighter than they were a year ago.

Trade in Iraq during 1928 showed little if any improvement over 1927. The economic development of the country will of necessity be a matter of time.

The Government of H.M. King Feisal have spent and are continuing to spend substantial sums upon irrigation. An Agricultural Department of the Government is ready to give advice upon modern methods to the individual, whilst an Agriculture Society recently formed under royal auspices aids co-operation. H.M. King Feisal is himself an enthusiast, his farms being equipped with modern machinery.

PROSPECTS.

The prospects for the current year are still uncertain. There have been indications of an improvement in trade in certain directions, but a disturbing factor has been introduced by the rise in the Bank of England rate to 5½ per cent., followed by a rise in the Imperial Bank of India rate to 8 per cent. The latter, though the highest since 1924, is seasonable A decline should take place when the export season is drawing to a close. The crucial factor is that of the Bank of England rate. If a further advance can be avoided and great efforts are being made to that end, trade should adjust itself to the present rate and the improvement we have so long desired may not be appreciably checked.

The report and accounts were unanimously adopted and the formal business was duly transacted.

On the proposition of Mr Joseph Nissim a resolution was passed amending certain provisions relating to the remuneration of the directors, and the proceedings terminated with a vote of thanks to the chairman, directors and staff.

THE SALT UNION, LIMITED.

THE TRADING OUTLOOK.

SALT INTERESTS SHOULD BE MERGED.

MERSEY POWER: ENCOURAGING PROSPECTS.

The fortieth ordinary general meeting of shareholders of the Salt Union, Limited, was held, on the 26th instant, at the Exchange Station Hotel, Liverpool.

Mr George Henry Cox, J.P., chairman of the company, presided over a good attendance of shareholders.

Mr E. C. Wickes, secretary, having read the notice convening the meeting,

The chairman said: Ladies and gentlemen, as you have had an opportunity of perusing the report and accounts—which are again very satisfactory—no doubt you will agree to take them as read. (Agreed.)

Before commenting upon them, I wish to refer to the death of Mr John Rigby, who passed away in January last in his 84th year. He occupied many responsible positions with the company, and was for several years prior to his retirement a member of the board.

SATISFACTORY FIGURES.

The figures before you, having regard to the difficulties of the trade situation, form an account of our stewardship with which I think you may be well satisfied. On your behalf I should like to take this opportunity of thanking the managing directors, the staff and workpeople for their respective efforts culminating in these excellent results.

The balance sheet calls for very little comment. There is a net decrease of £16,254 in the properties account chiefly due to sales of unwanted properties and especially of cottages. These latter are not economic holdings, due to taxation and high rates and heavy costs of repairs.

Investments show an increase of £36,196, representing purchases of gilt-edged stocks.

The general reserve fund remains at the substantial figure of £550,000 and does not require further additions for the time being.

With regard to shares in allied companies, I will refer later to the changes in form of our Mersey Power Investment, which is the only item calling for special comment.

Turning to the other side of the balance sheet, contingencies account, which after being utilised for the purposes contemplated was started again with an allocation of £35,000 out of the profits of 1927, will total £60,000 with the £25,000 it is to receive out of the profits of 1928.

With regard to the profit and loss account, the gross profit shows a decrease of £40,678 for reasons which you will understand when I go more closely into the trade matters, as I propose to do in a moment. You must bear in mind that, as usual, we have made ample provisions for depreciation and obsolescence before arriving at the profit.

Other items in the profit and loss account call for no special comment.

TRADE MATTERS.

To deal with trade matters, our total deliveries for home and export markets were practically the same as those for the previous year. There have been decreases in certain directions, but increases in others.

CALCUTTA AND THE EAST.

To Calcutta we shipped less than in 1927, but obtained a better profit. The competition of Solar Salt from several sources by new shippers outside the Importers' Association of Bengal has been very active, and has compelled the latter to drop prices. It may result at the end of the year in the resumption of unrestricted shipments, which will make the regulation of prices impracticable. It will be a great pity should this occur, for it must result in an unprofitable trade for all concerned.

We shipped considerably more to Japan and obtained satisfactory prices, but there again great competition is threatened, and of a character that it will be very difficult for us to cope with.

WORLD-WIDE SALESMANSHIP.

Generally speaking I may say that only constant and strenuous efforts on our part enable us to hold what export trade we still retain. We long since followed the excellent advice as regards salesmanship recently given by the Prince of Wales. We employ a large number of travellers both at home and abroad who possess in an appreciable degree the qualifications commended by His Royal Highness. Chief among them is Mr. J. Parke Jackson, a member of the board, who has travelled for us repeatedly in many foreign countries, and throughout the length and breadth of the British Empire. (Hear, hear.)

ORGANISATION OF SALT TRADE.

Last year I foreshadowed the possible calling of meetings for the transaction of important business. There was then good reason to believe that the salt trade might be consolidated, and to do so effectively would have necessitated the widening of the present Salt Union borders, which in turn would have involved our obtaining powers to issue new shares, &c. This was the very simple meaning of the hint just referred to, which led to fantastic speculations on the part of certain sections of the press. Although the merging of all existing salt interests is not yet possible, we still regard it as the only rational method of organising the trade, and placing it upon a sound economic basis. (Hear, hear.)

In the meantime, our deputy chairman, Mr Clark (who as you know is also chairman of the Salt Manufacturers' Association), has succeeded in getting that Association renewed for the current year as a minimum period on a quota basis, each member of the Association being entitled to a specified share of the trade. Mr Clark showed great tact and patience throughout these very protracted negotiations, and it was only at the eleventh hour that the present settlement was arrived at. Mr Clark and the whole associated salt trade are to be congratulated upon the successful outcome. (Hear, hear.) But competition is still keen as a result of the tactics of certain opposition salt-makers, both at home and abroad. They have been, and will continue to be, checkmated with the result in many cases of the lowering of prices. The expense of preserving our business against such attacks is considerable, and in due time will, if wiser counsels do not prevail, be reflected in the accounts of all salt manufacturers.

LABOUR.

Excellent relations have existed throughout the year between the management and the large body of artisans in our employ.

The conditions of the trade have so far enabled us to pay the full rates of wages, and we hope this state of things may continue, but all parties must bear in mind that the keen competition existing lowers prices, and so reduces the amount of the fund available for wages. We have helped to promote welfare schemes in connection with the works, and especially at our Stoke Prior Works in Worcester, where a wonderful spirit of self-help and good feeling has resulted. Bowling greens, tennis lawns, cricket and football, and camera and fishing clubs, have been established and suitable recreation rooms provided. An interesting magazine is regularly published. The initiative has come from the men and women of our staff, who have done much of the work themselves, in which, of course, the Board has also assisted. Such a centre as has thus been provided is of special value at a place like Stoke Prior, where there is not even a village near at hand. We are also about to erect new offices at Stoke for the old ones are quite inadequate for present requirements.

We are much indebted to our manager, Mr Lockhead, for the work and enthusiasm he has displayed in connection with these affairs. (Hear, hear.)

COAL AND ECONOMY.

Coal has once more been the predominant factor in the economic production of our salt, and has thus helped us to achieve the favourable results shown in the balance sheet.

Having been entirely free from contracts, we have taken full advantage of the declining markets. We have provided large reserve stocks at the works, and at the same time regularly bought our weekly requirements in addition.

Our average purchasing prices have been the lowest since 1922 but there is now a tendency for them to steady, and in some cases slightly to advance.

We cannot expect that the recent low prices will be permanent; and it must ultimately be in the interests of the collieries and consumers alike that the mines should not be worked at a loss, but that they should yield a reasonable profit.

MOST UP-TO-DATE MINE.

I mentioned at our last meeting that we had been compelled to abandon the Adelaide Mine and that we had taken steps immediately to open the Meadow Bank Mine.

This was rapidly carried out, and simultaneously 13,000 tons of rock salt were raised by makeshift gear.

The mine is now unquestionably the most up-to-date salt mine in the world, being equipped with electric winding gear, electrically operated rock salt cutters and electric locomotives instead of ponies down below; and the most complete labour-saving arrangements for grinding, grading and dispatch of rock salt on top.

With the exception of the purchase of part of the machinery' the whole of the work was done by our own staff. This is a most excellent performance, and Mr Malcolm and the members of his staff are to be highly congratulated upon it.

We have thus added a very valuable and profitable adjunct to our estate. (Hear, hear.)

PURCHASE OF BRIDGE SALT WORKS.

During the year we negotiated the purchase of the Bridge Salt-works owned by Messrs John Garner and Co., these works being exceptionally well placed on the River Weaver at Winsford. The transaction does not appear in the accounts before you, as it was not completed by 31st December. But I can say that the Salt Union have acquired control of a works with a potential capacity of 35,000 tons a year (together with rights over certain other lands of the vendors and valuable export connections) on reasonable terms. At the same time the danger of competition from those works is now removed. The Salt Union Board has, subject to your confirmation to-day, been strengthened by the addition of Mr Barton, one of the vendors of the Bridge Works. (Hear, hear.)

DE-RATING.

The new Local Government Bill which is certain in due course to be placed on the statute book, should afford us some relief in a full year, assuming that assessments are not substantially raised under the provisions of the 1925 Rating and Valuation Act. So far as the current year is concerned, the new Local Government measure can only benefit the final quarter, as the rating relief provisions do not come into force until 1st October. No relief is provided for our great undertaking, the Mersey Power Company, because that ranks among the public utility concerns which are excepted.

The Bill illustrates the current tendency of legislation towards a centralising and bureaucratic policy, which takes little account of local conditions and local patriotism. In a sense it may be designated a semi-revolutionary measure, for it completely alters both rating and the machinery of local government. The ultimate outcome it is impossible to forecast, but some of the consequences may turn out to be unfavourable.

MERSEY POWER COMPANY'S PROSPECTS.

Before dealing with the position of the Mersey Power Company and its relation to the parent company, the Salt Union, I desire to say a few words about certain overtures that were made to us by wealthy American and other buyers with a view to our selling the undertaking to them.

After going very carefully into the matter we decided not to sell at the figures indicated. We consider that it is in your best interest to retain this very valuable property for the present.

Since we last met the subscribed share capital of the Mersey Power Company has been greatly enlarged, which has enabled the Power Company to pay off all the mortgages and loans with the exception of £200,000 lent under the Trade Facilities Act on favour-able terms. Thus the balance of the loan of £300,000 from the Government has been paid off; also the second debenture for £296,475 held by the Salt Union. A public issue of 400,000 6 per cent. cumulative preference shares of £1 each at par was made by the Power Company's directors last autumn, with preferential forms for Salt Union shareholders. The result was an over-subscription of rather more than ten times the amount.

In addition 150,000 6 per cent. cumulative preference shares, ranking *pari passu* in all respects with the issue just mentioned after June next, were allotted to the Salt Union in part satisfaction for the cancellation of its second debenture. The remainder of the second debenture, namely £146,475, was satisfied by the allotment to the Salt Union, at par, of 146,475 ordinary shares in the Power Company. The Union's holding is now 495,471 ordinary and 150,000 preference shares, a total of 645,471 shares of £1 each out of 1,046,475. With the exception of 250 shares held by each director of the Power Company as his qualification, the whole of the ordinary shares, with their valuable future possibilities and voting power are held by the Salt Union.

I will not take up your time in describing the progress of the Power Company in 1928, as immediately these proceedings are through it is to hold its first public meeting, which many of you will doubtless attend as subscribers to the preference issue. I need only say here that a dividend of 5 per cent. has been declared, and that the prospects are most encouraging. A higher dividend could have easily been declared, but the Power Company deemed it wiser to conserve its resources and build up adequate reserves. (Hear, hear.)

I now beg to move: "That the report of the directors with statements of accounts for the year ended December 31, 1928, now submitted, be received and adopted." (Applause.)

Mr H. J. Falk seconded the motion, which was carried unanimously.

Messrs R. G. Barton and J. H. Beazley were re-elected directors, and the remaining business was routine.

VICKERS LIMITED.

BENEFITS OF AMALGAMATION.

The annual general meeting of shareholders of Vickers, Limited, was held, on the 25th instant, at the River Don Works, Sheffield. General the Hon. Sir Herbert A. Lawrence, G.C.B., chairman of directors, presiding.

The chairman, in the course of his address, said that the net profit for the year ended December 31st last was £939,902, including dividends from subsidiary companies and investments. The profit included the trading profits on certain armament and other contracts which under the terms of the agreement for sale to Vickers-Armstrongs had been retained and completed by the company.

Proceeding, the chairman explained that in view of the critical times through which industry was passing it was desirable that the company should build up sound revenue reserves. It had to be remembered that there had not yet been time to effect the economies which it was hoped to secure from the amalgamation policy which had been steadily pursued since the reorganisation, and the financial assistance required by the amalgamated businesses must be provided by Vickers.

During the past year the fusion with Armstrong Whitworth and Co. had been completed, and in furtherance of the reorganisation policy Vickers-Armstrongs had disposed of the Sheffield and Openshaw undertakings, and the stamping department at Elswick to the English Steel Corporation, a company which had been formed to consolidate the commercial steel interests of Vickers, Vickers-Armstrongs, and Cammell Laird and Co. In addition to its share interest in the new corporation Vickers had agreed to advance to it a sum up to half a million pounds for working capital.

The formation of the new company afforded an opportunity for placing that section of the steel industry in a position to secure greater efficiency and substantial economies in production, so that it might be able to meet successfully the ever-growing competition of foreign manufacturers. Negotiations were already taking place for the inclusion of other firms in the combine. Ultimately the English Steel Corporation should become a powerful unit. It could not, however, be stressed too strongly, that the full benefit of the re-organisation of the steel industry which was taking place would not be apparent for two or three years.

It was essential that each of the works should instal the latest and most efficient plant if they were to produce on a competitive basis. The companies must be in a financial position both to if they were to keep up-to-date with the latest methods of pro-duction.

Vickers-Armstrongs, Limited, had earned a profit of £182,734 in the past year, though owing to the retained contracts, &c., that did not represent the true earning capacity. Further, the year had been one of transition for the company.

The process of rebuilding the fortunes of the company had been a difficult one, and the task was not yet completed, but they had laid the foundations of what they believed would be a successful future. They were sowing the seeds of a new industrial era, and he believed the time was not far distant when the changes in production methods and the advantages of co-operation, would again give a satisfactory yield to those associated with British industry.

The report was adopted, and the dividend of 8 per cent. agreed to.

BRITISH INSULATED CABLES, LIMITED.

BONUS SHARES.

IMPORTANT CONTRACTS ON HAND.

CHAIRMAN ON THE COMPANY'S SUCCESS.

The thirty-third ordinary general meeting of shareholders of the British Insulated Cables, Limited, was held on Tuesday, the 26th instant, at the Exchange Station Hotel, Liverpool.

Mr D. Sinclair, Chairman of Directors, presided over a good attendance of shareholders.

Mr W. Kerfoot (Secretary), having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, congratulated the shareholders on another successful year of trading.

SATISFACTORY PROFIT.

They would agree, he said, that the profit of £617,951, which compared with £609,242 for the previous year, was a satisfactory result. The profit, with the balance brought forward of £305,880, made a total of £923,831.

After payment of directors' and trustees' fees, &c., debenture interest, preference dividend and interim dividend on ordinary shares, amounting to £140,442, a disposable balance remained of £783,389. Allowing for the transference of £100,000 to depreciation account and £299,966 to reserve account, the balance available for dividend was £383,423. From this was recommended a further dividend of 10 per cent. on ordinary share capital, making, with the interim dividend already paid, a total distribution of 15 per cent. for the year in addition to the share bonus distribution, and leaving £250,089 to be carried forward.

RESERVES AND DEPRECIATION.

Issued share capital and debenture stock remained unchanged in the balance sheet. The reserve account, increased by last year's appropriation of £200,000, now stood at £900,000. Besides being augmented by the transference of £299,966 from trading account, the directors had brought £185,034 from investment reserve and £150,000 from special reserve, thus merging all the reserves shown in the balance sheet in one group, aggregating £1,535,000. To this he would refer later.

The value of property, plant and machinery, standing at £1,564,823, was an increase of £167,877 on last year. The increase represented expenditure on capital account over and above main-tenance and upkeep of buildings and plant charged to revenue. From the total value of property and plant, it was again proposed to write off £100,000 for depreciation.

Stocks and work in progress at £1,026,347, an increase of £109,779, was a fluctuating figure depending on the amount of work on hand and the cost of raw materials. Debtors at £1,473,789 closely corresponded to last year.

INVESTMENTS.

The value of investments had hitherto been subject to a contin-gent reservation which, on a careful review of present and probable future values, was now regarded as unnecessarily conservative. Accordingly, the amount of £185,034 had been, as explained, transferred to the reserve account.

Looking at the figures, it would be observed that the company was possessed of ample cash resources, not only for carrying on its business, but to enable it to participate in any trade or other investment deemed to be beneficial to its interests.

BONUS SHARE DISTRIBUTION.

"As a result of the adjustments and transfers to which I have referred (the chairman proceeded), the company's reserves now amount to the large sum of £1,535,000, exclusive of the carry-forward of £250,089.

"It is the opinion of your directors that this amount is in excess of the requirements of the company, and it is therefore proposed to distribute from this reserve to the ordinary shareholders, by way of bonus, one ordinary share free for every existing four ordinary shares held, together with 500,000 'A' 5½ per cent. cumulative preference shares of £1 each in the proportion of three such shares free for every existing eight ordinary shares held, such shares to rank for dividend as from 1st January, 1929.

"The effect of this will be to increase the issued capital of the company by a total of £833,333, which will, of course, in the following balance sheet reduce the amount of the reserve account by that sum and, after adding something like the annual increment to reserve in recent years, leave the reserve account in the region of £900,000. The interest on this additional capital will involve a somewhat heavy burden of new interest to find, but with con-tinued hard work on the part of everyone and a certain amount of confidence which our past history justifies, we hope to be able to carry the weight." (Hear, hear.)

ALLIED COMPANIES.

The various companies in which British Insulated Cables, Limited, was particularly interested continued to do well.

The Midland Electric Corporation for Power Distribution, Limited, having distributed the bonus of share for share referred to last year, now proposed to pay a dividend of 8 per cent. on the increased capital, equivalent to 1 per cent. better than last year.

The Electric Supply Company of Victoria was in a much more favourable position and had entered into a provisional agreement with the Victorian Government by which the whole undertaking would be sold to them in three years' time on terms and conditions fair and advantageous to both parties.

VALUABLE AGREEMENT.

The "Closer Working" Agreement, to which he had previously referred, continued to work smoothly and satisfactorily. Valuable results had been achieved by combination in research, and these were reflected in the improvement of quality and processes of manufacture. The full benefits of the arrangement had not as yet been reaped. A great deal remained to be done, on the result of which it was hoped further advantages would accrue to the company.

STAFF AND WORKPEOPLE.

To the excellent staff pension fund the company had now con-tributed a sufficient sum to place it on a thoroughly sound actuarial basis, making unnecessary the provision of further sums beyond the regular contributory payments.

With regard to the workpeople, the year had been marked by an absence of disputes and an increase in cordiality. As denoting their keen interest in the welfare of the employees, the directors recommended that £50,000 be set aside from reserves, the income from which was to be utilised to provide compassionate allowances for workpeople and their dependents. It was intended that each individual case should be dealt with on its merits in so far as the fund permitted.

IMPORTANT NEW CONTRACTS.

During the last twelve months the company had fully maintained its position in the electrical world. Its products covered all kinds of electric conductors, both bare and insulated, and they were well equipped to deal efficiently with all reasonable demands that might be made upon them.

The large contract recently secured to supply and lay cables in the London area for the Central Electricity Board was of a value of well over £500,000. The major portion of the cable would be for a working pressure of 66,000 volts, practically a replica of their cables which had been working successfully for the past three years on the North East Coast. These were still the only cables in this country working at so high a pressure.

Important contracts on hand included railway electrification in India, big transmission lines in this country for the Central Elec-tricity Board, and in the Federated Malay States for the Perak River Hydro Electric Power Company. The conductors for the overhead grid system in this country were of steel-cored aluminium, and in addition to supplying their own requirements for this material they had secured large orders for the sections being carried out by other contractors.

A NEW PRODUCT.

Steel cores coated with copper were a recent development of the business. They had entered into an arrangement with an American firm to manufacture and sell material of this description known as copper-weld wire, which had the advantage of high tensile strength coupled with comparatively high conductivity, and was particularly suited for overhead line work, in which a growing business was being done in this country and abroad.

The chairman referred with regret to the resignation of the senior director, Mr J. C. Stitt, and expressed high appreciation of his services. Mr D. Johnstone Sinclair had been elected a director.

Owing to the increasing burden of executive affairs he (the chairman) had resigned the position of managing director, and

Mr G. H. Nisbett had been unanimously appointed to the vacancy, while Sir Alexander Roger had been appointed vice-chairman.

APPRECIATION OF SERVICES.

The chairman concluded by expressing thanks to officers, staff and all, from the highest to the lowest, who by their devotion to the company's interests had contributed to the success attained during the past year. They would like them to know their services were appreciated, and shareholders, he was sure, would associate themselves with this expression of thanks. (Applause.)

The directors' report was adopted, and the accounts were approved and confirmed.

Messrs J. A. Smith, D. Sinclair, and Eric Taylor, were re-elected directors, and the appointment of Mr D. Johnstone Sinclair as a director was confirmed.

A resolution was carried in favour of the payment of a further dividend of ten per cent. on the ordinary shares, making with the interim dividend already paid a total distribution of fifteen per cent. for the year ended December 31, 1928.

Messrs Chalmers Wade and Company were re-appointed auditors.

Mr J. McKay, in proposing a vote of thanks to the chairman and directors for their services during the year, made a commendatory reference to the recommendation of the Board to set aside £50,000 from reserves for the provision of compassionate allowances for the company's employees and their dependents. He said it showed the democratic spirit of the Board, and the spirit of humanity which prevailed amongst its members. (Hear, hear.) In conversation with many people on the subject before coming to that meeting the expression had been unanimously used that the Board had done a very wise act, especially in these days when labour was always wanting to know where its rights were. The Board of the British Insulated Company had demonstrated to the public that they had the right spirit, which ought to permeate all industry, and the right spirit which shareholders also ought to have. (Hear, hear.)

At an extraordinary general meeting of the company, held subsequently, a resclution was adopted deleting Articles 116 of the Company's Articles of Association, and substituting a new Article, which it was explained, would give the Company and its directors the widest possible powers in connection with capitalisation, and would cover all reasonable requirements.

BRITISH ALUMINIUM COMPANY, LIMITED.

INCREASED TRADING PROFIT.

The annual general meeting of the British Aluminium Co., Limited, was held, on the 27th instant, at Winchester House, London, E.C. 1.

Lt.-Col. Stephen H. Pollen, C.M.G., who presided, said that the net profit was £441,383 against £432,176 for the previous year. A year ago he drew attention to increased competition and lower prices. A further reduction in prices occurred towards the end of the first half of 1928, and competition was intensified, particularly in semi-manufactured products. In spite of these conditions (which continued) the trading profit had increased, mainly due to more stable industrial conditions and to higher efficiency, record production, and materially decreased costs.

Out of the profits of the year, £50,000 had been appropriated to the depreciation reserve account, which now stood at £900,000. The debenture redemption account and the depreciation reserve amounted together to £1,345,055. The directors had again made an allocation of £100,000 to the reserve account, bringing it up to £850,000. He again would draw attention to their considerable financial obligations in respect of the Lochaber scheme, involving the guarantee of the debenture stock of the North British Aluminium Co., Limited, and the provision of the ordinary share capital of that company. In addition, the British Aluminium Co. was itself incurring further considerable capital expenditure to provide the raw materials for Lochaber. In these circumstances, they considered it quite essential to continue to build up a very strong reserve account. An interim dividend of 4 per cent. had been paid on the ordinary share capital, and a final dividend of 6 per cent. was recommended, payable on April 1st next. There would remain £33,843 to be carried forward.

The results showed that they had been able to do rather more than offset the reduced prices by reductions in costs and increased efficiency. There was a limit to what could be achieved in this direction, and in considering the prospects for 1929 it must be remembered that they started the year with a lower level of prices, whereas last year a higher range of prices ruled for the first few months. Against this they had the pleasing feature of the maintenance of the demand for their products, which encouraged anticipation of a satisfactory volume of sales this year.

The report and accounts were unanimously adopted.

TRADE INDEMNITY COMPANY, LIMITED.

MR C. E. HEATH ON CREDIT INSURANCE.

The eleventh ordinary general meeting of Trade Indemnity Co., Limited, was held, on the 22nd instant, at the Cannon Street Hotel, London.

Mr C. E. Heath, O.B.E., the chairman, presided, and in the course of his address said: Gentlemen, we have to point to varying results. 1927 has not wound up quite as it should have done; 1928, on the contrary, is very good, but I hope you will agree with us that on the whole satisfactory progress has been made. So far as the year 1927, with which we are now principally dealing, is concerned, there was a falling off in premiums as compared with 1926. But besides the smaller premium received in 1927, we have had to reckon with the fact that, so far from having to add additional premiums received in 1928 on that account, the returns, reinsurances, and so on have more than swallowed them up. Then, too, the loss ratio for the year was at the rate of 63 per cent. of the premiums as against 57 per cent. in 1926. Notwithstanding these disadvantages, we have been justified in recommending the same dividend—6 per cent.—and putting the same amount to reserve—£15,000—thus bringing it up to £50,000. The carry-forward is necessarily less, but, as against that, instead of a depreciation in our investments of about £1,000, there is an appreciation of nearly £5,000. The amount reserved to meet claims still to be paid for 1927 and previous years is rather less—£30,463, against £33,389. These figures are the estimated known losses. Here the smaller liability may be put down to the smaller total of 1927 premiums. I am glad to be able to state that Mr Spain's estimates in this respect have turned out in the result to have been very accurate. Considering the state of trade in 1927 it must be admitted that we have not come out at all badly. As regards 1928, the figures are very encouraging. For the first time our gross premiums, without deducting brokerages and returns, have passed the £200,000 mark. After deducting brokerages and returns they are 24 per cent. up on those of 1927. Our own retained premiums have risen from £68,000 to £80,000, an increase of 17½ per cent. The number of policies issued has increased from 2,798 to 3,463, being 23·7 per cent. A satisfactory feature about the number of policies issued is that those for the export trade have increased by 30 per cent.—this in spite of very strong Government competition, and are now just double what they were four years ago There is no doubt, therefore, that we have really been of great use to what is perhaps the most important part of the country's trade.

"A VERY FINE POSITION."

At a rough guess at least ten million pounds worth of export transactions have been insured by your company last year—transactions which could probably not have taken place without your help. Altogether, 1928 so far looks quite satisfactory. Of 1929, of course, it is far too early to say much. It is of interest, however, to state that the gross premiums for January and February this year have beaten those for the same months in 1928 by about £10,000.

As regards our general position, it is quite first-rate. I remember it used to be said that it was safe to insure with any company which had assets equal to 100 per cent. of its retained premiums. We are able to say that our assets come to no less han 450 per cent. of our net premiums. That is a very fine position to be in and it puts us high up in the list of insurance companies.

The first world meeting of Credit Insurers, which was held in London, was followed by a second, which took place last year in Paris. As many as 200 persons took part in it. Among others, there were representatives of 40 French banks. Some of them made very interesting speeches on what is certainly one of the most important of our problems—the linking up of banking and credit insurance. It is in France, I think, that the need for his linking up has been most appreciated, and it is there that the alliance between the two has been more effectually consolidated than anywhere else. Quite apart from the practical questions of procedure and the methods of improving credit business which these international meetings have helped to solve, they have undoubtedly led to a strengthening of the bonds which unite the different credit insurance companies in different parts of the world. At home still more of the leading insurance companies have joined in our enterprise by becoming our reinsurers. We now have 18 companies in Great Britain, besides a good number of Lloyd's underwriters working with us.

As to the future, though we may be effected by depression in trade, and shall necessarily have our ups and downs, it now seems certain that credit insurance has come to stay. Not only are inquiries increasing daily in number, but new wants and new opportunities for credit insurance are constantly presenting themselves. The variety and versatility of our business is extraordinary.

The report was unanimously adopted.

LONDON LIFE.

CLERGY MUTUAL AND METROPOLITAN.

MARKED PROGRESS.

SURVEY OF ASSURANCE PROSPERITY.

QUESTIONS OF FUTURE POLICY.

The ordinary general meetings of the above companies were held on the 29th instant, at 81, King William Street, London, E.C.

Mr Reginald B. Jacomb (President of the London Life Association), in opening the proceedings referred to the resignation from the Board of Sir Fairfax Luxmoore on his appointment as one of His Majesty's judges and to the death of Mr. Francis Henry Beaumont, for 25 years President of the Association.

Continuing, he said "The publication for the first time of a balance sheet of the joint fund of the three offices, the London Life, the Clergy Mutual and the Metropolitan, makes this occasion an interesting one. The joint fund amounts to a little under £20,000,000. This figure makes one realise to what an important standing the association has attained.

Associated together are the London Life with two distinct funds, and the Clergy Mutual and the Metropolitan and in each case there are different problems arising in connection with distributions of surplus and other matters.

The problems which have come before us as directors are similar to those which have had or will have to be faced by many other companies, and for that reason I think that a general survey of the position of life assurance at the present time may be of interest.

PROSPERITY OF LIFE ASSURANCE COMPANIES.

Life assurance companies at the present time appear to be suffering from prosperity. Don't misunderstand me please. I only mean that the prosperity has come rather suddenly as a result of several causes all working the same way and, as a result of this prosperity, they are confronted with serious questions of inequity both as between different classes of assurance and as between existing and new policyholders.

The outbreak of war was followed by a tremendous depreciation in the value of securities and most offices had to pass their bonus altogether in order to meet the writing down in values. As prices gradually recovered, most of the appreciation was kept as a hidden reserve or actually transferred to reserve. (I am, of course, only speaking of the general tendency, and not referring to any particular office). At the same time, in spite of the heavy drag of income tax, the offices found they were able to get a better return on their new investments and, what is of greater importance still, they found that there had been a wonderful improvement in the rates of mortality. All these factors combined to make for prosperity, and as a result you will have noted the large bonuses which are being declared by nearly every company.

The very prosperity itself to which I have alluded is a danger, for it is easy to be persuaded into thinking that these bonuses can be maintained indefinitely. The real test which I want to emphasise is—"Are the rates of premium which are being charged for new assurances adequate, assuming that the rates of mortality will continue as favourable and the rates of interest earned be maintained—are these rates of premium adequate to provide the large bonuses which are now being given?" In many cases, indeed in most, I am afraid the answer is in the negative, and if large bonuses attract much new business, then some time or other in the future those bonuses must be reduced. Indeed, it is quite possible that in comparing two offices, the one which is giving the larger bonus may give the poorer result in the long run. This problem of the adequacy of the rates of premium to provide the rates of bonus declared is not a new one, but present conditions have made it of very great importance. There would appear to be three courses open to an office which is declaring an abnormally high rate of bonus if it desires to maintain this rate in the future. (1) To increase the rates of premium for new entrants, (2) To cease to transact new business, (3) To look for a higher return on investments—indeed, for such a return, whether in capital appreciation or in interest, as will provide the high rate of bonus to new entrants.

Each office will no doubt find the solution in its own way, but in No. 3 if it were to be adopted there seems to me to be an element of danger.

While we should, I think, get the best possible advice on investments with a view to the yield to be obtained, and while, with the very large funds we have to keep invested, we should spread our investments over a wide field, we should not forget that security is of greater importance than yield.

POSITION OF ASSOCIATED COMPANIES.

I will now consider the position of our own associated companies.

Take first the London Life and its reduction of premium system, which has been in force ever since its foundation in 1806; here we have an example of the prosperity I alluded to just now; we have been able for the second year in succession to grant increases of three in the rates of reduction, increases which were never contemplated in pre-war times, and there would not appear to be any difficulty in giving this increase for many years to come so far as existing members are concerned. The terms for new entrants are, however, too favourable, and a large new business would inevitably have an adverse effect on future distributions. In fairness to our present members it is right that the terms for new entrants should be revised and I hope that members will approve of the gradual steps suggested in the report.

Turning to the reversionary bonus system of the London Life, we are faced with quite a different situation. Here we have a young fund only started in 1914, a few weeks before the war broke out, which has been remarkably successful, but being a young fund it did not suffer materially from depreciation of securities nor broadly speaking has it gained to the same extent as older funds from the subsequent recovery in values. Its position is a normal one as compared with the abnormal position of the majority of companies. It is a great pleasure to be able to announce the increase of reversionary bonus from 38s. per cent. to 40s. This is a compound reversionary bonus, that is to say, it is calculated on the sums assured and existing bonuses and as compared with the rates of premium charged it is a remarkably good one. It is hardly necessary to remind you that on this class of policy we have declared yearly bonuses right from the commencement, at first 35s., then 36s., then 38s., and now 40s."

The President then reviewed the position of the Clergy Mutual before and after the war and, after alluding to the rapid recovery from the war position, said he was sure that with the bonus of £4 per cent. for whole life assurances with increases above age 65 and £5 per cent. for endowment assurances, the members would feel that the Society had done well for them.

"With the Metropolitan," he said, "we have an entirely different position. At the outbreak of war the Metropolitan adopted a cautious policy and increased their reserves in every possible way, with the result that, after having received but a small increase in rates of reduction during the last 14 years, the prospects for Metropolitan members are now extraordinarily good. With the 3 per cent. increase in rates of reduction mentioned in the report, we look forward to being able to give in the future better results still."

The President concluded his address with a tribute to the services of Mr Trouncer and the staff.

The reports and accounts submitted were unanimously adopted.

PINCHIN, JOHNSON AND COMPANY, LIMITED.

YEAR OF BRILLIANT PROGRESS.

CONTINUED EXPANSION.

The annual general meeting of the shareholders of Pinchin, Johnson and Co., Limited, was held, on Monday, the 25th instant, at the Hotel Cecil, London.

Mr Edward Robson (chairman) presided.

The Secretary (Mr. E. P. Thompson) read the notice convening the meeting, and the report and certificate of the auditors (Messrs. Gully, Stephens, Baillie and Co.) having been read,

The Chairman said: My Lords, Ladies and gentlemen, I beg to move "that the report of the directors dated March 13, 1929, and the balance sheet of December 31, 1928, now submitted, be, and the same are, hereby received and adopted, and that a final dividend on the ordinary shares for the year ended December 31, 1928, of 20 per cent. less tax, making, with the interim dividend already paid, 30 per cent. total for the year, less income tax, be declared and paid."

Before formally submitting the resolution for your approval, I should like to deal with the principal points referred to in our report and balance sheet recently submitted.

In the first place, I think I may congratulate you as shareholders upon the extremely satisfactory result obtained from the past year's trading.

RECORD PROFITS.

The net profit for the year, amounting to £422,796 1s. 7d., constitutes a further record in the history of this undertaking, and I think the extent of the figures given in the balance sheet indicates very clearly the very satisfactory progress that has been made during 1928. In every essential department of the undertaking we are able to record improved results, and I think the figures submitted to you emphasise in no uncertain manner the virility, strength and progressive nature of this highly successful undertaking.

As explained in the report, we have not brought into the accounts for the past year profits earned by the recently acquired Australian

and Indian undertakings, as owing to the necessity for changing the accounting period, it has not been found possible to bring the profits of these undertakings into our present accounts, although such profits are, I may tell you, very satisfactory.

STRONG BALANCE SHEET.

With regard to the balance-sheet items, other than our share capital, practically our only liabilities consist of the sum of £313,827 8s. for sundry creditors, so that the liability side of the balance sheet is not a very serious item.

With regard to the principal items on the asset side, I may mention that before bringing into the accounts the items of properties, plant and machinery, your board have made provision for a very substantial figure of extra depreciation on these items over and above the normal depreciation considered necessary. This special provision ensures to us a most conservative valuation of the assets referred to.

The items of stock in trade and sundry creditors call for no comment on my part, other than to formally assure you that the figures given have been arrived at after the fullest provision has been made for all likely contingencies.

ASSOCIATED AND SUBSIDIARY COMPANIES.

The item of associated and subsidiary companies, amounting to £493,580, is again a most conservatively valued asset. I might tell you that this item covers investments in various companies associated with us and allied to our particular industry, and I might further explain that in every instance the market valuation or the known value of the investments concerned, far exceeds the figures at which they are carried in our accounts.

The remaining items of interest on the asset side of the balance sheet consist of British Government and other trustee securities and cash at bankers and at call. These two items amount to over one million pounds, and I think that this must indicate to all of you the enormous strength of our position in relation to future prospects and developments.

HANDSOME BONUS DISTRIBUTION.

With regard to the resolution submitted: "That it is desirable to capitalise the sum of £344,989, part of the reserve and to allot and issue fully-paid ordinary shares to the ordinary shareholders on the Company's Register, March 14, 1929, in the proportion of one new share for each three old shares, held on that date," the Chairman said: I would mention that your board are fully convinced that they are justified in making this proposed distribution of reserves. If you refer to our balance sheet, you will notice that even after making the proposed distribution our reserves and carry-forward will amount to over £900,000, which figure we consider more than ample for the normal requirements of the business. In addition, we anticipate that these reserves will be further strengthened from time to time.

The resolutions were seconded by Mr C. G. Heywood (vice-chairman) and duly carried.

The retiring directors and auditors having been re-elected, the proceedings terminated with a hearty vote of thanks to the chairman.

An extraordinary general meeting followed, at which the proposal to sub-divide the 1,500,000 ordinary shares of £1 each into 3,000,000 ordinary shares of 10s. each was duly approved.

POWELL DUFFRYN STEAM COAL COMPANY LIMITED.

DEFINITE SIGNS OF IMPROVEMENT.

The annual general meeting of the Powell Duffryn Steam Coal Company, Ltd., was held, on the 26th instant, at Winchester House, Old Broad Street, London.

Mr Edmund L. Hann (the acting chairman and managing director), after referring to the resignation of Mr. Joseph Shaw, K.C., from the chairmanship of the company, and having dealt with several of the more important items in the balance sheet, said:

The profit and loss account shows for the year a debit balance of £231,805, which, after deducting £23,900 credit balance brought forward from last year, leaves a net debit balance on the account of £207,904.

The deplorable state into which the coal industry of this country fell has been the subject of much comment in the Press during the past year. In order that you may be in a position to grasp the essential factors of the situation, I think it would be useful to review briefly the history of the past few years.

CAUSES OF DEPRESSION.

During the years preceding the war there was a steady increase in the cost of production of coal, due entirely to legislation and increases in wages, but, notwithstanding this, the increasing demand for coal made a steady rise in prices possible, and consequently the coal trade during this period maintained a condition of comparative prosperity. During the war period and immediately afterwards, the world shortage in supplies caused an enormous increase in the price of coal, with the result that every nation having coal deposits of its own developed them to the fullest extent possible. Coupled with this there was a gradual replacement of coal for marine purposes of the monetary exchanges of the world, there was a general stagnation of trade.

During the period 1921 to 1926, when the coal trade of this country should have been doing all that was possible to maintain its share of the trade of the world and to reduce its costs to an economic level, the country had to endure a period of intense labour unrest, resulting in the strikes of 1921 and 1926.

A further material factor which has added enormously to our difficulties is the question of reparations. It is a fact which is not sufficiently recognised that the arrangements for reparations in kind have gravely injured the industries of this country and at the same time have conferred advantages both on our Allies and on our former enemies. Of all the industries in this country the coal trade has been the greatest sufferer, and of all the coalfields, South Wales has had to bear the greatest share of the burden, as German reparations coal has invaded markets which formerly drew the bulk of their coal supplies from South Wales.

Italy provides a striking example of what has happened. In 1913 Italy imported 10,700,000 tons of coal, of which 9,600,000 tons were supplied by Great Britain, the South Wales share being 5,500,000 tons. In 1927, Italy imported 14,000,000 tons, of which only 6,800,000 tons were imported from Great Britain, South Wales supplying 3,200,000 tons for the Italian market—a decrease so far as South Wales is concerned of 2,300,000 tons. The import of German coal into Italy has, on the other hand, increased from 950,000 tons in 1913 to 4,100,000 tons in 1927—an increase of over 3,000,000 tons.

I am afraid that unless, as a result of the discussions which are at present taking place, there is a substantial reduction in the amount of reparations in kind which Germany is permitted to make, these deliveries will continue to have a depressing influence on our industry.

Finally, as you will be well aware, there has been depression in the iron and steel industry. This had had the natural result of depressing the market for coke, and our ovens have been working considerably below their normal output during the whole of the year with a very low level of prices. As a result of these factors the year 1928 found the coal trade of this country weakened and disorganised by the labour troubles which had been inflicted on it, with a considerable amount of its trade secured by its competitors, and this, of course, at a time when these competitors were in a strong position consequent upon the profits made while the British coal trade was being almost destroyed by the 1926 strike.

EFFECT ON POWELL DUFFRYN COMPANY.

With such conditions prevailing, the company's collieries have unfortunately been working very irregularly and prices fell to a quite uneconomic level. It may not be fully realised to how large an extent satisfactory results in coal mining, especially in South Wales, are dependent upon regular working at the collieries, and it has been largely owing to intermittent working that the results for 1928 have been so disappointing.

To give you an indication of the extent to which the volume of trade has fallen, the exports of coal from the United Kingdom fell from 73,400,000 tons in 1913 to 50,000,000 tons in 1928—a decrease of 23,400,000 tons.

It may be of interest to you to know that the average loss per ton, as shown by the ascertainment figures, on the output of the South Wales coalfield during the nine months ended October 31st last, was 1s. 6d. per ton. This figure does not represent the total loss per ton suffered in the South Wales coalfield, because there are items of cost which are not taken into account in the ascertainment. These can be put at from 5d. to 6d. per ton. It will be seen, therefore, that the total loss sustained by the owners is more in the neighbourhood of 2s. per ton.

I venture to say that we may almost congratulate ourselves that the position of this company as reflected in the profit and loss account is not worse.

There is little doubt, ladies and gentlemen, that the year 1928 will go down to history as the worst experienced in the British coal industry within living memory. It is with a feeling of relief, therefore, as well as of pleasure, that I am able to tell you now that there are definite signs of improvement before us. As it has always been our policy to maintain our undertaking in a state of full efficiency, and that policy has been maintained during the past year in spite of bad times, the company is well equipped to take advantage of prosperity when it returns.

From the point of view of the Powell Duffryn Company, the year 1928 has conclusively proved that the whole aspect of the coal trade has completely altered. The marketing of coal has become an increasingly important and difficult part of our business. As a result of the most careful study of the problem which confronted them, the Board, as has already been indicated to you, came to the conclusion that the right policy was to link up with a large, well-established and comprehensive marketing organisation.

STEPHENSON CLARKE AND ASSOCIATED COMPANIES, LTD.

The Board are confident that in purchasing the business of Stephenson Clarke and Company, Ltd., the well-known firm of coal factors and distributors, they have taken a step which not only makes for the Powell Duffryn Company's success, but also adds to its security. Stephenson Clarke and Associated Company, Ltd., have been appointed sole vendors of the company's coal, coke and by-products, and in order to co-ordinate the whole of the services of distribution, this company's wagons have also been transferred to them. We have, then, two organisations, one confining itself to efficiency in production, the other to efficiency in marketing, and both co-ordinated and controlled by a central committee consisting of Sir Stephenson Kent, Sir John Hindley, Mr. Evan Williams and myself.

This is the first occasion in the history of the coal trade of this country in which the functions of production and marketing have been merged on such a scale. I am sure that this principle is one which eventually will have to be applied to the coal industry generally, for the experience of the last year has demonstrated that, standing alone, production is quite unable to protect itself, as is shown by the low level of prices which has been forced upon the collieries. It is not suggested that such organisations should be used for the purpose of forcing up prices, but rather for the purpose of obtaining an economic price for the products of the industry which would ensure a fair wage for those engaged in it, and a reasonable return on the capital employed, while, at the same time, tending to prevent the wide fluctuations in prices which in the past have been so detrimental to the coal trade, as well as to the general business interests of this country.

"PENALLTA MIXTURE" AND "PRESOTIM."

You will remember that last year I referred to plant which we had installed at Penallta Colliery for producing a special mixture of large coal and washed small coal. I am glad to be able to report that this Penallta mixture is becoming increasingly popular, and the excellent results of tests, to which I then referred, have been confirmed in a number of other cases. We believe that we have placed on the market a fuel which is most perfectly adapted for marine purposes and we look forward to its increasing popularity.

Again, the new by-product "Presotim," which we placed on the market as a wood preservative, is growing in popularity as it becomes known.

It will interest you to know that at Newport, Monmouthshire, over 400 houses are being built in which no paint is being used internally. The whole of the interiors of these houses are being decorated with Presotim.

The report and accounts were unanimously adopted.

NEWCASTLE-UPON-TYNE ELECTRIC SUPPLY COMPANY, LIMITED.

SUCCESSFUL RESULTS OF DIFFICULT YEAR.

The forty-first annual general meeting of the Newcastle-upon-Tyne Electric Supply Company, Limited, was held, on the 26th instant, at the Central Station Hotel, Newcastle-upon-Tyne, Mr R. P. Sloan, C.B.E. (chairman) presiding.

The notice convening the meeting and the auditor's report having been read by Mr M. Short (joint secretary),

The chairman, in moving the adoption of the report and accounts, said: When I addressed you last year I refrained from forecasting our prospects so far as supplies to collieries were concerned, as the position was full of uncertainties. I did not anticipate then that this important section of our business would suffer to the extent to which it has done. Last year proved to be one of the worst periods experienced by the coal trade in the counties of Northumberland and Durham for many years past, excluding, of course, the strike year of 1926.

In the case of another important section of our business, namely, shipbuilding and engineering, no great improvement was shown as compared with the previous year. While the tonnage of ships launched during the year, on the four rivers within our area, shows a substantial increase as compared with the year 1927, the new tonnage laid down showed a steady decline until towards the end of the year. It is, however, the new tonnage commenced which affects us rather than the actual tonnage launched, as the latter is the result of work carried out in the yards at an earlier period.

ALLOCATIONS.

The year's profit shows an improvement of £35,963, which, I think, may be considered satisfactory, bearing in mind the unsatisfactory condition of trade generally.

Interest on debentures and loans is less by £16,794, due to our having placed further share capital during the year 1927, which reduced the indebtedness to our bankers.

The transfer from profit to general reserve is the same as in the previous year, viz., £150,000, but the transfer to renewals and improvements reserve has been increased to £60,500, as against £50,000 last year. I shall refer to this later.

While the profit available would permit of the payment of a higher dividend on the ordinary shares, the directors consider it the wiser course to adopt a conservative policy, and they recommend the payment of a dividend at the same rate as that paid in the previous year, viz., 6 per cent., and that the balance of profit be carried forward, which will make the total sum to be carried forward to the current year £80,653.

While no increase in the rate of ordinary dividend is recommended, the amount required is £31,762 in excess of that required in the previous year.

The directors' recommendation with regard to the ordinary dividend was forecasted in the circular letter, in connection with the issue of 925,000 ordinary shares, which was sent to the shareholders in November last.

These new shares were, as usual, offered to the holders of 5 per cent. preference and ordinary shares of the Company. On this occasion, the issue was made at a premium of 3s. 6d. per share, and was underwritten. The shares were readily taken up, and I regret that many applicants for additional shares were much disappointed by the smallness of the allotments they received.

Reference is made in the directors' report to the fact that Royal Assent to the Bill, promoted by our associated company, the Cleveland and Durham County Electric Power Co., was given on August 3rd last. A commencement will be made shortly in developing this new area.

LIGHTING PRICES.

Many of you will be aware that, some little time ago, there was considerable correspondence in the local press regarding our flat-rate price for lighting. Much of this correspondence was anonymous, and, in many instances, full of inaccuracies and misleading statements. The subject was, however, taken up by a number of local authorities within our area of supply, and we were in due course invited by the Corporation of Newcastle to attend a Conference of Local Authorities to discuss the matter.

I do not propose to take up your time by going into the case put forward by the representatives of these authorities, nor the Company's reply, but I should like to mention one of the more important points which we put before the conference, and which it is important should be borne in mind.

In spite of the very rapid increase of our domestic supply business during the last four or five years, the great bulk of our business is that of supplying power to industries.

It will readily be appreciated that trade depression does not affect the consumption of electrical energy by domestic consumers to anything like the same extent as it affects consumption by industrial consumers. Any electrical undertaking which is mainly concerned

in supplying domestic consumers, has, consequently, not suffered on account of the acute trade depression in the way in which we have done.

At the conference to which I have referred, I intimated that we had had the question of a revision of tariffs under consideration for some time, and had decided to issue two new tariffs—one applicable to shops, which would operate as from the commencement of this year, and the other, applicable to domestic supplies, which would come into operation at the end of the current quarter.

In the case of the tariff for supplies for domestic purposes, we have framed this on a sliding-scale basis, which, besides giving a reduction in the standard flat rate per unit, will enable any consumer who increases his consumption beyond a certain quantity to get his additional units at progressively lower rates. The quantity referred to will be so graded as to represent a moderate use of electricity for ordinary lighting purposes.

We have also decided to withdraw all meter rentals, except in a few special cases. In the case of the smaller class of consumer—where the consumption of electricity is not great—a meter rental naturally represents a large proportion of the total bill, and we feel that this withdrawal will be welcomed by a very large number of our consumers.

The introduction of these tariffs will, in the aggregate, represent a very substantial concession to our own consumers, and those of our associated companies, which will be of the order of £45,000 per annum.

I may add that we anticipate a considerable increase in the consumption and use of electricity as a result of the concessions we are now making.

During the past year we connected up an additional 29,119 horse-power. As these connections were made throughout the twelve months, we did not reap the full benefit of the potential business they represent. Since the commencement of the current year we have connected 4,027 additional h.p. to our system, and orders for further supplies now in hand represent 31,600 h.p., which will become revenue-earning in due course.

We are continuing to develop our domestic business, principally concentrating on filling up networks already laid. This policy, as I have previously mentioned, does not enable us to secure so great a number of new consumers in any year, but it is a more profitable one for the company to pursue at the present time, as it improves our return on capital already expended.

There is evidence of some improvement in the shipbuilding trade. A considerable number of orders were placed during the earlier part of this year, of which local shipyards have secured a fair share.

The outlook in the coal and coke trades is distinctly brighter, and some collieries are booked well ahead.

The position of the iron and steel trades also appears to be improving.

The actual increase in our output, up to the latest date for which we have information, shows an improvement compared with the corresponding period of last year, and although this is not very great, the rate of improvement has been on the increase during the last few weeks. Generally speaking, I think the prospects are favourable, and the assistance to productive industries under the Government's de-rating scheme will, I have no doubt, still further improve the position.

As a public utility undertaking, we are precluded from any relief under that scheme, but as the great bulk of our business is that of supplying power to productive industries, anything which may assist them will indirectly be to our benefit.

In one respect, the passing into law of the De-Rating Act places a difficulty in the way of those whose business it is to develop the public supply of electricity in this country. The principal aim of the Government electricity scheme, as contemplated under the Electricity (Supply) Act, 1926, is to cheapen the cost and extend the use of electricity, and the possibility of achieving these results will depend, in a large measure, upon the extent to which electricity is supplied from the Central Transmission System or "grid." As the proposed rates rebate of 75 per cent. to "industrial heredita-ments" will apply to privately owned generating stations in factories, the rates rebate, in effect, puts a premium on privately owned stations, which will be an inducement to the continuance of those now in operation, and may also prove an inducement towards installing new private plants.

While the De-Rating Bills were under consideration by Parliament, efforts were repeatedly made by us and others interested to get electricity supply authorities placed in the same category as "freight transport hereditaments"—in which case the whole relief obtained has to be passed on to certain customers, or alternatively, that electricity supply authorities should receive the benefit of the rates rebate upon such portion of their works as were used for the purpose of supplying "industrial hereditaments." These efforts, I regret to say, met with no success.

The report and accounts were unanimously adopted.

ASSOCIATED PORTLAND CEMENT MANUFACTURERS, LIMITED.

PROFIT MAINTAINED IN DIFFICULT YEAR.

The thirtieth ordinary general meeting of the Associated Portland Cement Manufacturers, Limited, was held, on the 27th instant, at River Plate House, London.

Mr P. Malcom Stewart (chairman of the Company) presided, and, in moving the adoption of the report, said: The balance from the trading account at £568,016 is less by £56,536 than last year's figure, but the reduction is more than set off by the receipts from interest and dividends, which at £365,257 show an increase of £88,913. The total revenue for the year at £934,579 shows an increase of £32,930, which enables us to recommend the payment of a dividend of 8 per cent. on the increased ordinary share capital. That we should have been able to maintain our profits despite the adverse circumstances operating during the year is an achievement which, I believe, will be regarded by you with some degree of satisfaction.

ADVERSE CIRCUMSTANCES.

What were these adverse circumstances? We had at the outset to face a lower but not unsatisfactory average selling price than we had enjoyed the previous year. Unfortunately, this level of prices was not long maintained. The further co-operation advocated in my speech last year was not forthcoming for some time, and we had to face a period of intense competition which continued until the end of October and has left its trail of low-priced contracts to be completed. If co-operation is to be established, opportunities for friendly discussion must be facilitated. These were forthcoming. Ultimately, with the creation of a better understanding all round wiser counsels prevailed, and competitive manufacturers resolved to join the Cement Makers' Federation, the doors of which had always been kept open. Thus was the industry enabled to a considerable extent to stabilise selling prices. There was never any foundation for the statements appearing in the press that our companies had entered into agreements or made territorial arrangements. Further, it should not be assumed that, on the cessation of price cutting such as was experienced, the situation could immediately revert to the status quo ante bellum. Most industries pass through periods of price warfare, often brought about by over-production, and the attempt of manufacturers individually to force on to the market more than it can consume. The unrivalled service which we can give, combined with the recognised quality of Blue Circle Portland Cement and Ferrocrete, enables us to hold our own at equal prices. We do not rest on our goodwill; we are always striving to merit it increasingly. But there is a difference in price at which the buyer, often reluctantly, will feel compelled to purchase the cheaper article, and when faced with this situation we are not prepared complacently to see our old-established connections taken away from us by undercutting. Indeed, I would like you as shareholders to know that in such circumstances we deem your true interests to be best protected by the maintenance of our trade connections. We strive to give effect to a policy which will bring a reasonable degree of prosperity to all efficient manufacturers in the industry, but when attacked we are not prepared to sit down and see our trade filched away.

Nevertheless, I wish it to be clearly understood that no effort has been or will be spared on our part to further the cause of co-operation, to the service of which I have devoted myself during the past twenty years, first as chairman of the Inland Cement Makers' Alliance, and since as chairman of the Cement Makers' Federation. It is mainly due to the beneficent influence of the Federation that our industry has been able to pull through the difficult post-war period with a reasonable degree of prosperity.

You will have seen that we passed through a period of severe competition, culminating in the restoration of more stable prices on a reduced basis. How is it, then, that we have been able to maintain our dividend under these adverse circumstances? This result is due to two causes: in the first place, we last year began to reap the harvest of our reconstruction policy launched four years ago.

The second contributing cause of the maintenance of our profits was the fact that the reduction in our trading account profit was more than compensated for by the increased revenue from investments. We have not been favoured with any windfalls; our dividend has been earned from the production of Portland cement manufactured at home and abroad.

Last year I reminded you of the works reconstruction programme laid down four years ago and informed you of the progress effected to date.

anticipate obtaining from them 7,500 tons weekly, with a high degree of economy. To-day your company can face the future equipped with modern plant and served by a highly trained technical staff always striving to attain further efficiency and economy. There is no feeling that the task is ended, no inclination to rest on our oars. This year we are already working at the application of the lessons learned from the vast programme carried out. Our companies are now operating no fewer than 20 rotary kiln works spread over the United Kingdom. Briefly stated, we have closed our smaller and less efficient units and increased the production at works equipped with the best economic advantages, thereby decreasing our manufacturing costs. Further, we have reduced selling prices and increased the tonnage sold. At the same time we have maintained the wages paid to our employees; these to-day are well over 100 per cent. higher than paid pre-war, and are, in addition, earned in shorter hours.

Whatever help or hindrance may come from legislation, there is room for something to be done by voluntary effort through the influencing of public opinion. The growing tendency to buy British or Empire goods is encouraging. The influence of "Buy British" propaganda is stirring the conscience of the buyer with sufficient imagination to visualise the dark picture of unemployment.

You will be interested to learn that we made our first distribution last Christmas under the profit-sharing bonus scheme, announced last year. Over six thousand of our employees participated, of whom some fifty per cent. had served the company for ten years and over. Our men are gratified with the putting of this scheme into operation, and we are confident that it gives expression to a sound principle which I trust we shall see more generally adopted.

WORKS ABROAD.

Our works abroad call for comment. The results obtained during the past year in South Africa have been satisfactory, and this applies equally to Mexico and British Columbia.

Towards the end of November last, I sailed for India, and spent two months there. The position in India, which was one of acute depression in 1924, has since witnessed a remarkable change. Many manufacturers have embarked on programmes of extension, and although there is a risk of over-production when the increased tonnages come on the market, we have decided that to retain our relative position we must extend our works. These have now been brought up to a most satisfactory state of efficiency.

SALES POSITION.

Referring now to our sales position, our total deliveries as already mentioned constitute a record, the outstanding features being increased deliveries in the export trade and of Ferrocrete, which is growingly appreciated by engineers and contractors. As an illustration, I will cite the new docks at Tilbury, now being completed under scheduled time, largely due, I am given to understand, to the use of Ferrocrete. It is also being used for the new docks at Southampton, and other important public works.

Our "Blue Circle" propaganda and publicity is being vigorously pushed, and there is growing evidence that these efforts are successfully extending the uses of Portland cement, a matter of the utmost importance in view of the increasing production in this country.

To summarise the events of the past year, the trade has suffered from severe competition, followed by the stabilisation of prices at a low level. A four years' programme of reconstruction has been virtually completed, resulting in decreased manufacturing costs and increased efficiency and productive capacity; thus have we placed ourselves in a position to meet the growing demand for Portland cement which we look for. Finally, our profits have been maintained, and we recommend the payment of a dividend on the increased ordinary share capital of eight per cent., the same rate as was paid last year.

CURRENT YEAR'S PROSPECTS.

With regard to the current year, prices are undoubtedly on the low side, and early prospects have been somewhat blighted by the severe weather, but trade is now picking up satisfactorily. We shall seek to consolidate and put the finishing touches to the work already accomplished and look for some further reduction of our manufacturing costs. Whether any advantage gained in this direction will be neutralised by market conditions is a question to which I shall give you the answer when we meet next year.

The report and accounts were unanimously adopted.

RADIATION, LIMITED.

WELL IN THE FOREFRONT.

CURRENT TRADING SATISFACTORY.

The annual general meeting of Radiation, Limited, was held on the 25th instant at the Cannon Street Hotel, London, E.C., Mr. H. James Yates (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that during the past year in some sections of the business they had been up against keen and, he must say, most foolish competition. Naturally, that competition had had to be met, and as a result they had had to supply certain goods at prices which did not enable them to recover overhead charges, to say nothing of making a profit. For those reasons profits for the past year had suffered. In addition to those difficulties, the directors had been obliged to give much time and attention in relation to the events which had happened a year ago, and to which he did not desire to make further reference, except to say that it was to be hoped those matters were now finally closed. He was pleased to say, however that so far in the current year trading results showed a very satisfactory increase on last year.

It had been decided to hold the meetings of the company in future in London. There appeared to be an impression in some quarters that the greater proportion of the shareholders were in the Birmingham district, but that impression was quite erroneous. London was the centre which suited the convenience of the majority of the shareholders.

IMPROVING THE GAS FIRE.

At the meeting last year he had made reference to an investigation on which the Board had been engaged for a number of years, having for its object the possibility of improving the quality of heat emitted by the gas fire. To explain what was meant by improving the quality of heat, everyone would agree that the heat experienced when in the sunshine was more pleasant than that felt when sitting in front of a domestic fire of any type. The human body could bear without discomfort a greater intensity of the sun's heat than of that emitted by any other forms of heating. That effect was due to the difference between the quality of the heat from the sun and that emitted by domestic fires; hence, if something of that distinctive feature of the sun's heat could be imparted to the heat given out by a gas fire, a greater degree of comfort would be ensured.

Energy radiated from a source travelled like series of waves through the ether, and the character of the energy was determined by its wave length. It was only in respect of wave length that light differed from the longer and invisible rays to which the sensation of heat was attributed.

The sun's energy had the power of penetrating the outer layer of the skin and getting directly to the nerve ends which lay very near the surface, and also of travelling through to the fine blood capillaries which lay immediately underneath. As a result of their research work the Board had succeeded in producing a new radiant, which provided a more congenial warmth, and the scorching and drying sensation often experienced when sitting in front of a domestic fire had been done away with. The company had thus produced a gas-fire radiant greatly in advance of anything hitherto made, called the "Thermo-XX Beam" radiant. It was strictly interchangeable with its predecessor, the "Thermo-XX" radiant, which up to the present had proved to be the most efficient gas-fire radiant made. Those radiants could be obtained from any gas undertaking and could be fitted in place of the "Thermo-XX" radiants in existing radiation "Injector-Ventilator" gas fires.

The new "Thermo-XX Beam" radiants had had a remarkable reception, not only from the gas industry, but among medical men and the general public.

The ultimate ideal of making a gas fire which would give the beneficial effect of sunshine in every home was still being pursued. The Radiation "Injector-Ventilator" gas fire fitted with the new "Thermo-XX Beam" radiant was hygienically perfect. It warmed the room and at the same time ventilated it, thus being the means of causing the admission of cool and fresh air to the room.

COOKING DE LUXE.

Radiation was an organisation that never rested, as was exemplified by continued developments in all the various apparatus which they made, and, in particular, in the "New World" cooker. Its introduction some years ago marked an epoch. Ever since, the Board had experimented continuously to bring about still further improvements, and were now introducing a new type of hotplate, known as the "Disc-Bar." While still maintaining the highest economy, it greatly improved the general utility of the hotplate, and upheld the company's high hygienic standard. On the introduction of the "New World" cooker, and with the "Regulo," which enabled automatic control of the oven to be effected, he had prophesied that the day would come when no gas oven would be

used without some form of automatic control. That prophecy was being borne out, and to-day it was an exception for them to supply a "New World" cooker without the "Regulo." The "Regulo" was the only absolutely reliable automatic control made to-day. At that the housewife had to do was to place the food in the oven, set the "Regulo" at the prescribed mark, and after the lapse of the necessary time remove the food perfectly cooked. Another feature of their "New World" cookers was the mottled enamel finish, Apart from the improvement in the appearance, the enamel required very little labour to keep clean.

PATENT LAW DEFICIENCIES.

In his opinion, the patent laws of this country did not provide inventors with the same degree of protection as was to be obtained in other industrial countries—notably the U.S.A. Many of the developments in the company's apparatus had been the result of long-continued and costly research. When they had reached their goal they had frequently found themselves in the unfortunate position of not being able to retain the results of their great expenditure and pioneer work, which became at once available to competitors who made no corresponding contributions to the progress the company had thus effected. Developments, however, on hand fully assured the company continuing to hold the premier position in all the types of apparatus they made, and the Board would continue to take every step which they considered essential to protect the company's inventions and designs and to prevent the use of any name which could be regarded as trespassing upon or infringing their rights, especially having regard to the energies—representing years of work—which had been spent and the great expenditure which had been incurred in the extensive research work carried out.

At an extraordinary general meeting held last year provision had been made for the annual retirement of one-third of the directors liable to retire. This year it fell to Messrs. T. B. Peattie and Edward Markwick to retire, and their re-election would be dealt with by resolutions to be submitted subsequently.

Sir David Brooks seconded the motion and, the chairman having replied to questions, it was put to the meeting and carried *nem. con.*

The retiring directors, Mr. Edward Markwick and Mr. T. B. Peattie, were re-elected, and the auditors, Messrs. Peat Marwick, Mitchell and Co., having been re-elected, the proceedings terminated.

MIDLAND ELECTRIC CORPORATION FOR POWER DISTRIBUTION, LIMITED.

DEBENTURES PAID OFF.
9 PER CENT. DIVIDEND.
A RATING ANOMALY.

The thirty-first ordinary general meeting of shareholders of the Midland Electric Corporation for Power Distribution, Ltd., was held on Tuesday, the 26th instant, at the Exchange Hotel, Liverpool.

Mr D. Sinclair, M.I.E.E., Chairman of the Company, presided.

Mr C. Heathcock, Secretary, having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts for the year, said: The profit for the year amounted to £154,460, an apparent decrease of £40,462 from the previous year. These figures, however, are not a true comparison, for it will be borne in mind that in 1927 we owned and operated the generating station at Ocker Hill.

From the purchase money obtained from the sale of the station, we have paid off the whole of the debentures and have filed satisfaction at Somerset House. The interest on the debentures, has, therefore, been saved, with a reduction of sundry administrative items, such as rates and insurances. After making the necessary adjustments, the financial result is very little different from the previous year.

It is as yet too early to estimate the effect of purchasing all our supplies, as the interlinking of the various generating stations is not completed. In the meantime the charges for current are being regulated by the proportional cost to us previous to handing over the station. The West Midlands Joint Electricity Authority hopes to fix its tariff at the end of March, and the effect may be to increase costs somewhat until the full advantage of joint working of the stations is obtained.

CAPITAL.

At the last annual meeting resolutions were passed increasing the nominal capital of the company, and such resolutions were confirmed in April, 1928.

Of the additional capital thus authorised, 350,000 ordinary shares were issued in June as a bonus distribution of share for share to ordinary shareholders, so that the share capital issued now more nearly corresponds to the capital attributable to the undertaking.

DIVIDEND.

Your directors recommend a final dividend of 5½ per cent., making, with the interim dividend of 2½ per cent., a total distribution for the year of 8 per cent. on the increased capital. It is proposed to carry forward the sum of £24,549 remaining.

AREA OF SUPPLY.

An application for a special order to extend the company's area of supply to the parishes of Swindon, Seisdon, Trysull, Bobbington and Claverley was lodged in April last, and the order was confirmed on the 11th instant. To expedite supply to a large works in Swindon, a Fringe Order was obtained in November last, and overhead mains are now in course of erection. The new areas are at present almost entirely rural, and the increased load, apart from the one works at Swindon, will not be large. The company's area is now entirely surrounded by the areas of other undertakers, so that further extensions are unlikely. On the other hand, your directors have contracted to sell a small portion of the undertaking lying in the urban districts of Heath Town, portions of Upper and Lower Penn, together with Tettenhall.

Wolverhampton extended the borough boundaries and had the right to purchase, in 1940, a substantial portion of the area sold, by virtue of such extension. They approached the company as to an immediate sale, and a price was agreed that will result in a substantial profit to this company.

EXTENSION OF TENURE.

I mentioned at our meeting last year that various local authorities had the right to purchase the company's distribution system in their particular areas in 1940 or any subsequent tenth year. Your directors are now in negotiation with the respective councils to obtain an indication of their views on this matter so as to be able to plan the development of the area accordingly.

CENTRAL ENGLAND SCHEME.

During the year a scheme for the electrical development of central England, which included our area of supply, was published.

Your directors, from a long experience of supply in the area, made several representations with regard to the scheme, and in reply received an invitation to meet the Central Electricity Board. The deputation was received in a very courteous manner, when representations made were considered and fully met.

LOCAL RATES.

The properties of the company have been re-assessed for local rates, under the provisions of the Rating and Valuation Act of 1925. The new assessments will operate from April next, and will result in a substantial increase in the company's costs.

Public utility companies were unable to secure any relief from rates under the Rating and Valuation (Apportionment) Act, 1928, so that now you have the anomaly that a privately operated generating station obtains relief, while a station operated for public supply has to pay.

LOYAL SERVICE OF STAFF.

Before moving the adoption of the reports and accounts, I want you to join the Board in an expression of grateful appreciation to the whole of the employees for the loyal and efficient service they have rendered during the past year. We have the chief officers here in Mr Parkinson, the manager and engineer, and Mr Heathcock, the secretary, and I am sure you will wish to join in a hearty vote of thanks, and ask them to accept it for themselves, and also on behalf of all their absent colleagues, to whom I ask them to convey it.

I have now to move that the report and accounts for the year ended December 31, 1928, as certified by the company's auditors, be received, approved and adopted.

Mr G. H. Nisbett seconded the resolution, which was unanimously adopted.

The meeting approved of the payment of a further dividend of 5½ per cent., making, with the interim dividend paid, a total distribution of 8 per cent. for the year.

On the motion of Sir Arthur Stanley, seconded by Mr D. Johnstone Sinclair, Sir James Devonshire was re-elected a director of the company.

The meeting closed with a very hearty vote of thanks to the chairman and directors for their services.

INTERNATIONAL AUTOMATIC TELEPHONE COMPANY, LIMITED.

SATISFACTORY INCREASE IN PROFITS. BONUS DISTRIBUTION. DEVELOPMENT OF OVERSEAS MARKETS.

The ninth ordinary general meeting of the International Automatic Telephone Company, Limited, was held, on the 27th instant, at Winchester House, Old Broad Street, London, E.C.

Sir Alexander Roger (chairman of the company) presided.

The secretary (Mr C. H. W. Brougham) having read the notice convening the meeting and the report of the auditors,

The Chairman said; It is with deep regret I have to record the death of Mr John Lee in December last. He was returning from a visit to the United States undertaken in the company's interests.

Mr Lee was a recognised authority on communications and his death is keenly felt by the company. As a colleague Mr John Lee was held in high esteem by his fellow-directors and by his death we have all lost a lovable friend and an enthusiastic official who will be difficult to replace.

PROFIT AND ALLOCATIONS.

As your directors report and balance sheet have been available for some days, I assume that in the usual way you will take them as read. Both show a satisfactory increase in the profits of the company.

For the year under review the profits, after providing for contingencies, and after writing off certain small items, are £130,823, compared with £124,369 for 1927.

After providing for dividend on the 7 per cent. cumulative preference shares, amounting to £11,923, and interim dividend at the rate of 3½ per cent. per annum (less income tax) on the ordinary shares, amounting to £16,125, both of which have already been paid, your directors recommend that a further £10,000 be transferred to reserve, leaving an available balance of £152,359.

Your directors then recommend payment of a final dividend at the rate of 6½ per cent. per annum (less income tax) on the ordinary shares, making, with the interim dividend already paid, a total of 10 per cent. (less income tax) for the year. A bonus of 2½ per cent. (less tax) on the ordinary shares is also recommended.

On the deferred shares there is recommended a dividend of 10 per cent. (less income tax) for the year, together with a bonus of 2½ per cent. (less income tax).

I should like to emphasise that the directors truly consider the additional distributions in the light of bonuses and not as a change in the dividend rates.

These dividends and bonuses will take in all £82,625, compared with the figure of £62,875 in 1927, leaving a sum of £69,735 to be carried to the next account, as against £59,592 brought in from the previous year. Your directors feel that having made substantial provision for contingencies, the recommendations now submitted may be safely approved.

As you are aware, this company is engaged principally in selling in overseas markets—through its agents—the Strowger system of automatic telephony manufactured by Automatic Telephone Manufacturing Company, Limited, of Liverpool. A substantial amount of revenue is disbursed annually in the development and consolidation of overseas markets, and, in addition, the patent rights of the Strowger system of automatic telephony are being maintained by this company and its associated companies in all important markets of the world. By agreements there is a mutual exchange of patent licences in the common interests of the associated companies and of the system.

BALANCE SHEET.

My remarks in regard to the balance sheet must, of necessity, be largely a reiteration of those of previous years.

We recommend steadily adding to reserve account, and this year suggest that it be increased by a further £10,000. The fund will then stand at £120,000.

A small amount expended on office furniture and fittings during the year has been written off.

The sum of investments and loans has increased from the net figure of £758,449 in the 1927 balance sheet to the net figure of £897,732 in this balance sheet. The book figure for investments is some few thousands of pounds below cost, and the market value of these investments at date is in excess of both the book figure and cost.

As I said a year ago, our investments are made for a double purpose. We not only consider them from an investment or security point of view, but we always have in mind the purpose of furthering the sales exploitation activities of this company, and in consequence the manufacturing efforts of Automatic Telephone Manufacturing Co., Limited.

The return from investments is satisfactory, and shows some increase irrespective of the bonus of 2½ per cent. on Automatic Telephone Manufacturing Co., Limited's ordinary shares approved at the general meeting of that company which was held yesterday in Liverpool.

In the 1927 balance sheet there was a notation to the effect that your Company had undertaken to subscribe for further investments amounting to approximately £100,000. There were, in fact, two undertakings included in this sum; one amounting approximately to £80,000, and the other for £20,000. The trading benefits expected to accrue from the former have been arranged without the necessity to subscribe arising. The second undertaking in respect of the sum of £20,000 still stands and is expected to produce trading benefits.

Sundry debtors and debit balances, together with bills receivable, amount to £126,627 against £112,466 in the 1927 balance sheet.

Sundry creditors and credit balances amount to £150,506, as compared with £37,235 in the previous balance sheet. In the figure for creditors and credit balances there is the sum of £40,000 being provision for contingencies; also a small reserve for income tax liability on undistributed profits.

You will appreciate that in a company of this character, dealing with varying world conditions, provision for contingencies arises in the ordinary course of trading.

The increase in both debtors and creditors is substantial, but is in large measure accounted for by one purchase account and its corresponding sale account, the latter amounting to approximately £56,000.

AUTOMATIC TELEPHONE MANUFACTURING CO., LTD.

Yesterday I presided in Liverpool at the annual general meeting of Automatic Telephone Manufacturing Company, Ltd., and the profits of that company amount, on true comparison, to £175,670, compared with £171,359 for the previous year. The reserves and depreciation which were approved, amounted to £85,000, and the payment of 10 per cent. dividend, together with a bonus of 2½ per cent., was declared on the ordinary shares. The carry forward was increased from £81,755 to £93,482.

BUSINESS OVERSEAS.

Competition in our field, which lies overseas entirely, continues to be keen, and changes and developments are constantly taking place. By reason of the excellence of the products of Automatic Telephone Manufacturing Company, Ltd., and the standing which the Strowger system has secured throughout the world, we have hitherto secured our fair share of the business available, and with the resources at our disposal, both technical and financial, we hope that we shall continue to secure our share.

In conclusion, I would ask you to join with your directors in thanking the secretary and the staff for their very efficient work during the year.

I have much pleasure in moving "That the directors' report and accounts be approved and adopted, and that the dividends and bonuses recommended therein be paid."

Mr D. Sinclair (Vice-Chairman) seconded the resolution, which was carried unanimously.

The Board of Directors was unanimously re-elected on the motion of Mr H. B. Johnstone, seconded by Mr G. W. Younger.

The auditors, Messrs Harmood Banner and Son, were re-appointed and the proceedings terminated with cordial votes of thanks to the chairman, directors and staff.

MAZAWATTEE TEA COMPANY LIMITED.

STRONG POSITION.

The thirty-third ordinary general meeting of the Mazawattee Tea Company, Limited, was held, on the 26th instant, at the Cannon Street Hotel, London, Mr Alexander Jackson (the chairman of the company) presiding.

The Chairman said that although the past year's profit was less than that of 1927 the trading result of the year was highly satisfactory, particularly as it enabled the directors to raise the total reserve funds to £100,000, pay 15 per cent. on the ordinary shares, and carry forward £1,112 more than last year. Holding the large stocks which they did they were bound to feel the effect of varying markets, and the fluctuations in the price of tea had been most violent, particularly during the first half of the year. It had always been the directors' policy to create a substantial reserve as a set-off against the item of trademarks and goodwill, and as the reserves and carry-forward now amounted to £153,000 odd, it left only £110,673, or less than two years' purchase on the basis of the net trading profit for the past year. It was their intention to continue that policy and further to consolidate their already sound financial position, because such a business as theirs required a large amount of capital to finance it and to enable them to meet

General Manager & Secretary: Hugh Lewis

changing market conditions. After payment of the dividends recommended there would remain a balance of £53,185 to be carried forward, subject to directors' commission.

The company had been faced with adverse markets and varying duty conditions, which had added to their difficulties, and the competition in chocolate and confectionery had been very keen indeed. The turnover in tea had been quite satisfactory, so also had the turnover in other departments, and the growing popularity of high-class Mazawattee tea was most encouraging. Towards the end of the year under review trade, and especially in tea, began to improve, and this improvement was continuing not only at home, but also abroad.

As to the company's reserves, these were all invested in the business and formed a very important part of their working capital, for were they invested outside the business it would only mean that they would have to lodge the documents at the bank as security against further loans in order properly to finance their commitments, and loans on to-day's Bank Rate were anything but a luxury.

The chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr Joseph A. Densham and unanimously adopted.

"THE FINANCIAL NEWS."

ADVERTISEMENT REVENUE.
LARGE INCREASE.
STRONG POSITION.

The ordinary general meeting of The Financial News, Limited, was held on the 25th instant, at 20 Bishopsgate, London, E.C., Mr Brendan Bracken (chairman) presiding.

The chairman, in moving the adoption of the report and accounts, said: The year again shows satisfactory progress; the circulation and advertisement revenues have increased considerably, and the profits earned are the highest in the company's history. The accounts presented show the strength of our resources. We were able to recommend dividends at the rate of 175 per cent. for the year, and the carry-forward has been brought up from £115,700 to over £130,000. These undistributed profits are sufficient to pay the full preference dividend, and an 88 per cent. dividend on the ordinary shares for three years, without allowing for any profits earned in that period.

The reserve account profit on realisation of investments amounts to nearly £82,000, and the investment and loans items disclose a liquid position with ample cash resources.

An examination into the profit and loss account shows a profit of £93,500, as compared with £77,436 last year, which latter figure, however, included two years' dividends on investment in the Argus Press. The directly comparable figures are actually as follows, taking the profits before allowance for income-tax and adjusting by elimination of the Argus Press dividends in 1927, and interest on the funds liquidated by the sale of that investment in so far as they were not reinvested in newspaper properties:—

1927.—Profit as above £56,774
1928.—Profit as above £107,998

CURRENT YEAR'S LARGER PROFITS.

Finally, although the year 1928 was a very exceptional year, and the profits for January and February of that year were higher than for any previous corresponding period, the profits for January and February of the current year have again largely exceeded them.

The Board regret greatly that the Right Hon. Sir Hilton Young, M.P., will shortly retire from the office of Editor-in-Chief of The *Financial News* and general manager of the editorial department of our associated company, Financial Newspaper Proprietors, Ltd. He has played a great part in the direction of our affairs, and all who have had the advantage of working with him will forever remember his eminent services. The Board have appointed Mr O. R. Hobson, Financial Editor of the *Manchester Guardian*, to succeed Sir Hilton Young as Editor-in-Chief.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 23, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	16,035	From Revenue	28,259
Interest, &c., on Debt	1,457		
Sinking Fund	1,632		
Sundries	1,887		
Decrease in Debt	7,103		
Increase in Balances	145		
	28,259		28,259

The ordinary revenue for the week amounted to £28,258,900, as compared with £29,059,900 in the corresponding week last year. Property and Income Tax showed an increase of £555,000, and Super Tax an increase of £470,000. Customs receipts were £3,878,000, against £4,088,000 a year ago, and Excise receipts were £4,866,000, as compared with £3,026,000 a year ago.

Ordinary receipts brought in £14,500, as compared with £374,800, and Special receipts nil, against £48,000. The Revenue to date amounts to £732,238,500, as compared with £743,677,300 at this time last year. With one more week to run the excess of Revenue over Expenditure is £7,481,200. At this time last year Revenue exceded Expenditure by £658,200.

The National Debt was reduced by £7,103,000 as shown below:—

MOSCOW QUOTATIONS FOR TCHERVONETZ.

According to advices received in London, the following are the Moscow quotations for tchervonetz :—

£1,000 sterling equals 942·27–944·15 tchervontsi.
1 tchervonetz = 10 gold roubles. £1 sterling = 9·46 gold roubles.

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council from April 1, 1928, to March 23, 1929, amounted to £30,077,000, by means of purchases of sterling in India. Of this amount, £2,265,000 was remitted on account of the paper currency reserve.

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follow :—

1929. ARRIVALS.	£	1929. WITHDRAWALS.	£
Mar. 22 Bars bought	6,462	Mar. 22	nil
,, 23	nil	,, 23	nil
,, 25 Coin bought	975,849	,, 25 Sovs. for export	4,000
,, 26	nil	,, 26 Bars sold	37,717
,, 27	nil	,, 27 Bars sold	17,099
		Sovs. for export	30,000
Total	£982,311	Total	£84,816

Net arrivals, £897,495.

Messrs. Samuel Montagu and Co. write as follows on March 27, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £152,442,839 on the 20th instant (as compared with £151,704,273 on the previous Wednesday), and represents a decrease of £1,463,476 since April 29, 1925—when an effective gold standard was resumed.

Only about £17,000 of bar gold was available in the open market this week, and the additional requirements of India and the trade were met by withdrawals from the Bank of England. There was a net influx of gold of £883,050 during the week under review.

SILVER.

Silver has been a steady market and during the week prices have reached a slightly higher level.

There has been rather more inquiry from India, but Bazaar operators have not been keen to pursue any upward trend. China has been the chief support of the market, and buying from this quarter carried quotations to 26½d. for cash and 26¼d. for two months' delivery on the 22nd instant.

The market has been rather poorly supplied, as America has bought as well as sold, but China operators made some re-sales at the higher rates.

The difference between the two quotations widened on the 22nd instant, when cash silver was quoted at ⅛d. discount as compared with two months' delivery. The difference of 1/16d. was, however, re-established on the following day.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 18th instant to mid-day on the 25th instant :—

IMPORTS.	£	EXPORTS.	£
Germany	11,643	British India	40,603
Canada	17,200	Other countries	6,838
Other countries	14,735		
	£43,578		£47,441

	Mar. 22.	Mar. 15.	Mar. 7.
Notes in circulation	18,946	19,123	19,155
Silver coin and bullion in India	9,943	9,871	9,902
Silver coin and bullion out of India	—	—	—
Gold coin and bullion in India	3,222	3,222	3,222
Gold coin and bullion out of India	—	—	—
Securities (Indian Government)	4,327	4,327	4,327
Securities (British Government)	1,054	1,053	1,054
Bills of exchange	400	650	650

The silver coinage during the week ended the 22nd instant amounted to seven lacs.

The stock in Shanghai on the 23rd instant consisted of about 76,300,000 ounces in sycee, 115,000,000 dollars and 9,300 silver bars, as compared with about 76,300,000 ounces in sycee, 112,000,000 dollars and 10,000 silver bars on the 16th instant.

NOTICES.

Mr. William Macnamara Goodenough has been elected to a seat on the board of Barclays Bank, Limited. The bank has opened a new sub-branch at No. 6 The Strand, Moordown (Bournemouth), under the management of Mr. W. J. Bond, who is also manager of Winton branch.

A branch of the National Provincial Bank is now open at Kenton Road, Kenton.

The night safe service introduced by the Midland Bank into this country in August last is now in operation at 127 London and provincial branches of that institution.

Reports and Notices.

BRITISH RAILWAY TRAFFICS.

The following are the traffic returns of the four British railways for the week ended March 24, also the aggregate receipts for first twelve weeks of 1929 :—

	Week ended March 24, 1929.	Increase or Decrease	Aggregate 12 Weeks, 1929.	Increase or Decrease
	£	£	£	£
Great Western	579,000	+ 30,000	6,399,000	− 41,000
London and North Eastern	1,059,000	+ 52,000	11,704,000	− 160,000
London Midland and Scottish	1,415,000	+ 24,000	15,582,000	− 363,000
Southern	391,000	+ 6,000	4,335,000	− 93,000

We hope to publish our usual full statement of receipts next week.

MISCELLANEOUS.

THE PARÁ ELECTRIC RAILWAYS AND LIGHTING COMPANY.—Gross receipts for year to November 30, 1928, amounted to £179,146, against £173,032. Net revenue was £71,193, against £69,832. The preference shareholders receive 6 per cent. The sum of £10,000 is put to Renewals Reserve.

The carry forward is £5,002.

BRITISH ALUMINIUM COMPANY.—The report for 1928 shows a net profit of £441,383, as compared with £432,176 for 1927. The ordinary dividend is again 10 per cent. The redemption accounts in respect of prior lien debentures and the debenture stock have been increased during the year by £35,912, and now amount to £445,055. The depreciation reserve account, including £50,000 appropriated out of the profits of the year amounts to £900,000, the total of these two accounts being £1,345,055. The sum of £100,000 out of the profits of the year has been placed to the credit of reserve account, which now amounts to £850,000. The capital expenditure during the year amounts to £116,101. The whole of the works and plant at the various factories has been well maintained out of revenue. The selling prices of the company's products were further reduced during the year, but the demand was well maintained and economies were effected in the costs of production. The carry forward has been increased from £27,858 to £33,843.

PLUMMER RODDIS LIMITED.—The Report for the year ended February 12, 1929, shows a net profit, after payment of all trading expenses, and providing for bad debts, depreciation, interest, directors' fees and managing directors' remuneration, of £71,314 (last year, £71,059). Adding the amount brought forward, and deducting dividends on the first and second preference shares, and the interim dividend of 5 per cent. on the ordinary shares, there is a balance of £57,789, from which it is proposed to pay a final dividend on the ordinary shares of 15 per cent., making 20 per cent. for the year (last year, 18½ per cent.), transfer to reserve £5,000 (last year, £7,500), transfer to superannuation fund £161 (last year, £1,000), leaving £22,627 to be carried forward (last year, £22,474). With the proposed addition, the reserve will amount to £112,500. Cash is at £92,226, against £63,632. Goodwill remains at £26,000. Bank overdraft is £77,267 against £77,767. Meeting: April 3, 1929, at 14 Henrietta Street, W.1, at 12.30 p.m.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Wednesday evening.

A spell of fine open weather over the United Kingdom has facilitated field work, and with the land in good tilth rapid progress was made with ploughing and seeding of cereals. Rain would now be welcomed in order to assist germination and spring growth. Only small supplies of native wheat are reaching the statute markets, but prices were maintained with difficulty owing to the weakness of imported varieties. In the floating and forward cargo section, dull features continue to prevail, and values declined sharply on pressure to sell both Canadian and Plate descriptions. Large weekly shipments and sagging prices afforded little inducement for buyers to operate beyond immediate needs, though Continental and Mediterranean countries are reported to be taking fair quantities direct. A feature was the weakness of North American markets, due to favourable crop prospects and export selling of Manitobas, while also influenced by improved Indian crop reports, which was naturally reflected on this side. Canadian wheat is now moving more freely from the interior, so that ample supplies should be available for shipment when navigation is resumed on the St. Lawrence. Feeding stuffs experienced a slow sale, and trend of values were favourable to buyers. Active chartering, however, continues of Plate maize to Europe for all positions up to June loading.

Wheat, quiet and easier. No. 2 Northern Manitoba, 50s. 3d.; No. 3, ditto, 49s.; No. 4 Manitoba, 48s. 3d.; No. 5, 44s. 3d.; No. 6, 38s.; Rosafe, 63½ lbs., 45.; Barusso, 63½ lbs., 45s. 3d.; Australian, 47s. 3d., all ex-ship, per 496 lbs. English, 9s. 8d.-9s. 8d. per 112 lbs.

Flour, dull and values weak. London standard grade, 37s. 6d.; town whites, 38s. 6d.; patents, 39s. 6d.-40s. 6d. per sack delivered in the Home Counties, with 6d.-1s. per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 34s.-37s.; Minneapolis, 34s. 6d.-37s.; Australian, 35s.-35s. 6d., ex-store. On c.i.f. Manitoba top patents March-April quoted, 35s. 6d.-36s. 6d.; export ditto, 33s. 6d.-34s. 6d.; Australian, 32s. 6d.-33s. per 280 lbs.

Maize, quiet and the turn easier. Plate landed, 43s. 3d.; ex-ship to arrive, 42s.; March-April, 39s.; new April-May, 38s.; May-June, also June-July and July-August, 37s. 9d.; No. 2 white flat African, 41s. 9d. landed; No. 2 yellow American, 41s. 3d.; mixed ditto, 41s. landed, per 480 lbs. Yellow maize meal, £11 10s. ex-wharf; Hominy chop, £9 7s. 6d. per ton.

Barley dull. Californian ex-ship, 45s.-52s.; Chilian Chevalier, 48s.-58s.; Australian, 43s.-48s.; Smyrna, 44s.-47s. per 448 lbs. Algerian/Tunisian ex-ship, 34s. 6d.; Canadian feed, 29s. 9d.; No. 3 Canadian Western, April, 33s. 3d.; No. 2 Federal American, 29s. 9d., all ex-ship to arrive, per 400 lbs. English malting, 10s.-12s.; feed, 9s. 3d.-10s. per 112 lbs.

Oats quietly steady. Plate landed, 26s. 3d.; ex-ship to arrive, 25s. 3d.; March, 25s. 3d.; black Plate landed, 25s.; mixed Canadian feed landed, 22s.; Chilian white, 32s. landed; German landed, 29s. 3d.; ex-ship to arrive, 28s. per 320 lbs. English, 9s. 4d.-10s. per 112 lbs. Scotch landed, 30s. 9d. per 336 lbs. Irish black, 27s. 6d. per 320 lbs.

Millers' offals steady. Broad digestive bran, 9s.; middlings, 8s.; fine ditto, 9s. 6d.; feed oatmeal, 8s. 3d.; No. 1 oat feed, 9s. 3d.; ground oats, 12s. ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.

AMERICAN WHEAT MARKETS.

The tendency of the markets has been almost steadily downward, owing to favourable weather reports and absence of export enquiries. There was a rally on Monday, as a result of reports of storms together with a decrease in the visible supply, but this ground was lost afterwards under a flood of liquidation resulting from the further rise in call money. Quotations :—

Nearest Future.	Jan. 4, 1928.	Mar. 28, 1928.	Jan. 2, 1929.	Mar. 13, 1929.	Mar. 20, 1929.	Mar. 26, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.)	137	142⅛	122	132½	129⅝	123⅛
Chicago (No. Winter)— Cents per 60 lb.....	130⅛	142⅜	116⅜	125⅛	123⅛	116⅛

Visible supplies of wheat in Canada at 87,786 bushels show an increase of 1,003,000 bushels as compared with the previous figure. Supplies a year ago stood at 76,931,000.

THE COAL TRADE.

Our Sheffield correspondent writes :—The export coal trade continues strong, and supplies of best steams are scarce, owing to the reduction of output through sickness among the workpeople. A good many of the pits are working full time and expect to continue doing so for a considerable period forward. Inland demand for industrial fuel expands slowly. Prices all round are firm. All kinds of coke are wanted in large quantities.

Our Glasgow correspondent writes :—The stringency that has ruled for two or three months is gradually easing, owing partly to the seasoned falling off in demands, and partly to increased outputs. A number of the collieries in Fife and the Lothians are now looking for prompt business, and are willing to shade prices a little. There is not much business passing in the market, and easier prices in April seem probable. Current shipping quotations are round the following (f.o.b. district ports) :—Lanarkshire.—Ell best, 19s. ; splint best, 19s. 6d. ; splint second, 19s. ; navigation, 18s. 6d. ; navigation second, 16s. ; steam, 17s. ; Hartley, 19s. ; trebles, 17s. ; doubles, 16s.-16s. 6d. ; singles, 14s. 6d. ; pearls, 12s. 6d. ; dross, 10s. 6d.-11s. Fife.—Screened navigation, 19s. 6d. ; first-class steam, 17s. 3d.-17s. 6d. ; third-class steam, 16s. 6d.-17s. ; trebles, 17s. 6d.-18s. ; doubles, 16s. 6d.-17s. ; singles, 14s. 6d. ; pearls, 12s. Lothians.—Prime steam, 16s. 6d. ; secondary steam, 16s.-16s. 6d. ; trebles, 17s. ; doubles, 16s. 3d. ; singles, 14s. ; pearls, 12s. 6d. Ayrshire.—Unscreened navigation, 16s. 6d. ; jewel, 18s. 6d. ; steam, 16s. 6d. ; trebles, 17s. 6d. ; doubles, 16s. 6d. ; singles, 14s. 6d. ; pearls, 12s. 9d. ; dross, 11s. Ayr or Troon.

Our Cardiff correspondent writes :—The approach of the Easter holidays has been accompanied by an abatement of the pressure of the current volume of business, and efforts this week are being directed chiefly towards a greater despatch in loading operations, so as to get as many as possible of the vessels away before Friday, when the docks will be closed as well as on Monday next. The scarcity of prompt supplies has been as great as ever, and a large proportion of the collieries have been finding it extremely difficult to comply with their contract commitments notwithstanding a general policy of speeding up outputs. Last week the quantity of coal shipped at the South Wales docks in the foreign and coastwise trade was 633,577 tons, compared with 604,830 tons in the previous week, and just under 555,000 tons in the corresponding week last year. Quotations for all classes of coal have been very firm, with some grades ruling at slightly higher figures than those ruling a week ago. There has been a fair demand also for coke and patent fuel. The following are the current approximate quotations :—Best Admiralties, 21s. to 21s. 6d. ; seconds, 21s. to 21s. 6d. ; best drys, 21s. to 21s. 6d. ; Black Veins, 20s. 6d. to 21s. ; Western Valleys, 20s. to 20s. 6d. ; Eastern Valleys, 20s. to 20s. 3d. ; best small steams, 14s. 6d. to 15s. 6d. ; cargo smalls, 13s. 6d. to 14s. ; coking smalls, 14s. 6d. to 15s. 6d. ; anthracite best large, 33s. 6d. to 35s. ; Red Vein large, 25s. to 27s. ; machine-made cobbles, 40s. to 43s. 6d. ; French nuts, 42s. to 44s. ; stove nuts, 40s. to 43s. ; rubbly culm, 10s. 9d. to 11s. 6d. ; foundry coke, 27s. 6d. to 37s. ; patent fuel, 20s. to 21s. ; pitwood, ex ship, 27s. to 27s. 3d.

IRON AND STEEL.

We extract the following weekly report from the London Iron and Steel Exchange :—

The slackening in business which usually precedes a holiday has been less noticeable than usual. Business in the pig-iron market has been quiet, following the institution by the Midland manufacturers of their new "zone" scheme of quoting delivered prices in various zones according to the distances from the blast-furnaces. Consumers are not yet accustomed to the new quotations and are holding off the market for the time being. In the Cleveland district some scarcity of pig-iron has developed, and there is little material offering for near delivery. A feature of this market has been some good sales of pig-iron to Italy. In the semi-finished steel department the position remains similar to that existing for some weeks. Only a comparatively small share of the business passing goes to the Continent, in marked contrast to the situation existing a year ago. British works producing this class of material are well off as regards work. The demand for finished steel continues erratic, and whilst some good orders have been booked the export demand continues somewhat disappointing. Lately, however, there have been indications that a revival in this direction may not be long delayed.

Our Workington corespondent writes :—Demand in the Cumberland and North Lancashire hematite pig-iron trade is increasing steadily, and such headway has been made since the middle of January in the reduction of stocks that an expansion of the make must shortly take place. Continental, Midland, Scottish, South Wales, and local needs are bigger than can be satisfied by the output of the eleven furnaces in blast between Workington and Ulverston. A furnace is being relighted in the course of a few days by the United Steel Co., at Oldside, at Workington, but this will be put on to manganese, the stocks of which have now been cleared. Makers are, of course, in a stronger position to deal with customers, and they are quoting Bessemer mixed numbers firmly at 74s. per ton at works, and at a somewhat higher figure for prompt delivery. Low-phosphorus iron is in firm Continental demand for malleable iron at 99s. per ton delivered, and ferro-manganese is a better market at £13 15s. per ton. In the steel trade activity is becoming brisker. After the Easter holidays are over the rail, fish-plate and sleeper mills at Workington will be continuously employed until the end of June by Argentine, Colonial and home railways. Native ore is being raised only by the large producers. It is in firm request by local, East Coast and Scottish smelters at 17s. 6d. to 18s. 6d. per ton. Despite the warmer weather, the coal trade is strong. Cumberland has recovered its footing in the Irish market, in which the demand is heavier than can be dealt with, and in which prices have reached a more satisfactory level. Local landsale is firm, and there is a fair outlet for industrial fuel. Small coal is in short supply, and the West Cumberland coking plants are not working at full capacity. West Coast coke commands 18s 6d. per ton.

Our Middlesbrough correspondent writes :—With the approach of the Easter holidays, market conditions are somewhat quieter than of late. The pig-iron position, however, still maintains its strength, and Cleveland prices are firm on the following basis :—No. 1 Cleveland, 69s. 6d. ; No. 3 G.M.B., 67s. ; No. 4 foundry, 66s. ; No. 4 forge, 65s. 6d. For contracts over the second half of the year works are asking a premium of up to 1s. 6d. on the above prices. The hematite market is also fairly active, with mixed numbers about 74s. There is a fairly good inquiry, both from home and abroad. The steel position is fairly satisfactory, and works, although not working to full capacity, are busy. Prices remain unchanged on the following basis, subject to the usual rebates :—Steel ship plates, £8 7s. 6d. ; steel ship angles, £7 17s. 6d. ; iron bars, £10 5s. ; steel rails, £8 10s. The ore market still remains very firm, the price of best rubio being 23s. c.i.f. Middlesbrough, with supplies not too plentiful. Coke, also, is very scarce, and producers are now asking 19s. 6d. per ton delivered furnaces. The increase of price in these two raw materials must ultimately have the effect of increasing pig-iron prices.

Our Sheffield correspondent writes :—The upward movement in the iron market, which began earlier in the year, now comprises pig iron, basic steel billets, bar iron, manufactured steel, ferro-

chrome, tungsten and copper. Although prices have been advanced demand has not increased to any appreciable extent. Producers state that they have been losing money on the old prices, and these are now being placed on an economic basis. The local position is slightly better as regards home trade, but overseas demand for ordinary steels has been quieter this month. Business continues brisk in the more special products of the steel works. Expansion of pig-iron production has been checked by a scarcity of coke, due to the brisk overseas demand. For some time past practically the whole of the surplus output of the ovens over contract commitments have been sold to the Continent at good prices. Demand for foundry iron continues quiet, but there is rather more doing at the engineering foundries. Basic steel sells freely, although the position is not quite so strong as a few weeks ago. The call for acid steel, while disappointing, is slightly better. Basic steel scrap is scarce and dear.

Our Glasgow correspondent writes :—In Glasgow and the West of Scotland, conditions generally in the iron and steel industry are unchanged. In the pig-iron market business remains quiet and is confined to small parcels. The improvement noted in the heavy steel trade continues, and the demand for shipbuilding material and structural sections is satisfactory. Structural engineers in the Glasgow district are well employed at present, and are obtaining a considerable amount of export business at prices, which though competitive, leave a fair margin of profit. The arbitrator appointed by the Ministry of Labour in the malleable iron trade dispute has this week issued his award. He favours the institution of a 45 hours working week in five shifts, which is a compromise between the employers' claim for the introduction of a 47½-hour week and the operatives' demand for the retention of the eight hours day arrangement. In the black and galvanised sheet trades the position is practically unchanged, business is rather dull, but prices are held firm. Tube makers are fully employed.

Our Cardiff correspondent writes :—The recently improved position in the iron and steel trades is being fully maintained, and Sir Frederick Mills, the chairman and managing director of the Ebbw Vale Company, in the course of a speech at Ebbw Vale on Monday, expressed the view that the worst was now over, and that there would follow a period, if not of great, at least of reasonable, prosperity in the immediate future. Supplies of foreign blooms, billets and steel bars showed a considerable increase last week, totalling nearly 10,000 tons, compared with less than 900 tons the previous week, but the prices both of the imported and the native bar are unaltered. The recent increase, however, in the cost of the local steel bar has had a hardening effect on tinplate prices, which are now quoted up to 18s. 6d. compared with the minimum price of 18s. per basis box.

OTHER METALS.

Tin.—Quieter conditions prevailed in the standard market, buyers being less in evidence following lower Eastern advices, and, with sellers prominent, values gave way, especially for near positions, dealings being attended by slight irregularity. The closing tone was firm. Stocks in London and Liverpool warehouses for week ending March 23rd were returned at 8,844 tons, compared with 1,376 tons at corresponding period last year. Standard cash sold £220 17s. 6d.-£220 10s., £221 5s. and £220 15s. ; three months, £222 15s., £220,10s., £221 17s. 6d. In the East business was reported at £225 15s. to £224 5s. and £224 15s. per ton c.i.f. terms.

Copper market opened firmer, but buyers were reluctant to follow and subsequent realisations imparted weakness. Standard cash changed hands at £96 12s. 6d. to £93 17s. 6d., and three months £99-£96 10s., £98 12s. 6d. and £95 3s. 9d. ton.

Lead continued in good demand, but market ruled easier for distant positions under heavy offerings. Good soft foreign pig, March, sold, £26 15s. to £26 7s. 6d. ; April, £26 15s., £27 5s., £26 5s. ; May, £26 17s. 6d., £26 10s., £27 5s., £26 1s. 3d. ; June, £28, £26 10s., £27 7s. 6d., £26 2s. 6d. ; July, £26 15s. to £27 5s. and £26 3s. 9d. ton.

Spelter.—Business continued on fairly active lines at irregular prices though market fully steady on balance. March, sold, £27 3s. 9d. to £27 10s. ; April, £27 3s. 9d. to £27 12s. 6d. and £27 10s. ; May, £27 10s., £27 7s. 6d., £27 10s. ; June, £27 10s. to £27 15s., £27 8s. 9d. ; July, £27 10s., £27 11s. 3d. and £27 10s.

Aluminium steady. Ingots and bars for home delivery quoted £95 ton.

Antimony steadier. English regulus quoted £54 to £55 ; foreign spot, £38 to £38 10s. ; March-April, £35, c.i.f. terms.

Wolfram maintained. Chinese, also Straits qualities, 21s. 6d. to 21s. 9d. per unit, c.i.f.

Quicksilver steady. Spot, £22 5s. to £22 10s. per bottle.

Tin Plates firm. I.C. coke, prompt and forward, 18s. 3d. to 18s. 9d. per box, f b. Swansea.

THE COTTON TRADE.

Liverpool, March 26.

During the week prices have fallen some 15 points, largely owing to the less confident tone of the "bulls." This is due to the weakness of the stock markets in America, caused by the action of the banks there. Call money yesterday at one time was as high as 16 per cent. Weather news last week was a little better throughout the belt, but land preparation has been delayed by at least two weeks later than last year. Early indications of acreage would point to a moderate increase in the west, but a slight reduction in the east and south-east. Spot sales for the period from Thursday last to to-day (inclusive) are 33,000 bales, of which 17,850 are American, 50 Brazil, 250 Argentine, 3,500 Peru, 5,150 Egyptian, 5,050 African, 650 East Indian and 500 sundries. Imports for the same period are 47,301 bales, of which 19,847 are American, 232 Brazil, 524 Argentine, 189 Peru, 14,578 Egyptian, 6,103 African, 5,673 East Indian and 155 sundries. Quotations to-day are : American Middling, 10.92 ; Egyptian F.G.F. Sakel, 19.40, Uppers, 12.95 ; Brazile Fair, 11.12 ; Peru G.F. Mod-Rough, 13.00, Smooth, 11.87 ; West African Middling, 10.97 and East African G.F., 12.40.

Manchester, March 26.

Prices in the market have not shown very much change, but on the whole there has been more disposition to anticipate cheaper raw material as a result of better advices from the United States relating to the outlook for the new crop. Buyers of yarn and cloth have not been in the mood to operate with any freedom. In the piece-goods section the absence of workable demand for India has been rather marked, and undoubtedly the disturbances abroad continue to have an adverse effect upon trade. Advices from China continue more cheerful, and steady buying has taken place in a variety of goods. A little more activity has shown itself in printing and finishing styles for South America and the West Coast of Africa, but only retail orders have been secured for Egypt and the Near East. Reports from the home trade are generally healthy, and there are good clearances in the retail and wholesale establishments. American yarns remain dull, and there are no indications of any improvement in prices. A dragging demand has also been reported in Egyptian counts, and it seems likely that the short-time arrangement in this section will be extended.

THE WOOL TRADE.

Our Bradford correspondent, writing on Tuesday, says :—Demand for tops and yarns has doubtless been affected to some extent by the approaching holidays and the inactivity of the market has been accentuated. The general complaint is that trade is exceedingly disappointing, and this applies not only to the smallness of the orders, but even more to the poor offers. Although the raw material markets appear to have settled on a stable basis, with values which appear to be quite reasonable, spinners do not seem able to break away from their hand-to-mouth policy of buying, and, in the absence of bulk business, it is difficult to say with any certainty what is the actual market price of any commodity. On the other hand, importers are evidently under the impression that wool is not without attraction at to-day's level of prices, and in recent weeks there has been some heavy buying in the primary markets. This movement, however, was overdue, as comparatively little wool was bought in the first part of the season, and stocks are light for the time of year. Quotations for tops are steady, but there is still a good deal of irregularity in yarns, and the speculative buying of a week or two ago has not yet brought much relief. A spurt of activity in the piece-goods trade is encouraging, some good orders having been placed on home trade account in both men's and women's wear, especially the former.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

Since last writing the second series of London sales has closed, and though the position cannot be differently described, it may be emphasised that practically all classes of raw materials are now in an exceedingly good position. The declines seen, compared with a year ago, are very large, amounting in merinos to around 10d. per lb. clean scoured, and in crossbreds 4d. to 6d. The main thing, however, is that, after the opening decline previously reported, there has been no further fall, and, though there is a fair quantity held over for the next series, opening April 30, this amounting to 28,500 bales, the possibilities of expanding consumption at home and abroad are such that no real uneasiness need be felt. Opinion about the future of both merinos and crossbreds is that these will continue to sell around the present level, confidence in the latter having been strengthened by the free way in which crossbreds have been cleared in Coleman Street without any further depreciation in value. No doubt some of the second-hand wools have had rather a bad time, having been withdrawn at bids about 2d. per lb. clean scoured below the actual selling level, but home trade buyers and users are gradually adapting themselves to the changed conditions. Values now being comparatively reasonable, even the dear stocks should be eventually cleared by averaging out with more recent purchases.

The New Zealand season is practically closed. The only other sale to be held is a supplementary one fixed for Wanganui on April 10, when about 7,000 bales of seedy wool will be offered. The sale at Napier last Friday passed off very well indeed, the major portion of the offerings being taken by Yorkshire and Continental buyers at prices showing a slight advance. Clean costs appear to be fully equal to those current in London at the last sales. There is also firmness in the Australian selling centres, Sydney, for example, apparently being a dear market. The vital thing, however, is that during the past few months Bradford buyers have been able to operate on a more satisfactory level than in the early part of the season.

HIDE, LEATHER AND ALLIED TRADES.

There is a rather more buoyant tone about the allied leather industries this week, and many people take the view that the wave of depression is receding at last. Possibly the fine weather has something to do with it, whilst the improved demand for footwear and travelling goods may also be a factor. In any event, the rot in the hide and skins market seems to have ceased, as prices, both at home and abroad, are firmer. Hides all advanced in the British markets last week, and no sign of further weakness was apparent. Calfskins were also firmer, and advanced in some cases by ¼d. to ⅜d. per lb. Overseas hides are also firming up, and although business in South Americans is confined to Russia and the United States, quite a good business has been put through, fregorifics selling at 9 7/16d. Dry River Plates are dearer, and 13¾d. is now asked for B.A. Americanos and 14¾d. for M.V. Americanos. Chicago cables the market as steady, with 14½ cents asked and obtained for best native steers. While trade in sole leather is not normal for the season, fair amounts of bends and butts have changed hands this week, mainly in small parcels for immediate wants. Repairers are rather slack owing to the fine weather, but have been taking fair sized blocks of wet salted bends in the medium averages. Merchants are pressing sales, and there is plenty of sole leather being offered at prices below cost of production. Upper leather continues to sell slowly in small parcels. Curriers find a poor demand for wax butts, splits and semi-chrome, but some seem better employed on lining and fancy leathers. Glace kid in blacks, and a few shades of brown move off in the lower grades, and makers of patent ladies' shoes are again ordering this class of material rather more freely. Already retailers are doing a better trade in shoes in anticipation of the holidays, and it is sincerely hoped by leather and footwear producers that a good clearance will be made.

THE JUTE TRADE.

DUNDEE, March 26.

Absence of demand for all commodities is the feature of the jute trade, and the prolonged spell of quietness is having a disturbing effect on the market. Prices are no easier, but there is a tendency for producers of fabrics to show more anxiety to secure new business to follow on existing contracts. Buyers of jute cloth are refusing to go forward for their requirements, contenting themselves with satisfying their immediate needs with small orders. Relief in the shape of lower prices for the raw material is not in sight. The supply of old crop jute appears to be almost exhausted. Shippers are sending extremely few offers from Calcutta and, while one or two are giving indications of new crop prices, the latter are not yet freely quoted. Anxious times are ahead for the jute trade. New mills and extension of time working by the Calcutta mills call for a much larger supply of the fibre, and much interest will be vested in the progress of the new crop, which is now being sown under favourable conditions. Spinners here are purchasing small lots from spot and also for shipment at round about £33 10s. to £34 for Daisee assortment and £33 for threes. First Marks and Lightings are of small interest, and prices of old crop are purely nominal. New crop offers have been made at £38 for First Marks and £35 5s. to £36 for good Lightnings, August/September shipment. Jute yarns have ruled dull, with little doing to test prices. Spinners continue to name 3s. 7d. as the minimum for common 8 lb. cops and 3s. 8d. for 8 lb. spools, at which rates a trifling business is reported. Twist is sometimes stated to be obtainable at 5⅜d. for 3 ply 8 lb., but the usual rates are 5 13/16d. to 5⅞d. Sacking yarns are steady at from 4 7/16d. to 4½d. for 24 lb. weft, and from 5⅝d. to 5 11/16d. for 8 lb. chains. Rove is quiet and unchanged at £28 for 48 lb. and £18 for 200 lb. Fine yarns have been in most request and a fair business has been done for both home trade and export. Fine hessian makers are busy. Carpet yarns have sold on moderate lines at from 5⅜d. to 5½d. for 14 lb. warp. The value of 10½ oz. 40 in. hessians is usualy 4 11/16d. to 4⅝d. and 8 oz. from 5 5/16d. to 5⅝d. Manufacturers are desirous of securing orders for the 40 in. widths and would shade these rates by 1/16d. if business were offered. Easter holidays will prevent any improvement taking place for a week at least, and the approach of the General Election will probably hamper trade until it is over. Linoleum hessians are firm, but quiet, and heavy goods are again falling into a state of listlessness.

VEGETABLE OILS AND OILSEEDS.

Markets are not very active and the tone is easy. Linseed oil is barely steady, and consumers have bought more at the lower level of values. Current prices for raw oil are £28 10s per ton naked ex Hull mill for spot, and March-April delivery with later positions at a small premium. Cotton oils are slow and prices have further declined, crude Egyptian now offering at £27 10s. and common edible at £31 spot and March-April ex Hull. Other seed oils are quiet and about unchanged. In the oilseed section linseed is easier and demand of only moderate dimensions. Plate has declined to £15 12s. 6d. on spot and early shipment, with £15 15s. accepted for May-June to Hull. Arrivals have been fairly substantial and the quantity on passage to Europe has been reduced to 144,200 tons. Cottonseed is quiet, and only a small business done in black Egyptian at easier figures, £9 13s. 9d. and £9 15s. having been paid for March and April loadings to Hull. Soya beans are inactive and £11 2s. 6d. represents no nominal value afloat. Oilcakes are about steady, but the demand is falling off as the open weather is at hand.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There was no special feature to note. Only moderate clearances in spot goods at previous rates. T.L. granulated 22s. 4½d. ex refinery. White Mauritius, spot, London, 21s. to 21s. 6d., as to quality. Forward parcels quiet, and quotations nominally unchanged for Continental. White Java, May-June, to Europe, sellers, 11s. 4½d. c.i.f. According to cables from Cuba the formation of an Export Pool is now taking definite shape, and doubtless it would come in quite useful, if only to ensure orderly distribution of the remainder of this crop. Its sphere of influence would be outside that of U.S.A. requirements. Cuban, 96 per cent., centrifugal, May, sellers, 9s. 4½d. c.i.f. U.K. Terminals quiet and easier. Of raws, May sold 8s. 6¾d., August 9s. 1½d. to 9s. 0¾d., December 9s. 6d. to 9s. 5½d. White, May sold 11s. 5¾d., August 11s. 11¼d., September 12s., December 12s. 3d. cwt. Cuban receipts last week 257,963 tons, against 221,152 same time last year; exports 163,446, against 139,225; stocks 1,228,168, against 1,127,089. Centrals 161, against 155. Production to date about 600,000 tons excess, against last campaign. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending March 23rd amounted to 138,306 tons, compared with 78,391 at corresponding period last year.

COFFEE.—All the finer qualities in demand at full rates, but ordinary rather quiet and slightly irregular.

COCOA.—Market quiet. In auction, a fair quantity offered, and only a small part sold. Fine red Grenada at 58s. 6d.; Accra, F/F, April-June, quoted 43s. 9d.; mid-crop, 42s. 3d.; October-December, sellers, 45s. f.o.b. Terminal, July sold, 49s. 1½d.; September, 50s. 1½d.; December, 50s. 4½d. cwt.

TEA.—Indian auctions embraced some 31,472 packages. Competition was carried on with animation, which resulted in a firm market. Previous prices were not only fully maintained, but in several instances exceeded by ¼d. to ½d. per lb. Pekoe sold 1s. 0¾d. to 1s. 11d.; broken ditto, 1s. 1d. to 2s. 5d.; orange, 1s. 1½d. to 2s. 2d.; broken orange, 1s. 2½d. to 2s. 0½d.; finer parcels, 2s. 2d. to 2s. 9d. per lb. in bond. Ceylon auctions totalled 21,206 packages. Competition for all descriptions was carried on with activity, which resulted in a decidedly healthy market. Pekoe sold 1s. 1½d. to 2s. 4½d.; broken ditto, 1s. 2½d. to 2s. 4d.; orange, 1s. 4½d. to 2s. 5d.; broken orange, 1s. 4¾d. to 2s. 7d. per lb. Of China there is a fair demand, and Lapsang Souchong sold 1s. 10d., also a wad of Monings at 8½d., and siftings 5½d. to 6d. per lb. in bonds.

RICE.—Market idle and nominally unaltered.

RICE-MEAL.—Market steady and following business recorded. A steamer cargo, 7,000 tons Saigon to Liverpool, May-June shipment, at £6 7s. 6d. per ton c.i.f. terms.

BEANS.—In slow request, but sellers asked late rates. Madagascar butters, spot, 43s.-44s.; afloat "Clan Macintosh," 40s. 6d. Rangoon haricots, March 21s. 9d., April 15th 20s., April 19s., May 18s. c.i.f. London.

PEAS.—Marrowfats very firm, but otherwise market slow. Dutch marrowfat, prompt, held for 27s. f.o.b. Japanese blues, afloat, quoted 20s. 6d. to 22s. as to position of steamer, March 20s., April 19s. 6d., May 19s. cwt. c.i.f. London.

SPICE.—Pepper market dull and forward positions weaker. Lampong, March-May, 1s. 2¾d.; May-July, sold, 1s. 2½d.; August-October, 1s. 1½d. Muntok, white, March-May sellers, 2s.; May-July, 1s. 11⅞d.; August-October buyers, 1s. 9½d. lb. London stocks reduced 123 tons on the week. Tellicherry, January-March sellers, 147s.; February-April, also March-May, 144s. cwt. c.i.f. Pimento, August-October, to London, sellers, 118s. cwt. Cloves, Zanzibar, spot, 1s. 6d.; March-May sellers, 1s. 6¼d.; May-July, 1s. 3½d.; August-October, 1s. 0¼d. Madagascar, spot, London, sold, 1s. 5¼d. lb. Tapioca, dull. Singapore flake, March-April to Havre, quoted, 18s. 6d., c.i.f. African ginger, spot, London, sold, 51s. cwt.

FRUIT (Dried).—Currants firm with a good demand. Pyrgos quoted, 45s.-46s.; Patras, 46s. 6d.-47s. 6d.; choice, up to 51s.; Amalias, 46s.-46s. 6d.; Gulf, 47s. 6d.-50s.; Vostizza, 49s.-52s. Sultanas, Smyrna, in better request. Medium to good, spot, 36s.-53s.; Cretan, 45s.-72s.; Australian now ranges from 30s.-50s.; Californian soda, bleached, 30s.-36s.; natural, 27s. 6d.-29s. Raisins, steady. Valencia, quarter boxes, sold, from 45s.-53s., as to quality, but Australian and Cape difficult to vend. Figs in small supply. Genuine new, spot, 28s.-29s. Dates experienced a fair inquiry, chiefly for Siar, at 14s. 6d.-16s. 6d.; with Khadrowie, 21s.-28s.

EVAPORATED FRUITS.—Market keeps firm with supplies in manageable compass, but, apart from a fair inquiry for Californian plums and apricots, demand lacks activity, while still largely measured by immediate wants. Californian plums, 20's-30's, 65s.; 30's-40's, 56s.-57s.; 60's-70's, 43s.-43s. 6d. Australian pears range from 57s. 6d.-70s., as to quality. Lake County, 72s. 6d.-97s. 6d. Apricots, South African new crop, Royal, 57s. 6d.-117s. 6d.; Cape, 72s. 6d.-82s. 6d.; Californian, 85s.-117s. 6d. Peaches, Californian, choice, 52s.; extra choice, 54s.; fancy, 58s. Apples, Californian, spot, sliced, extra choice, 64s. Almonds quiet and values weak. Mazagan, 132s. 6d.; Mogador, 130s.; Majorcas, 130s.; Bitter-Jordan, 185s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—There is no material change in the general situation, but business is expected to improve after the Easter recess, while favourably influenced by warmer weather. Singapore pines continue slow of sale at late rates on the spot, and buyers still indifferent regarding forward parcels. Hawaiian, scarce on spot, and firmly held; but South African are now available. Tomatoes, firmly held, and business restricted.

CANNED FISH.—Sardines in quiet support, but best quality reservedly offered. Portuguese clubs, quoted, 5s. per dozen tins. Lobsters, scarce. Best halves, 140s.-145s.; and quarters, 77s. 6d.-82s. 6d. Salmon, steady. Red, talls, spot, sold, 42s. 6d.-44s.; pink, talls, 26s.-27s. 6d.; halves, 32s.-34s. 6d. Japanese crab realised full rates; finest quality at 97s. 6d.-100s.

Anglo-American Relations and Sea Power
By **JOHN W. DAVIS**

The former American Ambassador at the Court of St. James' discusses how to improve Anglo-American relations. In his view, trade rivalries and the unpaid debt are questions which at the moment do not lie in the field of useful debate. His definite recommendations concern the naval dispute.

der deutsche Volkswirt

A JOURNAL OF FINANCE AND POLITICAL ECONOMY.

Editor : GUSTAV STOLPER.

A knowledge of what is going on in contemporary Germany is an indispensable part of the equipment of all business men, economists and students of political life generally. There is no better way of obtaining this knowledge than by reading

Der deutsche Volkswirt

the brilliant Berlin weekly which occupies a place in German business and political life similar to that occupied by the great weeklies in this country.

Der deutsche Volkswirt

provides as regular features, detailed reports and special statistics upon the movements of German and continental stock and commodity markets, detailed critical analyses of the balance sheets of all leading German companies, Berlin financial news, weekly letters from the chief international centres of world commerce and notes upon the chief economic and political events of the day. In addition to these will be found special articles by public men and experts of international standing.

Der deutsche Volkswirt

is printed in roman type. The subscription price is £3 per annum post free.

Specimen copy gratis on request to

CANNED MEATS.—Corned beef quiet of sale, but ox tongues firm on limited offerings. Lunch tongues firmer and forward business brisk for delivery over the next six months. Cases of 12 by 6 tins, quoted, 107s. 6d. dozen. Tinned hams, quiet on spot, but large contracts have been made for delivery ahead on the basis of 1s. 7d. lb., ex-wharf London.

CONDENSED MILK AND MILK POWDERS.—Market without material change, but there is a good demand for evaporated, and stocks are moving off readily. Full cream, sweetened, English, spot, 45s.; Dutch ditto, 38s.; April-June, 37s. 6d. Machine skimmed, sweetened, English, spot, 27s. 6d.; Dutch ditto, 23s. 3d.; April-June, 23s., all in 5-cwt. barrels. Powders, Spray process, F.C. 26 per cent., 2 by 56 lb. tins, crated, 88s.; M.S. (1 cwt. cases), 40s.; Roller ditto, F.C. 26 per cent., 75s.; M.S., 28s. 6d., all net., duty paid ex-wharf London. On the Grocery side: F.C.S., 21s.; M.S.S., 10s., basis per case, usual packing. Danish cream, evaporated unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d. Condensed, sweetened, 48 by 14 oz., 20s. per case.

HONEY.—Market firm, with spot supplies in short compass. On the spot, Jamaican, pale amber, quoted at 48s.-51s. Small supplies of manufacturing grades up to 46s. 6d. New crop, March-April shipment, pale amber, quoted at 42s. 6d.-45s.; and f.a.q., 40s.-42s. 6d. New Zealand in brisk demand, dark amber, quoted, 50s.-55s.; medium, 55s.-65s.; light, 65s.-85s.; whites and water whites, 65s.-87s. 6d., cwt.

RUBBER.

Market firmer, due to cessation of selling orders from Singapore and fair buying orders, partly on covering account in the London centre. A subdued tone, however, subsequently set in. Sheet, spot, and March also April, sold, 10⅜d. to 11⅛d.; May, 11d., 11⅛d. and 11⅜d.; June, 11⅛d. to 11⅛d.; July-September, 11⅛d. to 11⅜d.; October-December, 11⅜d. to 1s.; January-March, 1s. to 1s. 0⅜d.; January-December, 1930, at 1s. 0⅛d. to 1s. 0⅛d. lb. London stocks increased 1,214 tons on the week at 27,656, against 59,644 at same time last year; deliveries, 1,211; landings, 2,425. Liverpool stocks increased 233 tons at 4,333; deliveries, 272; landings, 505.

GENERAL.

JUTE.—Market quite steady, fair demand. Firsts, April-May Continent, quoted, £34; May-June, £34 10s. ton. Hessians, dull.

HEMP.—There is a fair inquiry for Manila, and market remains firm. K grade, April-June, £33 10s.; May-July, sold, £33 15s.; L.1, April-June, quoted, £33 15s.; L.2, £30; M.1, buyers, £30 ton. Sisal, steady. Manila receipts last week, 37,000 bales, against 32,000; estimate for next week, 31,000, and following week, 30,000. Manila shipments last week, to U.K./Continent, 11,000 bales; U.S.A., 7,000; Japan, 7,000; other countries, 1,000.

SHELLAC.—Quiet. T.N., spot, 190s., May buyers, 185s., August sold, 191s. cwt.

COPRA.—Very dull but prices show no material change. Straits April-May, Rotterdam, quoted, £23 5s. Mixed Dutch East Indies, excluding Padang, steady to Marseilles, with buying cabled orders, mostly unaccepted by shippers. April-May, buyers, £22 5s.; and K.D., South Sea, quoted, £22 5s. Palm Kernels, March-April, Hamburg, £18 15s. ton.

MISCELLANEOUS.—Coconuts quoted 18s. to 24s. per 100. Coir yarn, Ceylon, £19 to £38 10s.; Cochin, £22 10s. to £40; Ceylon bristle, £18 10s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 2s.; Java, 2s.

METROPOLITAN CATTLE.—March 26.

THE MONEY MARKET.

At the beginning of the week about £30 million of maturing Treasury Bonds fell due for repayment, while the Treasury paid out a further £10 million in Conversion Loan dividend. Against this, on Wednesday, the final call on the December issue of Treasury Bonds fell due, and allowing for the proportion of holders who had previously paid up this call under discount, it was cal-

culated that about £30 million was taken off the market. Other movements comprised certain calls and dividend payments on other stocks and shares, and also the return of money from the country after the Easter holidays. The market consequently was prepared to face this week difficult and disturbed conditions.

* * * *

As matters turned out, these fears were not realised, and the position throughout the whole week remained quite comfortable. In a few cases 5 per cent. had to be paid for loans on Wednesday, but the ruling rate was around 4½ per cent. The market rate of discount upon three months' bank bills remained at 5-5/16-⅜ per cent., but the general feeling was happier, and the restoration of confidence made itself felt in a rather freer movement of bills. Although the American situation is still far from clear, hopes that an increase in the New York rediscount rate will be avoided are growing, and on balance these now appear to be justified. It is, however, only right to add that certain authorities still take the contrary view that an increase is inevitable.

* * * *

Meanwhile, the Bank is adding to its gold stocks, and this week's return reveals an increase of £1,600,000 during the past fortnight. This week the Bank secured £702,100 at a price of 84s. 10½d. per ounce in the open market. No fast boat was leaving for New York on the day of the sale, and this removed any possibility of American competition, but even so, this week's price compares favourably with those of previous weeks. Next week £800,000 is due from South Africa for the market, and also £500,000 in sovereigns for the Bank, while the following week £650,000 is expected. The £1,000,000 in sovereigns from Australia will arrive on May 8th. In addition to this, £3,000,000 of Dutch gold is known to have passed through the Customs, and of this the Bank has only so far had £900,000. There is no assurance that the balance will be transferred to the Bank, but the possibility of this taking place must be remembered.

* * * *

It may be that the Bank is making deliberate efforts to replenish its gold stocks from all quarters, and it is true that it now has only another four or five months at the most before it will once more be faced with the autumn drain. Still, the immediate outlook does seem to be more comfortable, and if there is no possibility of an early reduction in Bank rate, the fear of a further increase is beginning to recede. The present indications are that April will be a month of uneventful stability, which will come as a relief to the market after the excitement of the previous months.

	April 4, 1929.	Mar. 27, 1929.	Mar. 21, 1929.	Mar. 14, 1929.	Previous Rate and Date Changed.

Discount { Notice.....	3¾	3¾	3¾	3¾	2¾ (Feb. 7,'29)
Market rate (3 months' bills)	5 5/16 - ⅜	5 5/16 - ⅜	5 5/16 - ⅜	5⅜	...

Apart from the increase of £1,600,000 in the Bank's gold stocks during the past fortnight, as noted above, the main changes in the Bank return are net increases during the same period of £4,900,000 in Bankers' deposits, and of £12,000,000 in Government Securities held by the Banking Department. The holidays, too, have raised the note circulation by £9,100,000, with the result that the Banking Department's reserve has fallen by £7,800,000, and the Proportion from 49½ to 41 23/32 per cent. It is not easy to account for the changes in Bankers' deposits and Government Securities, though they, in their turn, explain this week's monetary ease. As has already been pointed out, this week has witnessed wide movements in funds, and these may possibly be the true explanation.

NEW YORK MARKETS.

Our New York correspondent cables:—The Stock Exchange is marking time pending the clearing up of the uncertain monetary position. Call money has been easier after the passing of the month-end settlements, the call rate dropping to 6 per cent., after being firm at 10 to 12 per cent. Bankers generally favour a stringent policy pending further share liquidation, in the belief that the latter will be sufficiently speedy to prevent tight money cutting down business activity. The weekly statement of the Federal Reserve system shows little change in discounts and Government security holdings, but a further large decline in bills and a reduction of $30,000,000 in the total reserve. The ratio is 71.5 per cent. Brokers' loans show a fresh reduction, partly due to a shifting of direct borrowing by customers from the banks. The release from earmarking of $13,600,000 of gold is attributed to a sale from the Bank of France to the Reichsbank, to avoid the necessity of direct shipment.

THE STOCK MARKETS.

The tone of the Stock Markets was mainly firm, in a week when the unofficial extensions of the holidays was reflected in an attenuated "House." Anglo-American securities were unfavourably affected by Wall Street uncertainties, but investment stocks made some little headway, gilt-edged, in particular, being assisted by the Bank's fresh accession of gold, and the repayment of Five Per Cent. Treasury Bonds. Home Rails were subjected to profit-taking after another week's favourable traffic return. Industrials had no definite trend, a general reluctance to undertake fresh commitments being observable in many quarters. Tea shares, though quiet, were steady, but dealings in rubber shares were of the smallest dimensions, and the restriction "hitch" discouraged public interest in oil shares. Rhodesian counters were moderately active, but almost the sole interest in Kaffirs came from Johannesburg.

THE COMMODITY MARKETS.

There is no longer any shortage of coal, but the undertone remains good in most markets. Coke is extremely scarce. The iron and steel position remains fairly steady. Tin is weak, but other metals remained firm until Thursday, when a sharp decline in copper occurred. The Liverpool cotton market is unsettled, and business in Manchester is far from satisfactory. The wool textiles trades are quiet, but the position is growing gradually healthier. Trade in hides and leather is improving. Vegetable oils and oilseeds are in very poor demand. Wheat has risen slightly.

THE FOREIGN EXCHANGES.

Notwithstanding the holiday period, the Foreign Exchange Market displayed considerable activity during this week, but business was principally confined to arrangements for the end of the quarter settlements. Sterling on New York was slightly lower at 4.85¼, with forwards strongly offered at discounts of ⅛ct. and 5/16ct. for the one and three months periods. Canada was offered at 4.88½. There was a good demand for Paris at 124.15 for the Stock Exchange settlement on 5th instant, but the close was higher at 124.21. Forwards were on offer at 2½ cents and 9 cents premium. Brussels was 34.95½ and Italy depreciated slightly to 92.74. Amsterdam remained steady around 12.11, forwards being ¼ cent and 2½ cent premium. Spain was comparatively steady between 32.00 and 32.20 and closed at 32.15. Switzerland improved to 25.22½. Among the Scandinavian Exchanges Stockholm depreciated again to 18.17. German Reichsmarks were offered up to 20.47, there being a strong German demand for dollars and sterling; forward Reichsmarks were quoted at discounts of ¼ pfennig for one month and ¾ per three. Among the Eastern Exchanges Japan eased off to 1s. 10 1/32d., as did also Bombay to 1s. 6d. Silver declined during the week, principally as a result of American selling, and closed 25⅞d. for both spot and forward positions. Hong Kong was 2s. 0½d. and Shanghai 2s. 6½d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Scotland, National Bank of India, Wesleyan and General Assurance Society, African and Eastern Trade Corporation, Nestlé and Anglo-Swiss Condensed Milk, Ceylon Consolidated Estates, General Electric, and Consolidated Mines Selection. Sir Charles McLeod, Bart., gave an informative review of Indian economic conditions at the National Bank meeting. The Nestlé chairman dealt, *inter alia*, with the company's developments in Brazil, South Africa, and other foreign countries.

THE SURPLUS AND THE BUDGET.

Fuel was added to the short-lived fires of holiday enthusiasm by the announcement, on Easter Saturday, of a realised surplus of £18,394,463 on the National Accounts for 1928-29. We trust that Mr Churchill's financial conscience prevented his feeling as elated as he might have been excused for feeling were that surplus all that it appears. A few weeks ago we forecast a much smaller balance, partly because we under-estimated the abnormal increase of revenue in the last month of the year, but chiefly because we supposed the Chancellor would pay the £65 million, which in his Budget speech last year he proposed to devote to the Sinking Fund. He has actually paid only £57½ million, and meanwhile the Floating Debt has been increased by £48½ million. It is true that his main pledge was to devote £369 million to National Debt charges, interest as well as repayment, and that, his short-term borrowings having been more expensive than he foresaw, he has actually carried out that promise. The fact remains, however, that in his Sinking Fund payments he is £7½ million short of the amount which the country believed it had a right to expect, and which was itself £10 million less than the minimum figure proposed by the Colwyn Committee. This occurs in spite of the fact that £13,200,000 was realised from the Currency Note Reserve; the remainder when this is deducted, £44,300,000, represents the only provision for debt repayment out of ordinary revenue.

Under that system of national finance which we have long regarded as sound, failure to bring Sinking Fund up to promise is irrelevant, if the deficiency is more than covered by the surplus, since the year's account is closed by handing over the surplus for the repayment of debt. But Mr Churchill, faced with the task of paying for derating, has taken upon himself to abandon that practice by accumulating not only his £18 million, but the £4 million which he realised last year, in a special suspense account. Thus his "surplus" has no proper claim to the title, being no more than the proceeds of taxation for expenditure which happens to fall due next year and not this year. The petrol tax was, in fact, imposed for this specific purpose. This system of anticipatory finance is only justified in so far as it spreads tax-burdens evenly over a given period, and therefore any reduction in central taxation which Mr Churchill makes in the coming year, while at the same time he is relieving local taxation, will expose the fact that 1928 has been over-taxed—or the Sinking Fund excessively diminished.

What we see in the figures of last year's revenue and expenditure, which are set out in full on page 743, gives no particular cause of jubilation. The best point is the saving of £6 million on the Supply Services, as compared with total estimates. On the basis of Budget estimates the saving is only £2½ million. The main items of saving are £1,245,000 on Defence, £1,426,000 on Imperial and Foreign Services, £1,205,000 on War and Civil Pensions, and £2,612,000 on the votes for Health, Labour and Insurance, where the supplementary estimates are chiefly concentrated. This is satisfactory as far as it goes, but it is hardly sufficient to bear out Mr Churchill's standing prediction of economy. In his 1925 Budget speech he admitted the possibility of reducing the Supply Votes by £10 million a year—scarcely a promise, but nevertheless a self-imposed standard. At that date the estimates for the Supply Services totalled £407.5 million, expenditure the previous year having been £402 million. Expenditure on Supply Services in 1928-29 has been £411 million, and the estimate for the current year is £421 million, which must be reduced by the £15 million provided for derating in order to render the figures comparable. We must also put on Mr Churchill's side the natural increase in the gross Post Office estimates from £53 million in his first Budget to £65½ million in his fifth, the greater part of which is self-balancing. But when the fall of 15 per cent. in wholesale prices between 1924 and to-day is taken into account, the extent to which the Chancellor has fallen behind his own standard of economy is blatantly obvious.

He has, admittedly, been fortunate on the Revenue side. Super-tax realised £4 million below estimate, and the remnants of Excess Profits Duty and Corporation Profits Tax have once more been disappointing, but Income Tax yield was in excess of the estimate by nearly £5 million, Stamp Duty by £2 million and Estates Duties by over £8½ million. The buoyancy of Stamp Duty, of course, reflects a livelier Stock Exchange year than had been expected, but the other items of gain bear very little relation to the actual trade prospects of the country. More up to date in their connection with business activity are the Customs and Excise figures, which show a deficiency of £8½ million, nearly £7 million of which is concentrated on excise. Details have not yet been published, but it looks as if Mr Churchill will once more be able to say: "The Lords Commissioners of His Majesty's Treasury have been increasingly uncheered by alcoholic stimulants. Death has been their frequent companion, and almost their only friend."

Still, he has a surplus of sorts, and his Rating Relief Suspense Account now totals £22,633,587. The announcement of the Conservative election programme, we are told, awaits Mr Churchill's statement, a fact which naturally leads us to fear that every effort will be made to produce a popular Budget, even at the expense of that sound finance which we still hope for from so able a Statesman, but the benefits of which seem obscure and belated to the ordinary voter. If we think politically, we cannot rule out the possibility of a reduction of taxes in excess of what the hard facts of the financial position would appear to justify. The possibilities have already been summarised in the *Economist* of March 16th. Estimates for supply services exceed the expenditure in 1928-29 by £16.4 million, and although Mr Churchill's provision for interest and repayment of debt is £14 million less, that is offset by the realisation last year of £13.2 million in the Currency Notes Reserve, a non-recurring item. If his ordinary revenue were the same as this year, therefore, he would have a surplus of a couple of million, beside his hoarded £22.6 million. In our opinion, given the principle of the Suspense Account, that would not be an excessive total with which to face a full year of de-rating, costing over £35 million. But Mr Churchill will certainly count on an advance of revenue and he may be tempted to sue for the favour of the housewife or the motorist. Twopence off the petrol duty would cost him £7 million, while a combined reduction of twopence in the tea duty and a penny in the sugar duty would be not quite so expensive. These would probably be the most popular remissions.

They would, however, render possible an estimated deficit on the year, apart from the Suspense Account. And even all Mr Churchill's ingenuity may not be able to justify the continuance of the Sinking Fund scheme which he inaugurated last year. His proposal was to devote to interest and repayment combined a fixed sum, which was to be £369 million last year, when the Currency Notes Reserve fell in, and £355 million in subsequent years. Of these sums, Mr Churchill allowed for interest on the debt (other than Savings Certificates) £290,500,000 in 1928, £288,500,000 in 1929, £286,000,000 in 1930, £283,000,000 in 1931, £281,500,000 in 1932, and in 1933 (when our War Debt payment to the United States increases by £4,000,000), £284,000,000. The remainder, for Sinking Fund and for interest on Savings Certificates, would be £78,500,000 last year, £66,500,000 this year, £69,000,000 in 1930, £72,000,000 in 1931, £73,500,000 in 1932 and £71,000,000 in 1933.

All these calculations were made on the assumption that the Treasury Bill rate would average 4 per cent., which the Chancellor regarded as a conservative estimate. But he has been sadly disappointed, the cost of issuing Treasury Bills last year having been well over 4½ per cent. on the average, and over 5½ per cent. after the rise in Bank Rate. His total interest payment was, in fact, £311,490,566, against an estimate of £304,000,000. If the rate which he has to pay were to remain at its present figure over the whole of the financial year—a not impossible contingency—interest charges might easily rise by £20 to £30 million above the estimate which Mr Churchill made a year ago, and this would leave him with

only some £40,000,000 out of his £355,000,000, for Sinking Fund and interest paid on Savings Certificates. Statutory Sinking Fund obligations alone total over £50,000,000, and £20,000,000 would not be a " scare " estimate of the provision which ought to be made for interest on Savings Certificates presented for encashment. The extent of this annual obligation is unknown before the event, but interest on certificates left outstanding increases at the rate of £15 million to £20 million a year, and the time is at hand when heavy realisations of early certificates may be expected. The average charge expected by Mr Churchill in the six years which he reviewed in his Budget speech a year ago was £20,250,000. Last year we wrote: " Not only, therefore, has Mr. Churchill reduced the rate at which debt will be repaid, but he has based his plan on figures which will make the situation a very tight squeeze in the years immediately ahead." Events have already proved that criticism more than justified, for the New Sinking Fund plan has become a veritable strait-jacket. The pressure could be relieved if the surplus were used, as a surplus ought to be used, for the reduction of debt, and if de-rating (which is only a transfer of rate- and tax-burdens) were paid for as its benefits are felt.

Behind the glamour of ingenuity in revenue devices, for which the general public may mainly remember his Chancellorship, Mr Churchill has not seldom revealed a grasp of sound financial principle. His financial rectitude, marred so far by occasional lapses, is now, apparently, to be put to an acid test. We trust that he will not blot his record by bowing too low before the severe pressure to which Party managers and strategists will inevitably submit him, but rather that he will crown his five years' administration of the national finances by winning a victory for sound principle over political temptation.

WAR AND NATIONAL POLICY.

THE Pact of 1928 for the renunciation of war as an instrument of national policy deserves a fine historian; and, if the Pact holds, its history will doubtless be written again and again as its effects work themselves out ever deeper and wider in the life of the world. At the same time, a special interest always attaches to those first histories of great events that are written by contemporaries. Whatever the contemporary historian may lack in perspective, he alone can convey to later generations the intellectual and emotional atmosphere in which the genesis of the great event occurred. His testimony will, of course, be doubly precious if he himself was an important actor in the drama—and not least if he deliberately confined himself to an unobtrusive *rôle* in the rear of the stage, whence he could scrutinise the movements of the other actors while still performing his own. On all these counts, Professor Shotwell's book* on the Pact—of which the English edition has just been published—might be expected *à priori* to be a work of high interest and enduring value; and this expectation is entirely borne out now that the book is in our hands. Professor Shotwell is not only a contemporary observer sensitive to the spiritual and political currents of the age; he is also, in a very definite sense, one of the architects of the Pact; and, over and above this, he always retains the historian's sense of perspective. He sees the negotiation of the Peace Pact in the light of the devastation produced by the General War of 1914-18 (For is he not the editor of the great series of Carnegie Endowment monographs on the economic and social history of the war?); and he sees the war of 1914-18 against the still more tragic background of all the wars of the past six millennia—since the simultaneous birth of war and civilisation. Thus, " War as an Instrument of National Policy " is at once a deep and a simple book. In other words, it is a book in which " the plain man " can study an issue which concerns him every bit as much as it concerns the statesman, because it affects the whole future of mankind. But this does not mean that the book is of secondary importance for " the expert "; for Professor Shotwell shows himself not only a historian with wide vision but also an interpreter of diplomatic documents with a very penetrating acumen. Anyone who, looking towards the future with a practical aim, is anxious to explore the diplomatic implications of the Pact itself and of the diplomatic correspondence out of which it emerged, will find Professor Shotwell's work indispensable.

Perhaps the most interesting single point that stands out in the book is the fact that both the idea expressed in the Pact and the momentum which carried this idea into the treaty stage were supplied by public opinion. The first suggestion was given in a message addressed by Monsieur Briand, not to his official " opposite number," the Secretary of State at Washington, but to the American people at large through a non-official agency, the American " Associated Press." In this message, Monsieur Briand deliberately took up a current popular American " slogan," the " Outlawry of War." Monsieur Briand's message, in turn, was taken up in America by private individuals—we may mention Professor Shotwell himself, Dr Nicholas Murray Butler, and Mr S. O. Levinson—and it was really they who got up the steam which started the diplomatic machinery working in good earnest nine months later, when Mr Secretary Kellogg made his formal proposal for a general treaty on December 28, 1927. The effect produced by these unofficial American missionaries of the Peace Pact was very imposing. In the first place, they succeeded in uniting the peace movement in the United States on a common programme—for the first time since that movement had been split over the question whether the United States should become a member of the League of Nations. They also aroused the interest of the American people as a whole, and the active sympathy of a very large majority of it—a majority far larger than the adherents of the peace movement in the narrower sense. But their effective action was by no means confined to their own country. Mr. Levinson conferred with Monsieur Briand in Paris—and what he was able to tell him about the state of American public opinion may well have been the decisive consideration that moved Monsieur Briand to follow up his first unofficial suggestion with a formal offer of a bi-lateral Franco-American treaty two months later. A few months later again, at the Honolulu Conference of the Institute of Pacific Relations, Professor Shotwell took the opportunity to explain the idea to the assembled national groups (Chinese, Japanese, Canadian, Australian and New Zealand, as well as American), and the seeds of the idea which were carried home by individual members of the Japanese group seem to have started that remarkable development of Japanese opinion which led to the Japanese Government, months afterwards, accepting Mr Kellogg's full-fledged proposal without reservations. It should be noted that the Institute of Pacific Relations, though an international institution, was a purely private association of non-official organisations in the several countries affiliated to it; and this was a projection, on the international scale, of an American way of doing things; for the initiative in the foundation of the I.P.R. had originally come from private American citizens resident in Hawaii. Moreover, the *rôle* of public opinion did not come to an end even when the official negotiations that eventually resulted in the Treaty of Paris began. For this public opinion overleapt the national frontiers and displayed itself as a worldwide force which no local Government could ignore. In Great Britain, a Ministry which did not reveal much spontaneous enthusiasm for Mr Kellogg's proposal was impelled by public opinion, energetically and persistently, along the proper course. And the effect of this worldwide opinion upon Governments was even more striking where, as in France and in the U.S.S.R., local public opinion either did not or could not assert itself. The French and Russian Governments were drawn along by this imponderable but pervasive and powerful world force no less effectively than if they had been subjected to close-range bombardments by Press campaigns in their own capitals.

In emphasising the *rôle* of international public opinion, we do not mean for one moment to call in question the brilliance of Mr Kellogg's diplomacy; for public opinion, by its nature, can only provide the driving power for political achievements; and all honour to the political engineer who, when he is presented with a fine head of steam, shows himself competent to get the utmost out of it. The brilliance of Mr Kellogg's work can be measured by its simplicity and sincerity; for it is a far harder task to induce other negotiators to refrain from importing subtleties, complications and reservations into a straightforward formula than it is to play the opposite part. Nothing could have been more masterly than Mr Kellogg's method of saving " the simplicity and purity " of Monsieur Briand's original formula by a series of timely moves—partly in the shape of conciliatory interpretations and partly through enlisting an ever-widening circle of Governments in favour of his own plan.

Thus the world will to peace—skilfully interpreted by Mr Kellogg in terms which " the plain man " could appreciate—found fulfilment in the signature of a Pact which would have been greeted either as a stumbling-block or as a folly not many years earlier. But of course the Pact is not the last but the first act of a play. This can be realised at once by comparing the contents of the Pact with those of the Covenant of the League of Nations. The Covenant contains three distinct elements: first, a partial renunciation of war without qualification; second, the provision of alternative, *i.e.*, pacific, means for the settlement of international disputes; third, the holding in reserve of sanctions against States which refuse to fall in with these alternative means of settlement—the first resort being economic pressure and the *ultima ratio* collective war against the Covenant-breaker. By contrast, the Peace Pact pledges the parties to a total renunciation of war as an instrument of national policy—though without impugning the right of self-defence, and that at a party's own sole discretion; it merely provides that international disputes shall not be settled except by pacific means, without itself making any arrangements for that purpose; and it is silent about sanctions. Thus, at best, for parties to the Peace Pact, who do not happen also to be States Members of the League, and possibly for all parties to the Peace Pact, acceptance of the Pact presupposes certain further action. As far as the United States is concerned, she is taking some of this action by busily weaving a network of bilateral conciliation and arbitration treaties with as many other States as possible. Sanctions are another matter—but perhaps it would not be altogether accurate to say that the Pact leaves them out of account; for in the preamble there is the very significant postulate that any party which violates the Pact shall automatically lose the benefit of it *vis-à-vis* all the other parties. In other words, there really is a sanction, though it consists not in the certainty of coercion but in the loss of certainty of immunity from coercion. It may well be, psychologically, that this unpredictable kind of sanction has a greater deterrent effect than the kind in which the worst that can happen can be calculated—and so perhaps provided against—in advance.

THE AMERICAN PRESS.

(BY A NEW YORK CORRESPONDENT.)

THE American Press, founded originally upon personalities, is becoming institutionalised. The past ten years have been a period of striking growth of newspaper chains, and have witnessed increased linking of local journals in widely scattered cities under single ownership and management, though not necessarily under uniform editorial direction. In the last five years the number of chains has more than doubled and the number of controlled papers has increased by more than half. It has been a period, too, of consolidation of competing papers in the same city, not only through purchase by the chains, but also by necessity, political partisanship having become insufficient to support two or more journals. Although the population is growing, the number of periodicals is decreasing. Some 20,600 daily and other periodicals are published now in the United States. The total is a few score less than in 1927.

The present magnitude of the newspaper business is apparent in the circulation figures, which show a daily sale of over 27,000,000 evening papers and 6,000,000 morning papers—a combined total of over 33,000,000—while circulation of Sunday newspapers aggregates more than 28,000,000. But whereas the beginnings of the industry are to be found in political opinion and the personality of colourful editors, it shows to-day definite signs of having outgrown these aids to greatness; of having become a business more than an art.

The most conspicuous example of the consolidation of competitive journals was the work of the late Frank A. Munsey, in New York City. His mergers reduced the morning papers there from seven to four and the evening papers from seven to five. Beginning with the *New York Press* in 1912, he bought the *Sun* and *Evening Sun* in 1916 and submerged the *Press*, retaining its Associated Press Franchise. In 1920 he purchased the *Herald*, with the *Telegram* and the European edition of the *Herald*, for the sum of $4,000,000. He amalgamated the *Sun* and *Herald*, later separating them and making the *Sun* an evening paper to replace the *Evening Sun*. In 1924, failing to buy the *Tribune*, he sold the *Herald* to that paper for $5,000,000. He combined the *Telegram* with the *Evening Mail* and the *Sun* with the *Globe*, later dropping the names of the *Mail* and the *Globe* from the merged organisations. These steps left the *World*, the *Times*, the *Herald-Tribune*, and the *New York American* in the morning field, and the *Sun*, the *Telegram*, the *Evening World*, the *Evening Post*, and the *Journal* in the evening field of the full-sized Manhattan dailies.

Three dailies, whose circulation figures outshine most of these, however, have been created within the last ten years. The *Daily News*, an experiment launched by *Chicago Tribune* interests, was the first. The others, the *Daily Mirror* and the *Evening Graphic*, are patterned after it, as are many others now throughout the country. They are half-sized newspapers, with news condensed, special emphasis on the sensational and sordid, and profuse illustration. The so-called " tabloid " is the modern " yellow " journal, appealing frankly to unintelligent masses. William Randolph Hearst sponsored the *Mirror* for a while, as he did also " tabloid " papers in Boston and Baltimore, but subsequently sold all three.

Mr. Hearst was the pioneer in the creation of huge newspaper systems. He began with the *San Francisco Examiner*, a paper owned by his father. He transformed it into a nationally known feature newspaper. He did the same to the *New York Journal*. His group to-day includes twenty-eight newspapers, published in such leading cities as New York, Chicago, Boston, San Francisco, Los Angeles, Detroit, Washington, Albany, Atlanta, and others. In the last two years, by the sale of the " tabloids " and the consolidation of several papers, he has made the first reversal of his policy of expansion.

The aggressive Scripps-Howard newspapers are running Hearst a close second. From the *Cleveland Press*, this organisation has reached out to acquire twenty-five other dailies, having a combined circulation of over 2,500,000. Its journals include the *New York Telegram*—bought from the *Sun* in spite of a higher tender by Hearst—and publications in Cleveland, Baltimore, Pittsburgh, San Francisco, Washington, Cincinnati, Indianapolis, and other cities.

The third powerful group, younger still, is the Frank E. Gannett system of sixteen newspapers, fourteen of which are in New York State. Its last acquisition was the time-honoured *Brooklyn Eagle*, in December, 1928. The Gannett chain last year alone spent $10,500,000 on the purchase of additional journals, exclusive of the $6,000,000 reported to have been paid for the *Eagle*. The Sentress Narsh organisation, with seven papers in Texas and others in the southwest, and the Ira C. Copley chain, with eighteen in California and four in Illinois, are other growing national groups.

The trend towards the formation of a " national " Press in the United States is apparent in the growth of

* " War as an Instrument of National Policy." By James T. Shotwell. (Constable, 15s. net).

the syndicates—companies which buy the output of comic artists and feature writers and distribute them all over the country for fees based upon the circulation of the subscribing journal. There are about 100 of such organisations. In any large city the itinerant reader may pick up a daily paper and find the favourite comic strip or feature article of his home town paper. The syndicates go even farther than supplying contributions to the make-up of a daily. The smaller publications, the semi-weekly or weekly paper of the rural districts, may contract for whole pages. They may even buy their paper already printed on one side with special news, educational features, and entertainment matter. Moreover, co-operative organisations among such small journals are active and extensive. The Western Newspaper Union, for example, embraces some 3,780 papers; the Montana News Association, 100; the United Weeklies, the Public Press, and the Northwest Newspaper Association, smaller numbers.

The effect of the newspaper chain upon the independence of individual papers has not been as great as might be surmised. For example, it is the policy of the Gannett managers to leave the editorial opinions and politics of their units unchanged. Thus they conduct a Democratic paper in one city and a Republican paper in another adhering to the traditions of each publication. The Scripps-Howard organisation controls the national and international policies, but leaves local jurisdiction in charge of local editors. It sends by leased wire from Washington editorial matter on national questions, though there is no strict rule about the use of such editorials. During the last presidential campaign it supported Mr. Hoover. Before his nomination it had announced that if Governor Smith were nominated and any other Republican than Hoover placed in the race, it would support Smith. The Hearst group, more than the others, is dominated by the policies of its commander.

Public ownership of the American Press, in the British manner, is practically non-existent. Financially, the newspaper business is in much the same position as that in which industrial corporations were placed a quarter of a century ago, when railroads were the prime investments, and other industries were not regarded favourably by the bankers or the public. The hazards of the publishing business appear to the American investor to be considerable. Profitable individual enterprises are held closely; to seek public financing has been considered a sign of weakness. One step, however, in the direction of widespread ownership has been the development of employee stockholding. The Scripps-Howard organisation, forming what amounts to investment pools in shares of various newspapers of the chain, has been successful in selling shares in the investment companies to their employees. Individual newspapers, in a few instances, have offered their workers a chance to share in the profits. These include the *Kansas City Star*, the *Chicago Daily News*, and the *New York Sun*. Following out the wishes of Mr. Munsey, William T. Dewart, the present publisher, offered all employees an opportunity to buy preferred stock, non-voting, non-cumulative and non-transferable. In addition, department heads and other executives were granted common stock. The *New York Post* and the *Philadelphia Public Ledger* stand almost alone as an example of public participation in the newspaper business—and this only through the stock of the Curtis Publishing Co., whose interests include three great national magazines. On the other hand, there has been some success in the floating of bond issues by newspapers. Hearst has gone to the public several times with mortgage or debenture issues backed by his personal guarantee. That guarantee in turn is backed by a net fortune of more than $25,000,000. The Scripps-Howard Newspapers also floated a $8,500,000 issue last year, in the form of 5½ per cent. unsecured debentures sold at $99, one of the highest known industrial issue prices either in this country or in Europe. It was their first outside financing except for a mortgage bond on real estate. The magnitude of the Gannett operations drove that group also to the open market with $5,000,000 in debentures, which were successfully disposed of.

As the benefits of chain operations become more apparent, through economies in purchase of raw material and production of entertainment features as well as through standardisation of mechanical practices, it seems apparent that a place will be found for newspaper equity securities in the investment market. Just as personal journalism has passed from the editorial side of newspaper making, so, according to leaders of the chain movement, personal financing is destined to pass from the business side of newspaper operation.

OUR INDEX NUMBER: THE QUARTER'S PRICES.

A FURTHER fractional rise took place last month in the general level of wholesale prices, our index number at the end of March being approximately one-half of 1 per cent. higher than a month ago, and nearly 1.2 per cent. above the figure recorded at the end of 1928. Changes in the indices of each price-group during the past quarter are summarised in the following table, the figures for the end of March, 1928, being added for purposes of comparison:—

Average, 1927 = 100.

End of—	Mar., 1928.	Dec., 1928.	Jan., 1929.	Feb., 1929.	Mar., 1929.
Cereals and meat	107·0	97·6	96·7	101·2	100·9
Other foods	96·9	90·2	89·4	88·5	87·3
Textiles	107·4	101·7	101·3	99·9	100·8
Minerals	91·4	94·1	94·8	96·4	99·7
Miscellaneous	96·9	91·4	91·2	91·4	91·4
Complete Index	99·9	95·0	94·7	95·6	96·1

Food prices, it will be observed, fell during March, whereas the value of materials rose, as a result, chiefly, of a further sharp advance in mineral prices. Textiles also recovered, while the " miscellaneous " group on balance showed no change. Fluctuations in the prices of individual commodities last month were considerable, as may be seen from the following analysis of the 58 articles comprised in our index number:—

	Inc. (+) or Dec. (−) per cent. compared with Month Ago.	Year Ago.		Inc. (+) or Dec. (−) per cent. compared with Month Ago.	Year Ago.
Wheat—For.	− 3·8	−15·9	Flax	− 1·1	−16·8

Cotton yarn	+ 1·6	− 1·5	Rubber	−14·5	−17·0
Cotton cloth	+ 1·8	− 1·7	Soda crystals	...	...
Wool, Eng.	− 3·7	−10·3	Sulph. ammon.	...	...
Wool, Aust.	− 2·4	−17·1	Creosote	− 4·5	−34·8
Wool tops	+ 2·3	−20·1			
Silk	...	+ 1·4	Miscellaneous	...	− 5·7

Among cereals and meat a notable feature last month was an advance in the price of Argentine beef, as opposed to falls in the price of English mutton and potatoes. Imported wheat and flour quotations also declined. In the " other foods " group, cocoa appreciated, but values of Danish butter and coconut oil were lower. Wool prices fell, among textiles, but the price of Egyptian cotton, and to a less extent that of American cotton, advanced. In the mineral section, coal prices, particularly of Welsh export coal, recovered substantially, and metals, other than tin, rose under the lead of " booming " copper prices. Among " miscellaneous " commodities, advances in petrol and petroleum prices were balanced by declines in the case of rubber, creosote and leather. In comparison with a year ago, it will be seen that the chief alterations in prices at the end of March were advances in the case of bacon, coal, lead, copper, spelter and petrol, offset by declines in most other commodities — wheat, potatoes, English mutton, sugar, butter, wool, flax, hides, rubber, and creosote being notably cheaper. In the next table we give actual price-quotations for a number of important articles at the end of last month in comparison with their price at the beginning of the quarter and at earlier dates:

	End 1926.	End 1927.	1928. End March.	1928. End Dec.	1929. End March.
Wheat, Canadian, per qr.	57/6	58/−	59/9	49/3	50/3
Potatoes, per ton	£6/10/0	£6	£7/10/0	£6/0/0	£6/5/0
Beef, English sides, per 8 lbs.	4/10	4/8	6/−	5/4	5/4
Mutton, New Zealand, per 8 lbs.	4/3	4/9	4/10	5/−	5/−
Tea, Indian auction average, per lb.	1/3½	1/6½	1/3½	1/5½	1/5½
Sugar, granulated, per cwt.	34/1½	29/9½	30/7	24/7½	23/6
Cotton, American middling, per lb.	6·90d.	11·06d.	10·77d.	10·59d.	10·96d.
Cotton yarn, 32's twist, per lb.	12·37d.	15·25d.	16·25d.	15·50d.	16d.
Wool, Australian, per lb.	45d.	48d.	48d.	44d.	41d.
Jute, per ton	£31/5/0	£31/15/0	£31/17/6	£32/5/0	£33/10/0
Pig iron, Cleveland No. 3, per ton	87/6	65/−	66/−	66/−	67/−
Coal, best Welsh, per ton	29/3	19/1½	19/3	19/4½	21/6
Tin, Standard, per ton	£300/7/6	£265/2/6	£239	£225/15/−	£220/10/0
Copper, per ton	£56/4/0	£60/18/3	£61/6/0	£74	£95/15/0
Linseed oil, per ton	£31/5/0	£28	£29/10/0	£29	£29
Rubber, plant, sheet, per lb.	19·12d.	20d.	13·25d.	8·69d.	11d.
Cement, Portland, per ton	60/9	54/−	54/−	47/−	47/−

Compared with the position three months ago the salient changes shown in the foregoing list are the advances in the price of copper, coal, and rubber. With these exceptions—to which petrol has also to be added—the quarter has been a period of relatively stable prices. The severe weather of February occasioned short supplies and temporarily higher prices in the case of certain foodstuffs, and, though a reaction came with the end of the frost, there has been a fairly general advance, of no great extent, in cereal and meat prices as compared with the end of 1928. Among " other foods " butter and sugar have declined. After weakness in January, cotton values have recovered to a point somewhat above the level of three months ago; wool prices have had a downward tendency; other textiles have been barely maintained. Except for a rise of 1s. per ton in Cleveland pig iron, steel and iron prices have undergone no alteration. Tin has been steady at the lower figure established in January; coal prices have latterly been firmer; and copper and other metals have gone strongly ahead. Hides and leather quotations have declined, and rubber, after reaching nearly 13d. per lb. at the end of February, was 2d. per lb. lower at the end of the quarter. Movements, in short, during the first three months of 1929 have been conflicting, and the rise on balance of 1.2 per cent. in the general price level shows that the rise in Bank Rate early in February has not resulted in any general fall in prices.

Calculated with 1924 as the base year, our index number at the end of last month works out at 83.1. Recent changes, measured on this basis, are summarised below:—

1924 = 100.

Date.	Cereals and Meat	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1925	99·9	94·7	90·6	93·6	102·9	96·8
" 1926	90·0	90·6	71·1	100·3	98·4	89·9
" 1927	87·5	93·8	73·1	83·7	94·7	86·4
End March, 1928	93·7	90·9	78·6	76·6	91·8	86·4
" June, "	98·8	86·7	80·3	76·4	90·8	86·9
" Sept., "	84·5	87·6	74·1	76·9	90·2	82·7
" Dec., "	85·5	84·5	74·3	78·7	86·5	82·1
" March, "	88·4	81·9	73·7	83·5	86·6	83·1

Since 1924, it will be noted, the decline in the textile group index figure has been substantially greater than that shown by the other groups, while " other foods " have fallen more than cereals and meat. These apparent divergencies in the rate of fall become more understandable when our index number is converted (by the method explained in the *Economist* of December 15, 1928) to a percentage of 1913:—

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168·5	215·8	214·7	149·3	122·6	166·2
" 1925	168·4	204·2	194·6	139·8	126·2	160·9
" 1926	151·7	195·3	152·6	149·8	120·7	149·4
" 1927	147·6	202·2	157·0	125·1	116·1	143·7
End June, 1927	155·5	199·4	157·3	123·9	113·9	144·1
" Dec., 1927	143·7	198·6	160·9	117·8	117·8	141·9
" June, 1928	166·4	187·3	172·3	114·2	111·3	144·5
" Dec., 1928	144·0	182·4	159·6	117·7	106·1	136·5
" Jan., 1929	142·7	180·8	159·0	118·6	105·9	136·1
" Feb., 1929	149·3	179·0	156·8	120·6	106·1	137·3
" Mar., 1929	148·9	176·5	158·2	124·7	106·1	138·1

In 1924 the increases since 1913 in the case of " other foods " and textiles greatly exceeded the general average. Thus, the relatively greater decline which has occurred in these two groups during the past four years has been in the nature of a step towards restoration of the pre-war balance of prices. " Other foods," it may be remarked, are still comparatively " dear," while, at the other end of the scale, the altered cost of rubber is largely responsible for the " cheapness " of the miscellaneous section. The increase of 38.1 per cent. over 1913, recorded at the end of March, compares with 43.5 per cent. a year ago and two years ago, and with 47.1 per cent. at the end of March, 1926. Thus, during the past three years the fall in prices as a whole has averaged no more than 0.17 per cent. per month—a high degree of stability in comparison with the previous five years.

The MERCANTILE BANK *of* INDIA

CO-OPERATIVE BUSINESS ADMINISTRATION.

(BY A CORRESPONDENT.)

POST-WAR expansion of the Co-operative Wholesale Society has outgrown the methods of supervision which were laid down when the society was mainly a distributing agency, with only a few advances into production. Now it has depôts abroad, agents in the British Colonies, investments in outside financial interests, joint partnorship with the Scottish C.W.S. in India and Ceylon and with Russian co-operators in the wheat supply, and a score of other enterprises—including the ownership, recently acquired, of a Sunday newspaper—involving expert guidance and direction. New problems with regard to the relation of the organisation towards commercial rivals, the experience in farming, the apathy of some retail societies to the productions from the works they have established through the C.W.S. have become insistently urgent. These facts, combined with the impression that an improvement was desirable in the status and emoluments of the directors and a change in the unwieldy character of the business meetings, led to the appointment, in January, 1928, of a Special Committee, thoroughly representative of the experienced leaders of the movement, to consider the whole matter and make recommendations with a view to helping the C.W.S. more adequately to meet the new conditions.

The Committee has now completed its inquiry, and the report, which has just been issued to the retail societies, will be considered at the delegates' meeting in April.

Tribute is paid to the efficient management and financial stability of the organisation; but it is recognised that the " unparalleled growth " of the society suggests the need for improvements in administration consequent on the expansion. Apart from its significance to the co-operative movement, the report of the Special Committee is of general importance in virtue of its plans for the election of directors from a panel of selected persons, and of its formulation of a policy to secure more considered examination of accounts by a lessened number of accredited delegates.

These reforms constitute an innovation in a movement that has stood for widening the area from which the candidates for responsible office should be drawn and extending the control by the members. The necessity for an overhaul of the executive machinery has been forced by the new factors which have entered into commerce—both on the economic and on the industrial side. Co-operation is no longer represented by small shops in the back streets of purely industrial areas. It is alongside Big Business in all the markets of the world.

The present directorate consists of 32 members, nominated and elected by the 1,200 retail societies. There is no shareholding qualification; and the individual interests are on a different basis from that which obtains in ordinary companies. Only societies may hold shares in the C.W.S., so that there are no individual members. The directors are elected in three districts—Manchester, which embraces half the societies, and Newcastle and London. The recent advance in the latter area, and the trade depression on Tyneside, have altered the proportionate importance of the divisions. Hence the new proposals to institute a national election and to reduce the number of directors to 28, from 32. Starting salaries of £750, rising to £1,000, are suggested, with pensions not exceeding £500 per annum on reaching the proposed retiring age of 68 years.

Under the present system the delegates are mainly dependent for their knowledge of the candidates from their speeches at the conferences frequently held in various districts. The problem is to distinguish between business acumen and oratorical power. It is now proposed to meet the position by setting up a Reference Committee consisting of two representatives of the retail societies in the seven areas into which England will be divided for the purpose. These fourteen, with two members of the C.W.S. board, will determine upon two or three candidates who, on the first ballot, secure more than the average number of votes for each nominee in the election. Thus the societies will, in the first place, vote for a national list. The result of that ballot will determine the most popular candidates by deleting all who fail to reach the average of votes. Then the Reference Committee will interview and examine the qualifications of those with the greater number of votes, and when they have decided on the two or three with the necessary qualifications, the societies will, on a final election, decide their choice. This is an interesting experiment in democratic business control, and is an adaptation of some of the methods practised by co-operative societies on the Continent. It is a recognition of the essential difference between political and business democracy.

In order to secure more thorough examination of the commercial affairs of the co-operative movement the Special Committee is recommending—and the present C.W.S. board intends immediately to adopt—the holding of delegate conferences to examine the balance-sheet in detail and to consider the account in a more detailed way than is possible in meetings attended by several hundred people. Representation at these quarterly business assemblies (and also the voting for the directors) will be based upon one vote as a member of the C.W.S., another for the first complete £20,000 of goods purchased, and another for each £40,000 of goods bought from the C.W.S. Thus the controlling power will be removed from the shareholding qualification and will be entirely regulated by the degree of loyalty to the institution as measured by purchases. This, again, is an innovation which is calculated to encourage the retail societies to draw all their trade stocks from the federation, and so extend its influence in the commercial markets as well as help the development of its own productive enterprises.

Apart from these two variations in the election, or selection, of directors and the transfer of governing power from capital to trade, the recommendations are designed to concentrate the central authority at the Manchester headquarters, where the board meetings are to be held 34 weeks in the year, the other weekly meetings being twice in London to once in Newcastle. The directors are to be divided into three sections dealing with finance, food supplies, and dry goods, with a view to their specialising in the various departments. There are 200 managers of works and departments now responsible to the directors, and the idea is to form these into groups " with a view to a reduction in the number of persons directly responsible to the board." Proposals are also to be made for the furtherance of education and welfare work among the 50,000 employees, the formation of workers' advisory councils, and the employment of specialists in agriculture to give expert advice on farming policy. The Special Committee has offered a suggestion for the consideration of the C.W.S. and the retail societies in its approval of " the principle of fixed maximum retail prices for suitable goods manufactured by the C.W.S."—thus (if the idea is adopted by the societies) meeting the controversy that has recently been raised by outside manufacturers seeking to prevent co-operative societies giving their usual dividends on goods with prices fixed by the makers.

Altogether the recommendations indicate the feeling among co-operators that the new competition they have to meet, and the fresh fields into which they are venturing, require the overhaul of their methods so as to preserve the traditional principles in a new policy of more intensive business application and a more extensive range of commercial enterprise. Their reception by the delegates at the meetings to be held next month will determine the rate of co-operative progress for another quarter of a century.

THE SINKING OF THE "I'M ALONE" AND "HOT PURSUIT."

(BY A LEGAL CORRESPONDENT.)

He would be an imprudent man who would attempt a judgment upon the case of the " I'm Alone," the Canadian schooner sunk by a United States coastguard vessel over 200 miles from the American coast, until the facts have been approved or agreed. But it is not too early to explore some of the legal principles and doctrines which are being bandied about to and fro across the Atlantic, and in particular the doctrine of " hot pursuit."

Territorial Jurisdiction.—The normal limit within which a State can lawfully exercise jurisdiction over foreign merchant ships is the extent of its territorial waters or marginal belt, as to which there is universal agreement upon three miles as a minimum and very general agreement upon that distance as a maximum. The principal parties to the present dispute—the United States and Canada—are in agreement upon three miles both as a maximum and as a minimum, and have solemnly declared their agreement in the first clause of the Liquor Treaty of January 23, 1924, between the British Empire and the United States. France, who is also interested because (it is said) the member of the crew of the " I'm Alone " who was killed was a French citizen, does not hold the same clear-cut view as to the limits of territorial waters, and the Franco-American Liquor Treaty of March 12, 1927, contains no such declaration.

Jurisdiction Outside Territorial Waters.—In addition, however, to this undoubted jurisdiction within territorial waters there is a controversial protective jurisdiction extending beyond it to an undefined extent (see the *Economist*, December 1, 1923, page 958). Lord Chief Justice Russell, when arguing as Attorney-General at the Behring Sea Arbitration in 1893, asked on what principle the Hovering Acts rested, and answered his own question as follows:—

" On the principle that no civilised State will encourage offences against the laws of another State, the justice of which laws it recognises. It willingly allows a foreign State to take reasonable measures of prevention within a moderate distance, even outside territorial waters; but all these offences, and all offences of the same class and character relating to revenue and to trade, are measures directed against a breach of the law contemplated to be consummated within the territory. . . ."

Whether this extended jurisdiction should be based upon international law proper or merely upon international comity is not clear, but its existence in one form or the other is recognised.

It was presumably with reference to this extra-territorial protective jurisdiction, and upon the analogy of the old Hovering Acts (both British and American) that in 1922 Congress enacted the Tariff Act of 1922, which made provision for the enforcement of the Prohibition Amendment within a distance of four leagues of the American coasts. But this being a purely municipal enactment did not thereby acquire international validity. The important event from the international point of view was the conclusion by the United States in the years 1924 to 1928 of a number of so-called " Liquor Treaties " with foreign States, whereby that country acquired a right to enforce her Prohibition law within a much greater distance than three miles or even four leagues. By the British-American Treaty of 1924 (to which Canada is a party) His Britannic Majesty agreed

" that he will raise no objection to the boarding of private vessels under the British flag outside the limits of territorial waters by the authorities of the United States . . . in order that enquiries may be addressed to those on board and an examination be made of the ship's papers for the purpose of ascertaining whether the vessel or those on board are endeavouring to import or have imported alcoholic beverages into the United States . . . in violation of the laws there in force. . . .

" The rights conferred by this article shall not be exercised at a greater distance from the coast of the United States . . . than can be *traversed in one hour by the vessel suspected* of endeavouring to commit the offence. In cases, however, in which the liquor is intended to be conveyed to the United States . . . by a vessel other than the one boarded and searched, it shall be the speed of such other vessel, and not the speed of the vessel boarded, which shall determine the distance from the coast at which the right under this article can be exercised."

The Doctrine of Hot Pursuit.—The further question arises: May a vessel, having committed an offence within a given area of jurisdiction in which she may lawfully be seized and then escaping beyond it, be pursued and seized on the high seas? May a pursuit lawfully commenced at spot A be lawfully consummated by seizure at spot B, where the pursuit could not lawfully have commenced? There is a general consensus of authority, both British and American, in favour of an affirmative answer to these questions in the case of an offence committed, and a pursuit commenced, within territorial waters, that is, within the three-mile limit. Sir Charles Russell, arguing in the arbitration mentioned above, said that "there is a general consent on the part of nations to the action of a State pursuing a vessel under such circumstances out of its territorial waters and on to the high sea." Though he regarded it not as " a strict right by international law, but something which nations will stand by and see done, and not interpose if they think that the particular person has been endeavouring to commit a fraud against the laws of a friendly Power," most authorities state it as a rule of law, and for our present purposes it does not greatly matter which view is the correct one. He also said: " It must be a hot pursuit, it must be immediate, and it must be within limits of moderation." The facts of the " I'm Alone " case, when established, will show whether these conditions are satisfied or not. The point of law, or one of the points, which the sinking of the " I'm Alone " seems likely to raise is whether this doctrine of hot pursuit is confined to offences committed within the strict limits of territorial waters or whether it applies by analogy to offences committed within the wider zone created by treaty between the United States and Britain. So far as we are aware, no international tribunal has yet been called upon to pass judgment upon this point. But there is nothing inherently improbable in the extension by the application of analogy. During the late war the British Prize Court was invited to apply the doctrine to the case of maritime property placed on land to avoid capture at sea, but upon the facts the necessity of an express decision of the point did not arise. Again, the doctrine has been invoked by the United States to justify the pursuit of Indian and Mexican raiders into adjacent foreign territory. And in the case of " The Vinces " it was decided by the United States District Court of South Carolina in 1927 that a vessel of British registry which committed an offence against the American Prohibition laws *within* twelve miles of the American coast could be pursued and lawfully seized at a point which was 12¼ to 13 miles from the coast. What attitude the British Government adopted towards this decision is not known.

A point of minor interest to observers of the development of Dominion status is the part which will be played by Mr Vincent Massey, the Canadian Minister at Washington, in the negotiations now taking place. In conclusion, it may be added that we need not anticipate serious difficulty in the solution of the matter. If even there were a " justiciable " dispute, it is this one, and the moderation of the British and American Press is of welcome good omen.

Notes of the Week.

Reparations.—Re-assembling at Paris this week after its Easter recess, the Committee of Experts apparently is entering on the final phase of its work with rather good prospects of success. Progress has been slower than was anticipated, but it seems to have been substantial. Machinery to replace that created by the Dawes Plan and a large part of that now in the hands of the Reparations Commission has been planned, and the ultimate operation of this machinery should do much finally to replace the war atmosphere by that of peace and to stimulate international economic co-operation and prosperity. The plan for a new bank for international payments has apparently been worked over carefully, and its sponsors have emphasised the intention of making it supplementary and helpful to existing institutions, and of not giving it powers to dominate. As an agency for co-operation between central banks it is envisaged as providing for regular meetings between the heads of existing central banks, or their representatives, much as the League of Nations provides opportunities for regular meetings between the statesmen of different countries. These seem to be the best grounds for believing that the bank would not attempt to interfere with the control of domestic money markets by their respective central banks, and that it would not compete with existing commercial institutions. In short, the bank as it has been developed bears, we gather, little resemblance to the " super-bank " that some early reports described. Meanwhile it would appear that the ideas of creditors and of the debtor regarding annuities have gradually been brought close enough together to permit concrete discussions in plenary sessions. At the last meeting before the recess was taken memoranda of principles to be employed for the determination of annuities were submitted by certain of the delegations. Judging by the optimism displayed at the adjournment, these memoranda contain nothing irreconcilable. Difficulties undoubtedly remain to be surmounted, and in negotiations of this kind the possibility of a hitch is always present. However, the Committee has been able to preserve good feeling within its ranks for a period of two months, and the quality of its membership should assure a sufficient supply of the give-and-take spirit to permit it to provide Europe with the basis for a real and lasting settlement.

Five Years' Revenue and Expenditure.—Political statisticians are hard at work totting up the evidence of Mr Churchill's luck and management in the four financial years in which he has had charge of the national accounts. They will be disappointed in their search for murderous bombs or lavish bouquets to hurl at the Chan-

cellor, but the following table, comparing the revenue and expenditure of the last four years with those of 1924-25, when Mr Snowden was in office, allows some interesting conclusions to be drawn:—

NATIONAL REVENUE AND EXPENDITURE, 1924–29.

£ (000's omitted.)

	1924–25.	1925–26.	1926–27.	1927–28.	1928–29.
1. *Revenue.*					
Income tax	273,836	259,411	234,717	250,583	237,620
Other Inland Revenue	165,230	169,030	167,330	167,500	169,320
Customs	99,344	103,487	107,515	111,620	118,972
Excise	135,128	134,560	132,978	139,200	134,000
Motor duties (net)	601	601	4,020	4,852	4,226
Total from taxes	674,139	667,089	646,560	673,755	664,138
Post Office (net)	5,070	3,400	3,950	6,200	8,100
Other revenue	54,284	70,168	82,918	86,403	85,866
Total revenue	733,493	740,657	733,428	766,358	758,104
2. *Expenditure.*					
Interest and management of National Debt	312,161	308,229	318,584	313,816	311,491
Other Consolidated Fund services	20,883	22,466	22,808	24,303	23,109
Defence	114,700	119,377	116,730	117,440	113,470
Civil and Revenue Depts. (exc. Post Office)	237,090	254,623	252,000	241,560	234,130
Sinking Fund	45,000	50,000	60,000	65,000	57,509
Total	729,834	754,695	770,122	762,119	739,709
3. *Self-Balancing Items.*					
Post Office	50,380	53,950	54,900	56,800	57,200
Road Fund	15,563	17,455	17,373	19,666	21,131
Total	65,943	71,405	72,273	76,466	78,331
4. *Balance*	+3,659	−14,038	−36,694	+4,239	+18,395

By far the most erratic item in the table is the yield of income tax, which, having stood at £274 million in 1924-25, amounted to no more than £235 million in 1926-27, thanks to the industrial troubles of that year, and to £238 million in 1928-29, chiefly on account of the remission made in last year's Budget. Meanwhile the yield of customs duties has steadily risen, against a nearly constant return from excise, a fact which reflects not merely the imposition of the petrol duties, but also the Protectionist tendencies of the present Government. Mr Churchill has, no doubt, been fighting a rearguard action for Free Trade, but he must nevertheless accept responsibility for the continuous increase in the proportion of tax revenue raised by indirect taxation. It will not escape notice that tax revenue has declined by £10 million in the space of four years, while expenditure has increased by the same amount. Mr Churchill found £3 million more coming in from the Post Office at his fifth account-making than at his first, but his non-tax revenue has been chiefly augmented by £16 million of receipts from loans and by a like total of special receipts (including last year the Currency Note Reserve). These heads of revenue are to a great extent both unpredictable and non-recurrent, and although there are similar items on the expenditure side, they are comparatively insignificant, so that the basis of the enlarged Budget is neither very stable nor very reliable. The cost of interest and of the supply services shows no tendency to decline by any serious amount. A million less for defence and £3 million less for civil departments, though better than an increase, are no evidence of thorough-going economy. The increased expenditure arises from sinking fund payments, which steadily rose until Mr Churchill inaugurated his New Sinking Fund; the Colwyn Committee recommended "that steps should be taken to increase the Sinking Fund as early as possible to £75 million a year," and that the aim should be to increase it by degrees to £100 million. Progress towards the realisation of their proposal has been rudely interrupted. In four years Mr Churchill has paid £232,509,434 for the reduction of debt. At the same time he has increased the debt by £50,732,120 on account of his two deficits. The annual average reduction is therefore about £45½ million, appreciably less than was provided in the year in which Mr Churchill took charge.

Labour and the I.L.P.—Few conclaves can have succeeded in passing so many foolish resolutions in so short a time as the Easter Conference of the Independent Labour Party. Meeting under the shadow of further losses in membership and branches during the past twelve months, the delegates were stirred by Mr. Maxton's presidential address to a creditable renewal of that "first fine careless rapture" whence the policy of "Socialism in Our Time" was conceived. The revised plan for the establishment (within two years from the accession of Labour to power) of a "living income standard" for every employed—and unemployed—worker was promptly endorsed, despite the cogent objections of a solitary critic, who doubted the merits of a policy which would begin by remunerating idleness more highly than many grades of skilled work. Having thus solved the problems of unemployment and under-consumption by the happy expedient of transferring wealth on a scale adumbrated as "hundreds of millions" from the "income-tax paying" class, the Conference proceeded, in the interests of world-peace, to instruct I.L.P. members of Parliament to vote against any expenditure on armaments. This embarassing decision called forth protests from more than one member, but the realists were overborne, and the conference concluded by deciding that in the event of the Labour Party being asked by the King to form a Government, the Party should immediately re-elect its leader and should thereafter select the Cabinet. Not without justification had Mr Roden Buxton complained at an earlier stage of the proceedings that the I.L.P. was "sowing suspicion of the Labour movement," though it may be questioned whether the sowers can find richer fields than they have found in the minds of the accredited leaders of that movement. For those outside the Labour Party's ranks the chief interest which attaches to the I.L.P.'s activities is not the degree of visionary enthusiasm with which the delegates succeeded in turning Carlisle into Cloud-Cuckoo-Town, but the extent of the Party's influence over its hundred odd members who are likely to sit in the next Parliament, and over the Labour Front Bench itself. Mr Macdonald has said hard words of the I.L.P.'s "futilities," but there is enough I.L.P. leaven in the mass of "Labour and the Nation" to render that encyclopædic document an acceptable bible for many of those who look for the "living income standard" in twenty-four months, and who would acclaim the total disarmament of a Great Britain no longer tainted by the supposed infamy of her present "Imperialism." Mr Macdonald owes it to the electorate to clarify and publish without further delay his Party's official policy, should they be enabled once more to take office.

The New Civil War in China.—This week, unfortunately, the "war-cloud" in China has turned into an unmistakable war—in fact, into two; for while a larger contest between Chiang Kei-shek and the Kwangsi groups is being fought out in the valley of the Yangtse, the resuscitated Northern War Lord, Chang Chung-chang, after taking Chefoo, has made a motion of advancing into the interior of Shantung. We do not take Chang very seriously, for before long he is bound to come into collision with Feng Yu-hsiang; and Feng, being aloof from the Yangtse campaign, ought to have sufficient forces available to suppress him with ease. As for the Yangtse campaign, it looks as though, in the military sense, Chiang Kei-shek is going to secure a rapid success. His advance guard is already converging on Hankow from several directions, and in the South, Canton has repudiated the Kwangsi leaders and rallied to Nanking. All the same, we prophesy that, even if Chiang Kei-shek gains his immediate military objective, he will have done so at a cost in political popularity and prestige which, on the balance, will make him a heavy loser. What the Chinese people want above all things now is peace; and it has become an odious rôle for any general to break this peace for the sake of anything that can be interpreted by his critics as a personal cause. Therefore, we foresee that, whatever may happen in this campaign, Chiang's stock will go down and Feng's stock rise in proportion. Feng is now more than ever in the favourite position of Chinese statesmen—the position of holding the scales between mutually hostile colleagues. And, several times in the past, Feng has shown consummate skill in exploiting this position to the maximum advantage. If China proves unable to get peace and reconstruction without dictatorship, everything now points to Feng being the man of destiny.

Monsieur Poincaré's Further Success.—The session of the Chamber has come to an end with Monsieur Poincaré still left in power. It is not easy to see what stronger weight of forces could be concentrated against him than that with which he has had to reckon since the Radical-Socialists reunited in opposition to him. Nor, again, is it easy to see what more contentious issue could arise than that of the religious congregations—a question which stirs France to its depths, as we pointed out when the debate on this matter was at its height some weeks ago. Therefore, if Monsieur Poincaré has survived thus far, it seems probable that he will go on surviving for some time to come. In these circumstances, the main concern for us is whether, or rather to what extent, he will continue to allow Monsieur Briand a free hand in foreign affairs. At the best, Monsieur Briand's position as a member of a Poincaré Ministry inevitably cramps his style. A little more, and the foreign policy of France might again lose touch with the international movement for peace and reconciliation—and this with unfortunate results both for France and for the world at large. It is too much to hope that Monsieur Poincaré should feel any positive sympathy for this movement; but at least we may hope that he has come to the practical conclusion that he cannot permanently hold it at bay, for, in that case, he may be the more inclined to leave the control of French foreign policy in the hands of colleagues who are more *en rapport* with the spirit of the age.

America and the World Court.—A Geneva correspondent writes:—A long step has been taken in the path of American membership of the Permanent Court of International Justice which should mark an important and significant development in the permanent peace organisation of the world. The League Committee of Jurists, which included Mr Elihu Root, the former Republican Secretary of State, and, for Great Britain, Sir Cecil Hurst, succeeded with very little difficulty in carrying out the mandate given to it by the Council to seek a solution, as suggested in the American note to States signatories to the Court Statute, of the difficulties still outstanding with regard to the previous American reservation concerning advisory opinions. The original formula, which was not accepted, was that the Court should give no advisory opinion on any matter in which the United States had or claimed an interest without its consent. The plan upon which the Jurists have agreed as being prejudicial neither to the interests of the League nor to the United States, is that whenever the Council contemplates asking the advisory opinion of the Court the United States will be informed and will have the right, within a given period, to ask for delay so that she may be heard. In the improbable event of no agreement being reached, the United States retains the right to resign from the Court. What virtually happens is that the United States, if she becomes a member of the Court, will have the same rights as any member of the League, which is as it should be. There are signs still of some hesitation on the part of one or two of the die-hard American senators, because apparently the exact wording of Mr Root's proposal, which formed the basis of the Committee's report, was a little altered here and there with his complete agreement. The idea that American participation in international meetings consists in presenting untouchable schemes still seems to linger in some quarters, but it ought to be possible for the Administration to make out a sufficiently convincing case. It is true, also, that there have been certain tentative criticisms of the solution in one or two European quarters, but they are "finicking" and not likely to have any consequence. The report will be presented to the Council, and the matter should be settled at the time of the September Assembly. If that is the case, as most reasonable people hope, it will be a fitting rounding-off of Mr Root's distinguished career. He has fought long and tenaciously for the development of an international court of justice; it was he who, with the late Lord Phillimore (both members of the committee which originally drafted the Statute of the Court in 1920) was responsible for the solution of the problem which had baffled previous efforts, namely, the discovery of a satisfactory means of electing the judges. It is true that they were helped by the mere existence of the Council and Assembly of the League of Nations, which were ingeniously used for the election procedure. If, therefore, Mr Root is also the instrument in clearing the way at last for American membership of an organisation which has always been dear to the mind of American jurists, it will be a fine distinction for this great old man. A further feature of general significance has been the deposit with the League secretariat of the United States accession to the Slavery Convention drawn up by the seventh Assembly of the League. It is the first League Convention to which the United States has become a party, and accession raised the question of the recognition of the League for certain formalities. When the Convention was transmitted for the approval of the Senate it was accompanied by a covering letter from the Secretary of State stating that it was not considered necessary to make any reservation indicating the position of the United States Government with respect to the League, but that if the Senate should consider a reservation of this kind desirable one might be made. The Senate, however, did not so consider, and no such reservation was made. This first acceptance of a League Convention without any reservation as to the League formalities, is an interesting development, and one more sign that the United States Administration can now afford to ignore the League of Nations bogey.

The "Small Investor."—The articles in the *Economist* of February 23 and March 23, with regard to the comparative unimportance of the "small investor" as a factor in industrial development, have confirmation (writes a correspondent) in the experience of the co-operative movement with regard to its increased share and loan capital. Between 1920 and 1927 the number of shareholders in the retail distributive societies increased by about a million to 5,579,038; their share and loan capital rose from £86,553,168 in 1920 to £109,773,835 in 1927. But this increase of £23,220,667 was not the result of actual investment; it was, in the main, due to the accumulation of a portion of the interest on capital and the dividend on purchases. For the year 1927 alone the profit of the societies was £23,424,744, and after the payment of share interest the remaining surplus was £19,499,487, of which about £17 million were distributed as dividends on the purchases. Co-operators are generally regarded as the most thrifty section of the people; but they are not subscribing such a large proportion of their own individual savings as was previously the case. But for the retention of the dividends in the societies there would be comparatively little additional money available for the new services that are now being developed in many districts. As a matter of fact the average share and loan holding of the individual members was £19 18s. in 1927, whereas it was £19 13s. in 1920. A rise of 5s. in the average capital holding of the members in eight years is not suggestive of the increasing power of the small investor—except from the accumulation of the dividends on his purchases. This is the point of advantage that the co-operative societies enjoy as compared with other forms of commercial organisation. Figures such as these reveal a position that even the most ardent co-operators scarcely appreciate. In 1913, the year before the war, the average share and loan capital of each of the 2,878,648 members at that time was £14 10s. Since then the aggregate share and loan capital has risen from £42,601,765—and is now two and a half times as much, while the membership has doubled. But the average individual holding has advanced only from £14 10s. in 1913 to £19 18s. in 1927. In the aggregate the value of the small investor appears pretty considerable, but the increase of capital of only £5 8s. per individual co-operator in fifteen years suggests that, but for a portion of the dividends being retained in the societies, the progress would have been comparatively small. When considered alongside the public subscriptions of large sums towards the capital of recent joint stock issues, the financial resources of the "small investor" seem of the restricted character suggested in the *Economist* of February 23. For, in many ways, the co-operators may be regarded as the most prudent of the thrifty classes of the people.

Medical Research.—The work carried on with assistance from the Medical Research Council, as related in its report for the year 1927-28, is so various and covers such a wide range that any attempt to summarise it is out of the question. Of considerable economic interest are two announcements in connection with cattle diseases. The new "double intradermal" test for tuberculosis, which the Council recommended in 1925, is now widely used, and has been found both more reliable and easier to perform than the old "subcutaneous" tuberculin test. A by-product of this discovery has been the elaboration of a test for early diagnosis of Johne's disease, which the Council regards as an effective means of saving large sums annually to the agricultural community. Among human diseases, progress is claimed in the radium treatment of cancer, and further investigation, with very satisfactory results, into the use of liver extract as a cure for pernicious anæmia, has been made in collaboration with the Harvard Medical School. The section of the report which has attracted considerable popular interest is that which deals with the effects of artificial sunlight. Experiments during the year covered by the report have strengthened the suggestion of previous investigations that violet-ray treatment does nothing for deficiency diseases that proper food, with an adequate content of vitamin D, will not do at a small fraction of the cost. It is similarly pointed out that there is no evidence that the reactions which follow a slight inflammatory action of the skin, consequent on light treatment, produce permanent effects of value, and that in any case they can be more cheaply induced by a mustard plaster. This is a bombshell to the public, who, in view of the wholesale adoption of this treatment by hospitals and private doctors, had formed a very different opinion. Which view is right? And how are the public to know? Progress has been made in innumerable other fields, but it is more than surprising that such a negligible amount of attention should have been devoted to the extraordinarily important fields of bacteriology and radio-therapy, and to the equally promising realm of bio-chemistry. Interesting though the report is, one is left wondering whether in the Research Council the country really has a fully-equipped General Headquarters Staff in the battle against disease. Can the public feel assured that important claims to new discoveries are promptly sifted and tried out, and that where new methods prove themselves effective they are not blocked by prejudice? It is said that Jenner's work was 20 years old before the general public was able to benefit from it. Would such a disastrous delay be possible to-day? We are not wholly confident of the answer.

The Fight for the European Coal Markets.—The various forms of "dumping" to which the European coal-exporting countries are now resorting, in order to secure outlets for their product, is strikingly summarised (writes our Paris correspondent) in the annual report which has just been issued by the Central Committee of French Coalowners. In Germany, it states, the Rheino-Westphalian Coal Syndicate is imposing a tax of 2.20 marks per ton on all internal sales, for the purpose of compensating colliery owners for the losses sustained in competing in foreign markets. "This questionable and terribly onerous means of preserving recently conquered foreign markets is proving effective, since at this price the Syndicate has been able to keep its export sales up to a monthly average of 2,825,000 tons." England is "openly applying an export subsidy of 4s. to 5s. a ton to the output from the great Midland coalfield, and appears to be ready to follow the same example in the Scottish coalfield, in order to recover her lost markets. In all the British coalfields selling prices are so plainly below the cost of production that a loss of £18,000,000 was incurred during the period of nine months, and wages generally were painfully lowered." Poland, by quoting Silesian coal f.o.b. Danzig at prices that practically ignore the cost of transporting it over the 370 to 400 miles that lie between the mine and the port," has driven English combustibles out of the Scandinavian markets and diverted them to nearer Continental markets." No better evidence could be afforded, the report contends, of the confusion and general anarchy into which the export markets have been thrown by these abnormal and unwholesome practices than the fact that last year the unit price per ton of imported coal on the French market fell to 129 francs—or, in gold values, 7 per cent. more than in 1913, whereas the general rise in wholesale prices averaged 29 per cent. The French defensive steps against the attacks of foreign competitors, according to the report, have been limited to "suitable modifications in railway rates for coal transport, which have rendered useful and in some cases decisive aid, and which, coupled with an especially energetic reduction of production cost, has rendered it possible to reduce the difference between French selling prices and those offered by more or less adventurous or more or less favoured foreign competitors."

New Capital Issues in the United States.—By courtesy of the New York *Journal of Commerce*, we are able to supplement our article last week on new capital raised in London during the past quarter with the corresponding figures for the United States. In our table we show the first quarter of 1929 in comparison with the whole-year totals for 1928, 1927, and 1926:—

	1926.	1927.	1928.	1929. Jan.-Mar.
	$	$	$	$
Foreign—				
Government	634,338,500	786,630,000	764,943,000	42,167,000
Corporate	725,877,040	601,563,375	811,550,482	126,925,000
Domestic—				
Municipal	1,922,007,101	1,867,230,449	1,123,940,316	180,306,289
Railroad	360,743,500	791,202,000	668,488,843	232,673,000
Public utility	1,667,750,950	2,405,298,362	2,427,790,217	488,512,350
Industrial	1,230,580,600	2,013,430,220	2,311,350,808	709,983,822
Others	770,520,400	1,132,307,589	1,783,542,833	993,626,182
Totals	7,311,818,091	9,597,662,015	9,891,606,499	2,774,193,643

Foreign borrowing has greatly diminished since this time last year, but that is offset by the prolific flow of industrial and miscellaneous issues.

Lancashire Cotton Corporation.—Our Manchester correspondent writes:—More than ordinary interest was taken in the meetings of creditors, preference shareholders and ordinary shareholders of the Ace Mill, Limited, which were held in Manchester on Wednesday for the purpose of considering the offer made by the Lancashire Cotton Corporation, Limited. This mill is one of the finest equipped coarse spinning mills in the trade, and the machinery is entirely post-war, averaging about 1921-24. It contains 118,032 spindles, and is specially fitted for the very coarse trade which the Lancashire Cotton Corporation is endeavouring to recover in the Far Eastern markets. At all the meetings a resolution was passed approving of the proposal that the Ace Mill should join the Corporation on the terms submitted. There were no dissentients at the creditors' and preference shareholders' meetings, and only two voted against at the largely-attended ordinary shareholders' meetings. It is estimated that the debenture-holders will receive about 17s. 6d. in the £ upon claims for £320,000, the unsecured creditors about 2s. 4d. in the £ for claims of £174,000, and the shareholders £22,000 in shares, to be divided amongst the preference and ordinary shareholders in a manner not yet finally decided. This is the first of the many meetings of creditors, &c., which will be held for the purpose of deciding whether to join the Corporation.

Peru's Economic Year.—A correspondent writes:—The current year will witness some interesting economic developments in Peru. On June 1 the Government will exercise its right to redeem, by direct payment at par, the 5 per cent. Gold Bonds of 1920, although redemption is not due before January 1, 1946. Notification

of its intention has already been given. The issue totalled £720,620, of which bonds for £617,950 are still outstanding. Another interesting feature will be the issue of 8 per cent internal bonds, with a maximum of £P1,500,000. This flotation, having already obtained the consent of the Chamber of Deputies, is assured of the approval of the Senate. The purpose of the new loan is to consolidate the floating debt accumulated during the last four years, the funding of which will, it is thought, greatly improve the Federal financial and local economic conditions. The systematic recording of the floating debt constitutes a feature of Peruvian debt history of the later years. The advance made in the regularisation of fiscal affairs, nowithstanding the setback suffered in 1921 and 1922, can be recognised, not only in the recent funding of various liabilities long ignored, but in an advance in accounting procedure and in statistical presentation. None of the floating debt bears interest (except such interest as may ultimately be conceded in the process of liquidation); it represents in general those obligations which have been delayed beyond the budgetary period to which they belong, or are in dispute, or are destined for funding. So far as the total public debt of the Republic is concerned, this was equivalent, at June 30th last, to approximately £26,476,719 (exclusive of £291,482 of Provincial Bonds guaranteed by the Republic, but inclusive of £2,040,886 of the bonds forming part of said debt which the Republic had acquired by purchase), of which £19,988,608 was external funded debt. The total annual service charges on the external funded debt of the Republic, prior to the issue of £2,000,000 6 per cent. sterling bonds made in October last, was approximately £1,754,658, or about 20.99 per cent. of the Republic's revenues, and, on the entire funded debt, approximately £2,048,990, or, about 24.5 per cent. of the 1927 revenues. The total income for the current year is estimated at £P12,450,636, or £P640,000 more than for 1928; but notwithstanding this, it is known that the budget expenditure for 1929 will exceed revenue by £P476,836. There have been somewhat higher ordinary expenditures than total revenues since, and including, 1925. The Government, finding it impossible to reduce outgoings, has been obliged to resort to the creation of several fresh sources of revenue to meet these heavy expenditures. On the other hand, the foreign trade of the Republic has advanced notably during the past few years; while imports have been steady, the exports have advanced in a highly-encouraging manner, exemplified by the fact that in 1927 the excess of exports increased threefold.

A Dutch Bank Amalgamation.—Our Amsterdam correspondent writes:—The Rotterdam Bankvereeniging and the Nationale Bankvereeniging at Utrecht have come to an agreement, by virtue of which the two banks will amalgamate in the course of this year. This amalgamation, or rather fusion, is to be considered as having taken place on January 1, 1929. For many years past the two concerns have really formed one banking group, not only on account of the fact that the Rotterdam Bankvereeniging holds the greater part of the Nationale Bankvereeniging's shares, but also because the former guarantees the latter's engagements. The Nationale Bankvereeniging deals with the provincial business of the group. It is intended to give the shareholders of the Nationale Bankvereeniging an opportunity of disposing of their stock in exchange for Rotterdam Bankvereeniging shares of an equivalent nominal value. This amalgamation will considerably increase the capital and the scope of the Rotterdam Bank. The present capital of the Nationale Bank is 10 million guilders, with a reserve of 2.7 millions. The gross profits during the year 1928 amounted to 5.7 millions, compared with 5.2 millions in 1927, while a dividend of 5 per cent. (same as in the previous year) was paid on the ordinary shares. At the close of 1928 the Bank held deposits to the extent of 94 million odd guilders. The shares of the company are quoted at 103 per cent. The Rotterdam Bank has a capital of 50 million guilders, with a reserve of some 20 million odd guilders. At the end of 1927 this Bank held deposits to the extent of approximately 39 millions, and moneys in current account to the extent of 99 millions. The dividend paid in 1927 was 5 per cent. (last year 4 per cent.). The gross profits for 1927 amounted to 7 million odd guilders. The prices quoted during recent years for the shares of the Rotterdam Bankvereeniging were: 1928, 62½-87 per cent.; 1927, 84½-98 per cent.; 1928, 95¾-108¼ per cent.; and at present 118 per cent. The sharp rise in the values of the shares of this banking concern goes to prove how favourably its affairs have developed of late years. The Rotterdam Bankvereeniging must be considered as one of the great Dutch banks, and through this agreement with the Nationale Bankvereeniging its affairs will become more extensive than ever.

Fire Losses in the U.S.A. and Canada.—The wastage from fire losses during the month of February exhibits a further decline compared with the corresponding month in 1928, and the aggregate losses during the first two months of this year now total $63,097,800, compared with $84,366,200 in the same period of last year—a substantial decrease amounting to 25 per cent. The comparison, however, is an unduly favourable one, since it happened that fire losses during the first two months of last year were on an exceptionally high level, and the following table of monthly losses during the past three years, extracted from figures compiled and published by *The Journal of Commerce, New York*, shows that this year's losses to date are at about the same level as those of two years ago:—

	1926.	1927.	1928.	1929.
	$	$	$	$
January	41,118,750	37,910,600	43,260,800	36,225,400
February	30,963,750	26,285,000	41,105,400	26,872,400
March	42,852,600	26,807,600	30,377,000	...
April	52,408,400	39,720,600	25,980,600	...
May	32,764,200	20,713,000	23,202,000	...
June	28,676,000	25,481,200	11,123,000	...
July	31,723,400	24,248,000	17,106,400	...
August	27,833,400	24,299,600	17,723,600	...
September	19,309,000	21,875,000	17,182,800	...
October	14,877,000	22,326,600	22,414,160	...
November	26,724,400	18,992,200	20,587,800	...
December	43,757,600	31,936,400	31,204,000	...
Total	393,010,500	320,595,000	301,267,560	...

The table exhibits clearly the considerable diminution in fire wastage in the past three years, the total of each year having declined continuously since 1926, the decline from that year being as much as 23 per cent. When this fact is considered in conjunction with the vast volume of building which has been in progress in the U.S.A. since the war, with a consequent increase in property values, it will be realised that the economic saving which these figures represent is very great indeed. The statistics of fire losses in the United Kingdom, compiled and published monthly by the *Times*, indicate that home fire losses have been on the up-grade since 1927. For instance, the total losses for 1928 aggregated £8,088,700, compared with £6,478,000 in 1927, and the total of the losses in the first two months of this year amount to £1,818,700, as against £1,187,000 in the same period of 1928.

Standard Life Insurance Company.—During the greater part of its history before the war, this company's activities had been mainly associated with overseas business. The company was a pioneer in the development of Colonial business, which it has transacted since 1845 and, beginning in 1890, gradually built up also strong connections in Europe, where it issued policies in many countries in a great variety of currencies. The war, of course, seriously interrupted this business. And, after that event, the opportunity was taken to dispose of the existing business in ex-enemy countries on exceptionally advantageous terms. No new business has since been accepted in Europe, so that the company was left free to expand the home business. It is of interest to observe, therefore, the changing character of the company's new

business over the period since 1913, the year immediately preceding the war:—

Year.	Total New Business.	Amount of Foreign Business included in Total.
	£	£
1913	2,189,324	1,506,924
1918	1,170,406	485,625
1923	1,977,098	1,115,105
1927	3,000,840	1,415,127
1928	2,989,766	not stated

Whereas in 1913 nearly 75 per cent. of the total was derived from abroad, it will be seen that this percentage has gradually fallen, and for the latest year for which particulars are available, was less than 50 per cent. A further step in the direction of freeing itself from Continental business has been taken by the decision to transfer the whole of the existing Spanish business, as from January 1, 1929, to a Spanish Life Office. It should be mentioned that, in addition to Life Assurance business, the Standard now transacts a greatly increased Annuity business, and in respect of new Annuity policies granted last year, received by way of purchase price the sum of almost £500,000. As regards the results of the year, the net interest earnings work out at the equivalent of £5 0s. 11d. per cent., compared with £5 0s. 9d. per cent. in 1927, while the expense ratio was 17.3 per cent., compared with 17.7 per cent.—the change in both cases being in a direction favourable to the company. The results of the annual valuation are disclosed in the report, and the calculations were made on the same basis as before, a basis which, so far as we are aware, is not exceeded in stringency by any other British Office. The results of the last two annual valuations are set out below.

	1926/1927.	1927/1928.
	£	£
Surplus earned during the year	370,513	342,617
Surplus income transferred from Guarantee Fund	21,496	26,091
Brought forward from previous year	21,580	34,967
	413,589	403,675
Allocations—		
To Bonuses to policyholders	278,622	281,864
„ Guarantee Fund	100,000	100,000
„ Carried forward to next year	34,967	21,811
	413,589	403,675

There was evidently a slight falling off in surplus earned during last year, but since interest earnings were higher, and expenses were lower, this would appear to have been due to a more unfavourable incidence of the death claims. The reversionary bonus has been maintained at the same rate as before, viz:—42s., per cent. compound. The Guarantee Fund, mentioned in the above table, now amounts to £1,450,000, and constitutes the security for £850,000 5 per cent. perpetual stock created in 1925 in exchange for the surrender by the shareholders of their participating rights and voting powers. The amount of the Fund being so greatly in excess of the liability, there is now, and will be hereafter, a considerable yearly surplus from interest earnings, and it appears to be the intention to transfer this surplus each year to the Life Assurance Fund.

Scottish Amicable Life Assurance Society.—In the course of our usual review early in the year of new life assurance business for 1928 we showed that the "Scottish Amicable" alone amongst 28 offices reported a decrease in business. The accounts for 1928 now to hand show that the falling off is more than accounted for by a reduced volume of single premium policies, a type of business which the society does not seek to encourage. The 1928 total of new business amounted to £1,267,028, but the accounts show that the volume of existing business advanced by only £209,742. The wastage is due to claims and, more especially, to surrenders and lapses, which appear to have been larger than usual, and its amount illustrates the amount of effort required merely to maintain a life office in a state of *status quo*. It is a custom among many offices to set out a comparison between the actual claims and the amount expected according to the mortality table employed in the valuation. The comparison is an unhelpful one because mortality profit or loss depends on the circumstance whether the deaths occurred among recently effected policies or among policies of long duration with substantial reserves accumulated against them. Thus the true measure of the strain arising from death claims is the difference between the amounts paid and the reserves in respect therof. The "Scottish Amicable" estimates that last year this difference amounted only to 56½ per cent. of that expected, and consequently that mortality profits yielded a substantial contribution to total surplus. As might be expected in the case of an office which the chief officer, Mr. William Hutton, and several directors are identified with trust company finance, an enlightened investment policy is pursued. The society takes no credit in its accounts either for appreciation or for realised profits, with the result that for many years an increasing hidden reserve has been accumulated. The chairman stated that this had been increased last year by no less than £200,000, equal to more than 2 per cent. of the funds. The interest earnings in 1928 worked out at £4 13s. 11d. per cent., net of tax, compared with £4 12s. 4d. per cent. in 1927, the increase being no doubt the result, in part, of the policy of reducing gradually the holdings in British Government securities in favour of higher yielding bonds, debentures, or preference shares. At the end of 1926 British Government securities accounted for 47 per cent. of the total assurance assets, but at the end of last year had fallen to 26 per cent.

Life Association of Scotland.—This Scottish life assurance company has been established now for 90 years, and is one of the very few surviving independent proprietary companies transacting life assurance business only. For many years the association's financial year has coincided with the income-tax year, but has recently been changed so as to end on December 31st. Consequently the present report is for a broken period from April 6, 1928 to December 31, 1928, and exact comparison with the previous report is impracticable. Net new life business was completed for this period amounting to £725,670, and it is stated that new business for the calendar year 1928 exceeded that of 1927 by over £250,000. During the period covered by the accounts the expense ratio worked out at 19.6 per cent., compared with 17.3 per cent. in the preceding financial year, but the increase may well be due to incidence of expenditure in the broken period rather than to an increase in costs of administration. The net rate of interest earned was equivalent to £4 11s. 6d. per cent. per annum, compared with £4 12s. 1d. per cent. The next quinquennial valuation and distribution of profits is due to be made at the end of 1930, but, meanwhile, the dividend has been raised from 30s. per share to 32s. 6d. per share, and, at their present price of £44, the shares yield approximately 3¾ per cent.

Equity and Law Life Assurance Society.—The distinguishing characteristic of this Society's business in the last five years has been the very large volume of new policies issued in the now familiar form of single premium super-tax saving contracts. Last year there was recorded a notable advance of 55 per cent. in the total new life business, the figures being £1,807,749 for 1928, and £1,177,461 for 1927. The 1928 report makes it clear, however, that the reason is again due to new single premium policies, the amount received by way of single premiums having advanced from £257,000 to £673,000. The first year in which these policies became fashionable was 1924. During the years from 1924 to 1928 this Society has collected over £2 million in single premiums, while loans on policies—largely in connection with this type of assurance—have increased from £160,000 to £2,105,000, the latter figure being equivalent to 25 per cent. of the total assets. With regard to the investment of the funds, the Society has always been a leading exponent of reversionary interests, which its strong legal connections and experience have enabled it to exploit with consistent success. At the end of last year £808,000 was invested in reversions and life interests pur-

chased—the book value being calculated to yield an average of 6 per cent. per annum over a series of years. A further £1,022,000 stands invested on mortgage in this form of security to yield probably at least 6 per cent., while the Society also owns the capital stock of the Law Reversionary Interest Society with a book value of £448,000. Thus, directly and indirectly, some 27 per cent. of the total assets are represented by reversionary investments. The balance sheet shows that in regard to the remainder of the assets the Society has, contrary to the prevailing tendency, actually increased its holding of British Government Securities last year by over £100,000. On the whole the investments are distributed in rather an unusual form, as may be seen from the following table:—

British Government securities	18 per cent.
Reversionary investments	27 „
Loans on the Society's own policies	25 „
Other investments	30 „
	100 per cent.

The rate of interest yielded last year by the funds, excluding amounts invested in reversions, was £4 6s. 6d. per cent., compared with £4 6s. 9d. per cent. in 1927. This comparatively low yield is, however, compensated for by the favourable return on that portion of the fund invested in reversions.

Provincial Insurance Co., Limited.—The 1928 report of this company coincides with the attainment by the company of its twenty-fifth birthday, and it is, therefore, pleasing to observe that the results of last year were, on the whole, very satisfactory. The accounts do, nevertheless, contain one blemish, namely, the marine department. Before 1927 the marine department was very small in size, but in that year the company acquired the business of the Hull Underwriters Association, Ltd., for a payment of £68,000 in cash. This has meant a fourfold expansion of the premium income, which last year amounted to £172,000, but the acquisition resulted in a loss in 1927 of £20,000, and a further loss of £36,849 in 1928. In the two main departments of the company's business, namely, the fire and accident departments, the results are excellent, and both sections exhibit steady growth in premiums. Fire premiums amounted last year to £151,000, to which Canadian business contributed approximately £60,000, and the total underwriting profit equivalent to 12.7 per cent. of the premiums, is at a high level. In the accident department the premiums amount to £485,000, and the profit has risen from 3.6 per cent. of the premiums in 1927 to 10.1 per cent. of the 1928 premiums. The detailed results of the last two years are set out below:—

	1927.		1928.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
	£		£	
Fire	20,223	14·5	19,215	12·7
Accident	16,001	3·6	48,915	10·1
Marine.....	− 20,000	−13·4	− 36,849	−14·1
	16,224		31,281	
Less: Items debited to profit and loss account	9,100		7,345	
Written off cost of acquiring subsidiary companies.....	5,000		10,000	
Net trading surplus.....	2,124		13,936	

Net interest earnings have grown from £24,586 in 1927 to £26,940 in 1928, and the preference and ordinary dividends, the latter being increased from 15 per cent. to 20 per cent., absorbed £18,400, compared with £14,200. The effect of writing a further £10,000 off the cost of the acquisition of subsidiary companies has been to reduce this item in the balance sheet to under £15,000. Part of the surplus of last year has been applied to increasing the general reserve fund by £20,000, and this fund now totals £80,000.

Guildhall Insurance Co.—This company was formed in 1919 with the title of the Autocar Fire and Accident Insurance Co., Limited, but in view of the widened scope of the business it was felt that the old title had become too restrictive in character. This has, therefore, now been changed to the Guildhall Insurance Co. The company's figures are presented in the report in an unnecessarily obscure form. One revenue account only is furnished, although the company transacts both fire and accident business, and on this occasion a special premium income amounting to £115,000 appears in the account in respect of "Special Contracts in respect of which all liability had expired at December 31, 1928." Apart from this item, which, according to the chairman in his speech at the annual meeting, represents a new sphere of enterprise which is showing material progress, the premium income shows an increase of £58,000 over that for 1927, and now amounts to £524,000. After the account has been debited with unexpired risk reserve on the basis of 40 per cent. of the normal premium income the underwriting profit for the year 1928 works out at £6,516, equivalent to a trifle over 1 per cent. of the premiums. This result compares with an underwriting profit in 1927 equivalent to 2 per cent. of the relative premium income for that year. The profit and loss account includes sundry items of credits and debits, and, allowance made for these, there was a net trading loss on the year of £625, compared with a surplus of £5,192 for the preceding year. The company first declared a dividend in 1926 at the rate of 5 per cent., and this has been maintained in 1927 and again last year. The cost of the dividend is £5,000, and the distribution appears moderate in relation to the interest earnings, which amount to £18,838.

UNITED STATES.—INDUSTRY—PRICES—PROFITS—MONEY—STOCKS.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 22.

THE beginning of Spring finds the financial community as cheerful as ever about the business prospect, and as much confused as ever as to the credit situation. Volume of trade has increased beyond the expectations of most people, and it is now generally believed that, failing any unexpected development, the first six months, at least, will bring new earning records for corporations. This view of the matter is not concurred in by everybody, and continued high money rates set in motion from time to time a wave of pessimism. Discordant notes in the prosperity symphony are struck from time to time; there was, for example, a considerable increase in unemployment in the spring. However, alarmist predictions are coldly received here, whether they come from American or British economists.

Whatever may be the ultimate effect of dear money on trade, considerable momentum has been attained in spite of the high rates in effect for nearly a year. The steel industry is now operating virtually at capacity, and the volume of new orders suggests that no substantial curtailment will occur during the next two or three months. Prices continue firm, and the week has brought all round advances in the base metals. Copper, lead, zinc and other members of the non-ferrous group are exceptionally strong. Copper, indeed, is getting out of hand. Producers, fearing the encouragement of use of substitutes, are somewhat alarmed over the rapid rise, but they assert that the fault lies with consumers who are bidding for the metal.

In spite of the sharp advances in some of the metals, the Bureau of Labour index of wholesale commodity prices shows a slight decline from January to February. The decrease was one-half of one per cent., and the index now stands at about one-third of one per cent. above a year ago. This remarkable stability in commodity prices gives the business man confidence in spite of speculation in securities. The Bureau of Labour Statistics weighted index, taking the average prices for 1926 as 100, is given below:—

Further light on the extraordinary earnings of corporations and individuals during the past year is shown by income tax collections for the first quarter. Complete figures will not be available for a few days, but the Treasury announces that tabulations of payments for the first 19 days of March show an increase of $99.3 million over the same period of last year. This gain may not be maintained, but the increase probably will not be much under that, and total collections may reach 600 millions in March, as against 513 millions last year. Although the corporation tax was reduced 1½ per cent., profits were so much larger that the tax collected far exceeds that of 1927.

Changes in the credit position for the week have been about the same on both sides of the ledger. Brokers' loans for the New York district rose $166 million to a new high record of $5,793 million. It is rather a sad commentary on the efficacy of admonition as a means of reducing credit on securities that, six weeks after the Bank of England raised its rate and the Federal Reserve Board issued its "warning," more credit than ever is employed on the Stock Exchange. It should be noted, however, that, so far as Reserve Bank credit is concerned, some gain has been made. In the past week member banks in this district reduced their discounts, though they contributed $90 million to the increase in brokers' loans.

For the system the week's drop in member bank borrowing was $13 million. Holdings of Government securities rose $20 million, but that was merely the residue of the heavy Treasury overdraft, represented by a special certificate of deposit, incident to tax date operations. The effect on the money market was partly offset by a further decline of nearly $50 million in bill holdings, which are now nearly $100 million lower than a year ago. The net result of changes was a reduction of $20 million in total Reserve Bank credit outstanding and an increase in the reserve ratio from 70.7 to 71.7 per cent. Total credit is, however, $176 million above last year, and against total reserves with Federal Reserve Banks of $1,726 million for reporting member banks in leading cities, borrowings from the Federal Reserve amount to $716 million.

Money was tight this week with the withdrawal of Treasury funds as income-tax check collections progressed. The call rate rose to 10 per cent. and averaged 9 per cent., while time money held firm at 8 per cent. Commercial paper also was a shade firmer, and best names now go at 6 per cent. An interesting development was an increase here and in other financial centres of ¼ of 1 per cent. for all maturities in the bill rate. The 90-day asking rate is now ⅝ of 1 per cent., against the New York 5 per cent. discount rate, an unprecedented situation and a striking illustration of how deeply submerged the discount rate is by the money market. Bill rates are now the highest for eight years. It would now appear that an increase of as much as 1 per cent. in the New York bank rate would have no great astringent effect on speculation, inasmuch as it would merely be official recognition of actual conditions in the money market.

Share prices are, however, gradually shading off under the influence of high money rates, and, apart from spurts in pool favourites and stocks enjoying special advantages, such as the copper and steel issues, the market is modest enough. No attention was paid to the gloomy predictions of Sir George Paish. On the other hand, stock traders were encouraged by an address of Governor Young, of the Federal Reserve Board, given a few days ago. Wall Street interpreted Governor Young's remark that the Reserve Board had no idea of advancing discount rates "until every effort to accomplish the desired results has been made by other means" to mean that no immediate change was in sight. In good quarters it is felt that Governor Young was placed in an embarrassing position in attempting to defend the policy of the board as a whole, but it was much deplored that, in the circumstances, he did not choose to say nothing at all.

FRANCE.—PUBLIC FINANCES—IRON AND STEEL—COAL PRODUCTION—SUGAR OUTPUT—MONEY.

(FROM OUR CORRESPONDENT.)

PARIS, April 4.

THE Chamber, after disposing of the "Collectif" for December—which means the various Supplementary Credits and annulments of credits hitherto outstanding in regard to the 1928 financial year—has risen for a recess of several weeks, which will be longer than usual this year, owing to the pending municipal elections. The extra credits accorded have absorbed (after allowing for credits authorised but not utilised) over 2,000,000,000f. of M Chéron's surplus of 4,629,000,000f. How much of this provisional balance of 2,500,000,000f. will remain for debt extinction purposes, after the adjustments that will be included in the July "collectif" (which will be the final one affecting the 1928 financial year), remains to be seen. The recent adjustments include provision amounting to 59,000,000f. to meet additional annual charges involved by the issue of 5 per cent. Rentes, which immediately preceded and facilitated stabilisation, and also furnished an additional 164 millions for the naval programme, 20 millions for new roads, 18 millions for port improvements, and 50 millions for overseas postal needs. As was expected, the demands made in the Chamber that a substantial portion of the realised surplus should be devoted to reducing certain categories of taxation to a more equitable level, have not received a favourable reply, except in one or two trifling instances.

Iron and steel production figures for February indicate falls of nearly 14 per cent. and 10 per cent. respectively, as compared with January's record figures, and disclose that the month's output was, in each case, substantially below the monthly average recorded throughout 1928.

The total output of iron was 781,000 tons, as compared with 904,000 tons in January (rectified figure), 882,000 tons in December, 784,000 tons in February, 1928, a monthly average last year of 841,000 tons, and of 749,000 tons in 1913 (Alsace-Lorraine included). The number of blast furnaces in operation during the month was 157, or the same as in January, compared with a monthly average of 190 in 1913. The total output of steel was 738,000 tons, as in February, 1928, as against 838,000 tons (rectified figure) in January, 828,000 tons in December, a monthly average of 782,000 tons in 1928, of 689,000 tons in 1927, and 559,000 tons (Alsace-Lorraine included) in 1913. This slowing down in production was due to the fact that the expected large orders for important projected public works and private contracts have not yet been given, although the reason for the delay is not clear. Owing to the absence of orders, production figures for March will also be found below the average. Delivery delays now range from eight to sixteen weeks, according to plant capacity, the majority being apparently between two and three months. Prices remain firm, and a resumption of activity is expected now the holidays are over.

Figures published by the Comité Central des Houillères de France show that the total output of the French collieries in 1928 was 52,429,468 tons, or 418,000 tons less than in 1927, and approximately the same as in 1926, whereas the amount extracted during the six years 1920-1925 increased by from four to five million tons a year. The other Continental coal-producing countries, on the contrary, all showed continued increase of output last year. Holland recorded an increase of 1,598,000 tons in 1928 (that country's total having previously increased to five times its pre-war figure); Czechoslovakia an increase of 500,000 tons; Belgium, 223,000 tons; Poland, 2,526,000 tons. In Germany there was a falling off of 2,700,000 tons in ordinary coal production, owing to the temporary stoppage in the metallurgical industry, but this was more than compensated for by increased lignite production, equivalent to 3,400,000 tons of ordinary coal. Under the impetus given by the great British coal strike in 1926, the Continental coal-producing countries have increased their output since that date as follows: Holland, 53½ per cent.; Poland, 40 per cent.; Czechoslovakia and Belgium, 19 per cent.; Germany (giving lignite its equivalent value in ordinary coal), 14 per cent.; France (including the Saar area), 7 per cent. Taking the Continental coal-producing countries as a whole, the average increase in output since 1925 has been 17 per cent. French coal consumption last year (exclusive of the amount used in the Saar region) totalled 80,000,000 tons, or 1,500,000 tons more than in 1927. Of this the French mines furnished 65½ per cent. The amount of foreign coal imported, which, in 1920 was equal to 54 per cent. of the total consumption, had been brought down by 1926 to 33 per cent., but is now again slightly on the up grade. Coke imports, which amounted to 4,720,000 tons in 1927, totalled 5,368,000 tons last year, in spite of an increase of 332,000 tons in the output of the colliery coke plants. French purchases of foreign coal in 1928 had a value of 3,220 millions, representing 6 per cent. of the total imports. In spite of the drop in production last year, the accumulated stocks at the pit-heads were reduced by only 500,000 tons, leaving 2,886,000 tons still available.

The French sugar crop for 1928-9, which was officially estimated, down to January 31, to total 810,311 tons (in refined product), is now reported as having attained, down to March 1, 812,911 tons, against 775,171 tons during the corresponding period of the previous season. Domestic consumption from September 1st to March 1st is returned as 459,543 tons, as against 441,844 tons for the same period last season. Imported sugars totalled 212,558 tons (against 136,368), while exports were 144,778 tons (against 132,946). Stocks on March 1st amounted to 501,107 tons, against 433,976 tons on the same date in 1928. The Rome Agricultural Institute estimates that the world's total production of sugar (cane and beet) for 1928-9 amounts to 27,270,000 tons, against 25,326,000 tons in 1928, 8,414,000 tons in 1900, and 2,416,000 tons in 1869-70.

For the end of the month settlement yesterday the rate was 5 per cent. in the Parquet (as against 2¾ per cent. on March 15th), and 7½ per cent. in the coulisse. The rise in the Parquet rate was due chiefly to the large recent issues of fresh capital by the banks and other institutions, and to the new Ville de Paris conversion loan. The latter consists of an issue, as from April 10, of 4½ per cent. 1,000-franc bonds at 910, in exchange for scrip of the 1921 5¼ per cent. issue. The new bond is attractive, not only because of its low issue price, but by reason of the fact that it will be free of all taxation, the coupons being paid net, whereas those of the 1921 issue were burdened with taxation amounting to 36 per cent. of the yield.

GERMANY.—CREDIT—STATES' DEBTS—INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, April 2.

THE March settlements passed with less tension in the money market than was expected; the quarter-end, in fact, developed like an ordinary month-end. The day-loan rate immediately preceding the Easter closing of markets rose to only 7½-9½ per cent.; month loans 7-8 per cent. The banks had provided themselves with money well in advance. Money, however, remains dearer than a year ago. The average rate for day loans in the last week of March was 6.59 per cent., against 6.23 per cent. in the same week of 1928, and 4.14 per cent. in 1927. To-day, on the reopening of markets, day money was in continued demand at the closing rate of last month, month loans 7½-8½ per cent., private discounts 6½ per cent. The Reichsbank's return for the third week of March shows a decline in discounts of 42 million marks, in advances of 15 million marks, in circulation of 133 million marks. Only a small decline in the legal-cover part of the bank's exchange holding is shown, but it is stated that there was a further drain, not disclosed, but estimated at 80 million marks, in the free exchange holding. This would account for the decline in discounts, with which part of the free exchange holding is booked. The net loss of exchange and gold since the beginning of February is about 370 million marks. Although the legal-cover exchange reserve is down to 69 million marks, the combined gold and exchange cover for Reichsbank and Rentenbank notes is 60.3 per cent., as against 48.9 per cent. a year ago. There is no sign of a lasting return to cheap money. The easy quarter-end market was in part due to a reduced demand from agriculture, which was the result of belated field work, but the agricultural demand will be felt in April.

Foreign loans in March totalled only 9 million marks, against 161 million marks in February; home loans, 24½ million marks, against 68 million marks. Foreign "loans," as so classed, are losing their relative importance as a source of capital supply. On the Berlin Bourse there have been large sales to foreigners of mark securities, whole blocks of new issues have also been sold to foreigners, and reichsmarks loans have been partly placed in Holland. Transactions such as the sale of the majority of the Opel motor car interests to General Motors bring in capital, and have the same effect as loans in increasing the current liability to abroad for dividends and interest. The commercial banks' reports for 1928 show that foreign funds at call are an increasing source of supply of working capital to bank customers. The banks' transactions are increasing much more rapidly than their own capital resources. The liabilities of the great banks have more than doubled since 1925, but their combined capitals and disclosed reserves have increased by only about 25 per cent, plus an unknown sum of new undisclosed reserves.

It is estimated that, at the end of the year, 43 per cent. of all bank liabilities were to abroad, as against 35 per cent. one year before. Half the liabilities of two of the big banks, and 60 per cent. of the liabilities of a third, are to abroad. The total bank liability to abroad (big banks only) is estimated at 4,500 million marks. The heavy outflow of funds in recent weeks, which resulted from the money market tension in America, is a warning that this dependence of German business upon foreign short-term credits and bank deposits may have serious inconveniences, all the more because a great part of German bank credits to industry cannot be called in without causing trouble.

The wholesale-prices index number for March 26th is 138.9, as against 139.3 on March 20th. In the last three weeks the agricultural products group has fallen from 135.0 to 130.4. The trade situation is somewhat better. Since the middle of February railway goods traffic has been rapidly increasing, and the last weekly return shows it to have recovered nearly to the figure for the corresponding week of 1928. The number of unemployed declined about 5 per cent. in the first half of March, but this apparently was due to seasonal causes. Coal production in February was 12,103,571 metric tons; in the first two months of the year 25,593,869 tons, as against 26,346,626 tons in the same months of 1928. The Ruhr miners' organisations have given notice to terminate the existing wage agreement. The home steel market is dull, but export is well maintained, and prices are firm. Home syndicate prices for April are unchanged. The steel trade Press discusses as possible Great Britain's entry into the International Steel Cartel upon its renewal after October 31st. These conjectures seem to have their source merely in the successful settlement of the international tubes and rails syndicate questions. It is not yet certain whether Germany herself will remain in the Cartel, which, without her participation, would necessarily dissolve. The home steel syndicate (Rohstahlgemeinschaft) expires simultaneously with the international Cartel, and the "A" products, "B" products, bars, bands, wire rods, and sheets syndicates will all soon terminate. Owing to the displacement which has taken place since 1925-26, when the syndicates were organised, in total production of the different products, and in particular in the relative production capacities of the individual concerns, the new negotiations will be accompanied by sharp struggles over the quotas question. It is not certain whether the syndicates will be renewed. Germany has already reserved the right to secede from the "Erma" Cartel if her own "A" Products Syndicate, which controls, among other things, steel rails, is not prolonged; and failure to renew the Rohstahlgemeinschaft and the syndicates for separate products would make Germany's continued participation in the International Steel Cartel impossible. Some of the larger concerns are indifferent, if not hostile, to syndicate-renewal, although they realise that failure to renew would be followed by a price-fall at home and, further, by price-instability, such as prevailed before the war, when the steel industry was not so completely syndicated as it is to-day. To-day only thin sheets are without an organisation. The report that Germany is about to join the Franco-Belgian-Luxemburg Pig-Iron "Entente" is denied.

The foreign trade return for 1928 for countries of origin and destination shows for imports a decline in the percentage shares of Europe and America and an increase in those of Asia and Africa; and for exports an increase in the share to Europe. Of imports, 51.1 per cent., as against 53.2 per cent. in 1927, came from Europe, and 29.4 per cent., against 30.0 per cent., from America. Of exports, 74.8 per cent., as against 74.0 per cent., went to Europe, and 14.6 per cent., as against 15.2 per cent., to America. Europe took 86.8 per cent. of exports of foodstuffs, 85.3 per cent. of raw and half-manufactured materials, and 70.7 per cent. of manufactured goods. All these figures refer to commodities only (without gold and silver). The share of Europe in Germany's imports is smaller than before the war. The share of Europe in her exports is also smaller, but it is increasing, having been only 72.0 per cent. in 1924, as against 76.1 per cent. in 1913.

AUSTRIA.—BANKS—LABOUR—STEAMSHIP CARTEL—TEXTILES.

(FROM OUR CORRESPONDENT.)

VIENNA, March 23.

THIS year's report of the Austrian National Bank contains a number of interesting points. In the first place reference is made to the serious injury which the postponement of the investment loan caused to economy. The management of the Bank also brings up the question whether further retrenchment should be made by the banks, as activity in the banking business did not come up to expectations last year, and this year, too, the complete stagnation on the share market prevents improvement. The question of fusion is certainly not a simple one in regard to the Vienna banks in view of the fact that there are only four big banks remaining. Of these the Escomptegesellschaft is the only one with a completely centralised business, for it has no branches. The Creditanstalt, the Bodencreditanstalt and the Bankverein all have numerous branches, and it is, therefore, difficult to see how amalgamation would be possible. No reduction of overhead costs would result therefrom, and that is one of the chief problems of the Vienna banks. The charges made on the banks for taxes and social imposts are extremely burdensome. Moreover, owing to the loss of the territory forming the Succession States, in which the Vienna banks once had very profitable branches, the sphere of their business is circumscribed, for the banks hold but few shares in their former branches, and in many cases have no longer any interest at all in their development. Most of these branches had to be sold to national banks. At home, business possibilities have been greatly discounted, and for this reason the Escomptegesellschaft and the Creditanstalt, which devote themselves more to foreign business than do the Bodencreditanstalt and the Bankverein, are better off than the latter banks. The balance sheet of the Bodencreditanstalt shows a recession of revenue from interest of 0.7 million schillings, the present figure being 15.9 millions. Commissions have sunk by 0.19 to 8.9 millions; revenue from foreign bill, security and syndicate business have sunk by 1.9 to 4.5 million schillings. On the other hand, the Bodencreditanstalt was in a position to reduce its burdens, as far as salaries, purchases and taxes are concerned, and was, therefore, able to distribute the same dividend as last year. Owing to the big sums of money it had lent to Poland and Roumania, and to its increased activities in those countries, the Escomptegesellschaft was able to show 0.8 million schillings more revenue from interest, the total revenue from interest being 6.8 millions; commissions aggregated 7.5 (minus 0.17); foreign bill, security and syndicate business, 2.13 (minus 0.53) million schillings. The Bankverein showed revenue from interest 12.6 (minus 0.35); there was a drop in the commission account, the total being 9.28 (minus 1.04); the profit on foreign notes and bills was 2.73 (minus 0.12); that on syndicate business, 2.9 (minus 0.1); on stocks, 1.9 (minus 0.9) million schillings. On the other hand, salaries, expenses and taxes called for an expenditure of 1.6 millions less than last year, so that the reduced profit was faced by smaller expenditure. The Austrian Credit Anstalt pays the same dividend. The revenue from interest shows an increase of 2.88 millions to 22.7 millions. Commissions have sunk by 0.74 to 15.9 million schillings, the revenue on security and syndicate business has fallen by 0.88 to 4.26 millions. Of all the Austrian banks the Nationalbank has done best. Its dividend, which was 11 per cent. last year, has been raised to 11½ per cent., its holdings of gold have gone up from 84.4 million schillings to 168.7 millions, and, even though the holdings of foreign bills have been reduced not inconsiderably, the total of foreign values available as cover for the fiduciary circulation is nevertheless higher by 8.06 per cent.

The Social-Democratic Party still maintains its negative attitude in the housing question, and even demands the dissolution of Parliament or a referendum. On account of this quarrel between the political parties, private house building in Austria is practically at a standstill. Efforts towards the introduction of a brown coal Customs duty are extending, and are receiving some measure of support from the Government. The Styrian industry demands the protection of its coalmines against German and Czechoslovakian competition. After long negotiations a cartel of the Danube steamship companies has been arranged to embrace not only the Austrian and German companies, but also the Czechoslovakian, Hungarian, Yugoslavian and Roumanian companies. The object of the understanding is the abolition of rate cutting. The Danubian steamship company is trying in Austria to get a State subsidy for

the maintenance of the passenger service, which, on account of the unimportant stopping places and the poor traffic, would otherwise show a loss. This service tended towards the reduction of the company's dividend for last year.

Unemployment, which has been the source of much worry during the last few months, as there were over 300,000 unemployed, is being diminished now that the warmer weather has set in. Textiles are still very weak and a number of smaller concerns are fighting for a bare existence. Several larger textile firms have also got into difficulties, and it is uncertain, as in the case of the firm of Max Kohn and Co., one of the oldest textile houses, which has 700 creditors and liabilities of over 2½ million schillings, whether it will be possible to arrange composition without bankruptcy. It is possible that, in the near future, an intense process of concentration will take place in the Austrian textile and print industry. The hopes of getting at least a part of the investment loan, which is pending, have not yet been fulfilled, and it is therefore possible that, in the course of this year, the Ministry of Finance will be obliged to make use of its right to issue 75 million schillings in Treasury bonds.

ROUMANIA.—COMMERCIALISATION—CO-OPERATIVE LAW—MINING LAW—MONEY—PETROLEUM.

(FROM OUR CORRESPONDENT.)

BUCHAREST, March 19.

MEASURES are being introduced which will have a profound effect on the development of the economic forces of Roumania, and there is no doubt that the Government and Parliament are working hard. The most important Bills placed before Parliament recently are the following: The commercialisation and organisation of the possessions and enterprises of the State, which has been voted by both Houses and become law, the reorganisation of the Co-operative System, and the alteration of the Mining Law of 1924.

By the Law of Commercialisation it is intended to carry out the administration of the State possessions, the domains and the industrial departments, such as the maritime and river transports, docks, bridges, fisheries, mines, &c., on a commercial basis. It is accompanied by an inventory of these possessions, and provides all forms in which they may be administered, such as concession, lease, State régie, mixed regié or any combined system. It is one of the features of this law that it secures equal treatment for Roumanian and foreign capital. The Government probably intends sooner or later to use this measure to attract foreign capital.

One of the avowed aims of the reorganisation of the co-operative system is the suppression of political influence. Further, the various spheres of action of the central institutions of the present co-operative system will be strictly outlined in order to prevent overlapping, which at present causes much waste and disorder. The institutions in question are the Central Office of the Peoples' Banks, the Central Office of the Co-operative Societies of Production and Consumption. and the Central Office of the Villages. The first named will be replaced by the Central Co-operative Bank, which will be as much as possible autonomous. The State participates in the capital with 500 million lei, to which will be added the amount subscribed by the associated co-operative societies. The vote of the State at the general meetings is limited to 50 per cent. of the votes present. The Board will be composed of nine members, *i.e.*, three delegates of various Government Departments, one delegate of the National Bank, and five members elected by the co-operative societies. The co-operative societies will be under the control of a central office called the National Office of the Co-operative Societies of Roumania, which will function as an autonomous institution at the Ministry of Labour. It will be conducted by a general council composed of six members of various Government Departments, six members elected by the societies, and three specialists in the co-operative movement elected by the council itself. In view of the important part played by the co-operative movement in the agricultural activities of the country, the reform is certain to have a far-reaching effect. The almost predominant participation of the State in the financial and administrative arrangements is much criticised, but it is considered in official circles that the present conditions in Roumania render a greater independence of the movement inadvisable.

The alteration of the Mining Law of 1924, which is of such great importance to the petroleum industry, will revolutionise the policy so far adopted by the State towards the underground wealth of the country. Some of its main aspects may here be outlined. The position of the State with regard to acquired rights will be determined, and the speedy organisation of an office of land registration will be taken in hand. By stimulating the exploration of unknown districts, assuring continuance of production and husbanding the reserves, it is hoped to secure the greatest possible advantage from this part of the country's resources, the State ownership of which is confirmed. Foreign capital will be assured equal treatment with that of Roumanian originan. The provisions of the old law regarding the registration of the shares and the obligation of the Roumanian mining companies to have some Roumanian capital and to have a certain number of Roumanian citizens on the board, are cancelled. The commerce in the interior is to be free of restrictions. While the establishment of a syndicate for the organisation of the sales of petroleum products in the interior is not to be prevented, it is not intended to permit the creation of a monopoly. The State will have the right to export crude oil. The same right is given to the producer in so far as the production surpasses the capacity of the refineries existing in the country. The principle of the control by the State of the pipe-line system is confirmed, but this control will be exercised in accordance with the law of commercialisation. The royalty due to the State on the production of petroleum is fixed on a sliding scale, in proportion to the amount produced, from 12 per cent. on the first 1,000 wagons up to a maximum of 50 per cent. The proposed reform has been received with satisfaction by the interested circles. Another important measure which is being contemplated is the revision of the customs tariff, which has been adjourned for over a year pending the introduction of the stabilisation, and has become of urgent necessity to the commerce and industry of the country. It is now in the hands of a Commission.

The effect of the foreign loan on the monetary conditions in the country is not yet noticeable, as money is still very scarce. This is due to the fact that so far the preparations have not been completed for the payment of the vast sums owed by the Government. The Minister of Finance has now obtained from Parliament authority to open an extraordinary credit of 6,000 million lei. It is hoped that the disbursement by the Government of this amount will not be delayed much longer, and that it will bring a much-needed relief to the money market.

Activity on the oil fields has been restricted during the last two months owing to the cold weather. Production hardly reached 1,300 wagons per day. With warmer weather approaching, the production should show a marked increase now. Nevertheless, feeling in the industry is depressed by the unfavourable reports from the world markets and the want of capital. Consequently there have been new low records in the prices of the shares on the Stock Exchange.

Fairly definite reports have made their appearance concerning an important credit amounting to 125 million marks which is being offered to Roumania by Germany through the Reichsverband der Deutschen Industrie. The credit is to be available in goods or material of which Roumania may have need. It is a sign of the efforts made by Germany to recapture the Roumanian market.

ARGENTINA.—MONEY—SECURITIES—CEREALS—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, March 5.

GENERAL financial conditions in Argentina all indicate the reasonable certainty that while money will be dearer by the end of March, such a condition is not likely to act as a serious handicap to import or export trade. Bank deposits at January 31, the latest date of official publication, showed an increase on the month of $61,000,000 paper. Current discount rates are 6½ per cent. to 7 per cent., and current account advances 7 per cent to 8 per cent. per annum, the latter rate being charged by certain of the smaller institutions. Cordoba province has not yet decided what sum it will authorise the Government to borrow, the Provincial Senate rejecting the Deputies' sanction of $72,000,000 paper. $45,000,000 paper is now spoken of and will assuredly, if sanctioned, be sought abroad. All first-class local securities stand very high. Argentine investors grow more numerous every day, and the supply of national bonds, and Cédulas of the National Mortgage Bank, is likely for another couple of months to be limited to what is on the market. The National Mortgage Bank has indeed only the right to issue a further $100,000,000 paper in Cédulas without seeking fresh legislation, and inasmuch as it is for the time being without a directorate, and therefore cannot grant any loans at all, there is no likelihood of new Cédulas being issued, with the consequent effect on current prices. Altogether the Argentine investment position may be considered thoroughly sound, though it is locally regretted that as yet the Argentine public are not to any great extent buyers even of first-class industrial shares. Holders of these are mostly persons of foreign origin, the volume of Stock Exchange business is painfully small, and it is no exaggeration to say that a free market for even the best industrial shares does not exist. This seriously hampers commercial development depending on limited liability enterprise, calls to public subscription being almost unknown and shares as a rule held by a comparatively limited number of proprietors.

The wheat position is much what it was a fortnight ago, liberal offers from this country to Europe being made and shippers having about half the exportable surplus already on their hands. Spot wheat is $9.85 paper per 100 kilos, with $10.05 for May delivery. The linseed market is firmer, with good demand from the United States and Europe, and a reasonable certainty that the crop will be smaller than was first anticipated, say 1,800,000 tons exportable surplus. For spot linseed $15.60 is quoted, with $15.75 for May delivery. Maize is in firm demand at $9.00 for spot grain and $8.25 for May delivery. An estimate of the export surplus puts the figure at 4,000,000 tons, a considerable reduction even on what was hoped for a fortnight ago.

For general produce, markets are quiet, but this is in a manner seasonal. The quotations for wool are, however somewhat disappointing, and the heavy supplies from the southern territories excite little interest, $16.00 paper per 10 kilos being merely a nominal quotation for the finest Santa Cruz wools. Hide prices, too, show a marked decline at $12.00 paper per 10 kilos for Buenos Aires hides. Import business is very brisk, and some idea of the increase in values may be gathered when one states that the Buenos Aires Custom House revenue to the end of February was $59,719,784 paper, as against $54,913,460 for the corresponding period of 1928. This increased import, combined with debt services and remittances made on behalf of the railway companies, is gradually driving Argentine exchange to the gold point; latest banks' cable rates being 47 7/32d. and 104.75 drawing on London and New York respectively. Some $3,000,000 gold has been withdrawn from the Conversion Office, which now shows a balance of $499,987,630 gold. One shipment of $1,000,000 U.S. has been made to New York, and it is possible that more specie will follow; a contrast to the position this time last year, when gold was still entering the country.

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital and Reserve Funds, £3,400,000.

EXECUTOR and TRUSTEE DEPARTMENT.

Head Office: 38, St. Andrew Square, Edinburgh

The Bank is prepared to undertake the duties of Executor or Trustee, and to act as Trustee for Debenture Stockholders, Public Institutions, etc.

LONDON OFFICE: 38, Threadneedle St., E.C.2

Every description of Banking Business transacted.

Letters to the Editor.

THE EFFECT OF FOREIGN LOANS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—This time, I fear, your comment on my letter does *not* carry the argument a step further. For you only repeat what you said before—namely, that a higher Bank rate stimulates exports because it "tends to lower sterling prices in general and thus enhances British competitive power in foreign markets." But you do not give your readers the slightest hint as to *how* a higher Bank rate brings this about.

May I, therefore, offer a suggestion? I know of only two ways in which this effect can be produced by that cause, of which the first can be only temporary and of secondary importance. In the first place, holders of stocks of commodities may (conceivably) be induced by the higher cost of carrying them to throw their goods on the market at a loss or at less than their usual profit. But, clearly, this cannot last, and is a precarious (and unprofitable) foundation on which to base an increased export trade. May I take it that you do not merely mean that a higher Bank rate stimulates exports by compelling British manufacturers to sell their goods at a loss?

If, then, we dismiss this particular effect of dear money as having no enduring value, it would seem that a higher Bank rate can only stimulate exports if it reduces, not merely prices, but *costs of production*. For here we should be on firmer ground. And here, indeed, we may find the answer to the conundrum. For a higher Bank rate, due to a loss of gold, is generally associated with a curtailment of credit, which in turn limits the opportunities of business men to provide employment. Now unemployment, if it is sufficiently severe and sufficiently prolonged, may be expected in the end to bring down the rates of wages. Here at last is our goal. For if wages are reduced, "British competitive power in foreign markets" is indubitably enhanced; and exports are increased.

Have I rightly interpreted your meaning? Have you any other explanation?

I have not ventured at any time in the course of this correspondence to deny your conclusion that, if we lend more abroad, this will stimulate our exports. For, evidently, there must be a balance between the two. I have only wanted to be clear just how this comes about; and I thank you for your collaboration in reaching the above conclusion. If next time you applaud the tendency of foreign lending to stimulate exports, you will add the explanatory words "because it will make the maintenance of full employment impossible at the present level of wages, so that unemployment will continue until British wages are reduced, which will enhance our competitive power in foreign markets," then I will promise to write you no more letters!—Yours, &c.,

March 26, 1929. J. M. KEYNES.

[Mr Keynes with great ingenuity endeavours to fasten upon us the statement that export of capital only stimulates commodity exports because it creates unemployment and lower wages. Naturally we do not concur. Mr Keynes turns away from all the other ramifications of effect and concentrates merely on one of the points which we raised in elucidation of his questions. He also appears to forget that wages are not the sole item in costs of production, and is guilty of ambiguity in using the word "wages" without indicating whether he means money wages or real wages. Nevertheless we welcome this letter, because at last we discover that Mr. Keynes agrees with us in our general conclusion, although critical of some of the arguments by which we reach it. So, after all, this long correspondence has a happy ending.—ED. ECON.]

INCOME TAX AND RESIDENTS ABROAD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With regard to the printed circular recently issued by the Board of Inland Revenue concerning United Kingdom Income Tax on visitors from the Dominions and Foreign Countries, the circular makes clear that only income arising from sources within the United Kingdom is chargeable to United Kingdom income tax, and that no part of a visitor's income from sources outside the United Kingdom is chargeable "unless as a person residing in the United Kingdom."

Article (3) of the circular defines what constitutes "residence," while Article (4), under the heading "Extent of liability to the tax on income arising abroad," reads as follows:—"A visitor who thus becomes chargeable as a resident is liable not on the whole of his income arising abroad, but only on so much of that income as is received in or *remitted to the United Kingdom*."

I put in italics the words on which I wish to lay emphasis, for this would appear to infer that a person ordinarily resident abroad, but who at the same time maintains a place of abode or is regarded by his habitual visits as being resident in the United Kingdom, is debarred from remitting money to the United Kingdom for investment purposes except under pain of having to pay income tax thereon.

Surely some differentiation should be made in the object of which such remittances are made—whether for ordinary expenditure or for purely investment purposes? To tax remittances made for the latter purpose is to tax capital, and so to discourage it entering the country.—Yours faithfully,

"A BRITISH SUBJECT RESIDENT ABROAD."

Aliartos, Greece, March 21st.

LACE AND SAFEGUARDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—You were kind enough, in your issue of the 16th, to admit that your argument needed qualifying. You go on to say that "There is no ground whatever for the suggestion that, of the £622,000 (cotton machine-made laces) imported from France into the United States in 1927, even the major portion came through British ports transhipped under bond."

Now, according to the answer given by the Parliamentary Secretary to the Board of Trade in the House of Commons on March 20th, lace and net, valued at £569,000, was in transit via Dover and Southampton to the United States during the year 1927. This is lace and net of all kinds, and no official information is available as to what proportion was machine-made. However, the proportion of machine-made lace to lace of other sorts imported from France into the United States was in 1927 as six to one. We shall probably then not be far out if we assume that about six-sevenths of this total of £569,000 was machine-made lace on its way from France to the United States. I suggest, therefore, that Lord Plymouth was entitled to make the statement which, in your issue of March 2nd, you endeavoured to disprove, and which you again deny in your reply to my letter.

In taking up my point that the French exports to the United States fell from seven-and-a-quarter million dollars to three million dollars (1924-27), you say that, during the same period, United Kingdom exports fell from 1,432,032 dollars to 439,814 dollars, "a much heavier percentage decline." The actual percentage declines are 58 per cent. and 69 per cent., but there is a point which you appear to have overlooked. You mean, of course, not "French exports" and "United Kingdom exports," but "United States imports from France and the United Kingdom." When goods were cleared through our Customs and re-exported, in many cases it will have happened that the United States authorities classified them as imports from the United Kingdom, though the goods were really from France. When, however, they are transhipped in bond, the United States authorities are far more likely to classify them correctly as imports from France, and this technical change would operate to increase the nominal imports from France and to decrease the nominal imports from the United Kingdom in 1927 as compared with 1924. If we could obtain the correct figures, it is more than probable that the percentage decline in both cases would be about the same.

Much has been made of the difficulties of the lace trade over the past three years, and in most cases the endeavour to connect these difficulties with the lace duty has been a complacent assumption that the duty has been responsible. You have made an endeavour to prove that this is so. I submit, however, that the facts are against you, and that there is not the smallest evidence, when the facts are closely examined, that the lace duty, imposed in 1925, can in any way be connected with the decline either of exports or re-exports of this industry. I do not think it is disputed that the home trade has greatly benefited, in which circumstance the case against the lace duty completely fails.—Yours truly,

Empire Industries Association,
26 Abingdon Street, S.W. 1.
March 25, 1929.

D. JACOBS,
Secretary.

[Our correspondent, in her attempt to justify Lord Plymouth's explanation of our re-export losses, has imperfectly examined the U.S.A. statistics, else she could not make the remarkable statement that "the proportion of machine-made lace to laces of other sorts imported from France into the United States was in 1927 as 6:1." The machine-made lace referred to is cotton, and Miss Jacobs's assertion would be correct if she had written "*cotton* laces of other sorts" (U.S.A. Returns 3170-3180); but when linen, silk and artificial silk, and metal laces (*ibid.* 3383, 3781-3, 3854 and 6691) are taken into the account (as clearly they must be) the proportion instead of being 6-1 cannot be much more than 50-50, and her argument collapses.

With regard to the further (hypothetical) argument contained in her penultimate paragraph, Miss Jacobs apparently overlooks the fact that, if we accept her hypothesis of erroneous classification, we make our pre-duty re-exports larger in volume than we have hitherto supposed, and we should accordingly magnify the decline which this trade has suffered.

As to the general effects of the duty, we have made no "complacent assumption." The persistent and detailed testimony of the City Wholesale Houses is evidence of the first order that one effect of these duties has been to send their Colonial and other overseas customers direct to Continental sources of supply. If confirmation were needed it is found in the experience of other trades similarly interfered with by safeguarding duties.—ED., *Econ.*]

Books and Publications.

AN ECONOMIST DISCOURSES.*

When Sir Josiah Stamp is not directing the affairs of the London Midland and Scottish Railway, or of the Bank of England, or of the Abbey Road Building Society, or settling the question of Germany's capacity to pay, or doing all kinds of good works that nobody hears about, he devotes some of his exuberant energy to giving lectures and addresses, and as he says in the preface to this volume, some of these efforts "seem to have, if they do not deserve" (which, of course, is merely his modesty) "an appeal beyond their lawful occasions. Hence this collection." Such books are necessarily difficult to review, but when produced by Sir Josiah they are eminently easy and instructive to read. Turning these pages is like going for a walk with a cheery companion who discourses on æsthetics, inheritance, invention, industrial co-operation, amalgamations, and so on. He is always light and lucid, and he turns one's mind inside out by the pleasant ease with which he exposes one's prejudices without saying anything unkind, but rather after having shown us what sound opinions they are, if only one remembers that they may be quite wrong. For instance, those who believe in hereditary wealth as the corner stone of capitalist production will glow with satisfaction when they read how an able man, under the stimulus of the power of bequest, "exerts his ingenuity to the highest degree, creates new capital forms and new mental embodiment of his genius in organisation," raising the potentiality of the average worker as a unit in the social system, enriching himself and his social environment simultaneously. Then comes the cold douche—let us "suppose that the knowledge that the individual can leave his wealth to his son and not to the community acts as a social irritant, an economic 'sulkifier.' All workers' efforts are then crabbed and limited by their psychological state; their output is restricted, and often interrupted on trivial pretexts; they have no ready elasticity to participate willingly in new combinations of the organising mind. Then the total economic result of the community's efforts may be less than if our original mind had never exerted itself at all, producing individual wealth for individual bequest." And so we are left wondering, which is the state of mind most to be desired by the true philosopher. Also, we are often

* "Some Economic Factors in Modern Life." By Sir Josiah Stamp, G.B.E. P. S. King. 10s. 6d.

amused by the way, as when we are told a story about Harold Cox and a Judge in India who said to him, "Cox, when you are a bit older, you will not quote Indian statistics with that assurance. The Government are very keen on amassing statistics—they collect them, add them, raise them to the *n*th power, take the cube root and prepare wonderful diagrams. But what you must never forget is that every one of those figures comes in the first instance from the chowkidar (village watchman), who just puts down what he damn pleases"—a bitter reflection for the statistician.

IRON AND STEEL STATISTICS.

"Statistics of the Iron and Steel Industries," a new edition of which has just been issued by the National Federation of Iron and Steel Manufacturers, contains the most comprehensive statistics of any volume dealing with the iron and steel industry. Not only are statistics of production, imports, exports, consumption of raw material, prices, etc., given for Great Britain in great detail, but figures are given in scarcely less detail for most other iron and steel producing countries. The volume is rendered more complete with each new edition, and there are now 170 pages, or twice as many as ten years ago. Thirty-four of the new pages are devoted to the tariffs on iron and steel imported into the principal consuming countries. Needless to say, the volume is indispensable to all interested in Great Britain's basic industries. The volume is published at 5s. 4d. post free, and can be obtained from the offices of the National Federation of Iron and Steel Manufacturers, Caxton House (E), Westminster, S.W.1.

BOOKS RECEIVED.

The Consumption of Wealth. By Elizabeth Ellis Hoyt. (London) Macmillan and Co., St. Martin's Street. 8s. 6d. net.

This is a very much more interesting treatment of the subject than is usually offered by books purporting to deal with consumption. There are four general sections, dealing with such matters as culture; the psychology of consumption; factors unconsciously controlling consumption; and the deliberate control of consumption by the consumer. The last section compares the standards of consumption of various past and present communities, and there is a detailed discussion of American habits in this respect.

The Morris Plan of Industrial Banking. By Peter W. Herzog. (London) A. W. Shaw and Co., 6 Carmelite Street, E.C. 4.

A study of a new development in banking which is playing a growing part in the financial structure of the United States.

Memoires et Documents pour servir à l'histoire du Commerce et de l'Industrie en France. (Paris) Librairie des Sciences Economiques et Sociales, 31 Rue Jacob.

A collection of very short monographs on modern French economic history. The range of subjects covered is extremely wide.

Die Frankfurter Bank, 1854-1929. (Frankfurt) Frankfurter Bank.

A history, in German, of the Frankfurter Bank.

The Annals: Farm Relief. March, 1929. American Academy of Political and Social Science. (London) P. S. King and Son, 2 Great Smith Street, Westminster.

A collection of over fifty articles which should form a useful body of information relating to American agriculture.

The Municipal Year Book, 1929. (London) Municipal Journal, Limited, Sardinia House, Sardinia Street, W.C. 2. 20s. net.

This compendious volume gives very complete information as to the position of municipal undertakings and of limited liability companies responsible for public utility services. It summarises the work of all local governing bodies and gives the names and addresses of officers. There is also a full list of water companies and a complete record of all the larger gas, electricity and tramway companies.

Twenty-eighth Financial and Economic Manual of Japan, 1928. (Tokio) Government Printing Office. Yen 2.00.

This very useful year-book contains comprehensive statistics of Japanese production, trade, communications, and public finance. There are also full notes on such matters as taxation, national debt, patents, foreign trade, and the currency system.

International Labour Review. March, 1929. (London) George Allen and Unwin, 40 Museum Street, W.C.1. 2s. 6d.

This number includes articles on: "The Organisation of State Industry in Soviet Russia," and "Seasonal Unemployment in the Building Industry in certain European Countries: III."

Radio: Supplement to the Annals of the American Academy of Political and Economic Science. (London) P. S. King and Son.

A collection of articles on the development and uses of radio in the United States. There is also a section on radio in international affairs.

Review of the Oilseed, Oil and Oil Cake Markets for 1928. (London) Frank Fehr and Co., Holland House, Bury Street, E.C. 3.

A very conveniently indexed collection of statistical and other information for persons interested in these commodities.

Bulletin of the Stable Money Association. January-February, 1929. *Bankers' Number.* (New York) Stable Money Association, 104 Fifth Avenue.

This number includes an article by Professor Jeremiah Jenks on the question of the retirement of the National banknotes in the United States.

La Revue Marxiste. March, 1929. (Paris) "Les Revues," 47 Rue Monsieur-le-Prince. 6 francs.

The editorial article in this number is entitled: "Democracy in Action."

Revista Mexicana de Economia. December, 1928. (Mexico) Talleres Eduardo Limon, Donceles 26.

A periodical, in Spanish, on Mexican affairs.

Bulletin of the British Library of Political and Economic Science, March, 1929. (London) London School of Economics, Houghton Street, W.C. 2. 6d.

There is the usual list of important recent additions to the Library and of duplicates available for exchange. The subject of the bibliography this time is the Channel Tunnel.

English Grammar and Composition, Part II. By Leonard Le Marchant Minty. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 5s.

The questions set at the examinations of the Institute of Bankers are reproduced here with model answers.

Foreign Affairs. April, 1929. (New York) Council on Foreign Relations, Inc., 25 West 43rd Street. $1.25.

Among a number of interesting articles this issue includes:—"Anglo-American Relations and Sea Power," by John W. Davis; "Biology and War," by Alexander Carr-Saunders; and "China's New Tariff Autonomy," by Walter H. Mallory.

Seventieth Annual Report of the Superintendent of Insurance, State of New York, March, 1929. (Albany) J. B. Lyon Company.

This report contains such information as is already available relating to insurance companies subject to the supervision of the Department, and a full account of the insurance legislation of the year.

The Economic Position of Hungary Between East and West. By Emel Stein. (Budapest) The Athenæum.

A short essay by the managing director of a Hungarian bank.

Austria of To-Day. (Vienna) Vienna Chamber of Commerce, Trade and Industry.

A small illustrated guide book containing a certain amount of economic information in condensed form.

The Stock Exchange.

THE STOCK EXCHANGE OUTLOOK.

MARKET movements in the past three months may be summarised by saying that bullish sentiments prevailed in January, that reaction set in with the rise in the Bank rate from 4½ per cent. to 5½ per cent. on February 7th, and that thereafter markets have continued to be unsettled in daily expectation of a break in Wall Street. A more cheerful feeling has been manifest on the Stock Exchange this week, but, like all holiday sentiments, it needs critical examination in the light of facts. The shake-out in Wall Street has undoubtedly been welcomed as lessening the risk of a further rise in the Federal Reserve re-discount rate and as lightening the Bank of England's problems in this country. At the same time, there are tentative signs of an improvement in domestic trade, evidenced by increased traffic on the railways and by the decline in the numbers of the unemployed. There is something to be said, therefore, for the view that, with a brighter monetary outlook, markets should be firm in spite of the coming elections. If we cannot altogether subscribe to this view, it is not because we regard the coming elections as an impending disaster, but because a review of the last three months leads us to the conclusion that the Stock Exchange is not yet free of certain influences which have been making for reactionary markets.

Apart from dearer money, the main features of Stock Exchange business in the past quarter have been the flood of new issues, the mixed nature of industrial reports, and the active participation of American speculators and investors in British securities. It was pointed out in the *Economist* last week that, if British Government borrowing were excluded from calculation, the London market had been called on to find £12,000,000 more in the last three months than in the first quarter of 1928, the total public offerings being £95,053,000, as against £83,282,000 in 1928. Among these new issues have been important Colonial Government loans amounting to £23,590,000, with £11,269,500 of investment trust company issues. Some of the more speculative of recent company emissions have been largely left with the underwriters (as we show in a subsequent "Investment Note"). The weight of new issues, however, is bound to tell upon markets as a whole for some time to come. Nor is the publication of the reports of the leading industrial companies for the financial years ending December 31, 1928, or March 31, 1929, likely to lend much encouragement to "bullish" views. A year ago industrial results stood out in contrast with those of 1926, the year of the coal stoppage, and naturally made cheerful reading. This year, with a few exceptions, company reports disclose profits at levels not much better than in 1927, and bear witness to the keen competition which has lately prevailed in many industries. In short, the "domestic" situation is not sufficiently favourable to offset adverse factors from outside. Definite bear points during the last two months have been dearer money and the gyrations of Wall Street, and it is doubtful whether, except in the gilt-edged market, market prices have yet completely adjusted themselves to this situation.

In the latter market prices suffered so severely from the rise in Bank rate that a recovery seems overdue, given any continued improvement in sterling. This particularly applies to the short-dated securities. The table in the preceding column shows the highest prices so far recorded this year, the prices ruling two weeks after the rise in Bank rate and to-day, and the yields obtainable at current prices.

	Highest, 1929.	Feb. 22.	To-day.	Flat Yield. £ s. d.	Redemp. Yield. £ s. d.
Conversion 3½%	80⅝	78½	76¾	4 11 0	...
,, 4½%	100	98¾	97¾	4 12 9	4 16 3
Consols 4%	88⅝	86½	85¾	4 14 0	...
Funding 4%	91¾	89½	87½	4 11 6	4 12 6
War Loan 5%	103½	101⅜	102¼	4 19 3	...
Treasury 5%, 1933/35	101⅛	100	99½	5 1 3	5 3 2
,, 4½%, 1932/4	100⅛	99½	96¾	4 13 6	5 7 4
,, 5½%, C. 1930	101⅛	100½	100⅛	5 10 0	5 6 4

The exceptional reaction in the price of 4½ per Cent. Treasury Bonds 1932-34 has no doubt been due to the selling of disappointed "stags," who applied for this issue at 99 on payment of £10, and had no desire to meet the £89 call due this week. The weakness of this stock has naturally affected other short-dated securities. As the Treasury 4½ per Cent. Bonds 1932-34 are convertible into 4 per Cent. Consols next July at the rate of £112, Consols, ex dividend, per £100 Treasury Bond, ex dividend, they will probably begin to attract buyers who desire to hold a short-dated security until the result of the General Election is known. Any brightening of the monetary outlook and any improvement in sterling will, of course, assist the recovery of both short-dated and long-dated securities in the gilt-edged market.

At this point it may be observed that, with the rise in Bank rate and the fall in the prices of British Government funds, disappears the last hope of any heroic attempt on the part of the Treasury to refund 5 per Cent. War Loan at any lower interest rate in this, the first optional year of its redemption. A reduction of ½ per cent. in the rate of interest payable on the £2,000,000,000 5 per Cent. War Loan would mean a saving of £10,000,000 a year to the British taxpayer. The reaction of the last two months has left the market in an unfavourable mood for refunding operations on the grand scale. Nor does the market take an unduly optimistic view of the Budget surplus of £18,400,000, seeing that £13,200,000 of the "surplus" is a windfall consequent upon the amalgamation of the Note Issues, while the Sinking Fund has, in effect, been raided to the tune of £7,400,000.

Apart from the gilt-edged market, the prospects of an early recovery in other sections of the Stock Exchange do not appear so favourable, but there are qualifications to any general view. As regards industrial shares, it is necessary in these days to make a distinction between those in which New York does and does not take an interest. In the case of purely domestic shares, which have not so far attracted the attention of the American investor, it will be found that prices have suffered in all cases from the rise in Bank rate, but that the yields obtainable at the present market prices are not high in relation to a 5½ per cent. Bank rate. The following table gives the relevant facts relating to shares representative of different markets which have not received American attention:—

	Highest 1929.	April 3.	Yield. £ s. d.
Midland Bank, £12—£2 10s. paid	9⅜	8⅜	5 0 8
Commercial Union	29¼	27½	3 5 6

Thos. Tilling	6¼	5¼	3 0 0
			3 17 1

* Based on last year's dividend of 25 per cent. † Tax free.

Turning to the industrial shares which have been popular with the American speculator, it will be found that, while prices have reacted considerably, they have not reacted to a point which allows even a moderate return on present dividends. With Bank rate at 5½ per cent., it would be impossible to run a bank overdraft to hold, for example, the following American-favoured shares:—

	Highest. 1929.	April 3.	Yield. £ s. d.
British American Tobacco	5⅜	6¼	4 2 6†
Courtaulds	5⅜	3⅜	3 15 7†
Col. Graphophone	18	14½	1 0 8
Gramophone	18⅛	16½	3 6 8
Imperial Chemical	45/6	40/-	4 0 0
Imperial Tobacco	6⅜	6	3 13 0†*
Swedish Match "B"	24⅜	21½	3 17 6
General Electric	81/3	60/9	5 4 0
Imp. Continental Gas	428	397½	2 10 0
Can. Pacific Common	273	244	4 2 0
Marconi	84/-	83/-	1 16 2

* This yield is worked out on the basis of a 21½ per cent. dividend. † Tax free.

It may be asked whether these leading industrial shares can continue to command such high prices if Bank rate remains for any length of time at 5½ per cent., or if money in New York remains dear. Sooner or later, the speculative fever in New York will receive correction—either by pressure from the banks or by a change in sentiment—and if industrial earnings in America begin to show signs of falling off, a revulsion of sentiment in the industrial share markets may be inevitable. In such an event, an unduly low dividend yield basis is bound to make an impression upon market valuations. From this point of view the outlook for industrial shares affected by American operators is not altogether favourable.

We have omitted from this review any detailed consideration of the speculative markets—land, rubber, tea, oil and mining—as these markets are affected by their own peculiar conditions. The past quarter, for example, has seen a remarkable boom in Rhodesian copper mining shares, which now shows signs of having spent its force. When the price of copper reacts, as sooner or later it must react, public attention on both sides of the Atlantic will turn away from the Rhodesian market. The rubber share market has also received a burst of support with the rise in the price of the commodity, but here again interest has tended quickly to decline on any reaction in the commodity's price. Buyers of tea shares have, for the most part, been discounting probable "cuts" in dividends, while the South African and nitrate markets have been featureless and neglected. There has been a disposition on the part of speculators to take an interest in tin shares, but the absence of any sustained rise in the price of the metal has restrained enthusiasm. Oil shares have been in and out of popular favour as the news from America has varied between depression and hopefulness. The rise in petrol prices and the attempt to impose national restriction of oil production in the United States, have, however, recently brought back this market into favour.

In our review of Stock Exchange markets during 1928 we suggested that even the more speculative section of Stock Exchange opinion was not prepared to support indefinitely the rise in prices, and that the first impetus towards a decline in values might be expected to come from America. This view has been largely confirmed in the last three months, particularly since the occurrence of the most serious break in Wall Street since June, 1928. At the moment of writing there is every indication that the correction of market values in America has still to make further progress. Security values still appear high, even after the slump in Wall Street last week, and, as far as American-favoured industrial shares on the London Stock Exchange are concerned, deflation has not yet occurred to any appreciable extent. We come to the conclusion, therefore, that, outside the gilt-edged market, a recovery in Stock Exchange values before the General Election is improbable.

or otherwise. The last days of the three-weeks account, it is true, saw the undoing of commitments in certain directions, particularly by profit-taking in the junior Home Railway stocks, some of which had been unusually hard to obtain earlier in the week. The new General Electric situation, discussed in an "Investment Note" hereafter, lessened, but did not remove, the old resentment against any interference with the Stock Exchange as a free, fair market.

To benefit the gilt-edged market there were the Wall Street shake-out of ten days ago, the Bank's acquisition of £700,000 of new gold, and Conversion Loan interest to the tune of over £10 million net available for reinvestment. The recovery, in evidence before the holidays, made further headway. Five per Cent. War Loan was again in demand, and both Three-and-a-Half and Four-and-a-Half Conversion Loan showed steady improvement. India Loans showed a similar hardening tendency. Dominion and Colonial stocks attracted no more than a moderate interest, but quotations were firmer where tested.

The Foreign market was inactive but steady. European loans showed fractional rises whenever business was done. A few South American stocks, including Chilean Six per Cents. and San Paulo Coffee Bonds, were marked up to a limited extent, but Brazilians as a group did not sustain their early appearance of firmness. Chinese Bonds were unshaken by the resumption of military operations, the market being inclined rather to concentrate on such bull points as the payment of the March, 1928, coupon on the Five per Cents. of 1912.

Once again the Home Railway traffic figures were encouraging—too encouraging, perhaps, since their publication was followed by a bout of undue eagerness to take profits accruing from the recent advance. North-Eastern stocks were most noticeably affected by this development, though the other three groups by no means escaped its effects. The senior stocks, however, showed a firmer front, coming within the orbit of the improvement in investment securities as a whole. The railway revenue figures are discussed in a subsequent "Investment Note." The Foreign Railway market was quiet, but as the latest traffic figures made a fair showing, the general tone was firm. Further buying of Central Argentine was in evidence, and San Paulo continued its steady rise.

Industrial shares had no well-marked tendency. The reactionary state of New York on Monday was reflected in the marking down of Anglo-American counters on Tuesday morning, and the uncertainty of Transatlantic conditions acted as a brake on business throughout the week. Columbia Graphophone was weak on Tuesday, but later improved along with H.M.V., which was not visibly affected by the proposal to issue new shares. On the pending publication of the merger terms, a fair demand sprung up for Marconi's, and Eastern Telegraphs were in request. The match companies failed to shake off the dullness of recent weeks. Gas shares were quiet, and shipping shares irregular, the market being still under the influence of the setback administered by the Cunard report. Tobacco shares continued to attract less than normal attention, and motors were less active than last week, though Fords rose on the forthcoming Continental issue. Distillers were active in the brewery group, the company's overseas business being reported to be in a healthy condition. Sustained buying was recorded of Lautaro Nitrates. United Molasses were an uncertain quantity before and after the dividend announcement. After reacting to 7 the shares rose sharply later to 7½. Courtaulds showed little or no movement, though the textile group as a whole was a shade harder than last week. Caledonians were an outstanding feature in a mostly irregular insurance market. Bank shares showed a slight fractional gain on a moderate investment inquiry.

Business was on a most attenuated scale in the rubber share market, sellers and buyers being equally difficult to discover. The commodity tended, if anything, towards greater firmness of price, but in informed quarters the view was current that the "resting" of the trees under restriction might result in more than normal yields for a few months after the wintering season. No tea auctions were held this week, but the tone of the share market was firm. Jhanzie being prominent on the company's reserve capitalisation proposals. The latest turn in the oil restrictions negotiations, which is described in detail on a later page, served to check incipient public interest in oil shares, the leading counters being all subjected to profit-taking.

Kaffirs opened with a steady tone, due rather to Johannesburg's operations, especially in Daggafontein, than to any interest taken by London or Paris, which was of the slightest. A certain liveliness marked Rhodesian copper shares, encouraged by glowing reports of Mr S. Joel's impressions on his recent trip to South Africa, and unsubstantial rumours of American offers for control of Bwana M'Kubwa. Elsewhere, dealings were on little more than a nominal scale. Rio Tinto came on offer on Paris account, tin shares were easy (Patino being sold from New York), and Burma Corporations moved within the narrowest of limits.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The New York share market is doing little beyond marking time, and waiting till the uncertainties of the credit position are cleared up. The passing of the month-end settlements is giving an easier tone to money, the call rate having fallen to 6 per cent., after being firm at 10 to 12 per cent. earlier in the week. Sentiment has been heartened by extraordinarily good reports from the steel and motor industries, while bull operators are basing their hopes on the pressure of public opinion bringing a change in the tight money policy of the Federal Reserve Board. The outcome, however, is problematical, bankers generally preferring a stringent policy until further liquidation has been effected, and believing that, once the process begins, it will be speedy enough to ensure its completion before tight money can seriously diminish business. Steel shares are buoyant on the record-breaking earnings of the first quarter, motors are improving on the record March output, and railroad shares are more active on good traffic returns. Enthusiasm in the oil market has been damped as a result of the Hoover administration's decision, Washington doubtless disliking a defensive *rôle* in case gasoline prices go up in the summer.

PARIS.

The closing of the Bourse for four days at Easter restricted business still further. To the caprices of Wall Street the market was indifferent, and the undertone was fairly firm, though a weaker note was sounded by the quotation of rights to participate in the Banque de Paris

capital augmentation at a lower price than their par value, which brought out offers at that "datum" level. Rentes made fresh progress. Chemins de Fer du Nord, Citroën, and coal shares were in prominent demand. Finally, the oil group showed a reawakened activity, a number of appreciable gains giving some tone to the market. At the month-end settlement, the contango rate was 5 per cent. on the Parquet and 7½ per cent. on the Coulisse.

BERLIN.

Trading was on a narrow basis when the Bourse reopened on Tuesday, but foreign buying was reported and prices rose, large gainers being the chief artificial silks and some coal and steel stocks. A sharp reaction followed. Wednesday's market was dull and undecided, weakening later under foreign selling, a rise in the dollar exchange, and fears of an advance in the Reichsbank's discount rate. With the money market easier on Thursday stocks hardened somewhat.

AMSTERDAM.

The market was closed on Friday, Saturday and Monday, and it reopened with an irregular tendency, business remaining restricted by reason of the firmness of the money market. The private discount rate rose to 5 per cent., and 5⅜-6 per cent. was quoted for prolongation. The steadiness of oils provided a favourable exception, but industrials were lower, and rubbers dull, Tobacco shares were on offer after the Sumatra tobacco auctions in Amsterdam. Dull conditions prevailed on Thursday, Margarine Unie, exceptionally, showing strength. Shipping shares were easier.

INVESTMENT NOTES.

Developments in the G.E.C. Affair.—Further important developments have occurred since the eve of the holidays in the matter of the proposed "British share" issue of the General Electric Co., to which reference was made in the *Economist* of March 16 and 23 last (pages 583 and 636). At a meeting to confirm the necessary changes in the company's articles of association, held on the day before Good Friday (when the American shareholders' representatives were still on the high seas, two days short of Southampton, it was announced that the issue contract with the Brish, Foreign and Colonial Corporation was still legally biding. The corporation had, however, proposed new terms to the Americans, under which the G.E.C. would issue (a) 140,853 new shares, at a maximum price of 40s., to *all* existing shareholders, and, subsequently, (b) 1,596,332 "Brish" shares at 42s. to holders in the proportion of two to every three, accompanied by renunciation letters, which holders, disqualified by nationality for permanent ownership, could dispose of, either on the Stock Exchange, or, after the end of May, to the British, Foreign and Colonial Corporation at an agreed price. The amended scheme, it will be seen, made certain by no means negligible concessions, inasmuch as it limited the offer to existing shareholders instead of throwing it open to all and sundry British subjects, and recognised the prerogative of holders of all nationalities to participate in any "bonus" accruing as a result of the issue. The "wirelessed" refusal of the American representatives to have anything to do with the new scheme, though worded, possibly, with emotion rather than lucidity, would seem to have been based on the undoubted fact that the terms involved the reduction of their share of the equity in the company from approximately 60 per cent. to 36 per cent., as the following figures show:—

	No. of £1 Shares.
Present issued ordinary capital of G.E.C.	2,253,645
No. of shares held by Americans (presuming 60 per cent. of total so held)	1,352,187
Capital, after issue of 140,853 new shares to all existing holders	2,394,498
No. of shares then held by Americans	1,436,699
Capital, after issue of 1,596,332 new "British" shares	3,990,830
Shares held by Americans { Number	1,436,699
Shares held by Americans { % of Total	36%

The G.E.C. is, in fact, endeavouring, by a retrospective and roundabout method, to put itself into much the same position as the Marconi International Marine Co., which limited foreign ownership to 25 per cent. of its shares before, and not after, that ownership had reached very large dimensions. It is understood that the G.E.C. is less interested than are some of its competitors in orders emanating, say, from South America, but has an influential clientèle in Australia and other parts of the British Empire, where, sentiment being what it is, future orders might be affected by the allegation that the company was not a truly "British" concern. Similar considerations may, indeed, have influenced the company in standing outside the recent Metro-Vickers—Thomson Houston merger. The conversations between Sir Hugo Hirst and Messrs. Chadbourne and Swope, the American representatives, which began on Tuesday last, will doubtless have centred round this main point. We have already stated that we regard the introduction of the "nationalist" criterion as unfortunate and dangerous at this juncture. Whatever might have been said for an attempt to exclude American investors from any but a minimum participation in the company twelve months ago, the process of locking the door must inevitably involve the trapping of somebody's fingers to-day.

Home Railway Revenue.—After several weeks of depression, home railway receipts would seem, at long last, to have taken a turn for the better. As will appear from the following table, the falling off in gross railway revenue, which was of significant proportions in February of this year, was definitely arrested last month, when the Midland and Scottish and the North Eastern companies recovered part of the ground previously lost, and the Great Western and Southern systems contrived to end the quarter with a small "surplus" by comparison with the corresponding figures for 1928:—

(000's omitted.)

Increase (+) or Decrease (−) in total railway receipts in 1929, as compared with 1928.	London Midland and Scottish Railway.	London and North-Eastern Railway.	Great Western Railway.	Southern Railway.	Total —Four Groups.
	£	£	£	£	£
Aggregate to January 27	− 78	− 65	+ 8	+ 5	−130
Aggregate to February 24	− 311	− 215	− 65	− 65	−656
Aggregate to March 31	− 287	− 124	+ 34	+ 53	−324
Week ended March 23	+ 24	+ 52	+ 30	+ 6	+112
Week ended March 31	+ 76	+ 36	+ 75	+146	+333
Week ended March 31, compared with Good Friday week, 1928	+ 4	+ 51	+ 20	+ 39	+114

The recovery, it will be seen, has been particularly in evidence during the past two weeks. The seven days ended March included the heavy outward passenger movement of the Easter holiday, but the figures remain favourable when related to those of Good Friday week last year. The absence of any general recrudescence of investment interest in home railway stocks may be ascribed to the reactionary mood of Stock Exchange markets as a whole in view of prevailing monetary con-

ditions, to the general realisation on the part of oft-disappointed railway investors that one swallow—or even two—does not make a summer, and to recognition of the fact that both the decline of receipts in February, and the recovery of the later days of March were probably exaggerated by the effects of the recent severe climatic conditions. Allowing for the last-named factor, it would still appear that the railways should shortly begin to reap the benefit of the contemporary improvement in British trade generally—a conclusion reinforced by the following comparisons of the various traffics:—

(000's omitted.)

Receipts for Thirteen Weeks to Mar. 31, 1929. Increase (+) or Decrease (−) on 1928.	London, Midland and Scottish Railway.	London and North Eastern Railway.	Great Western Railway.	Southern Railway.	Total—Four Groups.
	£	£	£	£	£
Passengers	− 45	− 65	Nil	+ 59	− 51
Merchandise, etc.	− 618	− 416	− 102	− 73	− 1,209
Coal and Coke	+ 376	+ 357	+ 136	+ 67	+ 936
Total receipts	− 287	− 124	+ 34	+ 53	− 324

Passenger traffic shows no great change from last year's levels, but general merchandise receipts have been running well below the corresponding figures for 1928, though allowance must be made for the effect on the figures of the de-rating concessions to the heavy industries. Coal and coke transport, however, shows a distinct recovery from its former very depressed level. How far this welcome development will be maintained over the summer months is not, of course, certain at the moment. On the whole, the figures so far suggest no reason for significantly revising dividend estimates either way—apart from the unknown quantity represented by economies in working expenditure, regarding which, presumably, the investor will remain in the dark for another three or four months.

Public Response to Recent Issues.—The well-worn maxim that the time to float off new joint-stock concerns is when the Stock Exchange is active and existing stocks are rising involves the corollary that promoters are, as a rule, well advised to "go slow" whenever Stock Exchange conditions are reactionary. That certain of the more speculative capital issues of last month would never have been made had this principle been closely followed is suggested by the number of instances where underwriters were left with large amounts of stock on their hands. It is true that 18 offers last month were said to have been "over-subscribed" or "fully subscribed," though the exact interpretation of these terms is less certain to-day, when so much "placing" is arranged for by the issue house before the formal offer is made, than it would have been a few years ago. In numerous other instances no intimation was afforded of the result of the public issue, such as might, possibly, have been expected had a conspicuous success been achieved. As to the fate of numerous other emissions, there is, unfortunately, much less doubt, as the following figures show:—

Company.	Nature of Offer.*	Proportion left with Underwriters.
Albanian National Brewery	800,000 5s. ordinary	70%
Ralph Alcock and Sons	1,000,000 2s. shares	30% to 35%†
Berry's Insulating and Building Products	528,000 5s. shares	30%†

* Made at par, unless otherwise stated.
† Percentage left unabsorbed; issue not underwritten.

The advent of "dearer money" early in February was bound in the long run to check any tendency towards exuberance in the capital market, as in other directions. Long-term borrowers of assured standing are naturally inclined to postpone their pending issues for the time being. A simultaneous lull in the creation of new and speculative company propositions would assuredly be beneficial to all concerned.

Oil Restriction.—A hitch has occurred in the movement towards world restriction of oil production. It was stated in the *Economist* of March 23rd last, that the American Petroleum Institute had put forward a plan for limiting, as from April 1st, the output of oil in the United States, Mexico and South America, to the level of the daily average production for 1928, and that regional committees of producers had been appointed to study the means of carrying out this scheme. At the meeting of the American Petroleum Institute Conservation Committee on March 27, which was attended by Sir Henry Deterding on behalf of the Royal Dutch-Shell interests outside America, the reports of the regional committees were received, and it was unanimously resolved to recommend this international restriction scheme to the Federal Oil Conservation Board. Mr. Hoover's administration has now made known its attitude. It effect, it is opposed to the scheme, partly because it is an infraction of the Sherman Anti-Trust law and would require legislation by Congress before it could be carried out, partly because it would involve a setting up of another Federal Commission which would have to interfere in the fixing of oil prices as well as in the fixing of production. It is apparently considered in Washington that oil restriction should be left to the producers in the different States to carry out, and that where necessary the different State legislatures should take action to regulate drilling. The American Government's attitude definitely upsets the American Petroleum Institute's scheme, which embraced restriction in Venezuela, Columbia and Mexico as well as the United States. Clearly, without the co-operation of producers in every oilfield of the United States, there can be no worldwide agreement to restrict over-production. The success achieved by obtaining the support of the Royal Dutch-Shell group and other big producers in Venezuela and Mexico for the restriction policy has thus been largely offset. Discussions are now proceeding between the American Petroleum Institute's representatives and the Federal Oil Conservation Board at Washington, and it remains to be seen what restriction plan can be evolved for America, which would induce the big producers outside the United States to restrict their output. The optimism which was manifest early this week in the oil share market in New York and London would, therefore, appear to have been somewhat premature.

Insurance Share Index.—It might have been thought that the insurance share market would have suffered more than most from the rise in Bank Rate, since it is obviously unprofitable to pay for a share yielding about 3 per cent. by money borrowed at 5½ per cent. and upwards. Although, in fact, our quarterly index shows a drop during the last three months, the decline is quite small, and many individual shares have actually appreciated during the period. The truth is that insurance shares are not the sport of speculators. They are bought as a rule by far-seeing investors content to sacrifice something in the way of income in order to enjoy an almost certain gradual appreciation. The table which appears below exhibits the history of an investment, in 1913, of £1,000 in the ordinary shares of each of twenty-five leading companies, and an index also of the total. Columns have been added to show the values as at December 31, 1928, and March 28, 1929. The figures are based on the mean of the highest and lowest prices in each year, except in the case of the last two columns,

which relate to the middle market prices on the dates specified.

SHARE INDEX.

* Caledonian, 1923.—£25 shares split into £5 shares, 1 new £5 share at 6 premium for each £25 share. † Commercial Union, 1927.—New shares of £2 10s. offered in proportion of 1 share for each 5 held at £16 per share. ‡ Guardian, 1917.—£10 shares split into 2 £3 shares and 1 £4 Pref. share each. § Royal Exchange, 1927.—New shares £1—offered in proportion of 1 share for each £5 stock held at £6 10s. per share.

Over the last three months the shares of as many as eight companies shows an appreciation; five register no change; the remaining twelve show varying degrees of depreciation. Of the companies whose shares have risen in value, the General Accident is again conspicuous with a substantial rise, and in a lesser degree the Legal and General and the Scottish Life. Amongst the shares which have depreciated, the Caledonian and the Gresham Fire both exhibit substantial falls.

Mexico and Railway Investors.—The rebellion in Mexico is naturally occasioning some perturbation among bondholders and shareholders affected, writes a correspondent. The area of conflict has already taken in a number of important districts, like those of Monterrey and Vera Cruz, in which the railways are largely the property of foreigners. The port of Vera Cruz, which is understood to have suffered physical damage, is the terminus of no fewer than four systems, the Mexican, the Interoceanic, the Vera Cruz and Isthmus, and the Ferrocarril-de-Vera Cruz railways, in all of which foreign bondholders are interested. At the end of last year British investors in the Interoceanic Railway of Mexico (Acapulco to Vera Cruz) were condoled with by the chairman (Mr Sandford Poole) upon a pecuniary loss on the year of £263,000, which followed a previous loss of £100,000. The Mexican Railway, after a prolonged period of obstruction and destruction, had once again commenced to earn a modest profit (only $240,000, or, say, £24,000), with indications pointing to higher gross receipts in the near future. Nevertheless the chairman (Mr Vincent W. York) prudently warned his fellow-shareholders, at the last meeting, that the situation was still serious, "the country having received a very severe shock from which recovery would be slow." In the States of Mexico which are in revolution against the Federal Government—*i.e.*, Durango, Guanjuato and Puébla in the centre; Chihuahua, Coahuíla, Nuévo León and Sonora in the north; Vera Cruz on the Gulf; and Oaxaca, Sinaloa and Jalisco on the Pacific—the railways in which foreigners are largely interested, have part or whole of their tracks laid. While Durango is served by the International Railway (National Railways of Mexico), Guanajuato depends upon the Mexican Central Railway; Puébla is served by both the Interoceanic and the Mexican Southern. Chihuahua, the most important city of north-central Mexico, where severe fighting is described as taking place, is served by the National Railways (Mexican Central line). Nuévo León, of which Monterrey is the capital, is crossed by the National Railways from west to north-east, which have no fewer than 31 stations in a course of 200 kms. of lines. Oaxaca relies for its transport upon the Mexican Southern Railway, largely owned by British bondholders. The State of Jalisco, one of the most turbulent (of which Guadalajara, the second city of importance in the Republic, is the capital) is connected with Mexico City by the National Railways, which possess numerous remunerative branches. Finally, in the State of Sinaloa is not only the terminus of the Kansas City-Mexico and Orient Railway, but also that of the Sinaloa and Durango—called also the Mexican Western—Railway, while the International Railways have a small branch ine from Villa Lardo (Durango) to the coast.

Bank of Scotland.—An increase in the dividend paid by an old-established British bank is always a noteworthy phenomenon. After maintaining its distribution at 16 per cent. on the paid-up capital over a large number of years, the Bank of Scotland raised its rate to 17 per cent. a year ago, and for 1928-29 is paying 18 per cent. Trade depression has not prevented a repetition of the slow but steady increase of profits of recent years:—

Years ended February 28 (or 29).	1927.	1928.	1929.
	£	£	£
Net profits	370,119	372,335	374,283
Dividends { earned	30·8%	31·0%	31·1%
Dividends { paid, less tax	16%	17%	18%
Dividends { amount	192,000	204,000	216,000
To reserve fund	125,000	125,000	125,000
To reduce bank premises and heritable properties accounts	50,000	30,000	30,000
Increase in carry-forward	3,119	13,335	3,283

The paid-up capital is £1,500,000, but the reserve fund and the carry-forward together now exceed £2 million. Acceptances to banking customers are up by £66,000, to other customers down by £96,000. An increase of £1,083,965 in deposits and credit balances is partially offset by a reduction from £784,256 to £266,951 in drafts payable within 14 days. Cash, money at call, and bills discounted total 28¼ per cent. of the liabilities to the public, against 27¼ per cent. a year ago, but the holding of Government securities is down from £13,429,806 to £10,750,658—which, in conjunction with a 33 per cent. rise in discounts, shows the effect of the 5½ per cent. Bank rate on joint-stock bank action. The present price of £150 of stock (£100 paid) at Edinburgh is 380½, giving a yield of £4 17s., less tax, allowing for accrued dividend.

General Motors.—An increase in profits of 17.6 per cent. to a new record level is reported by the General Motors Corporation. The earnings on the common stock were equivalent to $15.35, against $12.99 in 1927, on each of the old $25 shares, which, since January 10th last, have been split into $10 denominations. The Wall Street price of the new shares is round about $83½, at which they give a yield of 4½ per cent. on dividends, and over 7½ per cent. on 1928 earnings.

Years ended December 31.	1926.	1927.	1928.
	$	$	$
Net earnings	186,231,182	235,104,826	275,[illegible]
Debenture and preferred dividends	7,645,287	9,109,330	9,404,[illegible]
Dividends on common stock	103,930,993	134,836,081	165,[illegible]
To surplus	74,654,902	91,159,415	101,[illegible]

The sales of cars and trucks, by dealers to users, numbered 1,215,826, 1,554,577, and 1,842,443 in the last three years respectively. In 1926 the corporation claims to have manufactured approximately 25 per cent. of the cars produced in the U.S.A. and Canada, in 1927 44 per cent., and in 1928 40 per cent., the cessation of Ford production during part of 1927 obviously making that an abnormal period. Sales were kept down in the autumn of 1928 by changes in the Chevrolet and Pontiac models. Sales overseas have risen from 118,791 in 1926

and 193,830 in 1927, to 282,157 in 1928. Recognising that the development curve within the U.S.A. is bound to flatten out, the directorate is clearly determined to take every opportunity of expansion in other countries; in the words of the report, "to make the corporation a real factor in the industrial life of each country in which it operates." British manufacturers have not found the study of General Motors ideals of service and selling organisation altogether unprofitable.

Morris Motors.—Doubts whether Morris Motors would show results for 1928 at all commensurate with those of the previous year have been set at rest by the issue of a report showing that, despite a very difficult year in the motor trade generally, and a slight decline in profit on trading (from £1,242,524 to £1,198,015), the net reduction in earnings was no more than £20,818. Once again Sir William Morris has refrained from taking any dividend on the ordinary shares. As a result of this policy, a reserve of £2,154,635 has been accumulated in the three years of the company's existence, so that the preference shareholders, who possess no voting power (except when their dividends are in arrear) and have their affairs wholly in the control of one man, have nevertheless reason to be grateful for the self-denial which has so noticeably strengthened the backing of their shares.

Years ended December 31st.	1926.	1927.	1928.

* Less interest paid to vending companies, £229,965. † For 3 months.

Government securities at market value compose over one-quarter of the gross assets, or practically one-third if goodwill, patent rights and trade marks (an item standing at £1,641,043) be excluded. Investments in associated concerns are put at £461,925, against £347,042, a holding of 100,000 £1 shares in Morris (New South Wales) accounting for most of the increase. Fixed assets aggregate £2,087,908, against £1,829,257 a year earlier, and net working capital amounts to £793,515. Whether or not Morris cars maintain their popularity year after year, everything that can be done by conservative finance towards securing the position is being undertaken. The cumulative preference £1 shares at 21s. 3d. yield £7 4s. 6d. per cent., allowing for accrued dividend.

African and Eastern—Niger Merger.—Sir Robert Waley Cohen gave some further details of the merger between the African and Eastern and Niger companies at the extraordinary general meeting of the shareholders of the former. Both companies will now become holding companies, the actual trade being carried on by the United Africa Co., Ltd., in which each will have an equal interest. The A and B shares of United Africa will be identical in all respects. The new balance sheet of African and Eastern will consist of £7,366,000 share capital and £115,000 pension reserve fund on the liabilities side, and on the assets side 6,500,000 shares of £1 in United Africa, £500,000 in respect of the London office building, and a further number of shares in United Africa, subscribed for in cash, which will represent the African and Eastern's present surplus of liquid assets. This will enable the African and Eastern, valuing the United Africa shares at par, to balance its assets and liabilities without having to write down its share capital. What is not clear from Sir Robert Waley Cohen's address is the reason for valuing the United Africa shares at par. No estimate of the profits of the merger company has been made, but the combination of past profits of the two parties to the merger hardly gives a return on the combined capital which would justify valuing the merger company's shares at par. Economies will, of course, be realised as a result of the merger. Substantial direct advantages have, according to Sir Robert, already become visible, and more should undoubtedly follow, but it remains to be seen whether the merger company has not encumbered itself at the outset with an unwieldy capitalisation. Arising out of the merger of these two powerful units, we understand that a meeting of various interests concerned with the import, handling, and manufacture of raw cocoa, has decided upon the formation of a London Cocoa Association. Such a large proportion of the world's cocoa supplies is grown on British soil that it is felt that London should have a controlling voice in the management of the industry. It is also anticipated that the new Association will co-operate closely with the various Government departments and with the Imperial College of Tropical Agriculture in improving methods of cultivation, manufacture and transport of cocoa.

County of London Electric Supply.—Excellent results are again shown by this progressive company, which sold 323 million units last year, as against 248 million in 1927 and 145 million in 1926, increased its dividend by 2½ per cent., and made, nevertheless, two reductions during the year in its supply rates to consumers. In accordance with anticipation, it is proposed to increase the authorised capital from £7,000,000 to £12,000,000 by the creation of 2,000,000 new preference and 3,000,000 new ordinary shares, to be issued at the discretion of the directors. During 1928 some 96,517 preference shares were issued in connection with the acquisition of further interests in other undertakings bordering upon the company's area of supply. An increase of £126,000 in receipts from sale of current and meter rentals and a fall of £78,000 in fuel costs—public utility services are reaping a rich harvest from the price-cutting competition between colliery companies—together account for the rise of £193,102 in gross profit. Earnings, after charging debenture service, exceeded £1,000,000, before deducting various statutory provisions for depreciation, &c., under the London Electricity Act.

* On capital increased by 33⅓% by a bonus distribution.

During the year £1,641,063 was expended on capital account, which now totals £11,547,805, less reserve for depreciation £1,260,764. Investments in other electric supply companies have increased from £1,539,346 to £1,861,438, but the basis of valuation is not, and should be, stated. A large debenture issue made in May, 1927, for financing the extension of the Barking power house probably explained a cash holding of as much as £1,109,920 at the end of that year; the total is now down to £27,308, and a bank loan of £120,000 appears on the liabilities side. Possibly, in referring to the increase of capital, the chairman will give some indication of the directors' future development plans at the meeting on the 16th. At their present price of 52s. 9d. the ordinary shares yield £3 15s. 7d. per cent. on the basis of a 10 per cent. dividend.

Modder Deep.—Once again little variation is shown in operating results, writes our mining correspondent, and the dividend is maintained at the rate paid for several preceding years. A small draft upon the carry-forward is, howeverfi entailed. The balance sheet indicates a cash surplus of £150,000.

	1926.	1927.	1928.
Ore crushed .....tons	528,200	529,300	530,300

Ore reserves .....tons	4,150,000	3,560,000	3,000,000
Value ..... dwts.	9·0	8·9	9·0

A renewed shrinkage of 560,000 tons is shown by the ore reserve estimate, indicating that little fresh material was opened up during the period. Results on the hanging wall leaders were similar to those obtained in the preceding year, when the existence of a small tonnage of ore of moderate value was indicated.

Robinson Deep.—The experience of this Rand enterprise has been of the "rocket and stick" variety. From a "rubbish" price the "B" shares rose to nearly £2, substantial dividends being received in respect of both 1925 and 1926, but thereafter an unwelcome change was recorded. At first it was chiefly a case of the absorption of profits by capital expenditure. Then developments took an adverse turn, and so far from the position having improved in this respect the latest annual report indicates a very uncertain outlook. An additional 2,500 ft. of underground work was performed last year, but the ore reserves shrunk by over 600,000 tons, the decrease being attributed partly to the exclusion of ground which proved upon stoping to be unprofitable; the value declined by ½ dwt. The tonnage represents barely one and a half year's supply for the mill. Better results are hoped for by the consulting engineers during the current session, but their acknowledgment of the irregular character of the gold distribution in depth is not very reassuring. We contrast the results of the past three years:—

Value, dwts.	6·9	6·6	6·1

* After deduction of realisation charges.

Capital expenditure and debenture redemption in 1928 called for the somewhat increased sum of £65,000. After providing for taxes, &c., and for the fixed dividend on the "A" shares, the slightly enhanced balance of £76,850 remained to go forward.

Consolidated Mines Selection.—At £79,800 the net profit for 1928 showed an increase of £16,600 upon that of the previous year. Some of the factors were distinctly different. Interest and dividends accounted for less than before, sundry profits for more. Income tax absorbed only £28,900, as against £45,700. The maintenance of the dividend at 20 per cent. entailed a fresh draft of £22,000 upon the dividend equalisation reserve, which thus becomes reduced to £18,000. The cash position shows a surplus of £210,850; the market value of the shareholdings is stated to be largely in excess of the £617,200 at which they stand in the balance sheet. The 10s. shares stand at over 19s.

Southend Waterworks Company.—Offer for sale by tender of £130,000 5 per cent. perpetual debenture stock (minimum price, 98). Issued share capital amounts to £2,032,128, and loan capital to £672,837. Gross profit for 1928 was £136,474; interest on debentures, including this issue, requires £40,141. The area of supply is over 200 square miles, with a residential population of over 190,000. Annual water revenue receipts are steadily increasing.

The following prospectus issues have not hitherto received notice in these columns:—

"Beacon" Brown Flour Company, Limited.—Offer at par of 120,000 5s. 8 per cent. participating preferred ordinary and 40,000 (out of 80,000) 5s. deferred ordinary shares, the two classes ranking equally after payment of 10 per cent. on the deferred. The company acquires formulæ, processes, and the benefit of development work in connection with the manufacture of a brown flour placed on the market 14 months ago. The purchase consideration is £10,000 in deferred shares. Working capital is estimated at £36,500.

Townsend Bros. Ferries, Limited.—Issue at par of 19,500 (out of 20,000) £1 7 per cent. non-cumulative participating preferred ordinary shares, ranking for further dividend rateably with 100,000 1s. deferred ordinary shares (after payment of 7 per cent. thereon), which with the remaining preferred ordinary shares are issued to vendors in full satisfaction of the purchase price. The company acquires a Dover-Calais steamship ferry service for motor cars, passengers, &c. A steamship is being acquired and altered to double capacity at a cost of £15,000. Net profits for 6 months from starting of service last July were £1,636. Working capital is estimated at £3,500.

Particulars of the following have been issued for public information only with a view to Stock Exchange introduction:—**Splintex Safety Glass (Continental), Limited**; authorised capital £200,000 in 5s. shares; acquires processes and patents for Europe from parent company, for £15,000 in cash and £75,000 in shares; working capital is estimated at £37,000; 300,000 shares are under option at par.

COMPANY MEETINGS, &c.

BANK OF SCOTLAND.

PROGRESS OF THE BANK'S RESOURCES.
STRONG LIQUID POSITION.
DIVIDEND AGAIN INCREASED.

The annual general meeting of Proprietors of the Bank of Scotland was held within the Head Office, Edinburgh, on April 2, 1929, the Right Honourable Lord Elphinstone, K.T., presiding.

In submitting the directors' report, the Chairman said :—I assume that, as usual, we may hold as read the report by the Court of Directors of the affairs of the Bank as at February 28th last, a copy of which you have no doubt received.

The directors regret the death during the year of the Earl of Dalhousie, one of the extraordinary directors of the Bank.

To fill a vacancy on the board, the directors, in virtue of the powers contained in the Bank's constitution, had pleasure in inviting the Marquis of Linlithgow, K.T., one of the extraordinary directors of the Bank, to become an ordinary director, and I am glad to say that he readily accepted office. You will be asked to confirm his appointment by re-electing his Lordship to-day.

I should like to take this opportunity of expressing the gratification of the board at the recent honour bestowed upon our ordinary director, Sir Robert T. Boothby, K.B.E.

TRADE.

I do not propose to take up your time to-day with a detailed review of trade during the past year; that has already been done recently at various bank meetings. The year was on the whole distinctly disappointing, with the exception of one or two fortunate industries. At the same time, I am glad to think that there are indications of better conditions ahead. In coal, iron and steel there has been some improvement; the shipbuilding output for the past year was rather more satisfactory, and a fair number of orders for new ships have been placed.

There have been two promising movements during the year which may have excellent results. Continued efforts to bring about a better understanding between employers and employees have helped on the widespread desire for more cordial relations based on mutual trust. It is now generally recognised that our great industries cannot be productive of satisfactory results unless all engaged in them are co-operating to that end.

The other movement is what is usually termed "Rationalisation." Without committing ourselves to this as a universal remedy for all industrial ills, it is evident that reorganisation of works and amalgamation of allied interests, especially when operating in the same areas, would do much with the elimination of uneconomic units to secure economies of labour and plant and greater efficiency, with the result that the lower cost of production per unit would enable the goods to be marketed at lower prices. The depression of recent years will not have been altogether an evil if it has urged us nationally to put our house in order.

AMALGAMATION OF NOTE ISSUES.

The amalgamation of the currency note issue with that of the Bank of England in November last was carried through successfully, and once more established the sound principle that note issues should be free from any Government control. Our only regret is that in the Currency and Bank Notes Act, 1928, the claims of the Scottish banks to have the right to issue 10s. notes should have been set aside. It is an anomaly that Scottish customers should be obliged to accept Bank of England 10s. notes because the right to issue notes of that denomination was refused to the Scottish banks.

BANK RATE.

The increase in bank rate on February 7th from 4½ per cent. (at which it had stood since April, 1927) to 5½ per cent. was very regrettable, as it was in no way due to trade requirements. The speculation rampant in New York, as evidenced by the huge total of brokers' loans there, was apparently beyond the control of the Federal Reserve Board, and it is to be hoped that some measures will be possible to curb such activities which have far-reaching international complications.

DEPOSIT ACCOUNTS.

You are no doubt aware that recently, with the other Scottish banks, a system of deposit accounts, intended primarily for customers of small means, was instituted. There are many who prefer a pass book to deposit receipts, and the former appeals to those who wish to deposit in small amounts at frequent intervals. We hope that this additional facility, given in the encouragement of thrift, will meet with the success which it deserves.

SMALL £1 NOTE ISSUE.

We have recently begun the issue of a new £1 note of the same size as the £1 Bank of England note, and as there appears to be a growing preference for notes of this size, we anticipate that the new issue will very soon entirely supersede the larger note. Those of you who have seen the new note will, I think, be pleased with it. The artist, Mr. Robert Burns, whilst retaining the chief characteristics of the larger note, has introduced one or two important changes with, I think, excellent results.

THE BANK AS TRUSTEE.

To meet the wishes of an increasing number of its customers, the Bank has arranged for this class of business being undertaken, and the booklet giving the terms and conditions can be applied for through the agents of the Bank.

THE BANK'S BALANCE SHEET.

Turning to the Bank's report, you will see that deposits at £32,068,385 show an increase of £1,083,965, some of which is temporary money.

The note circulation shows a decrease of £97,953, but we anticipate that the new small note will probably tend to increase the circulation again.

The acceptances of £834,124 show a small decrease of £30,454.

STRONG LIQUID POSITION.

On the assets side, cash, bank balances, documents *in transitu*, and money at call and short notice amount to £7,326,233, or fully 20 per cent. of our liabilities to the public. Bills discounted (including £1,920,000 Treasury bills), and our investments amount to £13,756,116, or over 38 per cent., giving a total of £21,082,349, or fully 58 per cent. of our liabilities to the public in liquid assets.

A NEW RECORD FOR ADVANCES.

Advances at £17,229,717 show an increase of £2,944,339, which follows on an increase of £953,000 in the previous year. This is a new record figure for our balance sheets. The advances are well spread.

Every bad and doubtful debt has been fully provided for.

INVESTMENTS.

Investments at £10,942,477 show a decrease of £2,678,750, which includes a holding of 3½ per cent. War Loan which matured on March 1, 1928. The investments have, as you will see, been employed in additional advances throughout the year.

The investments are, with the exception of £191,825, all British Government securities. The market value is very substantially in excess of the value in our books.

BANK PREMISES AND HERITABLE PROPERTIES.

During the year considerable reconstruction work has been carried on in some of the Bank's branch premises, and we have found it desirable to acquire additional properties for bank offices, and also as houses for our agents. The whole properties of the Bank, including let properties, stand in our books at £460,000. I need hardly say that this figure is very substantially below the real value.

LONDON—WEST END BRANCH.

You will notice in the report a reference to a leasehold property which the Bank recently acquired. This is No. 16–18, Piccadilly, at corner of Air Street, London, to be used as a West End branch when the strong-rooms and other internal fittings have been completed. I have no doubt that many of our Scottish customers, as well as friends in London, will find this new branch a convenience to them.

A VERY SATISFACTORY YEAR.

The net profits, slightly over those of last year, are.....		£374,283
Add the balance from last year		166,801
		£541,084
Of that we allocate—		
To reserve fund	£125,000	
To bank premises and heritable properties	30,000	
	£155,000	
Dividend, 18 per cent. per annum, less tax	216,000	371,000
Leaving to be carried forward.....		£170,084

With the above allocations the combined reserve fund and balance carried forward are now £2,052,584, or £552,584 in excess of the paid-up capital. I need hardly say how gratified the directors are by the progress shown in the Bank's resources.

BANK STAFF.

I wish on behalf of the court of directors again to express our appreciation of the excellent services rendered by the executive, managers, agents and staff generally throughout the past year.

DIVIDEND.

I have pleasure in moving the adoption of the report and balance sheet as submitted, and that a dividend for the past half-year at the rate of 18 per cent. per annum, less income tax, be now declared, payable on 15th current, making, with the dividend paid in October last, 18 per cent. for the year, less income tax, as compared with 17 per cent. for the previous year.

The motion was agreed to.

The Lord Elphinstone, K.T., and Sir Ralph Anstruther of Balcaskie, Bart., were unanimously re-elected governor and deputy governor respectively for the current year; and the Marquis of Linlithgow, K.T., Mr Alexander Wallace, W.S., and the Lord Kinross, K.C., were re-elected ordinary directors.

Mr H. L. Usher, C.A., and Mr C. E. W. Macpherson, C.A., were re-appointed to conduct the audit of the books for the current year, and a vote of thanks to the chairman terminated the meeting.

BARCELONA AND SEVILLE EXHIBITIONS, 1929.

¶ The Anglo-South American Bank has branches in seven cities in Spain—including Barcelona and Seville—as well as Agents throughout the Peninsula.

¶ It is therefore in a unique position to provide complete financial services to intending visitors to the forthcoming Exhibitions.

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST, LONDON, EC2

WESLEYAN AND GENERAL ASSURANCE SOCIETY.
STEADY GROWTH AND ACCUMULATION OF FUNDS.

The eighty-eighth annual general meeting of the members of the Wesleyan and General Assurance Society was held, on the 2nd instant, at the Central Hall, Corporation Street, Birmingham, Mr B. Shirley Smith, president of the society, presiding.

The Chairman, in moving the adoption of the report and accounts, said :—

With regard to the ordinary department, you will notice from the report that there has been a steady and considerable volume of business, but the total figures have not quite reached the level of the previous year. In this department the claims by death are on the whole satisfactory, but the claims by maturity show an increase, which is only to be expected when the steady growth of the society's business is taken into consideration.

A special feature of the new business of this department has been the increase in the average sum assured. In 1914 the average was £50. Ten years ago the average was £90. Last year the new business averaged £137 per policy.

The Industrial Department has, as might be expected, been affected by the prevailing conditions of bad trade, but, notwithstanding this, the society has issued policies in this department for a total sum of £2,614,914. This amount, if not the best, is very nearly the best the society has ever done. In this department the mortality rate has been satisfactory. Deaths have been under 82 per cent. of the expected.

The new prospectus for this department introduced at the beginning of 1928 has been very well received. The outstanding feature was the special recognition given to the fact that difficulty is at times experienced in payment of premiums in old age. For new policies, after 20 years' payments have been made, the payment of premiums ceases at 65. This alteration is greatly appreciated.

With this new prospectus your agents are well equipped for the acquisition of good business, and your directors hope that if trade improves both departments will show good progress and make the present year a record one.

In recent years I have spoken again and again on the necessity of reducing the ratio of expenses in both departments. These ratios have again been slightly reduced in the year now under review. Much new business comes from personal influence, but policyholders are not sentimentalists, and prospective assurers are by no means above inquiring what proportion of the premiums received by the society is absorbed in expenses, and acting accordingly.

The other departments of the society's business are all making progress and are helping the society to attain satisfactory results.

FIRE AND GENERAL BUSINESS.

A few words with regard to the employers' liability, fire, accident, and general insurance business may not be out of place. You will notice that for the first time the employers' liability insurance business is separated from the fire, accident and general. Both departments show a steady increase in premiums for the year under review, together with an increase in funds at the end of the year. This is just where our members can help the society. Everyone should insure, whether against fire, motor, or otherwise, and our policyholders should help the society and help themselves by insuring and by getting their friends to insure with us.

I am glad to be able to say that the house-purchase business is still making steady progress. There is no mention of it in the report, but there is no reason why I should not refer to it here. We have not made so many advances as in previous years, but we have done a substantial business, and I mention the house-purchase business because our members can do us a service by talking about this part of the society's work among their friends. The house-purchase business helps the society by providing life policies and fire insurance, so that our members can greatly help by letting it be known that we do this class of business.

Looking at all the departments, the premium income is £1,745,478, being an increase over the previous year of £53,099, and this is after a steady increase over many years past.

We have been fortunate in our rate of interest earned on the society's funds. This amounts to £5 3s. 1d. per cent., as compared with £5 2s. 7d. in 1927 and £5 1s. 2d. in 1926.

Your directors are glad to be able to report that, notwithstanding the vicissitudes of the year that has gone by, your society shows steady growth and a steady accumulation of funds to meet liabilities as they arise.

The proposition was seconded by Mr C. E. Murray (deputy chairman) and carried unanimously.

Votes of thanks to the directors, officials and the indoor and outdoor staffs of the society for their loyal and efficient services during the year, and to the chairman for presiding, brought the proceedings to a close.

NATIONAL BANK OF INDIA, LIMITED.

A SATISFACTORY YEAR.
STRONG LIQUID POSITION.
INDIAN TRADE CONDITIONS.
SIR CHARLES McLEOD'S REVIEW.

The ordinary general meeting of the National Bank of India, Limited, was held, on the 2nd instant, at the Wesleyan Hall, Bishopsgate, London.

Sir Charles C. McLeod, Bt. (chairman of the company), presided.

Mr W. Ross Munro (general manager) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The report of the directors and the accounts to December 31, 1928, have been in your hands for some days, and I presume you will allow me as usual to take them as read. (Agreed.)

Before proceeding with the usual business of the meeting I desire to express our extreme regret at the loss we sustained by the death of our esteemed friend and colleague on the board, Mr. James Nicholson Stuart, who had been a director of the bank since 1903 and latterly deputy chairman. Mr Stuart took the keenest interest in its affairs and lost no opportunity of promoting its welfare. We shall miss his wise counsel and his kindly presence, and we, the members of the board, and many of our shareholders, deplore the loss of a good friend. Mr Stuart's place on the board has been filled by the appointment of Mr Walter Shakespeare, of Messrs Carson and Co., Colombo. We are pleased to have a representative of Ceylon as a colleague, and you will be asked to confirm this appointment.

I have also with the deepest of regret to inform you of the death of our valued general manager, Mr Hegarty, who died suddenly on October 26 last. Mr Hegarty had been connected with the bank since 1894, and had successfully filled the appointments of inspector of branches, London manager, and finally general manager. He was, as you are aware, a man of exceptional ability and deservedly most popular with our clients and our staff. We have appointed Mr Ross Munro as general manager and Mr Lawrence, late manager at Colombo, as London manager. These two officers have had long and varied experience in the bank's service.

PROFITS AND ALLOCATIONS.

As the result of our year's operations we are to-day placing before you figures which show net profits slightly less than a year ago, these being £530,829, compared with £541,098. The total amount available is increased from £796,499 to £807,328, but this increase is, of course, accounted for by the larger amount brought forward from the previous year. We propose to place £50,000 to reserve fund, raising it to £3,000,000, to write down premises account £30,000, to place to credit of officers' pension fund £50,000, and to pay a further dividend at the rate of 20 per cent. per annum, free of income tax, which, together with the similar interim dividend, absorbs £400,000 and leaves us with a balance of £277,328 to be carried forward.

I need scarcely add that these results have been obtained after having provided fully, as usual, for all bad and doubtful debts, and I trust you will agree with me they may be considered satisfactory.

BALANCE SHEET ITEMS.

The balance sheet figures do not exhibit any great change in any particular compared with those of the previous year, and such changes as there are, are in keeping with the ordinary fluctuations which occur in connection with a business such as ours. All rupee assets and liabilities are converted at 1s. 6d. per rupee, as was done in the previous year's balance sheet, and the figures now before you show that our business has been maintained. A year ago I pointed out that there had been some contraction in current fixed deposit, and other accounts, and added that these fluctuations had to be looked for from time to time. On this occasion we have to record an increase, the total being £34,088,229, compared with £33,655,120. Bills payable and acceptances are slightly down.

STRONG LIQUID POSITION.

Turning to the assets side of the sheet our cash and bullion totals £5,333,827, against £4,530,707 last year, our Indian Government rupee securities £6,589,807 against £6,869,988, while our British Government securities, Indian Government debentures, and other securities are £6,261,485 against £6,396,922. These three items—cash, Indian securities, and sterling securities—total £18,185,119, and if we add to these other liquid assets in the shape of bills of exchange, which amount to £7,768,527, you arrive at a figure of £25,953,646, against a total liability of £34,088,229 in respect of current, fixed deposit, and other accounts. The proportion of liquid assets to current and fixed deposits is, therefore, a very strong one. Discounts, loans, etc., show, at £14,224,562, a small advance on a year ago.

The figure for house property and furniture is rather less than a year ago. It has been our policy for many years past steadily to reduce this item. As you have seen, we again propose to set aside £30,000 for this purpose, and, as we have considerable further building to undertake to meet the requirements of the bank's business, it is part of our policy to continue to appropriate such amounts as may be considered necessary to write down our property adequately as and when funds permit.

PENSION FUND.

I may also add here that in common with others we find it necessary to strengthen the position of the bank's pension fund for the staff, and I feel sure that whatever is found to be necessary in this respect will meet with your hearty approval. Before leaving the figure of assets and liabilities I would just add that our securities, totalling nearly £13,000,000, are gilt-edged and stand in our balance sheet at or under market value. The balance sheet totals of £41,639,338 compare with £41,489,781 a year ago, and these figures and profits, arising out of a year when business has given no opportunity for any marked improvement in any special direction and has been, as in the past few years, beset with keen competition and small margins, I trust may be considered satisfactory to you.

INDIA'S TRADE FIGURES.

India's trade continues to be steadily maintained, and the balance in favour of India during 1928 was higher at 56 crores of rupees as compared with Rs. 51 crores in 1927. Exports of merchandise were also higher at 338 crores as against 327 crores in the previous year. No doubt a good monsoon has helped this expansion.

It is customary to give you the net imports of gold into India during the year, which amounted to £15,814,000, as compared with £12,300,000 in 1927. Silver imports have fallen off considerably, and have only reached £8,596,000, as against £11,400,000 in the previous year.

Indian crops, due to a favourable monsoon, were, on the whole satisfactory—indeed, with few exceptions, good.

INDUSTRIAL CONDITIONS.

As regards industries, the Bombay cotton mills continue in a very uncertain state, fitful starts have been made after the long strike, but owing to the unrest amongst labour no steady working has been possible, and, in consequence, no real progress has been made. A larger proportion than usual of Indian cotton has been exported. The jute industry in Bengal continues in a prosperous state and jute mills continue to show substantial returns, but these returns are apt to be misleading, as in many instances the older mills which were erected when the cost of machinery was very much lower than it is now, have been able to build up large reserves and keep down the capital figure which gives quite an incorrect impression of their earning capacity, I am of opinion that it would be wise for those who are in that position to capitalise part of their reserve funds in order to bring the capital more in line with the block expenditure and thus show a more correct result. It has now been decided to extend the weekly working hours from 54 to 60, with effect from next July, and it will be interesting to note the effect of this. Tea has also had a fairly good season, and although prices have been considerably lower than in 1927, most concerns in India and Ceylon will show fairly satisfactory returns to their shareholders. The coal industry has been very depressed now for some years, but there are signs that more interest is being taken in the trade of late.

POLITICAL SITUATION.

With the Simon Commission touring India, it was, perhaps, too much to expect complete tranquillity in the political atmosphere.

What thinking people can only regard as ill-advised exhibitions of racial prejudice have occurred here and there, as exemplified by bonfires of imported cloth, talk of a recrudescence of non-co-operation, and ill-considered legislative proposals such as the Inter-Coastal Trade Bill. On the whole, however, the moderate element appears to be making some headway, and it is satisfactory to note from recent events that the Government appears determined to curtail the activities in India of, as reported in the Press, Moscow-taught and Moscow-paid agitators.

EXCHANGE AND BANK RATE.

Exchange has ruled steadily round 1s. 6d. during the past year. Money has been in fair demand throughout the season, and our funds have been employed to good advantage. The Imperial Bank rate, which averaged 6·196 per cent., against 5·726 per cent. in 1927, has been moved up to 8 per cent., which is customary at this season of the year, when demand for money is more insistent.

The question of a Reserve Bank has been again mooted, but the Financial Minister in India, in speaking on the 6th of last month, indicated that before the matter could be taken in hand a Commission would be appointed to inquire into the general banking organisation throughout India. I gave our views on this subject last year, and I would only add that, in my opinion, it is still premature to consider the establishment of a Central Bank on Western lines. It seems to us that India is already well supplied with banks anxious to do business for their clients on the most favourable terms, and no reputable firm or company has difficulty in getting banking facilities.

EAST AFRICA.

In East Africa progress continues fairly satisfactory, and expansion is taking place in cotton, sisal, coffee and maize. Imports and exports in the three territories show considerable increases from the previous year. A plague of locusts caused considerable damage to the maize crop in some districts, and fears were entertained of a scarcity of food in these districts, but we have recently had assurance that there is no danger of a famine.

TRIBUTE TO STAFF.

Before I conclude I desire to add on behalf of myself and the other members of the Board our appreciation of the care and loyalty of our managers and staff, which is reflected in the present satisfactory position of the Bank.

I beg to propose: "That the report of the directors and statement of accounts for the year ended December 31, 1928, be received and adopted, and that a dividend for the six months to December 31, 1928, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income tax, on and after April 3, 1929."

After this resolution has been seconded by Mr Langford James, and before I put it to the meeting, an opportunity will be given to anyone who wishes to make any remarks or to ask any questions.

Mr R. Langford James: I have much pleasure in seconding the resolution which has just been proposed.

No questions being asked, the resolution was put to the meeting and carried unanimously.

The Chairman then proposed that the appointment of Mr Walter Shakspeare as a director of the Bank be confirmed and that he be re-elected.

Mr Robert Miller seconded the resolution, which was unanimously adopted.

The Chairman further moved that Mr Robert Miller and Mr J. A. Toomey be re-elected directors of the Bank.

The Hon. E. Julian Hawke seconded the motion, which was unanimously agreed to.

On the proposition of Mr John Mitchell, seconded by Mr George R. Christie, the auditors (Messrs Cooper Brothers and Co. and Messrs W. A. Browne and Co.) were re-appointed.

VOTE OF THANKS.

Mr J. Irwin Davis: Before proceeding with the resolution which I have to propose I am sure we should all like to associate ourselves with our directors in an expression of our sorrow at the loss we sustained last year by the death of our late deputy chairman, Mr J. N. Stuart, who, as a director for many years, rendered most able and devoted service to the bank. We deeply regret, also, the sudden death of our general manager, Mr Hegarty, which deprived the bank of a very able officer. We are fortunate in having as our new general manager Mr Ross Munro, whose ability and long experience should prove invaluable in the control and management of the operations of the bank.

It is again my pleasing duty to propose a very hearty vote of thanks to our chairman and directors for the care and prudence exercised in conducting the affairs of the bank during the past year, and also to the general manager, managers, and staff for their valuable services. We have every reason to be highly satisfied with the report and balance sheet which has been placed before us. The feature of the annual reports for several years past has been the steadiness of the profits, and, although there is a slight falling off in the net earnings for the past year, the total volume of business has been well maintained. I think that a notable achievement and it must afford our directors genuine satisfaction, as it certainly does the shareholders. I am sure we all appreciate the very interesting and instructive address of our esteemed chairman. With regard to the managers and staff it would be difficult to overestimate the value of their services. By their whole-hearted co-operation and efficiency they have contributed very largely to the favourable results of the year.

I shall now ask you to show your appreciation by passing a very hearty vote of thanks to all concerned, both at home and abroad.

Mr J. D. Longmire seconded the vote, which was carried with acclamation.

CHAIRMAN'S REPLY.

The Chairman: Mr Davis and gentlemen,—On behalf of myself and my colleagues on the board, I have to thank you very much for your kind expression of appreciation of the services we have been able to render during the past year. Although, as I have remarked in my speech, competition is keener than ever, we will do our very best to place before you on the next occasion results which we trust will be considered satisfactory. Mr Ross Munro has asked me to reply on his behalf and on behalf of the staff, and to thank you very much indeed for what you have said about them, which is very much appreciated. We shall take care that the remarks which have been made are conveyed to our staff abroad, who also, I am sure, will be highly gratified at knowing what has been said about them here to-day.

The proceedings then terminated.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED.
DIVIDEND OF 20 PER CENT.

The thirty-third ordinary general meeting of the Consolidated Mines Selection Company, Limited, was held, on the 4th instant, at River Plate House, London.

Mr Walter McDermott (the chairman) said that the operations during 1928 resulted in an earned profit of £79,836, to which could be added the balance of profit from 1927 of £6,673, making an available profit balance of £86,509. It was proposed to take from the dividend equalisation fund the sum of £22,000, and the directors recommended a dividend of 2s. per share, less tax, equal to 20 per cent. for the year 1928. The reserve for dividend equalisation would then stand at £18,000.

Their largest single investment, and one which had produced a large proportion of their earnings of the past year, was their holding in the Anglo-American Corporation of South Africa, the earnings of which for 1928 were such as to allow of the declaration of a dividend of 12½ per cent. From the profits of the year a sum of £250,000 had been transferred to the general and special reserve funds, which stood at £1,800,000. The policy of making the financial position of the Corporation very strong was reflected in its market standing and in its ability to undertake large new operations likely to secure very substantial returns in the future. The Corporation was deeply interested in the diamond-mining industry, and its chairman, Sir Ernest Oppenheimer, had recently stated that he considered that the prospects for the current year were distinctly favourable, and he looked forward with confidence to the future of the diamond trade.

The past year had been marked by an extraordinary development of copper-mining prospects in Northern Rhodesia, and in the examination and testing of vast tracts of copper-bearing deposits the Anglo-American Corporation had both secured interests and acted in the capacity of consulting engineer to some of the most important properties. Early in 1929 a merging of the Rhodesian interests of a number of companies and groups had been effected by the formation of a great holding company—the Rhodesian Anglo-American, Ltd. Various holdings purchased by the Consolidated Mines Selection Company has been sold to the Corporation, so that their shares and their indirect interests through their large holding in the Anglo-American Corporation made them quite largely interested in Rhodesian Anglo-American, Limited. The Rhodesian copper developments had opened out a remarkable revival in the South African mining industry.

The report and accounts were unanimously adopted.

NESTLÉ AND ANGLO-SWISS CONDENSED MILK COMPANY.

EXTENDING THE COMPANY'S INDUSTRY.
THE OBJECTIONS TO A CARTEL.
MR LOUIS DAPPLES' SPEECH.

The sixty-second annual general meeting of Nestlé and Anglo-Swiss Condensed Milk Co. was held on Wednesday, March 27th, at Cham, Switzerland.

Mr Louis Dapples, the president of the company, who presided, said that as the directors' report, which had doubtless been read by all the shareholders, was very explicit, he could confine his attention on that occasion to supplementing that report by giving them a few more details of a rather more intimate character. Shareholders should not assume from the fact that they were again in a position to propose an increase in the rate of dividend that such a state of affairs could always be anticipated by reason of the normal development of their affairs throughout the world. On the contrary, he felt that the struggle to maintain their strong position was becoming more bitter every year and called for not only a continually more intensive application of all their resources but also a constant extension of such resources, both technical and financial.

Anyone who had had occasion to visit their principal centres of production only a few years ago would hardly recognise them to-day after the improvements that had been effected, and there was no doubt that their newly-constructed factories represented the last word in what had been done up to the present in this domain.

BRAZIL, SOUTH AFRICA AND CUBA.

They had continued their studies in the direction of introducing their industry into countries where it was little known up to now, and had had to decide on the construction of certain new factories under the influence of the protectionist tendency that was continually becoming more accentuated throughout the world. They felt that it was perhaps better to be sometimes a little in advance of the times than to arrive too late and find the place already occupied by others. They owed that, in fact, to the leading position which their trade-marks occupied throughout the world.

Also he reminded them that, while it was easy to build a factory quickly, it was a much more difficult matter to develop the necessary attendant milk district. However, they certainly had a great deal of experience in this direction, and he instanced their factory at Araras, in the State of Sao Paulo, Brazil. This factory was situated in the heart of a coffee-growing district, and until quite recently they had never been able to reckon on an annual production of more than 50,000 cases of condensed milk. They could now reach an annual production of 150,000 cases at Araras, in spite of the fact that a cow in Brazil only yielded on an average three, or at the most four, litres of milk a day. He could not sufficiently impress upon them the persevering and tireless efforts that were required to attain such a result. They had had just the same experience in South Africa.

Again, who would have thought that it would ever be possible to produce condensed milk in the Island of Cuba, where fresh milk had been sold until quite recently in the town of Havana at about Frs. 2.50 the litre? Nevertheless, they were about to build a factory there which they confidently hoped would give them excellent service. In any case, they felt it their duty to do their best to assist in the development of agriculture in general in the Island of Cuba, which was one of their largest markets.

COMPANY'S FIRST CARE.

It was unnecessary for him to say that when they entered upon undertakings such as these, they were fully conscious of the risks that were inevitably attendant thereon, however profoundly they had been studied in the first place. At the same time, they never lost sight of the fact that their first care should be to increase the export of milk from the production centres of the Old World.

He did not think it was necessary to point out that the elaboration and rational execution of such a programme of expansion which was imposed on them by present-day circumstances called for very considerable financial resources, and they had in this way during recent years invested very considerable amounts in these new constructions. It was probable that they would have to continue with both zeal and foresight during the current and next year to strengthen their means of production even more intensively, but they looked forward with certainty to a not too far distant date when they would have completed their programme of new constructions, and could restrict their activities to the maintenance and the technical perfection of their equipment without fear of ever being surpassed by their competitors, however active the latter should be.

They would have to proceed in the same way with the factories they would acquire on the amalgamation with their friends, Peter Cailler Kohler, and they had already taken a very important step in this direction in their acquisition of a considerable number of shares in the chocolate manufacturing company of Sarotti, which was known all over the world and which enjoyed an old-established reputation.

WORKING FOR THE FUTURE.

As they had stated in their annual report, they could not expect their profit and loss account to reflect immediately the full benefit of all these initiatives, for naturally some time was required to make new undertakings fully remunerative. They might even be compelled some day to amortise one or other of these installations before it had produced any tangible results, but they knew, on the other hand, that they would expose themselves to a far greater danger if they allowed their competitors to get in ahead of them, and they were working in consequence less for the immediate present than for the future.

While it was true that well-placed, well-equipped and well-managed factories gave them an undoubted advantage, the fight against competition—especially in the biggest markets—lost none of its sharpness on that account, and those who lagged behind remained for a long time powerless.

They had been asked from various quarters why they did not form, in conjunction with other condensed milk undertakings, a trust or cartel to allocate the world consumption and ensure a reasonable margin of profit. Their reply to that was that one could not compare the condensed milk industry with that of oil, steel, or even dye-stuffs. A single example illustrating the conditions with which they had to contend in their own branch of industrial activity would be sufficient to explain the position.

Let them suppose, for instance, that any combination of farmers, say, in Holland, the United States, Australia or elsewhere, operating under co-operative principles for the sale of fresh milk, butter and cheese, suddenly finds—as very often happens—that there is a surplus of milk. They then imagine that they have discovered the solution of their difficulties in erecting, in great haste, a condensery, but they quickly find that it is difficult to interest the public in their preserved milk at a remunerative price. The product itself very soon reveals all kinds of defects, and has to be sold as rapidly as possible. It is then thrown on the market at a ridiculous price, involving a heavy loss.

But that is not of very great importance to the co-operative combination of which they were speaking, the only consequence being that the individual members obtain a few centimes less for their fresh milk, while the managers of the concern are in no wise affected and simply carry on. A very important co-operative undertaking of this kind in the United States not very long ago lost in one year about $9,000,000. To deal satisfactorily with competition of this nature called not only for perfection in technical and commercial organisation, but also for the command of the necessary financial resources. The situation corrected itself in time, but not always so rapidly as one could wish.

THE FRUITS OF CONSERVATIVE FINANCE.

This illustration showed how right the shareholders had been in giving the board their constant support in the conservative policy of the last few years. Their situation would have been quite different to-day if the realisation of this programme, which was absolutely necessary, had had to be undertaken by means of fresh issues of capital or bank loans. They had still too vividly in their memory their past experiences, and they must not lose sight of the fact that the first series of their obligations was redeemable during the following year.

The directors had been subjected to rather strong criticism from time to time in that they had not made more rapid progress in the distribution of dividends. They could only repeat that the shareholders' true interests lay in the first place in continually increasing the strength of the company's position in order to enable it to adapt itself to circumstances at any time. The board felt that they had justified the confidence that shareholders had placed in them; all their development had been undertaken in no rash manner, and so long as this spirit of initiative was accompanied by an inflexible will and indefatigable work it seemed to them that the shareholders' capital was not exposed to serious danger. He would, however, recommend them to take *cum grano salis* any rumours of one kind or another which circulated in the Stock markets during the course of the year.

TRIBUTE TO MANAGEMENT AND STAFF.

The Chairman concluded with a word of appreciation of the staff, which had continued to fulfil its duties with enthusiasm, devotion, discipline and economy under a benevolent but exacting management, and he further especially addressed their thanks to their excellent management, who were entirely devoted to the company. These gentlemen would now have an opportunity to exercise their experience and their energies in a much more independent manner, for he (the chairman) was at last going to pay his long-deferred visit to Australia. In the course of his journey he intended to visit the more important of the company's branches in the Far East, and he hoped that next year he would be able to tell shareholders some interesting things of those far-distant countries.

The directors' report and the annual accounts were adopted by the meeting, and the resolutions as to the distribution of profits in accordance with the proposals of the directors were duly passed.

AMALGAMATION PROPOSALS APPROVED.

The meeting then proceeded to the consideration of the proposed amalgamation with Messrs. Peter Cailler Kohler Chocolats Suisses S/A., in connection with which the chairman remarked that shareholders would have noted from the report which was in their hands that they were asked to vote for the ratification of the amalgamation of the company with Peter Cailler Kohler Chocolats Suisses S/A. He pointed out that their existing close relations with this friendly company involved such an interlocking of the two organisations that sooner or later this fusion of interests was bound to be envisaged, and that the amalgamation would not only have the effect of obviating all the differences which could arise in the interpretation of complicated contracts, but they were of opinion that the principal advantages that would ensue from the programme for which they requested the shareholders' approval would consist of a much more complete co-ordination in the administrative and technical services—placed in future under one single administration, and would thus ensure the more rapid execution of decisions arrived at—a factor which, as shareholders well knew, constituted the essential element of success.

Unfortunately, and in spite of the mutual desire to that effect of both boards of directors, it had not been possible to bring to a conclusion as rapidly as they had hoped the preliminary negotiations that the directors had entered into at the beginning of 1928. Certain divergences of view on the interpretation of agreements passed in the United States had caused these negotiations to drag out for rather a long time, and it had only quite recently been possible to settle them in a manner favourable to both parties. This unexpected period of suspense had, nevertheless, convinced them more than ever that the path they were following was in reality the best one, and they, therefore, sincerely hoped that, in the best interests of the company, shareholders would pass the resolutions for ratification of the agreements for amalgamation, which, as they no doubt knew, had already been accepted by the shareholders of Peter Cailler Kohler Chocolats Suisses S/A.

As a result of this amalgamation, the company would find itself in possession of a certain number of its own shares in consequence of the exchange of Peter Cailler Kohler shares now in its possession, but in order to conform to the law in this respect the board would dispose of the same in due course, and in the best interests of the company.

The resolution for the ratification of the agreement for amalgamation with Peter Cailler Kohler Chocolats Suisses S/A., and the resolutions in connection with the increase in the company's capital to frs.S100,000,000 and the alterations in the articles of association were duly passed.

CEYLON CONSOLIDATED ESTATES (1920) LIMITED.
IMPROVED POSITION.
REORGANISATION SCHEME APPROVED.

The eighth ordinary general meeting of the Ceylon Consolidated Estates (1920), Limited, was held, on the 27th ultimo, at the Cannon Street Hotel, London, Mr Harold J. Snowden (the chairman of the company) presiding.

The Managing Director and Secretary (Mr W. Fenton Pugh) having read the notice convening the meeting and the auditors' report,

The chairman, in moving the adoption of the report and accounts, said: The accounts before you cover a period of severe depression in the rubber industry, caused by the sudden decision of the Government to terminate restriction. The effect of this for the past year has been very unfortunate to rubber growers, as the price obtainable barely covered the cost of production, but it is expected that ultimately unrestricted production will be beneficial to the industry. The consumption of rubber is rapidly increasing, with the result that an improvement in the market price has recently taken place, and as this company has not entered into any forward contracts, it is in the favourable position of being able to benefit from any advance in values which has occurred or may occur during the current year, and as the accumulated stocks have now been absorbed, profitable prices for rubber should be secured.

It is in order that shareholders may benefit to the fullest extent that the directors advise the capital should be reorganised, as it will immensely improve the financial position of the company and place it on a sound and satisfactory basis. Briefly, the advantages of the reorganisation are: (1) The capital will be reduced by £50,000; (2) the debentures will be paid off, £28,000; (3) debenture interest of £2,000 per annum will be saved; (4) working capital of £25,000 will be provided; (5) additional areas will be planted with rubber; (6) the cost of the planted land will be under £70 per acre; and (7) any profits realised will be available for distribution.

These substantial advantages can be obtained by altering the denomination of the shares from 2s. to 1s., which will not affect their intrinsic value, as the new shares will represent the same assets and shareholders will have the same number of shares. The value of the shares will, in fact, be considerably enhanced, as the new company will have a reduced capital, no debenture debt and adequate working capital. In America and Canada a great number of shareholdings have no nominal value at all, as it is realised that it is quite immaterial from the shareholders' point of view.

After a short discussion the resolution was put to the meeting and carried.

An extraordinary general meeting of the company was then held, at which resolutions approving the scheme of reconstruction were carried.

GENERAL ELECTRIC COMPANY, LIMITED.
THE NEW OFFER.

An extraordinary general meeting of the General Electric Company, Limited, was held on the 28th ultimo at Magnet House, Kingsway, London, for the purpose of confirming the resolution altering the articles of association passed at the meeting held on March 13th last.

Sir Hugo Hirst, Bart. (chairman and managing director), presided, and in the course of his speech said:—Since we last met, you have no doubt read the articles in the Press criticising our proposed issue, and the telegrams which have passed between us and certain representatives of American shareholders. The holders of shares in America seemed to think they had a grievance, and raised questions of international finance. We are naturally very anxious not to have any disagreement with our American friends, or the Stock Exchange, but the settlement of this question is not altogether in our hands, but, to a large extent, rests with the B.F.C. So far as we have been able, we have requested the B.F.C. to do what they can in meeting the objections which have been raised, subject to the absolutely essential principle that 1,600,000 British shares should be issued and reserved for British subjects. Two representatives of the Committee of American Shareholders are on their way from America, and the B.F.C. have submitted to them and to us a scheme which appears to be fair and reasonable to all interests concerned. This arrangement will entail some variation to the existing agreement, and is not as satisfactory, either to ourselves or to the B.F.C., but we hope we may be able to show our American friends that we have endeavoured to meet them as fairly as possible under all the circumstances of the case, and we hope they will return to America satisfied.

The scheme is explained in a telegram which the B.F.C. have forwarded to the American representatives now on board the *Aquitania*. That telegram reads as follows:—"We regret that differences of opinion should have arisen between your committee and the company. Stop. In the interest of maintaining the best relations between our respective markets which we as an issuing house appreciate more keenly than anyone, we are submitting for your consideration a new scheme much less attractive to ourselves but one which we feel and are assured by other competent authorities meets all reasonable criticism from a business point of view and which we are simultaneously submitting to the company in the hope that it will be acceptable to both parties.

Stop. So that you should fully appreciate our standpoint we think it is important to bring to your notice the following :—

"Firstly. Under date sixth March we entered into a contract to purchase from the company 1,500,000 British ordinary shares and made application for same in the usual way, which application has been accepted.

"Secondly. The shareholders in meeting assembled have on thirteenth passed with requisite majority all resolutions necessary for the creation and issue of 1,600,000 British ordinary shares, and have thereby made our contract operative.

"Thirdly. We have taken competent legal advice and are informed that we hold binding contract with company under which we are entitled to delivery of 1,500,000 British ordinary shares or in the alternative to damages.

"Fourthly. We have fulfilled all our obligations under our contract and have at the request of the company suspended for time being the resale of these shares to the public.

"Fifthly. The company have made it known that for the effective carrying on of their business they must have large body of British shareholders. Stop. Bearing the foregoing in mind our suggestion is that arrangement be made for the company to issue 140,853 shares in proportion one to sixteen to existing shareholders at price to be agreed upon, but not being more than 40s. Stop. Issued ordinary share capital will then be 2,394,498. Stop. By way of next step company to offer two British shares in respect of every three shares then held by shareholders irrespective of nationality or residence, which will absorb 1,596,332 British shares. This new issue will be made in usual way accompanied by renunciation letters, which will be marketable on London Stock Exchange, and three Stock Exchange accounts terminating, say, end May next would be allowed for shareholders desiring or by reason of nationality required to dispose of their rights to do so. Issue of British shares to be at 42s. Any rights not sold by, say, end May we are prepared to purchase at price to be agreed. By this method all but nine thousand one hundred and seventy shares out of total authorised issue of four million shares will be absorbed and these shares should be left available for issue to company's staff at discretion of management."

The essential feature of this proposition is to offer the new shares to all shareholders in equal proportions, but in view of the disability attaching to certain shareholders to hold the shares in their own right, an offer by the Issuing House to repurchase the shares from them at a reasonable figure to be agreed upon will also be made. I believe this offer meets all the fundamental demands of our critics.

Mr E. G. Byng seconded the motion, which, in the absence of any questions or comments, was carried unanimously, amid applause.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.
SHAREHOLDERS APPROVE AMALGAMATION WITH NIGER COMPANY.

Sir Robert Waley Cohen presided over an extraordinary general meeting of African and Eastern Trade Corporation, Limited, which was held on Thursday, March 28th, at Liverpool. There was a large attendance of directors and shareholders. It was specially convened in order to place before the general body of shareholders the terms of the agreement for an amalgamation of the trading interests of the company and the Niger Co., through the creation of a new company, to be formed with a capital of £14,000,000 in £1 shares, of which 7,000,000 will be "A" shares and 7,000,000 will be "B" shares.

The Chairman said :—

The proposals, he believed, were fraught with the utmost benefit, not merely to their company, but also to the whole trade of West Africa. They were determined to make the agreement simple and straightforward, so that the whole of the forces of the two concerns might in the future be thrown together in a single-minded effort to produce a homogeneous trading concern, eliminating all the waste—which had been going on for so many years as a result of the destructive competition between those two great organisations. The whole West African trading interests of both concerns will be in future comprised in the new company. Though their respective shares had been called "A" shares and "B" shares, they were identical in every respect, the lettering being given to them merely for the purpose of convenience in providing for equal distribution of the seats on the board, and other similar provisions. Their balance sheet, after the new arrangements had been carried into effect, would be, on the one side capital, about £7,366,000, and pension reserve fund, amounting to about £115,000, by means of which they hoped to deal as generously as possible with those whose services the new company was unable to take over, and a balance carried forward from the profit and loss account. On the other side there would be their 6,500,000 shares in the new company, their building in London, and a further number of shares in the new company, which would bring the asset side of their balance sheet to balance with the liability side without any writing down of their capital. It was then hoped that the new organisation would prove stronger and much more efficient than either of its parents as an instrument of constructive trade. They believed that it would inspire confidence in the investing public, so that they could introduce modern equipments as and when required, and deal effectively with the problems both of the efficient marketing of the produce of the country, and of the development in those lands of growing prosperity of increasingly important markets for the manufactured goods of this country.

This resolution, approving the agreement entered into between the Corporation of the first part, the Niger Co. of the second part, and Lever Bros. of the third part, was approved.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the eight days ended March 31, 1929 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	9,350	From Revenue	25,865
Interest, &c., on Debt	1,811		
Sinking Fund	3,432		
Sundries	2,359		
Decrease in Debt	5,361		
Increase in Balances	3,552		
	25,865		25,865

The total ordinary revenue for the last eight days of the financial year amounted to £25,865,500. Property and income tax yielded £11,162,000, and super tax £3,920,000. Estate duties produced £2,090,000. Customs yielded £1,633,000 and excise £909,000. Special receipts yielded £4,851,300.

The national debt was reduced by £5,361,000, as shown below :—

(000's omitted.)

	£		£
Surplus Revenue 1928 issued to Rating Relief Suspense Account	−18,395	Telegraph Money	+ 2,300

1929. ARRIVALS.	£
Mar. 28 Bars bought	42
" 28 Coin bought	542
" 30	nil
Apr. 2 Sovs. released	750,000
" 3 Bar gold bought	702,100
" 4	nil
Total	£1,452,684
Net arrivals, £692,684.	

1929. WITHDRAWALS.	£
Mar. 28	nil
" 30 Sovs. set aside	750,000
Apr. 2	nil
" 3	nil
" " 4 Sovs. for export.....	10,000
Total	£760,000

Messrs. Samuel Montagu and Co. write as follows on April 3, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £153,331,566 on the 27th ultimo (as compared with £152,442,839 on the previous Wednesday), and represents a decrease of £574,749 since April 29, 1925, when an effective gold standard was resumed. About £800,000 bar gold from South Africa was offered in the open market to-day. The Bank of England secured £702,100, as shown in the figures below, the balance being taken for India and the trade. There was a net influx of gold of £702,684 during the week under review.

SILVER.

Owing to the Easter holidays business in the silver market has been restricted, during the week under review, to three working days. China has continued to sell and, with America disposed to offer more freely, the burden of support has lain with the Indian bazaars, the latter having secured a fair amount of silver for near shipment. Supplies have been forthcoming with a little more freedom than of late, and prices have, in consequence, eased as compared with those ruling last week.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 25th ultimo to mid-day on the 2nd instant :—

Imports.	£	Exports.	£
Mexico.....	117,907	British India.....	78,127
Canada	22,431	Straits Settlements	42,982
Other countries	2,685	Other countries	1,540
	£143,023		£122,649

The stock in Shanghai on the 28th ultimo consisted of about 76,800,000 ounces in sycee, 116,000,000 dollars and 9,320 silver bars, as compared with about 76,300,000 ounces in sycee, 115,000,000 dollars and 9,300 silver bars on the 23rd ultimo.

Statistics for the month of March last are appended :—

	Bar Silver per oz. std. Cash delivery.	Two Mos. delivery.	Bar Gold. Per oz. fine.
Highest price.....	26⅛d.	26⅛d.	84s. 11½d.
Lowest price	25⅞d.	25⅞d.	84s. 10½d.
Average price	26·000d.	26·044d.	84s. 11·30d.

Other reserves are at $2,000,000.

MISCELLANEOUS.

AKTIEBOLAGET SEPARATOR. — The Aktiebolaget Separator Stockholm, reports the results of its operations for the year 1928. Net profits for 1928 amount to Swedish Kr. 9,731,954.88=£540,664, against Kr. 8,639,402.44=£479,967 in 1927. Combined with the balance brought forward of Kr. 3,889,293.57=£216,072, total available profits amount to Kr. 13.621,248.45=£756,736. The board of directors will put before the general meeting of shareholders, expected to be held on May 27th, a proposal to pay a dividend of Kr. 8½=9s. 2d. per share on such shares which are entitled to full dividend, as against Kr. 8=8s. 10¾d. in 1927. The London issue of the "B" shares entitled to only ⅞ dividend for 1928, will receive Kr. 5½=6s. 1½d. This distribution on ordinary shares will absorb Kr. 6,226,000=£345,889; the board of directors further proposes to make the following allocations:—Kr. 1,050,000=£58,333 to reserve for 1929 preferred dividend; Kr. 1,200,000=£66,667 to reserve for 1929 taxes; and Kr. 5,145,248.45=£285,847 to carry forward to 1929 profit and loss account. Conversion from Swedish Kr. into sterling has been effected at the rate of exchange of £1=18 Kr.

SALTS (SALTAIRE) LIMITED.—The directors regret they are not in a position to recommend any payment on account of the dividend on the 7 per cent. cumulative preference shares. The position will be reconsidered when the final accounts for the company's financial year are available.

RICHARD THOMAS AND CO., LIMITED.—The directors regret that they are unable to pay the preference dividend due on March 31st.

FIRST CO-OPERATIVE INVESTMENT TRUST, LIMITED.—The results for the half-year ended January 31, 1929, show a credit balance of £49,540. The sum of £6,500 is transferred from reserve for dividend equalisation and £1,612 is brought in from preceding account, making £57,652 available. Preference dividend absorbed £1,210. Ordinary dividend of 7 per cent. absorbed £48,412. Directors' remuneration for half-year was £5,063. Reserve for proportion of dividend on preference shares to January 31, 1929, was £1,011. The carry-forward is £1,955.

THE BRITISH OIL AND CAKE MILLS, LIMITED.—The balance at credit of profit and loss account for 1928 is £610,884, against £702,857 for 1927, and adding the amount brought forward from 1927, the sum available is £645,376, against £736,491, which the directors recommend be applied as follows:—Preference dividend, £40,870; preferred ordinary dividend of 12½ per cent. (less income tax), £363,628; ordinary dividend of 6 per cent. (less income tax), against 8½ per cent. for 1927, £210,000; carry forward, £30,878. Although there has been an increase in turnover, the margin of profit has been narrow largely owing to the continued depressed condition of agriculture.

THE STOCK EXCHANGE DIVIDEND.—An increased dividend is to be paid to the proprietors of the Stock Exchange for the past financial year. The final dividend for the year is to be £9 per share, making £13 for the year, against £11 for the preceding year, and £9 for 1926-27. The carry-forward is increased from £39,562 to £59,859.

THE UNITED MOLASSES COMPANY, LIMITED.—The profit of United Molasses Company, Limited, and its associated and subsidiary companies for the year 1928 amounts to £539,809 (last year £386,102). From this depreciation must be deducted amounting to £153,136 (last year £119,853), leaving a balance of £386,673 (last year £266,249). At the annual general meeting, to be held on the 15th instant, the directors will recommend that a final dividend of 11 per cent. actual, less tax, on 1,496,590 ordinary shares (making 19 per cent. for the year) shall be paid on April 25th next (against last year 17 per cent. dividend and a 2 per cent. share bonus on 662,908 shares). That the capital of the company be increased from £3,000,000 to £6,000,000 by the creation of an additional 2,000,000 ordinary shares and 1,000,000 6 per cent. cumulative preference shares to be issued on such terms and at such times as the directors may determine.

BRITISH ENKA ARTIFICIAL SILK COMPANY.—The profit and loss account for 1928 shows a loss of £82,325, after making due allowance for depreciation of buildings, plant, machinery and equipment, and charging head office expenses, interest on debentures and loans. In December, the capital of the company was increased to £1,250,000 by the creation of 250,000 ordinary shares of £1 each, which were subscribed at 26s. per share, free of any commission, by the Maekubee Co. and the Union Corporation, Limited. In accordance with the arrangement made with those two companies, the shares so subscribed were offered on the same terms to shareholders on January 3, 1929. The issue of these shares provided £325,000 of cash, out of which a temporary loan contracted with those companies, which reached the amount of £220,000, was liquidated. £3,100 of first mortgage 6 per cent. convertible debentures were converted by holders during the year into £3,100 of 7½ per cent. cumulative participating income notes.

LEVER BROTHERS.—The report for the year ended December 31, 1928, shows a balance of £5,375,870 to the credit of profit and loss account (as compared with £5,390,288 in 1927), after charging debenture interest £444,988 (against £454,151) and making provision for depreciation. Dividends on the 7 per cent. and the 8 per cent. "A" preference shares absorb £3,380,772, and dividends on the preferred ordinary shares of all denominations a total of £1,514,760. A 5 per cent. dividend has been paid on the ordinary shares, absorbing £120,000 (the same as a year ago), and £200,000 is put to general reserve. A year ago the reserve fund received £272,962. The balance carried forward at £160,337 shows an increase of £58,542. The directors have followed the policy, as in earlier years, of treating associated companies on the footing of branches, i.e., all their undistributed profits have been taken to credit, and all their losses reserved for in the balance sheet. The directors are satisfied that shares and debentures in, and capital loans to, associated companies and shares in other companies are in the aggregate of the value at which they are included in the balance sheet.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions remained favourable for field work, and farmers are busily occupied on spring sowings, so that a comparatively large area is likely to be put under cereals this season. In many parts of the country rain is urgently needed after the long spell of dry weather, and warm, copious showers would considerably enhance agricultural prospects. Native wheat continued in small supply, and best samples realise full to rather firmer prices. Steady conditions also prevailed among imported varieties, but trading was of a restricted character, as the market was still under holiday influences. In the floating and forward cargo section, the decline in prices was temporarily arrested by the reluctance of North American sellers to grant further concessions and by partial rallies on the other side. The close, however, was weaker; buyers remained indifferent under the influence of large world's visible supplies. United States supplies are a prominent factor in the international situation. Private reports indicate increased Canadian sowings, while favourable climatic conditions over Europe also tend to limit purchases. Feeding stuffs are weak, prices being again reduced for Plate maize in order to stimulate buying interest.

Wheat quiet, but generally steady. No. 2 Northern Manitoba, 50s.; No. 3 ditto, 48s. 9d.; No. 4 Manitoba, 47s. 9d.; No. 5, 43s. 9d.; No. 6, 38s. 3d.; Rosafe, 63½ lb., 45s. 3d.; Barusso, 63½ lb., 45s. 6d.; Australian, 47s. 3d., all ex ship, per 496 lb. English, 9s. 6d.-9s. 8d. per 112 lb.

Flour quiet. London standard grade, 37s. 6d.; town whites, 38s. 6d.; patents, 39s. 6d.-40s. 6d. per sack, delivered in the Home Counties, with 6d.-1s. per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 34s.-37s.; Minneapolis, 34s. 6d.-37s.; Australian, 35s.-35s. 6d., ex store. On c.i.f. terms Manitoba top patents, April, quoted 35s 6d.-36s. 6d.; export ditto, 33s. 6d.-34s. 6d.; Australian, 32s. 6d.-33s. per 280 lb.

Maize easier, following forward weakness. Plate, landed, 43s.; ex ship, to arrive, 41s. 6d.; March-April, 38s. 3d.; new, April-May 37s. 9d.; May-June, also June-July and July-August, 37s. 6d.; No. 2, white, flat, African, 41s. 6d., landed; No. 2, American, mixed, 41s., landed, per 480 lb. Yellow maize meal, £11 10s., ex wharf; Hominy chop, £9 7s. 6d. per ton.

Barley slow. Californian, ex ship, 45s.-52s.; Chilian Chevalier, 48s.-58s.; Australian, 43s.-48s.; Smyrna, 44s.-47s. per 448 lb. Algerian/Tunisian, ex ship, 34s. 6d.; Canadian, feed, 29s. 9d.; No. 3 Canadian, Western, April, 33s. 3d.; No. 2, Federal American, 29s. 9d., all ex ship, to arrive, per 400 lb. English, malting 10s.-12s.; feed, 9s. 3d.-10s. per 112 lb.

Oats quiet. Plate, landed, 26s. 3d.; ex ship, to arrive, 25s. 3d.; black, Plate, landed, 25s.; mixed, Canadian, feed, landed, 22s.; Chilian, white, 32s. landed; German, landed, 29s. 3d., ex ship, to arrive, 28s. per 320 lb. English, 9s. 4d.-10s. per 112 lb. Scotch, landed, 30s. 9d. per 336 lb. Irish, black, 27s. 6d. per 320 lb.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.
Estimated sales of home-grown wheat—				
1 week to March 30	Qrts. 105,458	Qrts. 286,826	Qrts. 186,011	Qrts. 184,185
26 weeks to March 30	7,982,138	7,743,739	9,593,483	10,856,795
Average price of English wheat per cwt.	s. d. 9 9	s. d. 10 0	s. d. 11 7	s. d. 11 8

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.

AMERICAN WHEAT MARKETS.

Unfavourable weather conditions, keener export demand and lighter country offerings have caused an upward tendency in wheat prices. Rumours of rain and snow caused a fall on Tuesday, but this was not sufficient completely to offset the gain on the week. Quotations:—

Nearest Future.	Jan. 4, 1928.	Apr. 3, 1928.	Jan. 2, 1929.	Mar. 13, 1929.	Mar. 20, 1929.	Apr. 3, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.)	137	144¼	122	132¼	129⅛	124¼
Chicago (No. Winter)— Cents per 60 lb.....	130⅛	143¼	116⅛	125¼	123¼	118½

Visible supplies of wheat in Canada at 88,828,000 bushels show an increase of 1,042,000 bushels as compared with the previous figure. Supplies a year ago stood at 77,058,000.

THE COAL TRADE.

Our Sheffield correspondent writes:—New business on export account has been a little quiet, but shipments from Yorkshire ports keep at a high level. Buying of bunker coal is also quieter. Industrial requirements are on a moderate scale, and there is little expansion in this department. Works are consuming less coal than formerly. South Yorkshire steams are quoted at 15s. 6d. at pits. The demand for ordinary quality of house coal is falling off, but there is no difficulty in disposing of outputs of the best sorts, the prices of which have been reduced 2s. per ton. The scarcity of furnace coke amounts almost to a famine. Orders are being refused by producers, and the starting of blast furnaces is being held up for want of coke. The heavy demand, both home and export, for coke for central heating is largely responsible for the present shortage of supplies, and when this falls off, the output of coke will barely meet the expanding requirements of the blast furnaces.

Our Glasgow correspondent writes:—There are now plentiful supplies of coal for shipment, and prices of most classes have fallen while the tendency is still on the easy side. Foreign buyers seem still disinclined to buy at current rates. In connection with the coalowners' new scheme, it is understood that one of the biggest Lanarkshire concerns which up to the present seemed to be opposed to the proposals is now likely to join in with those in favour of the new plants. Shipping prices are approximately as follows (f.o.b. district ports):—

Lanarkshire.—Ell best, 17s. 6d.; splint best, 18s. 6d.; splint second, 18s.; navigation, 18s. 6d.; navigation second, 16s.; steam, 15s. 6d.; Hartley, 18s. 9d.; trebles, 15s. 6d.; doubles, 14s. 6d.; singles, 12s. 9d.; pearls, 11s. 6d.; dross, 10s. 6d. Fife.—Screened navigation, 19s. 6d.; first-class steam, 15s.; third-class steam, 13s. 6d.; trebles, 14s. 6d.; doubles, 13s. 6d. to 14s.; singles, 12s. 6d. to 13s.; pearls, 11s. 6d. to 12s. Lothians.—Prime steam, 15s.; secondary steam, 15s.; trebles, 14s. 6d.; doubles, 13s. 9d.; singles, 12s. 9d.; pearls, 11s. 6d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 16s. 6d.; trebles, 15s. 6d.; doubles, 14s. 6d.; singles, 13s. 6d.; pearls, 11s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Easter holiday conditions have considerably restricted the volume of business on the coal market during the past week. The collieries were idle on Monday and Tuesday and the docks wholly on Monday and partly on Tuesday, while even on Wednesday attendance on the Cardiff Exchange was very small. Sailings last week were very heavy, and as arrivals of tonnage have since been below the average all traces of congestion have been removed from the docks. Prices are nominally unchanged, although the undertone is firm. The following are the current approximate quotations:—Best Admiralties, 21s. 6d. to 22s. 6d.; seconds, 21s. 6d. to 22s.; best drys, 21s. to 22s.; Black Veins, 21s. to 22s.; Western Valleys, 20s. 6d. to 21s.; Eastern Valleys, 20s. 6d. to 21s.; best small steams, 15s. to 15s. 6d.; cargo smalls, 13s. 9d. to 14s. 3d.; coking smalls, 15s. to 15s. 6d.; anthracite, best large, 33s. 6d. to 35s.; Red Vein, large, 25s. to 27s.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 42s. to 44s.; stove nuts, 40s. to 43s.; rubbly culm, 10s. 9d. to 11s. 6d.; foundry coke, 27s. 6d. to 37s.; patent fuel, 20s. to 21s.; pitwood, ex ship, 27s. 6d.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—There has been no official market this week on account of the Easter holidays. The position, however, remains quietly steady with prices firm. Cleveland iron is in steady demand, with supplies not too plentiful. Prices remain on the following basis: No. 1 Cleveland, 69s. 6d.; No. 3 G.M.B., 67s.; No. 4 foundry, 66s.; No. 4 forge, 65s. 6d. Sellers are asking up to 1s. 6d. premium for delivery over the second half of the year. The hematite market is also fairly active, with good business being done both for home and export. The price of mixed numbers is about 74s. The output of basic pig-iron has been increased recently by the blowing in of two further furnaces in this district. There is nothing fresh to report as regards manufactured iron and steel, and works still continue to be fairly busy with very good order books for some months to come. Prices remain as follows: Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 5s.; steel rails, £8 10s. The coke position is still strong and supplies very scarce; the price is about 19s. 6d. delivered furnaces. The iron ore market is also very strong, with best rubio being quoted 23s. per ton minimum.

Our Sheffield correspondent writes:—In most cases the local industrial holiday was limited to a couple of days, and works have resumed with only a moderate amount of business on their books. Conditions are quiet in foundry pig iron, finished iron and ordinary commercial steels, and exports have been rather poor for some time past. There has been a welcome revival in the demand for colliery supplies. The position of railway material fails to improve. The country still contains many thousands of idle waggons. The opinion has been expressed at several recent company meetings that the country's capacity for producing tyres and axles is excessive, and that it would be advisable to concentrate on fewer plants. Steel specialities and motor trade requirements continue to provide Sheffield with a large amount of trade. Business in tool steel, tools, cutlery and plate remains steady, with turnover generally below that of last year. Prices of certain ferro-alloys used in making special steels have again gone up, despite the poor demand.

Our Glasgow correspondent writes:—Although works were closed down for only one day (Monday), little business was transacted in the City for the better part of a week on account of the Easter holidays. In the Scottish pig iron market conditions remain quiet, and the decision of Messrs. Merry & Cunninghame to dismantle their Carnbroe Works plant does not cause much surprise. In the heavy steel trade the recent improvement is maintained, several plants being exceedingly well employed. At the moment foreign competition is not serious, either in the heavy or in the semi-finished branches. Bar iron manufacturers are experiencing dull times, and are finding increasing difficulty in competing with the makers of re-rolled steel bars, for which there is at present a very fair demand. The situation in the sheet trade is slightly better this week, more business passing in both black and galvanised sheets. In all departments prices are unchanged.

Our Cardiff correspondent writes:—Owing to the intervention of the Easter holidays, there was no meeting of the Swansea Metal Exchange on Tuesday. Conditions in the tinplate trade are practically unchanged.

OTHER METALS.

TIN.—The standard market reopened after the holidays with a generally dull tone, and prices gave way under liberal selling orders and lack of support, together with lower Eastern advices. Stocks in London and Liverpool warehouses for week ending March 30th amounted to 8,576 tons, compared with 1,912 tons at corresponding period last year. Dealings were recorded in standard cash at £219 10s., £220 and £218 12s. 6d., and three months £220 10s., £220 15s. and £219. In the East, sales were reported on the basis of £223 to £222 7s. 6d. per ton c.i.f. terms.

COPPER commenced quiet and easier, but subsequently prices responded to an active demand, and with sellers more reserved firmer conditions prevailed, especially for near positions. Closing tone, however, depressed. Standard cash sold at £95 10s. to £96 15s. and £92 15s.; three months £95 10s., £97 and £89 15s.

LEAD in steady support and market irregular. Good soft foreign pig, April, sold £26 13s. 9d. to £26; May, £26 12s. 6d. to £26; June, £26 7s. 6d., £26 13s. 9d. to £25 17s. 6d.; July, £26 7s. 6d. to £26 15s. and £25 17s. 6d. ton.

SPELTER met with moderate attention and closed easier. April sold £27 10s. to £27 13s. 9d. and £27 5s.; May, £27 10s. to £27 12s. 6d., £27 10s.; June, £27 10s.; July, £27 11s. 3d., £27 12s. 6d., £27 ton.

ALUMINIUM steady. Ingots and bars for home delivery £95 ton.

ANTIMONY. English regulus, £54 to £55; foreign, spot, £38 to £38 10s.; April-May, £33 10s. to £34 ton c.i.f.

WOLFRAM firmer. Straits, also Chinese qualities, 22s. 9d. to 23s. per unit, c.i.f. terms.

QUICKSILVER steady. Spot, £22 5s. to £22 10s. per bottle.

TIN PLATES firm. I.C. coke, prompt and forward, 18s. 3d. to 18s. 9d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, April 3rd.

We have had a series of poor markets, mainly due to the continued weakness of the New York Stock Market, which has been reflected by "bulls" liquidating their holdings. Weekly weather news to-day was a little more favourable. Spot sales for March 27th and 28th, and April 2nd and 3rd (inclusive) are 19,000 bales, of which 12,800 are American, 150 Brazil, 150 Argentine, 1,500 Peru, 2,550 Egyptian, 1,400 African, 350 East Indian, and 100 sundries. Imports for the period March 27th to April 3rd (inclusive) are 58,203 bales, of which 34,761 are American, 204 Argentine, 226 Peru, 18,427 Egyptian, 2,755 African, 1,555 East Indian, 275 sundries. Quotations to-day are: American Middling, 10·80; Egyptian Sakel, 19·25, Uppers, 12·80; Brazil Fair, 11·00; Peru G.F. Mod-Rough, 13·00, Smooth, 11·75; West African Middling, 10·85, and East African G.F., 12·25.

MANCHESTER, April 3rd.

Owing to the Easter holidays it has been a short week in the market, and it will be a day or two before buyers and sellers get into their stride again. Business has been resumed facing unsettled raw-cotton markets, and all round there is a strong disposition to act with caution. Advices from the cloth-consuming centres abroad are anything but cheerful. India is still unsettled owing to the political disturbances, although there is now more confidence in Bombay and Calcutta as a result of the measures adopted to quell outbreaks by the unruly element and agitators. News from China portends trouble in the near future, and trading conditions are therefore bound to be adversely affected. The amount of business offering for the outlets generally has been of retail dimensions, and it is only in isolated instances that transactions have been arranged. There has been no particular activity in the yarn section. Spinners of American descriptions have complained loudly at the poor prices offered. In most instances producers have had to accept very low rates. There has been no improvement in the Egyptian branch. The immediate outlook for spinners and manufacturers is not bright and extensive curtailment of production in both the spinning and manufacturing sections is inevitable for some time to come.

THE WOOL TRADE.

Our Bradford correspondent writes: The break caused by the holidays has tended to emphasise the general quietness, and although work has been resumed in the mills, there is not much serious attempt at buying. Spinners and manufacturers find little or no change in quotations for tops and yarns as compared with those ruling a week ago. To a certain extent the market for tops is helped by the steadiness of the raw material position, and with the season drawing to a close, there does not now appear to be much prospect of any material change in wool values. The New Zealand season is ended, and there is not much unsold wool left in South America. In Australia the season will probably close in the course of a few weeks with only the normal carry-over, and in some quarters there is a belief that supplies may be rather on the short side before the next clip is available. The future, however, does not appear to worry users in this country, the majority of whom continue to operate on hand-to-mouth lines. New business in yarns is disappointing, and spinners still experience the greatest difficulty in making remunerative prices. The struggle to keep machinery running is reflected in the very keen prices accepted for practically all classes of yarns. There has been a welcome improvement in the demand for piece goods during the last two or three weeks, and this seasonal activity is expected to continue until Whitsuntide. Home trade buyers have placed some good orders, and some of the export markets have also been active.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

As the Colonial wool selling season is approaching a finish, rather less information is being received from overseas, but it is quite evident that values for all classes of raw material are being remarkably well maintained, and there does not appear to be any prospect of much (if any) ease taking place before the season is quite over. An outstanding fact is that the clean scoured cost of wool is fully equal to what can be realised for tops in Bradford. This applies to both merinos and crossbreds. It is also known that wool has been bought in Australia during the latter part of the season at more favourable prices than it was earlier, but fortunately this has not been accompanied by what can be regarded as a serious slump. Wool users were in need of the raw material at a more economic price, and we can only hope that now that values have undergone a revision, consumption at home and abroad will expand sufficiently to justify the confidence which is still being shown by the buyers of both merinos and crossbreds. Comment is frequently made upon the fact that crossbred wool is relatively dearer than merino, but it cannot be denied that prices have been established by the competition of the open market, and judging from the way crossbred wool has recently moved, there is no small measure of confidence in it. Part of the demand has emanated from Russia, and this has been most welcome in view of the fact that big quantities of direct Colonial imports are arriving every week. For quite a long time ihere has been a disposition in certain quarters to speak pessimistically about the position of crossbred wool and tops, but it is a tact that consumption is fairly well maintained, and if stocks continue to move at the present rate, there will be no need to anticipate lower values.

HIDE, LEATHER AND ALLIED TRADES.

Owing to the holidays few hide auctions have been held this week, so that prices are virtually unchanged. Values, however, appear to have almost reached stability for a time, so that supplies offered are taken readily. Calfskins are slightly firmer in price, but sheepskins in the wool have been slightly easier. Foreign hides are again firming up, and sellers are not so inclined to accept the offers made by tanners. The South American position is firmer, and as Russia and the United States have been buyers of Argentine fregorifics, values have remained stable, with 9⅞d. taken for best ox. Dry River Plates are also hardening, and 14d. is asked for B.A. Americanos. The sale by inscription of 16,000 Leibig Colon hides has created a certain amount of interest, 9½d. to 9⅝d. being offered and taken for heavies, and 9⅜d. to 9½d. for lights. Cape hides have sold much better of late and buyers have been found to take dry salted at 10d. to 11d. Latest cables from New York report the Chicago position as unaltered, with best heavy packer steers selling at 14½ cents. Trade this week in sole leather has been quiet in view of the fact that most shoe factories have been closed. Tanners and merchants still have plenty of stock and make concessions when business of any magnitude is in sight. Light and medium bends have been ordered by shoe manufacturers for post-Easter delivery, but repairers seem almost out of the market, the prolonged dry weather affecting their business. Upper leathers are slow and weak, but show signs of improving. For men's work, box and willow are wanted in fair-sized quantities, whilst for women's shoes, glacé kid in black and brown, black patent, suedes and reptile leathers are the most popular. Curriers of kip leathers are quiet owing to the unemployment in some of the industrial centres. The fine weather has led to a good demand for footwear of all kinds, and this should have a very good effect on the trade generally.

VEGETABLE OILS AND OILSEEDS.

Market conditions are quiet, and there is as yet no indication of a marked recovery from the easiness which has been a characteristic of late. Consumers of linseed oil are only moderately interested, and with some pressure to sell Continental oil in near positions values have declined to about £28 5s. per ton naked ex Hull mill for prompt and April delivery. Cotton oil is more or less neglected

The North American Company

60 Broadway, New York, N.Y., U.S.A.

ORGANIZED in 1890, controls through stock ownership five main groups of public utility companies operating in large and important areas of the United States. The electric properties in each group form a distinct interconnected power system. Summaries of operations of the principal subsidiaries follow:

CALIFORNIA: Electric service in San Francisco, Oakland, Sacramento and Fresno, and 254 other communities in Central California; territory served, area 12,977 square miles, population 1,650,000; gas service in Bakersfield and 3 other communities.

DISTRICT OF COLUMBIA: Electric service in Washington, D. C. and 29 communities in adjoining sections of Maryland and Virginia; territory served, area 629 square miles, population 600,000; electric railway and motor bus service in the District of Columbia and adjacent suburbs in Maryland.

MISSOURI-ILLINOIS-IOWA: Electric service in St. Louis and East St. Louis, and 88 other communities in Mississippi Valley; territory served, area 2,686 square miles, population 1,300,000; gas service in St. Louis County, Mo., Alton, Ill. and Keokuk, Ia.

OHIO: Electric service in Cleveland and 129 other communities; territory served extends 100 miles along Lake Erie, area 1,697 square miles, population 1,300,000.

WISCONSIN-MICHIGAN: Electric service in Milwaukee, Racine, Kenosha, Watertown and 306 other communities in Wisconsin and upper peninsula of Michigan; territory served, area 11,442 square miles, population 1,400,000; gas service in Racine, Kenosha, Watertown and 42 other communities in Wisconsin; electric railway and motor bus service in Milwaukee and suburbs, and interurban electric railway service in surrounding territory.

Statistics of Electric Service, Dec. 31, 1928

Group of Subsidiary Companies	Power Plant Capacity K.W.	Number of Electric Customers	Annual Electric Output K.W.H.

Total	1,818,902	1,169,046	6,103,032,653

Summary of 39th Annual Report to the Stockholders by F. L. Dame, President

THE Consolidated Income Statement of The North American Company for 1928 shows new high records in both gross and net earnings. As indicated in our regular quarterly reports to stockholders, new records were also established in the electric output of subsidiaries. A brief summary of the important features of the year's operations follows:

Gross Earnings of $135,551,899 increased 10.96% over the year 1927.

Net Income from Operation amounted to $64,399,252, the gain of 13.26% over the previous year reflecting the decrease, from 53.46% for 1927 to 52.49% for 1928, in the proportion of Gross Earnings required for Operating Expenses, Maintenance and Taxes. This improvement resulted from increased efficiency and favorable operating conditions.

Appropriations for Depreciation Reserves amounted to 10.53% of Gross Earnings and were equivalent to $2.96 per share on the average number of shares of North American Common Stock outstanding during the year.

After deducting Depreciation and all other reserves, the Balance for Dividends and Surplus amounted to $24,402,753, of which $1,820,032 was paid in dividends on North American Preferred Stock.

The balance of $22,582,721, after all preferred dividends, is an increase of 29.53% over the previous year, and is equivalent to $4.68 per share on the average number of shares of North American Common Stock outstanding during 1928, compared with $4.06 per share on the average number of shares outstanding during 1927.

Under the Company's policy of paying dividends on its Common Stock in Common Stock, the entire balance of $22,582,721 is available for investment in the business.

Electric and gas output for the full year 1928 of all companies classed as subsidiaries on December 31, largely exceeded the output of the same companies for the year 1927. Electric output amounted to 6,103,032,653 kilowatt-hours, an increase of 14.36%. Gas output amounted to 5,415,067,400 cubic feet, an increase of 19.24%.

The subsidiaries added 163,700 kilowatts of electric generating capacity, and made extensive additions to their electric transmission and distribution systems. Work was begun to provide for installation of 175,000 kilowatts additional generating capacity, which will be available in 1929. Capacity of gas manufacturing facilities was increased and gas transmission and distribution systems were extended.

Acquisition of voting control of Washington Railway and Electric Company was completed early in the year. That Company, with its subsidiaries, furnishes electric light and power and transportation service in the District of Columbia and adjacent territory. Results of operations of these companies for only the last nine months of the year are included in the Consolidated Income Statement for 1928.

The stockholders of the various subsidiaries now number more than 101,000, and consist largely of customers and residents of the territories in which they operate. Stockholders of The North American Company alone number 43,299, including 10,625 owners of Preferred Stock and 32,674 owners of Common Stock. Including the holders of stock of The North American Company and its subsidiaries, and the estimated number of owners of bonds of the subsidiaries, the public investors in the North American System total more than 260,000.

In accordance with usual custom, Messrs. Price, Waterhouse and Co., Chartered Accountants, have certified to the consolidated financial statements covering the year 1928.

CONSOLIDATED INCOME STATEMENT

	Year 1928	Year 1927
Gross Earnings	$135,551,899.02	$122,166,834.37
Operating Expenses, Maintenance and Taxes	71,152,646.78	65,308,621.27
Net Income from Operation	$ 64,399,252.24	$ 56,858,213.10
Other Net Income	4,290,936.06	3,022,715.26
Total	$ 68,690,188.30	$ 59,880,928.36

Copies of complete Annual Report may be obtained from THE DOMINION SECURITIES CORPORATION LTD. (of Canada,) 6, Austin Friars, London, E. C. 2, or from Messrs. J. HENRY SCHRÖDER AND COMPANY, 145, Leadenhall Street, London, E. C. 3.

but is rather steadier for crude Egyptian, which is now held for £27 5s. spot and April–May ex Hull with common edible and technical refined quoted £31.

In the oilseed section only a small business in Plate linseed is reported. For April–May shipment to Hull £15 12s. 6d. has been accepted, and this remains the value for this position, as well as "spot" and afloat. The quantity of linseed now on passage to Europe is 145,100 tons, or 900 tons more than last week, and compares with 255,500 tons a year ago. Crushers both here and abroad appear to be well supplied in view of their reduced commitments. Cotton seed is easier after business done in black Egyptian at £9 11s. 3d. for March and April loading. For April Sakellaridis to Hull £9, and for March-April Bombay £8 5s. have been accepted. Demand for oilcakes is falling off, and prices have an easier tendency.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Remains a dull and featureless market. Trade inquiries fail to extend, and this emphasises the numerical strength of offers from producing countries while offording but scant encouragement. No change was made in spot quotations, and Continental parcels for shipment are largely nominal. Java cables record a subdued market, with trend of prices decidedly in favour of the buyer. Raw refining descriptions offered at a further slight decline. White Java, July-September, to Calcutta, sellers, 12s. 1½d., October-December 12s. 3d., January-March 12s. 6d. c. and f. terms. Terminal sections dull and rates easier. Of raws, May sellers 8s. 2¼d., August sold 9s.-8s. 9d., December 9s. 3d. White, May sellers 11s. 1½d., August value 11s. 6¾d., December sold 12s. 2¼d.-12s. cwt. Cuban receipts last week 228,640 tons, against 220,300 last year; exports 157,957, against 142,221; stocks 1,296,744, against 1,202,870; central workings 146, against 131. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending March 30th amounted to 129,947, against 79,393 last year.

COFFEE.—Only small sales by private treaty at unchanged rates.

COCOA.—Spot market quiet, unaltered. Accra F/F April–June 43s. 6d.; *mid-crop*, 42s. 6d.; October-December, 45s. f.o.b. Terminal-May quoted 47s. 3d.; July, 49s. 0½d.; September, 49s. 10½d. cwt.

TEA.—Private contract market steady quiet, pending resumption of auctions.

RICE.—Market very quiet, but sellers adhere to previous asking rates.

BEANS.—Steady but trade remains sluggish. Madagascar butters afloat, sellers, 40s. 3d. Rangoon, March shipment, sellers, 21s. 9d.; April 15th, 20s.; April, 19s.; May, 18s. 3d. c.i.f. London.

PEAS.—Market distinctly firm with buyers more numerous. Steamers to Liverpool are reservedly held. Japanese, spot, London, quoted 23s. 9d.; crop 1927, 22s. 6d.; steamers close at hand, London, quoted 22s.; further off, 20s. to 21s. 6d. as to position; February-March sold 19s. 10½d.-20s. 3d.; March-April quoted 19s. 9d. c.i.f. London. Dutch marrowfats easier at 25s. f.o.b., with imperial blues 22s., smalls 20s. cwt. f.o.b. terms.

SPICE.—A quiet tone again pervaded the market for pepper. Lampong, March-May, sellers, 1s. 3d.; May-July, 1s. 2¾d.; August-October, 1s. 1¾d. Muntok, white, March-May, 2s. 1d.; May-July, 1s. 11¾d.; August-October, 1s. 10d. lb. London stocks 35 tons higher on the week. Tellicherry, January-March, 148s.; March-May, 145s. cwt. c.i.f. Cloves quiet, unaltered. There is no change to note in sago flour or tapioca. Ginger steady, quiet.

FRUIT (Dried).—Currants. Trading quiet under holiday influences, but market fully steady for most descriptions. Pyrgos, quoted, 45s.-45s. 6d.; Patras, 47s. 6d.; choice, up to 51s.; Amalias, 46s.-46s. 6d.; Gulf, 47s. 6d.-50s.; Vostizza, 49s.-53s. Sultanas: Smyrna in better request; medium to good, spot, 41s.-55s.; Cretan, 43s.-72s.; Greek, 38s.-53s.; Australian new ranges, from 30s.-50s.; Californian, neglected. Raisins: Valencia, quarter boxes, 48s.-55s., as to quality; Australian and Cape, inactive. Figs in small supply. Genuine, new spot, 30s.-31s. Dates: Siar, 14s. 6d.-16s. 6d.; Khadrowie, 21s.-23s.; Hallowie, 25s.-30s.

EVAPORATED FRUITS.—Market firm with increasing inquiries for Californian plums and apple rings. Apricots and peaches, quiet. Californian plums, 20's-30's, 65s.; 30's-40's, 56s.-57s.; 60's-70's, 43s.-43s. 6d. Pears: Lake County, 72s. 6d.-100s. Apricots: South African, new crop, Royal, 57s. 6d.-117s. 6d.; Cape, 72s. 6d.-82s. 6d.; Californian, 85s.-117s. 6d.; Australian, 75s.-85s. Peaches: Californian, choice, 52s.; extra choice, 54s.; fancy, 58s. Apples: Californian, spot, sliced, extra choice, 65s. Almonds quiet and tendency easier. Mazagan, 130s.; Mogador, 127s. 6d.; Majorcas, 130s.; *Bitter-Jordan*, 185s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—The demand for Californian fruits is gradually improving, a spell of warm weather being needed to stimulate consumption. Meanwhile, prices remain steady, with pears showing a hardening tendency. A moderate inquiry arises for Australian new pack to arrive. Singapore pines, dull; but Hawaiian firm on scanty offerings. Tomatoes in limited request at late rates.

CANNED FISH.—Market firm and demand shows signs of expansion. Portuguese clubs, quoted, 5s. per dozen tins. Lobsters, largely nominal pending arrivals of new pack. Best halves, 140s.-145s.; and quarters, 77s. 6d.-82s. 6d. Salmon: red, talls, spot, sold, 43s.-45s. 6d.; pink talls, 26s.-27s. 6d.; halves, 33s.-35s. Japanese crab, finest quality, 97s. 6d.-100s.

CANNED MEATS.—Corned beef quiet but Ox tongues firmly held on restricted offerings. Lunch tongues, firm and in request for forward delivery. Cases of 12 by 6 tins, quoted, 107s. 6d. dozen. Tinned hams also in brisk demand forward on the basis of 1s. 7d. lb. ex-wharf London.

CONDENSED MILK AND MILK POWDERS.—Market quiet and without material change.

HONEY.—Market firm with spot supplies scarce. Jamaican pale amber, quoted at 48s.-51s.; manufacturing grades up to 46s. 6d.; new crop, April shipment, pale amber, quoted at 43s.-45s.; and f.a.q., 41s.-42s. 6d. New Zealand in demand, dark amber, quoted, 50s.-55s.; medium, 55s.-65s.; light, 65s.-85s.; whites and water whites, 65s.-87s. 6d. cwt.

RUBBER.

Business proceeded on quiet lines, and market produced no new feature. Sheet, spot, and April sold 11¼d.-11d.; May, 11⅜d.-11⅛d.; June, 11¼d.; July-September, 11⅜d.; October-December, 11⅜d. lb. London stocks increased 421 tons, landing being 1,682, deliveries 1,261, stocks 28,007, against 58,197 at corresponding period last year. Liverpool stocks 100 tons higher, landings 297, deliveries 177, stocks 4,433.

GENERAL.

JUTE.—The depressed tone recently apparent in this market, became more intensified to-day. There appear to be several factors at work calculated to undermine the market. Primarily may be mentioned the sluggish sale attending all manufactured goods, followed by very favourable weather in growing districts. Moreover, increased working hours as from July 1st next by Calcutta mills is offset by the German Spinning Combine resorting to reduced hours. Firsts, March-April, Continent, quoted £32 10s.; April-May, £33 5s.; May-June, £33 10s.; Lightnings, May-June, sold £31 10s. ton.

HEMP.—Manila qualities fully steady while reservedly held, but demand quiet. Quotations are on the basis of £33 10s. for K, April-June. African Sisal firmly held. First-hand sellers of Mexican have withdrawn from the market, due, doubtless, to visible supplies being at vanishing point. Stocks are cabled as 35,000 bales, which constitutes a low-level record. Receipts last week, 8,000 bales; deliveries, 13,000. Shipments for last month totalled 62,991 bales, of which 22,232 were to Europe, 38,269 U.S.A. and 2,490 other countries. Manila receipts for the past week totalled 33,000 bales, against 36,000 at same time last year, estimate for next week 32,000, and following week 33,000. Shipments to U.K./Continent last week, 16,000 bales; U.S.A., 16,000; and Japan, 15,000.

SHELLAC.—Market steady, quiet. T.N. spot 190s., May sold 186s. 6d.; August quoted 191s. 6d. cwt.

COPRA.—This market quite lacks any new feature. Business still small and prices favour the buyer. Straits S.D., April-May, Rotterdam, sold £23 2s. 6d.; May-June, sellers, £23 5s.; June-July, £23 7s. 6d.; Dutch E.I., April-May, quoted £23; May-June, £23; June-July, £23 1s. 3d.; South Sea S.D., April-May, £22 7s. 6d.; South Sea K.D., April-May, to Marseilles, £21 17s. 6d.; mixed Dutch East Indies, excluding Padang, £22. Palm kernels, April-May, Hamburg, sellers, £18 10s. ton.

MISCELLANEOUS.—Coconuts quoted 18s. to 24s. per 100. Coir yarn, Ceylon, £19 to £38 10s.; Cochin, £22 10s. to £40; Ceylon bristle, £18 15s. to £25 10s.; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 2s.; Java, 2s.

THE MONEY MARKET.

The discount market was more active this week, and rates ruled lower. The Continent was buying bills more readily, at rates running down to 5½ per cent. for three months, while the Bank of England bought some May bills at around 5½ and even 5⅜ per cent. To replace these sales of short bills to the Bank, the market itself bought long bills, and this led to some competition for

the more distant maturities and brought the market rate on three months' bills down to 5 5/16 per cent. This is probably as low as it is likely to go for the moment, and it is not unlikely that steps will be taken to enforce stiffer conditions next week.

* * * *

Despite the easier tendency of bill rates, money this week was tight, and on Tuesday and Wednesday brokers were paying up to 6 per cent. in order to keep out of the Bank. The explanation of this apparent contradiction in rate movements is that a month or six weeks ago the Bank bought up most of the early April maturities in order to assist the market in the difficult conditions prevailing early in March. In a sense this action of the Bank only postponed the stringency, and it is this fact that has been brought home to the market this week. The extent to which the Bank has taken funds off the market is shown in this week's Bank return. Bankers' deposits have fallen by £3,368,000 and the earning assets of the Bank, consisting of bills and securities, by £7,495,000.

	Apr. 11, 1929.	April 4, 1929.	Mar. 27, 1929.	Mar. 21, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	5½	5½	5½	5½	4½ (Feb. 7,'29)
Banks' Deposit Rate	3½	3½	3½	3½	2½ (Feb. 7,'29)
Discount { Call	3½	3½	3½	3½	2½ (Feb. 7,'29)
Houses { Notice	3½	3¾	3¾	3¾	2¾ (Feb. 7,'29)
Market rate (3 months' bills)	5 5/16	5 5/16 – ⅜	5 5/16 – ⅜	5 5/16 – ⅜	...

Apart from these passing factors, the general tone is more cheerful. The return of Continental buyers to the London discount market is a good sign, while the further increase of £1,015,445 in the Bank's gold stocks, even though previously anticipated, is also encouraging. Finally, and best of all, it was stated on Wednesday that an appreciable amount of American money is now returning to London. On the whole, matters are at last all moving in the right direction.

* * * *

The monthly statement of the nine English clearing banks reveals a decline of £34 million in deposits, and one of nearly £9 million in acceptances. The shrinkage in deposits for the second month in succession reflects the influx of revenue into the Treasury during the last quarter of the financial year.

	Nov., 1928.	Dec., 1928.	Jan., 1929.	Feb., 1929.	Mar., 1929.
Capital and reserves	130·8	130·8	130·8	130·8	130·8

Total assets	2,083·1	2,154·5	2,172·8	2,139·0	2,092·2

Bank "cash" has fallen by one million, and if due allowance be made for the extremely difficult monetary conditions that prevailed last month, it must be admitted that the decline is very small indeed. Call money and investments are also fractionally lower. The main changes in the banks' assets are a fall of £46 million in discounts and an increase of £13 million in advances. The decline in discounts probably reflects the decrease in the volume of Treasury bills outstanding, which in turn is the result of tax collection. It is possible that the increase in advances is also a measure of the help the banks have given to those of their customers who had heavy tax payments to make, but this is a matter of conjecture, and it is permissible to hope that this increase reflects an improvement in trade.

NEW YORK MARKETS.

Our New York correspondent cables:—Money has been firmer this week, thanks to the banks' preparation for mid-month settlements, to the continued decline in Reserve holdings of bills and of member banks' discount paper, and to a larger volume of commercial borrowing at member banks. The Reserve system's figure of credit outstanding shows a substantial decline, while the Reserve ratio has risen to 73.8 per cent. There appears little likelihood of an early change—or, indeed, of any change at all—in the New York discount rate. There has been a fresh decrease of $27 million in the earmarked portion of the Reserve Banks' gold, which is thought to be from the French holding on German account, as it is believed that the Bank of France is willing to supply gold itself in order to avoid ocean shipment. Imports of gold also totalled $4 million, but the effect on the money market has been slight.

THE STOCK MARKETS.

In the absence of any change in the monetary situation, the stock markets were quiet, public participation being on a small scale and speculative fervour conspicuous by its absence. Gilt-edged stock was not too plentiful, and the home railway market was similarly of narrow dimensions. Interest in the industrial markets centred chiefly on the cable-wireless merger terms, cable stocks rising, while Marconi issues were sold after the official announcement. Rubber shares were, if anything, more idle than a week ago, but tea shares strengthened on a steady investment demand. The oil and Kaffir markets were quiet, while the weakness of base metal prices checked activity in Rhodesian shares.

THE COMMODITY MARKETS.

Reports this week vary very much from industry to industry. The forward position in some colliery centres is weaker, but prices remain firm in South Wales. Greater foundry activity has considerably improved the demand for pig iron, and most classes of steel are meeting with a fairly good market. Raw cotton is distinctly firmer. Manchester conditions are far from satisfactory, owing to the discouraging state of affairs in Oriental markets. The jute trade is depressed. There are signs of improvement in the hides and leather markets. Vegetable oils and oilseeds are in poor demand. Wheat prices are on balance scarcely changed.

THE FOREIGN EXCHANGES.

After fair activity at the opening of the week, the Foreign Exchange market was quieter towards the close. Sterling was firmer against the dollar at 4.85⅜, after being 4.85½. Montreal lost half a point at 4.89 and Paris four points at 124.25. Madrid underwent steady depreciation from last week's level of 32.15, and after touching 32.98 returned to 32.70. Dear money rates brought Amsterdam down sharply from 12.11 to 12.09½. Of the Scandinavian exchanges Stockholm depreciated from 18.17 to 18.18¼. The South American exchanges were again very steady. Rio gained 1/32d. at 5 27/32d., whilst Montevideo lost a little at 49¼d. The Mexican peso was rather steadier with the reports of Federal successes, and kept fairly firm at about 10.25. In the Far East the rupee was weaker at 1.5 31/32d., Batavia and the yen being unchanged. In the forward market dollars were a little less sought at discounts of 3/32 cent. and ¼ cent. The premium on Paris was wider at 7 centimes and 16 centimes, as against 2½ centimes and 9 centimes last week, as was the premium for forward pesetas at 10 and 30 centimes for the two periods. The discount on three months Amsterdam narrowed from ¾ to ¼ cent. Silver was unchanged at 25 7/16d. for both spot and forward, with little business passing, and Hong Kong lost ⅛d. at 2s., but Shanghai was unchanged at 2s. 6 1/16d.

THE CASE FOR FREE TRADE.

With this issue we publish a Supplement setting out "The Case for Free Trade." This will be reproduced in pamphlet form, and the pamphlet will be available on Tuesday, April 16th, at "The Economist" Office, 6 Bouverie Street, E.C. 4, price 4d. Special terms for quantities by arrangement.

THE CASE FOR FREE TRADE.

We cannot conceive that any apology is required for publishing, as we do in a Supplement to this issue of the *Economist*, a short re-statement of the main points in the case against trade restriction and an examination of some of the claims now being vaunted before the country by "Safeguarding" enthusiasts. We should, indeed, regard it as a dereliction of urgent duty if we failed to draw our readers' attention as forcibly as possible to the very real menace that besets the fiscal system of this country. The menace is the same as the menace of 1923. The only difference is that in 1923 Mr Baldwin clearly and definitely asked the country for power to install a protectionist system, whereas to-day he veils what is, in effect, precisely the same request, by describing Protection by the euphemism "Safeguarding." The menace, therefore, is more subtle. When Mr Baldwin asked permission to bring Protection up the front stairs, the people promptly forbade it. To-day it is the back stairs that they have to barricade. Both staircases lead to the same landing.

Mr Baldwin has not yet issued his election programme, and we have, therefore, to rely upon the latest references to fiscal policy made by him and his Ministers. By these the Conservative Party is revealed as committed to an indefinite extension of the Protectionist experiment. If Mr Baldwin is returned to power, a committee is to be set up before which any and every industry, always excepting poor agriculture, may apply for the protection of an import duty. One of the early applicants, we know, would be the iron and steel industry. It is clear, therefore, that, unless the country realises the full meaning of Mr Baldwin's policy and rejects it, we shall, in a few short months, have travelled beyond the realm of comparatively trivial tariff experiments right into the danger zone of full protection for major industries, to be imposed haphazard and piecemeal, and without regard to the broad needs and requirements of the country as a whole.

To emphasise the gravity of this threat to place fresh shackles upon our troubled industries, is the purpose of our Supplement. We do not here propose even to flit over the ground of argument that is covered there. But we do claim for this Supplement the earnest attention, not merely of Free Traders, but of those who lightly or lazily assume that fiscal policy does not greatly matter, and of those who may have failed to see the iron hand of Protection beneath the velvet glove of Safeguarding. We hope it may carry conviction to all whose minds are not too inextricably caught up in the web of tariff fallacies.

One hears, sometimes, such careless *obiter dicta* as this:—"Free Trade was all right in the nineteenth century, but it is out of date now." Or again:—"Let us get rid of obsolete political Shibboleths, and look at this fiscal question purely from the business point of views." Our readers will find that we have dealt with the question not merely from the point of view of theory (though theory is not neglected), but on the concrete basis of hard business facts—facts not of the nineteenth century, but of to-day. Circumstances, it is true, have changed since the nineteenth century. But the main trend of change is in the direction of the enormously greater interdependence of nations; and the trend has served, not to destroy, but to re-inforce every argument against trade restriction. The plain fact is that it is Protection, and not Free Trade, that is hopelessly out of date, and as the World Economic Conference showed, the nations of the world clearly recognise this, and are struggling to free themselves from the fiscal bonds which restrict the flow of their commerce. In the domestic sphere the developments of every passing year make Protection more and more impossible as a remedy for industrial troubles. In the international sphere Britain bears the tremendous responsibility of checking or encouraging that world-wide return to a saner fiscal policy which is a postulate of the recovery of prosperity. If these great issues are made plain to the people of this country, we believe that they will once again refuse to allow Mr Baldwin to lead the country with retrograde steps, however faltering, backwards from the goal of enlightened mercantile policy.

Some there may be who distrust statistics and the arguments derived from them, and others who find the summary of facts and figures, presented in our Supplement, hard reading. To such we would pose a few questions in terms of a homely simile. Is it possible to design a wall which will keep out the tramps and let through the sun and air? Which will shelter the timorous, who dislike strangers, and not discourage the adventurous who want to see the world? Which will enable us to bargain with our neighbour who has already built an ugly wall, without tempting him to build it higher? Which will make the flowers flourish without encouraging the weeds? Experience teaches us rather that it is the nature of walls to shut in as strongly as they shut out. It is a commonplace of life that a man who puts up a notice, "No Visitors," need expect few invitations. And how can Britain, of all nations, hope to live without the daily stream of visitors bringing invitations—imports of her needs calling forth orders for her products?

MR CHURCHILL'S CHANCELLORSHIP.

Final judgment on Mr Churchill's tenure of the Treasury must await next Monday's Budget. His statement, however, has to be viewed in relation to the fiscal history of the last few years, and, in order that our readers may be able to compare Mr Churchill's fifth pronouncement with the record of his earlier achievements and shortcomings, we have assembled in the following article some of the more important details of the national finances.

In the first of our tables we analyse the expenditure side of the National Accounts. Owing to the changes made in classification two years ago, it is not yet possible to give all the details of Civil Service expenditure last year, but where the actual payment is not available we have inserted in italics the original estimates. The current year's estimates are added for purposes of comparison:—

EXPENDITURE (000's omitted).

	Issues in Year (*Original Estimates in italics*).						
	1913–14.	1924–25.	1925–26.	1926–27.	1927–28.	1928–29.	1929–30.

* Excluding Post Office.
(a) Including coal mines subvention.

The largest single item in this table, the cost of the National Debt, is discussed in detail later in this article. The gigantic cost of armaments has undergone disappointingly small reduction over the last five years, in spite of the fact that the period has included several international conferences for the limitation of arms, and that the maintenance of good foreign relations has been one of the chief points on which the Conservative Party has claimed credit. We are still spending on current measures of defence nearly 3 per cent. of the national income, as compared with about 2 per cent. in the last half of the nine-

teenth century. Moreover, the memorandum accompanying the latest Naval Estimates points out that the bulk of the cost of the Singapore Base will not be felt before 1930. In the Civil Services the most obvious change on balance over the period 1924-25 to 1928-29 has been an automatic decrease amounting to nearly £12 million in war pensions, offset by an increase of over £10 million in old age, widows', and other pensions. Aggregate Civil Service and Revenue Department expenditure has fallen by £3 million—not a spectacular record of economy. In another column we discuss the possibilities of reduction in the Civil Service votes, and reach the conclusion that retrenchment is still possible without loss of efficiency. The large increase in the 1929-30 estimate for "other civil services" covers the cost of de-rating in that financial year.

We turn now to the methods by which this expenditure has been met:—

REVENUE (000's omitted).

	1913-14.	1924-25.	1925-26.	1926-27.	1927-28.	1928-29.

Surplus(+) or Deficit(−)	+ 5,750	+ 3,659	− 14,038	− 36,694	+ 4,239	+ 18,395

It will not escape notice that Mr Churchill's two surpluses have amounted to less than half the sum of his two deficits. Before proceeding to review briefly Mr Churchill's fiscal methods it may be convenient to examine in greater detail the revenue raised under several of the more important heads, in the latest years for which figures are available.

CUSTOMS AND EXCISE DUTIES—Net Receipts. (000's omitted.)

Grand Total	75,227	267,731	235,007	237,758	239,988	251,138

* Including wine, mineral waters, cocoa, coffee, matches, betting duty, railway passengers, patent medicines, liquor and other licences, and miscellaneous.

Revenue duties, it will be seen, increased in the first three years of Mr Churchill's term of office by nearly £5 million as a result of the large expansion in receipts from tobacco. Exchequer receipts in 1928-29 showed a further increase of £2 million over 1927-28, thanks very largely to the duties on light oils, which more than made up for a declining Excise revenue and a remission in the sugar duties. The protectionist experiments of the present Government are reflected in the growing part played by protective duties in the total Customs revenue.

In the revenue table, only that share of motor vehicle duties is shown which accrued to the Exchequer after meeting Road Fund payments. The total receipts from these duties in 1928-29 were £25,857,000, as compared with £24,518,000 in the previous year, and £16,164,000 in 1924-25.

Stamp duties, though sometimes condemned by economists, play an increasingly large part in the national finances:—

STAMP DUTIES—Net Receipts.
(000's omitted.)

	1913-14.	1923-24.	1924-25.	1925-26.	1926-27.	1927-28.
	£	£	£	£	£	£
Land and property	1,879	4,161	4,575	4,660	4,602	4,867
Stocks, shares, &c.	3,125	6,736	7,102	8,499	7,984	9,820
Company duty	698	2,295	2,225	2,680	3,506	3,251
Cheques and bills	2,322	4,750	5,182	5,368	4,772	4,977
Receipts	669	2,121	2,135	2,277	2,358	2,284
Total (incl. misc.)	9,648	21,579	22,758	25,129	24,870	26,894

In 1928-29 payments into the Exchequer totalled £30,060,000 against £27,030,000 in 1927-28.

The most elastic item is plainly the yield from stocks and shares, and the growth of the revenue from these duties reflects an enormously increased Stock Exchange activity.

Turning to direct taxation, we give below the Budget estimates and Exchequer receipts from Estate Duties:—

ESTATE, &c., DUTIES.
(In Million £'s.)

	Budget Estimate.	Exchequer Receipts.	Exchequer Receipts Larger (+) or Smaller (−) than Estimate.
1913-14	26·75	27·36	+ 0·61
1919-20	34·50	40·90	+ 6·40
1923-24	52·00	57·80	+ 5·80
1924-25	56·00	59·45	+ 3·45
1925-26	66·50	61·20	− 5·30
1926-27	66·00	67·32	+ 1·32
1927-28	67·80	77·31	+ 9·51
1928-29	72·00	80·57	+ 8·57

Death has in recent years been a good friend to the present Chancellor, and the yield from these duties has never once suffered a decline since the war. Their growing importance is shown in the ratio of their yield to the receipts from income tax, which advanced from 22 per cent. in 1924-25 to 34 per cent. in 1928-29. Details of the yield of income tax are given below:—

INCOME TAX.

	Estimate.	Exchequer Receipt.	Exchequer Receipt larger (+) or smaller (−) than Estimate.	Standard Rate of Tax in the £.	Yield per penny in the £.
	Mln. £'s.	Mln. £'s.	Mln. £'s.	s. d.	Mln. £'s.
1913-14	42·7	43·9	+ 1·2	1 2	3·14
1919-20	312·0	316·9	+ 4·9	6 0	4·40
1923-24	260·8	269·3	+ 8·5	4 6	4·99
1924-25	265·0	273·8	+ 8·8	4 6	5·07
1925-26	262·0	259·4	− 2·6	4 0	5·40
1926-27	254·8	234·7	− 20·1	4 0	4·89
1927-28	247·0	250·6	+ 3·6	4 0	5·24
1928-29	232·9	237·6	+ 4·7	4 0	4·95

The decline in receipts shown last year was the consequence of the increased family allowances given by Mr Churchill in his last Budget. It will be seen that when the effects of industrial troubles of 1926 had passed off,

income tax exceeded the Chancellor's expectations, whereas yield from Super Tax has disappointed him:—

SUPER TAX.
(1913-14 and 1919-20, United Kingdom; thereafter Great Britain and Northern Ireland.)

Year.	Incomes Exceeding which Super-Tax Becomes Chargeable.	Number of Persons Assessed.	Total Income Assessed, including First Portion on which no Super-Tax is Payable.	Budget Estimate.	Exchequer Receipt.	Exchequer Receipts Larger (+) or Smaller (−) than Estimate.
	£		Million £'s.	Mln. £.	Mln. £.	Million £'s.
1913-14	5,000	14,008	176	3·25	3·32	+ 0·07
1919-20	2,500	54,212	408	42·00	42·17	+ ·17
1923-24	2,000	95,526	535	58·00	60·64	+ 2·64
1924-25	2,000	93,841	540	61·00	62·68	+ 1·68
1925-26	2,000	95,364	546	63·30	68·51	+ 5·21
1926-27	2,000	94,676	537	64·50	65·91	+ 1·41
1927-28	2,000	*	*	62·00	60·60	− 1·40
1928-29	2,000	*	*	60·00	56·15	− 3·85

* Not available.

Reverting to our table of total revenue, we see that miscellaneous non-tax revenue has proved very remunerative to Mr Churchill. This item has included several windfalls—the Currency Notes Reserve, for instance, and repayments of debt by the Colonies and Dominions. The Chancellor's record with regard to tax revenue has been, in outline, as follows. In his first Budget he provided for an increase in a full year of £8.3 million in Customs and Excise revenue by restoring the McKenna Duties and by imposing duties on silk, artificial silk and hops, offset by increased preferences on sugar, dried fruits and tobacco. Small increases in the rates of death duties on estates between £12,500 and £1,000,000 were calculated to bring in £10 million, against which £10 million were remitted through the reduction of certain rates of Super Tax; a reduction of 6d. in the standard rate of income tax was to cost £32 million, and increase of allowance in respect of earned income £71/2 million. The next year additions and modifications in protective duties were calculated to yield about a million pounds; the motor vehicle duties were tightened up to yield a further £2,345,000, while £6 million in a full year were expected from the Betting Tax. In the last expectation Mr Churchill has been gravely disappointed, the yield amounting, in fact, to only £2.7 million in 1927-28. In 1927 he imposed additional duties on matches, wine and tobacco to yield in a full year £5,600,000, to which he added new protective duties on pottery and motor tyres to yield £950,000. Last year Customs and Excise was raised on balance by £13,715,000 in a full year; this covered a remission of £2,900,000 in the sugar duties, the imposition of a tax of 4d. a gallon on imported hydro-carbon oils, new duties on mechanical lighters and buttons, and an increase of duty on British wines. Motor duties were lightened on hackney vehicles at an estimated cost of £600,000, and £41/2 million were provided for increased relief from income tax in respect of children.

For the rest, Mr Churchill has obtained revenue by a series of ingenious devices. In 1926 and 1927 he got £101/2 million by reducing the period of Brewers' Credit. He took from the Road Fund surplus £7 million in 1926 and £12 million in 1927, while in the latter year he also obtained £14.8 million by collecting Schedule A Income Tax in one instalment. Only by these means has the country escaped a still more repressive burden of taxation. A fiscal policy whose fruits may be summed up as (1) a small measure of relief to the income tax payer and the consumer of sugar, (2) a greatly increased burden on the motor owner and in a smaller degree on the smoker, (3) an increase in the number of protective duties, has produced changes in the ratio of direct to indirect taxation which are shown in the following table:—

TAX REVENUE.
(including Motor Vehicle Duties, Gross.)

	Direct Taxation.		Indirect Taxation.	
	In Mln. £	% of Total.	Mln. £	% of Total.
1903-04	69	48·5	73	51·5
1913-14	78	47·9	85	52·1
1921-22	513	59·9	344	40·1
1922-23	472	60·9	302	39·1
1923-24	429	59·7	289	40·3
1924-25	433	62·7	257	37·3
1925-26	422	61·6	263	38·4
1926-27	399	60·1	265	39·9
1927-28	416	59·9	278	40·1
1928-29	402	58·7	283	41·3

It will be seen that although steadily diminished during the past four years, direct taxation plays a strikingly larger part in the total than before the war.

This account of Mr Churchill's record would be incomplete without reference to the state of the national debt. The following table shows the nominal total outstanding at the end of each year. The figure for 1929 is not an official one:—

NATIONAL DEBT.

* Includes War Debt to United States.

Having made history in his first Budget by the announcement of the return to the gold standard, Mr Churchill took the courageous step of raising the Sinking Fund from £50 million to £60 million in 1927, and to £65 million in 1927. Unfortunately this record was marred by the increase of debt to cover his deficits of £50 million. In 1928 Mr Churchill inaugurated his new and questionable policy of applying a fixed total sum each year to interest and sinking fund combined, which resulted last year in a reduction of the sinking fund payment to £57½ million, since in fact the total sum paid in interest was approximately the same as in 1927-28, although Mr Churchill had budgeted for a decline of £8 million. In a leading article last week we prophesied that the Chancellor will be forced to choose between enlarging his proposed provision for National Debt services and seriously slowing down the rate of repayment. His pronouncement on this section of the National Finances, and on the possibility of profitable conversion, will be awaited with unusual interest.

ITALY, FRANCE AND GREAT BRITAIN.

LAST week the twenty-fifth anniversary of the Anglo-French Entente of 1904 was celebrated at Cannes, and simultaneously, on April 2nd, Sir Austen Chamberlain had a personal meeting near Florence with Signor Mussolini. Both events were "unofficial," and there has been a not unnatural tendency in the French and Italian Press to put a rather misleading emphasis on each of them separately. To our mind, their true significance lies in their conjunction.

The heart of the matter was made clear by Sir Austen Chamberlain in an interesting interview published in *The Observer* last Sunday: "It is contrary to my whole conception of international policy that the good relations of two nations should be regarded as detrimental to the interests of a third party." This declaration was made *à propos* Great Britain's relations with France and Italy, but Sir Austen went on to state expressly that it was equally applicable to our relations with France and Germany. This is, indeed, a national and not a party policy; and when Sir Austen Chamberlain speaks this language he speaks not only for himself, but for his predecessors and successors in office. It is common ground that this is the right policy for every British Secretary of State for Foreign Affairs to pursue. The difficulty, of course, is to live up to it; for it is always a delicate and often a thankless and invidious task to act as the common friend of two nations who are not on the best of terms with one another; and the more impartial the common friend may be, in fact, the greater the possibility that one or other or even both of the rivals may become irritated at what seems like a superhuman, or inhuman, degree of disinterestedness and detachment. Nay, more, they may suspect it of being insincere; and then your "honest broker," grown weary of well-doing, may drift into taking the line of least resistance and may decide to make sure of his friendship with one party at least, at the risk of estranging the other. There have been such lapses in the foreign policy of His Britannic Majesty's present Government in Great Britain (for in these matters the Dominions follow their own courses and are not bound by action taken in Whitehall). One such lapse was the unlucky "Anglo-French Naval Compromise." But we do not propose to rake up old scores; and we wish to give Sir Austen Chamberlain full credit for seeing clearly what the right policy is and pursuing it, in spite of lapses, with fair consistency.

To state our Continental European policy in the simplest terms, its aim is to prevent the tensions and clashes between France and Germany and between France and Italy from coming to a head, and, further, to do anything that we can to assist these Powers to remove the underlying conflicts of interest out of which the tensions and clashes arise. The *importance* of keeping to this policy and making a success of it can be measured by the ugliness of the possibilities in case the policy of conciliation should fail. If the mediating and conciliating influence of Great Britain ceased to operate, we can readily imagine the greater part of Continental Europe once more divided into two camps, with France and her satellites on one side and Italy and her satellites on the other. We can imagine Italy seeking to redress a balance which would be heavily inclined against her by drawing Germany into the arena, with the argument that British mediation had not been effective in holding the scales even between Germany and France, and that it was now time for Germany to try the Fascist method of "direct action." We can imagine Soviet Russia sitting on the fence as the *tertius gaudens* in this new schism of "capitalist society"—a schism which would be a portent that the Marxian apocalypse was developing "according to plan." All this, no doubt, seems remote and fantastic as things are now; but it might become very practical politics if Great Britain became involved in naval competition with the United States, and then tried to cover her rear by allowing her European policy to develop into some kind of exclusive understanding with France. That was the vista opened up by the "Anglo-French Naval Compromise," and it was the glimpse of this vista that very naturally and rightly alarmed public opinion in this country. Fortunately, the policy of no competition with the United States, and no exclusive understandings with particular European Powers, has come into the ascendant again; and we are, therefore, once more in a position to help France and Italy to improve their relations with one another.

Where are the causes of Franco-Italian tension to be found? During the past three years the most conspicuous field of this tension has been South-Eastern Europe. It is well-known, of course, that France, ever since she was disappointed in 1919 of her expectation of guarantees from the United States and Great Britain, has been doing her utmost to fill the void by negotiating treaties of mutual guarantee with other Continental European States which have an equal interest with her in perpetuating the regime established by the four European peace-treaties. These States are Poland, Belgium, and the three members of the Little Entente; and the effect of the network of treaties which has been woven between France and these States has been to consolidate the interest of France and Belgium in perpetuating the present situation on the Western frontier of Germany with the interests of Poland and Czechoslovakia *vis-à-vis* the eastern frontier of Germany, with the interests of Czechoslovakia, Jugoslavia and Rumania in preventing the union of Austria with Germany and in confining Hungary to her present frontiers, and finally with the interests of Jugoslavia, Rumania and Greece *vis-à-vis* Bulgaria. From this "Franco-centric" system of Europe Italy held aloof, partly because she did not wish to play second fiddle to France and partly because her main conflict of interest was with Jugoslavia, who was one of France's natural allies. But as the French network was steadily extended and consolidated, the Italian Government began to feel that a policy of aloofness was not enough; and, in 1926, Signor Mussolini set to work to build up an "Italo-centric" system of his own. Since France had gathered round her those States which, like herself, had gained by the peace-treaties and which, therefore, wished to perpetuate the post-war *régime*, Italy turned her attention to the States which had lost by the treaties and which would like to see them changed. She accordingly set to work with considerable success to draw towards her Albania, Hungary and Bulgaria. She even succeeeded in persuading Rumania to flirt with her for a time, though the Rumanian Government afterwards came to the conclusion that it could not belong to two rival "systems" simultaneously, and, therefore, swung back into its old policy of solidarity with Jugoslavia, Czechoslovakia, Poland and France. The effect of this Italian policy was to produce a rather alarming series of "incidents" and "crises" in South-Eastern Europe which reached their climax in 1927. The logical outcome of the policy would be a rapprochement between Italy and Germany; but this has been impeded by the fact that a union between Germany and Austria would be no more welcome to Italy than it would be to the Little Entente or to France. Moreover, German public opinion has been estranged from Italy by the Italian policy of forcibly de-nationalising the German minority in South Tirol. Nevertheless, the situation remains dangerous; and however much those who sympathise with the grievances of Germany, Austria, Hungary and Bulgaria may wish to see the European peace-treaties revised, it is evident that this is not the right road to-day; for a revision of the peace-treaties could not issue out of a Franco-Italian rivalry unless that rivalry were to end in the disastrous *dénouement* of a general war.

The Franco-Italian rivalry in South-Eastern Europe, however, is only a secondary symptom; for the real seat of the trouble between Italy and France lies in North-West Africa and in the Western Mediterranean, and if the tension could be eased there at its source, there is little doubt that the dangerous secondary symptoms in South-Eastern Europe would die away.

The trouble in North-West Africa is that France has great possessions suitable for European colonisation without having the French colonists to people them, whereas Italy has a great population of potential colonists without any suitable territories for colonisation under her own flag—for what are the oases of Tripolitania, or even the plateaux of Benghazi, among so many?

The trouble in the Western Mediterranean is one which it is easy for us to understand, for it is the familiar issue of "mathematical" versus "strategical" parity of naval armaments. The Italians claim "mathematical" parity with France. The French maintain that this would condemn France to "strategical" inferiority, since the French Navy in war-time has one heavy additional task in the Western Mediterranean from which the Italian Navy is exempt: the task of convoying from Africa to Europe those supplies of African "man-power" which are a vital part of the French forces in any European campaign. This naval controversy between Italy and France is a matter of general concern, because it will be difficult for Great Britain to agree on any scheme of comprehensive limitation of naval armaments with the United States and Japan unless she can simultaneously persuade France and Italy to come into line on some agreed ratio.

It will be seen that in Africa and the Mediterranean there are serious conflicts of interest between Italy and France which have to be solved; and the first step would be a frank, friendly and exhaustive joint investigation of the whole field by the two parties. The prospect of this was held out at the end of 1927, at the time of Monsieur de Beaumarchais' appointment as French Ambassador in Rome. Last October it was reported that a general agreement was on the point of being reached; but since then the negotiations seem to have hung fire. It is, therefore, welcome news that they are now being taken up again; and this time we may hope for a definitive agreement leading to a lasting improvement in the relations between these two Powers. It is in the interest of Great Britain to smooth the path towards a Franco-Italian agreement by any means that may be in her power.

CANADA'S GRAIN MARKETING PROBLEMS.

(BY OUR OTTAWA CORRESPONDENT.)

THE grain marketing problem is at present very much to the forefront both in the prairie provinces of Canada and in Parliamentary circles at Ottawa, for the dissatisfaction which the Liverpool Corn Exchange has repeatedly in recent years manifested with the results of the present system employed for grading Canadian grain is matched by an equal volume of critical discontent among the Western farmers. Up till the third week in August the 1928 crop promised to be easily the best in the history of the West. But a series of frosts on successive nights after August 22nd wrought over a wide area a damage whose extent was only fully realised after threshing operations. The crop was in point of volume found to be the largest on record, but its quality has proved singularly disappointing, and an abnormally large proportion of it has been graded No. 4 Northern and even lower, large quantities being classified only as "feed." The result is that thousands of farmers have only been receiving about 70 cents per bushel for their wheat, which barely covers the cost of production, and agrarian leaders have bluntly declared that the crop of 1928 was one of the least profitable in recent years, because the heaviness of the straw made it expensive to handle.

Now the Western farmers have been schooled to accept vicissitudes with equanimity, but they feel that their misfortunes have been deliberately aggravated by human agencies. They cannot be convinced that a large part of the crop of 1928 was not "degraded" far below its real value as the result of a conspiracy between the private grain trade and the Board of Grain Commissioners. They assert that the elevator companies and milling firms were able to buy quantities of wheat at prices far below its real value for commercial purposes, and that, after subjecting it to mixing processes and hospital treatment, they have been able to reap the largest profits in their history.

This general indictment is reinforced by a special complaint about the administration of the Grain Act. Last year the Federal Parliament, at the instance of the prairie members, passed an important amendment to the Canada Grain Act, known as the Campbell amendment, whose effect was to give a farmer shipping wheat through a country elevator control of its ultimate destination in regard to terminal storage. The real objective of the amendment was to consolidate the position of the Western co-operative pools at the expense of the private elevator interests, which, under the old regulations, had each year been able to secure control of a good deal of "pool" wheat. The private grain companies fought this amendment bitterly through their political friends, and it now transpires that they have contrived this year to frustrate its purpose. Apparently they served notice early last summer upon the pools and the Grain Commission that, rather than carry on business under the restrictions imposed by the Campbell amendment, they would close up all their elevator plants and handle no grain at all. Now

there are still numerous points at which, in the absence of pool elevators, the local pool members have no alternative but to resort to the plants of the private elevator companies. The pool officials could not afford to leave these members in the lurch, and accordingly they felt compelled to make with the " trade " terms which, for all practical purposes, made the Campbell amendment a dead letter. With their consent the Board of Grain Commissioners issued last autumn a special grain ticket, now popularly known in the West as the " hybrid ticket," under whose terms the pools ceded to the trade the control of all pool grain passing through private elevators; they were in a position to do so because under the pool contracts grain when delivered passes from the control of the farmer to the pool. By this capitulation the private grain companies regained control of a large volume of wheat which had threatened to escape their clutches and their trading and " mixing " operations were greatly facilitated.

Illuminating evidence about the extent to which the wheat of Western Canada is subjected to the process known as " mixing " was given by Dr Donnelly, a Liberal member from Saskatchewan, in a speech delivered in the House of Commons on March 6th. He exposed in high relief the dimensions of the " mixing " practice by submitting to Parliament the following statistics about the ingoing and outgoing returns of the three statutory grades, Nos. 1, 2 and 3, Northern wheat at private terminal elevators at the head of the Great Lakes:—

		In.	*Out.*
		Million bushels.	
Crop year 1924–25	No. 1	16	20
	No. 2	15	14
	No. 3	16	25
„ „ 1925–26	No. 1	41	47
	No. 2	42	42
	No. 3	22	33
„ „ 1926–27	No. 1	14	18
	No. 2	32	40
	No. 3	14	27

The figures for the year 1926-27 are peculiarly revealing as they indicate that the owners of these private terminals took in 60 million bushels of Nos. 1, 2 and 3 grades, and sent out 85 million bushels of the same grades, and the inevitable conclusion, according to Dr Donnelly, is that they took 25 million bushels of the low-grade wheat and dumped them among the 60 million bushels of the higher grades. He also demonstrated that low-grade wheat had a habit of mysteriously vanishing, and quoted another series of statistics about the fate of Kota wheat, an inferior variety, in the private terminal elevators:—

	In. Bushels.	*Out.* Bushels.
1924–25	123,810	8,310
1925–26	792,166	49,000
1926–27	386,409	19,000

Subsequently, Mr Motherwell, the Minister of Agriculture, admitted in the Budget debate that, during a visit to Europe last summer, he had found his worst fears realised about the suspicions now attached to Canadian wheat in every important grain market, and he need obviously look no further than Dr Donnelly's statistics for the main reason.

The Western farmers admit that wheat shipped out via Vancouver has received much fairer treatment in grading, and has not been submitted to the same mixing processes. They attribute its better fortune to the fact that practically all the terminal elevator space at Vancouver is owned by the Government or the pools. Hence they are now demanding that the terminal elevators to be constructed at Fort Churchill, the tidewater terminus of the new Hudson Bay Railway, should be kept rigidly under Government control. Their argument is that, if the terminal elevators at Fort Churchill can only be preserved from the improper activities of the private grain trade and " mixing " forbidden there, they will attract most of the prairie grain unless the elevator interests at Fort William and Port Arthur agree to stop " mixing " and other objectionable practices.

Last summer the provincial Government of Saskatchewan, faced with a rising tide of agrarian discontent, appointed a Royal Commission to investigate and report upon the problem of grain marketing. It has held sessions all over the province and at places like Winnipeg and outside it, and has accumulated a diversified variety of evidence and data. The farmer witnesses have been almost unanimous in their complaints about the unsatisfactory character of the present grading system and in their demands for drastic reforms, being particularly insistent that the practice of " mixing " should be abolished. But the hearings also revealed a substantial volume of suspicion among the witnesses that the officials of the pools whose fundamental *raison d'être* was the correction of abuses practised by the private grain trade, if not its complete elimination, have in the last two years been working in too friendly co-operation with the private elevator companies and other interests.

The Commission, at a hearing in Winnipeg on March 11th, listened also to some frank evidence from Mr. James D. Fraser, the chief Government grain inspector, who declared that the mixing of Western Canadian hard wheat with soft grain from the United States was a common practice in the transfer houses at Montreal and that the resulting composition was shipped overseas under the certificates of the Canadian Government. Mr Fraser also expressed the opinion that Canadian wheat passing through the United States was subjected to the same adulterating process, and held it to be responsible for the dissatisfaction of European millers with Canadian wheat. Indeed, so startling were his statements that the Commission adjourned immediately afterwards to discuss them.

Undoubtedly agrarian opinion in the West is now genuinely aroused on a subject which vitally affects the farmers' livelihood, and the Conservative and Progressive politicians, discerning a unique opportunity to make political capital in Liberal strongholds like Manitoba and Saskatchewan, are championing the farmers' cause. Accordingly, the Government is being subjected to severe pressure by its Western supporters to take immediate remedial action for the removal of some of the worst grievances, and the prospects are that before the present session it will submit to Parliament important amendments to the Canada Grain Act. The Government is also awaiting an interim report of the Saskatchewan Grain Commission, which is expected to appear this month and to support many of the farmers' contentions, and its findings may provide the Government with some guidance for a policy adequate to meet the situation.

A SURVEY OF THE WORLD'S POWER.

THE rapid development of the national electrification scheme in Britain, with the widespread adoption of rationalisation in industry, have brought into prominence the whole question of the economic function performed by power. The aim of all rationalisation schemes is to obtain the highest possible continuous output per unit of equipment, and everything is subordinated to it: financial mergers, manufacturing amalgamations, central marketing schemes, are all concentrated on the purpose of ensuring a steady and full volume of production. Yet it is impossible to ignore in these developments the part played by power: mass-production is dependent on power equipment, and power, under its various forms, liquids, gases or electricity, constitutes the nerve force of industry. Some perception of the truth of this observation has always been apparent, most of all in those who have been responsible for the elaboration of the national electrification scheme in Britain, but we have not yet formulated even the most elementary principles underlying power economics. At no time has there been more need of investigation than now.

Even a few decades ago, coal was the only power-producing material, and the industrial wealth of a country was largely determined by its possession of or proximity to large coal reserves. Under those conditions, it was sufficient to devote attention to coal alone when a study of the power situation was made. Since then, however, the problem has become enormously complicated: heat economy and the growth of technical knowledge are together responsible for revolutionary changes in coal consumption, and in the grading of coal itself; low-grade fuels now possess a higher economic value than formerly; the exploitation of water-power resources and the elaboration of super-power transmission zones to transmit energy hundreds of miles and render it immediately available over areas measuring thousands of square miles have raised into industrial prominence a number of countries which were once regarded as exclusively agricultural, and so intensified international competition in many important commodities. A new alignment of economic values is taking place, with no evidence of conscious preparation or control by man, and little clear knowledge exists regarding the processes of adaptation or expansion on the basis of the new values.

Again, the industrialisation of many markets, once regarded as incapable of such development, has become an immediate possibility through the harnessing of water-power resources—with the result that financial groups are exploring the world for power concessions and competing actively with each other for the acquisition of electrical power undertakings capable of rapid expansion. The power situation threatens to become almost incredibly complicated, and the problems arising from such complexity are ceasing to be purely national in their effect. They may influence the future economic development of the world.

It is in the light of these considerations that the monograph now published by the World Power Conference should be judged.* As the Chairman of the Executive Council, Mr D. N. Dunlop, states in his preface to the work:—

" At a time when great industrial countries, in the possession of vast financial reserves, are still in ignorance of how best to use those reserves and ensure a continuous demand for their products, a survey of the power resources and power production of the world is a matter of urgent importance. It has more than a technical or scientific significance; its justification is primarily economic, and it should render it possible for concerted action to be taken with a view to developing on a scientific basis countries which have been hitherto undeveloped."

Some such principle as that enunciated inspired the International Economic Conference, held in Geneva in 1927, but that Conference disseminated its energies over too wide a field to be immediately and permanently effective in any one industrial or economic sphere. The World Power Conference, which now covers forty-eight countries, begins with the advantage of a definite and fairly closely determined range of activity. Its primary function has been to hold international meetings—Wembley, 1924, Basle, 1926, Imperial Institute, 1928, and Barcelona, 1929—where experts submit special reports on technical, financial, administrative and economic aspects of power production and utilisation, but it has made no effort to realise concerted international action in the treatment of any problem raised during its discussions.

As a further stage in development, it is proposed to carry out a survey of the power resources and production of the world on a uniform basis for each power-producing element—coal, brown coal, oil, gas, water-power, peat, and other low-grade fuels—allocate to one country the collection and preparation of essential data, and co-ordinate all data in one great scheme. When this work is completed it will be possible to give the state of world power development at definite periods, and thus substitute exact knowledge for mere speculation. Before carrying out such a work, however, it was found necessary to survey the present state of knowledge regarding resources and production, and show exactly where and how international effort could most effectively be employed.

The monograph has fulfilled these requirements, and gives, for the first time, a world picture which may be regarded as authoritative. It shows that already a considerable body of knowledge exists, but lack of standardisation and co-ordination has rendered it almost useless, while the development of more exact methods of assessment has served to destroy or weaken the authority of older estimates. The Toronto Geological Congress of 1913 gave the hard coal, brown coal and lignite resources of the world as 7,400,000 million tons, but the World Power Conference of 1924 reduced them to 5,835,000 million tons, while still more recent investigations—in Germany, Holland, Central Europe, the Dominions, Russia, China, Siberia and South America—have introduced further corrections. Thus an American Geological Survey, completed in 1926, gave the resources of China as 217,626,000,000 tons, compared with 995,587,000,000 tons given at the Toronto Geological Congress, and less spectacular but significant adjustments have taken place in other countries. The tendency is now to accept a lower figure even than 5,835,000 million tons. The world coal production in 1927 (including brown coal calculated on a hard coal basis) was 1,301,000,000 tons, so that the total reserves could last more than 4,000 years if 1927 could be taken as a standard. In the case of China and Siberia, reserves would last an indefinite time, but in other countries, such as Austria, Hungary and Italy, the end of resources is in sight. As a world problem, the conservation of coal supplies is not important.

In oil, where annual production would exhaust in forty years the total reserves of 43,000 million barrels established by the U.S. Geological Survey, the technical advance in the methods of extraction and exploitation and basic economic factors governing the distillation of crude oil have served to render any estimate of resources largely speculative. As Dr Gustav Egloff stated in a paper submitted to the Fuel Conference in 1928:—

" Since the foundation of the petroleum industry many predictions of oil shortage have been made. But, despite the stupendous increase in the use of petroleum during the last two decades, discovery of new fields has never failed to keep pace with the demand. At the present time the world's output of oil is far below the capacity of the actual producing wells. Proration and drilling agreements are holding back a veritable flood of crude, which would be produced in amounts far exceeding present requirements."

The world's reserves of natural gas are bound up with oil reserves, but one important factor lies in the volume of gas available for public utility distribution as well as the waste heat resulting from industrial production. Thus gases commercially available from coke-preparation are given as not less than one-fourth of the world's natural gas output.

In water-power greater accuracy obtains, although different methods of calculations have produced different results. The two most authoritative estimates, that of the World Power Conference of 1924 and that of the U.S. Geological Survey in 1927, fluctuate between 380,000,000 h.p. and 445,000,000 h.p., only 7 per cent. being developed. Under full development and with all the advantages of interconnection, water-power would

Travel and Money

The far too common method—or lack of method—of carrying cash in bulk when abroad, is wholly unsatisfactory. Travellers are invited to consider the arguments of two leaflets issued by the Westminster Bank, *Points before Travelling*, and *Safeguards for the Traveller*, which will be gladly sent by the Secretary of the Bank on application.

WESTMINSTER BANK
LIMITED
Head Office: 41 Lothbury, London, E.C.2

represent a fuel saving of 2,000,000,000 tons of coal, almost twice the present annual world production. The actual saving is given now as about 85,000,000 tons of coal.

One important section of the monograph deals with the electrical power production of the world. In 1927 it totalled 190-200,000,000,000 units, compared with about 47,000,000,000 units in 1913, the main countries responsible for the 1927 figures being U.S.A. (80,205,000,000), Germany (12,444,000,000), Canada (12,093,000,000), France (11,347,000,000), Britain (8,750,000,000), Italy (8,100,000,000), Japan (8,000,000,000), Norway (8,000,000,000), and Russia (4,110,000,000). As the monthly statistics bearing on the U.S.A., Britain, Germany, Canada, Italy and Switzerland, responsible for about 62 per cent. of the world output, show, Britain, since 1924, has not kept pace with other countries, and is now relatively in a worse position than even in 1924.

The national scheme initiated in this country is paralleled by similar schemes in U.S.A., Canada, Germany, France, Italy, Belgium, Spain, Japan, Russia, Austria and Sweden, so that a world electrification movement is actually under way. A calculation of world power production—hard coal, brown coal, oil, gas and water-power—on a common coal basis, serves to indicate how coal has lost ground. World power production increased from 1,370,000,000 tons in 1913 to 1,655,800,000 tons in 1927, but hard coal only accounted for 60,000,000 tons. and oil, with water-power, for 225,800,000 tons. Electrical power production, which was about 3.4 per cent. of the total in 1913, has risen to over 11 per cent. in 1927, and has been responsible for a saving of about 160,000,000 tons of coal. Since 1913, therefore, hard coal has lost about 400,000,000 tons annually of the power demand. These statistics are alone sufficient proof of the change that has taken place in the international power situation since 1913. The monograph prepares the way for a complete examination of the world economic position of coal and energy.

THE MARCH OF AFRICA.

(BY A CORRESPONDENT.)

As was shown in a recent article in these columns, the impact of Europe on what has for more than half a century been known as the "Dark Continent" is beginning to have tremendous results, impossible to envisage in their entirety, even though a whole issue of the *Economist* were given up to the lightest sketch of them. To get something like the right atmosphere for their appreciation it has to be remembered that it is no longer ago than 1856 that Livingstone completed his first journey across Africa. Lecturing on his travels at Cambridge in the following year, he concluded by saying:—"I beg to draw your attention to Africa." So near does the occasion seem, it is more than possible that some who heard the address may still be living. Yet at the time his story opened up to Europe a new, fantastic world.

Many others since Livingstone have drawn attention to Africa, and Africa, if slow to respond in the past, is beginning to show that so much attention has its effects. The wonders to which Livingstone drew attention have become commonplaces to-day, when even elderly tourists may, without exertion and at no very great expense, pass comfortably by train or motor-car over the trails which he blazed through forests and fever-stricken swamps. But meanwhile, short as the time seems, marvellous things have happened to bridge the gap between the explorer with his ardours and endurances and the tourist with his round-trip ticket and week-end valise. All of them denote some attention having been given to Africa, though it may be feared that Livingstone would have been the first to condemn, and quite properly, some of the forms in which that attention has manifested itself.

But the past may well be left to look after itself with such possibilities ahead as are foreshadowed by the awakening of the conscience of Europe to African problems as the result of the Peace Conference. There is to-day a great stirring in Africa among its 130 millions of virile peoples, who appear to be on the brink of a development both cultural and economic, greater than any yet recorded in history. Of this development, unfortunately, but little is said except in the dry tones of statistical reports of the rise in the standard of living brought about by the enormous changes of the past few decades. Whether or not the impact of Europe is all to the good of Africa is outside the scope of this article, but its moral and social results must be recognised, and so far as it has affected the standard of living of the African native it would not be difficult to prove that it has been mainly to the good.

Left to himself, the African is, to European habits of thought, not a consistent worker, and his standard of living, bearing in mind his undoubted intelligence and physical capacity, has been deplorable. The satisfaction of his material wants is easily achieved, and ingenuity with him has never even reached such early forms of expression as are implied in the use of chair, table or box, those primitive articles which spring from the earliest attempts in the arts of civilisation. At the same time, the African is an intelligent observer with surprising faculties of adaptability, and his awakening to civilising influences and all that they may mean to Africa comes at a time when Europe itself has hardly got over the wonderment of its own scientific development and new mechanisms, and even within its own territories has not yet had time to exploit them to the full. Other great continents, America and Australia, bear witness to the slowness of economic development until modern perfection of communications made all things possible and brought with it progress in material development undreamed of before. Thirty years ago, in the United States, Middle West farmers and their wives were still content to visit their nearest town, when roads permitted, in wagons drawn by a team of farm horses. That newer production, the Gold Coast native cocoa planter, began to visit his town in a motor-car.

African development, so long delayed, but with increased advantages as the result, may therefore be expected to go forward with unprecedented rapidity on the wheels of modern means of communication. In doing so, it is likely to present many anomalies, and progress may well be patchy in range and accomplishment. But the outstanding fact is that the isolation of the past has gone for ever. The impact has begun to have telling effects, and the younger generation of Africans, aided by the enlightened attitude of Europe towards their needs and aspirations, is proving itself not slow in appreciating what the future may hold.

Of the rise in the standard of living over Africa as a whole, two significant facts hold some clue. A century ago African trade with Europe was valued at no more than £30,000,000. To-day it exceeds £600,000,000. Fifty years ago the great continent, with its 11,600,000 square miles, had but 1,000 miles of railway. To-day it has 30,000 miles, and clamours for more. A road on which motor traffic can run, the "Great North Road," some 2,000 miles long, runs through East Africa from Nairobi to Victoria Falls, linking up Kenya and Tanganyika with the Rhodesias, while yet another road has been opened up to the west of it to connect the Nile with the Congo. On parts of these roads regular motor services are already established for the carriage of passengers and goods. Little imagination is required to see what such roads must speedily mean to Equatorial Africa by linking it with the older settlements of the north and south, in everything that pertains to housing, sanitation, education, as well as in agricultural and industrial production, and in the standard of living of the native population.

In those parts of northern Africa which have the Mediterranean for seaboard, the influence of Europe is naturally more strongly marked, and to-day, in Algiers, it is possible to see a white-robed lady, veiled to the eyes, stepping into a last-year's saloon model of an American car. Such indications of the rise in the standard of living may also be seen in both British East and West Africa, where darker ladies in "flapperish" costumes and silk stockings, who, it is rumoured, have silver tea services to grace their social functions, may be seen enjoying the amenities provided by the Ford and other cars specially constructed for use where roads are still far from perfect.

Banking facilities have given a new idea of the value of money to many a successful African farmer, and one instance of the important part played by communications in connection with the banking account is typical of what is taking place in many parts of Africa to-day. Thus in 1910 some 900 tons of groundnuts were exported from Nigeria. By the opening of the western branch of the Nigerian Railway in 1912 so great an impetus was given to groundnut cultivation that, in 1927, no less than 90,770 tons were exported from Nigeria alone, and it is estimated that in that season the sum of £870,000 was paid out by trading companies to African farmers and middlemen in the purchase of groundnuts.

If the Gold Coast offers the most spectacular instances of the rise in the standard of living, with its native University at Achimota, and what that may ultimately mean in material as well as cultural progress, the trading companies in their stores reflect the increasing demands of the native due to his impact with European standards. The motor-car, the gramophone, and European clothing are not for all, but the contents of a store situated on the verge of the forest in French Equatorial Africa will be a revelation to those out of touch with recent African development and its effect on the standard of living as it may be gauged by contrast with the days when coloured handkerchiefs, beads, cheap pocket knives and looking-glasses were important articles of commerce, and barter the only means of exchange. Such a store was visited by Dr Schweitzer when investigating sleeping sickness in the French Gaboon, and a record made of the articles. In his book, "On the Edge of the Primeval Forest," the author thus describes the store he saw:—

"Behind the counter," he writes, "stood conspicuous the beautiful white-painted cask of cheap spirits. Next to it stood the boxes of tobacco leaves and the tins of kerosene. Further on was a collection of knives, saws, axes, nails, screws, sewing machines, flatirons, string for making fishing nets, plates, glasses, enamelled dishes, lamps, rice, tinned stuff of every variety, salt, sugar, blankets, dress material, muslin, Gillette safety razors, collars and ties in rich variety, blouses and chemises trimmed with lace, corsets, elegant shoes, openwork stockings, gramophones, concertinas, and fancy articles of all sorts."

The list as it stands carries its own implications, and is but the beginning of things. To it must be added the bicycle, in increasing popular demand in places less remote than the verge of the Gaboon forests, while soaps, stationery, cameras, sporting goods, and snuffboxes, as well as pomades, perfumes, hats and caps and walking sticks, show an increase in the standard of living of varying degrees of elevation. One wonders what Livingstone would have thought of the safety razors, the blouses and chemises trimmed with lace, and the openwork stockings!

In 1897 Mary Kingsley published her "Travels in West Africa," a sprightly book more than ever worth reading to-day if the full measure of African development is to be appreciated. It has in it a delightful description of a Kru boy about to return to work, and by contrast gives an excellent idea of the difference in the standard of living, then and now, bearing in mind the contents of the Gaboon store described above.

"A trader who is satisfied with a boy," she says, "gives him when he leaves a bit of paper telling the captain of any vessel that he will pay the boy's passage to his factory again, when he is willing to come. One can picture to one's self sad partings in that far away dark land. 'My loves,' says the Kru boy to his families, his voice heavy with tears, 'I must go. There is no more cloth. I have nothing between me and an easily shocked world but this decayed filament of cotton.' . . . He tears himself away from them and comes on board the passing steamer in the uniform of Gunga Din—nothing much before, and rather less than half of that behind—goes down coast on the strength of the little bit of paper from his white master, and works like a nigger, in the good sense of the term, for another spell, to earn more goods for his home folk."

The same boy now would probably be found with a banking account, and boarding the steamer in a neat store suit with a portmanteau in his hand. Much water has flowed down the Niger in thirty years. All too little has the great African development of recent decades been recognised. Is it yet fully realised what a part the march of Africa may play in the twentieth century?

Notes of the Week.

Viscount Grey's Position.—Amid the week's ordinary hubbub of political oratory one voice has attracted outstanding attention. Viscount Grey occupies a position of his own in British political life. It is a position of comparative detachment. He speaks seldom, and, when he does, his words gain weight not merely from the fact of this position but from the speaker's prestige derived from his record as Foreign Secretary through troublous years and a career clearly marked by disinterested probity. On this occasion his speech, delivered to the Liberal Council on Wednesday, was the more eagerly awaited because on Viscount Grey's shoulders has fallen the mantle of the late Lord Oxford, and on his pronouncement depended the answer to the question whether the Liberal Party would go into the Election united or divided. Viscount Grey selected three main themes for his address—Free Trade, limitation of armaments and unemployment. His reiteration of complete adherence to the policy of Free Trade was, of course, a foregone conclusion. On the limitation of armaments his criticism of recent failures was both trenchant and constructive. But it was, of course, Viscount Grey's attitude towards Mr Lloyd George's unemployment plans that principally aroused expectation. His attitude, as revealed in the speech, is that Mr Lloyd George's policy is "absolutely right." He threw doubt, it is true, much as we have done in these columns, upon the possibility of fulfilling Mr Lloyd George's pledge to the letter, in respect of the time limit, the scope and the finance. "Even if the policy does not succeed in doing all that is hoped of it, even if the pledge turns out to be over-sanguine, even if the policy takes two or three or four years to accomplish all the results that we hope for, it will not be by any means a failure; it will still remain the right policy." This pronouncement means that the Liberal Party goes into the electoral arena as a united party.

Political Broadcasting.—The past fortnight has witnessed a renewal of the controversy over the broadcasting of political speeches. It will be recalled that many months ago an attempt was made to allocate the use of the microphone to each of the three political parties, and that the attempt broke down because the Government claimed for themselves twice the amount of time allotted to each opposition party. With the approach of the election the question was again considered, and last week it was announced that an arrangement had been reached according to which until the Dissolution the Government should have two nights to the other parties' one each, but that after the Dissolution all three parties should share and share alike. The terms in which this was announced were such as to suggest that they were acceptable to all three parties, though it seemed rather strange that the Liberal and Labour leaders should agree to receive only a half-ration. Disillusionment was quickly to follow. The Liberal Campaign Department immediately issued an energetic protest against the fairness of the proposal and denied that it had ever received the party's acquiescence, while on Saturday last Mr MacDonald, speaking in the country, condemned the proposal wholeheartedly, and went so far as to threaten a boycott on the part of the Labour party. On Monday different counsels prevailed, and it was announced that, under protest, the Labour party would come into the scheme. It certainly seems extraordinary that the Government should have persisted in their claim to a double measure of time, at the risk of running up against the British love of fair play. Their argument that as

each of the other parties would be engaged in attacking them, they should therefore have the right to a separate reply to each reveals a strange ignorance of the temper of the British electorate, and also of the attitude of the two Opposition parties towards each other. With three parties in the field, the elector is ceasing to be interested in destructive criticism, and instead is asking all three parties what their proposals are for the future; and if they are wise the chosen broadcasters of each party will take their own proposals as their main theme. On this ground it is clear that the Government has no moral claim to a double share. There is, however, this much practical consolation. The first broadcast on behalf of the Government, by Sir Laming Worthington-Evans last Monday, was no better than a dreary recital of the Government record. The fact that the Government has wasted its first opportunity will help to redress the balance between the three parties.

A Short Campaign in China.—Wuhan (Greater Hankow), which had been the headquarters of the dissident military leaders from the south-western province of Kwangsi, was occupied on Friday, April 5th, by the forces of the Kuomintang Central Government at Nanking, under General Chiang Kai-shek's command. Government gunboats have already advanced far up the Yangtse, above Hankow, in order to cut off the rebels' retreat in that direction; Feng Yu-hsiang's forces have drawn a cordon on the north, along the border between Honan and Hupeh; and the left wing of Chiang Kai-shek's forces seems to be advancing westwards, paralled to the course of the Yangtse, across Kiangsi into Hunan, in order to cut off the rebels' most natural line of withdrawal in the direction of their home province. Meanwhile, Canton City and Kwangtung province, which have also suffered from the domination of the Kwangsi men, seem to have rallied to the Kuomintang Central Government more heartily than they have usually done in crises of this kind. The interesting point is the difference in character and duration between this campaign and the earlier phases of the Chinese Civil War. In those earlier phases there were interminable campaigns without military or political decisions and innumerable victories and defeats which appeared to leave all the belligerents in just the same condition as before. And the Chinese people, while they groaned under the devastation of the war and under the rapacity of the War Lords, seemed to have an infinite capacity for putting up with misgovernment. A sign of change was the gradual reunion of all China under the Kuomintang flag during the years 1926-28, with the elimination of all War Lords who would not pay at least lip service to the new *régime;* and the significant point was that the Kuomintang successes were due less to military victories in the field than to the support of public opinion behind their adversaries' lines. In fact, there was and is no doubt that the Chinese people have become intensely and consciously eager for the restoration and maintenance of peace, unity and good government. The question remained whether this popular feeling, however sincere and widespread it might be, was strong enough to override the personal ambitions and rivalries of military leaders. The rupture between the Kwangsi leaders and the Government at Nanking put this to the test; and the rapid collapse of the rebels indicates the answer. The general desire for peace and unity is definitely prevailing over the forces of disorder; and the effect of this last trial of strength between Nanking and Hankow may well be to extend the *de facto* authority of the Nanking Government—hitherto limited to the vicinity of the new capital—over the whole of Central and Southern China, including the middle as well as the lower section of the Yangtse basin, the southern littoral, and perhaps even the three west-central provinces (Szechuan, Kweichow and Yunnan), which have hitherto helf aloof from the main action of the Chinese Civil War and have been indulging in local disorders of their own. This would still leave the territories of the Chinese Republic divided *de facto* between three or four authorities: the Kuomintang Central Government in the south and centre, Feng Yu-hsiang in a belt of provinces running west-and-east from Kansu through Shensi and Honan to Shantung; "the model Tüchün" in Shansi and at Peking; and, finally, Chang Tso-lin's son and heir in Manchuria. Of course, even if the situation were consolidated to this degree, it would remain dangerous; for it certainly takes less than four to make a quarrel. Nevertheless, we believe that the popular movement for peace and unity is now definitely in the ascendant, and that the Chinese people, though not yet out of the wood, have at any rate reached a point so near the edge that they can see the light between the tree trunks and be certain of the direction in which open country lies.

American Investments Abroad.—Two months ago the *Economist* published details supplied by the New York *Journal of Commerce* as to American capital issues during 1928, and the total then given for foreign issues was, in round figures, $1,576,000,000. There has now appeared the latest issue of Dr Max Winkler's annual review of United States investments in foreign countries. For 1928, as for previous years, the author has given his usual wealth of detail, while his introduction contains several passages, which, though familiar to most Englishmen, are to-day in danger of being forgotten by some of those who ought to know better. We would in particular cite the following sentences: "It is more than a mere coincidence that American investments abroad, both political and commercial, made during the period 1914-28, almost exactly correspond to the aggregate excess of our exports over imports for the same period. In other words, had we not invested abroad, we might not be able to dispose of our surplus production, nor would the rest of the world have been able to pay for such a surplus." The only comment we would add is that America had, and still has, the option of admitting more foreign goods. As regards the statistical side of his review, Dr Winkler is clearly up against the difficulty of defining exactly what is or is not a foreign investment. Thus he calculates that America's actual loans to foreign nations amounted during 1928 to a net $2,096,000,000, but that the increase in her foreign investments during the year was only $1,101,000,000. These two figures differ widely from each other and also from the *Journal of Commerce* figure previously cited. Dr Winkler gives a partial explanation of these discrepances when he says in his opening paragraph that lending abroad includes not only new capital issues, but sales of foreign securities in the American markets, American purchases of foreign internal issues, acquisition of foreign properties not involving the direct sales of securities, and extensions to foreign borrowers of advances or credits of not less than one year's duration. In short, to arrive at his two thousand million figure, Dr Winkler has cast his net as widely as he could. He has also brought all manner of strange fish to shore, including $10,000,000 of British 5 per cent. War Loan, $500,000 of "Reynolds, Sir Joshua (paintings)," and $25,000,000 of "Ford Motor Co., Limited." Incidentally, it is not easy to see how this last figure was reached. The assets acquired by the new Ford company, on its inception last year, were already in the direct or indirect ownership of Mr Henry Ford, who is undoubtedly an American citizen. It would therefore seem that the real increase in America's foreign investments in connection with this issue was the difference between the profits made by British stags, who sold their allotment letters to American buyers, and the par value of the shares allotted to, and still held by, British applicants. Even those fortunate people who sold their shares at the top of the market would hesitate to believe that the difference was as high as $25,000,000. Dr Winkler has given us a valuable mass of material. He has also shown up some of the difficulties that attend its compilation.

The Field for Public Economy.—On the eve of the Budget, writes a correspondent, there are certain features in the analysis of the public accounts which are of increasing interest to taxpayers in existing conditions. Including the Post Office and the Road Fund, self-supporting items at an inclusive £80 million, on the old basis for the purposes of comparison, the aggregate call on taxpayers seems unlikely in the near future to fall below £820 million per annum. In the Appropriation Accounts the fixed elements in the debt service and the continued heavy expenditure on armaments are impressive features; together they account for more than £470 million of the total each year. War pensions are steadily contracting, only to be offset by increasing outlay in old age pensions, widows' and orphans' pensions and other branches of the social services. Financial authorities have directed attention to (*a*) the growth of certain grants in aid, over which the Parliamentary control is insufficient; (*b*) large items like the expenditure of the Empire Marketing Board, which is virtually at the discretion of a single Minister; and (*c*) the increase in the number of fixed statutory contributions, as in the case of the £4 million per annum under the Widows', Orphans' and Old Age Contributory Pensions Act, 1925, over which neither the current review of the Estimates Committee nor the *post-mortem* analysis of the Public Accounts Commitee has any real authority, even admitting that the latter looks increasingly to policy as well as to the actual figures before it. Broadly speaking, therefore, the domestic economies which can be effected appear to the members of these Committees to be small, within the limits of existing practice. Given a fall in prices the Government would be assisted, for it is always in the market as a large purchaser of goods and services; but there is no immediate prospect of such a change. Everything, therefore, depends on policy. The impression grows that many of the smaller departments might be merged in larger establishments; that the war remnants should now be definitely cleared off; that many of the less important accounts should be grouped; that fresh inquiry should be made into the possibility of uniting the financially strong national health with the financially weaker unemployment insurance, on the basis of "all-in" insurance covering sickness, unemployment, old age and other need; and that, by sound use of the resources of the Road Fund and other revenues, steps should be taken to lift the relief element out of the social services and replace it by payment for definite work. No member of these finance committees underestimates the difficulty and the controversy of that programme; but the suggestions are strengthened by the apparently static characer of large blocks of expenditure which cannot in any sense be regarded as reproductive, and which are, in post-war conditions, settling down quite definitely in the national accounts.

Cotton Trade Short Time.—Our Manchester correspondent writes:—No surprise was occasioned in cotton trade circles when it became known that the Bolton Master Spinners' Federation had decided to extend the curtailment of production scheme in the Egyptian spinning section for a further four weeks. For some months past spinners in this section of the industry had been losing ground, and the position became so acute that, in the middle of February, it was decided to curtail production by 33⅓ per cent. for a period of two months. By this means it was hoped that stocks in first hands would be reduced. This step, however, has not had the desired effect. The turnover has been disappointing, and producers have obtained practically no relief. In the circumstances the employes have extended the short-time working plan until the middle of May. Most firms in this branch are still hampered by heavy stocks, and no definite relief is in sight.

Anglo-Russian Trade.—The Acting President of the Soviet State Bank, addressing the British Trade Delegation in Moscow, has once more affirmed that "economic co-operation" between the Soviet Union and Great Britain is impossible without a legal basis, and holds out an attractive prospect of substantial orders by the Soviet Government from British firms, in the event of diplomatic recognition of the Soviet by the United Kingdom. A still more substantial increase in trade, he hints, would follow a restoration of the Treaty which was signed in 1924, but never ratified. Now that a small number of official statistics of British trade with Russia in 1928 are available, it is worth while examining the changes in that trade during the first complete year since the breach in 1927. Figures for 1927 are useless for the purpose, partly owing to the after-effects of the coal dispute and partly because contracts fulfilled during the latter part of the year were, in many cases, placed before the rupture in May. The selection of commodities in the tables below has been conditioned by the limited amount of statistical material available, and does not include all the most important items.

BRITISH IMPORTS FROM RUSSIA.

In thousands of £'s.

	1913.	1923.	1924.	1925.	1926.	1927.	1928.
Total	40,271	9,266	19,774	25,322	24,130	21,052	21,548
Timber	13,740	3,992	6,132	5,758	3,445	5,782	6,024
Butter	3,831	238	2,338	2,448	1,924	2,595	2,656
Eggs	4,745	174	479	1,228	438	801	868
Flax	2,807	261	270	407	139	59	63

* Main classes only.

EXPORTS TO RUSSIA OF UNITED KINGDOM PRODUCE.

In thousands of £'s.

	1913.	1923.	1924.	1925.	1926.	1927.	1928.
Total	18,103	2,492	3,860	6,240	5,858	4,508	2,716
Coal	4,337	695	48	59	11	17	18
Herrings	1,988	9	729	164	10	155	75
Textile machinery ...	995	49	218	323	1,221	1,000	900
Prime movers (not electrical).....	395	79	9	58	55	73	205
Tin blocks, ingots and bars	295	175	35	67	14	25	9
Cotton yarn.....	262	7	13	633	696	40	59
Lead manufactures	199	38	139	36	12	2	21

The first point which emerges from these figures is that our trade with Russia in both directions had begun to decline in the year before relations were broken off. As this was the year of the coal dispute, however, too much cannot be inferred from that. The fact that the sharpest drop in imports occurred in 1927 and in exports in 1928 tends to confirm a suspicion that the cause, whatever it was, occurred in 1927, since forward contracts play a much larger part in our sales to Russia than in our purchases from her. Comparing our trade in 1928 with that in 1925, the peak post-war year, imports are found to have dropped by 15 per cent. and exports by 57 per cent. The imports appear already to be recovering slightly, but the decline in exports remains serious, and appears the more so when it is remarked that in certain commodities, for example, cotton yarn and textile machinery, exports had been increasing very rapidly up to 1927. Moreover, Russian total imports are increasing, so that there is scope for Great Britain to find a growing outlet for her products, instead of a diminishing one, as at present. While not countenancing the Russian demand for a revival of the agreement of 1924—our views about that were sufficiently vigorously expressed at the time—we adhere to our opinion that the breaking off of diplomatic relations in 1927 was a mistake in policy.

Shipping Freight Index Number.—As measured by our Index Number, whole-cargo shipping freights fell during March by 3.8 per cent., following a decline of 2.7 per cent. in February. The March figure, 119.4, contrasts with 108.4 a year ago, 138.0 in March, 1927, and 104.1 in the corresponding month of 1926. The recent movements of the various groups in the Index are summarised as under:—

AVERAGE 1898–1913=100.

	Average, 1913.	Mar., 1928.	Jan., 1929.	Feb., 1929.	Mar., 1929.
European Waters	110·0	101·7	119·2	122·7	125·8
N. America	113·1	104·8	128·6	125·1	122·7
S. America.....	123·4	102·8	125·2	121·5	118·5
India	106·3	106·7	123·7	117·4	112·2
Far East and Pacific	117·4	115·1	126·2	122·0	118·3
Australia	127·9	119·3	142·4	136·2	121·1
Total	116·3	108·4	127·5	124·1	119·4

During the past month interest in the chartering market has centred on the River Plate, which absorbed a large quantity of tonnage for April-May grain loading. Else-

where demand in the homeward trades was somewhat slack, and coal freights also tended to react after their recent firmness. The month's changes in the Index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home Trade	112·8	+ 6·2	South America—Outwards	88·9	— 3·3
Bay—Outwards	135·8	+ 3·7	South America—Homewards	148·2	— 2·6
Bay—Homewards	135·5	— 4·8	India—Outwards	117·9	— 4·2
Mediterranean—Outwards	138·3	— 4·8	India—Homewards	106·5	— 6·2
Mediterranean—Homewards	107·5	+ 0·2	Far East, &c.	118·3	— 3·7
North America	122·7	— 2·4	Australia	121·1	— 15·1

Expressed as a percentage of the average for 1913, the total figure of our Index Number for March works out at 102.6, as compared with 106.7 in February, and 93.2 a year ago.

British Merchants in China.—Sir Harry Goschen's reference to China Trade, at the National Provincial Bank meeting, has provoked some comment here, writes our Hongkong correspondent. While it is recognised that the improvement in the political situation justifies renewed efforts on the part of British manufacturers, it it felt that any attempt to dispense with the sevices of foreign importers is bound to end in loss. It does not seem to be realised at home that "dealing direct with the Chinese" invariably resolves itself into dealing with unstable native concerns which perform the same functions as foreign houses, but with less reliability. Another misconception which appears to be general is the idea held by many politicians that British manufacturers are poorly represented in the China market. The fact is that scarcely a British trade or industry is unrepresented here. Most of the leading Manchester and Bradford firms have their own employees on the spot, many with permanent offices in Shanghai, and quite a large number of smaller firms have agents who visit China annually. Engineering concerns are adequately represented and many other trades have resident agents who are visited periodically by travellers. There seems, therefore, to be no ground for the belief that other countries are exploiting the China market while British manufacturers wait for business to come to them. In the recently published China report of the Department of Overseas Trade the Commercial Counsellor pays a tribute to the efficient form of selling organisation which British firms established in the Far East provide; and he goes on to suggest that "these firms are an asset which, when the time comes, will enable our people to take full advantage of the opportunities for trade which China offers to the commerce and industry of the British Empire." In the opinion of local British merchants this is the most effective reply to Sir Harry Goschen and his fellow critics.

A New Aid to Saving.—The Westminster Bank has introduced a new form of home safe for the collection of small savings. Its appearance is that of a small leather bound book, apparently with the double idea of reducing the temptation to gunmen and garrotters as the holder passes to and from the bank, and of enabling him to keep it in some handy place in his home without ostentation. The contents can only be extracted with the aid of a key in the possession of the bank, but every branch bank up and down the country has a similar key, so that the holder of the safe can pay in what he has accumulated, or draw out small sums, wherever he happens to be. Compound interest is allowed at the rate of 2½ per cent. on every 10s. saved (including the initial 5s. deposit required on the issue of the safe). A pass-book is issued at the same time, and must be produced whenever money is paid in or drawn out. "Many a mickle makes a muckle" is a sound policy for banks as well as for their customers, but it is difficult to see how such schemes as this can bring a satisfactory return to their initiators. The expenses ratio of the Post Office Savings Bank is approximately ½ per cent. on a capital sum of over £250 million. On a smaller amount, and with the expensive apparatus of keys and safes, not to mention advertisement, the ratio would be considerably higher, and the margin left for the bank could not be very large. However that may be, the value to the country of any machinery for collecting and mobilising small savings is beyond any doubt, and a healthy rivalry between the banks is not at all to be deplored.

Another American Bank Merger.—Every week makes it clear that the amalgamation movement in American banking is gathering momentum. The latest instance is the proposal of the Chase National Bank to absorb the American Express Company. The names of both institutions are almost as well known on this side of the Atlantic as they are in the United States, and so this announcement cannot fail to arouse interest. To finance the amalgamation the Chase National Bank is creating and issuing fresh shares, some of which are being offered to its own stockholders and to those in its affiliated company, Chase Securities Corporation, and the balance will be offered to stockholders of the American Express Company in exchange for their own holdings. The president of the last-named company says, "I believe that this plan is fair and equitable, and that it is in the interests of American Express shareholders to deposit their shares with the committee. Under the plan they will exchange their shares for shares of one of the largest banking organisations in the world." There is no doubt that the scheme will go through, and that it will mark one more stage in the progress of American banking rationalisation. When this process is complete it will be interesting to compare the organisation of American banking with that of Great Britain, and bankers in both countries will doubtless have much to learn from such a comparison.

Transvaal Output in March.—The output of gold of the mines of the Transvaal for March amounted to 866,529 ozs. of fine gold. For March, 1928, the output was 877,380 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1923.	1924.	1925.	1926.	1927.	1928.	1929.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	July, 1928.	Aug., 1928.	Sept., 1928.	Oct., 1928.	Nov., 1928.	Dec., 1928.	Jan., 1929.	Feb., 1929.	Mar., 1929.
Gold mines	194,584	194,788	194,936	193,147	190,870	187,970	192,526	196,150	197,646
Coal mines	16,724	16,767	16,803	16,506	16,241	16,059	15,845	15,940	16,065
Diamond mines	4,535	4,807	4,889	4,762	4,481	4,444	5,056	5,635	5,787
	215,843	216,362	216,628	214,415	211,592	208,473	213,427	217,725	219,498

There was a further increase in the number of natives employed in all branches of mining during March.

Wesleyan and General Assurance Society.—This Birmingham society occupies a place by itself in the insurance world, being the only company with a mutual constitution transacting ordinary and industrial life assurance business. The company has not overlooked its responsibilities in this connection, and early in 1928 instituted a profit-sharing scheme for its industrial branch policyholders, thus anticipating by 12 months the recent announcements of other companies working the same field, namely, the Pearl, the Britannic, and the Refuge. The 1928 report records a small advance in the premium income in both branches; but the amount of new business in the ordinary branch, namely, £969,236, shows a big decline on that for 1926, namely, £1,106,974, and the industrial branch new business is slightly larger than in the preceding year. The least favourable feature of the company's business for many years has been the expense ratio. Even in the ordinary branch an expense ratio of 17.4 per cent. is now relatively high for an ordinary-cum-industrial office, and the industrial branch expense ratio of 40.8 per cent. is a good deal higher than that of its principal competitors. Interest income was maintained at a high level last year, and worked out at the equivalent of £5 3s. 1d. per cent., compared with £5 2s. 7d. per cent. in 1927. The usual annual valuation was made, and the results of the ordinary life branch were as follows:—

	1926.	1927.	1928.
	£	£	£
Surplus earned during the year	107,550	116,700	112,911
Investments Profits realised	8,158	1,878	1,878
Transferred from Industrial Branch	...	14,800	16,600
Brought forward from previous year	38,867	48,967	69,056
	154,575	182,544	200,445
Allocations:—			
To Bonuses to Policyholders	91,208	99,188	104,555
„ Investment Reserve Fund	4,800	...	...
„ Staff Pensions Fund	9,600	14,300	21,000
„ Carried forward to next year	48,967	69,056	74,890
	154,575	182,544	200,445

The reversionary bonus in this branch has been maintained at the same rate as that for 1927, namely, 42s. per cent. simple for endowment assurances, and 48s. per cent. simple for whole life assurances. The results of the industrial life assurance branch valuation were as follows:—

	1926.	1927.	1928.
	£	£	£
Surplus earned during the year	— 14,919 (loss)	101,213	113,223
Investments profits realised	8,642	2,052	2,061
Brought forward from previous year	19,645	12,768	26,333
	13,368	116,033	141,617
Allocations:—			
To Bonuses to Policyholders	...	44,400	49,800
„ General Reserve Fund	— 15,000	...	...
„ Investment Reserve Fund	5,200	...	...
„ Staff Pension Fund	10,400	15,700	24,000
„ Bonus to outdoor staff	...	14,800	16,600
„ Ordinary Branch	...	14,800	16,600
„ Carry-forward to next year	12,768	26,333	34,617
	13,368	116,033	141,617

The profit-sharing scheme in this branch, inaugurated a year ago, provided that the distribution of the divisible profits should be made in the proportion of three-fifths to the policyholders, one-fifth to the outdoor staff, and one-fifth to the ordinary branch. The policyholders' proportion of the profits has again been applied to make premiums cease on whole-life policies in order gradually to bring existing policies into line with those offered in the company's new prospectus, wherein all premiums cease upon the attainment of age 65. This year's allocation has been sufficient to enable the directors to decide that premiums on existing policies shall cease on the attainment of age 73, provided 23 years' payments have been paid. The balance sheet contains the following note: "The values of the Stock Exchange securities are determined by the directors. Due allowance has been made for accrued interest and the book value of these securities as set forth in the balance sheet stands considerably below cost price. A careful investigation as to the actual saleable value on December 31, 1928, compared with the book value, shows that the investments reserve is more than sufficient to meet any depreciation both of permanent and terminable securities." This is a statement which might well be elucidated.

Norwich Union Fire Insurance Society.—When in 1925 the control of this Society passed from the "Phœnix" to the "Norwich Union Life," some criticism was raised on the ground that a life office—and an office based on mutual constitution—was thereby adventuring a large proportion of its funds in fire and general business with additional liabilities in the shape of the uncalled capital. At that time the capital of the "Norwich Union Fire" consisted of 44,000 shares of £25 each, with only £3 paid up per share. When the transfers intimated in the 1928 report have been carried out the amount paid up per share will be £21 10s. Thus the "Norwich Union Life" has, within the short space of three years, almost entirely removed the ground of one part of the criticism, and it seems likely that next year the remaining uncalled liability of £3 10s. per share will be wiped out. From other points of view no more natural alliance can be imagined than one between two such offices as the "Norwich Union Life" and the "Norwich Union Fire," for both of them have grown up together in Norwich with much the same title and many other points of contact. Last year's report of the "Norwich Union Fire," though on the whole satisfactory, has yielded a lower rate of profit than in any of the past four years. There has been a slight falling off in premium income in every department excepting the general department. The complete results of the past two years are shown below:—

	1927.		1928.	
	Amount.	Percentage of premium income.	Amount.	Percentage of premium income.
	£		£	
Fire	189,004	8·3	144,847	6·4
Personal Accident	— 12,235	— 9·2	3,045	2·3
Employers' Liability (at Home)	22,610	8·7	3,283	1·3
General	17,678	1·3	56,857	4·0
Marine	— 10,755	— 4·5	— 16,805	— 8·4
	206,301		191,227	
Less taxation, &c.	50,976		67,824	
Total Net Trading Surplus	£155,325		£123,403	

The dividend for the year remains at the same rate as before, namely, £6 per share, less tax, and the cost, namely, £211,200, compares with net interest earnings, after deducting debenture interest, of £181,882.

Abstainers' and General Insurance Co., Limited.—It is very seldom that the general public is afforded an insight into the type of investment favoured by life assurance companies. Very few life offices publish anything more than the Board of Trade official group classification of securities. The Abstainers' and General is one of a small number which incorporates in its annual report a complete list of its Stock Exchange Securities. It is evident from a comparison of the last two lists that in general the company pursues a policy of purchasing a security in order to hold it as an investment, for actually only one security was sold during 1928. The Stock Exchange Securities are valued in the balance sheet each year at their market values, and any appreciation or depreciation is carried direct to an investment reserve fund. Turning now to the new securities purchased last year, these appear to have been as follows:—£3,000 Doncaster Corporation 4¾ per cent. Redeemable Stock, 1948-58; £3,000 Newcastle-on-Tyne Corporation 4¾ per cent. Redeemable Stock, 1948-63; £3,000 Walsall County Boro' 4¾ per cent. Redeemable Stock, 1948-63; £2,500 Kenya Government 4½ per cent. Stock, 1950; £1,200 Newfoundland 5 per cent. Bonds, 1953; £10,000 New Zealand Government 4½ per cent. Inscribed Stock, 1947; £3,300 Tanganyika Government 4½ per cent. Guaranteed Stock, 1948-68; £5,000 Dublin Corporation 5 per cent. Inscribed Stock, 1950-70; £2,500 Chilean Government 6 per cent. Sterling Loan, 1928; £3,000 Peruvian National Loan 6 per cent. External Sinking Fund Bonds, 2nd Series; £2,500 Underground Electric Railway Co., of London, 5 per cent. First Mortgage Debenture Stock. The list is a sound one, though unexciting. The rate of interest yielded by the investment of the life assurance fund is

a high one, and worked out last year at £4 19s. 11d. per cent. net, compared with £4 17s. 10d. per cent. net in 1927, but the high interest earnings are offset to some extent by a relatively unfavourable expense ratio. In 1928 the proportion of the premium income absorbed in commission and expenses was 20.2 per cent., compared with 21 per cent. in 1927. New Life assurance business transacted amounted last year to £794,482, being a little less than the preceding year's total. The company's clientele is mainly to be found in the lower middle classes, with the result that the average sum assured for each new policy is moderate, being under £300. This, no doubt, accounts partly for the expenses being on a somewhat high level, although the amount paid in commission, as shown in the accounts, does appear to be somewhat heavy in relation to the premium income. In addition to life assurance business the company transacts a modest but prosperous and increasing fire and general insurance section. Last year the premium income from this section amounted to £35,844, compared with £32,821 in 1927. The net trading surplus from this business was £4,711, equal to the very satisfactory proportion of 13.1 per cent. of the premiums.

West of Scotland Insurance Office.—When in 1924 the Commercial Union purchased the share capital of this office, it made for itself what has turned out to be an excellent investment in a sound company. The capital consists of 50,000 shares of £5, each with £1 paid up. The purchase price paid in 1924 was £12,500 in cash and £450,000 in 5 per cent. debenture stock. The dividend for the last few years paid by the West of Scotland has required a sum of £12,000 net of income tax, but last year's dividend was doubled and cost, therefore, £24,000. Thus, on its original investment of £462,500, the Commercial Union now receives approximately £5 4s. per cent. net per annum. The greater part of the West of Scotland business is transacted in the fire department. Of the total premium income last year, amounting to £185,758, £164,000 was fire business, and £21,000 was described as accident business. The fire department yielded an underwriting profit of 11.8 per cent., compared with 12.5 per cent. in 1927, and the accident department 9.4 per cent., compared with 20.5 per cent. The total net trading surplus, after debiting income tax, &c., worked out at £15,249, compared with £26,507. As already stated, the dividend has been raised from £12,000 to £24,000, and the increased amount falls short of interest earnings by some £7,000.

Oversea Correspondence.

UNITED STATES.—MONEY—PRODUCTION—GOLD MOVEMENTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 29.

EFFORTS of the Federal Reserve Board to deprive the stock market of credit were highly successful this week. Ordinary withdrawals of funds from the call money market by the banks and corporations in preparation for month-end and quarterly settlements, involving a turnover of approximately $500,000,000 would naturally have brought a money squeeze. Recently at month-ends the call rate has risen to 10 or 12 per cent. This week, however, the member banks of the Federal Reserve system, acting on the earnest solicitation of the Federal Reserve Board, were chary about coming to the assistance of the money market. From renewal rates of 9 per cent. for call funds at the beginning of the week the rate rose swiftly to 20 per cent., was maintained for a while at 15 per cent. and finally closed at 8 per cent. Meanwhile, in an effort to escape the ruinous charges for demand funds, the stock market turned to time money, forcing the rate to 9 per cent. for early maturities. The bill market also rose another one-eighth of 1 per cent., placing discounts fully three-quarters of 1 per cent. above the Federal Reserve Bank's 5 per cent. discount rate.

These rates are the highest which the market has had to pay since the early months of 1920, when the post-war depression was making itself felt. That was a time of inflated commodity prices, swollen inventories of unsaleable goods, real estate speculation and over-extended bank credit in nearly every direction. Apart from inflation in the share market, conditions now are quite unlike those of 1920, and such abnormal rates for money obviously are due to deliberate withholding of credit by the banks.

It is true that, with the loss of $500,000,000 in gold in the past year and a half, the member banks have had to make good their reserves to a considerable extent by borrowing at the Federal Reserve. The latest statement of reporting member banks, representing about 40 per cent. of the banking resources of the country, show total loans and investments of $1,026,000,000 higher than a year ago. Investments in securities other than Government are substantially lower, and commercial loans are only moderately higher than last year, leaving virtually all the gain in loans on securities. Deposits of all kinds are down about $30,000,000, while borrowings from the Federal Reserve banks are $358,000,000 higher.

Federal Reserve concern is, of course, based on the use of Reserve credit to support the increase in member bank loans on securities. However, such borrowing has not appreciably weakened the position of the Federal Reserve banks. This week's statement reveals, in spite of month-end preparations, a reserve ratio of 71.3 per cent., as against 71.7 per cent. last week and 73.8 per cent. a year ago. Total Reserve credit outstanding is only $38,000,000 more than last week and $150,000,000 higher than a year ago, although discounts are $500,000,000 greater. The gain in discounts this week was substantial at $80,000,000, all accounted for by the New York banks, which finally came to the aid of the share market.

Whether the Federal Reserve Board's policy of starving the share market into submission will be successful still remains to be seen. A bad break in prices accompanied the rise in call money to 20 per cent., average prices of active issues going off 10 to 40 points and forced liquidation of weakly-held stock taking place all along the line.

Selling was accentuated by the fear that money might not be available at any price, but a remarkable rally began when the 20 per cent. rate brought funds in. Confidence also was largely restored by a public statement of President Charles E. Mitchell, of the National City Bank. Mr Mitchell promised to make an additional $25,000,000 available, between 15 and 20 per cent., and added that he felt his duty to prevent a panic superseded that which he owned to the Federal Reserve Board. Since Mr Mitchell is a director of the New York Federal Reserve Bank his public statement has aroused the ire of Washington politicians, and Senator Carter Glass is now asking for his resignation.

Many bankers here feel that the credit situation has been very poorly handled, and that the sharp fluctuations in money rates which threatened to bring on a stock market panic, and, as a result, to shake business confidence, are greatly to be deplored. Probably something of the sort was necessary to stop the bull market, but evidently the apprehensions of the financial authorities that the selling would get out of hand brought support which has encouraged speculative Wall Street to regard the whole episode as another "victory." At any rate, the recovery in share prices was as pronounced as the decline, and active stocks ended the week at levels virtually as high as those obtaining at the end of the previous week. At the moment the forward movement is in full swing, and the market may simply be working toward another bad break. Out of the confusion, which is now greater than ever, the only certain things are that money is bound to remain firm and that the Federal Reserve system, which was formed to stabilise money rates, has lamentably failed to do so, and also has not succeeded, so far, in halting the stock market.

No one knows what action may be taken on the discount rate, but in good banking quarters it is felt that, within a few weeks at least, the New York rate may have to go to 6 per cent., if not to reduce loans on securities, at least to bring it somewhere near the open market rates. Strong opposition to higher discount rates is still to be found, however, and probably the share market itself holds the key. Meanwhile, by arousing the whole country the Federal Reserve authorities have again laid themselves open to attack from politicians, a thing which no one wishes to see.

Looking at the business situation it is difficult to see why anyone should feel alarm. Nearly all industries have finished one of the best quarters in history. The steel industry is now operating as close to capacity as it ever has come in peace time. Prices are strengthening, and an unusually good second quarter seems assured. Motor output continues to run high, and railroad traffic is rising. Railroad earning reports for February indicate a gain in net income of around 20 per cent. Income-tax collections for the first quarter were much higher than last year. Retail and wholesale trade is increasing.

Only mild interest is taken here in the British General Electric episode. It is believed that comparatively few Americans are affected, in spite of their organised protest. The gold movement during the week was interesting as showing an additional 8½ millions from Germany, believed to have been sent in support of mark exchange, and the earmarking of an equal amount, presumably for French account. The operations suggest that the Federal Reserve is taking steps to "sterilise" incoming gold and that the French demand was not satisfied with the earmarking of around $300 million some time ago.

FRANCE.—FINANCE—CREDIT—PRICES—COLLIERY OWNERS' REPORT.

(BY OUR CORRESPONDENT.)

PARIS, April 10.

The Chambers will not meet again until early in May, after the municipal elections, and by the end of next month M Chéron has promised to have his Budget Estimates for 1930 ready for presentation to the Lower House. Like Mr Churchill's, the coming Finance Bill proposals here are expected to reveal many surprises, and among them it is possible may be the beginnings of some more or less definite scheme for removing the chaos which has prevailed for some years in regard to the incidence of many of the existing taxes. Meanwhile the general situation remains dull and vague, pending definite decisions by the experts' commission which is thrashing out the German reparations and inter-allied debt problems. Payment of the $400,000,000 due to the United States Government in liquidation of the price to be paid for the American war stocks left in Europe will fall due in the autumn, but this is exciting practically no attention here, as it is understood the Government is amply provided with resources from which to obtain the necessary cash, if a general scheme of settlement is not agreed upon before August. Silence is observed in official quarters as to whatever plan may be adopted should the necessity for payment arise. The Bank of France return, in any case, shows that that instiution is amply provided with sterling and dollars to meet the situation.

A rather belated announcement was issued semi-officially last night stating that the recent issue of 4½ per cent. Bonds (at 93½) by the Caisse d'Amortissement, which was opened on February 18th and closed on March 30th, proved a complete success. It is now announced that the total amount of Defence Bonds thus converted was frs. 5,352,000,000, or largely more than the 4,000 million officially reported at the time. The amount of Tobacco Bonds offered in exchange for the new issue was frs. 2,164,000,000, of 93 per cent. of the total outstanding. The net results of the new issue are that, although the gross total of the nation's debt burden has not been diminished by it, the immediate annual interest charge has been slightly lessened, while another substantial portion of the floating debt has been placed beyond the possibility of becoming a menace to the Treasury.

The outstanding feature of last Thursday's bank statement, which set forth the situation down to March 29th, was the revelation of a rise in the note circulation to a new high record figure of frs. 64,574,941,000, owing to the issue of frs. 1,947,743,000 of notes during the week. This was explained by an increase of frs. 1,921,212,000 in the stock of bills discounted, which were returned at frs. 6,938,457,000 as against frs. 5,017,000,000 a week earlier. Credit needs at the end of March are always exceptionally heavy, and the compensating reduction of the amount of paper currency may be expected to occur in due course. The bank continues to reduce its stock of foreign exchange, which stood on March 29th at frs. 28,910,000,000 (in foreign bills and foreign sight drafts), a reduction of frs. 122,000,000 on the week and of frs. 735,000,000 during the fortnight, most of which may probably be attributed to monetary tension abroad. During the week the Bank added a further 65 million to its stock of gold, thus bringing its metallic reserve up to frs. 34,186,500,000. The Bank's cover in gold for its note issue and other sight engagement, amounting to frs. 32,794,276,000, is returned as equivalent to 41.29 per cent. against 42.26 in the previous week and 41.36 on March 8th. The legal minimum fixed by the stabilisation law is 35 per cent.

The index figure for wholesale prices at the end of March, issued by the *Statistique Générale* (based on 100 as representing the corresponding prices in 1913) is returned at 653, or one point higher than in February and 9 points higher than in January. The figure for French products, it will be noted, has gone down a point on the month, while that for imported goods has risen by 7. The detailed figures are as follows:—

Articles.	January.	February.	March.
General index figure	45	644	652	653
French products	29	639	648	647
Imported goods	16	651	658	665
Foodstuffs (general figure) ...	20	599	611	610
Vegetable foods	8	616	629	641
Meats	8	580	590	579
Sugar, coffee, cacao	4	605	617	611
Raw materials (general figure)	25	683	687	691
Minerals and metals	7	610	627	669
Textiles	6	775	774	765
Various	12	672	672	659

The figure for retail prices in Paris is returned as 607, against 530 in January, 1928, and 592 in January, 1927.

Coal production figures for February show that the total output for the month (24 working days) was 4,188,468 tons as against 4,527,951 tons in the 26 working days of January. The average daily output was 174,519 tons (with a labour force of 297,413), as against 174,152 tons in January (with 297,058 workers employed), 170,863 tons in January, 1928 (with 316,130 workers) and 136,147 tons (with 203,208 workers) in 1913. The pits in the Nord and the Pas de Calais, thanks to their modern re-equipment and the adoption of improved methods since the war, produced in February 18,078 tons per day more than in 1913, but it is significant that in the pre-war year the workers numbered only 203,200. The output of metallurgical coke by the colliery coke plants amounted 360,182 tons during February, or 115,000 tons more than in 1913. The market is now on the whole fairly active again. Deliveries are rather hampered by the temporary lack of sufficient rolling stock, and transport cost is higher The foreign market remains firm.

The French Colliery Owners' Central Committee, in their annual report for 1928, state that during the year standard wages in the northern pits, which were brought down from frs. 39.51 per day in November, 1926, to frs. 36.91 in March, 1927, were raised again to frs. 38.50 last November. Allowance for children and production premiums, etc., brought the standard daily income up to practically frs. 50. Taking France as a whole, the average wage is now around frs. 38, and that paid to underground workers frs. 41 per day (apart from extra payments). The output per man remains still appreciably below the level attained in 1913, although during 1928 the difference was reduced by about one-half. The average output of the French miner is still 40 per cent. below that of his British fellow, who extracts 1,070 kilos a day, the Committee states, and 45 per cent. less than that of the German miner in the Ruhr, who produces 1,191 kilos. per day, notwithstanding the fact that the use of mechanical and electric power "incomparably more advanced here than in Great Britain," is equal in quality to that on the other side of the Rhine. Every ton of French coal available for sale from the pithead, the Committee asserts, represents frs. 50 in prime cost for labour, frs. 17.65 in charges

and expenditure on extra allowances and social work, frs. 9.25 in taxation, and frs. 7.45 in net dividend to shareholders. (The turnover tax no longer applies to coal, but has been replaced by a direct tax on extraction). The Committee complains that State taxation on colliery operations is now 19 times as much as in 1913.

GERMANY.—BUDGET—CREDIT—INDUSTRY—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, April 9.

FOR the first time for many years Reichstag parties have handled a Budget drastically by amending material proposals of a Finance Minister. Last week the financial experts of the Social-Democratic, Centre, German-Democratic, German People's and Bavarian People's Parties agreed upon measures for reducing to 130 million marks Dr Hilferding's deficit of 380 million marks. The result is that the officially proposed increases in the beer, inheritance and property taxes are made unnecessary. The details of the new plan have not been officially divulged, and the unofficial reports show slight disparities, but substantially the facts are: The 130 million marks deficit remaining is to be covered by collecting a supplementary property tax payment (not to be confused with the official plan to raise the rate), which was already due in 1926, of about 40 million marks, and 90 million marks will be obtained by an increase in the brandy tax rates. This last item is the only one in Dr Hilferding's scheme which is to be retained. The Reichstag parties have not yet formally approved of their financial representatives' plan, but they will almost certainly do so. The Cabinet, "in spite of certain doubts," and on the ground that the passing of the Budget will be accelerated, has already accepted the plan. Normally, this would mean a severe rebuff to the Finance Minister, who failed to find a way of reducing the deficit below 380 million marks, other than by taxation, and in whose Budget the now abandoned beer, inheritance, and property taxes were central points. But the first result was an announcement that the negotiations for formation of a "Great Coalition" Cabinet, comprising the five above-mentioned parties, would be resumed. The last negotiations, in March, failed owing to the refusal of the German People's Party to negotiate until the Budget question had been settled. To-day the Social-Democratic Party, in opposition to the other groups, decided to persist in its refusal to vote for the second instalment of the armoured cruiser now under construction; and this refusal threatens a new crisis. The Cabinet, it appears, will not resign, but the inter-party Budget agreement may be jeopardised.

The reductions in the expenditure estimates total 180 million marks. Some of the reductions have merely the character of postponements of expenditure until the next financiay year. The Ministry of Communications estimate is reduced by 48½ million marks, of which 20 million marks falls to aviation; the Ministry of Labour by 45 million marks, from a cut in the fund for productive unemployment relief; the Ministry of Defence by 27.2 million marks, of which 7.5 million marks falls to the Army and 19.7 million marks to the Navy. The remainder of the savings is in small sums, falling to nine different departments. A large part of the saving is to be attained by postponing construction works which have been planned but not begun, and the cost of these works will appear in the Budget for 1930-31. On the ground of expected increased consumption, the estimate of revenue from tobacco is raised by 35 million marks, 34 million marks additional is to come from the Reichspost's payment to the Reich, and 1 million marks additional from increase of fees under the Ministry of Justice. The plan for covering the deficit is, therefore:—

Reductions of expenditure estimates	180	million marks.
Increase of revenue estimates	70	,, ,,
Increase of spirits taxation	90	,, ,,
Property Tax retrospective payment	40	,, ,,
	380	,, ,,

The Finance Minister's return for eleven months of the financial year, ending February 28th, shows: Ordinary Budget, receipts, 8,976.8 million marks; expenditure, 9,231.6 million marks; deficit, 254.8 million marks; extraordinary Budget, receipts, 170.6 million marks; expenditure, 396.4 million marks; deficit, 225.8 million marks. Counting the credit carryover of 647.1 million marks on the ordinary Budget from the financial year 1927-28 and the carried-over deficit of 430.3 million marks on the extraordinary Budget, the excess of expenditure over revenue in the eleven months was 263.8 million marks.

After the month-end settlements, money rates remained higher for longer than usual. The day-loan rate did not fall appreciably until April 6th. This week so far day-money is plentiful. The private discount rate was reduced by ½ to 6⅜ per cent. on the 5th. The market is under the influence of the usual quarterly demand for money for income and sales tax payments.

The Reichsbank's return for March 31st showed the legal-cover exchange reserve reduced to 36 million marks; and since the beginning of February the Bank had lost nett (including the decline in its free exchange holding) some 420 million marks of gold and exchange. The new return, for the first week of April, shows a further decline of 103,177,000 marks in the gold reserve, of 2,251,000 marks in the legal-cover exchange reserve, and some 20 million marks were lost from the free-exchange holding. This is the largest loss of gold and exchange in one week so far. Circulation, which in the last week of March, rose (including Rentenmarks) by the record large sum of 828 million marks, fell in the new week by 413 million marks, and deposits increased by 190 million marks to 668 million marks. The continuing drain on the Bank's reserves is causing some nervousness, though the position is still extremely good. The ratio of reserves to circulation—58 per cent. gold, 58.8 per cent. gold and exchange together—is much higher than it was a year ago; but, should the drain continue, the rediscount rate will probably be put up. Until to-day, when the new return appeared, it was generally held that no such advance would be made unless New York gave the signal by again advancing its rate.

The wholesale-prices index number for April 3rd is 138.4, as against 138.6 on March 26th. The cost-of-living index number for March is 156.5, the highest so far. Production of coal on the Ruhr continues to increase. During the past four weeks no mining shifts have been passed. The Ruhr Syndicate's per ton assessment, which goes mainly to finance unprofitable sales in the "contested (competition) districts," has been reduced, probably only temporarily. Into this assessment fund the leading Harpener Co., as shown by its new annual report, paid nearly £650,000 in 1928. The home steel market is a little more active; the home pig-iron market dull, but export improving. Increased orders for oil pipe-line plant are reported. Export trade in wire rods is very active. The Machine-Manufacturers' Association's annual report shows that in 1928, for the first time, the value of production and of home and foreign sales of machinery exceeded the pre-war figure. The figures for 1913 in the following table are on the basis of 1925 prices:—

	1913.	1927.	1928.
	Millions of Marks.		
Production	3,850	3,400	4,000
Production capacity	3,850	5,350	5,500
Home sales	2,800	2,440	2,830
Sales to abroad	1,050	960	1.170

The price-index for machinery in 1928 was 140.9. The value of export of electro-technical articles in 1928 was 536.1 million marks, as against 441.2 million marks in 1927, an increase of 21½ per cent.; or of 62 per cent. (16 per cent. at pre-war prices) over the value of 1913. Export of lighting and power-transmission plant and of light dynamos and electro-motors increased largely. A Chemnitz firm is reported to have signed a contract for the construction of artificial silk works in Moghilew and Klin, in Russia.

The first winter-crops report shows that some damage was done in Western Germany, where the snow-covering was insufficient, but that in general the severe winter did little harm. In general, the winter-crops outlook is satisfactory, but the spring sowing will be very late.

DENMARK.—UNEMPLOYMENT—LANDMANDSBANK—DIVIDENDS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, March 22.

THE hard winter has caused serious disorganisation of Danish trade with foreign countries, but thanks to very intensive work under the extraordinary conditions—especially on the part of the United Steamship Company—the efforts to maintain export trade have been fairly successful, and it is now hoped that the difficulties have passed their climax, although the ice has not yet disappeared.

Naturally it was unavoidable that unemployment should increase owing to the cold winter. During February the percentage of unemployment increased from 27.6 to 30, while at the corresponding period of last year it was reduced from 29.6 to 25.9. The principal part of the increase was suffered by the labourers, the hard winter naturally putting obstacles in the way of outdoor work. As far as the shipping trade is concerned, a rather considerable increase in the freight rates for coal and coke from the United Kingdom was registered in February for shipments to Denmark, as well as by other easterly routes, and as a consequence the official Danish freight index showed a rise during February from 113.8 to 121.1, following upon a decline in January from 115.6. It should be remembered, however, that the ice hindrances are charging the shipping companies with considerable extraordinary expenses, and consequently the increased rates cannot be used as a gauge of the profits of the trade in a situation like the present.

Otherwise the business situation has developed along unchanged lines. The position is still viewed with some optimism, and a continued, slowly progressive development is counted upon—though the impending General Election has now brought an element of unrest into the situation. A number of company reports have confirmed the impression that progress has already been made in the course of the past financial year. In this connection it should be mentioned that the affairs of the *Landmandsbank* have been settled. In the report of the bank it is pointed out that at the end of 1928 the perfectly liquid assets of the bank amounted to about 64 per cent. and the partially liquid means to about 31 per cent. of the deposits payable at call. The State guarantee should accordingly be without interest to the depositors, and it is therefore the intention of the bank to commence a limitation of this guarantee, which, according to the Act in force, will not expire before April 1, 1932. The bank will, therefore, request all Danish depositors, except the holders of pass-book and time-deposit accounts, to resign upon the State guarantee as from July 1, 1929. And from the same date new deposits from Denmark will not be accepted under State guarantee except as pass-book or time deposits.

The United Steamship Company has declared a dividend of 6 per cent. for the year 1928, out of net profits amounting to about Kr. 5,500,000. Further, it should be mentioned that Burmeister and Wain, the great shipbuilding and machine construction concern, has declared a dividend of 8 per cent. The output in 1928 has been very considerable, the machine factory being fully employed, while the shipyards have completed a total number of 15 vessels, with an aggregate tonnage of 71,402 tons gross.

NORWAY.—MONEY—INDUSTRY—FOREIGN TRADE—STOCKS—PRICES.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, March 27.

CONDITIONS on the money market have remained practically unchanged during February and the first weeks of this month. The effects of the rise of the Bank of England rate last month have been far less pronounced than was anticipated, but this event, at any rate, frustrated any hopes that may have been cherished of a reduction of the Norwegian bank rate. Considerable uncertainty prevailed about the middle of the month, when the possibility of a further rise of the English discount rate was imminent, but since nothing to this effect has yet ensued, there should, so long as New York and other big financial centres remain passive on this point, be no reason to fear a rise of the Bank rate in Norway. The returns of the Norges Bank for the last weeks show that notes in circulation decreased during the first two weeks of the current month, after having risen by some 7 million kroner during the last week of February. Loans and advances were also reduced, while the Bank's holdings of Foreign Exchange remained practically unaltered. From the Bank return of March 22, it appears, however, that the approaching Easter holidays, coinciding with the turn of the month, have tended to a tightening of the position. Notes in circulation increased by about 5 million kroner and loans and advances by some 4 million kroner, while on the other hand Foreign Exchange holdings show an increase of nearly 8 million kroner.

Most of our big industrial concerns have now published their reports for 1928, and it appears that, generally speaking, the year has brought satisfactory results, as regards both the turnover and prices obtained. The speech delivered by Mr Hjalmar Wessel at the annual meeting of the A/S Borregaard, gives expression to a brighter view of the situation than has been the case for some years past, but at the same time he also justly points out the necessity of a strict economy and a not too liberal dividend policy. Although foreign competition is still very serious to our home industries, there is now decidedly a better tone and a growing confidence in their ability to compete favourably with foreign industries. It has recently been decided to increase by 100 per cent. the production of the new ammonia factories at Notodden. This decision, which will be carried out to its full extent in the course of next month, will mean an increase of about 4,000 tons of azote, or nearly 25,000 tons of nitrate of potash.

According to the official statistics, the value of imports during January amounted to 73.2 million kroner, while exports aggregated 60.4 million kroner. This compares with 66.8 million kroner and 49 million kroner respectively in the same month last year. The excess of imports over exports was 12.8 million kroner, against 17.7 million kroner in January, 1928. Several export groups, such as fish and herrings, paper, pulp, and timber, show considerable increases, and the better balance was chiefly due to an improvement in the value of exports in these groups. Customs duties in February were about 2 million kroner below the figure for February, 1928.

During the last few weeks there has been a considerable turnover in bonds, but prices have been influenced by the situation on the international money market, with a declining tendency. According to *Økonomisk Revue* there was a decline in prices of 0.43 per cent. from March 12 to March 19. Bank shares have not attracted special interest and prices show a slight decline. Industrials have been extremely firm, the leading features being Borregaard, Azote (Norsk Hydro) and Akers mek. Verksted. The rise in the prices of these and other industrial papers during the past year represents from 30 to 50 per cent. Shipping and whaling are steady to firm. According to the returns from the various labour exchanges at February 15 the number of unemployed shows a slight increase from the preceding month. The figure—at 24,600—compares with 28,300 in February last year and 30,800 in the same month in 1927. The official wholesale price index at March 15 is 155, which is the same as at February 15.

JUGOSLAVIA.—REFORMS—FOREIGN POLITICS—TRADE—BANK AMALGAMATIONS.

(FROM OUR CORRESPONDENT.)

BELGRADE, March 23.

The Government has published a statement of its very extensive plans for reform, which comprise several hundred laws and regulations aiming at complete unification of the country's legislation. There is no doubt

that a clean sweep of the past is intended, as the plans encompass almost every public, social and economic activity of the nation.

Hitherto the most obvious effect of the new regime has been a greater expeditiousness in administration, following upon a number of lesser reforms chiefly disciplinary in character. Bigger changes may be expected upon the introduction of the new laws proposed, which are being submitted for examination to the newly set up Supreme Legislative Council, a body composed of eminent jurists with advisory power. The most important achievements of the regime, however, may be registered in foreign politics. Thus, the opening of the Bulgarian frontier, closed for a year and a half, as well as the setting up of a joint Jugoslav-Bulgarian Commission for the clearance of a number of outstanding frontier problems are events of first significance for the betterment of relations in the Balkans. No less important are the conclusion of a convention regarding the Jugoslav free zone in the Salonica port and the Pact of Friendship envisaged between Jugoslavia and Greece. Finally, we may mention the conclusion of a commercial treaty with France, and the renewal of negotiations for a settlement of war and pre-war debts to France. For this debt, which, inclusive of interest, amounts to about 1,800 million francs, the French ask payment in gold, while the Jugoslav view regards the debt as one of paper francs. A formula of compromise is now being sought.

Trade was at a standstill during January and February in consequence of the extremely heavy snowstorms and frosts, which interrupted all communications. Fortunately, the danger of spring floods is now past, and some improvement may be expected. Last year, as was expected, concluded with a heavily adverse trade balance, which reads:—

Exports ...	1928	4,526,762 tons. 6,444·7 mill. dinars.	1927	4,251,459 tons. 6,400·1 mill. dinars.
Imports ...	1928	7,835·3 mill. dinars.		7,286·3 mill. dinars.
Deficit on balance		1,390·6 mill. dinars.		886·2 mill. dinars.

Thus, in spite of some improvement in exports, the trade balance shows a greater deficit in view of much heavier imports. Timber, including wood for fuel, claimed over 20 per cent. of the exports, while the other chief articles, in order of importance, were eggs, wheat, pigs, copper, horned cattle, hops, fresh meat, live stock, cement and prunes. Cotton textiles, yarn and raw cotton formed the chief import, with machinery, woollens, hardware, inclusive of iron and sheet iron, railway material, coffee, hides, coal and silk following.

Bank amalgamations continue, contributing towards healthier finance and business. Thus, the Jugoslavenska Union Bank, which had formerly fused with the Bosnian Bank of Sarajevo, proposes now to amalgamate with the Agrarian and Industrial Bank of Belgrade, a fusion which is to be accompanied by an increase of capital from 175 to 200 million dinars. The new shares are to be taken over by the Creditanstalt of Vienna. Later on this amalgamation would be extended so as to absorb the Credit Institution of Ljubljana, the Commercial and Industrial Bank of Novi Sad, and the Commercial and Industrial Bank "Vardar" of Skoplje. This would increase the capital to 250 million dinars, and make it the largest bank in the Kingdom. The Anglo-International Bank is reported to be interested in this fusion.

A similar fusion is pending of the Croatian Bank of a capital of 20 million dinars, in which the Banca Commerciale Italiana has considerable shares, with the Bosnian Industrial and Commercial Bank, also with a capital of 20 million dinars, part of which is invested in industry, and which was founded by the Niederosterreichische Eskompt Gesellschaft. This amalgamation would be joined later on by the Subotica Bank, which has a capital of 10 million dinars, and is connected with the Ungaro-Italiana of Budapest. The merging of these would mark a revival of interest in this country on the part of Italian capital.

FINLAND.—MONEY MARKET—TRADE AND SHIPPING—BANKING IN 1928.

(FROM OUR OWN CORRESPONDENT.)

HELSINKI, March 15.

THE considerable stringency, which made itself felt to a growing extent in the autumn, continues to characterise the money market, and we must be prepared for the fact that during the next few months the credit requirements will, as usual, be heavy, and we must not forget that the growth of deposits in the banks and other financial institutions will be considerably smaller than in preceding years, owing to last year's poor harvest and other causes.

Deposits in the Joint Stock banks in January and February only increased by 82 million marks compared with 226 millions for the same period in 1928 and 241 millions in 1927, while at the same time their credits showed an increase of 113 million marks against 396 millions last year and 140 millions in 1927. Credits were consequently appreciably less than last year. The savings banks also show signs of reduced savings. Their deposits for January and February amounted to 55 million marks, compared with 163 millions in 1928 and 117 millions in 1927. The reduction mainly affected the savings banks in the rural districts.

This state of affairs is reflected, too, in the position of the Bank of Finland. For instance, the note reserve rose from its lowest point at 209 million marks at the end of December, to 353 millions at the end of January, but fell again to 293 millions on March 8th. The bills re-discounted by the Joint Stock banks at the Bank of Finland, which amounted at the end of December to 677 million marks, attained, after some fluctuations, a level of 612 million marks on March 8th. The foreign balances also increased, according to the balance sheet of March 8th, to a higher figure than during the previous weeks.

The cold spell which recently caused so much distress in large parts of Europe, also exerted its effects clearly in Finland. Owing to the exceptional ice conditions in the southern part of the Baltic and the Danish Sounds, shipping at the Finnish winter ports was very much restricted, and foreign trade was at a standstill. About March 10th, however, there was a change in the weather with sunshine and considerable warmth.

The value of imports in February only amounted to 334 million marks, compared with 528 millions during the same month in 1928. Exports also dropped from 234 to 184 million marks. Exports suffered not only from the fact that considerable quantities of goods collected in the ports of export, incurring storage and interest charges, but also from the circumstance that, as goods could not always be delivered within the time specified, the position of Finnish exporters was weakened in foreign markets. The reduction of imports was not only a consequence of the ice conditions, but also the slower pace of economic life and the reduced purchasing power.

Figures are now available for the business of the banks during 1928, and reveal that they extended their business considerably. The total turnover of the banks increased from 540,875 million marks in 1927 to 605,445 millions last year, *i.e.*, almost 12 per cent. The joint-stock banks were able to book gross receipts last year to an amount of 1,181 million marks, which exceeded the corresponding figure for 1927 by 133 millions. The net results for last year were also satisfactory, as the net receipts amounted to 207 million marks, as against 178 millions in 1927 and 161 millions in 1926. All the banks showed profits, as a rule larger than in 1927, and several banks have raised their dividends to shareholders. The banks had to face severe competition from the savings banks and co-operative credit societies. These kept their rates on deposits higher as a rule, and thereby attracted a comparatively larger share of the fresh accumulations of savings. While the Joint Stock banks held over 64 per cent. of all deposits at the end of 1927, they received only about 33 per cent. of the new accumulations of capital deposited in financial institutions in 1928. This corresponds to what is happening in most other countries.

AUSTRALIA.—BANKS—FOREIGN TRADE—GOVERNMENT LOAN.

(FROM OUR CORRESPONDENT.)

MELBOURNE, February 28.

THE principal totals of the quarterly average returns to December 31, 1928, of the twelve ordinary banks (exclusive of the Commonwealth Bank of Australia) relating to liabilities and assets within the six Australian States and New Zealand (not including London figures) compare with those for the preceding quarter and the corresponding period of 1927 as follows:—

	Dec. 31, 1927.	Sept. 30, 1928.	Dec. 31, 1928.
Deposits:	£	£	£
Australia	265,263,262	268,798,215	277,059,038
New Zealand	47,475,991	54,224,705	53,732,096
Total deposits	312,739,253	323,022,920	330,791,134
Advances and Securities:			
Australia	249,303,081	252,086,340	260,497,024
New Zealand	55,593,213	51,040,268	54,065,917
	304,896,294	303,126,608	314,562,941
Coin and bullion (Australia and N.Z.)	33,880,137	33,159,952	33,144,738
Australian Notes and cash with Commonwealth Bank	26,562,621	23,802,751	27,256,888
Legal Tender Notes of other banks (New Zealand only)	207,020	79,252	74,559
	60,649,778	57,041,955	60,476,185

The Australian figures show, as compared with twelve months ago, an increase of £11,795,776 in deposits and an increase of £11,193,943 in advances and securities. The increase in Government and municipal securities held in Australia is £7,250,047, as the result of support given to Commonwealth conversion loans, and the increase in advances alone is therefore £3,943,896. The New Zealand figures show an increase of £6,256,105 in deposits and a decrease of £1,527,296 in advances and securities for the year. The increases in deposits have been mainly in fixed deposits, the proportion of which to the total is now higher than for a number of years past.

The principal averages (within the six Australian States) of the Commonwealth Bank of Australia, not included in the above, compare as follows:—

	Dec. 31, 1927.	Sept. 30, 1928.	Dec. 31, 1928.
	£	£	£
Deposits	25,703,194	29,031,444	25,577,042
Balances due to other banks	10,606,769	9,711,992	12,497,905
Advances and short-term loans	21,621,802	16,204,213	16,345,423
Securities	53,810,945	12,393,405	11,370,697
Coin and bullion	901,493	861,993	660,623
Australian Notes	5,994,920	4,595,743	3,688,011
Balances due from other banks	101,107	94,924	84,949

The decrease of £5,276,379 in advances of the Commonwealth Bank for the year is mainly in short-term loans in Australia, which have declined from £6,824,135 for the December quarter, 1927, to £1,862,932 for the December quarter, 1928. The large decrease in securities is due to the separation of the Savings Bank Department.

An unofficial compilation of Australian trade statistics for 1928 (based upon the monthly official statements) shows totals comparing with those for 1927 as follows:—

	1927.	1928.	Increase (+) or Decrease (−).
Imports:	£	£	£
Merchandise	160,967,513	139,074,659	− 21,892,854
Gold	680,122	889,990	+ 209,868
Total imports	161,647,635	139,964,649	− 21,682,986
Exports:			
Merchandise	141,451,752	136,557,785	− 4,893,967
Gold	4,971,831	2,021,361	− 2,950,470
Total exports	146,423,583	138,579,146	− 7,844,437

Although imports have decreased by over 21 millions, there is still an excess of total imports over total exports of £1,385,503, and as the payments to be made abroad for interest and services are now estimated at over 33 millions per annum, the basis for balancing the account is to be found in capital movements to Australia in the form of public borrowings and private investments. Exports include half of the wool and butter export seasons, but the quantity of wool awaiting disposal in Australia was larger at the end of 1928 than at the end of 1927, and this, together with the larger quantity of wheat available from the excellent harvest, will help to swell Australian exports during the first half of 1929. The wheat harvest is not far short of 160 million bushels, while the exports from the beginning of December, 1928, to February 21, 1929 (including flour at the equivalent in wheat) amount to 40,815,435 bushels, against 17,720,207 bushels for the corresponding period of last season. The greater proportion of this season's shipments is for India and other destinations outside Europe, and this has given the Australian wheat growers an appreciably better return than if Europe had had to be depended upon to the usual extent, the difference in this respect being reckoned by high authority at fully 5d. per bushel.

Amongst the principal exports during 1928 are wool and tops £61,234,788, against £63,745,870 for 1927; wheat and flour, £21,117,405, against £28,902,617; butter, £7,941,714, against £5,369,826; frozen beef, £2,748,376, against £1,840,012; sugar, £5,461,489, against £3,383,233; hides and skins, £9,582,300, against £9,531,080; and lead, £3,159,640, against £3,538,338.

The Commonwealth Government is now offering locally on behalf of the States a 5½ per cent. loan, to mature July 15, 1939, for £7,000,000 at par, the proceeds being for State public works and for redemption purposes.

JAPAN.—TARIFF REVISION—TRADE BALANCE—BANK FIGURES.

(FROM OUR CORRESPONDENT.)

TOKIO, March 11.

A TARIFF REVISION BILL has been introduced into the Diet, and is now in the committee stage in the Lower House, proposing to increase the duty on timber, together with some modifications of the rates on dyestuff intermediates, glazed or mercerised cotton yarns, and pianos. Under the proposed measure the timber duty will be increased by 13 per cent. on the average, ranging from yen 1.20 to yen 6.25 per cubic metre. Another tariff bill has just been presented to the Diet for repealing or modifying in part the 100 per cent. *ad valorem* duties, or what are known as the luxury duties.

According to the tentative estimates of the balance of trade in 1927, lately published by the Treasury, Japan owed 139.8 million yen, against 301.9 millions in 1926, in her international payments. While the import excess of merchandise and net payments abroad by the Government totalled 393.7 million yen, or 156.3 millions less than in 1926, the official estimates of invisible exports were put at 253.8 millions, or 5.7 millions higher. Invisible items, on balance, are set out below in comparison with the preceding year:—

THE OFFICIAL CALCULATION OF INTERNATIONAL PAYMENTS IN 1926 AND 1927

(in million yen).

Particulars.	1927.	1926.
Excess of imports of merchandise (including that of Korea, Formosa, and South Seas Islands)	289	442
Net Government's payment made abroad	104·7	108
Total	393·7	550
Net income from overseas investments and business	45·1	47·7
Net national shipping income	132·5	125
Emigrants' remittance	41·3	39·9
Foreign tourists' expenditure, &c.	22·8	22·7
Others	12·1	12·7
Total	253·8	248
Excess of expenditure over income	139·8	301·9

Except the Mitsubishi, all the Japanese joint-stock banks have now published their reports for the December half-year, which again make poor showing. Among

the big banks, the outstanding feature is a decline of nearly two million yen in net profits shown by the Mitsui Bank. Other leading banks in Tokio and Osaka, except the Yasuda, generally recorded decreased earnings. The reduction in profits is obviously ascribed to easier money and lower money rates ruling during the last six months of 1928. But the customary rates of dividend were maintained in all cases. Of the two colonial banks, the Bank of Chosen registered a fairly larger profit of 850,000 yen, and paid a regular 4 per cent. dividend, while the Bank of Taiwan earned for the first time since the consolidation a tolerably good profit of 434,000 yen, which was allocated to make good the loss brought forward from the preceding years.

The trade returns for February show that imports totalled 237,231,000 yen, and exports 146,393,000 yen, the excess of imports over exports amounting to 90,838,000 yen, the largest adverse balance since March, 1926. As compared with the corresponding month of last year, imports rose by 36 million yen, while exports fell by 14 millions, the import excess being thus 50 millions higher. The increase in imports is mainly accounted for by raw cotton, while cotton manufactures are largely responsible for the decline in exports.

Books and Publications.

TRADE AND CREDIT.*

Mr. Hawtrey is always stimulating and interesting, and this book will please his many admirers, though it seems to be a collection of essays written on and for different occasions, only two of which have not been published before. But he is quite justified in claiming in his preface, that these essays "possess sufficient unity of subject to form a volume"—the first three are concerned with the machinery of credit in relation to trade, and the other five with the relation of credit to productive activity, and more particularly to the trade cycle, expounding and defending the author's well-known conviction that the latter is a purely monetary phenomenon. Such a book is necessarily difficult to review, and on every page Mr Hawtrey is so suggestive (and often also so puzzling) that only a piecemeal method can be applied. There are many apparent inconsistencies which the writer would probably explain quite simply if he could sit by every reader, but may bewilder the latter in the absence of this arrangement. For instance, in the chapter on "What is Finance?" it is stated that "to value a thing, we must assume it to be sold (actually or hypothetically). It must be sold at a price. The price simply states the debt which will be incurred by the buyer to the seller." But if the article is sold at a price it seems to follow that the price is paid, and if so where and how does the question of a debt arise? And later on, it is said that the valuation in a balance sheet "will be based partly on cost (less depreciation) and partly on the expectation of a profit. To an outside critic the expectation of profit is a matter of opinion." Must it not be so necessarily to everybody? And what would a company's auditors say, if the directors proposed to write up their assets because they had reason to expect that they were going to make bigger profits next year? And here is another dark saying that seems likely to puzzle a student—"the art of finance is summed up in the single aim of maintaining the cash balance." This may be the single aim of the art of finance, as defined by Mr Hawtrey as the "Art of providing the means of payment," but is it business? Surely it is very often the ambition of shrewd business men to work with a small cash balance, or, better still, with a cash balance that is a minus quantity. If one looks at the balance sheet of an active trust company—and trust companies are the practical embodiment of what most people mean by Finance—one is pretty sure to find a very small cash balance among the assets, and a far bigger loan from bankers among the liabilities. That of the British Combined Trust, for instance, which has lately appeared, shows Cash at Bankers £30, and loans from bankers, £118,000 odd; and this is as it should be, for trust companies, like most other live businesses, can earn more on borrowed money than they pay for the use of it. And Mr Hawtrey himself sees that a cash balance is bad finance, for in the next sentence but one, after saying that the art of finance is summed up in the single aim of maintaining the cash balance, he tells his readers that the said art "includes methods of using a cash balance, because the accumulation of idle cash is merely a wasteful method of providing money when required." But is it possible at the same time to maintain and to use a cash balance? Many people would like to know how to do it.

WAR AS AN INSTRUMENT OF NATIONAL POLICY

and its Renunciation in the Pact of Paris

By JAMES T. SHOTWELL,
Professor of History at Columbia University.

Times Lit. Supp.: "Dr. Shotwell writes with peculiar authority, since he himself took a leading part in the movement in the United States, which, in little more than a year, led to the multilateral treaty renouncing war. His account of this movement is of great interest, if only for the light it throws on the methods by which the American public is gradually being educated to some appreciation of the problems of the outside world."

With an Introduction by Professor GILBERT MURRAY.

A MAN WORTH KNOWING.*

Many people read novels chiefly for the pleasure of knowing the personalities they meet in them. To those of us who read slowly, closing a novel that we have just finished is like seeing off friends at the station after a long visit, and leaves us melancholy. But these characters in fiction whom we learn to regard as friends are the creations of artists; it is very unusual for an autobiography of an individual who makes no particular claim to literary art to leave us with the feeling of having spent long evenings in the presence of a man whom it was a joy to know. Sir Edmund Hornby must have been a rapid, excited, endlessly entertaining talker, and he writes as he would talk, with scant regard for grammar or style, but with a vividness that many a self-conscious stylist would give his ears to be able to imitate. Whether he is decribing a mountain journey in Japan, when the reader is made to feel himself in the midst of a scene of exquisite beauty, or relating in half a dozen lines how he fished an unknown young lady out of the Thames by her crinoline, "and being a girl of pluck I had little difficulty in getting her ashore, and as I felt pretty confident I could earn my bread and cheese married her and settled down in a cottage at Weybridge"—he always shows that same power of standing aside and with an absolute minimum of words putting the reader in a position to see or feel or experience the thing for himself.

The book is full of racy anecdotes, one of the most delightful being the story of how the author as a boy, outraged by the indifference with which the clerks in Rothschild's Bank treated a cheque for what seemed to him untold wealth, conceived the suspicion that the institution was on the verge of insolvency, and blundering unnoticed into the room of a superior officer, generously offered to wait for the bulk of the money if he could have £10 down. The superior officer, who was no less than Rothschild himself, had a sense of humour and played up with perfect solemnity. The result was a practical joke of "Arabian Nights" splendour, the account of

* "Sir Edmund Hornby: An Autobiography." (London) Constable and Co., Limited, Orange Street. 18s. net.

which must be read in Sir Edmund Hornby's own words to be fully enjoyed.

In the course of his work, first in the diplomatic service and subsequently as a judge, Sir Edmund became intimately acquainted with a wide range of countries both in the Near and the Far East, and as he evidently had the gift of winning the confidence of all with whom he came into contact, his observations, gloriously sweeping and uncompromising though they generally are, are always worth hearing. His views on foreign policy would probably startle historians, but he must have increased the popular respect for British justice wherever he went. Intolerant he certainly was, and intolerant above all of any form of cruelty and injustice, but his judgments, though sometimes merciless, were always free from prejudice. Indeed, the great charm of the man and the book is that everything about him is free from prejudice; he may—though he seldom does—seem harsh, and he sometimes seems wrong, but always his ideas and his actions are the direct, uninfluenced offspring of a mind bubbling over with human kindness and vitality.

ETHICS AND ECONOMICS.*

Father Watt has made a courageous attempt to appraise our economic structure in the light of the moral law; and the modesty of his preface almost disarms the criticism that he has left his subject much where he found it. He is convinced that employers should deal with their workers on terms dictated by the requirements of private morality, and he believes that those aspects of capitalism which appear to conflict with such requirements are capable of correction within the framework of the present economic system. There is little in the book which excites challenge, apart from the curious confusion of thought which leads its author to oppose family allowances with the naïve assumption that the "natural value" of male labour is "a sufficiency of commodities to enable the worker to discharge fundamental moral duties," *i.e.*, the duty of parenthood. This "natural value" is somewhat arbitrarily identified with the worker's moral right, irrespective of whether he is a parent or not. But no respect is paid to the practical question of whether in fact the general level of wages can be so drawn as to correspond with any such "natural value" or moral right. We are tempted to suggest that the real line of advance towards a moral critique of our present economic system lies along the lines of an examination of motive, and the reaction to motive, and that it should be conducted with continuous reference to the familiar petition: "Lead us not into temptation."

The Stock Exchange.

TOBACCO COMPANIES.

The reasons for the sustained popularity of tobacco company shares are not far to seek. Taken by and large, tobacco is probably the most prosperous industry in the whole of Great Britain to-day, economic depression and increased taxation apparently being alike powerless to arrest its progress. The Chancellor of the Exchequer now draws some £58 million a year from the industry (as compared with £18 million in 1913-14), but the tobacco companies have nevertheless increased their profits to a striking extent since the war. The 1928 earnings of the Imperial Tobacco Company, for instance, were 310 per cent. of those of 1913, the earnings of the British American Tobacco Company 303 per cent., and those of Carreras no less than 2,840 per cent.

One cause of this enviable state of affairs has been the tapping of a market largely unexplored before the war; another, the definite shifting of public taste from lower to higher-priced products. The growth of smoking among women and the ground gained by the cigarette at the expense of the pipe are strikingly exemplified in the last production census figures, which show that, as between 1907 and 1924, the British output of cigarettes rose from 267,000 cwt. to 823,000 cwt., while that of pipe tobacco declined from 627,000 cwt. to 464,000 cwt. Another reason for the prosperity of the trade may be sought in the increased efficiency and the effective sales policy of the companies concerned, which increased the volume of their output, in the seventeen years ended 1924, by 40 per cent., while their labour force increased by only 3 per cent. Competition between the "combine" and the "independents" continues to be a feature of the industry, but it is waged on the *terrain* of quality and advertising, not, as a rule, of prices. The extent, indeed, to which the industry, in its *rôle* of advertiser, assists the average reader of the British press to obtain his morning journal at approximately half its cost price, may be tacitly criticised by tobacco shareholders, but its real explanation is the rooted prejudice of the British smoker for his favourite brand—a condition which makes his suffrage rather costly to obtain in the first place, but is a tower of strength to the companies once that stage has been passed. The same feature, incidentally, explains why the smaller concerns, manufacturing a few favourite brands, are able comfortably to maintain their position alongside the giants of the industry. As far back as 1901, when the Imperial Company was formed, as many as 20,000 brands of tobacco products were sold in Great Britain, and the total is not less to-day.

The attraction of tobacco company securities for the investor, in short, is bound up with the high "inelasticity of demand" for the commodity, i.e., the small extent to which increased prices have checked, or are likely to check, the growth of consumption—and the strongly organised position of the industry itself. The latter factor is apparent in the recent results of the leading concerns, summarised in the table in the preceding column, which includes figures for two "combine" companies and two of the outstanding "independent" concerns.

Both large and small companies show a liquid position, and a high rate of earnings in proportion to their issued capital. Conservatism in the matter of dividend distribution is particularly well marked in the case of the "independent" concerns, so that Carreras, for instance, despite repeated bonuses to shareholders, still has visible reserves significantly in excess of its paid-up capital. The large companies have, as is well known, considerable "secret" reserves, at the dimensions of which the investor can do no more than wildly guess, the inscrutability of directorial policy being proverbial in the case of these concerns. The smaller firms have been more visibly affected than the larger by recent increases in the tobacco duty, especially that of 8d. a pound last year. Carreras had an increased turnover in 1928, but, as the chairman remarked with some pathos at the last meeting, "the Chancellor of the Exchequer reaped the reward of the extra business, instead of the shareholders." The extent to which Godfrey Phillips was affected by the same cause last year will be apparent from the accounts, which are due in the very near future.

Since the issue of the latest balance sheets, noteworthy changes have occurred in the capital structure of three of the four companies in the list. Carreras has celebrated its removal into a new "model" factory by an ordinary share bonus issue equivalent to 1 in 4—the fourth capitalised bonus since 1924. The growth of this concern on the profit-earning side has been phenomenal, profits in the 25 years of its existence having been, on the average, as follows: first quinquennium, £18,132; second, £29,320; third, £77,636; fourth, £101,512; fifth, £939,862. The Imperial (of Great Britain and Ireland) announced, in January last, a capitalised ordinary share bonus of 25 per cent., approximately three months after the British American Tobacco Company had formed a subsidiary—the Tobacco Securities Trust Company—to take over certain of its interests whose extent and nature were not disclosed. Most shareholders have probably forgotten the "tobacco war" of 1901-02, but that short and sharp struggle left a permanent impression on the world's tobacco trade, and an understanding of its results is essential to a true appreciation of recent events. It was the threat of the American Tobacco Company, in September, 1901, to spend £6,000,000 in capturing the British and European markets, which led twelve well-known British tobacco firms to combine, under the leadership of the Wills interests, to form the Imperial Company, with an issued capital of £14,518,097 (of which goodwill, trade marks, brands, etc., accounted for £8,518,097).* The total purchase price of the merging concerns was £11,957,022. Various other interests have since been acquired (including a one-third holding in British American Tobacco, referred to below), and the earning power of the combine has, of course, risen very considerably, so that the 1928 balance sheet figure of £8,811,034 for investments in associated companies con-

* For Godfrey Phillips, Dec. 31, 1927. † On increased capital.
(a) Increased subsequently to £37,439,621 by capitalisation of reserves. (b) Increased subsequently to £1,406,250, by capitalised bonus. (c) In arriving at these figures, an item "Creditors, Provision for Taxation . . . Amounts set aside for Contingencies . . . Employees' Liability and Other Funds," has been counted among "Floating Liabilities." Of the reserves shown above, approximately £7,500,000 has been capitalised and distributed to the ordinary shareholders. (d) £281,250 has since been capitalised.

*The firms concerned were: W. D. and H. O. Wills, Franklyn Davey, and Edwards, Ringer and Bigg (of Bristol); Lambert and Butler, Adkin and Son, and Hignetts (of London); John Player and Sons (of Nottingham); Hignett Bros., and William Clarke and Son (of Liverpool); and Stephen Mitchell, F. and J. Smith, and D. and J. Macdonald (of Glasgow).

tains a "hidden reserve" of unusually large proportions. The "war" between Imperial Tobacco and American Tobacco resulted, in September, 1902, in a compromise under which the two protagonists were left in undisturbed possession of their respective home markets, while the potentialities of the rest of the world were to be developed by a joint concern, the British American Tobacco, in which Imperial Tobacco took a one-third interest. This agreement—which anticipated by a quarter of a century the proposals for "rationalisation" and "international division of markets," about which so much is being heard to-day—has proved durable to a degree. If the Imperial still holds its one-third interest in the B.A.T., something like 20 per cent. of its current profits would seem to be derived from that one investment(i.e., from its share of the tobacco export business), and the shares of the newly-created Tobacco Securities Trust, which it has recently received from the B.A.T., should have a market value of something like £5,000,000.

The recent course of Stock Exchange values, and the present yield on the various securities of the four companies, are shown in the attached table:—

† Tax deducted. (a) Assuming a 21⅛ per cent. dividend. (b) On increased capital.

Despite the moderate price reaction of the last few weeks, the dividend yield on tobacco shares is modest—a fact reflecting their investment popularity and also, in the case of three of the four concerns, the quotation of the ordinary shares on the New York Curb market. For the long-term investor, however, the yield on earnings, shown in the final column, is a more trustworthy guide than the yield on present dividends. In calculating the latter, a hypothetical 21⅛ per cent. distribution has been allowed for on Imperial Tobacco ordinary, on the supposition that the company will increase its earnings this year by the same average amount as in the past four years, and will distribute the same proportion of the whole in dividends on its increased capital.

Tobacco shareholders are naturally awaiting next week's Budget speech with keen interest. Of recent years the Chancellor has not been prone to treat the industry with undue tenderness, but with an election looming near, some concession to tobacco consumers is being canvassed by the more optimistic prophets. The prospects of the forthcoming Budget have been discussed in recent articles in the *Economist*, which have suggested that the Chancellor, with the best will in the world, will have but a limited scope for significant reductions in taxation. In the light of past experience, however, the investor would be well advised to base his judgment as to the merits of tobacco shares, at their present prices, on the outlook for the continued popularity of the industry's products, and the substantial financial position of the leading company, rather than on extraneous assistance which may or may not be forthcoming.

THE CABLE-WIRELESS MERGER.

The terms of the cable-wireless merger have been made public this week. Cables and Wireless, Limited, is the name of the Company formed to take over the ordinary share capital of the Eastern Telegraph, Eastern Extension, and Western Telegraph group, and the shares of the Marconi Wireless Telegraph Company. Lord Inverforth is its first President, and its managing directors are Mr Denison-Pender and Mr. Kellaway. The Imperial and International Communications, Limited, is the name of the "communications company" formed to acquire the communication assets of the merger companies, together with the obligations and liabilities of the Pacific Cable Board, including the West Indian Cable and Wireless system, together with the Imperial transatlantic cables operated by the Post Office and the Empire Beam wireless services. Sir Basil Blackett is to be the first chairman of the Communications Company and Mr Denison-Pender and Mr. Kellaway are again managing directors.

The official announcement contained the terms of the offer of shares in Cables and Wireless, Limited, to ordinary shareholders of the cable companies and the shareholders of Marconi, but, unfortunately, did not specify the terms on which the communication assets of the Cable companies and Marconi were being acquired by Imperial and International Communications. It may be stated at the outset that the share exchange appeared satisfactory to the ordinary shareholders of the Cable Companies, and the 10s. ordinary shareholders of the Marconi Company, but unsatisfactory to the £1 preference and ordinary shareholders of Marconi. These last are not being offered twice as much as the 10s. ordinary Marconi shareholders. Until the terms are known on which the communications assets of the Cable and Marconi Companies are being acquired by Imperial and International Communications, it will not be possible for the £1 shareholders in Marconi to decide definitely whether they should refuse the offer or not, but they have lost no time in protesting against the terms. The details of the offer of exchange are as follows:—

Holdings in the Cable Companies or the Marconi Company.	Amounts (in nominal value) of fully-paid shares in Cables and Wireless, Limited, to be issued in exchange.
AS REGARDS THE THREE CABLE COMPANIES.	
For each £100 (nominal value) of ordinary stock in Eastern Telegraph, or Each £100 (nominal value) of Ordinary shares of £10 each in Eastern Extension—that is, ten shares—or Each £100 (nominal value) of Ordinary shares of £10 each in Western Telegraph—that is, 10 shares.	£165 of 5½ per cent. £1 cumulative preference, £108 18s. of 7½ per cent. £1 non-cumulative "A" ordinary and £26 of "B" £1 ordinary.
AS REGARDS MARCONI'S WIRELESS TELEGRAPH COMPANY.	
For each £100 (nominal value) of 7 per cent. cumulative participating preference of £1 each—that is, 100 shares.	£131 10s. of 5½ per cent. £1 cumulative preference. £205 8s. of 7½ per cent. £1 non-cumulative "A" Ordinary and £150 5s. of "B" £1 ordinary.
Each £100 (nominal value) of ordinary of £1 each—that is, 100 shares.	£131 10s. of 5½ per cent. £1 cumulative preference. £205 8s. of 7½ per cent. £1 non-cumulative "A" ordinary, and £150 5s. of "B" £1 ordinary.
Each £50 (nominal value) of ordinary of 10s. each—that is, 100 shares.	£81 10s. of 5½ per cent. £1 cumulative preference. £205 8s. of 7½ per cent. £1 non-cumulative "A" Ordinary, and £150 5s. of "B" £1 ordinary.

It will be seen that the only distinction which is being made between the £1 ordinary and preference shares and the 10s. ordinary shares of Marconi is that the former are offered 10s. more per share than the latter of the 5½ per cent. cumulative preference shares of Cables and Wireless, Limited, the proportions as regards equity-carrying stock being identical. In the *Economist* of October 20, 1928, we went into the position of the £1 Marconi shareholders at some length. The legal position, in the event of a liquidation, is that, after repayment of the preference capital and the amount of capital paid up on the £1 and 10s. ordinary shares, the surplus is divided among the preference and ordinary shareholders in proportion to the *nominal amount* of their shares, not according to the *number* of shares. In other words, each £1 share would get twice as much as each 10s. share. This legal status is recognised by the directors in the payment of dividends, because the amount of dividend on a £1 share is twice as large as that on a 10s. share. Yet the legal position between these £1 and 10s. shares is apparently ignored altogether in the offer of shares in Cables and Wireless.

Taking the shares of Cables and Wireless at their par values it is interesting to compare the equivalent values of the ordinary stocks of the cable companies and the shares of Marconi with their present market values:—

	Present Market Price.	Price Equivalent at Par in Cables and Wireless, Ltd.
Eastern £100 stock.....	£285	£299 18 0
Eastern Extension £10 shares	28⅛	29 19 9
Western £10 shares	28⅛	29 19 9
Marconi £1 pref. shares.....	5	4 17 5
Marconi £1 ord. shares.....	5	4 17 5
Marconi 10s. ord. shares	4¼	4 7 5

The market is apparently discounting already quotations for the Cables and Wireless shares at about par. Let us see how far this attitude is reasonable. The capital of Cables and Wireless, assuming the exchange of shares is carried out, will be as follows:—

£23,500,000 in 5½% cumulative preference shares of £1.
21,200,000 in 7½% non-cumulative "A" ordinary shares of £1.
9,000,000 in "B" ordinary shares of £1.

£53,700,000

The revenue of Cables and Wireless has been estimated as follows:—

Income from Imperial and International Communications	£1,865,000
Income from gilt-edged and non-traffic investments of Cable Companies	750,000
Income from Marconi patent and manufacturing rights	750,000
	£3,365,000

The estimates of revenue from the investments of the Cable Companies and from the manufacturing business of Marconi are of the order of intelligent guesses, but it is interesting to observe that a total revenue of £3,365,000 would enable Cables and Wireless to pay its preference dividends, 7¼ per cent. on its "A" ordinary shares and 5 per cent. on its "B" ordinary shares. Hence, it is suggested that the market will begin to deal in the "B" ordinary shares at something approaching par. It is even hinted that New York, when it is in a happier frame of mind, will take an interest in the "B" shares. Prudence, however, suggest that the new company is not likely to start paying dividends on its "B" shares until it has created reserves and provided for capital developments. In view of the possibilities of American interest in the shares of Cables and Wireless, it should be added that the articles of association provide that not more than 25 per cent. of the issued shares of any class in that company may be held by or on behalf of foreigners or foreign corporations.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 22.	April 24.

A THIRTEEN-DAYS' account opened quietly on Monday morning, nor did any renewal of outside interest appear as the days went on. Undoubtedly, the chief interest of the week was provided by the publication of the Marconi and cable merger terms, discussed above, after hours on Tuesday night. A heavy slump in the price of copper caused considerable downward movements in base metal shares, but elsewhere little occurred to affect market sentiment. The Budget falls within the present Account.

Gilt-edged stocks were on the rise at the beginning of the week, but though the Bank further strengthened its gold reserves on Monday and Tuesday, it would be incorrect to interpret this strength of the stock market as a true indication of a clearer monetary outlook. The market was short of stock, prices having gone recently below the level at which the banks would continue to sell. Then the regular investment demand brought prices up again, until, by Wednesday, the large holders were beginning to offer stock again. The market for short-dated bonds, which had fallen to unnecessarily low prices, was, in fact, a more genuinely firm one than that for the long-term stocks. The Four and a Half per Cent. Treasury Bonds are receiving attention for the sake of the conversion rights they carry; these being exercisable in July, they provide a safe holding over the General Election. Dealings in

Dominion and Colonial stocks were on a somewhat increased scale, in a firm market.

Business in foreign bonds tended to tail off as the week progressed, and movements in quotations were inconsiderable. German Seven per Cents. were strong, and French loans inclined to weaken on unofficial Reparation Conference reports of approaching agreement on the basis of a scaling-down of Allied claims. Turkish Unified was quoted *ex* dividend, for the first time for six-and-a-half years, the coupon being valued at 13s. 4d. gross and 10s. 6d. net. San Paulo Coffee bonds were inquired for. Chinese and Japanese were steady, without attracting appreciable investment interest.

Home Rails were still a narrow market, and showed characteristically wide variations in response to day-to-day changes in sentiment. The tone as a whole was a shade firmer than last week, despite numerous setbacks, but signs of real and permanent improvement were still to seek. The traffic returns for Easter week belied the promise of the Good Friday week figures, leaving two of the group lines with a deficiency in receipts over the whole Easter holiday, as compared with last year's figures. The London group stocks continued to attract little or no public attention. Foreign Rails were quiet, but firmer whenever business was done. The Argentine lines hardened slightly on favourable traffic figures, while Leopoldina, among Brazilians, reflected optimistic dividend anticipations. Canadian Pacifics were out of favour, but lost only a few points.

The cable-wireless merger terms overshadowed all else in interest in the industrial markets. Cable shares further appreciated after the announcement, but Marconi's, which had been actively supported early in the week, reacted considerably. The existence of a bull account in the 10s. ordinary was confirmed after the publication of the fusion terms, while the prospect of litigation by dissatisfied £1 shareholders acted as a further damper on speculative exuberance. United Molasses were a centre of activity, following the report (dealt with in a later "Investment Note"), and the new capital proposals. The market was puzzled, and somewhat disturbed, by the very large capital increase foreshadowed in the annual report of Imperial Chemicals (also discussed on a later page). Gramophone shares were the sport of fluctuating New York sentiment, being weaker after official hours on Tuesday, but strengthening the following day. International Nickel showed parallel fluctuations for similar reasons. Match shares were dull again, despite the satisfactory 1928 profits revealed by Swedish Match. Nervousness was still in evidence regarding the Dunlop dividend. No great interest was taken in rayon shares—apart from Listers and American Celanese, which strengthened after the New York meeting. Hudson's Bays continued to gain ground with each week bringing nearer the annual report. Cunards had a slight recovery, shipping shares as a whole being more active than last week. Variations in tobacco shares were of narrow dimensions, but a moderate amount of buying gave a firm appearance to brewery shares. The banking and insurance sections were entirely featureless.

The erratic course of crude rubber prices failed to reproduce itself in the share market, which has now settled down to its wonted idleness. The tea auctions, however, revealed a steady demand after the Easter suspension, and investment buying caused a fresh strengthening of share values, both in the heavy and the low-priced groups. Quiet conditions continued to rule in the oil share market, in the absence of French or American support. No extensive changes were marked, but all the leaders were easier, Shells, possibly, being the least affected.

The prevailing dullness was particularly noteworthy in the mining markets, the favourable Rand gold returns for March being powerless to stimulate Kaffirs into even the semblance of activity. Union Corporation alone stood out after the publication of the increased profit figures of 1928 (discussed in a subsequent "Investment Note"). The Rhodesian market did not escape the influence of the break in copper prices, or the uncertain tone of New York. Tuesday was a particularly quiet day, but "shop" intervention, *inter alia*, produced a certain hardening the next day. No great disposition to sell copper-producers' shares was observable, but marking-down was adopted as a defensive measure. The Rio Tinto final dividend (making 40s. for 1928, against 50s. for 1927) was in accordance with expectation. The tin share market—which has been mainly professional for some weeks past—was weak on the drop in the price of the metal, the Anglo-Oriental group showing considerable irregularity. Patino was heavily sold, despite the unchanged dividend of 4s., which raised the total distribution for 1928 to 12s.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Public interest in share markets has reached a very low ebb, the volume of transactions averaging only three million shares daily, which is about half the recent rate. The liquidation of holdings by manipulation on margins continues, and brokers' loans are being gradually reduced. This week they fell another $135 million, bringing the three weeks' fall up to $266 million. Late in the week an oversold condition developed, and a feeling that the credit outlook had somewhat improved resulted in a professional attempt to force up prices; most sections of the market rallied briskly. Copper shares rose on the belief that the decline in the price of the metal had come to an end, but oils were a sluggish market, thanks to the Hoover Administration's opposition to the restriction scheme. Rails were quiet, the only feature being a sharp break in local tractions on the announcement of the decision of the Supreme Court in the New York "seven cent fare" case. Fixed interest securities have been slightly weaker and interest is dormant. Trading in shares is now largely professional, and there is little attention to anything but opportunities for quick profits.

PARIS.

The scarcity of funds at the disposition of the market inevitably restricted the activity of business. On the other hand, at no time was the tendency really bad. Oil shares lost the whole of their recent gains, and coppers suffered a serious fall on the heavy reaction in the price of the metal, while Rio Tinto was additionally affected beforehand by uncertainty about the final dividend. French stocks, however, have hardly been influenced by the set-back in those two groups, and Banque de France actually moved upward. The outstanding share has undoubtedly been Citroën, which has risen sharply, with an animated market. The lists for the Ville de Paris loan were opened in very favourable conditions.

BERLIN.

The *Frankfurter Zeitung* stocks index for April 5th was 131.95, as compared with 128.25 for March 1st. With easier money and a reduction in the private discount rate the stock market a week ago closed firm and active. The new week began with a slight weakening, due to unfavourable rumours about the Paris conference, but a recovery followed. The proposed abandonment of the increase in the beer excise duty led to buying of brewery stocks. On Tuesday, after a weak opening, there was a sharp but temporary rise, from which potash stocks were the chief gainers. Dealing in electricals was active, but rises were only moderate. Wednesday and Thursday were irregular, with a weak close in consequence of a fears of an advance in the Reichsbank rediscount rate.

AMSTERDAM.

The uncertainties of the money market caused business to remain restricted, though the general tendency was fairly firm. Last Saturday, however, a sharp reaction followed on the rise of the money rate to 6¼ per cent. On Monday the situation cleared up, with 5½ per cent. quoted for prolongation, and transactions were more active, prices being on the rise. Among oils, Royal Dutch and American oil shares led the way, and, in a firm industrial market, artificial silks were prominent. The reported introduction of the shares at Berlin gave strength to Margarine Unie. Sugars eased on the lowering of Java sugar prices, and the poor figures of the United Java Sugar Producers' Association. Rubbers were dull, and tobaccos lower again. Shipping shares were neglected.

INVESTMENT NOTES.

Railway Standard Revenue.—The Railway Rates Tribunal will sit, according to the *London Gazette*, on May 6th next, to review the charges for each of the British railway companies in accordance with the provisions of Section 59 of the Railways Act of 1921. This announcement is of special interest, for the reason that last year—the first occasion on which the provisions of the Railways Act were in complete operation—actual revenue fell below the "standard" level on every group line, as the following figures show:—

	London Midland and Scottish Railway.	London and North-Eastern Railway.	Great Western Railway.	Southern Railway.
	(£'000)	(£'000)	(£'000)	(£'000)
"Standard Revenue," under Railways Act ...	20,237	14,788	8,312	6,631
Actual Net Revenue, 1928	16,271	11,278	7,057	6,394
1928 Revenue as % of Standard Revenue	*80·0%*	*76·3%*	*84·9%*	*96·4%*
		Pref. Def.		Pref. Def.
"Standard Earnings" on Ordinary stock.....	7·87%	5·0% 4·12%	7·96%	5·0% 2·85%
Actual earnings on Ordinary stock, 1928	3·6%	0·21% Nil	5·1%	5·0% 2·1%

Only the Southern Railway came within sight of its standard revenue last year, earnings on the other three groups ranging from approximately 15 to 25 per cent. below the datum level. Under the Railways Act, however, the Rates Tribunal must now set itself to the task of adjusting charges so as to produce the desired result, this action being compulsory and not merely permissive. The companies have already lodged certain accounts with the Tribunal, and the Minister of Transport has also transmitted relevant documents, the whole being available for inspection at the Registrar's Office at 2 Clement's Inn, London, W.C. 2. Such adjustments in charges as are decided upon will come into force early next July. The average railway stockholder, however, would be well advised to frame his expectations of increased revenue from this source on decidedly modest lines. The railways may be relied upon to explore the possibilities of the situation to the fullest extent, but, except in the case of the Southern, it is improbable that any effective screwing up of charges will, in itself, produce anything like the desired result. In the case of passenger traffic, competition from the roads has already compelled the companies to cut their fares below the legal maximum, while as regards season tickets the adjustments (generally in an upward direction) made last year already appear to have checked new business to an appreciable extent. The higher-priced goods traffics are, as a rule, precisely those most susceptible to road competition, while among the heavier traffics, where the element of railway "monopoly" is at its maximum, the Government has recently stepped in and arranged a reduction in coal, iron and steel and agricultural charges, under the de-rating scheme. Such heavy traffics as bricks, stone, cement and other building materials certainly offer "adjustment" possibilities, but regard must be had to the fact that these materials are frequently used (and are therefore likely to be carried) along the main roads of the country. Altogether, the "standard revenues" seem likely to remain an ideal rather a matter of practical politics for the next year or two, during which increased earnings are more likely to emanate from improved trade, further economies in working expenditure, and, possibly, a "linking up" of road and rail transport. Holders of Southern Deferred stock alone may be interested, in the near future, in the fact that, should actual revenue in any year exceed standard revenue, the Rates Tribunal is required so to adjust rates as to eliminate 80 per cent. of the excess in subsequent years, the remaining 20 per cent. going to benefit the company concerned.

Imperial Chemical Industries.—The report for 1928 is a much fuller document than was issued a year previously, but for the accounts of a holding company to be intelligible it is essential that a consolidated income account and balance sheet should be issued which shows the real earnings and assets of the subsidiary and associated companies. As the income of the Imperial Chemical Industries is derived from dividends received from its subsidiary and associated companies, it is impossible, in the absence of a consolidated income account, to say what the combine is really earning. It appears that the company did extremely well last year, in spite of the depression in certain sections of industry. In their progress report the directors referred to the increased production of artificial silk, which resulted in a larger demand for caustic soda and chlorine, to satisfy which additional plant had been brought into operation. With regard to the production of fertilisers, the first of the large units at the company's synthetic nitrogen works at Billingham was started up early in 1928, the second will be started up shortly, and the third should be completed by the end of 1929. The British Dyestuffs Corporation, it is stated, made further progress, reduced the prices of its products and introduced a number of new dyes. The unification of control of the combine's various metal companies—Elliott's Metal Co., British Copper Manufacturers, Limited, and Allen Everitt and Sons—is said to be practically complete, and is already showing savings of no mean order in overhead charges. As the directors remark, there are very few important trades which are not served in some way by one or other of the company's products. The table on the next page shows net profits and their distribution last year as compared with those of 1927. In calculating the earnings as a percentage on the ordinary and deferred capital, account has been taken of the provision that, after payment of 7 per cent. preference dividends, a non-cumulative dividend of 7 per cent. is paid on the ordinary shares, and the balance of surplus profits is distributable as to two-thirds to the ordinary and one-third to the deferred shares. Some striking changes are

shown in the balance sheet. The reserves have been increased from £700,000 to £11,009,138, chiefly as a result of the revaluation of the holdings in Nobel Industries, Limited, on the voluntary liquidation of that company. The excess of this valuation over the book value of the holding was more than £7,000,000. Of this sum £1,260,153 was applied to writing off preliminary expenses, £2,308,216 was applied to capital reserve, £1,000,000 to free reserve, and £2,500,000 to the establish-

ment of a Central Obsolescence Fund. This fund takes the place of the depreciation accounts previously kept in the accounts of the various subsidiary and associated companies. In future, any funds required for the replacement of obsolete plant, &c., will be furnished by the parent company out of this common fund. After applying a further £509,138 out of the year's profits of the company this fund stands in the balance sheet at £3,009,138. By the appropriation of share premiums amounting in all to £2,929,781, the capital reserve is brought up to £5,529,020, and the free reserves, after providing a further £1,000,000 from the year's profit, up to £2,470,979. Thus the total reserves amount to £11,009,138. The working capital, representing the surplus of current assets over current liabilities, is found to be £10,489,155. The uninformative nature of the balance sheet is shown in its first item of investments, which are divided as follows: "Shares in Subsidiary and Associated Companies, £59,415,054, and Other Industrial Investments, £9,083,879"; making a total of £68,498,933. This showed an increase of £9,689,233 as compared with the previous year. It is to be hoped that, at the general meeting, Lord Melchett will give further details of the investment holdings as well as some more information about the real earnings of the subsidiary companies of this colossal chemical trust. The market is also awaiting news of the purposes of the increase of £20,000,000 in the authorised capital. In view of the probability of an increase in the issued capital, the market in the ordinary shares at the moment of writing is slightly easier at 39s. 3d., at which price the yield on the basis of 8 per cent. dividends is 4.15 per cent.

Lever Brothers.—Following on the news of the formation of United Africa, Ltd., to amalgamate the trading interests of the African and Eastern Trade Corporation and the Niger Company, comes the annual report of Lever Brothers, which, true to its tradition of Olympian reticence, refrains from mentioning the event. Lever Brothers holds a controlling interest in the Niger Company, and should benefit—though to what extent it is too early to conjecture—by the substitution of co-operation for competition in West African trading stations. In 1928 Lever's profits declined by £116,213, which, however, represents a difference of little more than 2 per cent. In reaching these figures the directors adopt their usual policy of treating associated companies as branches; that is, their undistributed profits are taken to credit and their losses reserved for. In the table below the cover for each of the three classes of preference shares held by the public and dealt in on the Stock Exchange is shown separately. The dividend on the privately held ordinary shares, on which nothing was paid for 1925 or 1926, is maintained at the 5 per cent. rate of 1927, but whereas £374,757 out of the 1927 earnings was left in the business, the corresponding figure this year is £258,542:—

Year ended December 31.	1926.	1927.	1928.

* After charging £463,466 debenture interest in 1926, £454,151 in 1927, and £444,988 in 1928.

At £68,309,448 the total of gross assets shows little change. Investments in associated companies account for £47,176,357, against £45,382,790, the difference being attributable to an expansion of the soap and perfumery interests, which represent nearly 37 per cent. of the gross assets. On the other hand, advances to associated companies and the balance of their undistributed profits have fallen from £5,700,510 to £4,515,355. It is unwise to hazard an interpretation of movements in these enormous items, whose composition is wrapped in permanent obscurity; like the capitalisation of the company, in which ordinary shares represent only 4 per cent. of the whole, they are part of the Lever tradition. Another part, however, which other companies might be encouraged to copy, is the practice of supplementing the book value of the investments held by giving their percentage annual return. This income figure is 9.6 per cent. (the same as last year) on the book value, the latter, in the opinion of the directors, is equalled by the real value in the aggregate. Unfortunately the only alteration in the form of the balance sheet this year is on balance a retrograde one. "Leasehold properties" used to be shown separately from "freehold land, buildings, plant, machinery and patents," but now the two have been amalgamated into "freehold land, buildings, plant, machinery and leasehold properties," patents disappearing. As a partial compensation, the amount of capital expenditure during the year is for the first time explicitly stated, and it is also shown that £286,563 has been deducted under the heading "proceeds of sale of plant not required and book value of land and buildings transferred to associated companies." The total of fixed assets is £180,722 lower on balance. The general reserve, after being cut down to a meagre £22,600 three years ago, to write off capital losses, has risen to £500,000, but for a combine of this size such a total is almost ludicrously diminutive. However, Lever's has always been a law to itself; at the cost of jettisoning something from its ordinary dividends, it has weathered the post-war slump, and recent results have shown noteworthy consistency. The market price of the most popular of its shares, the £1 7 per cent. cumulative preference, is 22s. 9d., and the yield, allowing for accrued dividend, £6 5s. 4d., less tax.

United Molasses.—The satisfactory impression given by the preliminary profit figures for 1928, which we published last week, has since been confirmed by the appearance of what is only the third annual report of this young but flourishing combine. Its progress is registered by the expansion of its gross assets from £1,740,708 to £3,988,965 within the year. Meanwhile, the issued share capital has been increased from £1,000,000 to £2,797,944, and by the redemption of £418,410 of debenture stock outstanding a year ago, and the conversion of all the old 8 per cent. preference shares, the 6 per cent. cumulative preference £1 shares, which were issued at par in June last and now stand at 1/16 premium, take their place free of all prior charges. On the ordinary shares, which are approximately trebled in number since the date of the last accounts, the dividend is raised from 17 to 19 per cent., requiring £227,482 instead of £90,156, but this time no capital bonus is given. The methods adopted by the company in setting out its financial results are somewhat

complex, though its practice of giving comparative figures for the previous year does much to elucidate them. The figures that are given for total profits are a less significant guide than those of net profits, which are struck after charging depreciation. At £386,674, these registered an increase of 45 per cent. on the previous year, and, after providing for income tax and prior charges, £291,776 remained available for the ordinary shares, of which £67,294 was withheld from distribution. This was done by leaving £166,254 in the associated and subsidiary companies as undistributed profits (against a mere £927 in 1927), and drawing on the reserves and carry-forward of the holding company for the difference, £98,961.

Years ended December 31.	1926.	1927.	1928.

Total carry-forward, including profits left in associated and subsidiary companies	19,884	20,255	179,548

Owing to the magnitude of the changes, the 1928 balance sheet is hardly comparable with its predecessor, but at all points it is very strong. The chief difference is shown by investments in subsidiary companies, £1,175,940, against £663,552, and current accounts of the subsidiaries, £1,069,545, against £118,837. "Motor vessels and steamships" have risen from £621,625 to £1,070,109, and instalments of £323,117 have been paid on two more motor vessels under construction. The general reserve of £92,000 has disappeared by reason of the operations described above, but, thanks to premiums on shares allotted during 1928, the capital reserve, £8,624 a year ago, has grown to £867,231, after having been drawn upon for the expenses of capital increase, premiums on debenture redemption, and loss on the sale of a steamer. A consolidated balance sheet is a new and welcome addition. Including a depreciation reserve of £490,411, it shows the aggregate reserves of the combine as £1,528,609. It is announced that the authorised capital of United Molasses is to be doubled by the creation of an additional 1,000,000 preference and 2,000,000 ordinary of £1 each, and shareholders are awaiting with interest next Monday's meeting in the anticipation of hearing that they will be offered, as in the past, favourable terms. Further extensions of the combine in important directions are being talked about, but these rumours at present lack confirmation. The ordinary shares, which were as low as 2 3/32 at one time last year, rose sharply on the report, and are now round about 8, though they were as high as 8 13/32 in January.

Meadow Dairy.—The accounts of the Meadow Dairy Co., which cover a period of 53 weeks, have a special interest by reason of the arrangement made with the Home and Colonial Stores subsequent to the date of the balance sheet—a transaction concerning which the *Economist* had occasion to ask a number of questions (March 2nd, page 453). Allowing for the extra week in the financial year, it appears that in 1928 the Meadow Dairy earnings remained at practically the same level as in 1927. The table in the next column shows how small are the changes. Few important alterations appear in the balance sheet, which follows the commendable practice of giving the comparative figures for the previous year. A certain rearrangement of assets has taken place, the valuation of freehold and leasehold properties having risen from £467,716 to £530,153, while investments in subsidiaries have dropped from £941,801 to £892,452, and stock-in-trade is £72,172 lower at £324,553. As usual, a combined statmeent is furnished for the company and its subsidiaries

	52 weeks ended Jan. 1, 1927.	52 weeks ended Dec. 31, 1928.	53 weeks ended Jan. 5, 1929.

* These shares ranked for dividend from January 3, 1927.

(which include Broughs, Neale's Tea Stores, Pearks Dairies, and Sherry's Dairy Co.), and shows freehold and leasehold properties at £1,063,605—an increase of £152,615. For some time past Meadow Dairy has been associated with the management of Liptons', and we have suggested reasons, in an earlier article, for the belief that the outcome of the recent agreement may have been the passing of the Home and Colonial Stores into the control of Meadow Dairy interests. The 1s. ordinary shares (some two-thirds of which were, under the agreement, to be sold to the Home and Colonial) at 4s. 9d., yield £6 6s. 3d. The Home and Colonial has also acquired rather more than two-fifths of the 1s. preferred ordinary shares, which rank for dividend *pari passu* with the ordinary after payment of 10 per cent. on both, and are 6d. cheaper, probably as a result of their non-possession of voting rights.

Union Corporation.—The post-war progress of the Union Corporation has been gratifying to all concerned. Since the resumption of dividends in 1917 the rate of distribution has been steadily raised from 1s. to 5s. 6d. per 12s. 6d. share, and the financial position entirely rehabilitated. The results for the past three years are shown below:—

Years ended December 31.	1926.	1927.	1928
	£	£	£
Issued capital (in ordinary 12s. 6d. shares)	875,000	875,000	875,000
Realised profits (less exchange, commission and amounts written off)	436,399	441,940	520,447
Salaries, fees and other expenses and contributions, etc.	52,409	55,780	46,865
Provision for income tax	...	...	30,000
Provision for expenditure on new offices	...	...	15,000
Net profit	383,990	386,160	428,582
Earned per share	43·9%	44·1%	49·0%
Paid per share	40·0%	40·0%	44·0%
Amount of dividend	£ 350,000	£ 350 000	£ 385,000
To reserve (from year's profits)	30,000	30,000	30,000
Increase in carry-forward	3,990	6,160	13,582

The net profit figure of £428,582 in respect of 1928 should be increased by £45,000 to obtain a true comparison with 1927, provision for income tax and for expenditure on new offices appearing for the first time this year as a deduction from revenue. The extent to which the increased profit was derived from the Corporation's South African interests is not clear, Modder Deep having shown a slightly reduced working profit per ton, but maintained its total dividends at £675,000 (6s. 9d. per share), while Geduld Proprietary showed a drop in working profit from £551,377 to £485,663 (as a result of the decline in the value of the ore reserves shown at the end of 1927), and paid total dividends of £448,218 (6s. 9d. per share), against £498,020 (7s. 6d. per share) in 1927. Development at the East Geduld Mines has proceeded in advance of the original schedule, while the Corporation has acquired interests in Northern Rhodesian copper-mining concerns, from which much is expected in the future. The San Francisco Mines of Mexico showed a fall of 11 per cent. in net profits, and reduced their dividends from 4s. to 3s. 9d. per share, an increase of 7½ per cent. in the tonnage

milled failing to counterbalance a drop of about 13 per cent. in metal prices. The mines have so far, it is understood, fared favourably this year, despite the Mexican rebellion. The Union Corporation has recently extended its interests outside the mining industry—a policy which, to judge by the chairman's address last year, is to be continued. Its holding in the Polyphonwerke A/G., one of the two largest gramophone concerns in Germany, has so far been decidedly profitable, thought another outside holding—in the British Enka Artificial Silk Company—has so far given less favourable results, owing to the unexpected producing and trading difficulties encountered. The Corporation is in the happy position of being able to finance these and other developments without increasing its own issued capital, by selling blocks of its ex-enemy shares, purchased originally from the Custodian of Enemy Property at 14s. at around the market price, which is at present 90s. In the last four years £248,194 has been added by this means to reserve account, to which an additional £120,000 has been placed out of revenue, the total reserve as at December 31th last being £630,570.

The Break in Copper.—For some days a marked change in the copper situation has been heralded by a drastic downward reaction on the London standard market, accompanied by a quotation for electro some £10 below the price quoted by the Incorporated Exporters. Business with consumers has been at a standstill, and the greatest uneasiness has prevailed. The effect on representative copper share-values on the Stock Exchange (outside the Rhodesian market) is shown in the following table:—

	Shares fully paid.	Price. Highest of 1929.	March 1, 1929.	April 1, 1929.	April 11, 1929.
	£				
Rio Tinto	5	66	63½	62½	59
Tharsis	2	6⅞	6⅝	6⅝	6½
Mount Lyell	1	2⅛	2⅛	2⅛	2⅛
Namaqua	2	1⅜	1⅛	1⅛	1⅛
Anaconda	$50	£35⅝	£29	£32	£29
Arizona	5/−	2⅛	1⅛	1⅛	2⅛

On Tuesday afternoon last it was announced that the American combine were prepared to sell a certain amount of electro at £9 10s. below their official price, while on Wednesday morning a further cut of £11 12s. 6d. was made. It is understood that the official price of the exporters stands still at £112 12s. 6d. c.i.f., but that about 2,000 tons are available at £21 below this price. This is apparently Custom Smelters' metal, which has accumulated, and in the stagnation following the excessive rise has been sufficient to break the American price. Low as was this cut price for electro, merchants have under-quoted, but buyers are thoroughly frightened and no business has been done. Consumers the world over are well bought and can afford to look on for a few months while the situation adjusts itself. The exporters have received a serious blow to their prestige, though it may be premature to suggest, as is being done in some quarters, that the days of this American combine are numbered.

Geduld.—The setback in last year's profits is chiefly due to the milling of lower-grade ore, a measure necessitated by the character of the 1927 development values. During 1928, however, improved results were obtained. Despite the performance of some 2,000 ft. less of underground work, and a reduction of 2 in. in the estimated stoping width, the ore reserves are up by 80,000 tons; the value—owing to the factor first named—being a trifle better. This change should be reflected in the returns for the current session. The results for the past three years are summarised below:—

	1926.	1927.	1928.
Ore crushed ..... tons	976,000	983,500	979,000
Yield per ton	28/9	27/9	26/6
Cost per ton	17/1	16/7	16/7
Profit per ton	11/8	11/2	9/11
Total working profit .....£	595,050	551,380	485,660
Dividends .....£	498,020	498,020	448,220
Rate per cent.	37½	37½	33⅓
Ore reserves ..... tons	6,040,000	6,020,000	6,100,000
Value ....cwts.	6·6	6·4	6·5

A feature is the strength of the financial position, the balance sheet showing a cash surplus of £177,600. This will be useful in connection with the financing of the East Geduld, in which a one-half participation is being taken. The last-named company advises excellent progress in the developments conducted through the workings of the Geduld Proprietary. Of the footage sampled, 4,940, or about 41 per cent., proved payable, the value averaging 12.3 dwt. over 37 in. Presumably, the stage of independent shaft-sinking is not far distant.

West Rand Consolidated.—A mixed showing is made by the annual statement of this, now the only important producer of the General Mining group. At 3,502,000 tons the ore reserves display an expansion of some 400,000 tons, but despite the high-grade stretches reported at times during 1928, their average value remains at 5.6 dwt. over 49 in. This gives no more than 274 in.-dwts., whereas the quarterly reports have represented over 400 in.-dwts. There is, in addition, a million tons which would give a small profit at the reduced working cost average. Due to the operation of the new plant, the monthly profits towards the end of the year underwent a marked and rapid expansion, £16,000 being reached for December. This figure might be taken to indicate the possibility of dividends of, say, 7½ per cent., but unfortunately the delay in completion of the extension programme has increased the company's indebtedness to over £600,000. Unless this can be capitalised the possibility of a distribution of profits will doubtless be affected.

Rotterdamsche Bankvereeniging.—The accounts of this important Dutch bank show that the net profit increased from 4,176 million guilders in 1927 to 4,846 million guilders in 1928. The dividend is maintained at 5 per cent. Special provision for possible bad debts amounted to f.1.6 million, against 1.25 million guilders in 1927. The profit and loss account shows the following position:—

	1926.	1927.	1928.
	(In thousands of guilders)		
Operating profits	11,703	11,655	12,897
Operating expenses	7,320	5,611	5,889
Depreciation	609	618	562
Special provisions	2,000	1,250	1,600
Net profit	1,774	4,176	4,846
Dividend: Amount	2,000	2,500	2,500
Dividend: Rate	(4%)	(5%)	(5%)
Redemption of amortisation-shares	—	1,500	2,000

Out of the net profit 2 million guilders of amortisation-shares has been redeemed, against 1½ million guilders in 1927. The balance sheet shows an increase in acceptances from 22.1 million guilders to 24.6 million guilders. Deposits stand at 38 million guilders. Creditors in current account amount to 114 million guilders, against 99 million guilders in 1927.

Stock Exchange "Majorities."—The unofficial market in Election "majorities" has been quieter in the last two weeks, but its main features have been a reaction in Liberal stock since the spurt on the recent by-election successes, a steady recovery in Unionist stock, and a relapse in Labour. The following figures show the prices on February 28th, on March 25th (which reflected the results of the by-elections), and on April 10th:—

	Unionist.	Labour.	Liberal.
February 28	284	261	74
March 25	259	261	98
April 10	275	255	85

The par values—being the present distribution of seats in the House of Commons—are Unionists 400, Labour 162, and Liberal 46. We may repeat that dealings in the market are in units of money and that no money will change hands until after the election, when the results will decide the profit or loss on a "deal" at current market quotations.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Commercial Bank of the Near East, Norwich Union Fire Insurance Society, First Co-operative Investment Trust, British Enka Artificial Silk, John Barker, Gordon Hotels, London Electric Wire and Smiths, and Garrard Engineering and Manufacturing. The chairman of the Norwich Union referred to the progress made in revising the reserves for outstanding claims of its American organisation, and the substantial improvement in the accident department generally. Sir Henry Strakosch described the unexpected technical, labour and sales difficulties encountered by the British Enka Artificial Silk Company, but found various encouraging factors in the outlook, especially as regards the spinning of fine denier rayon.

CAPITAL ISSUES.

Easter, and the ill success which has attended many recent speculative offers, have, together, checked the flow of new issues. Five prospectuses only appeared during the past week, the absence of untried patent propositions being a welcome feature. The cash involved, £600,000, brought the total for 1929, to date, up to £98,653,483, as compared with £174,069,000 for the corresponding period of last year. The largest issue was of an uncommon, but laudable, type, made on behalf of the *London Clinic and Nursing Home*. To meet the needs of middle-class people, for whom the charges of private nursing homes are prohibitive, it is proposed to erect a specially planned building on a site near Harley Street at a cost of £347,000, £180,000 of which will be raised by a mortgage already arranged. In addition to 175 beds, there will be 30 consulting rooms, the leases of which a group of medical men has agreed to take. The board includes well-known business names, and a director of Harrods will act as managing director. Out of the 175,000 £1 shares, 15,000 were privately subscribed. An immediate return on the shares is not to be expected, but they are a reasonable investment. The *North of Ireland "L. and N." Company* has been formed to exploit "L. and N." coal distillation rights in a new field. None of these processes of coal treatment has yet passed the experimental stage, and in this case the geological report on the small coalfield in Co. Antrim that is being acquired is cautious in its language. *P. H. Galloway* is an established business of wholesale chemists in South London, which is launching out as a public company. The 7½ per cent. preference shares appear to be well covered by past profits, but the public is called on to subscribe more than half the capital in order to obtain a one-sixth share of the equity. The purchase price (£100,000 in cash and £99,999 in shares) appears to set a high value on the goodwill, considering that net assets (excluding goodwill) amount to £78,170 only. The issue was fully subscribed, as was that of *Ketton Portland Cement*, which offered participating preference shares only to the public—a fair industrial issue, under Sheffield auspices. Lastly, a company formed three years ago, *Ceylon Amalgamated Tea and Rubber Estates*, made an issue of 7 per cent. convertible debentures to obtain working capital. The service of the debentures was covered only 1¾ times by 1927-8 profits, though a "substantial increase" is prophesied for 1928-9. Dividends on the 7 per cent. preference shares have been regularly paid hitherto, but the £1 ordinary shares, which last changed hands at 9s. 10½d., have not yet received a dividend. This debenture offer is obviously not over-attractive.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

London Clinic and Nursing Home, Limited.—Issue at par of 175,000 £1 shares. The company acquires a London site and will build, equip and manage a medical clinic and nursing home. An advance on mortgage will provide £180,000, and premiums on grant of consulting room leases a further £60,000. After payment of cost of building (£347,000), purchase considerations for lease (£11,000), and other expenses, £26,700 will remain for working capital.

North of Ireland "L and N" Company, Limited.—Offer at par of 140,000 (out of 250,000) £1 shares. The company acquires a 62-year lease of cannel coal and other minerals, covering an area of 9,330 acres, in Co. Antrim, and will work the "L and N" coal distillation process thereon. The purchase price for the lease is £80,000, payable as to £20,000 in cash and £60,000 in shares, and £5,000 in cash is paid for the trade mark "L and N" for Northern Ireland. After erection of plant, etc., there will remain £57,000 for working capital.

P. H. Galloway, Limited.—Issue at par of 100,000 £1 7½ per cent. cumulative preference and 200,000 (out of 1,200,000) 2s. ordinary shares. The company acquires a business, founded in 1890, of wholesale chemists, hairdressers' sundriesmen, &c. Net assets, excluding goodwill, are valued at £78,170. The purchase consideration is £199,999, payable as to £100,000 in cash and £99,999 in 2s. shares. Profits have been (to December 31): 1924, £20,344; 1925, £24,755; 1926, £17,177; 1927, £27,473; 1928, £29,259. Working capital will be increased by some £22,000 from the proceeds of this issue and profits accrued since December 31, 1928.

Special Representative

148 Leadenhall St. London E.C.3.

Ketton Portland Cement Company, Limited.—Issue at par of 90,000 (out of 100,000) £1 7½ per cent. participating preference shares, entitled to an extra 1/5 per cent for every 1 per cent. paid in excess of 7½ per cent. on 200,000 £1 ordinary shares, which, together with the remaining preference shares, have been privately subscribed. The company acquires a mineralised freehold estate of 1,174 acres in Rutland, and will erect thereon a works for the production of cement. The purchase price is £67,250, and the cost of the cement installation, etc., will be approximately £190,000. Working capital is estimated at £27,750.

Ceylon Amalgamated Tea and Rubber Estates, Limited.—Offer at par of £75,000 (out of £150,000 authorised) 7 per cent. convertible debenture stock, redeemable at 103, 1939-44, and convertible into ordinary shares at par at holder's option up to 1939; the stock is a first floating charge on the undertaking. Issued share capital amounts to £574,753. The company was incorporated in 1926, and acquired estates in Ceylon covering some 12,209 acres. Profits have been: 1926-27, £20,951; 1927-28, £13,000. Further working capital is required to cope with increasing crops.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introductions: **Sika (Australasia), Limited**; issued capital, 4,000 £1 10 per cent. cumulative preference and 100,000 1s. ordinary shares; will exploit the sole rights for the sale and distribution of Sika waterproofing compound in Australia and Tasmania. **Rhodesian and General Asbestos Corporation Limited**; issued capital £1,505,000 in 1 shares, together with £150,000 6 per cent. debentures, 1939; incorporated in Southern Rhodesia in 1917 to acquire and develop asbestos and other properties and to sell the treated fibre. **Electric Furnace Co. Limited**; issued capital 80,007 £1 7 per cent. preferred ordinary and 78,036 £1 ordinary shares, the former entitled to a further 3 per cent. with the ordinary after payment of 7 per cent. on the latter; incorporated in 1928 to take over the assets of an existing company; contracts for installations of electric furnace plant, and owns or is licensed to use various patents. **Mocimboa Sisal (Holdings) Limited; issued capital 110,000 £1 7 per cent. participating** (*pari passu* with ordinary to 10 per cent.) preference and 89,996 £1 ordinary shares; acquires shares and debentures of a syndicate formed in 1923 to develop 18,250 acres in Portuguese Nyassaland as a sisal plantation. **Charrington, Gardner, Locket and Company Limited**; issued capital, 212,000 £1 shares; an amalgamation, dating from 1903, of various London coal merchants and lightermen; recent dividends have been: 1926, 5 per cent.; 1927 and 1928, 20 per cent. **African Consolidated Investments Corporation, Limited**; issued capital, 2,085,500 £1 ordinary shares, together with £1,329,760 7 per cent. first mortgage debenture stock, redeemable by purchase or drawings through a sinking fund at 102½, 1932-67; incorporated in 1927 as a finance and property company.

COMMENTARY ON THE HUNGARIAN BUDGET FOR THE FINANCIAL YEAR 1929-30

The totals and balance of the Budget for 1929-30 are the following :—

	Million Pengös.
I. ADMINISTRATION.	
Expenditure	920.8
Revenue	923.0
Surplus	2.2
II. STATE ENTERPRISES.	
Expenditure	507.9
Revenue	509.2
Surplus	1.3
III. TOTAL.	
Expenditure	1,428.7
Revenue	1,432.2
Surplus	3.5

As it appears from above, the Budget shows a surplus of 3.5 million pengös, 2.2 million pengös being derived from the administration and 1.3 million from State enterprises. Of the administration expenditure 30 million pengös are set aside for investments, and of the State enterprises expenditure 18.7 million pengös are earmarked for the same purpose, a total of 48.7 million pengös being thus reserved for capital outlay. The actual budgetary surplus is therefore 52.2 million pengös, 32.2 million falling to administration and 20 million to State enterprises.

The following table compares the expenditure upon and revenues of administration and State enterprises in 1928-29 and 1929-30 :—

	Expenditure.			Revenue.		
	Budget for 1928/29.	Estimates for 1929/30.	In 1929/30 more (+) or less (−) than in 1928/29.	Budget for 1928/29.	Estimates for 1929/30.	In 1929/30 more (+) or less (−) than in 1928/29.

* Amount less than 50,000 P.

The above statement shows that, if compared with the Budget for 1928-29,

	Million Pengös.
Gross expenditure on administration is increased by	53.0
Gross revenues of administration by	52.7
Gross expenditure on State enterprises by	17.9
Gross revenue of State enterprises by	19.2

As regards revenues, the increase is constituted by estimates based on actual results—*i.e.*, on sums which may really be expected—while the increase of expenditure is produced partly by the automatic increase of expenditure upon personnel, pensions and subsidies, partly by the insertion into the Budget of certain surpluses of expenditure already incurred in the course of the current financial year, and partly by the rise of such expenditure as is counterbalanced by corresponding revenues—as, for instance, expenditure on the Tobacco and Salt Monopoly, expenditure on nursing of the sick and children. In addition to these influences, increase in expenditure and revenues of State enterprises must also be attributed to increased manufacture, production and traffic.

I.—EXPENDITURE ON ADMINISTRATION.

	Million Pengös.
Excess of expenditure on personnel	7.5
Excess of expenditure on pensions	5.6
Excess of expenditure on subsidies to independent administrations (for personnel and pensions) ...	1.3
Excess of expenditure on material and transitional items	37.4
Excess of expenditure on treaty charges	1.2

The amount reserved for investments did not change, and State debts show but slight changes.

The excess of expenditure on personnel is mainly due to increased lodging allowances connected with the gradual promotion of officials, and rising house rents. Apart from this, a "qualification allowance" of 600 p. annually was provided for judges, public attorneys, and for officials occupying posts requiring a similar qualification, and an allowance of 300 pengös annually for officials of the VIII-X salary classes. The increase in the salary of the police force (granted from July 1st, 1928) and of officials on service in certain foreign countries in which an additional allowance was necessary had also to be entered into the Budget.

The number of State official and employees on active service decreased by 263 in the Budget for 1929-30. An even larger decrease would be apparent if it were not for provisions which had to be made for the personnel of new institutions (schools, hospitals, &c.), established within the scheme of capital outlay.

The proportion existing between the expenditure on personnel and on the other items of the Budget shows a decrease from 33.6 per cent. in 1928-29 to 32.5 per cent. in 1929-30.

The excess of expenditure for pensions is due to the increase by 1,155 of the number of pensioners, widows and orphans, to the increased lodging allowances connected with rising house rents, and to the fact that the old pensioners are successively replaced by new ones, whose pensions are fixed on the basis of higher salaries.

The excess of expenditure for subsidies to independent administrations is, in the case of the Ministry for Home Affairs, due to provisions for increased salaries contemplated in the Bill concerning administrative reforms, and, as far as the Ministry of Worship and Education is concerned, to additional allowances for clergymen, to the raised salaries of non-State teachers, and to additional payments for the pension institute of non-State teachers.

Of the excess of expenditure for material and transitional items, amounting to 37.4 million pengös—apart from smaller items—7.4 million pengös are counterbalanced by revenues. Out of the amount in question, 4.4 million pengös represent expenditure of the Ministry of Finance on the Tobacco Monopoly, and 0.7 million pengös on the Salt Monopoly. A further 0.5 million pengös represents expenditure of the Ministry of Commerce on road building, to be credited against the proceeds of the motor-car tax, 1.3 million pengös represents expenditure of the Ministry of Public Welfare and Labour for the nursing of the sick, and 0.5 million pengös expenditure of the same Department for the protection of children. One million pengös figure in the Budget of the Ministry of Public Welfare and Labour as contribution to the expenditure of the Hungarian Social Insurance Institute (Országos Társadalom Biztosító Intézet) and to the Insurance Institute of Private Employees (Magánalkalmazottak Biztosító Intézete), this contribution being provided by Law XL of 1928, concerning obligatory old-age, widowhood, orphanhood, and invalidism insurance. From the excess of expenditure in question, 13.6 million pengös are earmarked for "other expenditure" (material) of the national defence, this being required to be able gradually to raise the strength of the national forces to the level provided in the Peace Treaty. There are also to be mentioned the 0.4 million pengös provided in the Budget of the Ministry of Commerce, and the same amount in the Budget of the Ministry of Agriculture, both for the promotion of exports and the 0.4 million pengös reserved in the Budget of the Ministry of Finance for two new borings for natural gas. The balance is chiefly needed to provide the essential funds and equipment for existing State institutions, to enable the State to meet its obligations in this respect, and further to meet the requirements of new State institutions (primarily of schools and of hospitals). There is still provided six million pengös for the relief of destitute subscribers to War Loans, but one million pengös of this amount—reserved for the relief of minors and persons under guardianship, whose respective War Bonds are deposited with the Orphans Court—figure this time in the Budget of the Ministry for Home Affairs.

Compared to the preceding year, the amount estimated for expenditure in connection with State debts shows hardly any change. It must be mentioned that the amounts payable by the State on account of its floating debt to the National Bank of Hungary show a further considerable decrease in the Budget estimates for 1929-30, because the principal amount of this debt, which originally was 1.980 milliard paper crowns (158.4 million pengös) fell from 108 million pengös, figuring in the Budget for 1928-29, to 92.2 million pengös in the estimates for 1929-30.

The 7.6 million pengös provided to meet Treaty Charges represents an increase of 1.2 million pengös, compared with the preceding year. The reason for this is that, in conformity with the arrangement made with the Reparations Commission, Hungary has to pay 6 million gold crowns in the calendar year 1929, and 7 million gold crowns in 1930, compared to the 5.5 million gold crowns in 1928-29. Thus 6.5 million gold crowns, *i.e.*, the equivalent of this amount in pengös, had to set aside for the financial year 1929-30.

For investments 30 million pengös is provided, which is the same amount as last year.

REVENUE.

The following table shows the details of State revenues estimated for 1929-30, compared with the estimates for 1928-29, and with revenue actually collected in 1927-28 :—

	Collected in 1927/28, according to data of monthly reports.	Estimates for		Estimates for 1929/30 more (+), or less (−)	
		1928/29.	1929/30.	than collected in 1927/28.	than estimated in 1928/29.
	(Million Pengös.)				
Direct taxes	178·0	171·5	181·0	+ 3·0	+ 9·5
Turnover taxes	140·8	119·8	114·8	− 26·0	− 5·0
Stamps and dues	109·7	86·1	101·5	− 8·2	+ 15·4
Excise	97·4	82·7	101·6	+ 4·2	+ 18·9
Customs	148·1	128·6	128·6	− 19·5	...
Saccharine and lottery monopolies	1·6	1·6	2·0	+ 0·4	+ 0·4
Salt monopoly	24·8	22·9	24·2	− 0·6	+ 1·3
Tobacco monopoly	151·2	150·0	158·0	+ 6·8	+ 8·0
Departmental receipts	93·9	92·7	95·3	+ 1·4	+ 2·6
Receipts from tax on railway traffic	15·9	14·4	16·0	+ 0·1	+ 1·6
Total	961·4	870·3	923·0	− 38·4	+ 52·7

Revenues from direct taxes, Stamps and dues of the Excise, and of the Tobacco Monopoly show a larger surplus over the estimates of the preceding year. If, however, we compare the estimates for 1929-30 with the revenue actually collected in 1927-28, only direct taxes, the Excise and the Tobacco Monopoly show a surplus. As far as direct taxes are concerned, the surplus is mainly due to the estimated proceeds of the house tax, owing to the rising house rents. The surplus of the company tax is due to the anticipated higher proceeds of the assessments. In the case of the Excise and the Tobacco Monopoly, increased consumption, and, as far as the latter is concerned, increased tobacco production, account for the surplus. On the other hand, estimates of Customs and the turnover taxes remain considerably below the revenue actually collected in 1927-28, this being due to the more liberal use being made of lump-sum assessments in the case of the turnover tax, the abolition of the turnover tax on livestock, and to the effect of the commercial treaties which have been concluded.

Amongst direct taxes, the land tax has been reduced by 4 million pengös, because the contemplated reduction by 8 million pengös is effective only as from January 1st, 1930, *i.e.*, only during the second half of the financial year 1929-30. In the case of the house tax, it was kept in mind that owing to the provisions of Law II of 1929, any proceeds exceeding 13.5 million pengös of the house tax collected in the villages must be paid into the subsidy fund of the villages.

As regards departmental receipts, the revenue derived from the rent of the so-called "Vagyonáltság földek" (capital levy lands), which represented 8.5 million pengös in the estimates for 1928-29, amongst "revenues of State debts" was cancelled in the present Budget, because, owing to the provisions of Law XLI of 1928, this revenue must be transferred to the so-called capital levy fund (vagyonváltság alap). On the other hand, a new revenue item of 5.8 million pengös was introduced into the Budget of the Ministry for Home Affairs, as contribution payable by the towns, under § 13 of Law XXXIII of 1928, to the expenditure on the State police.

II.—EXPENDITURE OF STATE ENTERPRISES.

	Million Pengös.
Excess of expenditure on personnel	5.5
Excess of expenditure on pensions	0.1
Excess of working expenses	14.5
Reduction of expenditure on investments	2.2

In expenditure on personnel, 3.5 million pengös entered for the first time into the Budget (as commission for the personnel) under the newly-established commission regulations of the State Railways. Apart from this fact, the increase of expenditure for personnel and pensions must be attributed to the same reasons as in the case of State Administration.

In the case of certain State enterprises the raising of the number of employees was unavoidable, because the respective branches of service—especially the Post, Telegraph and Telephone, and the State Railways—could not otherwise have met the requirements of constantly increasing traffic. The number of new employees is 374. In these branches of service the number of pensioners, widows and orphans also rose by 892.

The excess of working expenses is due to increased traffic, production and manufacture, and this item is totally counterbalanced by the rising revenues of the enterprises.

Compared with the preceding year, estimates of investments show but slight changes. As far as the Post is concerned, the total surplus of 1929-30 was not used for the investments of this institution, being partly utilised for investments of the State Railways, because—in conformity with the practice repeatedly observed in pre-war times—part of the capital outlay for the Post was advanced out of the working funds of the latter.

Owing to increased traffic, the revenues of the enterprises rose by 19.2 million pengös.

As mentioned above, estimates for State enterprises show a surplus of 1.3 million pengös, after providing for the investments; without the latter, the surplus is 20 million pengös. The surplus of the respective enterprises is the following :—

	Million Pengös.
Post, Telegraph and Telephone	9.5
State Railways	6.6
State Iron, Steel and Machine Factories	1.6
State Domains	1.7
Postal Savings Bank	0.4

The surplus of State forests, of the silk production, and of coal mining is below 100,000 pengös.

Out of the above-mentioned 20 million pengös for investments the following allocations are made :—

	Million Pengös.
Post, Telegraph and Telephone	5.4
State Railways	11.2
State Iron, Steel and Machine Factories	1.6
State Domains	0.1
Postal Savings Bank	0.4
Total	18.7

From a formal point of view, the Budget for 1929-30 corresponds with the Budget for 1928-29. A certain change is only apparent in the disposition and the name of certain Titles and Rubrics. A new Chapter was opened for the office of the Minister for Economic Affairs.

COMPANY MEETINGS, &c.

FIRST CO-OPERATIVE INVESTMENT TRUST, LIMITED.

7 PER CENT. DIVIDEND MAINTAINED.

VALUE OF THE INVESTMENTS.

The fifth annual ordinary general meeting of the First Co-operative Investment Trust, Limited, was held at Kingsway Hall, London, on April 5, 1929, some 900 members and friends being present.

Alderman A Emil Davies, L.C.C. (the chairman), presided.

The Chairman, in moving the adoption of the report and accounts, said: For the fifth year in succession, we have been able to maintain the dividend at 7 per cent., but some of you may have wondered whether this would have been possible on this occasion, if we had not brought into the revenue account for the current half-year the dividend equalisation reserve of £6,500.

SEVEN PER CENT. EARNED.

The answer is that if we had taken credit for accrued dividends up to the hilt we could still pay the 7 per cent. and add slightly to the carry-forward, without trenching upon the dividend equalisation reserve, but, as stated in the report, we have decided to adopt a more conservative policy in the matter of taking credit for accrued dividend. As to capital, you will notice that out of the profits on sales made during the half-year, we have been able to increase the investment reserve by £5,000, bringing that up to the round figure of £40,000, and are able to state that on the basis of middle market prices at January 31st last, the aggregate value of the investments was in excess of the amount at which they stand in the balance sheet.

CAPITAL INTACT.

This means that our capital, the reserves and carry-forward (the last two aggregating £78,028), are more than intact. You will observe that of our total investments of a book value of £1,890,693 5s. 5d., less than 4½ per cent. were unquoted.

Some people are of opinion that it will be impossible to continue dividends at the high rate of 7 per cent. per annum. Well, we have managed it thus far, although the margin of income over the amount necessary to pay that amount is slight. We propose in future that the distribution for the first half of each financial year shall be an interim dividend of 3 per cent. instead of 3½ per cent.; this will bring us into line with the usual procedure of investment trusts and most important companies of paying a smaller interim dividend and a larger final dividend in respect of the second half of the financial year.

An unfavourable factor is the rise in the Bank rate, which, for the sake of British trade generally, one must hope will prove to be merely temporary.

POPULAR PREFERENCE SHARES.

The popularity of our 5 per cent. (5½ per cent. if retained a certain period) withdrawable preference shares is helpful to us, for, while providing a higher rate of interest than can be obtained elsewhere with the same degree of safety and facilities for withdrawal, they represent relatively cheap capital to us. It will not always be possible to obtain this highly desirable means of investing temporary moneys, for one of the regulations governing the issue of the preference shares is that they may never exceed one-fourth of the capital of the Trust. These preference shares are now being taken up even faster than the ordinary shares, so that the moment will arrive when it will only be possible to issue more preference provided that three times that amount of ordinary is being taken up.

We propose to effect various economies, one of which is the reduction in the directors' remuneration, which, in spite of the violent protests you may be expected to make, will, no doubt, be carried.

The resolution was seconded by Mr Ernest Martin, F.C.I.S., and carried unanimously.

The formal business was followed by a lecture by Mr Norman Angell on "Economics and the Plain Man."

Copies of the Report and Accounts, with full list of investments, and of the Trust's quarterly publication, "*The Rainy Day*" may be obtained on application to the First Co-operative Investment Trust, Limited, 27 Broad Street House, London, E.C. 2.

NORWICH UNION FIRE INSURANCE SOCIETY, LIMITED.

TOTAL ASSETS INCREASED TO £6,096,432.

The 131st annual meeting of the Norwich Union Fire Insurance Society, Limited, was held, on April 8th, at the head office, Surrey Street, Norwich, Mr. Michael Falcon presiding.

The notice convening the meeting and the auditors' report were read by the secretary, Mr. F. C. Botting.

The Chairman, in moving the adoption of the report and accounts, said: In the fire account we show premiums totalling £2,255,515—a small reduction of £14,490. The loss ratio works out at 49.62 per cent., and the profit earned is £144,846, or 6.42 per cent. Since 1922 our premium income in this account has steadily advanced, and the small setback this year is somewhat disappointing. Fortunately it does not reflect a general loss of business, but is attributable to a reduction in our United States fire income, where we wrote some £70,000 less business than in the preceding year, and may be further explained by telling you that this reduction to a very large extent arises in one account. It will thus be seen that our well-spread business in other parts of the world shows progress, although, with the rate reduction which is continually going on, owing to keen competition, it is not easy to expand our premium income. Even if this competition is not successful in alienating business from us, it will be appreciated that it adds greatly to the task of showing progress in the premium account.

HOME FIRE BUSINESS.

Our home fire business did well, although not repeating the remarkably good results of 1927, and this is not surprising, seeing that the estimated total fire losses in the United Kingdom for 1928 were some 25 per cent. higher than in the preceding year. We could not expect to escape participation in these extra losses, and must be satisfied that this account only suffers by comparison with an exceptionally good year. In Canada we are able to report a substantial increase in volume, together with a satisfactory loss ratio, and the United States is again a contributor to our profits. In Australasia our loss ratio was better than in recent years, and I am pleased to report some improvement in political and trading conditions in China, of which our agents are taking advantage.

ACCIDENT DEPARTMENT.

The accident accounts put before you are under three headings, Personal Accident, Employers' Liability, and General. The total premium income in these is £1,812,016, being an increase of £29,435 over the previous year. The loss ratio is 57.41 per cent., and the profit of £63,184 represents 3.49 per cent. of the premium income, which, although by no means what we regard as the best that this department can do, is a substantial improvement on the preceding year. In that year, you will remember, we took in hand a thorough revision of the reserves for outstanding claims of our American organisation, the Norwich Union Indemnity Company, and, it was stated from this chair, that benefit was expected in the 1928 account from such action. I am glad to say that we have been justified in that expectation, and this year's accounts include a contribution to profits from the American business.

In the personal accident account, I am glad to be able to point to an improvement over the past two or three years.

I now turn to the marine account, which shows premiums less commission amounting to £194,179, representing a business very little different in volume from the preceding year. The continuance of unsatisfactory conditions in the "Marine Market" is deplorable.

PROFIT AND LOSS ACCOUNT.

I have already referred to the trading department transfers, and I need therefore only draw your attention to the interest and dividends less income tax, which reach £196,114, being an increase of £4,765. The outcome of our transactions is that we have £387,340 profits and interest out of which to pay the usual items debited to profit and loss, and to declare the same dividend as last year, leaving £94,077 available for use at our discretion, and from this we propose continuing our policy of paying up the uncalled liability on shares, and the sum of £92,500 is appropriated for this purpose; from the amount then available—£117,500—we propose to utilise £110,000 to pay up a further £2 10s. per share, making each £25 share £21 10s. paid.

The account is closed by carrying forward £406,474, an amount slightly in excess of that brought in.

Our assets now total £6,096,432, and have increased by £63,594 during the year.

Taking a general view of the society's position, I am glad to say that, in spite of a continuance of poor trade in this country, the home premium income has made some progress, and the organisation has been maintained everywhere, and extended in those quarters where there seemed to be prospect of development.

The report and accounts were adopted.

THE GORDON HOTELS, LIMITED.

CONSIDERABLY IMPROVED RESULTS.

SUCCESS OF MAY FAIR HOTEL.

The thirty-ninth ordinary general meeting of the Gordon Hotels, Limited, was held, on the 11th instant, at the Hotel Metropole, London.

Major-Gen. Guy Dawnay, C.B., C.M.G., D.S.O. (the Chairman), said that this year he was able to report a considerably improved year's working. The year 1928 would have shown a still greater measure of improvement, however, had it not been that the recovery of the business in England was not accompanied by a similar recovery in France. They had again had a comparatively poor season on the Riviera and Dieppe, and he regretted that they had nothing better in prospect during the current season on the Riviera. The business at their seaside hotels during 1928 afforded little material for favourable comment. They would still be glad to realise certain of the company's properties on a suitable opportunity, so as to be able to concentrate their efforts in directions in which they could be made more immediately and more permanently remunerative.

The bulk of the improvement in 1928 came from the company's London hotels, and it was satisfactory to notice that during these early months of the current year that improvement was being maintained and even increased. The board had been very confident of the highly remunerative investment they had made in acquiring the May Fair Hotel in substitution for the Grand Hotel and the Burlington Hotel at Eastbourne, but their best anticipations fell short of the actual results, which had exceeded all their hopes. He had no hesitation in saying that it was by far the best of their investments, yielding a very high return upon the capital employed on it. As to the immediate prospects, if the General Election did not seriously interfere with the business in the coming season, they had every reason to look forward to the future with confidence.

Dealing with the accounts, the Chairman said that the balance profit carried to the balance sheet was £18,000 higher than in 1927 and £19,000 higher than in 1926. The total reserves, after the allocation of £10,000, which was now proposed, would amount to rather more than £260,000. It would be remembered that they had not only built up their general reserve out of revenue from nothing in 1921 to over £150,000, but they had also increased the Leaseholds Redemption Funds in the same period by £125,000. Altogether their reserve and Leaseholds Redemption Funds now amounted to 16½ per cent. of the property item standing at the top of the assets side of the balance sheet.

The Chairman concluded by moving the adoption of the report and accounts.

SIR FRANCIS TOWLE'S VIEWS.

Sir Francis W. Towle, C.B.E. (Managing Director), said that the results of the year were, in his opinion, very satisfactory, in some respects exceedingly so, and most encouraging for the future. Since the present board had been in office they had constantly expressed their firm belief that the modernisation of the business and the provision of new units were a *sine qua non* if the company was to be put on a satisfactory earning basis. Realising that it was vital to have at least one modern unit the board had taken their courage in both hands and proceeded to arrange the necessary finance to build the May Fair Hotel. This first experiment of building a new unit in their company had been an outstanding success, not only from the hotel and social point of view, but, what was far more important, a very considerable financial success. The trading profit of this hotel had far exceeded, in its first completed year, the estimate made by him of the profits which it would have been reasonable to anticipate in the third year of its existence, and were more than 25 per cent. higher during the past year in comparison with that earned by any other hotel owned by the company in any year of its existence. Leaving the May Fair Hotel aside, the business of the three other London hotels had been well maintained. An increased profit had been earned by the Hotel Metropole, Brighton.

MAINTENANCE POLICY.

As to the future he was sure it would greatly encourage the shareholders to know that the whole decrease on the Riviera hotels had been more than compensated for by the increased receipts at the May Fair Hotel. In other words, losses on the Riviera, so far as this season was concerned, had been counterbalanced by the increased profits earned in this country.

It would encourage the shareholders to know that the trading profits of the hotels, before paying repairs and maintenance, and after making full allowance for the debenture interest on the May Fair Hotel, were the largest profits ever earned in the company's history—the previous record being in the Exhibition year of 1924.

The report and accounts were unanimously adopted.

BRITISH ENKA ARTIFICIAL SILK COMPANY, LIMITED.

DIFFICULTIES OF THE YEAR.

MORE ENCOURAGING OUTLOOK.

The fourth ordinary general meeting of the British Enka Artificial Silk Co., Limited, was held, on the 8th instant, at Winchester House, Old Broad Street, London, E.C.

Sir Henry Strakosch, G.B.E. (the chairman), in the course of his speech, said: The profit and loss account shows a net loss of £82,324, of which £54,703 is due to depreciation charges, £25,327 to debenture interest, loan interest, and sundry outgoings, and £2,291 to a working loss for the year. I need not tell you how keenly disappointed I am at having to lay before you figures as unsatisfactory as these.

ADVERSE FACTORS.

At the beginning of the year we appeared to be making good progress in the development of the No. 2 factory; the rayon market was good; prices were encouraging, and the quality of our production was steadily improving. Unfortunately as the year advanced a variety of adverse circumstances intervened. The technical difficulties connected with the bringing into operation of the No. 2 factory were not overcome as rapidly as at one time was anticipated, and the training of labour proved a slower process than we had expected. The effect was felt both in production costs and the proportion of the higher grades of rayon produced. Market conditions also became less favourable, and stocks began to accumulate. In view of this combination of unfavourable factors, it was considered advisable to curtail production somewhat until such time as the training of labour and technical difficulties in the factory were overcome and the market conditions were more promising. Towards the end of the year the No. 2 factory, although not fully occupied,, was working in a more satisfactory manner, but the market conditions became steadily worse. Prices continued to decline, and at the beginning of December there was a further all-round cut to which we had to conform.

The loss made during the year, therefore, may be attributed, first, to abnormal production costs in the No. 2 factory due to the difficulties experienced; and, secondly, to unsatisfactory market conditions resulting in reduced prices and a curtailment of output. I should add that a strike, which occurred at the works in September, was a contributory factor. The trade union concerned, I am glad to say, declined to recognise this strike, and the places of the strikers were filled, but this involved the training of a number of new men—a long and costly process. Apart from this isolated incident, the relations between the company and its employees, who number over 2,800, have always been very good.

TECHNICAL DIFFICULTIES.

The technical difficulties to which I have referred are not due, I am assured by our technical advisers, to any major defects in the design or construction of our plant or to the manufacturing processes we employ. These are well known and well tried, and are in all respects similar to those used with outstanding success by the Enka Co. in Holland and elsewhere. But the process of manufacturing rayon is so delicate that slight variations of a chemical, physical, or climatic character are capable of adversely affecting the spinning, and, consequently, the proportion of high grade rayon spun. The yield from a given quantum of materials used is naturally also affected. The problem is to adjust the manufacturing process to the particular local conditions, and that—I understand—can only be done by patient experimentation. The training of the labour force to complete efficiency in their tasks, of course, also pays a most important part.

PROBLEMS CONQUERED.

I think I may say we have succeeded in conquering these problems in our No. 1 factory, and there is no reason why we should not be equally successful in the No. 2 factory. The annoying part is that it takes time, and that whenever disturbances of the kind occur one's confidence in the reliability of the rayon produced becomes somewhat shaken.

I should add that we have never experienced any serious difficulty in selling any of the rayon we have produced, and we have had few complaints regarding its quality. The material to which we attach our full guarantee realised adequate prices having regard to market conditions, but rather than risk spoiling our good reputation in the matter of quality we have preferred to sell without our guarantee, mainly abroad at lower prices, material in which we did not have complete confidence ourselves.

ENCOURAGING FACTORS.

In view of the disappointments we have suffered in the past, I feel some diffidence in speaking of the future. I believe, however,

that our No. 1 factory, which has been working satisfactorily for some time, is not likely to disappoint us. It is producing silk of excellent quality, which is finding a ready acceptance in the market. With regard to the No. 2 factory, all I can say is that we are leaving no stone unturned to bring it to the same technical efficiency as the No. 1 factory. It is having the unremitting attention of the management and of the technical staff at the works as well as of the experts of the Enka group.

Latterly the production in that factory has been more satisfactory, and the quality of the rayon is steadily improving, so much so that we have now commenced the spinning of fine denier rayon, which is being sold under the name of "Fidenka" and "Fiducia," and of dull rayon under the name of "Modrella." Two further encouraging factors should be recorded. First, general market conditions appear to be improving; and secondly, we have now increased our rate of production and we are disposing of it currently.

The report and accounts were adopted.

JOHN BARKER AND COMPANY, LIMITED.

INCREASED NET PROFIT.

The thirty-sixth ordinary general meeting of John Barker and Co., Limited, was held, on the 11th instant, at 63–65 Kensington High Street, London.

Sir Sydney M. Skinner, J.P. (the chairman), said that the year under review had covered a somewhat difficult period of general trading conditions, in the first half of the year partly due to a general reduction in the purchasing power of the public and partly to the lateness of the summer. Although the second half of the year had been generally better, in common with others they had felt the uncertainty caused by the much-regretted and serious illness of H.M. The King. They had also been handicapped throughout the year by rebuilding work, and in those circumstances he felt that shareholders were justly entitled to be congratulated in that they had under consideration that day accounts which showed an increase in net profit over that for the previous year of £13,732, or a total amount after charging debenture interest of no less than £444,901. That was only £4,500 short of the figure for the company's record year ended January, 1926.

He felt that he could congratulate shareholders on the further improvement which the balance sheet showed, and especially on the acquisition of further freeholds and the increased bank balance. The gross profits totalled £1,706,484, which showed a rather considerable reduction of just over £62,000. The rearrangement of several departments at Derry and Toms and the entire closing of others must account to some extent for a reduction in the gross profits.

It was their policy to meet competition by giving their customers the utmost value for everything purchased in their stores. That policy they had further developed, and would continue to do so even more drastically than they had done in the past. Especially would they do their utmost to make shopping in Kensington more attractive to the general public in every possible way under present conditions of rebuilding. Competition was assuming a serious character owing to the various amalgamations which had taken place recently, but the administration of their business was on such a financially conservative, yet progressive, basis, that they were prepared to meet every form of competition, and, if necessary, to trade on a lower rate of gross profit, relying upon their organisation and good management to control all unnecessary and surplus expenditure, and thus maintain the net profit which had been such a satisfactory feature of their balance sheet for the past ten years.

Good progress had been achieved by both Barkers and Pontings' while the Zeeta Company was developing satisfactorily. Good sites were more and more difficult to obtain, but new branches were added from time to time as suitable locations were obtainable. They were especially proud of the new Cafeteria which had just been opened on the site of the old Post Office buildings in St. Martin's-le-Grand. That was a self-serving café, similar to the one which had proved so popular a feature at Pontings. Seating accommodation was provided for nearly 700 people, and they confidently anticipated that before long it would be so popular that they would be serving 2,000 to 3,000 lunches per day.

In the result the reduction of the total charges more than exceeded the reduction in gross profits, and, after providing for all administrative and working expenses, including depreciation, taxation, bad and doubtful debts and interest on debenture stocks, there remained an increase of £13,732 in their net profit, which, in spite of the difficulties of the year, amounted to the very handsome sum of £444,901. They brought into the accounts £289,817 from the previous year, giving a total amount to be dealt with of £734,719. They had already paid interim dividends on the preference and ordinary shares, and now proposed to write off a further £25,000 from goodwill and £41,267 from fixtures, fittings and furniture, and to transfer £100,000 to reserve account for rebuilding and modernisation of premises, and £10,000 to employees' pension and benevolent fund, and to declare a further six months' dividend on the preference shares and a final dividend on the ordinary shares of 15 per cent., making 20 per cent. for the year. That rate had now been maintained for ten consecutive years.

The report and accounts were adopted.

LONDON ELECTRIC WIRE COMPANY AND SMITHS, LIMITED.

SATISFACTORY PROGRESS.

The 20th annual general meeting of the London Electric Wire Company and Smiths, Limited, was held, on the 11th instant, at Hotel Victoria, Northumberland Avenue, London.

Sir George H. Fisher-Smith, J.P. (the chairman), after referring with regret to the death of Mr Retallick, an old shareholder of the company, said: The £571,414 5s. as shown on the balance sheet represents assets considerably below current values and all our buildings and plant are in a complete state of repair. All the stock has been valued on the same conservative basis and the total as shown on the balance sheet may be regarded as a perfectly sound asset. Our investments were increased last year by £42,942 13s. 5d. The total shown of £297,143 4s. 3d. is represented by sound securities conservatively valued and the larger part of these investments can be readily converted into cash as and when required for the further expansion of our business. Sundry creditors and credit balances show a small increase of £3,837 2s. 9d. When comparing this item on the balance sheet with sundry debtors you will notice that there is a substantial balance in the favour of the company, even greater than in the previous year.

The profit and loss account shows an increase of £4,662 5s. 4d. as compared with 1927, which with the additional £10,000 added to the general reserve account makes the total increase £14,662 5s. 4d. Although the company has had a much larger turnover, a considerable amount of business has had to be taken at very cut prices, and this increase in profit does not altogether express the improvement in the business of the company over that of the previous year. In recent years competition in our business has been exceptionally keen, but your company has been able to maintain its position in the trade, and during the past few years a great deal of thought, time and energy has been spent by your board in reorganisation in order to be able to meet changing demands of customers and the competition which exists in the trade. It must be remembered that great changes have taken place during recent years in the industries of this country, and I believe that the full effects of the special efforts which we have made will become apparent within the next few years.

The introduction of "Rationalisation in Industry" has been responsible for many of the changes previously mentioned, and your board is giving serious consideration to this problem as affecting our future with a view to taking such steps as may be considered to be in the best interests of all parties concerned. In view of the approaching General Election it is difficult to attempt to forecast the immediate future. I may, however, say that during the latter part of 1928 and up to the present time trade has been more of a stable character and unless interrupted by unforeseen circumstances I regard the future as distinctly hopeful.

The report was unanimously adopted.

HEAD OFFICE: HELSINKI (HELSINGFORS), FINLAND

Established 1889.

COMMERCIAL BANK OF THE NEAR EAST, LIMITED.

CONTINUED STEADY PROGRESS.

The seventh annual general meeting of the Commercial Bank of the Near East, Limited, was held, on the 10th instant, at the offices, 4, London Wall Buildings, London, E.C., Mr C. H. D. Moberly (managing director) presiding.

The secretary (Mr P. J. Bailey) having read the notice convening the meeting,

The Chairman said: On behalf of the Board, I have to regret, and to apologise for, the absence of our co-directors, Messrs Empedocles, Petrocochino and Merlin, who are detained by their duties in Athens.

As the report of the directors and the accounts for the year ended December 31, 1928, have been in your possession for some days, I propose, with your permission, to take them as read.

Trade shows a slow and gradual improvement, notwithstanding the heavy burden of post-war taxation. The business of the bank, both here and abroad, has been slowly and steadily increasing in spite of the difficult conditions in the Near East.

You will observe that we have sold our holding of shares of our associated bank, the Commercial Bank of Greece, at a good profit. They were purchased by prominent banking interests in London and Greece, who acquired at that time a substantial holding of shares in the Commercial Bank of Greece. I may mention that the Commercial Bank of Greece still hold their shares in this bank.

Our profits for the year 1928, excluding the profit on the sale of the Commercial Bank of Greece shares, amounted to £10,532, as against £9,914 for the year before, and they may be considered satisfactory. With regard to the future, we look for the steady progress experienced since the bank was founded to continue under conditions which we have reason to hope are gradually becoming more settled.

I now beg to propose: "That the report of the directors and the statement of accounts for the year ended December 31, 1928, be received and adopted, and that a final dividend for the year 1928 at the rate of 6 per centum per annum, less income tax, be paid on the shares of the company on and after the 11th April, 1929."

Mr D. J. Cassavetti seconded the resolution, which was carried unanimously.

GARRARD ENGINEERING AND MANUFACTURING COMPANY, LIMITED.

YEAR OF CONTINUED PROGRESS AND EXPANSION.

The annual general meeting of the Garrard Engineering and Manufacturing Company, Limited, was held, on the 11th instant, at the Criterion Restaurant, Piccadilly Circus, London.

Mr. Charles E. Newbegin (the chairman) said:—The profit and loss account shows a trading profit of £78,480, from which, after deducting directors' and auditors' fees, providing for income tax, and writing off the balance of £2,659 10s. 4d. standing to experimental account, there remains a net available profit of £70,081 as compared with £40,561 for the previous year.

The year now under review has been one of continued progress and expansion. To meet demands for our products we have found it necessary to incur capital expenditure on new buildings and new machinery, at a cost of £39,477. We have also acquired a piece of freehold land adjoining our property at Swindon, which is available for further extensions.

Production has increased month by month during the whole year, and those of you present who have practical experience of works organisation know, and those who have not can easily imagine, the difficulties attendant on meeting a constantly increasing demand, while at the same time building and re-building, installing new machinery, etc., with all the complementary alterations in organisation. We have surmounted them, and I cannot speak too highly of the way in which the difficulties have been overcome, and the work carried through under the supervision of our works director, Mr. Slade, assisted by the very able staff by which he is surrounded. Results speak for themselves, and to all at Swindon our thanks are due.

Once again I feel very confident in assuring you that the prospects for our company are distinctly good, providing always that there should be no untoward events which will destroy confidence and react on the trade of the country. We are now getting into production with a new small single spring motor, for which we are anticipating a very large demand, and also an electric motor, which we venture to believe is the last word in its particular branch of driving power for gramophones. We have completed our plans for the present year, and are prepared to cope with any volume of trade that may offer. To date our sales show an increase over last year, while our orders for future deliveries constitute a record for this time of year, a happy augury, I hope, of the continued success of our business.

The report was adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 6th, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	10,750	From Revenue	17,966
Interest, &c., on Debt	17,345	Increase in Debt	7,739
Sinking Fund	735	Decrease in Balances	3,329
Sundries	195		
	29,025		29,025

Total ordinary revenue from April 1st to April 6th amounted to £17,965,800. Income tax produced £8,199,000 and super tax £1,610,000. Estate, etc., duties yielded £1,320,000. Customs yielded £1,541,000 and excise £665,000. Receipts from sundry loans amounted to £2,881,716.

The national debt was increased by £7,729,612, as shown below:—

(000's omitted.)

	£		£
Treasury Bonds	− 1,721	Treasury Bills	+ 7,692
		Public Department Advances	+ 9
		National Savings Certificates	+ 100
		Sundries	+ 1,650
	− 1,721		+ 9,451

The floating debt was increased by £9,335,000 to £746,680,000.

Financial Year, 1929–30, April 1 to April 6.

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follow :—

1929. Arrivals.	£	1929. Withdrawals.	£
Apr. 5 Bars bought	92	Apr. 5	nil
" 6 Bars bought	6,380	" 6 Bars sold	1,710
" 8 Sovs. from abroad	506,000	" 8 Bars sold	1,720
" 9 Bars bought	714,011	" 9 Sovs. set aside	250,000
" 10	nil	" 10	nil
" 11	29	" 11 sovs.	5,000
Total	1,226,512	Total	258,430

Net arrivals, £968,082.

Messrs. Samuel Montagu and Co. write as follows on April 10, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £154,045,537 on the 3rd instant (as compared with £153,331,566 on the previous Wednesday), and represents an increase of £139,222 since April 29, 1925—when an effective gold standard was resumed.

In the open market this week, about £855,000 bar gold from South Africa was available. The Bank of England secured the bulk of this amount—about £714,000, as shown in the figures below; India took £20,000, the Home Trade £53,000, and the Continental Trade £60,000. There was a net influx of gold of £963,053 during the week under review.

SILVER.

The week has seen rather a quiet market and movements in the prices have been but narrow. The Indian Bazaars being less interested except at lower rates, quotations at first showed some disposition to sag under the influence of some re-selling of silver on China account. On the fall, however, China was more inclined to buy, and, as offerings were small and restricted as to price,

the market assumed a steadier tone, although American operators have been generally disposed to offer moderately on most afternoons.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 2nd instant to mid-day on the 8th instant :—

Imports.	£	Exports.	£
Mexico	107,379	Germany	62,800
Canada	43,600	British India	50,034
Orher countries	8,397	Other countries	8,146
	£159,376		£120,980

† Free of Income Tax. (t) Sixteen Months.

Continued from p. 825.

BURMA CORPORATION, LIMITED.—(Incorporated in India).—During the month of March, 38,814 tons of ore were mined, including 3,635 tons of high grade ore. 30,400 tons of ore were milled in the Treatment Plant, producing 10,580 tons of leady concentrates. 13,632 tons of lead-bearing material, including 3,275 tons of high grade ore, were smelted in the blast furnaces, producing 6,980 tons of hard lead for treatment in the refinery. Refinery products were 6,602 tons refined lead and 628,211 ounces refined silver. Of silver production 79,780 ounces were recivered from the treatment of copper matte. Zinc plant produced 4,620 tons zinc concentrates, assaying 9.9 ounces silver, 5.2 per cent. lead and 51.1 per cent. zinc.

In addition to the above 900 tons copper matte were produced from the treatment of accumulated smelter by-products and 6,243 tons copper ore. 100 tons of refined antimonial lead were also produced. Included in the tonnage of refined lead is 504 tons recovered from the smelting of copper ore.

THE MOUNT LYELL MINING AND RAILWAY COMPANY, LIMITED.—During the quarterly period ended 31st March there were smelted :—Mount Lyell ore, 421 tons; North Lyell ore (direct to smelters), 1,145 tons; concentrates, 8,469 tons. The converters produced 1,901 tons of Blister copper containing :—Copper, 1,883 tons; silver, 29,692 ozs.; gold, 662 ozs. The mill treated 37,346 tons of ore, and produced 7,183 tons of concentrates. Furnace ran 42 days. Cathode copper produced, 1,707 tons.

SULPHIDE CORPORATION, LIMITED.—During the four weeks ended 23rd March, 1929, 9,804 tons of Central Mine ore, together with 1,444 tons of slimes were milled at the Central Mine, producing 1,846 tons of leady concentrates (including 88 tons from the de-leading plant) which assayed 49 ozs. silver, 65 per cent. lead, together with 2,657 tons of zinc concentrates assaying 8 ozs. silver, 5 per cent. lead and 50 per cent. zinc per ton, and 187 tons special slimes, assaying 10 ozs. silver, 12 per cent. lead and 5 per cent. zinc per ton.

BROKEN HILL SOUTH, LIMITED.—For the four weeks ended 6th April, 1929, 23,100 tons of crude ore were treated and produced 4,418 tons of leady concentrates assaying 66 per cent. lead and 25 ozs. silver per ton; also 4,538 tons of zinc concentrates assaying 50 per cent. zinc. Decreased output due to Easter holidays.

SAN FRANCISCO MINES OF MEXICO, LIMITED.—Cable advice of operations for March has now been received as follows :—Ore treated, 26,000 tons; lead concentrates produced 3,500 tons; zinc concentrates produced 3,900 tons. Estimated net smelter returns, $348,372. Operating expenses, $118,113. Estimated operating profit, $230,259.

OIL OUTPUTS.

ANGLO-ECUADORIAN OILFIELDS, LTD.—The production for March is cabled as 13,968 tons.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The results for the month of March are as follows :—Production of oil, 37,210 tons; deliveries, 38,100 tons. The production for the first six months of the current year to March 31st amounts to 196,470 tons, as compared with 134,000 tons for the corresponding period last year.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended March 27th : Venezuela, 34,710 barrels; Trinidad, 15,980 barrels. Total, 50,690 barrels.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended April 3rd : Venezuela, 37,612 barrels; Trinidad, 21,235 barrels; total, 58,847 barrels.

LOBITOS OILFIELDS, LIMITED.—The production of the Peruvian company for March was 27,629 tons.

STEAUA ROMANA (BRITISH), LIMITED.—The production of the Steaua Romana Co., Bucharest, for the month of March was 63,100 tons.

TAMPICO OIL, LIMITED.—The total production on the company's properties in Mexico during March was 21,877 barrels, in respect of which the Royalty due to Tampico Oil, Limited, amounted to 1,641 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during the month of March amounted to 116,786 barrels, or approximately 16,684 tons.

THE MEXICAN EAGLE OIL.—The production for the week ended March 23, 1929, was 155,000 barrels.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during March, 32,300 tons; oil purchased during March from other companies, 43,100 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending March 27, 1929, was 2,508 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for week ending April 3, 1929, amounted to 2,173 tons.

VENEZUELAN CONSOLIDATED OILFIELDS, LIMITED.—Total production week ended March 30th, 3,878 barrels (554 tons).

VENEZUELAN CONSOLIDATED OILFIELDE, LIMITED.—Total production for week ended April 6th : 3,934 barrels (562 tons).

VENEZUELAN CONSOLIDATED OILFIELDS, LIMITED.—Total production for month of March 15,006 barrels (2,143 tons).

VENEZUELAN OIL CONCESSIONS.—Production for the week ended March 30th was 118,733 metric tons (previous week ended March 16th, 120,868 metric tons).

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended April 6th was 119,876 metric tons (previous week ended March 30th 118,474 metric tons).

Reports and Notices.

Admiral H. W. Grant, C.B., has been elected a member of the board of Direct Spanish Telegraph Co., and Mr J. C. Denison-Pender has been appointed the chairman.

Messrs. Grieveson Grant and Co. have removed to 97 Gresham Street, E.C. 2 (general office entrance, 40 Coleman Street, E.C. 2).

The Prudential Assurance Co. have elected Mr. Frank Haycraft to to the vacancy on the board occasioned by the death of Mr Daniel Wintringham Stable.

The Right Hon. Lord Bradbury, G.C.B., director of Williams Deacons Bank, Limited, has been elected chairman of the committee of London Clearing Bankers for the ensuing year, and Mr Frederick Craufurd Goodenough, chairman of Barclays Bank, Limited, has been elected deputy-chairman.

Mr C. Cowley has been appointed secretary of the Antofagasta (Chili) and Bolivia Railway Co., Limited, and of the Chilian Northern Railway Co., Limited, to fill the vacancies caused by the death of the late secretary, Mr A. H. Clinch.

The Standard Bank of South Africa, Limited, have appointed Mr H. G. Hoey, secretary of the Bank, as assistant general manager in Cape Town. Mr Hoey will leave for South Africa in the autumn and will be succeeded as secretary by Mr T. D. Williams, the present accountant at the head office in London. Mr C. Vaux, assistant accountant, will fill the post of accountant.

The Royal Mail Steam Packet Co. have appointed Mr P. G. M. Mitchell to be a director of the company, to fill the vacancy caused by the death of Mr J. W. Clark.

BANKS.

SWISS BANK CORPORATION. — The Extraordinary General meeting of shareholders of the Swiss Bank Corporation, which was held in Basle on April 6th, under the chairmanship of Dr Max Staehelin, ascertained and certified that the subscription and payment of 40,000 new shares, i.e., frs. 20 million, had been duly carried out. It was decided to allocate the premium of frs. 5 million arising out of the new issue to reserves. The total paid-up capital and reserves of the bank consequently amount to frs. 209 million. After explanations given by the chairman, the amendments proposed by the board of Articles 31 and 32 of the articles of association, providing for the creation of a board of general managers, were duly approved. The delegates of the board of directors will continue to function as before.

RAILWAYS.

THE CANADIAN NATIONAL RAILWAYS.—The annual report of the Canadian National Railways shows a net operating income of 53,213,000 dollars for 1928, exclusive of taxes, totalling five millions. The net operating revenues showed an increase of twelve and a half million dollars over 1927. The net revenues enabled the Canadian National system to pay all interest charges on its bonded indebtedness due to the public, and thirteen million dollars over for repayment to the Government on the advances of the past few years. The gross earnings of the system increased by tweny-eight million dollars over the preceding year, and the operating expenses due to increased traffic and the higher scale of wages increased by fifteen millions. During the year one hundred and seventy-seven miles of new branch lines were completed and one hundred and ninety miles of new construction begun. A separate statement shows a net operating loss on the Maritime Provinces lines of 520,000 dollars, consequent on the reduction of rates under Federal legislation two years ago. The system will be recouped for this loss by a Federal grant.

MISCELLANEOUS.

ALLIANCE TRUST COMPANY, LIMITED.—Profits for the year ended January 31, 1929, amounted to £483,662, an increase of £46,283, while interest absorbed £168,009, compared with £156,356. The net profit rose from £281,024 to £315,653. After maintaining the dividend on the increased ordinary capital at the rate of 25 per cent., and paying a full year's preference dividend on the bonus issue of preference stock made last year, the directors are placing to contingent fund £80,000, against £70,000, and are increasing the balance forward by over £5,000 at £48,923. In the belief that the current year will again provide opportunities for the favourable employment of capital the board are making a further issue to stockholders of 92,500 shares of £1 at £5 per share, convertible into stock.

ANCHOR LINE (HENDERSON BROTHERS), LIMITED. — The report for 1928 reveals a net profit of £287,986, against £285,319 for 1927. The sum of £266,626 has been written off for depreciation. The balance to carry forward is £96,669, against £89,609 brought in. The report states that results of the year's working show some improvement on those of the preceding year, but it is disappointing to note that there has not yet been evidenced such general improvement in national and international trade as is essential to the prosperity of the British mercantile marine.

CAMMELL, LAIRD AND COMPANY, LIMITED.—The accounts for 1928 show a loss of £80,694, after charging full depreciation and paying debenture interest. This compares with a loss of £112,046 for 1927. After transferring £75,000 from the reserve account (against £125,000 last year), there remains a credit balance to carry forward of £5,921 (against £12,816). No dividends are recommended on the preference or ordinary shares. The dividend on the Preference shares is in arrear as from June 30, 1925.

DEBENHAMS SECURITIES LIMITED.—The report for the year ended March 31, 1929, states that dividends received from Debenhams, Limited, amounted to £534,103 (the previous report showed the net dividend at £317,746). Adding interest received, £4,824, and the balance brought forward, £67,338, and deducting income-tax, directors' fees and other expenses, £72,132, the available balance to be dealt with is £534,133. The preference dividend absorbs £204,713 and the ordinary share dividend (1s. per 5s. share, with the final dividend now proposed of 8¼d. per share), £240,000, leaving a balance of £89,420 to carry forward, subject to accruing dividend on the preference shares from December 31.

SWEDISH MATCH COMPANY.—The profits for 1928 amounted to Kr. 48,961,568 as against Kr. 40,436,615 for 1927. Including Kr. 6,683,895 brought forward, there is Kr. 55,645,463 at the disposal of the general meeting. The directors propose that a final dividend of 10 per cent. (making with the interim dividend of 5 per cent. paid in October last, 15 per cent. for the year) should be paid, and that the balance of Kr. 28,645,463 should be carried forward. The directors also propose that an interim dividend of 5 per cent. in respect of the current year should be paid during the latter half of 1929. The balance sheet of the company shows total assets of Kr. 603,729,451.

THE HOME AND FOREIGN INVESTMENT TRUST, LIMITED.—The directors recommend a dividend on the ordinary stock for the half-year which ended on March 31st last at the rate of 3½ per cent. (actual), making, with the 2½ per cent. (actual) interim dividend paid on November 12, 1928, 6 per cent. for the year to March 31, 1929. This dividend will be paid with the dividend on the preference stock on May 14th next.

WHITBREAD AND CO., LIMITED.—The profit for 1928 amounted to £300,653 (against £268,205 for 1927, including £37 401 profit on sale of properties and premiums received for leases). After allowing for debenture interest, preference and preferred ordinary dividends, 10 per cent. dividend on Crawshay shares, and the interim ordinary dividend, it was decided at the meeting on Monday last to pay a final dividend of 7 per cent. on the ordinary shares, making 12 per cent. for the year (against 11 per cent.). During the year £46,991, representing profits (less losses) on sale of properties and premiums received for leases, has been added to reserve account; a further sum of £53,009 is now added to reserve out of profit, which brings the reserve account up to £400,000. The carry-forward is increased from £210,473 to £243,437. Last year £300,000 was placed to reserve. Cash is at £142,780, against £143,675. Investments (Government) are at £505,871, against £442,115. Trade investments are at £379,593, against £378,300.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Occasional rains and a lower temperature experienced during the past week over the United Kingdom tended to retard growth, though autumn and winter cereals have improved considerable of late, and present a healthy appearance. Meanwhile rapid progress is being made with spring work, and a large area put to barley and oats. Supplies of native wheat are still on a light scale, growers being too busy to attend to threshings. Prices ruled steady in sympathy with imported varieties, but general course of trade fails to expand. In the floating and forward cargo section, values rallied somewhat as the result of higher American cables occasioned by encouraging prospects of farm relief measures there in order to raise prices. Buyers, however, were reluctant to follow the upward trend, while confining purchases to a few vessels on passage for immediate requirements, and subsequent movements disclosed a sagging tendency. Crop prospects are favourable in most producing countries, while the international position is still influenced by large visible supplies, particularly in North America. Steamers of Rosafe 64 lbs. March clearance sold 42s., ditto early April 43s., Australian afloat 44s. 6d. to 44s. 10½d., with part cargoes at 45s. 3d. Feeding stuffs firmer and Plate maize more reservedly offered in view of improved inquiries on Continental account. Steamers of La Plata sold 39s. 6d., and April clearance 39s. 3d., all per 480 lbs. c.i.f. terms.

Wheat.—Steady. No. 3 Northern Manitoba, 48s. 9d; No. 4 Manitoba, 47s. 9d.; No. 5, 44s. 3d.; No. 6, 38s. 9d.; Rosafe, 64 lbs., 45s. 6d.; Barusso, 63½ lbs., 45s. 9d.; Australian, 47s. 6d.; all ex-ship, per 496 lbs. English, 9s. 6d.–9s. 8d. per 112 lbs.

Flour.—Maintained. London standard grade, 37s. 6d.; town whites, 38s. 6d.; patents, 39s. 6d.–40s. 6d. per sack delivered in the Home Counties, with 6d.–1s. per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 34s.–37s.; Minneapolis, 34s. 6d.–37s.; Australian, 35s.–35s. 6d. ex-store. On c.i.f. terms Manitoba top patents April quoted 35s. 6d.–36s. 6d.; export ditto, 33s. 6d.–34s. 6d.; Australian, 32s. 6d.–33s. per 280 lbs.

Maize.—Firmer, especially for distant positions. Plate landed 42s.; ex-ship to arrive, 40s. 9d.; March-April, 39s. 6d.; new April-May, 38s. 6d.; May-June to July-August, 38s. 3d.; No. 2 white flat African, 41s. 6d. landed; No. 2 American mixed, 40s. 6d. landed, per 480 lbs. Yellow maize meal, £11; hominy chop, £8 17s. 6d. ton landed.

Barley.—Steady. Californian ex-ship, 45s.–52s.; Chilian chevalier, 48s.–58s.; Australian, 43s.–48s.; Smyrna, 44s.–47s. per 448 lbs. Algerian/Tunisian ex-ship, 34s. 6d.; Canadian feed, 29s. 6d.; No. 3 Canadian western, 33s. 3d. ex-ship; No. 2 Federal American, 29s. 6d. ex-ship to arrive, 31s. landed, per 400 lbs. English malting, 10s.–12s.; feed, 9s. 3d.–10s. per 112 lbs.

Oats.—Quiet. Plate landed, 26s. 3d.; ex-ship to arrive, 24s. 9d.; black Plate ex-ship, 24s.; mixed Canadian feed landed, 21s. 9d.; Chilian white, 31s. 6d. landed; German landed, 29s. 3d.; ex-ship to arrive, 28s. per 320 lbs. English, 9s. 4d.–10s. per 112 lbs. Scotch landed, 30s. 9d. per 336 lbs. Irish black, 27s. 6d. per 320 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.
Estimated sales of home-grown wheat—				
1 week to April 6	Qrs. 135,452	Qrs. 184,215	Qrs. 164,804	Qrs. 134,246
27 weeks to April 6	8,117,590	7,927,954	9,758,287	10,991,041
Average price of English wheat per qr.	s. d. 9 9	s. d. 10 1	s. d. 11 6	s. d. 11 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

Weeks ended.	Quantities Sold.			Average Price per Qr.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1929.	Qrs.	Qrs.	Qrs.	s. d.	s. d.	s. d.
Mar. 30	105,458	61,881	30,310	9 9	10 3	9 9
Apr. 6	135,452	81,470	41,297	9 9	10 1	9 8
Apr. 4, 1925	154,431	65,122	68,233	12 6	10 10	9 5
Apr. 3, 1926	184,185	105,895	41,076	11 8	8 11	8 11
Apr. 9, 1927	164,804	68,325	49,710	11 6	10 10	8 2
Apr. 7, 1928	184,215	61,630	32,946	10 1	11 0	11 2

AMERICAN WHEAT MARKETS.

In spite of a fairly steady demand, wheat tended downward during the early part of the week as the result of persistently favourable weather reports. A subsequent rally, inspired by keen export demand, hopes of farm relief, and some speculative buying was not wholly lost in the decline which followed the publication of the Bureau report. Quotations:—

Nearest Future.	Jan. 4, 1928.	Apr. 11, 1928.	Jan. 2, 1929.	Mar. 20, 1929.	Apr. 3, 1929.	Apr. 10, 1929.
Winnipeg (No. 1 Manitoba)—Cents per 60 lb.)	137	150	122	129⅜	124⅜	124⅜
Chicago (No. Winter)—Cents per 60 lb.	130⅜	147⅜	116⅜	123¼	118¼	120⅜

Visible supplies of wheat in Canada at 90,610,000 bushels show an increase of 1,782,000 bushels as compared with the previous figure. Supplies a year ago stood at 77,231,000.

THE COAL TRADE.

Our Sheffield correspondent writes:—The forward position for export coal is again a little weaker, and sellers are accepting lower prices. Supplies, however, continue on the short side, and a large tonnage is being shipped. The demand for industrial fuel is rather disappointing. The scarcity of furnace coke continues, and there is none available in the open market. The home trade in foundry coke is quiet, but there is a brisk export demand.

Our Glasgow correspondent writes:—There has been a marked falling off in both the home and the foreign demands lately, and supplies of coal are now plentiful in all districts. The majority of the collieries are, in fact, looking for business now, and are willing to shade prices for any suitable orders. Prices are on the easy side, shipping quotations being round the following, which are all f.o.b. district ports:—

Lanarkshire.—Ell best, 17s.; splint best, 18s. 6d.; splint second, 17s. 6d.; navigation, 18s. 6d.; navigation second, 16s.; steam, 15s.; Hartley, 18s. 3d.; trebles, 15s.; doubles, 14s.; singles, 12s.; pearls, 11s.; dross, 10s. 6d. Fife.—Screened navigation, 19s. 6d.; first-class steam, 14s. 6d.; third-class steam, 13s.; trebles, 14s. 6d.; doubles, 13s. 6d.; singles, 12s. 3d. to 12s. 6d.; pearls, 11s. 3d. to 11s. 9d. Lothians.—Prime steam, 14s.; secondary steam, 14s.; trebles, 14s. 6d.; doubles, 13s. 6d.; singles, 12s.; pearls, 11s. 3d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 16s. 6d.; trebles, 15s.; doubles, 14s.; singles, 13s.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Although the pressure of business on the Cardiff market is not as great as it was a few weeks ago, the undertone continues very firm and shipments are still active. Collieries, on the whole, are very well sold over the present month, and except in individual cases, and then only for spot or prompt positions, prices have been retained at the recently improved figures. At the docks normal tonnage conditions are prevailing, and practically no vessels are waiting for berths. During the past week three more of the South Wales colliery companies have issued their reports for the past year. The Cardiff Collieries, Limited, show a loss of £37,109 and the Albion Steam Coal Company, Limited, of £22,761. Both these undertakings have again passed their ordinary and preference dividends, and the great concern of Ocean Coal and Wilsons, Limited, has been unable for the first time since its incorporation to make any distribution on its ordinary share capital. As this company is now a shareholding concern, the balance sheet does not show the extent of the losses suffered by the Ocean company's collieries during 1928. There is reason to believe that under the present improved conditions all the more important collieries in the coalfield are, for the first time since January, 1927, operating on a profit-earning basis, but in view of the possibility of a reaction in the immediate future, the Commercial Committee of the Coalowners' Association will next week consider the advisability of raising the level of the minimum prices under the 1928 scheme. The following are the current approximate quotations: Best Admiralties, 21s. 6d. to 21s. 9d.; seconds, 21s. to 21s. 6d.; best drys, 21s. to 21s. 6d.; Black Veins, 21s. to 21s. 6d.; Western Valleys, 20s. 6d. to 21s.; Eastern Valleys, 20s. 6d. to 21s.; best small steams, 14s. 6d. to 14s. 9d.; cargo smalls, 13s. 9d. to 14s. 3d.; coking smalls, 14s. 6d. to 15s.; anthracite best large, 33s. 6d. to 35s.; Red Vein, large, 25s. to 27s.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 42s. to 44s.; stove nuts, 40s. to 42s. 6d.; rubbly culm, 10s. 3d. to 10s. 9d.; foundry coke, 27s. 6d. to 37s.; patent fuel, 19s. 6d. to 21s. 6d.; pitwood, ex ship, 26s. 9d. to 27s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Following a quiet spell, business has been resumed on somewhat active lines. In the pig-iron department the situation appears to be gradually improving and there is a likelihood of more furnaces being put into blast. The overseas demand for certain classes of iron has improved, while there is a much better demand for foundry qualities than for some time past, and this may be taken as an indication of improving conditions in the foundry trades. The absence of any competition in the British home market from Continental pig-iron producers has enabled this branch of the industry considerably to improve its position. In the semi-finished steel section of the market the British steel makers are experiencing a steady demand. Continental manufacturers appear to have only small quantities to offer for the British market and are quoting prices which are scarcely competitive with the prices asked for British material. Of late the greater part of the foreign semi-finished steel sold in this country has been German and there seems a likelihood that supplies from this source will not be maintained, so that the prospects of the British steel makers are favourable. There is a fairly good demand for finished steel, although the export markets continue to buy slowly. In the home market there has been a fair amount of business passing in structural steel, but the principal support of the British industry comes from the shipyards.

Our Middlesbrough correspondent writes:—The pig-iron market still remains very firm, and prices are inclined to advance. Notwithstanding the nominal quotation of 67s. for Cleveland No. 3, buyers are willing to pay up to 68s. 6d. for the iron, and prices must be reckoned on this basis. Other grades have also advanced, and are as follows: No. 1 Cleveland, 71s.; No. 4 foundry, 67s. 6d.; No. 4 forge, 67s. As regards East Coast hematite, there seems to be a slight lull, and iron is not so difficult to get as it was a few weeks ago, when there was some fairly heavy buying. The nominal price is 74s., and this will probably be shaded against a substantial enquiry. The position of manufactured iron and steel is very steady, and the recent improvement is being maintained. Prices are inclined to advance, and hard and medium billets have both been advanced 7s. 6d. per ton, while small advances have occurred in soft billets and steel bars. Iron bars have been advanced 10s., and the amended prices are as follows, subject to the usual rebate: Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 15s.; steel rails, £8 10s. The ore position is still very strong, with best rubio well maintained at 23s. c.i.f. Middlesbrough, with mineral scarce. Buyers, however, would appear to have satisfied their immediate requirements, so that the market is not very active. Coke is still scarce, and now commands nearly 20s. per ton delivered furnaces.

Our Sheffield correspondent writes:—April has opened quietly as regards the ordinary products of the local steel industry, and the present output is below the average of January, when there was a considerable revival. Special lines, however, are as active as ever and instances of expansion are not altogether absent. Prices of hard basic billets have this week been advanced 7s. 6d. per ton and best qualities of this material are now more expensive than acid steel. Dearer fuel and the high cost of scrap are responsible for the increase. The output of the best acid steels remains on a restricted scale owing to the absence of important orders for railway material. Comparatively little foundry iron has been bought since the price was advanced, but makers' attitude is firm. Foundry consumption, although a little better, remains below normal. Conditions in the lighter and finished branches have been steady over a long period and exports are being maintained at a substantial level. Best qualities of silverplate and cutlery are in poor demand and are being neglected by the general public.

Our Glasgow correspondent writes:—While the Scottish pig-iron trade remains quiet there are signs of improvement within the last day or two. Makers of heavy steel continue to benefit from the increased volume of work at the shipbuilding yards together with the very restricted amount of Continental competition. In the semi-finished trade the foreign competition is also negligible. The position with structural engineering firms in and around Glasgow remains very satisfactory, but there is less activity in the locomotive engineering establishments and at some works it has been found necessary to curtail the working week in several departments. The market for black and galvanised sheets is quiet. Tube makers in the Lanarkshire area are all busy. The demand for bar iron remains poor. Prices all round are unchanged.

Our Cardiff correspondent writes:—Steady conditions are ruling in the South Wales steel and tinplate markets, and on the Swansea Metal Exchange on Tuesday it was reported that among the new business recently arranged is an order for half a million boxes of oil plates for the Eastern market. Prices of basis grades are ruling up to 18s. 9d. per box compared with a maximum of 18s. 3d. at the corresponding period last year. Local tinplate bars are unchanged at the new price of £6 6s. 3d. and foreign bars are now ruling at £6 per ton. Shipments last week were slightly less than in the previous week, but, as supplies received from works were lower, stocks have been reduced from 306,442 boxes to 278,579 boxes.

2OZ. POCKET TIN 1/10

OTHER METALS.

TIN.—Considerable irregularity and weakness accompanied dealings in the standard market, influencing factors being liberal offerings following lower American and Eastern cables, also the heavy decline in copper values. Later values marked some recovery on increased buying interest. Stocks in London and Liverpool warehouses for week ending April 6th were returned at 8,455 tons, compared with 1,976 tons at corresponding period last year. Standard cash changed hands at £216 12s. 6d., £207 and £210 10s.; three months, £217 15s., £207 and £211 10s. In the East sales were recorded from £220 15s. to £213 15s. ton c.i.f.

COPPER market commenced steadily, but later values slumped heavily on realisations and discouraging movements in New York. Active trading occurred at the lower levels, chiefly in three months, near metal being neglected. Standard cash sold at £80 to £82 5s.; three months, £89-76-£79 10s.

LEAD in good demand, but with ample supplies on offer, values exhibited irregularity and weakness. Good soft foreign pig, April, sold, £24 15s. to £23 17s. 6d., £24 5s.; May, £24 15s.; £25 1s. 3d. and £23 15s.; June, £24 15s., £25 and £23 15s.; July, £24 17s. 6d., £25 1s. 3d., £23 10s. and £23 15s.

SPELTER in quieter request, and market weak under liberal offerings. April, sold, £27 to £26 13s. 9d.; May, £26 13s. 9d., £26 8s. 9d. and £26 11s. 3d.; June, £26 16s. 3d. to £26 8s. 9d.; July, £26 16s. 3d. to £26 7s. 6d.-£28 8s. 9d.

ALUMINIUM steady. Ingots and bars for home delivery, £95 ton.

ANTIMONY dull and tendency easier. English regulus, £54 to £55; foreign spot, £38; ditto, April-May, £33 10s. c.i.f. terms.

WOLFRAM firm. Chinese, also Straits qualities, 22s. 9d. to 23s. per unit c.i.f.

QUICKSILVER maintained. Spot, £22 5s. to £22 10s. per bottle.

TIN PLATES firm. I.C. coke, prompt and forward, 18s. 3d. to 18s. 9d. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, April 10.

The market has shown a firmer tone during the last few days, fears of rains in the Mississippi valley and the Eastern belt causing some trade buying. Liquidation seems about over. According to the monthly figures of Cotton Textile Merchants of New York, the production of cotton cloth in March amounted to 298,000,000 yards, against 293,000,000 yards in February. Sales during the month totalled 358,000,000 yards against 341,000,000 yards in February. Stocks on hand at the end of March amounted to 345,000,000 yards, against 373,000,000 yards at the end of February, and the unfilled orders totalled 505,000,000 yards, against 472,000,000 yards at the end of the preceding month. Spot sales for the week 4th to 10th, inclusive, are 31,000 bales, of which 16,620 are American, 1,250 Brazil, 500 Argentine, 5,000 Peru, 4,800 Egyptian, 1,700 African, 620 East Indian and 510 sundries. Imports for the same period are 59,299 bales, of which 26,651 are American, 2,022 Peru, 17,905 Egyptian, 3,038 African, 9,038 East Indian and 645 sundries. Quotations to-day are: American middling, 10·92; Egyptian Sakel, 18·90; Uppers, 12·70; Brazil fair, 11·12; Peru G.F. Mod-Rough, 13·00, Smooth, 11·87; West African middling, 10·97; and East African G.F., 12·30.

MANCHESTER, April 10.

The Manchester market during the past week has been dull. There has been a marked absence of practicable demand in yarn and cloth, and spinners and manufacturers have lost ground. The slack state of affairs has been largely due to nervousness with regard to raw cotton values and discouraging advices from the leading cloth consuming outlets abroad. The situation in India has caused much anxiety, and business has been confined to odd lines, chiefly in light cloths, prints and fancies. The prospects in China have met with a setback. The trade being done at the present time for the several minor outlets is not worth mentioning. Failing an early revival of buying, looms will soon be stopping work in considerable numbers. The sales of American yarn have been less than the output, and it is not difficult to obtain quick delivery for most counts and qualities. As anticipated, it has been decided to extend the short time in the Egyptian spinning section for a further four weeks.

THE WOOL TRADE.

Our Bradford correspondent writes:—Buying in small weights for immediate requirements continues as in recent months, and although tops and yarns are being offered at prices well below replacement cost, users show no inclination to make provision for the future. There is an apparent determination to avoid carrying stocks, so that the risk of being caught by a fall in the market is reduced to a minimum. The absence of bulk buying is reflected in a somewhat sagging tendency in quotations. Some firms are unwilling to make further concessions in either tops or yarns, but others appear to be in need of orders and are prepared to concede a fraction. Generally speaking, neither spinners nor manufacturers seem to have much confidence in the future, but it is just possible that they may be taking too pessimistic a view of the outlook. It should be remembered that stocks are not large for the time of year, and there is a possibility of supplies being on the short side before the next season's clip is marketed. In the meantime, matters of more immediate concern are the result of the recent Safeguarding application and the present wages dispute. No doubt the uncertainty regarding the Safeguarding question is holding up business in some quarters, and the opinion is held by some traders that the rejection of the application may lead to increased activity of Continental users in the raw wool markets. With regard to the wage reductions in the Heavy Woollen District, the general belief is that serious trouble will be avoided, and that the action taken by certain manufacturers will ultimately lead to a new wages agreement for the whole industry.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

Though manufacturing conditions in various parts of the world are none too good, the position of wool is remarkably sound, and as the end of the Australian season approaches the future seems fairly well assured. There is no probability of an excessive weight of wool having to be carried forward when the last sale has been held. The indications are rather that wool will not be plentiful between now and the time when the next new clip begins to come forward in bulk. There will, of course, be some early shorn clips from Australia coming on to the market which will fill a very useful place, but the curtailment of the selling season during recent years has been by no means the least serious of the problems which have had to be faced. The buying of the bulk of the world's clip in a comparatively short period has naturally imposed big financial responsibilities upon those handling it, and it is really remarkable how this situation has been dealt with. Cable information received from Australia by importing topmakers shows that there is no evidence of the reactionary tendency which usually develops towards the end of the season. That steady wool values are needed will be fully conceded by everyone who knows the state of affairs in manufacturing circles in this country and on the Continent. Merino wool is at a fairly reasonable price, and outlets for crossbreds are being found which justify the confidence shown in this description. Russian buying does not yet appear to be finished, and if further sales of crossbreds can be made to that destination it will be a valuable help in relieving Bradford merchants of their stocks. The question of payment is vital, but some firms here are prepared to do the business, and as there are tremendous manufacturing needs in the country there will no doubt be opportunity for shifting increasing weights of both merinos and crossbreds.

Included in the news recently received from Australia is the intimation that excellent rains have fallen over pastoral areas, particularly Queensland and New South Wales. The drought in Queensland has evidently been completely broken, except in the Far West, and as this is not an important wool-growing district, the health of the flocks generally and the acceptability of the forthcoming clip is fairly well assured. The Queensland clip in particular should be better than the last, and the Australian clip as a whole, though not likely to be any bigger than last year, will probably be somewhat finer.

HIDE, LEATHER AND ALLIED TRADES.

Although conditions remain difficult, there is a rather better feeling in trade circles as quite a good clearance of boots and shoes was made before the Easter holidays. This has led to an influx of orders to shoe manufacturers, who have in turn been obliged to buy more leather. The market hide position still seems a little uncertain, though it is a good sign that at recent auctions no decline in values has been registered, in spite of the conservative attitude of tanners. Foreign hides show little alteration in the standard classes, but a few ordinary sorts have slightly weakened in the face of a poor demand. South American fregorifics, however, remain very firm, and as supplies are becoming shorter, no further reduction is expected as the United States and the Continent are buying. Current quotations for best Argentine ox are 9½d. Dry hides are erratic, B.A. Americanos now offering at 13½d., as against 14d. a week ago. African hides have advanced, and 13⅜d. is quoted for first dry salted Capes, seconds a penny less. Australians are also a shade lower, Queensland meatworks hides now selling at 10¼d. Latest cables from Chicago report the position as steady with best heavy packers now selling at 15 cents.—an advance of a cent. on last week's prices. The demand for sole leather has certainly improved, and fair-sized quantities of light and medium bends have gone into consumption. Tanners seem less inclined to offer concessions, but merchants who bought heavily some time ago, are clearing stocks at less money and cutting their loss. Rough hides are firmer and advances are again asked for split hides. Trading in upper stock remains rather quiet, although there are signs of improvement as orders for willow and box calf have come along more regularly. Patent has fallen rather flat, but glacé in black, brown, and a few fancy shades has moved off well. Curriers are still rather slack on kip leathers, but dressers of clothing leathers seem busy.

JUTE TRADE.

DUNDEE, April 10th.

The jute trade is in a state of depression. Buyers of yarns and cloth are not inclined to operate in view of an easier trend in raw material values, and prices are all more or less nominal in the absence of a test. Spinners and manufacturers are not yet forced to quote lower terms to induce business, as they are still fairly well supplied with orders to complete for a few weeks. The position of the raw material is very uncertain. While prices are declining as the result of good weather reports of the new crop, which is in course of being sown, sellers of the old crop are not free with their offers to this market, and in the majority of cases prices are nominal. Good First Marks and Lightnings might be bought at £36 and £34 respectively for April/May shipment, and Daisee assortment is nominal at £33 and Tossa assortment at £34 for same shipment. New crop was offered at the end of last week at £37 for First Marks and £35 for Lightnings, but less would now be taken for August–September shipment. There are, however, no actual quotations in the market. Some private messages from Calcutta state that the new crop when completed is expected to be about the same size as that of the present season. To the end of March, 9,525,000 bales were accounted for for the first nine months of the season, compared with the Government final forecast of 9,916,000 bales for the whole season. The remaining supply of fibre held up-country is stated to be very small, but there seems to be little doubt about the forecast figures being again exceeded for the season. The course of the whole market during the next three or four months will be very anxiously watched by the trade. Buyers of jute yarns are displaying so little interest that the market is practically idle, and prices are not being tested. Spinners continue to quote 3s. 7d. for common 8 lb. cops and 3s. 8d. for 8 lb. spools, though no doubt something less would be taken if business were offered. The same applies to all other qualities. Twist is at 5⅜d. for 3-ply 8 lb., and sacking yarns at 4d. for 24 lb. weft and 5⅛ for 8 lb. chains. Rove is not quoted at less than £28 for 48 lb. and £18 for 200 lb., but fairly large quantities can be bought at 5s. to 10s. less. Fine yarns are firm and carpet descriptions are quoted at 5⅜d. for 14 lb. warp. Manufacturers are only selling very small quantities of cloth at from 4⅜d. for 10½ oz. 40-in. hessians and 3½d. for 8 oz., but 1/16d. less would not be refused for a respectable order. Linoleum hessians are dull and nominal, while heavy goods are very slow. Makers of the latter are putting off machinery. Calcutta goods have declined sharply owing to lack of demand.

VEGETABLE OILS AND OILSEEDS.

Markets generally are not very active and business is small in volume. Notwithstanding easier prices the demand for linseed oil by consumers continues poor and the market is only barely steady around £28 5s. per ton, naked ex Hull mill for April delivery with later positions at a premium advancing to £29 for September-December. Cotton oils are neglected. Crude Egyptian offers at £27 5s. and common edible at £30 15s. for prompt and May-August, ex Hull palm kernel oil is steadier but rape oil easier on better supplies. In the oilseed section linseed has been in some demand in near positions and is firmer, £16 to £16 2s. 6d. being demanded for Plate on spot and on passage. For seed now shipping down to £15 16s. 3d. has been accepted, and for May-June £15 15s. More interest is evinced in the new Indian crop and Calcutta to London passage to Europe at 146,600 tons is now within moderate compass. Cotton seed is easier and black Egyptian for April loading to Hull has declined to £9 8s. 9d. (actual business done). Soya beans are dull and a small trade to the Continent has been done at £11 2s. 6d. April shipment. Oilcakes are in less demand as the open weather approaches.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Pending the Budget announcement, it is quite evident that no improvement in consumption requirements is likely to occur. In fact, manufacturers and distributors alike are working their stocks down to the lowest possible ebb. Previous prices held good for all spot sugars. American centres were quiet but fully steady. Slight weakening in the Java markets is partly accounted for by the fact that stocks in India have shown decided augmentation of late; a good deal of sugar from Europe also has yet to be taken up. The sale has taken place from second-hands of a steamer cargo T.L. British granulated, 6,500 tons afloat to India at 12s. c.i.f. terms, a figure which compares most favourably with the 12s. c. and f. paid for German and Belgian crystals. In these circumstances prospects of early new crop Java are by no means roseate. White Java, May-June, to Europe, quoted 11s. c.i.f. Cuban, 96 per cent. May sellers, 9s. 1½d.; June 9s. 3d. c.i.f. U.K. Terminal sections fully steady, and chief feature extensive transactions in the August position of raw. May sold 8s. 5½d.; August, 8s. 11½d.; December, 9s. 5½d.; White, may sellers, 11s. 1½d.; August, 11s. 9d.; December, 12s. 1½d. cwt. Cuban receipts last week totalled 185,431 tons, against 159,827 last year; exports, 135,720, against 114,915; stocks, 1,345,590, against 1,227,078; central workings, 141, against 111. Stocks of raw sugar in the three chief ports of the United Kingdom for the week ending April 6th amounted to 142,770 tons, against 109,529 last year.

COFFEE.—The market presented a quiet appearance during the week. Progress with offerings in auction was slow; but where business resulted prices manifested no material change. Costa Rica fine bold colory sold 159s. 6d. and faded greenish from 123s. to 145s. Peas reached 171s.; Vera Paz, fine bold hard grey, sold 161s. 6d.; Kenya dull, faded 130s. to 131s.

COCOA.—Market quiet and featureless on spot. Forward easier with realisations in force. Accra F/F, April-June, sold 43s. to 42s. 6d.; mid-crop, 41s. 6d.; October-December, 45s. to 44s. f.o.b. Terminal; July sold, 48s. 6d. to 47s. 6d. and 47s. 7½d.; September, 49s. 9d. to 49s.-49s. 3d. and 49s.; December, 49s. 9d. to 49s. and 49s. 1½d.; January, 49s.

TEA.—Indian auctions during the week totalled 53,012 packages. These met a good general demand, and previous prices were not only fully maintained but frequently improved upon. Ceylon sales of 27,064 packages also accorded active support, particularly from one prominent operator, and prices ruled firm to occasionally dearer, while improved quality was keenly appreciated by buyers. Java sales met a good demand at irregular prices.

RICE.—Market still very dull and prices in most cases favour the buyer. Two Stars, Rangoon, spot London, 13s. 9d.; old crop, 13s.-13s. 3d.; April-Mary, sellers, 12s. 9d. c.i.f. Spanish oiled, April-May, 18s. 6d.; Egyptian, 18s. c.i.f.

BEANS.—There is no apparent revival in demand, but sellers are equally reserved and prices fully maintained. Parcels arrived ex "Clan Macintosh" held for 42s. 6d. ex store, and per "Clan Macauley," due middle May, sellers, 39s. 9d. c.i.f. Rangoon haricots, quiet. March sellers, 21s. 3d.; April 15th, 19s. 6d.; April, 18s. 9d.; May, 17s. 9d. cwt. c.i.f.

PEAS.—With competition still felt from Dutch varieties, certain weakness is observable in this market, though buyers are decidedly more prominent. Japanese, afloat, 18s. 9d. to 20s. 6d., as to position of steamer; February-March, 19s.; March-April, 18s. 7½d.; April-May, 18s. 4½d.; May-June, 18s. 3d. c.i.f. Dutch marrowfats, 22s.; imperial blues, 19s. 6d.; small blues, 18s. f.o.b. There is moderate interest shown in Maples. Tasmanian new crop, afloat, sellers, 68s. 3d.; April, 68s. 3d., with buyers at 67s. 6d. No. 1 New Zealand, March-April, 61s. 6d.; April-May, 61s. per 504 lb. c.i.f. terms.

SPICE.—Pepper met a quiet demand, and forward positions moved slightly against the seller. Lampong, March-May, quoted, 1s. 2¾d.; May-July, 1s. 2½d.; August-October, 1s. 1½d. Muntok white, March-May, 2s. 0½d.; May-July, 1s. 11¼d.; August-October, 1s. 9½d. lb. London stocks of black reduced 100 tons on the week, but white increased by 72 tons. Cloves, quiet, unaltered. Sago flour, near, 11s. 6d.; forward, 11s. 7½d. cwt. c.i.f. Tapioca, dull, unaltered. African ginger, spot, 53s.; April-May, 49s. 6d. cwt. c.i.f.

FRUIT (Dried).—Currants. Market firm, with a fair business passing. Pyrgos, quoted, 45s. 6d.-46s. 6d.; Amalias, 46s.-46s. 6d.; Zante, 47s.; Vostizza, 50s.-55s.; Patras and Gulf in limited supply. Sultanas: Smyrna is moving off in fair quantities, medium to fine, 46s.-53s.; Cretan, 44s.-72s.; Greek, 40s.-55s.; Australian, quiet, and range from 38s.-46s. Raisins, dull; Valencia, quarter boxes, common to good, 46s.-52s.; Lexias, 32s.-36s.; Australian and Cape, neglected. Figs, quiet, with remaining stocks of indifferent quality. Genuine, spot, 28s.-31s.; Dates, steady; Hallowie, spot, 25s.-30s.; Khedrowie, 21s.-23s.; Siar, 14s. 6d.-16s. 6d.

EVAPORATED FRUITS.—Market firm with improved inquiries especially for plums and apricots, and sellers more reserved. Californian plums, 20's-30's, 65s.-66s.; 30's-40's, 56s.-57s.; 60's-70's, 43s.-44s. Pears, Lake County, 75s.-100s.; Apricots, South African new crop, Royal, 57s. 6d.-117s. 6d.; Cape, 72s. 6d.-82s. 6d.; Californian, 85s.-117s. 6d.; Australian, 75s.-85s. Peaches, Californian, choice, 52s.; extra choice, 54s.; fancy, 58s. Apples, Californian, spot, sliced, extra choice, 65s. Almonds, dull and tone weak. Mazagan, 127s. 6d.; Mogador, 127s. 6d.; Majorcas, 130s.; Bitter-Jordan, 185s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—The general position remains fuliy steady, and increased inquiries are circulating from distributors. Prices tend dearer for apricots and pears, while peaches realise fully late

rates. Singapore pines slow of sale, both spot and for shipment, and trend of values favour buyers. Tomatoes, firmly held, but transactions somewhat restricted.

CANNED FISH.—General tone firm and business improving. Sardines, Portuguese clubs, quoted, 5s. per dozen tins. Lobsters, largely nominal on scarcity. Best halves, 140s.-145s.; and quarters, 77s. 6d.-87s. 6d. Salmon: Red, talls, spot, sold, 43s.-45s. 6d.; pink talls, 26s.-27s. 6d.; halves, 33s.-35s. Japanese crab, finest quality, 97s. 6d.-100s.

CANNED MEATS.—Corned beef slow of sale, but ox tongues held for full rates owing to limited offerings. Lunch tongues firm and business active in forward contracts. Cases of 12 by 6 tins quoted 107s. 6d. dozen. Tinned hams also sell readily forward, on the basis of 1s. 7d. lb. ex-wharf London.

CONDENSED MILK AND MILK POWDERS.—Market quiet. Full cream, sweetened,—English, spot, 45s.; Dutch ditto, 38s.; April-June, 37s. 6d. Machine skimmed, sweetened,—English, spot, 27s. 6d.; Dutch ditto, 23s. 6d.; April-June, 23s., all in 5-cwt. barrels. Powders, spray process, F.C. 26 per cent., 2 by 56 lb. tins, crated, 88s., M.S. (1 cwt. cases), 40s., Roller, ditto, F.C., 26 per cent., 77s. 6d.; M.S., 28s. 6d., all nett, duty paid ex-wharf London. On the Grocery side: F.C.S., 21s.; M.S.S., 9s. 9d., basis per case, usual packing. Danish cream,—Evaporated, unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d. Condensed, sweetened, 48 by 14 oz., 20s. per case.

HONEY.—Firm and in demand. Jamaican pale amber quoted at 48s.-51s.; manufacturing grades up to 47s. New Zealand, dark amber, 50s.-55s.; medium, 55s.-65s.; light, 65s.-85s.; whites and water whites, 65s.-87s. 6d. cwt.

RUBBER.

A quiet and featureless market, and just now there is very little interest shown, either on consumption or speculative account. American consumption figures for last month are expected at a high level, in some directions 49,000 tons is spoken of, but 44,000 would appear to be the popular figure. Standard sheet, spot and April sold, 11d.-10⅞d.; May, 11⅛d.; June, 11⅛d.; July-September, 11⅛d.-11⅜d.; October-December, 11⅜d.-11⅝d. lb. London stocks, 857 tons up on the week. Landings, 1,952; deliveries, 1,095; stocks, 28,934, compared with 58,732 at corresponding period last year. Liverpool stocks 9 tons up at 4,442; landings, 147; deliveries, 138.

GENERAL.

JUTE.—Market steady, moderate demand. Firsts April-May sold, £32; May-June, £32 5s. Lightnings, April-May, quoted, £31 5s. ton.

HEMP.—A fair demand for Manila descriptions and market on the firm side. J.2, April-June buyers, £37; K, £33 5s.; L.1, £33 10s.; M.1, £30 5s.; M.2, £26 10s. ton. Sisal, quiet, but fully steady. Manilla receipts for the past week, 31,000 bales, against 21,000 last year; estimate for next week, 34,000; and following week, 28,000. Shipments last week, 19,000 bales to Europe; 18,000 U.S.A.; 1,000 Japan; 1,000 Australia. Local stocks, 8,000 bales down at 205,000.

SHELLAC.—Quiet and easy. T.N. spot 187s. 6d., May sold 180s., August, 184s.-182s. cwt.

COPRA.—Market very dull. Straits S.D. April-May, Rotterdam, quoted, £22 7s. 6d.; June-July, £22 10s.; Ceylon, May-June, £23 15s. South Sea, unaltered. Palm kernels, May-June, £18 ton.

MISCELLANEOUS.—Coconuts quoted 18s. to 24s. per 100. Coir yarn, Ceylon, £19 to £38 10s.; Cochin, £22 10s. to £40; Ceylon bristle, £18 15s. to £25 10s.; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 2s.; Java, 2s.

THE MONEY MARKET.

Rather to the surprise of the market, money this week proved relatively easy, and discount rates showed a definite downward tendency. After the ease of the preceding week it had been anticipated that steps might be taken to stiffen conditions early in the week, and as a result the majority of applications for Treasury bills lodged on Friday, April 12th, were for bills to be paid for towards the end of the ensuing week. These anticipations proved unfounded, and as few payments had in consequence to be made early in the week, easy conditions prevailed. On Wednesday, April 17th, short money was readily obtainable at 4¼ per cent., and even as late as Thursday the rate was very little stiffer.

* * * *

Discount rates, too, have sagged to a marked degree, and on Wednesday many bills changed hands at rates as low as 4⅞ per cent. The three months' rate was naturally not quite so low, but 5 3/16 per cent. was on Thursday the highest rate mentioned in the market, and even this figure means a spread of 1/16 per cent. between market rate and Bank rate. It seems difficult to believe that a margin of this size can be allowed to persist if Bank rate is to remain effective, but it must equally be recognised that this week several factors have combined to force the discount rate down.

* * * *

Firstly, it is stated that American money is definitely returning to London and is being invested in sterling bills. Next, there is at present a fair Continental demand for bills. This is partly to replace current maturities, but it is significant that, contrary to the usual experience of the market, some Treasury bills are at present passing into the hands of foreign holders. It is also suggested that some bills are being bought on behalf of foreign Central Banks. Finally, there is a certain shortage of three months' bills, and when all these factors are taken into account it is possible to see why the three months' bill rate has fallen.

* * * *

The market has taken some interest in Mr Churchill's hint of the possibility of lower money rates, and inquiries have been heard as to whether he knows anything of the intentions of the Bank. On the whole, it seems unlikely that he was speaking with any definite knowledge. It is fair to recall that for several years in the past he has under-estimated the annual cost of the service of the National Debt, and this suggests that he was expressing little more than a hope. On the main question of whether or not an early reduction in Bank rate is likely, opinion now leans to the view that the 5½ per cent. rate will last for at least the larger part of the year. Nothing in the outlook to-day suggests that the rate could be brought down to 4½ per cent. by August, especially as no change seems likely before polling day, and it seems worse than useless to bring it down by a half point in the summer, if that would mean an increase of a whole point to 6 per cent. in the autumn.

	Apr. 18, 1929.	Apr. 11, 1929.	April 4, 1929.	Mar. 27, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate.....	5½	5½	5½	5½	4½ (Feb. 7,'29)
Banks' Deposit Rate ...	3½	3½	3½	3½	2½ (Feb. 7,'29)
Discount { Call	3½	3½	3½	3½	2½ (Feb. 7,'29)
Houses { Notice.....	3¾	3¾	3¾	3¾	2¾ (Feb 7,'29)
Market rate (3 months' bills)	5 5/16	5 5/16	5 5/16 – ⅜	5 5/16 – ⅜	...

The Bank return shows a further increase of £789,000 in the Bank's gold stocks, which now stand at £156,272,000, and as £3,190,000 of notes have returned from circulation, the banking department's reserve has risen by £3,979,000. The other major changes are declines of £3,120,954 in bankers' deposits and of £4,696,000 in Government securities. Discounts and advances, too, have fallen by £1,643,000. It seems as if the Bank had taken some steps to stiffen up conditions, but either that these have proved inadequate, or else that the Bank felt that it had done enough. It will be interesting to see if further steps are being taken during the current week.

NEW YORK MARKETS.

Our New York correspondent cables:—Brokers' loans are down two millions. This is the fourth consecutive week of decline, which now aggregates $368 million since the latest Federal Reserve warning. However, member bank borrowing is on the upward trend again, while the Reserve is still reducing bill holdings and the probability of a discount rise still exists. An additional $13 million gold has been released from the earmarked reserves held on account of the Bank of France, and is believed to be for German account. Business pace is well maintained and corporation earnings for the first quarter are uniformly better than a year ago. The Bureau of Labour commodity price index for March is ¾ per cent. higher at 87.5. The rise is due for the most part to farm products.

THE STOCK MARKETS.

The Budget exercised but a negligible influence on the stock markets. The National Debt calculations of the Chancellor were not corroborated in the gilt-edged market, but their effect was outweighed by favourable monetary factors. Home rails were dull after the Budget speech, the passenger duty remission having been foreseen and discounted. Nothing occurred to induce fresh activity in industrial shares, the coming elections continuing to weigh heavily on the markets. Rubber shares were reactionary on the weakness of the commodity. Profit-taking in tea shares followed the announcement of the repeal of the Customs duty. Oils were quiet in the absence of interest, either domestic or foreign, amateur or professional. Kaffirs were similarly neglected, while Rhodesians became less active in view of pending appeals for new capital. Tin and copper shares were more steady following the partial recovery in base metal prices.

THE COMMODITY MARKETS.

Reports this week are again somewhat varied. Coal prices are showing a downward tendency, though the decline has not yet spread to South Wales. Most branches of the iron and steel trades are fairly well employed, and the improvement in pig iron is maintained. Tinplates are firm. Other metals showed some irregularity early in the week, but the close was steadier. Except for a slightly improved demand for piece goods in a few markets, the situation in the cotton trade is unchanged. In spite of greater stability in wool values, Bradford trade is still far from active, though the tone of the market is fairly good. Hides are still dull, but there is a slightly improved demand for leather. Vegetable oils and oilseeds are steady. The tendency of wheat has been very slightly upward.

THE FOREIGN EXCHANGES.

No great activity was visible this week, but some currencies were again irregular. Sterling maintained its strength against New York at 4.85 19/32, after being 4.85½ on Monday. Montreal was a shade firmer at 4.89⅛. Paris lost two points at 124.27 after touching 124.29. Milan, after some hesitations, settled down four points better at 92.70, and Madrid was again erratic, going on balance from 32.70 to 32.82. Continued dear money rates brought Amsterdam from 12.09½ to 12.08⅜. Berlin, after being as high as 20.46 and as low as 20.48, lost ¼ point on balance at 20.47¼. Switzerland moved against us once more, gaining ⅜ at 25.21⅛. Stockholm improved suddenly from 18.18¼ to 18.16, but reacted at the close to 18.17. Of the Central and South American exchanges Mexico showed further improvement with news of Federal successes against the rebels, and went from 10.25 to 9.95—10.5. Rio gained 5/64d. at 5 7/32d., but Montevideo lost ⅛d. at 49d. In the Far East the rupee and yen were both easier at 1s. 5 15/16d. and 1s. 9 15/16d. respectively. In the forward market U.S. dollars were more on offer at wider discounts of 9/32 and a ¼ cent, but francs were in rather better request at enhanced premiums of 8 centimes and 17 centimes. Milan went from 6 and 16 centesimi discount to 14 and 29 centesimi discount for the two periods, but forward pesetas were rather better at slightly higher premiums of 11 centimos and 32 centimos for one and three months. Silver rose by 1/16d. both spot and forward to 25⅛d., with small demand and no offers. The China silver exchanges were unmoved, Hong Kong at 2s. and Shanghai at 2s. 6¼d.

THE BUDGET AND THE SINKING FUND.

No auditor of the speech with which Mr Churchill opened his fifth Budget can have left the House of Commons on Monday without a feeling of gratitude for two and a half hours of rare and refreshing entertainment. In Mr Churchill's previous Budget speeches he was embarrassed by an excess of material, which caused his narrative to flag occasionally in interest. This year it was a lack, rather than an excess, of material that confronted him, and he surmounted the difficulty by presenting his programme wrapped up in an abundance of wit of a high intellectual order. The speech was indeed a Parliamentary triumph, and if the financial programme, which it cloaked as much as it revealed, had been as good as the speech, the Budget would have been impervious to criticism.

There is one great failure in this Budget, and we come to it at once. It is the failure to make what is commonly acknowledged by financial authorities as an adequate or proper provision for the repayment of debt. The root cause of this failure dates back to the Budget speech of 1928, when Mr Churchill reverted to the practice of a fixed debt charge—an aggregate figure covering Interest, Management, and Sinking Fund. For 1928-29 Mr Churchill put his debt charge figure at £369 million, of which he allotted £304 million for Management and Interest, leaving £65 million for the Sinking Fund. His caluculations were, however, upset by an unexpectedly large total of interest paid on Savings Certificates encashed, and by the course of money rates, which caused the cost of renewing Treasury Bills to reach a substantially higher figure than he expected. Instead of £304 million, Interest and Management in the last financial year cost £311½ million, with the result that the Sinking Fund suffered, the actual Sinking Fund payments falling £7½ million below estimate. In the current year the outlook for the Sinking Fund is substantially worse. The full debt charge figure is placed at £355 million, of which £304.6 million is allowed for Interest and Management, and £50.4 million for Sinking Fund. From an examination of existing facts and likely prospects, we are unable to find any justification for thinking that the figure of £304½ million is adequate for the purpose for which it is estimated. Nor can we understand the Chancellor's supposition that this charge will be £7 million lower than last year's actual cost. His estimate of Savings Certificate liabilities suggests that he would have to meet £1½ million less under this head in the current year, and he may save some £2 million through not having to pay interest on the £57 million of debt redeemed last year. But it is not easy to understand where the remaining decline of £3½ million can come from. The Floating Debt is £56 million greater than a year ago, and the change in the form of it, as compared with a year ago, does not favour the Exchequer, for, while Advances by Public Departments have fallen from £106.6 million to £37 million, the volume of Treasury Bills outstanding has risen from £519.9 million to £700.3 million. In the last financial year Bank rate was at 4½ per cent. for 45 weeks. This year has started with a 5½ per cent. rate, and no reduction is yet visible on the horizon. Under such circumstances, to leave the Sinking Fund at the mercy of the very hazardous expectation of a year of low money rates savours of recklessness. It does not appear to us unlikely that the Debt Interest figure might this year exceed the estimate by anything between £7 and £10 million. This would mean, in effect, under the present system by which any surpluses which accrue are withheld from the Sinking Fund, that only from £40 to £43 million would be available for Sinking Fund purposes, and this would compel the next Chancellor to borrow from £7 to £10 million to meet merely his obligatory Sinking Fund charges. The position might be even worse if our suspicions that certain revenue items are too optimistically estimated should, unfortunately, come to be justified. The Sinking Fund may, indeed, this year reach little more than half the figure suggested as a minimum by the Colwyn Committee. We regret that Mr Churchill has rounded off his record at the Treasury by making this further lapse from the paths of sound finance.

An unusually small proportion of the Budget speech was devoted to the financial proposals for the current year, for perhaps three-quarters of the time was taken up in an exposition and defence of the Government's financial record, and lively attacks upon the policies declared by the Socialists and the Liberals. In recent issues of the *Economist* we have examined in great detail the salient figures of the national finances during the five-year period of the present Government, and we do not propose to cover the ground again. Mr Churchill is fully entitled to harp, as he did with heavy and recurring emphasis, upon the financial difficulties placed upon his shoulders by the labour troubles of 1926. Equally unimpeachable was the pride with which he referred to the restoration of the gold standard, a measure for which his Chancellorship will perhaps mainly be remembered by history. Nor did he take more credit than was due for some of the clever *ad hoc* devices by which he rounded the very difficult fiscal corner which resulted from the long coal stoppage. But there are two or three points which we cannot allow to pass without remark. His attempt, for instance, to appear in the *rôle* of "economiser" was by no means convincing. The reduction in fighting services, which he claimed to have effected, was mainly due to the automatic reduction of Middle East services, and whereas in his first Budget he held out the hope of economy in the Supply Services to the tune of £10 million per annum, he can only make out a total net reduction since 1924 of £7 million. Nor did he face the fact that, having regard to the fall in prices in the quinquennium, the 1929 figure in reality represents a substantial increase in Supply Services expenditure over that incurred in the year for which Mr Snowden was responsible. Again, the language which he employed to glorify the results of his experiments in protection were disingenuous enough to have come, not from a Free Trade Chancellor, but from the protectionist propaganda department of the Conservative Party.

For the rest, the Budget proposals are neither particularly striking, nor, in the main, open to criticism. From a detailed analysis of the estimates, which we print in a succeeding article, it will be seen that, in forecasting a prospective surplus of £10½ million available for tax remission, Mr Churchill has raised the estimates of Income Tax, Death Duties, and Stamp Duties above the figures actually reached last year. In fixing the Income Tax figure the Chancellor is presumably acting on sound information, though the probability of its fulfilment seems a little doubtful. The raising of the Death and Stamp Duties estimates is bold enough to be startling; for last year was a bumper year for the Death Duties and a period of great activity on the Stock Exchange. Mr Churchill, or his successor, will be lucky if the estimates are realised.

With regard to actual changes in taxation, the abolition of the Tea Duty is entirely acceptable. The anticipation by six or seven months of rate relief for agriculture—which is financed not out of current revenue, but out of the Suspensory Fund—invalidates, so far as agriculture is concerned, the criticism that the derating scheme was too slow in bringing relief to distressed industries. The device by which he takes back from the brewers, distillers, and tobacconists the rating relief which was the object of much political attack, is wise and clever, even though the moral effect is somewhat spoiled by a substantial present to the trade "through other channels." The railway passenger duty has long been a complete anachronism, and its abolition is generally welcomed.

It is not easy to pronounce a summary verdict either on the latest Budget or on the whole of Mr Churchill's work at the Treasury. The five years have been marked in a most equal degree by ingenuity, achievement, and lapses—lapses into trade restriction and lapses into unsound finance. But we confess to relief that in this last Budget the lapses have not been more pronounced. With Conservative sentiment not too confident and the two Opposition parties each beating the showman's loud drum in the Election Fair, the pressure exerted upon Mr Churchill to produce a "really popular" Budget at the expense of sound finance must have been exceedingly strong. The Party managers must have

said to the Chancellor, as Pharaoh's task-masters said to the Children of Israel, "There shall no straw be given you, yet shall ye deliver the tale of bricks." Mr Churchill, having no straw, has delivered his tale of bricks. But it is a small one, and we doubt whether it is enough to satisfy his taskmasters. Bearing in mind the political urgencies of the moment, we ought, perhaps, to be thankful that concessions for which the funds are not in sight have not been multiplied, and to give Mr Churchill credit for being less flexible under pressure than a Chancellor of a lesser calibre might have been.

AN ANALYSIS OF THE BUDGET ACCOUNTS.

THE customary statement* presented to the House at the opening of the Budget supplements the Chancellor's speech with a more detailed analysis of the figures on the basis of which he forecasts a surplus of over £4 million. In the first of our tables we present a comparison of the estimated expenditure of 1929-30, in the new form in which the accounts are now shown, with the estimated expenditure and actual issues from the Treasury in 1928-29.

EXPENDITURE (000's omitted).

	Estimate, 1928–29.	Actual Issues in 1928–29.	Estimate, 1929–30.	Estimate for 1929–30 compared with 1928-29 Estimate.
	£	£	£	£
CONSOLIDATED FUND SERVICES.				
National Debt Services:				
Interest, &c.	304,000	311,491	304,600	+ 600
Sinking Funds	65,000	57,509	50,400	− 14,600
Total	369,000	369,000	355,000	− 14,000
Payments to Local Taxation Accounts	14,200	15,203	15,000	+ 800
Payments to Northern Ireland Exchequer	5,600	5,100	5,400	− 200
Other Consolidated Fund Services	2,600	2,807	3,500*	+ 900
Total	391,400	392,110	378,900	− 12,500
SUPPLY SERVICES.				
Army Votes (including Ordnance Factories)	41,050	40,500	40,545	− 505
Navy Votes	57,300	56,920	55,865	− 1,435
Air Votes	16,250	16,050	16,200	− 50
Civil Votes	223,804	222,493	238,885	+ 15,081
Customs and Excise and Inland Revenue Votes	11,777	11,637	11,569	− 208
Total	350,181	347,600	363,064	+ 12,883
Grand Total	741,581	739,710	741,964	+ 383

* Including new Agricultural Mortgage Scheme, £500,000; expenses of returning officers at General Election, £420,000.

Supplementary estimates amounting to £3,584,000, of which £115,000 was required for the Army and the remainder for the Civil Services, subsequently raised the first column to £745,165,000, so that the saving on total estimates was £5,455,000. Of this, £1,445,000 was saved on the Defence Votes, but the bulk was concentrated on the various Civil Votes. Attention has repeatedly been drawn to the excess of interest charge over the estimate. This extra £7½ million does not affect the total expenditure, since it is counterbalanced by a correspondingly diminished sinking fund, but it does cause grave doubts with regard to the provision made for 1929-30. Mr Churchill estimates interest and management charges at £304,600,000, and the difference, £50,400,000, between this *sum* and the total amount provided for National Debt service almost exactly equals the statutory and specific sinking funds. The Financial Statement includes a table of the debt outstanding, on which we calculate that fixed interest charges would amount to about £258 million, apart from the floating debt and National Savings Certificates. Since interest on the latter is accumulating at the rate of nearly £20 million per annum, and it is reasonable to assume that the £40 million and more of principal repaid each year is now on the whole of comparatively early date, an allowance of less than £17 million on this score would be unwise; this would bring the total interest charge up to £275 million. The actual payment last year was about £18 million, and Mr Churchill's own allowance is £16.6 million. The average amount of floating debt outstanding throughout 1928-29 was about £758 million, on which the interest at 5 per cent. would be £38 million. The present rate on Treasury Bills is over 5½ per cent., and there is no sign of any immediate reduction of discount rate. Taking, however, a very conservative figure of £37 million, we come to the conclusion that an estimate of less than £312 million for interest charges would be, to say the least, unduly optimistic. The remainder of the fixed debt charge, £43 million, does not fully cover statutory sinking funds, so that Mr Churchill, even if his sanguine estimates of revenue are realised, is sailing very close to the wind.

As for the Supply Services, the estimates have already been analysed in previous issues of the *Economist*, and we need only remind our readers here that the Civil Votes include £15,560,000 for de-rating, apart from the earlier relief to agriculture, which is to be borne by the Suspense Account. Our next table compares the estimates of revenue on the basis of existing taxation with estimates and actual receipts in 1928-29.

REVENUE (000's omitted).

	Revised Estimate for 1928–29.	Actual Receipts in 1928–29.	Estimate for 1929–30 on basis of Existing Taxation.	Estimate for 1929–30 compared with 1928-29 Receipts.

Grand Total	752,903	758,104	753,940	− 4,164

SELF-BALANCING ITEMS (000's omitted).

	Estimate 1928–29.	Actual Amount 1928–29.	Estimate 1929–30.	Estimate compared with 1928-29 amount.
	£	£	£	£
Post Office expenditure	57,314	57,200	58,110	+ 910
Motor Vehicle Duties apportioned to Road Fund	21,300	21,131	22,600	+ 1,469
Total	78,614	78,331	80,710	+ 2,379

The surprising increase in the estimate of receipts from Estate Duties is discussed in our first leading article. Mr Churchill, it will be observed, has also counted on gaining from increased prosperity £1,880,000 in income tax and £1,850,000 in super tax, as well as £7,028,000 in Customs duties. The latter is almost entirely accounted for by the petrol tax, which will, however, bring nothing into Excise this year. Excise, mainly for this reason, is estimated at over £2 million less than in 1928-29. Motor vehicle duties are estimated to expand by nearly £2 million in all. Of the non-tax revenue, the Post Office profits are expected to rise by £890,000, although the expansion of the turnover is put at only £1,800,000. Receipts from sundry loans show a large increase, which is, however, swamped by the estimated decline in miscellaneous receipts. Special receipts last year included the Currency Notes Reserve of over £13 million, which was added to the Sinking Fund. Apart from this item, ordinary revenue is estimated at £9 million more than last year.

With prospective revenue of £753,940,000, and expenditure of £741,964,000, Mr Churchill had a possible surplus

* "Financial Statement, 1929–30." H.M. Stationery Office. 4d.

of £12 million with which to salt the elector's tail. The details of his plans for disposing of it are shown in the following table:—

CHANGES IN TAXATION (000's omitted).

	Estimated Increase or Decrease in 1929–30.	Estimated Increase or Decrease in a full year.
	£	£
Customs:—		
Tea	− 6,150	− 6,200
Excise:—		
Railway Passenger Fares	− 300	− 360
Betting: Repeal of Turnover Tax	− 1,100	− 1,180
New Duties	+ 250	+ 280
Licenses: Brewers for Sale	+ 350	+ 350
Distillers	+ 30	+ 30
Tobacco Manufacturers	+ 100	+ 100
On retailers	− 950	− 970
Total Excise	− 1,620	− 1,750
Total Customs and Excise	− 7,770	− 7,950
Motor Vehicle Duties*	− 20	− 20
Post Office (net receipt)	− 90	− 90
Grand Total	− 7,880	− 8,060

* This is the loss to the Exchequer. The loss to the Road Fund will be £40,000 in respect of Motor Cycles, and £50,000 in respect of Goods Vehicles.
The cost, £2,570,000, of antedating rating relief for agricultural land, will fall on the Rating Relief Suspense Account.

It will be seen that by the changes the Chancellor has given away some £8 million net, reducing his surplus to £4,096,000. The duties of 4d. per lb. on tea, with an Empire preference of ⅜d. per lb., are to be abolished altogether. So are the duties on railway passengers and the betting turnover tax, but the first remission is given on condition that the capital equivalent of the relief should be used for the development and modernisation of railway freight transport; and the second, though accompanied by the repeal of the annual duty of £10 on bookmakers' entry certificates, has a counterbalance in an annual duty of £40 on each telephone used by a bookmaker in his business, and a duty of ½ per cent. on totalisator takings. The new or increased duties on brewers, distillers and tobacco manufacturers are imposed to countervail the rating relief gained by these industries. At the same time, on-licence duties are reduced at a cost of £970,000 in a full year. Motor duties on motor cycles are scaled down, so that the rate of 30s. will apply to cycles weighing up to 224 lb. instead of 200 lb., while the duty on goods vehicles weighing between 2 tons and 2½ tons is reduced from £40 to £35, with a rebate of 20 per cent. for vehicles fitted entirely with pneumatic tyres. The telephone service is to be extended by the equipment with call offices of about five-sixths of the rural post offices and railway stations at present without them, and by extending from 1½ to 2 miles the radius from the nearest exchange within which a telephone is provided without extra mileage charge.

The Suspensory Fund now stands at the figure of £22,633,000. Out of this there will have to be paid this year £2,570,000, the cost of anticipating by six months the relief of rates on agricultural land. The remainder of the cost of de-rating in 1929-30 will fall on the ordinary budget, and any surplus realised will be added to the fund. If Mr Churchill's expectations are realised, therefore, he or his successor will have some £24 million with which to face a de-rating cost in a full year of approximately £35 million.

THE CONSERVATIVE PROGRAMME.

THE wares of the two Opposition parties have long been on show in the political shop window. The Labour Party in *Labour and the Nation*, and the Liberal Party, in the Yellow Book, with its more aggressive Orange offspring, have gone near to embarrassing the newly-increased electorate by the plenitude of the policies which they would pursue if returned to office. The Liberals, in particular, have staked their fortunes upon the specific schemes devoted to the relief of unemployment. Mr Baldwin completed the window-dressing display at a representative meeting of the Conservative Party at Drury Lane Theatre on Thursday, and he would be the first to admit—nay, he stressed the point particularly in his speech—that the wares which he displayed have not the glitter of those shown by his opponents. We agree with the Prime Minister that the temper of the electorate has changed. Platform speakers of all parties report the common experience that their audiences are intolerant of destructive criticism and party gibes. What they want to hear about is the practical steps which the various parties will pledge themselves to take. Mr Baldwin ran on Thursday through the tale of the things which the next Conservative Government would do. But we must at the outset confess that the list leaves us wondering why it was necessary to delay the pronouncement of a programme which contains nothing startling, and nothing which might not have been said weeks or months ago, with the trifling exception of those small measures which had to await the Budget before they could be made public property.

Now that the veil has been lifted from the official Conservative programme let us see what it contains in the direction of practical legislative and administrative promise. We will draw up the list as faithfully as we can. The de-rating of industry is, of course, in the forefront, and is the bedrock of Mr Baldwin's policy of "putting men into permanent employment." The Factories Bill, long promised, but not yet passed, is really to be produced at last. For agriculture there is the accelerated rates relief announced in the Budget, and a vague promise of legislation to enable drainage schemes to be carried out, while stock farmers are offered a sop in the pledge that the diet of the British fighting services between the months of August and March shall comprise no beef which is not home fed, nor bread of which 25 per cent. of the flour has not been milled at home. In the sphere of social legislation the *pièce de résistance* is slum clearance—an item on the programme of the other two parties also—but Mr Baldwin did not elaborate the procedure he proposes to follow. Then comes the chapter of the programme which is presumably fancied as appealing to the vast numbers of newly-enfranchised women. This chapter, in brief, is this: A fuller and more efficient service of medical and nursing attention for mothers both before and at childbirth; a Royal Commission to be appointed to investigate the possibilities of State care for child welfare between the ages of one and five; State and other schools to be put on the same footing and extended facilities for higher education to be provided; and, finally, a ladder not merely to the university, but to the technical colleges. As regards Imperial affairs, the Prime Minister spoke much, but his only promise was that, within certain limits, the Home Government will bear the cost of interest in the early years on loans floated by young colonies for necessary development purposes.

We have left out of this catalogue one main line of policy, namely, "safeguarding." We had hoped that the Prime Minister would answer the earnest appeals that we have made to him to clear up the serious ambiguities which surround his fiscal intentions. So far from doing this he merely read out the well-known letter which he addressed to the Chief Whip as long ago as last August. This silence is ominous and expressive. If no further explanation is to be vouchsafed, the country can only assume that Mr Baldwin is definitely pledged to a system under which Protection may be afforded to any and every manufacturing industry in the country, big or small; and, as we have frequently shown, this practice, according to our present knowledge, will be granted haphazard on an individual investigation of particular industries without any attempt to assess the economic needs of the nation as a whole. Mr Baldwin's silence is more eloquent than any challenge he could have delivered to Free Traders to arm themselves for what may be the decisive battle for the retention by this country of the only economic system under which she can possibly prosper.

The Prime Minister's speech in itself was dignified and restrained, and through it ran a charming vein of humanism. Attacks on his political opponents were delightfully absent. But an impartial hearer could hardly fail to feel that the complacency with which the Prime Minister reviewed the record of the last five years was matched by the lack of imagination which marked the programme for the future. The picture of the State guiding the child from the days before its birth right through to the time of manhood's skilled employment is attractive. But it is not a new one. It is, in fact, the idea that has underlain most of the social legislation of this country since Mr Lloyd George introduced the National Health Insurance Acts. Nor does it seem likely that de-rating and "safeguarding," practically unsupported by any new ideas, will convince the country that the Government, if returned to power, will slough off the inertia which it has exhibited towards the problem of industrial unemployment. We may admire the Prime Minister's determination to promise "not one iota more than he can perform," but the scope of the performances which he does promise is not impressive when examined in relation to the critical problems which beset the country to-day. Here is the sum of the whole matter. What Mr Baldwin promises the country is another five years of Government on the same lines as those of the last five years—the same foreign policy, presumably (though on this subject, again, he was conveniently silent), and the same home policy. He offers only one new thing, the indefinite extension of Protection. And that way lies disaster.

PRESIDENT HOOVER AND ARMAMENTS.

THE American nation is a young nation rejoicing in its strength, and delighting to measure that strength in gigantic enterprises. In an independent career that has so far run for only just over a century and a half, this nation has already broken in a continent. During the Great War America consciously came of age; and the rest of the world has been wondering how she is going to celebrate the occasion. She will certainly do it by undertaking some enterprise still greater than any that she has accomplished before; but here there are alternatives—and alternatives that are fateful not only for America herself but for the rest of humanity. Is her next enterprise to be the domination of the world as a climax to her conquest of a continent? Or is she going to crown her crusades against autocracy, slavery and alcoholism by a new crusade against an even more formidable and baneful institution—war? After the failure of the Three-Power Naval Conference at Geneva in 1927, President Coolidge's administration made two concurrent moves. His Secretary of State, Mr Kellogg, taking up and transforming a suggestion of Monsieur Briand's, carried through the negotiations for the General Treaty for the Renunciation of War. The Treaty was signed by fifteen States on August 27, 1928, and has since been accepted by 47 out of 49 other States that were invited to adhere. Concurrently, President Coolidge's Secretary for the Navy, Mr Wilbur, introduced into Congress a Naval Construction Bill for building 71 warships, ranging from aircraft carriers and 10,000-ton cruisers to submarines, at an estimated cost of approximately $725,000,000. On these two measures, American public opinion declared itself in plain terms and with potent effect. In favour of the Treaty, it supplied the driving force which enabled Mr Kellogg to achieve his remarkable diplomatic success. Against the Wilbur Bill, it protested to such good purpose that the House Committee on Naval Affairs substituted a new Bill for constructing 16 warships instead of 71, at an estimated cost of little more than a third of the original figure. The reduced Bill and the unreduced Treaty were both passed by the Senate in the early months of this year, just before President Coolidge's term of office expired. That stiff-necked body, the Senate,

had recognised its master in the people and had bowed to the public will; and there are already symptoms that this last victory of enlightened and organised public opinion in the United States is going to inspire public opinion in other countries. In fact, we may be catching the first glimpse of an entirely new force in human affairs: a general public opinion transcending frontiers. Meanwhile, the declaration of the American people's will has not been lost upon President Hoover; and there are signs already that he means to execute this mandate with all his might. For, in his luck in tackling difficult enterprises on the grand scale, Mr Hoover is a true son of his country; and there is no doubt that the outlawry of war is a greater and more difficult enterprise than the pursuit of world-dominion.

Already, since Mr Hoover took office, the United States has started to explore the ground again with a view to adhering to the statute of the Permanent Court of International Justice; and this time it seems possible that the obstacles which baffled the last attempt may be overcome. This is one of the practical constructive steps which naturally follow from the signature and ratification of the Kellogg Pact; for when a State has pledged itself never to seek the settlement of international disputes except by peaceful means, it naturally makes arrangements to have such means at its disposal in the event of future disputes, in case it might find itself without any means of settlement at all. But there is another practical step which follows from a general renunciation of war as an instrument of national policy, and that is an all-round reduction of armaments; for when all States have agreed that public force shall only be used for collective police work, it is evident that the amount of public force which each State needs to possess is much less than under a dispensation which permitted any and every State, for its private national ends, to make war on any other. Towards the end of last week there were indications from Washington that President Hoover intends to take up the disarmament question too, and to attack it at its critical point: the problem of the relative naval strengths of the three principal naval Powers of the world, who failed in 1927 to arrive at an agreement during the Geneva Conference.

President Hoover, it appears, would welcome an overture from one of the other two Powers concerned for reconvening the Three-Power Naval Conference; and there is a hint of the lines on which he would then negotiate. He would propose "mathematical parity" in cruiser strength between the United States and the British Empire on the scale of 250,000 tons each, which he considers ample for the security of either party against any conceivable coalition of other naval Powers. Within this total figure, he would leave the British Empire free to build small cruisers and the United States free to build 10,000-ton cruisers; but he would be fully alive to the British contention that "mathematical parity" of total cruiser tonnage thus diversely employed would not produce "strategical parity," and he would exert himself to get over this crux, not on the technical plane (where it may well be insoluble), but on the political plane, where Gordian knots are not impossible to cut. It may be necessary (Mr Hoover is reported to suggest) for the British Government to adopt the principle that there never will be war between the two countries; and it is added that the United States Government will be willing to offer the British Government encouraging reasons for relying upon this hypothesis.

What do these intimations mean? To discover this, we must consider what are the circumstances in which a clash between Great Britain and the United States, involving a danger of war between them, is conceivable. No serious person supposes that a danger of war would arise directly between the United States and Great Britain, or *a fortiori*, between the United States and any other self-governing State member of the British Commonwealth. The "I'm Alone" incident—which might have been a *casus belli* in other times or between other parties—is a case in point. There would not even be much danger of an Anglo-American War if a British Government were to be so ill-advised as to implicate itself in a "private war" with a third party; for although the United States might then have its hands free under the terms of the Kellogg Pact, is it likely that the British Government in such circumstances would press interpretations of maritime law in war time to which the United States objected? The real danger would be if the British Government, under the Covenant of the League of Nations or under the Locarno Pact, were to find itself involved in international police operations against a third party, which had violated one or both of these instruments and *ex hypothesi* had also violated the Kellogg Pact. In such a situation, a British Government might feel it its duty to use its naval power to the full, or in other words, to interpret its rights at sea in war time in the widest sense; and this is the situation in which, as things are now, a dangerous clash between Great Britain and the United States might be apprehended. This, then, we take it, is the point on which President Hoover would seek to furnish us with assurances. What form such assurances would take, it is impossible yet to conjecture. We can only say that, if satisfactory assurances could be given by the United States in an authoritative way, the Gordian knot of the naval armaments problem could almost certainly be cut. We believe that, if American public opinion realises this and lines up behind Mr Hoover in any endeavour that he may make in this direction, Mr Hoover's policy will go through; for in the United States, if the President and the people are of one mind, there is no political force that can stand against them.

INDUSTRIAL PROFITS.

OUR quarterly figures of the profits of industrial companies again reveal an upward tendency, but the improvement, as might be expected, is decidedly smaller than that recorded a year ago, when the statistics reflected the recovery of much ground temporarily lost through the labour troubles of 1926. The accounts of 454 joint-stock enterprises published during the first three months of 1929, and tabulated in the *Economist's* weekly summary, show aggregate net profits amounting to £59,869,638, an increase of £903,926, or 1.5 per cent., on the £58,965,712 earned by the same concerns in their previous financial year. The results of our analysis in the past five quarters are summarised below:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.)

	Number of Companies.	Reports Published in		Increase.	
		1927.	1928.		
		£	£	£	%
First quarter	504	53,645,330	61,822,534	8,177,204	15·2
Second quarter ...	556	57,729,860	58,477,637	747,777	1·3
Third quarter.....	237	21,170,777	23,221,775	2,050,998	9·7
Fourth quarter ...	412	35,036,441	36,120,801	1,084,360	3·1
	1,709	167,582,408	179,642,747	12,060,339	7·2
		1928.	1929.		
First quarter	454	58,965,712	59,869,638	903,926	1·5

The working period to which the majority of the reports published during the past quarter refer is the calendar year 1928. In view of the slight, but none the less unmistakable, setback which some sections of British industry experienced twelve months ago, a diminution shown in the rate of expansion of net profits, as compared with that of previous years, will occasion no surprise. The next table, which gives the quarterly trend of net earnings since the beginning of 1923—the first year to register an improvement after the severe slump of 1921-22—shows that, setting aside the exceptional results published during the six months immediately following the coal stoppage, the increase of 1.5 per cent. now recorded is the smallest gain

made in the first quarter of any of the years covered by the table:—

	1923. %	1924. %	1925. %	1926. %	1927. %	1928. %	1929. %
First quarter.....	+41·4	+ 8·7	+ 9·1	+7·6	−4·0	+15·2	+1·5
Second quarter	+22·1	+ 3·0	+11·1	+8·3	−5·7	+ 1·3	—
Third quarter	+55·2	+ 2·3	+ 4·8	+2·8	+2·4	+ 9·7	—
Fourth quarter	+11·4	+13·3	+ 6·4	+3·8	+0·3	+ 3·1	—
Year	+30·6	+ 6·6	+ 8·7	+6·3	−3·0	+ 7·2	—

It would be premature as yet to conclude that the upward curve of industrial profits, whose recent steady rise (the coal stoppage period excepted) is shown above, has now begun to "flatten out." It will be observed, however, from the following analysis of earnings in different industrial groups that last quarter's small increase represents the net result on balance of a somewhat "patchy" range of upward and downward fluctuations:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.)

Miscellaneous	147	24,960,427	25,388,614	428,187	1·7	...	...
Total.....	454	58,965,712	59,869,638	903,926	1·5	...	...

Apart from the steep decline again recorded in the profits of rubber-producing companies, and a slight falling off in "catering" earnings, significantly large decreases are revealed in the shipping and in the iron, coal and steel groups. Steamship companies, both in the "tramp" business and in the operation of regular "liner" services, appear to have fared less well in 1928 than in the previous year, while the decline of £565,500 in the aggregate profits of the "heavy" group is an eloquent reflection of keen competition and price-cuts, notably in the case of coal. Among the increases, that recorded by trust companies is satisfactory, though indicative of world, rather than especially British, conditions. The textile group is somewhat overweighted by the higher earnings of Courtaulds and Bradford Dyers; the marked rise in motor and cycle profits represents an improvement in the results of two individual firms, Leyland and Crossley Motors; and the bulk of the distributing trade's increase was occasioned by one concern, namely, Debenham's, Limited. Substantial gains were made by breweries, and by public utilities, such as tramways and electricity supplies, but it is noteworthy that the increase of 1.7 per cent., shown by the large and representative "miscellaneous" group, contrasts unfavourably with an increase of 15.1 per cent. a year ago, and of 10.1 per cent. in the year before the coal dispute.

In the next table we give the distribution of profits in each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.		Preference Dividend.		To Reserve, &c.	
1928.	£	£	%	£	%	£	%
First quarter	61,822,534	36,557,829	59·1	11,093,506	17·9	14,171,199	23·0
Second quarter	58,477,637	33,960,930	58·1	13,115,605	22·4	11,401,102	19·5
Third quarter	23,221,775	13,207,015	56·8	3,917,390	16·9	6,097,370	26·3
Fourth quarter	36,120,801	22,176,868	61·4	5,548,214	15·4	8,395,719	23·2
	179,642,747	105,898,242	58·9	33,679,115	18·8	40,065,390	22·3
1929. First quarter	59,869,638	36,336,626	60·7	10,896,063	18·2	12,636,949	21·1

The last column of this table, and of that which follows, includes not only specific allocations to reserve, but also the net amounts by which balances carried forward were increased. As compared with the corresponding figure a year ago, the proportion reserved during the past quarter appears in a not too favourable light. The apportionment of profits by the individual groups is set forth below:—

	Net Profits.	Ordinary Dividend.		Preference Dividend.		To Reserve, &c.	
	£	£	%	£	%	£	%
Breweries.....	1,932,539	1,025,933	53·1	375,115	19·4	531,491	27·5
Elec. Lighting and Power	4,015,780	1,634,633	40·7	806,333	20·1	1,574,814	39·2
Gas	2,903,966	2,198,417	75·7	420,008	14·5	285,541	9·8
Hotels, restaurants, &c. ..	366,882	171,602	46·8	34,892	9·5	160,388	43·7
Iron, coal and steel.....	1,834,698	869,491	47·4	708,378	38·6	256,829	14·0
Land, mortgage, &c....	1,619,650	888,678	54·9	153,115	9·4	577,857	35·7
Motor & cycle	1,343,506	221,386	16·5	299,558	22·3	822,562	61·2
Rubber	449,226	345,814	77·0	3,818	0·8	99,594	22·2
Shipping	967,430	632,747	65·4	153,975	16·0	180,708	18·6
Shops & stores	5,782,571	3,320,876	57·5	1,635,143	28·2	826,552	14·3
Tea	78,150	50,500	64·7	4,833	6·1	22,817	29·2
Textiles	8,001,218	5,146,144	64·3	1,084,665	13·6	1,770,409	22·1
Tramways ...	527,629	277,177	52·6	105,700	20·0	144,752	27·4
Trusts	3,955,371	2,231,404	56·4	1,084,729	27·4	639,238	16·2
Water	702,408	408,031	58·1	232,483	33·1	61,894	8·8
Miscellaneous	25,388,614	16,913,793	66·6	3,793,318	14·9	4,681,503	18·5
Total	59,869,638	36,336,626	60·7	10,896,063	18·2	12,636,949	21·1

Highly conservative finance is exemplified as usual by the motor and cycle group, while breweries, hotels, land and mortgage, and textile companies were also among those who apportioned rather more of their profits to reserve than a year ago. The shipping group's reserved proportion, on the other hand, fell from one-third of the total net profits a year ago to less than one-fifth in the past quarter. The percentage withheld from distribution in the "miscellaneous" group also declined appreciably.

Turning to earnings on capital, we next show the ratio of net profits and of amounts reserved to total ordinary and preference share capital in each of the past five quarters:—

	Total Ord. and Pref. Capital.	Net Profits.		Carried to Reserve, &c.	
1928.	£	£	%	£	%
First quarter	530,963,258	61,822,534	11·6	14,171,199	2·7
Second quarter	558,893,092	58,477,637	10·5	11,401,102	2·0
Third quarter	195,502,736	23,221,775	11·9	6,097,370	3·1
Fourth quarter	328,226,005	36,120,801	11·0	8,395,719	2·5
	1,613,585,091	179,642,747	11·1	40,065,390	2·5
1929. First Quarter	537,360,324	59,869,638	11·1	12,636,949	2·3

The ratio of net earnings to capital last quarter is sensibly below that recorded in the first three months of 1928, but is identical with last year's average figure. In 1926 the average was 11.3 per cent., and in 1927 10.5 per cent.—the proportion carried to reserve in those years averaging 2.3 and 1.8 per cent. respectively.. The average rates paid on debenture, preference, and ordinary capital in each quarter since the beginning of 1926 have been as under:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1926.	1927.	1928.	1929.	1926.	1927.	1928.	1929.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%	%	%	%	%	%
1st quarter	4·65	4·80	4·78	4·89	5·4	5·1	5·3	5·4	10·9	10·4	11·3	10·9
2nd "	5·14	5·30	5·43	...	5·8	5·9	6·0	...	11·7	11·8	10·0	...
3rd "	5·02	4·98	4·90	...	4·8	5·2	5·4	...	10·5	10·2	10·7	...
4th "	5·05	5·19	5·04	...	5·4	4·9	4·9	...	10·8	10·1	10·3	...
Year	4·96	5·08	5·02	...	5·4	5·3	5·4	...	11·1	10·8	10·6	...

The average rate of ordinary dividend for the past quarter, 10.9 per cent., is higher than the average for either of the two years which have elapsed since the coal dispute, but is below the figure attained in the first quarter of 1928.

Our final table gives the average dividend rate analysed by groups, the 1928 figures being added for comparison in the case of rates paid on ordinary capital:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Interest.	Ordinary Capital.	Rate of Dividend.	Rate of Div. a Year ago.
	£	%	£	%	£	%	%
Breweries	8,588,206	4·5	7,550,032	5·0	6,538,629	15·7	13·0
Elec. lighting and power ...	12,874,307	5·5	14,344,252	5·6	23,438,720	7·0	7·3
Gas.....	15,734,063	4·2	9,696,073	4·3	38,957,178	5·6	5·5
Hotels, restaurants, etc. ...	1,513,600	4·4	2,170,554	1·6	1,710,060	10·0	9·7
Iron, coal and steel	10,242,370	5·9	14,679,128	4·8	21,092,160	4·1	4·1
Land, mortgage, etc.	2,696,299	4·5	3,104,225	4·9	8,667,092	10·3	9·7
Motor and cycle	454,970	7·5	4,212,008	7·1	4,883,860	4·5	4·0
Rubber, etc. ...	74,060	7·0	53,349	7·1	6,618,940	5·2	11·9
Shipping.....	7,763,347	5·0	4,875,000	3·2	12,043,245	5·3	5·2
Shops & stores	6,799,302	4·8	23,107,808	7·1	19,722,931	16·8	17·4
Tea.....	Nil	...	75,000	6·4	148,000	34·1	30·6
Textiles	3,789,115	4·5	22,718,700	4·8	42,790,986	12·0	13·2
Tramways	3,335,474	4·6	2,082,020	5·1	5,558,537	5·0	4·3
Trusts.....	31,706,765	4·8	25,929,295	4·2	23,253,007	9·6	10·4
Water.....	4,244,292	3·8	4,215,766	5·5	6,250,180	6·5	6·7
Miscellaneous...	22,613,826	5·2	64,530,085	5·9	112,343,504	15·0	14·2
Total.....	132,429,996	4·89	203,343,295	5·4	334,017,029	10·9	11·3

Apart from the decline in the average rate of ordinary dividend paid by the rubber group—as opposed to higher average tea dividends—few striking changes are disclosed in the foregoing figures. Shops and stores, and breweries vie with each other for first place in the list of remunerative trades. The "miscellaneous" group also yielded a satisfactory average figure of ordinary dividend, in contrast to the low rates paid by the shipping, "heavy industry," and motor and cycle groups. The average rate paid on the ordinary capital of investment trusts was reduced from 10.4 per cent. to 9.6 per cent., whereas land and mortgage concerns increased on the average their rate of ordinary dividend. The reduction, as compared with a year ago, in the average rate of dividend, disclosed above, on £334 millions of ordinary capital scarcely bears out Mr Churchill's optimism regarding the future yield of Income and Super Tax.

A NEWLY-DISCOVERED RACE.

THOSE of our readers who, as very small children, were occasionally assailed by a terrible misgiving lest supposedly inanimate objects were, after all, sentient, and feared, till this reflective mood passed, to whip a top or kick a football, will be interested in the report that an important discovery has resulted from research among the archives of the stock and commodity markets. A distinguished anthropologist, who has made a life-long study of the market reports published in the *Economist*, claims to have established the fact that the stocks and commodities dealt in are a race of animate beings, with characteristics, customs, and institutions not unlike our own. Chapter and verse, from records of undoubted authenticity, are in process of collection for every theory he advances, and, though his work is still incomplete, we are glad to publish the preliminary results in the hope of stimulating others to further research.

That all the more elementary human characteristics are present in this race is abundantly demonstrated. They have free will—being frequently described as harder or easier—"for choice." Among coffees, fine bold types are mentioned with apparent admiration. Snobbery, on the other hand, especially racial snobbery, is very marked. A strange term, unmistakably expressive of contumely, "slipe," is frequently applied to three-quarter bred lambs, and instances of greasy crossbreds meeting with a poor reception are frequently reported by our Bradford correspondent. They have their moods, too. Flour is often quiet, as is natural in people who have been through the mill; stocks have been recorded as having "a tired appearance; while recently it was reported that copper was getting out of hand—an indication perhaps that these beings have their own modern child problem. Other qualities are exemplified by the announcement that rubber is often resilient, in spite of bearish advices, that even cocoa, *pace* Mr G. K. Chesterton, can be buoyant, and that, triumphing over who knows what troubles, tea succeeds in recovering sharply.

near Temple Bar.
Assets Exceed - £20,750,000
General Manager: W. A. WORKMAN, F.I.A.

On the other hand, pessimism and unsociable behaviour are also manifest, as when bacon is reported to be heavy and dull, or pepper to show great reserve. The frequent statement, however, that ox tongues are firmly held leaves no doubt that self-respecting reticence is regarded as a high virtue among this population. No vice is spoken of with more consistent disapproval than that rather nebulous fault, "irregularity."

Mrs Grundy, it is found, has an active and important counterpart in this community. Thus, vegetable oils, which are in the habit of making their appearance naked ex-Hull mill, are universally characterised as "crude." There is abundance of evidence, also, on the question of social distinctions. Tinned fish, for example, are great clubmen, to judge by repeated references to "Portuguese clubs," in this connection. Other data suggest that we are dealing with a race of great travellers: not a week passes but some commodity moves off steadily, to some unstated destination, while the terminal (this variant of "terminus" is by no means the only trace, as yet unexplained, of American influence) is frequently described as disclosing more animation. Once, at least, there appears to have been a mass migration—"the market travelled on steady lines"—a movement which, perhaps, accounts for occasional references to quota restriction in certain reports.

In one respect—the littering of public places with rubbish—there is evidence that commodities are more advanced than the human race. What can that constantly recurring phrase: "beasts . . . to sink the offal" mean, if not that a force of animal scavengers is employed to consign waste matter to the ocean? Our knowledge of their arts is incomplete, but they have their stage celebrities, who, apparently, are less exigent than ours in the matter of salary ("market very firm and two stars quoted 16s."); they have fashions, not only in clothes, but in figures ("shoulders which turn in for the cut sole trade were in much demand"). This cryptic passage is almost all the evidence we have as to the bodily structure of this race, but that they are diminutive we can safely infer from the Lilliputian character of their police force; in a jute report occurs the illuminating statement: "For 8 lb. cops, 3s. 8d. has been paid for delivery this year, with few available." Evidently this is a normal weight, since constables of this class, though temporarily scarce, are described as "common."

Finally, there are a number of very curious customs, the significance of which has not yet been discovered. A great service to the cause of learning would be done, for example, by a student who could furnish authentic material for a sketch of a "sardine in quiet support"; "new crop Plate advancing sharply"; "the market going into the Bank"; "Japanese crab being firmly held"; "a squeeze for prompt positions"; "ginger moving off slowly by private treaty"; or of the remarkable ceremony recorded in a recent report, when China auctions "embraced a wad of monings." One would like to be assured that, in their public life in the market, these newly-discovered homunculi always observe a proper decorum, but there is, unfortunately, more than a suggestion of mass-inebriety in the recently noted statement that "the market as a whole was tight but cheerful."

Notes of the Week.

Mr Snowden's Indiscretion.—Discussion of the Budget in the House of Commons has, so far, been somewhat colourless. The weakness of Mr Churchill's Sinking Fund policy was effectively exposed on Tuesday night by Mr Runciman—an exposure met by Sir L. Worthington-Evans in a singularly unconvincing reply—and in an interesting speech, on Wednesday, Mr William Graham traversed critically the Chancellor's claim that the Government had been architects of increasing prosperity. His central charge against the Budget was that it had "no direct and emphatic bearing upon the problem of unemployment." Apart from these lines of attack, Mr Churchill has, up to now, escaped lightly, thanks largely to an exceedingly aromatic red herring drawn across the Budget trail by Mr Philip Snowden, who, on Tuesday night, delivered a startling condemnation of British policy as reflected in the Balfour Note. We do not propose to inquire into the niceties of Mr Snowden's meaning, nor to discuss in any detail the merits or demerits of the international debt arrangements which this country has made, for we have had frequent opportunity of stating our opinion on each settlement, and on the general policy which the Balfour Note embodied. But we wish to put on record our view that the severe and effective castigation meted out to Mr Snowden on Wednesday, in the House of Commons, by Mr Churchill and Sir Austen Chamberlain was necessary and deserved—deserved because, whatever Mr Snowden's meaning was, the effect of his words was to create the impression throughout the world that one who has been in charge of the nation's finances, and who may be in charge of them again, was flirting with the idea of the repudiation of contractual obligations. We hope, however, that on balance good may result from this unfortunate incident, for Mr Snowden's speech made it necessary for his own leader, Mr. Ramsay MacDonald, and for the Liberal Party, to make their attitude on this important question clear. And this they certainly did. Mr. MacDonald said: "So long as I occupy the position that I do, there shall be no repudiation." On behalf of the Liberal Party, Mr Runciman, in the absence of Mr Lloyd George, said: "We (the Liberal Party) wish to make it clear, here and now, not only in this House, but in the hearing of Europe, that, so far as we are concerned, we should not depart from the doctrine of the continuity of contractual international obligations entered into in our name by the Government of the day, whether we agree with that Government or are opposed to that Government. It seems to me of the first importance that we should not neglect that expression of view in order that the world may realise that once Great Britain has put her name to an undertaking, she will carry it through, in spite of the vicissitudes of political fortune." These definite statements should be sufficient to reassure the world that, whatever the faults and shortcomings of Britain's international policy may be, the phrases "repudiation" or "dishonouring of a bond" are not to be found in the English political vocabulary.

Reparations.—With the present week, the work of the Reparations Conference in Paris has entered upon a critical stage. Last Saturday, Dr. Schacht was presented with a memorandum, endorsed unanimously by the experts of the creditor Powers, containing a complete scheme of payments. Monday and Tuesday were spent in furnishing the German delegation with additional data amplifying and explaining the Allied memorandum, and at the plenary session, held on Wednesday afternoon, definite counter-proposals were put forward by Dr. Schacht and referred to a sub-committee—identical in composition with that which evolved the Reparations Bank scheme—for informal examination. Details have not yet been given officially either of the Allied memorandum or of the German reply. Unofficial but persistent reports, of whose substantial accuracy there seems to be little doubt, indicate that the Allied experts set up a schedule beginning with an annuity of 1,800 million marks, increasing, over a period of 15 years, to 2,450 millions, holding that level until the end of the thirty-seventh year, and then declining to a flat rate of 1,700 millions for a further 21 years. This would correspond to an average annuity of about 2,200 millions, and would afford Germany a saving, as compared with the standard annuity of 2,500 millions under the Dawes Plan, of 700 millions in the first year and some savings in all the other years, even without taking account of the enlarging influence of the index of prosperity. The German counter-proposals are reported to be based on a figure of 1,650 millions as the average annuity payment, and to envisage, not only the termination of payments before the end of 58 years, but a flat rate of payment throughout the period. The unfavourable reception accorded to the Allied memorandum in Berlin made it certain that the German delegation's offer would be appreciably below the figure presented to them last Saturday, and, having regard to the normal manner in which negotiations between creditors and debtors are apt to be conducted in international conferences, as well as between individuals, we are not greatly surprised or dismayed at the width of the initial gap which the experts have to endeavour to bridge. Rumours that Dr. Schacht has been inclined this week to reopen the whole question of Germany's capacity to pay—an issue exhaustively canvassed in the earliest stages of the conference—and to digress into political questions, are somewhat disturbing, but it was never to be expected that the final phase of the conference, when it became a question of "getting down to brass tacks," would proceed either rapidly or without inevitable hitches and delays over stumbling blocks of one kind or another. Dr. Schacht is entitled to make as good a bargain for his country as he can, and the abandonment of "transfer protection" is a factor which clearly bulks large in German opinion. It is satisfactory, however, that the Allies should at least have reached unanimity among themselves. At the moment of going to press we learn that Dr Schact's memorandum was, after all, intended as an ultimatum, and a very serious situation therefore arises. But we continue to be hopeful that, if the German delegation retain their grasp on the realities of the situation, and sincerely desire the settlement of a question whose solution would benefit inestimably, not only the cause of European peace but Germany's own interests, an agreement will be reached.

The Grand Coalition in Germany.—On Saturday, April 13, the Government of the Reich was reconstructed on lines which in practice re-establish the "Grand Coalition" of the Social-Democrats, Democrats, Centre, People's Party and Bavarian People's Party. This is not only the most stable Government that the Reich can have on the existing balance of parties, it is the Government best able to carry the country with it along liberal lines of policy, in both home and foreign affairs. It is true that the parties composing it are divided over the cruiser question; and it is also significant and wholesome that the controversy on this matter of armaments should be conducted between different German parties rather than between Germany and her neighbours. It seems, however, that the division over this question will not bring the coalition down, since all parties concerned are determined to hold together in order to deal with the Budget and, we may presume, with the still larger question of Germany's final answer to the former Allied and Associated Powers on the question of Reparations. The crux in the formation of the Grand Coalition was the attitude of the Centre Party; but three representatives of the party have now entered the coalition, including such a notable figure as Dr Wirth, a former Chancellor, who has perhaps done more than any other German statesman except Dr Stresemann for the cause of international understanding since the war. With Dr Wirth as Minister for Occupied Territories, Dr Stresemann still at his post in the Ministry for Foreign Affairs, and Herr Hermann Müller as Chancellor, the new German Government ought to be a constructive force in both internal and foreign affairs.

Peace in Sight in Mexico.—It is now becoming possible to estimate the effects of the disaster suffered by the main insurgent forces in Chihuahua, on their retreat from Jimenes; and all the indications are that the blow has been decisive. The insurrection has not only been stamped out in outlying districts, but its back seems to have been broken in the north-west, which, for all Mexican insurrections, is the natural stronghold and base of operations. On Saturday, the 13th, one insurgent leader, General Manzo, crossed the United States frontier, with his staff, at Nogales, Arizona, and surrendered to the United States immigration authorities. The remaining insurgent forces in the State of Sonora are reported to be treating for capitulation. It remains to be seen whether the insurgent commander-in-chief, General Escobar, will give up the struggle or will attempt to carry on a local guerrilla warfare; but even if he perversely chooses the latter course, this will not alter the general fact that the insurrection has failed and that the Calles régime (for ex-President Calles is still the power behind the presidential chair) has surmounted the most serious internal crisis with which it has yet been confronted. The danger was, of course, that the insurrection—which had been carefully arranged to break out at a number of points simultaneously—might become so widespread that the Government forces would fail to cope with it, both from insufficiency of numbers and still more from the inadequacy of means of communication. In that case, the insurrection might have dragged on indefinitely, and so have rallied to its standards all the forces of disorder and discontent, until the Government collapsed. This was the really serious possibility; for the military leaders belonging to the faction of the late General Obregon, who started the trouble, can hardly have a large popular following of their own. The crucial question was whether the long-drawn-out struggle between Church and State would flare up when the Calles régime was challenged; for in that case the insurgent "Obregonista" generals might have been supported by a Catholic mass-movement, at any rate in the North-west; and though that alliance would have been incongruous and almost certainly transitory, it might well have availed to overthrow the existing order. Without taking sides in Mexican politics, we may legitimately rejoice that the whole life of the country is not to be thrown into the melting pot again. When the Diaz régime broke up in 1910, there were ten years of disorder; and it has taken from 1920 until to-day to repair the damage of that anarchical period. It would be a tragedy for the Mexican people if they were to be thrown back into that plight just when they had found their feet again; and it would also be a grave setback to the cause of international peace; for Mexico is the China of the New World, and her internal disorders cannot go far without producing international complications. We may hope that the process of reconstruction will now be resumed under the auspices of ex-President Calles, and with the sage and disinterested advice of Ambassador Morrow.

Mr Churchill's Faulty Logic.—Possibly because of the shadow of the impending election, or possibly because he knew that in a few minutes he would be confessing the failure of the betting tax, Mr Churchill, in his Budget speech, felt it necessary to deliver a vigorous defence of the duties upon artificial silk and motor tyres. What would be an apology from most people is never one from Mr Churchill, and he made a valiant attempt to prove that both duties had been an unqualified success. His argument in each case was the familiar one—imports down, exports up, home production up, new factories erected, prices lower, and finally, "an assured revenue of over £6,000,000 a year." He ended by recommending Mr Snowden to re-read the speeches he delivered against the silk duties during their passage. It is to be regretted that Mr Churchill has apparently neglected to follow himself his prescription for Mr Snowden. If he had done so, he would have found that one of his arguments at the time for the introduction of the silk duties was that artificial silk was a new and expanding industry, which could well bear the burden he was then proposing to inflict upon it. The fact that the industry has gone on expanding has nothing to do with the duty, and in fact, as was pointed out last week in our Free Trade supplement, the rate of progress during the three years following the duty was little more than half that of the three years preceding it. His statement that the home price of artificial silk yarn has fallen by 25 per cent. since the duty was imposed is equally irrelevant. Prices, as it happens, have of late years been falling all over the world. The real question is one that Mr Churchill omitted to mention. It is, what would be the price of artificial silk yarn to-day if the duty had never been imposed? A possible answer was provided by Mr Snowden's statement in Tuesday's debate, that "the price of the most used artificial silk yarn was 50 per cent. more than the price of similar yarn in continental markets." Another and even more telling answer was given by Mr. Churchill himself a year or more ago, when he admitted that the duty had intercepted a decline in price. The Chancellor has once more evaded the real point. *Post hoc, ergo propter hoc*—is not a form of argument whereby the case for trade restriction can be made convincing.

Mr Hoover on Tariffs.—Mr Hoover's first Message to Congress dealing with tariff policy contains a passage which we commend to the attention of our protectionists over here. First of all he deals a doughty blow to those who attempt to prove the success of protection from the good fortune—often due to totally different causes—of the protected industries. He roundly states that "we must not fail to take into account the broad interests of the country as a whole, and such interests include our trade relations with other countries. It is obviously unwise protection which sacrifices a greater amount of employment in exports to gain a less amount of employment from imports." To which we would content ourselves with adding that there never was any form of protection which did not have that result. We congratulate Mr Hoover on having compressed in two short sentences so much economic truth.

The Indian States Committee.—The Report* of the Indian States Committee, laid before Parliament on Tuesday night, is exemplary in succinctness and in unanimity. Sir Harcourt Butler and his two colleagues were appointed to report upon the relationship between the Imperial Government, as Paramount Power, and the Indian States; to inquire into the financial and economic relations between British India and the States; and to make any recommendations thought desirable for the more satisfactory adjustment of those relations. The Committee's findings emphasise the need for recognition of the fact that in the territories of the Raj and the Rajahs there are two Indias; that the machinery of Government must be adapted to this condition; and that the States "differ so greatly among themselves that uniform treatment of them is difficult, if not impossible." Having traced the historical development of the relationship between the Indian States and the Crown, the Committee reaches the axiomatic conclusion that, pragmatically, the doctrine of "Paramountcy" is open to little criticism, and that "the relationship between the Princes and the Paramount Power has on the whole been harmonious and satisfactory." In round terms the Committee states: "Paramountcy must remain paramount; it must fulfil its obligations, defining or adapting itself according to the shifting necessities of the time and the progressive development of the States." At the same time, there is no lack of sympathy in the Report with the views of the Indian Princes. The justice of their claim to consultation in matters of general policy regarding maritime customs is fully recognised, and the recommendation is made that an expert body should be appointed to inquire into the fairness of the States' contribution to Imperial revenue and their proper share in Customs' receipts— the Committee's own opinion being that the ideal solution of the tariff issue would be an

* Cmd. 3302, 1929. H.M. Stationery Office, 1s. 6d. net.

Indian Zolleverin combined with the abolition of internal Customs in the States themselves. In matters of finance a number of other recommendations of minor importance are made, but it is in the sphere of future political relations that the Committee's conclusions will attract most attention. Though it is careful to make it clear that "the door is left open for closer union" between the two Indias, the Report points to the need for "great caution in dealing with any question of federation at the present time" in view of the fact that the Indian Princes are a body "so heterogeneous, so conservative, so sensitive, so tenacious of internal sovereignty." The demand of the States "that without their own agreement the rights and obligations of the Paramount Power should not be assigned to persons who are not under its control," is endorsed without qualification. Recording its "strong opinion" that the States should not be transferred save by their own consent to a "new Government in British India responsible to an Indian legislature," the Committee recommends that better methods be adopted for recruitment and training of officers for the Political Department attached to the States, that the States should deal in future with the Viceroy as representative of the Crown, not with the Governor-General in Council, representing in that capacity the Indian Government; and that "important matters of dispute between the States themselves, between the States and the Paramount Power, and between the States and British India, should be referred to independent committees for advice." The Committee's conclusions may possibly be assailed as "undemocratic" by some sections of advanced Indian opinion, but the Report in its broad lines is a realistic and authoritative pronouncement on one aspect of the problem which the Simon Commission have to solve.

The Preparatory Commission for Disarmament.—In a leading article in this issue we discuss the somewhat more hopeful prospects of a renewed attempt being made to reach an Anglo-American *entente* on naval policy and construction. In the absence of such an understanding the present session of the Preparatory Commission for the Disarmament Conference cannot be expected to make much progress. A Geneva correspondent writes:—What the Commission will be able to accomplish during its session—which is estimated to last two or three weeks—is almost entirely a matter of speculation. Vague and contradictory messages from Washington leave complete uncertainty as to whether the head of the American delegation, Mr Hugh Gibson, brings from Mr Hoover any instructions to take the initiative in resuming negotiations with Great Britain. Since his arrival in Geneva he has said nothing to clear up this uncertainty. Lord Cushendun apparently takes the attitude of benign receptivity towards any suggestions that may be made, and in any case it is fair to recognise that the imminence of the General Election does not make his task easy. At the same time, surprises are always possible, and while on any ordinary basis of business probabilities a meeting of the Commission would not have been summoned at this moment, it may well be that advantages will accrue from resumption of contacts and a stocktaking of the situation as a whole. So uncertain is the situation that the first business of the Commission is to make up its mind what its agenda is to be. There is, of course, no lack of subjects, and the President has made a list of suggestions which include the German proposal concerning publicity and exchange of information, and a number of points in the draft convention which were left in suspense at the so-called first reading. These cover "effectives," chemical warfare, air armaments, material, budget limitations, and some other points which are quite sufficient to occupy all the attention of the Commission. There is a certain amount of malicious interest as to what will happen to the remains of the late Anglo-French compromise, more especially in regard to the limitation of trained reserves. The drastic Soviet plan will undoubtedly have to be dealt with, but it seems to be only a question of the form of interment, as on the occasion of the first Soviet project for immediate, complete and general disarmament, the Commission decided that it could not be adopted as a suitable basis for their work, which must be continued along the lines already mapped out—that is to say, the completion of the preliminary draft convention. There is likely to be a considerable amount of confused discussion during the session, and the most that can be anticipated from this meeting is an impetus towards a little more energy and initiative on the part of the governments with whom progress mainly rests.

The French Vaccination Order.—The sudden decision (now in suspense) of the French authorities to exclude from France all visitors from Great Britain who failed to produce a certificate of vaccination within the past two months naturally created a considerable stir. The French, it is true, were perfectly within their rights, both under international law and also under the terms of the Franco-British Convention of 1926 dealing with certain contagious diseases. At the same time, to make so drastic an order, with the minimum of warning, was calculated to cause grave inconvenience and loss. Plans would have to be suddenly altered by business men and holiday-makers, including not only persons with conscientious objections to vaccination, but also the majority of those who have been vaccinated within the usually accepted time limit of several years. French hotelkeepers, and all those interested in the "tourist" industry would have been hard hit; but more important still, from the international aspect, is the interest of the Swiss and Italian hotel-keepers, since the order applied as much to passengers travelling through France as to those intending to stop there. No doubt all these considerations were raised in the conversations which at once took place between the two Foreign Offices, and which resulted in the indefinite suspension of the order. Meanwhile, a meeting is to be arranged between French and British health authorities, so that they may take in common whatever precautions may be deemed necessary. That is as it should be. Up to a point, it is possible to sympathise with the French authorities, and the incident should give a valuable lesson to the port sanitary authorities of this country not to repeat what seems to have been the ill-advised failure to impose quarantine on the passengers and crew of the "Tuscania." But such a panic measure as was promulgated, and the comments with which it was greeted by certain French papers, show an unfortunate ignorance of the care which is taken by the health authorities of Great Britain to isolate cases and to arrest the spread of diseases like smallpox.

The League's Economic Activities.—A Geneva correspondent writes:—In a week or two the preliminary report of the League's Economic Committee on the coal situation will probably be available for the public. The Committee has drawn up an interesting and useful review of the more characteristic international aspects of the problem, and has reached the conclusion that further consultations will be necessary before recommendations are made. The Committee's desire now is to consult experts familiar with all the important angles of the question, and no doubt at its next meeting it will have had some useful guidance from the Economic Consultative Committee which by then will have held its meeting in May. It is idle to pretend that the sugar inquiry is proceeding with equal promise. The sugar experts devoted their attention mainly to two points: (1) the possibility of stabilising production for a number of years; and (2) measures which might be employed to increase consumption. They were of opinion that agreements between producers must first be concluded—a view which caused the Economic Committee delegates to point out that the Committee could assume no responsibility for taking any initiative in the matter, but must confine itself to the principles set forth by the Economic Conference, that is, to follow the developments and progress of such agreements and to bear this factor in mind in its final report to the Council on the position of the sugar industry. The rest of the work of the Economic Committee has included a study of the relations between bilateral and multi-lateral conventions in connection with the most-favoured-nation clause; collective action with a view to tariff reduction; bills of exchange; indirect protection; Customs nomenclature; industrial agreements; and statistics. With regard to collective action for the reduction of tariffs, the Committee was able to note that a large number of countries concerned in the production of and trade in cement would be willing to examine the customs régime, but it was unable to form a definite opinion on the attitude of certain South American countries which play an important part in the trade. It therefore intends to consult experts in the industry before coming to a decision, and has appointed a small delegation, including Sir Sydney Chapman, to undertake this work. The meeting with the experts will not take place until the early autumn. The other products which the Committee have included in its programme are: iron and steel, wood, hides and skins, fresh fruit and vegetables, &c. It seems that the Committee is finding it difficult to take isolated products without giving rise to much wider economic considerations. It was realised, however, from the outset, that the Committee's tentative efforts on those lines to pave the way for a more general movement to lower tariff barriers represented a task neither easy nor to be rapidly accomplished.

A Quarter's Overseas Trade.—The foreign trade returns for the first quarter of 1929 are mixed reading. Compared with a year ago, imports have fallen by £3,788,000, and, of this decline, £1,487,000 is accounted for by the raw material group. Exports at £181,168,000 have barely held their own.

MONTH OF MARCH.

	1929.	Increase or Decrease compared with 1928.		Increase or Decrease compared with 1927.	
	£	£	%	£	%
Imports	98,593,340	−11,923,782	−10·8	−14,906,681	−13·1
British Exports	58,623,357	− 6,334,766	− 9·7	− 3,490,789	− 5·6
Re-exports	9,986,463	− 1,280,716	−10·5	− 784,682	− 7·3
Total Exports	68,609,820	− 7,615,482	−10·0	− 4,275,471	− 5·9
Excess of imports over total exports	29,983,520	− 4,308,300	−12·5	−10,631,210	−26·2

FIRST QUARTER.

	1929.	Increase or Decrease compared with 1928.		Increase or Decrease compared with 1927.	
	£	£	%	£	%
Imports	305,975,160	− 3,787,901	− 1·2	−14,960,103	− 4·7
British Exports	181,167,939	− 769,065	− 0·4	+10,694,545	+ 6·2
Re-exports	30,098,041	− 3,140,812	− 9·4	− 1,341,263	− 4·3
Total exports	211,265,980	− 3,909,877	− 1·8	+ 9,353,282	+ 4·6
Excess of imports over total exports	94,709,180	+ 112,976	+ 1·1	−24,313,385	−20·4

The trade returns of the first quarter are a fair indication as to how the year has opened, and when these details are considered, the impression they leave behind is again a mixed one. To consider, first, raw material imports: of the thirteen items in the following table eight increases over 1928 are offset by five decreases. The balance, therefore, is the right way, but not overwhelmingly so, and decreases in such important items as wool, hides, flax, hemp and jute are somewhat discouraging. Considerable comfort, however, can be derived from the increases in iron ore and raw cotton, and it would be wrong to regard with pessimism the raw material import figures as a whole.

SOME LEADING RAW MATERIAL IMPORTS.
(Quantity Retained.)

	First Quarter. 1927.	1928.	1929.
Iron Ore ... tons	1,010,677	1,210,116	1,271,021
Wood and Timber, soft sawn ... loads	589,048	402,928	444,355
Cotton, raw ... centals	5,572,362	3,468,400	4,971,849
Sheep's and lamb's wool ... centals	2,355,492	2,400,183	1,826,017
Raw silk ... lbs.	1,126,078	1,080,895	1,092,612
Flax, hemp and jute ... tons	142,920	130,888	118,665
Cotton seed ... tons	153,281	166,148	162,331
Flax or linseed ... tons	96,071	85,652	97,164
Petroleum, crude ... thous. galls.	168,876	108,487	116,439
Hides, wet ... cwts.	183,094	139,626	109,503
Hides, dry ... cwts.	154,087	231,958	98,067
Wood Pulp ... tons	298,288	222,212	309,689
Rubber ... centals	637,716	219,994	622,967

If raw material imports are an indication of business now in hand, exports are a proof of results already achieved. Here, again, the figures are inconclusive. Sixteen items are included in the next table, and, comparing 1929 with 1928, these items yield ten decreases and only six increases. The six increases include such important items as coal, iron and steel, and worsted tissues, but cotton goods, machinery and leather are all lower than in 1928, and, though it is possible to hope that the increase in raw cotton imports betokens an approaching improvement in the industry, so far the record of 1929 does not compare over-favourably with that of the preceding year.

SOME LEADING EXPORTS.
(Quantity.)

	First Quarter. 1927.	1928.	1929.
Coal ... tons	13,085,647	12,022,994	13,125,958
Railway material ... "	82,132	189,398	134,320
Total of iron and steel ... "	824,121	1,058,513	1,151,404
Textile machinery ... "	26,988	31,573	31,712
Total machinery ... "	118,887	144,878	142,063
Cotton yarns ... lbs.	49,436,300	44,889,300	44,166,600
Cotton piece-goods ... sq. yds.	1,015,027,100	1,050,969,400	1,039,383,000
Wool tops ... centals	106,009	97,575	87,597
Woollen tissues ... sq. yds.	33,076,300	36,763,200	30,912,600
Worsted tissues ... "	11,087,800	9,732,300	14,299,500
Linen piece-goods ... "	19,536,600	21,583,900	18,152,500
Jute piece-goods ... "	35,886,800	45,608,100	45,114,700
Boots and shoes ... doz pairs	247,940	299,005	234,652
Leather ... cwts.	91,180	120,546	76,080
Locomotives ... tons	2,763	7,754	9,592
Motor cars and chassis ... number	12,505	7,342	10,385

The year 1928, it will be recalled, opened well, and it was only in the second quarter that trade began to fall away. Once more, we are to-day at that critical turning-point, and if 1929 eschews the examples of previous years, and maintains trade on the level of the past three months, we shall have causes for satisfaction.

Taxable Wealth.—The Report of the Commissioners of Inland Revenue for 1927-28 contains some interesting statistics relating to national income and property. The £12 million, by which in that year Inland Revenue receipts exceeded estimates, arose mainly from an unexpectedly high yield of estate duty. Not only did the number of estates liable to tax, and their total capital value, increase between 1926-27 and 1927-28, but their average value also rose from £4,567 to £4,725. Yet, at the same time, the percentage of the total value consisting of small estates, between £1,000 and £5,000, had been increasing, from 14.13 in 1924-25 to 15.08 in 1927-28. The table of the distribution of capital values presents many points of interest. The percentages in the two representative groups, £30,000 to £40,000, and £100,000 to £150,000, both fell considerably between 1926-27 and 1927-28, suggesting that fortunes of medium size are becoming proportionately fewer. The increase of small estates has been noted above; at the same time, the aggregate value of estates over £3,000,000 has been increasing extremely rapidly, from £4,607,083 (one estate), or 1.00 per cent. of the whole, in 1924-25, to £28,529,620 (four estates), or 5.58 per cent. of the whole, in 1927-28. The kinds of property assessed also show marked changes in the last few years. Landed property forms a steadily diminishing, and money lent on mortgage a steadily increasing, percentage of the whole; the proportion in insurance policies is also rising. In discussing the figures of total income coming to the notice of the income tax authorities, it must be remembered, first, that not all the income assessed in any year has been earned in that year, and, second, that alterations have recently been made in the basis of assessment. The following are the most important figures:—

Year.	£ millions. Gross Income.	Exemptions and Reductions.	Actual Income.	Allowances from Actual Income.	Taxable Income.	Net Produce of Tax.	pence per £. Average effective rate of Tax.
1924–25	2,970·4	569·7	2,400·7	1,052·2	1,348·5	273·0	27·29
1925–26	2,944·4	607·5	2,336·9	1,024·8	1,312·1	236·0	24·24
1926–27	2,916·6	579·6	2,337·0	1,013·2	1,323·8	233·7	24·00
1927–28a	2,904·0	584·0	2,320·0	1,020·0	1,300·0	228·0	23·58

(a) Estimates.

This table certainly gives no spectacular evidence of advancing national income, but the growing habit of investing for capital appreciation rather than for current revenue causes death duties to profit at the expense of income tax. Further evidence of a gradual redistribution of wealth is contained in the super tax statistics. The proportion of the aggregate of assessed incomes which falls in the lowest income groups has steadily increased, and so has the proportion in the highest group. Meanwhile, the average and the mode of the incomes assessed remain practically constant. If any conclusion can be drawn, then, from these figures of taxable incomes and property, it is that the curve of distribution of national wealth is being steadily loaded more heavily at its upper and lower ends.

A Quarter's Shipbuilding.—The shipbuilding returns for the first quarter of 1929, issued this week by Lloyd's Register, show that the improvement which took place towards the end of last year in the volume of work in hand has been maintained, but that there are signs of a renewed falling off in the quantity of fresh orders placed. Figures of tonnage commenced, launched, and under construction in British yards are given below for the past five quarters.

	Thousand Tons Gross.		
	Commenced.	Launched.	Under Construction.
1928—			
1st Quarter	342	406	1,440
2nd Quarter	279	403	1,203
3rd Quarter	245	387	1,090
4th Quarter	432	246	1,243
1929—			
1st Quarter	362	290	1,357

It will be noted that the figure of tonnage building in this country on March 31 was 114,000 tons higher than at the end of December, but was still 83,000 tons lower than a year ago; and that the tonnage commenced declined on the quarter by 70,000 tons. Abroad, the position of the industry underwent comparatively little change on balance during the past three months, 298,000 tons having been commenced and 215,000 tons launched, as compared with " commencements " at 249,000 tons, and launchings at 262,000 tons, in the previous quarter. The world total of tonnage building at the end of March was 2,838,000 tons, of which 1,399,000 tons were motorships. The continued progress in the employment of the internal combustion engine for larger vessels of the " liner " class is shown by the fact that of the 94 vessels each of 8,000 gross tons and upwards now building in the world, 61 are designed for Diesel engines—the British figures being 29 motorships out of a total of 37 vessels. In the " general trading " type of ship—those of a tonnage from 4,000 to 8,000 gross tons—it is significant that foreign builders favour motor engines to a much greater extent than British designers appear to do. British yards have now in hand 90 steamers, and only 24 motorships in this tonnage group, as compared with a corresponding total of 60 motorships and 20 steamers under construction abroad. Of the total tonnage building in the world at the end of March, the British proportion amounted to 48 per cent., as compared with an average figure of 57 per cent. in 1913.

Iron and Steel Production in March.—According to the figures just issued by the National Federation of Iron and Steel Manufacturers, production of iron and steel continued to improve during March. Steel production amounted to 859,900 tons, compared with 774,900 tons in February and 793,300 tons in March, 1928, while pig iron production amounted to 590,500 tons in March, compared with 519,600 tons in February, and 592,600 tons in March of last year; the increase in the daily rate between February and March amounted to 3 per cent. The increase in the case of pig iron would probably have been greater but for the difficulties experienced in the supply of coke, and, although the increased demand for pig iron would appear to justify the re-lighting of more blast furnaces, the net increase in the number in operation during the month was only five—seven having been blown in and two blown out. The scarcity is, naturally, accompanied by an increase in price, and, on the North East Coast, for instance, blast furnace coke has advanced by 2s. 6d. per ton since the beginning of the year. Imports of iron and steel, which, at 160,000 tons, were exceptionally low in February, rose to 182,100 tons in March, but were some 90,000 tons less than in March, 1928. Exports of iron and steel declined from 380,100 tons in February to 350,100 tons in March. The following table compares production, imports and exports of iron and steel in the first three months of 1929 with the first quarter of 1928:—

PRODUCTION, IMPORTS AND EXPORTS OF IRON AND STEEL.
(In thousands of Tons.)

	Production.				Imports and Exports			
	Pig Iron.		Steel Ingots and Castings.		Imports.		Exports.	
	1928.	1929.	1928.	1929.	1928.	1929.	1928.	1929.
January ...	560·5	563·9	626·2	764·6	283·9	244·3	332·2	421·2
February	550·8	519·6	764·4	774·9	286·9	160·0	317·0	380·1
March ...	592·6	590·5	793·3	859·9	271·5	182·1	409·3	350·1
	1,703·9	1,674·0	2,183·9	2,399·4	842·3	586·4	1,058·5	1,151·4

Production of pig iron in the first quarter of 1929 is practically equal to the output in 1928, when it is remembered that February, 1928, contained 29 days; but, whereas last year the March output was the maximum for the year, it may be hoped that the next few months will improve on the March output. Steel production in the first quarter of 1929 is 10 per cent. higher than in the first quarter last year, while exports are also up by nearly 10 per cent. The most significant feature of the table is the decline in imports by 256,000 tons, or 30 per cent., due, in a large measure, to activity on the Continent, with consequent rise in price and delay in delivery.

Cotton Yarn Association, Limited.—On Tuesday last there was a special meeting in Manchester of the members of the Cotton Yarn Association, Limited, to consider the future work of this organisation. Proposals for the continuance and reorganisation of the association were put forward and discussed, but failed to secure sufficient support, and it was decided that the directors should take immediate steps to wind up the association. Further meetings will be called at an early date for the necessary formal resolutions to be passed. It is therefore practically certain that this organisation, which at one time promised to be highly instrumental in relieving the depression in the cotton trade in Lancashire, has come to an end. The association, writes a correspondent, was formed in October, 1926, with a nominal capital of £100, but in April, 1927, there was a further registration of a company with the same name with a capital of £250,000. The objects of this movement were set out very definitely by the president, Mr J. L. Tattersall, at a meeting held in July, 1927. It was reported that the membership consisted of 221 companies, representing nearly 21,000,000 spindles, and these firms were pledged to stand by the directors as regards their instructions for curtailment of production and for minimum prices. Within a few months of that meeting, however, there were increasing difficulties in maintaining the policy of the association, especially with regard to minimum yarn prices. There was a substantial number of spinners outside the organisation, and these producers secured the bulk of the trade passing, as they were willing to book orders at a little below the minimum rates. In October, 1927, the board of directors realised that a crisis was near at hand, and an appeal was made to the Master Spinners' Federation for help and support. A joint committee of the two organisations was set up, and after protracted meetings the Cotton Yarn Association agreed to abandon their minimum prices system in favour of the basic prices scheme of the Masters' Federation. On the other hand, the Federation promised, subject to the approval of their members, to adopt the sectionalisation of this branch of the industry for short-time purposes. The new basic prices, however, were only effective for a few days, and the Manchester market became very irregular. In the meantime the members of the Federation failed to support the ballot on sectionalisation, and although a big effort was made to secure the necessary majority, it was ultimately announced that the owners of only 72 per cent. of the spindles had voted in favour. Owing to this disappointing response the Federation decided to take no further action. This development created a crisis, and a few days later the directors of the Cotton Yarn Association resolved to release the members from their obligations with regard to minimum rates and curtailment of production, and a state of unfettered competition prevailed. The association then turned its attention to the formation of an amalgamation of spinning mills, and ultimately this scheme was consolidated by the establishment of the Lancashire Cotton Corporation, Limited. It is held in many quarters that no useful purpose can now be served by the continuance of the Cotton Yarn Association, Limited, although it is admitted that the statistical information gathered from week to week relating to productions, sales and deliveries has been extremely useful and valuable. The progress of the new Corporation, despite the backing of substantial trade and financial interests, is necessarily slow, and so far only one mill has been absorbed, but it is understood that negotiations are taking place for the taking over of a number of other concerns.

Employment in March.—During the month there was a very substantial increase in employment. The advent of improved weather conditions at the beginning of March led to an increase in the numbers employed in those industries which had been adversely affected by the severe weather which prevailed during the previous month, while the position was maintained in those industries which had shown an improvement during February. According to the *Ministry of Labour Gazette*, among the 11.9 million workpeople insured under the Unemployment Insurance Acts of Great Britain and Northern Ireland, the percentage unemployed (wholly and partially) at March 25 was 10.1, as compared with 12.2 at February 25, and 9.5 at March 26, 1928. The total number of registered unemployed at March 25 was approximately 1,168,000. This compares with 1,430 at February 25th, and 1,063,000 a year ago. The following table gives the monthly movements in the unemployed percentage for some years past:

PERCENTAGE UNEMPLOYED AMONG INSURED WORKPEOPLE IN GREAT BRITAIN AND NORTHERN IRELAND.

	1922.	1923.	1924.	1925.	1926.	1927.	1928.	1929.
End of—	%	%	%	%	%	%	%	%
January	16·2	12·7	11·9	11·5	11·0	*12·0	10·7	12·3
February	15·7	11·8	10·7	11·3	10·4	10·9	10·4	12·2
March	14·6	11·1	9·9	11·1	9·8	9·8	9·5	10·1
April	14·4	10·9	9·7	10·9	9·1	9·4	9·6	...
May	13·5	10·7	9·5	10·9	*14·3	8·7	9·9	...
June	12·7	11·3	9·4	11·9	*14·6	8·8	10·8	...
July	12·3	11·5	9·9	11·2	*14·4	9·2	11·7	...
August	12·0	11·8	10·6	12·1	*14·0	9·3	11·7	...
September ...	11·9	11·7	10·8	12·0	*13·7	9·3	11·4	...
October	12·0	11·7	11·1	11·4	*13·6	9·5	11·8	...
November ...	12·4	11·5	11·0	11·0	*13·5	9·9	12·2	...
December ...	12·2	10·7	10·9	10·4	*11·9	9·8	11·2	...

The improvement recorded during the month was relatively greatest in the building trade and public works contracting, in brick and tile, artificial stone and cement manufacture, and in the mining group of industries. There was a further decline in those wholly and temporarily unemployed in the coal mines. Other industries which showed an improvement included pottery, iron and steel manufacture, general and marine engineering, the motor vehicle industry, shipbuilding and ship-repairing, the textile trades (with the exception of jute manufacture), the clothing trades, and river, dock and harbour service. There was a slight decrease of employment in the shipping service.

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

Cost of Living.—There was a substantial fall in the cost of living during March. At April 2nd the index number of the Ministry of Labour stood at 62 per cent. above the level of July, 1914. This compares with 66 per cent. at the end of February and 64 per cent. a year ago. For food alone the index stood at 50 per cent. at April 2nd, as compared with 57 per cent. a month ago and 55 per cent. a year ago. The following table shows the monthly movements of the index figures over a number of years:—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All Items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1921.	1924.	1925.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%	%
January ...	85–90	165	77	80	75	75	68	67
February ...	90	151	79	79	73	72	66	65
March.....	90	141	78	79	72	71	64	66
April	90–95	133	73	75	68	65	64	62
May	85–100	128	71	73	67	64	64	...
June	100	119	69	72	68	63	65	...
July	100–105	119	70	73	70	66	65	...
August	110	122	71	73	70	64	65	...
September..	110	120	72	74	72	65	65	...
October.....	115–120	110	76	76	74	67	66	...
November ..	120–125	103	80	76	79	69	67	...
December ..	120	99	81	77	79	69	68	...

The decrease in the cost of living during the month was mainly due to the cessation of bad weather conditions and to seasonal influences which are to be expected at this time of the year.

Co-operative Trade Position.—By a coincidence, writes a correspondent, we are able to check the optimistic views of politicians as to the industrial position with the actual figures as revealed in the accounts of the Co-operative Wholesale Society. These reflect the wage-earners' capacity for consumption, which is closely conditioned by the state of employment. For the year ended January 12th the sales of the C.W.S. were £87,294,025, an increase of only ⅜ per cent., compared with an advance of 15 per cent. in the previous year, of nearly 2 per cent. in 1926 over 1925, and of 7 per cent. in the latter year over 1924. There has been a re-arrangement of the accounting period, but, in the main, these percentages represent the substantial increases which have annually occurred until last year. True, the weekly average trade throughout 1929 reached £1,678,731, an increase of £98,884 per week, but the number of individual members in the shareholding societies was over 430,000 more than in 1928. For the last half of the year the turnover was £44,084,237, of which £13,594,018 was for supplies from the society's own productive works. There was a net surplus of £638,300, from which the societies will receive £505,896 in the form of a dividend of 3d. in the £ on their purchases; £117,880 will be allocated to writing off land, buildings, fixtures, etc.; £13,601 placed to the reserve fund; and £1,472 apportioned as half dividend (1½d. in the £) on the trade of non-members. The latter represents a negligible amount over the whole trade. This surplus of £638,300 is arrived at after the payment of interest on capital, depreciation of property according to rule, and meeting all the expenses of production and distribution. Steadily the reserve fund of the society, which was drawn upon in 1921, is being restored. It stood at £1,052,775 on January 12th. The banking business of the society totalled £342,711,882 in the last half of 1929, this being the amount of withdrawals and deposits in the C.W.S. Bank, which now operates 24,520 current accounts, of which 8,562 are those of trade union offices and 5,168 other mutual working-class associations. The difficulties of the industrial population find expression in the decreased supplies from all the flour mills of the society. These totalled £4,770,852, a decrease of 12 per cent. There was a decrease of 11 per cent. in the output of the boot and shoe works and tanneries, the total production of which was £1,199,954. These two important sections of the society's business may possibly reflect lessened power of consumption among working people. This is apparent in several directions. The most notable exception is concerned with the C.W.S. cabinet factories, where the increase of 1¼ per

cent. suggests that many co-operators, having obtained mortgages on their new houses through local co-operative societies, are furnishing from co-operative sources.

Foreign Trade of the United States.—Detailed analyses now available of the imports and exports of the United States in 1928* confirm the results of general observation of the trend of economic development in that country. The ratio of United States exports to world exports, though still higher than in 1913, is declining, but her outward balance of merchandise has risen from $378 million in 1926 to $681 million in 1927 and $1,038 million in 1928. There was also an outward balance of gold movements, and it is not yet known by what invisible imports the payments were balanced. Since 1928 the quantity of exports has increased by 47 per cent.; exports of automobiles and of calculating machines multipled sixfold, of wheat tractors by five and a half times; exports of typewriters and of rubber tyres more than doubled. Imports increased by 50 per cent. in the same period, the most marked increases occurring in the cases of rubber, coffee, tin and silk. Of 437 exports analysed, 68 showed records in respect of quantity and value, and a further 67 in respect of either quantity or value. These commodities ranged from dried prunes and undressed opossum skins to motor-cars. There was a substantial number of records also among imports. Changes in the distribution of trade among the various classes are significant:—

PERCENTAGE OF EXPORTS.

	Raw Materials.	Crude Foodstuffs.	Manufactured Foodstuffs.	Semi-manufactures.	Manufactures.
1913	31·7	6·9	13·3	16·2	31·9
1928	25·7	5·8	9·3	14·3	44·9

PERCENTAGE OF IMPORTS.

1913	34·6	12·3	11·1	19·0	20·9
1928	35·9	13·4	9·9	18·6	22·2

The increasing industrialisation of the country is clearly reflected in these figures, and further evidence of its influence is to be found in the changes in the geographical distribution of United States trade shown in the following table:—

PERCENTAGE OF IMPORTS.

	North America.		South America.	Europe.	Asia.	Oceania.	Africa.
	North.	South.					
1913	8	13·7	11·1	48·2	16·7	0·9	1·3
1928	12·2	11·3	13·9	30·5	28·6	1·3	2·2

PERCENTAGE OF EXPORTS.

1913	16·5	7·7	5·9	60·4	6·2	2·2	1·2
1928	18·0	7·7	9·4	46·3	12·7	3·5	2·3

The continents in whose share of her imports there has been the largest increase are Asia, from which come over 56.2 per cent. of United States imports of raw materials, and North America, from which she imports over 40 per cent. of her crude foodstuffs, whereas Europe, from which come nearly 60 per cent. of her manufactured imports, plays a declining part. Similarly Asia and South America, which play a more important part as markets for finished goods than for raw materials and foods, are rapidly increasing the proportion they take of U.S. exports, while Europe, the leading consumer of food and raw materials, is a market of declining importance.

The American Invasion of Europe.—Our Paris correspondent writes:—*French motor-car manufacturers are closely watching developments in connection with the American effort to secure a larger share of the European market by purchasing control over certain of the German car factories, but it cannot be said that this menace to a valuable section of her export trade has been received with any great degree of nervousness in France. A section of the Paris Press is urging that French motor-car constructors should organise a common front against the Transatlantic "enemy," but those leading makers who are making any move in the matter appear to prefer continuing the policy of establishing works of their own in the countries in which the Americans are threatening to secure a footing. As a retort to the establishment of the American General Motors concern at Warsaw, the Citröen company is reported to have decided to organise a substantial plant in the Polish capital. Fifty-one per cent. of the capital of the new Citröen subsidiary, it is asserted, will be Polish. The engines are to be imported from France, but the raw materials will, as far as possible, be of Polish origin. It is reported that the Continental motor-car trade is not the only industry American industrials are coveting. One leading Paris dressmaker is stated to have received from an American source an offer to purchase his undertaking for $2,500,000, with the promise that nothing shall be changed in regard to *personnel* or models, and that French taste shall be respected. "The only stipulation we shall make," the letter conveying the offer stated, "is that the whole of the piece goods used shall be supplied by American firms." This naïvely-couched proposition, it is asserted, was promptly declined. The tariff policy of the Washington Government is provoking increased hostility among French exporters. The report of the Confédération Générale de la Production Française warns the American Government that unless it adopts a less greedy tariff policy the outcome may be regrettable. The surprise that was felt in France, at the time of the signing of the new Franco-German commercial agreement, when the Washington Government, although flatly refusing to reduce its almost prohibitory rates against French products, demanded most-favoured-nation treatment for American goods entering France, has now been emphasised by the announcement that the United States proposes to raise still higher the rates imposed on certain important classes of French goods. The French Ambassador in Washington has already reminded the American Government that its policy may have a bad effect on Franco-American relations. "It is to be hoped that this warning will be heard," concludes the report referred to, "and that we shall not be forced to take retaliatory measures against certain important items of American exports."*

*U.S. Department of Commerce, Trade Information Bulletin No. 602.

New Zealand's Economic Problems.—Official returns recently published for the year 1928 show an exceptionally favourable trade balance. Imports for 1928 amounted to £44.9 million, as compared with £44.8 million in 1927, while exports were £56.2 million, as against £48.5 million in the previous year. Banking figures reflect the changes in the overseas trade balance. An interesting feature of the situation is, however, that the funds accumulated have been placed in unusually large measure in fixed deposit, and hence are inactive, and are not having their full anticipated effects in stimulating business activity. It appears probable that this concentration of funds on fixed deposit will lead to some reduction of bank rates of interest, which in turn would stimulate borrowing and business. But the amount of funds placed in cold storage is directing attention to other factors, which determine business prospects, and analysis shows that there are troublesome legacies of the post-war boom that have yet to be eliminated. Internal prices, which determine costs of production, have become stabilised at a high level, while export prices, which largely determine buying power in the local market, are variable about a lower level. Since export prices are fixed in competitive world markets, they are beyond the control of New Zealand, and in the long run local costs of production must adjust themselves to these world prices. Local costs of production are, however, extremely inelastic. High taxation, and tariffs, heavy private and public indebtedness, state and other monopolies, rigid fixation of wage rates and labour conditions, small and isolated markets separated by heavy transport charges, all these combine to keep costs high, and though there has been some depression and considerable unemployment since 1921, and particularly since 1925, the appeal for higher production at lower costs has had little visible effect. The most promising development is the expansion of production per head and production per acre in the dairying and pastoral industries, which, providing about 93 per cent. of the Dominion's exports and 53 per cent. of its estimated total production, are the foundations of its prosperity. The dairy industry shows up best, and between 1920 and 1927 annual butter fat production per cow increased from 150.6 lbs. to 198.5 lbs. This is the direct result of better breeding and better nutrition. It is difficult to reach conclusions regarding secondary industries. Public utility services, financed by borrowed capital, are expanding, as are those industries preparing pastoral products for market. Timber and building are in the doldrums, having suffered contraction after a prolonged building boom, mainly in North Island towns. Slow changes in consumption too, are having widespread effects. The rapid advance of motor transport brings keen competition to bear on the railways and creates a demand for better highways; many owner-drivers spend now on motoring what hitherto they spent on other comforts and luxuries; the mechanisation of agriculture and housekeeping is changing the nature of demand for a wide range of agricultural and domestic contrivances; and tastes in wearing apparel, &c., change in the Dominions much as they do elsewhere. The nature of New Zealand's difficulties is not greatly different from those troubling many other countries; sheltered prices and local costs are high; industry, burdened with debt and high taxation, adjusts itself but slowly to lower price levels, and is hampered by marked changes in demand in its markets. But farming efficiency and production per acre are high and improving, and the last two years have seen good harvests sold at remunerative prices. The farmers are therefore in a stronger position than for many years past, and when the farmer is prosperous the Dominion may fairly expect prosperity to become widely diffused amongst its people.*

INSURANCE NOTES.

Eagle Star and British Dominions.—The 1928 report of this company will shortly be available, and its publication is awaited with great interest. The 1927 results were disappointing inasmuch as they disclosed in the marine department an unexpected loss of £75,000, which counterbalanced the satisfactory figures in other sections of the business. With regard to 1928, it has been already announced that the quinquennial valuation of the Star Life Closed Fund will yield a sum of £145,000 for the profit and loss account. There now comes a preliminary statement of the results of the quinquennial valuation of another Closed Fund, that of the Sceptre Life. Although the details have not yet been vouchsafed, the reversionary bonuses to the policyholders have been greatly increased, and it is reasonable to assume that the allocation to shareholders, which amounted five years ago to £20,000, will be largely exceeded. From these two sources the Eagle Star and British Dominions should receive at least £165,000 compared with only £25,000 from other sections of the life business in 1927. As regards the policyholders of the Sceptre, the reversionary bonuses to be declared for the quinquennium 1924 to 1928 will be at the following rates, the rates for the preceding quinquennium being also given for comparison:—

	1919–1923.	1924–1928.
Temperance section:		
Whole-life policies	50/–% per annum.	80/–% per annum.
Endowment assurances	45/–% ,,	75/–% ,,
General section:		
Whole-life policies	42/–%	72/–% ,,
Endowment assurances	42/–% ,,	72/–% ,,

Provided that no unwelcome surprise comes to light from the marine department, the omens for the forthcoming report are good.

Atlas Assurance Company.—The year 1928 marks the closing of the triennial valuation period in the life department of this company. For the purpose of comparison the results of the last two valuation periods are summarised below:—

	1923-1925.	1926-1928.
	£	£
Surplus earned during the triennium	387,322	590,833
Capital profits taken credit for	...	...
Brought forward from previous valuation	6,265	30,101
	393,587	620,934
Allocations—		
To Bonuses to Policyholders	156,879	365,825
,, Shareholders	41,723	55,454
,, Strengthening of Actuarial Valuation	82,183	122,000
,, Written off securities	82,701	63,711
,, Carried forward to next valuation	30,101	13,944
	393,587	620,934

The large increase in profits earned has enabled the directors to increase the reversionary bonus for the triennial period from 36s. per cent. compound to 42s. per cent. compound. Moreover, it has been decided to allot in addition a further special reversionary bonus of 18s. per cent. compound, making in all a bonus of 60s. per cent. compound for the three years 1926-1928. It will be seen from the figures in the above table that the profits have been conservatively dealt with, and for the future the directors have determined upon an interim bonus at the exceptionally high rate of 48s. per cent. per annum compound. New life business last year underwent further large expansion, the amount having risen from £2,946,816 to £3,482,611. Development in the life department has been very rapid since the war. New business in 1912 amounted to only £420,788; in 1920 the figure had grown to £1,972,261, and in 1923 to £2,310,362. The expansion of the life department has been associated with the energetic development in particular of group insurance and of special life assurance schemes for industrial firms. Turning now to the fire and general departments, it is satisfactory to observe that the company has again had a very favourable year. The total premium income from fire, accident, and marine combined amounts to almost £3 million, of which £2,400,000 is due to fire business, £440,000 to accident business, and only the comparatively small balance of £160,000 to marine insurance. The following table, setting out the underwriting results of the past three years, exhibits clearly how successfully the business has been conducted:—

	1926.		1927.		1928.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
	£		£		£	
Fire	228,993	10·2	248,559	10·9	221,854	9·3
Accident	36,499	10·0	21,382	5·4	31,836	7·2
Marine	...		...		...	
Life	16,649		19,124		19,681	
Sinking fund	...		4,777		2,013	
	282,141		293,842		275,384	
Taxes, pension fund, &c.	78,381		79,041		100,117	
Total Net Trading Surplus	203,760		214,801		175,267	

The cost of the dividend, namely, £176,000, remains the same as in 1927, but it is calculated on a different amount owing to the fact that last year part of the uncalled liability was wiped out, and at the same time the £10 shares were sub-divided into £5 shares each, with 25s. paid up. There is a moderate gap of £32,000 between the cost of this dividend and interest earnings after reduction of debenture interest. Incidentally it is interesting to observe that transfer fees received have increased from £77 in 1927 to £125 in 1928, this increase being probably due in no small part to the increased popularity of the shares in their split form.

Legal and General Assurance Society, Ltd.—The constitution of the new life business is again analysed in the report, and the following table exhibits a comparison of the 1928 figures with those of 1927, when the analysis was furnished for the first time.

	1927.		1928.	
	Sums Assured.	Amounts per annum.	Sums Assured.	Amounts per annum.
Life assurances:	£	£	£	£
Ordinary business	3,190,803	...	3,387,118	...
Decreasing term and group insurances	3,458,361	...	4,259,783	...
	6,649,164	...	7,646,901	...
Deferred annuities, etc.	...	43,865	...	90,581
Sinking fund assurances	565,262	...	997,622	...

The table clearly shows the considerable expansion which has taken place during the year in all classes of business. As regards life assurances, the company's business is of an unusual character. All of it is now transacted on a "non-profits" basis, and, although there is still existing a large volume of "with-profits" business, this means that for the future the shareholders have a 100 per cent. proprietary interest in profits. For the rest it would be interesting to know how much of the £4¼ million of business is due to decreasing term assurances, and how much to group insurance on bodies of employees. The former is a development of recent years, and has been made possible by the boom in the purchase of small houses through the medium of building societies. The method by which the loans granted for this purpose by building societies are liquidated is by means of an annuity payable over a term of 15 to 20 years. Each annuity payment includes an instalment of principal, growing in size with each year, so that the death of the borrower before final redemption takes place involves the immediate liquidation of the balance of the loan. The Legal and General has been enterprising enough to remedy this defect by offering temporary assurances subject to a single premium with a sum assured decreasing each year in accordance with the principal of the loan. Turning now to the investment of the funds, these have yielded an average rate of £4 11s. 6d. per cent. in 1928, compared with £4 11s. 11d. per cent. in 1927. The expense ratio last year worked out at 16.9 per cent., while the corresponding figure in 1927 was 17 per cent. As an adjunct to the life business the company started a fire and accident department in 1919. This has been very carefully and successfully managed. The premium income from this source last year was £274,325, and yielded a net trading surplus of £20,426 (equivalent to 7.4 per cent.), together with net interest earnings of £45,685. Since the cost of the dividend was £70,000 it will be seen that the earnings of the fire and accident departments are now on a scale almost sufficient by themselves to meet the dividend without touching the life department profits. Taking everything into account, the company is earning at least twice its present dividend. From the shareholders' point of view the Legal and General is an excellent property with very considerable possibilities.

London Assurance.—The final results for 1928 are coloured by the relatively unfavourable outcome of the fire department—the largest section of the business. Premiums in this department have been declining for the past three years, the diminution being partly the result of more stringent selection of the American business and partly to increasing competition. The underwriting profit last year in respect of premiums, amounting to £1,730,000, worked out at 3.7 per cent., compared with 8.7 per cent. in 1927. The next most important department is the marine. The possession of a large marine income exceeding £1,000,000 is, in present conditions, a distinct disadvantage. The marine fund has been maintained for some years at a round figure of £1,000,000, and in 1927 required a transfer from profit and loss of £250,000 for this purpose. Happily, on this occasion no further support has been necessary, but interest earnings have been left in the account, and there was an underwriting loss of £43,517. The detailed results of all departments are set out below:—

	1927.		1928.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
	£	%	£	%
Fire	155,606	8·7	63,995	3·7
Accident	2,317	15·8	729	4·3
Employers' Liability	11,913	16·4	10,896	14·2
General Accident	– 17,750	– 4·6	– 4,765	– 1·2
Marine	– 293,263	– 28·7	– 43,517	– 3·8
Life	12,500		12,500	
	– 128,677		39,838	
Less Items debited to Profit and Loss Account	53,638			
Total Net Trading Profit	– 182,315		54,436	
			– 14,598	

Thus it will be seen that, apart even from the marine department, the results of all other sections were less favourable last year than in 1927. The contribution from the life department represents one-fifth of the proprietor's share of the surplus disclosed at the 1925 quinquennial valuation. New business in this department more than recovered the decline recorded in 1927, the amount last year being £1,746,180. The dividend has been maintained at the same rate as before, and the cost is covered by interest earnings with a small margin. At the present price of 10⅜ the £2 10s. shares, with 50 per cent. paid up, yield 5¼ per cent. approximately. Last year the shares were as high as 13⅝.

Caledonian Insurance Co.—From the shareholders' point of view the most important department, because it is the largest contributor to profit and loss, is the fire department. The main feature of the results for 1928 is the falling off in fire profits, though this is largely made good by the greatly improved outcome of the general department. Consequently the total underwriting profits, allowing for the fact that 1927 included 5 years' profits from the life department, are very little less than in 1927. The following table exhibits the details of the underwriting experience in the various accounts:—

	1927.		1928.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
	£	%	£	%
Fire	86,644	9·7	44,505	5·1
Personal Accident	886	15·0	1,227	21·6
Employers' Liability	6,575	15·3	8,591	20·7
General	3,696	1·2	37,143	11·7
Marine	2,290	1·9	7,392	6·6
Life	36,691		...	
	136,782		98,858	
Less Items debited to Profit and Loss Account	22,503		24,273	
Total Net Trading Surplus	114,279		74,585	

The dividend has been maintained at the same rate as that for 1927, namely 87½ per cent., and its cost, £90,300, compares with interest earnings of £79,068. The capital consists of 129,000 shares of £5 each with £1 paid up, and it is proposed to make a bonus issue to the shareholders of an additional 26,000 shares (one in five) at a price of £14. The market price of the existing shares is £25. The accounts show that a portion, at any rate, of the company's hidden reserves has been brought into the open to the amount of £200,000. Of this sum £150,000 has been utilised to inaugurate a contingency fund, and the remaining £50,000 has been added to departmental reserves. During the year 1928 new life policies were issued for sums assured of £1,344,891, and the fund now stands at £6,170,000. The rate of interest yielded by this fund was £5 5s. 11d. per cent. net of income tax last year, and £5 3s. 2d. per cent. net of income tax for the preceding year. The company has decided to institute actuarial valuations and distributions of surplus biennially in future instead of quinquennially, and the investigation is fixed to take place at the end of 1930.

Canada Life Assurance Co.—A very noticeable feature of the past few years has been the energetic manner in which certain of the Colonial offices have developed and expanded their life business in this country. Their unusual advertising methods, the attractive trimmings which they attach to their policy contracts, together with their own increasing merits, have combined to make them formidable competitors of the older established home offices. In 1927 the Canada Life wrote new life policies for the very large amount of £26,305,000, of which a little more than £2 million is attributable to business transacted in this country. During last year it is stated that the new business amounted to £28,923,000, and that of this amount more than £3 million was completed in this country. In the course of his speech at the annual meeting, the president stated that the total amount of life insurance in force in the American Continent has now reached the huge total of £20,340 million, and that new business written during the year 1928 amounted to £3,900 million. He was careful to add that notwithstanding these very large figures the life assurance business is still far from its ultimate goal, for it is estimated that in Canada the proportion of income devoted to life assurance premiums is still less than 2½ per cent. The investment policy of the Canada Life is in striking contrast to that of the Sun Life of Canada, which eschews mortgages and devotes more than one-half of its total assets to investments in common stocks. The total assets of the Canada Life amount approximately to £32¼ million, of which £10,400,000 is invested in mortgages, and less than £500,000 is represented by ordinary stocks.

Scottish Union and National Insurance Co.—The Scottish Union and National has had an extremely good year, and the report records progress in practically every department. In the life department the year 1928 was the first year of a new quinquennium, and the fact that the new business transacted amounted to £2,025,887, being over £300,000 in excess of that for 1927, is very satisfactory. The life department was worked at an expense ratio last year of 13.8 per cent. of the premiums, compared with 14.1 per cent. in 1927. The net rate of interest on the life fund worked out at £4 10s. 8d. per cent., compared with £4 7s. 6d. per cent. The underwriting results in all departments are shown in the following table for each of the last two years:—

	1927.		1928.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
	£	%	£	%
Fire	158,738	12·2	168,040	12·8
Accident	1,211	5·5	1,166	4·8
Employers' Liability	10,612	20·4	8,432	15·8
Miscellaneous	8,940	6·4	10,567	7·1
Marine	15,000	3·8	15,000	4·1
Life and Sinking Fund	176,778		...	
	371,279		203,205	
Plus Excess Profits Duty and Income Tax provision not now required	121,432		...	
	492,711		203,205	
Less items debited to Profit and Loss Account	142,342		80,488	
Total Net Trading Surplus	350,369		122,717	

The large contribution from the life and sinking fund departments in 1927 was, of course, the result of the quinquennial valuation made at the end of that year, and represents, therefore, five years' profits. Net interest earnings in 1928 yielded £152,594, compared with £141,801 in 1927. The dividend has been raised from 60 per cent. to 65 per cent., and the cost from £144,000 to £156,000. As a result of the year's operations the net surplus assets have been increased by a sum of £119,311, equivalent to rather more than one-third of the paid-up capital.

Co-operative Insurance Society, Ltd.—This society, with headquarters in Manchester, is, as its title implies, the insurance department of the co-operative movement. Having all the advantages of a ready-made connection, its growth, especially in recent years, has naturally been rapid. New life policies were issued last year for sums assured of £1,236,288 in the ordinary branch and £11,244,044 in the industrial branch, compared with £1,177,017 and £12,144,160 respectively in 1927. Though the industrial branch total is smaller than in 1927, it compares with only £8,331,333 in 1926. The rapid expansion of the business is evidenced by an unusually large premium income in each branch in relation to the funds. This enables the society to show a moderate expense ratio of 11.7 per cent. in the ordinary branch (compared with 12.2 per cent.); but the industrial branch figure of 39.8 per cent. (as against 40 per cent.) is still too high, though not unduly so in comparison with other offices. The investment of the funds yielded an average rate of interest of £4 17s. 7d. in 1928 and £4 16s. 2d. per cent. in 1927. The commendable practice is adopted of publishing simultaneously with the annual report the actuary's report on the annual valuation, and the comparative results of the last three years are set out below:—

	1926.	1927.	1928.
Ordinary Branch.	£	£	£
Surplus earned during the year	155,768	217,941	269,765
Brought forward from previous year	108,045	38,876	45,150
	263,813	256,817	314,915
Allocations:—			
To Bonuses to Policyholders	218,937	211,667	264,850
,, Investment Reserve Fund	6,000	...	...
,, General Reserve Fund	...	...	...
,, Carried forward to next year	38,876	45,150	50,065
	263,813	256,817	314,915

The allocation to policyholders has been sufficient to maintain the reversionary bonus at the rate of 42s. per cent.

	1926.	1927.	1928.
Industrial Branch.	£	£	£
Surplus earned during the year	26,997	38,583	62,517
Brought forward from previous year	9,492	15,936	24,508
	36,489	54,519	87,025
Allocations:—			
To Bonuses to Policyholders	16,553	20,011	48,321
,, Investment Reserve Fund	4,000	...	...
,, General Reserve Fund	...	10,000	7,500
,, Carried forward to next year	15,936	24,508	31,204
	36,489	54,519	87,025

The society's unique position has enabled it to develop a large and growing business in fire and general insurance. Last year the combined premium income from these departments amounted to £1,109,317, but the net trading result, apparently because of unfavourable claims experienced in its motor-car section, was a loss of £11,943 as against a small profit of £6,430 in 1927.

World Marine and General Insurance Co.—This extremely successful company is controlled by the Northern through ownership of the entire share capital. The company was established as far back as 1894 for marine insurance, but shortly after the war decided to commence operations in fire and accident insurance. In this venture it has been moderately successful, and the premium income in these departments amounted last year to £188,936. The underwriting profit on this worked out at £2,458, equal to 1.3 per cent., compared with 3.4 per cent. in 1927. In the transaction of its marine business the company has been fortunate in having as its underwriter one of the most successful practitioners in the marine market. Consequently it has been able to show a substantial marine profit each year in spite of the general depression which has overtaken marine insurance. Last year the transfer to profit and loss account from the marine department was £30,000, equal to 17.8 per cent. of the premium income, compared with £20,000, equal to 10.6 per cent. in 1927. The net trading surplus in all departments in 1928 was £33,334, compared with £27,371 in the preceding year. The net interest income has advanced from £41,819 to £43,859, and the dividend has been raised from 40 per cent. tax free to 65 per cent. tax free, and now costs £65,000.

Sea Insurance Co., Limited.—Like the World Marine and General, the Sea was originally founded for the purpose of transacting marine insurance, but shortly after the war inaugurated fire and accident departments. The Sea, however, is an independent company, and, in fact, is one of the few remaining large independent marine offices. The feature of the 1928 accounts is the very welcome advance in the underwriting profit from marine insurance. The 1927 account has been closed by a transfer to suspense account, and the balance of £32,146, equal to 6.6 per cent. of the premiums, represents the final profit of the account. This sum compares with only £11,132 in respect of the preceding closed account. The 1928 account has opened with a premium income of £541,721, compared with £483,717 in the 1927 account. Moreover, the claims experience of the first year has been decidedly more favourable than that of the preceding year, the claims ratio being 32.1 per cent. compared with 35.1 per cent. The fire and accident departments have been developed very rapidly, and the consequent expense of their establishment has hitherto prevented the full fruits of their results being made available. The fire department, however, last year yielded a modest profit of £5,259, equal to 2.9 per cent. of the premiums, compared with nil in the preceding year and a loss in 1926. The accident department has produced a loss of £12,377, equal to 19.8 per cent. of the premiums. This compares with a loss of £10,542, equal to 31.7 per cent. of the premiums in 1927. After allowing for a contribution to superannuation fund, the total net trading surplus of the year has amounted to £23,696, compared with a loss of £5,484 in 1927. The dividend has been raised to 16¼ per cent., and the cost, namely, £65,000, covered by net interest earnings.

Oversea Correspondence.

UNITED STATES.—MONEY—SHARE MARKET—FEDERAL RESERVE POLICY.

(FROM OUR CORRESPONDENT.)

NEW YORK, *April 5.*

THE fog overhanging the money market shows no sign of lifting. It is still doubtful whether steps which have been taken so far by the Federal Reserve authorities and the member banks to reduce credit employed in the securities markets will ultimately be successful. Having recovered from a panicky condition which followed the rise in call money rates to 20 per cent. a fortnight ago, holders of shares are inclined to stand by for a while. They will not easily be shaken out of their holdings, and the first signs of definite ease in money would doubtless bring a revival of speculative activity.

During the past week the share market has been quite dull, comparatively speaking, with the daily turnover falling to around 3,000,000 shares, with pools inactive, and with an aimless succession of declines and rallies. On the whole, prices are about where they were a week ago, but the end-of-the-week slump in call money to 6 per cent. brought a quick turnabout in professional circles, and for a while shorts were given an unpleasant time. The ultimate fate of the stock market doubtless hinges on industrial activity as much as on money rates. So far, resistance to tight money has been stubborn, and the belief is growing that it may take actual evidence of a slowing down in business to bring about extensive liquidation. The amount of stock carried on margin on the Stock Exchage is enormous, and, although average interest rates paid on debit balances last month were 11 per cent., traders do not seem to mind so long as they have hopes of further capital appreciation. The bull party is staking its money on a reversal or softening of the Federal Reserve Board's tight-money policy. Bulls believe that the Reserve authorities are prepared to do some injury to business if thereby they can squeeze credit out of the share market, but they count on a country-wide protest to alter this policy. Meanwhile, the share market has a favourable background of record-breaking production in the steel and motor industries in the first quarter, mounting railroad traffic, higher retail trade and stable commodity prices. Adverse factors are, of course, high money rates and the beginning of loss of confidence among business men in the immediate outlook. So far only the building industry has shown any actual falling off, but that has been rather marked, and some companies closely allied with it are finding earnings decreasing moderately.

Criticism of Federal Reserve policy has the country by the ears. Prominent bankers, Congressmen, business men, economists and people in nearly all walks of life are airing their views through the public Press and otherwise. It is to be feared that the upshot of the matter will be that Congress will attempt fresh legislation, and real friends of the Federal Reserve system hope above all that banking may be kept clear of politics. An unfortunate aspect of the matter is that the Federal Reserve authorities, through their numerous "warnings" and public addresses, invited the public discussion of banking policy which has now become the fashion. Business men are becoming genuinely alarmed lest money for their purposes become scarce, and lest a stock market crash, which would wipe out private savings, affect public purchasing of commodities and shatter confidence, crown the efforts of the Federal Reserve Board. They fear that, to cure the stock market toothache, the Reserve Board may cut off the business head. In more temperate quarters it is felt that, while the outlook has become beclouded, there is no reason at all to fear a general business depression; that the worst that need be feared is losses by individuals in the share market.

Although share prices during the past week made some further recovery, the Federal Reserve Board's report on brokers' loans for April 3rd shows another decline, of $87,000,000, bringing the total to $5,562,000,000, or $231,000,000 below the peak reached on March 27th. The principal reduction was for New York member bank account. No doubt the principal reduction came through the growing practice of large stock market operators of borrowing direct from the banks, thereby reducing loans through brokers. Good bank customers can obtain accommodation at their banks on Stock Exchange collateral at 5½ per cent., whereas the stock market call loan rate has ranged from 10 to 20 per cent. during the past fortnight. In this district, for instance, loans to brokers for member banks' own account are down $244,000,000 as compared with a year ago, while member bank loans to customers other than brokers and dealers are up $1,330,000,000. In the same period borrowings at the Federal Reserve Board have risen by only $30,000,000. This week discounts fell off $63,000,000 at the New York Bank, and the reserve ratio jumped to 81 per cent., as compared with 74.3 per cent. last year. The condition of the Bank is far from suggesting a higher discount rate, and if one comes eventually its object will be to place the official rate somewhere nearer the level of open market rates.

What is worrying the Federal Reserve Board is the fact that a tremendous expansion in member bank credit on securities has taken place, and that the banks have maintained their reserves required to support it by borrowing from the Federal Reserve banks. Since the beginning of the year the system has let its bill holdings run off 315 millions. Government security holdings and bills are now about half what they were a year ago, but, in the meantime, member bank borrowing has doubled.

In its current monthly bulletin the Federal Reserve Board again seizes an opportunity to set forth its policy, and the statement has been regarded by Wall Street as another "warning." These warnings have been so numerous, however, that they have lost some of their force, and it is still an open question whether they will be followed, if necessary, by action on the discount rate, or, as is vaguely hinted, flat refusal of the discount privilege to member banks which are lending money on securities.

The latest statement of the Board, admitting that the "considerable growth in the volume of bank credit" in recent weeks has been chiefly due to seasonal demands and that New York banks have reduced their loans on securities, finds substantial increases in the Chicago and other districts. The Board notes that it has been securing "co-operation" from member banks since its warning of February 7th, and observes that "continued developments in this direction, indicating a definite reversal of recent trends, would release an increasing amount of credit for the use of trade and would lead to an easing in the money situation. In case the desired readjustment is not brought about by voluntary co-operation, however, the Federal Reserve system may adopt other methods of influencing the situation." That is far from saying that anything will be done, and it is felt that if the Reserve Board wishes to discuss its policy at all it should give a clear-cut statement.

FRANCE.—REPARATIONS—REVENUE—PRODUCTION— STOCK EXCHANGE.

PARIS, *April 17.*

THE experts have now apparently reached the stage of being able to present definite proposals to Germany, and the expected moment for bargaining to begin seems to have arrived. It is understood here, although no official confirmation has been given, that the experts propose that, instead of Germany continuing to make payments totalling 2,500,000,000 marks a year—which was the stage of the Dawes plan that came into operation on September 1st last (out of which France would receive 52 per cent., or 1,270,000,000 marks)—the total annuities for the next 38 years shall be payable on a scale starting from 1,800,000,000 marks and rising to 2,400,000,000 marks, and then, for the subsequent period, decreasing to 1,700,000,000 marks for the next 20 years. These annuities would include payments representing the whole of the debt owing by the Allies to the United States Government in respect of which the deductions from the annuities paid by Germany would amount for the first few years to 900,000,000 gold marks, rising rapidly to 1,500,000,000 marks, and then to a maximum of 1,700,000,000 marks, at which level it would remain for the final 20 years, at the end of which the Allied debt would have been extinguished. During the first 38 years on this plan, it is asserted, there would be from 12,000,000,000 to 13,000,000,000 gold marks available to meet a substantial portion of the expenditure which the Allies have had to make to repair the war damage they have suffered and have had so far to pay from their own pockets. Once this total has been reached, as it is proposed it should be during the coming 38 years, there would remain only the still-outstanding balance of the Allied debt to America to be liquidated. Out of this estimated 12,000 or 13,000 million marks (spread over the first 38 years) France's share would be, in round figures, 7,000,000,000 marks, or about 42,000,000,000 francs. This would be far less than her actual expenditure on the devastated regions has been, but it seems to be fully recognised here that sacrifices must be made if the financial pacification of Europe is to be made possible, and towards this France is prepared to do her share. France's proportion of the 2,500,000,000 gold marks yield from the Dawes Plan this year should represent 7,721,000,000 francs of this total. After the payment of £9,000,000 on account of the British debt and $12,500,000 on account of the United States debt, the cost of the army of occupation and other charges, there will remain a balance in cash of about 903,000,000 francs, which will pass into the general Budget, while France will have also received some 4,336,000,000 francs in the form of the 26 per cent. tax on German imports, and in the form of payments in kind.

The revenue returns for March indicate a yield from all sources of 2,969,782,800 francs (exclusive of Posts, Telegraphs and Telephones, and of the tobacco monopoly and the special taxes allocated for debt extinction, none of which accounts now pass through the Budget proper). Of this total 2,930 millions was from "normal and permanent" sources, against 2,688 millions in March, 1928, and 2,428 millions in March, 1927. March is invariably one of the worst revenue months of the financial year, owing to the small amount of direct taxation usually outstanding at that period. The yield from indirect taxation during the month was 2,619 millions, or 432½ millions more than Budget Estimates. This brings the realised surplus for the first three months of the year to 1,304 millions, compared with 4,629 millions for the whole of 1928. All categories of indirect taxation showed substantial increases in yield as compared with March last year, with the exception of those on colonial foodstuffs, motor spirit, benzole and heavy oils. Customs were 91 millions up, turnover tax 63½ millions, registrations 67 millions and taxes on securities 24 millions. Some of these rises were due in part to rising commodity prices which would directly affect the yield from turnover tax and from *ad valorem* Customs duties. Direct taxation in March (including income tax) produced 509½ millions.

As the result, apparently, of the continued outcry against the present system of "super-balancing" Budgets, the Ministry of Finance has issued a special communiqué warning the public against "inexact interpretations" of the revenue figures. This states that the superior yield from taxation, as compared with Budget estimates, must not be regarded as having the character of realised surpluses, as the expenditure side of the current Budget has not yet attained its final level. Pay of the public servants and credits for public works, etc., it is pointed out, have not yet been adapted to the new currency, and it will be impossible to know what surplus has really been secured or what reduction of taxation will be possible until it is known what expenditure has to be provided for.

Provisional index figures for production in February, which are now available, are summed up in a general index of 136, which is the same as that returned originally for January (since rectified to 137). The figures for the motor-car, machinery, metallurgical and textile industries all show a fractional decline. That for motor-car construction (based, like the rest, on 100 as representing production in 1913) has dropped from 692 to 657, after a rise from 657 in January. Building is a point better at 96, while the rubber industry, which was returned as 618 in December and in January, is returned at 726 for February. Coal, iron and steel tonnages, as already reported, all showed substantial drops on the month. A similarly discouraging situation prevailed in the textile industry, the output of cotton yarn having dropped from 2,227 kilos per spindle in January to 2,093 kilos, and of 100-metre piece-goods per loom from 5.59 to 5.11. The output of woollen goods in the Roubaix-Turcoing area was 7,186 tons (against 8,459 in January) and of Lyons silk 482 tons against 556 tons. Railway receipts and tonnage, nevertheless, both showed substantial improvement, the gross receipts per week in February having been 263,866,000 francs against 255,753,000 francs in January, while the daily average of trucks loaded was 61,198 against 59,984. Shipping figures showed an all-round drop, outward bound tonnage being only 848,000 tons during February, against 1,008,000 tons, and inward tonnage 2,680,000 tons against 3,059,000 tons.

Bourse quotations during March marked, with few exceptions, a substantial fall. The general figure for 52 French issues with fixed-yield (base: 100 in 1913) remained at 84.5 (after 86 in January), but that for 288 French descriptions of variable yield, which was returned as 643 in January and 548 in February, dropped to 535. Insurance companies and railway issues alone moved up. Speaking generally, quotations are now back at the level of December. The bull campaign that characterised the Paris market in January and February was based principally on the hope that quotations of industrials would be brought

The MERCANTILE BANK *of* INDIA
LIMITED.
Head Office: 15, Gracechurch St., London, E.C.3
Branches and Agencies throughout the East
Capital Authorised - - - £3,000,000
Capital Paid Up - - - £1,050,000
Reserved Fund and Undivided Profits £1,622,047

to new levels consistent with the new monetary level. This was expected to give rise to increases of capital in many directions, to which valuable subscription rights would be attached, including distributions of reserves in the form of bonus shares. These expectations have been only partially fulfilled, and that much more slowly than had been anticipated.

New issues in March totalled 1,405,700,000 francs (of which 100,800,000 francs represented offers by new companies) as compared with 1,092,100,000 francs in February and 770,200,000 in January.

GERMANY.—POLITICS—REPARATIONS—REICHSBANK—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, April 16.

THE Cabinet crisis has been overcome—for the present—by the readmission of three Centre politicians, Herr Guérard taking the Ministry of Justice, instead of Dr Koch-Weser, who resigns, Dr Stegerwald the Ministry of Communications, and the former Chancellor, Dr Wirth, the Ministry for Occupied Territories. In mere composition the Administration is again on a "Great Coalition" basis. As the five represented Reichstag parties have undertaken to support the Budget amendments of their experts (which the Finance Minister has also accepted), it may be said that the Cabinet is somewhat more firmly based than it was before the crisis, when the Reichstag parties would not bind themselves to support any Government measures. In other matters than the Budget the five parties retain a free hand, so that it cannot be said that the Great Coalition formally exists. In the Budget Committee the Finance Minister, Dr Hilferding, justified his acceptance of the parties' radical changes in his Budget on the ground that a firm Government majority is necessary in view of the pending Reparations settlement; but he persisted that his original proposal—new taxation instead of expenditure reduction—was the right policy. The Budget, he said, had been framed without regard to the Paris negotiations—framed, that is, on the basis of the Dawes standard annuity, but with the intent of reducing taxation again if the Reparation burden is reduced.

The Reparations Memorandum of the Allies' representatives, the contents of which have not been officially divulged, has evoked strong protest here. The conditions, precipitately described as being put as an ultimatum, were declared to be wholly inacceptable. The amount of the annuities in the next few years is the matter which interests Germans most. Ever since the Geneva decision to reopen the Reparations question, the public here has been led to believe that the new initial annuity might be around 1,000 million marks, or even lower, that being the most that Germany could pay. On that condition Germany would surrender all "transfers protection." In view of the proposed prolongation of the payment term to 58 years, the proposal of an initial annuity of 1,800 million marks is not admitted to mean any reduction at all. Formally, under Article 233 of the Peace Treaty, it is argued here, Germany can objection to the extension of the payment term to more than 30 years from May 1, 1921. This supplies her with a lever for bargaining on the question of the level of the annuities.

The money and stock markets have been almost entirely under the influence of fear of an impending advance in the Reichsbank's discount rate. It was even suggested that the rate, which was reduced by only ½ per cent. on January 12th, might be advanced by 1 per cent. The demand for money has been considerable. After April 11th the day loan rate tended slightly upward, and on that date, too, the private discount rate was advanced to 6½ per cent., the same level as the official rate. To-day money is easier. The Government still needs money, as the April quarterly tax payments have not improved the cash position, and some 1,200 million marks are required by the end of this month. The banks were unwilling to prolong the current account credit of 150 million marks given to the Reich last month, and this must be repaid to-day; but negotiations are under way to secure money by some other expedient. The heavy demand for exchange has in general continued, and the dollar has remained around its highest recent official point of 4,217, but has in fact been dealt in higher, and dollar notes were bought up at to 4.23. Taken by itself, the Reichsbank's status remains satisfactory. The recent development of the status was more or less foreseen at the time of the January rate cut. The Bank then predicted that the result would be "a shift in the circulation cover," and not an increase in circulation or a price advance. Wholesale prices have, in fact, of late fallen, and circulation has remained about stable. The Bank's exchange reserve has fallen to a very low sum, but after its return for the first April week appeared it was considered that a further loss of 200 to 300 million marks gold could be borne. Since then there has been a new loss of gold of unknown amount. According to American reports, gold was sold to the New York Federal Reserve Bank last Saturday, and it appears this week also, earmarked French gold being booked to German account, to be replaced by export of German gold to France. This further decline in the Reichsbank's reserve has caused nervousness. It is suggested, for the first time (in the *Frankfurter Zeitung*), that Germany might request the Agent for Reparations to go slow with cash transfers, not indeed on the unreal ground that the present increased pace of transfers might lead to a mark collapse, but on the ground that the drain on the reserves, which tends to narrow the money market, may do harm to business. Of a revival of long-term borrowing from abroad, which would counteract the pressure on the exchange market, there is no sign. The home capital market is also inactive. The interest yield on home loans and debentures at Bourse prices has of late further risen, and is at present calculated, for 104 such securities, at an average of 9.4 per cent.

The wholesale prices index number for April 10th is 137.4, against 138.4 on the 3rd. Since the currency stabilisation this index has moved as follows: Yearly average, 1924 137.3, 1925 141.8, 1926 134.4, 1927 137.6, 1928 140.0. The highest monthly figure of 1928 (in July) was 141.6. The index movement shows a close connection with the state of trade, 1926, which had the lowest figure, being a bad trade year. The new drop is probably in part connected with the trade decline. Skilled wages in March were entirely stationary. The number of unemployed in the second half of March (provisional report) declined by some 400,000. This big decline confirms the belief that the heavy unemployment of the past winter was due very largely to exceptional weather influences. In 1928 10,450,478 working days were lost through strikes and lock-outs, as against 6,005,950 in 1927 and 1,404,875 (lowest post-war figure) in 1926. The main cause of the rise in 1928 was the November lock-out in Westphalia. A memorandum by the Minister of Labour foreshadows a reform of the unemployment insurance law of 1927.

The industrial situation shows no material change. The steel export market is firm. Pig-iron production in March was 1,061,214 metric tons, as against 1,170,476 tons in March, 1928. Home iron and steel prices for May are unchanged. The Steel Trust's (Vereinigte Stahlwerke) quarterly report states that orders on books on March 31st were 10 per cent. higher than the monthly average of the business year 1927-28. The Norddeutsche Lloyd Co. has acquired a majority stock interest in the Neptune Shipping Co. of Bremen, a competitor in English, North European and Spanish business.

The German attack upon the commercial treaty of 1927 with France is being continued, and the French are retorting by raising the question of German machinery deliveries, in particular Reparations deliveries in kind. They complain that the deliveries in kind not only injure the French home market but that they reduce French selling to other Reparations countries. The total German machinery deliveries in kind are, in fact, much larger than in 1925, but since then they have been practically stable, the figures being 1925 23,524,000 marks, 1926 46,446,000 marks, 1927 40,062,000 marks, and 1928 46,889,000 marks, though the French share has increased at a greater rate. Reparations deliveries of locomotives fell in 1928 to a very small figure. The German cotton industry's view that the treaty with France is largely responsible for home stagnation is not justified by the figures. The treaty came into force in September, 1927. Before then the total import of cotton yarn had reached its highest point, and it has since then steadily declined. The import of cotton cloth continued to rise until a couple of months after the treaty came into force, but has since then fallen. The Government is not inclined to denounce the treaty, under which the total German trade balance with France has improved.

HOLLAND.—MONEY MARKET—FOREIGN TRADE—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, April 2.

DURING March the position of the Amsterdam money and bill markets was of especially great importance. The high rate of interest in New York and the rise in the London discount rates at the beginning of February resulted in a steady flow of money from Holland. Consequently the Netherlands Bank has repeatedly had to stimulate the bill market, thereby impairing its own position. After selling bills for a considerable amount abroad the central bank was finally compelled to have recourse to the gold supply. It therefore became more and more obvious that a rise in the discount rate was inevitable, and on Saturday, March 23rd, the Dutch discount rate was raised to the same level as that of London, 5½ per cent. The extent of this flow of money to England and America is clearly reflected in the advance in sterling during the past few weeks, despite the fact that the Netherlands Bank parted with large amounts in the shape of foreign bills. The following table clearly shows how the position of our central bank has changed since the London discount rate was raised:—

(In millions of guilders.)

	February 4, 1929.	March 4, 1929.	March 25, 1929.
Bills discounted	59·4	98·0	149·3
Advances	108·3	117·8	103·0
Foreign bills	205·6	132·3	42·4
Sundry accounts	33·7	42·6	69·5

The rise in the Netherlands Bank rate immediately had its effect on the bill market in the form of a fall in sterling and dollar rates. This reaction was, however, but shortlived, and both currencies had soon again reached the export gold point. There was no relapse in the money market either, and the rate for "prolongations" even rose to 6¼ per cent. and the private discount rate to 5⅞ per cent. From this it will be seen that the raising of discount rates has not been very favourable for the Amsterdam Bills Market.

The decision of the Netherlands Bank did not greatly affect the stock exchange. It merely led to a shortlived reaction, which remained small in extent. There was a speedy recovery and the prices of various kinds of stock advanced as interest in them increased. The Bond market only remained dull. Both the 4½ per cent. loans and the Mortgage Bonds suffered greatly through so many being on offer, and steadily fell. The entire conduct of the money market during March had had a depressing effect on the Amsterdam Exchange. New issues of shares or bonds, therefore, had but little chance of success. The issues market consequently had a calm aspect, and the number of new issues was considerably lower than in the preceding months. The following figures show how the Dutch and Foreign shares and bonds were divided:—

	Shares.	Bonds.	Total.
Dutch	3,202,500	1,582,750	4,785,250
Foreign	2,380,000	18,295,125	20,675,125
	5,582,500	19,877,875	25,460,375

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG, STOCKHOLM MALMO.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - Kr.182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

It will be seen that during March only 4.8 millions were taken up by Home stock, whereas Foreign stock accounted for 20.7 millions, making a ration of approximately 1-4. Only two American issues, namely, the Gamewell Company, and the Interstate Hosiery Mills Inc., were offered in the shape of Dutch certificates of 10 shares. Only one State loan made a call on our capital market, namely, the Republic of Chile loan of 1 million dollars 6 per cent. income bonds at 93¼ per cent.

The following foreign returns are published by the Central Bureau of Statistics:—

(In millions of guilders.)

	February, 1929.	February, 1928.	January-February 1929.
Imports	177·6	217·8	410·6
Exports	123·6	151·7	275·8
Import balance	54	66·1	134·8

The comparatively low export figure for February, 1929, is due to the transport difficulties resulting from the prolonged frost: the returns for March will also be affected by this.

In the first two months of 1926-1929 the values were as follows:—

(In millions of guilders.)

January-February.	1926.	1927.	1928.	1929.
Imports	402·6	378·0	434·0	410·6
Exports	251·3	270·3	291·2	275·8
Import balance	151·3	107·7	142·8	134·8

According to the official returns of the Central Bureau at The Hague the position of the Floating Debt was less favourable for the State on January 7, 1929, than previously. Since May 1, 1924, there has been only one State loan (in the period February 1-May 1, 1928): this was for an amount of 84,000,000 guilders, with 4½ per cent. interest, at an issue price of 99 per cent. as a conversion of the loan 1923 B.

The funded debt of the State gradually rose from about frs. 1.150 millions in 1914 to about frs. 2.925 millions in 1925. Since then it has been reduced to frs. 2.590 millions at the beginning of 1929.

SWEDEN.—DISCOUNT RATE—EMPLOYMENT—STOCK EXCHANGE.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, April 9.

THE problem which has dominated the first quarter of the current year has been that of interest rates—especially in the last two months. Since England raised its rate at the beginning of February there has been a prospect of an increase in Sweden, but it is still impossible to make any safe forecast.

In considering this problem it is necessary to bear in mind the special climatic conditions of Swedish industrial life. The restrictions in shipping occasioned by the cold and ice of the winter months produce a natural seasonal variation in output and foreign trade. The staple industries must; therefore, work for stock during the early months of the year, and the balance of trade in those months is usually very adverse until the shipping season

sets in. It is a natural consequence that the first half of the year is usually characterised by a considerable expansion of the volume of credit and a marked worsening of the balance of payment, clearly visible in a drain on the reserves of bills and in a rise of foreign exchange rates.

If one considers the developments of the current year against this background, it must be admitted that they have been surprising. During January the weather was unusually mild. Shipments could be effected on a considerably larger scale than usual. The consequence was that January showed a record production, and the balance of payment was remarkably favourable. The excess of imports was Kr. 13 million, compared with Kr. 39 million in 1928, when, however, the labour conflicts greatly restricted exports. But, even compared with earlier years, the excess was moderate, since in the very favourable year 1927 it amounted to Kr. 16 million, and in 1926 it amounted to no less than Kr. 31 million. In February began a marked setback owing to the exceptional winter and ice conditions, which crippled shipping during the latter part of the month and the greater part of March, and consequently reduced export trade. Although the effects on the industrial position were very pronounced, they were almost to the advantage of the balance of payment. Whereas previous experience of ice blockades had shown that they restricted exports principally, whilst imports found other ice-free ports, the unexpected phenomenon now occurred of exports being less curtailed than imports. The balance of payment, therefore, stood at a debit of not quite Kr. 10 million, as against Kr. 46, Kr. 17 and Kr. 20 million in the three preceding years.

The developments sketched above have naturally greatly affected the question of the discount rate. In spite of the fact that comprehensive capital exports have continued, the seasonal worsening of the balance of payment has been very moderate. During the first two months the net foreign claims of the banks were reduced by Kr. 48 million, as against Kr. 66 million in 1928, and even in comparison with earlier years the position is not unsatisfactory, with the exception of the usually favourable year 1927. In contrast with earlier years the consumption of reserves has not primarily affected the Riksbank, but the commercial banks, which elected to employ their own ample resources, owing to the fact that the possibilities of profitable short-date loans abroad were fewer. It is remarkable, indeed, how slight the calls on the Riksbank's reserves have been up to the present. Apart from the days after the turn of the year the Bank had no need to effect any sales worth mentioning for more than one week in the first quarter. The decline in its bill reserve for this period amounted to Kr. 26 million, compared with Kr. 78 million in 1928. The pressure on Swedish rates, which is normal at this time of the year, owing to demand for bills, has, therefore, this year been very moderate. The necessity for raising the discount rate in consequence of the severe pressure, which is natural with an unfavourable balance of payment, has not as yet become serious.

Similar developments have occurred in the money market, which has been characterised neither by pronounced ease nor by symptoms of abnormal credit demands. The firm tendency of the international money market must, however, in the long run tend to raise Swedish interest rates also, having regard to the close connections of Sweden with foreign capital markets. If New York and London do not further raise their discount rates, it is conceivable that Sweden may maintain its present rate throughout the spring. The determining factor will be the state of the balance of payments in April and May. The Riksbank is sufficiently provided with foreign paper to be able to maintain the principal exchanges within gold point, even under considerable pressure.

During the last three months employment in the leading industries has been brisk, and sales on the whole satisfactory. Thus, it is significant in the pulp industry that the latest sales have been principally for 1930 and even 1931, and the same is partially true of the papermills. Price movements in these industries have, in the main, been favourable, with a firm tendency. This does not apply to timber, though sales have been larger than was expected at the beginning of the year, the total figure at the end of the quarter amounting to about 550,000 standards, or more than half the year's production. The decided improvement in the iron and steel industry which set in last year has continued, partly as a result of higher costs of production on the Continent, and perhaps mainly as a result of rationalisation. Finally, the important mechanical engineering industry, the industry which has shown the most marked improvement in recent years, is still briskly occupied.

Nevertheless, there are visible symptoms of hesitation from a fear of the consequences of an eventual setback in the U.S.A. With our present intimate connections with foreign countries, not least as a result of the placing and quotation of our leading stocks in a number of foreign countries, this has appeared most clearly on the Stock Exchange. The indications of a break in international—especially American—'change speculation, have clearly affected the Stockholm Stock Exchange. As this time of the year it is, under normal conditions, steady, under the influence of the published accounts of the preceding year, which this year have revealed favourable news, especially when the severe labour conflicts of 1928 are taken into consideration. This year, however, there has been no rising tendency, and towards most stocks investors have maintained an attitude of reserve. In Kreuger shares, the quotations for which may be said to have been greatly over-discounted by international speculation, there has been a very considerable downward adjustment, though in view of the international character of these shares, this can hardly be regarded as typical of the Stockholm Stock Exchange.

CANADA.—WEATHER—BUSINESS CONDITIONS—HUDSON BAY RAILWAY—GRAIN MARKETING—BANK OF COMMERCE.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 3.

WINTER suddenly reappeared on Easter Monday in one of its most violent moods, and Ontario and Quebec were swept by a severe blizzard, which interrupted communications and caused considerable property damage estimated at well over a million dollars in Ontario alone. Winter also resumed last week its grip upon the Prairie Provinces, and there, since the ground had been refrozen hard, cultivation, which had begun in some places, has been summarily halted. To-day, however, warmer weather has returned, and the effects of the setbacks upon spring work should soon be overcome. All the major indices of business conditions remain favourable. The Bureau of Statistics, in its latest survey of the business situation, taking 100 as the index for the corresponding period of 1928, has worked out the following series of indices covering the more important economic activities of the country: employment, 109; pig-iron production, 145; steel production, 118; bank clearings, 104; carloading figure, 102; building permits, 101; exports, 93; coal, 114; coke, 121; investors' stock market index, 140; traders' stock market index, 109.

The employment figure is for March 1st; the carloading figure covers the second week in March; the stock market index the third week in March; and the remaining indices relate to February conditions. Iron and steel production for the first quarter of the year has been about 19 per cent. larger than in the parallel quarter of 1928, and the immediate outlook for the plants engaged in it and secondary equipment industries, using iron and steel as their raw materials, is excellent. The branch line extension and replacement programme of the two railway companies is responsible for the placing of large orders by these corporations for rails, rolling stock, and other equipment, and the demands of the manufacturers of farm implements, automobiles and mining machinery are also heavy. The Western farmers are still complaining about the lack of profits on the last crop, but the spring movement of wheat will begin on a fairly strong market. The mild winter has enabled live stock to emerge in a condition above the average, and the dairy industry is looking for a very prosperous summer unless a higher American tariff interferes unduly with the export business in milk and cream.

There was great rejoicing in Western Canada when the Canadian National officials in Winnipeg received, on March 29th, a wire running, "Steel has reached Fort Churchill." This news was concrete evidence that hopes of an alternative outlet to Europe for the produce of the prairies were at last within sight of realisation. But, although the steel rails have actually reached the port, they have been laid in rather haphazard fashion on ground which is frozen hard, and, as soon as the real spring thaw sets in, subsidences at many points will make the route valueless for traffic purposes. The summer months, however, will be devoted to ballasting and creating a permanent roadbed, and the Department of Railways still aspires to be able to haul out some of the grain crop of 1929 by the new route. But much will depend upon weather conditions, and it will be no surprise if the Hudson Bay route does not receive any serious test of its practicability until the summer of 1930.

The Prairie Provinces are still seething with discussion of the grain marketing problem, and the evidence tendered last week at Winnipeg to the Saskatchewan Royal Grain Commission by Mr Matthew Snow, one of the Grain Commissioners, was not calculated to appease the angry farmers. On its surface it seemed to show that the Grain Commission had taken a very light-hearted view of its duties and responsibilities, and had exercised only the most casual supervision over the operations of the elevator companies. Some sharp exchanges occurred between Mr Justice Brown, the Chairman of the Commission, and Mr Snow, and at one point, when Mr Snow declared angrily that a good many statements made to the Commission were not worth a great deal, the Chairman said: "They may probably mean more than you think they do. That is just the way you are treating the whole matter. If you are not prepared to take action on the evidence, the Commission does not want to listen to you at all." In the light of the proceedings of the Commission it is considered inevitable that the Government will dismiss all three existing members of the Commission and appoint a new board of five members. It will also have to tackle the problem of "mixing," which Mr Dunning, the Minister of Railways, has declared should cease; and the probability is that it will introduce amendments to the Grain Act which will restrict "mixing" to grades of No. 4 Northern and lower, and forbid any tampering with the first three contract grades.

On March 27th the directors of the Canadian Bank of Commerce announced that they had decided, in view of the expansion of the bank's business during the past year, to increase its capital stock from its present figure of $24,823,400 to $30,000,000; they had previously secured the approval of the Treasury Board at Ottawa to increase their capital from 25 to 50 million dollars. Accordingly, in accordance with the terms of the Bank Act, the existing shareholders will have the opportunity of subscribing for the new stock at a price of $200 per share in the ratio of one new share to every five held. This allotment will bring the capital of the bank up to $29,788,800, and, in order to round off the $30 million authorised, there will be an additional allotment of one new share for every 117 held, because the Bank Act does not permit allotment of fractions of shares. The premium of $100 received for the new shares, which have a par value of $100, will be added to the reserve fund, bringing it up to $30 million, the same figures as the share capital. The stock of the Bank of Commerce has responded well to the announcement, and on April 3rd sold at 355, a gain of 25 points from the time of the publication of the news.

ARGENTINA.—GRAIN—MONEY MARKET—ADMINISTRATION—EXCHANGES—FREIGHTS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, March 21.

COMMERCIAL and financial activity during the month of March has remained at a somewhat lower level than was generally anticipated. The persistence of low prices for wheat, and the reasonable certainty that a considerable amount of this grain is unsold, though still afloat, appears to be acting as a drag upon trade in general. Actual shipments to the end of the current week amount in round numbers to 2,000,000 tons, and, at the date of writing, quotations in the Buenos Aires futures market are $9.65 paper per 100 kilos. for May and $9.85 for June delivery. For maize $8.00 spot and $7.95 for June are the current quotations, while linseed is $15.40 spot and $15.55 for May. There has of late been considerable discussion regarding the terms on which grain is dealt in locally, and efforts are being made to fix the responsibility for low prices, to some extent, on the prevalence of certain measures taken by the great exporting firms. While it is true that their influence is preponderant in the rural districts, owing to the primitive methods of contract and sale which still govern Argentina's disposal of her crops, this allegation does not hold water. Argentine wheat may be at the moment slightly under world parity, but it is precisely this fact that has enabled the sellers to go on disposing of their grain, for which, be it remembered, there is practically no storage accommodation in the country, at any rate nothing nearly commensurate with the volume of her crops.

The market is beginning to feel the need for more ready funds, and interest rates, alike for discounts and current account advances, are 6½ per cent. to 7 per cent. for first-class trade bills and 7 per cent. to 8 per cent. for overdrafts. These figures are those of the first-class institutions, the majority of the smaller banks getting better terms. There has as yet been no talk of the Banco de la Nación putting up its charge for accommodation, but were such a step to be taken its reaction on the general market would be immediate. This bank handles roughly 50 per cent. of the loan business of the country, and so many of its operations are conducted with a view to the immediate needs of special classes of producers rather than to the showing of a profit on the year's operations that its altruistic policy reacts on local financial conditions far more than is generally realised outside the Republic.

News of official financial operations is altogether lacking, though it is reasonably certain that a loan must be sought by the National Government in May or June; if indeed the subject is not broached earlier on the basis of a subsequent *ad-referendum* agreement to be sanctioned by Congress. Very little exact information regarding the doings of the Cabinet reaches the ears of the general public, there being little or nothing of a concrete nature dealing with commercial and financial matters published in the Argentine Press. This applies with equal force to the organs openly associated with the party in power. It is, however, rumoured that President Irigoyen is still engaged on a complete reorganisation of various administrative services, and that in consequence all current work in the various ministries has been thrown into arrears. To this cause must be attributed the prevailing delay in publication of all official statistics, now some four months behindhand, and it will be interesting to see what steps, if any, will be taken to bring matters up to date when Congress meets, if it does meet, during the last week in May. Very much of an individualist, H.E. President Irigoyen is endeavouring to cope personally with what threatens to become an overwhelming amount of administrative work, taking nothing for granted, but insisting upon sifting to the bottom practically everything that calls for the presidential signature. Laudable in its way, this devotion to duty has certain drawbacks, which the magnitude and variety of Argentina's interests at the present time render it unnecessary to particularise.

Exchange continues to move slowly but surely against the Argentine dollar, banks' cable rates being 47 11/16d. and 104.80, drawing on London and New York respectively. A further $15,000,000 gold has been drawn from the Conversion Office for shipment abroad, and the present balance is $484,768,000 gold. In the freight market, though chartering has been active, freights are roughly 1s. below what they were a fortnight ago, and 24s April loading San Lorenzo range to U.K./Continent is the current figure. Fixtures for Adriatic ports, and for Calcutta, indicate that cheap wheat prices are taking Argentine crops farther afield than is customary. Current berth rates for grain to the United Kingdom are 20s. 6d., with 22s. 6d. for Italian ports.

Letters to the Editor.

NEW CAPITAL ISSUES AND REAL CAPITAL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Chancellor of the Exchequer, in his Budget speech on the 15th instant, referred with satisfaction to the magnitude of recent capital issues. He said: "New capital issues for home investment in 1928 show a growth of about £100,000,000 over those of 1924. Municipal and industrial issues in the United Kingdom have risen from £70,000,000 in 1924 to £180,000,000 in 1928."

In this connection it must be borne in mind that new capital issues of shares of fixed amount are not confined, in amount, to real capital represented by actually existing things, such as land, buildings, plant, machinery, raw materials, manufactured stock, book debts and cash over liabilities, but that they extend, in an increasing degree, to include the alleged present value of rights to receive future benefits expected to arise from patents and from goodwill.

Thus, to an unknown extent, a mere increase in the fixed amount of new capital issues may be evidence of a change in the character and mentality of the subscribers to the new capital issues rather than evidence of any increase in real wealth.

If this is so—and the character of some recent issues suggests it—then future prospects are not altogether happy, because many of these hoped-for future benefits may never arise, and, in that case, the capital subscribed may be found to have been lost.

This is one effect, clearly observable, of our modern fiscal policy, which, by means of heavy and disproportionate direct taxes on annual income and crushing death duties, is operating to remove accumulations of capital from the most able hands into which it naturally gravitates. Effective control of capital involves its ownership, and thus our most able employers, and their chosen agents, are not now in control of the tools of industry to anything like the same extent that they were. We have, unfortunately, to rely more upon a less experienced class who are a good deal given to speculation of a rather loose character.—Yours faithfully,

25, Abchurch Lane, London, E.C. 4. P. D. LEAKE.
April 16, 1929.

[The point which Mr Leake makes has substance, but we are not prepared to endorse the generalisation that divorce of control from ownership necessarily leads to speculative policies in industry. Such a view hardly fits the facts of modern large-scale enterprise.—ED., *Econ.*]

Books and Publications.

COMBINES AND AMERICAN LAW.*

THE subject of public policy towards business has already engaged the attention of the National Industrial Conference Board of New York in two of its series of studies, published before "Mergers and the Law," a third volume which has now been issued. The object of this latest publication is to trace the development of public policy towards corporate consolidations, and to outline the modifications of this policy in recent years. Certain comments upon the working of the anti-trust laws in the United States are offered, but do not extend to the making of definite suggestions for the revision of those laws. The book is rather a collection of materials upon which the reader may, if he will, exercise his powers of thought.

The materials are well presented. They commence with a short historical review of the development of legal rules in England and in the United States, well documented, in which some interesting points and comparisons are brought out. Against this background the Sherman Anti-Trust Act of 1890 is considered. The gradual change of view traceable in the earlier judicial interpretations of the measure is referred to, and a summary of more recent cases as to business mergers, decided upon the Act, is then given. These, it is suggested, have cleared up some ambiguities. There is "a growing accommodation of judicial opinion to business expediency," though new problems arising may still prove to be open questions in relation to the anti-trust laws. Recent Federal legislation, which has modified the application of the original Act to public utilities and in certain other instances, is dealt with, and finally some conclusions are stated. These, as already indicated, are set forth more in the form of a judge's summing up to a jury than by way of an actual verdict.

A specific reference to the existing legislation for the regulation of business and its enforcement, contained in the new President's inaugural address, showed that the subject is in the minds of those in authority in the United States. It is claiming attention, too, in many other quarters, and this addition to the literature of the subject of trade combinations comes, therefore, opportunely. National treatment of the question varies from country to country and the subject has a growing international interest. For this reason also, carefully prepared materials for study, such as are to be found in this volume, are welcome.

* "Mergers and the Law." National Industrial Conference Board, New York, 1929. $3.

BOOKS RECEIVED.

Disarmament. By Salvador de Madariaga. (London) Oxford University Press, Warwick Square. 15s. net.
Few people can speak on this question with such authority as Professor de Madariaga, and his vigorous book, which deals very fully with disarmament, both critically and historically, should be very welcome.

Toryism and the People, 1832-1846. By Richard Hill, with a foreword by Keith Feiling.
This is an unusually interesting contribution to English social history. The chief purpose of the book is to examine the points of contact between the Tory party and the working classes in the period 1832-1846. A further object is "to examine the ancestry of Tory social ideas."

Die österreichischen Währungs- und Notenbankgesetze. von Dr Richard Kerschagl. (Vienna) Manzsche Verlags- und Universitätsbuch-handlung.
A classified and fully annotated summary of the legislation affecting banking and currency in Austria.

Zugbildungskosten, Zugförderkosten und ihre Wechselbeziehungen. By G. Capelle, A. Baumann, and R. Feindler. (Berlin) Verlag Guido Hackebell A.-G. 3 Rm.
A very technical German treatise on certain aspects of railway costs.

Newspaper Finance. By J. Cranfield Hicks. (London) London General Press, 8 Bouverie Street. 2s.
This useful pamphlet sets forth very clearly and concisely the position of the respective newspaper groups, with an analysis in each case of the last two balance sheets and profit and loss accounts of individual companies.

Fifty-fifth Annual Report of the Council of the Corporation of Foreign Bondholders. (London) Council House, 17 Moorgate. 7s. 6d.
This report contains a valuable account of the financial position of over twenty foreign States whose bonds are largely held by English investors.

The Working of the Bill of Exchange. By Arthur Michael Samuel, M.P. (London) Effingham Wilson, 16 Copthall Avenue. 2s.
A very brief, and therefore of necessity rather scrappy, explanation of foreign payments and the overseas trade balance.

Annual Report on Administration of Chosen. 1926-27. (Keijo) Government-General of Chosen.
An illustrated report which contains much information of the kind usually found in year-books.

The Edinburgh Review. April, 1929. (London) Longmans, Green and Co., Limited, 39 Paternoster Row. 7s. 6d.
An interesting number, which includes, *inter alia,* articles on "The Revision of the Dawes Plan," "The Monroe Doctrine and the Latin-American States," and "The British Empire and Foreign Relations."

C.P.A. Review. By Clem Wetzell Collins. (London) Chapman and Hall, 11 Henrietta Street, Covent Garden. 42s. 6d. net.
A volume of answers to the American Institute of Accountants' examination questions.

The Legend of the "Francs-Tireurs" of Dinant. By Dom Norbert Nieuwland and Maurice Tshoffen. Translated by E. Louisa Thompson. (Genbloux) J. Duculot.
A regrettable revival of a painful controversy on war atrocities.

The Banker. April, 1929. (London) Eyre and Spottiswoode, Limited, 9 East Harding Street, Fleet Street. 2s. 6d.
Articles in this number include: "The International Bank Scheme," by Joseph Caillaux"; and "Credit Restriction Efforts in the United States," by H. Parker Willis.

The Stock Exchange.

THE FINANCES OF THE BRITISH FILM INDUSTRY.

The financial position of the British film industry, faced with the revolution of the talking film, calls for careful consideration. For the Stock Exchange the industry is divided at present into three groups—Gaumont-British Picture Corporation, British International Pictures, Limited, and "the rest." The financial position of "the rest" (meaning the smaller British producers), is the most pressing problem.

The passing of the Films Act, in March, 1927, was designed to give some measure of protection to the young and growing British film production industry. This Act imposed on renters (distributors), and on producers, a certain quota of British films, beginning with 7½ per cent. and rising by 2½ per cent. each year to 25 per cent. of turnover. In other words, a demand for British films was artificially created. We use the word "artificially" because the British public had shown no preference for British as opposed to foreign films, but only a preference for goods, rather than less meritorious productions. The company promoters were not slow, however, to accept the invitation offered by the Act, and a flood of film production issues followed upon the introduction of the Government's measure in the House of Commons. In spite of the fact that film production, even in the hands of experienced and able directors, is a decidedly speculative business, the public was asked to subscribe blindly to new and untried companies, whose prospectus promises they had no means of putting to any test.

In July last year the *Economist* undertook an investigation of these film promotions, which disclosed a sorry position. To the eleven issues examined the public was found to have subscribed £1,936,750 in cash, and, by July 14th, 1928, it had suffered a capital loss on this investment of no less than £436,365. Unfortunately, the position to-day is even less satisfactory, as the following table shows:—

FILM PRODUCTION ISSUES OF 1927-28.

	Latest Issues.	Price of Issue.	Total Cost to Public.	Present Market Price.	Present Market Value.
			£		£

	170,000 1s. ord.	par	8,500	6d.	4,250
			1,641,962		857,335

It will be seen from this table that the shares for which the public subscribed £1,641,962 are now valued in the market at £857,335, which shows a loss to the public of £784,627, or 48 per cent. We do not wish to characterise all the film production issues of the "gold rush" of 1927-28 as indefensible. Those of British Instructional Films and its distributing organisation Pro Patria Films, of New Era National, which took over existing producing units, and of Gainsborough Pictures, which is associated with Gaumont-British, were not unattractive speculations. British Instructional Films, for the period from May 27 to December 31, 1927, paid a dividend at the rate of 12 per cent. per annum on its ordinary shares of £1, and of 3.472d. per share on its 1s. deferred shares. New Era National Pictures has recently published its report for the year ending January 31, 1929, and has paid dividends at the rate of 9.36 per cent. on the £1 ordinary, and of 20 per cent. on the 1s. deferred shares. None of the other companies has yet published any accounts, and the position of some, as reflected in the market valuation of the deferred shares, would seem to be precarious in the extreme. If the accounts shortly to be published by these new companies confirm the market's diagnosis, as expressed in current share quotations, the promotion boom of 1927-28, which was set in motion by the introduction of the Films Bill, may prove to have been one of the most disastrous episodes in the annals of British company finance.

It may be argued that the film production companies, whose issues we have been examining, account for but a minor part of the British film industry. We agree that the corner stone of the industry is represented by the 2,500 to 3,000 independently-owned cinematograph theatres, which are for the most part enjoying prosperity. But the Stock Exchange is not concerned with independent exhibitors, but with public companies, and, apart from the new production companies, it has mainly to deal with the Gaumont-British group and its potential rival, British International Pictures, Limited. Let us examine, first, the position of the Gaumont-British group, with its 300 theatres, its wide distributing organisation and its established production companies. Gaumont-British was formed as an amalgamation of existing film producing, renting and theatre-owning concerns. In May last year it obtained a controlling interest in two newly-formed theatre circuits—Denman Picture Houses and General Theatres Corporation. In January this year it purchased a controlling interest in the Standard Film Company, which give it control of Provincial Cinematograph Theatres, Limited, which had a circuit of about 100 theatres. The issued capital of Gaumont-British now consists of 3,680,000 ordinary shares of 10s., and 1,000,007 preference shares of £1, making a total of £2,840,007. In addition, there is a loan capital of £800,000. The report for the year to March 31, 1929, has not yet been issued, and in view of the new acquisitions it is impossible to estimate the year's earnings. On a capital of £2,000,007 (of which £1,000,000 was in ordinary shares of 10s.) at March 31, 1928, the date of the last balance sheet, Gaumont-British showed net profits, after providing for interest, depreciation and income tax, of £175,790, which was equivalent, after allowing for preference dividends, to 10½ per cent. on the ordinary shares. There is a feeling in some quarters that Gaumont-British is very heavily capitalised, but until the accounts for the year to March 31 last are published, judgment on that question must be deferred.

We have referred to British International Pictures as the potential rival of the Gaumont-British group. It has been more active on the production side than Gaumont-British, and has produced at its Elstree studios (the largest and best equipped in this country), some costly pictures, the profits from which have not yet been disclosed. On the distribution side it owns Wardour Films in this country, and a 51 per cent. interest in First National-Pathé, a company formed to combine the British distribution activities of Pathé Films and First National Pictures, one of the "big three" of the American film industry. Further, it has distributing companies in France, Germany, Austria and Australia, and last year it established World Wide Pictures, Inc., to handle its distribution in America and Canada. On the theatre side, British International has a controlling interest in Associated British Cinemas, which has a circuit of 55 houses. The accounts of British International Pictures for the year to March 31, 1929, are not yet published, but an interim dividend of 7½ per cent. has been paid. The issued capital is now

The whole British film industry is, however, rendered more uncertain by the invasion of the talking film. It is said that talking films have captured the American film industry. Certainly, the big American organisations, Warner Brothers-First National, Metro-Goldwyn, Famous Players and Fox Films have decided to produce talking pictures almost exclusively in future. In this country British International Pictures have announced a programme of talking films, using the Radio Corporation process, while Gaumont-British have, for some time, been developing the system of British Acoustic Films. The difficulty seems to be that no one knows what system of talking films will be in vogue five years hence. An immense advantage has been secured by the Western Electric Company, whose disc system is, for the time being, almost exclusively used in America. It is thought that the system which employs a gramophone disc is only a stop-gap, and that the future lies with the process which photographs sound on the film. In any case, Western Electric has patents for both systems—the disc, which it calls Vitaphone, and the film, which it calls Movietone.

The British public has subscribed to two British talking film promotions—British Phototone and British Talking Pictures—the first employing the disc and the second the film process. The Stock Exchange appears to value the chances of British Talking Pictures more highly, for the 5s. shares are quoted at 6s. 6d., while those of British Phototone stand at 4s. 6d. Both shares are purely speculative, and the public has little means of judging chances in this talking film handicap.

In conclusion it may be stated, broadly, that the revolution of the talking film has thrown the British film industry's prospects back into the realm of the gamble. By creating an artificial demand for British films, the Films Act was intended to set the British industry on its feet. If British companies were called upon to make pictures for Great Britain, it seemed only a matter of time before they would be making pictures for the international market. That, at least, was the theory of the matter. But the talking film has entirely transformed the outlook in this respect, and the British companies are now called on to start afresh and to master a new technique. The established companies such as Gaumont-British will, no doubt, be able to adapt themselves to the new situation, but the talking film will probably administer the *coup de grâce* to some of the new companies, whose isues were a feature of the promotion "rush" last year.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
April 22.	April 24.

The Budget, the rights of Marconi shareholders, the development of the General Electric negotiations, an offer to United Steel security holders, and certain features of a coming issue on behalf of the Melbourne Board of Works, have, together, given the Stock Exchange plenty to discuss, but nothing has stimulated daily business. Outside Home Railway and Tea shares, the Budget produced no perceptible effect. With the New York situation still shrouded in obscurity, and Berlin feeling the monetary strain acutely, the Chancellor was thought to be taking an unduly hopeful view about the prospects of cheaper money, but it would not be true to say that movements in the gilt-edged market this week were largely influenced thereby. Mr Snowden's statement on the Inter-Allied Debt agreements had a much more discouraging effect. A fresh acquisition of gold by the Bank, and the unexpectedly easy position in the money market were factors on the other side, and the net result was no very considerable change in quotations. Five Per Cent. War Loan was steady and Four Per Cent. Consols held the ground gained early in the week, but Funding Loan was easier after rising ½ to 88⅝ on Monday. India Loans, similarly, were easier after an active start, and only a moderate business was done in Dominion and Colonial issues.

The Foreign market exhibited precisely the same features as in recent weeks—an absence of public interest and little or no important price changes. A slight rise in Brazilian bonds did not outlast the two opening days. One or two French issues were marked up fractionally, but Turkish Unified suffered a relapse. Far Eastern descriptions were inactive and uninteresting.

Pre-Budget anticipations, not all of a rational character, induced a little speculative buying of Home Railways on Monday, and their non-fulfilment a precautionary marking-down of prices on Tuesday, particularly of Great Westerns and Midland and Scottish. Southern came later on offer by reason of the French quarantine regulations. The Chancellor's remission of the Passenger Duty had been discounted in advance. The week's traffic figures were regarded as useless for comparative purposes, the corresponding figures for 1928 relating to a Bank Holiday week. Dealings in Foreign Railways were of meagre dimensions. Leopoldina was in request on dividend anticipations, but weakened after a poor traffic return. Moderate buying was in progress of United of Havana. Canadian Pacific was unaffected by the issue of fresh capital on bonus terms.

The colourless nature of the Budget removed the last hope of any development calculated to infuse new vigour into the Industrial market before the General Election, and idle conditions prevailed generally. Favourite groups, such as gramophones and artificial silk were neglected, such interest as was in evidence being mainly of a bearish character and emanating from America. Cable shares tended to ease after their recent advance, while Marconi's were affected by the dissatisfaction of the £1 shareholders with the merger terms, which at one time seemed to threaten costly litigation. Dunlops remained dull, the cut in tyre prices increasing misgivings regarding the forthcoming dividend. A clearer perception of the scope and purpose of the Imperial Chemical capital increase did not obviate a fall to 38s. 6d. International Tea reflected the Budget proposal, the doubling of the interim dividend on Star Tea, and the management agreement with a Selfridge subsidiary. The Budget had no appreciable effect on catering shares. The Hydro-Electric report was well received, though Brussels was in profit-taking mood. Margarine securities were stronger, and British Match improved on the increased Bryant and May dividend. The Budget failed to substantiate all the forecasts affecting brewery shares, which were dull in consequence. Motor, newspaper, and shipping securities attracted no more than a modicum of public attention. In the iron and steel group the offer to buy out United Steel share and debenture-holders (discussed in an "Investment Note" on a later page) had no noteworthy effect on quotations. Possibly the firmest section of the "House" was the market for bank shares, where fair investment buying was in progress. Insurance stocks were steady to firm as a whole, but Sun Life, exceptionally, fell 2½ to 51 on Wednesday. Yorkshire Insurance rose on the capital proposals.

The placidity of the rubber share market was ruffled by a further relapse in the price of the commodity, mainly due to American liquidation. Business was on the scantiest of lines, but quotations were marked down as a precaution against possible selling, which, in fact, did not eventuate. Tea shares were in evidence early in the week, less, perhaps, owing to the remission of the Customs duty (the full implications of which the trade has not yet realised) than to the firm tone prevailing at the commodity auctions. The Budget announcement, however, was the signal for a certain amount of profit-taking in the shares. Oils were steady, but quiet in the extreme, few operators, amateur or professional, showing any inclination to take a hand, in the absence of news likely to affect the market either way.

South African mines showed no sign of more active times to come, Johannesburg and Paris being scarcely less apathetic than London. The prevailing quietude was broken only by selling of East Geduld (and, to a less extent, of Geduld Proprietary) by proprietors desirous of liquidating part of their holdings to take up the new shares. No particular excitement was observable in the Rhodesian market, where several increases of capital are pending. Roan Antelope is raising its authorised capital to £1,250,000, and an official announcement by N'Changa is early expected. Base metal shares were spared a repetition of last week's unfortunate incidents, copper being somewhat firmer on the Metal Exchange. The Rio Tinto accounts made a much better showing than could possibly have been deduced from the dividend statement, and the shares rallied a full two points after their publication. London Syndicate were a leading feature among tin shares, which, as a group, showed no appreciable reaction to the better news from the commodity market.

We are officially informed that Mr John William Cook was declared a defaulter upon the Stock Exchange on April 11, 1929.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The sentiment of the share market has improved with the easier tone of the call and time money markets. The moderate rally in share prices is, however, due principally to the oversold condition of the past fortnight. A strong buying movement in bonds has developed. Copper shares are firmer after a drop on the recession in the price of the metal, and motors are somewhat better on higher first-quarter earnings. Steels are firm on record production, but there is now a seasonal fall in orders. Holders of United States Steel common are rather disappointed at the new stock offering, but the plan is having a bullish effect on the stock. There is a slump in new security offerings, which are only 85 millions, compared with 232 millions in the previous week.

PARIS.

Fears of a check in the Reparations conversations led to some realisation. Bank shares again were most affected, while the announcement of an increase of capital by the Comptoir National d'Escompte was, like other similar announcements, a fresh cause of weakness in

this group. French stocks in general had a tired appearance. Copper shares were appreciably raised, in particular Rio and Tharsis; the latter regained its previous loss. Citroën was in even greater demand than of late. The contango rate at the mid-month settlement was 5 per cent.

BERLIN.

A week ago, owing to fears of an advance in the Reichsbank rate, and of a breakdown in Paris, stocks were inclined to weaken. A further general decline occurred at the beginning of this week. Rumours of an advance in demand, and, though realisations took place later, the covery followed. On Wednesday English buying of Polyphon was reported; artificial silk stocks were also in demand, and, though realisations took place later, the list as a whole advanced. Thursday's Bourse was very firm, on fairly extensive foreign orders, and a variety of stocks showed considerable rises, but towards the close there was a moderate reaction.

AMSTERDAM.

The money market remained tight, and in consequence there was very little animation on the Bourse. The general tendency was irregular, but among industrials Philips were strong on favourable reports and the announcement of a capital increase, and Margarine Union showed firmness. Breda Silk is paying no dividend, against 5 per cent. last year. Artificial silk shares were generally lower. Sugars were dull, but later on displayed a better tone, thanks to good 1928 dividends. Shipping and tobacco shares were idle, and oils weakened. The market on Thursday was still dull, though the strength of Margarine Union was maintained.

INVESTMENT NOTES.

The Stock Markets and the Budget.—Few Budgets have had so little effect on markets as has Mr Churchill's this week. It is true some improvement has been recorded in the gilt-edged market, but this is attributable, not to Mr Churchill's treatment of the Sinking Fund, which met with general disfavour, but rather to improvement in the monetary situation. It is generally agreed that the short-dated British funds have been unduly depressed. The following table shows the prices of the leading British funds before and after the Budget:—

	April 12.	April 18.
5% War Loan	102 9/16	102 3/32
3½% Conversion	77⅛	77¼
4% Consols	86¼	86 9/16
4% Funding	87⅞	88 1/16
Treasury 4½%, 1932/34	97 9/16	97 3/32
Treasury 5½%, 1930	100 9/16	100½

As regards the industrial markets, the Budget lent no encouragement to a revival of speculative interest. The abolition of the tea duty was the one feature which markets could seize on, and a number of tea-distributing companies' shares improved, in particular International Teas, which gained 1s. to 30s. 7½d. Tea-producing companies' shares were supported, but some profit-taking ensued. In any case, this market has been hardening for some time. Perhaps the general view taken by the Stock Exchange of the Budget was expressed in the market in Election "majorities." Disappointment at the unexciting nature of Mr. Churchill's proposals brought in sellers of Conservative stock, while Liberal and Labour stocks were marked up 2 points. The following table shows how the market in "majorities" closed on the day after Budget:—

	Present position in House of Commons.	"Market" Price, Apr. 15.	"Market" Price, Apr. 16.	Rise or Fall.
Conservative	400	280	275	− 5
Labour	162	251	253	+ 2
Liberal	46	84	86	+ 2

Enquiries which have reached us suggest that the dangerous nature of this "majorities" market is not invariably realised by the private investor. The whole business is a gamble, pure and simple, and the "differences" which will eventually have to be paid may be very considerable, in some cases.

United Steel Offer.—The directors of the United Steel Companies have announced, with their benison, the preliminary terms of an offer made by the Austin Friars Trust, and others, to purchase for cash the entire issued capital, debentures, and obligations of the company, together with the preference shares of the United Strip and Bar Mills, which are guaranteed by United Steel. The following table sets out the relevant particulars:—

Stock or Shares.	Amount Issued—Nominal Value.	Market Price, April 12.	Price Offered by Austin Friars Trust.	"Market Capitalisation," April 12.	Total Cash involved in Trust's offer.*
	£		(Per £100)	£	£
"A" 6% First Mort. Debentures	833,300	60½	£75	504,146	624,975
"B" 6% First Mort. Debenture Stock	999,100	60½	£80	604,455	799,280
"C" ditto	499,998	83	£97½	414,998	487,496
6% Notes, due April, 1935	1,025,923	†	£50	512,961†	512,961
6% Cum. Pref. Shares, £1	1,317,516	4s. 4½d.	(Per Share) 6s. 8d.	287,218	439,172
Ordinary Shares, £1	8,006,549	3s. 6d.	4s. 0d.	1,401,146	1,601,310
United Strip & Bar Mills, 8% Guaranteed Cum. Pref., £1	1,500,000	6s. 3d.	7s. 6d.	468,000	562,500
Total	14,182,386	...	...	4,192,924	5,027,696

* Presuming acceptance by holders of 100 per cent., in every case.
† Not quoted. Taken at a price of 50 in calculating "Market Capitalisation."

The offer is conditional on acceptance by 90 per cent. of each and every class of security. It will be seen that the Austin Friars Trust and its associates propose to give some £834,772 (or 20 per cent.) more than the total market capitalisation of the various securities on the eve of the announcement, the price representing approximately 35½ per cent. of the nominal value of the securities to be acquired. As they are also, apparently, paying off the indebtedness to bankers of United Steel (£548,838) and its subsidiaries, Steel, Peech and Tozer, and Appleby Iron Co., and providing over £1,000,000 new working capital, the group responsible for the offer must have cash resources in hand, or in view, of the best part of £7,000,000 at the very least. The option to be given to holders of shares for obligations to re-invest the whole, or to debenture holders to re-invest part of their proceeds, may be calculated to reduce the net amount of cash to be eventually provided, but as the announcement expressly states that the United Steel undertaking is to "form the nucleus of a larger merger of interests," it is evident that large-scale plans are in prospect. Capital reorganisation—a necessary first step towards "rationalisation," which, it is agreed, has become indispensable to the future prosperity of the iron and steel industry—has previously been effected from within the

companies concerned, under the auspices of the various boards of directors, acting on the advice of eminent accountants, whose proposals have been based mainly on estimates of future earning power. Inasmuch as the initiative in the present offer appears to have come from a separate group, which would seem to have regarded current Stock Exchange values (which, in the main, reflect outside rather than inside opinion), as at least a relevant factor in its calculations, the proposed transaction marks a new departure in the post-war history of the industry. In view of the state of affairs revealed by recent balance sheets, United Steel debenture holders may possibly be called on to make some capital sacrifice, under any scheme, like their colleagues in other recently reconstructed steel companies. They are entitled as a preliminary, however, to know the level at which future earning power is estimated by those best qualified to assess it. Six months ago the chairman recorded his opinion that the company—which is responsible for fully 10 per cent. of the steel ingot production of Great Britain—would date the recovery of prosperity from June, 1928. It is understood that the company's business has, in fact, shown a gratifying degree of expansion in recent weeks. We hope to comment on the proposals in greater detail in our next number on the basis of the particulars given in a subsequent circular, issued as we go to press.

Rubber Company Profits.—The spurt of activity in rubber shares, which accompanied the recent rise in the price of the commodity to over 1s. a pound, has now entirely subsided. Rubber has been weak during the last few days, the London "spot" quotation for standard ribbed smoked sheet being now no more than 10½d., and the share market has resumed its customary state of masterly inactivity. Meanwhile, the numerous reports which have recently been issued by producing companies, covering operations in 1928, are calculated to afford the investor considerable food for thought. The following table, for example, sets out the results achieved during the past two years by a dozen companies whose accounts have been published in the last week or two:—

Company.	Net Earnings. Amount. 1927.	1928.	Dividends. 1927.	1928.	Crop. (Thous. lbs.) 1927.	1928.	Selling Price (per lb.). 1927.	1928.

* Not stated.
† Company has 1,423 mature acres of tea, in addition to its 2,315 mature acres of rubber

The total profits of the twelve concerns declined last year from £947,896 to £579,506, a fall of 39 per cent., while the average rate of dividend paid dropped from 15 per cent. to 11½ per cent. The total rubber harvested showed an increase of 7½ per cent., but the average selling price (realised by the seven companies which published complete figures for both the years in question) was only 11.53d., against 1s. 9.07d. in 1927—a decline of 45 per cent. In the case of the seven Malayan concerns, profits were down 38½ per cent., dividends 21 per cent., and selling prices 47 per cent., while crops increased by 12 per cent., the results thus showing but slight deviation from the average. While 1927 was a year af full-blown "restriction" in Malaya and Ceylon, production was accelerated during 1928 as a result of the Prime Minister's advance announcement of the termination of control. It would seem inevitable that those companies which sold large quantities of their 1929 output "forward" at the very low prices prevailing after that announcement should suffer a further decline in earnings this year. As regards the remainder, the fact that the present market price of rubber is below the average prices on which last year's earnings were based, in almost every case, must be set against the considerable economies in overhead costs which should accompany a *régime* of "free" production. The market, however, is awaiting indications of the extent to which the "resting" of the trees under restriction will be reflected in an abnormally heavy yield for a few months to come, and it consequently does not regard current prices of the commodity as necessarily stable. Altogether, only the most favourably situated, "low-cost" companies can reasonably be expected to show results for 1929 marking even a slight advance on last year's, while those of many other concerns may fall appreciably short of that level.

Harland and Wolff.—The year 1928 has to some extent fulfilled the hopes held out by the directors twelve months ago, for "a very substantial improvement." As far as can be ascertained from the accounts (which do not include a separate profit-and-loss account) £250,000 was set aside for depreciation, advances under the Trade Facilities Act were reduced by the repayment of £98,669, and after payment of the first preference dividend, the carry-forward was increased by £12,356. Seeing that in 1927 no depreciation was charged, no advances were repaid, and that in order to pay the dividend it was necessary to take £300,000 from reserve and reduce the carry-forward by £49,713, it appears that results may have improved actually by over £700,000 in comparison with 1927, instead of the £362,000 shown in the accounts, which are summarised in the following appropriation table:—

Years ended December 31,	1926.	1927.	1928.
	£	£	£
Profit	201,446	*Dr.157,713*	204,356
Transfer from reserve	...	300,000	...
First cumulative preference dividend	192,000	192,000	192,000
Increase or decrease in carry-forward	+9,446	−49,713	+12,356

The form of the balance sheet has been improved by the separation of fixed and floating assets and floating liabilities under inclusive headings, and by discrimination between investments in and advances to subsidiaries. The auditors have introduced into their certificate the qualification:—"subject to the value under present conditions of the investments in steel works, &c." These investments stand at £4,267,493, forming over one-quarter of the gross assets. The company received no dividend for 1928 from its steel and coal interests in Scotland (David Colville and Sons and Archibald Russell), though a year ago the prospects there were stated to be "more encouraging." The shipyard at Greenock has been closed for the time being, but the Belfast and Govan yards have been fairly well occupied, though difficulty is still reported in obtaining contracts at remunerative prices to keep the slips occupied. The shipbuilding and engineering output, excluding that of associated companies, amounted to 101,786 tons gross, a higher total than in 1927 or 1926, but 12,000 tons short of the 1925 figures. Welcome as is the improvement, there is still a long way to go, and in each of the next four years a sum of £298,669 has to be found for repayment of Trade Facilities Act advances. The reserve and the carry-forward together total £1,107,558, but the balance sheet is still far from liquid, floating assets amounting to £2,503,169, against £5,566,829 of floating liabilities. The shares not in the hands of the public, the "A" and "B" cumulative preference and the ordinary, together exceeding £6,000,000 in nominal value, have received no dividends since 1924. The 6 per cent first preference shares at 15s. 6d. yield £7 14s. 10d. per cent.

Cammell Laird.—This company last recorded a profit in 1924, last year's operations resulting only in a reduction of the annual net loss from £112,046 to £80,694, as we noted last week. The last dividend paid on the £3,234,060 of ordinary shares was 5 per cent. for 1922,

arrears since June 30, 1925, on the 5 per cent. cumulative preference dividend amounting now to over £214,000.

Year ended December 31.	1926.	1927.	1928.
	£	£	£
Loss	73,575	112,046	80,694
Directors' fees for previous year	1,600	1,600	1,200
Transfer from reserve account	50,000	125,000	75,000
Increase or decrease in carry-forward	− 25,175	+ 11,354	− 6,894

The balance sheet, which the auditors sign "subject to the adjustment required in respect of certain investments," does not give effect to the agreements with Vickers and Vickers-Armstrong, concluded in December, for the merging of Cammell Laird's wagon interests in the Metropolitan Cammell Carriage, Wagon and Finance company, and of its steel interests in the English Steel Corporation, as the final figures have not yet been adjusted. It was announced a month ago, however, that Cammell Laird was to receive 599,539 preference and 2,033,149 ordinary shares of £1 each in the English Steel Corporation, and as the ordinary shares are being allotted in respect of fixed assets, it appears that this item is likely to be reduced from £2,882,975 to under £1 million in the next balance sheet. The present report discloses that the English Steel shares received will correspond approximately to the book value of the assets transferred, though a reduction of book values by some £350,000 will be involved in carrying through the wagon agreement (under which Cammell Laird receives 1,750,000 £1 ordinary shares in the new company). This will swallow most of the reserve, reduced now to £400,000 by the transfer of £75,000 on account of the 1928 loss. The directors are faced with the prospect of £500,000 5 per cent. first mortgage debentures falling due for redemption at 103, and £400,000 4½ per cent. debentures at 102½, on July 1, 1930. Whether the company will by then be reaping the full benefit of its bold efforts after rationalisation it is too early to say. Henceforth Cammell Laird will be mainly a holding company, having sloughed off practically all its manufacturing activities except the Merseyside shipyards. *The £1 ordinary shares have fallen* since the beginning of January from around 8s. to 5s.

Babcock and Wilcox.—The net profits of this steadily successful boiler-making concern were slightly reduced in 1928, though the gross manufacturing profit was some £16,000 higher than in the previous year. The dividend on the ordinary shares, which form 93 per cent. of the total capital, is maintained at the rate of 15 per cent., tax free, to which it was raised from 13 per cent. in 1927. The sum of £50,000 (against £100,000) is allocated to the reserve fund, which thereby reaches £850,000, in addition to £400,000 in the dividend equalisation fund; visible reserves, in fact, aggregate £1,370,363.

Years ended December 31.	1926.	1927.	1928.
	£	£	£
Net profit	716,577	743,820	734,902
6% preference dividend	6,000	6,000	6,000
5% second preference dividend	8,953	8,953	8,953
Ordinary { Earned, after tax	16·3%	16·9%	16·7%
Ordinary { Paid, free of tax	13%	15%	15%
Ordinary { Amount	558,955	644,948	644,948
Reserve fund	150,000	100,000	50,000
Staff pension fund	20,000	20,000	32,000
Increase or decrease in carry-forward	− 27,331	− 36,081	− 6,999

The balance sheet shows fixed assets at £1,119,446 (against £795,581), and interests in associated companies, the total income from which is again stated to be satisfactory, at £823,815 (against £1,046,997). The general position is strong, the surplus of liquid assets over liabilities remaining in the neighbourhood of £2,400,000. Extensions and additions have been and are being made to the factories and plant, which have been maintained in a high state of efficiency, to meet the increasing demand for high-pressure boilers. At their present market price of 67s. 6d. the £1 ordinary shares yield £4 8s. 9d., tax free, and, though there is no immediate prospect of increased dividends, their backing by assets is substantial.

Hong Kong and Shanghai Banking Corporation.—At the annual meeting of the Hong Kong and Shanghai Banking Corporation, a report of which appears on a later page, the chairman, Mr A. H. Compton, gave his customary review of commercial and political developments in the Far East. From the shareholders' point of view, however, an arresting feature of the address was the hint that unless there was an improvement in the Bank's business during the current year, a reduction in the present dividend might be unavoidable. Despite a long period of trade depression in the greater portion of the Bank's field of operations, profits have kept remarkably steady, and a return of £8 per share has been maintained for several years past. It is, therefore, a little disturbing to learn that there is a possibility, slender though it may be, of a modification of the dividend. In the early part of this year the London quotation of the shares rose to £149, apparently owing to the optimism engendered by the newly-signed Anglo-Chinese Treaty. The rise was not followed by the Hong Kong share market, which has never quoted the shares at more than the equivalent of £140; presumably the cold douche administered by the chairman will have a sobering effect upon enthusiastic operators at home. As regards the situation in China, the trade results were summed up as "a welcome return towards normal," although the actual improvement was on a somewhat restricted scale. The efforts of the Nationalist Government were reviewed in a very sympathetic manner, and the speech concluded with the reminder that, although a transitional period is always a difficult and often a disappointing time, there can be no doubt that the spirit of progress is abroad throughout the country. The general opinion in Hong Kong is that while Mr Compton's speech may have been less optimistic than those of his immediate predecessors, there is reason to hope that the clearer atmosphere of the present time will have a most beneficial effect upon trade generally. As for the political side of affairs, the Nationalist Government can count upon the whole-hearted support of all foreign traders, provided that its present ideals continue to influence its official policy.

Imperial Chemical Industries. — At the general meeting of the Imperial Chemical Industries on Thursday this week Lord Melchett announced that, in order to finance the present constructional programme of the company, the directors proposed to issue immediately the balance of the existing authorised capital, and a small portion of the new capital authorised. The present issued capital is £65,745,661, and the authorised capital £75,000,000. The present issue consists of 4,410,595 7 per cent. preference shares of £1 and 6,016,857 ordinary shares of £1, which will use up the balance of the existing authorised capital (*£9,254,339*) and *£1,173,113* of the new. The issue is being made in the form of rights to the shareholders in the following proportions: One new preference share for every existing four preference shares, at 23s.; one new ordinary share for every existing eight ordinary shares, at 33s. 6d.; and one new ordinary share for every existing sixteen deferred shares, at 33s. 6d. The new preference shares will rank for dividend as from May 6, 1929, in respect of the half-year to June 30, 1929, calculated on the amounts paid up from the due dates of the instalments, and in respect of the half-year ending December 31, 1929, *pari passu* with the existing preference shares. The new ordinary shares will rank for the interim dividend for the year 1929 from May 6, 1929, calculated on the amounts paid up from the due dates of the instalments, and for the final dividend for the year 1929 *pari passu* with the existing ordinary shares. At the extraordinary general meeting the authorised capital was increased from £75,000,000 to £95,000,000 by the creation of 40,000,000 new shares of 10s., of which £10,000,000 is to be in the form of preference shares consolidated into shares of £1.

Southern Pacific.—The 1928 report of the Southern Pacific lines shows the largest railway operating revenues in the history of the company, exceeding the previous record established in 1926 by $1,303,029. This happy state of affairs was due to a record volume of revenue freight, an increase of $5,744,247 under that heading being partly offset by a decrease of $2,887,296 in passenger revenue. As a move against motor competition, which is the principal factor in the decline in passenger revenue from $62 to $50 millions in the last five years, the Southern Pacific Motor Transport Company was incorporated two years ago as a subsidiary, and now owns 222 motor coaches, trucks and service cars. The freight increase resulted from heavier tonnage of nearly all agricultural products, except oranges, bananas and barley. With economies equivalent to 0.66 per cent. in operating expenses, and an increase of $1½ million in dividend income, the combined net income of the transportation system and of all separately operated, solely controlled affiliated companies showed an improvement of 10.77 per cent., recovering thereby more than half the ground lost in 1927. The dividend is maintained at 6 per cent.

Years ended December 31.	1926.	1927.	1928.
	$	$	$
Operating revenues	298,800,998	297,745,406	300,104,028
Operating expenses	215,595,480	218,179,192	216,734,203
Net income (with associated cos.)	42,034,665	35,999,197	39,876,657
Capital stock { earned	11·29%	9·67%	10·71%
Capital stock { paid	6%	6%	6%
Capital stock { amount of div.	22,342,854	22,342,854	22,342,854
Increase in credit balance*	25,611,407	13,075,679	23,937,118

* After certain capital and other adjustments.

The Transportation Act of 1920 provides that the railways shall receive a fair return—at present fixed at 5¾ per cent. —upon their railway property, but in spite of a steady increase in traffic the Southern Pacific has never reached its "fair" rate of return on the book value of its road and equipment. The 1928 percentage was actually 3.76, *as compared with* 3.59 in 1927. The net decrease in the company's funded debt during the past year was $1,384,879, and a credit balance of $504,124,008 was carried forward to 1929.

San Paulo Railway.—The new San Paulo report proves that prognostications of traffic improvement were justified. Though revenue from the general interest account was reduced from £57,971 to £38,790, a profit of £9,837 on sale of investments, an increase of £4,522 in interest from investments, and one of no less than £94,183 in net railway revenue, together enabled the company to show the large rise of 15 per cent. in net earnings. Apparently, therefore, it would have been possible to raise the dividend, but the directors have preferred a conservative policy. In addition to the usual allocation to reserves, a sum of £35,000 is set aside for pensions to the London office staff.

Year ended December 31.	1926.	1927.	1928.
	£	£	£
Net earnings (after charging debenture interest)	574,453	596,352	685,714

Special reserve	100,000	...	...
Pension fund (London)	...	...	35,000
Increase or decrease in carry-forward	− 10,547	+ 11,352	+ 40,714

Except for a heavy fall in coffee, all the important classes of traffic improved, and working expenses were reduced, on the main line from 69.01 per cent. of gross receipts to 66.84 per cent., and on the Bragantina section from 95.86 per cent. to 93.17 per cent. The general balance sheet shows that opportunity has been taken to invest a large portion of the cash on deposit twelve months earlier. The various reserves, together with the carry-forward, now aggregate £2,982,553. The price of the shares, which fell to 192 not many months ago on the breakdown of negotiations with the Brazilian Government, is at present as high as it has ever been. At 211½ they give a yield of £5 13s. 5d., free of income tax.

"Administratiekantoren" Certificates: A Warning.—The growing activity in France, writes our Paris correspondent, of numerous institutions known as Administratiekantoren, which have their headquarters in Holland, calls attention to a form of investment the exact nature of which should be made known to English investors. Some of these concerns are extensively circularising the public, offering to sell one-hundredth parts in Royal Dutch shares (quoted in Paris at around 10,000 francs) and scrip of other companies. These offers take the form of certificates issued by "Administratiekatoren" concerns, each share concerned in the operation being held by the bank or other organisation, which is prepared to sell certificates representing one-hundredths of a single share. The Royal Dutch Co., of course, is in no way a party to the transaction. This practice is quite common in Holland, its object being to replace shares which are difficult to negotiate, by reason of transfer and other factors, by bearer certificates, the price of which brings them within the scope of the smallest investor. Another form of operation is to issue "collective certificates," representing a fractional interest in one share of each of several companies. For instance, certificates may be issued representing an interest amounting to 1,000 francs in shares of each of three quite separate French or other banks. The point to be impressed upon possible investors in these certificates is that the responsibility for the payment of dividends, &c., does not rest primarily with the company or companies whose shares are concerned, but merely with the concerns issuing the certificates, the status of which depends largely on the soundness of the issuing Administratiekantoren. Some of these concerns are subsidiaries of Dutch banks, who are represented on the boards of directors, in which case no adverse criticism would as a rule be offered. Other Administratiekantoren are of less satisfactory standing. It is true the certificates are generally countersigned by a notary, who guarantees that the original shares have been deposited in the concern's safes —which in some cases cannot be opened except in his presence—but it is obviously difficult for the average small capitalist to satisfy himself on these points, or as to the payment of dividends, for which the Administratiekantoren is alone responsible. Though we have no desire to induce unnecessary nervousness on the part of holders of these certificates, it is as well that these facts should be known.

Imperial Tobacco.—A Correction.—We have to correct an error which occurred in our calculation of the yield obtainable on Imperial Tobacco ordinary shares, in our issues of April 13th and April 6th. Allowance was not made for the fact that these shares are still *cum* the bonus of one new share for every four shares held. At the present price of 6$\frac{3}{16}$ a yield of 4.34 per cent., tax free, would be obtained if the dividends for the current year amounted to 21½ per cent., tax free. We explained in our issue of February 23rd that, in view of the increase in capital, it was reasonable to estimate dividends of 21½ per cent., tax free, as against 26 per cent., tax free, in the previous year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Hong Kong and Shanghai Banking Corporation, Banca Commerciale Italiana, Imperial Chemical Industries, County of London Electric Supply, Monte Video Water Works, Morris Motors (1926), United Molasses, Jugra Land and Carey, Paquin, United Drapery Stores, Champion Reef Gold Mines of India, Mysore Gold Mining. The Hong Kong and Shanghai, and Imperial Chemical meetings are dealt with on earlier pages. Shareholders in United Molasses will find particularly noteworthy the chairman's account of the company's short, but determined, struggle with the Dunbar interests for leadership in the world's molasses trade, and its outcome. Reference was made by Sir William Morris to the liquid financial position of his company, and to recent technical developments.

MINING NOTES.

Indian Gold Mining Results.—Our mining correspondent writes:—The feature of last year's operations of the Kolar group was the progress made by the Nundydroog. Thanks to continued improvement in the developments, this company was able to treat ore of higher grade than before, and the expansion in the profits permitted a fresh increase in the dividend rate, the 20 per cent. paid comparing with 17½ per cent. for 1927 and 12½ per cent. in respect of 1926. Owing to extra expenditure upon ventilation, costs rose about 2s. per ton to 21s. 3d., but new plant due to come into operation very shortly should yield economies. Moreover, the growth in the ore reserves occurred despite the performance of only 10,780 feet of exploratory work, as against 12,320 feet previously. The Balaghat, on the other hand, showed retrogression, although the preference shares once again received 1s. 6d. and the ordinary 6d. Developments appear to have taken a slightly more satisfactory turn.

The following tabulation contrasts the salient features of the results of the past three financial periods of the five companies:—

	Tons of Ore Milled.	Mill Yield per Ton.	Working Profit.	Carried Forward.*	Ore Reserve Tonnage.
		Dwts.	£	£	
Balaghat—					
1926	40,350	14½	31,130	10,370	52,980
1927	45,250	13½	30,140	5,650	70,390
1928	47,950	12½	24,150	7,580	74,130

1928	150,000	†11	99,930	9,990	295,130

* Subject to directors' percentage. † Average assay value.

In the case of the Champion Reef the effect of treating a larger tonnage of ore was more than offset by a sharp fall in grade. Certain difficulties in working experienced during the year are expected to be overcome during the current season. The ability of the company to raise its dividend rate from 9d. to 1s. arose from a much smaller amount being required for depreciation. Mysore results indicate little change apart from the welcome further recovery in the ore reserves. The company's investments in Canadian mining have not proved particularly happy. Liquid assets at the end of last year totalled £311,300. Ooregum's set-back, due to the less favourable nature of recent developments, entailed a cut of 5 per cent. in the dividends, last year's total being 27½ per cent. on the preference and 17½ per cent. on the ordinary.

The following table sets out the highest and lowest quotations of the past year, and the approximate yield per cent. on the basis of the current price:—

Share (par value, 10s.)	Highest, 1928.	Lowest, 1928.	Current Price.	Yield.
	s. d.	s. d.	s. d.	%
Balaghat, ord.	8 9	5 9	5 6	9
Do. pref.	13 9	10 9	10 6	14½
Champion Reef	15 6	9 1½	10 0	9½
Mysore	19 9	14 9	13 0	18½
Nundydroog	18 3	13 0	16 6	12
Ooregum	16 9	11 9	10 6	9½
Do. pref.	23 6	19 3	17 6	16

In practically every case the current price is below the level prevailing twelve months ago.

Rio Tinto.—That this prominent base metal enterprise would be under the necessity of reducing its 1928 dividend was generally expected; indeed, as much might have been inferred from the tenor of the chairman's speech at the last annual meeting. It is the full text of the accounts which provides the item of surprise. The profits on sales in Spain and elsewhere figure at £1,669,800, as against £1,221,350. Apparently the increase is attributable partly to expansion in the output and partly to the rise in the price of copper, the latter becoming more pronounced in the last three months of the year. The directors have taken advantage of this windfall to strengthen the financial position. Of the £366,000 arrears of taxes on produce all but £100,000 has been charged against revenue, the balance being taken from taxes suspense account. Moreover, £200,000 is set aside to an emergency account. Hence the need to follow up the cut of 5s. in the interim dividend (15s.) with one of like amount in the final, the total of 40s. per £5 share comparing with 50s. for each of the preceding four years. The issue of the report occasioned a rally of about two points in the quotation to £60, and emphatic views were expressed that the directors might well have given some explanation in announcing the balance distribution. At current price the yield to the investor is barely 3½ per cent.

Rezende.—The 1928 statement of this Rhodesian enterprise affords no justification for the recent spurt in the price of the shares. Owing to the treatment of slightly lower-grade ore than before, the profit declined and the dividends totalled 25 per cent. in place of 30 per cent. Development evidently opened up a certain amount of payable ore, as the tonnage crushed was 76,400, while the ore reserves, at 165,000 tons, show a decrease of 47,000 tons. Work at depth, however, proved unsuccessful. In the absence of more favourable developments, operations may cease within two or three years.

Transvaal Consolidated Land.—Last year's income, especially under the heading of interest and dividends, fell below the 1927 amount, but expenses were lower and only £8,600 was required for depreciation, as against £25,850. As a result, the net surplus figures at £42,300 in place of £28,150. No change was made in the dividend rate, 12½ per cent. again being disbursed; but an increased, instead of a reduced, balance goes forward. Of the company's platinum interests, the Brakspruit property (Rustenburg district) gave hopeful indications. The 10s. shares fully discount the future at their quotation of 42s. 6d.

CAPITAL ISSUES.

After an Easter lull, substantial prospectus issues are beginning to reappear. Offers to the public last week amounted to £1,533,000, bringing the total for 1929 up to £100,484,810, excluding conversions, as compared with £176,948,000 for the corresponding period of last year. Two electric supply companies head the list. The *Lancashire Electric Light and Power Company*, which has paid 7½ per cent. dividends for some years, issued a further 600,000 £1 ordinary shares at 27s., promising special consideration to existing shareholders. It was natural that the issue should be quickly over-subscribed, for the old shares, with which these are to rank equally, were being dealt in at over 30s. a week ago. The proceeds are required to complete the first two units of a generating station at Kearsley (a "selected station" under the N.W. England and N. Wales Electricity Scheme), and for other purposes. The *Nigerian Electricity Supply Corporation* is to carry out a project, on which £100,000 has already been spent in constructional work during the past twelve months, for supplying electric power to the tin mines on the Bauchi plateau in Northern Nigeria. A charter has been acquired embodying a Government lease of land and water rights for 45 years, which may be extended for another 20, and the company, which has entered into 15-year contracts with a number of mining companies, hopes to be dividend-paying in respect of 1930. A cumulative reserve is to be set aside as a backing for the preferred ordinary shares, which were those offered to the public. Electrical development in the area will obviously share whatever fortune the future has in store for the tin mines. *London and Southern Super Cinemas*, formed to acquire seven cinema theatres, one of them new, in London, Woking and Newport (Mon.), issued

shares of a popular speculative denomination. The cash portion of the purchase price was large, and profits on the new cinema were generously estimated. In order to absorb another brewery in its neighbourhood, the 40-year-old business of *Parker's Burslem Brewery* offered 5½ per cent. debentures (secured by a first mortgage on licensed and other properties) at 98, which were oversubscribed. Profits show a gradual decline over the last five financial years, but the capital value of the new stock is covered twelve times by net assets, and the interest on all debentures about eight times by 1927-8 profits. A small issue by *Phosferine Products* had some unusual features. The company's brokers applied for the whole of the shares, but the directors stipulated that a prior right to subscribe be given to shareholders in the parent company and others. The brokers, however, received a substantial option. Secondly, application to deal is not to be made until, in the directors' opinion, the progress of the company justifies it. The prospectus did not explain the reasons for the formation of a new company to carry on a portion of the existing company's business.

ISSUES OF THE WEEK.

Lancashire Electric Light and Power Company, Limited.—Issue of 600,000 £1 ordinary shares at 27s., ranking for dividend from April 1, 1929. Issued capital consists of 511,440 6 per cent. (free of tax up to 6s. in the £) cumulative first preference, 1,000,000 7 per cent. cumulative participating preference, and 1,000,000 ordinary shares of £1 each, together with £1,000,000 5 per cent. debenture stock, 1980. The 7 per cent. preference shares are entitled to participate equally with the ordinary up to a maximum of 10 per cent. The company owns all the debenture and share capital of the Lancashire Electric Power Co., which is empowered to supply electricity throughout Lancashire south of the River Ribble, excluding certain county boroughs. The sums available, after tax, for interest and dividends have been (to March 31): 1925, £100,662; 1926, £108,169; 1927, £133,903; 1928, £163,021; 1929, £190,885. Dividends on participating preference and ordinary shares have been 7½ per cent. for the last six years.

Nigerian Electricity Supply Corporation, Limited.—Issue at par of 450,000 £1 7½ per cent. preferred ordinary shares, entitled to one-quarter of the surplus distributed profits after payment of 7½ per cent. on 200,000 £1 ordinary shares. The company acquires, and will complete the construction and equipment of, a hydro-electric installation to supply power to tin-mining companies on the Bauchi plateau of Northern Nigeria. The purchase price for a 45-year Government lease of land and water rights is £199,693 in shares, and the company also pays the total amount already expended on the power scheme.

London and Southern Super Cinemas, Limited.—Issue at par of 1,500,000 (out of 3,500,000) 2s. shares. The company acquires seven cinema theatres, valued at £330,354. The purchase price is £300,000, payable as to £110,000 in shares and £190,000 in cash. Profits for year to March, 1928, on six theatres (one for 23 weeks only) were £19,457. A mortgage for £90,000 is to be created. A balance of £50,000 will remain for preliminary expenses and working capital.

Parker's Burslem Brewery, Limited.—Issue at 98 of £100,000 5½ per cent. "C" mortgage debenture stock, secured by a first mortgage on 34 freehold licensed and adjoining properties purchased for £135,885, and a floating charge on the rest of the undertaking (subject only to the charge securing the existing debenture stock). The stock will be redeemed in or before 1958 by a cumulative sinking fund of not less than £2,500 a year applied by purchase or drawings at par; the company has the right to redeem the whole in or after 1940 at 103. Issued share capital amounts to £615,000, and £181,230 4 per cent. first mortgage debenture stock and £75,621 4½ per cent. debenture stock are outstanding. The company was incorporated in 1889, and at June 2, 1928, assets exceeded liabilities by £1,210,469. Profits have been: 1923-24, £124,650; 1924-25, £115,679; 1925-26, £112,925; 1926-27, £112,414; 1927-28, £109,620. The proceeds of this issue will be applied towards financing the purchase of an Uttoxeter brewery company.

Phosferine Products, Limited.—Issue at par of 500,000 (out of 1,200,000) 1s. shares. The company acquires the selling right throughout the world of Phosferine health salt and certain other Phosferine products. The purchase price is £15,000 in shares. The whole proceeds of this issue, subject only to preliminary expenses estimated at £2,000, will be available as working capital. The remaining 400,000 shares are under option at par.

Sevenoaks Waterworks Company.—Issue of 930 £10 ordinary shares, ranking for a 7 per cent. dividend equally with existing shares, at a minimum price of £11 per share. Maximum dividends are now being paid, and profits are more than sufficient to pay dividends at these rates on the present issue, which is required for the extension of works and mains.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introductions: **Great Britain and Canada Investment Corporation**; issued capital, 40,000 $100 5 per cent. cumulative convertible preferred shares and 350,000 common shares of no par value, together with $6,000,000 4½ per cent. convertible debentures, 1959; each preferred share entitles its holder to receive one common share at a certain date, and also may be converted at any time at holder's option into two common shares; debentures are redeemable at par in 1959, or at corporation's option at 105 on any interest date; each $1,000 par value of debentures similarly entitles the holder to ten common shares, and is convertible into twenty common shares; incorporated under the laws of

COMPANY MEETINGS, &c.

THE HONG KONG AND SHANGHAI BANKING CORPORATION.

DIVIDEND AND BONUS MAINTAINED.
TREND OF THE SILVER MARKET.
FAR EASTERN TRADE AND FINANCE CONDITIONS.
SITUATION IN CHINA.
MR. A. H. COMPTON ON THE POSITION AND PROSPECTS.

The ordinary yearly general meeting of the shareholders of the Hong Kong and Shanghai Banking Corporation was held on February 23rd last at the City Hall, Hong Kong.

Mr A. H. Compton (chairman) presided.

The chief manager read the notice convening the meeting.

The Chairman said:—Ladies and gentlemen,—With your permission I shall, as usual, take the report and statement of accounts as read, as they have been in your hands for some time past.

RESULTS OF THE YEAR.

The results of the year's working are, you will have noticed, somewhat less favourable than in recent times, the net profit of $13,430,061·61 comparing with $14,239,288·14 for 1927. Our earnings, I am glad to say, justify the board in recommending the same dividend and bonus as before, but you will observe that we have had to suspend our practice of making an annual addition to reserves.

That the banking year in the Far East should have proved less prosperous can cause no surprise when we consider the unpropitious conditions in three of our fields of operations: the commercial depression in China—the legacy of civil wars and successive political upheavals; the unsettled economic situation in Japan, the causes of which I propose to analyse later; and, in the case of the Straits and Malaya, a drastic curtailing of trade, consequent on the fall in the price of rubber.

As I shall show presently, there is reasonable ground for looking to an improvement in each of these cases, and I think we may be fairly hopeful of seeing during the next 12 months that revival in the business of the bank without which it will not be possible to assure to shareholders a continuation of a return on the high level which has been maintained for these several years past.

ALLOCATION OF PROFITS.

Including $3,411,430·90 brought forward, and after deducting the interim dividend of £3 paid in August last (namely, £480,000 at 2/-=$4,726,153·85) and $50,000 remuneration to directors, the balance available for distribution is $12,065,338·66. The allocation of this balance recommended by the directors, which I hope will meet with your approval, is as follows:—

A final dividend of £3 per share, with bonus of £2 per share (subject to deduction of income tax), absorbing	$7,917,525·77
Transfer to bank premises account	750,000·00
Balance carried forward to the new account	3,397,812·89
	$12,065,338·66

BALANCE-SHEET FIGURES.

The figures of the balance sheet do not require much comment. Money being easier in most of the principal centres of our activities, bills discounted, loans and credits have declined about $16 million, which is compensated by an increase in our cash and bullion in hand and in transit of about $20¾ million.

The only other considerable difference is in our holding of securities, which is lower by about $29½ million, this being to a great extent accounted for by an increased holding of bills receivable, which are some $10 million higher, and a reduction in current accounts of about $11 million.

I would mention that our investments stand in our books at well below current market prices.

Although the event falls actually within the current year, and so is outside the period under review, I should like to refer to the opening on January 2 of our Kowloon sub-agency. In establishing this new office on the mainland we are keeping in step with the rapid growth of the Colony in that direction, and are, I feel sure, providing the increasing body of residents with a much appreciated convenience. The sub-agency serves also to relieve the pressure of work which falls on our head office.

THE SILVER MARKET.

Among the subjects dealt with by the chairman at our annual meetings the silver market holds an always important place, inasmuch as, by its effect on the China exchange, the price of silver exercises a probably greater influence than any other single factor over the operations of foreign banks and commercial houses in the Far East.

During the past year the trend of the market has been quiet and steady with few very sharp movements in the price, ready prices ranging between 26 1/16d. and 28⅞d. per ounce, with an average price for the whole year of 26⅜d., compared with 26 1/16d. in 1927.

An estimate of the total amount of the world's production of mined silver in 1928 is 268,000,000 standard ounces. This was supplemented by some 25,000,000 ounces sold by the Government of India from their currency reserve, and by over 30,000,000 from the melting down of British, French and Belgian silver coins. The total addition to world stocks thus amounts to about 323,000,000 standard ounces, against 305,000,000 in the previous year.

On the consumption side, China handled no less than 141,000,000 ounces as compared with 98,000,000 in 1927, and this constitutes a record. India absorbed some 110,000,000 ounces net. The aggregate uptake of the two great silver consuming countries can thus be placed at near 250,000,000, an increase of about 45,000,000 over the preceding year.

If the output of the mines had not been amply augmented from the special sources of supply which I have already mentioned, China's unusually large requirements could hardly have been met without a substantial advance in price. Looking forward, the Chinese demand for silver, as likely to be the dominating factor in price, invites particular interest. The bulk of the silver taken by that country last year was minted into dollars, and it remains to be seen whether the hoped-for recovery of trade resulting from more peaceful conditions will mean a sustained demand for these coins, the circulation of which among China's vast population has an enormous potential scope.

EVENTS AFFECTING THE LONDON MONEY MARKET.

The money markets of the world are dealt with so fully from time to time in the various financial papers that a reference to them here seems unnecessary, but it may be of interest to enumerate certain outstanding events of the year affecting the London market which holds its pride of place as the world's chief financial centre:—

(1) The stabilisation of the French exchange at 124·21 in June last, a prelude to which was the large accumulation of foreign balances by the Bank of France and the importation of gold from America.

(2) Heavy borrowings of foreign capital by Germany and consequent importation of gold into that country.

(3) The high rates for call money in New York and advance in the New York Federal Reserve Bank rate from 3½ per cent. in January to 5 per cent. in July.

(4) The final transfer of the currency note issue to the Bank of England. This operation completed our transitional steps from the War currency non-gold basis to the gold bullion standard.

It is satisfactory to note that the endeavours towards the stabilisation of world prices are being continued, and that the central banks of Europe maintain their policy to this end. Gold has now been universally adopted in Europe as the monetary standard, while in Japan, though the Government remains non-committal, public opinion appears to be favourable to its early adoption.

TRADE AND FINANCE IN CHINA.

I will now briefly pass in review conditions of trade and finance throughout the Far East, beginning with China. The cessation of civil war brought, I need not say, great relief to the trading community in the country. This was largely discounted, however, by a disappointing lack of improvement in such essentials as taxa-

tion, transport, and public security, not to mention the disturbing effects of a radical alteration of the Customs tariff. Taking the picture as a whole, nevertheless, the year marked a welcome return towards normal. The consumption of British cotton piece-goods has compared well with previous years, and hopes are fixed on the co-operative schemes of the Lancashire manufacturers. The trade in woollens appears to have felt the beneficial effect of the growing use of foreign-style clothing. For engineering products Manchuria alone has afforded a fair demand, and even there British goods have cut but a small figure in the market; good promise of recovery in this important branch of trade attaches, however, to the many schemes of railway improvement, not to mention the present rapid extension of roads for motor traffic and the projects of air transport.

POSITION IN HONG KONG.

Turning to the trade of this colony, I need only say that the year's experience justifies the restrained optimism of my predecessor's remarks. There has been improvement, but on a very restricted scale, showing that the damage of many years of civil war and chaos had sunk too deep to be quickly repaired on the return of peace. Excessive taxation in China further impedes recovery, so much so at Swatow that it has practically closed the port as a distributing centre. Hong Kong itself is suffering from the diversion of the rice trade to direct channels. The Canton sales of silk have been fairly satisfactory with low prices but a good demand, while the export of wood-oil has reacted somewhat from the artificial stimulus which it derived in the previous year from the stoppage of Yangtze shipping.

YANGTZE AND THE UPPER RIVER.

On the Yangtze itself the export trade, which in 1927 was brought almost to a standstill by war, banditry, and taxation, made a partial recovery in the absence of civil fighting, but continues to struggle with heavy odds. While river navigation—thanks partly to naval guards—has been less interfered with by piracy, the movement of goods has been increasingly hampered by means of local taxation, fresh imposts being continually applied by the various regional authorities without method or warning, to the great dislocation of trade.

Trade on the Upper River has been fitful and somewhat precarious owing to cases of local interference and to the disturbed political condition of the province of Szechuen, which still virtually maintains its traditional independence of the rest of China.

BUSINESS IN THE NORTH.

In the North business has had further obstacles to contend with—first, the dearth of railway transport due to the wholesale removal of rolling stock by the Manchurian authorities; and secondly the crippling charges imposed on railway traffic by the military authorities controlling the lines. Since the middle of the year through traffic has been suspended both on the Tientsin-Pukow and Tientsin-Mukden lines, on the former by reason of the blowing up of the Yellow River bridge and subsequent misunderstandings between the Chinese and Japanese authorities; on the latter on account of the failure of Mukden and Nanking to come to a working arrangement. The port of Tientsin has also been cruelly handicapped by the silting up of its waterway—a state of affairs which is, I trust, being seriously taken in hand.

Manchuria has given proof of slow but steady development, commercial and economic, and seems to be coming nearer to rectifying the disordered state of her currency which has been for several years past the chief bar to prosperity.

The 1928 returns of the Chinese Maritime Customs show a total of Haikwan taels 82,332,000—a rise of 13½ million over the previous year. Though the increase is satisfactory, the figures have little real value as a criterion of progress, since the excess is almost entirely referable to the last few months when goods were being hurried into the country in anticipation of the new Customs rates, which came into force on the 1st of this month.

INDIA.

In India the record of 1928 was not unlike that of the previous year, a good monsoon coinciding with rather disappointing trade results. Imports were dull, especially Manchester piece-goods, which continue to suffer from the popularity of Japanese manufactures. There was a large and good cotton crop, but the price of raw cotton fluctuated unduly owing to speculation, while a strike of mill operatives, lasting for six months, seriously affected the situation. The jute crop was smaller, but sold at a better price, and gunny shipments were well up to the 1927 figure. Exchange followed a normal course, and a favourable trade balance at the end of the year; encourages a hopeful outlook.

JAPAN.

Japan, on the contrary, has had to face an accentuated adverse trade balance, exports having declined by 20 million yen, against an increase of 15 million yen in imports. This result must be attributed mainly to two causes, fluctuations in the exchange value of the yen and the boycott of Japanese goods in China and in other markets controlled by Chinese traders. Trade development is hampered also by an unduly high retail price level, the index figure being no less than 20 points above that ruling in the United Kingdom and the United States of America. Fortunately, the country as a whole enjoyed an excellent rice crop and a sustained market for its output of raw silk.

The financial crisis of 1927 has been repaired to the point where only seven of the 30 banks involved now remain closed, and we may fairly look for more prosperous developments if the country is freed from the retarding effects of the boycott by Chinese, on the one hand, and, on the other, of the uncertainty caused by the lack of a fixed policy in dealing with the foreign exchange problem.

The Philippine Islands suffered from a drop in the prices for their principal articles of export, especially sugar, though, in view of the general over-production of this latter commodity, they were fortunate in being able to market a crop of half a million tons in the U.S.A. at a reasonable profit. Taking trade as a whole, the year was somewhat less favourable than its predecessor.

STRAITS SETTLEMENTS AND MALAYA.

As regards the Straits Settlements and Malaya, I need not refer to the vicissitudes which have befallen the rubber industry during the year with such serious effect upon the economic situation in general. The drop in rubber prices and a fall in tin in the early part of the year curtailed purchasing power, and the import and export figures show a sensational falling away from the returns of the previous years. There is comfort to be found in the expectation that the readjustments which are now taking place in both of the major industries will leave them in the end on a more stable footing, to the ultimate benefit of all the interests concerned.

MORE PROMISING OUTLOOK IN CHINA.

The political situation in China shows a marked improvement, and although experience warns us against a too facile optimism the outlook as a whole may be considered more promising than for a long time past, since there is good reason to hope that the victory of the Nationalists means the end of the dismal cycle of inter-party warfare from which the country has suffered for more than a decade. At the annual meeting three years ago your Chairman, after alluding to the bitter and undeserved attacks which the British in China had suffered at Nationalist hands during the previous months, finished by expressing the belief that for all its obvious faults the Nationalist movement held the seeds of regeneration and would, patriotically led, prove the means of delivering China from her great curse of militarism. Though it is early to speak with confidence of the fulfilment of this hope, we gladly recognise the promising advance which the Nationalist Party have made in banishing civil war, setting up a national Government, and restoring, nominally at least, the reign of civil law.

POLITICAL RECONSTRUCTION OF CHINA.

Let me summarise in a few words the steps which have led up to the present situation. Five years ago—shortly before the death of their founder, Dr Sun Yat Sen—the Nationalist Party launched their programme for the freeing of China from military rule and its political reconstruction on the lines now adopted. The first or "military" stage, which began with the advance from Canton in 1926, ended in June last when the Nationalist armies entered Peking. We are now seeing the development of the second stage, the so-called Political Tutelage of the country under the Kuomintang. A Constitution, based on this principle and placing the whole governing power in the hands of the party, was promulgated on October 4 and a new Government was created, shaped on committee lines and including in it the leading military chiefs who had combined against Chang Tso-lin and the northern confederation. A national congress of the Kuomintang has been summoned to meet next month to determine future policy.

Manchuria under Marshal Chang Hsueh-liang, who succeeded his father, Marshal Chang Tso-lin, after the tragic death of the latter by the blowing up of his train on the retreat from Peking, has hoisted the Nationalist flag, although for all practical purposes it still retains administrative and financial independence.

"A UNIFIED NATION."

Thus, by the adherence to the Nationalist cause of all the regional military commanders, China is enabled to reappear before the world as a unified nation.

After political unification the pressing need was for economic and financial reconstruction. A promising start was made by the holding of conferences in July, at which the opinions of leading business men were freely and boldly voiced, existing abuses exposed, and proposals made for essential measures of reform. These, as condensed in a programme put out by the Ministry of Finance, included the following: —Redemarcation of central and provincial revenues, with the adoption of a budget; revision of the Customs tariff, with abolition of likin ; disbandment of troops; rehabilitation of the railways; the regulation of taxes; and, finally, the creation of a central bank, reform of the currency, and consolidation of the unsecured debt.

Translated into action, this programme would form an admirable groundwork for national reconstruction, and one looks anxiously for signs of its being carried into effect. I regret that the indications are hardly encouraging, even when allowance is made for all the initial difficulties.

NEW CUSTOMS TARIFF.

Taking the various points, by agreement with the Treaty Powers the new Customs tariff came into force on the 1st of this month. The import duties are based on the proposals made during the interrupted Tariff Conference at Peking in 1925–26, and are to remain in force unaltered for one year. Regarded as a whole the new tariff appears to be conceived on moderate and reasonable lines, and British merchants as a whole have acquiesced in the increase in no grudging spirit. The position will be totally changed, however, if, as there seems some reason to fear, the new scale is rendered nugatory by the addition of extra taxation on imports under some other name.

Another proposal put into effect is the founding of a Central Bank. The bank, which is capitalised with $20,000,000 supplied from Treasury funds, is charged by its charter with the duties of issuing currency notes, holding Government funds, minting and the floating of national loans, while it is also allowed to engage within specified limits in ordinary banking and exchange. There is every hope that the new bank will be a valuable instrument to assist the trade, improve the finances and enhance the credit of China, and I have strong faith in its future if the management profit, as they may, by the experience which has recently been gained in Europe of the functions of central banking in the regulation of currency and exchange, the essential element of which is an administration which shall be independent of Government control.

FINANCIAL REORGANISATION.

Financial reorganisation generally has made, I am forced to say, little visible progress, and there are no signs as yet of the introduction of a proper budgetary system, which must be the first step towards effective reform. In fact it is difficult to see how anything radical can be done in the way of improvement so long as the military drain on the country's resources remains as at present. At the point which especially touches the foreign merchant—namely, the irregular taxation of trade—there is no change for the better; indeed the exactions of local authorities are, generally speaking worse than before. British merchants as a whole realise that a high level of taxation is in present circumstances inevitable, but what they have bitterly to complain of is the reckless and arbitrary imposition of local taxes, which are continually varied and changed. The effect is as prejudicial to the authorities who levy the taxes as to the merchants themselves, while the country as a whole suffers incalculable loss from the holding-up of trade.

REHABILITATION OF THE RAILWAYS.

The rehabilitation of the railways is among the most pressing needs of the country. Unhappily it is blocked by continued military interference in the form of retention of rolling-stock and the "milking" of revenue, in regard to which conditions are particularly bad on the three northern railways, the Peking–Mukden, Peking–Suiyan, and Peking–Hankow lines. The new Ministry of Railways is energetically combating this incubus by means of publicity and all other means at its disposal. The root of the evil lies, however, in the existence of the regional armies for whose payment and support the individual military leaders are forced to indent on revenue procurable from the railways by sequestrating the earnings and by refusing to merchants the use of wagons except against heavy payments. Until military expenditure comes under the control of Nanking in accordance with the Government programme, we cannot hope to see the railways restored to normal conditions of efficiency and earning capacity. Once they are freed, however, from outside interference and their revenues made available for the purpose of their own improvement, recovery should be rapid. The outstanding railway debts could then easily be provided for and the Government would be free to appeal with confidence for the financial assistance required to recondition and extend the lines. Already the Shanghai–Nanking and Shanghai–Hangchow Railways, which are under the more immediate control of the new Ministry at Nanking, and on which an effective measure of foreign expert supervision is still maintained, have made a substantial improvement and have cleared off their arrears of loan service.

FUNDAMENTAL HINDRANCE TO PROGRESS.

Consideration of the railway situation brings me to the question of the armed forces, the existence of which at their present strength of over 1,500,000 is the fundamental hindrance to progress and lies at the base of the reconstruction problem. Apart from the economic burden to China of having to support these unproductive legions, the militaristic system which they represent must, while it lasts, block all important schemes for improving the state of the country. As I have hinted already, an independent military commander clinging to control of the sinews of war in his district is an insuperable obstacle to national reorganisation, so that real reform depends on the centralisation of military control coupled with reduction of the armies. We may welcome the attempt made to grapple with this problem by the Disbandment Conference held at Nanking last month.

In Sino-foreign relations the year has been eventful, new treaties having been signed with all but one or two of the treaty Powers. Our own Government concluded the new tariff treaty on December 20, followed on the next day by the presentation of letters of credence by H.M. Minister. General, as well as diplomatic, relations between the two countries may happily be said to have returned to normal. The anti-British agitation of two or three years ago has now practically vanished, and a new spirit of friendliness is making itself felt, for which I believe we are in no small part indebted to the personal influence of H.M. Representatives in Peking and Hong Kong.

TARIFF AUTONOMY.

The recognition of tariff autonomy follows logically from the British declaration of policy in Chinese affairs made at the end of 1926, and is a first and major step in the treaty revision which H.M. Government then accepted as being due in justice to China. It is much to be hoped that the concession will be taken in this sense and not made a stepping-stone for demands for the prompt and unconditional surrender of essential foreign safeguards, the removal of which is not yet warranted by existing conditions in China and can safely come about only by a mutual process of adjustment. Much as I hope to see the necessity for special foreign rights replaced at an early date by the security afforded by a responsible Chinese administration effective throughout the country, I do not hesitate to say that in the state of affairs which exists at the present moment the total disappearance of the existing safeguards would be disastrous to foreign business with China.

Of the so-called foreign-controlled services, I have to record, with regret, the resignation of Mr Edwardes, Officiating Inspector-General of Customs since the retirement of Sir Francis Aglen two years ago. He is succeeded by Mr Maze, for the success of whose administration we tender our best wishes.

REORGANISATION LOAN AGREEMENT.

In the case of the Salt Gabelle the National Government have repudiated many of the major provisions of the 1913 Reorganisation Loan Agreement and substituted new regulations, drawn up without reference to the signatory banks, rigorously curtailing the joint supervisory powers of the Chinese and foreign chief inspectors. It is gravely damaging to the new Government's reputation for good faith that they should hold themselves free to alter contracts by their own arbitrary decision even when, as in this case, the rights involved had been made almost a dead letter by the action of the authorities of a previous régime. The Minister of Finance has, meanwhile, publicly pledged himself to provide for the services of the loans secured on the salt revenue, and the foreign Governments concerned have noted his undertaking.

DEFAULTED CHINESE FOREIGN LOANS.

The list of defaulted Chinese foreign loans in which British interests are involved was increased last year by the addition of the Anglo-French loan of 1908 and the Crisp loan of 1912. Five of the railway loans are also in arrears, and the total defaulted payments for 1928 on the British portions alone (not including unsecured loans) amounted to £1,160,000. It is to be hoped that the Government will not delay in taking in hand a scheme for liquidating the large body of arrears on these foreign debts. It may not be out of place to mention in round figures the outstanding amount of long-term Chinese loans raised on the London market. The total is between 30 and 40 millions of pounds sterling, of which roughly one-half relates to loans used for railway construction.

A PERIOD OF TRANSITION.

If my review of the Chinese situation has been less tinged with optimism than some of my hearers might have hoped, let me remind you that I have been dealing with the facts of to-day rather than the promise of to-morrow, and, furthermore, that a transitional period is always a difficult, and often a disappointing, time. I count it a great achievement in itself that the Nationalist Party and its military supporters have held the country together since their victory of last summer, and one can see in many directions outside the range of politics the promise of rapid advance; to take material examples, in the opening up of the country by extensive motor roads and by the aeronautical development of which we have had a striking example in the successful flight by Chinese pilots across the entire length of the country from Canton to Mukden.

SPIRIT OF PROGRESS THROUGHOUT THE COUNTRY.

There can be no doubt that the spirit of progress is abroad throughout the country. May I conclude by saying that those who bear the responsibility of directing this progress and of restoring law, order, and prosperity to the country have our genuine sympathy, that we realise the peculiar difficulties of their task, and, in the following situation, we strive to maintain an outlook essentially broad-minded and free from petty or biased views?

Finally, I would ask for your confirmation of the action of the directors in voting a bonus of 10 per cent. on their salaries to the staff. The year has been a very difficult one to all concerned, and I feel confident you will approve of this recognition of their services.

I now beg to propose the adoption of the report and statement of accounts.

After the proposal has been seconded and before placing the motion before the meeting, I shall be pleased to answer to the best of my ability any questions that shareholders may have to ask. (Cheers.)

THE CHAIRMAN CONGRATULATED.

The Hon. J. Owen Hughes, in seconding, said:—Mr Chairman and gentlemen,—I am sure that shareholders will join me in congratulating our chairman on the lucid and exceedingly interesting exposition of the bank's affairs during the past year, and particularly with the masterly review of the political and economic condition of affairs in the East generally, and more especially in China.

Not only do we here in Hong Kong look forward to this annual meeting of the Hong Kong and Shanghai Banking Corporation to have presented to us the considered views of the court of directors, the chief manager, and branch managers of the institution, so also do the banking and commercial world generally, and I think it will be conceded no better review of the situation has ever been presented than that which we have just now listened to.

I will not attempt to analyse the formidable figures that are disclosed in the statement of the affairs of the bank, which clearly proves its strength and fully justifies its position in the front rank of the world's financial institutions to-day, of which fact we, in Hong Kong, are naturally proud. (Cheers.)

A DIFFICULT AND DISAPPOINTING YEAR.

While we note with regret the result of the year's working is somewhat less favourable than the preceding years, this, however, can cause no surprise to those acquainted with conditions that have ruled in the principal fields of the bank's operations during the past year, and we can well congratulate ourselves on receiving the same dividend as allocated for the past few years, and I would here congratulate the chief manager and all associated with him in the attainment of this very satisfactory state of affairs, bearing in mind the undoubted difficult and disappointing year just passed.

We share with you the hope that during the present year there will be such a revival of trade as will justify the continuance of the same level of return to the shareholders as is now recommended, and that the warning you now give "that without that revival the high level of past years may not be possible" will be found to have been unnecessary.

CHINESE MARITIME CUSTOMS RETURNS.

Reference is made to the Chinese Maritime Customs returns of last year at over 82 million Haikwan taels, being a rise of 13½ millions over the previous year. Although constituting a record and remarkable figures, these should not be exaggerated for the reasons you have given; furthermore, unless and until there is clear evidence that merchandise is moving into the interior markets of China it cannot be confidently asserted that a period of prosperity is immediately at hand, but, given a fair measure of political stability in China throughout the year, with continued industrial peace at home and in Europe generally, and the faithful carrying out of the new Customs tariff without the imposition of any further vexatious taxes on imports, the coming year should show a considerable improvement on past years, and bring a much-needed relief to both Chinese and foreign merchant firms.

One of the most gratifying features of the speech is the pronouncement that the anti-British agitation of two or three years ago has practically vanished, and that a new spirit of friendliness is now making itself felt. I am inclined to say rather that the old spirit of friendliness is becoming more apparent. Whichever it be, we are in entire agreement that we are much indebted to H.M. Representative in Peking, and, as regards Canton and South China, to H.E. the Governor of Hong Kong. (Cheers.)

THE KOWLOON SUB-AGENCY.

We congratulate the directors and chief manager on the opening of the new Kowloon Sub-Agency, which I am sure will be of service to the ever-increasing population on the mainland. For my own part I am sufficiently optimistic of the future of Kowloon as to predict that before many years it will be necessary to have our own premises.

Mr. Chairman and gentlemen, I have very much pleasure in seconding the adoption of the report and statement of accounts. (Cheers.)

The report and accounts were unanimously adopted.

The Chairman.—The business now before the meeting is the election of directors.

Mr H. R. B. Hancock proposed that the appointments of Messrs. J. A. Plummer, B. D. F. Beith, and B. Lander Lewis be confirmed, and that Messrs. H. P. White, T. G. Weall, and W. H. Bell be re-elected directors.

Mr K. S. Morrison seconded, and the motion was carried unanimously.

Mr J. H. Taggart proposed that Mr C. Bernard Brown and Mr John Fleming be re-appointed auditors.

Mr E. L. Sim seconded the proposal.

The motion was carried unanimously.

This concluded the business.

EXTRAORDINARY GENERAL MEETING.

Subsequently an extraordinary meeting was held at which the Chairman moved that the following resolution, which was passed at the extraordinary meeting held on Saturday, February 2, 1929, be confirmed—namely:—

"That the directors of The Hong Kong and Shanghai Banking Corporation be and they are hereby requested and authorised by and on behalf of the shareholders of the Corporation to take all such steps as may be necessary for the introduction of an Ordinance into the Legislative Council of the Colony of Hong Kong and for the enactment of the same by the Governor of Hong Kong with the advice and consent of the Legislative Council thereof, in the terms of a Print which, for the purposes of identification, has been signed by the chief manager of the Corporation, in substitution for the existing Ordinances (except as in such print is mentioned) and Deed of Settlement of the Corporation."

Mr T. E. Pearce seconded, and the motion was carried unanimously.

MORRIS MOTORS (1926) LTD.

HIGHLY SATISFACTORY POSITION.
INCREASING POPULARITY OF PRODUCTS.

The Third Annual General Meeting of Morris Motors (1926), Limited, was held at the registered offices of the company at Cowley, Oxford, on Saturday, April 13, 1929, Sir William R. Morris, Bart., the chairman and managing director of the company, presiding.

The Secretary (Mr S. G. K. Smallbone) read the notice convening the meeting, and the auditors' report to the shareholders was read.

The Chairman, in proposing the resolution that the report and balance sheet for the year ending December 31, 1928, be approved and adopted, said:—

The balance sheet of the company for the year 1928 is, I feel sure, one with which we have every reason to be satisfied, and I presume that you will take the accounts and the report now before you as read.

SOUND TRADING PROFITS.

The profits on trading and the interest received for the year amounted together to £1,314,089 7s. 9d., which figure is arrived at after making full provision for depreciation of assets and for all possible contingencies that are likely to arise, for, as you know, the accounts of the company are always drawn on a thoroughly conservative basis.

It is worthy of note that the profit on trading and the interest received for the year exceeded the average of the earnings for the previous two years by £145,819, and exceeded the average shown in the prospectus by £241,309.

When our prospectus was issued an obligation was entered into for the formation of a reserve of £1,000,000, but, in order still further to strengthen the position of the company, your directors have decided to transfer this year to the reserve £900,000, thus making the total reserve £2,000,000, or twice the amount necessary to fulfil the terms of the prospectus.

I regard this increasing of our reserve fund as essential, under existing conditions, to the building up and support of the business of the company. It has always been my idea to use available profits to secure and provide for the development of the business—a policy which has been proved to be absolutely necessary to the results that have been and are being obtained.

No dividend, for the third year in succession, is being paid on the ordinary shares, again with the sound object of placing the company in such a strong position that it can meet all possible contingencies and maintain and increase its lead in the industry.

I have always felt it my duty to take the utmost possible care of the interests of the holders of the preference shares who have entrusted us with three million pounds of their money, and it is with some pride that I now point out that in three years we have raised a reserve fund of £2,000,000; that, at the present time, our net tangible assets are £2,513,592 in excess of the holdings of the preference shareholders; that we have gilt-edged securities of the value of £2,170,243, and that, during the past three years, the earnings of the company could have paid the dividends on the preference shares more than five and a-half times.

FINANCIAL PRINCIPLES MAINTAINED.

It is generally admitted that the year 1928 was not a good one in the motor trade in this country, and I feel that I am quite justified in stating that the results of the company's operations during that period, as disclosed by the balance sheet, are indicative of a highly efficient organisation.

We will now deal with the accounts in detail. Of the profit of £1,314,089 7s. 9d., there is appropriated for the payment of the dividend on preference shares for the year 1928 the sum of £225,000. The payment of income tax absorbs £259,236 6s. 5d., and there remains, with the amount brought forward from the previous year, a total disposable undivided profit of £1,054,634 10s. 1d., this exceeding the corresponding amount of the previous year by £104,853 1s. 4d. From the total disposable undivided profit the directors propose to carry £900,000 to the reserve fund, while £154,634 10s. 1d. will be carried over to the next balance sheet.

I am glad to see that a great deal of favourable public comment has been aroused by the obvious soundness of this policy. It is a continuation of the sound principles of finance which have enabled us to build the business of Morris Motors (1926), Limited, to its present proportions.

INVESTMENTS.

With regard to the investments appearing in the company's balance sheet, the Government securities are shown at their market value of £2,170,243 5s. 8d., and all the other investments, which are of great value to the company in its trading activities, are well secured.

It is worth while pointing out that the value of the net tangible assets of Morris Motors (1926), Limited, on December 31, 1927, amounted to £4,683,715. The corresponding figures to December 31, 1928, as disclosed by this year's balance sheet, are £5,513,592, and this increase is in itself indicative of the progress of the company, and directly affects the preference shareholders, who rank for priority in the repayment of capital as well as in the payment of dividends.

During the year 1928 very considerable progress has been made by the company in the development not only of its plant and machinery, but also in the nature of its products. The plant and equipment are kept at the highest pitch of efficiency, and no less a sum than £41,002 has been utilised out of profits for making changes in machinery and buildings in order to reduce production costs and improve the saleability of the products.

INCREASED EFFICIENCY OF WORKS.

During the year a body mounting and finishing plant that can rightly claim to be the most highly developed installation of its type in Europe has been erected and put into operation at the Cowley factory, the extensive work involved being undertaken and completed without interruption of normal production—in itself no mean feat of engineering.

During the year, sales of current models were well maintained, and type extant has been installed at Coventry, and is now operating.

To meet wear and tear of plant, machinery, fixtures, fittings, office furniture and amortisation of leases, the sum of £178,171 has also been set aside out of profits.

GREATLY IMPROVED MODELS.

During the year sales of current models were well maintained, and some very important development work was undertaken. The introduction of the Morris Minor model was received by the public both at home and abroad with very great enthusiasm, and this model, which is now well in production and for which there are very large numbers of orders outstanding on our books, is proving itself highly successful. Its advent has proved to be a further source of strength to the company in all markets.

In many senses the Morris Minor marks an epoch in the British motor trade, for it represents the production for the first time of a vehicle designed on conventional big car lines and presented to the public at a price that ensures for it very large sales.

In addition, its performance on the road is such as has never before been attained by cars of similar size and price, and it is fully representative of the progressive policy in design that is continually pursued by the directors.

Concurrently, all our other models have been improved during the course of the year, not only as regards their mechanical efficiency, but also as regards their appearance and the durability of their external finish.

We realise that the day is now far past when a motor manufacturer has to cater solely for the mechanically-minded enthusiast, and, besides developing our engines and chassis to a very high degree of excellence, we have also done a great deal in setting new fashionable style in coachwork designs, comfort and finish, and the new body mounting and finishing plant, to which I have previously referred, is already proving of considerable value in these respects.

Our products have never been so popular with the public as they are to-day, and our policy of developing year by year our range of cars to meet all tastes and requirements has proved, and continues to prove, highly successful.

HIGH FACTOR OF SAFETY.

There is one other development to which I would like to call attention, and that is the incorporation of a high factor of safety in all our models.

To meet crowded road conditions every effort should be made by manufacturers to make their cars as safe as possible to operate, and to this end we have, besides standardising the fitting of four-wheel brakes on all our models, introduced, recently, bumpers fore and aft as standard fitments, and also, through a satisfactory arrangement made with its producers, we are able to offer Triplex shatter-proof glass at option at very attractive prices indeed.

One other point I should like to stress is that our service charges are constantly decreasing in proportion to our rate of output; and this is important, for these charges are a direct index to the reliability of our products in the hands of the public. This is proof that besides reducing prices, increasing our output and exhibiting a very satisfactory financial result, our products are proving themselves increasingly reliable, and, therefore, popular.

Our efforts to cultivate overseas markets have met with encouraging success. We are admittedly faced with considerable opposition from foreign firms, and our task of meeting them on equal terms is rendered more difficult because of the system of taxation that is in force in our home market. The horse-power tax as it stands at present, apart from any question of amount, is wrong in its principle of application, for the arbitrary technical formula on which it is based is thoroughly out of date, and imposes a distinct obstacle to improvements in engine design. We are making substantial progress overseas, but we should do better, were our actions not restricted in this way.

Although the results achieved during 1928 by the company can, as I have said before, be looked upon as highly satisfactory, we and our workmen are almost entirely in the hands of the Government, which very largely has the power to decide by its policy of Safeguarding or otherwise whether our future as useful productive members of an industry is secure or not.

BENEFITS OF SAFEGUARDING.

The motor trade of this country has been able to make certain definite progress under the protection of Safeguarding, but I say without hesitation that removal of the McKenna duties would seriously affect not merely our chances of increased prosperity on overseas markets, but—and this is far more serious—the tenure of our position at home would be very seriously jeopardised. A reduction of output and employees would be inevitable.

In these days we often hear the project of the Nationalisation of means of production suggested by those in favour of Socialism. I think I am entitled to ask whether, under national control, this or any similar business could possibly have achieved the results which we have maintained during the past three years. Two entirely new models have been successfully launched; the prices of the other models have been greatly reduced; substantial improvements in the specifications of all our products have been made; the business

employs, directly, an average of 10,000 operatives and staff, and, indirectly, probably another 50,000 men and women; and, although we are selling in the face of severe competition, we have accumulated a necessary liquid reserve of no less than £2,170,243, which is invested in Government securities to meet the risks and contingencies of future trading.

EXCELLENT LABOUR CONDITIONS.

I want here publicly to pay tribute again to the continued loyal support of the workmen and staff of this company. The year 1928 was, as I have said, one in which more than ordinary difficulties arose and had to be faced; but the spirit of cheerful willingness and undaunted progressiveness that is stronger among the employees of this company to-day than it ever has been enabled them to be overcome, and the company to show such an excellent trading result.

We constantly do our utmost to encourage thrift among all our workers, and our well-established employees' savings fund is excellently supported. The company's employment benefit scheme has also proved itself of great benefit to the employees.

I feel I am justified in saying that the company has never been in such a strong and vigorously healthy condition as it is to-day.

I have much pleasure in formally moving the adoption of the report and balance sheet.

Mr E. H. Blake, deputy-managing director, seconded the resolution, which was carried.

The Chairman: I have much pleasure in proposing the re-election of the following to the board of directors: Mr H. Landstad, Mr A. A. Rowse, Mr H. A. Ryder, Mr H. Seaward, Mr W. M. W. Thomas, Mr F. G. Woollard and Mr H. W. Young.

Mr R. W. Thornton seconded this proposal, which was carried.

The Chairman then proposed the election of Mr S. G. K. Smallbone, the secretary of the company, to the board of directors. This was seconded by Mr E. H. Blake and carried.

Mr Andrew Walsh then proposed that Messrs Thornton and Thornton, of Oxford and London, be re-elected auditors for the ensuing year. This was seconded by the Chairman and carried.

The Chairman: In concluding this meeting I should like sincerely to thank the directors, management and staff for their hard work, progressive outlook and co-operation during the year.

UNITED DRAPERY STORES, LIMITED.

CAPITAL INCREASE SANCTIONED.

The second annual general meeting of the United Drapery Stores, Limited, was held, on the 16th instant, at the Cannon Street Hotel, London.

Sir Arthur Wheeler, Bart., D.L., J.P. (chairman of the company), presided, and, in moving the adoption of the report, said that the board were well satisfied with the results of the past year's working. The gross income from investments in the Associated Companies which they controlled was £113,856, as compared with £113,847, and in paying the dividends to the United Drapery Stores the Associated Companies had by no means distributed everything available, as was evidenced by the fact that the accumulated profits and reserves carried forward by those companies amounted to £124,367, as compared with £116,778 a year ago. The net profit was £86,521, as compared with £75,691 a year ago.

The board were well satisfied with the outlook. Their businesses were situated largely in the Greater London area, where unemployment was not so intense as in the North and North Eastern Counties. Ladies were spending more in the commodities which their companies supplied, and while they continued to handle the right type of goods at the right prices they had no fear as to their ability to show good results at the end of the year.

Mr L. M. Drage, in seconding the resolution, said that the shareholders to-day stood in a very handsome position. He thought they could look forward to greater profits than those disclosed in the year under review. The directors had only one object in view, and that was "progress."

The resolution was carried unanimously, and a final dividend at the rate of 5 per cent. actual, making 10 per cent. for the year, was declared.

The Chairman, in moving that the capital be increased to £1,000,000 by the creation of a further 250,000 shares at £1 each, said that many opportunities had occurred of employing profitably increased capital, otherwise they would not have suggested that the capital should be increased.

In reply to a question, the chairman said that his view was that existing shareholders should have an opportunity of subscribing to the new shares before the general public, and that they should have an opportunity of doing so on very favourable terms.

The resolution was carried unanimously.

THE COUNTY OF LONDON ELECTRIC SUPPLY COMPANY, LIMITED.

FURTHER DEVELOPMENT IN PROSPECT.

The thirty-fifth ordinary general meeting of the County of London Electric Supply Company, Limited, was held, on the 16th instant, at River Plate House, London, Sir Bernard E. Greenwell, Bart., vice-chairman, presiding, in the unavoidable absence of the chairman and managing director, Sir Harry Renwick, K.B.E.

The manager and secretary (Mr John C. Dalton) having read the notice convening the meeting and the auditor's report,

Sir Bernard E. Greenwell said: Ladies and gentlemen, I have to commence the proceedings by apologising for the absence of our chairman and managing director, owing to indisposition. Sir Harry reminds me that he has not missed a general meeting of the company for about thirty-five years, and I am sure you will sympathise with and excuse him on this occasion. He asks me to claim your indulgence by permitting me to read the speech which he has so carefully prepared.

He says:—I am in a position to record another year of continued prosperity and progress—progress in every department. Briefly stated, the position is shown by the following summary: There is an increase of 75,151,048 units in the units sold for the year, making a total of 323,462,367. There is an increase of 40,449 kilowatts in the new business secured, making a total of 287,390 kilowatts connected, while there is an increase of over 20,000 in the number of new consumers obtained during the year.

As to the revenue, there is an increase of £144,810 in the gross revenue received, making a total for the year of £1,859,159. The net revenue for the year is even more satisfactory, for it shows an increase of £193,103, whilst the sum placed to various reserve accounts out of revenue for the year amounts to over £346,000, and we propose to pay 10 per cent. for the year on the ordinary shares of the company, which is an increase of 2½ per cent. over 1927.

INCREASE OF CAPITAL.

Your business is growing so rapidly that further developments at Barking and elsewhere are necessary, and it is your board's intention to make a further issue of capital as soon as a favourable opportunity presents itself. It is my sincere hope and intention that the issue, when made, should give a bonus to the shareholders in some shape or form, and that is not a very difficult matter, having regard to the market price of our ordinary shares. I think we may fairly congratulate ourselves on the figures disclosed. Our consumers, too, have shared and must continue to share in our prosperity. The value of the reductions made to our consumers during the past year exceeds £200,000, and still further reductions are in contemplation.

At our last annual meeting I informed you that we were proceeding with the erection of the second half of the first section of the Barking power house; this is now practically complete and in service, and I have to add that the growth of our business is so rapid that we are now approaching the Electricity Commissioners for their approval to the erection of a further section. We have always claimed that Barking would be a most economical station, and I am now happy to place on record the fact that the efficiency of that station compares favourably with the best results obtained at any other power station in the kingdom.

PROSPECTS FOR THE CURRENT YEAR.

As to the prospects for the current year and the future progress of your company, for the three months of this year ended March 31 there is an increase of 15 per cent. in the units sold over the corresponding period last year; an increase of 4,439 in the kilowatts of new connections, while the number of new consumers has increased by 2,748, and, in addition, important negotiations are now pending with prospective large consumers. To give you some idea of our prospects, I may mention that the national rate of increased consumption of electricity for the year was only about 8 per cent., whereas our own increased output as compared with 1927 was over 30 per cent. The increase in units sold was over 75,000,000, and it is interesting to note that this increase for the year equals approximately the whole output of our undertaking in the year 1924—just four years ago.

Your company is now responsible for an area of nearly 1,000 square miles in extent. You will see, therefore, that our organisation is the largest of its kind in the country. As to our associated companies, I am happy to say that those with which your company has for many years been allied continue to make satisfactory and increased progress. These additions to the company's interests, apart from Essex, involve additional areas amounting to 170 square miles.

The report and accounts were unanimously adopted, and a resolution increasing the capital passed. A vote of thanks to the directors, staff, and employees was also passed.

UNITED MOLASSES COMPANY, LIMITED.

CONTINUED EXPANSION—INCREASED PROFITS.

INCREASE OF CAPITAL APPROVED.

The Third Annual General Meeting of the United Molasses Co., Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London, Mr F. K. Kielberg (chairman and managing director) presiding.

Mr Cecil Dodd, A.S.A.A. (secretary), read the notice convening the meeting and the auditors' report.

The Chairman, who was received with cheers, said: The report again shows a satisfactory advance on last year's profits, and indicates the great financial strength and the continued growth of the company. The net profits for the twelve months ended December 31, 1928, after making adequate allowances for depreciation, amounted, as you will see from the report, to £386,673 12s. 11d. Our reason for transferring £92,000 from the reserve account to profit and loss account in the United Molasses Co.'s accounts, while leaving an amount of £166,254 1s. 5d. as profits not declared as dividends by associated companies, will be clear on referring to my statement at the extra-ordinary general meeting of the company held on June 2, 1928. When at that meeting I announced the terms on which we had secured an interest in the Dunbar Molasses Corporation, New York, I mentioned that the purchase contract gave the vendors the right to declare as dividend an amount equal to the net liquid assets of the company. The amount which these terms gave vendors the right to withdraw was $1,277,803.70, and to replace this amount—the working capital of the company—your directors have preferred to allow Dunbar's profits to accumulate rather than to incur the heavy expenses which would be involved in declaring such earnings as dividends into the United Molasses Co., seeing that this would have necessitated an immediate replacement of the capital in question.

THE DIVIDEND.

After carrying into effect these suggestions there remains, after deduction of the interim dividend on the ordinary shares, a net available balance of £143,087 19s. 2d. The board proposes to pay a final dividend of 11 per cent. actual on the ordinary shares, less tax.

In consequence of the rapid expansion of the company's business, it has become increasingly difficult to present a clear and fully informative statement of the company's position through the legal balance sheet, and we have, therefore, this year added to our report a consolidated balance sheet. You will get some idea of the extent of the business from the consolidated balance sheet, which shows about £1,500,000 invested in motor vessels and steamships, nearly £1,400,000 invested in storage tanks, rail tank cars, &c., and about £1,000,000 in molasses. The investments of £261,000 consist of holdings in outside securities, and are taken at cost price, which is considerably below to-day's market value.

SETTLEMENT WITH DUNBAR GROUP.

I should specially like you to bear in mind, when analysing the accounts, that the year bears the full burden of the short but very determined struggle between the Dunbar group of associated companies and our company for the leadership in the world's molasses business. The faith we had in our superior equipment and stronger financial structure made us confident of the issue when Dunbar threw down their challenge to us in the summer of 1927. The determined and effective manner in which we countered their attack without a doubt led to the speedy termination of the struggle, which ended in May last year by our acquiring an interest in the Dunbar Co. on most favourable terms—terms which more than justified the sacrifices we had made in the defence of our position in the trade when it was challenged.

We met the overtures for a settlement as readily as we had met the attack, and the terms upon which we ended the struggle not only brought the Dunbar Co. into our group of associated companies, but secured for our company the benefit of the services of a most capable, energetic and far-seeing management, and I should like to take this opportunity of expressing to Mr Maurice Levin, the president of the Dunbar group of associated companies, our most sincere thanks for and appreciation of the valuable services he is rendering our companies. We were equally fortunate in retaining the management of C. U. Snyder, Inc., when we acquired an interest in that company, which is expanding its business in a most satisfactory manner.

Our American customers and friends have quickly come to realise and appreciate the value of the services which our world-wide organisation is capable of rendering to their market. We are doing a large and increasing business in the United States, and are working in friendly co-operation with producers and consumers alike in all markets in which American interests play a part, but our present position has not been attained without determined attempts at different times from different quarters to encroach upon our territory or to check our progress in new markets. We have had to defend our position in markets where we have been long established, and we have had to fight our way into new markets where it was necessary we should gain a footing, but it has in no instance been our policy to attempt to crush existing smaller firms. We have hitherto been able to retain every customer with whom we ever traded and have succeeded in establishing friendly and cordial co-operation in every new market we have entered, with the result that whereas last year we did business at a loss in many parts of the world, at the moment we are not trading anywhere without making a reasonable profit and a satisfactory return on the capital invested.

THE FLEET.

Since the annual meeting in April last year we have taken delivery of three Diesel tankers and one tank steamer, in addition to which we have contracted for seven Diesel tankers and one tank steamer for delivery during the next twelve months. During the year we sold one of our old steamers, thereby continuing our policy of disposing of our old tonnage and replacing it by new. Every ship we have built has been built in British yards. Although our fleet has grown so very rapidly during the last few years, our building programme has not kept pace with the expansion of our trade. We have not only been able to employ every new boat when completed, but in addition we have had to charter outside tonnage, and have ample employment in sight for all the new boats under construction, which will give you some idea of the further expansion in sight.

In forming the large world-wide organisation, occupying a predominating position in the world's molasses trade, we are merely following the policy that is being recognised and adopted by all progressive industries throughout the world in the conduct of business to-day, and I should like to give our assurance that it will be our constant endeavour to utilise our experience and knowledge and the large means which our shareholders are so readily placing at our disposal to continue to equip ourselves with the most up-to-date facilities for handling and transporting molasses as economically as possible. It is our policy to spare no expense that will enable us to cheapen our handling and transportation charges, that we may be able to pay the producer a higher price and still supply the consumer with his raw material at a lower average price than he has been accustomed to pay over a period of years. At the same time, we endeavour to protect them both against the unexpected and violent fluctuations that used to take place in molasses from year to year, to the great inconvenience and financial danger of everybody connected with the business.

NEW CAPITAL PROPOSALS.

The total amount of additional capital required to meet expenditures for equipment during the current year is about £1,750,000. The much larger business we shall be handling when these new ships and tanks are ready will necessitate considerable additional working capital. To furnish the means to meet these commitments we suggest to increase the capital by 2,000,000 ordinary shares and 1,000,000 6 per cent. preference shares, and it is your board's intention for the time being to issue immediately 666,666 ordinary shares, for which we propose to give the ordinary shareholders the right to subscribe at the rate of one new ordinary share for every three ordinary shares held, at an issue price of £2 10s. per share. No fractions will be issued. In addition, your board intends to give to the directors, the principal officers, managers, and members of the staffs the right to subscribe for a maximum of 20,000 shares at the same price and on the same terms; the number of shares allotted to any individual will be limited to 500. We have a most loyal and efficient staff both at home and abroad, and we think it right and fitting and to the best interests of the company that as substantial shareholders they should be given every opportunity of participating in the company's prosperity and progress.

It is the intention to issue forthwith the new ordinary shares for payment as follows: 25s. per share on May 1; 25s. per share on July 1. The new shares will in all respects rank pari passu with the existing ordinary shares, apart from the fact that they will not participate in the final dividend for last year, payable on April 25.

He moved the adoption of the report and accounts, which was seconded by Sir James Cooper, and carried unanimously.

The resolution, as detailed in the report, increasing the capital from £3,000,000 to £6,000,000 by the creation of an additional 3,000,000 shares of £1 each, was unanimously agreed to.

Sir George Jessel moved a resolution thanking the chairman for his conduct of the meeting and for his control of a great company in a great manner. The resolution was carried with acclamation.

BANCA COMMERCIALE ITALIANA.

DIVIDEND OF 13 PER CENT.

OPERATIONS OF THE BANK.

The thirty-fourth annual general meeting of the Banca Commerciale Italiana was held in Milan, at the head office of the bank, on March 23rd last.

Senator Crespi occupied the chair and in submitting the report for 1928 said: During the past year, general conditions in Italy have naturally been influenced by the monetary reform carried out towards the close of 1927. As we ventured to forecast in our last report, the difficulties which the year 1928 has brought in its train for Italy have not been so serious as might have been feared. Your bank has spared no effort—within the limits of its scope and possibilities—in its continued support and attention to the home markets, whether industrial, commercial, or financial. At the same time it has given still greater impulse to its activities abroad by strengthening and extending its organisation in the United States of America and by completing its network of auxiliaries in Eastern Europe, in order that the functions of intermediary, for which our home markets are so eminently suited, should be rendered still more profitable. It has also participated in the international financial operations—in a measure proportionate to their importance—which have helped to guarantee the monetary stability of Greece, Bulgaria, and Roumania.

We have opened further town agencies in Milan, Genoa, and Rome, and new offices at Frosinone, Rieti, Sora, and Treviso, apart from some sub-agencies in smaller parts.

THE BALANCE SHEET.

Coming now to the examination of the balance sheet, which we submit for your approval, you will notice first of all a reduction under the heading of "Bills receivable, Treasury bonds, and Government securities (Littorio Loan)"; this is chiefly in consequence of very important reimbursements made by industrial concerns which have consolidated their finances by means of long-dated loans; on the other hand, commercial bills are up by quite a handsome figure.

A change which calls for special attention is the rise in "Contangoes and Loans." It proves once more our constant interest on behalf of the stock markets, in regard to which we may well claim to have boldly and without deviation followed a clear and steady course, from which we have not allowed ourselves to be deflected by temporary inducements, a policy which we consider as best suited to the national interests; we are convinced that it will soon show profitable and lasting results. It will likewise help to foster the interest which foreign investors have already shown for Italian stocks during the past year.

The reduction under "Participations in other Banks and Syndicates" is due to the realisation on profitable terms of various share holdings which we had been carrying for some time.

LIABILITIES.

On the "Liabilities" side there has been a significant increase in "Savings Deposits," and you will notice also that our "Commercial Acceptances" have reached a larger figure.

The "Profit and Loss" account, which has again been drawn up on strictly conservative lines, closes with a net profit which shows but a trifling difference from that of the previous year and enables the dividend to be maintained at the rate of Lit. 65 per share (13 per cent.), at the same time providing for another allocation of Lit. 20,000,000 to reserve and leaving some Lit. 28,500,000 to be carried forward.

ALLOCATION OF THE PROFITS.

We feel sure that you will endorse our proposal that the profits be allocated as follows:—

	Lire.
Net profits as per balance-sheet	114,161,389·65
10 per cent. to the ordinary reserve, in accordance with Article 3 of the Royal Decree of September 7, 1926	11,416,138·95
	102,745,250·70
5 per cent. dividend on the capital of Lire 700,000,000	35,000,000·00
	67,745,250·70
5 per cent. to the Board of Directors	3,387,262·55
	64,357,988·15
out of which we propose paying an additional dividend of 8 per cent. on the paid-up capital	56,000,000·00
which will leave a balance of	8,357,988·15
to which is to be added the amount carried forward from previous years	28,707,806·90
	37,065,795·05
out of which we propose transferring to the Ordinary Reserve Fund (in order to increase it altogether by the round figure of Lit.20,000,000) a further amount of	8,583,861·05
leaving a balance to be carried forward of	Lire 28,481,934·00

The balance-sheet was passed unanimously by the general meeting of shareholders.

The retiring members of the board were all re-elected, and Signor Mino Gianzana's election to the board was confirmed.

PAQUIN, LIMITED.

GOOD RESULTS AND PROSPECTS.

The 32nd annual general meeting of Paquin, Limited, was held on Thursday, 18th April, at the Cannon Street Hotel, London.

The secretary (Mr C. Beavis) having read the notice convening the meeting and the auditors' report,

Sir Harry K. Newton, Bt. (the chairman) said that the outstanding feature of the accounts was that the exchange had now been taken at 125 francs to the £ sterling. In 1921, after an application to the High Court and at the cost of writing down the capital of the company by £173,000, or one-half of the then issued ordinary share capital, it was found possible to prepare the company's accounts for the year 1921 on the basis of an exchange rate of 50 francs to the £ instead of the old pre-war rate of 25 francs to the £. The object of the course then taken was to bring the accounts as they were presented into line with the actual facts, and for a very short time that object had been realised, but it had not been long before the gap between the par of exchange and the rate current widened still further, until at long last—but only after the wildest fluctuations—the rate of exchange had settled down in the vicinity of 124 francs to the £, and ultimately, in June last, was stabilised by the French Government at 124·21 to the £6.

Without having to resort to the High Court and without any further reduction of capital, they were now able to effect a still greater modification and to present accounts made out on the basis of 125 francs to the £ and with a reserve brought by that day's appropriation from the figure of £21,000, to which it had been reduced, up to £60,000, and showing a net profit for the year of more than £74,000. (Applause.) He thought all would agree that that was an achievement of which they might all be very proud. (Hear, hear.)

EXPANSION IN LONDON AND BUENOS AYRES.

The sound and conservative policy in matters financial which the directors had consistently pursued had been a considerable element in making possible what had been now accomplished. The other and principal factor was the inherent greatness of the business, founded more than 30 years ago by Monsieur and Madame Paquin, but continually revivified and reinspired by the artistic genius, the sound craftsmanship, and the devoted labours of those who were privileged to serve the house of Paquin in its many departments in various parts of the world. While the increase in the volume of the company's business had been general, in London it had been specially remarkable. There was also a very marked improvement in their Buenos Ayres branch. Whereas last year they were able to make a distribution of 20 per cent. on the ordinary shares, provide allocations to reserves of £26,000, and have a free carry-forward of £23,851, subject to directors' additional remuneration, this year they were able to make a distribution of 22½ per cent. on the ordinary shares, provide allocations to reserves of £28,400, and leave a carry-forward of £24,228. The directors felt that the expanding trade and profits of the company justified this increase in the dividend, and they were only too glad to be able to make the recommendation.

For some years past he had felt compelled year by year to take a rather pessimistic tone at the annual meetings of the company, to caution shareholders against anything like undue optimism, and to warn them as to possible or probable difficulties to be surmounted. With the step they had taken this year, following the action of the French Government in stabilising the exchange, the directors felt that the main part at least of the difficulties and obstacles of which they had been fearful had now been removed.

SPLENDID DIVIDEND RECORD.

Looking backwards, it would interest shareholders to know that, assuming they approved the board's recommendations, since the application to the High Court with reference to the reduction of capital—that was, in the last eight years—the company would have distributed in dividends £241,980 net, after deduction of income tax. The figures for the last three years were even more encouraging, for in respect of those three years there would have been distributed in dividends a net sum of £123,500, and during the same period the allocations out of revenue to reserves amounted to £77,400, or a total profit appropriation during those three years of £201,000 net.

In conclusion, he would say that the position in all respects was stronger than it was 12 months ago; they had builded solidly and well; their trade had increased, and he was glad to say was increasing; the reputation of the house stood higher than ever before; and there seemed no reason why they could not look forward with confidence to still further increased prosperity in the future.

The report and accounts were unanimously adopted.

JUGRA LAND AND CAREY, LIMITED.

REDUCED COSTS AND PROSPECTS OF FURTHER REDUCTIONS.

The ninth annual general meeting of shareholders was held in the Hall of the Institute of Accountants and Actuaries, 220 St. Vincent Street, Glasgow, on Friday, April 12, 1929, at 12 o'clock noon, Mr. L. Dougal presiding.

Mr. Allan Macdonald, for the secretaries, having read the notice calling the meeting, and the auditors' docquet, the Chairman said:—

Ladies and Gentlemen,—You have had the report and accounts in your hands now for the statutory period and, if you agree, we shall, as usual, hold these as read.

At our last meeting I mentioned that it was probable that we would have a trying time consequent upon the withdrawal of restriction, but that the company, with its resources, should be able to give a good account of itself.

A SATISFACTORY YEAR.

It has proved to be the case that the rubber producing industry has suffered from low prices. I think you will agree, however, that, under the circumstances, we have had a satisfactory year.

"Costs," both of rubber and copra, have been reduced, and, although we obtained bigger crops with no increase of revenue expenditure, the fall in the selling price of our rubber from 1/5.84 per lb. to 9.67d. per lb. reduced our net profit from £87,799 15s. 9d. to £73,100 5s. 2d. The price obtained for copra was £26 4s. 7d. per ton, against £26 12s. 2d. per ton last year. Depreciation has been amply provided for, £18,837 4s. 9d. having been written off.

MAINTENANCE AND DEVELOPMENT OF THE PROPERTY.

You will have seen from the balance sheet that we have spent considerable sums on buildings, and on maintenance and development of the property. It is unquestionable that the estate should be maintained in the highest possible state of efficiency, and the board are satisfied that the money so spent will prove to have been profitably invested. In this connection I may say that Mr Mustard, the visiting agent, has, as usual, given a good report on the properties. He mentions that rubber trees and coconut palms generally are in good condition; that the tapping is first class and that the upkeep of the estate is satisfactory. For this our thanks are due to the eastern staff.

During the year the question of planting up some 400 odd acres which had been felled prior to our last meeting was considered. The matter was left to Mr French, who, as you see from the report, is at present in the East. We have now heard that he considers it advisable to clear up and plant only 262 acres of the felled land during the year, and it has been decided to plant 94 acres of this with coconuts and the balance with rubber.

With an estimated output of about 4,000,000 lbs. of rubber, of which 672,000 lbs. have been sold forward at prices equivalent to almost 1s. per lb. landed in London, I think, despite a rise in wages, we shall be able to produce rubber at even less than the 6.06d. per lb. shown in this report. Unfortunately, at the present moment the copra market is dull, but here again our expected increased crop should help us.

CULTIVATION OF TEA.

Last year reference was made to the cultivation of tea, and I see from the Press that it is expected that further announcements will be made at this meeting. The latest information from the estate shows that there are under 100 acres set apart for tea, and these have not all been planted up, 28½ acres being the total shown in the report. There is little tea grown in Malaya and, as I explained last year, what we are doing now is in the nature of an experiment, so far only some three acres being ready for cropping. What we have planted has been favourably reported on, but we must wait until we are satisfied that it will be profitable to grow tea on a larger scale before we decide to embark upon any big scheme.

IMPROVED CASH POSITION.

Our cash position, as shown in the balance sheet, is further improved by the fact that, since the close of the accounts, the very considerable stock has been realised.

It is impossible to speak with any accuracy as to the present position of supply and demand, and I shall not attempt to make any forecast as to the future. I am sure that this company with its capacity for cheap production will always be able to show satisfactory results.

I now beg to move that the report and accounts for the year ended November 30, 1928, be adopted; that £30,000 be transferred to reserve account, and that a dividend of 5 per cent., less income tax, be declared.

I shall ask Mr Cook to second this resolution, and when this has been done, and before putting it to the meeting, I shall be glad to answer, to the best of my ability, any question any shareholder may care to ask.

The report and accounts were adopted.

Mr Peter MacLellan was re-elected a director.

Messrs Gibson, Anderson and Co., C.A., were re-elected auditors.

MONTE VIDEO WATER WORKS COMPANY, LIMITED.

EXTENSION OF THE SYSTEM.

The fiftieth ordinary general meeting of the Monte Video Water Works Company, Ltd., was held on the 12th instant, at 52 Moorgate, London. Mr James Anderson (the chairman) presided.

The Chairman, in moving the adoption of the report and accounts, said they had at last attained the object they had been seeking for several years past, viz., permission to carry out a much-needed extension of the water supply of Montevideo. The urgent necessity for such extension had been explained at every meeting held during the last five years, as also the difficulties encountered in giving effect to it. Having recapitulated the causes of the delay, he said that consideration of the contract with the Government had given rise to much discussion in the House of Deputies, and no decision had been arrived at when the Session was closed in the autumn of last year. Since then the matter had remained in *statu quo*. Meantime, the urgency of extending the water supply at the earliest possible moment was becoming more and more apparent, and the Executive Government in December last, as an emergency measure, granted the company permission to proceed with the laying of a new 36-in. pumping main, which was the most important item of the proposed extensions, the company, on the other hand, agreeing to make the reductions in tariff designated in the A Referendum Contract. This resolved the most important of the points under discussion between the Government and the company, and enabled the company to commence at once with the most pressing item of the proposed extensions. Having explained the vital importance of this new main, he mentioned that the cost of the main, including pipes freight and laying, was estimated at approximately £350,000. When all the programme was completed their new capital expenditure would, it was estimated, be in the neighbourhood of £750,000. They should then, however, be in a position to extend their system to many new districts in the suburbs of the city. They were confident that an extended capacity to supply would lead to a large increase in the sale of water.

THE OUTLOOK.

As to the outlook for the current year, he mentioned the main factors affecting the position and outlook, observing that unless something unforeseen occurred they anticipated no difficulty in maintaining the usual rate of dividend, notwithstanding the incidence of heavy capital outlay on the extensions. As to the additional capital required they were increasing the ordinary capital by £343,750, and proposed to offer 239,062 shares of £1 to the stockholders for subscription in cash at par, being at the rate of one new share of £1 for each £4 of stock now held. That would give £239,000 which, with some £261,000, which they had available on this side in investments and cash, would provide a total of £500,000, or two-thirds of the total required. The remaining third would not be wanted for some considerable time, and the directors would in due course decide as to the best means of raising it.

Mr J. Percy Clarke, C.B.E., M.Inst.C.E., seconded the resolution, which was carried unanimously.

Mr Clarke, in moving a resolution to place on record the grateful acknowledgment of the company of the very valuable services rendered by Mr. Anderson, said that Mr. Anderson's connection with the undertaking extended to some 50 years, and it was mainly to Mr. Anderson's personal supervision, ability and foresight that the company was in the prosperous condition it was to-day.

Mr John Adams seconded the resolution, which was supported by Mr George Shaw and Mr Mitchell Innes on behalf of the stockholders, and carried unanimously.

The proposal to increase the capital of the company to £1,300,000 was unanimously approved.

IMPERIAL CHEMICAL INDUSTRIES, LIMITED.

SECOND ANNUAL GENERAL MEETING.

INCREASED PROFITS.

INCREASE OF CAPITAL.

The second annual general meeting of Imperial Chemical Industries, Limited, was held at the Central Hall, Westminster, S.W.1, on Thursday, April 18, 1929, the Right Hon. Lord Melchett, P.C., D.Sc., F.R.S., chairman of the company, presiding.

The secretary (Mr P. C. Dickens) read the notice convening the meeting and the resolution for the increase of capital.

The treasurer (Dr W. H. Coates) read the auditors' report. The report and accounts were taken as read.

Lord Melchett said that the company had made considerable progress in profits and production despite the fact that the general condition of trade in 1928 had not improved as had been anticipated. He was glad to observe that there was a general improvement in trade. The products of the company were so widespread and universal that the prosperity of the company was naturally related to the prosperity of the country. It was of the utmost satisfaction that in a year such as 1928, the prosperity of Imperial Chemical Industries had been so considerably improved.

DE-RATING ACT.

While not desiring to introduce any political note, he felt he must refer to the De-rating Act as a matter of outstanding importance to the industry of the country. He had always been a consistent supporter of a proposal which would remove from British industries a burden of about £26,000,000 per annum. The rating system in operation placed an intolerable weight upon the industries which were most depressed. The De-rating Act had broken the vicious circle and he felt sure it would prove one of the most fruitful means for the restoration of British industry. A curious accusation had been made against himself as one who supported a measure which was beneficial to industry for the sake of his own businesses. He would be a very bad chairman who did not look after the interests of his shareholders. With characteristic exaggeration and ignorance of figures it was alleged by this politician that the concerns in which he was interested would benefit to the extent of £600,000 per annum. A careful calculation by experts had been made and it was found that Imperial Chemical Industries would benefit this year by approximately £50,000, and in a full year by about £200,000.

TECHNICAL DEVELOPMENT.

The technical development of the company had proceeded with great results. The Billingham Works of Synthetic Ammonia & Nitrates, Limited, represented a very great achievement, and he desired to pay a tribute to Colonel G. P. Pollitt and his able staff. When the present problem of construction at Billingham was completed the company would have an investment there of rather more than £25,000,000. By the end of the present year the works—which is rather a city than a works—would be producing 2,500 tons per day of sulphate of ammonia and considerable quantities of other products. Next year the range would be still further extended by the addition of a number of other organic chemicals. At his old home at Winnington, practically the whole of the plant had been reorganised during the past two years, and the work had been carried out without interfering with the steady and normal output of the plant. The reconstruction had involved a capital expenditure of some £850,000 in 1928, but a satisfactory return on the outlay was anticipated with confidence. Indeed, it had been found that the saving in the alkali section in 1928 gave a return of approximately 22 per cent. on the average capital outlay during the last two years. In pursuance of development and research problems the new research station and farm at Jealott's Hill was nearing completion. This was one further stage in the company's investigation of scientific problems affecting agriculture, and the results would benefit not only agriculture in this country but throughout the Empire. As an example of the beneficial effect of research upon the company's activities he need only mention that the company held about 500 British patents, while British patent applications pending amounted to 215.

LABOUR RELATIONS.

A year ago the company had 40,000 men and women in its employment. To-day it had approximately 53,000. At the present time, in pursuance of the share participation scheme announced last year, employees of Imperial Chemical Industries now held a total of 850,636 shares in the company. Relations with the Trades Unions continued to be of a close and cordial character. He had committed himself personally by signing the report of the Melchett-Turner Conference to a recognition born of lifelong experience of the value of working together with the accredited representatives of organised labour. His experience as chairman of the employers' group of the Melchett-Turner Conference convinced him that the responsible leaders of labour to-day were anxious to assist in the prosperity of industry, which was the only source from which those benefits could flow which could improve the position and life of those they so ably represent. The first elections for the 71 works councils had just been completed and the interest displayed by the workers could be judged by the fact that there were only 56 unopposed returns out of a total of 287 wards, and that the percentage of voting was 92.9. When he had finished his labours that morning he would that afternoon preside over the inaugural meeting of combined delegates of these councils and place before them, as he had placed before the shareholders, the result of their efforts and their problems, present and future. He did not think he was wrong in saying that this was the first time such a thing had ever been done.

FINANCIAL RESULTS.

The annual meeting this year was being held nearly six weeks earlier than last year, and it reflected great credit upon all concerned, including the auditors, that this had been possible. The printed report, which was already in the hands of the shareholders, enabled him to concentrate his speech upon particular points. The profits for the year amounted to the satisfactory total of £5,448,243, or an increase of £921,018 over those for 1927. The total earnings represented 10.47 per cent., or just over 2s. per £1 share on the ordinary capital, and practically 6 per cent., or 7d. per 10s. share on the deferred capital. The year's profits had been arrived at after meeting the cost of maintaining in the highest efficiency all plant and other properties of the company. Referring to the liquidation of Nobel Industries, Ltd., he desired to pay a personal tribute to the results of Sir Harry McGowan's investment policy, which had proved so shrewd and far-sighted.

OBSOLESCENCE RESERVES.

The company had developed a new policy and created a precedent by a new method of providing for the contingency of the obsolescence upon machinery and buildings—a risk which should never be absent from the minds of those responsible for the conduct of large manufacturing enterprises. The total obsolescence reserves of the company were over £9,000,000, and this represented 22 per cent. of the total book value of the plant, machinery and buildings of the subsidiary companies. He felt sure that all would agree that this state of affairs was one of great strength. He had always been entirely in favour of building up financial resources from which plant could be replaced without difficulty or danger to the future prosperity of the concern. General Motors had recently spent nearly £6,000,000 in re-modelling their plant for the production of some of their new models for this year. This sum had been accumulated by the company out of its profits. To build up the necessary financial resources it was essential that too large a proportion of profits should not be distributed immediately to shareholders, but should be retained to provide for capital appreciation. For the four years 1924-1927 the I.G. Farben-Industrie had distributed an average percentage of profits of 52 per cent. The Allied Chemical and Dye Corporation in the United States had for the four years 1925-28 distributed 52 per cent., while last year the United States Steel Corporation had distributed 56 per cent. Imperial Chemical Industries had only been in existence a short period of two years, and those had been years of difficulty in national industry. The dividend of 8 per cent. on the ordinary shares and 1¾ per cent. on the deferred shares was equivalent to 12.875 per cent. on the old ordinary shares of Brunner, Mond and Co., as against 10½ per cent. paid by that company for the year 1925-26; 12.875 per cent. as against 10 per cent. paid by Nobel Industries, Ltd., for the year 1925; 12.29 per cent. as against 10 per cent. for the year 1925 in the case of the United Alkali Company. A 3 per cent. increase in two years was a considerable achievement. Moreover, the precise figures to three points in the case of Brunner, Mond and Nobel Industries showed how correct Sir Harry McGowan and himself had been when the merger was made.

CONSTRUCTION PROGRAMME.

The company was and intended to remain the leader of the chemical industry in the British Empire, and they intended to hold their own in the industry in the competition of the world. Their expenditure on additions and alterations at the factories of the subsidiary companies amounted in 1928 to approximately £8,000,000. This more than absorbed the amount raised by the issue of new capital in 1928. The greater part of the expenditure had been devoted to the extension of the fertiliser plants at Billingham, but some amounts had been absorbed by the reconstruction of various works in the Alkali Section and the erection of new plant at the Ardeer Works of Nobel's. They anticipated a very satisfactory return—all additional income—from these capital additions when they came into production. During 1928, additional investments in associated and other industrial companies amounted to approximately £2½ million. Part of this development was taking place in Australia and Canada, where, in conjunction with powerful domestic and other interests, they were consolidating and extending their position. They already had remunerative interests there, and looked to their future growth with great confidence. In a company with such vast and widespread enterprises and interests, and with such universal demands for their products, which were continually increasing, it was essential that there should be continuous extension of factories and plant, stocks and credits. The constructional programme on fixed assets calls at the beginning of this year for more than £13,000,000. He would never be associated with a business which was not in a position to carry out the legitimate extension of a great industry. There was a great and growing market for their goods. Their selling organisation, under the able direction of Mr J. G. Nicholson, was without equal. In such a business as theirs, they must always be in a position at short notice to be able to take an interest in allied or suitable enterprises, either at home or anywhere throughout the world.

NEW ISSUE.

In order to enable their 160,000 shareholders—whose average holding was about £300—to take the fullest possible advantage of the new issue, and, in view of the fact that all the money would not be required except in instalments spread through the year, they had decided to issue the new shares in the following manner :—To the preference shareholders : one new preference share for every existing four preference shares; to the ordinary shareholders : one new ordinary share for every existing eight ordinary shares; to the deferred shareholders : one new ordinary share for every existing sixteen deferred shares. Shareholders of all classes would, in addition, be allowed to apply for any surplus of shares either preference or ordinary which might not be taken up by the exercise of the rights. The offer would be made to shareholders on the register at March 15, 1929. The new ordinary shares would rank for any interim dividend declared in respect of the year 1929, calculated on the amount paid up and from the due dates of the instalments. For the final dividend for 1929 these new ordinary shares would rank in full, thus giving a small bonus in this respect.

PRICES OF NEW SHARES.

The prices at which it was proposed to offer the shares were :—Preference shares 23s. per share, or a premium of 3s. per share, and ordinary shares at 33s. 6d. per share, or a premium of 13s. 6d. per share. The preference shares at 23s. per share would produce £5,072,184, and the ordinary shares at 33s. 6d. per share would produce £10,078,235. The total amount of cash to be received by the company would, therefore, be £15,150,491. The total amount of premiums on these shares would be approximately £4,500,000, which would immediately increase the existing reserves of approximately £11,000,000 to over £15,000,000. The value of the rights on each old share was calculated at 5d. for the preference, 8½d. for the ordinary, and 4¼d. for the deferred shares. The date by which the acceptance of the new shares must be made was May 6th, when the first call of 5s. would be payable on both the preference and the ordinary shares. The final call on the preference would be payable on July 8th, and the final call on the ordinary shares on November 4th. They had come to the conclusion that there should be no further issue of deferred shares. The deferred shares were created to represent the equity of the original shareholders in the merger in future potential profits latent in the organisation and assets then in existence, but not fully remunerative. If that intention was to be fully effective it followed that no further issue of deferred shares would be justified except when they acquired other businesses containing within themselves similar potentialities. Further, on this occasion, as contrasted with last year, the deferred shareholders were offered rights.

FUTURE DIVIDEND PROSPECTS.

To maintain the rates of dividend they were paying for the year 1928 would require, in respect of the new capital for the year 1929 an additional distribution of £582,000. It was somewhat early yet to speak of the prospects of trade for this year, but conditions were improving and, on the results already known for the first quarter of the year, he had no hesitation in saying that the growth of profits in 1929 on the capital already in their possession would be amply sufficient to take charge of the additional dividend requirement. Further, the £4¾ millions of uncompleted capital expenditure at the end of 1928 would come gradually into production throughout the year 1929 and yield them additional profits. The company had a balance of authorised, but unissued, capital of a little over £9,000,000 out of the £10,000,000 authorised last year. This was insufficient to cover the requirements of the new issue, which called for a total nominal amount of £10,427,000. It was, therefore, necessary to ask their sanction for a further increase in the authorised capital, and in the resolution, which had already been read, they asked permission to raise it by £20,000,000 in 40,000,000 shares of 10s. each, subject to the Board's power to consolidate these shares as and when necessary into £1 shares.

PROSPECTS OF THE MERGER.

He was very proud to be chairman of that company. He thought everyone connected with it in any capacity had an equal right to be equally proud of it. Two years ago Imperial Chemical Industries was launched as the first great merger of its size in the country. They were now satisfied that the chemical industry was going to act as an example for the salvation of the industries of this country. Their action had been justified. Their affairs showed a progressive improvement, yet they had not so far obtained by any means the full value and benefits of the merger. It would take at least another two years before the process of rationalisation and concentration within their own organisation would be completely carried through, but anyone who sat, as he did, day by day, surrounded by the most loyal band of co-workers and staff such as any man might be proud of, and supported as he knew he was by the great majority of their vast company, could have no cause for hesitation or doubt as to the great future which lay before them. Making profits might be the acid test of success—this the company fulfilled—but they had a greater endeavour. It was to maintain the great industry for which they were responsible in its leadership in all parts of the Empire with which they were getting daily into more and more complete contact—thus fulfilling the high mission which they had set themselves.

SIR HARRY MCGOWAN'S SURVEY.

Sir Harry McGowan (president), in seconding the resolution for the adoption of the accounts, said they reflected a most satisfactory result of a trading year. The publication prior to the meeting of the printed report was evidence of the company's sincerity in stating that it would take the shareholders into its confidence to the maximum extent. He was sure that the shareholders would desire to join with him in congratulating the chairman upon the signal honour which had been conferred upon him. They would all agree that he was one of the outstanding commercial leaders in the country. In a little over two years all those engaged in conducting the affairs of the company had succeeded in developing the "I.C.I. spirit," which was a spirit of comradeship, of team work, of mutual respect and recognition of the part the company was playing in the development of the British Empire. Industrial conditions at home showed steady improvement, and it followed that with the company's widespread activities it would participate to the full extent in that improvement. The progress reported in 1928 had been fully maintained during the opening months of 1929. Overseas operations showed a gratifying development. The various companies which had been organised throughout the world

were, without exception, justifying themselves. While giving the opportunity of more intensive sales efforts in all the company's products, they were adding materially to the company's turnover and profits. He had recently returned from a visit to America and Canada, and was specially gratified with the progress of the associated company, Canadian Industries, Limited, which had recently decided upon the extension of its activities into the large and promising fields of heavy chemicals, fertilisers, &c. Mr Todhunter, in Australia, was working on a scheme for the affiliation and amalgamation of the various concerns interested in heavy chemicals and fertilisers with the company's own Australian interests. Mr Nicholson had recently visited India, and had formulated plans and constituted action which they all felt would in time result in stimulating increasing demands for the company's products, particularly in agriculture. The opening up of Rhodesia, particularly in copper mining, called for increasing demands for goods of African Explosives and Industries, Limited, one half of whose capital was held by Imperial Chemical Industries. Another outstanding development was the formation of Scottish Agricultural Industries, Limited, of which Imperial Chemical Industries had the control. Most of the company's products were either raw materials or semi-manufactured commodities for use in the production of other marketable goods, such as alkali soap, dyes for textiles, &c., and it must be realised that it would not be policy by any undue handicap in the price of goods to prejudice the user of the company's intermediary products in its efforts to secure business. The company had always been ready to help its customers in the study of cheaper supplies, and to place its expert knowledge at their disposal with a view to helping them reduce the cost to themselves of the materials they drew from the company. The company had pursued, and would pursue, a policy of selling at an economic price and helping the buyer as far it could with due regard to its responsibilities as trustees of the shareholders' money. The formation of Imperial Chemical Industries had led to an all-round reduction in the price and improvement in quality and service. In was the company's firm intention to maintain and accelerate those advantages. In this satisfactory state of affairs no small share had to be ascribed to the loyal work and enthusiasm of the staff and workers. With such a wonderful organisation, and with such a loyal and efficient staff of workers, he had no doubt as to the future of their great company.

The resolutions to increase the authorised capital by £20,000,000 and to authorise the creation of £10,000,000 of 7 per cent. Cumulative preference shares of £1 each were approved.

CHAMPION REEF GOLD MINES OF INDIA, LIMITED.
RESULTS OF DIFFICULT YEAR.

The annual meeting of the Champion Reef Gold Mines of India, Ltd., was held on the 17th instant, at Cannon Street Hotel, London, the Hon. A. T. J. Fraser, D.S.O., presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit for the past year amounted to £39,100, against £40,900 in the previous year.

The capital expenditure amounted to £14,000, against £40,000, consequently the directors had felt justified in writing off a smaller amount this year—£13,000, against £22,500 a year ago. This left them—including the amount brought forward—with a profit of £31,200, and after paying a dividend of 1s. per share, equal to 10 per cent., they were carrying forward £4,693. During the year they had crushed 111,000 tons for a recovery of 52,000 oz. of fine gold, the average assay value being almost exactly 9·5 dwt. per ton.

He could thoroughly understand any feeling of disappointment which might be felt by shareholders at the result of the year's working, especially in view of the fact that Heathcote's shaft came into commission in the early part of the year. He had fully expected that the definite improvement in the production of the first three months of 1928 would be shown over the remainder of the year. This, however, had not taken place.

The reason for the lower grade of ore milled was simply that they had not been able to stope out enough of this high-grade ore to bring up the average of the total tonnage milled to the desired point. The outstanding reason for this was the difficulty they had been in with labour.

A great deal of attention had been paid to the best method of stoping these large widths (up to 10 ft. and more) at the enormous depth of 6,000 to 7,000 feet vertically below the surface, especially in view of rockbursts, which, unfortunately, had not been unknown to the company. Safety of their workers had necessarily to receive primary consideration, but at the same time they had to remember the risk of having areas of their ore reserves made inaccessible by rockbursts. After much thought and experiment, a system was decided upon which promised the best solution of these problems. The system necessitated concreting the floors of levels as a preliminary, arching in concrete the roofs of drives at the wider points, securing the ore-passes with built-up granite slabs and actually stoping out the rock by a system known as rill-stoping. It was an entirely new method on this field, and entailed the drilling entirely of "upper" holes, and also the use of a different type of machine drill, to which their labour had previously been unaccustomed.

Unfortunately any new method such as this was invariably treated with suspicion and met with prejudice by uneducated labour, and they had not yet been able to obtain the production from "rill" stopes that they had hoped for. This poor production, coupled with the shortage of labour for working in them, had led the company to stope in areas which they would have preferred not as yet to touch, and to stope by means in which it had been well nigh impossible to prevent heavy shaling. Every effort had been made to mitigate dilution, but undoubtedly it accounted in a measure for the value of the grade milled.

As regarded the future, he anticipated a gradual improvement, but he was not prepared to say it would be immediate.

Now, with regard to costs, the total cost per ton milled, excluding development, amounted to 28s. 6d. for the year. That might seem a high figure for those of them who were shareholders of other mines where conditions were very different. He could assure them, however, that in the circumstances of a comparatively small tonnage, enormous depth, very erratic occurrences of ore and the enormous expenditure necessary to keep open the great length of shafts and levels at those great depths and pressures, that in all those circumstances the costs reflected great credit on all concerned.

There was a rather natural tendency to criticise expenses when profits were not so large as anticipated and to overlook the fact that expenditure was commensurate with the scale of the operations and the size and depth of the mine. He could assure them, however, that costs were most carefully and constantly scrutinised and every possible economy is practised.

The report and accounts were unanimously adopted.

MYSORE GOLD MINING COMPANY, LIMITED.
SOUND FINANCIAL POSITION.

The forty-ninth ordinary general meeting of the Mysore Gold Mining Company, Limited, was held, on the 16th instant, at Cannon Street Hotel, London. The Hon. Lionel Holland (the chairman) presided.

The chairman, in moving the adoption of the report, said: The period covered by the accounts has been a period of steady, uninterrupted work on normal lines, which we can regard with a fair measure of satisfaction. The ore mined and put through the mill was less by 4,704 tons than the preceding year. The grade of ore and extraction were a shade higher. 217,199 tons of ore were milled, returning 103,502 oz. of fine gold; and 279,314 tons of dump material, sands and slimes—some 72,000 tons less than in 1927—were treated with an extraction of 12,059 oz. of gold. The total recovery of fine gold from the ore mined and milled during the year, and from the dump and sands treated and minor sources, amounted to 116,435 oz.—3,183 oz. less than for the year 1927—and realised, after deducting the royalty payable to the Mysore Government, £468,201. This compares with a sales revenue of £480,421 in 1927.

Our income revenue for the year is brought up by other receipts to a total of £479,247—a drop of from £14,000 to £15,000 from the figure for the previous year. Our revenue expenditure, however, at £301,352 is nearly £13,000 lower than last year's expenditure, owing partly to some minor economies, and partly to the develop ment footage having been slightly curtailed, which nevertheles was considerable, amounting to 15,657 ft., or over 2,700 ft. mo than the 1926 footage. The final profit balance for the year £201,053—little more than £1,000 less than the profit for 1927.

We are left with a disposable profit of £113,373. The fir dividend declared in February, bringing up the dividend for 12 months to the same as last year—2s. 3d. a share, or at the r of 22½ per cent.—takes £93,330, leaving a carry-forward to current year's revenue of about £20,000. For the current y our managers foreshadow a slightly lower grade of ore mill the new tonnage developed last year being of a lower aver of this company remains a sound one. Its liquid assets—cash the banks, stock of gold, investments in Government securiti and sundry debtors—exceed current liabilities by over £300,0 We have, besides, our mining interests in Canada, which are tal into the balance sheet at cost—some £132,000.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 13th, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	4,400	From Revenue	9,144
Interest, &c., on Debt	1,642	Decrease in Balances	53
Sinking Fund	500		
Sundries	210		
Decrease in Debt	2,445		
	9,197		9,197

The total Ordinary Revenue for the week amounted to £9,144,200, as compared with £7,030,000 in the corresponding week last year. Property and Income Tax amounted to £2,571,000, and Super Tax to £1,220,000, against £2,850,000 and £890,000 respectively. Customs were higher at £2,569,000 against £1,350,000, but Excise was lower at £1,136,000 against £1,422,000. Ordinary Receipts brought in £5,200, as compared with £10,000, while Special Receipts were nil for both weeks. The National Debt was reduced by £2,445,000, as shown below:—

(000's omitted.)

" 18		Nil			
Total		792,882	Total		32,544

Net arrivals, £760,338.

Messrs. Samuel Montagu and Co. write as follows on April 17, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £155,042,703 on the 10th instant (as compared with £154,045,537 on the previous Wednesday), and represents an increase of £1,136,388 since the April 29, 1925—when an effective gold standard was resumed.

In the open market this week about £665,000 South African gold was available. The Bank of England secured about £534,000—as shown in the figures below, the balance being taken by the Home and Continental Trade (about £117,000) and India. There was a net influx of gold of £760,357 during the week.

SILVER.

There has been little movement to record since our last letter, prices having kept steady at practically the same level. Holders of silver on China account again offered to sell, but were unwilling to follow the market when prices began to sag. The quotations touched 25¾d., but here fresh buying orders from China arrested any further fall, and the market again slightly hardened.

America has been rather less disposed to sell, and the tone of the market continues steady in the absence of any real willingness on the part of sellers.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 8th instant to mid-day on the 15th instant :—

IMPORTS.	£	EXPORTS.	£
U.S.A.	11,636	British India	171,438
France	9,509	Other countries	6,332
Other countries	12,013		
	£33,158		£177,770

Reports and Notices.

The Right Hon. Sir Thomas Smartt, P.C., K.C.M.G., Deputy Leader of the South African Party, who died on April 17th, was a Director and Past Chairman of the Southern Life Association.

The Pacific Steam Navigation Company have appointed Mr William Lewis (General Manager) to be a Director.

Helbert, Wagg and Co., Limited, have placed their representation in New York on a more permanent basis under the style of Helbert, Wagg and Co. (New York), Limited. The Board consists of Directors of Helbert, Wagg and Co., Limited, and Mr Walter G. Mann will be in charge of the New York office.

In succession to the late M François Thys, Dr Frederic Sohr has been appointed general manager for Belgium of the Eagle Star and British Dominions Insurance Co., Limited.

Mr Robert Crichton, lately vice-chairman of the Scottish Iron and Steel Company, Limited, has accepted a seat on the board of The United Steel Companies, Limited, and the position of general manager of Workington Iron and Steel branch.

BANKS.

YOKOHAMA SPECIE BANK, LIMITED.—The balance-Sheet at end of 1928, compares with end of 1927 as follows :—

Liabilities.	Dec. 31, 1927. Yen.	Dec. 31, 1928. Yen.

The directors propose that yen 3,000,000 be added to the reserve fund, and recommend a dividend at the rate of 10 per cent. per annum, which will absorb yen 5,000,000. The balance, yen 9,346,622, will be carried forward.

INSURANCE.

YORKSHIRE INSURANCE COMPANY.—The directors have decided to recommend to the shareholders that the capital be rearranged by doubling the amount paid up, the £1 fully-paid shareholders to receive an additional £1 fully-paid share and the £5 (10s. paid) shares to be made £1 paid and sub-divided into two shares of £2 10s. (10s. paid). The aggregate dividend will be unaffected, and the rearrangement of capital will be met out of the funds held by the company. The directors have, further, decided to offer to the shareholders one new fully-paid £1 share for every seven of the existing £1 fully-paid shares, or fourteen of the £5 (10s. paid) shares, at a price of £12. (Arrangements will be made for dealing with fractions.) The directors announce that the valuation reserves of the Life Department have again been strengthened, and they have declared considerably increased reversionary bonuses, which are 12s. per cent. per annum greater than the rates declared at the last valuation in 1924. The bonuses on the increased scale average £2 8s. per annum per £100 sum assured. The "Yorkshire" maintained its full rate of bonus throughout the war period.

RAILWAYS.

CANADIAN NATIONAL RAILWAYS.—We are informed that owing to a cable error the net operating loss of the Canadian National Railways on the Maritime provinces lines during 1928 was given, in Reuter's telegram from Ottawa of April 10th dealing with the annual report of the company, as 520,000 dollars, and was published in the *Economist* of April 13th, page 827, at that figure. The figure should have been 3,520,000 dollars.

CANADIAN PACIFIC RAILWAY.—The Company will offer to the holders of its ordinary capital stock of record at 3 p.m. on Thursday, May 2, 1929, $30,000,000 of ordinary capital stock, comprising 300,000 shares of $100 each at the price of $170 per share in the proportion of one share of the new issue for each ten shares then held by them respectively. The right to subscribe will expire at 3 p.m. on June 17, 1929. A circular containing the terms of subscription and payment, accompanied by warrants to subscribe, will be mailed to the holders of ordinary capital stock on or about May 15, 1929.

MISCELLANEOUS.

THE ROADS IMPROVEMENT ASSOCIATION.—Total assets at December 31, 1928, amounted to £1,764. Of this sum, £1,250 is invested in 5 per cent. War Loan, which is in the balance sheet at £1,123. Cash amounts to £376. Reserve Fund for Road Fund Campaign stands at £350. Creditors are at £204 and debtors £263.

MANCHESTER SHIP CANAL.—The following is the latest monthly approximate traffic returns :—March, 1928, £111,104; March, 1929, £114,703; increase, £3,599; Total for three months, 1928, £332,509; 1929, £336,327; total increase, 1929, £3,818.

MARSHALLS, LIMITED.—The report for the year ended January 31, 1929, shows a net profit, after payment of all trading expenses, and providing for bad debts, depreciation of fixtures, interest, directors' fees and managing director's remuneration, £41,882 (last year £39,169), making, with the amount brought forward, a total of £58,997. Deducting premiums paid on leases redemption policies, interest paid to bank in respect of Birmingham and Manchester investments and preference dividend to July 31, 1928, there is a balance of £47,318, from which the directors propose allocating to preference dividend to February 1, 1929, £5,250, and dividend of 6 per cent. on ordinary shares, £24,000, leaving £18,068 to be carried forward. Bank loan has been reduced from £154,812 to £95,613. Reserve has been increased from £25,000 to £30,000.

HOWARD AND BULLOUGH, LIMITED.—The results for a number of years past are shown in the following table :—

	1913–14.	1923–24.	1924–25.	1925–26.	1926–27*	1927–28.	1928–29.

* Ten months to March 31st.

LEETHEMS (TWILFIT), LIMITED.—This Company paid an Interim dividend of fivepence per ordinary share on April 19th in respect of the period ending June 30, 1929.

SPILLERS, LIMITED.—The profit of Spillers, Limited, for the year ended January 31st last, amounted to £176,668, which, with £170,536 brought forward, gives a total of £347,204. Dividends on the preference shares having already been paid, a dividend of 7½ per cent. (less income tax) on the ordinary shares, against 5 per cent for preceding year, will be recommended by the directors, which will leave £182,973 to be carried forward.

HOPKINSONS, LIMITED.—The third report shows that the profit for the year ended January 31, 1929, after providing for all revenue charges, depreciation and directors' fees, but before providing for income tax, amounted to £94,707 (last year £71,578). Adding the amount brought forward, and deducting preference dividend for the year, interim dividend of 5 per cent. paid on the ordinary shares, and £20,000 as provision for income tax, there is a balance of £53,310 from which the directors recommend the transfer to general reserve account of £20,000 (last year £10,000), and the payment of a final dividend on the ordinary shares of 5 per cent., making a total of 10 per cent. for the year (last year same), leaving £19,310 to be carried forward (last year £12,202).

The balance sheet shows :—Investments at Cost, British Government Securities, £99,804, against £99,804; British Railway Stocks, £18,650, against £18,650; Other Investments, £11,772, against £11,772; Cash, £1,264, against £16,734. Meeting, Britannia Works, Huddersfield, April 26, 1929, at 3 p.m.

SOUTHEND WATERWORKS COMPANY.—The recent issue for sale by tender of £130,000 5 per cent. perpetual debenture stock has been overtendered for at prices ranging from £102 to the minimum of £98 per £100 of stock.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended April 10th : Venezuela, 37,091 barrels; Trinidad, 16.101 barrels; total, 53,192 barrels. Production for March : Venezuela, 154,530 barrels; Trinidad, 85,752 barrels; total, 240,282 barrels. Deliveries for March, Venezuela, 157,141 barrels; Trinidad, 87,580 barrels; total, 244,721 barrels.

TRINIDAD CENTRAL OILFIELDS, LIMITED.—Production for March quarter, Tabaquite, 7,096 barrels; Guapol, 372 barrels.

THE MEXICAN EAGLE OIL CO., LIMITED.—The production for the week ended April 6, 1929, was 168,000 barrels.

VENEZUELAN CONSOLIDATED OILFIELDS, LIMITED.—Total production for week ended 13th inst., 3,087 barrels (441 tons).

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended April 13th was 129,373 metric tons (previous week ended April 6th, 119,876 metric tons).

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Agricultural prospects have been improved by frequent and heavy showers of rain over the United Kingdom during the past week, but low night temperatures tended to retard growth, and a return to warmer conditions would be welcome. Meanwhile, an excellent seed bed has been prepared for spring cereals, and the young plant is thus afforded every opportunity for a good start. Offers of native wheat are now in small compass and realise full rates, but the market for imported varieties became rather unsettled owing to fluctuations in forward values. With regard to floating and forward cargoes, a rather sharp decline was registered, particularly for Canadian grades occasioned by weakness on the other side. The prospect of obtaining financial relief appears somewhat discouraging to American growers, and this naturally led to increased selling orders. In these circumstances, and in view of large visible supplies, buyers adopt a reserved attitude pending further developments in the situation. Feeding stuffs also weaker in sympathy, though more interest was shown in Plate maize on Continental account. Part cargoes of Australian wheat bulk afloat sold 45s. 4½d. to 45s. 6d., ditto bags, 46s., also a steamer of Plate maize April shipment at 39s., all per 480 lbs. c.i.f. terms.

Wheat easier. No. 3 Northern Manitoba, 48s. 6d.; No. 4 Manitoba, 47s.; No. 5, 44s.; No. 6, 37s. 6d.; Rosafe, 64 lbs., 45s. 3d.; Barusso, 63½ lbs., 46s.; Australian, 47s. 6d., all ex-ship, per 496 lbs. English, 9s. 6d. to 9s. 8d. per 112 lbs.

Flour dull and tendency easier. London standard grade, 37s. 6d.; town whites, 38s. 6d.; patents, 39s. 6d. to 40s. 6d. per sack, delivered in the Home Counties, with 6d. to 1s. per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 34s. to 37s.; Minneapolis, 34s. 6d. to 37s.; Australian, 34s. 6d. to 35s., ex-store. On c.i.f. terms, Manitoba top patents April-May, 35s. 6d. to 36s. 6d.; export ditto, 33s. to 33s. 6d.; Australian, 32s. to 32s. 6d. per 280 lbs.

Maize steady. Plate landed, 42s.; ex-ship to arrive, 40s. 9d.; March-April, 39s. 6d.; new April-May, 38s. 6d.; May-June, also June-July and July-August, 38s. 3d.; No. 2 American mixed, 40s. 6d., landed, per 480 lbs. Yellow maize meal, £11 per ton landed.

Barley maintained. Californian, ex-ship, 45s. to 52s.; Chilian Chevalier, 48s. to 58s.; Australian, 43s. to 48s.; Smyrna, 44s. to 47s. per 448 lbs. Algerian/Tunisian, ex-ship, 34s. 6d.; Canadian feed, 29s. 9d.; No. 3 Canadian Western, 33s. 6d. ex-ship; No. 2 Federal American, 29s. 9d. ex-ship to arrive, 31s. 3d. landed per 400 lbs. English malting, 10s. to 12s.; feed, 9s. 3d. to 10s. per 112 lbs.

Oats quiet. Visible supplies of wheat in Canada at 91,380,000 bushels show an increase of 770,000 bushels as compared with the previous figure. Supplies a year ago stood at 77,197,000.

Youth and Age

Youth is the time of courageous experiment and creative work, whilst age has experience and is ripe with practical knowledge and wise judgment.

Youth held in rein by age, and age tempered with the spirit of youth, give industry its greatest achievements.

The Chatwood organisation is a combination of youth and age, and throughout the firm is an atmosphere of growth, new knowledge, and new ideas.

Those with treasure to protect entrust it to The Chatwood Security with contented confidence, for it has withstood the greatest of all tests—the test of time.

J.E.S.

THE CHATWOOD SECURITY

THE CHATWOOD SAFE CO., LTD., Bankers' Engineers, SHREWSBURY, ENGLAND.

THE COAL TRADE.

Our Sheffield correspondent writes:—The pressure on the collieries for both home and export trade continues to ease and prices have been reduced. The immediate demand is good, but a less tonnage is being booked forward. The indications point to quieter conditions than of late. There is no surplus of best steams for home consumption and prices are firm at about 15s. 6d. at pits. Business in small fuels is quiet and prices favour buyers. The house coal trade is much quieter. Demand for furnace coke having fallen off, there are large quantities available for smelting. As several blast furnaces are going into commission it is believed that these will absorb any surplus output. Shipments of both furnace and foundry coke continue on a large scale and good prices are being obtained.

Our Glasgow correspondent writes:—Dull conditions rule in the Scottish coal market. Prices have been falling all along the line, and current prices are in many instances at the lowest levels touched this year. There is little or no business passing. Shipping prices are approximately as follows (f.o.b. district ports):—Lanarkshire: Ell best, 16s.; splint best, 17s. 6d.; splint second, 17s.; navigation, 18s.; navigation second, 15s. 6d.; steam, 14s.; Hartley, 18s.; trebles, 14s.; doubles, 13s.; singles, 12s.; pearls, 11s.; dross, 10s. Fife: Screened navigation, 18s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 13s. 6d.; doubles, 12s. 6d.; singles, 12s.; pearls, 11s. to 11s. 3d. Lothians: Prime steam, 13s. 3d.; secondary steam, 13s.; trebles, 13s. 6d.; doubles, 12s. 6d.; singles, 11s. 9d.; pearls, 11s. Ayrshire: Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 16s.; trebles, 13s. 9d.; doubles, 13s. 3d.; singles, 12s.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—There has been a fair supply of tonnage, collieries have been very regularly employed, and the volume of traffic at the ports has been heavy. The Great Western Railway Company returns for the first full week after the Easter holidays show total exports in the foreign and coasting trades of 604,355 tons, compared with 411,902 tons in the corresponding week last year, which, however, included Easter Monday. Prices show little variation, with quotations for best Admiralties ruling up to 21s. 9d. and best bunker smalls up to 14s. 9d. The tenders for the supply of 180,000 tons to the Egyptian State Railway between June and August next have been disclosed and the lowest figure tendered for Monmouthshire coals is 29s. 6d. for one-third of the contract, compared with the price of 28s. 6d. at which the whole of the last contract for 130,000 tons was placed with a South Wales coal-exporting firm. Current prices, however, are approximately about 2s. 6d. per ton higher than they were when the last contract was arranged, but it is the view of the market that both coal prices and freight rates will be at slightly lower levels between June and August than they are to-day. Current approximate quotations are as follows:—Best Admiralties, 21s. 6d. to 21s. 9d.; seconds, 21s. to 21s. 6d.; best drys, 20s. 9d. to 21s. 6d.; Black Veins, 21s. to 21s. 3d.; Western Valleys, 20s. 6d. to 21s.; Eastern Valleys, 20s. to 21s.; best small steams, 14s. 6d. to 14s. 9d.; cargo smalls, 13s. 9d. to 14s. 3d.; coking smalls, 14s. 6d. to 14s. 9d.; anthracite best large, 33s. to 36s.; Red Vein large, 25s. to 27s.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 42s. to 44s.; stove nuts, 40s. to 42s. 6d.; rubbly culm, 10s. to 10s. 6d.; foundry coke, 27s. 6d. to 37s.; patent fuel, 19s. 6d. to 22s.; pitwood, ex ship, 27s. 6d. to 27s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—

Steady conditions continue to rule in the iron and steel markets. The pig-iron section of the market is particularly strong, and on the North-East Coast the quantities produced are insufficient to meet the demand, with the result that premiums are being paid for forward delivery. The Midland producers also are experiencing moderately active conditions, and are holding their recent price advances. The strength of the demand for semi-finished steel has enabled British manufacturers to increase their prices for some descriptions. Business with Continental manufacturers is difficult, as apparently they have little left for the export markets after satisfying their own requirements. As a consequence, prices for Continental semis are high, and most of the business transacted in the British market is taken by the home steel works, who are well off for this class of business. In the finished steel department the export demand is still hanging fire, although recently a certain amount of business was transacted for the Far Eastern and Indian markets. Competition from the Continent in this department, also, is not so severe, and a good share of the business passing is now going to the British makers.

Our Middlesbrough correspondent writes:—The recent improvement in the iron and steel trade is maintained. Over the first half of this month the shipments of pig-iron were over 18,000 tons, as compared with a little over 11,000 tons to same date last month. Most works are fairly well sold up till June, but prices are unchanged and are, as reported last week, on the following basis: No. 1 Cleveland, 71s.; No. 3 G.M.B., 68s. 6d.; No. 4 foundry, 67s. 6d.; No. 4 forge, 67s. Cleveland iron is scarce, and it is likely the make will be shortly increased by the blowing-in of further furnaces. The hematite market is, if anything, rather quieter, but the price for East Coast mixed numbers is maintained at 74s. per ton. It is stated that Messrs. Palmers, of Jarrow, will re-start two furnaces early next month, one on hematite and the other on Cleveland iron. It has also been decided to re-start two local ironstone mines in South Skelton and Grinkle to increase the supply of Cleveland stone. The steel trade is very steady, and the output for March has been the biggest for some considerable time. All works are fairly busy, and there are indications of increased interest in the export market for finished steel. Quotations for home consumers, subject to the usual rebates, are as follows: steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 15s. 0d.; steel rails, £8 10s. 0d. The coke market is slightly easier, and the price of blast furnace coke delivered furnaces has fallen to about 19s. per ton delivered works. The supply is rather more plentiful, due probably to the decrease in the demand for export. The ore market is quiet, consumers having covered their requirements for some months ahead. The market, however, is very firm, with 23s. as the minimum price for best rubio.

Our Sheffield correspondent writes:—Conditions in the steel trade have become decidedly quieter since the beginning of the month, and several firms have curtailed their output of acid steels. Demand for railway steel and wagons is as flat as ever. There is a large output of basic steels, but here the tendency is downward. The Board of Trade returns of overseas trade in March were somewhat unfavourable as regards the products of Sheffield. The works in North Lincolnshire are well employed, and the steel trade there promises further to expand. There has been another rise in the prices of tungsten, which are double those in force last December.

Our Glasgow correspondent writes:—In the pig-iron trade in the West of Scotland business is still quiet, and the output capacity of the furnaces presently in blast is more than sufficient for the demands of the moment. In the steel trade there is some expansion, but this is not quite general, there being considerable disparity in the position as between one plant and another. On the whole, makers of heavy steel are better placed than makers of the lighter sections. Re-rollers also seem for the time being to be experiencing a quieter time. It is reported that Messrs. Scott's Shipbuilding and Engineering Co., of Greenock, have received a contract to build and engine four high-class cargo steamers of about 8,000 tons deadweight each. There is no falling off in the tube trade, and all makers are busy. The demand for sheets, both black and galvanised, has been rather better this week both on home and foreign account.

Our Cardiff correspondent writes:—Steady to firm conditions continue to rule in the South Wales steel and tinplate trades, and on the Swansea Metal Exchange on Tuesday prices of basic tinplate boxes were quoted at 18s. 4½d. to 18s. 9d., compared with 18s. 3d. to 18s. 9d. the previous week, and between 18s. 1½d. and 18s. 6d. at the corresponding period last year. Local steel bars were firm at the new minimum of £6 6s. 3d., but foreign bars are easier at from £5 15s. 0d. to £5 17s. 6d. Owing to heavy shipments last week, stocks have been slightly reduced. Scrap continues scarce and dear, and for heavy steel, quotations have been advanced from 77s. 6d.-80s. to 79s. 6d.-80s., bundled shearings from 69s.-71s. to 72s. 6d.-75s., and mixed wrought iron and steel scrap from 70s.-72s. 6d. to 72s. 6d.-75s.

OTHER METALS.

ALUMINIUM steady. Ingots and bars for home delivery quoted £95 ton.

ANTIMONY quiet. English regulus, £54 to £55; foreign spot, £39 ton.

WOLFRAM steady. Straits quality, 23s. to 25s. per unit c.i.f.

QUICKSILVER maintained. Spot, £22 5s. to £22 10s. per bottle.

TIN PLATES firm. I.C. coke, prompt and forward, 18s. 3d. to 18s. 9d. per box, f.o.b. Swansea.

METALS.—At first session, the market for tin displayed weaker features, prices being adversely influenced by lower Eastern cables and a falling off in demand, cash on balance being 57s. 6d. to 60s., and forward 70s. to 72s. 6d. ton lower. Standard cash, quoted, £204 5s. to £204 10s.; three months, £205 5s. to £205 10s. Settlement price, £204 5s. 400 tons changed hands, cash, at £204 10s.-£204 and £204 7s. 6d.; three months, £204-£205 5s. and £205 2s. 6d. English ingots, quoted, £204 5s.-£204 15s. In the East, 250 tons reported sold on the basis of £208 c.i.f. terms.

COPPER, in good support, and with sellers more reserved a firmer tone resulted, cash on balance being 30s., and forward 27s. 6d. to 30s. per ton dearer. Standard cash, quoted, £79 5s. to £79 10s.; three months, £77 to £77 2s. 6d. Settlement price, £79 10s. 1,400 tons changed hands, cash, at £78 to £79 7s. 6d.; three months, £76 5s.-£77 5s. and £77. Electros, quoted, £84 to £85. Wire bars, £85.

LEAD, in moderate support, but with sellers more reserved a firm tone ensued. 400 tons sold, good soft foreign pig, April, at £24 15s.; July, £24 7s. 6d. to £24 5s. Settlement price, £24 15s. English, quoted, £26 5s.

SPELTER firmer, but buyers reserved. 325 tons sold, April, at £26 17s. 6d.; July, £26 12s. 6d. to £26 13s. 9d. Settlement price, £26 17s. 6d. ton. Tin plates, antimony, &c., unaltered.

AMP

For Life Assurance.

The Australian Mutual Provident Society is mutual. That is to say, all divisible Surplus, without deduction, belongs to the Policy-holders themselves and is distributed yearly. Moreover, the Society, established in 1849, has been for many years the largest and most prosperous British Mutual Life Office. Why is this? Because it offers to Assurers the Acme of Security and Profit, and because its satisfied members are its best advertisement. Why are policies with the A.M.P. Society so profitable? Because while its premium rates are below the average, it possesses in a unique degree the combination of a low expense rate, a high interest return and a favourable mortality experience. The A.M.P. Society should be covering you. You will be sent full particulars on application.

EVERY YEAR A BONUS YEAR.

Assets: £70,000,000. Annual Income: £10,000,000.
New Business for 1927: £15,397,528.
Cash Surplus for One Year (1927): £2,895,454.

ROBERT THODEY, F.I.A. Manager for the United Kingdom.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY

THE COTTON TRADE.

LIVERPOOL, April 17th.

The March consumption in America was 633,000 bales, against 598,000 bales for February this year and 582,000 for March last year. Though slightly less than anticipated, the daily rate of consumption is very little less than the record daily rate. The weather, though cold, has been favourable and has enabled a great deal of farm work to be put through. The market looks as if it will have a very dragging tendency until more is known of new crop prospects. Spot sales for the week 11th to 17th (inclusive) are 31,000 bales, of which 20,480 are American, 100 Brazilian, 100 Argentine, 3,100 Peruvian, 4,500 Egyptian, 1,500 African, 600 East Indian, and 620 sundries. Imports for the same period are 46,305 bales, of which 33,131 are American, 148 Brazilian, 264 Argentine, 239 Peruvian, 1,809 African, 10,599 East Indian, and 115 sundries. Quotations to-day are American Middling, 10·69; Egyptian Sakel, 18·30; Uppers, 12·31; Brazil Fair, 10·89; Peru G.F. Mod-Rough, 13·00; Smooth, 11·64; West African Middling, 10·74; and East African, 12·15.

MANCHESTER, April 17th.

Demand in the market during the past week has not shown any appreciable change, and there has been very little alteration in values, though the tendency of raw material rates has been in a downward direction. Cloth manufacturers continue to be depressed by the unfavourable reports from merchants as to the position in India and the political disturbances cause much anxiety. Some scattered sales have occurred for Calcutta and Bombay in light fabrics at cut prices. Rather better news has been received from China, there being larger clearances at the auction sales in Shanghai. Fresh business, however, has not been of any importance. Some useful lines have been booked in printing and finishing styles for South America and certain African outlets, but makers have met with very little support from Egypt and the Near East. Fairly healthy advices are being received from the home trade section. In American yarns the irregularity of prices has tended to increase and transactions of weight have been decidedly scarce. Only restricted operations have occurred in Egyptian yarns.

THE WOOL TRADE.

Our Bradford correspondent, writing on Wednesday, says:—Although there is no marked increase in activity, the tone of the market is fairly good and, if anything, inquiries for tops and yarns are rather more numerous. More business could be done in merinos if sellers were prepared to make further concessions, but although values now appear to be on a reasonable basis, users are not inclined to speculate, preferring to limit their purchases to relatively small weights for current requirements. At to-day's price, 64's tops are 1s. per lb. cheaper than they were a year ago, while 46s' are about 4d. cheaper. In low and medium crossbreds offers of business are more numerous, and it is significant that in many cases prompt delivery is required. There is, indeed, a feeling that crossbreds are not likely to ease much, if at all, and certain qualities are in short supply. Incidentally, the clearing-up sales in New Zealand have revealed a good demand, and notwithstanding the comparatively poor selection, prices remain firm. Business in yarns is irregular, and prices are still very disappointing. Botanies are cheap, being frequently below replacement costs, but demand is very restricted and spinners are constantly faced with the problem of keeping machinery employed. As regards piece goods, men's wear fabrics continue to sell well both on home and export account, but business in dress goods is rather slow. Generally speaking, however, manufacturers are in a better position than they were a few weeks ago.

COLONIAL WOOLS.

FROM A CORRESPONDENT.

Judging from the cable information received from Australia, and the general tone of things in Bradford, prices are sound. If there is any fault to be found, it is the fact revealed by the Board of Trade returns that imports from Australia, New Zealand and other sources during the first quarter of this year were 200,000 bales less than in the corresponding period of 1928. This may be partly accounted for by delayed shipments this season, but during the first three months of 1928 as well as 1927, imports were substantially larger than in any three months since 1915, having been well over the million bales mark. It is therefore rather disappointing to find any reaction, particularly as the world's production of wool is increasing. We have already anticipated that the next Australian clip will not be any larger than the current one, but it is to be hoped that importers will be able to find outlets for larger quantities. The textile trade of this country can well do with handling more wool, not only through merchanting channels, but also for actual machinery purposes. The price at which merino wool can now be bought is reasonable, and the adjustments bearing on overhead charges which have taken place in various directions should enable it to be sold freely on ultimate consumptive account. The tendency in fine tops has recently been in buyers' favour, but this cannot really be taken as the forerunner of any great decline in the raw material. The demand for preparing wools for export has been very helpful to crossbreds, and the probability is that further encouraging outlets will be found for all qualities.

HIDE, LEATHER AND ALLIED TRADES.

Trade conditions remain difficult and tanners seemed puzzled. Whilst market hides remain firm, oversea sorts are again weaker and the demand poor. At the last Bermondsey auctions, best ox were firm at 7½d., seconds selling at 6¾d., whilst calfskins realised 7¾d. to 14d. for best selections. The demand for foreign hides remains dull, and many sorts are again weaker. South Americans are, however, an exception, the current price for Argentine fregorifics being 9 1/16d., with the United States as the chief operators. In saladeros, Rio Grande ox have sold at 7⅞d., but the market will be

STANDARD LIFE
ASSURANCE COMPANY
For mutual assurance.

ANNUAL REPORT
For Year ended 15th November, 1928.

Principal features disclosed.

(1) NEW POLICIES ISSUED - - - £3,130,000.
The largest amount ever issued by the Company.

(2) ANNUAL VALUATION.
Market rate of Assets considerably in excess of book value.
No credit taken for appreciation.
Liabilities calculated on same basis as before of unequalled stringency (rate of interest assumed 2½%).
Net rate of interest actually earned over 5%.

(3) RESERVES STILL FURTHER STRENGTHENED.
£100,000 of surplus carried to General Reserve and £22,000 carried forward.
The Guarantee Fund which gives additional security to Policyholders now amounts to £1,450,000.

(4) BONUS DISTRIBUTION.
An annual compound bonus of 42/-% was again declared. (This is approximately equal to 44/-% if declared quinquennially.)

NEW ANNUAL CASH BONUS SCHEME inaugurated.
A With-Profit Policy at a Non-Profit Premium.
A really remarkable Policy, giving practically the same initial cover as can be obtained under a Without-Profit Contract, and at the same time preserving the right of participation in profits.
Write to-day for a copy of the Annual Report and for Leaflet "A.J. 19" giving full particulars of this new scheme.

The STANDARD LIFE ASSURANCE COMPANY
LONDON 46 QUEEN VICTORIA ST. E.C.4 / 15A PALL MALL S.W.1
ESTABLISHED 1825
DUBLIN 59 DAWSON STREET
HEAD OFFICE - 3 GEORGE STREET EDINBURGH

tested by the sale this week of Q.20,000 Leibig Colon hides by inscription. Dry River Plates have weakened, and B.A. Americanos are now quoted at 12¾d. Capes are lower, and 12¼d. to 11½d. is quoted for dry first and second qualities. Australians are lower, and 10d. has been accepted for dry-salted Queensland meatworks hides. Cables from Chicago report the market as steady, with best heavy packers still selling at 15 cents. Tanners and merchants report a rather better demand for sole leather this week. Speculation, however, is out of the question, as buyers are not yet convinced leather has touched bottom. This was the view expressed at Leeds Leather Fair on Wednesday, and in consequence little business was done. Wet salted bends are in better request, and are rather weaker, but other sorts remain quotably about the same. Offal is selling slowly and parcels of Continental offal are again reaching this market at low prices. Curriers report rather a better demand for kip leathers, and semi-chrome and linings have come in for more attention. Chrome calf tanners are working off odd lots, but are hard hit by American and Continental competition. Glacé in black and brown sells well, and there is some demand for suede for spring samples of women's shoes. Imports of dressed leather show a remarkable fall so far this year, the values for the first three months of 1928–29 being £2,534,677 and £1,580,016 respectively.

VEGETABLE OILS AND OILSEEDS.

Rather a better tone has developed in the markets, though business generally is still on a modest scale. In sympathy with seed, linseed oil is steadier, but prices are depressed by the offers of Continental oil on competitive terms. Current value is around £28 10s. per ton naked ex Hull mill for "spot" and April delivery, with later positions at a small premium. Cotton oil is dull and reduced figures have failed to stimulate demand to any extent. Crude Egyptian offers freely at £26 10s. and common edible at £30 10s. for prompt and May-August ex Hull. Other soft oils are quiet. In the oilseed section linseed in near positions is scarce and has been in good demand both here and on the Continent, value of Plate on spot having advanced to £16 7s. 6d., while up to £16 5s. has been conceded for seed on passage and £16 for "shipping or shipped." Business has again been done in Calcutta linseed to London, £18 2s. 6d. having been paid for April shipment. The quantity of linseed on passage to Europe is not excessive and is around 140,000 tons. Some little business is reported in black Egyptian cottonseed to Hull, prices ranging from £9 3s. 9d. to £9 7s. 6d. for April and May loadings. Oilcakes are in quiet demand and values inclined easier.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—A moderate business in spot goods proceeded, demand having subsided somewhat after the active movement of previous day. The market in general was quieter, mostly owing to delay in discussion of the proposed American tariff. Java markets cabled dull. Foreign, 96 per cent. centrifugal, May, quoted 9s. 3d. c.i.f. U.K. White Java, June to December, 12s. 1½d., c. and f. Calcutta. Home-grown granulated, 22s. 4½d. to 22s. 6d. for ready parcels as to factory. Terminal sections easier. Of raw, May sold 8s. 3¾d. to 8s. 4½d.; August, 8s. 9¾d. to 8s. 10½d.; December, 9s. 3¾d. to 9s. 4½d.; March, 9s. 7½d. to 9s. 6¾d. White, May, sold 11s.; August, 11s. 6¾d. to 11s. 7½d.; December, 12s.; March, 12s. 3d. cwt. Cuban receipts last week, 211,529 tons against 139,871 last year; exports, 129,014 against 92,547; stocks, 1,427,318 against 1,270,066; central workings, 122 tons against 85 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending April 13th totalled 148,981 tons against 132,564 last year. U.K. imports last month, 147,721 tons against 133,882 last year; consumption, 147,938 against 120,662; stocks, 308,850 against 311,550.

COFFEE.—Offerings at public sales included some attractive qualities and were well absorbed; prices ruled steady. Of East India, fine bold Mysore sold 151s. to 157s.; peas up to 160s. 6d.; Kenya bold dull coated, 146s.; Matagalpa medium, greenish, 122s. 6d.; peas, 138s.; Colombian bold colory, 127s. to 129s. 6d.; Costa Rica, bold sizes, from 137s. 6d. to 170s. 6d.; peas, 138s. to 170s. 6d.

COCOA.—A quiet but steady market on spot. Accra for shipment more or less nominal. Terminal sections decidedly more active during the week, though irregular and easier. May sold 46s. to 46s. 1½d. and 45s. 9d.-46s.; July, 47s. 4½d. to 47s. 1½d., September, 49s. to 48s. 4½d.; December, 48s. 9d. to 48s. 3d.; January, 49s. 4½d. to 49s.

TEA.—Indian auctions of 47,684 packages came to quite a brisk market and a firm to dearer one, especially for fine and finest liquoring descriptions. Common teas steady, Ceylon sales on Tuesday amounted to 26,316 packages. These were the first teas to be knocked down duty free, dating back to about 1766. With brisk competition, full to dearer rates were secured. Java and Sumatra auctions met quite a firm market.

RICE.—Market dull and quotations nominally unaltered.

BEANS.—Market steady but quiet.

PEAS.—Steady and buyers more frequent. Japanese spot 22s. 6d., afloat, 18s. 6d. to 20s. 6d. as to position; April-May, 18s. 4½d. cwt., c.i.f. London.

SPICE.—Sustained buying in force caused sellers to adopt marked reserve and prices in forward positions further moved upward. Black Singapore spot quoted 1s. 5d.; Lampong, 1s. 5d.; Tellicherry,

The Sweet Security of 5%

MILLIONS "invested" last year in the most reckless type of speculation—with results already being felt in countless homes. Millions last year invested in and applied to the development of foreign countries. Meanwhile, on at least one occasion, a great Colonial borrower felt himself driven from the London Market and obliged to borrow in America with inevitable loss to this Country. For, every penny lent abroad means trade for the lending country—a simple and universally accepted axiom of economics.

Trade may follow the Flag—It must follow from investment abroad.

To-day the state of development of a Dominion like Australia, compared to what it should be in 50 years, is best visualised by comparing the United States to-day with what she was half a century ago.

Investment in the Stocks of the Dominions and Colonies combines absolute security of capital and certainty of income paid at due dates with a slightly higher income than is obtainable on similar Stocks at home.

This announcement is issued by Corporation and General Securities, Limited, in the interests of the British and Colonial Corporations and other Authorities it has the honour to serve. No correspondence is invited. Investors wishing to learn more of this class of Security should communicate with Members of the London and Provincial Stock Exchanges.

THE WHOLE OF THIS ISSUE HAS BEEN UNDERWRITTEN.

A Copy of the full Prospectus has been filed with the Registrar of Joint Stock Companies.

The Subscription List will open on Tuesday, 23rd April, and will be closed on or before Thursday, 25th April, 1929.

Application will be made to the Committee of the Stock Exchange for permission to deal in the Shares of the Company after Allotment.

CHEMICAL & WOOD INDUSTRIES LTD.

(Incorporated under the Companies Acts, 1908 to 1917.)

SHARE CAPITAL - - - - - - - £1,000,000

Divided into 1,000,000 Ordinary Shares of £1 each.

The Vendor's confidence in the future of the Company is indicated by his acceptance of 275,000 Ordinary Shares in full satisfaction of the purchase price.

ISSUE AT PAR OF
725,000 ORDINARY SHARES OF £1 EACH.

Payable as follows: On Application, 2/6 per Share. On Allotment, 7/6 per Share. On 5th June, 1929, 10/- per Share.

Payment may be paid in full on Allotment and Interest will be allowed on the amount prepaid at the rate of 5 per cent. per annum.

THE CORNHILL ISSUES CORPORATION, LIMITED, of 3, London Wall Avenue, London, E.C.2, has been authorised by the Company to invite applications for the above-mentioned 725,000 Ordinary Shares of £1 each at par through its Bankers: BARCLAYS BANK LIMITED, Head Office, 54, Lombard Street, E.C.3; 1, Minories, London, E.1, and Branches. WESTMINSTER BANK LIMITED, Head Office, 41, Lothbury, E.C.2; 1, Finsbury Square, E.C.2, and Branches.

Directors:

THE RT. HON. LORD BLEDISLOE, P.C., K.B.E., D.Sc., F.C.S., 52, Sloane Street, S.W.1 (Director, Gloucester Railway Carriage and Wagon Company, Limited), Chairman.

SIR JAMES CALDER, C.B.E., 32, Park Lane, W.1 (Director of The Distillers Company, Limited; Chairman of Calders, Limited).

RENE PAUL DUCHEMIN, 27, Quai de la Tournelle, Paris (Officier de la Légion d'Honneur; Président de la Confédération Générale de la Production Française).

THE RT. HON. VISCOUNT ELIBANK, D.L., 238, St. James Court, S.W. (Chairman of the Perak River Hydro-Electric Power Co., Limited).

MAJOR CYRIL FULLARD ENTWISTLE, M.C., LL.B., 14, Hill Street, W.1 (Director of The Cornhill Issues Corporation, Limited).

MILIVOJ CRNADAK, Yurievska, 26, Zagreb (Vice-President of the First Croatian Savings Bank; President of the Chamber of Commerce, Zagreb, Yugoslavia).

Technical Adviser: DR. W. R. ORMANDY, D.Sc., F.I.C., F.C.S., etc., Consulting Chemist and Engineer, London.

Technical Advisers to the Destilacija Drva D.D.: PROFESSOR H. SUIDA, D.Ph., etc., President Chemical Section, Technical High School, Vienna. M. JACQUES MAUGER, Chemical Engineer, Managing Director "Maison Camus Duchemin," Paris.

Bankers: BARCLAYS BANK LIMITED, 1, Minories, London, E.1. WESTMINSTER BANK LIMITED, 1, Finsbury Square, E.C.2.

Solicitors: To the Company: ALBERT M. OPPENHEIMER, 31, Queen Victoria Street, E.C.4, and 27, Behrenstrasse, Berlin. To the Vendor: MAYO ELDER & CO., 10, Draper's Gardens, E.C.2.

Local Legal Adviser: DR. STEPAN POSILOVITCH, 7, Berislaviceva, Zagreb.

Brokers: CAPEL-CURE & TERRY, 10, Old Broad Street, London, E.C.2. MEWBURN & BARKER, 13, Pall Mall, Manchester. PEARSON, CONNOR & CO., 20, Renfield Street, Glasgow, C.2. CLARK, PEACOCK & CO., 9, Mount Stuart Square, Cardiff.

Auditors: PRICE, WATERHOUSE & CO., Chartered Accountants, 3, Frederick's Place, E.C.2, and at Paris, Milan, Berlin, Bucharest, Rotterdam, and Brussels.

Secretary and Registered Office: H. R. ATTWOOD, A.S.A.A., 3, London Wall Avenue, E.C.2.

Registrar and Transfer Office: A. ENGEL, 4, Bucklersbury, E.C.4.

ABRIDGED PROSPECTUS.

OBJECTS.—The Company has been formed for the purposes specified in the Memorandum of Association, and in particular to acquire a controlling interest (of over 77 per cent. of the share capital) in the **Destilacija Drva D.D. (called in English, "Wood Distillation Company")**, to finance that concern and by that means to develop and exploit its **chemical works and timber concessions in Bosnia, Yugoslavia.**

WOOD DISTILLATION COMPANY.—The Company was established under Yugoslavian law at Zagreb in 1921 for the purpose of acquiring from the Government, for a term expiring in 1946, a Lease Contract of the **Chemical Plant, Sawmills, Railways, Forest** and **Equipment,** originally installed by the Bosnian Timber Exploitation Company, a subsidiary of the great German Wood Distillation Company, named **Holzverkohlungs Industrie A.G.,** of Constance. Under the direction of the **First Croatian Savings Bank,** the enterprise has been entirely reconstructed and modernised. The present Government has agreed to extend the Lease Contract until 1971 on very favourable terms.

Timber Concessions.—The Wood Distillation Company holds rights from the Yugoslavian Government and Mussalman Church Administration over approximately 33,000 hectares (about 80,000 acres) of Forest limits from which the Government have granted felling rights for the Sawmill and Distillation Plant. The Directors consider that these Concessions, together with certain other smaller Forest reserves available, will ensure an ample supply of wood for all purposes.

Wood Distillation Works.—It is the **largest single installation of its kind in Europe.** It is especially equipped in a thoroughly up-to-date and comprehensive manner for the carbonisation annually of 200,000 **stack metres** of wood for the economic manufacture of **Acetic Acid, Acetone, Formaldehyde, Methyl Alcohol, Charcoal** and allied products.

The "Suida" Patents.—These belong to the Wood Distillation Company, and relate to the well-known "Suida" Process for the direct manufacture of Acetic Acid and the recovery of weak Acids. These processes have been operated on a commercial scale for the last two years, and the Directors consider these patents to be of the greatest commercial importance.

Sawmill.—This has a capacity of **100,000 cubic metres** per annum. The eminent firm of **Carl Gottlieb, Vienna, Sawmill Engineers,** have contracted to reconstruct and modernise the present Sawmill and conditioning plant at an inclusive cost of £12,670.

Installation.—This includes a well-equipped Power Station, houses for the staff and workpeople, warehouses and other buildings. The Distillation Factory employs about 700, the Sawmill about 200, and the Forest about 1,500 to 2,000 workmen. Local working conditions are excellent. **Labour** is cheap, efficient and abundant. **Water,** both river and artesian, is in ample supply for all industrial and domestic requirements.

Railways.—The lease includes about **150 kilometres Government standard gauge railways,** directly penetrating the forests, together with **Stations, Sidings** and **Rolling Stock,** providing direct contact with the Central European railway system and ensuring efficient transport to Susak and Dubrovnik, Fiume, Trieste, the Ports of Call of the Cunard, Ellerman and Ellerman-Wilson Lines.

Coal Resources.—With seams running under the very ground area of the factory, the Wood Distillation Company works its own Brown Coal Mines, from which all its industrial and domestic requirements are supplied at a very low cost. The reserves of Coal already exposed are more than adequate for all present and potential requirements. The amount keeps pace with the factory demand of about 100,000 tons per annum. The Directors anticipate considerable profit from this source in the future.

GOVERNMENT CO-OPERATION.—The capital of Wood Distillation Company is 20,000,000 dinars, divided into 100,000 shares of 200 dinars each, of which 20,000 are priority (or preference) shares, carrying a preferential dividend of 6 per cent. per annum, but in other respects ranking equally with the 80,000 ordinary shares. **The Yugoslavian Government holds these 20,000 priority shares,** and is therefore interested in the success of the Wood Distillation Company. The Company will acquire 77,642 of the 80,000 ordinary shares, and thus be in a position of a **partner with the Government,** and the works consequently will continue to enjoy particular protection under the Preferential Tariffs. There are no debentures or mortgages outstanding on the real estates and goods of the Wood Distillation Company.

PROPERTY VALUATION by **Messrs. Bradshaw, Brown & Co.,** Valuers, Billiter Square Buildings, London, E.C. 3.

(*a*) **Buildings, Fixed and Loose Plant and Machinery,, Railways and General Equipment acquired and owned by the Wood Distillation Co., Ltd.**	**£186,164 0 0**
(*b*) **Buildings, Fixed and Loose Plant and Machinery, Railways and General Equipment leased from the Government for 42 years, namely, until 1971**	**£284,932 0 0**
Giving a total of	**£471,096 0 0**

TIMBER CONCESSIONS VALUATION.—Messrs. Toplis & Harding & Russell, Surveyors and Valuers, established 1790, of 28, Old Jewry, London, E.C. 2 (and at Manchester, Cairo, etc.) report upon these forests, and is summarised as follows:—

Apart from the revenue accruing from the Distillation Plant **WE ESTIMATE THE NET ANNUAL INCOME FROM THESE FORESTS TO BE THE SUM OF £98,000,** which will accrue to Chemical and Wood Industries, Limited.

WE VALUE THE CONCESSIONS AT THE SUM OF £750,500.

Yours faithfully, (signed) **TOPLIS & HARDING & RUSSELL.**

TECHNICAL ADVISER'S REPORT.—Dr. W. R. Ormandy, D.Sc., F.I.C., F.C.S., late Bishop Berkeley Fellow of the Owens College, M.I.A.E., M.I., Pet. Tech., M.I.Chem.E., London, whose report is summarised as follows:—

I ESTIMATE THAT THE "SUIDA" PATENTS HAVE A CAPITAL VALUE OF £120,000.

Yours faithfully, (signed) **W. R. ORMANDY.**

GENERAL MANAGER'S ABRIDGED REPORT.—Dr. Sigmund Pordes, Genera Manager of the Wood Distillation Company, reports as follows:—

The Cornhill Issues Corporation, Limited,
3, London Wall Avenue, London, E.C. 2.

Dear Sirs, Zagreb, 28th March, 1929.

After having thoroughly discussed all matters concerning methods and conditions of manufacture at the Teslic works with **Dr. W. R. Ormandy,** London, **Mons. Jacques Mauger,** of Paris, and **Professor H. Suida,** of Vienna, as technical advisers, and the late **Mr. Arpad Karolyi,** as General Director of the Wood Distillation Company, I beg to report that actual experience and proven results demonstrate that the Wood Distillation plant, now that it has been completely modernised, is **EARNING NET PROFIT AT THE RATE OF £71,360 PER ANNUM FROM THE SALE OF A CHEMICAL PRODUCTS ALONE.** It is clear that this figure is capable of considerable expansion as methods improve and certain economies are effected. Domestic and International "Cartels" dispose of the entire output of the Distillation and Chemical Plant.

The **"Suida"** processes have now been operated in conjunction with **First** Croatian Savings Bank on a commercial scale during the past two years. In addition to the great value to the economic working of the Distillation Plant at Teslic these patents are already producing **A REVENUE OF ABOUT £10,000 PER ANNUM,** which figure it is anticipated will, from negotiations now pending, be **INCREASED VERY SHORTLY TO AT LEAST £20,000 PER ANNUM.**

The Company has also received offers by Yugoslavian Textile Mills to take over the entire output at market figures, which would leave the Company with a **MINIMUM ANNUAL PROFIT OF £112,200.**

Yours faithfully, (signed) **SIGMUND PORDES.**

ESTIMATED PROFITS.—The Directors estimate the earning capacity of Chemical and Wood Industries, Limited, as follows:—

	£
Interest on Advances to the Wood Distillation Company	**36,000**
Timber as per Report of Toplis & Harding & Russell	**98,000**
Chemical Works as per Report of Dr. S. Pordes, £71,360, of which over 77 per cent. accrues to this Company	**54,947**
Interest on £230,000 reserved for Artificial Silk Factory	**11,500**
	£200,447

After making the necessary provision for Directors' fees and remuneration, management, technical and administrative expenses, there would remain a net profit of about £190,000 for the first year, which would be equivalent to about **19 per cent.** on the capital of the Company.

PURCHASE PRICE.—This Company acquires from the Vendor 77,642 shares of the **Wood Distillation Co., Ltd.,** at the price of £275,000, which will be satisfied by the allotment of 275,000 fully-paid Ordinary Shares of £1 each, of which 175,000 will be allotted to the Engelsch-Nederlandsche Financieering Maatschappij, who are interested with the Vendor in the Shares being acquired.

Prospectuses and Forms of Application may be obtained at the offices of the Company, and from the Company's Bankers and Solicitor, and from The Cornhill Issues Corporation, Limited, 3, London Wall Avenue, E.C. 2.

London, 16th April, 1929.

1s. 5½d.; Muntok, white, 2s. 2½d.; Lampong, March-May, quoted 1s. 3½d.; May-July sold 1s. 2⅝d.; August-October, 1s. 1⅝d.; Muntok, white, March-May, quoted 2s. 1¾d.; May-July sold 1s. 0⅜d.; August-October, 1s. 11d. lb. London stocks reduced by 5 tons on the week for black, but 27 tons higher for white. Tellicherry, March-May, quoted 145s. cwt. c.i.f. Pimento; July-August sellers, 115s.; August-October, 110s. cwt. c.i.f. London; cloves dull, unaltered; Singapore flake tapioca, April-May, Havre, 17s. 9d.; Penang seed to Hamburg, 16s. 9d. cwt.; African ginger, spot, 53s.; April-May, 50s.; F.W.R. Cochin, spot, 70s. cwt.

FRUIT (Dried).—Currants. Markets steady, but business confined to small parcels of low-priced fruit. Pyrgos, quoted, 45s. 6d.-46s.; Amalias, 46s.-46s. 6d.; Zante, 47s.; Vostizza, 50s.-55s. New crop Australian shows attractive quality and realised from 50s.-62s. Sultanas, Smyrna in better request, medium to fine ranges from 41s.-54s.; Cretan, 42s.-72s.; Greek, 40s.-55s.; Australian, new crop, 60s.-70s. Raisins experienced a quiet sale. Valencia, quarter-boxes, common to good, 46s.-52s.; Lexias, 30s.-34s. Australian and Cape unaltered. Figs quiet. Genuine spot, 28s.-31s. Dates quietly steady. Hallowie spot, 25s.-30s.; Khedrowie, 21s.-23s.; Siar, 14s. 6d.-16s. 6d. cwt.

EVAPORATED FRUITS.—Business is slow to develop apart from a good inquiry for Californian plums, but general tone firm and offers reservedly made in view of probable damage to crops by recent frosts. Californian plums, 20's-30's, quoted, 65s.-66s.; 30's-40's, 56s.-57s.; 60's-70's, 43s.-44s. Pears, Lake County, 72s. 6d.-100s. Apricots, South African Royal, 57s. 6d.-117s. 6d.; Cape, 72s. 6d.-82s. 6d.; Californian, 85s.-117s. 6d.; Australian, 75s.-85s. Peaches, Californian, choice, 52s.; extra choice, 54s.; fancy, 58s. Apples, Californian, spot, sliced extra choice, 70s. Almonds, market less depressed. Mazagan, 127s. 6d.; Mogador, 127s. 6d.; Majorcas, 130s.; Bitter, Jordan, 185s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—The market was fairly well supplied by recent arrivals of Californian fruits, which are being steadily absorbed. Sellers hold for full prices, both spot and forward, owing to unfavourable crop prospects. Small available supplies of Australian move off steadily. Singapore pines experienced a quiet sale, buyers being reluctant to operate forward at current rates. Italian tomatoes somewhat difficult to vend, business being hampered by fluctuating forward quotations.

CANNED FISH.—There is not much change in the general situation, a spell of warm weather being needed to stimulate demand. Meanwhile full rates were quoted for all descriptions. Sardines, Portuguese clubs, 5s. per dozen tins. Lobsters largely nominal on scarcity, and best halves realise 140s.-145s. Salmon, red talls, spot, 43s.-45s.; pink, ditto, 26s.-27s.; halves, 43s.-45. Japanese crab in moderate supply, with finest quality 97s. 6d.-100s.

CANNED MEATS.—Corned beef and tongues sell slowly, but the latter remains firm on limited offerings. Lunch tongues realise full rates, with sustained forward inquiries. Cases of 12 by 6 tins, quoted, 1s. 7d. lb., ex wharf principal U.K. ports.

CONDENSED MILK AND POWDERS.—Market easier. Full cream, sweetened, English, spot, 42s. 6d.; Dutch, ditto, 37s. 6d.; May-June, 37s. 6d. Machine skimmed, sweetened—English, spot, 25s.; Dutch, ditto, 22s. 9d.; May-June, 22s. 9d.; all in 5 cwt. barrels. Powders, spray process, F.C., 26 per cent., 2 by 56 lb. tins, crated, 88s.; M.S. (1 cwt. cases), 39s. 6d. Roller, ditto, F.C., 26

PRELIMINARY NOTICE.

OLYMPIA LIMITED

(Incorporated under the Companies Acts, 1908 to 1917).

CAPITAL:

Authorised.		To be issued.
£1,000,000	in 1,000,000 7 Per Cent. Cumulative Preference Shares of £1 each -	£400,000
£500,000	in 2,000,000 Ordinary Shares of 5/- each - - - - -	£200,000
£1,500,000		£600,000

The Subscription Lists will open on Monday next for an

ISSUE AT PAR OF

400,000 7% CUMULATIVE PREFERENCE SHARES of £1 each and 400,000 ORDINARY SHARES of 5s. each.

DIRECTORS:

PHILIP ERNEST HILL (Chairman, Covent Garden Properties Company, Limited), *Chairman.*
CLAUD FRANCIS GODDARD, of Messrs. Goddard & Smith, Auctioneers and Estate Agents.
PAUL STANLEY MAY (late Senior Partner of Messrs. May & Rowden, Auctioneers and Estate Agents).
LOUIS NICHOLAS, Chartered Accountant.
REGINALD GARDINER HEATON (Managing Director, Olympia (1912) Limited), *Managing Director.*

The Prospectus will show that:

The Company is acquiring as from the 1st January, 1929, the whole of the assets and undertaking of Olympia (1912) Limited (the Proprietors of Olympia), which is the recognised centre for Trade Exhibitions in Europe.

The main Olympia buildings and adjacent properties belonging to the Company cover an area of 9¼ acres, but as they are not sufficiently large to meet the demand for accommodation, considerable further extensions are being proceeded with, which will bring them up to a total area of about 10 acres.

The present buildings are let for practically the whole year round with the exception of a few days in August, which are utilised for the annual cleaning, etc.

The estimated value of net assets, exclusive of goodwill, is £1,134,585, which sum covers the present issue of Preference Shares over 2¾ times.

Profits for the past six years have been as follows:

1923	..	£70,816	1926	..	£67,007
1924	..	57,285	1927	..	81,940
1925	..	77,830	1928	..	90,760

The year 1924 was the first year of the Wembley Exhibition and 1926 was the year of the General Strike. **The net profits for the current year are estimated by the Managing Director at £105,000 and it is anticipated that these profits will be considerably increased when the extensions have been completed.**

The services of Mr. R. G. Heaton as Managing Director and of Mr. Samuel Fortescue and all the other principal officials and staff of Olympia (1912) Limited have been retained.

Prospectuses and Forms of Application can be obtained from the—

HONEY.—Market firm, with sustained inquiries for small available supplies. New crop, Jamaican, realised advanced rates on confirmation of shortage, pale sorts being reservedly offered on spot at 60s.; light amber, 55s.; dark amber, 47s. 6d. Limited quantities of old manufacturing sorts are still obtainable at 44s.-45s. New Zealand sells readily, dark amber ranging from 50s.-55s.; medium, 55s.-65s.; light, 65s.-85s.; white and water-white, 65-87s. 6d. per cwt.

RUBBER.

Prices continue to sag in face of insufficient support both on manufacturing and speculative account, while quantities coming along are liberal. Sheet spot and May sold 10¼d. to 20d. and 10⅛d.; June, 10⅜d. to 10½d.; July-September, 10½d. to 10¼d. and 10½d.; October-December, 10⅜d. to 10⅛d. and 10⅜d.; January-March, 10⅞d. lb. London stocks increased 1,512 tons on the week. Landings were 2,829 tons; deliveries, 1,317; stocks, 30,446 against 58,948 last year. Liverpool stocks, 149 tons higher. Landings, 320; deliveries, 171; stocks, 4,591.

GENERAL.

JUTE.—A quiet market and prices slightly easier. Calcutta weaker. Firsts, March-April, Hamburg, sold £31 10s.; April-May, quoted £31 17s. 6d.; May-June, £32; new August-September, £33 10s. ton. Hamburg stocks increased 5,300 bales on the fortnight at 123,800.

HEMP.—After a very weak closing the previous day, market for Manila descriptions proved tolerably steady, as buyers were more frequent. J2, April-June, quoted £37s. 10s.; K, £34; L1, £34 10s.; L2, £31 10s.; M1, £31 10s.; M2, £27 10s.; S1, £57; S2, £51; S3, £41 10s.; G, £38 10s.; H, £34; C2, £32; C3, £30. African Sisal, No. 1, April-May sellers, £40; No. 2, £38 ton c.i.f. Manila receipts last week, 36,000 bales compared with 34,000 at same time last year; estimate for next week, 34,000, and following week 28,000. Manila shipments to U.K./Continent last week, 8,000 bales; U.S.A., 8,000; Japan, and other countries, 13,000. Local stocks on the week, 3,000 bales up at 208,000.

SHELLAC.—Slow of sale. T.N. spot 190s. 6d., May 184s., August, 188s. cwt.

COPRA.—The firmer tone recently observable in this market made further marked progress to-day, though business was rather impeded by the high pretensions of sellers. Some assistance is forthcoming by marked stability of the Marseilles centre, and where arrivals of all grades for the first half of present month approximate to only 1,300 tons. In this, very little South Sea smoked copra figured, and next steamer, the "Tolken," due at the port end of month, has about 500 tons. Balance of cargo is for Spanish ports and Dunkirk. Straits S.D., May-June, Rotterdam, quoted £22 13s. 9d.; June-July, £22 15s.; Dutch E.I., May-June, £22 8s. 9d.; Ceylon, £23 10s.; South Sea, April-May, Marseilles, sold £21 15s. for smoked; S.D. being quoted £21 17s. 6d.; P.R., £22. Palm kernels, April-May, Hamburg, £18 5s. ton.

MISCELLANEOUS.—Coconuts quoted 18s. to 25s. per 100. Coir yarn, Ceylon, £19 to £38 10s.; Cochin, £22 10s. to £40; Ceylon bristle, £18 15s. to £25 10s.; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 2s.; Java, 2s.

METROPOLITAN CATTLE.—April 17.

British Beasts, per stone of 8 lbs. to sink the offal. Sheep per stone.

SOUTHERN PACIFIC CO.

REPORT OF THE BOARD OF DIRECTORS.

TO THE STOCKHOLDERS OF THE SOUTHERN PACIFIC COMPANY: NEW YORK, N.Y., April 4, 1929.

Your Board of Directors submits his report of the operations and affairs of the Southern Pacific Lines and Affiliated Companies for the fiscal year ended December 31, 1928.

INCOME ACCOUNT.

The following statements of income and of surplus show the income for the year and the accumulated surplus to the close of the year, accruing to Southern Pacific Company stock from the Transportation System and from all *separately operated Solely Controlled Affiliated Companies*, combined:

NET INCOME OF THE SOUTHERN PACIFIC LINES AND SOLELY CONTROLLED AFFILIATED COMPANIES, COMBINED, FOR THE YEAR 1928 COMPARED WITH THE YEAR 1927.

	Year Ended December 31, 1928.	+ Increase − Decrease Compared with 1927. Amount.	Per Cent.
1. Net income of Transportation System	*$39,028,633·24	+ $5,326,108·77	15·80
2. Net income of Affiliated Companies	*$48,024·04	− 1,448,648·30	63·08
3. Net income of Transportation System and of all separately operated Solely Controlled Affiliated Companies, combined	$39,876,657·28	+ $3,877,460·47	10·77
4. Per cent. earned on average amount of outstanding capital stock of Southern Pacific Company:			
(*a*) From operations of Transportation System	10·48	+ 1·43	15·80
(*b*) From operations of Affiliated Companies	·23	− ·39	62·90
(*c*) Total for the year 1928	10·71	+ 1·04	10·75
(*d*) Total for the year 1927	9·67	—	—

* Excludes all inter-company dividends.

SURPLUS OF THE SOUTHERN PACIFIC LINES AND SOLELY CONTROLLED AFFILIATED COMPANIES, COMBINED, TO DECEMBER 31, 1928.

	Debit	Credit
1. Total corporate surplus at December 31, 1927	—	$480,186,890·62
2. Net corporate deficit, at date of acquisition, of properties acquired during the year	$1,077,586·25	
3. Credit balance transferred from income:		
Transportation System	$37,452,900·31	
Affiliated Companies	816,204·04	
4. Dividends paid:	—	38,269,104·35
On capital stock of Southern Pacific Company:		
1½ per cent. paid April 2, 1928	$5,585,713·50	
1½ per cent. paid July 2, 1928	5,585,713·50	
1½ per cent. paid October 1, 1928	5,585,713·50	
1½ per cent. payable January 2, 1929	5,585,713·50	
Total Southern Pacific Company	$22,342,854·00	
On capital stocks of Transportation System Companies held by the public	30·00	
	22,342,884·00	
5. Miscellaneous adjustments during the year	—	9,098,483·78
6. Credit balance December 31, 1928	504,124,008·50	
	$527,544,478·75	$527,544,478·75

INCOME ACCOUNT OF SOUTHERN PACIFIC LINES.

The income account of the Transportation System (Southern Pacific Company and Transportation System Companies, combined, excluding offsetting accounts and inter-company dividends) for the year 1928 compared with the year 1927, was as follows, viz.:

	Year Ended Dec. 31, 1928.	+Increase −Decrease.	Per Cent.
OPERATING INCOME.			
1. Railway operating revenues	$300,104,027·55	+$2,358,621·39	·79
2. Railway operating expenses	216,734,202·82	− 1,444,989·50	·66
3. Net revenue from railway operations	$83,369,824·73	+$3,803,610·89	4·78
4. Railway tax accruals	21,525,425·43	+ 311,913·08	1·47
5. Uncollectable railway revenues	75,568·19	− 56,555·50	42·80
6. Equipment rents—Net	7,018,072·68	+ 658,184·73	10·35
7. Joint facility rents—Net	*157,342·64	− 413,964·21	—
8. Net railway operating income	$54,908,101·07	+ 3,304,032·79	6·40
NON-OPERATING INCOME.			
9. Income from lease of road	$95,442·10	− $139·85	·15
10. Miscellaneous rent income	1,691,917·26	− 85,337·13	4·80
11. Miscellaneous non-operating physical property	91,344·35	− 12,834·97	12·32
12. Dividend income	†5,729,469·87	+ 1,793,446·77	45·56
13. Income from funded securities—Bonds and notes	2,905,290·70	− 45,566·72	1·59
14. Income from funded securities—Investment advances	47,890·17	7,361·57	18·16
15. Income from unfunded securities and accounts	1,460,047·38	+ 627,287·30	75·33
16. Income from sinking and other reserve funds	1,053,340·94	+ 48,171·96	4·79
17. Miscellaneous income	225,925·60	− 180,138·86	44·36
18. Total non-operating income	$13,300,658·37	+$2,243,383·51	20·29
19. Gross income	$68,208,759·44	+$5,547,416·30	8·85
DEDUCTIONS FROM GROSS INCOME.			
20. Rent for leased roads	$253,428·99	+ $2,801·03	1·12
21. Miscellaneous rents	790,339·52	+ 1,229·60	·16
22. Miscellaneous tax accruals	43,984·00	− 8,103·22	15·56
23. Separately operated properties—Loss	72,480·95	+ 17,546·00	31·37
24. Interest on funded debt—Bonds and notes	27,380,646·95	+ 273,141·13	1·01
25. Interest on funded debt—Non-negotiable debt to affiliated companies	43,182·99	+ 20,717·73	92·22
26. Interest on unfunded debt	320,657·53	+ 116,936·59	57·40
27. Amortization of discount on funded debt	99,095·54	+ 25,777·56	35·16
28. Maintenance of investment organisation	36,961·85	+ 2,645·13	7·71
21. Miscellaneous income charges	138,347·88	− 231,384·02	62·58
30. Total deductions from gross income	$29,180,126·20	+ 221,307·53	·76
31. Net income	$39,028,633·24	+$5,326,108·77	15·80
DISPOSITION OF NET INCOME.			
32. Income applied to sinking and other reserve funds	$1,494,159·41	+ $54,296·89	3·77
33. Income appropriated for investment in physical property	81,573·52	− 44,744·59	35·42
34. Total appropriations	$1,575,732·93	+ $9,552·30	·61
35. Income balance transferred to credit of profit and loss	$37,452,900·31	+$5,316,556·47	16·54

* Credit. † Excludes all inter-company dividends.

INCOME ACCOUNT OF SOUTHERN PACIFIC LINES—Continued.

The operating income of the Transportation System is dealt with further on under the heading "Transportation Operations—Southern Pacific Lines." The causes of the principal increases and decreases in non-operating income and in deductions from gross income are explained below, viz.:

NON-OPERATING INCOME.

The increase of $1,793,446·77 in the account Dividend Income is due, principally, to increased dividends received from Pacific Fruit Express Company and from Standard Oil Company of California, which increases were partly offset by a decrease in the amount of dividends received from the Reward Oil Company.

Of the increase of $627,287·30 in the account Income from Unfunded Securities and Accounts, the sum of $502,343·84 represents an increase in interest on time and demand loans, due to the increased amount of such loans and to increased interest rates; and $103,828·72 represents an increase in interest on Federal income and other tax refunds received during the year.

The decrease of $180,138·86 in the account Miscellaneous Income is due, principally, to decrease in royalties received on oil from wells located on transportation property in the Spindletop, Texas, field.

DEDUCTIONS FROM GROSS INCOME.

The increase of $273,141·13 in Interest on Funded Debt—Bonds and Notes is made up as follows:

	Principal	Interest
Bonds issued this year and the interest accrued thereon this year	$34,537,000·00	$1,178,680·10
Bonds retired this year and the difference between the interest accrued thereon this year and a full year's interest last year	*35,921,879·14	*1,127,780·74
Decrease in outstanding bonds held by the public...	*$1,384,879·14	

	Interest.
Increase in interest accrued this year as compared with last year on the bonds so issued and retired	50,899·36
Difference between a full year's interest accruing this year and the interest accruing last year on bonds issued last year as shown on page 15 of last year's report	610,253·97
Net increase in interest paid on bonds held in sinking funds	49,913·50
	$711,066·83
Less Interest accrued last year on bonds retired last year as shown on page 15 of last year's report	*437,925·70
Net increase	273,141·13

The net decrease of $1,384,879·14 in the principal of the outstanding funded debt will result in a decrease of about $190,000 in the annual interest payments.

The increase in the account Interest on Unfunded Debt is due, principally, to interest paid during the year on deferred payment of claims, which have been in dispute for several years.

The dividends paid for 1928 were appropriated from the profit and loss surplus and, therefore, do not appear in the income account. Payments for 1928 amounted to $22,342,884·00, compared with $22,342,929·00 for 1927. The figures for this year include $30·00, and those for last year, $75·00, representing dividends on stocks of Transportation System Companies held by the public.

* Items in italics represent decreases.

TRANSPORTATION OPERATIONS—SOUTHERN PACIFIC LINES.

The following table shows the Net Railway Operating Income and Traffic Statistics of the Transportation System for the year 1928 compared with those for the year 1927.

	Year Ended December 31, 1928.	+ Increase − Decrease.	Per Cent.
1. Average miles of road operated	13,599·69	+ 94·84	·70
NET RAILWAY OPERATING INCOME.			
RAILWAY OPERATING REVENUES.			
2. Freight	$222,360,880·87	+ $5,744,246·83	2·65
3. Passenger	50,353,632·20	− 2,887,296·09	5·42
4. Mail and express	12,184,801·38	+ 428,050·56	3·64

As has been stated in reports for previous years, the Transportation Act of 1920 provides that the railways shall receive a fair return upon the aggregate value of railway property held for and used in the service of transportation, such fair return being 5½ per cent., as last fixed by the Interstate Commerce Commission, under authority of the Act. Notwithstanding a steady increase in the volume of traffic handled, and the marked gain in operating efficiency as reflected in net revenue from railway operations, the existing rate structure, during each year since enactment of the Transportation Act, has failed to give your Company the fair return contemplated by the Act, the rate of return upon the book value of road and equipment of the lines constituting the Transportation System having been as follows:

	Per Cent.
1921	3·36
1922	4·29
1923	4·81
1924	3·99
1925	3·77
1926	3·98
1927	3·59
1928	3·76
Average return for 8 years	

TRANSPORTATION OPERATIONS—SOUTHERN PACIFIC LINES—Continued.

The total Railway Operating Revenues for 1928 amounted to $300,104,027·55, and were the largest in the Company's history, exceeding the previous high record established in 1926 by $1,303,029·49, and exceeding last year by $2,358,621·39. This was the result of an increase of 562,085,317 ton-miles, or 3·71 per cent., over the record established last year, in the volume of revenue freight carried by your lines. This increase in the volume of freight carried resulted in an increase of $5,744,246·83 in freight revenue, which was partly offset by a decrease of $2,887,296·09 in passenger revenue, due, principally, to automobile competition, and by a net decrease of $498,329·35 in other operating revenues, the result, principally, of a decrease in the earnings of tank steamers.

The increase in operating revenues was accompanied by a decrease of $1,444,989·50 in operating expenses, an increase of $311,913·08 in taxes, and an increase of $187,665·02 in equipment and joint facility rents and other charges, the result being an increase of $3,304,032·79, or 6·40 per cent., in Net Railway Operating Income.

On the Pacific Lines, freight revenues increased $5,442,603·10, or 3·53 per cent. This increase resulted from increased tonnage of nearly all products of agriculture, except oranges and barley; increased tonnage of forest products; and increased tonnage of manufactures and miscellaneous commodities, partly offset by a decrease in the tonnage of mineral products. There was a decrease in the orange crop which caused a decrease in revenue of about $800,000. On the other hand, there was an increase in the apple crop which brought a substantial increase in revenue. Other fruit crops were also greater, and the increased tonnage resulted in increased revenue, notwithstanding a 7½ per cent. reduction in rates to transcontinental points, effective from February 10, 1928, on all deciduous fruits except apples, which caused a decrease in the revenue from grapes, although the tonnage handled was greater than in 1927. Freight revenue was also increased by a heavy westbound movement of corn. These conditions, together with greatly improved crops of canteloupes, watermelons, sugar beets, and fresh vegetables (particularly lettuce), account for the increased revenue from agricultural products. The increase in revenues from forest products is the result of a more stabilised condition of the lumber industry; an improved demand for lumber in the East; and a large increase in the box shook movement, caused by the increased production of fruits, vegetables, and melons. The increase in revenue from manufactures and miscellaneous commodities is the result, principally, of an increase in the tonnage of automobiles and parts, the production of automobiles in 1928 having exceeded that of 1927 by approximately 950,000 cars and trucks; of an increase in the distribution of automobiles; and of a large increase in the tonnage of potash fertilizer originating, principally, at Trona, California. The decrease in the tonnage of mineral products was due, principally, to a decrease in coal shipments from Dawson, New Mexico, to the Chicago, Rock Island and Pacific Railway, for locomotive use; and to a decreased movement of coal from Utah to California, caused by producers not making the usual price reductions on coal for summer storage.

On the Texas and Louisiana Lines, freight revenues increased $666,099·81, or 1·26 per cent. This increase was the result, principally, of increased tonnage of agricultural products, practically all commodities under this classification, except bananas, showing gratifying increases, due, principally, to larger crops of cotton, rice, melons, and potatoes, in the territory served by these lines, and to increased tonnage of fruits, fresh vegetables, and other perishables from California and from the Rio Grande Valley. The decreased movement of bananas is due to the fact that a large proportion of this tonnage formerly received at Gulf ports for the West is now moving via the Panama Canal. There was an increase in the tonnage of automobiles and parts, due to increased production; and an increase in the tonnage of brick, cement, tile, and other manufactures, due to increased building activities and to generally improved business conditions. The above-mentioned increases were partly offset by a decrease in the tonnage of animal products, due to a shortage of cattle which caused higher prices for meat and packing-house products, thus decreasing the demand therefor; by a decrease in the tonnage of forest products, due to increased use of substitutes and of fir from the North-west; by a decrease in the tonnage of petroleum and gasoline, due to shifting of trade territory and to pipe-line and truck competition; and by decreased tonnage of iron and steel articles and machinery, due, principally, to decreased construction of pipe line and oil-tank facilities.

On the Southern Pacific Steamship Lines, freight revenues decreased $364,456·08, or 3·84 per cent. This decrease is due, principally, to a decrease in the tonnage of cotton and cotton linters, the result of a short cotton crop in Texas and Louisiana last year, and of the strike in the New England textile mills; to Panama Canal and tramp steamer competition on railroad ties; and to the after effects of the flood, last year, in the lower Mississippi Valley.

Passenger revenues decreased $2,887,296·09, or 5·42 per cent., of which a decrease of $1,840,742·20 allocated to the Pacific Lines, and a decrease of $1,158,949·21 to the Texas and Louisiana Lines, such decreases being partly offset by an increase of $112,395·32 on Southern Pacific Steamship Lines. While the decrease on the rail lines is attributable in part to the competition of the Panama-Pacific Line which, in January, 1928, established a steamship passenger service between Atlantic and Pacific ports, via the Panama Canal; and to increased travel to Europe, which has diverted tourists from the Pacific Coast; the major part of the decrease is due to the more extensive use of private automobiles and to the continued and increased competition of motor coach lines, which, through coordination and consolidation of services, are reaching out for transcontinental and other long haul traffic. The increase of $112,395·32 on Southern Pacific Steamship Lines is attributable to the placing in service during 1928 of the new S.S. "Dixie," of 12,440 tons displacement, which has attracted considerable new business owing to her superior accommodations.

The following tabulation, giving for the past five years the fluctuations in gross passenger revenue, contrasted with the fluctuations in gross revenues other than passenger, indicates the extent to which automobile competition has affected the passenger business of your lines:

YEAR.	GROSS PASSENGER REVENUE. For the Year.	GROSS PASSENGER REVENUE. Decrease During Year.	GROSS REVENUES OTHER THAN PASSENGER. For the Year.	GROSS REVENUES OTHER THAN PASSENGER. Increase During Year.
Year ended—December 31, 1923...	$62,158,876	—	$225,045,759	—
December 31, 1924...	$58,818,668	*$3,340,208*	$232,908,352	$7,862,593
December 31, 1925...	56,292,247	*2,526,421*	238,809,507	5,901,155
December 31, 1926...	55,262,330	*1,029,917*	243,538,668	4,729,161
December 31, 1927...	53,240,928	*2,021,402*	244,504,478	965,810
December 31, 1928...	50,353,632	*2,887,296*	249,750,395	5,245,917
Average per year for the five years.....	54,793,561	*2,361,049*	241,902,280	4,940,927

The gross revenues of your lines from all business, other than passenger, increased from $225,045,750 for the year 1923, to $249,750,395 for the year 1928. This is an average increase per year for the five years, of $4,940,927, and represents a steady increase in the traffic handled, implying a condition of prosperity, which, ordinarily, would indicate that there should be a corresponding proportionate increase in passenger revenue. As will be seen, however, passenger revenue, instead of increasing, has shown a steady decline, decreasing from $62,158,876 for the year 1923, to $50,353,632 for the year 1928, or an average decrease for each year of the five year period of $2,361,049. As indicated in the annual reports for the years under consideration, this decline is due, chiefly to the increasing inroads of motor coach and other automobile competition. To meet this condition, and to effect certain economies in train service, your Company caused the incorporation, in April, 1927, of the Southern Pacific Motor Transport Company, which commenced operations last year by the establishment of certain motor coach lines, as set forth on page 24 of last year's annual report. Since its establishment last year this service has been actively extended, which matter is dealt with under the heading "Southern Pacific Motor Transport Company," further on in this report.

All Other Transportation Revenue decreased $603,792·03, or 6·42 per cent. This is the result, principally, of a decrease in the revenue of Southern Pacific Steamship Lines, due to falling off in the demand for tank steamers for transportation of commercial oil and to decreased rates on the tonnage handled. This decrease in the revenue of the Steamship Lines was partly offset by increased revenues of the rail lines from switching and from the operation of automobile ferries.

Incidental Revenue decreased $213,053·34, or 2·80 per cent., due, principally, to abnormal revenues last year for detouring trains in the flood districts of Louisiana, and to credit adjustments of miscellaneous rentals last year.

Maintenance of Way and Structures decreased $2,218,242·45, or 5·41 per cent. This decrease is due, principally, to the completion in the early part of last year of the work, begun in 1926, of bringing certain portions of your line up to main line standard, to fit them for use as a part of through traffic routes established through the construction of new lines; to a decrease in the charge to operating expenses on account of retirements in connection with additions and betterments, which is the result of the large expenditures for improvements to the property in previous years; to a decrease in tie renewals, brought about by the constantly increasing percentage of treated ties in the track; and to decreases in prices of maintenance materials. These decreases were partly offset by increases in the wages paid to maintenance forces. The following table, giving the principal items of materials used in repairs and renewals during the past six years, shows that the property has been maintained up to your Company's usual high standard:

MATERIAL USED IN REPAIRS AND RENEWALS.

	1928.	1927.	1926.	1925.	1924.	1923.
New steel rail, track miles	506·77	536·82	510·14	349·09	403·32	458·12
Ties, number	4,289,056	4,431,318	4,832,239	4,767,408	3,973,715	3,971,158
Ties, number per mile	214	225	248	252	222	245
Tie-plates, number	6,981,084	6,446,358	7,516,596	6,162,239	5,485,332	5,390,530
Piling, lineal feet	666,291	403,417	489,580	883,017	766,208	825,745
Lumber, feet b.m.	23,540,807	24,057,955	27,528,359	37,661,011	32,023,097	26,463,926

Maintenance of Equipment increased $945,197·01, or 1·86 per cent., which is the result, principally, of the increase in the volume of freight traffic handled by your lines.

Traffic Expenses increased $459,716·08, or 6·77 per cent., due, principally, to increases in the expenses of outside agencies, in advertising, and in expenses of industrial and development bureaus.

Transportation Expenses decreased $305,914·55, or ·29 per cent., which was made up of an increase of $211,855·70 on the rail lines and a decrease of $517,770·25 on the Steamship Lines. The increase on the rail lines was caused, mainly, by increases aggregating $1,433,000 in the pay of yardmen and trainmen, due to an increase of 3·71 per cent. in the ton-miles of freight traffic handled and to increases in the rates of pay (including back pay for the year 1927 for locomotive firemen); and by a decrease of $1,038,000 in the cost of fuel for locomotives, due to the decreased price of fuel and to the saving in fuel consumption. The constant campaign carried on for years to reduce fuel consumption in locomotives, has been reflected by a gradual but large reduction in the amount of fuel used in proportion to the ton-miles of traffic moved. The reduction in pounds of fuel used per 1,000 gross ton-miles in 1928, compared with 1927, amounted to 1·22 per cent. in passenger service, and 2·80 per cent. in freight service. The value of the economy realised in 1928, compared with 1927, amounted to $456,920, and in 1928 compared with 1913, to $12,158,588. The following table shows results obtained in fuel economy in 1928, compared with the preceding two years, and with the year 1913:

LOCOMOTIVE FUEL PERFORMANCE.	1928.	1927.	1926.	1913.	COMPARISON OF 1928 WITH 1927.	COMPARISON OF 1928 WITH 1926.	COMPARISON OF 1928 WITH 1913.
Pounds of fuel per 1,000 gross ton-miles:							
Passenger service	124·03	125·56	126·35	206·67	− 1·22%	− 1·84%	− 39·99%
Freight service	116·52	119·88	124·67	192·83	− 2·80%	− 6·54%	− 39·57%
Value of fuel saved in—							
1928 over 1927							$456,920
1928 over 1926							1,043,644
1928 over 1913							12,158,588

The decrease in Transportation Expenses of the Steamship Lines was the result principally, of a decrease in the operation of tank steamers.

Miscellaneous Operations decreased $237,287·40, or 4·56 per cent, due, principally, to decreased dining car operations resulting from decreased passenger travel.

General Expenses increased $131,094·46, or 1·16 per cent., due, principally, to increased pension and relief department expenses of $104,000 and to an increase in valuation expenses of $76,000.

Railway Tax Accruals increased $311,913·08, or 1·47 per cent., due to increased income taxes and to increased rates and assessments for local and state taxes.

CAPITAL STOCK—SOUTHERN PACIFIC LINES.

The decrease during the year in capital stocks of Southern Pacific Company and Transportation System Companies *held by the public* amounted to $600·00, as follows:—

Capital stocks of Transportation System Companies, acquired from the Public	$600·00

FUNDED DEBT—SOUTHERN PACIFIC LINES.

To provide for the construction and acquisition of new rolling stock, an equipment trust, known as "Southern Pacific Company Equipment Trust, Series K," was created, and an issue of $4,815,000, par value, of Four and One-Half Per Cent. Equipment Trust Certificates authorised, all of which were issued during the year, pursuant to authority of Interstate Commerce Commission's order dated August 14, 1928, in Finance Docket No. 7062. The certificates are dated August 1, 1928; they mature serially, in lots of $321,000 on August 1 of each year from 1929 to 1943, both inclusive; and have attached dividend warrants entitling the holders to dividends at the rate of 4½ per cent. per annum from August 1, 1928, payable semi-annually on February 1 and August 1. In accordance with the terms of the trust all certificates were guaranteed by the Southern Pacific Company.

On January 26, 1928, the Executive Committee of the Southern Pacific Company authorised the issue of $29,400,000, par value, of Forty-Year Four and One-Half Per Cent. Gold Bonds, to provide funds for the retirement of a like amount of Twenty-Year Five Per Cent. (Collateral Trust) Gold Bonds, which latter bonds were called for redemption on May 1, 1928. All the bonds so authorised were issued during the year, pursuant to authority of Interstate Commerce Commission's order dated February 23, 1928, in Finance Docket No. 6722. By issuing $29,400,000 of Four and One-Half Per Cent. Bonds, to retire a like amount of Five Per Cent. Bonds, a considerable reduction in fixed charges will be effected. The new bonds are dated March 1, 1928, are payable on March 1, 1968, and bear interest at the rate of 4½ per cent. per annum from March 1, 1928, payable semi-annually on March 1 and September 1.

The net decrease during the year in funded debt of Southern Pacific Company and Transportation System Companies *held by the public* amounted to $1,384,879·14, as follows:—

FUNDED DEBT RETIRED DURING THE YEAR.		
Southern Pacific Company Equipment Trust Certificates maturing during the year, paid off		$5,520,600·00
Southern Pacific Company Twenty-Year Five Per Cent. (Collateral Trust) Gold Bonds, called for redemption May 1, 1928		29,400,000·00
Carried forward		$34,920,600·00
Brought forward		$34,920,600·00
Alamogordo & Sacramento Mountain Railway Company Thirty-Year First Mortgage Five Per Cent. Bonds, purchased from the public and held alive in treasury of Southern Pacific Company		118,000·00
Central Pacific Railway Company Three and One-Half Per Cent. Mortgage Bonds:		
Retired from proceeds of sale of lands	$436,000·00	
Retired by sinking fund	25,000·00	
		461,000·00
Bonds of El Paso & Southwestern subsidiary companies, acquired from the public during the year in exchange for an equal amount of El Paso & Southwestern R. R. Co. First and Refunding Mortgage Five Per Cent. Bonds owned by Southern Pacific Company, pursuant to El Paso & Southwestern Refunding Plan approved by Interstate Commerce Commission, December 26, 1923		322,000·00
Other funded debt held by the public retired during the year		100,279·14
Total funded debt held by the public retired during the year		$35,921,879·14
Less:		
FUNDED DEBT ISSUED DURING THE YEAR.		
Southern Pacific Company Four and One-Half Per Cent. Equipment Trust Certificates, Series K, issued during the year to provide for the construction and acquisition of new rolling stock	$4,815,000·00	
Southern Pacific Company Forty-Year Four and One-Half Per Cent. Gold Bonds, issued during the year to provide funds for the retirement of a like amount of Twenty-Year Five Per Cent. (Collateral Trust) Gold Bonds which were called for redemption May 1, 1928	29,400,000·00	
El Paso & Southwestern Railroad Company First and Refunding Mortgage Five Per Cent. Bonds delivered to the public during the year, in exchange for an equal amount, par value, of bonds of El Paso & Southwestern subsidiary companies, in accordance with El Paso & Southwestern Refunding Plan, as explained above	322,000·00	
Total funded debt issued to the public during the year		34,537,000·00
Decrease in funded debt held by the public		$1,384,879·14

Total corporate surplus		$468,270,437·93	+	$22,816,917·09
Grand total		$2,243,378,453·82	+	$36,756,701·91

INVESTMENT ASSETS—SOUTHERN PACIFIC LINES.

The following is a brief description of the investment assets of the Transportation System, reported in the balance sheet, viz.:

INVESTMENT IN TRANSPORTATION PROPERTY ... $1,458,869,269·86

Book value of investment in transportation property carried on the books of the companies comprising the Transportation System, consisting of 13,634 miles of first main track, 972 miles of additional main tracks, 5,895 miles of yard tracks and sidings, the Company's terminals at Galveston, a ten-story office building in San Francisco, 2,427 locomotives, 2,805 passenger-train cars, 82,469 freight-train cars, 5,713 company service cars, 23 ocean steamships, 2 river steamships, 13 automobile ferry boats, 14 passenger ferry and car transfer boats, 11 tugs, 73 barges, and 20 other vessels, the whole forming a transcontinental system extending from New York via New Orleans and Galveston, to San Francisco, California, and to Portland, Oregon, with a line extending from Ogden, Utah, to San Francisco, California.

SINKING FUNDS ... 21,351,455·82

Sinking funds for the redemption of outstanding funded debt, consisting principally of $19,700,000, par value, bonds of Transportation System Companies, $1,838,000, par value, bonds of other companies, and $272,143·79 cash in hands of Trustees.

MISCELLANEOUS PHYSICAL PROPERTY ... 2,940,553·85

Book value of terminal and other real estate acquired in anticipation of future use.

INVESTMENTS IN AFFILIATED COMPANIES ... 643,099,346·85

Investments in securities of Transportation System Companies, which are included in the outstanding obligations as shown by the balance sheet, but which are owned within the system:

Investments in securities of, and advances to, Solely Controlled Affiliated Companies and Jointly Controlled Affiliated Companies collateral to, but not a part of, the Transportation System, representing, principally, investments as follows:—

Electric Railways in California (full ownership), owning 45 electric locomotives, 1 steam locomotive, 4 gas-electric locomotives, 551 motor cars, 19 motor car trailers, 581 freight-train cars, 101 company service cars, and 1 gasoline launch—operated mileage ... 872·84

(The above railways also own 198 auto buses, 4 auto trucks, 2 auto service cars, and 1 auto business car used in operation of 212 miles of auto bus routes).

Electric Railways (one-third ownership), owning 4 electric locomotives, 15 motor cars, 2 motor car trailers, 33 freight-train cars, and 2 company service cars—operated mileage ... 56·20

Steam Railways (full ownership), owning 112 steam locomotives, 131 passenger-train cars, 1,251 freight-train cars, and 412 company service cars—operated mileage ... 1,535·43

Carried forward	$2,125,760,626·38
Brought forward	$2,125,760,626·38

Steam Railways (half ownership), owning 90 steam locomotives, 235 passenger-train cars, 1,631 freight-train cars, 381 company service cars, 8 automobile and passenger ferry boats, and 1 gasoline launch—operated mileage ... 804·49

(The above jointly owned steam railways include the Northwestern Pacific Railroad, with operated mileage of 477·56, full control of which was acquired in January, 1929, as as shown further on under the heading "Acquisition of full control of the Northwestern Pacific Railroad Company."

Total operated mileage of railways collateral to, but not a part of, the Transportation System ... 3,268·96

Automotive Transportation Companies (full ownership), owning 151 auto buses, 6 auto business cars, 5 auto service cars, and 8 auto trucks, operating over 4,986 miles of auto bus routes. Although this service is operated independently, it is co-ordinated with, and constitutes an extension of, the steam train service of your Company's transportation lines;

Land Companies (full ownership), owning 8,789,273 acres of lands in various states traversed by the Southern Pacific Lines; and 5,902 town lots. Of these town lots, 2,873 are located in the State of Texas; 644 in the State of Nevada; and 2,385 in the State of California, of which 953 are located in Los Angeles and vicinity;

Oil Companies (full ownership), owning 2,444 acres (including 1,925 acres fully owned and 519 acres jointly owned), and holding under lease 30,066 acres of producing and prospective oil lands in Texas and Louisiana, together with ownership of mineral rights in 84,159 acres of prospective oil lands in Texas. Number of producing wells, 144. Annual production, about 1,800,000 barrels;

Timber Lands (full ownership): 21,567 acres of timber lands and 44,925 acres of other lands, including 2 saw mills;

Coal Lands (full ownership): 22,688 acres of coal lands in Oregon and Colorado, 6,321 acres of prospective coal lands in Texas, and 2,502 acres of lignite, clay, and other lands in Texas and Louisiana;

Terminal Companies (full ownership), owning 25 acres of land in the City of Los Angeles, California, with improvements, including three two-story market buildings, and one seven-story, two six-story, and one four-story warehouse buildings situated on the line of Southern Pacific in the heart of the wholesale district of Los Angeles;

Carried forward	$2,125,760,626·38

INVESTMENT ASSETS—SOUTHERN PACIFIC LINES—*Continued.*

Brought forward		$2,125,760,626·38
Southern Pacific Building Co. (full ownership), owning a nine-story office building at Houston, Texas;		
Associated Pipe Line Co. (one-third ownership), owning 561 miles of oil pipe line serving California oil fields;		
Pacific Fruit Express Co. (half ownership), operating 40,513 refrigerator cars serving Southern Pacific, Union Pacific, and Western Pacific lines; and		
Stock interest, as indicated, in following companies operating railroad terminal facilities:		
El Paso (Texas) Union Passenger Depot Co., 50 per cent.;		
Ft. Worth (Texas) Union Passenger Station Co., 50 per cent.;		
Northern Pacific Terminal Co. (Portland, Ore.), 20 per cent.;		
Ogden (Utah) Union Railway & Depot Co., 50 per cent.;		
Union Terminal Co. (Dallas, Tex.), 12·50 per cent.		
OTHER INVESTMENTS		6,636,981·65
Of this amount, $2,202,383·61 represents cash in hands of Trustee, to be applied in payment for new equipment; and the remainder represents, principally, investments in outside securities.		
Total Investments		$2,132,397,608·03

ROAD AND EQUIPMENT—SOUTHERN PACIFIC LINES.

The increase during the year in Investment in Road and Equipment of the Transportation System, as shown in the balance sheet, amounted to $25,446,588·36, as follows:

Expenditures for Road Extensions	$902,987·75	
Expenditures for Rolling Stock...	8,065,710·68	
Expenditures for Floating Equipment... ...	270,145·38	
Expenditures for Other Additions and Betterments	22,048,416·41	
Total Expenditures...		$31,287,260·22
Add		
Investment in Road and Equipment of the Texas and Midland Railroad at April 1, 1928, on which date such company was taken into the Transportation System, as explained on page 25		3,605,449·69
		$34,892,709·91
Deduct		
Improvements to property held under lease, included in above expenditures, transferred to "Improvements on Leased Railway Property"	$53,099·47	
Adjustments in construction accounts, completed lines	95,326·17	
Property retired, equipment vacated, and other adjustments	9,297,695·91	
		9,446,121·55
Net increase in Investment in Road and Equipment ...		$25,446,588·36

The following table shows the number of units of each class of rolling stock owned at December 31, 1928, and at December 31, 1927, and the number of units of each class added and retired during year:—

CLASS.	OWNED DEC. 31, 1928.	OWNED DEC. 31, 1927.	CHANGES DURING THE YEAR.	
			Added.	Retired.
Locomotives	2,427	2,448	42	63
Passenger-train cars	2,805	2,896	69	160
Freight-train cars...	82,469	82,213	1,487	1,231
Company service equipment	5,713	5,860	532	679

* Includes 17 locomotives, 16 passenger-train cars, 191 freight-train cars, and 16 units of company service equipment, acquired with Texas Midland Railroad taken into System April 1, 1928.

BALANCE SHEET AND INCOME ACCOUNT OF SOLELY CONTROLLED AFFILIATED COMPANIES.

Below will be found a condensed balance sheet as of December 31, 1928, and a condensed income account for the year 1928, of all separately operated Solely Controlled Affiliated Companies, combined:

BALANCE SHEET.	December 31, 1928.
ASSETS.	
1. Property investment	$253,022,652·95
2. Sinking funds	319,460·86
3. Investments in affiliated companies—Stocks	809,090·12
4. Investments in affiliated companies—Bonds	418,950·00
5. Investments in affiliated companies—Advances	38,502,075·07
6. Other investments	17,591,850·62
7. Cash	1,236,552·90
8. Accounts receivable	3,307,709·22
9. Material and supplies	3,819,108·23
10. Merchandise	485,021·73
11. Deferred assets	1,986,023·40
12. Discount on securities	11,196,338·96
13. Other unadjusted debits	19,860,090·33
14. Total assets	$352,554,924·39
LIABILITIES.	
15. Capital stock	*$148,471,460·00
16. Premium on capital stock...	535,151·75
17. Funded debt:	
(*a*) Held by the public ... ... $30,864,000·00	
(*b*) Held within the system ... ... 29,968,000·00	
(*c*) Total	60,832,000·00
18. Non-negotiable debt to affiliated companies	64,501,215·57
19. Current liabilities	3,945,556·47
20. Deferred liabilities	122,586·19
21. Accrued depreciation	14,330,904·60
22. Reserve for amortisation of property investment	10,066,052·64
23. Other unadjusted credits	13,896,426·60
24. Total liabilities	$316,701,353·82
25. Additions to property through income and surplus	$1,434,340·97
26. Sinking fund reserves	364,686·52
27. Appropriated surplus not specifically invested	700,000·00
28. Profit and loss—Balance	33,354,543·08
29. Total corporate surplus	$35,853,570·57
30. Grand total	$352,554,924·39

INCOME ACCOUNT.	YEAR ENDED DEC. 31, 1928.
31. Operating revenues	$34,477,153·69
32. Operating expenses (including depreciation)	27,786,270·62
33. Net revenue from operations	$6,690,883·07
34. Taxes	2,549,612·56
35. Uncollectible railway revenues	204·66
36. Equipment and joint facility rents—Net	401,957·28
37. Net operating income	$3,739,108·57
38. Non-operating income	1,242,544·80
39. Gross income	$4,981,653·37
40. Interest on funded debt	$2,994,184·77
41. Other deductions from gross income	1,139,444·56
42. Total deductions	$4,133,629·33
43. Net income	$848,024·04
44. Income applied to sinking and other reserve funds	$31,820·00
45. Income balance transferred to credit of profit and loss	$816,204·04

* The amount of outstanding capital stock includes $1,300·00 owned by Directors and $52,910·00 owned by the public; the remaining $148,417,250·00 being owned within the system.

CLAIM FOR CLOSING COLORADO RIVER BREAK.

On page 22 of last year's report, mention was made of a suit brought under an Act of Congress, by your Company, in the Court of Claims, Washington, D.C., to enforce its claim against the Government of the United States, for the sum of $1,113,677·42, expenditure incurred over twenty-one years ago, at the instance of President Roosevelt, in closing a break in the Colorado River to protect the Imperial Valley.

On April 12, 1928, United States Court of Claims Commissioner, John M. Lewis, filed his findings, allowing your Company, on account of its claim, the sum of $1,012,700. Government counsel has, however, excepted to the findings of the Commissioner. Briefs have been filed by your Company and by the Government and the case is now on the calendar of the Court of Claims for oral argument.

After submission to that Court, it may, by its judgment, affirm the findings of the Commissioner, or the Court may make independent findings of its own as to the amount due. The parties have the right to appeal. If no appeal be taken, it will then be in order for Congress, by appropriation, to pay the claim as finally determined.

NEW LINE FROM KLAMATH FALLS, OREGON, TO ALTURAS, CALIF.

On page 24 of last year's annual report, mention was made of the construction by your Company of a line extending from Klamath Falls, Oregon, through Cornell, California, to a connection with the Nevada-California-Oregon Railway near Alturas, California, a distance of about 95 miles.

The construction of this line was resumed during 1928, and at the end of the year grading had been completed, ready for rails and ties, on about 12 miles, and was under way along the remaining 83 miles of the line. It is expected that the line will be placed in operation during the latter part of 1929.

EXTENSION OF OREGON, CALIFORNIA AND EASTERN RAILWAY.

On pages 22 and 23 of last year's annual report, mention was made of the purchase by your Company of the Oregon, California and Eastern Railway, and the subsequent sale of one-half the capital stock of said Company to the Great Northern Railway Company, under the authority of the Interstate Commerce Commission. On May 19, 1928, grading was started on an extension of the line eastward from its terminus at Sprague River to Bly, a distance of 26·42 miles, and on November 23, 1928, laying of rail into Bly was completed. Severe weather conditions in December caused cessation of the work before the ballasting and the fencing of the line were completed. Work will be resumed early in the spring of 1929, and, it is expected, will be completed within a few weeks from the date of commencement. This extension will tap a heavily timbered territory which has not been developed heretofore because of lack of transportation facilities. The opening up of this territory will result immediately in a considerable increase in the log traffic moving over the Oregon, California and Eastern Railway, a large part of which will be moved subsequently as lumber over the lines of your Company.

AUTOMATIC BLOCK SIGNALS.

The mileage of your Company's Pacific Lines equipped with automatic block signals has been gradually increased from time to time, so that nearly all of its main lines are so protected. A programme was adopted in the latter part of 1928 involving an expenditure of $2,315,000, which will result in the complete equipment of all of such main lines some time in 1930.

SOUTHERN PACIFIC MOTOR TRANSPORT COMPANY.

On page 24 of last year's report, mention was made of the incorporation in April, 1927, of the Southern Pacific Motor Transport Company, all of whose capital stock is owned by your Company. During the year 1928 the operations of the Southern Pacific Motor Transport Company have been actively extended, with the view of providing a more economical method of transportation by the substitution of motor coaches for steam and electric trains, and of providing supplementary feeder service for your Company's lines, where profitable. The substitution of motor coach service for steam train operation is being established where it is found more economical, upon securing the approval of the necessary regulatory commissions. Such substitutions have been made upon several branch lines in California; and motor bus operations in Oregon have enabled your Company to discontinue to a great extent both electric and steam train operations on branch lines which were no longer profitable. Interstate operations have been established between Los Angeles, California, and El Paso, Texas; between San Francisco, California, and Portland, Oregon; between Grants Pass, Oregon, and Eureka, California; between Truckee, California, and Reno, Nevada; and between Phoenix, Arizona, and Lordsburg, New Mexico, over the "Apache Trail."

To provide a more flexible service and to secure greater economy in operation, the Southern Pacific Motor Transport Company, during 1928, acquired control, by stock ownership, of the Oregon Stages, Inc., and the Coast Auto Lines, Inc., and similarly in January, 1929, acquired control of the Pacific Stages, Inc. These three companies operate a total of 75 motor coaches in intrastate service in Oregon, and these operations, together with the operations of the Southern Pacific Motor Transport Company, will provide an adequate and co-ordinated service with your Company's rail lines serving Western Oregon resulting in improved service and reduced expenses. With the acquisition of these three companies, the Southern Pacific Motor Transport Company now has a total of 222 motor coaches, trucks, and service cars operating in the States of Oregon, California, Nevada, Arizona, New Mexico, and Texas.

MOTOR COACH ACTIVITIES OF PACIFIC ELECTRIC RAILWAY COMPANY.

The Pacific Electric Railway Company, a wholly owned subsidiary of the Southern Pacific Company, operating 686·56 miles of electric lines in Southern California, is located in one of the most rapidly growing territories of the United States, and while the increase in population in that part of California has been marked, the passenger business of the Pacific Electric Railway Company has not grown in proportion, both the interurban lines and the local street car lines of that Company having been seriously affected by the increasing motor coach and automobile competition. To meet this condition the Pacific Electric Railway Company established a motor coach service, and is now operating forty-two motor coaches over ten interurban routes aggregating 143 miles, and seventy-two motor coaches over sixteen routes, giving city service, aggregating 81 miles, or a total of one hundred and fourteen motor coaches operating over twenty-six routes having an aggregate length of 224 miles.

The Western section of Los Angeles is served locally by the Pacific Electric Railway Company and by the Los Angeles Railway, and in order to meet parallel motor coach competition which was threatened, a joint agency, known as the Los Angeles Motor Coach Company, was formed by the Pacific Electric Railway and the Los Angeles Railway. This joint agency, with 132 motor coaches, is now operating, for the equal joint account of the parent companies, four routes giving cross town service between the territory served by the Pacific Electric and that served by the Los Angeles Railway, and two routes from the centre of the City through territory served by both lines.

In Southern California, motor truck operation has diverted from the railroads a large amount of the local less-than-carload business, and to meet this competition, there was incorporated on October 13, 1928, the Pacific Electric Motor Transport Company, all of whose capital stock is owned by the Pacific Electric Railway Company. This Company will begin operations in the Spring of 1929 with an experimental service from store door to store door, the pick-up and delivery service being rendered, as far as possible, by local motor truck companies, under contract and lease arrangements, the railway being used for the line haul service.

SUISUN BAY BRIDGE.

To replace the train-ferry between Port Costa and Benicia, a distance of about one mile, which constitutes a gap in the heavy traffic, double track, main line between Oakland and Sacramento, and in the main line between Oakland and Portland, authority has been obtained from the War Department and from the Interstate Commerce Commission, to construct a double track railroad bridge across Suisun Bay, about three miles east of the present ferry.

This bridge, which will extend from Suisun Point in the City of Martinez to Army Point, east of Benicia, will be 5,600 feet long, the main spans will be 531 feet long, and there will be a lift span 327 feet long which will provide 300 feet of horizontal clearance and 135 feet of under-clearance. However, as the minimum clearance under bottom of the steel will be 70 feet at mean high water, which will permit nearly all the water-borne traffic at the bridge to pass under it, it is estimated that it will be necessary to open the lift span, on an average, only about five times during each twenty-four hours, so that the effect of the opening of the lift span upon train operations will be negligible. The estimated cost of the bridge, including the cost of building a second track on the line from Port Costa to Suisun Point in the City of Martinez, is $12,000,000.

It is estimated that the saving which will result from the discontinuance of this ferry service will exceed the cost of operating the bridge by an amount that will be more than sufficient to pay the carrying charges on the cost of the bridge, including depreciation.

ACQUISITION OF FULL CONTROL OF THE NORTH-WESTERN PACIFIC RAILROAD COMPANY.

Pursuant to authority granted by the Interstate Commerce Commission in its order, dated December 14, 1928, in Finance Docket No. 7102, the Southern Pacific Company, on January 17, 1929, acquired full control of the Northwestern Pacific Railroad Company, by the purchase from the Atchison, Topeka and Santa Fé Railway Company of its one-half of the outstanding capital stock of the said Company, the total amount of such outstanding stock, since the incorporation of the Northwestern Pacific, in January, 1927, having been owned, one-half each, by your Company and the Atchison, Topeka and Santa Fé Railway Company.

The Northwestern Pacific Railroad Company owns a line of road extending from Sausalito and Tiburon, California, in a general northerly direction, to Trinidad, California, which, with several branch lines, makes an aggregate of 514·68 miles of road owned, of which 477·56 miles are operated directly by the Northwestern Pacific, and 37·12 miles of branch lines are leased to lumber companies. This line of railroad is an important direct connection of your Company's Pacific Lines which receive a substantial haul on a large part of the freight traffic originating on and destined to such line. With complete ownership of the line it is expected that substantial economies in operation will be effected by reduction of expenses not possible under dual control.

SAN JOSE LINE CHANGE.

Because of the expiration of the franchise by virtue of which your Company has operated along 4th Street, in the heart of the City of San Jose, California, it becomes necessary to establish a new route through that city.

This will involve a line change extending from College Park to Lick station, a distance of 5·64 miles, and will result in a route one-quarter of a mile shorter than the present operated line. It will be so located that there will be a minimum of interference to train movements by vehicular traffic at cross streets, the plan contemplating eight grade separations, permitting greater speed of trains with consequent saving in running time.

The estimated cost of the project is $3,236,848, and it is proposed to undertake the work at once, with the expectation of completing it within two years.

A new passenger station will be built on the line change at a suitable location.

SOUTHERN PACIFIC RAILROAD COMPANY OF MEXICO.

The operations of the line were interrupted at various times during the year, by the firing of bridges and trestles and by tunnel fires set by bandits and Yaqui Indians, eight trestles having an aggregate length of 1,545 feet, and 1,723 feet of timber lining in two tunnels, having been destroyed during the year by such fires. Operations were also interfered with by damages caused by floods in the Presidio, Rosario, and Sonora Rivers. Charges to operating expenses on account of these extraordinary causes, including the charges in connection with replacing the bridge over the Fuerte River (washed out in 1927) with a 700 foot steel bridge and 540 feet of trestle, increased operating expenses by about $584,000.

The unsettled conditions which existed in 1927, however, were greatly improved during 1928, with resulting benefits to agriculture and industry, which in turn resulted in an increase in the volume of railroad traffic. Operating results for the year 1928, therefore, show a substantial improvement over those of the previous year. Expressed in United States currency, operating revenues for the year amounted to $6,474,207, an increase of $672,638, or 11·59 per cent. Operating expenses amounted to $5,278,023, a decrease of 812,093, or 13·33 per cent. After deductions for Taxes, Joint Facility Rents, and Uncollectible Railway Revenues, there was a net operating income of $831,386 compared with an operating loss last year of $708,324.

At the time of going to press, affairs in Mexico are in a very unsettled condition which, probably, will have a serious effect upon the operations of this line during 1929.

SOUTHERN PACIFIC GOLDEN GATE FERRIES, LTD.

On account of the wide distribution and increased use of automobiles, the transportation of automobiles by ferry across San Francisco Bay between San Francisco and other Bay points, has grown rapidly during the past few years. To provide for this traffic, automobile ferries have been operated by your Company, by the Northwestern Pacific Railroad Company, and by the Golden Gate Ferries, Inc., between San Francisco on the one hand, and Oakland, Alameda, Richmond, Berkeley, Sausalito, and Vallejo, California, on the other. The result has been a wasteful duplication of service without compensating public benefit or adequate return upon the investments of the companies mentioned. To improve the situation and to avoid such costly and unprofitable operations, an agreement has been reached between the Southern Pacific Company, the Northwestern Pacific Railroad Company, and the Golden Gate Ferries, Inc., under the terms of which the three companies will transfer to a new company, to be known as the SOUTHERN PACIFIC GOLDEN GATE FERRIES, LTD., the automobile ferry equipment and facilities heretofore operated by the respective companies. Appraisal will be made of the value of the properties, now estimated at $15,500,000, and securities of the new company will be issued to pay for such properties. Southern Pacific interests will direct operations of the new company through having, with a majority of the stock, five of its nine directors.

It is expected that substantial savings will be made through the elimination of wasteful service, the better employment of the operating equipment, and the operating economies which will be effected as a result of this consolidation.

The plan is subject to the approval of the California Railroad Commission, and it is hoped it will be made operative some time during the year 1929.

ACQUISITION OF CONTROL OF THE TEXAS MIDLAND RAILROAD.

Pursuant to authority granted by the Interstate Commerce Commission in its order, dated February 11, 1928, in Finance Docket No. 6650, the Southern Pacific Company and the Texas and New Orleans Railroad Company (a solely controlled subsidiary of the Southern Pacific Company) acquired control on April 1, 1928 (the former by stock ownership and the latter by lease) of the Texas Midland Railroad, extending from Ennis, Texas, a divisional terminal point on the Dallas Division of your Texas Lines, to Paris, Texas, a distance of 125 miles. This line, which thus becomes a part of the Southern Pacific Lines in Texas and Louisiana, serves an agricultural district which it is expected will give your lines a considerable tonnage of cotton and other valuable traffic.

FEDERAL VALUATION OF RAILROADS.

The joint conferences referred to on page 27 of last year's report, between representatives of your Company and of the Interstate Commerce Commission's Bureau of Valuation, were continued in 1928, and resulted in reducing the number of protested items to be disposed of at formal hearings, so that the formal hearings in respect of the tentative valuations of the lines in Texas and Louisiana were completed on July 2, 1928, and of the Pacific Lines on October 26, 1928. The joint conferences resulted in substantial increases in the estimates of reproduction cost which the Bureau of Valuation recommended to the Commission. At the formal hearings, many claims involving principles upon which the Commission had formerly decided adversely to your Company's contentions, were disposed of by making general and specific reservations under which the right was reserved to support such claims by the introduction of evidence, and by argument, whenever the Commission makes any change in its decisions relating to these or similar claims; or makes any order changing or modifying its policy or practice in any way relating to such claims; or whenever any decision or order entered in the primary valuation proceedings becomes related to, or is used in any manner in, any other proceedings; or whenever the valuation of the properties of your Companies may be determined as of some subsequent date or dates.

Briefs have been filed by your Companies in respect of the items not disposed of at the joint conferences and formal hearings, and after the Bureau of Valuation has filed its brief, and your Companies have filed their reply briefs, the matter will then be submitted to the Commission for its final decision.

In connection with the matter of bringing to a common date, the value of the properties of all common carriers subject to the provisions of Section 19a of the

Interstate Commerce Act, the Commission issued an order, effective July 1, 1928, requiring each carrier to file with the Commission, returns showing all additions and retirements, and the cost thereof, from the several valuation dates down to and including December 31, 1927.

The method which the Commission will use in bringing the valuations of all properties down to a common date has not been disclosed, and it cannot now be determined how long it will take to accomplish this task.

CHANGE IN ORGANISATION.

On December 13, 1928, the Board announced the following changes in the organisation and management of the Company's affairs, effective January 1, 1929:—

Mr Henry W. de Forest, Chairman of the Executive Committee since June 1, 1925, was elected Chairman of the Board, a new position. Mr de Forest will have the management of the Company's general financial affairs and consolidation matters.

Mr Hale Holden, for many years President and Chairman of the Executive Committee of the Chicago, Burlington & Quincy Railroad Company, was elected Chairman of the Executive Committee. Mr Holden will have general control of the Company's business, except the management of its general financial affairs and consolidation matters.

Mr Wm. Sproule, President since September 25, 1911 (except during the period from July 12, 1918, to December 31, 1919, both inclusive, when he was District Director of the United States Railroad Administration), after more than 41 years of service with the Southern Pacific Lines, retired from active service December 31, 1928, under the pension rules of the Company and in accordance with his expressed wish.

Mr A. D. McDonald, Vice-Chairman of the Executive Committee of this Company, will, in addition to the other duties of that position, have general control of the management of the Southern Pacific Steamship Lines. He will also continue in the office of President of the Texas and New Orleans Railroad Company (the Southern Pacific Lines in Texas and Louisiana). In these dual capacities, he will have immediate charge, under the direction of the Chairman of the Executive Committee, of the management, operation, and traffic of the Southern Pacific Steamship Lines, and of the railroads and other properties of all Southern Pacific Lines East of El Paso, Texas.

Mr Paul Shoup, Executive Vice-President since June 1, 1925, was elected President to succeed Mr Sproule. Mr Shoup will have immediate charge, under the direction of the Chairman of the Executive Committee, of the management, operation, and traffic of the railroads and other properties of the Company, west of El Paso, Texas, and Ogden, Utah. The office of Executive Vice-President was discontinued.

Mr Lewis J. Spence, Executive Officer since June 1, 1925, after more than 43 years of continuous service with the Southern Pacific Lines, at his own request, retired from active service on December 31, 1928. The office of Executive Officer was discontinued.

Mr J. H. Dyer, General Manager of the Pacific Lines, was appointed Vice-President in charge of Operations. Mr Dyer will have immediate charge, under the direction of the President, of the maintenance and operation of the railroads of the Company west of El Paso, Texas, and Ogden, Utah.

Mr F. L. Burckhalter, First Assistant General Manager of the Pacific Lines, was appointed General Manager to succeed Mr Dyer, promoted. The position of First Assistant General Manager was discontinued.

The headquarters of Mr T. O. Edwards, General Auditor in charge of operating accounts, was transferred from San Francisco, California, to New York City.

The title of Mr C. M. Scott, Assistant Treasurer, with headquarters in San Francisco, California, was changed to Local Treasurer.

GENERAL.

The dividends for the year, on the capital stocks of the Southern Pacific Company and its Transportation System Companies held by the public, amounted to $22,342,884·00, as follows:

Dividends on capital stock of the Southern Pacific Company:		
1½ per cent. paid April 2, 1928	...	$5,585,713·50
1½ per cent. paid July 2, 1928	...	5,585,713·50
1½ per cent. paid October 1, 1928	...	5,585,713·50
1½ per cent. payable January 2, 1929	...	5,585,713·50
Total Southern Pacific Company	...	$22,342,854·00
Dividends on stocks of Transportation System Companies held by the public	...	30·00
Total dividends payment for the year	...	$22,342,884·00
The total taxes for the year, of the Transportation System and of all separately operated Solely Controlled Affiliated Companies, amounted to	...	$24,075,087·00

Under the pension system put into effect January 1, 1903, there were carried on the pension rolls at the end of the year 1,982 employes. The payments to pensioners for the year amounted to $1,189,012·27, equivalent to 6 per cent. per annum on an investment of $19,816,871·17.

The Board announces with sorrow the death, on January 4, 1929, of Mr J. Horace Harding, who served your Company as a Director from January 13, 1913, to the time of his death, and also served as a member of the Executive Committee from and after April 4, 1918; the death on January 29, 1929, of Mr Ogden Mills, who served your Company as a Director from April 4, 1906, to the time of his death, and also served as a member of the Executive Committee from and after June 20, 1907; and the death, on March 24, 1929, of Mr Samuel Rea, who served your Company as a Director from April 9, 1919, to the time of his death.

The Board gratefully acknowledges its appreciation of the loyal and efficient services rendered by officers and employees during the year.

By Order of the Board of Directors,

HENRY W. DE FOREST,
Chairman of the Board.

CANADIAN PACIFIC RAILWAY COMPANY.

ISSUE OF ADDITIONAL ORDINARY CAPITAL STOCK.

Notice is hereby given that the Company will offer to the holders of its Ordinary Capital Stock of record at 3 p.m., on Thursday, May 2, 1929, $30,000,000 of Ordinary Capital Stock, comprising 300,000 shares of $100 each at the price of $170 per share, in the proportion of one share of the New Issue for each ten shares then held by them respectively.

The right to subscribe will expire at 3 p.m. on Monday, June 17, 1929.

Payments will be received at the Bank of Montreal, London, New York or Montreal, as follows:

$42·50 per share on subscriptions on or before June 17, 1929.
$42·50 per share on August 15, 1929.
$42·50 per share on October 15, 1929.
$39·55 ($42·50 less $2·95) per share on December 16, 1929.

In the final instalment deduction has been made of interest at the rate of six per cent. per annum on each instalment from the due date thereof to December 31, 1929, which interest amounts to $2·95 per share.

Shareholders may, as a matter of convenience to themselves, pay any or all of the instalments before the due dates, but interest will be allowed only as above stated.

All shares of the issue on which instalments have been paid in full on the due dates will rank for dividends payable after January 1, 1930.

A Circular containing the terms of subscription and payment, accompanied by Warrants to Subscribe, will be mailed to the holders of Ordinary Capital Stock on or about May 15, 1929.

By Order of the Board.

ERNEST ALEXANDER, Secretary.

Dated at Montreal, April 13, 1929.

THE ROYAL BANK OF CANADA.

DIVIDEND No. 167.

Notice is hereby given that a DIVIDEND of Three per Cent., being at the rate of 12 per cent. per annum upon the paid-up capital stock of the Bank, has been DECLARED for the three months ending 31st May, 1929, and will be PAYABLE at the Bank and its branches on and after Saturday, 1st June, 1929, to shareholders of record on 30th April, 1929.

By order of the Board,

E. B. McINERNEY,
London Manager.

Bank Buildings,
Princes Street,
London, E.C. 2.
April 13th, 1929.

RIO TINTO COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the Fifty-sixth Ordinary General Meeting of the Shareholders will be held at the Cannon Street Hotel, Cannon Street, in the City of London, E.C., on Wednesday, the 24th April, 1929, at twelve thirty o'clock precisely, for the purpose of receiving the Directors' Report and Statement of Accounts, for the Declaration of a Dividend, and for other purposes.

Holders of Share Warrants to bearer who desire to attend can receive a Ticket of admission, on depositing their Warrants in accordance with the Articles of Association three days prior to the Meeting, at the Company's Offices in London.

The retiring Directors are J. N. Buchanan, Esq., and the Earl of Denbigh, who, being eligible for re-election, offer themselves accordingly.

The retiring Auditors are Messrs. Turquand, Youngs and Co., who, being eligible for re-election, offer themselves accordingly.

The TRANSFER BOOKS will be closed from Thursday, the 18th, to Tuesday, the 30th April, both days inclusive.

By Order of the Board,

R. H. BEECHER,
Secretary.

Offices of the Company,
3, Lombard Street, London, E.C.

THE MONEY MARKET.

Money this week again proved easy, and on Wednesday short loans were obtainable at around 4½ to 4¾ per cent., while on the following morning the market rate on three months' bills was described as being "a weak 5⅛ per cent." So far April has proved an uneventful month, and it would appear that rates are being allowed to find their own level without any attempt being made to stiffen them.

How long this will last is uncertain, but a pause of this kind is welcomed by the market after the excitements and anxieties of the first quarter of the year. Meanwhile a fair demand for bills is noticeable, especially from the Continent. This is described in one quarter as no more than a " replacement " demand, but it accounts in part for the low level of market rate.

* * *

On Thursday last the German Reichsbank raised its rate from 6½ to 7½ per cent. This move had long been expected, and its effect had consequently been discounted in advance. For some time past funds had been moving in a steady stream from Berlin to Paris, and, while the immediate causes of this efflux were not known, it seems more than likely that they represented the first stage in the remittance of funds from Germany to America. To find the reason for Germany having to make such remittances, there is little need to look beyond the large sums borrowed from America by Germany during the past few years. The immediate effect of the rise was to bring the mark exchange back from 20.48 to 20.45, and this should for the moment prove sufficient to check the efflux of funds.

* * *

According to the theory of international finance, the increase in the German Bank rate should be reflected in stiffer rates here, but it by no means follows that this will be the case. Just as the rise in the Dutch Bank rate a few weeks ago came as a reinforcement to London in the demonstration against New York, so may the German increase, in its turn, help to make it clear that Europe is presenting a united front. If so, the return of money from America to Europe may be accelerated, and so help London to maintain fairly easy conditions without undue risk.

	Apr. 25 1929.	Apr. 18, 1929.	Apr. 11, 1929.	April 4, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate.....	5½	5½	5½	5½	4½ (Feb 7,'29)
Banks' Deposit Rate..	3½	3½	3½	3½	2½ (Feb. 7,'29)

Houses { Notice.....	3⅞	3⅞	3⅞	3⅞	2½ (Feb 7,'29)
Market rate (3 months' bills)	5⅛	5⅛	5⅛	5⅛ – ⅜	...

This week the Bank obtained little gold, and the return shows an increase of only £270,000. The note circulation, however, has fallen by £1,663,000, so that the banking department's reserve has risen by £1,933,000. The only other changes are contractions of £2,346,000 in bankers' deposits and of £4,040,368 in Government securities. Apparently the Bank is still keeping a tight hand on the monetary situation, even if it is content to permit a certain amount of latitude to exist in rates. This is confirmed by the fact that the Bank itself bought bills this week, though these purchases were probably on account of some foreign Central Bank.

NEW YORK MARKETS.

Our New York correspondent cables:—The share market is advancing and the bond market gradually improving. Higher earnings for the first quarter are helping oil, steel and motor shares. Railroad earnings in March are running above those of last year. The steel industry is operating to full capacity, and the larger companies are expanding their plants. New capital issues are at a low ebb, but offerings to stockholders only continue actively. There is concern in the best quarters over Reparations, but stock traders are unaffected. There is some improvement in the week's Reserve statement, with the ratio up to 74.3 and the total credit outstanding down by $30 million. Discounts are $20 million off. The reduction in bill holdings that has been going on for several weeks has apparently ceased, but Government securities are down $12 million. Foreign loans on gold have increased to $7,700,000, presumably on additional shipments of the metal coming from Germany.

THE STOCK MARKETS.

Though dealings were again on a meagre scale in the Stock markets, the tone was not unsatisfactory, and prices were, on the whole, sustained. Gilt-edged stocks were more responsive to the steady improvement in monetary prospects than to fears occasioned by the Reparations set-back, and fully held their ground, though India Loans were less firm. Liquidation of Home Rails was checked after the opening days of the week. The settlement in Industrials was one of the least extensive for some time. The markets were largely inactive, and quotations showed few changes, apart from special factors, such as the Dunlop report. Rubber shares were more and tea shares less active on opposite movements in commodity prices. Oils were dull, and Kaffirs neglected. Tin shares reflected a recovery in the price of the metal.

THE COMMODITY MARKETS.

Little change is recorded in this week's reports. The downward tendency of coal prices is accentuated, as conditions in Germany and Poland have now returned to normal. The improvement in pig iron continues, and many branches of the steel trade are enjoying satisfactory activity in most districts. Tinplate quotations are firm and an increase is expected. Other metals are quiet, but, on the whole, steady. Cotton crop prospects have been improved by recent good weather. Orders for Manchester goods have been principally from South America and from the home market; prices in China have fallen as a result of the raising of the Japanese boycott. Bradford wool users are still buying for immediate requirements only, though steady values for the raw material are anticipated. The jute trade is in a state of stagnation. Hides are still weak, but the leather market is firmer and shoe manufactures are much better occupied. The hardwood market is firm, but softwood importers are having some difficulty in placing their purchases. Little interest is shown in vegetable oils and oilseeds. Wheat prices are lower.

THE FOREIGN EXCHANGES.

There was no general activity in the Foreign Exchange market, although several currencies were irregular as a result of the reparations dead-lock, and the peseta was wildly erratic. New York moved $\frac{1}{32}$ of a point on balance against starting at 4.85⅜. Paris made a sharp recovery at one time to 124.16, but closed at 124.18. Brussels improved to 34.94, Lisbon lost ½ at 108⅛, but Milan improved 3 points to 92.67. The peseta opened at 32.97, but soon fluctuated and was clearly out of control, finally struggling back to 33.60 after touching 34.45. Warsaw and Budapest were unaffected by the alterations of their Bank Rates, but the raising on Thursday of the Berlin rate had an instantaneous effect, and brought the reichsmark at 20.45¾ after it had been over 20.48 as a result of the Paris deadlock. Switzerland improved by ⅝ to 25.21, as did Amsterdam by ⅛ to 12.08¼ after 12.07⅞. The South American currencies were remarkably steady with the exception of Montevideo, which went from 49d. to 47⅜d., and the Mexican dollar, which receded to 10.25. In the Far East the yen recovered to 1s. 10⅛d. after being 1s. 9½d. Batavia improved from 12.15 to 12.12½. In the forward market dollars were more wanted at one month at a discount of ⅛ cent, but three months quotations were practically unchanged. The premiums on Paris fell from 8 to 1 and from 17 to 6 centimes for the two periods. Forward lire improved from 14 centesimi discount for one month to 8 centesimi and from 29 to 27 centesimi for three. One month's Amsterdam was better at ⅝ cent discount but the Berlin forward quotations were nominal at discounts of 2 and 4 pfennigs, the market not yet having had time to digest the change in the Bank Rate. Silver lost $\frac{1}{16}$d. both spot and forward in a dull market.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

A FORWARD STEP IN INDUSTRY.

The welcome results of the Conference held on Tuesday between the General Council of the Trades Union Congress and Committees representing the Federation of British Industries and the National Confederation of Employers' Organisations lend solid support to the belief which has coloured the Prime Minister's recent speeches on the platform and before the microphone, that the parties to industry are really about to take practical advantage of the " new atmosphere," and to exploit its immense potentialities for good. Although many difficulties have yet to be overcome, and much work remains to be done before a complete solution of even the more pressing of the varied problems of industrial relationships can be reached and the foundations of durable peace and mutual confidence securely laid, the evidence of the new spirit animating both sides in Tuesday's proceedings is sufficient to justify the prophecy that the conference will come to be regarded as a land-mark in British industrial history. Past pages of that history contain much " ill done and well forgotten "; there could be no better policy for the welfare of the nation than a common determination on the part of employers and employed to face the future, in Mr Baldwin's own words, " from a new starting point." There is now good reason to hope that the advocates of such a policy have won the day.

The Conference met under somewhat unpromising conditions. The employers' reply to the Melchett-Turner proposals had been couched in terms suggestive less of an enlightened desire to recognise effective partnership between capital and labour than of an inclination to preserve (for the supposed interests of employers) a real separatism, sugar-coated with time-worn phrases such as " mutual understanding." Having announced their inability to accept the report of the Melchett-Turner conference, the employers did, indeed, invite the General Council to meet them, but only, as it seemed, for the disappointingly narrow purpose of hearing an explanation of " the difficulties which stand in the way of consultation . . . through a National Industrial Council," and of examining the possibility of the three bodies " usefully consulting together " on matters of common concern " within the limits of their respective representative capacities and powers." Encouraged by the rapid progress which they had made in arriving at agreed statements of principle and policy with Lord Melchett's group of employers, the General Council not unnaturally felt keen disappointment at this frigidly guarded invitation, and there is reason to think that the offer was accepted not so much with the expectation that the policy of industrial peace would thereby be furthered, as because a refusal would, in the public eye, have laid upon them a serious responsibility for any eventual reversion to the policy of industrial strife.

It is greatly to the credit of the members of the General Council that, when they met the employers, they were not content to play the passive rôle of critical auditors, but advocated the principle of industrial co-operation with a warmth and sincerity which made a strong impression on the least progressive of the employers' representatives. So successful was that advocacy that the Conference, going further than the most optimistic had anticipated, adopted unanimously a resolution to appoint a committee " to examine the best methods for consultation and co-operation between the three organisations." Few expected a decision so definite, and it is worthy of note that this meeting, which established for the first time contact—on the basis of official recognition—between the national organisation of the trade unions and the two national organisations of the employers, should have imported into its resolution the significant word " co-operation "—a term which the employers had conspicuously omitted from their letter of invitation, and whose implications one section, at least, of the employers' organisations had previously been at pains explicitly to reject.

We do not overlook the consideration that this Conference was held in circumstances in which political factors were bound to carry weight. Not cynicism, but a measured sense of human probabilities, prompts the reflection that eagerness to tread the path of industrial peace is for each party an asset in the eyes of the vast majority of the electorate; that the more conciliatory the attitude of the T.U.C., the more Mr MacDonald, in his capacity of leader of a " strictly non-inflammable " Labour Party, is likely to profit at the polls; and that the employers, having regard to the doubtful issue of May 30th, had good reason (did not ill-health once make a monk of the devil?) to profess an enthusiasm for " industrial partnership " greater than they might have entertained in conditions of greater security for the interests of " capital."

That Tuesday's meeting was dominated by conscious *arrières pensées* of this character we do not believe. And even if we thought that to a large extent political expediency had determined the Conference's decision, we should still applaud the result. For, whatever the self-interested calculations of each side, whatever the mental reservations on the part of individual reactionary " masters " or class-conscious " men," the national organisations of capital and labour have now avowedly embarked upon a policy of joint effort, retreat from which will be rendered the more difficult by every step which is taken in common deliberation and co-operative study of the problems with which British industry as a whole is faced.

Given the endorsement of the principle of co-operation —a word whose real significance lies in its recognition of Labour's claim to fill an actively constructive part in the organisation of industry—there is no insuperable difficulty in overcoming the obstacles in the way of effective " co-partnership " between the three organisations represented at Tuesday's Conference. Difficulties presented by the constitution of the bodies of employers are readily susceptible of solution, and though we share in large part the view of many of the individual employers' organisations that the National Industrial Council on the lines suggested by the Melchett-Turner Conference might be an unwieldy and ineffective organism, whose intervention in particular industries might seriously prejudice the working of existing Joint Industrial Councils, the precise methods whereby the national organisations of employers and employed can most fruitfully co-operate are essentially a matter of administrative detail, whose definition goodwill and mutual trust should readily accomplish.

The future relations between capital and labour in an island whose whole fabric of civilisation rests precariously on the maintenance of industrial efficiency are an issue whose importance transcends that of any question on which the electorate is likely to be invited next month to record its votes. The establishment of joint machinery of co-operation between national organisations of employers and employed is by no means a complete solution. The speech of Lord Melchett at the inaugural meeting last week of the Central Works Council of Imperial Chemical Industries, Limited, wisely laid emphasis on the fact that there are problems of detail in industrial administration with which local joint bodies are best equipped to deal, without prejudice to the T.U.C.'s sphere of influence as a national organism for negotiation. To work out on enduring lines the structure of " industrial democracy " is the task not of a Conference but of a generation, but it is a task which must be undertaken if our civilisation, in its complex mechanised form, is to survive. It cannot be accomplished by mere lip-service to the principle of " peace in industry," or even by the constitution on a national basis of a " super-Whitley " Council whose functions are limited to the passing of sonorous resolutions and the utterance of agreeable generalisations. The future relations between capital, management and labour must be worked out practically in the workshop; the workers' insistent and justifiable claim to a measure of responsibility must be met by the evolution of an industrial system which shall still ensure that the efficiency of administration is not weakened, nor the authority and initiative of management undermined; in a wider sphere the problems which are likely to be entailed in the relations between large-scale " rationalised " industries, operated on lines of internal " co-operation," and the community as a whole, must find eventual solution.

The complexity of these many and varied problems need not dismay us. The British genius for arriving at compromises which " work " has overcome greater difficulties in the past. Solid reassurance for the future is

to be derived from the present momentous step forward which the employers and the T.U.C. have unanimously taken. It is a step which means that on the one side reactionary and obsolete notions of industrial autocracy have been abandoned—we hope, irrevocably—and that on the other side there is a growing recognition of the fundamental falseness of the Marxist conceptions which a few years ago seemed to be imperilling the sanity of organised British Labour. The accumulating evidence that the leaders of the trade unions are ready to endorse, and by these negotiations have endorsed, the principle that capital, management and labour are indissolubly bound by common interests, should encourage employers to take new heart in determining to face and overcome, in a spirit of real partnership with the workers whom they at one and the same time control and serve, the problems of the future.

REPARATIONS.

UNWELCOME indeed is the news which the past eight days have brought from the Reparations Conference in Paris. The high hopes recently entertained of an agreement which would lift Reparations out of the sphere of political controversy have received a severe setback; and although, as we write, the position is not hopeless, a formidable deadlock has arisen. The news, too, contains an item which means a tragic loss to the City of London. Lord Revelstoke, whose sudden death from heart failure was no doubt hastened by the load of work ably shouldered by him as one of the British delegates on the Expert Committee, was a man who cannot easily be spared; and in him the world of banking and finance has lost an enlightened leader and a figure of outstanding prestige.

From the first there was always room for serious doubt whether the attempt to reach a permanent Reparations settlement was not premature, and therefore unwise. It may be that the next few days will prove that these doubts were fully justified. As we write, the Conference of Experts is still in being, but its *raison d'être* is now reduced to the purpose of drawing up a report. For inclusion in that report there is a number of points on which agreement was reached—the Reparations Bank plan, for example, and the principle of dividing German payments into " protected " and " unprotected " categories—but these all concern the mechanism of payment rather than the crucial question of the total sum to be paid. Here the gap to be bridged is formidable. Between the Allied proposal of 37 variable annuities with a present capital value of some £1,950 million, and the German offer of annuities representing a capital sum of £1,325 million, there is a difference too wide to be readily susceptible of accommodation, and though the Allies, in presenting their figures, were obviously concerned to avoid the impression of handing out an ultimatum, while Dr Schacht, we still think, may not have said his last word, it is difficult any longer to be confident that the Conference will result in complete agreement.

It is important therefore that, while not yet abandoning hope, we should estimate calmly the consequences of possible failure, both from the financial and political point of view. That a breakdown of the negotiations would be likely in some degree to impair Germany's credit cannot be denied, and, as our Berlin correspondent shows on a later page, there are strong reasons why Germany would be wise to strain every possible point in order to reach agreement. On the other hand, we would deprecate strongly the alarmist prognostications current in some quarters as to the results likely to follow a final break-up of the Experts' Committee. The alternative to agreement is reversion to the Dawes Plan. Such reversion need have no grave monetary consequences. Admittedly, Germany's large short-term indebtedness is a vulnerable point in her credit system, and the (not unexpected) decision of the Reichsbank this week to strengthen its position and to check the recent heavy depletion of its gold reserves by raising its rate from 6½ to 7½ per cent. is a reflection of strain in German finance which it would be idle to minimise, but equally wrong to exaggerate. We do not believe that failure of the Paris Conference would cause any heavy withdrawal of short-term credit by London or New York, and Germany herself has the keenest interest in taking steps to prevent any internal panic-flight from the mark. We do not share the view that failure is calculated to cause in any monetary centre a crisis of the dimensions which some authorities, not entirely free from the suspicion of propaganda, are assiduously predicting. Taking the long view rather than the short, there is much to be said for the argument that it would be better to go back to the Dawes Plan and to face whatever difficulties may lie close ahead, rather than for the Experts to achieve an unsatisfactory compromise and pretend that it is a permanent and satisfactory solution. And even if it should become necessary—as Dr Schacht suggests—temporarily to apply the " transfer clause " and suspend purchases of foreign currencies on Germany's Reparations account, it is well to remember that such a possibility was always an integral part of the Dawes formula, and need not be taken to imply a necessarily dangerous situation.

It is in the realm of international politics that a breakdown of the Paris negotiations, which have inevitably opened old wounds and revived old controversies, might have results most disappointing to our hopes. Psychologically, the lack of a final settlement of the Reparations problem represented the failure of Europe to clear up the aftermath of the war and get to work again in a constructive way; and the need for throwing off the war spirit was not satisfied by the Dawes Plan. Indeed, the very essence of the Plan was that it was almost ostentatiously provisional. In order to get rid of the psychological legacy of the war in Europe it was desirable to fix the total figures for Reparations and provide for payment on a commercial basis, and this is what the Experts in Paris have been labouring to do. In fact, the decision to go forward from the Dawes Plan and seek a final settlement at this juncture was justifiable mainly on the grounds of general political advantage. If the Experts succeed only in registering their disagreement, the attainment of these political advantages will again be postponed. The prospects of a complete evacuation of the Rhineland—whose military occupation is the most conspicuous symbol in Europe that the war is not yet dead and buried—are dependent in some measure upon a final settlement of the Reparations question. It will be unfortunate for the immediate future of Franco-German relations if hopes aroused in this connection are now dashed, and equally unfortunate for the world as a whole if American opinion is unfavourably impressed by what may appear across the Atlantic as evidence of Europe's continued inability to set her house in order. From final and insoluble deadlock at Paris no major crisis would be likely to arise, but the fact must be faced that failure to agree, though not perhaps so tragic in its consequences as some observers affect to believe, would mean a failure to advance towards the goal of confidence and security to which the eyes of Europe are earnestly turned.

NEW HOPES FOR DISARMAMENT.

WHEN the Preparatory Commission for Disarmament met at Geneva, on Monday, the only ray of light in a bleak sky was the hope that Mr. Hugh Gibson, the American representative, would make a new advance, which should be authoritative and practical. Happily, that ray of light has spread over the whole sky. The speech which Mr. Gibson delivered to his colleagues on Monday, of which a summary is given on page 920 by a League correspondent, was exceedingly important and encouraging for many reasons. In the first place, Mr. Gibson was avowedly expressing President Hoover's ideas. In the second place, he put disarmament in its true setting as a corollary to security; and he appealed to the signatories of the Kellogg Pact to examine the whole problem afresh in the hope that they would find in the general world conditions and in the solemn obligations they had taken upon themselves the reassurance of their security, and that they would find in themselves the confidence to dispense with the armaments which hitherto had seemed so essential. Any approach to the disarmament problem on

purely technical grounds was bound to be inconclusive, and the United States Government had always felt that they needed no exact balance of ships and guns which could be based on the idea of conflict. Mr. Gibson, however, did not leave it at that, but went on, in the third place, to make conciliatory and constructive proposals for solving certain technical problems which had actually stood in the way of agreement in the past. On the question of whether tonnage should be reckoned " globally " or by categories for the purpose of comparison, he accepted in principle a compromise which had been suggested, during the third session of the Commission, by the French Delegation. Tonnage might be reckoned by categories, but each party might be left free to transfer certain percentages of the tonnage allocated to it from one category into another. On the question of " mathematical " versus " strategical " parity (the rock which wrecked the Three Power Naval Conference of 1927), Mr Gibson suggested that equivalent naval values might be estimated by some kind of index number formula in which other factors beside tonnage might be included. The fourth feature in Mr Gibson's speech was that he urged, not merely limitation of naval armaments on the basis mentioned above, but a substantial reduction. Finally, he urged that this reduction should apply to all categories of vessels without exception.

After Mr Gibson had spoken Lord Cushendun replied; and it is to his credit that he did what in him lay to help forward the new American move, and said nothing to damp the effect of Mr Gibson's declaration. Had he done otherwise, he would, indeed, have failed to represent the feelings and desires of the British people, who are as earnestly set as the American people upon peace and disarmament. Moreover, question time in the House of Commons, on Wednesday, gave Sir Austen Chamberlain an opportunity, which he seized, for extending a careful, but hearty, welcome to the new American advance. The following passage from the Foreign Secretary's statement should be placed on record:—

> His Majesty's Government equally with the Government of the United States desire not merely a limitation but a reduction of naval armaments. They have indeed themselves made proposals for such general reduction and that the reduction should be applied to every class of war vessel. As between ourselves and the United States such difference as has hitherto existed has not been concerned with these great principles nor with the relative strength of our respective Navies, but with the determination of the categories into which ships of war should be divided. On this point his Majesty's Government have noted with much interest the new criteria suggested by Mr Gibson. They attach great importance to the possibilities opened by the greater elasticity given by his suggestions for the adjustment of the agreed naval strengths to the different circumstances of the two Powers. Finally, they desire me to take this opportunity to express their warm appreciation of the cordial and conciliatory spirit shown by the American delegation and to give the assurance on their behalf that it is in the same spirit and with the most earnest wish to reach complete agreement that they will consider the American suggestions."

Replying to a further question, Sir Austen said: " Agreeing with the Americans that the limitation and reduction of every class of war vessel ought to be secured, and can be, the Hon. Member may rest satisfied that His Majesty's Government will not be wanting."

Thus, at last, the deadlock is broken. In due course we may look forward with confidence to an agreement for the all-round reduction of naval armaments between the United States, Great Britain and Japan; and from this other agreements are likely to follow. First, we may expect a naval agreement, within the same framework and on the same principles, between France and Italy; for there is a problem of naval policy between these two Powers which resembles that between Great Britain and the United States, so that if a solution is found for the one problem it may be expected to serve for the other. Thus a general agreement on naval disarmament is coming into sight; and, if that were once achieved, we could address ourselves to the local problems of land and air armaments under more favourable conditions than ever before. A new vista of hope is opened up, and it rests in no small measure with the British Government to see that the new opportunity is used to the full. The present Government has little time left. To the next Government, of whatever complexion it may be, the country will look for a pursuit of practical armament reduction on broad statesmanlike lines, and avoidance of those mistakes which in recent times have rendered progress impossible. Here is a great opportunity and a great responsibility.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

IT is not possible to express satisfaction at the trade done in manufactured cotton goods by Lancashire spinners and manufacturers during the first quarter of the year. Demand has ebbed and flowed and buying movements have been for very limited periods, with the result that producers have not been able to improve their position and in most sections buyers can obtain goods at prices which show a loss, or at any rate are not any better than production costs.

An event of importance since the beginning of the year has been the registration of the Lancashire Cotton Corporation, Limited. The negotiations with the several interests were successfully accomplished in the middle of January. The object of this Corporation is to amalgamate spinning mills in order to effect economies by centralised management of purchases and sales. A strong board of directors has been appointed and the Corporation has been fortunate in securing some of the best brains of Lancashire in their executive officers. A week or two ago it was announced that 107 mill companies had asked for valuation of their properties and the Corporation had made firm offers for 15 concerns. At the time of writing, however, only one mill has been taken over. The Corporation has the good wishes of the bulk of Lancashire people, but an organisation of this kind must run up against certain vested interests and many difficulties will have to be surmounted before the combination of mills can be accomplished and work effectively. Other proposals for an amalgamation of mills known as the Hammersley scheme have been considered

by the Master Spinners' Federation, but progress is slow. Discussions are now taking place for the purpose of combining a number of mills engaged in the spinning of Egyptian cotton. Some of the leading employers in this section of the industry are supporting this movement, and it is understood that it is being backed by financial interests in London. No details, however, have so far been published. An attempt is also being made to bring about a combination of ring spinning mills. The scheme is an effort to control prices rather than to form an amalgamation of companies.

During the last three months there has not been any marked change in the price of raw cotton, though many fluctuations in rates have occurred. On January 2nd the quotation for Middling American on the spot in Liverpool was 10.59d. By the 15th there had been an advance to 10.74d., but 10.34d. was registered on the 30th. The easier movement continued until February 5th, when 10.24d. was posted. There was then a recovery to 10.49d. on the 12th, with 10.76d. on the 28th. The month of March brought higher values, 11.14d. being registered on the 15th and 16th, but the month closed at 10.96d. The quotation on Wednesday, April 24th, was 10.51d. Spinners throughout the quarter have purchased rather sparingly. Latterly there has been a disposition to anticipate lower prices. As usual at this time of the year much uncertainty exists as to the new crop in the United States. The Government estimate of the acreage will not be issued until July 8th, but according to private advices there is a probability of an increase of 3 to 4 per cent., which would bring the area very near to the record of 1926. During March, farm work in the American belt was hindered by heavy rains, but since then drier conditions have been reported and recently growers have made better progress. It may be pointed out that according to the International Federation consumption of all kinds of cotton during the first half of this season (six months ended January 31st) was 12,772,000 bales, against 12,553,000 bales in the half year ended July 31, 1928, and 12,987,000 bales in the six months ended January 31, 1928.

On January 2nd the price of Fully Good Fair Sakellaridis Egyptian cotton on the spot in Liverpool was 19.35d. Many ups and downs in rates took place and the figure on January 31st was 18.40d. Values in February were fairly steady, the quotation on the 28th being 18.15d. By March 22nd there had been an advance to 19.60d., but on Wednesday last, April 24th, the figure was 18.10d.

Foreign trade in piece goods during the quarter has not shown any improvement on that of recent years, as will be seen from the following table of exports:—

THREE MONTHS ENDED MARCH.

	Yards.	£
1913	1,773,424,100	24,040,540
	Square Yards.	
1927	1,015,027,100	27,523,349
1928	1,050,969,400	29,266,463
1929	1,039,383,000	27,917,484

On one or two occasions during the period under review there has been extensive buying of light fabrics for India, but grey shirtings and other staple cloths have attracted very little attention. Recently business for India has been adversely affected by the political disturbances, and owing to the uncertain outlook traders have no confidence, with the result that commitments are being restricted as much as possible. A factor of importance has been the embargo upon shipments of certain cloths to Calcutta in particular months, and the action of dealers in that port has undoubtedly had a disorganising effect upon trade generally. It is significant, however, that there is a tendency for trade to be diverted from Calcutta to the up-country markets. Reports with regard to China have varied a good deal, but shipments have been much larger than in the same period of last year. The general demand has broadened and owing to better clearances at the auctions in Shanghai merchants have been prepared to place orders with manufacturers for replacements. Fairly encouraging support has been met with from Singapore and Java. There has not been any activity worth mentioning for Egypt and the Near East in spite of a reduction in stocks in that part of the world. Certain producers of printing and finishing styles have done fairly well for the outlets of Central and South America. Most of the buying for the Continent has run on fine cloths. Useful support has been met with from the Colonies, especially Australia. About a month ago a number of manufacturers were enabled to restart idle looms, but during the last few weeks some ground has been lost, and more cases of restriction of output are now reported. On the whole, production in the weaving branch of the industry is equal to about 80 per cent. of full capacity.

The position of spinners of American yarns has continued to be deplorable. Total output has varied during the quarter from 75 to 80 per cent. of full time, but it has been difficult for most producers to prevent the accumulation of stocks at the mills. The prices ruling have shown a distinct loss. The position of affairs was considered by the Master Spinners' Federation in March and it was recommended that during April spinners should close their mills on Saturdays and Mondays, but a ballot on this proposal did not show the necessary majority and the committee decided to take no further action.

Compared with the beginning of the year a less satisfactory situation prevails in the mills spinning Egyptian cotton. Early in February the trade position was considered by the Bolton Master Spinners' Association, and it was decided to recommend all the members to curtail production by one-third for two months. The ballot on this proposal was successful, and the scheme was put into operation. The limitation of output did not have the desired effect, and it has been decided to extend the short time movement for a further period of four weeks. The recent turn of events in the fine spinning section of the industry has caused a good deal of anxiety, as throughout the long depression since 1920 this branch has continued to do fairly well up to this year. There has not been any activity in yarns suitable for export purposes. The following is a comparative table of shipments of yarn:—

THREE MONTHS ENDED MARCH.

	Lb.	£
1913	53,067,000	3,725,282
1927	49,436,300	5,523,461
1928	44,889,300	5,974,900
1929	44,166,600	5,730,233

The immediate outlook for Lancashire trade is by no means bright. A number of schemes for the reorganisation of the industry are now under consideration and the Lancashire Cotton Corporation, Limited, is in being, but progress with all these proposals is necessarily slow. The root of the trouble is that the demand for goods is not sufficient to keep all the machinery running and, as is usual in such circumstances, there is keenness for the orders available and the internal competition is very severe. The opinion is held in many quarters that the costs of production cannot be reduced to a sufficient extent without touching hours and wages, or by some reorganisation of working conditions. As India is Lancashire's biggest customer the political unrest there is causing much anxiety and trade developments are undoubtedly being affected by the uncertain outlook. There are reasonable hopes of an expansion in China trade given a continuance of the more stable conditions in the Far East. With regard to raw material values this is always a period of the year when much uncertainty exists and it will be some months before there is reliable information as to the probable output in the United States for the new season. There is a possibility of a big growth, but the deciding factor will be the weather in the belt this summer.

THE DEVELOPMENT OF ALGERIA.

(BY A CORRESPONDENT.)

THE French colony of Algeria is a good example of modern colonial development. The needs of the war focussed attention on its resources, and the spread of industrial civilisation is developing its potentialities. The colony is fortunate in its geographical situation and its climate. Climatically, for the most part, it is fitted for habitation by Europeans, and its nearness to crowded populations makes its further development a necessity. To many English people Algeria is known chiefly as a winter resort where one may follow the sun and enjoy the "magic of Islam." Its recent strides in production and trade, in population and the standard of living, may have escaped notice.

A hundred years ago the natives numbered less than two millions. In 1891 the whole population was estimated at 4,124,732. The latest available figures give a total population of approximately six millions, of which 867,000 are Europeans. This population is mostly in northern Algeria, which, with an area of 80,000 square miles, has a population of five and a half millions. The remaining half million people in Southern Algeria are spread over an area of 767,000 square miles largely consisting of desert. To attract colonists France has adopted a scheme of assisted passages; she recognises that colonies, like children, are a necessity for a great Power. To French eyes the map of the western Mediterranean basin shows that Morocco, Algeria and Tunis may be regarded as a southern prolongation of France, with the western Mediterranean as a lake joining Northern and Southern France. This southern extension of France has a total area nearly equal to five times that of the mother country.

Algeria, together with France, forms a self-contained Customs union, and as the French market does not absorb the whole of her output, Algeria must find new markets. She has to sell her wines, cereals, ores, phosphates, livestock, vegetables, &c., and she buys in exchange food, such as rice and sugar, chemicals, textiles and clothes, coal, iron, steel, and manufactured articles. The principal productions are wheat, barley, oats, tobacco, wine, fruit and vegetables, ores, phosphates, olive oil, cork, cotton, esparto grass and livestock. The production of alfa, or esparto, is of great importance to British paper makers, and the supply rarely seems to overtake the demand. Great Britain imported 277,943 tons of esparto during 1928. This represents an output of 120,000 tons of esparto paper. Scotland specialises in the making of paper from esparto grass, which is used chiefly for high-grade paper. There were labour difficulties during 1928, as the Algerian natives, instead of harvesting the grass, preferred gathering olives at a higher wage, and there will possibly be a shortage of the grass this year. Alfa land is used also for sheep breeding.

The following production figures are approximate, and represent minima in each case:—

Wine	220,000,000 gallons per annum.
Minerals and Phosphates	2½ million tons per annum.
Cereals	3,000,000 tons per annum.

There are approximately 12,000 acres under cotton,
80,000 acres of tobacco,
123,000 acres of market gardens,
15,000,000 olive trees.

Algeria, Tunis and Morocco produce nearly half the world supply of phosphates, and are exceeded in production only by the United States. The vast phosphate deposits are said to extend right across the northern part of the colony, and are well suited for transformation into super-phosphates. During 1927, 876,306 tons of phosphates were exported, valued at £537,000. Fortunately for Great Britain Algeria has to import a good deal of coal. There was a reported discovery of coal in eastern Morocco in August, 1928, estimated at not less than four million tons of good quality soft coal, but no commercial exploitation has yet followed. Lack of fuel, indeed, seems to be one of the chief adverse factors of northern Africa, as so far the search for petroleum has not been commercially successful. In 1927 unfavourable weather conditions and extensive floods caused a temporary setback in agriculture, livestock breeding and viniculture, but the annual report for 1928 just issued by the Bank of Algeria shows the striking inherent prosperity of the colony. The wine harvest has created a new record, and both imports and exports have increased.

The Budget figures for Algeria for 1929 are as follows:—

Receipts	Francs 1,235,300,626 (£9,962,000).
Expenditure	Francs 1,234,827,220 (£9,958,000).

French Moroccan revenue for 1928 was approximately 631,374,610 francs, and Tunisian revenue for the same period approximately 388,000,000 francs.

Algerian exports have trebled during the last five years and in three years its revenue has doubled, and both Moroccan and Tunisian exports and revenue have greatly increased. The value of Algerian exports for the year ended June 30, 1928, was 3,861,000,000 francs; for the previous year the total value was 3,520,948,000 francs. The nature of the imports, such as building and other constructional material and motor cars, is in itself a sign of development.

In Algeria to-day there are 186 agricultural co-operative societies, the more important being those connected with wine production, depôts for cereals and tobacco, and for agricultural materials. New buildings are going up on every side to meet the shortage of accommodation both for housing and for business purposes, and within a decade property in Algiers itself has increased in value three and even four fold. It is suggested, however, that present values may be inflated. Millions of francs are being spent on port improvements at Algiers, and grandiose schemes are mooted to enlarge the port, but Oran as a port has outstripped Algiers. The number of ships entering Oran during 1928 was 5,529, with a total tonnage of 9,806,410; and during the same period 3,512 ships entered Algiers with a total tonnage of 7,512,831. The tourist traffic is being assiduously developed by the French Transatlantic Company, which runs its own ships, hotels and touring cars. Rail development is not so forward; there are at present some 3,000 miles of railways, but motor transport is fast forging ahead over the 18,000 odd miles of roads. Trans-Saharan aerial reconnaissances have been arranged in the direction of the Congo and the Soudan to connect France and Madagascar through the Sahara; the itinerary will probably be from Maison Blanche, near Algiers, via Lake Tchad to Mozambique and Madagascar. Recent expeditions in connection with Saharan penetration have taken place under Prince Sixtus of Bourbon, and a parliamentary committee, under the presidency of M. Steeg, the late Resident-General in Morocco, and formerly Governor-General of Algeria, has been appointed to deal with the question of the trans-Saharan railway.

The standard of living is high, even comparatively so among the indigenous working class, as there is no unemployment problem, but rather, at present, a shortage of labour. This is in part due to an increase of public works in connection with the celebration of the centenary of the French occupation. An index to prosperity in the town of Algiers may be seen in the number of motor cars. It is said that, after Paris, Algiers has a greater number of cars in proportion to the population than any other French town. The cost of living is high, higher than in Paris. The following figures are expressive:—

		Pre-war price.	Present price.
Beef	lb.	·75	7·50
Eggs	doz.	·60	12·00
Bread	kilo.	·35	2·20
Rice	lb.	·25	4·00
Butter	lb.	1·60	17·00
Potatoes	kilo.	·15	1·40
Electricity	hectowatt	·10	1·69
Coffee	lb.	2·20	12·80
Sugar	kilo.	·80	4·10
Flour	kilo.	·60	2·30
Wine	litre	·40	3·00

In view of the present value of the franc (2d.), 5 must be used as a constant co-efficient.

The present number of troops in Algeria is 77,000, but this figure is unusually high owing to recruiting; the normal figure is 65,000. Morocco has 80,000 troops, and Tunis 25,000.

Next year Algeria celebrates the centenary of the French occupation, and a Budget has been prepared for the centenary celebrations as follows:—

Receipts	Francs 84,020,000
Expenditure	Francs 83,929,000

Towards this sum the French Government is contributing twenty million francs, and the Algerian Government a like amount.

Algeria may confidently view the future from the height of hope. She is both old and new. Agriculture is firmly established, and there is room and virgin soil for new enterprise. One noteworthy point is that her native population seems entirely free from the virus of communism. She stands, the more mature colony, between Tunis and Morocco as the keystone of what will one day form the united Colony of French North Africa—eventually to be consolidated, as M Maginot, the French Minister of the Colonies, has recently intimated, with French West Africa.

TAX-DODGING IN FRANCE.

(BY A PARIS CORRESPONDENT.)

TAX-DODGING is one of the many old-fashioned practices which the French have inherited from the Ancien Régime—a direct survival from the arbitrary days of the *fermiers généraux*, when "everybody who was anybody" was able to escape fair contribution towards the nation's needs. Since the war and the creation of innumerable new taxes, the tendency to rob both the State and one's neighbour, by avoiding as much as possible of one's legitimate share of the fiscal burden, has been intensified. Tax-dodging in France now amounts to a fine art. "Defrauders," states M Besson, a high official of the Revenue Department, who has written a revealing book on one aspect of the evil, "have become all the more skilful as the profits to be derived from tax-dodging have become larger." The doctrine that it is not stealing to defraud the State finds more supporters every day.

Evasion of succession and death duties has been notorious throughout France for years past. It now prevails to such an extent as to render misleading nearly all statistics that should serve as a basis for gauging the volume and distribution of the national wealth. The return of estates passing at death in 1925 (which is the last available one) shows that out of 386,000 on which succession duties were paid, those sworn as having a value of less than £16 amounted to 31 per cent., those of less than £80 to 66 per cent., and those of less than £400 to 92 per cent. of the total. It is unthinkable that these figures accurately represent the facts in a country where everybody is to some extent a possessor. The fact that the French limit their investments very largely to bearer securities renders it suggestively easy, when Death lays his hand on a wealthy *rentier*, for the heirs quietly to remove a fortune from the costly curiosity of the revenue officials.

In regard to income tax the situation is similar. This tax did not really come into operation in France until after the war, and has not even yet reached its full yield, in spite of much closer enforcement latterly. M Georges Mer, a Finance Ministry official who specialises in the study of fiscal frauds and the means of checking them, estimates that in income-tax yield alone "several milliards" are filched from the State every year through wilful under-declaration. The French income tax in 1927 yielded frs. 8,991,000,000 (say, £72,500,000), apart from frs, 3,502,000,000 deducted at the source from dividend coupon payments. The figure affords some clue to what proportion the loss of "several milliards" would amount. The general French attitude towards income tax was bluntly expressed a few years ago by M Loucheur (who soon after became Finance Minister himself, and is now Minister for Labour and Housing), who designated the tax as "*l'impôt des poires*" (or "simpleton's tax"). The suggestion was, of course, that it is so easy to evade that nobody but fools would pay it.

Instances abound that suggest that practically every other category of taxation is honeycombed with possibilities for fraud, of which full advantage is being taken. Customs officials complain, not only of a huge increase in ordinary smuggling, but of endless new forms of fraud, which the existing laws are impotent to check, for the reason, among others, that the statutory penalties remain at the same nominal level as before stabilisation, so that convicted persons have to fear fines equivalent to only one-fifth of their pre-war value. The luxury taxes, it is notorious, are scandalously evaded. There is good ground for believing that in a vast number of cases the 10 per cent. levy, imposed on every restaurant meal that works out at over 20f. per head of any party sitting together, never reaches the Treasury. Payment of this tax should take the form of a receipt stamp affixed to the bill, but there is more than a suspicion that, through the carelessness of customers who neglect to carry away the bills they have paid, the same stamp is made to serve for a succession of different bills. Many millions of francs are also, according to experts, lost to the Treasury in connection with the Montmartre and other night resorts. In these places a luxury tax of 12 per cent. is supposed to be levied on all sales made up to midnight, after which the rate rises progressively, according to the hour, up to 50 per cent. *ad valorem*. "We have certainly recovered frs. 3,000,000 (£24,000) of evaded taxes from four houses alone," a revenue official asserts, "but it is impossible for any real control to be exercised unless we keep a civil servant permanently on duty every night in each establishment, as is done in all the theatres, to check every sale."

The French taxation system has now become so complicated that not only are taxpayers, in the majority of cases, absolutely in a fog as to their liabilities, but most of the revenue officials are equally bewildered as to the proper interpretation of many of the fiscal laws. Experts state that daily experience shows that three out of four French taxpayers are so ignorant of both their obligations and their rights that 80 per cent. of their declarations have to be rectified by the officials. Most firms of even average importance have been compelled in self-defence to add at least one "fiscal expert" to their counting-house staff, and big concerns need a special department. These special departments inevitably rapidly develop into super-tax-dodging organisations against which the revenue authorities are often powerless in their efforts to check deliberate fraud.

The present chaotic state of the French fiscal laws has resulted in the creation of an entirely new industry. This has taken the form of the opening of offices known as *cabinets de contentieux*, which specialise in assisting taxpayers to fill in their declaration forms correctly. In Paris alone there are over sixty of them, while over 300 other offices are carried on by people trading as "expert accountants," who devote themselves in most cases mainly to facilitating tax-dodging. They usually work on the payment-by-results principle, and all are apparently flourishing. Nor is this all. The supervisors of direct taxes, speaking in their corporate capacity not long ago, stated that it is a common practice of agencies of this kind to establish false balance sheets and bogus profit and loss accounts for traders, on which to base their income-tax declarations. "If this is allowed to continue," the supervisors state, "the time will soon arrive when, according to their own books, there will not be a single solvent merchant left in France." It is also asserted that some of these tax-dodging agencies have such influence that they have been able surreptitiously to secure the insertion of clauses in Bills, during their passage through the Chambers, that have rendered nugatory more than one apparently drastic measure for the prevention of fiscal fraud.

Here is a typical instance. A man who had sold some house property was asked by the district supervisor, who knew the bald facts of the case, to explain why no reference to the transaction appeared in his income-tax declaration. The man had not visited a tax-dodging agency for nothing. He glibly explained that he had invested the proceeds in National Defence Bonds. The supervisor, whatever his suspicions may have been, was compelled to accept the man's statement, for the law gives revenue officials no power in such cases to insist on proof. Even if, greatly daring, a supervisor pressed to be shown the bonds, it is easy for a fraudulent taxpayer to furnish the proof desired. The tax-dodging agency is always prepared, other things being equal, to lend his customers sufficient scrip to furnish the "proof" required, which would be returned immediately after it had served their purpose. The revenue authorities have no power to inspect his banking account or his books, unless he is actually undergoing criminal investigation for fraud.

Collusion between buyer and seller, for the purpose of cheating the State, is notoriously frequent in connection with real estate sales. Under French law the actual transfer of property must take place in the presence of a notary, and payment must be made simultaneously in cash. Whether he is aware of the actual facts or not, the notary can only accept the figures intimated to him by the two parties concerned. The value of the banknotes that pass from buyer to seller "under the table" is no business of his! Property sales are sometimes disguised under the form of an "exchange" of two lots of realty, which enables the special tax of 7 per cent. on *first* transfers of ownership to be avoided.

The tax on business turnover provides endless opportunities for evasion. Traders of all kinds, whether selling in their own shops, in the produce exchanges, or in the meat, vegetable and other markets, now pose whenever possible (for fiscal reasons) as mere commission agents, in which capacity they are liable to turnover tax only on their alleged "commission" earnings, and not on the total selling price of the goods in which they deal. "Before this tax existed," one of the principal inspectors concerned with the turnover tax states, "there were 500 dealers in potatoes in one French department, who would all be liable to pay this tax. Since the tax came into operation only one of these has the honesty to declare himself a tradesman."

Instances of this type could be multiplied, but enough has been said, perhaps, to suggest that in France tax-dodging is a popular sport. To which the Frenchman replies that the "honest Englishman" pays his taxes—because he cannot avoid them.

Notes of the Week.

The King.—The message issued by His Majesty from Craigweil House on Monday night is gratifying from every point of view. It proves that the King is making a quicker and a surer recovery to health than doctors or public dared at one time to hope; and it disposes, presumably, of the rumours, which have been so persistently current, to the effect that it would be necessary to appoint a Regent to relieve His Majesty of duties connected with the forthcoming General Election. The satisfaction aroused by the message will thus be as general and as deep-seated as were the concern and anxiety exhibited during the critical days of the Royal illness. But the message arrests attention for another reason as well. That reason is found in the felicity of its phraseology and the spirit in which it is conceived. His Majesty is now able to realise that, in the crisis of his ordeal, the "crowds of friends waiting and watching at the gates" were but the outward and visible sign of deep feelings which transcended the boundaries of race and clime; and his realisation of this striking fact evokes a remarkable passage: "I cannot dwell upon the generous sympathy shown to me by unknown friends in many other countries without a new and moving hope. I long to believe it possible that experiences such as mine may soon appear no longer exceptional: when the national anxieties of all the Peoples of the World shall be felt as a common source of human sympathy and a common claim on human friendship." The hope is nobly conceived and universally echoed.

The Election Date.—Not before it was time Mr Baldwin, on Wednesday, announced the date of the General Election. Parliament is to be prorogued and dissolved on May 10th, nomination day is to be on May 20th, and polling on May 30th. These dates are in accordance with popular anticipation, but their official confirmation will come as a relief, not only to those who have election plans to make, but also to industrial and commercial interests generally. On the whole, the news should be received with public satisfaction. It is, of course, impossible to find dates which will suit everybody, and the Scottish churches possibly have a legitimate grievance in that the election clashes with meetings which this year are of unusual importance. The rival merits of the Thursday and Saturday poll will doubtless also arouse keen discussion, while there may be complaints from Lancashire that the election comes too close to the Whit week holidays. Candidates and their agents will have to note that nomination day falls on Bank Holiday, which means that they will have to draw their deposits from the bank on the previous Saturday. Still, apart from these special cases, the election comes at a time of year when it ought not to cause much interference to trade. It comes after the spring activity, too early to interfere with the harvests, and well ahead of the autumn trade. On the whole, the dates have been chosen well.

The Fascist Four Hundred.—On Saturday, April 20th, the eclipse of democracy in Southern Europe was signalised by the closing of an ancient university in Spain and the opening of a new-fangled legislature in Italy. The University of Barcelona has shared the fate of the Universities of Madrid and Oviedo—a lesson to Castilian and Catalan intellectuals that the cause of liberty is fundamentally one and indivisible. As for the prospects of the Fascist Four Hundred, whose opening session was honoured by the presence of the Duce and the King, we are reminded of the famous Four Hundred at Athens who supplanted the Athenian democracy at a moment when the Athenian people had been thrown off its balance by public misfortunes. The methods by which the Athenian Four Hundred were "elected" were remarkably like those to which the present Italian Four Hundred owe their seats. One can read in Thucydides the story of how they came into power; and one can also read in the same author how they went out of power again, and how soon. The main subjects dealt with by the King of Italy on this occasion were the constitution of the State under the Fascist régime, the economic and financial situation, and the agreement with the Vatican—an event which the King treated as the consummation of the life-work of his famous grandfather, King Victor Emmanuel II. But the passages of greatest general interest were those in which His Majesty referred to the question of armaments and peace. The stress, as was to be expected, was upon the necessity for adequate defence and for a foreign policy that would win strength and respect for Italy; but the context in which these desiderata were put forward was noteworthy. The necessity for defence was grounded on the regrettable failure, hitherto, of international attempts at disarmament; and Italy's determination to win strength and respect for herself was commended on the plea that it did not exclude, but actually favoured, a sincere foreign policy of peace. Here we see the influence of what may soon prove to be the greatest force in public affairs: an international public opinion which is at once impalpable and pervasive. We have seen its potency in the negotiation of the Kellogg Pact and in the new move towards disarmament which is beginning at this moment. Perhaps, after all, Democracy is like Nature. You may expel her with the pitchfork, but somehow, every time, she comes back again.

Better Hopes in China.—The stability of the present *régime* in China was severely tested by the open breach and armed conflict between Chiang Kai-shek and the military commanders of the Kwangsi Faction; but the rapidity and completeness of the defeat which the Kwangsi militarists have sustained have placed the Kuomintang All-China Central Government at Nanking, with which Chiang Kai-shek is identified, in a stronger position than ever before. Had the Kwangsi Faction succeeded in their ambition of carving out a domain for themselves in the Middle Yangtse Basin (in the provinces of Hupeh and Hunan), all the work of unification and reconstruction which has been done in China during this last year might have been undone again. The Japanese military occupation of the railway zone in Shantung might have been continued indefinitely; the former warlord of that tormented province, Chang Tsung-ch'ang might have got into the saddle again; and the three Manchurian provinces, which, under the rule of Chang Tso-lin's son, have been making tentative approaches

towards union with Nanking, might have sheered off again on an independent course of their own. Out of all this fresh chaos, Feng Yü-hsiang might have attempted to snatch a dictatorship for himself; and, indeed, if China really had gone into the melting pot again this spring, an effective Chinese dictator might have been the greatest benefactor for whom his unhappy countrymen could have hoped. As it is, the defeated Kwangsi forces are being followed up so hard that they have little chance of living to fight another day; and simultaneously, on the minor front in Eastern Shantung, the Nanking troops have disposed of Chang Tsung-ch'ang. These successes seem likely to have a decisive effect upon the relations between the Nanking Movement and Feng; and it looks as though counsels of moderation were prevailing on both sides. Feng is showing no disposition to challenge the authority of Nanking, while Nanking is taking some care not to humiliate him. The concrete issue is the succession to the control of Shantung when the Japanese step out, as they have already agreed with the Nanking Government to do. Last week saw the strange spectacle of Nanking asking the Japanese to postpone their departure—the reason being, of course, that if the Japanese had gone out before Chiang Kei-shek had his hands free from his Kwangsi opponents, the beneficiary might have been Feng; and if Feng had succeeded in acquiring Shantung, his position *vis-à-vis* Nanking would have been greatly strengthened, for he would have gained not merely another large and populous province, but an access to the sea, and therewith the opportunity to import munitions and to deal separately with foreign Powers. That possibility now seems to have disappeared; and when the Japanese troops do embark, we may expect to see Chiang take over the paramount control of Shantung, while allotting to Feng a " face-saving " share in it. The political omens, then, are favourable to stability in China; and there is a financial portent which points the same way. The Municipal Electricity Department of the International Settlement at Shanghai has been purchased, at a price of more than ten million pounds sterling, by an Anglo-American combine. Presumably the purchasers expect that, in a not too distant future, Shanghai is going to come into that great heritage of industrial development which might have been hers by now if political disorders in the hinterland had not put off the day.

The Labour Programme.—While the country still awaits the official Labour programme, and does not know definitely which of the points adumbrated in " Labour and the Nation " will be definitely selected as the planks of Labour's electoral platform, Mr. Ramsay MacDonald, in a speech at Buxton on Wednesday, threw new light on one or two points. A Labour Government, he said, would extend widows' pensions " on the principle of need as the one test." They would also give the Food Council control over food prices. As regards education, nursery schools are to be " in the forefront " of the Labour programme; and as for housing, a million more working-class houses are to be built. Here we have a little more light on the Labour proposals, but we feel strongly that, with polling day only five weeks distant, it is high time that the programmes of all three parties should be placed before the country in clear, concise and easily understandable terms.

The Slums.—There are signs that the public conscience is being stirred again by the housing needs of the nation, as it was in the early post-war years, and now that the requirements of those families which can afford to pay over 15s. a week gross rent have largely been met, each of the three parties is giving a policy for the slums a leading place in its election programme. The Labour Party does not yet appear to have amplified with practical explanation its promise in " Labour and the Nation " that it " will attack the slums which exist in well-nigh every town and village, and will promote town and regional plannings so as to combine the preservation of natural beauty with social amenities and the maximum of economic convenience." Liberal policy, sketched in the Yellow Book, and in a resolution at the Yarmouth Conference last October, has been developed by Mr Lloyd George through " We Can Conquer Unemployment " and his recent speeches thereon. In addition to town planning, region planning, and a thorough survey of the national housing situation preliminary to the adoption of a long-period policy, the Liberals would immediately " press on with the provision of houses at the lowest rents possible with the present subsidy, and begin the provision of urban houses at less than 10s. per week gross rental for the unskilled worker with a large family." This will evidently involve rent allowances for children where the family income is below a certain minimum, and probably some readjustment of the subsidy as well. Mr Lloyd George also brings his road development policy into conjunction with the known facts that overcrowding is as great an evil in the slums as the condition of the houses, and that one of the main causes of the overcrowding is the unwillingness or, more often, inability of workmen living in slum conditions to afford the time and cost of a long and irksome journey to and from the outskirts of a large town. The Conservative programme has been indicated in more than one recent speech by the Prime Minister. " The time has come," he said at Drury Lane, " to go forward farther and faster in the direction of clearing slums and of reconditioning them. That will be a task to which the new Government will devote the whole of its strength and mind after the election." Taking the three policies as hitherto stated, it certainly appears that here the Liberals are more precise and concrete in their plans than the other two parties have so far shown themselves to be. How much Government assistance the Conservatives really plan to give towards slum clearance remains unknown; the present grant for the purpose is notoriously inadequate, but experienced members of housing committees know that the actual clearance of an area must come last, not first, in any scheme for re-housing slum dwellers. The scope for reconditioning, a policy which the Liberals too recommend, but only as a supplement, varies in every town inversely with the amount of such work which the local authority has already carried out. A progressive council like that of Manchester has done by now most of the reconditioning that is worth while, whereas other great cities are far behindhand. It would be valuable to know at once the extent as well as the nature of the practical steps that the Conservative and the Labour parties respectively have in mind. But, taking the long view, it is certain that some form of de-rating is as much needed, on grounds of equity, by small houses as by industry, and no permanent way of providing a dwelling at an economic gross rent not too high for the unskilled workman is likely to be found until he is no longer obliged to pay in rates ten times as large a percentage of his income as the man with £15,000 a year. The present rating system inverts every equitable scale of taxation.

De-rating for Agricultural Land.—The Bill implementing, as far as England and Wales are concerned, Mr Churchill's announcement that agricultural land would be relieved of rates forthwith passed through all its stages in the House of Commons without a division and without amendment, neither Opposition party daring to vote, so soon before a General Election, against a measure which must, to some extent at least, prove to the advantage of agricultural areas. The cost of the relief in England and Wales is estimated in an accompanying memorandum at £2,100,000 out of the £2,570,000 to be provided from the Rating Relief Suspense Account. The machinery for antedating this relief by six months can only be regarded as makeshift. The new valuation lists separating industrial and agricultural hereditaments from the rest, which must be the basis of the de-rating allowances, do not come into force till October next; in consequence they have to be supplemented by special interim lists, and by certificates of the assessment committees whenever a ratepayer is entitled for the current half-year to more or less relief than he would obtain on the basis of the definitive list. In practice, no doubt, those who believe themselves entitled to the relief will refuse to pay rates, or claim rebates on rates already paid, so that the matter will not be finally cleared up until long after the period of the Act's operation is past. This complicates the already difficult problem of compensating the local authorities. By the new Bill each is to be paid the difference between the sum actually receivable as the proceeds of rates and the sum receivable had the new Act not been passed, " provided," the Bill continues, " that if the Minister is satisfied that the amount in the pound of the rates levied by any rating authority in respect of the current half-year has been abnormally increased by reason of charges not ordinarily falling to be borne by rates having been imposed thereon, the sum payable to the rating authority shall be such sum as may be estimated and certified by the Minister as the sum which would have been so payable if the said amount in the pound had not been so increased as aforesaid." That provision gives the Minister wide powers. What are " charges not ordinarily falling to be borne by rates "? Rating authorities may be discouraged from enlarging their social and other programmes in the current half-year lest the new expense should be disallowed by the Minister of Health as one " not ordinarily falling to be borne by rates." It is, however, hard to think of any simple alternative method of safeguarding the Treasury, and the defect can only be exhibited as a necessary one in hasty anticipatory legislation of this kind.

Cotton Labour Dispute.—The Federation of Master Cotton Spinners' Associations, writes our Manchester correspondent, threatens to bring about a total stoppage of production in the spinning section of the Lancashire cotton industry on May 18th next, failing a settlement of a dispute which has arisen at the Alma Mill, Oldham. Owing to bad trade, this mill did not work for several months, and it is contended by the operatives that when it restarted an attempt was made to pay wages on a lower list than previously. Special agreements exist between the trade unions and the employers' associations for joint meetings to be held in the district, and if necessary in Manchester, to consider any complaint before notices to cease work are issued, but on this occasion strike notices were given in and the mill was put on strike. Since then the matter has been considered by the Executive Committee of the Card Room Operative's Amalgamation, when it was decided to instruct the local association at Oldham to tell the workpeople to return to their employment so as to put the case in order. The Oldham Card Room Operatives' Association, however, has refused to take this action, and as there is a deadlock the Emergency Commitee of the Masters' Federation in Manchester on Tuesday last decided to convene an extraordinary general meeting of members to be held on May 3rd, at which a full statement explaining the principle at issue will be submitted. It was also decided to put forward a resolution recommending all Federation mills to close at noon on Saturday, May 18th, and remain closed until such time as the card room operatives return to work at the Alma Mill. The situation must be considered serious, but it is extremely likely that some way out of the difficulty will be found, and in trade circles there is very little fear at the moment of a total stoppage of production. There have been rumours in Manchester during the last few weeks that the cotton employers contemplate the raising again of the hours and wages question. At the annual meeting of the Bolton Master Cotton Spinners' Association, held this week, the President, Mr William Howarth, who is also managing director of the Fine Cotton Spinners' Association, said that unless the operatives and themselves could agree to reduce costs it would not be possible to re-establish trade at a full volume. He said that they had tried to avoid strikes and lock-outs to the best of their ability, but if the operatives were sincere in desiring to get the full trade of the county re-established they should consider this phase and say that whatever was necessary in this regard they were willing to agree to. He pointed out that, owing to the reduction in the cost of living, which was partly due to the return to the gold standard, real wages had advanced during the last few years, but employers were under the disability of trying to sell cotton goods produced at a high cost to countries which were on a lower wage basis, and owing to severe competition it was impossible to secure sufficient orders to keep all machinery in work. It is understood that at an early date the employers will approach the trade unions and propose a revision of the wage rates which now exist.

Lancashire Cotton Corporation, Limited.—Our Manchester correspondent writes:—The directors of the Lancashire Cotton Corporation, Limited, now seem to be making more progress in absorbing mills. The Corporation has made offers for the purchase of the Orme Ring Mill (1920), Limited, Oldham, the New York Mill (1920), Limited, Heywood, and the Lees Union Mill (1919), Limited, Oldham. Special meetings of the shareholders and loanholders in these concerns have been called, when particulars will be submitted of the offers put forward by the corporation. Some details are available in regard to the case of the Orme Ring Mill. The £1 shares of this concern are paid up to the extent of 13s. 9d. According to the proposal the shareholders will have to pay up the remaining 6s. 3d. per share, but will receive in exchange only 1s. 7d. in deferred shares of the corporation. It is significant, however, that the debenture-holders are to be paid in full, made up of 9s. 3d. per pound in 5½ per cent. income debenture stock, 5s. 10d. in ordinary shares, 4d. in deferred shares, and 4s. 7d. in cash. Unsecured creditors are to receive 10s. 3d. in the pound, of which 9s. 9d. will be ordinary shares and 6d. in deferred shares. It is understood that progress in the developments of the Lancashire Cotton Corporation, Limited, is being rendered slow as a result of the large amount of time which has to be spent on legal points with lawyers and with accountants in regard to the interpretation of proposed terms of sale. Although some difficulty may be experienced in getting the consent of the shareholders of the three mills mentioned, it is anticipated that the necessary support will be forthcoming. There are rumours, however, that a hitch has taken place in the transfer of the Ace Mill, Limited, Hollinwood.

The Trend of Overseas Trade.—" The Board of Trade Journal " this week contains the usual quarterly calculations of the volume and value of our overseas trade. These results are perhaps not of quite the same importance as they were a few years ago, when the wide fluctuations in the price-level made comparisons of value alone most misleading, but even to-day they are of interest in illustrating the general trend of trade. The statistics take 1924, the census of production year, as their basis. Comparing quantities for 1929 and 1924—that is, after correcting the value figures for intervening price changes—the following results emerge, 1924 being equal to 100 in each case:—

	January–March, 1929. Retained Imports.	British Exports.
Food	110·7	105·1
Raw materials	123·6	89·8
Manufactured goods	143·3	114·1
Total	121·6	109·2

The increase in the index for imported manufactured goods is spread over a large number of the constituent items, the most prominent of which are oils, fats and resins. These, of course, have a strong claim to be ranked as raw materials. On the export side, the least satisfactory items are coal, wood, iron and steel. Machinery and vehicles are all good, and, on the volume basis, cotton in 1929 was little below the 1924 level. In general, these calculations show that the fall in the value of our export trade between 1929 and 1924 is more than accounted for by the decline in prices. In volume there has been an increase, though not so large a one as could have been hoped.

Finance of Building Societies.—From 1890 to 1918, as a recent official analysis has shown, conditions in the building society movement in Great Britain were practically static. With the great demand for houses after the war progress has been remarkable. The latest statistics indicate that there are over 1,000 societies; that the membership is approximately 1½ million, excluding depositors; that the sum advanced on mortgage each year must now

approach £60 million; and that the aggregate assets of the societies will soon be £250 million, if, in fact, they have not already reached that figure. Although the more serious forms of the housing shortage are disappearing, the societies are advancing over £1 million a week to purchasers of their own houses, covering at least 80,000 properties per annum. There is, however, in this progress a problem of finance of considerable interest. As is well known, the societies have an arrangement with the Inland Revenue under which they make contribution in bulk in respect of the probable liability of their shareholders to tax; on that basis they are then able to offer to investors 5 per cent. free of tax. This attractive rate, and more especially the conditions—including complete security for the capital and repayment at short notice—attached to it, have led to the inflow of substantial sums. In some cases the difficulty is to get enough out on mortgage, and at sufficient speed, to use up both this considerable investment and also the large volume of steady repayment of the mortgages, which is made, in the overwhelming majority of cases, month by month. Accordingly, most of the societies have withdrawn their advertisements for shares; they are concentrating for the time being on the extension of their mortgage business. For all practical purposes the bulk of that is on a 6 per cent. basis. On that margin of 1 per cent. the societies have to provide for their payments to the Inland Revenue authorities, their administrative and other expenses, with one or two additional charges. The financial position is thoroughly sound, but, while investments will not be refused, they will in numerous societies not be encouraged, at all events, until the volume of mortgage business, still very considerable, is able to absorb them and free the societies from the necessity of looking for investments within the trustee list, by which they are bound, for the surplus funds at their disposal.

Co-operative Administration. — A correspondent writes:—The report with regard to the administration of the Co-operative Wholesale Society, summarised in the *Economist* of April 6th, has now been considered at the various meetings of the shareholding societies. All its main features have been approved with the exception of the suggested reference committee for examining the credentials of candidates and the proposal to have national voting in place of district voting and representation. These were two new motions that failed to secure much approval from the representatives of a movement that has been based on the recognition of local work and on popular election. But all the other recommendations have been endorsed, and will be put into operation before the end of the year. These involve the reduction of the directorate from 32 to 28 members, and the raising of the salaries of the directors (and also of the auditors) to £750, with an annual increment of £50, till a maximum of £1,000 is reached. Candidates for the board will have to be less than 50 years of age, and retirement will be compulsory at the age of 68 years. Pensions will be based on £20 for each year of service, with a maximum of £500 per annum. Provision is made for the more thorough examination of the accounts at meetings, which will mainly consist of the officials of the distributive societies, and for representation at all business meetings on a basis of the trade that is done with the society. Altogether the effect of the recommendations should be to knit more closely the retail societies with the C.W.S., which was established by the capital they invested and which is dependent on their trade as its only avenue for business. The fact that many have wandered into the open market has led to this effort to keep them within the co-operative fold.

A Quarter's Fishing.—The value of the wet fish landed or imported into the United Kingdom in the first quarter of the year exceeded five million sterling, and thus contributed a substantial addition to the nation's food supply. The figures of weight and firsthand value (or in the case of imports the c.i.f. value) compiled from the preliminary returns of the Ministry of Agriculture and Fisheries are as under:—

January-March.	Weight (in cwts.).		Value.	
	1928.	1929.	1928.	1929.
			£	£
British caught:				
England and Wales	2,087,836	2,487,605	3,015,834	3,008,781
Scotland	1,204,403	1,137,790	1,002,868	949,798
Shell fish	...	...	87,689	59,674
	3,292,239	3,625,395	4,106,391	4,018,253
Foreign landings	393,012	300,706	334,740	210,694
Imports	811,610	827,595	1,035,368	1,058,140

The average value of British-caught fish landed in England and Wales was 24s. 2d. per cwt., as against 28s. 10½d. per cwt. in the corresponding three months of last year; and in Scotland 16s. 8½d. against 16s. 7¾d. In the case of England and Wales it will be noted that a considerably larger quantity fetched rather less in the aggregate, which would seem to indicate that demand does not always keep pace with supply. Efforts, however, are now being made to stimulate the consumption of fish in the great industrial areas, but this is not likely to be permanently successful unless the means of distribution are improved and the commoner kinds offered at the lowest possible prices. The landing of wet fish by foreign-owned fishing vessels showed a marked diminution, but imports, chiefly herrings from Norway for the purposes of the curing industry, are slightly in advance of a year ago. As a set-off against imports it may be added that we exported British-caught wet fish to the value of £341,185 and "cured or salted" (principally herrings) to the value of £1,012,711. In addition to the imports of wet fish imports of "cured or salted" were valued at £294,943, and of "canned" at £1,636,191.

European Timber for the U.S.A.—A correspondent writes:—Judging by the results of a meeting of the Finnish Lumber Manufacturers' American Export Association held in Helsingfors, further and larger shipments of Finnish timber will be made to New York this coming season. From all accounts, American buyers were well satisfied with the quality and cut sent last year, but the demand was dull owing to the large consignments of Russian wood and the keen competition occasioned thereby. Europeans are gradually working into the United States buying market for building timbers. If it succeeds—as it seems certain to do unless the authorities at Washington decide otherwise—this development will have the effect of putting another buyer into competition against Great Britain. It is safe to predict that European timber will prove to be a very keen rival in the States with Canadian spruce, as it has been for many years past in the United Kingdom. It also goes to show that the United States supplies of softwoods are dear, and that there are not many forests now left to provide an annual increment sufficient to supply the States at a price which can compete with the softwoods of Old World countries.

Drink Question in Russia.—A correspondent writes:—The revenue of the Soviet State from sale of liquors in the financial year 1927-28 exceeded 1 milliard roubles. The "Gosplan's" five-years' economic plan, which is being reconsidered, provides for a gradual reduction of the production and sale of vodka, and recommends that the production and sale of beer be reduced annually by 25 million litres, so that, at the end of the five years, the annual sale would be 270 million litres. It is not proposed to reduce the sale of wines. The annual sale of vodka at the end of the five years is to be 492 million litres, of which 117 million litres is to be sold in the towns; or, according to a variation, 430 million litres, including 80 millions, in the towns. According to the "Gosplan's" *rapporteur*, M Maimin, 2 million tons of cereals, of value 150 million roubles, were consumed in distilling and brewing in 1927-28, and altogether the production of liquors other than wines cost 300 million roubles. "The losses of industry through absenteeism of drunken workmen and through reduced productivity from the same cause are estimated at 650 million roubles; other losses of the State (sickness, mortality, fires, &c.) from intemperance are estimated at 185 million roubles. . . . It is, therefore, beyond doubt that the revenue from alcoholic beverages, if considered from the social and economic viewpoints, is not an effective resource." The "Gosplan" considered that a cessation of the legal trade in spirits and the entire surrender of this source of revenue within the five years would not result in suppressing alcoholism; suppression must be attained "through the gradual cultural development of the masses." Several members of the presidial council of the "Gosplan" declared for more drastic measures, one member demanding that the State should at once surrender half of its revenue from drink. The Soviet State's attitude towards the drink question, as shown both by its measures and by its expressed views, closely resembles the attitude of the originator of the Vodka Monopoly, Count Witte, thirty years ago.

Lithuanian Trade in 1928.—A correspondent sends the following particulars of Lithuanian foreign trade for the last five years. The figures are in millions of lits. One lit approximately equals 5d.

	Exports.	Imports.	Excess of exp. over import.	Excess of imp. over export.
1924	267	207	60	...
1925	243	253	...	10
1926	253	241	12	...
1927	250	266	...	16
1928	257	291	...	34

The balance of payments was favourable throughout, since to the money received for exported goods must be added money remitted home by Lithuanians living in the United States and in other foreign countries, and other smaller items, amounting in all to not less than 35 million lits a year. The chief Lithuanian exports are flax and linseed.

	Flax.		Linseed.	
	Tons.	Thous. of lits.	Tons.	Thous. of lits.
1925	11,081	42,923	20,600	17,400
1926	16,682	50,671	25,762	18,000
1927	18,348	54,984	25,018	18,497
1928	9,481	36,223	6,183	4,072

The export of flax and linseed diminished in 1928 as a result of bad crops and of low prices on the world market. The decrease in these exports, however, was compensated by an increase in export of dairy products, cellulose, veneer and other goods.

Exported.	Butter.		Cheese.		Milk.	
	Tons.	Thous. of lits.	Tons.	Thous. of lits.	Tons.	Thous. of lits.
1926	1,797	12,707	602	2,341	2,622	1,245
1927	2,057	13,565	629	2,418	4,031	1,553
1928	2,642	20,308	689	2,687	5,740	2,570

During the last three years exports of boards, cellulose and veneer were as follows:—

	Boards.		Cellulose.		Veneer.	
	Tons.	Thous. of lits.	Tons.	Thous. of lits.	Tons.	Thous. of lits.
1926	26,395	6,306	40,083	26,300	4,747	5,700
1927	48,376	11,482	40,480	23,790	4,500	6,029
1928	51,501	13,578	47,880	26,979	6,570	11,707

Among imports the principal are: Cotton and woollen goods, 55,700,000 lits; coal, 11,300,000 lits; wrought iron, 8,400,000 lits; superphosphates, 13,256,000 lits; sugar, 19,671 thousand lits; motor cars, 5,075 thousand lits; machines, 12,500 thousand lits; cement, 4,685 thousand lits; mineral oils (crude oil, kerosene, benzine and others), 9,600 thousand lits. Germany was Lithuania's principal customer in 1927, taking 51.5 per cent. of her exports; Great Britain came next with 24.8 per cent. Germany also was responsible for 50 per cent. of Lithuanian imports, Poland for 16 per cent., and Great Britain, ranking third, took 6.7 per cent.

Guatemala's Trade.—A correspondent writes:—Inasmuch as the continued payments of arrears due on Guatemalan coupon certificates, held largely in the United Kingdom, are dependent upon the export trade of the country, the present economic situation is of interest. According to the fifth paragraph of the Deferred Interest Agreement, signed October 15, 1927, the Government, in guarantee and for the security of the punctual payment of the interest and of the quota of amortisation of the bonds, as, indeed, for all of the State's sterling loans, assigns the tax of $1 (gold) for each quintal of coffee exported. Receipts from this tax for the five years to the end of 1927 were (in quetzales, or gold dollars): 1924, 889,911; 1925, 970,451; 1926, 935,023; and 1927, 850,000 (estimated). Coffee, both in the shell and clean, forms the most important of the exports, accounting for over 80 per cent. of the national revenue. For the past year, however, there has been a substantial decline in the coffee shipments, which touched 966,121 quintals, valued at $23,048,390, as compared with 1,146,934 quintals, valued at $28,568,561, for the previous year. As usual, the largest consignments of the berry were to the United States, whose purchases amounted to $11,464,248 of clean coffee, and $173,936 in the shell, while Germany bought to the value of $8,149,809 of clean and $489,673 of shelled coffee. If, for any reason, the Government tax on coffee assigned should not be sufficient in any one year for the service of the foreign debt, the Government must supplement the guarantee by other revenue. It is, therefore, of interest to note that the total exports in 1928 showed a shrinkage of 17 per cent., falling from $33,915,225 in 1927 to $28,211,572 in 1928. Against the fall in exports a considerable advance took place in imports. These marked a record total of $24,145,181, an increase over the previous year of $4,359,849, or 22 per cent. This substantial increase in foreign purchases may be accounted for in some respect by the partial failure of the domestic corn-crop, no less than 18,411,465 kgs. of wheat-flour, valued at $1,296,917, having been imported, against 13,496,218 kgs., costing $1,120,637, in the previous year. The share of the United Kingdom in Guatemala's trade suffered a further decline, contributing no more than 10.9 per cent. of the total imports, against 11.2 per cent. in 1927. Since the services of a competent foreign expert were enlisted to supervise and develop the Customs receipts of Guatemala, a distinct and progressive improvement has been recorded. Having stabilised its currency, reached agreements with nearly all of its creditors, and made satisfactory arrangements for the observance of such agreements, the Republic, under the present administration, may be expected to get rid of such slight defects as still exist in its fiscal organisation.

INSURANCE NOTES.

London and Lancashire Insurance Co., Limited.—Though founded little more than 50 years ago, the London and Lancashire has attained a commanding position even among the giants in the composite office world. For many years now, under the chairmanship of the veteran, Mr Pascoe Rutter, the company has been a leading exponent of the policy of absorption. The result is that the group of which the London and Lancashire is the centre and the parent, comprises no less than 24 individual companies, each retaining its legal entity and operating in all parts of the world. The London and Lancashire accounts are presented in a consolidated form; that is to say, they include the transactions of all these allied companies, and bring into account, therefore, the whole of the profits and losses of all of them. The combined results of the year 1928 maintain the accustomed high standard of excellence; for each of the underwriting accounts has yielded a substantial sum for profit and loss account, while the total premium income has advanced from £7,183,000 to £7,361,000. The details of the last two years are shown in our usual form in the table below:—

	1927. Amount.	1927. Percentage of Premiums.	1928. Amount.	1928. Percentage of Premiums.
	£		£	
Fire	515,853	15·0%	507,079	14·7%
Accident and General	144,026	6·1%	146,429	6·0%
Marine	113,739	8·2%	86,979	5·9%
Sinking fund	1,547	...	1,454	...
	775,165	...	741,941	...
Less income tax and staff pensions	175,323	...	199,848	...
Written off cost of acquired businesses	197,228	...	...	...
Total net trading surplus	402,613	...	542,093	...
Interest earnings less debenture interest	468,990	...	497,489	...
Total amount available for dividend	871,603	...	1,039,582	...
Dividend	502,680	(85%)	561,818	(95%)
Net increase in surplus assets	368,924	...	477,764	...

It will be observed that, although the increase in the dividend has widened the gap between the dividend and the interest earnings, the operations of the year have added a further large sum to free assets equal to about 13s. per share. The reserve position of this huge combine is impressive. In respect of a total premium income (excluding life and sinking fund) of £7,361,000, the reserve funds, apart from the paid-up capital, now amount to £9,967,000, equivalent to 135.41 per cent.

Life Assurance Business.—During the past week there has been issued the annual volume of returns to the Board of Trade by all the life assurance companies transacting business in this country. Since the volume is concerned only with returns lodged with the Board of Trade during the year 1928, the figures relate for the most part to the business of the year 1927, and are, therefore, now some 18 months out of date. Nevertheless, there are many points of interest to be observed, especially in that part of the volume containing the summary of business. The total new life assurance business transacted in 1927 by all the home offices combined was £147,825,161. This large volume of business represents an increase of 15 per cent. over that for the preceding year. In spite of the noticeable general advance in popularity of life assurances, the total new business for 1927 has only just exceeded the volume written in the boom year after the war, 1920. A further point of interest is the fact that of the total business in 1927 £13,662,191 was transacted outside this country, in the Dominions or abroad—practically 10 per cent. of the total. The extent to which the craze for single premium policies has grown may be judged from the fact that in the four years, 1924-27 inclusive, the combined offices received the sum of no less than £27,727,859 in the form of single premiums, and in 1927 alone the total was £9,968,044. The following table exhibits the course of new life business in each year since the war:—

Year.	New Life Assurance Business transacted by all Offices.	Increase per cent. each year over the previous year.
	£	%
1919	131,454,363	+79·2
1920	146,627,474	+11·5
1921	109,243,943	−25·5
1922	106,302,251	− 2·7
1923	111,750,559	+ 5·1
1924	123,661,009	+10·7
1925	130,196,611	+ 5·3
1926	128,915,643	− 1·0
1927	147,825,161	+14·6

But in addition to the business transacted by the home offices in this country there is now the large and rapidly increasing business of the Colonial offices. In the year 1927, for instance, new life assurances written in this country by all the companies established abroad amounted to £13,457,082. This represented an increase of 28.6 per cent. over that for 1927. The list of companies transacting business in this country contains in 1927 one notable addition, namely, the Metropolitan Life of New York, which in that year wrote two policies for sums assured of £1,040,100 for yearly premiums of £13,255. Since the company established a branch in London it has been very active indeed, and although no particulars are yet available as to the 1928 new business, it is probable that the 1927 figure has been largely exceeded. The following table sets out the total new life assurance business transacted in this country by foreign and Dominion offices operating here:—

Year.	New Life Assurance Business transacted by all Offices.	Increase per cent. each year over the previous year.
	£	%
1919	4,662,760	+101·7
1920	6,861,862	+ 47·2
1921	5,880,879	− 14·3
1922	5,629,203	− 4·3
1923	6,386,310	+ 13·4
1924	8,058,066	+ 26·2
1925	9,118,318	+ 13·2
1926	10,464,362	+ 14·8
1927	13,457,082	+ 28·6

A very striking record of steady advance.

Eagle Star and British Dominions Insurance Co.—Although the hope expressed in our last week's issue that the marine account would require no further support has not been realised, the 1928 accounts make, on the whole, a very much better showing than those of the preceding year. In every department excepting the fire there has occurred an advance in the premium income; and in every department except the marine there has occurred a notable increase in profits. The fire premium income amounted to £979,883, being a decline of some £120,000 over that for 1927, but from this reduced figure there emerged a profit of 8.5 per cent. When it is remembered that in 1925 the fire department yielded a profit of only 1 per cent., and in 1926 of only 3½ per cent., it may be conceded that the company's efforts to reorganise this section of its business have been remarkably successful. The accident department, which includes the premium income derived from newspaper insurance contracts, also shows a remarkable advance in profits from 9.4 per cent. of the 1927 premium income to 28.3 per cent. of the 1928 premium income. The general account has the largest premium income of all, amounting to £1,138,000, and, largely owing to a less unfavourable experience in the pluvius business, the profit has been multiplied 3½ times. The sum of £100,000 has been transferred to marine account from profit and loss account, compared with £75,000 in 1927. Although the fund has been thus increased from 76 per cent. to 79 per cent. of the premiums, this still falls short considerably of one year's premium income, which is usually regarded as the minimum. This, and the fact that claims in 1928 have absorbed a much larger figure, lends no encouragement to hope that the current year may be any more satisfactory than the last two years. The contribution to profit and loss account from the life department has amounted to £148,393. This sum arises from the quinquennial valuation of the Star closed fund, and a further sum of £21,487 on account of the quinquennial valuation of the Sceptre fund will appear in the accounts of the current year. The revenue accounts of the life department are singularly uninformative. Only one account is published, notwithstanding that it relates not only to the current series, but also to no less than four closed funds of businesses acquired. The detailed results of the past two years are set out in the table which follows below:—

	1927. Amount.	1927. Percentage of Premiums.	1928. Amount.	1928. Percentage of Premiums.
	£		£	
Fire	80,176	7·3	83,028	8·5
Accident	12,345	9·4	41,640	28·3
Employers' Liability	2,229	1·2	2,993	1·6
General	12,693	1·2	44,981	4·0
Marine	− 75,000	−10·2	−100,000	−12·6
Life	25,000		145,393	
Sinking Fund	Nil		3,000	
Profit from Investments realised	15,185		59,001	
	72,628		280,036	
Less Written off cost of Businesses acquired	Nil		120,000	
Expenses, Taxes, &c.	79,689		68,221	
Total net Trading Surplus	− 7,061		91,815	

The opportunity provided by the large contribution to surplus from the life department has been taken to write off a substantial sum from the cost of acquiring the various closed life funds. As a result the original cost of £606,000 has now been written down to £355,000. After meeting the dividends on the preference and preferred ordinary shares, the net interest earnings have amounted to £118,491, compared with £115,196 in 1927. For the fifth year in succession the dividend on the ordinary shares remains the same, at 20 per cent., and cost the sum of £128,484.

General Accident, Fire and Life Assurance Corporation.—Though the underwriting results of last year were fully maintained on the scale of the preceding year, the final results were marred by a large exchange loss due to the stabilisation of the French exchange at its new par figure. The total premium income shows a further large advance, particularly in the accident department, and now amounts to close upon £7½ million. The company's fortunes depend in an unusual degree upon the success of one department, namely, the accident department; moreover, the greater part of the accident premium income is believed to be derived from various forms of casualty insurance in

the United States. The accident revenue account presents one or two special features of interest. In the first place the premiums are split into two items—one representing "Annual and Long-term" contracts, and the other "Monthly and other Short-term" contracts. It is noticeable that the proportion of monthly and other short-term contracts, in respect of which no reserve for unexpired risks is maintained or is necessary, has shown a falling tendency in recent years. For instance, in 1925 the proportion of short-term contracts to the total was as high as 35 per cent., whereas last year the proportion had fallen to 26 per cent. Another important characteristic of the account is that, contrary to the common practice, no fixed proportion of premium income appears to be maintained for unexpired risks. In recent years the percentage reserved for this purpose has fluctuated around 35 per cent., and although the proportion reserved at the end of last year had risen to 37 per cent., this still falls short of the 40 per cent. which is commonly maintained as a minimum by other offices. In calculating the profit on the account we have based our figures upon an unexpired risk reserve of 40 per cent. of the premiums in respect of long-term contracts, and this calculation yields on this occasion a rather higher profit than that shown by the company, owing to the strengthening in unexpired risk reserve which has taken place during the year. Detailed underwriting results in each of the last two years are set out below:—

	1927. Amount.	1927. Percentage of Premiums.	1928. Amount.	1928. Percentage of Premiums.
	£		£	
Fire	108,192	17·9	108,960	17·0
Accident and General	219,776	3·4	231,728	3·4
Marine	−1,028	−1·8	−1,356	−1·7
Profit on sales of investments	6,562		14,724	
	332,502		354,056	
Less taxes, &c.	209,315		184,457	
Loss on Exchange	Nil		176,214	
Total net trading surplus	123,187		−6,615	

Net interest earnings in 1928, after deducting the preference dividend, amounted to £225,956. The ordinary dividend has been raised from 40 per cent. to 48 per cent., and the cost is now £158,976. There still, therefore, remains a margin in interest earnings of £67,000, and it is interesting to notice that the General Accident is now almost the only large company possessing a margin of any considerable size between interest earnings and cost of dividend. Life assurance business is transacted through the medium of the General Life Assurance Company, which was acquired some few years ago, and the life fund now stands at just over £3 million. A large new business is transacted, and last year's amount is as much as £1,757,538, compared with £1,378,562 in the preceding year. The expense ratio of the life fund is as high as 18.7 per cent., and the rate of interest is a very moderate one indeed, namely, £4 8s. 2d. per cent. The general accident business has in late years been expanded very considerably, and this has perhaps prevented it from augmenting its reserves to keep pace with the progress in the premium income. The reserve position, compared with that of other large composite companies, is, in fact, a relatively weak one; for in respect of the ordinary premium income in the fire, accident and general, and marine departments of £6,050,413, the total reserves are equivalent to only 57 per cent.

Law Union and Rock Insurance Co., Limited.—This company is a member of the London and Lancashire group, and is the only member which transacts life business. The feature of the company's life business last year was the remarkable expansion which occurred in new single premium policies. The amount received in this way last year amounted to £713,067, compared with £323,255; and consequently the total new business advanced from sums assured of £1,632,510 to £1,977,388. Interest earnings on the life funds worked out at a rate of £4 13s. 8d. per cent., compared with £4 10s. 11d. in 1927, and the expense ratio was 14.5 per cent. in 1928 and 14.7 per cent. in the preceding year. Considering that an unusually high proportion of the funds—almost 33 per cent.—is invested in British Government securities, the rate of interest earned is very favourable. In addition to the life business, there is a premium income of £796,559 derived as to two-thirds approximately from fire insurance and one-third from accident insurance. The figures relating to these transactions are incorporated in the accounts of the parent company, the London and Lancashire. The trading results of each of the past two years are set out below:—

	1927. Amount.	1927. Percentage of Premiums.	1928. Amount.	1928. Percentage of Premiums.
Fire	107,922	19·8%	89,337	16·3%
Accident and General	30,314	14·6%	15,643	6·3%
Sinking fund	1,547	...	1,454	...
	139,783	...	106,434	...
Items debited to profit and loss a/c	35,416	...	36,449	...
Net trading surplus	104,367	...	69,985	...
Interest earnings (less debenture interest)	70,902	...	73,771	...
	175,269	...	143,756	...
Dividend	90,703	...	90,938	...
Net increase in surplus assets	84,566	...	52,818	...

Ocean Accident and Guarantee Corporation.—This well-known company has the largest accident account of any British office, and operates in this field all over the world. The company has been uniformly successful, and the 1928 report shows a further large advance in profits. There is a small fire premium income amounting to just under £350,000, which produced a susbtantially lower profit in 1928 of 7.5 per cent., though this is still a reasonably satisfactory result. The accident premium income has shown a falling tendency in the last two years, and last year amounted to £5,900,000, compared with £6,444,000 in the preceding year. A sum of £75,000 was transferred from the accident account to profit and loss last year, but in a separate typewritten statement issued with the report the underwriting profit is stated to have been £214,442. If the usual allowance be made for unexpired risk reserve on the basis of 40 per cent. of the difference in the premium income, the underwriting profit works out at £335,170. The detailed results of the past two years are set out below:—

	1927. Amount.	1927. Percentage of Premiums.	1928. Amount.	1928. Percentage of Premiums.
	£		£	
Fire	53,188	15·6	26,048	7·5
Accident	124,572	1·9	335,170	5·7
	177,760	...	361,218	...
Less items debited to Profit and Loss account	64,766	...	53,189	...
Total net trading surplus	112,994	...	308,029	...
Interest earnings	306,435	...	306,789	...
Total amount available	419,429	...	614,818	...

The dividend has been increased from £300,000 to £400,000, and the increased dividend works out at 282 per cent. of the paid-up capital. The share capital is held by the Commercial Union, in whose accounts all the figures of the Ocean are incorporated.

State Assurance Co., Limited.—The State has been since 1924 a subsidiary of the Royal Exchange, but, unlike most subsidiary companies, the accounts are not incorporated in those of the parent company. The State transacts all classes of insurance business excepting life, but in this, too, it has an indirect interest by virtue of its control of the British Equitable, which transacts life and other business on its own account. Moreover, the accounts of the State include also all the transactions of its subsidiary the British Equitable. The premium income in all departments in 1928 was higher than in the previous year, and, on the whole, the results have worked out at much the same as in 1927. The details of the results of the last two years are set out below:—

	1927. Amount.	1927. Percentage of Premiums.	1928. Amount.	1928. Percentage of Premiums.
	£		£	
Fire	34,360	4·9	28,978	4·1
Accident and General	17,449	11·1	13,347	7·7
Marine	4,042	10·6	5,827	13·0
Life	...	...	6,217	...
Capital redemption	...	...	107	...
	55,851		54,476	
Less expenses, taxes, etc., debited to profit and loss account	24,287	...	27,673	...
Total net trading surplus	31,564	...	26,803	...
Add net interest earnings	36,346	...	38,789	...
Total amount available for dividends	67,910	...	65,592	...

The dividend has been maintained for the seventh year in succession at 40 per cent. and the cost last year was £32,229—comfortably within the interest earnings. The accounts of the British Equitable, which are separately issued, show an increased life business in the life department, and an advance in the fund from £1,651,000 to £1,663,000. The quinquennial valuation was made as at December 31, 1928, and the contribution in the profit and loss account of the State represents the shareholders' portion of the resulting surplus. No dividend has again been paid by the British Equitable. The last year in which the British Equitable paid a dividend was 1923.

London and Provincial Marine and General Insurance Co., Limited.—This company is a subsidiary of the Yorkshire, and is the means by which the parent company transacts marine insurance. The accounts of the London and Provincial are all incorporated with those of the Yorkshire. The marine department, last year, produced an increased profit of £40,000, compared with £30,000 in 1927. In addition to the marine business there is a fire and accident account with a premuim income last year of £148,000, and this account yielded a profit of £4,881 compared with £4,165. Combining these figures, and allowing for items debited to profit and loss account, the total net trading surplus of the year worked out at £38,457 for 1928, compared with £28,970 for 1927. The dividend is maintained at 20 per cent., free of tax, and costs £20,000. Since interest earnings amount to close upon £50,000, it would appear that the profits have been very conservatively dealt with.

National Guarantee and Suretyship Association.—The control of this company, which has its headquarters in Edinburgh, is held by the Northern. The company confines itself to the transaction of Fidelity Guarantee insurance, and in this comparatively restricted field has been eminently successful. The trading results of the past three years are set out below: —

	1926. Amount.	Percentage of Premiums.	1927. Amount.	Percentage of Premiums.	1928. Amount.	Percentage of Premiums.
	£		£		£	
Underwriting profit	6,983	14·5	11,301	21·3	15,087	24·6
Less items debited to profit and loss account.....	1,553		1,473		1,248	
Total net trading surplus ...	5,430		9,828		13,839	
Net interest earnings.....	7,458		7,938		8,752	
Total amount available for dividends.....	12,888		17,766		22,591	

In each of the years 1926 and 1927 a dividend was paid at the rate of 17½ per cent., and the cost was £7,000. For 1928 the dividend has been raised to £9,000, and in addition the paid-up capital has been doubled by a transfer from general reserve. The paid-up capital now amounts to £100,000 in 25,000 shares of £20 each, with £4 paid up. There still remains a general reserve of £50,000, in addition to which there is a profit and loss credit balance of £21,632, together with appreciation on securities not brought into account of £20,237.

Oversea Correspondence.

LEAGUE OF NATIONS.—DISARMAMENT DISCUSSIONS—MR GIBSON'S SPEECH—A NEW HOPE.

(FROM A LEAGUE CORRESPONDENT.)

GENEVA, April 23.

THE intervention of the delegate of the United States Government, Mr Hugh Gibson, in the Preparatory Disarmament Commission, has changed the whole complexion of the meeting. After a week of arid discussion, it has opened out a new vista of possibilities in the way of naval settlement, and, as it is generally accepted that the whole disarmament problem depends primarily upon agreement between the great naval powers, it is felt to be a new impetus to the work.

What chiefly marks this new American initiative—Mr Gibson declared that the present deadlock could be broken only by the decision of the powers possessing the greatest armaments to initiate measures of reduction—is its flexibility, its insistence upon reduction as opposed to mere limitation, and its definite summons to the states of the world to be honest about the Kellogg Pact. What the American attitude amounts to is this: Parity between Great Britain and the United States has been accepted. On the basis of the relative status of existing treaties, that is to say, on the basis of parity with Great Britain and the maintenance of the Washington Conference ratios, the United States is willing to agree to any reduction, "however drastic," of naval tonnage which leaves no type of war vessel unrestricted. As to methods, the United States is prepared to give consideration to equivalent naval values, which take account of other factors than displacement tonnage alone—factors such as age, unit displacement, and calibre of guns—and it has given careful consideration to various methods of such comparison which it is ready and prepared to discuss whenever the issue comes before the Commission. The Government is disposed to give full consideration to any supplementary methods of limitation, and to accept as a basis of discussion the French proposal brought forward at a previous meeting of the Commission, attempting to combine total tonnage proposals with the method of tonnage by categories. Under this system total tonnage was assigned to each nation and this total divided among categories of ships, certain modifications being suggested so as to provide that the tonnage allocated to any given category might be increased by a certain percentage to be agreed upon, such increase to be transferred from any other category.

Mr Gibson made it plain that he was speaking with the full authority of Mr Hoover, and this made his strong appeal for action all the more noteworthy. Mr Hoover, he said, felt that the pact for the renunciation of war opened an unprecedented opportunity for advancing the cause of disarmament, an opportunity which admits of no postponement. Any approach to the problem on purely technical grounds was bound to be inconclusive. The technical justification of armaments was based upon past wars and upon the anticipation of future wars. So long as the approach to the problem was based on old fears and old suspicions, there was little hope of disarmament. The lessons of the old strategies must be unlearned. "If we are honest, if our solemn promise in the pact means anything, there is no justification for the continuation of a war-taxed peace. Great armaments are but the relic of another age."

Another emphatic statement was that agreement on the basis of existing world armaments (or at higher levels) could never be justified before enlightened public opinion as a positive achievement, and Mr Gibson therefore advised the Commission to take the bold course of scrapping the term "limitation" and concentrating upon general reduction. As regards the relations of maritime powers among themselves, there was no need for the building and maintenance of large naval establishments, for even if the danger of war were admitted it could be guarded against just as well by the maintenance of relative strength at low levels as at high levels, and apart from the signatories of the Washington Treaty, there was no conceivable combination of strength which need give the principal naval powers concern. Naval needs were relative (this was Mr Gibson's excuse for the American cruiser programme) and general reduction was based only on that theory. The only alternative was the thesis of absolute naval needs, which would mean that all thought of reduction was abandoned. What was really wanted was a commonsense agreement based on the idea that they were going to be friends and settle their problems by peaceful means.

Lord Cushendun, while obviously unable to commit himself to any specific proposals in the American declaration, said that it was so important and had such a close bearing on the whole naval question that it must profoundly affect the Commission's work. So far as any general principle was concerned, there was nothing that Mr Gibson had said with which he could not express his agreement. He welcomed, particularly, the allusion to the Kellogg Pact, the importance of which, he considered, had not even yet been fully realised. Great Britain also desired not only limitation but reduction applied to all classes of vessels. A departure from this principle in the provisional agreement with France was due to the fact that in the interests of agreement they had been willing to forego some part of their ideal in order to get agreement on others. They had never concealed the fact, however, that they desired, if they could get agreement upon it, limitation and reduction as applied to all classes of vessels.

Having referred to previous British proposals as showing a willingness to carry further the principle of reduction which they were anxious to promote to the fullest possible extent, Lord Cushendun singled out as specially important Mr Gibson's reference to equivalent naval values. He entirely agreed that it was along these lines that they should investigate the problem, and the British Government had to some extent been doing so; but it was an extremely technical matter which could only be examined with expert advice. Any suggestion from the United States Government, any information as to their course of study of the subject, would be examined in the most friendly spirit. He welcomed the friendly, conciliatory and hopeful spirit of Mr Gibson's declaration, which the British Government cordially reciprocated.

The Japanese, French and Italian delegates committed themselves to little more than agreeable generalities. Mr Litvinoff expressed himself as particularly gratified that the United States had accepted reduction (instead of limitation), and proportional reduction, two of the principles which had been expounded by himself. The Canadian delegate spoke enthusiastically of the declaration as a splendid augury for the future, and the President took the same line.

This concluded the discussion started by Mr Gibson's declaration, and what the next stage will be is uncertain. There seems to be some idea that the best thing would be to appoint a naval sub-committee, as there will have to be much more precise exchanges before the naval powers can get down to business. It is suggested that if a naval sub-committee were appointed it might get together and another meeting be held some time after the English elections have taken place, but clearly the renewal of contacts at the Commission has resulted in a definite reopening of the naval problem in hopeful conditions. One essential question raised is what will be the attitude of the United States if the Kellogg Pact should be violated. Neither Mr Gibson nor anyone else mentioned this point in the Commission, and the world still has to learn whether the United States has any contribution to make which will ease Great Britain's situation in respect to its obligations under the League Covenant in case of violation of the Pact—a factor which cannot be excluded from a consideration of relative needs.

UNITED STATES.—CREDIT—BUILDING—CAPITAL ISSUES—FEDERAL RESERVE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 12.

CREDIT uncertainties and high interest rates continue to becloud the outlook for financial markets, if not for trade, but Wall Street's nerves are much calmer. The share market has settled down to a substantial decline in activity, with liquidation by margin-holders exceeding their new buying. Important financial interests feel that the market is offering no bargains as yet, but it is agreed that, once definite signs are descried of an easing up in the Federal Reserve Board's credit policy, a renewal of speculation for the rise is likely to set in, provided, of course, that business has not, in the meantime, fallen off considerably.

Because of the important part it has played in the post-war prosperity, the building industry is being closely watched. Since late last year building has experienced more than the seasonal decline. Contracts let for new building and engineering work during March show a falling off, as compared with the same month of last year, of about 18 per cent., although a gain of 34 per cent. over February is reported. For the first quarter of the year the value of contracts let was 32 per cent. below the first three months of 1928. That is, of course, a substantial decline, and it is having an effect on earnings of companies closely allied with the building industry. Actual work now going on in the building trades is, however, heavy enough to keep available labour employed, since contracts let last year broke all records.

Now that the share market has quieted down, the mantle of worry is falling on the shoulders of investment bankers. New security flotations, until a few weeks ago, were large in spite of rising interest rates. Excluding refunding issues, domestic security issues in February were about 60 per cent. larger than a year ago, and they were about equal to those of the preceding month. New issues last month were slightly above the February total, but diminished rapidly toward the end of the month. So far in April offerings have been almost non-existent. Some of the largest houses have business in sight, including some good-sized pieces of foreign financing, but they are hesitating to test out the market.

High interest rates, however, are by no means the chief hindrance to new security flotations, although they are a drawback, and many new bond proposals are being held back in the hope of more favourable terms. Bond dealers all report a good demand by investors for bonds, but shelves are fairly well supplied with unsold securities. They can be moved slowly without price concessions, but the dealers naturally dislike to handle new issues while they have old bonds to dispose of. Moreover, the present market would mean more attractive terms for new bonds than those on which old bonds were sold, so that the dealers would be forced to cut prices on their bond "inventory." On top of that, most dealers now have all their capital tied up in unsold bonds, and the banks, particularly in the interior, are very loath to lend fresh money on securities. The dealers' hands, therefore, are pretty well tied, and, while they are offering to take such amounts of new bonds as they can readily sell, they are refusing to sign the usual syndicate agreements to subscribe to a stated total of bonds. The result is that, in spite of willingness of investors to take attractively priced new issues, offering houses have all but shut down. This inability of large corporations to float new bond issues will, it is feared, slow down the business pace later on. The trouble lies in the unwillingness of the banks to lend rather than in the level of interest rates. Meantime, the uncertainties in the share market have sharply cut down new investment trust and other share offerings, which will, of course, help to keep down brokers' loans without having much effect on business generally.

There is a somewhat more optimistic feeling in good financial quarters that the unsatisfactory situation in the money market and in Federal Reserve Bank policy will improve as time goes on. It is now plain that the majority at least of the members of the Federal Reserve Board are opposed to higher discount rates, and no change is likely to be made in the near future. Should the share market resume its rise on a large scale, action is probable; otherwise the chances favour maintenance of the 5 per cent. rate, although it is well below the open market.

Brokers' loans were further reduced this week, and now are $266,000,000 below the peak of middle March. Reduction for account of the banks has amounted to nearly twice that amount, but the difference has been made good by corporations and others over which the Reserve Banks have no control. In short, credit is being squeezed out of the security market steadily and at a rate which is bringing no recurrence of the panicky conditions reigning at the close of last month. However, the results are laid to the willingness of the member banks to reduce their loans, and, while there is a good deal of sympathy with Federal Reserve objects, there is almost none with the methods used to attain them.

The position of the Reserve Banks also has strengthened. For the current week the system reports an increase in gold reserves, a further substantial decline in member bank borrowing and in bills held. Total Reserve credit outstanding is down sharply, and is only $66,000,000 higher than a year ago, but discounts are still 50 per cent. larger. Steady decrease in Reserve credit in

use, the lack of gold imports and strong commercial demand for bank credit are keeping the money market tight. In addition, rates advanced this week on preparations for mid-month settlements, which involve interest payments on Government debt of $150,000,000, and unusually heavy corporation dividend and interest disbursements. State income-tax collections on April 15th also are being anticipated. No changes have taken place in bill rates, but time money is firm at 9 per cent. for all dates, and the call rate ran up to 10 per cent. A recurrence of 20 per cent. money will be avoided, it is believed, but no real relief from high rates is yet in sight.

The shining light in the industrial picture is the steel industry. Steel output last month and for the first quarter constituted a record, and this was accomplished in the face of firmer prices. At the beginning of April the United States Steel Corporation, which has operated at virtual capacity for several weeks, reported an increase in unfilled orders of 266,000 tons. The very swiftness of the pace is raising doubts as to whether it can be maintained much longer, but another busy three months is assured. Copper prices have weakened, but producers still seem to be in a strong position. The oil trade was somewhat taken aback by failure to secure the approval of Washington for its restriction plans, but nature is helping it out.

FRANCE.—REPARATIONS—NATIONAL INSURANCE SCHEME.

(FROM OUR CORRESPONDENT.)

PARIS, April 24.

In view of the latest news of the Reparation's negotiations, French opinion has already adopted M Poincaré's suggestion at Bar-le-Duc to the effect that all that remains for the Allies is to fall back upon the provisions of the Dawes Plan as a solution of the situation brought about by Germany's default. Why Dr Schacht should have ventured to put forward an offer that was foredoomed to be unacceptable is puzzling all sections of opinion here. The French, who have a 52 per cent. interest in whatever payments may be made, have made it clear for a long time that they will refuse to accept any arrangement that will not furnish them with sufficient money to pay their debts to their Allies and to America, and also leave them a substantial balance to compensate, in part at least, for the enormous sums they have had to devote to the devastated regions. That France's Allies are completely in agreement with her on this point is eloquently confirmed by the very nature of the proposal unanimously put forward by the Allied experts.

It is felt here, in view of Dr Schacht's attitude since his return from Berlin, that Germany had based all her hopes, so far as securing a substantial reduction of her Reparation payments, on being able to divide the Allied Governments, as she has done on more than one previous occasion. One factor on which Dr Schacht seems to have relied was British dislike of the system of Reparation payments in kind, which has the double disadvantage, however useful it has proved as a *pis aller*, of being at the same time prejudicial to British industrial interests and of great benefit to German foreign trade.

The insufficiency of the German offer becomes obvious when it is compared with that of the Allied experts, coupled with an analysis of the composition of the latter. Reliably exact figures are now available as to both offers. These show that on the basis of the Allied demand the actual present value of the whole German Reparation debt would work out, for its commercial mobilisation, at 40,000,000,000 gold marks. This total was composed as follows: 24,000,000,000 gold marks for the complete liquidation of the inter-Allied debts; 1,000,000,000 gold marks to meet priority charges under the Dawes Plan (service of the 1924 loan to Germany, cost of the control commission, restitutions, &c.); 1,500,000,000 gold marks to liquidate the cost of military occupation; 13,500,000,000 gold marks to liquidate the outstanding claims of the whole of the Allies for reconstruction, payment for depreciated marks, advances, and other war losses.

The offer made by Dr Schacht provided for the payment of 37 annuities of 1,650,000,000 gold marks each. The actual present value of the German Reparation debt, taken at this figure, would be 26,000,000,000 gold marks, which would be almost entirely swallowed up in liquidating the inter-Allied debts alone, and would not leave a farthing to be used to meet Allied damages and war losses. Dr Schacht, who astonished his colleagues by his vehemence, not only insisted that (in spite of Mr Parker Gilbert's historic report to the contrary), Germany's present economic situation makes it impossible for her to pay more, but he emphatically asserted that Germany would not give up, "for the smallest fraction of this sum," the operation of the transfer clause created to protect her payments under the Dawes Plan. He hinted that if the Dantzig corridor were abolished and Germany's colonies restored to her, it might be possible to increase the offer, but otherwise the sum offered must be regarded as impossible of modification. The Allied figure, on the other hand, is notably lower than any hitherto put forward by Germany's creditors. The proposal which has just been rejected by Dr Schacht would give this country only about 7,000,000,000 gold marks, or less than Germany nine years ago admitted was due to France; while Germany's own proposal would leave nothing for recoupment of war losses after the cost of mobilising the acknowledged debt had been provided for.

Another stage towards the application of a national scheme of insurance against sickness, premature disablement, old age and death has been reached by the publication of the regulations under which the system will operate. The law embodying the principles of the scheme was adopted at the beginning of April, 1928, with the stipulation that regulations should be drawn up forthwith, and that the law should come into effect ten months after the promulgation of these rules. This will bring the scheme into application early next February. The law applies to all wage earners (with the exception of miners and railway workers, who are provided for under separate schemes) whose total incomes do not exceed certain fixed scales. Adherence is obligatory if, in cases where there is no dependent child under 16, the total earnings do not exceed frs. 15,000 a year, or frs. 18,000 in cases where there is one dependent child, this maximum rising by frs. 2,000 in respect of each child after the first. In declaring the total earnings, account must be taken of all remuneration received from the employer in both cash and kind (except when in the form of *allocations familiales*), including tips, when these (as is often the case in France) constitute the whole or part of the remuneration received. This rule brings under the national scheme a large class of workers, such as concierges, house servants, waiters and others, who do not exactly approximate to the normal wage earner. Employer and worker will each contribute at the rate of 5 per cent. of the wages and/or other remuneration received, the worker's 5 per cent. being deducted from his pay and represented by insurance stamps. The State will also contribute, but this will mean no addition to the Budget, as it will be compensated by saving in the cost of some 1,300,000 existing old-age pensioners, who will in future be absorbed in the national insurance scheme. These will benefit, as from May 1st next, by an increase in their pensions from frs. 200 to frs. 300 a month. Under the new scheme a workman aged 44, who earns, say, frs. 45 a day, and who has a wife (not earning) and two dependent children, will have the right to medical attention, medicines and hospital accommodation free, and will receive a trifle over frs. 25 a day during illness. His wife will receive practically free medical attendance at childbirth, and a nursing allowance of frs. 600 at the birth of each child. The cost of medical attendance for the rest of the family will be merely nominal. At 60 the workman will be entitled to an old-age pension of frs. 2,900 a year. There are signs of an incipient revolt by the doctors, similar to that which attended the advent of the British national insurance scheme, and there is some nervousness as to the effect of the new scheme on prime cost charges, but there is every reason to expect that these objections will disappear before the law actually comes into operation.

GERMANY.—REPARATIONS—EXCHANGE SITUATION—FINANCE—INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, April 23.

Owing to the attitude of the Press, which reported prematurely that the Paris Conference had practically dissolved, extreme nervousness prevailed late last week. But in authoritative and initiated quarters it was not admitted that the crisis foreshadowed a breakdown. On German credit and business a breakdown would react disastrously, and therefore anything like an ultimatum policy on Germany's side would have been injudicious. At the present juncture a bad settlement for Germany would be better than no settlement; all the more so because the Dawes Plan, which is in general less favourable to her than the Allies' proposals, would remain in force. Owing to the undue optimism of German public expectations, it has all along been clear that a settlement satisfactory to public opinion here is out of the question. But competent persons surmised that the resources and ingenuities of the Paris Conference were sufficient to prevent a breakdown; and though it is dangerous to predict, that is still the belief. At the worst either a temporary settlement, or an ostensibly permanent settlement, with provisions for adaptation to future developments—a settlement which would therefore hold out prospects of alleviation to the more disappointed of the two parties—could be devised. This, indeed, points to a very complicated and much qualified plan; but what has been so far divulged makes it clear that any new plan will be more complicated and elaborate than that of the Dawes Committee, and will not follow the lines laid down by the Agent-General for Reparations in his report of December, 1927, which practically recommended the conversion of Reparations into an ordinary international public debt. Except with the Right parties, which in principle repudiate Reparations and desire a breakdown, Dr Schacht has had an unfriendly public. The simultaneous submission of two alternative schemes is considered to have been unwise tactics, and the political initiative is roundly condemned. Although the Cabinet issued a declaration that Dr Schacht's memorandum did not even contain suggestions of political character, the text published to-day shows plainly that one of the alternative schemes was made conditional upon a revision of the Peace Treaty. An extension of the German "raw-materials basis" on the lines suggested by Dr Schacht would not materially improve the foreign trade or foreign payments balance. The picture of German business and currency prospects in the second paragraph of the memorandum is not objective, and will not bear examination.

The money market and exchange situation is unsatisfactory. The exchange position, as it is irresponsibly interpreted and over-emphasised here, is calculated to injure Germany's credit. Already there are signs of this in what Germans call "Angstkäufe" of foreign currencies, that is, purchases not needed for commercial purposes. The dollar last week rose to a new high point, 4.2175. In the second week of April the Reichsbank lost 150 million marks gold, 10 million marks from its legal-cover exchange reserve, and some 40 million marks of the exchange bills booked under discounts. In 1928 the gold and exchange holdings increased by 730 million marks; in less than four months of this year they declined by 745 million marks. After a brief slackening the demand for exchange has again set in. There is an increasing voluntary export of funds to America, with the aim of profiting from the high money rates there. Though this is lawful and legitimate, it is not consistent with the theory that the Reparation transfers are largely responsible for the drain on the reserves. But as everything, plainly with propaganda aim, is being connected with the Conference, it is now declared that the Reichsbank's decision on the discount rate question will depend upon the result in Paris; a break-off must inevitably bring a rate advance. It is suggested by malicious persons that the exchange crisis, and the Budget crisis, which might just as well have occurred in 1928 as in 1929 (and, indeed, would have occurred if the Government, as it ought to have done, had chosen to increase taxation for partial extinction of the long carried-over extraordinary Budget liabilities) synchronise so neatly with the Conference that Providence must have intervened in Germany's Reparation interest.

The money market is still influenced by expectations of an advance in the Bank rate*. Time money was borrowed in advance of the need. Day loans were plentiful after repayment of the 150 million marks credit to the Republic. To-day's day loan rate was 4-6½, month loans 7½-8½, private discount 6½ per cent.

The financial year ending March 31st brought a considerable excess of taxation revenue above the estimate, but for the Republic itself there is a small deficit. The States and municipalities receive 222.8 million marks more than estimated out of the excess yields of the income, corporation income, and motor-car taxes, and 25.4 million marks less than estimated out of the sales, land-purchase and betting taxes. Altogether the States and municipalities received 197.4 million marks more than was estimated. As the total tax yield exceeded the estimate by 160.7 million marks, the share of taxation available for Federal purposes is 36.7 million marks below the estimated. Following are the chief figures. In the preceding financial year taxation yielded 8,490,394,735 marks, as against an estimate of 8,460,500,000 marks:—

Financial Year 1928–29.	Received. Marks.	Estimated. Marks.
Totals	9,022,745,136	8,862,000,000
Thereof direct	6,145,075,731	6,060,000,000
Income	3,108,176,490	2,900,000,000
Corporation	608,340,367	550,000,000
Property	450,677,527	520,000,000
Inheritance	73,531,591	100,000,000
Turnover	999,766,121	1,050,000,000
Motor-car	181,337,998	160,000,000
Railway traffic	354,080,025	340,000,000
Thereof indirect	2,877,554,607	2,802,000,000
Therein controlled revenues:		
Customs	1,104,554,572	1,200,000,000
Tobacco	870,515,953	780,000,000
Sugar	158,235,049	140,000,000
Beer	396,876,076	370,000,000
Spirits	296,967,497	270,000,000

Although there is no excess over the estimate available for the Reich, the result must be considered satisfactory.

The wholesale prices index has again sharply fallen—to 136.9, a drop of nearly five points since July, 1928. Unemployed (including crisis-relief recipients) on March 31st numbered 2,077,000. The Trade Unions report 16.8 per cent. of fully unemployed members at the end of March, as against 22.3 per cent. a month before. The Pig-Iron Syndicate is selling for May delivery at unchanged prices. The Steel Syndicate's home prices are also unchanged. It is reported that the International Steel Syndicate has made new proposals for Great Britain's accession. The home iron and steel market has slightly improved; export is fairly firm (with, however, lower prices for bars); and there have been large sales of ships' plates to Japan and of bars and sheets to Russia. Ingot-steel production in March was 1,314,373 metric tons, against 1,422,050 tons in March, 1928; production of rolling-mills 904,257 tons, against 1,039,088 tons. The Government has renewed its subsidy, at 80 pf. per ton, to the Siegen, Lahn and Dill iron-ore mining concerns. There are new reports of impending motor-car manufacturing trusts, aimed against American imports and American competition within Germany. The most likely trust, however, would be in the commercial cars branch. The private car concerns are mostly in financial difficulties.

The influence of the decline in foreign borrowing in improving the trade balance is very marked, and, with a Reparations settlement pending, it ought to be emphasised, in view of the prevailing confusion between what may be called the natural trade balance of Germany and the recent abnormally passive balances, which are a mere result of the import of borrowed capital. The distinction was already made clear by the active

* The rate was raised from 6½ to 7½ per cent. on April 25th.—ED., *Econ.*

balance attained in 1926, when there was no (net) import of capital. Figures are:—

	March.	February.	Jan.-March.
	Marks—000's omitted.		
Imports:			
Livestock	8,221	8,842	29,143
Foodstuffs	262,879	279,574	946,691
Raw and half-manufactured materials	562,955	546,051	1,797,157
Manufactured goods	187,875	182,386	584,896
Merchandise	1,021,930	1,016,853	3,357,887
Gold and silver	9,519	7,183	29,593
Totals	1,031,449	1,024,036	3,387,480
Exports:			
Livestock	1,389	1,380	4,066
Foodstuffs	49,260	48,373	163,025
Raw and half-manufactured materials	223,417	210,803	681,572
Manufactured goods	709,458	712,765	2,212,908
Merchandise	983,524	973,321	3,061,571
Thereof Reparations deliveries	52,543	52,264	173,692
Gold and silver	2,492	3,990	9,552
Totals	986,016	977,311	3,071,123

The import surplus in March was the smallest since October, and was less than half that of March, 1928.

ITALY.—BANK OF ITALY'S REPORT—THE ALTERNATIVE TO OPEN-MARKET POLICY.

(FROM OUR CORRESPONDENT.)

TURIN, April 9.

THE report read by Signor Stringher to the annual shareholders' meeting of the Bank of Italy has fully met the expectations of financial circles. The yearly averages of discounts, advances and day-to-day loans (through the clearing-houses) made by the Bank of Italy (in millions of lire) are as follows:—

	Current Operations.	Old frozen Credits.	General Total.
1919	1,730·7	...	1,730·7
1920	4,747·0	...	4,747·0
1921	5,851·7	...	5,851·7
1922	7,483·7	...	7,483·7
1923	7,417·0	...	7,417·0
1924	5,573·1	3,049·4	8,622·6
1925	7,402·5	2,854·3	10,256·8
1926	8,546·9	2,614·1	11,161·0
1927	6,641·2	2 484·9	9 126·1
1928	4,468·5	1,256·7	5,725·2

The item "frozen credits" fortunately is rapidly approaching extinction, and it is anticipated that the total will fall well under the one milliard limit before June 30, 1929. The increase in current operations until 1926 and the decrease in the last two years throw light on the old and the new monetary policy. The deflation in 1927 and the stabilisation in 1928 were accomplished through restriction of credit. Trade asked for less money as prices were decreasing and less money was needed. But the low 1928 level indicates also that the Bank of Italy did not come to the rescue of weak concerns. Some among the lesser banks failed in recent months, and there is some talk of difficulties in a big Trieste cotton textile firm and its associates; but the balance sheet of the Bank of Italy bears no traces of aid to those old inflationist remnants. With "old" frozen credits disappearing and the current operations at their lowest ebb, the situation of the Bank of Italy appears to be very strong indeed.

The main currents of change during 1928 may be traced as follows (in millions of lire):—

Assets.	December 31.	
	1927.	1928.
Discounts, advances, and day-to-day loans	5,520·1	5,655·9
Old frozen credits	1,433·8	1,160·0
Gold reserve	4,547·1	5,051·9
Gold securities reserve	7,558·8	6,018·9
	19,059·8	17,886·7
Liabilities.		
Notes	17,992·2	17,295·4
Other sight and current debts	4,041·6	3,426·1
	22,033·8	20,721·5

As I have quoted only the principal items from both sides of the balance sheets, totals do not tally exactly. But the trend is illuminating. Notes and other sight and current debts of the issue bank decreased by 1,312.8 million lire, because notes no longer have to be kept in circulation for keeping up old frozen credits. As fast as old losses are liquidated, notes go back to the Bank. Secondly, notes and other sight debts were reduced because the public (or on their behalf ordinary banks, which are the most important customers of the Bank of issue) tendered notes or drew on their current accounts against gold securities. The main change of the past year was, indeed, the increase by 504.8 millions of coin or bar gold, and the decrease of 1,539.9 millions of other gold securities. The immediate cause of the net decrease of the gold reserve was, as Governor Stringher announced, the necessity of making up the deficit in our international balance of payment. Gold securities are sent out because notes were superabundant after the monetary reform of December, 1927. Italian experience is perhaps one of the most interesting recent verifications of the Ricardian theory of the international movements of precious metals (gold securities are claims on cash gold). The steps were as follows:—

1. Before monetary reform, internal prices were adequate at a level of, say, 120 lire to £1 sterling
2. Notes and other sight debts were adequate in amount to the level of prices.
3. After stabilisation at the level of 92.7, gold internal prices are in 1928 still higher than foreign gold prices.
4. Therefore imports increased (by 1,666 million lire) and exports decreased (by 1,205 million lire).
5. A deficit arises which must somehow be paid. Customers of the Bank of Italy (either directly or through their banks) tender notes or draw on current accounts in payment for gold securities.
6. Gold securities of the Bank of Italy decrease, but notes and cheque circulation decrease also.
7. So far we have dealt with past history. Coming to prophecy, we may suppose that the decrease of note and cheque circulation, which, by the way, is continuing (at March 10, 1929, the total was further decreased to 19,804 million lire), reduced still further internal paper and gold prices. When the equilibrium between internal and foreign prices is finally restored, imports will again decrease and exports increase, and the balance of international payments automatically be adjusted. The monetary manœuvre will then be perfect.

As far as we can see, we are bound to compliment Signor Stringher on his admirable silent handling of the process. Nobody cares for the cries of those last remnants of inflationism, who would have preferred to keep the notes for internal use and borrow the gold securities toward meeting foreign engagements. Signor Stringher, in refusing these absurd claims, has deserved well of his country.

Coming to less momentous matters, the report is interesting also because it deals for the first time with the duties of supervision of other banks, which legislative Acts of September 7 and November 6, 1926, entrusted to the Bank of Italy, making it not only the supreme bank but also the legal guardian of other banks. New banks must now obtain the permission of the Bank of Italy before starting operations; similarly, no new branches of established banks can be opened without her leave. Inspectors may be sent; abnormal increases of individual credits to single customers may be vetoed; balance sheets must be submitted every two months; a due proportion between capital and deposits must be kept, and so on. During 1927, leaving out of account some small rural banks, the number of savings banks diminished by 35; of joint-stock banks and private banks by 43. The concentration and reduction movement is bound to continue. At the date of the report, Signor Stringher could predict that 491 banking concerns out of a total of 4,197 will disappear before long.

It is suggestive of the marked differences between our own experience and that of the United States, that in the whole 121 pages of the report, not a word can be found on open-market policy. The Bank of Italy did indeed, possess 1,080.8 million lire of

public securities and a further 186.8 millions were allocated to miscellaneous funds. But the securities are held as investments of reserves or of pensions funds; not, as is the current policy in England and America, as a means of intervening in the money market, depleting it of funds by sales, or refurnishing it by purchase of securities. Perhaps the only Italian approximation to open-market policy is the variation of the rate of interest granted on the deposits of the ordinary banks. In autumn, 1926, the Bank of Italy, being desirous of restricting credit in the open market, granted 5 per cent. interest on the ordinary bank deposits, thus absorbing money which could have been utilised in Stock Exchange and other operations. Deposits which in 1927 averaged 2,147.9 million lire went thus to a maximum of 3,688.2 at February 20, 1928. Such absorption of money from the market being no more necessary, the rate of interest was then reduced to 4.50 per cent. at March 6, 1928, to 4 per cent. at March 26th, to 3.5 per cent. at June 25th, to 3 per cent. at August 6th, to 2.75 per cent. at September 1st, and to 2.50 per cent. at March 11, 1929. Deposits decreased gradually to 1,525.2 million lire at December 31, 1928, and at March 10, 1929, were 1,703.9 million lire. Creating a safe remunerative harbour for superabundant money, and inversely expelling it in times of scarcity, seems to be the new policy evolved recently in Italy; a policy which may well deserve a close study.

BELGIUM.—PRICES AND WAGES—STOCK EXCHANGE—FINANCIAL OPERATIONS.

(FROM OUR CORRESPONDENT.)

LOUVAIN, April 21.

WHOLESALE prices have been stationary for the last two years (gold index 1913=100) at about 125; retail prices have gradually increased, and are exactly level with them. This equality, however, is only apparent. In the first place, both index numbers do not refer to the same goods. For wholesale prices only industrial raw materials or products of the heavy industries are included; they adjusted themselves quickly to the level of the monetary stabilisation. Retail prices concern vegetable foods, clothes and cost of lighting and fuel (not rent). Besides, the first index number is calculated by means of the geometric average, the second by means of the arithmetic average. The index number of wholesale prices, if calculated according to this method, would be about 131. Nevertheless, the index number of wholesale prices is lower than those of other nations. Retail prices have risen on an average 5 per cent. in the last seven months.

The cost of living remains very low, so that, although wages expressed in gold are low, expressed in purchasing power they are fairly high. In this matter it is necessary to warn people against inaccurate statistics which have been published. Real wages in Belgium, though not so high as in England, are as substantial as those paid in the big countries of the Continent.

While home and export trade is prosperous and industry really active, the Stock Exchange remains in a state of depression. The index number of shares, calculated by the National Bank of Belgium, was 108 on January 2nd of this year; it reached 112 on April 2nd (on the basis of January, 1928=100). Coal mine shares, favoured by the very severe weather and the recovery of the coal market, rose from 154 to 171. Colonials, however, remained insensible of the advance in copper, which is, nevertheless, of great importance for all Congo shares; they appear to have been influenced by the April fall.

The total figure of shares quoted in Brussels amounted to 89 thousand millions of francs (£510,000,000) in January, 1928; in January, 1929, it was 118 thousand millions (£675,000,000). This rise was principally caused by banks, which increased from 11 to 20 thousand millions of francs; shares of the Société Générale de Belgique were greatly responsible for the progress. This bank will shortly augment its capital; a first general meeting was convened for this purpose on April 19th, but as the number of shares deposited was insufficient, the meeting has been put off till May 10th. The new issue referred to will bring the subscribed capital from 400 million to 1,000 million of francs, and the reserve fund from 735 to 1,045 million. The capital invested in this business will thus exceed 2,000 million of francs (equal to £11¼ million), while the Stock Exchange value reaches at present 10½ thousand million of francs (£60 million).

This new issue does not suggest a diminution of issues in Belgium, but a reduction will be necessary in order to improve the situation of the Stock Exchange. As regards the first two months of this year, notice was given of new shares amounting to 3,500 million of francs.

On April 18th the issue took place of the Ford Company of Belgium, whose joint stock capital has been raised from 100,000 to 100 million of francs. In consequence 60,000 shares were issued at 540 francs, whereof 20,000 were preferentially offered on application to agents, employees, etc., of the company; Belgian subscribers were also preferred. The subscription enjoyed full success in spite of a dull market; total investments of the company in Belgium amount to 45 million of francs, and more than 5,500 cars, model A, have already been constructed here, at Antwerp.

CZECHOSLOVAKIA.—RAILWAYS—EMPLOYMENT—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PRAGUE, April 14.

THE economic situation of Czechoslovakia was thrown out of balance by the abnormally severe winter, which is very unusual in this latitude; and as it was primarily transport that suffered, the immediate effects can be seen in the revenue of the State railways on the one hand and in the statistics of foreign trade on the other. The magnitude of the frost-calamity of last February can best be judged from a comparison of the number of railway trucks laden for goods transport in the first three months of this and of the previous year:—

	1928.	1929.
January	458,491	451,204
February	437,029	374,135
March	515,428	509,095

The difference between February, 1928, and 1929 is 63,000 wagons, which makes it the smallest February figure for the transport of goods since 1924, and even this it was possible to attain only by a most drastic reduction of passenger train service. The resulting decrease in the railway revenue is made more serious by a heavy increase of expenditure for the repair of locomotives and rolling stock damaged by the frost. The State treasury participates in this loss by a corresponding decrease of its revenue from the transport tax, of which 25 per cent. is kept by the railways for depreciation and development and 75 per cent. go to the State. The total effect upon State finance will be seen only in the autumn, when the budget for 1930 comes to be handed in. But even now serious voices can be heard insisting upon the necessity of thorough overhauling of the State railways and demanding that a larger quota of the transport tax be left for this purpose. The treasury on the other hand, refutes this claim by a reference to the necessity of maintaining budget equilibrium, and the railways after the February calamity became thus one of the central economic problems in Czechoslovakia.

The statistics quoted above show, of course, that transport in March returned to the level of March, 1928, which was a very good month. There are also other signs which seem to show that the economic life of Czechoslovakia is quickly resuming the activity it displayed before February. Although industry suffered greatly from lack of coal and curtailment of transport, it maintained the general good level of employment. The number of unemployed on the first day of each of the last three months is shown in the table:—

	1928.	1929.
January	45,571	39,400
February	57,148	53,247
March	55,184	55,224

The development of the labour market is seen to have been different in the two years under comparison, but on March 1st of both years the statistics show very nearly the same number of unemployed. For a country of 14 million people the figure is very satisfactory, and when we

notice that the February calamity threw only 2,000 people out of employment, we must admit that the outlook into the future is no less so.

The difficulties caused by the unusually low temperatures in February had yet another unfavourable result. The curtailment and disorganisation of all means of transport added to the difficulties with which the foreign trade of Czechoslovakia has to deal in foreign markets. This is best seen from the statistics of exports, the value of which (in thousands of Czechoslovak crowns) in the first three months of this and last year was as follows:—

	1928.	1929.
January	1,551,414	1,407,057
February	1,484,145	1,174,802
March	1,871,069	1,536,124
First quarter	4,906,628	4,117,983

The value of imports in the same period was the following:—

	1928.	1929.
January	1,315,565	1,692,180
February	1,491,725	1,234,776
March	1,785,658	1,641,419
First quarter	4,592,948	4,568,375

The value of imports in the first quarter, 1929, practically equals that of the corresponding period of 1928, while the value of exports diminished by almost 800 million Cz. crowns (about £5 million) with the result that, instead of last year's favourable balance of 314 millions, the balance of trade of the first quarter of this year is unfavourable by 471 million crowns. The fact naturally attracted some attention; an unfavourable balance of trade in some months of the year is not unusual, but this is the first time that a whole quarter shows a deficit. The situation, as it appears after a closer study of details, is, however, not so tragic as it would appear at first glance. In the first place, it is not rare for a single month to bring a surplus of 400 million, and it is very probable that the deficit will soon be made up. Secondly, it is important to notice that raw materials account for 2,395 million Kc. of the total imports, as against 2,269 million Kc. of last year. This is a good promise for the future, indicating, as it does, the prospect of a satisfactory employment of industry.

POLAND.—POLITICS—TRADE DEPRESSION—CROPS—FOREIGN CAPITAL—POLISH BANK.

(FROM OUR CORRESPONDENT.)

WARSAW, April 13.

POLAND is passing again through a very acute political crisis. Thirty-five days have elapsed since the Premier, Mr Bartel, tendered his resignation, and hitherto the attempts at forming a new Cabinet have been unsuccessful. This state of affairs is due to a process of disintegration which may be observed in the Government party. The lack of any definite programme is the weakest point of Marshal Pilsudski's *régime*. His great personal influence which for a time formed a point of concentration for a great group of politicians representing very heterogeneous economic interests—great landowners, peasants, manufacturers, workmen, etc.—was not sufficient for maintaining the necessary cohesion. The friction between two groups became very acute—one was represented by Mr Bartel, the other by a party of "colonels." Mr Bartel was for a moderate course, and tried to co-operate with the Parliament. The "colonels" party on the contrary is in favour of a decided anti-Parliamentary policy.

This internal discord of the Government has strengthened the position of the Sejm. The opposition has gained much during the last months in moral strength. The National Democratic Party and the Polish Socialist Party form a decided anti-Government front. The impeachment of the former Minister, Mr Czechowicz, before the State Tribunal for not having presented to the Diet the supplementary budget is a proof that the political centre of gravity has moved.

The opposition, however, is suffering from the same weakness which is undermining the strength of the Government. It is heterogeneous in composition, and it has no common constructive programme. The left and the right can easily form a coalition for opposing the Government; it will be very difficult for them to find a common platfom for forming a working majority. Events have shown that Marshal Pilsudski's attempt at solving the great political difficulties of Poland by the sword has failed. In its essential features the present crisis is not different from the situation before May, 1926. To-day, as then, it is impossible to form a Government backed by a strong majority with a common political programme, only a long and slow evolution will be able to create these necessary foundations of a sound Parliamentary *régime*.

The strengthening of the opposition is to a great extent due to the trade depression which has been making itself felt for several months. As long as the economic situation was good the Government could keep its opponents in check by laying emphasis on the great improvement which has taken place since the inauguration of the new regime. This, however, is not any more the case to-day. The number of unemployed is steadily increasing; it amounted to 94,100 in November, to 126,300 in December, to 160,800 in January, to 178,200 in February and it now exceeds 180,000. This increase is not of a merely seasonal character. The number of unemployed during the same period of last year amounted to 167,000.

The increase of protested bills is also a proof of the change for the worse. The number of protested bills in February amounted, according to a report of the Polish Bank, to 4.61 per cent. of the total; this is a record figure. Apparently the textile industry has the greatest difficulties in settling its engagements, for .54 per cent. of all protested bills belong to this branch. These difficulties are partly the consequence of the frost, which, for several weeks, has paralysed the economic activity of the country, but there are also deeper reasons. While the prices of agricultural products are lower than in 1927, those of manufactured articles have increased. The purchasing power of the rural population is, in consequence, depressed, and it is possible that this has a detrimental influence on the industrial situation. It is very characteristic that the economic revival in 1926 was accompanied by a contrary movement of prices. Agricultural products rose faster than manufactured goods. This seems to countenance the thesis that there is a close connection between the comparative prices of these two groups of articles and the state of trade.

The Bureau of Statistics has published final figures of crops in 1928. They differ from the estimates published previously and are as follows:—

	Quintals. 000's omitted.	1927 = 100.	1923-27 = 100.	1909-13 = 100.
Wheat	16,116	109·2	122·6	96·0
Rye	61,101	107·4	113·8	107·0
Barley	15,272	93·5	98·8	102·6
Oats	24,977	73·7	79·6	88·7

The crops of wheat and barley were better than in 1927, and the figures are higher than the average of 1923-1927. The pre-war level has been surpassed in the case of rye and barley. The crops of wheat were by 4 per cent., and those of oats by 11.3 per cent. smaller than in 1909-13. The yield per hectare amounted, in 1928, to 12.5 quintals for wheat, to 11.4 for rye, to 18.2 for barley and to 12.3 for oats.

During recent years large amounts of foreign capital have flowed into Poland. The following table shows the estimated net annual change from 1923 to 1927 in the outstanding credits and loans by foreigners to Poland. The symbol + represents an increase of the amount outstanding and − a decrease.

FOREIGN CAPITAL IN POLAND.
(Million zlotys.)

	1923.	1924.	1925.	1926.	1927.
(a) Loans to national and local governments	− 19·6	+105·1	+273·3	− 56·5	+491·2
(b) Merchandise credits	*	+275·0	−460·6	+122·5	+254·7
(c) Loans to banks, private firms and individuals	+ 37·0	+ 89·3	+348·3	−136·8	+150·8
	+ 17·4	+469·4	+161·0	− 70·8	+896·4

* Figure not available for 1923.

In 1928 this process of inflow of foreign capital was maintained. The great credit balance of capital movements made it possible for Poland to settle an unfavourable balance of trade in the year 1928, amounting to zlotys 854 millions, with a reduction in the gold and foreign exchange holdings of the Bank of Poland of only 44 million zlotys.

The Bureau of Statistics, in a very detailed analysis of Poland's balance of payments in 1927, gives figures of the composition of foreign loans according to the countries of origin. At the end of 1927 the loans granted to Polish joint stock companies amounted to 661.8 million zlotys. Their national composition was as follows: United States 163.9, England 151.7, Holland 87.9, Germany 54.7, Sweden 47.9, Austria 44.2, Italy 34.0.

During the first quarter of the year the amount of foreign currencies held by the Polish Bank has decreased by 55 million zlotys. The amount of currencies serving as cover has increased from 527.1 million zlotys, at the end of December, to 529.9 millions at the end of March, but the foreign currencies not included in the cover were subject to a drain of 57.9 millions. The discounts show an upward tendency, they were, at the end of March, by 63 millions higher than at the end of December (703.9 and 640.7 millions). The ratio of gold and foreign currencies to total liabilities (demand liabilities and bank notes) remains high (end of March 62.49 per cent., the gold cover alone 33.72 per cent).

Letters to the Editor.

LACE AND SAFEGUARDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I very much regret that you should have thought me guilty of the inaccuracy and discourtesy of including the *Economist* in my general condemnation of "complacent assumption." My intention was the direct opposite.

May I point out first of all that "erroneous classification" in the United States returns of United States imports could in no way affect the totals of our re-exports of 1924 as shown in the United Kingdom returns, and that therefore if we make the correction I suggested we do in fact increase the effective figures for 1927 but not for 1924.

I have examined the reference you were kind enough to give in conjunction with some other figures. Cotton machine-made lace imported into the United States from France amounted to 3,020,000 dollars, cotton lace, other than machine-made, to 516,000 dollars, and lace, other than cotton, to 1,424,000 dollars. The proportion of cotton machine-made lace to lace of other sorts therefore was, on these figures, as 3 to 2. U.S.A. Returns 3854 and 6691 deal with "rayon manufactures other than braids" and "manufactures of gold and silver n.e.s., braids, fabrics, laces, &c.," and relate not only to lace but to all tissues. An examination of the imports for consumption shows an import of 262,000 dollars of "rayon, laces, galloons, rufflings, ruchings, ornaments, trimmings, fringes and gimps not specially provided for" from all sources, while the corresponding figure for "laces, fringes, galloons, trimmings and ornaments of tinsel wire, &c.," was 420,000 dollars, and it is only by including these items that the proportion of cotton machine-made lace to lace of other sorts can be brought to a figure approaching 50-50, and even so we do not know if these items left French shores as "lace."

The "Tableau Générale du Commerce et de Navigation, 1926" (the 1927 figures are not available), shows that in 1926 the exports of cotton machine-made lace from France to the United States amounted to 110,722,000 francs, while the exports of hand-made lace amounted to 2,965,000 francs, and lace other than cotton to 2,684,000 francs, that is to say, only about 5 per cent. of the value of laces of all sorts was other than cotton machine-made lace.

Lord Beauchamp, in the House of Lords, quoted the re-exports from this country in 1924 at £1,756,774. Volume II. and IV. of the Annual Statement of Trade (United Kingdom) show that in 1924 the value of articles, free of duty, imported and exported on through bills of lading (other than goods transhipped under bond) was as to cotton lace and plain net and articles thereof, except embroidery, £1,419,347, in 1925 £571,675, and thereafter nil. In 1924 and subsequent years lace of other kinds in the same category is practically nil. Therefore, of the total re-exports of 1924, cotton lace, plain net and articles thereof constitute about 80 per cent. The returns of imported merchandise subsequently exported to the United States of America show that cotton lace and net amounted to £1,456,377 and embroidery and needlework, except linen embroidery, £145,480. The former after 1925 practically disappears, standing in 1927 at £565, the latter at £15,461. These figures indicate that practically all the cotton lace and net re-exported was consigned to the United States of America. This is confirmed further by cotton lace and plain net and articles thereof, except embroidery, shipped from the port of Southampton in 1924, which stands at the figure £1,491,360, and again by 1927 has practically disappeared, being £5,392. In these returns there were also shipped from Southampton silk lace, &c., £204,559.

Do not all these figures point in the same direction—that "the great bulk of this lace, which is now transhipped under bond and was formerly shipped on through bills of lading, is French lace on its way to the United States"?—Yours truly,

DOROTHY JACOBS, Secretary.

Empire Industries Association,
26 Abingdon Street, S.W.
April 22, 1929.

[We are obliged for our correspondent's courtesy. Miss Jacobs still objects to our estimate of 50-50 in regard to the 1927 ratio existing between the cotton machine-made laces and laces of other kinds of French origin going into the U.S.A. She herself suggested 6-1. We showed that this was wrong, and gave chapter and verse as pointing to a percentage much nearer 50-50. Even without making any allowance for the artificial silk (rayon) and metal laces, which are not precisely listed, the figure is 3-2, as Miss Jacobs now admits. (It is true she tries to throw some doubt on the American categories, but as a matter of fact we know that the quantity of French silk and mixed silk laces sold to the U.S.A. is now quite substantial.) Yet, having come to a figure of anyhow approximately 3-2 (which is so different from her previous 6-1 as to destroy her previous argument), Miss Jacobs proceeds to pray-in-aid some figures culled from the French trade returns of 1926 showing a proportion of 20-1! We are frankly bewildered.

Miss Jacobs' final argument is vitiated by the fact that during the last four years the marked universal decline in the cotton lace trimmings trade has been accompanied by a steady growth in the sales of other lace trimmings, particularly of silk, and of silk and/or artificial silk mixtures. (All the known Nottingham official returns as well as the export figures confirm this.) It is a serious fallacy to argue from the known composition of the 1924 re-exports on a basis that the proportions of trade as between cotton and other laces have remained constant. The change in ratio has been highly important.—ED. *Econ.*]

FRANCE AND HER DEBTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The head and front of Mr Snowden's offending appears to have been his use of the word "Repudiation." The word, it is true, has evil associations, for, as in earlier times, it was used in connection with the putting away of one's wife, so now it has come to mean the getting rid of one's debts, not by paying, but by disowning them. And the ex-Chancellor is held by a consensus of opinion to have aggravated his offence by applying the term, with ruthless logic and in the same breath, equally to France and Russia. The settlement of war debts (so called) is governed mainly and rightly by political considerations, and the taxpayer can only trust to the representative government of the day—be it Conservative, Liberal or Socialist—to act with a full sense of responsibility towards its nationals, the country or countries immediately concerned, and the world at large.

The obligations of France in respect of loans issued by the Bank of England, at the request of the French Government and with the "consent and approval" of the British Government, are more a matter of individual concern, and bondholders may therefore approach the debtors with less reserve and speak, as Mr. J. M. Keynes suggests, "as man to man." The circumstances under which the money in question was borrowed in 1915-18, and the conditions attaching to the several loans, are well known and need hardly now be recalled. One might, however, observe that probably few of the original subscribers knew, or even anticipated, that their bonds would vary in value through the operation of the exchange in subsequent years; they were, no doubt, satisfied that the signature of the French Government indicated that 27·50 francs (in the case of the 5 per cent. loan) would, at any time, be the equivalent of the £1 sterling or thereabouts (One would like to know what our bankers and brokers

thought of the security when advising their clients at the time of issue.) Be this as it may, it was decreed by the French Government, on or about October 2, 1928, that their liabilities in respect of both capital and interest be written down (what in fact had been done before) to about 4s. in the £. In effect, creditors of a solvent and highly prosperous country lose four-fifths of their money *without any strictly legal* grounds for redress. Holders of German 3 per cents. in England have received in exchange for their bonds what are virtually scraps of paper. Those holding Russian securities will leave them at the bottom of their tin boxes, where, I fear, moth and rust will corrupt. Comparisons are usually invidious, whether made with respect to individuals or to nations. But, having regard to the diverse character of the relations existing between our own country and the three great European nations just mentioned, is it too much to say that, if the case of the British holder of French bonds were argued on ethical grounds a just claim would be established which, if it were a matter as between individuals, would receive immediate satisfaction. Is it still in vain to appeal to France for equitable treatment on the grounds of the highest public policy?—Yours faithfully,

JAMES B. BAILLIE.

The Beacon, Beaconsfield, Bucks.
April 24th.

BOLSHEVISM EXAMINED.

Russia was a *determining factor* in the last General Election and is likely to play a minor part in the next. Already it has its place in the Liberal unemployment scheme, and one may surmise that on a thousand Labour platforms the rupture of diplomatic relations will figure among government misdeeds. The present is therefore an opportune moment for the appearance of a second edition, with an added chapter to bring it up to date, of Mr Dobb's history of Russian post-war economic development.* Here the internal economic structure of Bolshevism, at any rate, is faithfully dealt with, and Mr Dobb's text book is not the less valuable because its content is rigidly limited in scope, and ruthlessly shorn of emotional trappings. The political background is dealt with in so far, and only in so far, as it is necessary for the interpretation of the economic foreground. And only once, at the opening of the concluding chapter, is the curtain tentatively raised on the social and personal scene. For the rest, we trace step by step the stormy emergence of "war communism" from the "economic decay" of Tzarism, war, defeat, and political upheaval. its first big compromise in the matter of peasant proprietorship, the quick supersession of autonomous works councils by a Soviet bureaucracy, the formation of public trusts, later of national syndicates, the 1921 compromise with a limited capitalism in the shape of Lenin's New Economic Policy, and finally, during the last few years, that deliberate reaction against the N.E.P., which it is, perhaps, too early to regard as the *mieux sauter* after the *reculer*. It may be said that both his chapter on the political background and that on economic decay, as well as much else in the book, emphasise the inapplicability of Russian economic experience to the problems of Western European industrial organisation. Nevertheless, one broad piece of experience is not without its relevance:—Nationalisation is a gradual and piecemeal process, a tentative process, even under Bolshevist auspices. The frontiers of State enterprise are liable to be pushed backwards as well as forwards in response to technical and administrative exigencies, even by the most orthodox of Marxian fundamentalists. And when due allowance is made for what might be called the Russian factor, the record of Bolshevist experiment, so many phases compressed into so short a span of history, should be of incalculable value to economists and administrators all over the world. Here are opportunities for clinical observation at someone else's expense, beyond the dreams of theory; and Mr Dobb has summarised them with lucidity and discretion.

With Mr Eastman's translation of certain recent publications by, or concerning Trotsky,* we enter a world of political polemics, in which economic facts and policies form the background to clashing ambitions and tangled theologies. Mr Eastman himself is concerned with a vindication of Trotsky in his long and apparently losing struggle with Stalin, following the death of the one man capable of fusing the warring personalities of the communist revolution in an elastic interpretation of the Marxian creed. In his own country Trotsky has been the victim of a censorship exercised as Communists and Fascists alone know how to exercise it; but Mr Eastman, by the publication of censored documents, and others relevant to an understanding of Trotsky's personal and political position, is prepared to uphold his claim to be the true inheritor of the Leninist faith. As constituting a ray of light upon current Russian politics, we have reason to be grateful for the book, however repellent may be the outlook of its hero, however fine the split hairs of his Communist theory. In Trotsky's suppressed "opposition platform," which constitutes the bulk of the volume, we do at least gain some apprehension of the nature and appeal of that thunder on the left, which seems to explain Stalin's present offensive against the N.E.P.

PRIMITIVE ECONOMICS.†

This is undoubtedly the most competent and thorough account of primitive economics which has yet appeared in any language. It deals, it is true, primarily with one ethnographical area, but the writer, who is a trained economist, discusses under each heading the general theory of production, organisation of labour, distribution, value, trade, and psychology of incentive, one and all in their application to simple societies.

The book will be useful to the teacher of economic history as the only equivalent to a text-book on primitive economics. It provides relaxation and amusement to all who can taste the quaint and exotic as it appears in "the economic nature of man." Indeed, here the vagaries of custom, of so-called savagery, present certain features as unexpected and amusing as they seem strange and inexplicable—until we are made to understand them through Dr Firth's scientific analysis. The extraordinary customs of ceremonial robbery, the destruction of wealth on a grand scale incidental to old-time Maori feasts, certain aspects of slavery and of economics by magic, as well as South Sea systems of banking—all these will provide relaxation even to those who do not want to reflect more profoundly upon the real significance of these customs. For the book is written in a vivid style; its construction gives a dramatic flow to the narrative; and Dr Firth—who as an anthropologist has already made his mark by his previous publications—has an intimate personal acquaintance with the Maori.

But the real value of the book lies in its truly scientific treatment of a difficult and instructive subject. In the first place there is no doubt that the understanding of a system of economic organisation widely different from our own helps, as nothing else can do, to clarify some fundamental concepts of our theoretical economics. Take the discussion of value in this book: the author proves beyond doubt that the concept of *value in exchange* cannot be used in reference to the natives, who have no market for any commodities in the economic sense of the word; nor do they possess any forms of money or currency. And yet economic value dominates their whole tribal life; it is associated with the social organisation, supplies them with driving power; and it serves to establish the distinctions of rank and the authority of the chief.

The perusal of the three chapters on Wealth, Land Tenure, and Exchange-gifts will be invaluable to all those who have either to discuss earlier forms of exchange and ownership, or to define the fundamental concepts of theoretical economics. Again, Dr Firth's destructive criticism of the myth about the alleged "primitive communism" will throw light on many modern and historical problems. Each chapter, in fact, with its initial theoretical analysis, its rich array of facts, and its interesting conclusions, provides food for thought.

*"Russian Economic Development." By Maurice Dobb, M.A. Routledge & Sons, Limited. pp xii 437. 15s.

* "The Real Situation in Russia." By Trotsky, translated by Max Eastman. George Allen & Unwin, Limited. pp xxv. 364. 7s. 6d.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

English Poor Law History. Part II. *The Last Hundred Years.* In two volumes. By Sidney and Beatrice Webb. (London) Longmans, Green and Co., Limited, 39 Paternoster Row. 36s. net.

We welcome the appearance of the last two volumes of this monumental series on English local government. Volume I. traces the history of the Poor Law from 1834 to 1908, and Volume II. brings it down to the Local Government Act of the present session. It goes without saying that the treatment is analytical and critical, that the mass of material handled is immense, and that the documentation is excellent.

Die englischen Rüstungsausgaben seit dem Weltkriege. By Dr. Elsa Fiedler. (Leipzig) Akademische Verlagsgesellschaft, m.b.H.

This German study of British expenditure on armaments is the first of a series of publications on the major financial problems of various nations. It appears to be written in an impartial and scientific spirit, and contains useful statistics. There is a comparison with corresponding expenditure in France and the United States, and an appendix on India.

Present-Day Labour Relations. By Paul F. Gemmill. (London) Chapman and Hall, Limited, 11 Henrietta Street. 15s. net.

A valuable discussion of collective bargaining in the United States.

Economic Organisation of Indian Villages. Vol. II. By N. G. Ranga. Foreword by Hon. V. Ramadas Paululu. Introduction by Dewan Bahadur A. V. Ramalinga Aiyer. (Bombay) D. B. Taraporevala Sons and Co., "Kitab Mahal," Hornby Road. Rs. 2.

This interesting study is the fruit of intensive research into the organisation of three villages. In addition to its purely economic interest it is of value for the insight it affords into social conditions among Indian peasants.

The Foreign Exchange Market. By Hugh F. R. Miller. Second edition. (London) Edward Arnold, 41 and 43 Maddox Street. 8s. 6d. net.

This text book, first published in 1925, deals with the foreign exchanges entirely in terms of post-war conditions. It keeps an admirable balance between the purely theoretical side of the subject and the descriptive treatment of actual happenings in the market.

Accounting and Finance. By Leon E. Brownell. (London) Chapman and Hall, Limited, 11 Henrietta Street, Covent Garden. 17s. 6d. net.

A very thorough, clear and readable text book.

Is Labour Leaving Socialism? By L. Haden Guest. (London) John Murray, 50A Albemarle Street. 3s. 6d. net.

The thesis of this book, based on a brief discussion of socialism in Germany, France, Scandinavia, Russia and the Dominions, is that the labour movement everywhere is turning from socialism to other methods of working class organisation.

The Conservative Outlook. By Sir Reginald Mitchell Banks. (London) Chapman and Hall, 11 Henrietta Street, W.C.2. 5s. net.

A statement of the Conservative point of view.

The Australian Mandate for New Guinea. Edited by the Hon. F. W. Eggleston. (London) Macmillan and Co., Limited, St. Martin's Street. 5s. net.

A record of a discussion held under the auspices of the Council of the League of Nations Union. The papers reproduced cover a variety of problems, and each is written by a specialist.

The Peopling of Australia. Edited by P. D. Phillips and G. L. Wood. With a Foreword by the Hon. J. G. Latham. (London) Macmillan and Co., Limited, St. Martin's Street. 6s. net.

A collection of essays on practical aspects of the population problem.

Studies in Australian Affairs. Edited by Persia Campbell, R. C. Mills and G. V. Portus. (London) Macmillan and Co., Limited, St. Martin's Street. 6s. net.

A collection of essays, published under the auspices of the Institute of Pacific Relations, which provides a mine of information on Australian economic affairs.

Oil, Its Conservation and Waste. By James H. Westcott. Third Edition. (New York) Beacon Publishing Co., 25 Broad Street.

This discussion of technical aspects of the oil industry is not unintelligible to the layman, and it contains a number of statistics of general economic interest.

The Gold Standard and the Effect of our Return on the Cotton Trade and other Industries of the Nation. A series of letters by W. H. Waller. 3d.

These letters, reprinted from various Lancashire papers, express a plea for a change in monetary policy which shall include the fixing of a higher price for gold.

Enthronement of the One Hundred Twenty-Fourth Emperor of Japan. (Tokyo) The Japan Advertiser. Published and edited by Benjamin W. Fisher.

Here is a reminder of what British journalism has to learn from Japan. This is an account of the enthronement ceremonies, with articles explaining their symbolical significance. Some of the illustrations are delightful.

Wie die Reparationsforderungen begründet wurden. By Dr. Eugen Würzburger. (Leipzig) Akademische Verlagsgellschaft, m.b.H.

Another contribution is added to the growing pile of literature on Reparations.

The Bills of Exchange Act, 1882. By Maurice H Megrah. (London) Sir Isaac Pitman and Sons Limited, Parker Street, Kingsway. 6s. net.

A full exposition of the law governing bills of exchange.

The Slavonic Review. March, 1929. (London) Jonathan Cape, Limited, 30 Bedford Square. 6s. net.

This interesting number includes articles on "Psychologics Undercurrents of the Russian Revolution," by Prince A. Lobanov Rostovsky; "Agrarian Reform in the Danubian Countries," b Ifor L. Evans; and "Wycliffe's Influence on Central Europe," b Otakar Odlozilík.

Nitrate Facts and Figures, 1929. (London) Frederick C Mathieson and Sons, 16 Copthall Avenue, E.C.2.

Contains the usual invaluable collection of statistics relating t Chilean nitrates and nitrate companies.

Rubber Facts and Figures, March, 1929. (Londo Frederick C. Mathieson and Sons, 16 Coptha Avenue, E.C.2. 2s. net.

Shares of Leading Swiss Companies. (London) Swi Bank Corporation, 99 Gresham Street.

This useful little brochure gives details of the capital, reserve recent profits and dividends and share prices of those Swiss com panies which are of most interest to the general investor.

The Stock Exchange.

CHILE AS A BORROWER.

THOUGH Chile has long enjoyed the tangible benefits of a favourable London credit rating, this condition has possibly been attributable less to the intrinsic strength of her internal economic situation than to her eminently honourable history as a borrower. Apart from a temporary deferment of amortisation (with the consent of the bondholders) as a result of war in 1879, and a very brief delay in payment in 1899, Chile's record has been without blemish for the last 89 years, while the London Stock Exchange List shows that she has repaid nearly £23,000,000 of the original £52,000,000 of Government stock issued in this country since 1885. The City rightly places a tender conscience at the head of the list of desirable borrowing qualifications, but unhappy experience acquired during the last fifteen years, in Europe and elsewhere, shows that the best-intentioned States may be at times the victims of untoward circumstance. A world-war, like an earthquake, is a contingency against which no degree of financial foresight can avail, but the investor of to-day has at least learned the wisdom of inquiring somewhat more closely than in earlier days into the fundamental economic soundness of any country seeking the support of his purse. Judged by this criterion, it must frankly be admitted that a few years ago Chile's position left something to be desired, since the national fortunes were involved to a dangerously large extent in the vicissitudes of a single industry—nitrate production. Not only did the latter provide the lion's share of the national exports, but the Government was at one time dependent on taxation of nitrate sales for some three-fourths of its income. The recent crisis in the industry as a result of the formidable competition of synthetic nitrogen might, therefore, at an earlier epoch have threatened the financial stability, not merely of the nitrate producers, but of the State itself. Happily, the position in this respect has lately shown welcome modification, even if its dangers have not been entirely obviated, so that to-day the criticism that Chile carries all her eggs in a single basket has lost much of its force.

That Chile is numbered among the three "Great Powers" of South America is by way of being a tribute to the national character, the country itself being smaller than, say, Bolivia, Colombia, Peru or Venezuela, and a mere three-and-a-half times as large as Great Britain. As South American countries go, Chile is fairly densely populated, the number of persons to the square mile being exceeded only in Uruguay and Colombia. To a British reader a more concrete impression may be conveyed by the statement that the density of population is approximately equal to that of New Zealand. Expressed as a ratio of the population, Chile's road system is between three and four times, but her railway system no more than three-fifths, as long as that of her neighbour, Argentina; but these comparisons need to be interpreted in the light of certain other factors. Chile has, on the one hand, a much larger proportion than her neighbour of difficult mountainous country, and, on the other, a much longer coast-line in relation to her total area, while about one-half of her railway mileage is attributable to the so-called Longitudinal Railway, which, traversing the country from north to south, owed its construction to strategic rather than economic considerations, and has never handled a very extensive traffic outside its northern section.

Chile's preoccupation with the development of her nitrate deposits may be ascribed rather to the accident of their originally representing a world monopoly (and so offering a "line of least resistance") than to any absence of variety in her natural resources. Her copper reserves are estimated to be larger than those of the United States, though her production is less than a third of that of the latter country, and she supplies at present only about 15 per cent. of the world's requirements of copper ore. Her iron ore deposits have been put at 1,000 million tons, and her coal reserves at 2,000 million tons. Gold, silver, manganese, borax (the largest known deposits in the world), sulphur, iodine and salt are also included among the national resources, while the fertile Central Valley, in a temperate latitude, is a potentially rich agricultural and timber area, and the southern portion of the country includes wide areas of sheep-grazing land.

It goes without saying that the British investor, deciding the merits of a given foreign issue, will be better disposed towards a country with a diversified national production (which itself tends to "spread" his risks) than towards one dependent mainly on a single "monopoly," especially when the latter has been effectively challenged in his own time. To what extent has Chile developed her resources other than nitrate, in the last few years? The following comparison between production in 1920 and in the latest year for which figures are available provides an interesting commentary on the position. The data are taken from official sources in every case:—

Commodity.	Unit of Quantity.	Production, 1920.	Production, Most Recent Year.	Increase or Decrease since 1920.
Nitrate of Soda	Thou. M. tons	2,353	3,164 (1928)	Per Cent. + 25·4
Minerals:—				
Copper Ore	Long tons	103,000	235,545 (1927)	+ 128·7
Iron Ore	Thou. long tons	3	1,380 (1927)	...
Coal	Thou. long tons	1,046	1,451 (1927)	+ 38·9
Gold	Fine troy ozs.	53,190	105,871 (1925)	+ 99·2
Silver Ore	Thou. fine ozs.	2,604	3,262 (1925)	+ 25·3
Manganese Ore	Long tons	11,446	10,887 (1925)	— 5·0
Borate of Calcium	Long tons	15,569	27,580 (1926)	+ 77·1
Sulphur Rock	Long tons	13,130	8,929 (1925)	— 32·0
Salt	Long tons	33,405	28,871 (1925)	— 13·6
Agriculture, &c.:—				
Wheat	Thou. M. Quintals	6,314	6,341 (1926–27)	+ 0·5
Maize	Thou. M. Quintals	428	401 (1926–27)	— 6·3
Barley	Thou. M. Quintals	1,096	985 (1926–27)	— 10·1
Potatoes	Thou. M. Quintals	3,263	3,056 (1926–27)	— 6·3
Wine	Thou. hectolitres	1,861	3,095 (1926)	+ 66·4
Cattle	Thousands	2,163*	1,918 (1925)	— 11·3
Sheep	Thousands	4,500*	4,094 (1925)	— 8·9
Exports of Wool	Thou. M. Quintals	138	123 (1927)	— 11·0

*Number in country in 1919.

Note.—The Nitrate of Soda totals are taken from: "Nitrate Facts and Figures" (Mathieson's), the mineral figures from the "Statistical Summaries" of the Imperial Institute, and the agricultural data from the Year Books of the International Agricultural Institute.

The figures suggest that while Chile has been devoting increased energy of recent years to the successful exploitation of her mineral resources (with certain exceptions), agriculture—the "third string" to her bow—has been less progressive. Of her exports last year nitrate accounted, in value, for 47½ per cent., bar copper for 31 per cent., iodine for 3½ per cent., wool for 3 per cent., and meat for 1 per cent. The dangers of one-sided development have, it must be admitted, been obviated as regards the *internal finance* of Chile to a more considerable extent than the above figures imply. Following the "bloodless revolution" of five years ago, those in control of affairs have not only promulgated a new and improved constitution, bettered Chile's relations with her neighbour Peru, brought the country back to the gold standard, and set up (on American advice) a central banking organisation much on the lines of the United States Federal Reserve system, but have succeeded in putting an end to the budget deficits which had become endemic in Chilean public finance, and in broadening the whole basis of the national revenue. The present Nitrate Law gives the Government power to subsidise the nitrate industry with all surplus receipts from the nitrate and iodine duties over £4,250,000, and as the total of the budget revenue for 1929 (excluding £5,625,000 of capital expenditure to be raised by loan) is fixed at the equivalent of £27,582,000, exclusive dependence on nitrate taxation has clearly passed away—not before its time. Among the items which have taken its place may be mentioned an income tax, from which nearly £4,000,000 was derived in the fiscal year 1928.

Despite these welcome developments, Chilean prosperity for many years to come must hinge largely on the fortunes of the nitrate industry. Events have moved rapidly since the period when high prices, restricted output, and powerful competition from "synthetic" producers in Europe and elsewhere reduced Chile's share in the world's production of nitrogen (according to the estimates of the British Sulphate of Ammonia Federation) from 30 per cent. in 1925-26 to 16 per cent. in 1926-27. Free selling, reinstituted in April, 1927, was followed by an immediate increase in sales and, eventually, by "cut" and fluctuating prices. The key to the situation, obviously, lay with the Government, which collected 5s. 1d. export duty on all nitrate exports. Shortly after an announcement that no reduction in the duty would be considered before June, 1929, the Government proceeded to guarantee a price of 17s. per metric quintal to the producers, provided no sales were made under 16s. 4d.; to declare that producers would be protected against price-cutting on the part of the synthetic combine and, shortly afterwards, to ask the industry to form a selling agency to regulate supply in different parts of the world. An arrangement was concluded between the Government, the producers and the exporters, under which the Government, through the Nitrate Association, regulates prices in the world markets according to local conditions, but without altering the price to the producers. The life of the Chilean Nitrate Association (which has been strengthened by the adhesion of American interests) has been extended to June 30, 1939, and the Government has declared its intention to act on the provisions of the Nitrate Law, mentioned above, the surplus available for assistance to the industry on these lines, on the basis of the 1928 shipments, being estimated by one authority* at £2,800,000.

Whether permanent prosperity can be ensured by these devices, under which the Government returns with one hand part of the sums extracted from the industry with the other, is an open question. The outlook for the producers has certainly improved during recent months. During 1928 production rose from 1,614,084 to 3,163,604 metric tons, and exports from 2,375,444 to 2,801,383 metric tons. Ultimately some form of *rapprochement* with the synthetic interests would seem to be inevitable. In the meantime "rationalisation," as the term is understood on this side, is proceeding in the industry itself, five groups of producers, who own most of the cheap working oficinas, having been responsible for 66 per cent. of the total output last year.

The British investor's stake in Chilean national progress is, of course, considerable. Of the Chilean securities quoted in London, Government stocks have a nominal value of £29,300,000, corporation stocks of £488,000, railway stocks of £19,300,000, and nitrate company securities of £19,100,000. A recent estimate placed British investments as a whole at approximately £97,000,000. The comparative Stock Exchange position of certain representative securities is set out in the table below:—

	Originally issued.	Outstanding.	Middle Prices. 1913.	1921.	1929.	Present day. Price.	Yield.†

‡ Flat yield, or £6 16s. 3d., assuming redemption half-way between now and final date.
(a) Preferred ordinary. (b) Deferred ordinary. (c) £5 shares, split in 1920.

* Mr E. T. Tatham in "Nitrate Facts and Figures, 1928." (London) Frederick C. Mathieson and Sons, 16 Copthall Avenue, E.C. 2.

The market prices of Chilean Government, corporation and railway stocks have recovered in gratifying fashion from the depression of 1921, though quotations in most cases are still significantly below the level of 1913. Nitrate shares continue to reflect the reactions of the recent crisis on the dividends of the leading companies—a situation which forthcoming reports may tend to modify. The preceding paragraphs suggest that Chile, in pursuing the essential task of *all-round* development of her resources, may be expected to remain an influential overseas borrower for some time to come. Whether America or Great Britain will fill the larger rôle, however, in the supply of the necessary capital is a somewhat doubtful question. The Chilean Government has availed itself of New York's facilities on various recent occasions, American money has largely financed Chilean mineral development (Anaconda Copper and American Smelting, for instance, being largely interested in copper exploitation) and America's share in the nitrate industry, already appreciable since the Guggenheim interests entered the field, is likely to be considerably enhanced if the Lautaro Company (which recently bought extensive new nitrate grounds) passes under American control. The United States, again, has raised her share in Chile's import trade from 17 per cent. in 1913 to 38 per cent., while the British Empire's percentage has fallen from 35 to 23. Geographical and other factors may have done much to hasten these events, but when due allowance is made for the possibility of their continuance, it is still reasonable to expect that Great Britain will play a by no means negligible part in Chile's future development.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
May 7.	May 9.

No one except the operator in specialities has been doing much business on the Stock Exchange for some time past. The General Election must take the blame. Fresh purchases of gold by the Bank scarcely affected British Government securities, but some disturbance was caused in the Foreign market by the apparent deadlock in the Reparations conference. The weak appearance of Home Railway junior stocks mainly reflected an extrinsic and passing cause—the liquidation of a large holding by executors. A firmer tone became perceptible on Wednesday afternoon in the Industrial market, where previously the chief feature had been the fall in Dunlop shares on the dividend announcement.

Apart from somewhat unexpected weakness in India Loans, due to Eastern selling, the gilt-edged market was steady to a degree, considering the small dimensions of day-to-day business. The Reparations set-back had little perceptible influence, which was more than counterbalanced by the further slow, but steady, improvement in financial prospects, by easy money market conditions, and by a slackening of the monetary pressure in New York. Five per Cent. War Loan was steady around 103 before going *ex* interest on Friday. Changes in other quotations were fractional. Dealings in Dominion and Colonial issues were meagre, but Australian stocks had a firm tendency.

The Foreign market was quiet, with prices tending slightly downwards. A certain uneasiness over the turn taken by the Reparations Conference showed itself in scattered selling of French and other European stocks. Chilean loans were supported, but Brazilians were offered on less hopeful diagnoses of the coffee situation. Apart from a slight inquiry for Japanese bonds, Far Eastern descriptions were quiet and unchanged.

The week opened with further liquidation, of a special character, of Home Railway stocks, but the movement appeared to have spent its force by mid-week. The traffic figures of the North-Eastern proved the best of the four, and caused an appreciable hardening of the junior stocks. The Foreign Railway market fluctuated from day to day, Argentine stocks, for example, advancing on Tuesday, only to recede the following day, when, despite

satisfactory traffic returns, public interest was found to have evaporated. Leopoldina similarly reacted after further buying on dividend expectations. The prevailing dullness applied equally to Canadian Pacifics, after a firm opening.

The industrial markets have, for the present, reached a land where it is always afternoon. This week's settlement was one of the smallest for many months past, but the steadiness of quotations, despite the paucity of buyers, was, in a negative way, a decidedly satisfactory feature. For such noteworthy movements as occurred some special cause was generally discoverable. Dunlops, for instance, reflected the company's losses on its rubber stocks, which affected the market much more than the reduced dividend. Bear closing gave the shares a steadier appearance, however, as the week progressed. The implications of the report are dealt with in a subsequent "Investment Note." Textiles, again, were heavy on the threatened lock-out arising from the Oldham dispute. Courtaulds were in moderate demand, and British Celanese issues gained a little ground. The slight hardening of the markets in mid-week found expression, again, in a modest revival of interest in such favourite investment stocks as Imperials and British American Tobacco, while afterthoughts on the Budget were reflected in an enhanced demand for brewery shares. Imperial Chemicals were lower after deduction of "rights" in connection with the new issue. Margarine shares maintained noteworthy strength up to the issue of the report (discussed on a later page), when profit-taking ensued. Cable stocks were less firm, and Marconi's, by the same token, somewhat better. Motor manufacturing shares displayed irregularity, and America was, as before, an uncertain supporter of gramophone and electrical equipment shares. Quotations showed narrow fluctuations in the iron and steel group, gains as a whole outbalancing losses. Insurance shares failed to maintain last week's activity. Bank shares were quiet, but held their ground.

Stability of rubber prices is still to seek, American buying producing an advance this week, followed by further weakness on Thursday. The share market consequently betrayed an appearance of greater activity, though interest was concentrated mainly on recognised speculative counters, including Rubber Trusts (whose profits were not unsatisfactory, all things considered), and the American-supported Malaccas. Demand for tea at the auctions, on the other hand, was more irregular than of late, and declines were registered through an extensive range of tea company shares. Speculative interest was again at a low ebb in the oil share market. New York was "temperamental," and moderate domestic selling sufficed to give a dull appearance to an essentially narrow market, Apex and British Borneo, exceptionally, being marked up on Eastern buying.

Kaffirs still stand and wait for a revival of public interest. Stagnancy was the leading characteristic of the week, changes, where they occurred, being generally unfavourable. General Mining was lower on the report (summarised on a later page). De Beers deferred fell sharply at the outset, but recovered strength on Parisian buying on higher dividend expectations. Influential support was obtained by Chartered, but Rhodesians as a whole lacked a reasonable excuse for fresh activity—as was shown by the eagerness with which the market seized on the announcement made at the Rio Tinto meeting that the company had acquired interests in Minerals Separation and Rhodesian Congo Borders. The meeting, incidentally, induced more justifiable strength in the shares of the company itself. After last week's losses the price of tin on the Metal Exchange took an upward turn, which was fully reflected in the share market, but a reaction occurred on Thursday.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market is advancing, with an increased volume of trading and prices within 4 or 5 points of their recent peak. The amount of public interest is shown by a reversal of the four weeks' downward trend of brokers' loans, which are up $67 million this week. The rising demand of the stock market for money and early preparations for the end-of-the-month settlement created a temporary shortage of call funds, which rose to 12 per cent.

for the second time this month, but the effect on stock traders was only mild. Copper shares are doing a trifle better in the belief that efforts are being made to stabilise the metal price. High earnings for the first quarter are helping oil, steel and motor shares. The bond market is gradually improving on the ground that the long-term money outlook is better. There is concern in the best quarters over Reparations, but stock traders are indifferent on the theory that easier money may come if a breakdown occurs.

PARIS.

Although certain French securities have a book value greater than their market value, the Bourse is wholly without business. One notable reason for this state of affairs is the scantiness of available funds, due, in part, to the realisations that have been effected for some months past by foreign holders, and the withdrawal of foreign money that has followed. The corresponding reduction of the fiduciary circulation and of the bill holdings of the Banque de France, as well as the advance in the market rate of discount, are the outward indications of the position. On the other hand, it is thought in financial circles that the disappointment caused by the crisis at the Reparations Conference might perhaps bring funds back from Berlin to Paris. In spite of the slight volume of business, the market has kept up well. Rio Tinto, Péchiney, Société Générale, and Peugeot have been particularly firm.

BERLIN.

The crisis in Paris caused a heavy fall in values. Foreign (in particular, Belgian) buying orders led to a partial recovery on the 20th, which was helped by easier money, many weak holders having by then been forced out. The new week began with fresh selling; Farbenindustrie, for instance, fell to its lowest price of the year. Further weakness was seen on Tuesday, but some recovery followed. On Wednesday there was a decline once again, but the following day, the advance in the Bank rate to 7½ per cent. having been discounted, a general recovery took place, led by Polyphon.

AMSTERDAM.

Business in the share market has improved, though the tendency is still irregular. The check in the Reparations conversations appeared to have no influence, and among industrials in particular there was more animation. Margarine Union was active and strong, but artificial silks were dull on the disappointing figures of the Italo Olandes Enka. The report of a Government subsidy to the Dutch beet sugar industry caused a fall in the Central Sugar Co., but other sugar shares were steady. Tobaccos were firm, but shipping shares irregular, and rubbers easier. Oils recovered only scanty attention. The money market remained steady.
