Such remarks cannot be allowed to go unchallenged, and I ask for the indulgence of your columns to set out my opinion on these matters.

With regard to (1), I merely draw attention to the scheme set up under the Local Government and Other Officers' Superannuation Act, 1922. This Act provides for the superannuation of officers and servants of local authorities, and, briefly, the scheme is one of pensions on incapacity or old age according to a scale based upon the average salary or wages received during the five years prior to retirement, provided for by an annual contribution expressed as a *fixed* percentage of salaries or wages from the employee and the council respectively and a definite certified equal annual charge to meet the non-contributory service of existing employees at the date of the establishment of the scheme. The general scheme contained in this Act was based upon the recommendations of a Departmental Committee, and included amongst its members two eminent actuaries, viz., the Government actuary, Sir Alfred Watson, and Mr W. P. Elderton, the actuary to the Equitable Life Assurance Society.

Many schemes have been set up under this Act, and though they are capable of actuarial solution by means of private funds, yet it is quite safe to say that not one single life assurance company would be prepared to quote for a scheme of this character on the definite lines laid down in the Act. The same criticism applies also to any scheme where it is desired to fix both the scale of pensions and the scale of contributions at the outset. So much, therefore, for the flexibility of life assurance company schemes.

Your correspondent suggests that a private scheme is wedded to a particular system. Exactly the opposite is the case. Any scheme which is desired by employers and employees can be provided for by means of a private fund.

With regard to (2), all I would say is that actuaries are responsible both for the schemes drawn up for life assurance companies and for schemes under private trust deeds, and as I am sure your correspondent does not desire to cast reflection upon the ability of that section of the Profession which has most to do with the establishment of private schemes, it is difficult to understand why in his opinion one scheme should give rise to insolvency any more than the other. The fact that in the past some schemes which were set up without actuarial advice have required financial adjustment at a later stage does not affect the argument. It is true, of course, that there have been some schemes set up under actuarial advice which have required adjustment of the pension rate on account of the acceleration of the age of retirement; but in that case the pension rate of a life office scheme would also have had to be adjusted. In this connection, it must be remembered that the age at which employees retire rests entirely with the employers and nobody else.

With regard to (3), my own experience is that the investment of private funds have been most skilfully handled, as has the administration also. Surely it is almost an impertinence to suggest that the persons responsible for prosperous businesses in this country are mere amateurs on the subject of investments, particularly when they have at their disposal the same type of expert advisers as those attached to life offices.

Finally, I would point out that although assurance companies can do useful work in the case of a small staff, or a group of small staffs, yet there can be no question that where the numbers are large enough for the law of averages to operate, a well-arranged private fund must be able to offer better benefits than any life office scheme. This will be obvious when it is realised that all profit from interest above 4 per cent. (and this is very considerable) falls into the general profits of the assurance company under a life office scheme, whereas, in the case of a private fund, such profit, and in fact all profit, is available for the benefit of the employees.

Generally, since salaries and wages, age of retirement, and questions of incapacity are all matters to be settled by the employers only, any scheme of pensions is so closely bound up with ordinary staff conditions that of necessity it must be more suitably and equitably treated by means of a private trust rather than by any outside scheme through a life office, which really has no domestic interest in the firm concerned. I enclose my card.—I am, Sir, yours faithfully,

CONSULTING ACTUARY.

Books and Publications.

ORGANISED LABOUR IN THE U.S.A.*

FOUR small competently written books lie before us, each dealing, from its own angle, with organised labour in the U.S.A. Miss Beard's *Short History of the American Labour Movement*, supplemented by Mr Spero's detailed monograph on trade unionism among Federal employees, gives us a general view of the growth and structure of American trade unionism. We see it, as one might expect, emerging on a craft basis, in response to certain evolutions in the history of business organisation, much as it did in Great Britain, but somewhat later by reason of the later development of American industrial capitalism. In its earliest years the shadow of the Mother Country fell across its destiny, and its first legal battles centred round the relevancy of the English common law with regard to criminal conspiracy. In the end, judicial opinion seems to have reached the position secured in Great Britain by the statutes of 1824 and 1825; the right of combination was recognised, the methods of effective combination were penalised. As the century proceeds there emerges a close parallelism in the reactions of organised labour in both countries to those larger movements of prosperity and depression which involve the world's cash nexus, as well as in the closely related alternation of emphasis as between economic and political action. In the case of the women's labour movement, outlined from its beginnings by Miss Henry in *Women and the Labour Movement*, there appears to be a still more intimate interlocking of destiny. It is interesting to note that Mrs Patterson, founder of the British Women's Trade Union League, derived her original inspiration from certain women's craft unions seen during a visit to New York in 1873; and that the American Women's Trade Union League subsequently took shape on the British model, and formulated its legislative demands on lines laid down by Mary Macarthur.

The contrasts, however, are more interesting than the similarities; and one is tempted to marshal them in the form of an answer to the question: Why is there no political national labour party in the U.S.A.? Looking behind this outstanding fact, we can see it as a reflection of the structure and policy of the American Federation of Labour, which took shape under the shrewd and consistent leadership of Samuel Gompers in the early eighties. It is, and always has been, according to the deliberate intention of its founders, a loose organisation of national craft union, with strongly developed benevolent functions and limited aims. As such it has pursued a "non-partisan political policy," whose scope is instructively illustrated in the extracts which comprise Chapter xxxiii. of Mr Sapos' useful collection of *Readings in Trade Unionism*. Three factors, summarised in the opening chapter of Miss Beard's *Short History*, may throw some light on this failure of the American labour movement to emphasise horizontal economic cleavages and precipitate them into the sphere of party politics. In the first place, there is the fact that in spite of the influence of the English common law on their early struggles, American trade unionists have no long tradition of resistance to the political and social privileges of a strongly entrenched governing class. In the second place, there is the relief afforded to industrial conditions, at least up till the nineties of last century, by the easy acquisition of government farming land. It may be that an effective substitute for such relief is found to-day in the diffused ownership of property and in the banking and financial enterprise which characterise American trade unionism. This last factor is not emphasised by any of the authors under review, but it is not without significance as a counterweight to anti-capitalist movements. In the third place, the steady stream of immigration which set in after the eighteen thirties created a problem of organisation and assimilation which is perhaps, in itself, enough to account for the relative numerical weakness of American trade unionism. And alongside the variations of language, economic standards, and political ideals against which any effective craft unionism has to stand its ground, must be set the early development of trust organisation over a gigantic market on the side of the employers.

Finally, a small factor in relation to the last, yet one which is not without its significance in this connection, is the fact that industrial legislation is State legislation, State legislation, moreover, which is at the mercy of judicial interpretations of the Federal Constitution in its bearing on individual "freedom of contract." Here again is a diversion, if not from anti-capitalist entanglements, at any rate from nationally organised effort in one important field of labour activity.

MARKETING—A FARMER'S PROBLEM.*

THE importance of Chicago in the international grain market is common knowledge, and when it is found, as the outcome of three months' investigation, by an authoritative *ad hoc* Committee, that the marketing situation in Chicago is "in confusion and disorganised owing to archaic laws and practices which have grown up," it cannot but be useful to seek the causes which have brought about such a state of affairs. This is the more obvious when it is realised that, five years before the above opinion was recorded by the Illinois Legislative Grain Market Investigating Committee in 1927, a special convention in the same State had recommended that the same body of laws be retained "as it has been for fifty years, and has worked to the advantage of all concerned."

Such a difference of opinion regarding what may be described as the point of focus of the world's wheat market demands further investigation, and the author of the work under review, who acted as special counsel for the Investigating Committee, is peculiarly fitted to carry out the task. The results of his labours are here presented, and are a noteworthy addition to the literature bearing on the historical, legal and economic aspects of grain marketing in the United States.

The study covers the latter half of the nineteenth century, that is, from the time when Chicago, being already a primary grain market of considerable importance owing to its strategic position as a lake shipping point located in the heart of the grain-growing area, became subject to the evolutionary influence of railroad developments. The remoteness of the grain growers from the consumers, both in America and in Europe, has inevitably invested the warehousing problem with very considerable importance, and the history of the development of the Chicago grain market, its relationship to other important terminal markets which grew up with the railroads, is very largely

*"Marketing: A Farmer's Problem." By Benjamin F. Goldstein. London: Macmillan & Co., Ltd., St. Martin's Street. 15s. net.

a story of attempts to control, in the public interest, the conditions under which grain was shipped into and out of the Chicago warehouses. Beginning with the setting up, in 1848, of the Board of Trade of Chicago, a voluntary association, the author shows how it became necessary from time to time to strengthen control by legislative action in order that public confidence in the administration of the warehousing and shipping facilities in Chicago, with the attendant credit problems surrounding the use of warehouse receipts as instruments of currency, might be restored and maintained.

The changing character of the Chicago Grain Market under the influence of such factors as the growing dominance of Canada in the world's wheat market; the shifting of the wheat areas in the Western States; changes in railroad transport policy; increasing demands for flour at home and and in European markets; and the growth of future dealings is concisely stated in the chapter which surveys the position from the commencement of the present century to date.

The work as a whole possesses a strong legal flavour and is a record of facts not overburdened with personal opinion or criticism. Whether the reader has a bias towards the legal, constitutional, economic or geographic aspects of historical surveys, there is here material deserving of notice. The annotations are surprisingly numerous; the list of authorities cited in itself covers twelve pages, and is evidence of the painstaking and thorough manner in which the author's objective has been attained.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

The Transactions of the Fuel Conference, London, 1928. With a Foreword by C. H. Lander. In three volumes. (London) Percy Lund, Humphries and Co., Limited, 3 Amen Corner.

In addition to the full record of proceedings at the Conference these volumes include lists of the national committees and representatives of the World Power Conference of delegates and members of the Fuel Conference. The subject matter is overwhelmingly comprehensive, and covers the composition, preparation and utilisation of every kind of fuel and source of power.

The Unequal Treaties. By Rodney Gilbert. With a Foreword by H. E. Morriss. (London) John Murray, Albemarle Street. 9s. net.

The author's long and intimate knowledge of the Chinese people entitles his defence of the treaties to the respectful consideration even of those who cannot accept his position.

Income Tax Law and Practice. By Cecil A. Newport. Third Edition. (London) Sweet and Maxwell, Limited, 2 and 3, Chancery Lane. 10s. 6d. net.

A thoroughly documented work, illustrated throughout by examples.

Mediaeval Cheshire. By H. J. Hewitt. (Manchester) Manchester University Press, 23, Lime Grove, Oxford Road. 21s. net.

The author has aimed at filling in, by his own researches, gaps in previous investigations into the history of mediaeval Cheshire and in throwing light on certain phases of that history which have not been previously treated.

Farm and Factory in China. By J. B. Tayler. (London) Student Christian Movement, 32, Russell Square. 2s. 6d.

This very readable little book describes briefly and effectively the human side of the industrial revolution in China.

Evasion in Taxation. By A. Victor Tranter. (London) George Routledge and Sons, Limited, 68-74 Carter Lane. 6s. net.

This interesting discussion of the extent of forms of evasion, both legal and illegal, and of the scope of existing remedies, closes with a plea for the establishment of a Government investigation into the matter.

Modern Office Machinery. By Leonard F. Foster. Gee and Co. (Publishers), Limited, 6 Kirby Street. 12s. net.

An illustrated account of the mechanical devices now available for office use.

Conquering the Illusion of Economic Isolation. By Magnus W. Alexander. (New York) National Industrial Conference Board, Inc., 247 Park Avenue.

Reprint of a presidential address to the National Industrial Conference Board.

Brasilien Volk und Land. By Dr Walter Schück. (Berlin) Hermann Paetel Verlag G.m.b.H.

A descriptive account of Brazil by a resident German, which aims at the presentation of a general picture rather than of detailed statistics.

La Paix par La Justice. By Emmanuel Lévy. (Paris) Librairie Giard, Rue Soufflot, 16. Fr. 3.50.

Reprint of a lecture delivered in Lyons and published by *La Vie Socialiste.*

Balance Sheet Values. By P. D. Leake. (London) Gee and Co. (Publishers), Limited, 6 Kirby Street. 3s 6d. net.

A discussion of the rules which should be applied in computing the appropriate values of industrial assets and liabilities.

The 100 Best Investments, May 1929. (London) British, Foreign and Colonial Corporation, Limited, B.F.C. House, Gresham Street. 1s. net.

Full details are given of 100 investments, each of which the authors consider to be among the best of its class.

New York Stock Exchange. Report of the President. May 1, 1928, to May 1, 1929. (New York) Stock Exchange, 11 Wall Street.

Stock Exchange Investments for Non-Residents. New Edition. (London) Frederick C. Mathieson and Sons, 16 Copthall Avenue. 6d.

A list, with explanatory notes, of British Stock Exchange Securities on which non-residents do not have to pay income tax.

Soviet Union Year Book, 1929. Compiled and edited by A. A. Santalov and Louis Segal. (London) George Allen and Unwin, Limited, 40 Museum Street. 7s. 6d. net.

As a work of reference on Russian conditions this annual publication is becoming well known. The present edition brings the information up to date and contains in addition a Who's Who in politics, science, literature and banking. The statistical tables are extremely comprehensive.

The Economic Journal, June, 1929. (London) Macmillan and Co., Limited, St. Martin's Street, 6s. net.

An unusually interesting number includes articles on: "Organised Marketing in the Coal Industry," by Professor J. H. Jones; "The Monetary Theory of the Trade Cycle," by Professor Pigou; "The Theory of International Trade Reconsidered," by Professor J. H. Williams; and a discussion of the transfer problem by Professor Ohlin with a rejoinder by Mr J. M. Keynes.

The Banker, June, 1929. (London) Eyre and Spottiswoode, Limited, 9, East Harding Street, Fleet Street. 2s. 6d.

Articles in this number include, *inter alia*, "The French War Debt Debate," by Joseph Caillaux; "The Gold Position of the United States," by H. Parker Willis; and "Internationalisation of Banking," by Paul Einzig.

The Financial World. (New York) 31 Park Place. 25 cents.

A weekly investment and business journal of independent conservative colour. The current number includes articles on "Advantages of Utility Consolidation," by Matthew S. Sloan, and "Power Companies in Europe," by Max Winkler.

LONDON ELECTRICITY SUPPLY COMPANIES.

In the *Economist* of May 25th we discussed the position of some of the large electricity supply companies under the national electricity scheme. We propose to deal in this article with the London companies, which form a separate group under the leadership of the London Power Co. and the County of London Electric Supply Co.

The investor must realise that the shares of the London electricity companies coming under the London Electricity Acts fall into the class of redeemable securities. In calculating the dividend yields obtainable on the ordinary or preference shares of such companies at the current market price, allowance must be made for capital loss on redemption at par in 1971. This position arises as a result of the London and Home Counties Electricity District Order of 1925, which established a Joint Electricity Authority for the general supervision and development of electricity supply over an area of approximately 1,785 square miles, covering the counties of London and Middlesex, with parts of Essex, Hertfordshire, Buckinghamshire, Berkshire, Surrey and Kent. The area extends roughly from Windsor to Gravesend and from St. Albans to Reigate. The London Electricity No. 1 and No. 2 Acts gave legislative sanction to the settlement arrived at between the London County Council and certain companies, under which the undertakings of these companies are to be handed over to the Joint Electricity Authority in 1971. The No. 1 Act dealt with the City of London Electric Lighting Co., County of London Electric Supply Co., South London Electricity Supply Corporation, and South Metropolitan Electric Light and Power Co. The No. 2 Act dealt with the ten constituent companies of the London Power Co., which are: Brompton and Kensington Electricity Supply, Central Electric Supply, Chelsea Electric Supply, Charing Cross Electricity Supply, Kensington and Knightsbridge Electric Lighting, London Electric, Metropolitan Electric Supply, Notting Hill Electric Lighting, St. James' and Pall Mall Electric Light, and Westminster Electric Supply.

The main provisions of the London Electricity Acts are as follows:—

1. The undertakings of the companies are to be taken over by the Joint Electricity Authority in 1971 on the following terms: the assets in existence at July 29, 1925, free, and the future assets at cost less depreciation.
2. Each company is allowed to capitalise, and distribute to its ordinary shareholders, the reserves remaining after the existing assets have been written down in accordance with the rates allowed by the Income Tax Authorities.
3. Subject to the existing maximum prices, each company is allowed to make charges sufficient to cover all expenses, interest on debenture and other debt, preference share dividends, sinking funds, sufficient to provide for the repayment of capital at par in 1971, and dividends on the ordinary share capital at the following rates: (*a*) until 1931, at the rate of 10 per cent. on capital subscribed for in cash before December 31, 1922, and at the rate of 7 per cent. on capital issued after that date, together with 7 per cent. on the capitalised reserves. (Alternatively, each company may pay the same amount of money in ordinary share dividends as it paid for the year 1922. Two companies have elected to adopt this alternative, the City of London Electric Lighting and the Notting Hill Electric Lighting.) (*b*) After 1931 at the rate of 7 per cent. per annum on the whole ordinary share capital, including capitalised reserves.
4. The standard prices to consumers are fixed and if the charge to consumers is less than the standard price so fixed, then, if profits are available, one-sixth of the difference can be retained for the benefit of the ordinary shareholders.

The following table shows how the constituent companies of the London Power Group have distributed their free reserves under the terms of the London Electricity Acts, 1925. Central Electric is omitted because it is controlled by the St. James' and Pall Mall, and the Westminster, which hold its ordinary shares in equal proportions:—

Company.	Ordinary share capital at 31 Dec., 1925.	Reserves capitalised and issued to shareholders.		Present Ordinary share capital (including capitalised reserves and shares issued under staff superannuation schemes).
		Amount.	Per cent. of Ordinary share capital in existence at 31 Dec., 1925.	
	£	£		£
Brompton & Kensington	292,330	58,466	20% (1 for 5)	350,796
Charing Cross	576,000	460,800	80% (4 for 5)	1,036,800
Chelsea	247,180	148,308	60% (3 for 5)	395,488
Kensington & Knightsbridge	105,000	189,000	180% (9 for 5)	317,500
London Electric	499,500	199,800	40% (2 for 5)	699,300
Metropolitan	1,000,000	500,000	50% (1 for 2)	1,500,000
Notting Hill*	£1,352 10s. in def. shs. of 1s.	*	*	*
St. James and Pall Mall	200,000	440,000	220% (11 for 5)	670,000
Westminster	755,620	503,746	66⅔% (2 for 3)	1,259,366

* The Notting Hill Co. is compelled to wait until its share of the free reserves of the Kensington and Notting Hill undertaking is ascertained before capitalising its own free reserves.

The next table shows standard dividends allowed to the same companies up to 1931, the actual dividends paid in the last three years, the present market price of the ordinary shares, the current yield per cent. at the last rate of dividend paid, and the redemption yield per cent. allowing for a 7 per cent. dividend from 1931 to 1971. It does not, of course, follow that these companies will pay the exact dividends allowed as "standard" under the Acts; the ordinary shares held by various staff benefit and superannuation funds may slightly affect the figures of the standard dividends:—

Company.	Standard dividend up to and including 1931 on the present increased Ord. share capital.	Dividends paid.			Present market price.	Current yield.	Yield for redemption in 1971 allowing for 7% as from 1931 to 1971.
		1926.	1927.	1928.			
	%	%	%	%		%	%
Brompton and Kensington	8·625	8·625	8·6275	8·6275	26/–	6·7	5·5
Charing Cross†	8·1574	8·151	8·151	8·151	27/–	6·13	5·23
Chelsea	8·875	8·875	8·875	8·875	26/6	6·76	5·42
Kensington & Knightsbridge	8·0714	8·0357	8·0095	7·9921	26/6	6·12	5·35
London El.	8·4285	8·4285	8·4285	9·00	28/6	6·54	5·05
Metropolitan	...	9·0	9·0	9·0	2⅛	3·79	...
Notting Hill	13/6	12/6	13/7·636	14/4·006	7½ (def.)	9·88	...
St. James and Pall Mall	7·8954	7·9375	7·8954	7·8954	27/6	5·83	5·07
Westminster	8·8	8·8	8·8	8·8	26/6	6·75	5·45

† The standard dividend of 10 per cent. on £350,000 Ordinary share capital of the City Undertaking of the Charing Cross Electricity Supply Co., Limited, will continue until December 31, 1936. For the years 1931–1936, inclusive, the difference between 7 per cent. and 10 per cent. on this £350,000 Ord. share capital of the City Undertaking (£10,500 per annum) will be retainable by the Charing Cross Company for the benefit of its Ordinary shareholders. This amount (£10,500) is equal to slightly over 1 per cent. on the existing £1,036,800 Ordinary share capital of the Charing Cross Company.

It should be added that the extra benefit accruing to the ordinary shareholders, if the charge to consumers is less than the standard price fixed, has enabled certain companies to apply sums to special reserve (and Notting Hill to increase its dividends), but this must not be regarded as recurrent.

As regards the London Power Co., the Stock Exchange is interested in the debenture stock only, the £50,000 ordinary share capital being held by the ten constituent companies, who have agreed to take from the London Power Co. the whole of the electricity required by them up to 1971, with the exception of the Metropolitan Electric Supply Co., which has bound itself for at least ten years from March 11, 1927, to take from the company all the electricity it may require for its London area of supply. Four of the existing generating stations of the London Power Co. (namely, Willesden, Grove Road, Bow and Deptford East), together with the two new

generating stations that are being constructed by the company at Deptford West and Battersea, have been adopted by the Central Electricity Board as selected stations for purposes of the South East England Electricity scheme. The undertaking of the London Power Co. will be taken over by the Joint Electricity Authority in 1971 on the terms provided in the London Electricity No. 2 Act of 1925. Meanwhile, each of the ten constituent companies has agreed with the company that if in any year the receipts of the London Power on revenue are insufficient to meet the charges payable, which include interest on the debenture stock and contributions to the sinking funds, it will provide a part of the deficiency equal to the proportion that the amount paid by it for electricity during the year bears to the total amount paid for electricity supplied by the London Power Co. during that year. Including the £3,000,000 issue of February, 1929, the 5 per cent. redeemable debenture stock of the London Power Co. amounts to £13,858,400, on which the interest charges amount to £692,920 and the 1 per cent. sinking funds to £138,584, making the total of £831,504. The security behind the debenture stock of the London Power Co. may be described as of a gilt-edged character. The present price of the old London Power debenture stock is 101, which, allowing for accrued interest returns a yield of about 5 per cent.

The terms on which the City of London, South London, part of the County of London, and South Metropolitan Companies are to be acquired under the London Electricity No. 1 Act, 1925, are the same as provided under the No. 2 Act. Power is given under the Act for County of London, City of London, South London, and South Metropolitan to amalgamate. No amalgamation has yet taken place, but County of London has a controlling interest in South London and South Metropolitan, and the power stations of the City and County Companies are linked to enable reciprocal supplies to be given as and when required. It is not possible to give the standard dividend of the County of London because it has areas outside the scope of the London Electricity Acts, including interests in the Bournemouth and Poole Electricity Supply Co., the West Kent Electric Co., the Kent Electrical Power, the South East Kent Electrical Power, the Sevenoaks and District and other electricity companies. It will therefore be seen very clearly that these outside areas have potentialities for development of much greater scope than those of the inside areas. The amount of the reserves capitalised and issued to shareholders in respect of the portion of the company's undertakings coming under the London Electricity Act amounted to £1,773,334 (133⅓ per cent. of the existing capital, or four shares for three) which brought the ordinary share capital up to £3,103,334. The following table shows how these four companies have been affected by the Act.

	Ordinary share capital at Dec. 31, 1925.	Reserves Capitalised and issued to shareholders.		Present ordinary share capital (including capitalised reserves and shares issued under staff superannuation schemes).	Standard dividend up to and including 1931 on the present increased ordinary share capital.	Dividends paid.			Present market price.	Current yield.	Yield for redemption in 1971 allowing for 7 per cent. as from 1931 to 1971.
		Amount.	Per Cent. of ordinary share capital in existence at Dec. 31, 1925.			1926.	1927.	1928.			
	£	£		£	%	%	%	%		%	%
City of London	800,000	400,000	50% (1 for 2)	1,200,000	10*	10	10	10	33/9	6·0	4·05
County of Lond.†	1,330,000	1,773,334	133⅓% (4 for 3)	3,103,334	...	7½	7½	10	55/9	3·60	...
South London...	260,000	234,000	90% (9 for 10)	494,000	8·5789	8·5065	8½	8½	26/6	6·67	5⅛
South Met.† ...	250,000	350,000	140% (7 for 5)	600,000	...	8⅛	8⅛	8½	26/3	6·73	...

* Up to and including 1932.
† These two companies have areas outside the scope of London Electricity Acts, and for this reason it is not possible to give figures of standard dividends.

It will be seen that the redemption yield in the case of City of London is the lowest obtainable of all the shares we have considered. The company, however, has not yet fully capitalised its reserves. Up to now there would appear to be some £185,000 of uncapitalised reserves, and the hope has been expressed in some quarters that by 1932 the company will be able to capitalise sufficient reserves to enable it to maintain the present rate of distribution thereafter. In the case of County of London and the Metropolitan companies the current yield of dividend is also comparatively low, which is no doubt explained by the importance attached to the development of the areas outside the scope of the London Electricity Acts. It is worthy of note that the dividend yield obtainable from British electric light and power companies is, on the average, higher than that obtainable from American or Continental companies of similar standing. Nor can it be denied that the scope for electrical development in this country is at any rate as large as, if not larger than, in those countries.

UNITED STEEL REORGANISATION.

In earlier issues of the *Economist* (April 20 and 27 and May 11, 1929) we described the various stages in the buying out of debenture and shareholders in the United Steel Companies by a financial group represented by the Austin Friars Trust. In a new circular, the latter states that holders of from 95 to 99½ per cent. of the various classes of securities concerned have now intimated their acceptance of the offer, and gives figures regarding the earnings of the United Steel organisation, which, as we earlier took occasion to suggest, might well have been provided when the offer was first made.

For the six months ended June 30, 1928, the gross profit earned, as audited by a firm of accountants, is stated to have been at the rate of £350,482 per annum, and for the six months ended December 31, 1928, at the rate of £496,181 per annum; while for the three months ended March 31, 1929, the estimated gross profit was at the rate of £648,448 per annum. Estimated relief from derating brings up the latter figure to £798,448, from which fall to be deducted £90,000 for interest on the prior charges of subsidiary companies, and, say, £200,000 for depreciation, leaving £508,448 available for holders of the £8,000,000 ordinary shares of the reconstructed company. The figures, it should be clearly realised, are based on the results for three months only, when the improvement, common to the whole of the iron and steel industry in the first part of this year, was accentuated, as regards the company's coal production, by the effects of a severe winter.

The approximate consolidated balance sheet of the reorganised United Steel Companies is shown below:—

LIABILITIES.

Debentures of subsidiary companies and secured loans	£1,846,000
Sundry creditors	1,195,000
Share capital—	
8,000,000 Ordinary shares of £1 each	8,000,000
	£11,041,000

ASSETS.

Land and minerals, steel works, collieries, coking plants, &c. say	£6,791,000
Wagons	267,000
Miscellaneous investments in associated undertakings written down from ... ... £865,000 to	250,000
Stocks	1,394,000
Debtors and debit balances	1,364,000
Cash and marketable investments ...	975,000
	3,733,000
	£11,041,000

It will be seen that land and minerals, etc., wagons and miscellaneous investments in associated undertakings are now valued, in the aggregate, at £7,308,000, whereas in the June 30, 1928, balance sheet of the old company the corresponding items (*plus* goodwill and advances to subsidiaries, which have now disappeared) had an aggregate valuation of £14,771,440. Meetings are to be held to alter the articles of association so as to restrict total charges to £3,000,000, *i.e.*, to rather less than £1,200,000 in excess of their present amount.

It may be recalled that debenture and shareholders were given the option of taking cash for their holdings or subscribing, on given conditions, for ordinary shares. They are now offered the further choice of applying at par for 6½ per cent. first cumulative preference shares (convertible into "A" ordinary on a scaled series of premiums up to July 1, 1935) in a holding company formed to take over the new United Steel capital, and known as Steel Industries of Great Britain, Ltd. As shareholders may find it difficult to decide on their best policy, in view of the somewhat complex points involved in the proposed arrangements, we have endeavoured to work out the actual position (A) presuming that all former holders elected to subscribe for ordinary shares in United Steel Companies (the "operative" company); and (B) presuming that all such holders chose instead to take up preference shares in Steel Industries of Great Britain (the "holding" company). Putting available earnings of United Steel, in both cases, at the figure mentioned above, as being based on the results of the first three months of 1929, viz., £508,448, the following state of affairs would ensue, according to our calculations:—

A. *All former holders of United Steel Securities elect to subscribe for shares in the new United Steel Co., on the terms set out in the earlier Austin Friars Trust circular.*

The total ordinary share capital would be £8,000,000, of which former United Steel debenture and shareholders would own £3,435,992 (42.95 per cent. of the whole), and other parties £4,564,008 (57.05 per cent. of the whole)*—say, in round figures, £3,500,000 and £4,500,000 respectively.

		£	
Total available earnings		508,448	
Divided	Former United Steel holders	222,446	(Dividend 6·35%)
	Other parties	286,002	(„ „)

B. *All former holders elect to subscribe for 6½ per cent. cumulative convertible preference shares in the holding company (Steel Industries of Great Britain):—*

TOTAL CAPITAL.

Authorised.		To be issued.
£		£
3,500,000	6½% First Cum. Convertible Pref. shares of £1	3,500,000
6,000,000	"A" Ord. shares of £1.....	3,300,000
1,500,000	"B" Ord. shares of £1.....	1,500,000
11,000,000		8,300,000

The "A" ordinary are entitled to 80 per cent. and the "B" ordinary to 20 per cent. of residual profits after payment of preference dividend.

		£	
Total available earnings		508,448	
Divided between	Preference shares (*i.e.*, former United Steel holders).....	227,500	(Dividend 6½%)
	No. of times covered	*2·2*	
	Other parties:—		
	"A" ord. shares	224,758	(Dividend 6·8%)
	"B" ord. shares	56,190	(Dividend 3·7%)

The chairman of the United Steel Companies has stated that, in his opinion, profits should reach a figure of £840,000, or, after certain further expenditure, £1,040,000. Let us suppose, however, that they show the more modest increase of 50 per cent., and reach £750,000 in a few years' time. Then, under alternative "A" above, former United Steel holders would have a right to total earnings of £328,125, representing a return of 9.4 per cent. on their capital. Under alternative "B," they would obtain dividends of only £227,500 (covered 3.3 times), but by exercising their option to convert into "A" ordinary shares, *and paying premiums ranging from 5s. to 10s. a share*, their receipts would rise to £309,000, equal to a return of 8.8 per cent. on their capital (less any premium paid). Were the holding company to issue new capital—as a result, possibly of the acquisition of further iron and steel interests—these figures would require adjustment.

The conclusions suggested by our calculations may be briefly summarised. Former debenture and shareholders who were not sufficiently attracted by the original offer to exchange into ordinary shares of the reorganised company, will find no fresh inducement in the terms of the new offer. Former holders who wish to re-identify themselves with the company's fortunes, will elect to subscribe for ordinary shares in the operating company if they believe that the latter's *earnings are likely* to be on the up-grade during the next few years. If they are doubtful, in their own minds, whether the present level of earnings will be maintained, they may take preference shares in the new holding company, and obtain dividends at the current level, even if earnings fall off by as much as 50 per cent. They must ask themselves, however, whether in such a case the price of a preference share returning only 6½ per cent. would not be liable to fall below par on the Stock Exchange. If they find difficulty in making up their minds as to the most likely course of events in the next six years, they can "hedge" by taking preference shares and, after paying the appropriate "premium," convert later on, after seeing how events turn out. In view, however, of the slender basis for all these calculations—three months' working in a far from normal period—we regret that the Austin Friars Trust has not seen its way to reveal any new and concrete details as to the scope of its plans for the further "rationalisation" of the iron and steel trades.

* According to the estimate made in the *Economist* of April 27, 1929, p. 935.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 25.	June 27.

ABSENCE of business and of public interest kept the stock markets extremely quiet. The New York exchange remained at a low level, and a substantial outward shipment of gold inevitably affected the gilt-edged market—though there was no pressure to sell—and spread an indirect influence further afield. European bonds continued to benefit from the Reparations agreement, but industrials contained few features of interest, and the Rhodesian boom appeared to have passed its climax. There is no sign of an end to the present dull conditions; public attention has turned away, and nothing is occurring that might be counted on to bring it back.

The gilt-edged market was obviously apprehensive at the opening, the New York exchange being regarded as a danger signal. Most quotations were ⅛ off on Monday and Tuesday, but not until Wednesday, when the full psychological effect was experienced of the Bank of England's loss of gold, was the fall in prices at all serious. Funding Loan was ⅝ lower that day, and Three-and-a-half per Cent. Conversion and Four per Cent. Consols ¼ lower. India Loans were on offer most of the week, but Dominion and Colonial issues, though infrequently dealt in, showed little change of price.

The only part of the House where activity was witnessed in fixed-interest stocks was the Foreign Government market. The Reparation settlement continued to have some effect on French and other European loans, while, further afield, inquiry was forthcoming for Mexican, Brazilian and Chilean bonds, though in no case were prices maintained at the best. Japanese

receded after a little early buying, but Chinese were a shade firmer.

The Home Railway traffic returns came opportunely to support a drooping market. The Great Western and North-Eastern increases in receipts were hailed as satisfactory, though Southern yet again reported a loss of traffic. Undergrounds suffered appreciably as a result of the growing belief that the London Traffic Bill will not obtain a benison from the Labour Government, though the week's traffic figures initiated an appreciable recovery. Foreign Rails were irregular, Leopoldina advancing while Antofagasta remained on offer. Argentine stocks remained firm for the most part, the decision of the Cordoba Central to follow the example of the Pacific and the Great Southern, by "disfranchising" shareholders other than British or Argentine, having no effect on the market. Canadian Pacific rose four points on Monday, following week-end activity in New York, but lost part of the improvement on subsequent days.

Industrials continued, as for some weeks past, a "difficult," dull and hesitant market. Such rumours as were current were generally of a bearish nature, and no outside development occurred which could be construed at all optimistically. British Celanese were depressed by fears of a poor report, and Dunlops by rumours of a new issue. Marconi's were unable completely to hold their ground, despite the favourable decisions from the company's point of view, given in the courts of law regarding the position of the £1 shareholders and the company's patent rights. Dutch shares reacted and Margarine issues were subjected to profit-taking. Breweries were weak on a surprisingly small amount of selling. In the gramophone section the profits and dividends were regarded as disappointing. Deccas hardened on the news that a strong shareholders' committee would investigate the position, the company, meanwhile, having ample liquid resources. The news of further foreign purchases by United Molasses had only a moderate reflection on prices. Associated Electricals again fluctuated, largely on American advices, though Sir Felix Pole's acceptance of the chairmanship was well received. A steady demand was in existence for Henley's Telegraph. A succession of poor iron and steel reports proved too much for the market, which gave, possibly, less than their meed of attention to the better trade reports now coming from various districts. Among nitrate shares, Lautaros advanced on the new financial arrangements set out in a later "Investment Note" in this issue. Bank shares opened harder but became dull, while dealings in insurance shares remained restricted.

Rubber shares proved sensitive to comparatively small forced liquidation from the provinces, the incident affording a significant commentary on the narrow market now prevailing. The commodity remained erratic, with a slight but perceptible upward trend, but only a spectacular increase would have any effect on the share market in its present mood. Tea shares were irregular in the absence of a definite "lead" from the auction rooms. The Shell and Royal Dutch reports, discussed on a later page, were calculated to have a reassuring effect on holders, but the oil market, as a whole, was quiet to the point of dullness, owing partly to the absence of news and partly to the efforts of stale bulls to rid themselves of Mexican Eagles.

The earlier South African election results, commented on in this column last week, proved illusory "pointers" of the final state of affairs, General Hertzog's ultimate victory inducing much heaviness among Kaffirs. The Rhodesian group, in its turn, was much less active, the effect of any withdrawal by the large interests being immediately felt in the present technical condition of this market. The news of the formation of British-American Tin (referred to in a subsequent "Investment Note"), and of a rise in the price of the metal, produced a short period of activity in tin shares, but no considerable amount of public interest was attracted. Copper continued its downward course, carrying with it the quotation for Tinto, after the latter had risen on going ex rights on Monday.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Our New York correspondent cables: This week has seen an increase of $136 million in brokers' loans, which is believed to be due almost entirely to the exercise of expiring rights to subscribe to additional stock of certain corporations. The week's calls on stock amount to about $400 million, out of approximately $900 million due during June and early July. These overhanging rights to subscribe have made the share market feel rather lethargic. Public utility shares alone are unusually strong and active, while fixed interest-bearing securities have been gradually improving on the belief that money rates will fall still further. Food company shares show gains on account of certain mergers and of the fall in the prices of grain, sugar and other foodstuffs. Coppers are also a trifle better, but oils show weakness on the expectation that the failure of the Conservation Conference will mean a further increase of output. Following the arrangement of a $50 million credit for the German Government here, some foreign bond issues are expected, but it is thought that high money rates will keep down the total, and that the issues are unlikely to include a Reich Goverment loan. The week has shown a certain increase in bonds, but there has been a marked decline in stock flotations.

PARIS.

It has become a commonplace to deplore the lack of business on the Bourse, and this week again the amount of activity was insignificant. Neither the prospect of having tax encumbrances removed nor the likelihood of important foreign securities being introduced, which is a corollary of the proposed law modifying the *abonnement* arrangements, provided the market with the stimulus which it needs. In the general apathy, prices again tended to sag; Banque de France went back considerably, while credit institutions, commercial houses and industrial shares generally suffered small setbacks. Coppers, rubbers, and oils were on offer likewise, Mexican Eagles being specially affected in the last group. French Rentes stood out by reason of their firmness. At the mid-month settlement, the contango rate was 4 per cent. An important rise in the franc was a feature of the foreign exchange market.

BERLIN.

The Bourse has been generally dull, and the volume of dealings fell away in comparison with the previous week. Foreign buying of Reichsbank and of potash stocks was reported on Monday, but elsewhere the tendency was towards weakness, being influenced by fears of an unfavourable Reichsbank return and by the increasing opposition of the Right parties to the Paris agreement. On the 18th the chief interest was in Vereinigte Glanzstoffe, which rose 19 points on news of the completed fusion with Dutch Enka. Both Wednesday and Thursday were dull and undecided, A.E.G. and Siemens und Halske receiving most attention. Glanzstoffe dropped considerably from its highest.

AMSTERDAM.

The dullness on the principal European Stock Exchanges caused an alteration in the general attitude of speculators as well as of investors, who became anxious to realise profits. Heavy buying was thus followed by cautious liquidation. Margarine Unie came back, and Philips were not a steady market, while artificial silks were very irregular on the publication of the "General Artificial Silk Union" project. Fords, however, stood out as good and active. In the oil market Royal Dutch suffered from the sudden end of the Colorado Springs conference. Sugars improved a trifle, but tobaccos gave way and rubbers were dull. Shipping shares were almost neglected. The money market was easy, with the private discount rate 5 3/16 per cent. and the prolongation rate 5 per cent.

INVESTMENT NOTES.

Tin Control.—Not long ago a letter appeared in *The Times* signed by a number of leading men in the tin producing industry, urging the need for co-operation among British tin producers. It met with a good response, although the chairman of one company, Kramat Pulai, Limited, was sceptical of the success of any scheme for restriction of output, was pessimistic about the future, and believed that higher prices would only tend to increase over-production from independent sources of supply. The formation of the British-American Tin Corporation within the last ten days may, however, be read as a sequel to the conversations which have been proceeding between tin producers. This Corporation has been formed with a capital of £1,000,000 to deal in tin and to finance producers. Its subscribers include representatives of the Anglo-Oriental Mining group, the Aramayo Mines in Bolivia, in which Guggenheim Brothers have an interest, the Consolidated Goldfields of South Africa, and Sir Hugo Cunliffe Owen, who is chairman of the Tobacco Securities Trust. No doubt it is intended to bring other producers into the fold. In this connection the following figures are of interest as showing the distribution of the world's tin production inside and outside the British Empire:—

	1927.	1928.
	In long tons.	
Federated Malay States	52,176	61,898
Unfederated Malay States	1,999	2,499
Bolivia	33,858	40,307
Dutch East Indies	35,288	34,964
Siam and Burma	9,038	9,188
China	6,000 (est.)	6,000(est.)
Nigeria	7,592	9,010
Australia	1,160 (est.)	2,500(est.)
Cornwall	2,593	2,500
Elsewhere	2,700	2,000
	152,404	170,866

It will be seen that the British Empire accounts for about 50 per cent. of the world's tin output. If, therefore, producers in Bolivia and the Dutch East Indies refuse to participate in the scheme for the regulation of tin production the results of restriction of British output will be as fatal in the case of the tin industry as they were in the case of the rubber industry. The attitude of the Dutch Government, which controls production and smelting in the Dutch East Indies, is of prime importance. One factor which is not to be ignored is that British interests control about 80 per cent. of the world's tin-smelting capacity.

British Shares in France: Handicaps Removed.—Sweeping reductions in taxation on both native and foreign securities are proposed by the French Budget Bill for 1930 (writes our Paris correspondent), and will prove particularly interesting to the many British companies whose shares were formerly quoted in Paris. Owing to the chaotic fiscal conditions of the past few years, and especially to the hampering effects of the French *abonnement* system, many South African and other British companies recently ceased to *abonner* their issues, so that their shares were no longer quoted on the Bourse, which thus lost a substantial portion of its business. Now, under strong pressure from the French financial world, the Govment has decided to suppress entirely the system of compulsory *abonnement* of foreign issues, which will henceforward—in all probability as from July 1—be allowed official quotation on the same terms as French issues. Holders of non-*abonné* shares who produce an ownership certificate in their own names will be required to pay only 18 per cent. income tax on the yield, instead of the existing 25 per cent., while the stamp duty will be reduced to 1 per cent. A further reform of interest to British investors in French issues concerns the so-called "transfer" tax (*taxe de transmission*) imposed on dividend coupons, which is not a transfer tax in the English sense of the term, but a form of super-tax on income. Its principal vice is that it is levied every year, no matter whether dividends have been distributed or not. If no dividend is distributed, the transfer tax is carried forward till the following year, so that there have been many cases in which taxation payable has amounted to even more than the yield from the coupon. Companies will henceforth be authorised to pay the transfer tax themselves, which will relieve holders of any visible burden in this respect, although the revenue collected by the State will be undiminished. Other reforms include the reduction of income tax on dividends from future issues from 18 per cent. to 15 per cent., which will be brought down to 12 per cent. in the case of all loans issued by local government and other public bodies, while the yield from issues by French colonies, protectorates and mandated areas will, like the Rente, be entirely exempt from income tax.

North-Eastern Railway Debentures.—A new capital issue by a British railway company is sufficiently *rara avis* to call for special notice. An offer has this week been made to proprietors and debenture stockholders in the London and North-Eastern Railway Co. of £2,000,000 5 per Cent. Debenture Stock (redeemable at par on April 15, 1947) at 96. From October 15th next the stock will rank *pari passu* in all respects with the company's existing 5 per Cent. Redeemable Debenture Stock (of which some £5,000,000 is at present quoted on the London Stock Exchange), and will be a trustee security, though the company's letter to its proprietors omits to mention this fact. The price of issue compares with a current market price of 97, gives a running yield of £5 4s. 2d. per cent. and a redemption yield of £5 7s. 2d. per cent., and represents an advance on the price (95) at which the last issue of this stock was made two years ago. Among the "Big Four" railways only the North-Eastern and the Midland and Scottish have redeemable debentures outstanding, but a number of guaranteed and preference stocks are of this character, with redemption dates falling within the next thirty-five years:—

Stock.	When Redeemable.	Amount Outstanding.	1929 Prices. Highest.	Lowest.	Latest.	Yield at last price, including redemption.	Availability for Trustees.
		£				£ s. d.	
London & N. Eastern 5% red. deb.	April 15, 1947.	*5,000,000	101¾	97½	98	5 4 3	All trusts.
London, Midland & Scottish 5% red. deb.	May 15, 1952.	5,570,000	102¾	98	99	5 1 6	All trusts.
Southern 5% cum. pref. red.	June 30, 1957.	4,000,000	101⅝	97	98	5 4 0	All trusts.
Gt. Western 5% red. pref.	June 30, 1950.	6,000,000	100	96	97	5 6 0	All trusts.
L. & N. Eastern 5% red. pref.	1955.	4,014,400	86½	82⅛	86	6 3 6	All trusts.
L. Mid. & Scottish 5% red. pref.	June 30, 1955.	9,695,832	97	93	93*	5 10 3	English, Irish and Welsh trusts.
Southern 5% red. pref.	Dec 31, 1964.	2,000,000	99	95	96	5 6 3	English, Irish and Welsh trusts.

* Excluding present issue.

The present is not altogether a propitious time for raising new capital from the railways' point of view. The indications are that actual issues will be maintained for some time at as low an aggregate as possible, and recourse will be had, as in the present instance, to redeemable stocks offering the prospect of a saving in interest charges by conversion at a lower rate on maturity.

Lautaro Nitrate's Metamorphosis.—To British shareholders, who have been interested in the development of the Chilean nitrate industry from its earliest days, a decided significance attaches to the news that $32,000,000 First Mortgage Six per Cent. Convertible Gold Bonds, issued by the Lautaro Nitrate Company, were promptly taken up in New York on Wednesday. The announcement, in fact, signalises the triumph of "massed production" methods in the industry, and the passing under American control of the largest British producer. The merits of the newer "Guggenheim" as against the older "Shanks" process of nitrate extraction have been a vexed question in Chile for some time past. The Lautaro board, faced with the necessity of erecting new plant to exploit the large and valuable areas obtained some time ago, has now decided, after inspection of the plant at work on the (Guggenheim) Anglo-Chilean properties, that the future lies with the newer method. The advantages claimed for the Guggenheim process are, broadly, that it enables caliche with as little as 8 per cent. nitrate content to be profitably treated, against a minimum of 13 per cent. under the Shanks process, that the substitution of electric shovels for hand mining reduces labour requirements by 80 per cent., that as much as 88 per cent. of the nitrate content can be extracted from the caliche, and fuel consumption can be reduced by two-thirds to three-fourths. The financial arrangements attendant upon the new development are of a complex character. The American-controlled Anglo-Chilean Consolidated Nitrate Corporation will erect a Guggenheim process plant with a capacity of approximately 540,000 tons of nitrate per annum on the Lautaro land, and will provide, for the Lautaro, a licence to use the Guggenheim process for a payment of $485,000 U.S.A. currency. The existing ordinary and "A," "B" and "C" ordinary shares of Lautaro will be converted into 7 per cent. cumulative preferred (sterling) shares of £5, with voting rights, which are intended to be acquired or redeemed by a 1 per cent, sinking fund in about 31 years. Two million new ordinary shares of 1s. will then be created and issued at their nominal value (carrying one vote per share) to a company formed in Delaware, U.S.A., to be called "The Lautaro Nitrate Corporation." The latter will have a capital of 4,000,000 "no par value" shares, 2,340,000 being held by the Anglo-Chilean and 1,660,000 by the Lautaro company. The latter will proceed to distribute its 1,660,000 shares as follows: 320,000 to its present shareholders in the proportion of one to five; 740,000 to a Chilean firm as part compensation for the termination of agreements; and 600,000 to the National City Company of New York. The National City Company has purchased from Lautaro the $32,000,000 bonds mentioned at the beginning of this note, and disposed of them at 99, every purchaser of $1,000 of the bonds receiving a free present of 10 shares of the Delaware Corporation. The bonds mature in 25 years at 105, and are convertible into preferred (dollar) shares of Lautaro. The proceeds will be used to provide the cost of the new plant and additional working capital. The upshot of these arrangements will be that, for the future, America will have the heaviest of stakes in Chilean nitrate production.

American Buying of British Securities.—Readers who have been following the articles which have appeared in our Stock Exchange columns on this subject in the last two weeks will find a concluding exposition of the broader economic issues involved in the matter in an article entitled "American Capital in Britain" on page 1386 of this week's paper.

Guest, Keen and Nettlefolds.—Thanks, partly, to its ability to compensate for the poorness of present-day coal and heavy steel prices by its manufacture of specialised articles, Guest, Keen and Nettlefolds has again fully earned its 10 per cent. tax free dividend, as the following table for the past three years shows:—

(Years ended March 31.)		1927. £	1928. £	1929. £
Profit		909,279	966,244	956,071
First preference dividend		86,000	86,000	86,000
Second preference dividend		220,019	225,759	229,259
Ordinary	*earned*	*9·5%*	*10·3%*	*10·1%*
	paid, tax free	10%	10%	10%
	amt. of dividend	630,447	630,447	630,447
Increase or decr. in carry-forward		− 27,188	+ 24,038	+ 11,365

The reserve fund has been reduced by £847,070—from £2,628,503 to £1,781,434—to write off the loss arising on the company's holding in the Consolidated Cambrian group of colliery companies, which went into liquidation last autumn. As investments, however, are only £395,909 lower, at £12,989,614, they must have been increased in other directions. The item is by far the largest in the balance sheet, and in view of present conditions in the industry the directors might well consider the possibility of taking the shareholders fully into their confidence as to the basis of valuation. Such knowledge, after the Consolidated Cambrian experience, would reassure all shareholders that the balance sheet was as demonstrably strong as it appears to be on paper. At their present price of 39s. 4½d., cum final dividend of 1s., the £1 ordinary shares yield £5 3s. 6d. per cent., free of income tax. Power is being asked to make certain alterations in the memorandum and articles of association.

Stanton Ironworks.—In view of the hard times through which the iron and steel industry is passing, the Stanton Ironworks deserves congratulation on its ability both to earn and pay regular dividends of 10 per cent., tax free, Earnings, however, fell away by some £22,000 in the last financial year, and the allocation of the usual £50,000 to reserve for depreciation of new works has entailed a reduction in "carry-forward" to £117,187.

(Years ended March 31.)		1927. £	1928. £	1929. £
Profit		234,617	214,308	192,037
Debenture interest		45,000*	36,000	36,000
Net earnings		189,617	178,308	156,037

Number of times covered		*8·8*	*8·2*	*7·2*
Ordinary	*earned, after taxation*	*14·7%*	*13·7%*	*11·8%*
	paid, free of tax	10%	10%	10%
	amount of dividend	113,671	113,671	113,671
Reserve for depreciation of new works		50,000	50,000	50,000
Increase or decrease in carry-forward		+ 4,458	− 6,850	− 29,122

* Tax included.

The balance-sheet no longer shows a liquid position, a bank overdraft of £235,929 having made its appearance. This is principally accounted for by the rebuilding of the blast furnace plant; four complete new units out of the five proposed are now in operation. The "new colliery development account" has advanced from £773,267 to £917,359, and the colliery is approaching the stage at which half its maximum planned capacity will be in operation. It appears, therefore, that the new capital provided by the issue of £1,000,000 debentures in 1925 under the Trade Facilities Acts has nearly all been expended, so that it will now be seen what earning power has been gained by this provision of cheap funds for capital development. In notes appended to the report and accounts, it is stated that, so far as the iron industry is concerned, there are signs that during the next 12 months there will be some improvement over the conditions of 1928; this improvement had become noticeable in the first three months of 1929, the results of which are included in the present accounts. The last bargain marked in the fully-paid £1 ordinary shares was at 33s. 9d., which, allowing for final dividend of 6 per cent., represents a yield of £6 2s. 9d., free of income tax.

Ebbw Vale.—A loss of £407,394 was incurred by Ebbw Vale for the year to March 31, 1929, as compared with one of £234,716 in the previous twelve months. The trading account shows a loss of £40,818; debenture and other charges (including £240,000 interest, debited but not paid, on the £3,000,000 of 8 per cent. notes redeemable in 1938) amount to £336,576, while £30,000 (against £7,500 last year) is set aside for the note redemption premium reserve, which nominally calls for £100,000 each year. The total debit balance has risen to £957,636, and once again nothing has been provided for depreciation. A capital reconstruction scheme is inevitable sooner or later, though the company still maintains £1,350,348 on capital reserve account; and "reserves for special purposes, including provision for taxation," have increased from £791,709 to £871,886—a movement to which no explanatory reference is made. The report states that though the trade depression continued without abatement throughout 1928, an improvement in demand set in after the beginning of 1929, and all but one of the collieries are now at work. Moreover, a battery of 100 bye-product coke ovens, completed in 1922 and never started, were successfully put into operation last July. The iron and steel departments were fully employed throughout the period, with some improvement in costs, but the prices obtained reflected the intense Continental competition prevailing. These are the reasons which compel the directors to describe the financial results of the year as "altogether inadequate." Production, however, increased all round—the output of coal by 11 per cent., of coke by 44 per cent., of pig iron by 28½ per cent., and of steel by 38 per cent. The company would obviously gain considerably by the stabilisation of prices at a more remunerative level.

Anglo-Argentine Tramways.—The results achieved by the Anglo-Argentine Tramways Co. in respect of 1928 carry on the story of recent years, the second preference dividend being again covered, but no dividend being paid on the ordinary shares. The latter are held by the South American Public Utilities Trust, and received their last distribution in 1914:—

(Years ended December 31.)	1926. £	1927. £	1928. £
Profits	1,031,876	1,042,481	1,052,176
Annuity to City of B.A. Tramways Co.	70,660	70,660	70,660
Debenture interest on sinking funds	587,821	587,821	587,821
Sinking fund for preference and ordinary	9,230	9,599	9,983
Net earnings	364,165	374,401	383,712
First preference dividend	176,000	176,000	176,000
Number of times covered	*2·0*	*2·1*	*2·1*
Second preference dividend	183,000	183,000	183,000
Number of times covered	*1·0*	*1·0*	*1·0*
Increase in carry-forward	5,165	15,401	24,712

Receipts from passenger traffic increased, and the operating ratio was reduced from 74.57 to 73.50 per cent. Renewals expenditure was £279,742, against £335,473 in 1927, and the allocation to renewals reserve £372,416, against £368,666. Reference is again made in the report to the difficulties created by the traffic congestion in the central streets of Buenos Aires. The measures taken by the authorities and by the company have mitigated some of the worst features of the situation, but cannot remove its causes. Omnibus competition continues to be severe, but the increase in the tramway receipts is taken as a justification of the directors' policy for meeting this competition; though the company's omnibus services have been run at a loss, they are stated to have proved a valuable auxiliary to its other services. Unfortunately, the company's *ad referendum* agreement on tariffs, signed in 1925, has not yet received the necessary ratification of the Municipal Council, though hope is expressed, in view of the traffic problems and the need of underground line extensions, that it will be dealt with definitively at an early session. The balance sheet of the company is less liquid than a year ago. The £5 second preference shares at 3⅝ (cum 3s. final dividend) yield £8 11s. 6d., and the first preference at 3 9/16 (cum 2s. 9d. final dividend) just £8, whilst the 5 per cent. debenture stock, at 74½ ex dividend, gives a flat yield of £6 14s. 3d.

Attock Oil.—The directors' report of the Attock Oil Co. for the year ending December 31, 1928, has particular interest in view of the recent rise in the shares following on the reports of the discovery of deep oil sands on the c mpany's properties. The report shows that the production of crude oil increased from 266,360 barrels to 306,288 barrels, the bulk of the production being obtained from the 3,100 and 3,300 ft. sands. In the latter part of the year deeper sands were proved at 3,600 and 3,800 ft. and three wells were driven in to these sands by December 31st. The directors remark that these deeper sands have proved satisfactory producers, and that their further development is proceeding. The improvement in earnings is shown in the following table:—

	1927. £	1928. £
Ordinary share capital	1,500,000	1,500,000
Net profit	128,383	203,931
Ad. expenses	4,678	5,058
Depreciation	86,091	120,000
Balance	37,614	78,872
Percentage earned	2·5%	5·26%
Percentage paid	Nil	7½%

The improvement in earnings is all the more satisfactory seeing that profits were affected by the price-cutting war in the Indian kerosene market during the first half of the year. The dividend of 7½ per cent. is the first dividend to be declared since 1924, when 10 per cent. was paid. The dividend was not actually earned if allowance is made for depreciation, but the directors have no doubt paid regard to the current rate of earnings. The chairman, at the general meeting on June 28th, will probably have some cheerful remarks to make on the prospects of the company as affected by the development of the deep sands. That the market takes a favourable view of these prospects is shown in the current price of the shares, which, at 2⅞, return a yield of only 2.66 per cent. on dividends of 7½ per cent.

Anglo-Persian Oil.—The report for the nine months ended December 31, 1928, of the Anglo-Persian Oil Co. compares favourably with that of the previous twelve months, the rate of earnings being 15 per cent. higher. Indeed, the company did better than was generally expected, seeing that the price of petrol in Great Britain was reduced at the end of March 1928 (before the petrol tax was imposed) by 1d. per gallon ex pump in the London and home counties area and by 1½d. ex pump outside those areas. Why the directors do not give in their report the amount of the company's production in Persia is difficult to understand. Are they not aware that the report of the Royal Dutch gives the figures of world oil production, which show that Persia increased its output from 5,227,200 metric tons in 1927 to 5,600,138 metric tons in 1928? The increase in production does not account fully for the increase in net profits, but it may be assumed that the Anglo-Persian has been able to reduce further its operating expenditure. Moreover, the alliance between the Anglo-Persian and the Royal Dutch-Shell group for the joint marketing of oil products in parts of Asia and the east coast of Africa has no doubt been instrumental in increasing profits. The following table, giving the trading results for the last three periods, shows the beginning of the recovery in Anglo-Persian fortunes:

	12 months to March 31, 1927. £	12 months to March 31, 1928. £	9 months to Dec. 31, 1928. £	Equivalent for 12 months. £
Ordinary capital	13,425,000	13,425,000	13,425,000	...
Net profits	6,927,123	4,300,803	3,738,239	4,984,319
Deb. and note interest	310,918	254,397	216,206	288,275
Directors' fees	22,197	21,294	22,326	29,768
Persian Government royalty	1,027,595	250,806	305,816	407,755
Income tax	930,968	661,776	360,933	481,244
Balance	4,635,443	3,112,529	2,832,958	3,777,277
Preference dividend	875,000	875,000	656,250	875,000
Balance available for ordinary capital	3,760,443	2,237,529	2,176,708	2,902,277
Earned (net)	28·01%	16·67%	21·62%	21·62%
Dividends (subject to tax)	12·5%	7·5%	12½% p.a.	12½%
To deb. stock redemption reserve	200,000	200,000	206,250	275,000
To extra depreciation and reserves	1,590,888	1,053,267	651,052	868,068
To carry forward	2,246,879	2,224,266	1,771,645*	...

* Less £513,434 payments for excess profits duty.

It will be seen that a smaller amount was applied to extra depreciation and reserves in 1928, but a conservative dividend policy is still being pursued. The amount paid by way of royalty to the Persian Government remains a subject of mystery. Presumably it varies in proportion to the profits earned by the Company, but no definite proportion can be ascertained from the extreme fluctuations in the amounts paid for the last three years. The balance sheet shows a strong cash position, the surplus of current assets over current liabilities being £8,348,850 as against £6,200,000 at March 31, 1928. The ordinary share capital remains at £13,425,000 in £1 shares, of which the British Government own 7,500,000 shares and the Burma Oil Co. 2,861,990 after transferring 700,000 to the B.O.C. Anglo-Persian Oil Trust. The British public is, therefore, interested in only 17.6 per cent of the equity, a fact which may account for the relatively high price of 4½ (yielding only 2¾ per cent. on dividends of 12½ per cent) at which the ordinary shares are quoted in the Stock Exchange.

Royal Dutch and Shell Transport.—The curious but singularly effective alliance between the Royal Dutch Petroleum and Shell Transport and Trading is based on the holding of 60 per cent. by Royal Dutch and 40 per cent by Shell of the shares of their subsidiary oil producing, refining, shipping, and marketing companies. Whatever the state of the oil markets may be, the earnings of both Royal Dutch and Shell, which are derived from dividends paid by their subsidiary companies, seem to increase steadily each year. Last year was one of mixed blessings for a worldwide combine such as the Royal Dutch-Shell group. While oil prices rose in the United States and to a less extent in Europe, in India there was a price-cutting war in kerosene for the first half of the year, and in Great Britain there was no recovery in prices at all. The real earnings of the Royal Dutch-Shell group are, however, never ascertainable, because the dividends drawn from their subsidiary companies do not absorb the whole of the profits earned. Moreover, the earnings of the subsidiary companies are arrived at after allowing very substantial depreciation. The feature of the Royal Dutch report for 1928 is the increase of nearly 30 per cent. in the crude oil production of the subsidiary companies which is given in the following table:—

	1927.	1928.
	Metric tons.	
Dutch East Indies	3,448,116	3,971,045
Sarawak	711,756	751,092
Egypt	183,284	268,461
Roumania	593,828	705,854
Mexico { Corona	594,753	528,979
Mexico { Aguila	987,528	893,681
Venezuela	4,497,713	7,125,339
Trinidad	65,841	65,187
United States (Shell Petroleum Corporation, formerly Roxana Petroleum Corporation)	2,694,312	3,890,767
United States (Shell Oil Company, formerly Shell Co. of California)	3,203,719	3,812,233
Argentina	17,701	50,773
	16,998,551	22,063,411

These figures must not be taken to imply that the turnover of the Royal Dutch-Shell has increased by 30 per cent in 1928. It is possible that the group bought less crude oil from independent sources. Nevertheless, a substantial increase in sales must have been realised. Mention is made in the report of the Royal Dutch of the extended use of asphalt for industrial purposes, in which connection the company took over last year the Flintkote Co. of Boston, a concern of many years' standing in the asphalt manufacturing business. More attention has also been given to the use of the by-products of the refineries in the agricultural and the chemical industries. The following tables show the net income and distribution of profits of the two following companies for the last three years:—

ROYAL DUTCH.

	(In florins.) 1926.	1927.	1928.
Ord. capital	412,103,000	412,103,000	412,103,000*

* Since increased by £333,333.

The balance sheets of Royal Dutch and Shell continue to show the strong liquid position which is usually associated with the group. The surplus of current assets over current liabilities for the Royal Dutch amounted to Fl. 289,363,227, and for the Shell to £6,768,722. The investments of the Shell group, which are mostly in gilt-edged securities, show a rise of £1½ million at £6,627,101. Both Royal Dutch and Shell increased their capital last year by the issue of shares to shareholders in the proportion of one new share at par for every five shares held. These shares rank for dividend as from the beginning of 1929. In calculating dividend yields obtainable from the ordinary shares it will be appreciated that Shell Transport pays its dividend free of British income tax, which is a disadvantage to the foreign shareholder, seeing that he cannot get back the tax which in effect has been deducted. At the present price of 4 29/32 Shell Transport shares return a yield of 5.09 per cent. free of tax, and Royal Dutch at 33¾, a yield of 5.87 per cent.

The Rand Midsummer Dividends.—Our mining correspondent writes: The half-yearly dividend announcements of the Witwatersrand Gold Mining Companies have only in one instance aroused any enthusiasm. Comparing the present declaration with those of a year ago, there are nine examples of change, five being in the upward direction. The most noticeable instance is furnished by the Crown Mines, whose rate exceeds even the increased distribution in respect of the December period. The explanation would appear to consist in smaller requirements for capital outlay, the monthly profits of the current half year having totalled less than those for the last six months of 1928. The most notable reduction occurs with Sub Nigel. In the circular accompanying the report of Dr Maclaren, issued about the end of February, the directors foreshadowed a reduction in the milling grade owing to the development position; but, although the monthly profits have displayed an almost continuous decrease, the difference has scarcely been such as to prepare the shareholders for so substantial a cut as one-third. The lower rate of the Geduld is payable upon an increased capital, additional shares having been issued to enable the company to subscribe for its proportion of the new capital of the Geduld East. Our usual table is appended:—

Company.	Total, 1927.	June, 1928.	Dec., 1928.	Total, 1928.	June, 1929.
	%	%	%	%	%

Rand Mines	100	50	50	100	50
Rand Selection	50	15	10	...	15

* Tax free.

This table does not include declarations made at dates other than June and December.

The City Deep, which has been out of the list for two years, is now picking up a little: its monthly losses, at least, are less than they were. Some disappointment was experienced at the absence of any payment on the part of the Nourse and the Rose Deep, which made distributions on account of the first half of 1928. As regards the finance companies the Johnnies rate

is steadily maintained, but that of the New Era has further shrunk. The position as regards the Rand Selection is a little complicated. Hitherto this company's announcements have been made in March and September. Last autumn the dividend was passed owing to the company's financial requirements, but an interim was declared in December and this is followed up by 15 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Whitehall Electric Investments, Independent Investment, Carmelite Trust, Electric Supply Corporation, British Electric Traction, Malacca Rubber Plantations, General Mining and Finance Corporation, City Deep, Siamese Tin Syndicate, Bangrin Tin Dredging, Booth's Distilleries, Lobitos Oilfields, Wm. Cory and Son, and Hovis. Mr Horne, at the Carmelite Trust meeting, referred to the fall in newspaper shares, but predicted a material appreciation "at no far-distant time" in the Trust's large holdings in them. The chairman of the Independent Investment Company defined his board's attitude to investment in low-yielding ordinary shares. For the current year a record output is anticipated for Malacca Rubber Plantations, and the company is also embarking on the cultivation of oil palms. The chairman of Hovis discussed the unsatisfactory state of the milling industry.

CAPITAL ISSUES.

One Dominion corporation loan and two "business" prospectuses made their appearance during the week, involving a total cash subscription of £2,597,917. The aggregate for the year to date, including offers to shareholders as well as to the general public, is £163,229,034, excluding conversions, which compares with £240,860,861 for the corresponding period of last year. The issue of £2,149,109 *City of Montreal* 4½ per cent. stock at 92½ was interesting as the first Canadian loan raised in London for some years. The yield is £4 17s. 3d. flat, or £4 18s. 9d., allowing for redemption at par in 1969. Money market conditions, unfortunately, were unfavourable, and 72 per cent. was left with underwriters. The stock is not a trustee investment in Great Britain, but only in the Province of Quebec. A reasonably secured debenture issue, 6 per cent. at 97, was put out by *Daily Express Building Co.*, and obtained over-subscription. The company is to acquire and demolish certain property in Fleet Street, and to erect on the site a building which is to be part of the London headquarters of the *Daily Express* and *Sunday Express* newspapers, the London Express Co. having contracted to take a 35 years' repairing lease of the building when completed. An issue to the public of 10s. shares at 2s. 6d. premium was made on behalf of *Gooch's* (1928), a company formed last year to take over the well-known shop premises and business in Brompton Road. The shares previously existing had been allotted to the vendors in part satisfaction of the purchase price. The new shares, though fully subscribed, were not without a certain speculative tinge, the prospectus giving no figures of the former company's results. It is a noteworthy sign of the times that these were the first issues of an industrial character, save for one small speculative offer, since May 16 last.

City of Montreal.—Issue at 92½ of £2,149,109 4½ per cent. registered stock, 1969. The proceeds will be used for the purchase of the Montreal Water and Power Co. and for the enlargement of an aqueduct and the construction of underground conduits. The stock is a trustee investment in the Province of Quebec. Total funded debt of the city, including this issue, amounts to £35,674,346; the revenue from all sources for 1928 was £7,026,957 and the expenditure £6,741,423. The population is estimated at 1,032,385.

Daily Express Building Company, Limited.—Issue at 97 of £500,000 6 per cent. first mortgage guaranteed debenture stock, redeemable by 1956 by a 2 per cent. cumulative sinking fund commencing in 1932, applied in purchase at or below par or annual drawings at par; the company may also redeem at 105 until 1934, at 103 between 1934 and 1939, and thereafter at par. Capital and interest are unconditionally guaranteed by the London Express Newspaper, Limited. The stock will be secured by a first specific mortgage or charge upon land in the City of London, which the company is being formed to acquire, and the building to be erected thereon. Issued share capital consists of 50,000 £1 shares. The purchase price for freehold and leasehold properties is £156,500, payable as to £138,700 in cash and £17,800 in shares. The London Express Co. will take a 35-years' repairing lease of the building when completed at a yearly rent of £45,000.

Gooch's (1928), Limited.—Authorised capital consists of 600,000 10s. shares. Issue of 200,000 10s. shares at 12s. 6d., to rank *pari passu* with the 317,207 existing shares. The company took over an established London business of fashion and wear specialists. The present issue is intended to provide additional working capital and to repay advances made on reconstruction account, &c.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction:—**Quemont Mining Corporation, Limited**; issued capital, 1,465,607 shares of no par value; incorporated in Canada as a mining, milling, reduction and development company.

COMPANY MEETINGS, &c.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

UNAPPROPRIATED PROFIT AND GENERAL RESERVE.
CAUSES OF THE DECREASE IN REVENUE.
OPERATIONS OF THE SUBSIDIARY UNDERTAKINGS.

Mr Arthur French, presiding at the annual general meeting of the General Mining and Finance Corporation, Limited, held in Johannesburg on Tuesday, the 18th instant, dealt with the balance sheet and profit and loss account. He explained the new item of £23,613 under the heading of pension fund, stating that the corporation had contributed £10,000 for 1928. The increase in stocks and shares of £274,798 was partly represented by an increase in the holding of Phœnix Oil and shares in Witpoort Gold Areas accruing in respect of the capitalisation of the debt due by Rand Collieries. The decrease in Government securities and cash was more than accounted for by the increase in stocks and shares and sundry debtors.

THE LIQUID ASSETS.

Attention was drawn to the fact that liquid assets, namely, cash, Government stocks, and advances against securities, together making £564,119, compared with current liabilities amounting to £304,116, which position was very satisfactory. The decreased revenue was explained by the unfavourable market conditions which prevailed during the latter part of the year. Further, it was necessary to write down, out of profits, certain holdings in order to bring them into the balance sheet at or under the market prices as at the end of the year. The statement in the directors' report was reiterated that the valuation of stocks and shares per balance sheet was still considerably under aggregate market prices. No final dividend was declared owing to the conservation of funds for carrying out present undertakings and for undertaking further business.

Apart from the unappropriated profit of £120,257 carried forward they had a general reserve of £400,000, which was invested in the corporation's business, for which purpose it was chiefly created. It was one of the functions of a controlling house to advance moneys to subsidiary companies when such funds were required for expanding their producing capacity, or for entering into active mining operations, until the companies concerned were able to finance themselves. The corporation's general reserve had been gradually built up, mostly from profits, with this object largely in view; otherwise these profits would probably have been distributed as dividends.

THE SUBSIDIARY COMPANIES.

Dealing with the position and prospects of the subsidiary companies, Mr Arthur French stated that the early cessation of mining at the Meyer and Charlton was not anticipated. At the Van Ryn development of the upper leaders was being vigorously prosecuted. The West Rand Consolidated profits for the last five months showed a satisfactory increase. Working costs at 18s. 1d., including 2s. 9d. development, representing a net cost of 15s. 4d. per ton were very creditable, and no better record could be shown by any other mine on the Rand working under similar conditions. He quoted the ore reserve position, and reiterated the statement *re* an additional million tons now payable owing to lower working costs. A satisfactory feature of the recent expansion in operations was that the ore mined from reserve blocks consistently reflected the value called for; in other words, that stoping fully confirmed the computed valuation of the ore reserve. It had been decided to sink a vertical shaft which should, on completion, result in substantial economies in working expenditure. Development on the lower levels of the main and battery reefs continued to exhibit gratifying values, the development accomplished during the last five months indicating a higher percentage of payability than recently, and the whole outlook was very encouraging.

The recent issue of shares by the Witpoort Gold Areas, Limited, had provided a net amount of £157,812 for working capital, while the terms of the Government lease were satisfactory to the company. Surface equipment had been completed, dewatering commenced, and the water was now down to 1,500 ft. from the shaft collar, As the extended area of 3,010 claims now held was in close proximity to mines in which the existence of rich ore had been proved, there was reasonable hope that the company would meet similar conditions when unwatering was completed and development resumed in the near future.

EAST RAND PROPRIETARY AND PHŒNIX OIL.

At the East Rand Proprietary good progress had been made with the extensive scheme of reorganisation undertaken on the amalgamation. The advancing profits confirmed the chairman's statement at the last annual meeting that the board expected improved returns during the current year. Development was still being energetically pursued with satisfactory results, and Mr French expressed the opinion that the outlook was now better than for many years past.

As regards the Phœnix Oil and Transport, in which the corporation had increased its interest, the outlook showed considerable improvement as the result of the installation during 1928 of the most modern refining plant, and of the drilling of new oil lands which already indicated a satisfactory improvement in the production, as shown by increased outputs.

CITY DEEP, LIMITED.

(INCORPORATED IN THE UNION OF SOUTH AFRICA)

RESULTS OF A DIFFICULT YEAR.

The twenty-eighth ordinary general meeting was held in Johannesburg, on May 23, 1929.

The Chairman (Mr J. Martin) said:—The past year has been an exceedingly difficult and most disappointing one for the City Deep. For the first time in its history, a loss—and that a heavy one—was incurred; the yield of gold per ton milled was the lowest on record; working costs were, on the average, the highest since 1921; there was a further decline both in the grade of ore mined and developed and in the percentage of payability; and the ore reserve showed a decrease of 401,500 tons and a drop of 0·2 dwt. in value compared with the previous year. The most vigorous measures have, however, been adopted to cope with the situation, and I am glad to be able to express the belief that some of the most anxious of our difficulties have been overcome, that the progressive reduction of monthly working losses may be expected to continue, and that, given a reasonable share of good fortune, a profit-earning position will, at no distant date, be regained.

The tonnage of ore treated during 1928, at 1,027,000 tons, was 27,000 tons more than in 1927, but the value of the yield decreased by 3s. per ton milled, working costs increased by 1s. 10d. per ton milled, and a working loss of £122,940 was incurred. The total loss for the year, after adding the difference between sundry items of expenditure and revenue detailed in the working expenditure and revenue account, was £127,934.

At the commencement of the year the net cash liabilities of the company amounted to £33,966; to this must be added the following items, viz., net loss for the year, less forfeited dividends, £127,796; Government and provincial taxes, £4,085; undermining rights annuity, £6,560; expenditure on capital account, £146,093. After deducting from the above the decrease in cash assets of £49,505, the cash liability at the end of the year was £268,995; against this liability the company had £124,111 invested in cash assets.

I referred at our last annual meeting to the financial assistance rendered by the Central Mining and Investment Corporation, Limited, and Rand Mines, Limited, who had made a loan to your company up to an amount of £150,000, bearing interest at the rate of 7 per cent. per annum. These corporations have since agreed to increase the limit of the loan to £350,000.

The proportion of the outstanding liability of the scheduled mines in respect of miners' phthisis compensation for which the company is liable has been calculated at £288,388 as at July 31, 1928, an increase of £22,848 compared with the estimate made twelve months before.

The heavy indebtedness of the company on loan account has, of course, been due to the working losses incurred and the financing of the capital expenditure programme to which we were committed. That indebtedness has for the same reasons been increased since the beginning of the current year. The assistance rendered to the company during this critical period by the Central Mining and Investment Corporation, Limited, and Rand Mines, Limited, has been invaluable; but shareholders will, I think, agree that as soon as circumstances permit, proposals should be submitted by the Board for liquidating the loan and placing the finances of the company upon a more stable and satisfactory basis.

Capital expenditure during the current year and during the early part of 1930 is estimated at about £70,000, practically all of which will be spent on the equipment of the 26th main haulage level, which will be connected between the No. 1 and No. 2 shafts towards the end of this year, on the equipment of a main loading station at the bottom of the No. 4 shaft and on the equipment of main pumping stations at the 27th level, No. 4a shaft, and 25th level, No. 1 shaft, which will reduce pumping costs and provide an improved clear-water system for mine service. The completion of these necessary and urgent items will mark the end of the present programme, and no further capital expenditure of any importance is anticipated for some years.

The heavy fall in profits from 1924 onwards and the serious loss incurred last year have been primarily due to a persistent decrease both in the grade of ore developed and mined, and in the percentage of payability revealed by development. The effect of this marked change in the characteristics of the mine during recent years is seen

in the exceptional decline that has taken place in the yield of gold per ton milled—a decline the rapidity of which, the consulting engineer states, is without precedent in Central Rand mining.

The actual footage accomplished in 1928 was 46,524 feet, or 4,774 feet more than in the previous year. The footage sampled on Main Reef Leader was 12,813 feet, of which 5,990 feet were classed as payable, having an average value of 17·7 dwts. over a reef width of 18 inches or 318 inch-dwts. Some good values were obtained to the west of No. 4 shaft from the 21st to the 27th levels, and in the main cross-cut at the 28th level the reef intersection also gave encouraging indications.

The ore reserve as recalculated at December 31, 1928, totalled 1,809,000 tons, of an average value of 6·31 dwts. per ton over an assumed stoping width of 51·2 inches, showing, as already mentioned a decrease in tonnage of 401,500 tons, a decline in average value of 0·2 dwt. per ton and a reduction of 1·6 inches in the estimated stoping width.

During the first four months of this year there has been a small improvement in the percentage of payability obtained in development operations. The footage sampled was 6,560 feet, of which 50·8 per cent. was payable, with a value of 16·0 dwts. over 19·5 inches, or 312 inch-dwts.; throughout 1928 the percentage was 46·7 per cent. payable, at 17·7 dwts. over 18 inches, or 318 inch-dwts.

There are, therefore, favourable and unfavourable factors to be taken into account in assessing the prospects of the company, but that, after all, is an inseparable, inherent condition present, in a lesser or greater degree, in all mining ventures and enterprises. The City Deep has had its share of prosperity and adversity. We had sixteen years of substantial profits, the dividends over that period amounting to nearly £6,000,000. We have now had a year and more of heavy losses and are faced by a number of onerous problems. There can be no certainty about the future, but I feel hopeful that our difficulties will, in course of time, be overcome, and the mine re-established on a profitable basis. In that endeavour no effort will be spared by the management, by our technical advisers or by the board.

The report and accounts were unanimously adopted.

CARMELITE TRUST, LIMITED.
CONSIDERABLE PROGRESS ACHIEVED.

The first annual general meeting of the Carmelite Trust, Limited, was held on Monday, the 17th instant, at Winchester House, E.C.

Mr H. S. Horne (the chairman) said that to have made a net profit of £216,168 in a most difficult period of creating and building up their organisation was no small achievement, but even more important was the fact that they had sown the seed for carrying on an undertaking which already occupied a unique position in the general newspaper situation. The Trust was one of the largest holders of *Daily Mirror* ordinary shares, a company which had the controlling interest in the Daily Mail Trust and Associated Newspapers, Limited, and various other important investments. The Daily Mirror Company's ordinary shares, despite a record profit, had depreciated during the year by nearly 30 per cent. The break-up value of the assets, however, apart from goodwill, was substantially in excess of the current market valuation. The depreciation in values was not confined to newspaper securities and was due to a variety of causes. No useful purpose would be served at the present time by dwelling on the point, but if the occasion arose in the future he would not hesitate to dot the "i's" and cross the "t's" as to his views concerning this particular phase.

Their quoted securities, with a market value of £1,225,527 consisted almost entirely of holdings in leading newspaper-owning concerns, and the valuation placed on them should show a material appreciation at no far distant time. As to Associated Newspapers, Limited, deferred shares, where could one find a security paying quarterly dividends, increasing its earnings year by year, being in an exceptionally strong financial position, and in addition controlling a mining property that might be worth millions in due course. They understood that the shares of the Associated Newspapers, Limited, would be listed in New York, which would have a beneficial effect on the market, not only in those shares, but in certain other newspaper securities as well. Perhaps there, even more than in this country, it was realised what an enormous capital was required to reach the impregnable position which certain of the newspapers enjoyed to-day in this country. He hoped shareholders, despite the disappointment in not receiving a dividend in the company's first year, would appreciate the considerable progress that had been made and that the company had an organisation equipped to take full advantage of the expansion likely to come about in the specific sphere of operations they had chosen.

The report and accounts were unanimously adopted.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.
ADVANTAGEOUS SALE OF CHILIAN AND MEXICAN HOLDINGS.

The seventh ordinary general meeting of Whitehall Electric Investments, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London.

The Hon Clive Pearson (chairman of the company) presided.

The Chairman said: You were advised by letter dated October 9, 1928, of the sale of our holdings in the various Chilian and Mexican companies which then constituted the entirety of our investments. I consider we have made an advantageous sale both from the point of view of profit and because our investments need no longer be confined to two countries only. I also consider that Electric Bond and Share Company have made a good purchase, since the acquisition of our properties extends the geographic diversity of their operations. The criticism has been made that the sale to Americans of interests in companies built up by British capital looses for British manufacturers orders for materials which would otherwise continue to be placed in this country. It has to be remembered, however, that it is during the early years of development that the greatest expenditure is incurred in the way of plant and equipment and that our companies were developed and extended whilst under British control. Further, a large sum of money has been made available in English hands for reinvestment in new undertakings which in their turn should bring trade to this country.

DIVIDEND AND BONUS.

Our investments having been sold as at January 1, 1929, cum accrued interest and dividends, our gross income for the year amounted to the reduced sum of £517,105. After charging debenture interest, expenses and the preference share dividend, and adding the amount brought forward from last year and the amount previously applied in writing off discounts, &c., there is a total to be dealt with of £1,100,400. Your directors recommend a dividend of 2 per cent. for the year on the ordinary shares, together with a bonus dividend of 18 per cent., which will require £1,000,000, and leave a carry-forward of £100,400.

The sale of our investments realised a profit of £2,738,793, which, in accordance with the company's articles of association, has been credited to capital reserve. From this reserve two transfers have been made, namely, £625,000 to special reserve account and £729,313 in writing off discounts, &c.

As to the special reserve, this has been contingently set aside to provide a bonus of 5s. per share on the preference shares, to be payable on redemption or liquidation. The intention is to convert the existing £1 preference shares into shares of the same nominal value, but redeemable by the company at any time at 25s. per share, and also repayable on liquidation at 25s. per share. In the meantime, there is no proposal before the shareholders, and no action is required on their part. In any case, I would like to make it clear that there is no immediate intention to repay the outstanding debenture stock or to redeem the preference shares.

Our present position—and by that I mean the position of this company and that of its two subsidiaries—is a very liquid one, inasmuch as we have a temporary investment of some £1,500,000 in War Loan, we hold about £2,000,000 of 5-year 6 per cent. notes of South American Power Co., which are secured on bonds and debentures of the companies in Chile and Mexico previously in our ownership, and there is owing to us the balance of the sale price of our investments, which will give us approximately £6,000,000 of free cash.

INTERESTS IN DEVON AND SOMERSET.

Through the intermediary of Whitehall Securities Corporation, Ltd., we have acquired controlling interests in a number of companies operating electric undertakings in Devon and Somerset. These undertakings will be linked up by high tension transmission lines and the service extended to neighbouring towns and villages. The extensions we shall make in the system of distribution will reach many districts not yet served, and we have every confidence that at the same time the per capita consumption of the present users of electricity will respond to the improved facilities we intend to provide. Your directors are considering other investments in electrical and other public utility undertakings in some of which, although not necessarily in all, we anticipate obtaining share control.

I think we may congratulate ourselves upon the present position of the company. The trustees for the debenture stock holders hold shares and securities having a value of over £5,000,000, which are specifically charged to the service of the debenture stock. The position of both the debenture holders and preference shareholders has been improved, since they now hold a more widely distributed security for their investment.

The report and accounts were unanimously adopted

SIAMESE TIN SYNDICATE, LIMITED.
CURRENT YEAR'S IMPROVED RETURNS.

The twenty-second ordinary general meeting of the Siamese Tin Syndicate, Limited, was held, on the 19th instant, at Winchester House, London, Mr William H. P. Stevens (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the result of the company's mining operations during the past year was a total revenue from ore sales of £180,402, against £210,590 in the previous year. On the Ngow property 507·87 tons were produced in 1928, of a value of £78,677, which compared with 661·08 tons, of a value of £129,434 in 1927, while the productions from the Kopah property was 642·29 tons, of a value of £101,725, as against 418·81 tons, of a value of £81,156.

The Kopah figures for the past year included for the first time a full normal year's working of both the Plaiwah and Peek dredges The results of the working of Ngow property were obtained from the operation of the three dredges. The report of the manager of this estate explained the reasons for the relatively poor returns Improved returns began in November last, and the returns for the first five months of the current year were 326 tons, as compared with 183 tons for the corresponding period of 1928. For the same period the returns from the Kopah dredges had amounted to 284 tons, bringing the total output for the five dredges up to 610 tons, against 468 tons for the corresponding period of 1928. Whereas the total output for 1928 had increased by some 70 tons, the total proceeds showed a decrease of approximately £30,000. The net average price per ton received, before deduction of Government duty, was £156, as compared with £195 for 1927.

The net trading revenue of £35,227 compared with £71,031 for the previous year. They were fortunate in being able to bring into credit of the accounts a sum of £10,000 which became available during the year from income-tax reserve. Two interim dividends amounting to 20 per cent. had already been paid, and after writing off £21,947 for amortisation and depreciation, they carried forward £7,459.

During the year the company had acquired an interest in the Alaska Gold Dredging Co., which was formed in October last.

The company had undertaken an active prospecting campaign in the Australasian Dominions, and much work had been done, very promising results having been obtained on one property, the name of which it was inadvisable to mention.

The report and accounts were unanimously adopted.

BANGRIN TIN DREDGING COMPANY, LIMITED.
INCREASED OUTPUT ASSURED.

The ninth ordinary general meeting of the Bangrin Tin Dredging Co., Limited, was held, on the 19th instant, at Winchester House, London, Mr William H. P. Stevens (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the total revenue from mining operations during the past year amounted to £77,596, being the proceeds of 498·36 long tons of tin ore as compared with £106,451 and 544·09 long tons in the previous year. The net average price per ton received, before deducting Government duty, was £155, whereas for 1927 the average was £195. Expenditure on mining operations amounted to £24,729 and Government duty was £10,007, the comparable figures for 1927 being £21,661 and £17,881. The expenditure for the past year included only a short period of working of the No. 2 dredge, which commenced operations on the Bangrin Extended property on December 1st last, but no revenue accrued from this source in the accounts now submitted. Mining operations showed a net revenue of £42,958 transferred to profit and loss account, and this arose entirely from the No. 1 dredge on Bangrin property. A dividend of 10 per cent. had already been paid, and, after providing £13,366 for amortisation and depreciation for the past year, they were carrying forward £10,469.

It would be seen that the whole revenue of the year was obtained from the operation of No. 1 dredge only; that the tin recovered was 45·73 tons less than in the previous year, and that the average price realised was less by £40 per ton.

The great delay in the completion of the two new dredges and the power-house had been due to a combination of circumstances beyond the control of the directors—delay in the delivery of material and local labour difficulties. The first of these two dredges, known as dredge No. 2, was, however, completed and started to work out of her erection paddock in November. The various initial difficulties had been almost entirely overcome, and the dredge was now giving very satisfactory returns. No. 3 dredge was almost ready to start.

With three dredges in full operation a material increase in output was assured. This company, however, like all other tin producers, was passing through a period of depression, and the immediate future was obscure. He had no doubt that the price of tin would ultimately rise far above the present level, and that the average in future years would enable this company to distribute very handsome dividends.

The report and accounts were unanimously adopted.

BRITISH ELECTRIC TRACTION COMPANY, LIMITED.
SALE OF VARIOUS INTERESTS.

The twenty-third ordinary general meeting of the British Electric Traction Co., Limited., was held, on the 17th instant, at Winchester House, London.

Mr J. S. Austen (the chairman) said that the profits for the past year showed an advance of £17,000 on the figures of the previous year. That might not seem a particularly large sum, but he could assure them that when a company derived its sole income from dividends, it was a material amount even for a company of their size.

With regard to the past year, during that period they had sold their holding in the London and Suburban Traction Co. That had been the largest holding—amounting to a nominal sum of over £850,000—which they had held in any single undertaking. He was not going to say that they had got a wonderfully good price for those shares, but he would say that the money they had got would be of more worth to them than were the shares which were paying them no dividend at all. They had also sold the Shropshire, Worcestershire and Staffordshire Power Co., in which they had held about a one-third interest. The profit on that deal was nearer £700,000 than £600,000.

He would like to say a few words with regard to the value of the company's deferred stock. As stockholders knew when that stock had been created it had not been their intention to pay large dividends upon it, but it was a stock to which they must look for appreciation. He thought stockholders would agree that that appreciation came with a vengeance, for at the present it was quoted upon the Stock Exchange at £1,400 for £100 of stock.

As to dividends it was their intention to continue a distribution at the same rate as they were making this year, but if their revenue grew and they saw they were in a position to give the stockholders an extra bonus and then after that for an indefinite number of years to continue on the previous basis, they would not hesitate to do so. With regard to earnings, just at the moment they were lagging behind the capital value, and the reason for that was merely that they had received money which was not immediately remunerative. Therefore, if during the current year they had a material increase in their revenue, the stockholders must not assume that that represented an increase in their capital value, because it would merely be that revenue was catching up capital.

The report and accounts were adopted.

ELECTRIC SUPPLY CORPORATION, LIMITED.
INCREASED SALES—REDUCED CHARGES.

The twenty-seventh annual general meeting of the Electric Supply Corporation, Limited, was held, on the 17th instant, at Winchester House, Old Broad Street, London. Mr John G. B. Stone (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Gross earnings were practically stationary because of reductions in charges to consumers. The effect of cheaper coal upon our large power contracts accounted for nearly £2,000, and reductions during the second half of the year to the general consumers amounted to £7,000. We have always made a point of considering the consumers' interests as well as our own, and we felt it right to make these reductions, the effect of which, you will observe, is that we sold 11,627,623 units for practically the same amount as we sold 11,017,008 units in the previous year. We shall undoubtedly reap the benefit of this policy in the future from the largely increased demand which the reduced charges will encourage. Finally it will be observed that the gross profit, including dividends on investments, shows a small reduction of £1,433.

Coming to the revenue account of the company, you have already seen that the balance from this account is less than the corresponding figure for the year 1927, but as the interest on investments amounting to £13,247 has to be compared with £10,942 in 1927, it is in the trading profit that we fall short of the 1927 figure. Our working expenses amounted to £68,783, against £64,995 in 1927. The revenue at £109,099 is £50 more than in 1927.

The net revenue account shows on the credit side the balance brought forward from 1927, interest and rent at £1,903, as against £1,168 in 1927, and the balance from the revenue account reduced as already mentioned. When we come to the debit side, the dividend on the preference shares at £15,000 is for a full year on the increased preference capital, and the interim dividend on the ordinary shares at £10,000 is similarly on the increased ordinary capital. There is a corresponding increase in the extra remuneration to which the directors are entitled under the articles, and the balance carried to the balance sheet, £38,902, compares with £38,025 in 1927.

We recommend a final dividend of 7 per cent., making the same distribution as for the previous year, and we propose to carry forward £17,012 18s. 11d., against £10,525 8s. 3d. brought in from 1927.

The resolution was carried unanimously.

BOOTH'S DISTILLERIES, LIMITED.

CHAIRMAN'S CRITICISMS OF SPIRITS DUTY.

The ordinary general meeting of this company was held, on the 20th instant, at the Great Eastern Hotel, London, E.C.

Lord Lurgan, K.C.V.O. (the chairman), said that, considering the strenuous times which they had been through, and were still experiencing, he thought he was justified in saying that they might all be satisfied with what the company had accomplished. The turnover for the year showed an increase over that of the previous year, and the gross profit was greater by £27,709. Working expenses had naturally increased, and were larger by £20,074, which was mainly accounted for by advertising. After charging all expenses, the net trading profit came out at £66,283 as compared with £55,217 a year ago, an increase of £11,066, a result which, under prevailing conditions, he felt they were entitled to consider an adequate return for all their labours.

A year ago he ventured to speak rather fully on the iniquitous duty which the Government of this country imposed on spirits and the absurdly small margin of profit which they consequently had to work upon, and the results now submitted had only been arrived at after a great deal of strenuous work by their employees and the most rigid attention to detail and economy by the board and everybody connected with the company. He had hoped that the late Chancellor of the Exchequer would have seen his way to lighten this very heavy burden. Whether his successor, Mr Snowden, would have the temerity to rise to the occasion and have the courage to do what was obviously right in regard to a greatly overburdened British industry remained to be seen, but if his Government studied the unemployment question from an industrial standpoint—and this surely was their party cry—this industry must obviously require to be seriously considered, as it was bearing a much heavier burden than was any other trade in the country. The present heavy prohibitive duty placed their products quite out of the reach of the great majority of the workers in this country, who would be all the better for a little stimulant, and would not be forced to drink cheap foreign wines or inferior imitations of them. Early in this year they went through an extremely and almost abnormally cold period, and, while Bovril and other such commodities reaped great advantages, they, by reason of the absurd price they were forced by the Government to charge for their products, practically receiving no extra benefit at all. The revenue produced by this industry was of paramount importance, not only to the country, but to the Government in office, and he ventured to say that the continuance of the duty on the present basis would eventually "kill the goose that lay the golden eggs."

ALARMING DROP IN REVENUE FROM SPIRITS.

In proof of what he had said he might mention that there had for a number of years past been a steady decline in revenue from this great industry. The figures for the Government year just issued showed an alarming decrease in Customs and Excise, amounting on spirits to no less than £1,767,000, which simply meant a decrease in the consumption of their commodities. Their goods were placed beyond the masses by an unfair and restricted duty, which should certainly be greatly modified. They had to work desperately hard to produce the results which they placed before the shareholders.

There was another irksome matter which had a direct bearing on their position: he referred to "Dora." "Dora," and its very offensive and tiresome restrictions, meant that the number of hours for consumption of spirits was less than it used to be, and there was no doubt that "Dora," in every sense of the word, kept visitors away from this country and drove them to France, where everybody was free to do what he liked, to say nothing of those Americans who came over here after suffering under prohibition in their own country. Again he wondered whether our new Home Secretary would have the courage to tackle this question. He was glad to notice that "Dora's" chief sponsor, Sir William Joynson Hicks, was going to be relegated—or should he say elevated—to a place where, at any rate, he would be comparatively harmless in the future.

Referring to the balance sheet the chairman pointed out that certain of the changes in the figures were due to the fact that additional businesses had been acquired during the year under review. The profit and loss account showed a net available balance of £30,348, as against £30,547 a year ago. This figure was arrived at after allowing for the dividends on the preference and cumulative preferred ordinary shares, setting aside £15,000 for redemption of debentures, writing off £15,294 from investments, and the whole expense incurred in connection with the new share issue, viz., £3,305.

The report and accounts were adopted.

INDEPENDENT INVESTMENT COMPANY, LIMITED.

BOARD'S SOUND INVESTMENT POLICY.

The fifth ordinary general meeting of the Independent Investment Co., Limited, was held, on the 17th instant, at Winchester House, London, Mr T. J. Carlyle Gifford, W.S., presiding.

The Chairman said: The accounts differ from those of previous years, in that the capital has now been divided into five per cent. preference stock and ordinary stock, the amounts being £252,000 of preference stock and £168,000 of ordinary stock. In other respects, the main feature of the balance sheet is that the amount of money borrowed at March 31, 1929, was £60,000 less than at March 31, 1928, and, in view of the general situation in recent months, I think you will agree that it is satisfactory to find our position so unencumbered. The general outlook is obviously uncertain, and, having borrowing power which we can make use of when thought desirable, we are in a position to act if we think prices of securities have fallen to an attractive level.

The market value of our securities as at the close of the year is equivalent, after deducting the final dividend and having written off the stamp duty on last year's increase of capital, to £163 for each £100 of ordinary stock. This calculation is made on the basis of a liquidation in which the preference stock would be repaid at par.

As regards the future, we are each year more impressed by the fact that the ordinary shares and common stocks, which afford the best prospects of successful investment, are often those which at the moment of purchase give a low current yield on the price paid for them. If too much thought has to be given to earning an immediately attractive return on our own ordinary capital, there is a risk of being precluded from investing in shares which on their own merits appear most suitable for investment, and we, therefore, as a board, do not wish you to have too high hopes as to the rapidity of the progress of our revenue account in the near future. Taking a longer view, the results should be not less satisfactory than if we had aimed at an immediately higher income. We naturally do not anticipate that our policy will endanger the maintenance of the present rate of dividend, but, while we could increase that rate if we were to buy securities giving a high immediate yield, we prefer to let you know now that that is not likely to be the line which we shall follow.

The report was unanimously adopted, and a final dividend of 5½ per cent. on the ordinary stock, making 7½ per cent. for the year, was declared.

MALACCA RUBBER PLANTATIONS, LIMITED.

BOARD'S FORWARD SALES POLICY.

The twenty-third annual general meeting of the Malacca Rubber Plantations, Limited, was held, on the 18th instant, at 2–4 Idol Lane, London.

Mr Charles Emerson (the chairman) said that their crop for the year amounted to 4,988,910 lb., compared with 5,283,150 lb. for 1927, and they recorded a net profit of £53,766, as contrasted with £114,545 for the previous year, a falling-off which shareholders would have anticipated owing to the materially weaker market for the raw material which had ruled during the accounting period. They proposed to pay a dividend of 7½ per cent. for the year on both classes of shares. That, he thought, might be said to be a reasonably good showing under the somewhat depressing conditions.

For the current year they estimated an output of 5,753,000 lb., which would, if obtained, constitute a record in the history of the company. Present indications were that their estimate would prove to have been justified, and if that were so they would have 764,090 lb. more rubber to market at, they hoped, a slightly better price, with commensurately favourable results upon their profits. Their costs for the past year were appreciably lower than those for the previous year, and were, in fact, the lowest in the history of the company.

They had decided to embark upon an alternative form of culture, and had selected oil palms as being the most likely to yield a substantial return upon the capital involved. Two other companies in the Guthrie group had come to the same decision, and it was quite conceivable that the three companies would be operating some 15,000 or more acres of oil palms in one compact block.

With regard to forward sales they regarded their 1930 sale as a prudent measure of insurance, because no one could tell what market conditions would be during that year. A company of this size must carry large and heavy obligations in any event, and they deemed it only prudent to secure their position in advance when they could do so upon reasonable terms. They could adopt a policy of not selling forward upon any occasion, but that would involve the necessity of carrying much heavier liquid reserves, and he did not believe that it would commend itself to the general body of shareholders.

He committed himself to no prophecy regarding the near future of the industry, but as to its ultimate well-being he did not think there was need for heart-searching.

The report and accounts were unanimously adopted.

WILLIAM CORY AND SON, LIMITED.

DIVIDEND OF 17½ PER CENT.

The thirty-third annual ordinary general meeting of William Cory and Son, Limited, was held, on the 20th instant, at the Cannon Street Hotel, London.

Sir A. C. Cory-Wright, Bart., the chairman of the company, who presided said that the record of steady progress had been fully maintained. The trade for the past year had resulted in a profit of £772,289. The payment of a final dividend of 12½ per cent. on the ordinary and employee shares, making with the interim dividend of 5 per cent. a total of 17½ per cent. for the year, was proposed and the board also recommended that £150,000 be placed to reserve, bringing that fund up to £1,250,000, and that the balance of £677,497 be carried forward.

Throughout the greater part of the year under review, the depression through which the coalmining industry had been passing for the last five years had continued unabated, and prices fell to a low and uneconomic level. In every district it had been found necessary to close down many of the more expensively-worked pits, and a large number of miners had been thrown out of employment. The condition of affairs had grown so serious that it became imperative that steps should be taken to reorganise the industry and place it on a sound basis. Agreements were entered into by most of the collieries on the lines of local amalgamations and co-operative arrangements whereby both prices and output could be regulated. Those schemes, while they had caused difficulties to those engaged in the distribution of coal, and to consumers, had proved of benefit to the collieries. Owing to the curtailment of output, it had not been easy to supply the consumer with either the quantity or class of coal required, and during the early part of the current year efforts to meet the position were further handicapped by a long period of severe weather conditions which prevailed both at home and all over the Continent.

He was of opinion that a closer association between the productive and distributive side of the industry was essential in any complete scheme for the reorganisation of the industry, and if that could be brought about on the lines of co-operation whereby the influence and facilities that the larger distributors possessed for the maintenance and development of both the home and foreign markets could be utilised to the best advantage. He felt certain that it would not only be beneficial to the industry generally, but would prove advantageous to all consumers.

The report and accounts were unanimously adopted.

HOVIS, LIMITED.

INCREASED NET PROFITS.

The meeting of Hovis, Limited., was held, on the 18th instant, at the Caxton Hall, Westminster, London, Mr A. H. Dence (chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said it was very gratifying that, after another most trying and difficult year, the directors were again able to show a small but very satisfactory increase in the company's net profits. That result had not been achieved without much hard work, and it represented a very useful increase in the company's turnover through its depôts and allied companies and it also resulted from increased care in their expenditure and rigid economy in their administration. He thought it was most necessary to emphasise the fact when dealing with a commodity such as theirs that formed the most important part of the food of the nation, that their profits were not by any stretch of imagination the result of profiteering. It was surely a matter of general knowledge that the reward of the milling industry to-day, and for some years past, had been almost meagre—for months together milling might be and frequently was carried on at a dead loss, and white flour was sold under cost price. That, of course, was due to keen competition from both home and abroad, and was complicated by the great difficulty all millers had to face together with the risks in buying wheat. That was a very unhealthy and unsatisfactory state of affairs, and unless something was done to remedy it milling would become one of our depressed and dying industries, and the country would grow more and more dependent on Overseas supplies.

The businesses of their allied companies continued to show progress, and to bring in good returns. Finally, the Chairman remarked that this was the thirty-first annual meeting of the company, and it must be apparent to all the shareholders that in a company of this age there were many of their staff who had served for a great number of years, and it was incumbent on the directors that some provision should be made to meet the inevitable call for those who had fallen ill or who had reached such an age as to be no longer capable of carrying on. A scheme had been carefully considered by the board, and had been worked out actuarially by an insurance company, and they reckoned that the annual cost to the company would be about £2,220.

The resolution was carried unanimously.

LOBITOS OILFIELDS, LIMITED.

A YEAR OF GREAT DIFFICULTY.

The twenty-first annual ordinary general meeting of Lobitos Oilfields, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London, E.C. The Rt. Hon. Lord Forres (the chairman) presided.

The Chairman, in moving the adoption of the report and accounts, said the year had been one of great difficulty. Their chief interest was the ownership of shares in the Cia Petrolera Lobitos, a Peruvian company, whose results for the ten months ended October 31st last showed a loss of £43,522. Shareholders were informed in January last that drilling was being limited by the Peruvian company during the period of low prices, which policy had enabled them to dispense with the services of a large number of men, and at the same time reduce the amounts spent in the engineering shops, transport, &c., all of which in the aggregate would save their financial resources.

During the ten months the Peruvian company had drilled 121,068 ft., as compared with 177,766 ft. during the previous twelve months. In one well a depth of 6,332 ft. was reached, which was a record for the field. The well passed through several oil sands on its way down. Production for the whole year 1928 was 314,281 tons, as compared with 296,248 tons for the preceding year, and was since being maintained at about 26,000 tons per month. The total gasoline produced during the ten months was, in round figures, 1,690,000 gallons, for which, although the price obtained was not high, they had received a new and welcome addition to the company's income, especially when the price of oil was so low.

With regard to market conditions, while the price obtained for oil in 1927 showed a reduction of £1 2s. 11d. per ton on the 1926 average, the price obtained during 1928 was 8s. 7d. lower still. They reached a price which was below cost of production, taking into account the necessary depreciation. Information as to development of other companies in which they were interested, mainly the International Petroleum Company and Anglo-Ecuadorian Oilfields, was satisfactory. Since the accounts were closed some improvement had taken place in the basic price of oil of the quality they sold, and for 1929 they should obtain a slightly higher premium, and the board therefore felt justified in recommending the payment of a dividend of 10 per cent., although it was not fully earned during the year.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 15, 1929 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	3,600	From Revenue	6,786
Interest, &c., on Debt	16,481	Increase in Debt	14,227
Sinking Fund	615		
Sundries	26		
Increase in Balances	291		
	21,013		21,013

Revenue amounted to £6,786,400, against £5,800,000 in the corresponding week last year. Income tax yielded £685,000, against £11,000, and super-tax £400,000, against £120,000. Estate, &c., duties yielded £1,320,000, against £1,530,000. Customs produced £2,488,000, against £2,003,000, and excise receipts were £500,000 lower, at £1,472,000. The National Debt was increased by £14,227,000, as shown below :—

(000's omitted.)

Other Countries	1,601
Total declared value of imports	1,013,527

Exported from Great Britain and Northern Ireland.

To—	£
Austria	13,000
Poland (includ. Danzig)	1,709
Germany	20,420
Netherlands	1,543
France	18,182
Egypt	27,430
United States of America	838,000
Bombay *via* other Ports	51,230
Other Countries	274
Total declared value of exports	971,788

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follow:—

1929.	ARRIVALS.	£	1929.	WITHDRAWALS.	£
June 14	Bars bought	2,618	June 14	Bars sold	8,578
„ 15		Nil	„ 15		Nil
„ 17		Nil	„ 17	Bars sold	5,158
„ 18		Nil	„ 18	Bars sold	1,117,633
„ 19		Nil	„ 19		Nil
„ 20	Bars bought	47	„ 20		Nil
Total		2,665	Total		1,131,369

Net withdrawals, £1,128,704.

Messrs Samuel Montague and Co. write as follows on June 19, 1929:—

GOLD.

The Bank of England gold reserve against notes amounted to £163,241,482 on the 12th instant (as compared with £162,968,424 on the previous Wednesday), and represents an increase of £9,335,167 since April 29, 1925—when an effective gold standard was resumed.

In the open market yesterday about £655,000 bar gold from South Africa was available. The U.S.A. exchange being favourable to the export of gold to that country, there was keen competition from New York for the amount offered in the open market, and the bulk—about £545,000—was secured at the maximum price of was withdrawn from the Bank of Englaand for the same destination —as shown in the figures below. The balance—about £110,000— of the gold in the open market was absorbed by the requirements of India and the home and Continental trade. There was a net efflux of gold of £788,263 during the week.

SILVER.

The steadier tone prevailing last week has continued, mainly owing to a slackening off in the selling which has been the feature during the past few weeks. China operators have been buyers on most days, but have shown willingness to sell at rates slightly above current prices. The Indian Bazaars have made small purchases for shipment, and also in cover of bear commitments, whilst America has been inclined to support the market.

Mail advice from Bombay under the date of May 31st contained the following information:—

"The daily trade return of the Bombay Chamber of Commerce shows an export of 408 ingots of silver to London, valued at Rs. 5.88 lacs, on Government account."

The following were the United Kingdom imports and exports of silver registered from mid-day on the 10th instant to mid-day on the 17th instant:—

Imports.	£	Exports.	£
Germany	16,795	Poland	107,032
Canada	19,262	Egypt	17,300
Other countries	16,443	British India	365,512
		Other countries	8,920
	£51,500		£498,764

The stock in Shanghai on the 15th instant consisted of about 78,600,000 ounces in sycee, 126,000,000 dollars and 7,780 silver bars, as compared with 77,500,000 ounces in sycee, 128,000,000 dollars and 5,000 silver bars on the 8th instant.

ANGLO-ORIENTAL MINING CORPORATION.—The following cabled advices have been received by the Anglo-Oriental Mining Corporation, Limited, regarding the May production of the affiliated tin companies: In the East: Larut, 80 tons; Jelapang, 33 tons; Kuala Kampar, 115 tons; Chaangkat, 54 tons; Rawang, 70 tons; Kundang, 37 tons; Tavoy, 51 tons; Theindaw, 3½ tons; total, 443½ tons. Nigeria: Associated Tin of Nigeria, 250 tons; Northern Nigeria (Bauchi), 160 tons; Mongu (Nigeria), 35 tons; Tin Properties, 15 tons; Juga Valley, 12 tons; Junction Tin Mine (Nigeria), 8 tons; total, 480 tons. Cornwall: Wheal Kitty, 50 tons; Polhigey, 31 tons; total, 81 tons.

THE BROKEN HILL PROPRIETARY COMPANY, LIMITED.—Report for four weeks ended April 24, 1929:—Coke ovens: The average number of ovens in operation was 76·22, the production for the period being: Coke, 12,733 tons; tar, 134,509 gallons; sulphate of ammonia, 164 tons. Benzol: Satisfactory quantities of refined motor spirit continue to be produced by this plant. Blast furnace dept.: Production of pig iron amounted to 14,972 tons. Open hearth dept.: Production of Ingot steel amounted to 20,418 tons. Blooming Mill: This mill produced 19,853 tons of blooms and billets for the period. 28-in. Mill: The output from this mill amounted to 14,903 tons of rails, beams, billets, angles, clutch bars, and sheet bar. Broken Hill: The slime plant working without interruption treated 12,191 tons of oxidised slime tailings, producing 1,646 tons of lead concentrates, assaying 40 per cent. lead and 17 ozs. silver per ton. The despatches to Port Pirie smelters amounted to 1,472 tons.

BROKEN HILL SOUTH, LIMITED.—For the four weeks ended June 1, 1929, 22,220 tons of crude ore were treated and produced 4,359 *tons of leady concentrates* assaying 67 per cent. lead and 24 ounces silver per ton; also 3,954 tons of zinc concentrates assaying 49 per cent. zinc. Decreased output due to labour holidays, and three days' strike.

BURMA CORPORATION, LIMITED.—(Incorporated in India.)—Cable advices received this day report:—During the month of May 40,747 tons of ore were mined, including 4,278 tons of high-grade ore. 30,600 tons of ore were milled in the treatment plant, producing 10,010 tons of leady concentrates. 15,850 tons of lead-bearing material, including 3,715 tons of high-grade ore, were smelted in the blast furnaces, producing 7,955 tons hard lead for treatment in the refinery. Refinery products were 6,567 tons refined lead, and 623,222 ounces refined silver. Of silver production, 46,976 ounces were recovered from the treatment of copper matte. Zinc plant produced 4,900 tons zinc concentrates, assaying 8·59 ounces silver, 4·27 per cent. lead and 52·9 per cent. zinc. In addition to the above, 1,193 tons copper matte were produced from the treatment of accumulated smelter by-products and 4,342 tons copper ore; 100 tons of refined antimonial lead were also produced. Included in the tonnage of refined lead is 287 tons recovered from the smelting of copper ore.

EAST POOL.—May:—Tons of ore milled, 7,464; tons of black tin recovered, 84·75 lbs.; black tin recovered per ton of ore milled, 25·44; tons of arsenic recovered, 25. Estimated revenue, £10,200. [April, £10,008.]

ELECTROLYTIC ZINC CO. OF AUSTRALASIA, LIMITED.—Production during four-weekly period ended May 29th: 3,982 tons zinc, of which 70 tons used at the works. Silver-lead product for shipment to Port Pirie for realisation containing 560 tons lead, 68,000 ounces silver.

SULPHIDE CORPORATION, LIMITED.—During the four weeks ended May, 18 1929, 11,135 tons of Central Mine-ore, together with 1,630 tons of slimes, were milled at the Central Mine, producing 1,955 tons of leady concentrates (including 70 tons from the de-leading plant), which assayed 53 ozs. silver, 67 per cent. lead, together with 3,055 tons of zinc concentrates assaying 7 ozs. silver, 4 per cent. lead, and 50 per cent. zinc per ton, and 184 tons special slimes, assaying 8 ozs. silver, 12 per cent. lead and 6 per cent. zinc per ton.

ZINC CORPORATION.—May:—Lead concentrator treated 24,105 tons of ore, producing 5,485 tons of lead concentrates and 4,212 tons of *zinc concentrates*. Estimated gross profit, with lead at average price for May (£23 17s.), zinc at contract flat rate, silver 2s. (£27,847). Variation for each £1 fluctuation in price of lead, £3,381. [April profit, £27,515.]

Reports and Notices.

Associated Electrical Industries, Limited, announce that, having decided to retire from active business, Mr. H. C. Levis has tendered his resignation as Chairman of Associated Electrical Industries, Limited, and it has been accepted with regret. Sir Felix J. C. Pole, General Manager of the Great Western Railway, has been appointed Chairman in his place, and will give his whole time to Associated Electrical Industries, Limited, except that the Great Western Railway have a call on his services in a consultative capacity.

GOVERNMENT STOCKS, &c.

3½ PER CENT. METROPOLITAN CONSOLIDATED STOCK.—Holders of this stock, due October 6, 1929, are reminded that the list of applications for conversion into 4½ per cent. London County Consolidated Stock will be closed on June 25, 1929. Any 3½ per cent. Metropolitan Consolidated Stock not converted will be redeemed at par on Monday, October 7, 1929.

MISCELLANEOUS.

JOHN BROWN AND COMPANY, LIMITED.—The net profit for year ended March 31, 1929, was £87,262, against £67,390 for preceding year. The preference dividend absorbed £87,500. The carry forward is reduced from £91,163 to £90,925. The directors have before them the necessity for dealing with the book value of the fixed assets and investments, which are in excess of present values, notwithstanding the depreciation which has been applied in the past. The shareholders may, however, rest assured that this situation will be dealt with whenever the directors consider the proper time for doing so has arrived. Cash and bills stand at £46,294, against £62,116. Debtors are at £438,099, against £484,262. Reserve account remains at £300,000. Contingency account is £325,000, against £375,000.

SALTS (SALTAIRE) LIMITED.—The profit and loss account for year ended March 31, 1929, reveals a decline in trading profits from £133,728 to £45,234. Gross income from investments amounted to £85,814, against £85,453. Over provision for income tax brought in £29,467, making a total income of £160,515, against £219,182 for preceding year. Directors' fees again absorbed £4,000. No income tax has been paid against £16,875. The depreciation fund again receives £40,000. Debenture interest took £64,280, against £66,199. The net profit is reduced from £92,108 to £52,235. The total available amounted to £149,722. Preference dividend for year ended March 31, 1926, paid during year ended March 31, 1929, amounted to £84,000. The amount at credit of profit and loss is £65,722, against £97,487 a year ago. Bank overdraft is now £404,057, against £242,833. Cash is at £465, against £693.

DECCA RECORD COMPANY, LIMITED.—A group holding a large proportion of the shares of the company has appointed a committee, at the request of the directors, to investigate the position. The board has expressed its desire to co-operate with the committee to the fullest extent, and, meantime, the committee is assured that the company has ample resources and is in a strong financial position. The committee is composed of the following members: Sir Duncan Watson, J.P., Sir W. Harry Peat, K.B.E., Brendan Bracken, M.P., F. W. Rickett, E. R. Lewis.

THE UNITED MOLASSES COMPANY, LIMITED.—The National Distillers Products Corporation of New York has contracted to sell to the United Molasses Co., Limited, of London, its molasses business represented by stock ownership in the Old Time Molasses Co., a Cuban corporation, also 100 per cent. of the Solex Car Line Corporation, and one-half interest in the Eastern Alcohol Corporation, which owns and operates one of the world's largest and most up-to-date industrial alcohol plants, located in Philadelphia; the other half interest in the Eastern Alcohol Corporation is owned by E. I. Dupont de Nemours and Co. The purchase price will be satisfied partly by payment in cash and partly by an issue to the vendors of 200,000 fully paid United Molasses Co., Limited., ordinary shares, which will rank *pari passu* in every respect with the existing ordinary shares. In addition, 80,000 fully paid ordinary shares have been issued *in exchange for shares in companies which were already partly* owned by the United Molasses Co., Limited.

MARCONI'S WIRELESS TELEGRAPH COMPANY, LIMITED.—The committees representing the two classes of £1 shareholders have felt obliged to hold up the formation of the proposed investment company, pending the decision on the proceedings instituted in the Chancery Court by an independent £1 shareholder. The result of these proceedings, which accorded with the committees' expectations, has in no way modified their views as to the expediency of proceeding with the plan to form such investment company. They have received sufficient support to justify, in their opinion, the formation of this company forthwith.

VOCALION GRAMOPHONE COMPANY, LIMITED.—Trading profits for year ended March 31, 1929, amounted to £102,094 against £76,941 for preceding year. To this sum must be added £13,635

THE

CEMENT INDUSTRY

A series of three articles dealing with Cement and Cement Companies has been arranged to appear in the *Investors' Chronicle*. They are the outcome of an exhaustive enquiry by Mr. Roy Hopkins extending over many months. The first article appeared in the issue of 15th June. The subsequent articles will appear on 22nd June and 29th June, respectively.

This week's article discusses:—

NATIONAL MONOPOLY AND WORLD COMPETITION IN THE BRITISH CEMENT INDUSTRY

It will show that the British cement industry has moved towards rationalisation more quickly, perhaps, than any other industry, an achievement accomplished, however, only after a fierce struggle.

In the third article Mr. Hopkins will deal with the financial position of the leading British cement companies and will make a survey of market prospects.

The Investors' Chronicle may be obtained at all bookstalls and newsagents throughout the country, or a copy of each of the three issues containing these articles will be sent, post free, on receipt of **1s. 9d.**, by

The Publisher:

"THE INVESTORS' CHRONICLE"

14, BISHOPSGATE, LONDON, E.C.2

derived from profits on realisation of, and dividends on, investments making total profit £115,729, from which has been deducted £20,291 for depreciation and amortisement of copyrights, &c., leaving a net profit of £95,438 against £96,627 for preceding year. The ordinary dividend is again 40 per cent. The carry forward is £38,653 against £23,216 brought in.

TREDEGAR IRON AND COAL COMPANY, LIMITED.—The report for the year ended March 31, 1929 points out that the heaviest depression which has ever affected the coal industry characterised the opening of the company's financial year, and not until November was any improvement apparent. The arrangement of a minimum price for South Wales coals had a good effect and the state of trade made it possible to obtain more remunerative prices from January, 1929, onwards. The company has obtained some advantage from the railway rates rebates, which came into force on December 1, 1928. The profit secured was £46,151 against £11,852 for preceding year. The sum of £10,000 is put to depreciation. A dividend of 2½ per cent. free of tax is paid on "A" and "B" shares, against nothing for preceding year. The carry-forward is reduced from £47,819 to £40,693. Bank overdraft has disappeared from the balance sheet. It was £22,257 in March 31, 1928, balance sheet. Cash is at £86,705, against nothing a year ago.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

All cereal crops in the United Kingdom have derived considerable benefit from the recent spell of fine weather, and spring sowings now present a healthy appearance after an indifferent start, while winter wheat indicates a fairly good yield. Limited offerings of native varieties came to a sluggish market, and prices for the most part were nominally unaltered. Imported descriptions, however, were in fair request, and rates generally firm, a good clearance being effected of Australian and Plate cargoes on passage and for early shipment. Canada is putting forward offers freely, but buyers are reluctant to follow the upward trend in view of the heavy statistical position, and meanwhile are able to cover their pressing requirement on more favourable terms from the southern hemisphere. The United States Farm Relief Bill has now been passed in an amended form, but being already discounted exercised no influence on the market, as in any case surplus stocks are not reduced thereby and must eventually be offered for export. The new winter crop gives every promise of a larger yield than last year; harvesting is progressing steadily, and will soon become general. The progress of the new crops now claims chief attention in the international situation, and is apparently a more influential factor than the North American surplus, being mainly responsible for the present firmness. Canada reports rain in some districts, but more moisture is needed. Conditions are similar in Argentina, but the Australian crop is making satisfactory progress, and European prospects are maintained. Weekly shipments continue on a liberal scale but only moderate arrivals occurred at United Kingdom ports. Of feeders, Plate maize ruled firmer on a good demand for both cargoes and parcels to the U.K., and improved inquiries from the Continent, sellers adopting a reserved attitude, but South African offers are restricted, very little being available before August-September shipment. Feeding barley also firmer, but oats neglected and in buyers' favour.

Wheat.—Quiet. No. 2 Northern Manitoba, ex-ship, 45s. 9d.; No. 3, ditto, 45s.; No. 4 Manitoba, 43s. 9d.; No. 5, 39s. 6d.; No. 6, 38s. 3d.; Rosafe, 64 lbs., 40s. 9d.; Barusso, 63½ lbs., for shipment 40s. 6d.; Australian, 44s. ex-ship, per 496 lbs. English, 9s. 5d.-9s. 8d. per 112 lbs.

Flour.—Quietly steady. London, straight run, 34s. per sack delivered. Of imported, Manitoba patents range from 33s. 6d. 36s. 6d., Minneapolis, 34s. 6d.-35s. 6d.; Australian, 31s. 6d.-32s. ex-store, per 280 lbs.

AMERICAN WHEAT MARKETS.

After a fairly steady rise owing to the need of rains in the chief growing districts, there was a sharp drop upon the news that the drought had broken. This was, however, shortlived, owing to the strength of cash and export demand, and the close was higher on the week. Quotations :—

Nearest Future.	Jan. 4, 1928.	Jan. 2, 1929.	June 20, 1928.	June 5, 1929.	June 12, 1929.	June 29, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.)	156½	122	136⅜	115	114½	116⅞
Chicago (No. Winter)— Cents per 60lb.	166½	116⅜	137⅛	107	105⅞	109⅛

Visible supplies of wheat in Canada at 65,511,000 show a decrease of 833,000 as compared with the previous week's figures. Supplies a year ago stood at 62,477,000.

THE COAL TRADE.

Our Sheffield correspondent writes :—The position of the coal industry is fairly steady, the only notable weakness being the house coal section. Demand for industrial fuel tends to improve and there is no surplus of coal suitable for export. Blast-furnace coke is fairly strong in the home market, with moderate business being done abroad.

Our Glasgow correspondent writes :—Shipping business is being hampered by a scarcity of vessels, which is preventing shippers from taking up the quantities for which they are committed and leading to some price-cutting on the part of the collieries. The registered collieries are not affected at the moment through the shortage of ships. The Lothian collieries are still in need of business in steams, and in Lanarkshire all round coals are slow of sale. Shipping prices are approximately as follows (f.o.b. district ports) :—Lanarkshire.—Ell best, 14s.; splint best, 16s.; splint second, 15s. 6d.; navigation, 17s. 6d.; navigation second, 15s.; steam, 13s.; Hartley, 16s. 6d.; trebles, 14s. 6d.; doubles, 13s. 3d.; singles, 12s. 6d.; pearls, 11s. 6d.; dross, 10s. Fife.—Screened navigation, 17s. 6d.; first-class steam, 14s. to 14s. 6d.; third-class steam, 12s. to 12s. 6d.; trebles, 14s. 6d. to 15s. 6d.; doubles, 13s. 6d.; singles, 12s.; pearls, 11s. Lothians.—Prime steam, 13s.; secondary steam, 12s. 6d.; trebles, 14s.; doubles, 13s. 6d.; singles, 12s. 3d.; pearls, 11s. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 16s. 6d.; steam, 13s. 3d.; trebles, 13s. 9d.; doubles, 13s. 3d.; singles, 12s. 9d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes :—There has been no improvement this week in the general position on the Cardiff coal market Prices of sized and small coals have continued very firm, but there is something like a glut of large coals, and it is only loyalty on the part of salesmen to the minimum price schedule that is preventing a fall in quotations. Stocks are accumulating, and in some of the districts pits are less regularly employed than they have been at any other period this year. In these altered conditions there is a more insistent demand for output regulation, and hopes are now entertained that the conflicting views of some of the more important groups as to the respective merits of output control and price control will ultimately be reconciled on the basis of a scheme embodying both methods of regulation. The Buenos Ayres Electricity Works have placed a contract for 100,000 tons and an inquiry for a further 100,000 tons is anticipated, while there are also expectations that an order will be placed during the next few days by Australian buyers for 40,000 tons of Monmouthshire coals. The following are the current approximate quotations :—Best Admiralties, 19s. 9d. to 20s.; seconds, 19s. to 20s.; best drys, 19s. to 19s. 6d.; Black Veins, 18s. to 18s. 6d.; Western Valleys 17s. 9d. to 18s.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. 9d. to 14s.; cargo smalls, 12s. to 13s.; coking smalls, 14s. to 14s. 6d.; anthracite, best large, 33s. to 36s. 6d.; Red Vein, large, 23s. to 27s.; machine-made cobbles, 40s. to 44s.; French nuts, 42s. to 44s.; stove nuts, 39s. to 42s. 6d.; rubbly culm, 10s. to 10s. 6d.; foundry coke, 27s. 6d. to 36s. 6d.; patent fuel, 20s. 6d. to 21s. 6d.; pitwood, ex ship, 27s. to 27s. 3d.

IRON AND STEEL.

We extract the following from the weekly report of The London Iron & Steel Exchange :—Some improvement was noticeable in the iron and steel market in the latter part of last week, when a fresh spurt of buying took place which to some extent has been continued. It is realised that we have now entered upon the quiet time of the year, but business is maintained in a fair volume, although the export trade has not come up to the expectations entertained a month or two ago. This, however, is generally attributed to the financial stringency which is affecting some of the most important of the overseas markets. In the home market the pig iron position has become firmer if anything, and the shortage of North East Coast iron and the difficulty of obtaining parcels for near delivery has led to an improved demand for iron from other districts. In the semi-finished department also business continues brisk, and the British works are doing well as a result of the scarcity and high prices of Continental material. The demand for finished iron and steel has been somewhat irregular, and the quieter demand from the shipyards is affecting this section of the market. Nevertheless, the general volume of business is good.

Our Middlesbrough correspondent writes :—A firm tone pervades the market, but business in Cleveland iron is considerably restricted, owing to the shortage of supplies. There are no indications of any increased quantities being available from makers for the open market, and as merchants have now very little local iron to offer, consumers have to look to other districts for supplies, and further important purchases of Northants iron are reported. Second-hand holders of Cleveland have realised 72s. 6d. for small odd lots of No. 3 for early delivery, and this was the nominal figure at Tuesday's weekly market, No. 1 being 75s., No. 4 foundry 71s. 6d., and No. 4 forge 71s. Shipments of all kinds of pig iron to June 18th total 16,105 tons, against 23,710 tons to May 18th. A fair trade is passing in hematite. Makers have moderate quantities available for this month and for July onwards full supplies can be secured. The price for mixed numbers is firm at 74s. and for No. 1 74s. 6d. The demand for steel on home account at the recently advanced prices is quiet, but producers have important tonnages on their books at the old figures which keeps them busy, and a fair amount of export business is being secured. Home prices are unchanged, viz., steel plates, £8 12s. 6d.; angles, joists and channels, £8 2s. 6d.; subject to rebates. Outside the rebate scheme iron crown bars are unchanged at £10 15s. 0d.; heavy steel rails, £8 10s.; black sheets, 21/24-gauge, £10 10s. 0d.; galvanised corrugated sheets, 24-gauge, £13 15s. 0d. The demand for coke is increasing, and prices have an upward tendency. 20s. is now a minimum for good average qualities delivered works, and 20s. 6d. is quoted for some brands. There is not much new business in ore, but sellers are not pressing for business. Best rubio is firm at 23s. 3d. to 23s. 6d. c.i.f. Tees. The number of furnaces in blast in this district is increased to 44, two at Jarrow having been blown in on Tuesday.

Our Sheffield correspondent writes :—Makers of Sheffield's staple steel goods are benefiting in increased orders, from the expansion of trade in some of the great industrial centres of the country. Sheffield has only gained in a limited degree by this revival, as her railway, steel and waggon plants are still badly depressed. Under plans of rationalisation a local tyre plant—one of the largest in the country—has been closed, and the work previously booked there will be transferred to other plants. Specialities in steel are selling freely and several departments are on full time. On the other hand business still drags in ordinary commercial lines and prices are cut to the bone owing to excessive competition. The output of acid steel is abnormally low. Business in basic steel is active and the output of the Lincolnshire works is being increased to meet the heavy demand. Tool steel is doing a little better. Exports of tools and cutlery show a tendency to expand, although the abnormal proportion of small orders militates against profitable operation.

Our Glasgow correspondent writes :—In Glasgow and district there is no great activity in the iron and steel markets. Pig-iron business continues to be on a small scale and the output of the furnaces still in blast is more than sufficient for present requirements. There has been a better demand for plates during the current week and on the whole steel makers are fairly well placed with orders for early delivery. The demand for British semis is also fairly steady but no betterment is noted in the malleable iron trade. The position at the tube works remains highly satisafctory. The improvement in the demand for galvanised sheets is maintained and meantime prices are held firm although export buyers are endeavouring to place business at reduced prices.

Our Cardiff correspondent writes :—In the iron and steel trade conditions continue, on the whole, fairly satisfactory. Exports of tinplates last month established a new record, while those of galvanised sheets were also in excess of the recent monthly average. Prices of both these products, however, are unaltered, and quotations for Welsh and foreign tinplate bars are stationary on the basis of last week's figures.

OTHER METALS.

Tin.—The standard market presented firmer features, sellers being somewhat more reserved in face of improved American and Eastern advices, also a better general demand, though a good deal of irregularity was noticeable at times. Stocks in London and Liverpool warehouses for week ending June 15th amounted to 8,498 tons, compared with 1,559 tons at same period last year. Standard cash changed hands at £201-£202 7s. 6d.; three months, £205 10s.-£204 5s., £206 5s. and £205 10s. In the East, sales were reported at £205-£208-£207 10s. and £208 17s. 6d. per ton c.i.f. terms.

Copper proved a quiet market, and, with sellers prominent, a weaker tone resulted, dealings being chiefly in cash and early positions. Standard, cash, sold, £75 10s. to £72 15s.; three months, £74 17s. 6d. to £73 ton.

Lead slightly irregular but firmer on balance, with a fair business in force. Good soft foreign pig, June, sold, £23 15s. to £23 18s. 8d.; July, £23 15s.-£23 18s. 9d.; September, £23 13s. 9d. to £23 16s. 3d. U.K. consumption for May, 23,426 tons, against 23,628 during April.

Spelter market opened easier, but steady since on improved inquiries. June, sold, £26 3s. 9d.-£26 1s. 3d. and £26 2s. 6d.; July, £26-£26 1s. 3d. and £26; August, £26 to £26 1s. 3d.; September, £25 18s. 9d. to £26 and £25 18s. 9d.; October, £26 ton.

Aluminium steady. Ingots and bars for home delivery, £95 per ton.

Antimony slow. English regulus, £48 to £52; foreign spot, £34 to £34 10s. ton.

Wolfram quiet. Straits nominally quoted 31s. per unit c.i.f.

Quicksilver quiet. Spot, £22 2s. 6d. to £22 7s. 6d. per bottle.

Tin Plates quiet. I.C. coke, prompt and forward, 18s. 4½d. to 18s. 7½d. per box f.o.b. Swansea.

Facilities for Travellers in S. America

Travellers to Latin-American countries can obtain valuable facilities through the Bank of London & South America. With branches and agencies at all strategical points, this Bank issues letters of credit, renders status reports on South American firms, supplies a free Monthly Review of market information, and offers a complete international banking service between Great Britain and South America.

THE COTTON TRADE.

LIVERPOOL, June 19th.

The market continues featureless with very little business passing. Spot sales for the week 13th to 19th (inclusive) are 43,000 bales, of which 26,930 are American, 2,050 Brazil, 2,850 Argentine, 2,900 Peru, 3,550 Egyptian, 2,600 African, 1,550 East Indian, and 570 sundries. Imports for the same period are 23,816 bales, of which 4,217 are American, 3,644 Brazil, 3,429 Argentine, 3,318 Peru, 2,122 Egyptian, 1,921 African, 4,534 East Indian, and 631 sundries. Quotations to-day are: American Middling, 10·20; Egyptian Sakel, 16·40; Egyptian Uppers, 11·26; Brazil Fair, 10·30; Peru G.F. Mod.-Rough, 12·50; Peru G.F. Smooth, 11·15; West African Middling, 10·25; East African G.F. 11·45.

MANCHESTER, June 19th.

The tone of the market has been rather firmer and inquiry has shown some expansion. Spinners and manufacturers, however, complain of offers being on a very low basis and progress in the way of securing contracts has been difficult So far the wages question has not had any vital effect upon the market, but it is realised that a serious labour situation may arise towards the end of next month. The feature of interest during the week has been the better advices from China. At the auction sale in Shanghai on Tuesday a revival of demand was experienced, and the clearances showed an increase of 30 per cent. on the previous auction, with higher prices all round. More new business has been attempted, especially in white shirtings and dyed goods. No particular development has occurred in the off-take for India, but a few more contracts have been arranged in dhooties for the up-country markets and in bleached shirtings for Bombay. No activity worth mentioning has been reported for the several minor outlets, but steady buying has taken place in home trade fabrics. Rates in American yarns have been rather firmer and some spinners have sold a little more freely. Business in Egyptian counts has been patchy.

THE WOOL TRADE.

Our Bradford correspondent, writing on Wednesday, says:—There is, perhaps, a more general feeling that prices have touched bottom, but it cannot be said that spinners and manufacturers are at all responsive. Users everywhere still appear to be waiting for a lead, though no one seems to have any idea as to the quarter from which it may come. Probably little will be done until the raw material position has again been tested, and for this reason the London auctions which open next month are awaited with considerable interest. There is no doubt that a firm series in Coleman Street Wool Exchange would materially assist in restoring confidence both in the West Riding and on the Continent. New business in tops is of a retail character, and low prices are still being offered, but several of the larger topmakers are practically out of the market; they realise that under existing conditions they cannot make the prices which they need if the cost of production be taken into account, and so they prefer to maintain their recent quotations and wait for things to improve. Weak sellers, however, are to be found here and there, and the position generally is against the seller. The only exception is found in the lower qualities of crossbred tops, in which supplies are comparatively small and prices, therefore, remain steady. Little of interest has developed in the yarn market. Fine counts are plentiful and low prices are being accepted by firms who have stock or are anxious to keep machinery running. The wages question has been considered by the Emergency Committee of the Industrial Council, but the discussion yesterday proved abortive and the general position remains unchanged.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The season will commence in Sydney on September 9th, and before then some of the earliest shorn Queensland clips will be on the Brisbane market. It is evident that wool is selling in Sydney on a level which is fully equal to the market value of tops in Bradford. It is agreed on all hands that merino wool is now at a price which should enable it to be handled profitably, and there does not seem to be any likelihood of bigger supplies of any class of raw material coming forward than can be absorbed if patience is exercised. The sale of the clips to be offered in Brisbane will be followed with close interest, for the prices realised will indicate how things are likely to go when selling begins in good earnest. The Australian clip is not likely to be much, if any, larger than last year. Though encouraging rainfall reports have been published recently, drought has been rather severe in various parts. This will militate against any increase in the quanttiy, as well as tending to the production of a slightly finer fibre. It has been quite appropriately commented in Bradford that the disappointment in handling the last clip has been intensified by the fact that a good deal of it was of excellent Bradford style. While conditions in consuming centres do not show any great improvement, there is evidence that the standing of the raw material is fairly sound. The declining tendency in merino tops has been checked, topmakers refusing to believe that it is impossible to sell without accepting lower prices. The stiffening in the attitude of topmakers has no doubt been largely induced by the firmness of wool, and it would really seem as if some of the reports received, even from the selling end of the trade, have been too pessimistic. Demand for tops has certainly not developed much, and the call for yarns by manufacturers is capable of considerable improvement. The future of prices is entirely dependent upon the development of machinery requirements, and if the dispute about the rate of wages payable to operatives could be settled, there would be a better prospect of getting more spindles and looms running.

HIDE, LEATHER AND ALLIED TRADES.

The home hide position is steadier to firm, and advances have been made at most provincial auctions this week, higher prices being expected at the Bermondsey auctions. Tanners are fighting the advances as much as possible as they fear they may upset the values of leather just as trade is opening up a little. Overseas hides share the firmness, and Argentine fregorifics are now quoted at 8¾d. with light at 8 3/16d. Saladeros are firm, and Russia is quoted as a buyer of Salto and Casablanca hides at 7 15/16d. Dry River Plates are also advancing, and sales of B.A. Americanos have been made at 12⅜d. African hides are again much in request, but the higher prices has affected business. Dry-salted Capes of first and second quality have sold at 12½d.-11½d. respectively. Australians are again firmer, and dry-salted Queensland meatworks have sold on a basis of 9½d. The Chicago market is cabled as steady with best heavy steers selling freely at 17 cents. Although prices are still rather unsettled, there is a better business doing in sole leather. Light bends from dry hides are wanted by shoe manufacturers, but it is a good sign that wet-salted bends of lighter weights are also being used for the better-class boots and shoes. Repairers are also busier, and merchants report good deliveries of the sorts of bends favoured by this section. Offal is selling rather better, and parcels of bellies and shoulders at firmer prices have gone into consumption. There seems a shade more confidence in the dressed leather section, and inquiries for box and willow calf have been frequent now prices are more established. Glacé kid in black and brown is still selling well, although shoe manufacturers seem unable to appreciate the fact that raw skins are dear, and want the finished leather at below cost. Suede and reptile leathers are also wanted, some varieties of the latter being scarce. Imports of dressed leather for the first five months of 1928–29 were valued at £3,827,147 and £2,876,776 respectively—a very decided fall, showing how dull the state of trade has been. Shoe manufacturers are busier, and many have enough orders in hand to last them for some weeks ahead.

JUTE TRADE.

DUNDEE, June 19th.

Trade in jute goods continues in a very quiet manner. Consumers are only purchasing small quantities to meet their immediate requirements, and spinners and manufacturers are compelled to continue their policy of curtailing production. Much machinery is standing, and the majority of the works are running only four days per week, closing down on Friday evenings till Tuesday mornings. Brighter prospects have appeared on the horizon through a better market for Calcutta goods during the past few days, and it is hoped that this may be the forerunner of an improvement generally throughout the trade. Users of jute cloth have operated sparingly during the past three months, and stocks are bound to be greatly reduced. Especially noticeable has been the lack of demand for linoleum hessians, and it is the works engaged in the production of these which are most severely hit. Ordinary hessians are not so badly off, the widths ranging from 45 to 60 in. being quite busy. Unless conditions improve, the works will probably be off for two to three weeks at the holiday period at the end of July. The raw material is not being allowed to fall in price, even though the prospects for a good crop in the coming season are bright. Sellers are maintaining a very reserved attitude, and appear afraid to sell "bear." Offers therefore are very few. Supplies of old crop are decreasing. The forecast has again been exceeded, the quantity accounted for during the eleven months ending May 31st being 10,300,000 bales, against 9,916,000 bales estimated in September last. Prices of jute are from £33 for First Marks and £31 for good Lightnings, August/September shipment, while Daisee assortment rules at £29 10s. for long group to £30 for short group, and Tossa assortment at £31 10s. for good marks, October/November shipment.

Jute yarns have declined in value in face of a meagre demand. Common 8 lb. cops are offered at 3s. 1d. to 3s. 2d., and 8 lb. spools at 3s. 2d. to 3s. 3d. There are buyers at 3s. 0d. and 3s. 1d. respectively, but spinners will not reduce their prices further, owing to the fact that the cost of the raw material is even relatively higher than their quotations. Twist is from 5 3/16d. to 5⅜d. for 3-ply 8 lb., and 24 lb. sacking weft at from 3½d. to 3¾d., and 8 lb. chains at 5d. to 5⅛d. Rove is steadily held at £27 for 48 lb., and £17 for 200 lb., while fine yarns show no change. Carpet 14 lb. warp is from 4¾d. to 5d. Prices of jute cloth have been reduced to a very reasonable level. For 10½ oz. 40 in. hessians 4 3/16d. to 4¼d. is quoted, and 8 oz. at 3 3/16d. for the common makes in the 40 in. and also wide widths, but a fraction more must be paid in the medium widths. Heavy goods are only being bought in small quantities.

VEGETABLE OIL AND OILSEEDS.

Markets are fairly active. Linseed oil is scarce on spot and for near delivery, and with a good consumptive demand prices advanced to £29 10s. per ton, naked, ex Hull mill, but with easier seed values is now lower at £29 5s. for prompt, with £28 12s. 6d. quoted for June and July-August delivery. Cotton oil is in fair demand, heavy crude Egyptian quoting £28 spot and £27 10s. June-August, and common edible £31 spot. Other seed oils are about unchanged. In the oilseed section linseed is irregular, and after a rise on reports of reduced surplus of Plate seed and the need of rain in Canada, it again relapsed. Demand, however, is poor. Some little business in Plate to Hull is recorded at £15 10s. for shipment June-July to August-September, but Indian is entirely neglected. The quantity afloat for Europe at 182,000 tons is slightly less than a week ago. A moderate trade has transpired in cotton seed. Black Egyptian (old crop) has been sold at £9 2s. 6d., July and August loadings, and new crop at £9 7s. 6d. September, and £9 5s. November-January. At the close linseed prices were 2s. 6d. easier. Soya beans are quiet, but some business in early positions has been done on Continental account.

OVERSEAS PRODUCE.

FOOD BEVERAGES, &c.

SUGAR.—Both on the grocery and manufacturing side of the commodity, buyers vie with each other to secure supplies, and prices are advancing. A rise of 1s. was registered on all spot sugars. An interesting item was the discarding of the habit on the part of British refiners of booking orders at the old figure, after an advance had been announced. Tate and Lyle's cubes now 26s. to 26s. 6d. as to quality; London granulated, 23s. 1½d.; T.L., ditto, 22s. 10½d.; ditto, month forward, 22s. 9d.; yellow crystals, spot, 21s. 7½d. T.L. granulated, sold, 22s. 3d. ex refinery. White Mauritius, spot, London, ranges from 20s. 3d. to 20s. 9d., and extra-fine parcels, 21s. 3d. Czecho granulated, ready, 10s. 9d.; November-December, 11s. 1½d. f.o.b. Hamburg. Dutch J., ready, 10s. 10½d., f.o.b. Rotterdam. Polish crystals, ready, 10s. 4½d., f.o.b. Danzig. White Mauritius, September-November shipment, 13s. 9d., c.i.f. U.K. Java sugars steady; 10,000 tons browns, June shipment sold, 10½ guilders ex go-down, and 4,000 tons white, 12 guilders. White Java, July to March, 1930, shipments, quoted 11s. 4½d., c. and f. Calcutta. Cuban raws again higher, and a steamer cargo, 96 per cent. July sold to the United Kingdom at 8s. 9d. c.i.f. Terminal sections again stronger and extensive transactions occurred in raws, but quieter later. August sold, 8s. 2½d. to 7s. 10½d.; December, 8s. 8½d. to 8s. 4½d.; March, 9s. to 8s. 7½d.; May, 9s. 3¾d. to 8s. 10½d. White, August sold, 10s. 6d. to 10s. 9d. and 10s. 1½d.; March, 11s. 7½d. to 11s. 6d. and 11s. Cuban receipts last week, 43,934 tons, against 31,438 last year; exports, 91,996, against 52,747; stocks, 1,369,144, against 1,209,482; centrals, 2, against nil. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending June 15th totalled 128,909 tons, against 149,405 last year.

1-4, Great Tower Street, London, E.C.3.

COFFEE.—There was no new feature to note in this market. Moderate supplies offered in auction, and really attractive roasting and liquoring parcels were but poorly represented. These met a fair demand and commanded steady prices. Inferior qualities only saleable at easier prices.

COCOA.—Spot market dull, unaltered. Accra F/F, October-December sold, 42s. 6d. f.o.b. Business again kept down in Terminal market. September sold, 45s. 4½d., and December, 46s. to 45s. 10½d.

TEA.—Indian auctions during the week amounted to 47,039 packages. Competition for most descriptions continued active, and on balance there was no essential change to note in prices. Common easy. Ceylon auctions embraced some 30,085 packages, which met a fairly good demand, and, allowing for continued falling off in quality, rates remained about unaltered. Java and Sumatra sales steady. Business resulted in new season's Keemun on overland sample at 2s. 6d. to 3s. per lb.

RICE.—Spanish and similar kinds steady. Burma firm in local markets, Siam being decidedly dear and Saigon steady. But there is a woeful absence of business throughout the set of European markets.

BEANS.—Butters firm, quiet. Spot, 41s.-43s. Rangoon haricots, spot, 13s.; afloat, 12s. c.i.f.

PEAS.—Market quieter. Japanese, spot, 17s.-17s. 6d.; afloat, 16s. 9d. to 17s. 6d.; June-August, 17s.; September-October, 19s. cwt. c.i.f.

SPICE.—Pepper steady but quiet. Lampong, August-October quoted, 1s. 3½d.; Muntok, May-July, 2s. 4⅛d.; August-October, 2s. 0½d. London stocks of black about unaltered on the week, but white reduced 59 tons. Cloves dull, unaltered; also sago flour. Dutch farina and tapioca. African ginger, spot, 62s. 6d. cwt.

FRUIT (Dried).—Currants steady, but demand restricted. Pyrgos quoted 44s.; Amalias, 45s.-45s. 6d.; Zante, 45s.-46s.; Vostizza, 50s.-56s.; Australian, 45s.-51s. Sultanas, Smyrnas cleared. Australian, new, 40s.-65s.; old, 32s.-35s.; Cape, bleached, 52s.-68s. Raisins dull. Valencia, common to good, 42s.-45s.; Lexias, new, 45s. Figs in small supply. Bags, genuine, common to fine, 27s. 6d.-35s.; new September shipment, 21s.-22s. c.i.f. Dates in fair demand. Siar, spot, 14s.-16s.; first tide, 13s. 6d. per cwt.

EVAPORATED FRUITS.—Trade generally quiet, but late rates were maintained, Californian plums being sparingly offered. Fair supplies of Australian were available, but moved off slowly. Californian plums, 20's-30's, quoted 66s.-67s.; 30's-40's, 58s.-59s.; 60's-70's, 44s.-45s. Pears, Lake County, 80s.-100s.; Australian, 75s.-76s. Apricots, South African Royal, 57s. 6d.-117s. 6d.; Australian, 67s. 6d.-100s. Peaches, Californian, choice, 54s.; extra choice, 56s.; fancy, 60s. Apples, Californian, spot, sliced, extra choice, 77s. 6d. Almonds quiet, and tendency easier. Mazagan, 127s. 6d.; Mogador, 127s. 6d.; Majorcas, 130s.; Bitter-Jordan, 180s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—A good movement continues for all descriptions of Californian fruits on the spot, and prices at a firm level, First shipment of the new pack may be later than usual and prices are slightly above ruling last year, due to crop damage by frost. Australian descriptions move off freely, heavy deliveries being made against forward contracts. Singapore pines in better demand on spot, while packers indicate higher prices. South African sell readily, Hawaiian being reservedly offered. Tomatoes quiet, but available supplies are in moderate compass and forward parcels firmly held.

CANNED FISH.—Sardines steady. Portuguese clubs, 5s. per dozen tins. Lobsters firm, with larger quantities available, and best halves quoted 140s.-145s. Salmon also in good request at full rates. Red talls, spot, 43s. 6d.-46s. 6d., forward quotations being much above spot parity; pink ditto, 26s. 6d.-28s. 6d.; halves, 33s.-36s. 6d. Japanese crab firm on limited offerings, finest quality ruling at 98s.-102s. 6d.

CANNED MEAT.—Corned beef quiet, but ox tongues tend firmer on light supplies, also Danish lunch, with a good trade passing. Danish boned hams sell readily and market firmer, also Dutch veal and brawn.

CONDENSED MILK AND MILK POWDERS.—Market steady. Full cream, sweetened, English, spot, 41s.; Dutch, ditto, 37s.; July, 37s. 6d.; August-September, 38s. 3d.; machine-skimmed, sweetened, English, spot, 24s. 6d.; Dutch, ditto, 22s. 6d.; July-August, 23s., all in 5-cwt. barrels. Powders, Spray process, F.C., 26 per cent., 2 by 56-lb. tins, crated, 92s.; M.S. (1-cwt. cases), 41s.; roller ditto, F.C., 26 per cent., 72s. 6d.; M.S., 31s. 6d., all nett, duty paid, ex-wharf London. On the grocery side, F.C.S., 19s. 6d.; M.S., 9s. 3d., basis per case, usual packing. Danish cream, evaporated, unsweetened, 48 by 16-oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 48 by 14 oz., 20s. per case.

You can have

THE MYSTERY OF THE TRADE DEPRESSION

By Frederic E. Holsinger

A book which in simple and non-technical language makes a sensational exposure of what is really wrong in the economic system, and of the fallacies and contradictions in the teachings of the Economists,

ON FIVE DAYS' APPROVAL

By sending 7s. 6d. (the price of the book) and eightpence extra (for postage). If the book is received back within seven days of despatch the whole price of the book (7s. 6d.) will be forthwith returned.

For one hundred years this country has tried to maintain Employment and Prosperity upon the basis of an Export Surplus or the Export of Capital. The result has been a disastrous failure, as shown by over a million unemployed and the most appalling poverty.

In *The Mystery of the Trade Depression* it is shown that it is a ridiculous fallacy that Employment and Prosperity can be maintained by the Export of Capital. The logic of the book is simple. The only possible justification of the Export of Capital is the Import of Interest in the form of foodstuffs, raw materials and other goods. It is proved in *The Mystery of the Trade Depression* upon irrefutable evidence that the income from British capital invested in oversea lands is a financial fiction, that no foodstuffs, raw materials or other goods are received in payment of interest and that the capital exported has been completely lost to this country.

There could be no more sensational disclosure in the economic sphere, because this country is the world's largest exporter of capital.

In no less than ten chapters the author answers in an entertaining and detailed manner all the pretexts upon which the export of capital has hitherto been maintained.

The author shows, among other things, how exactly the export of capital arises and that it is destructive of genuine trade, because it must have the effect of compelling the debtor countries to try to reduce imports and increase exports in order to find a surplus of exports with which to make payments of interest.

The author shows that the tariffs in the Dominions, India, the Republics of South America and the States of Central Europe—all debtor countries—are an inevitable reaction to the Export of Capital from this country.

In a chapter, entitled "The Myth of Mercantilism," the author gives the first economic explanation of the absorption of the precious metals by India, where the author has lived for thirteen years, and explodes the fallacy of the Economists that it arises from "an ingrained fondness for handling hard gold" in the people of India.

***The Mystery of the Trade Depression* is a most sensational and epoch-making book. It will revolutionise economic thought more completely than Adam Smith's "The Wealth of Nations." Incidentally, it is a vindication of John Stuart Mill, who, unlike Adam Smith, was, upon theoretical grounds, opposed to the Export of Capital.**

HONEY.—Market fairly steady, but only a moderate trade passing. Further supplies of new crop Jamaica and San Domingo are to hand, also substantial arrivals of new crop New Zealand. Jamaica, good amber to find pale, 49s.-55s.; dark to fair amber, 40s.-47s. 6d.; San Domingo, white set, 50s.; New Zealand, dark amber, 50s.-55s.; medium, 55s.-65s.; light, 65s.-85s.; white and water whites, 65s.-87s. 6d. cwt.

RUBBER.

No new feature crept into the general situation. Meantime, there is a moderate amount of business in progress, with but minor price fluctuations. The way London landings and deliveries proceed so far, a drop of about 400 tons is promised for Monday next. Standard sheet, spot, and June, sold 10 11/16d.-10 13/16d.; July, 10 3/4d.-10 11/16d.; August, 10 3/4d.; July-September, 10 11/16d.-10 3/4d.; October-December, 11 1/16d.; and January-March, 11 5/16d. London stocks reduced 493 tons on the week, landings being 1,142; deliveries, 1,635; stocks, 31,142, compared with 41,185 at corresponding period last year. Liverpool stocks 17 tons down; landings, 232; deliveries, 4,733.

GENERAL.

JUTE.—Market generally slow, but steady. Firsts, June-August, old crop, quoted £29 15s.; new, August-September, £30 17s. 6d. ton c.i.f. Hessians steady. Hamburg stocks, 99,701 bales, being a decrease on fortnight of 5,927.

HEMP.—Market fully steady, with a moderate demand, chiefly for K and H grades. J No. 2, June-August, quoted, £38; K for sellers, £33; K, August-October, buyers, £33; L No. 1, June-August, quoted, £33; L No. 2, £31; M No. 1, £31; M No. 2, £26 10s.; G, £38 15s.; H, buyers', shippers' terms, £33 10s.; S No. 1, quoted, £53 10s.; S No. 2, £49 10s.; S No. 3, £39 10s.; C No. 2, £31 10s.; C No. 2, £28 15s. c.i.f. There is quite a dearth of offers regarding African sisal, and prices advanced sharply. No. 1 f.a.q., June-August, quoted, £39 10s.; marks, £40, with finer from £40 10s.-£41; No. 2, f.a.q., quoted, £38 c.i.f. Manila receipts for last week, 34,000 bales, against 23,000 last year estimate for next week, 29,000, and following week, 29,000. Shipments to Europe last week, 13,000 bales; U.S.A., 15,000; and Japan, 3,000. Local stocks, 3,000 bales up on the week at 212,000

SHELLAC.—Steady, quiet. T.N., spot, 195s. 6d.; August, 194s. 197s. to 196s. 6d.; October, 197s. to 199s. cwt.

COPRA continues in quiet demand and trend of values in buyers favour. Straits, sun-dried, to Rotterdam, June-July, also July-August, £21; August-September, £21; Dutch East Indies, June-July, £20 15s.; Ceylon ditto, £22; South Sea, smoked, to Marseilles, June-July, £19 10s.; sun-dried, ditto, £19 17s. 6d.; palm kernels to Hamburg, June-July, £16 16s. 3d. per ton.

MISCELLANEOUS.—Coconuts, quoted, 13s. to 19s. per 100. Coir yarn, Ceylon, £19 10s. to £37 10s.; Cochin, £23 to £41; Ceylon bristle, £18 15s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon 1s. 10½s.; Java, 2s. 3½d.

METROPOLITAN CATTLE.—June 19.

THE MONEY MARKET.

THE Money Market this week has been dominated by preparations for the end of the half-year on the one hand and by the heavy and continued gold losses by the Bank on the other hand. Since Monday, heavy borrowings from the Bank took place every day in preparation for the half-

year stringency, and on Wednesday, when the Bank return was made up, discounts and advances showed an increase on the week of no less than £19,391,214. As a result of these borrowings, money has this week been unlendable at rates as low as 4 per cent. The Bank's gold losses, however, had the natural result of forcing up discount rates, which, on Wednesday, were quoted at 5⅜ per cent. for one month's, two months', and three months' bills alike. On that day, fears of an impending rise in Bank rate to 6½ per cent. were freely expressed, and the market was in a thoroughly nervous condition.

* * * *

To give the week's gold movements in detail, on Monday the Bank acquired £10,000 in sovereigns and sold £1,721 of bars, these transactions being of very minor importance. Tuesday saw the first of the big outward movements, Germany taking £1,873,718 out of the Bank, in addition to all the new gold available in the market. On Wednesday, Germany took another £1,540,592 from the Bank, while on Thursday the Bank lost £1,000,000 to the United States and £1,804,564 to Germany. Including the shipments of £1,100,000 taken from the Bank on Tuesday of last week, the Bank's net loss during the present efflux is, in round figures, £7,300,000, of which £5,200,000 has gone to Germany and £2,100,000 to the United States. By Thursday evening, the Bank's gold stocks were down to about £157,000,000.

* * * *

The shipments to America are easily explained, but the reasons for the strength of the reichsmark and the shipments to Germany have been the subject of some misunderstanding. One factor clearly is that, especially since the reparations settlement, Germany has become an attractive centre for money seeking investment, and to this must be added a certain amount of foreign short-term borrowing by German municipalities and also the recent appearance in the London market of a fair number of German bills. About £900,000 of insurance money was also paid against the *Europa* claims this week. Finally comes the $50,000,000 credit recently arranged for Germany in New York. Here it is reported that these dollars are being sold in Paris in exchange for sterling, and that while the French get the dollars, Germany gets sterling, which she is taking in the form of gold. It is needless to add that the report that the Federal Reserve Banks are in any way connected with this transaction is entirely groundless. It will be recalled that an exactly similar triangular transfer was the cause of the gold shipments to Germany last autumn.

* * * *

The truth of the matter is that London is back in its old position as a free gold market and the world's banker. London is open to supply gold on demand, and circumstances at the moment are such as to induce other centres to ask for gold. In spite of all fears to the contrary, the Bank has not felt it necessary to raise its rate, and indeed it is difficult to see how it could have at present justified such a step. Apart from the reassuring fact that about £2,500,000 of gold is due to reach London within the next ten days, current gold exports are the result of special circumstances discussed above and also in the *Economist* of last week. Even though the foreign exchanges are slow in responding, the conditions that have caused the outflow are still properly to be regarded as temporary. If this assumption were to prove incorrect and the outflow continue at its present rate, drastic action would be necessary. But in the meantime to raise the rate would impose a handicap on industry to remedy a situation which is in no way due to inflation at home.

	June 27, 1929.	June 20, 1929.	June 13, 1929.	June 6, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%

Market rate (3 months' bills)	5⅜	5 5/16	5 1/16–5/16	5 5/16	...

The salient features of the week's Bank return are declines of £3,293,540 in Gold and of £5,723,836 in the banking department's Reserve, and increases of £11,183,115 in Bankers' Deposits and of £19,391,214 in Discounts and Advances. Most of these movements have been already discussed, but the fall in the Reserve is in part due to an inopportune increase of £2,429,296 in the note circulation. The Proportion of Reserve to Liabilities has fallen sharply from 55⅞ to 44 23/32 per cent. It should be understood, however, that much of this decline is due to the week's borrowings at the Bank. Apart from this purely artificial factor, the Proportion would only have fallen to about 52½ per cent. A better test of the effect of recent gold losses on the Bank's own position will be obtainable in a fortnight's or three weeks' time.

NEW YORK MARKETS.

Our New York correspondent cables:—Wall Street is undisturbed by the advance in call money to 10 per cent. The tone of other money is easier, and the stringency in the call rate is due to mid-year disbursements for dividends and interest by corporations and to heavy window-dressing. Gold imports for the week amount to $17.6 millions, but nevertheless member banks have increased their borrowings at the Reserve by $40 millions, and here has been a further rise of $122 millions in brokers' loans. The bill holdings of the Reserve system are little changed, but Government securities are $10 millions up, probably on the 15-day repurchase agreement usual at the end of the month. The Reserve ratio is 75.3 per cent., compared with 68.7 per cent. last year.

THE STOCK MARKETS.

The stock markets were overshadowed by unfavourable monetary developments. Gilt-edged stocks were most closely affected, but caution was the dominant note everywhere, investment purchases, as well as speculative operations, being "held up" for the time being. America purchased a few favourite stocks, and Marconis were firmer on the consummation of the Cable-Wireless merger, but dullness obtained elsewhere in the industrial market, as in the Home Railway, Rubber, Oil, and Mining Markets. An offer was made of £5,000,000 debenture stock of the Agricultural Mortgage Corporation—a trustee issue yielding a full 5 per cent.

THE COMMODITY MARKETS.

Markets have done little more than hold their own. In spite of a serious shortage of tonnage, coal prices are fairly well maintained. The volume of business in the iron and steel trades compares very favourably with that of the corresponding season in previous years. Apart from an improvement in the advices from China, Manchester trade is increasingly unsatisfactory, and uncertainty continues to hamper the woollen industry. There has been a sharp advance in hides. The timber trade has greatly improved its position. More interest has been shown in vegetable oils and oilseeds, and wheat has risen several points.

THE FOREIGN EXCHANGES.

The principal features of a quiet market were the continued weakness of sterling on New York, and the rather spectacular variations of the reichsmark before and after the gold shipments to Germany. New York opened at 4.84⅞, but remained weak, being quoted at 4.84 27/32 on Thursday. Montreal went from 4.88⅛ to 4.84 1/16. Paris gained four points at 123.92, after being 123.90 and 123.98, and Brussels was three points better at 34.90. The peseta, after early weakness, now appears to be pegged at 34.25. Amsterdam lost ⅛ at 12.07⅛, and Berlin moved from 20.31½ to 20.35¼ on Tuesday's gold shipment, reacting on Thursday to 20.34½. Buenos Aires gained 5/16d. at 47⅛d. on gold being shipped to New York. The rupee was very firm at 1s. 5 7/16d., but the yen lacked strength and was erratic at 1s. 9 23/32d. Batavia gained a point at 12s. 10½d. In the forward market New York was quoted at narrower discounts of ⅛ cent and 7/16 cent; Paris went from a half-centime discount to par for both periods. Berlin was at considerably narrower discounts of 3 and 9 pfennigs for the two periods. The silver markets showed an easy tendency, China affording the principal support, whilst America and the Continent were ready to meet any demand. Prices for both spot and forward fell 3/16d. The Chinese silver exchanges were not much affected, Hong Kong being unchanged at 1s. 11⅛d., whilst Shanghai lost ¼d. at 2s. 4⅝d.

THE POOR RELATIONS.

Poor Relations traditionally display three characteristics in their attitude towards their rich kinsmen. They are respectful—even humble; they are expectant if not importunate; but neither their humility nor expectancy prevents them from being very acutely critical. All these three shades of feeling are, we believe, mingled in varying degrees in the attitude of the statesmen and the peoples of the various countries of Europe towards that great nation across the Atlantic to whom most of them are individually in debt and all collectively are looking expectantly, but not always confidently, for signs that the Rich Uncle will fully recognise in policy and in action the implications and obligations of his powerful and favoured position.

The most Christian of these feelings—humility or respectfulness—is, we believe, more prevalent than Americans might be led to think by a casual review of superficial indications. It is not merely a humility of overawed regard for great wealth, power and resources. In the homes as well as in the Chancelleries of Europe there is a keen remembrance of the idealism of President Wilson (not wholly obliterated even yet by its tragic sequel), of the great war relief work of the American people under the lead of the present President, of the courage and vision which led to the Washington naval agreement and to the Kellogg pact. Even more lively and general is the recognition of the high thinking and courage of those many leaders of opinion who have often and successfully influenced the policy of America in the direction of large and liberal aims, and it is well to emphasise that of all this and much more Europe is not unmindful. Yet it would be folly to pretend that other aspects of the relations between the old world and the new—aspects provocative of the less amiable sentiments of the poor relative—are more immediately and constantly in the European mind. Most significant and even startling a proof of this fact was given this week by no less a person than Dr Stresemann who, in a speech in the Reichstag on the Reparations agreement, said (*Frankfurter Zeitung* report): "We are not a colony of the French and English. It seems to me doubtful whether the whole of Europe is not in danger of becoming a colony of those who have been more fortunate than we have." (Cheers.) No longer is the old enmity with France the chief preoccupation of the German Foreign Minister, no longer is Britain or British "Imperialism" the burden of his popular song; the thought of Germany isolated in defeat has passed away. The picture has changed, and it is now one of Europe as a whole in fee to the power of the United States.

There can be no doubt that Dr Stresemann, greatly daring, indiscreet perhaps, has spoken the half-formed thought of millions of Europeans and of a dozen Governments. And that, we think, is a thing that America ought to know and understand. To any thinking man in Europe the revolution in the relationship between the old world and the new, brought about, equally perhaps, by Nature and by War, is the great outstanding fact and factor of our times. To whatever European problem you may turn, this new factor is present. Is it a question of population or unemployment, there is America's immigration policy; or of inter-Allied Debts and Reparations, there stands America as the ultimate and almost all-consuming creditor; or of monetary stability, international investments and gold questions, every European eye has to be anxiously watching the signs in the sky of Wall Street or Washington; or, most important of all, of the struggle to acquire the surplus of commodity exports by which foreign debts can be paid, there is the high Protectionist tariff of America still growing higher. To a Europe striving to export and thereby gain the means for foreign payments, it will pass as a grim jest to-day that the latest revision of the American tariff is not all upward; there is one reduction on—garlic! Can we wonder, then, that, as our Paris correspondent pointed out last week, European Chambers of Commerce are talking of "defence and secret weapons" against American Protection; that schemes for a great development of British inter-Imperial trade have received a fillip from the encouragement of Canadian statesmen; and that protests against the new tariff have been received by the State Department at Washington from the Governments of twenty nations.

Poor relations are sometimes able to appreciate hard facts better than rich uncles; and the central facts which they see to-day in the world economic and financial situation are, first, that American policy can play the principal *rôle* in making or marring the immediate future in Europe, and, second, that whether that future be one of stable progress or of chequered struggle is in these days of growing world interdependence a question of vital interest to America herself as well as to Europe. Do the American people, they ask again, realise the implications and obligations, whether selfish or unselfish, of their overwhelmingly responsible position? To that question we receive sometimes an answer productive of hope. One example is to be found in the comments (referred to in a "Note of the Week") of the *Baltimore Sun* on a recent article in the *Economist*, and another in the latest issue of the *Information Service* of the Foreign Policy Association of America, which, after reviewing the economic position of America, says:—

> In view of this situation, many critics of American tariff policy, both at home and abroad, declare that the United States tariff stands in the way of a normal and equitable exchange of goods and services. According to their arguments, unless we are prepared to receive from abroad goods and services in exchange for those we export, our exports are being sent out on credit. The indebtedness so created can ultimately be paid off only in goods and services. It would seem absurd, therefore, to set up artificial barriers against the receipt of those goods and services by which alone we may receive the benefit of our foreign loans. This argument derives point from the fact that the United States must receive, besides payment for her current exports, a large annual payment on account of war debts and previously acquired private indebtedness.
>
> Whatever may be the merits of these arguments, they undoubtedly influence foreign attitudes towards American tariff policy. Considerable resentment is expressed against the country which insists upon the payment of war debts and, at the same time, adopts a policy making that payment more difficult.

Then, again, the current issue of *The Annals of the American Academy of Political and Social Science* contains, amid a wealth of Protectionist essays, an article in which Professor George B. Roorbach, of Harvard, frankly faces the facts. Reviewing recent economic events, he says:—

> There has thus been placed upon Europe the added burden during reconstruction of making adjustments and shifts in her trade, some of which at least are economically less advantageous than would have been the case if only economic forces were operating under less restricted trade conditions. In addition, the tariff must bear its share in the responsibility for the added complications and misunderstandings and bitternesses that have developed in European relations with the United States. . . . And ill-will is not an asset in commercial expansion, either national or international.

Such signs of clear recognition of the facts of world economics and of America's interdependence with older nations are welcome, but we could wish that they were more common. It is to be hoped that Americans who have achieved a broad world perspective will work unceasingly to give to the economic policy of their country the breadth of vision which has characterised the Kellogg pact and the new attempt at a solution of the disarmament problem. The situation is an anxious one. Our apprehensions are most inclined to be assuaged when we remember that Mr Hoover is at the White House; for Mr Hoover knows Europe and has a broad first-hand grasp of the relentless laws of world economics.

So runs the case against America. But America, we do not forget, has something to say at the bar of world opinion. Her case is that, in the last analysis, there is no reason why Europe (regarded as an integral whole) should be a "poor relation," for she is a continent of greater aggregate resources and productivity than the United States; that her poverty is due to her own faults, to her nationalistic subdivisions and economic rivalries, to h[illegible] slowness in learning and applying the secrets of mod[illegible] industrial success, and to the inability of units to [illegible] stitute co-operation for division. There is very [illegible] force in these contentions. For many of her pre[illegible] troubles Europe has herself to blame. Great and urgent are the tasks of self-help that await her. She must frankly face the fact of the shifted world balance of economic power, and she must face it with courage and

determination and without cringing. Yet to our more favoured kinsmen across the sea we would say that, at the final reckoning, there will be applied to nations as to men the test that from him who hath much, much shall be expected.

GREAT BRITAIN AND RUSSIA.

When Mr MacDonald came into power in 1924 one of his first steps in the field of foreign affairs was an attempt to re-establish normal relations between this country and Russia. The enterprise was extraordinarily difficult because it exposed the Labour Government to an attack on two fronts: from the Conservative Opposition at home, who were enabled to represent the Government as being the dupes or pawns of the Russian Communists; and from the leaders of the Third International at Moscow, who were enabled, from their point of view, to interpret precisely the same transactions as proof that Mr MacDonald and his colleagues were the dupes or pawns of the British capitalists. The question of Russian Communist propaganda, which was and still is inseparable from the other aspects of Anglo-Russian relations, was largely responsible for the Labour Government's fall; for Mr MacDonald resigned over the "Campbell Case" and lost the subsequent election over the "Zinoviev Letter." Thus, the enterprise was a costly one for the Labour Party; yet, Mr MacDonald, having now returned to power, may be expected to make a second attempt at settling this difficult but important business. No doubt, if and when he does make the attempt, he will profit by the experience of five years ago. Above all, he is likely to go slow and to insist, whatever the Russians may say, upon taking one thing at a time.

How does the present state of Anglo-Russian relations compare with that which existed at the beginning of 1924? In the first place, the Soviet Government was not then recognised *de jure* by the British Government, as it is now. This *de jure* recognition is the sole monument of Mr MacDonald's Russian policy in 1924 that survives to-day. It has survived the "Zinoviev Letter" and it has survived the "Arcos Raid." The fact is that, when once *de jure* recognition has been accorded by one Government to another, it is not easy to find any plausible ground for withdrawing it, unless the Government that has been recognised is swept away or transformed out of recognition by the effects of war or revolution. The Soviet Government, however, has not ceased to exist, and the British *de jure* recognition stands. This means that at any moment, without further formality, the two Governments can agree to accredit diplomatic and consular representative *auprès* one another; and that is so much to the good.

On the other hand, the present situation is appreciably worse than the situation which existed at the beginning of 1924 owing to the lapse of the Anglo-Russian Trade Agreement of March 16, 1921. That agreement, which had been negotiated by Sir Robert Horne on behalf of Mr Lloyd George's Coalition Government, afforded Mr MacDonald in 1924 a foundation for building upon which he lacks to-day. The virtues of the Trade Agreement were these. It provided a juridical basis for Anglo-Russian trade, it explicitly looked forward to the eventual conclusion of a regular commercial treaty, it contained a reciprocal pledge that neither party would conduct propaganda at the other party's expense, and it made it possible for either Government to be informally, but not necessarily ineffectively, represented in the territory of the other. The Trade Agreement of 1921 preceded and survived the abortive treaties of 1924; it was terminated in 1927 by the Conservative Government on the ground that the provision regarding abstention from propaganda had been violated on the Russian side. The final and conclusive evidence for this violation was said to have been obtained by the British Government as a result of the "Arcos Raid." It will be remembered that, on this occasion, the Conservative Government not only declared that the Trade Agreement had lapsed, but dismissed the Soviet diplomatic mission from London and withdrew the British diplomatic mission from Moscow. Thus, on returning to office now, Mr MacDonald finds the British Government without any kind of diplomatic agreement or any kind of diplomatic relations with Moscow; and this practical setback considerably outweighs the formal advance represented by *de jure* recognition.

So far we have been comparing the situations of 1924 and 1929 on the juridical and diplomatic planes, but these are relatively superficial matters, which can be adjusted readily if the state of mind on both sides is favourable. What differences, if any, of outlook and feeling on either side can we observe to-day in contrast to 1924? As far as Moscow is concerned, it is virtually impossible for us to judge. Some of those in authority at Moscow have always desired an Anglo-Russian settlement; others have always proved strong enough to frustrate the policy of their colleagues. So it was in 1924 and perhaps in 1927; and it is idle to speculate whether the position has been altered by those personal dissensions within the bosom of the Russian Communist Party, which have since brought new men into control of both the Soviet Government and the Governing Body of the Third International. It is true that the eponymous hero of the "Zinoviev Letter" has been hurled from power into ignominy, and that the redoubtable Trotsky is frankly pleading for permission to enjoy the bourgeois comforts of residence at Surbiton or Weston-super-Mare. But it would be rash to presume that the triumph of Stalin at Moscow means a new orientation of Soviet Russian foreign policy. For all that we know, these dissensions in the Russian Communist Party may be entirely personal; and even if the contending Kommissars were also divided by genuine differences of opinion on matters of principle, it is improbable that these differences would be discernible to the naked eye of the mere bourgeois infidel sitting in outer darkness. It must be remembered the Marxism is a theological system, and that the greater part of this system is not the subject of controversy among the faithful. Trotsky and Zinoviev did not disagree with Stalin over such axiomatic dogmas as the Eternal Damnation of the Capitalist World. That is common ground between them all; and there is, therefore, no reason to expect any change of attitude on this matter just because Trotsky and Zinoviev have been beaten and because Stalin has been victorious in controversies that have arisen over other, and far more subtle, theological issues.

In Great Britain, on the other hand, Mr MacDonald is likely to encounter less opposition to an Anglo-Russian settlement to-day than five years ago; for, with every year that passes, the temperature of public feeling towards the Bolsheviks tends to grow cooler. It does so because the people of Great Britain have a keen eye for realities and a strong sense of humour. For a dozen years they have been told, day in and day out, and this in the same breath, that the Bolsheviks are just going to set the Thames on fire and that they are just going to vanish into thin air; and a dozen years' experience has convinced them that the two prophecies are equally futile. They have come to realise that the Communist and Capitalist dispensations are likely to go on existing side by side in the modern world—Communism in the territories of the U.S.S.R. and Capitalism elsewhere. Either system is a hard fact in its own domain, and hard facts must be accepted for what they are. Again, the Englishman's sense of humour makes him feel ridiculous in the posture of righteous indignation He may be persuaded to fall into it for a moment, but nothing will induce him to remain in it permanently. There is also a feeling that the Conservative Party have exploited the Bolshevik bogey for party purposes once too often, and a suspicion that, in pursuing these party tactics, they may have sacrificed possible openings for British trade. The upshot is that a fresh attempt to arrive at an Anglo-Russian settlement is likely to meet in this country with public approval though not to arouse public enthusiasm.

If and when the Government do embark on negotiations with the Russians, the first step will presumably be to re-establish provisional diplomatic relations on both sides. At present Russian interests in Great Britain are in the hands of the German Embassy in London and British interests in the U.S.S.R. in the hands of the Norwegian Legation in Moscow. This roundabout business, at any rate, is absurd, and some kind of direct relations ought to

be re-established forthwith. It has been explained above that this can be done without any fresh formalities. The first thing needed is to restore effective contact between the Governments. After that, the old issues will present themselves again. Will the British Government be willing to convert provisional diplomatic relations into regular permanent diplomatic relations unconditionally? Or will it, as in 1924, stipulate that this must wait upon some measure of agreement in regard to propaganda and debts? And if the question of debts is reopened, will the Soviet Government once more decline to admit liability for old debts unless the British Government places its guarantee behind the flotation of a new Russian loan on the London market? These were the critical issues in 1924. It does not follow that they will present themselves in the same form in 1929, but there are sufficient imponderable factors in the situation to make it wise for Mr MacDonald and Mr Henderson to proceed slowly and warily.

THE ECONOMIC POSITION OF THE IRISH FREE STATE.

(BY OUR DUBLIN CORRESPONDENT.)

The outstanding feature of the economic life of the Irish Free State is the extent to which the country relies on agriculture as the source of its national wealth. The recently-published Census of Occupations shows that, of the total occupied population, 51.4 per cent. are employed on the soil, while a very large number of those engaged in transport and commerce are also indirectly engaged in assisting agricultural production. It is estimated that agriculture directly and indirectly employs nine times as many persons as manufacturing industry. The export figures point in the same direction, about 80 per cent. of the total exports being composed of agricultural products. It is obvious that the interests of an industry that plays such an overwhelmingly important part in the national economy must be regarded as paramount in the framing of any economic policy. This consideration has been, on the whole, borne in mind by the Government during its eight years of office.

The agricultural policy of the Irish Free State is founded on the Report of the Agricultural Commission, which was set up in 1922. This Commission emphasised the impossibility of assisting by protective measures an industry depending upon export markets, and indicated that the correct line of development lay in the direction of reducing costs of production and improving the quality of the articles produced. Several definite measures were recommended, many of which have since been adopted. The Dairy Product Act and the Eggs Act have put the butter and egg trades respectively under strict public regulation and control; grades and standards of quality have been established, and severe penalties provided for the export of any produce that might injure the reputation of Irish butter or eggs in outside markets. The Live Stock Breeding Act, by making it illegal to keep bulls without a licence, aims at improving the general level of the breed of cattle. The creamery industry has been "rationalised" by a bold measure whereby the Ministry for Agriculture purchased the greater number of the privately-owned creameries, closed those that were redundant, and transferred the others to co-operative societies. Much overlapping and wasteful competition have been abolished by this measure. The cause of orderly marketing has been advanced by the formation of a central selling agency for creamery butter, the Irish Associated Creameries, Limited, through which about 80 per cent. of the butter exported is now sold. The improvement of agriculture in other directions has been actively pursued; schemes of education and live-stock improvement have been developed; faculties of agriculture have been established in two universities; and an Agricultural Credit Corporation has been founded, financed largely by public money. Finally, land purchase has been actively pushed forward; it is expected that all the land in the country will be transferred to the tenants in the course of a couple of years. The single protective agricultural measure already tried—namely, the subsidising of sugar beet, has not been so conspicuously successful as to encourage other experiments in the same direction.

It is not unnatural that the great predominance of agriculture should have given rise to the complaint that the economic life of the Free State is unbalanced, and unduly reliant on a single source of income. Mr Arthur Griffith, the real founder of the Free State, was alleged to hold protectionist views, and it is not surprising, therefore, that a certain clamour for industrial protection made itself manifest soon after the Treaty. The Government, in order to avoid undue haste in coming to a decision on such an important matter, set up a committee of economic experts to advise them. The report of this committee was adverse to any measure of industrial protection on the grounds that the Free State market was too small to permit of production on a scale large enough to ensure cheap prices, and that the consequent rise in the cost of living would injure the exporting industries, especially agriculture. The Government, however, was coerced by political pressure into imposing duties on quite a number of commodities, so that at present 60 per cent. of the non-agricultural imports of the Free State are included in the tariff.

The principal protected articles are manufactured tobacco, confectionery, furniture, boots and shoes, made-up clothing, and woollens and worsteds. The McKenna Duties on motor cars, clocks and watches and musical instruments have also been retained. Imperial preference has been conceded in many cases. About 12,000 persons have obtained employment as the result of the imposition of these duties, and the cost of living has not been appreciably raised, thanks to the balancing effect of the abolition of many of the old revenue duties, those, for example, on tea, coffee, cocoa and sugar. Applications for protection are now heard by the Tariff Commission, a body composed of three high civil servants. Several applications are at present being heard by the Commission, which has recently rejected the claim for a duty on flour. A measure taken for the encouragement of industry is the granting of trade loans with a Government guarantee. Of £1,000,000 available for this purpose, only £400,000 has been utilised; two thousand persons are said to have found employment in consequence of these advances. The recently-published Report of the Census of Production shows that the net value of the manufacturing output of the Free State in 1926 was £24,109,000, the number of salaried workers and of wage earners 14,077 and 93,223 respectively, and the net output per person engaged £225. This Report also shows that the most important industries are those that do not rely for their prosperity on protection. Brewing is one example, while the most important new industry started since the Treaty, namely the Ford motor works at Cork, manufactures almost exclusively for export. The cost of power for industrial purposes will be materially reduced as soon as the Shannon hydro-electric scheme is completed. It is expected that current will be available before the end of the present year, in spite of certain serious engineering difficulties which have delayed the work of construction.

The figures of the external trade of the Free State have caused a good deal of uneasiness owing to the large adverse balance which they disclose. The following

The MERCANTILE BANK *of* INDIA
LIMITED
Head Office: 15, Gracechurch St., London, E.C.3
Capital Paid up - - - - £1,050,000
Reserve Fund and Undivided Profits - - £1,612,047
Branches and Agencies throughout the East.
EXECUTORS AND TRUSTEES
The Bank has power to undertake these duties, and the Appointment of a Corporation secures important advantages.
A booklet giving full particulars may be obtained on request.

table shows that this balance is being gradually reduced:—

Year.	Imports. £000's.	Exports. £000's.	Balance. £000's.
1924	68,890	51,585	17,306
1925	62,950	44,381	18,569
1926	61,286	41,957	19,329
1927	60,824	44,852	15,972
1928	59,852	46,305	13,547

The invisible items in the international balance of payments have not been accurately measured, but the following figures are probably approximately correct:—

INVISIBLE EXPORTS.

(£000's.)

Revenue from foreign investments	12,500
Emigrants' remittances from U.S.A.	2,200
British war pensions	2,100
Post Office adjustment	1,218
Other items	403
	18,421

INVISIBLE IMPORTS.

(£000's.)

Profits on foreign capital invested in Free State	5,700
Land purchase annuities	3,002
Local loans fund	600
Pensions to ex-R.I.C.	286
Other items	508
	10,096

It would appear that the real balance of payments of the Free State is adverse to about the extent of £5,000,000, but that this adverse balance is tending to disappear. Any material increase in the price of agricultural products would probably convert the adverse into a favourable balance.

The currency of the Free State is linked to sterling, so that no fluctuating rate of exchange with Great Britain is possible. Two kinds of notes are in circulation: a currency or legal tender note, issued by the Currency Commission, backed by short-dated British Government securities, and payable in sterling on demand at the Bank of England; and a consolidated bank note, also issued by the Currency Commission, backed by the liquid assets of the issuing bank, and payable by demand at the issuing bank in legal tender notes. It will thus be seen that the Free State is on the gold standard, and that the existing currency Act makes the issue of any unsound or irredeemable money impossible. The joint-stock banks are in a flourishing condition; the deposits of the six Free State banks on January 1, 1929, amounted to £129,000,000, and the Dublin clearings in 1928 were £251,631,000, an increase of 1.3 per cent. on the previous year. Rumours are heard that amalgamations between some of the banks may be expected as soon as the Bank of Ireland obtains its new charter which is now being considered by the Dail.

The public finances of the Free State have been managed with admirable conservatism by Mr Blythe, who has succeeded in reducing the income tax to 3s. in the £. The normal revenue and expenditure have been made to balance each year; for the present financial year the estimated revenue is £23,939,000 and the estimated expenditure £23,925,000, showing a small surplus. In the years following the Treaty a large amount of abnormal extraordinary expenditure was incurred in connection with the civil war, and in more recent years large sums have been expended on certain capital outlays, such as the Shannon scheme and the rationalisation of the dairying industry. To meet this expenditure borrowing was necessary, but such borrowing was done on very favourable terms, and, except for a small American issue, was all done internally. The 5 per cent. National Loan issued at 95½ now stands at par, which is a striking tribute to the credit of the Free State and to the wise financial administration of Mr Blythe. The National Debt at present amounts to £23,517,000, against which assets are held worth £9,534,000, so that the total dead-weight debt is about £14,000,000, or less than £5 per head of the population. To this must be added the liability to pay Great Britain sixty annual sums of £250,000 and twenty annual sums of £600,000 in settlement of the Free State's liabilities in respect of the National Debt and the Local Loans Fund respectively.

As a field of investment, the Free State possesses the attraction that it is socially very stable. The great majority of the population are small landowners, who have all the conservatism of peasant proprietors. Even in the town organised labour is moderate and essentially non-revolutionary. Probably far fewer working days have been lost in the Free State through industrial disputes than in any other country in Europe during the last five years. The quality of Irish labour is also admittedly very good; the managers of the Ford motor works at Cork have expressed the most complete satisfaction with the labour which they employ. The danger of political insecurity is far less than it has been at any time within the last ten years, and there is every reason to believe that the Free State has definitely turned the corner economically. The long-continued fall in agricultural prices has apparently come to an end, the number of cattle and other live stock is increasing, the balance of trade is becoming more favourable, unemployment is decreasing, bank deposits and clearings are on the increase. In a word, all the generally accepted indices of economic prosperity point in the right direction.

THE HALF-YEAR'S NEW CAPITAL.

EXCLUDING conversion operations, which amounted in all to £31.3 millions, new capital issues during the past half-year totalled £174.4 millions, or £70.4 millions less than in the first six months of 1928. On the other hand, it will be seen from the first of the ensuing tables that if British Government borrowings are omitted in both half-years, the 1929 total works out at £172.8 millions, or £13.2 millions more than the corresponding figure a year ago.

DESTINATION OF NEW CAPITAL.

	First Half of Years. 1913.	1925.	1926.	1927.	1928.	1929.

British Possessions— Government	14,324,300	14,661,500	22,969,000	12,813,100	31,423,000	23,590,000
Other	28,678,300	13,462,300	9,735,100	21,529,000	8,754,700	26,374,000
	43,002,600	28,123,800	32,704,100	34,342,100	40,177,700	49,964,000
Foreign countries— Government	22,529,500	Nil	12,700,500	2,657,500	5,745,100	3,650,000
Other	34,403,100	5,187,900	8,826,000	13,540,600	14,318,100	15,363,800
	57,032,600	5,187,900	21,526,500	16,198,100	20,063,200	19,013,800
Grand total	120,359,600	112,011,200	120,765,200	207,563,800	244,762,800	174,393,600

Borrowings by the British Government this year are represented exclusively by the net excess of sales over encashments of National Savings Certificates, whereas a year ago this item included a large Treasury bond issue made for purposes of Debt Conversion. Colonial Government borrowings (other than conversions) are £7.8 millions lower than last year, and Foreign Government loans down by over £2 millions.

Excluding all Government borrowings, other issues in the first half of the current year have amounted to £145.6 million, against £122.4 million a year ago, and £83.4 million in the first half of 1913. The destinations of these aggregates may be indicated conveniently by the following comparative percentages:—

	1913.	1928.	1929.
United Kingdom	24	81	71
British Possessions	35	7	18
Foreign Countries	41	12	11
Total	100	100	100

New capital supplied to the Empire overseas has formed a larger proportion of the total this year than in 1928, but the alteration in the distribution of lending as compared with 1913 is still striking.

The next table gives an analysis under different heads of the total capital issues made in the June quarter of this year, with the corresponding figures for the March quarter and for earlier periods.

IN MILLION £'S.

	Total.	British Government.	Foreign and Colonial Govt.	British Colonial and Foreign Corpn.	Foreign Railways.	Mines, Finance, and Exploration.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1919	1,017·4	805·8	14·6	2·9	...	15·3	18·3	160·3
Total whole year, 1920	367·5	37·6	12·0	46·5	1·1	10·3	18·9	241·1

1929—1st quarter	96·9	1·9	27·2	·3	3·8	21·2	4·9	37·6
2nd "	77·4	*Dr.0·3*	Nil	11·4	Nil	12·9	0·1	53·3

In view of the monetary conditions which have prevailed during the past three months, it is not surprising that Foreign and Colonial Government borrowing should have dropped in the past quarter from £27.2 million to nil. Foreign railway issues were also non-existent, and rubber and oil issues negligible. The increase in the total raised by "Corporations" represents borrowing by the Melbourne Board of Works and the City of Montreal, in addition to the loans raised by the Central Electricity Board and the Agricultural Mortgage Corporation in this country. It should also be noted that the unclassified balance, described in the table above as "mainly for home industry" includes an issue of £10.2 million for the Canadian Pacific Railway.

The next table carries our analysis a stage further by sub-dividing the past half-year's issues into twenty-nine categories.

ANALYSIS OF NEW CAPITAL APPLICATIONS.

Description.	First Half-Year, 1928.	First Quarter, 1929.	Second Quarter, 1929.	Total First Half-Year, 1929.
	£	£	£	£
British Government Loans	88,211,000	1,900,000	*Dr.300,000*	1,600,000
Colonial Government Loans	31,423,000	23,590,000	Nil	23,590,000
Foreign Government Loans	5,745,100	3,650,000	Nil	3,650,000

Motor traction and manufacturing	876,900	222,000	158,700	380,700
Gas and water	448,000	250,000	1,106,100	1,356,100
Hotels, theatres and entertainments	10,427,300	1,487,200	1,066,800	2,554,000
Patents and proprietary articles	4,717,700	5,913,400	691,500	6,604,900
Docks, harbours and shipping	300,000	Nil	544,500	544,500
Banks and insurance	7,777,500	575,000	3,633,900	4,208,900
Manufacturing and miscellaneous	31,009,800	14,116,800	27,858,500	41,975,300
Total	244,762,800	96,953,000	77,440,600	174,393,600

Apart from the borrowings to which reference has been already made, an interesting feature disclosed by the foregoing table is the slump—by no means untimely—which occurred last quarter in issues for "Patents and Proprietary Articles." Following the great activity witnessed in the March quarter, "Investment Trust" issues were also on a much smaller scale. The second quarter's figure of the "Manufacturing and Miscellaneous" group is somewhat over-weighted by the issue at a premium (to shareholders only) of 4,410,595 Preference and 6,016,857 Ordinary shares of Imperial Chemical Industries. Issues confined to existing shareholders bulk largely in the total for this group in the June quarter, amounting to £18.4 million out of £27.8 million.

In a recent issue of the *Economist* (June 8, 1929, page 1296) we referred to the unfavourable reception accorded by the public to offers made during the month of May.

The following table shows some of the most important issues during the half year:—

Date of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, End June, 1929.
1929.		£		
Jan. 3	Govt. of India 4½% Loan, 1958–1968	10,000,000	91	86
9	New Zealand Govt. 4½% Stk., 1948–1958	19,510,000 (a)	95	95
16	Commonwealth of Australia 5% Stk., 1945–1975	8,000,000	98	96
Feb. 5	J. Sears and Co. 7% Cum. Pref.	2,000,000	Par	22/6
6	London Power 5% Debs., 1972	3,000,000	99½	...
13	Roumanian Stabilisation 7% Loan, 1937–59	2,000,000	88	85½
Mar. 6	Watney Combe Reid 5½% Debs., 1959	2,500,000	99	100½
6	Barclay Perkins 5½% Debs., 1940–65	500,000	98	100½
12	Chilian Govt. 6% Bds., 1962	*2,000,000*	94½	96
May 11	Canadian Pacific Railway, 300,000 Ord. $100 (shareholders only)	10,200,000	$170	239
13	Allied Ironfounders 6% Debs.	780,000	96	43½
13	British Power & Light Corporation, Ord. £1	1,600,000	Par	19/3
13	Commonwealth of Australia 5% Reg. Stk., 1945–75	12,403,734 (b)	97	96
25	Central Electricity Board 4% Stk., 1959–89	3,000,000	83	81½
June 15	London County Council 4½% Cons. Stk. 1945–85	5,551,396 (b)	...	...
26	Agricultural Mortgage Corporation 5% Debentures, 1959–1989	5,000,000	par	...

(a) £12,510,000 for Conversions. (b) All for Conversion purposes.

The foregoing list comprises issues of a "solid" investment character rather than of a speculative nature. Current prices, reflecting for the most part the general reaction of "gilt-edged" securities to dearer money—both actual and apprehended—indicate clearly that many of the numerous foreign and home issues known now to be "ripe" for flotation may have to await a more propitious season.

THE INDIAN BANKING INQUIRY.

(BY A CORRESPONDENT.)

IT is now announced that the *personnel* of the Indian Banking Committee, set up by Sir George Schuster to inquire into the general banking organisation of India, has been finally decided upon. The utility of such an inquiry may, at first sight, seem doubtful. The publicity gained by the authoritative recommendations of the Hilton Young Report of 1926 on Indian Currency and Finance, must surely have led many observers to conclude that almost every question connected with Indian finance had received an appropriate answer in the Reports of one or other of the notable Committees and Commissions which have examined the Indian financial system five times in the last forty years. But these bodies, however wise and far reaching their recommendations, never came to grips with purely banking problems. Their object was to reorganise the currency, and banking questions received in most cases only a cursory consideration as (admittedly relevant) side issues. There is consequently still distinct room for a general banking inquiry as such in India (as in other parts of the British Empire).

Moreover, recent developments make the present a particularly opportune time to undertake the work.

To begin with, the unfortunate fate of the 1926 Commission's recommendations will almost certainly mean that Sir B. N. Mitra will have to take up the work where Sir E. Hilton Young left it. It is well known that the Report of the Royal Commission recommended the establishment of a " Reserve Bank," to give effect to the proposals as to the reform of the currency, and to act in all respects as an orthodox Central Bank. Unfortunately the three Bills introduced by Sir Basil Blackett, each embodying more or less of the main features of this proposal, all came to grief as a result of strenuous opposition in the Indian Legislature. The Government nevertheless still seem to cherish the idea of resurrecting a scheme which Sir Basil Blackett described as " the most important measure of liberalism in finance that has been ever offered to India," and a new Reserve Bank Bill, with the blessing of the new Committee to sustain it, would certainly be assured of a much less stormy passage than its predecessors. On the other hand, the principal reason for the failure of the original Bills raises perplexing doubts as to the chances of success of any new one passing into law *intact*. It will be remembered that the Finance Member's first draft Bill of 1927 was referred to a Joint Committee of the Council of State and the Legislative Assembly, and at the hands of this body it suffered drastic amendment. The " shareholders " bank envisaged by the Hilton Young Commission became a State bank, capitalised by the Government, because a Central Bank " would if directed by a body responsible only to a number of private shareholders, tend to be controlled by vested interests. . . . Its utility to the public might even be endangered by a conflict of interest within the management of the Bank between Indian and external capital." Further, six of the proposed fifteen directors of the Bank were to be *elected* by the members of the Central and Provincial Legislatures, in spite of the specific recommendation to the contrary of the Royal Commission, and of the well-known Brussels and Genoa objections to political pressure of any sort being exerted upon Central Banks. Finally, the principle of Indianisation was implicit in the suggestion of the Joint Committee that either the Governor or the Deputy-Governor of the Bank should be an Indian, this introducing totalling irrelevant racial questions into a sphere where they obviously do not belong. It is to be hoped that the new Committee will rise above the desire to quarrel with such widely accepted banking principles as those enunciated so clearly by the Royal Commission, and that they may also be able to soothe the refractory elements in the Assembly into acquiescence.

Indian banking questions are, however, certainly not exhausted by the solution of the Reserve Bank problem. An equally urgent need has yet to be provided for. India with a population of 320 millions has but 710 commercial bank offices of a reasonable size (and these mostly at the ports), whereas the fortunate 45 million people of the United Kingdom are served by nearly 9,000 bank branches. This grossly inadequate financial equipment has become a by-word. Recognised Indian writers like Findlay Shirras, official bodies like the Indian Industrial Commission of 1918 and the External Capital Committee of 1925, have all emphasised the urgent and growing need for more banking facilities. No doubt the present Committee will concern itself with the possibility of developing the co-operative banks started by Lord Curzon to help the agriculturist, and the Post Office Savings Banks, which so far seem to be most successful in towns already provided with commercial banks. Perhaps another bargain will be struck with the Imperial Bank (whose present contract with the Government expires in 1931) like that of 1921, which bound the bank to open 100 new branches in five years in exchange for the privilege of keeping the Government accounts. But beyond the bare need for more banks, there comes the need for more trained staff. The Exchange Banks and the Imperial Bank can never hope to supply the financial requirements of the whole of India, and the necessary development must be almost wholly an internal affair, though the help of the European banks in training Indians to assume posts of responsibility would be appreciated. Beyond the need for trained men even, there is yet the more vital necessity of stimulating an increase in the banking habit amongst the people. The cheque system in India is notably under-developed. Seven clearing houses (for the whole of India) handled in 1926 Rs. 15,91 crores, an insignificant amount in comparison with the annual United Kingdom total of £40,000 million. It has been suggested, by Sir Basil Blackett amongst others, that the Indian Bills of Exchange law is too imitative to take account of local instruments, in which case the remedy is obvious. But the language difficulty seems to be one of the greatest obstacles in the way of a more widespread use of credit instruments, and this will naturally take time to overcome.

India's unfortunate banking experiences in recent years, especially during the war, have given the Committee at least one certain lead. The absence of any comprehensive bank law, like the Canadian Bank Act, has made the incorporation of numerous small and unstable " banks " far too easy, with the result that these form a potentially dangerous and quite unregulated part of the Indian banking system, liable to instant disintegration at the first sign of financial crisis. This weakness was revealed by Mr Keynes as early as 1913, and the failures of 1914-17 provided his vindication. Legislation providing for a minimum paid-up capital, as in Canada, for some form of Government inspection, as in the United States, or at least for some restriction on the promiscuous use of the title " Bank," might succeed in mitigating the worst effects of the small bank nuisance; it might well have helped in the crisis of 1914, which did so much to bring banks in general into disrepute and set back financial progress.

In its examination of all these questions, the Banking Committee will compel the attention of other British countries, like South Africa and New Zealand, where similar enquiries have been urged. And in England it will be watched by the Eastern Exchange Banks, which have much to gain from progressive banking legislation. Their former opposition to the Central Bank scheme has now died away, and their approval and their help will be substantial evidence of home interest and support to the Committee in its difficult work.

THE HUDSON BAY ROUTE.—II.

(BY OUR OTTAWA CORRESPONDENT.)

THE partisans of the Hudson Bay route have always realised that its value would largely hinge upon navigation conditions in the Bay, and there were critics who contended that only specially equipped vessels could successfully cope with them, and that the insurance rates on ships and cargoes using the route would be prohibitive. So the Dominion Government was induced to despatch an expedition to the Hudson Straits in 1927 to make accurate observations of ice and weather conditions. Including meteorological and other experts, it established bases on the Hudson Strait, and spent a winter there, remaining altogether 18 months, and aviators who accompanied it enabled almost daily flights to be made over the Hudson Strait. Now it has returned and submitted to Parliament a report which confirms the basic claims of the advocates of the route. The all-important question was the length of the navigation season, and on this point the report makes this statement: " Taking July 1st as the opening date for the Strait and the Bay, and November 16th, when ice was first reported at Nottingham, as a closing date, we get a season of 120 days, or practically four months during which commercial vessels could have been navigated with safety and without the aid of ice-breakers."

Now, navigation on the Great Lakes, down which the larger part of the exported grain of Western Canada is carried each year, usually closes before the middle of November, and accordingly there will be available each autumn just as long a period for shipping grain by the Hudson Bay route as by the Lakes. Indeed, it will be longer, as, Churchill being so much nearer the grain fields, as will be shown later, the first new grain will be received

there at an earlier date than at Fort William, and it will be possible to send shipments forward at a later date with the assurance of their despatch.

The report also infers that the Bay season could be extended by the use of ice-breakers, and it recommends that two powerful vessels of this type be secured and stationed, one at Churchill and the other in the Hudson Strait. It admits that heavy fogs, the navigator's worst enemy, are common, but expresses the view that they need not prove a serious obstacle if all modern aids to navigation, like direction-finding stations, are enlisted. The report, after referring to the vessels of the Hudson Bay Co., which have been coming into the Bay for two hundred years, finds it not unreasonable to suppose " That modern ships, modern equipment and modern ideas should meet with a considerably greater degree of success, and that a very important route will eventually be developed, provided always that, in the initial stages of development, every precaution is taken to provide for the protection of vessels using it."

It is now proposed that the Government should send ships of the State-owned mercantile marine and insure their cargoes for the initial tests of the route in order that shipping firms and marine insurance companies may obtain some guidance about the risks involved for the settlement of their rates. But whether this suggestion is acted upon or not, the Bay route will receive an exhaustive trial, and, if it proves a success, it may easily have far-reaching effects upon the present transportation arrangements of the North American continent.

To-day the exports of the prairie provinces reach the markets of Britain and the European continent either via the Great Lakes and Atlantic ports or by the Pacific ports and the Panama Canal at heavy cost; but the Hudson Bay route will offer the prospect of a substantial reduction in the freight rate toll now levied upon the prairie farmers. How great will be the curtailment of the rail haul can be gauged from the following table, which shows the distances between the more important centres of the prairies as compared with the distances to Montreal:—

From	To Churchill. All Rail. Miles.	To Montreal. All Rail. Miles.	To Montreal.. *via* Gt. Lakes Miles.
Winnipeg	992	1,357	1,633
Regina	843	1,713	1,990
Moose Jaw	886	1,756	2,032
Saskatoon	847	1,828	2,136
Edmonton	1,146	2,158	2,464
Calgary	1,246	2,260	2,466

Now the ocean voyage from Montreal to Liverpool is 3,007 miles in length, and from Churchill by the shortest track it is about 30 miles less. Accordingly, the new route will bring the chief centres of the prairies from 500 to 1,000 miles nearer to European markets, according to their location. And the Vancouver-Panama route cannot hope to compete with it during its nagivation season, for by it the distance from Edmonton to Liverpool is 10,701 and from Calgary to Liverpool 10,572 miles.

Now both Winnipeg and Vancouver are faced with the possibility of suffering from the competition of the new route, and do not like the prospect. British manufacturers, however, might easily derive great profit from it as the vessels and cars which take out wheat from Churchill will not want to return empty, and very low ocean rates are likely to be offered from Europe.

Moreover, the Government dare not allow the railway rates on the Hudson Bay line to be fixed at a high level lest they be accused of conniving at the strangulation of the new route. So British manufacturers may find themselves in a position to compete with the manufacturers of Eastern Canada on better terms than ever before, and should be preparing to take advantage of the opportunities which are likely to offer themselves. Furthermore, if the new route proves a success, the trade of the United States may experience repercussions from it. The Hudson Bay line will bring Minnesota, the Dakotas, most of Montana and parts of Wisconsin, Illinois and Iowa, Nebraska and Wyoming—a huge area—within 4,500 miles of Liverpool, as compared with an average to-day of more than 5,000 miles via Duluth or any other of the Upper Lake ports. Even to-day a large amount of grain and some other farm produce raised in the north-western States of the Republic is exported via Montreal, and the Hudson Bay route should offer greater attractions. Moreover, the transportation systems of Canada and the United States have for many years found it good policy to keep their rates at a reasonable approximation to one another, and, if the popularity of the Hudson Bay route compelled a reduction of Canadian rates on the Great Lakes route, American transportation interests would be faced with the alternative of following suit or losing business.

But whatever its results may be, the Hudson Bay route is soon going to receive an extended and thorough trial, and business interests in Western Canada which are concerned with import and export trade are already trying to appraise what its effect will be upon their fortunes and arrangements. At present chief stress is laid upon its potential value as an outlet for grain and livestock, but it may get a substantial trade from exports of a different type. Churchill is the nearest port to the new mining field in Northern Manitoba, which contains the Flin-Flon, Sherritt-Gordon, and other promising mines, and the whole area lying west of the Hudson Bay is known to be richly mineralised; prospectors are now swarming in this country and hundreds of claims have been staked. Churchill is the base of operations for these mining ventures, and three Canadian banks are apparently satisfied that it will soon be a prosperous place, as they have already established branch offices there.

Notes of the Week.

The Coming Session.—Its Speaker elected, its members duly sworn, the new House of Commons has attained corporate existence and is ready to proceed with the business of the Session. Mr MacDonald has, so it seems, rather strangely failed to recognise the studiously courteous and unprejudiced character of the welcome given to his Government by the Press, has complained, with some unfairness, that there has been " in mischievous papers like the *Times* an appeal to the country to get into a frame of mind of general fear " before the Session begins. The Prime Minister, we trust, will not accuse us of sharing our distinguished contemporary's hitherto unsuspected *Schadenfreude* if we say that all shades of responsible opinion in the country await the forthcoming King's Speech—the first to be framed by a Labour Cabinet—with expectancy not unmixed with concern. If rumour prove to be correct that in his Speech and in the subsequent debate on the Address the Government intends to outline in considerable detail its legislative and administrative plans for the ensuing twelve months, then next week's proceedings in Parliament should at any rate have a good result in that much of the unsatisfactory uncertainty, which now prevails, will be dispelled one way or another. To demand of any Government a year's programme, " cut and dried " in every particular, would be an unreasonable request. At the same time, having regard to the fact that the present Government, placed in office by the votes of a minority of the electorate, is supported by a Party whose election programme was conspicuously nebulous both in its promises of action and professions of faith, it is not unfair to look to Mr MacDonald for rather more than usual precision in the terms of next week's Speech. The issues in which a clear statement of the Government's intentions is required are as important as they are numerous. The terms on which the foreshadowed resumption of diplomatic relations with Russia may be effected, the future of the McKenna and the Safeguarding Duties, the treatment of the London Traffic Bills, the policy to be followed by Government with regard to the coal-mining and cotton textile industries, the legislation projected in order to implement the pledge, already given, that the Washington Hours Convention will be ratified—all these are controversial questions in which continued uncertainty would have damaging economic reactions. In addition, it is earnestly to be hoped that the Government will lose no time in explaining in concrete terms what is implied by Mr MacDonald's

latest promise of " sincerity, determination, and courage " in " facing the various causes of unemployment." What use of Trade Facilities Acts is contemplated? What forms of Relief Works has Mr Thomas in mind? Is it proposed that the unemployed shall be reduced by lowering the pensionable or raising the school-leaving age, and, if so, at what cost? Does the Government's unemployment policy involves the raising of substantial loans in a market not propitious, at this juncture, for Government borrowing? The obvious questions, thus put, demand an answer. Finally, implicit in and overshadowing all these particular issues, there is the still uncertain attitude of the Government in relation to its own position as tenant " by leave " of office. The opening of the Session should go far to show whether our hopes are justified that Mr MacDonald appreciates both the opportunities and responsibilities of Government by minority under a Three-Party System. As we write, the omens are conflicting. The Prime Minister's broadcast idealism, tempered by concern for the " quiet development of industry " has been met by less re-assuring " Thunder on the Left " from the Clyde-side members. Gossip, neither malicious nor ill-informed, has it that the Government, determined to escape the accusation of " firing on the Red Flag," is in the mood to eschew " Safety First," and to strain to the maximum from the outset Liberal conceptions of the limits of " common fruitful ground." If this forecast be accurate, and if the coming Session prove to be a battle-ground in which the contending protagonists are in reality Mr Maxton *versus* Mr Lloyd George, with Mr Baldwin as *tertium gaudens*, the first Session of the present Parliament is likely to be its last. But such a fear, we should have thought, is belied by Mr MacDonald's clear recognition, on the morrow of the election, that the country does not want another election for two years.

Appointed Guardians.—In the course of the debates of last session on the new Local Government Act Mr Chamberlain revealed his intention of allowing the emergency arrangements at present in force in the Poor Law Unions of Bedwellty and Chester-le-Street to lapse on April 1, 1930, the date on which the poor-law provisions of the Act come into operation. He proposed, however, to make use of his powers to retain the appointed Commissioners in West Ham until April, 1935. The Labour Party has always so vehemently attacked on principle the policy of superseding elected guardians and putting in their place Commissioners appointed by the Ministry that it is not surprising to learn that the new Government has determined to remove the Commissioners from all three Unions as soon as possible. Turning to account the provision in the new Act that no further elections of guardians should be held after its passing into law, the Government proposes, for the period between August 1st and April 1st next, to place in office members of local authorities in the different areas, to be nominated by the local authorities themselves. In a sense these persons will still have the character of " appointed " guardians, but the selection of them will have been made by local representatives and not by Whitehall. After April 1st all difference between these three and other poor-law areas will disappear automatically, the administration being transferred to the councils of the counties or county boroughs concerned, exactly as in the case of any other Union. The event will measure the wisdom of these decisions, but few will regret that there is now no prospect of direct elections of guardians ever again being held in Bedwellty, Chester-le-Street or West Ham. In each of them the appointed Commissioners effected very large economies and probably suppressed grave abuses, though they were ceaselessly charged with callousness by Labour spokesmen; and it is true that in an official report last winter the Chief Medical Inspector of the Ministry of Health criticised the practice of the Bedwellty Commissioners in neglecting single men. [illegible] the intervening months before these Unions become [illegible] in larger and supposedly more responsible areas. [illegible]nestly to be hoped that the local authorities will [illegible]e unbiassed and competent administrators.

Progress Towards Naval Disarmament.—The new movement towards naval disarmament is making progress. Mr MacDonald's and General Dawes's speeches of the 18th, on which we commented last week, have been very well received in Japan; and though the French and Italians are lying rather low, there is nothing to indicate that they either of them intend to stand in the way of the movement. Nor, if they are not led to do so by motives of policy, are they likely to be goaded into obstruction out of pique; for the American and British statesmen who have initiated the new move are taking care, at every stage, not to leave the other naval Powers out in the cold. For example, the texts of Mr MacDonald's and General Dawes's speeches are reported to have been shown, before the speeches were delivered, to the Japanese, French and Italian Ambassadors in London. In Washington, an effective contradiction has been given to a false and mischievous report that " the freedom of the seas " had been the subject of a conversation between the British Ambassador and Senator Borah. There is, of course, no intention on the British side of interfering (and least of all in an " incorrect " way) with the course of procedure which President Hoover is gradually unfolding. The President's latest step has been to despatch Mr Hugh Gibson to London in order to confer with General Dawes. This is a good practical step to take, because Mr Gibson is better acquainted, from personal experience, than any other American diplomat with the history of the Three-Power Naval Conference of 1927 and also with the work of the League of Nations Preparatory Commission for the Disarmament Conference. It was in the Preparatory Commission that Mr Gibson originally made the announcement about the new American policy for a " yard-stick " which was the starting-point of the present movement. It looks as though President Hoover regards the Preparatory Commission as the proper place for bringing forward and comparing the alternative " yard-sticks " which are to be worked out by the respective naval experts of the Powers. The next step will probably be a meeting between President Hoover, Mr MacDonald and perhaps also Mr Mackenzie King on American soil. And all this is to lead up to the conference of the five naval Powers which is due to take place at Washington in 1931 in pursuance of the decision of the Washington Conference of 1921-2. We are beginning to see the road clear ahead.

The Acquittal of an Alsatian Autonomist.—On Saturday, June 22nd, a French jury at Besançon acquitted the Alsatian Autonomist leader, Monsieur Roos, who was being tried on a charge of conspiracy against the safety of the State. All good friends of France and of Alsace and of Europe will hope that this verdict may mark a turning point in Franco-Alsatian relations; and that the state of feeling between the Frenchmen of " the interior " and the Frenchmen of the " disannexed departments," which has been growing steadily worse since the Armistice, may now begin to improve. The possibility of improvement depends, of course, upon whether the view taken by the jurymen in Franche Comté is adopted by French public opinion in general. Meanwhile, this verdict is at least a hopeful sign; for there is no reason to suppose that, on the Alsatian question, Besançon thinks differently from the rest of France. Indeed, the trial was held there, and not in Alsace, precisely in order that Monsieur Roos should be tried by an ordinary French jury which would have no predisposition in favour of Alsatian autonomy and whose verdict might therefore be taken to represent the verdict of France herself. Besançon was well chosen; for the ancient provinces of Franche Comté has had a history in some ways like that of Alsace and in some ways different from it. Both Franche Comté and Alsace were annexed to France in the reign of Louis XIV., and were afterwards spiritually incorporated in France by passing through the common experience of the French Revolution. On the other hand, Franche Comté is a French-speaking province which has never since been separated from France and which is not divided from the rest of the country by any geographical barriers; whereas Alsace is differentiated from the rest of France by the three barriers of the Vosges, the German language, and the captivity of

1871-1918. The jury at Besançon seem to have realised a truth about the Alsatian point of view which it is evidently difficult for French minds, moulded in the French tradition, to grasp. The truth is that the Alsatians have a genuine and earnest desire for autonomy within the French body politic; but that this desire is simply what it professes to be, and is not a cloak for any insidious designs of breaking away again from France and re-entering the German Reich. During the trial, Monsieur Roos made it clear that the present autonomist movement in Alsace is a completely Alsatian movement. It is neither inspired nor supported by the Germans; and, if it were, Monsieur Roos and his friends would not be leading it. One of the Alsatian witnesses at the trial put the difference in the Alsatian attitude towards Germany and towards France in an epigrammatic way. " When the Germans made a *gaffe*," he said, " I used to laugh. When the French make one I want to weep." There is a world of difference in these words. They mean that " the Frenchmen of Alsace " will help " the Frenchmen of the interior " to heal the present unhappy breach, if once " the Frenchmen of the interior " will begin to help themselves. The jury at Besançon have now shown the way.

Religious Truce in Mexico.—On Friday, June 21st, the religious conflict in Mexico, which had been going on for nearly three years, was brought to an end by an agreement (since approved telegraphically by the Pope) between a Mexican prelate, who had been appointed Apostolic Delegate for these negotiations, and the President of the Mexican Republic, Don Emilio Portes Gil. In some of the remoter and wilder States of the Mexican Union, particularly in the north, the conflict had actually taken the form of civil war—the " Cristeros " maintaining a guerilla warfare in the mountains with at least one militant bishop at their head; but this was not the most serious aspect. The religious conflict was serious first because it tore the Mexican nation in two—even in States where the Catholic Party could not or would not actually take up arms—and secondly, because it was one of the factors that threatened to prevent the consolidation of a good understanding between Mexico and the United States. This was not only because the Catholics in the United States, who are, of course, a numerous and influential community, were strongly sympathetic towards their co-religionists over the border; but because the religious conflict was the most formidable remaining obstacle to the restoration of internal stability in Mexico, and an unstable Mexico practically means a Mexico at loggerheads with the United States, in view of the immensity of the American vested interests in Mexican territory. The strife that has now been composed, at least temporarily, goes a long way back in Mexican history. The power of the Catholic Church, both as an owner of property and a mistress of men's souls through her control of education, has been nowhere greater than in the former Spanish dominions in the New World; and this ascendancy of the Catholic Church in Mexico lasted longer than the authority of the Spanish Crown. During the century of Mexican independence that preceded the Revolution of 1910, the State several times came to grips with the Church and sought to clip her wings, without ever succeeding in bringing her permanently under control. The anti-clerical legislation of that century was resumed and extended in the Mexican Constitution of 1917; but the recent conflict did not break out until the Mexican Government began to take steps to put the ecclesiastical provisions of the new Constitution into effect, and that was not until 1926. The Church's retort to the Government's decree of July, 1926, was to suspend all Church services, and this suspension continued until last week—to the acute distress of millions of women and men who wanted to be both good Mexicans and good Catholics. The gist of the settlement seems to be that while priests are still to be required, in accordance with the Constitution, to register with the civil authorities, the candidates for registration are now to be designated by the Mexican Episcopate; and that while—again in accordance with the Constitution—religious instruction is to be prohibited in the schools, it is now to be permitted in the churches. An interesting point is that ex-President Calles and also the American Ambassador at Mexico City, Mr Dwight Morrow, are reported to have contributed towards bringing about the settlement.

America's Balance of Payments.—The annual report of the United States Department of Commerce, giving details of the balance of International payments of that country, has just been issued in Washington. The cabled summaries of this complicated but important statement are insufficient to enable us to piece together the balance sheet for 1928, and we must reserve comment until the full text is available. At this stage we can only record the final results and some of the impressions made upon the minds of the compilers of the calculation. Last year, it will be remembered, America's net export of merchandise amounted to about 550 million dollars, but, when interest due to and from the United States and invisible items such as tourist expenditure, payment for freights, immigrants' remittances, &c., had been taken into account this figure was reduced to 500 million dollars. To this has to be added a net transfer of gold to foreigners of 166 million dollars. The final result, therefore, was that America added 670 million dollars to her net foreign assets. In 1928 the visible export surplus had risen to about 1,030 million dollars, and after taking all the invisible items into account and making all the necessary adjustments, the report comes to the conclusion that this figure of approximately 1,000 million dollars represents the net increase in America's foreign investments for the year. The report again makes the comment that this figure is comparatively small in relation to the foreign issues placed on the American market, but this latter figure is, of course, largely offset by the investments made by foreigners in the United States and by other capital movements. The report also comments on the comparatively low figure of the total of America's net foreign investments, which are estimated in the case of private investments at about 9,000 million dollars (13,000 millions owned abroad less 4,000 million owned in America by foreigners). The extent to which the United States is a creditor nation is, however, greatly increased if to this figure we add the war debts at their face value, which would bring the total up to nearly 20,000 million dollars. This latter figure is not far from the probable total of Britain's private capital overseas. Our total would be very substantially swollen if war debts were included at their face value, for the sums due to us are several times greater than the amount we owe to the United States. We cannot, however, now claim to add this figure, seeing that we have agreed to scale down the debts due to us to the figure which we owe to the United States. Confining ourselves to private investments, the figures show that, as in 1927, so in 1928, the United States is slowly overhauling Great Britain, for the net export of 1,000 million dollars in 1928 compares with 150 millions sterling—or, say, 750 million dollars—which was Great Britain's net export of capital in that year. At this rate America's private foreign holdings will equal those of this country in 44 years. The report makes the comment that the character of the capital movements has changed very greatly in the twelve months under review, and therefore suggests that the resources of international finance are much more capable of dealing with the vast problem of " transfers of capital " than is commonly assumed, the conclusion suggested being that, from the point of view of international exchange, Europe will have no difficulty in paying its debts to America.

An American Tariff View.—Recent comments in the *Economist*, contrasting America's progressive record in some sections of the economic sphere with her reactionary tariff policy, have called forth some significant references in the American Press. " One reason for this discrepancy," comments the *Baltimore Sun*, " is the fact that in building up our domestic economic system, we Americans have had the advantage of operating in a great [illegible] restricted trading area. Had the founding fathers allow[illegible]

the several States to erect tariff walls around themselves, as some of them wanted to do, our inferior development would not only have been retarded, but our thinking on domestic commerce would be the same as that of the high protectionist. Benefits obviously attributable to superior industrial efficiency and management would have been credited to the tariff system of New York, or Massachusetts, or Maryland. The fact that the United States has been a free trading area makes it necessary for these bad logicians to transfer their faulty reasoning to the international scene. In spite of the export of capital, which makes the world virtually a single trading area, the ordinary Congressman still continues to think in terms of American industrial achievement as the result solely of the tariff." After describing what happens "when the bargaining begins"—the struggle of different industries to gain their own ends and not the nation's—the *Sun* goes on to say: "Everybody who has been in Washington when a tariff bill was being constructed knows that the doctrines, the tables of statistics, the expert testimony and all the rest of the paraphernalia of economic science are snares and delusions. It is all a matter of what politician you know and whether somebody more important than you knows the same politician even better. If the public followed it closely, a tariff revision should be a great education for the populace—but not an education in economics." British Protectionists please note.

Mr Snowden and the Savings Banks.—At the recent annual meeting of the Trustee Savings Banks Association the chairman read a letter from Mr Snowden conveying his congratulations and good wishes to the association. He commented on the fact that the funds of the banks have grown during the past year more rapidly than during any other year since 1920, and now reach a total of very nearly £159 million, while at the same time there has been a gratifying increase in the number of depositors, and added: "It is of the highest importance to the economic welfare of the country that great numbers of the citizens should contribute to the national savings, and I am very sensible how greatly the trustee savings banks have encouraged them to do so." These sentiments a contemporary describes as "feeding the fowls for plucking." But they are as complementary to Mr Snowden's policy of taxing large "unearned" incomes as to his declared views on national savings. Eighteen months ago Mr Snowden declared that trade revival was vitally dependent on capital raising and the capital development of this country, and that the lack of savings was greatly hindering our trade recovery. A year later he said, apropos of the surtax, that sometimes when they were trying to estimate what was available for further taxation they were apt to leave out of account the important item of capital investment, which was absolutely essential if the efficiency of industry was to be maintained. These admirable views can only be reconciled with a policy of taxation which must inevitably discourage in some measure the capital investment of the very rich, if Mr Snowden intends to foster a wider distribution of savings and a proper utilisation of the small resources of poor people. Should he succeed, the country will have cause to be grateful. Should he fail, he is likely to find two parts of his faith in conflict.

North-East England Electricity Scheme.—The sixth scheme to be prepared by the Electricity Commission covers Northumberland and Durham and part of the North Riding of Yorkshire; it coincides, therefore, with the area of supply of the Newcastle Electric and Associated Companies and, as a result of the co-ordination and centralisation of production carried out by the latter, affords less opportunity for the realisation of economies through interconnection. The Electricity Commission has recognised without modification the existing system as far as generation and transmission are concerned, but it has provided definitely for the conversion of frequency from the present 40-cycles to the national standard of 50-cycles. To avoid, however, dislocation of the extensive industrial electrification network which has been elaborated on a 40-cycle basis, the change will be spread over a long series of years. In the first five years, i.e., by 1935-36, only £2,207,155 will be expended for this purpose out of a total earmarked of £5,963,070. On full conversion, the annual capital charges will amount to £368,678, and it is advisable that this sum, which will be met by the national scheme as a whole, in common with standardisation charges from other schemes, be spread over as large an output as possible. The total expenditure to be incurred before 1935-36 will be £4,113,622, main transmission accounting for £1,131,467 and extensions of generating stations (75,000 kilowatts) for £775,000, so that the scheme is rather less costly than any other yet evolved. The output of electricity in the area, which covers roughly 5,050 square miles, with a population of 2,674,800, was 802,780,000 units in 1927-28, but to this should be added energy derived from waste-heat stations owned by the Newcastle Company and surplus power fed into the system from private coal-mining, iron and steel plants, equivalent to an additional 375,000,000 units, which are not considered by the Electricity Commission. By 1935-36 the output will have risen to 1,338,400,000 units and, by 1942-43 to 2,138,000,000 units, a consumption per head of population of 660 units. The cost of electricity as furnished by the Central Board will fall from .3268d. per unit in 1931-32 to .3167d. per unit in 1935-36, and the working costs per unit in the selected stations will be, in the latter year, .2809d., the lowest in Great Britain. Through interconnection a saving of £382,173 will be effected in four years and five months, while 80,000 kilowatts of reserve plant, representing an original expenditure of £1,360,000, will be brought into revenue-earning activity. The position of the principal undertakings under the scheme is illustrated by the summary table below:—

ELECTRICITY SUPPLY IN NORTH-EAST ENGLAND.

Undertaking.	Stations.	Capacity of Generating Plant. (Kilowatts).		Output of Electricity. (Millions of Units).	
		1928.	1941.	1927–28.	1935–36.
Newcastle Electric Supply Co.	Carville A	38,250	75,000	263·9	480·0
	Carville B	55,000	75,000		360·0
	Dunston	83,980	245,000	177·4	250·0
	Grangetown	15,300			
	North Tees	110,000	160,000	249·4	189·0
	Total	302,530	555,000	690·7	1,279·0
Darlington Corporation	Darlington	20,900	37,400	23·7	46·0
Sunderland Corporation	Sunderland	33,000	20,000	36·8	9·0
Scarborough Corporation	Scarborough	9,750	5,625	4·0	...
Newcastle Corporation	Manors	11,300	...	19·2	...
Newcastle and District Electric Lighting Co.	Close	12,500	...	23·7	1·0
South Shields Corporation	South Shields	14,300	10,800	12·7	3·4
Total		403,980	628,825	810·8	1,338·4

Only South-West England and South Wales, a part of East Anglia and the Northern and Southern extensions of Central Scotland remain to be surveyed to complete the national scheme, so that early next year the work of national reorganisation can be assessed at its proper value and in its proper setting.

Engineers' Wage Tactics.—The official report of the proceedings at last week's conference between the National Federation of Engineering and Allied Employers and the Trade Unions representing workers in the engineering industry is a document which deserves a place among the more curious archives of our industrial history. The upshot of the conference was purely negative, the application of the Trade Unions for an advance of 8s. per week for time-workers being countered by an offer on the part of the employers to consider the position in six months' time—an offer which the Trade Unions declined to accept. To appreciate, however, the whole matter of the present *impasse*, it is necessary to recall the history of engineering wages during the past five years. In 1924 the employers were presented with an application for an all-round increase of 20s. per week in wages—an application based on the grounds of the admitted disparity between the rates payable to engineers and those enjoyed by less skilled workers in "sheltered" trades. Lengthy negotiations on this claim broke down in January, 1926, and were followed by the local strike at Messrs R. Hoe and Co.'s works, which led to the employers' threat of a national lock-out as a deterrent against attempts to secure local advances. The Hoe works strikers eventually obeyed the orders of their Union officials to return to work, and the growing movement for district advances was arrested by the General Strike of May, 1926. In August of that year the engineering Trade Unions, which had refused in April an offer of 2s. 6d. per week advance conditional on modified regulations with respect to overtime and night shifts, formally announced that their claim for the 20s. per week increase was "deferred indefinitely." Nine months later, however, negotiations were renewed—on an "unprejudiced basis"—and in July, 1927, the employers offered to give an advance of 2s. per week to plain time workers. This offer was accepted with a patent lack of enthusiasm, and in January, 1928, the Trade Unions once again decided to approach the employers on the wages issue, and to apply for an 8s. per week increase for time workers with corresponding additions to piece-raters. Refused in April, 1928, on the ground that the engineering industry, with a net return on turnover stated to be only 2.7 per cent., was in no position to bear any addition to labour costs, this patiently submitted application came once more last week before the employers. On this occasion, Sir Allan Smith, the employers' chairman, chose as the grounds on which to base the now almost traditional rejection—not the economic position of the industry, but the supposition that Parliament, with a Government of pink "placid imbecility," goaded by "purple patches" of extremism, might impose on engineering—either by repeal of De-Rating, ratification of the Washington Convention, increase of school-leaving age, abandonment of the McKenna Duties, repeal of the coal mining Eight Hours' Act, or approval of the establishment of the Reparations Bank in Brussels—burdens which would render the industry unable to pay higher wages. With this remarkable medley of alarms the employers backed their refusal, and at the abortive end of the conference Sir Allan Smith remarked in farewell to the trade unions: "So far so good." We dissent. It is not good. Whatever the financial difficulties of some engineering firms may be, however valid may be the case against a rigid national advance under present conditions, we are convinced that the engineering employers, whose attitude to the Melchett-Turner Report indicated a deplorably anachronistic view of industrial organisation, will do their industry the worst possible service if they fail to recognise and to admit frankly and without reservation that the engineering trade unions have waited with commendable courage and patience for conditions of trade which might justify at last the full consideration of the question whether wage increases have become possible. Engineers throughout the country will reasonably want more convincing arguments than those advanced by Sir Allan Smith to prove that those conditions have not now arrived—at least in some degree, and in some sections of the industry.

Cotton Trade Wages.—The proposed new rates of wages for the operatives engaged in the cotton industry will come into operation in the week ending August 3rd, and, in the meantime, arrangements are being made for a joint conference between the employers and representatives of the workpeople. It is expected, writes our Manchester corrspondent, that the Master Spinners' Federation and the Cotton Manufacturers' Association will act jointly and deal with the nine cotton trade unions as one body. With regard to the Master Spinners' Federation, a new development is that a ballot is being taken of the members before the notices expire, and it will, therefore, be necessary for 80 per cent. of the members to vote in favour of the wages reduction. There is ground for believing, however, that the rank and file of the employers, both spinning and weaving, will support their central committees to the extent of over 80 per cent. Statements made during the week by the leaders of the operatives indicate that the strongest possible opposition will be made to the claims of the employers. Should there be a danger of a stoppage of machinery, however, intervention, either by the Government or some outside party, is regarded as a practical certainty.

The Continental Steel Cartel.—At its periodical meeting here last week (writes our Paris correspondent) the managing committee of the European International Steel Cartel fixed its tonnage programme for the third quarter of 1929 at one million tons higher than that hitherto in force. The Cartel's nominal total output for the next three months, therefore, will be carried to 32,295,770 tons. An informal discussion took place as to whether the international entente should be prolonged, and this was unanimously decided in the affirmative. The details for bringing the prolongation of the agreement into operation will be discussed at the next meeting of the committee, which will take place in Vienna. Other international agreements in the metallurgical industry will come up for consideration in the near future. The international rail cartel, whose leaders are to meet here, propose to come to decisions as to the increase of selling prices. The existence of the international zinc syndicate has been prolonged until the beginning of October next, and it has also been decided to maintain the rate of restriction of production at 5 per cent. A similar policy of regulating production and maintaining prices is contemplated by the lead and tin industries. A conference is to be held in London next month to discuss the advisability of organising an international lead cartel. The dropping of tin prices to £200 a ton is apparently inspiring the leaders of that industry to come to an agreement with a view to bringing selling level back to £300. The Anglo-Oriental Corporation is reported here to be anxious to bring about a general restriction of production, on the ostensible ground that the mines will soon be exhausted unless protective measures of this kind are taken. The leaders of the nickel industry in England, Holland and this country are reported to have met here with the object of creating an international syndicate.

Substitutes for Timber.—From time to time, writes a timber trade correspondent, new composition boards come on the world's markets, which all in their way help to delay still further that timber shortage of which we hear so much. Amongst the latest patents is one in Canada, where a company has been formed to manufacture boards made of compressed straw. It is claimed that the product is fireproof on account of the extreme pressure given it, amounting to 100 pounds to the square inch. These boards will be turned out in sizes 14 feet long by 5 feet wide, and no doubt others to meet requirements to save labour as much as possible. We have heard of straw boards before, but the surprise in the new manufactured board is that the thicknesses will be as much as two inches. As Canada must have large quantities of straw available year by year, a new industry is likely to be set up, which may have results in timber economy.

Gresham Fire and Accident Insurance.—A year ago this society was overtaken by an unexpected and serious loss in that the Canadian subsidiary, the Dominion Gresham Co., was forced into liquidation. Thus the whole of the parent company's investment, standing in the books at £64,000 was lost. The situation was promptly met by the issue of 100,000 new £1 fully-paid shares, all of which were taken up by the Gresham Life, which controls the Gresham Fire, at 35s. per share. The premium, amounting to £75,000, was thereupon utilised for the purpose of writing off the Gresham Fire Co.'s investment, and, incidentally a further £8,000 was employed in eliminating from the balance sheet the balance of "establishment of business" account. Without the help so readily afforded by the Gresham Life, the position might obviously have been much more serious. As it is, the company's anxieties have been relieved, and it appears to have grappled vigor-

ously with the overhaul of the business. The results, as disclosed by the 1928 report, are indeed gratifying, and are better than for many years past. The fire premiums for 1928 amounted to £171,477, being some £14,000 less than in 1927, but the accident premium income of £168,935 shows practically no change. The detailed results of the past two years are as follows:—

	1927. Amount.	1927. Percentage of Premiums.	1928. Amount.	1928. Percentage of Premiums.
	£	%	£	%
Fire profit	2,337	1·2	3,916	2·3
Accident profit	1,816	1·1	5,457	3·2
Investment profits	4,137		2,572	
	8,290		11,945	
Less items debited to profit and loss account	2,408		1,288	
Total net trading surplus	5,882		10,657	

Owing to the increased funds provided by the new issue, the interest earnings have grown from £10,065 to £15,178, and have been sufficient to cover the usual 7 per cent. dividend, costing £14,919. A beginning has been made with the task of strengthening reserves. The underwriting reserve in the fire account has been raised from 35 per cent. of the premiums to the accepted minimum of 40 per cent., but the reserve in the accident account still remains at 35 per cent.

Licenses and General Insurance.—The primary function of this company, which was established some 30 years ago, still remains the provision of insurance for licensees against risk of loss entailed by the forfeiture or non-renewal of their licences. The premium income of this business, including also the whole of the general business, now amounts to £300,000. Of late years, however, the company has cultivated to an increasing extent a fire and accident business, the combined premium income for which now slightly exceeds £200,000. The underwriting experience of the company for the last few years has been very patchy and uneven, and the year 1928 has proved to be no exception from this, as the detailed results set out below indicate.

	1927. Amount.	1927. Percentage of Premiums.	1928. Amount.	1928. Percentage of Premiums.
Fire	— 3,482	— 2·1	— 12,853	— 7·6
Accident	— 1,801	— 14·8	— 280	— 1·9
Employers' liability	— 759	— 2·3	1,100	3·3
Licences and general	718	0·3	5,336	1·8
Marine	— 25,000	— 66·5	Nil	...
	— 30,324		— 6,697	
Less items debited to profit and loss a/c	7,778		12,838	
Total net trading surplus	— 38,102		— 19,535	

The dividend remains at the same rate as for 1927, namely 20 per cent., and its cost, namely £11,816, is easily covered by interest earnings of £18,245. In the past two years, when commenting upon this company's results, we have referred to what appeared to be an over-valuation of the shares. For instance, last year the ordinary shares of £1, with 10s. paid up, rose to a high point of 95s. A subsequent gradual fall has occurred, and a month ago the company issued to its shareholders 57,624 additional ordinary shares at 50s. Even at the present price of about 55s. the yield, namely £3 12s. 6d. per cent., is very moderate.

University Life Assurance.—Within the limits of the very restricted field in which it operates, this society has succeeded in showing a notable expansion in the past four years. In 1924 the new business amounted only to £75,053, but in 1928 this had grown to £160,356. As is implied by the name, the *clientèle* of the society is for the most part drawn from members of universities, and, indeed, the business is strictly limited to "members of the universities, public schools, theological colleges, and other approved educational institutions." Hitherto the financial year has ended on April 30th, but last year the directors decided to alter the financial year so as to coincide with the calendar year, and, therefore, the report now published is for the broken period of eight months from May 1, 1928, to December 31, 1928. In that period good progress appears to have been made, and the new sums assured, amounting to £150,631, are almost up to the level of the figure for the preceding complete year. The present report being for a broken period, the figures are naturally disturbed somewhat by the incidence of the business, and an exact comparison of interest earned and of expenses is impracticable. As regards the former, however, earnings hitherto have been on the low side, and the annual net rate of interest during the first years ended April 30, 1928, was little more than 4 per cent. On the other hand, owing to the fact that the society pays no commission for introduction of business, the expense ratio is remarkably low, and averages over the same period 8.5 per cent. The next quinquennial valuation is due to be made as at December 31, 1929. The society is controlled by the "old Equitable" by virtue of the ownership of almost the whole of the share capital.

British Oak Insurance.—This company is really an offshoot of Spillers Milling and Associated Industries, Limited. There is an inter-locking directorate, and a large proportion of the company's business is derived from its association with the milling industry. No dividend has been paid since 1918, when the company was converted into a public company, and a year ago it became evident that some reconstruction was needed. Accordingly £75,000 was written off the issued capital of £250,000 and utilised for the purpose of eliminating a good-will item from the balance sheet amounting to £17,000 in respect of a subsidiary, the "M.M.I." Association, Limited, and also of strengthening the marine account. Both of these things have been done, but, unfortunately, during 1928 the company encountered an unhappy underwriting experience. In the fire account there was a loss of £20,808 on a premium income of £103,000, and in the Accident Account a loss of £22,920 on a premium income of £303,000. The result is, that the writing down has turned out in fact to be insufficient, and there still remains a debit profit and loss balance of £18,450. Nevertheless, all known losses appear to have been provided for, including the complete writing down of another subsidiary, The St. Christopher Insurance Co., Limited, in course of liquidation, and there is no reason why, in due course, the company may not be made into a profitable concern.

Victory Insurance.—This company has undergone in the ten years of its existence a very trying experience. The combination of disastrous losses from early adventures in marine insurance and of the failure of the Essex Union, with which it was intimately associated, necessitated in 1926 a drastic reconstruction scheme. Since that time good progress has been made, and as at the end of 1928 the company finds itself with a general reserve fund of £20,000 and a profit and loss balance of £7,123 in respect of paid-up capital of £150,000—originally £250,000. Only fire and accident insurance business is now conducted, and the combined operations are exhibited in one account. From this it appears that the premium income has risen by £50,000 to £250,000 in 1928, in respect of which the underwriting profit was £2,520, compared with £3,011 in 1927. This is a very meagre return. Allowing for items debited to profit and loss account, there was a total net trading loss in 1928 of £2,793, compared with a loss in 1927 of £1,103. Fortunately, however, there is a very substantial margin between interest earnings and dividend amounting last year to nearly £8,000. The dividend has been raised from 4 per cent. to 5 per cent., and the shares of 16s., with 6s. per share paid up, now stand at 7s., and yield, therefore, just under 5 per cent.

The Reparation Commission at its meeting held on June 11th, appointed (after consultation with the British member of the General Board of the Reichsbank) Mr Charles Wigham to be a member of the Transfer Committee in the place of Mr Henry Bell, resigned.

Oversea Correspondence.

UNITED STATES.—BUSINESS—PRICES—FOREIGN TRADE—MONEY—CAPITAL.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 19.

THE heat has slowed down dealings on the Stock Exchange to some extent, but it has stimulated trade. Recession in the principal industries is being remarked, but it is only slight and promises to be less than usual for the season. There is no disguising the fact that great satisfaction is felt over the adjournment of Congress for a summer recess, which will last until August. Wall Street would have been better pleased if adjournment had been *sine die*. However, the farm relief bill has been passed and without the objectionable feature of a subsidy for the purpose of buying up the surplus. The bill as passed is considered sound enough, although there is a difference of opinion as to how soon actual benefits will flow from it. At least a controversial matter has been settled. In all probability when Congress reconvenes, enthusiasm for sharp increases in tariff duties will have cooled somewhat.

With credit more abundant and interest rates somewhat lower the security markets are improving and the principal commodity markets are steadier. Wheat and cotton new crops are now coming on the market and more attention is paid to the weather than to the money market. Commodity prices as a whole, however, are continuing to decline. Farm products groups account for most of the drop, but prices everywhere are weaker. The decline has been gradual, however, and probably has not hampered trade. The decrease during May, according to the index of the Bureau of Labour Statistics, was about one per cent., which is the average amount of monthly decline for the past few months. The Bureau's index, as compared with the previous month and a year ago, follows:—

INDEX NUMBER OF WHOLESALE PRICES BY GROUPS AND SUB-GROUPS OF COMMODITIES.

(1926 = 100·0.)

Groups and Sub-Groups.	May, 1928.	April, 1929.	May, 1929.
All commodities	98·6	96·8	95·8
Farm products	109·8	104·9	102·2
Foods	101·2	97·7	97·7
Hides and leather products	126·3	107·9	106·8
Textile products	96·6	95·5	94·2
Fuel and lighting	81·8	80·6	81·1
Metals and metal products	98·6	106·4	105·2
Building materials	93·5	97·9	96·8
Chemicals and drugs	95·3	94·9	94·2
House-furnishing goods	97·8	96·7	96·7
Miscellaneous	85·1	79·2	79·6
Raw materials	101·4	97·0	95·3
Semi-manufactured articles	98·6	97·4	95·1
Finished products	97·1	96·9	96·4
Non-agricultural commodities	95·6	94·7	94·1

In addition to the continuous decline in commodity prices foreign trade statistics for May, published a few days ago, have caused some concern. For the first time since April, 1926, this country brought in merchandise of a greater value than that shipped abroad. The excess of imports over exports was due both to lower exports and to higher imports, as compared with a year ago. Imports during May amounted to $401 millions, which was $8 millions less than in April, but which was nearly $50 millions above May, 1928. Exports of $387 millions were $40 millions below April and $35 millions below last year. Department of Commerce officials attribute the drop in exports to smaller shipments of cotton, while higher imports are attributed to an attempt to send in goods before new tariff rates become operative. The explanation of the increased imports would, of course, be more convincing had the outlook for tariff increases been brighter; as it was, no one expected any change in old rates for some time. So far as our exports are concerned, the question is raised whether the tight money policy of the Federal Reserve Board, which has brought about deflation here, has not had enough depressing effect on foreign currencies as to reduce purchases of our cotton and other commodities. The bugaboo among business men now seems to be that a decline must be expected in export trade, but fears of that doubtless are exaggerated. Admittedly relentless pressure on credit by the Reserve Banks would not only injure foreign trade, but domestic business as well, but that pressure probably will be lifted and foreign borrowing will probably be resumed with the approval of the reparations agreement.

At the moment the money market is fairly easy under the influence of Treasury borrowing at the Reserve Banks of an amount estimated at $150 millions, which is less than usual at the tax date. Member banks were granted immediate credit at the Federal Reserve Banks on Saturday for maturing certificates of $528 millions and the Treasury paid out about $100 millions in interest. As an offset, $404 millions of new certificates were sold, foreign Governments paid about $80 millions interest on war debts, principally in United States bonds bought at a discount, and income taxes were collected. Most income tax payments are made by cheque, however, and their collection will spread over the week. As the Treasury overdraft is liquidated the money market should firm up somewhat, but seasonal influences are at work toward easier money.

In addition to the help which the money market is receiving from the Government, gold is now coming in. In the past week Canada, for the first time in several months, has sent in gold, the first shipment being about $2 millions. More has come from Argentina and more is on the way. Including this week's announcements of about $7 million, the total addition to the gold stock of the country through import and release from earmark since the first of the year is about $160 millions. Although that will support about $2,000 millions of credit, Federal Reserve credit actually has been deflated by about $700 millions and total loans and investments of reporting member banks (about 40 per cent. of the banking resources of the country) are down $1,200 millions since the first of the year. Just how much help will come from the gold depends largely on what the member banks do with it. They may be depended on to cut their discounts further, but some easing effect is nevertheless anticipated. Morally the effect is expected to be considrable on the Federal Reserve Board, which has no desire to drain off any more of Europe's gold.

The share market has been creeping forward, but the volume of business is small, indicating public participation at a low ebb. The best class of shares have made the best showing, and the bond market also continues to improve. Offerings of additional shares were made by a large number of corporations last spring, for the purpose of paying off bonds, retiring debt and expanding commercial activities. It is estimated that the exercise of subscription privileges maturing in June and early July will call for the investment of approximately $850 millions. The effect on the money market should not be considerable, since the operations merely mean a shifting about of bank balances. The effect for a short while may be, however, to increase brokers' loans since many shareholders are unable to take up new stock all at once. This week a total of $401 millions was called for on new stock subscriptions.

The latest statement of the Federal Reserve system indicates a more lenient attitude. The Reserve Banks increased slightly their holdings of bills and added largely to Government securities. Total credit outstanding fell, however, because the member banks cut down their borrowings. The excuse for the addition to bills and securities is offered that the Reserve wished to help dealers over the mid-month, and while the financial district is inclined to accept it for what it is worth, a close eye is being kept on Reserve operations to detect further signs of an easier money policy.

FRANCE.—LONDON AND WASHINGTON AGREEMENTS—PUBLIC DEBT.

(FROM OUR CORRESPONDENT.)

PARIS, June 26.

THE question whether the Washington and London debt agreements shall undergo ratification forthwith continues to dominate all others, and it is not yet possible to foresee what the solution will be. Opinion in the Chamber and throughout the country is still sharply divided on the matter. M Poincaré, in a series of three exhaustive speeches before a joint assembly of the Foreign Affairs and Finance Commissions of the Chamber, has put forward a remarkable mass of arguments in favour of ratification, but the Commissions have not yet reported their decision. In political circles, although there is still a large section which refuses to agree to ratification in any form, the opinion of the majority appears to be in favour of ratification accompanied by reservations. The principal condition which it is desired to attach to ratification is that France shall be free, in the event of Germany suspending or repudiating reparation annuities, also to suspend payment. The difficulty confronting the Chambers is how to express this condition without rendering the form of ratification adopted inacceptable to the United States. M Poincaré's proposal is that the Chambers should, as a preliminary step, pass a resolution authorising the President of the Republic to ratify the two agreements by decree. This, he pointed out to the Commissions, would enable Parliament to voice its reservations as part of the resolution. The presidential decree, once signed, would come before Parliament for formal approval, which would provide a final opportunity to attach an expression of their reservations to their vote.

The Commissions have admittedly been much impressed by the Premier's arguments, but outside Parliament opposition to ratification has been in no degree lessened. A demonstration on Sunday of former soldiers belonging to several national federations proved a fiasco, owing to the Premier refusing to receive a deputation representing them. To-day capital is being made out of a statement made in October, 1926, by M Jacques Bardoux, to the effect that he had been told by " one of the highest personages in the republic " that the campaign then being carried on in certain newspapers in favour of ratification was being " paid for by American money, and that the names and figures were known." Several of the newspapers are now demanding that the names of the persons accused should be made public.

Common sense, in view of the fact that on August 1st payment becomes due of the $400,000,000 owing for the American war stocks left in France in 1918, would seem to dictate immediate ratification. The Treasury, as already announced, is undoubtedly in a position to find the money required to liquidate the American claim, but this apparently would not stand alone. It is now announced that a few weeks ago, before the General Election, Mr Churchill reminded the French Government that if it decides to pay off the American bill of $400,000,000 forthwith, the British Government will demand payment of an equivalent amount in sterling, on the ground that the London agreement stipulates that the payments made to Great Britain must not be inferior to those made to the United States. M Poincaré, as might be expected, does not accept Mr Churchill's interpretation of the clause in question. Unofficially, the opinion is expressed here that, in view of the present situation of the pound, the new Labour Government may find it advisable to adopt a more conciliatory attitude towards its Continental debtors than Mr Churchill appeared to assume.

The following statement of the French public debt, as on May 1, 1929 (comprising both that of the State and of the Caisse d'Amortissement), is published by the newspaper *Le Capital*, which is generally well informed:—

I.—INTERNAL DEBT.

"Perpetual" Rente	100,941,000,000f.	
Redeemable Rente	110,130,000,000f.	
Short-term debt	22,118,000,000f.	
Floating debt	40,507,000,000f.	
		273,696,000,000f.

II.—FOREIGN COMMERCIAL DEBT.

United States Loan, 1921	1,552,000,000f.	
" " " 1924	2,112,000,000f.	
" " " 1928–68	1,914,000,000f.	
United States Loans (Lyons, Bordeaux, Marseilles)	1,149,000,000f.	
United States War Stocks	10,397,000,000f.	
Argentine (banking credits)	202,000,000f.	
		17,326,000,000f.

III.—FOREIGN POLITICAL DEBT.

United States Treasury	74,310,000,000f.	
British Treasury	89,553,000,000f.	
		163,863,000,000f.
Total		454,885,000,000f.

Assuming *Le Capital's* figures to be approximately accurate, it is interesting to work out the modification the French public debt has undergone during the five years that have elapsed since M Clementel, the then Finance Minister, published his historic " Inventory of the Financial Situation of France " in 1924. In that exhaustive summary M Clementel set forth the total internal debt at July 31, 1924, as 277,850,000,000 francs, which he estimated as equivalent in gold (calculated on the basis of the average rate of exchange during the month named) to 73,550,000,000 francs. Reducing the amount of 273,696 million stabilised francs (given above as that of the French internal debt to-day) to a similar gold level (on the rough basis of 125 to the £, as representing the present franc's value), it appears that the internal debt is now equivalent, approximately, to 54,739,000,000 francs gold; from which it appears that during the period since stabilisation the total internal debt has been reduced (in real values) by some 18,811,000,000 francs gold. This result has, of course, been obtained almost entirely owing to the fixing of the franc by the stabilisation law at its present diminished value; one effect of which law was to wipe out at a stroke the 23,000,000,000 francs which figured in M Clementel's " Inventaire " as owing by the State to the Bank, and which was equivalent to about 25 per cent. of the floating debt as it existed in 1924. Quite apart from any question of reducing the internal debts of 1924 and of 1929 to a common gold basis, the figures given in the table above and in M. Clementel's " Inventaire " show that the internal debt since 1924 has been reduced from 277,850,000,000 francs to 273,696,000,000 francs, in addition to which the floating debt has been rendered " safe " by the conversion of the whole of the former dangerously short-term bonds into securities with a minimum maturity of two years.

GERMANY. — REPARATIONS—CREDIT—FINANCE —INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, June 25.

THE evacuation of the Rhineland was the central point of the Reichstag debate on foreign policy which began yesterday. The attitude of the parties on this point was made clear—that of the Cabinet not quite so clear. Late last week it was announced that the Cabinet had decided to treat the Young Report as " the basis for a conference between the Governments and in connection therewith for the liquidation of the outstanding questions which originated in the World War." This not very clear reference to evacuation was supplemented by the Minister for Occupied Territory, who expressed approval of " the unanimity of the parties in demanding a speedy evacuation of the occupied area and the restoration of the Saar district." Dr Stresemann yesterday declared with great emphasis that evacuation must not be followed by any form of permanent control, but he did not declare categorically that evacuation is the Cabinet condition for acceptance of the Young plan. The Government parties' spokesmen did make declarations in this sense; evacuation must, they declared, be a conditions. The Cabinet, it is clear, is committed to reject control as a condition of evacuation, but, unlike the parties, has not committed itself to reject the Young plan if evacuation cannot be attained or if it could be attained only under the unacceptable condition of control. It is, however, not likely that even if " liquidation of the outstanding questions " cannot be negotiated on conditions acceptable to Germany, the Young plan, which offers such great advantages, would be rejected.

The party speakers professed to be disappointed with or doubtful about the plan. The plan is also being subjected to criticism outside the Reichstag, not on the ground of its organisation details, but on the alleged ground that the payments are excessive. The Central Association of Banks declares that the Young Committee's proposed protection for part of the payments should—contrary to the Committee's report—not be regarded as an emergency expedient necessary only when the economic position is exceptionally bad. Germany should have a right to demand this protection if the general expectations which are the basis of the plan prove to have been too optimistic. The Federation of German Industries holds that the burden is too high. The Disconto Bank complains that the Young Committee ignored " the vital fact that the Dawes annuities were paid out of foreign loans," predicts that without foreign loans the reduced annuities will not be payable, and holds that even the payment of the unprotected 660 million marks a year is in doubt. On this point, which has played such a big part in Reparation discussions, the banker, Dr Bernhard Dernburg, told the Reichstag the truth—that " the moneys borrowed from America went into German business; it is therefore false to assert that the Reparations payments were effected through debts."

The demand for money last week increased, but in view of the impending half-yearly settlements and of the holiday demand it was not excessive and was easily supplied. The recent money market stringency was largely due to the need of the Republic, caused by the old cash deficit. Here the position has been improved by agreement for a credit of 210 million marks from a banking syndicate led by Mendelssohn and Co., against which the syndicate is to get an equivalent one-year dollar credit from an American group. Offers of foreign funds increased last week at somewhat reduced interest rates, but the lowness of the chief foreign exchanges tended to cause sale of mark holdings by foreigners. Day loans to-day cost 6½-9 per cent., month loans 9½-10½ per cent.; private discount rate unchanged 7½ per cent. The commercial banks, which on June 1st put up their interest rates all round by 1 per cent., have reduced them as from July 1st by the same amount, so that the debit rate is again the normal 1 per cent. above the official rate. This reduction is a result of the removal of the Reichsbank's restriction of rediscounts, and the removal is a cause of the money market improvement. The Reichsbank's return for June 22nd shows a decline in discounts by 128½ million marks, in advances by 33 million marks, and in circulation by 123 million marks. The gold and exchange reserves show only small changes, and the ratio to reichsmark circulation has risen further to 51.5 per cent., and to all circulation 46.5 per cent. The sterling exchange rose sharply to-day to 20.345 as a result of the abandonment of the Reichsbank's opposition to import of gold, followed by the purchase of English gold of so far unknown amount. The Reichsbank, which seems to have believed that the extreme weakness of sterling witnessed since the middle of May was temporary, had given the commercial banks to believe that it opposed arbitrage gold purchases. The natural consequence was a complaint by exporters to England, who stood to lose if they converted sterling bills into marks. The sale last week of English gold to the United States caused a change in the Reichsbank's attitude. Commercial circles here disapprove of the gold export embargoes and gold purchase embargoes of which so much has been heard of late. The system is considered to be inconsistent with a gold currency.

Receipts from taxation in May totalled 657 million marks, against 939 million marks in April (including quarterly payments). The completed Budget for 1928-29 shows:—

	Ordinary.	Extraordinary.
	Millions of M.	
Receipts	10,277·6	216·8
Expenditure	10,231·7	1,121·3
Surplus or deficit	45·9	*Dr. 904·5*
Expenditure not paid by end of Budget year	200·3	73·3
Deficit	154·4	977·8

The total deficit is, therefore, 1,132.2. The extraordinary deficit of 977.8 million marks is recoverable out of loans; the ordinary deficit of 154.4 million marks, according to law, out of ordinary revenue in the Budget year 1931. The extraordinary deficit is due as to 259.8 million marks to repayable loans to the Unemployment Insurance Board, and as to 465.3 million marks to a liability carried forward from 1927-28. The funded debt at the close of the Budget year was 7,947.9 million marks, whereof 877.1 million marks represented the international loan of 1924, 5,039.8 million marks valorised paper-mark debts, 562.3 million marks home war-compensation registered claims, and 655.6 million marks Rentenbank loan. The floating debt totalled 990 million marks.

The wholesale-price index number for June 19th is 135.2 as against 134.9 on June 12th. The agricultural products group continues to rise. Unemployed members of the trades unions on May 31st were 9.1 per cent., as against 11.1 per cent on April 30th and 22.3 per cent. on February 28th. While the labour market as a whole has greatly improved, unemployment and partial unemployment in the textiles branch have increased during the past four months. The import of raw cotton and wool this year so far has been at about the same level as in the first part of 1928, but the import of cotton and woollen yarns has heavily declined, and this is regarded as pointing to slack trade. Export of finished textiles this year so far has been larger than in 1928 or 1927. The steel market is increasingly active. The May ingot steel production, 1,421,047 metric tons, is the largest since the war; the production of January-May inclusive is 6,892,882 metric tons, against 6,627,696 metric tons in the same months of 1928, and exceeds *pro rata* the production of 1927. Business in semi-products, joists, and railway permanent materials is very good. Export of structural steel to South America and Scandinavia is increasing, and the price has been put up 5s. per ton. The bar market is still dull.

The " Grain Valorisation Commission's " proposal to create a monopoly with the aim of maintaining remunerative prices has met with difficulties. The present design is to abolish the reduced interim duties which are 55 marks a ton for wheat and 50 marks for rye. This would merely bring into force the Swedish commercial-treaty rates of 65 marks and 60 marks respectively, which are considered too low. As Sweden does not seem inclined to surrender her rights the treaty will probably be denounced to January 1, 1930. This will leave Germany entirely free. It is desired, however, that this year's crops shall benefit from the price rise; and it is, therefore proposed to pass immediately a law compelling millers to mill a fixed production of home grain, and by this means to drive prices up. In the sugar industry negotiations for a cartel in order to get full advantage of the import duty (which is combined with a legal maximum price) are under way.

The foreign-trade balance for May, for the first time since 1926, is favourable. Both imports and exports show declines as compared with April. Exports of finished

goods declined slightly, but remained far above the monthly average of the past year:—

	Imports.			Exports.		
	May.	April.	Jan.-May.	May.	April.	Jan.-May.
	Marks (000's omitted).			Marks (000's omitted).		
Livestock	11,661	12,389	53,193	2,100	1,647	7,813
Foodstuffs	300,074	350,820	1,596,186	79,510	83,588	326,123
Raw and half-manufactured materials.	613,482	691,802	3,102,441	260,132	269,514	1,211,218
Manufactured goods	196,417	199,990	981,003	834,074	876,261	3,923,218
Merchandise	1,121,634	1,254,901	5,732,823	1,175,816	1,231,010	5,468,372
(Thereof Reparations Deliveries in kind)	...	...	...	77,392	66,822	318,272
Gold and silver	11,770	11,558	52,921	3,290	936,610	949,452
Totals	1,133,404	1,266,459	5,785,744	1,179,106	2,167,620	6,417,824

The adverse balance on the five months (wares only) is 264½ million marks, or a monthly average of 53 million marks, as against a monthly average of 200 million marks in 1928, and 330 million marks in 1927.

AUSTRIA.—RENT ACT—RAILWAYS—INDUSTRY—AGRICULTURE—STOCK EXCHANGE.

(FROM OUR CORRESPONDENT.)

VIENNA, June 22.

THE Rent Bill has been passed by Parliament, and the cause of the most bitter political fights has thereby been removed until the year 1931. The increase which the tenants will have to pay in comparison with the present rents are of little material consequence in those categories which had small flats and shops in pre-war times, and even for large flats and large business premises the old tenants will not have to make any great sacrifice. In the case of new tenants and new leases, however, a not unjustifiable increase of rent will be imposed. The important question now is whether private enterprise in house building will set in in the measure anticipated. The Department of Finance has allotted a sum of 24 million schillings per annum for the redemption service of the housing bonds, which are to be issued to a value of about 450 million schillings. Private builders of houses who may avail themselves of the advantages of the new law will have to pay about 5 per cent. interest for the redemption of the credits accorded to them. Banks, savings banks and insurance companies are to lay out in the new loan a certain quota of the savings deposits or premiums paid to them. A political touch is being given to the whole matter. in that in Vienna the tenants of houses on sites especially valuable in pre-war times will have imposed upon them a special rate, which will be used to furnish a fund for the benefit of tenants of houses on which the cost of repairs would otherwise be too high. The chief thing is, however, that the impracticable provisions of the Tenants' Protection Act have been modified, so that within a reasonable time house property in Vienna will once more come into consideration for security purposes. The issue of the housing loan will undoubtedly be influenced by the situation of the international money market, especially as it is intended to dispose of a portion of the loan abroad; foreign inquiries for this loan have already come to hand. The proposed rate of interest is 7 per cent.

The Department of Finance must also shortly take legislative measures in order to be in a position to prosecute with more vigour the negotiations for the big investment loan which it desires to float. It is probable, however, that for the time being the big loan will not be issued but the example of Germany followed and requirements covered by means of provisional transactions.

The balance sheet of the Post Office Savings Bank indicates that for a long time to come the State will have to continue subsidies. For last year they amounted to 5.5 million schillings, corresponding to the interest on a 4.8 per cent. guarantee, which the State undertook for an amount of 113 million schillings on behalf of the Post Office. The 113 million schillings represent losses sustained by the Post Office Savings Bank during the inflation period and now being gradually worked off. The balance sheet of the Federal Railways, it is true, shows a working surplus of 28.7 million schillings. As, however, the greater part of this was drawn upon for purposes of the loan and interest service, there remains a net profit of only 135,689 schillings. During the present year, the Federal Railways have increased their rates, but they will not be able to derive any great profit therefrom, because the severe winter caused serious damage to rolling stock and railway property. At present a considerable movement has set in for a fresh reduction of staff, especially as calculations show that the cost of the personal representation, which exercises a decisive influence upon the whole enterprise, is unusually high. Another transport concern, the Danube Steamship Co., has so far not yet succeeded in getting the subsidy it desires from the State. The company has declared that it cannot maintain for long even the reduced passenger service, as it is completely unprofitable and involves serious losses. It was perhaps a great mistake on the part of the company in previous years to overestimate its assets and to calculate the temporary profitableness of its coal values and the value of its fleet so high that it did not give adequate consideration to the profitableness of the passenger service. In an appeal to the State it has pointed out that the shipping companies in all neighbouring countries enjoy government subsidies, while it has none. For the time being, the shareholders are the sufferers, as they have received no dividend for the last business year.

Apart from individual industries, stagnation prevails, though bankruptcies and compositions are less numerous. In the year 1928 there were 2,663 bankruptcies and compositions in Austria (18 per cent. less than in 1927), in Czechoslovakia 2,660 (10 per cent. less), Yugoslavia 917 (13.5 per cent. less), and Hungary 1,599 (21.7 per cent. more). Brisker business is shown in the brewing industry, in several branches of the electrical industry and in building. The iron industry is slowing down, though the works are still fairly busy. The position of the Austrian milling and textile industries is decidedly unfavourable. Both these industries are endeavouring to secure greater tariff protection. It is also proposed to introduce the duty on cast-iron pipes, which was formerly suspended; the first domestic enterprise is about to be established. The demand for a higher duty on boots is meeting with the resistence of the Czechoslovakian and German footwear concerns.

In spite of these unfavourable signs, seasonal work has again reduced unemployment in the first week of June, at which time there were in Vienna only 56,757 in receipt of unemployment benefit. Building concerns are making great preparations in view of the Housing Promotion Act, and the price of building land has already gone up. It appears that a number of savings bank and bank depositors are withholding their savings and also drawing them out for the purpose of building their own houses and acquiring ground. In any case the movement of saving, which for a long time had been constantly rising, has been slowing up very noticeably.

The position of farming has lately become unfavourable. It is suffering through sharp foreign competition, and in certain quarters the introduction of a State grain-trading monopoly is advocated. The trade-treaty negotiations with Germany are making very slow progress. The revision of the Austro-Roumanian most-favoured-nations agreement is contemplated and the creation of a tariff treaty instead of it. For the present the farming interests are sharply opposed to one another. The fight over the extension of the West Tyrol water power has not yet been decided. It is likely that a compromise will be arrived at between the Austrian banks who are financing the affair and the German consumers of electric energy, who desire to secure a stronger influence on the finance. The National Bank still remains the chief source of credit. Even though important offers are received from abroad, the National Bank is practically the cheapest source of credit accommodation. As a consequence, its bills receivable account, which at the beginning of June had grown to 228 million schillings, which was almost the highest level since the year 1924, is receding very slowly. It is hardly likely that there will be any change in the bank rate in the near future.

The Stock Exchange is stagnant. Matters are made worse by the circumstances that the Austrian public has large holdings of Hungarian shares from an earlier period and has been badly hit by the depreciation consequent upon recent events on the Budapest market. Aversion from shares is as bad as it can be, and various plans to execute fresh issues have accordingly had to be put back. The index figure of Austrian shares, exclusive of mining shares, stood at 1,053 at the beginning of January, at 1,054 at the beginning of May, and at 1,452 and 1,479, at the beginning of June respectively, including mining shares. Business people complain that foreign tourist traffic is not fulfilling expectations. The desire of certain circles of business people for more stringency in the regulations covering composition with creditors, which is undoubtedly necessary, will probably not be fulfilled until a later date.

GREECE.—POLITICS—BANKS—MERCHANT MARINE—TREATY WITH RUSSIA—REPORT OF THE I.F.C.

(FROM OUR CORRESPONDENT.)

ATHENS, June 19.

WITH the Opposition parties casting blank votes, Admiral Coundourioutis was elected on June 3rd President of the Republic of Greece. Though he has been carrying out the duties of a President for several years, it is only now that his nomination to the post of the head of the State is made conformable to the Constitution. The election of the President afforded to Mr Venizelos the opportunity of realising a reconstruction of his Cabinet, which had been expected for some months. While a few Ministers are to continue in office, new ones were appointed and two new posts were created: a Deputy Minister of Finance and one of Communications. The inclusion in the new Cabinet of persons considered by the principal Opposition party as belonging to the group responsible for the shooting of the five Royalist Ministers and the Commander-in-Chief after the Asia Minor catastrophe, led to a decision of the Popular Party to abstain from any further collaboration with the Government in the House of Parliament and the Senate. In view of the successful reconciliation efforts made by all the parties after the overthrow of the Dictatorship and before the return to politics of Mr Venizelos, this relapse into the old political quarrel is a lamentable development. On the other hand, with the impending transference of the hitherto Minister of National Economy to the Ministry of Finance, and the appointment as his Deputy-Minister of one of the young and promising Greek statesmen, the finances of the country will be once more in strong and dexterous hands—an event of paramount importance in view of the present financial conditions of Greece. Again, of considerable, if not of equal, importance is the nomination as Minister of Communication of a sober-minded man, who, in a statement made on the day of taking office, pledged himself to see to the faithful and unprejudiced application of existing contracts. From a British point of view, these changes, coupled with the assurances given recently by Mr Venizelos, may be looked upon with a feeling of gratification. For they permit the entertainment of the confident hope that British financial interests will receive fair treatment.

Nearly a year after it was raised, the question of the ownership of the difference on revaluation at the stabilisation price of the cover in gold and gold exchange held by the National Bank for its note circulation has been definitely disposed of. By an agreement signed between the State and the Bank, the latter undertakes to pay to the former, by instalments, a sum of 560 million drachmas—*i.e.*, roughly half the difference. The Bank is entitled to write off the loss arising from this payment of annual amortisation. The question of principle is not settled, each of the signatory parties maintaining its point of view as to the ownership of the amount representing the difference on revaluation.

Provision is made by the same agreement for the establishment of an Agricultural Bank, which will take over from the National Bank its agrarian credit branch. Credits not exceeding a sum of 850 million drachmas will be granted to the Agricultural by the National Bank for a period of 10 years, at a rate of interest 2 per cent. lower than the discount rate of the latter—except for a sum of 100 millons, for which the rate of interest will be 3 per cent. lower, this difference being reduced to 2 per cent. only should the discount rate of the National Bank fall to or below 7 per cent. The credits to be so granted will be reduced by 15 per cent. during the second five years of operation of the Agricultural Bank, save for the aforementioned sum of 100 millions, which, constituting a special credit, will be repayable at the termination of the 10-years' period. As from that date, and until December 31, 1950, a credit of 200 million drachmas will be allowed by the National to the Agricultural Bank. In addition to the above credits, the State will endow the new institution with a sum of 985 million drachmas.

A question concerning central banking theory has been raised owing to an agreement between the State and the National Bank, by virtue of which the cash balances of various funds of public character shall continue to be deposited with the latter instead of with the Bank of Greece, the new bank of issue. The question was brought before the Financial Committee of the League of Nations. As this concession has been made to the National Bank in exchange for services rendered to the State, the Greek Government insists on this stipulation being maintained in force. It is expected that a compromise solution will be found.

According to figures published by the *Merchant Marine Review*, the Greek mercantile marine numbered on December 31, 1928, 528 steamers of 1,256,965 gross tons, and 729 vessels of 58,508 tons, or 1,257 ships in all of 1,315,473 gross tons. The total gross tonnage was 1,001,116 tons in 1915, and 410,793 tons in 1918—owing to heavy losses from submarines. The majority of owners of coasting vessels have combined into a company with a fleet of some 30 ships and a share capital of 93,050,000 drachmas. By this association it is aimed at eliminating the keen competition hitherto prevailing, and improving generally the conditions of coastal traffic.

A new commercial agreement has been concluded with Russia. The most-favoured-nation clause is mutually granted. Russia is entitled to keep a trade delegation for her commercial transactions with Greece. The head of the delegation only, and, in his absence, his substitute, are to rank with the foreign commercial secretaries and enjoy diplomatic privileges. The headquarters of the delegation will be in Athens, with agencies in Piræus and Salonika only.

From the annual report for 1928 of the International Financial Commission just issued, it appears that the yield of the revenues assigned for the service of the national debt amounted to 4,064 million drachmas, as compared with 3,892 million drachmas in 1927. This increase is due entirely to larger receipts from Custom duties. In addition to these receipts, the Commission has received from the Refugee Settlement Commission a sum of 53,000,000 drachmas for the ordinary and £15,151,147 for the extraordinary service of the Refugee Loan of 1924.

NATIONAL BANK OF GREECE
Established 1841

Head Office: **Athens.**
Branches throughout Greece.
New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

The revenues subject to the distribution of the surplus in favour of the old debt in gold reached 232,399,929 drachmas, as against 200,293,830 drachmas for the previous year. The interest to be paid in the course of the year on the old loans will be 100 per cent. of the original interest for the 1887 loan, 90 per cent. for the 1893 loan and those of the second group, and 88 per cent. for the 1889 loan. The contractual 2 per cent. of the original sinking fund will be increased for the distribution of 1929 by 14 per cent. for the first and the second group of loans, and 12 per cent. for the third group. The service of the loans controlled by the Commission has required an amount of 1,371 million drachmas. A surplus of 2,745 million drachmas was returned to the Greek Government.

FINLAND.—MONEY MARKET—FOREIGN TRADE—FINANCE—IMATRA WATER-POWER PLANT—BANK AMALGAMATION.

(FROM OUR CORRESPONDENT.)

HELSINKI, June 22.

As is usually the case, there was growing stringency on the money market in May. This seasonal phenomenon is, however, not so marked this year as it has been in previous years. The joint-stock banks, indeed, saw their deposits reduced by 61.3 million marks, whereas as a rule they increase, but, on the other hand, credits increased less than in previous years, namely, by 90.7 millions, compared with 332.4 millions in 1928 and 201.8 millions in 1927. The joint-stock banks were, nevertheless, forced to increase their rediscounting at the Bank of Finland at the same time as their net foreign indebtedness rose by 45.7 millions to 466.9 millions, as against 331.6 millions a year ago. The fact that the joint-stock banks were able to manage so well, comparatively, in spite of the heavy imports, was mainly due to lumber work having been restricted considerably—according to calculations from 308 million English cubic feet last year to only 207 millions last winter. The falling off in building operations also contributed to this result.

The heavy imports also left their mark on the position of the Bank of Finland. The reserve of foreign currency dropped in May by 80.9 millions, and in the first two weeks in June by a further 24.6 million marks to only 555.6 millions, compared with 761.2 millions a year earlier. The credits of the Bank, too, increased slightly, principally as a result of the rise in rediscounts. Notes in circulation have gradually dropped from last year's level, so that on June 15th they amounted to 1,469.8 millions, against 1,555.8 millions a year before. The note reserve, which had risen in March and April, fell again in May by 21.2 millions, only to rise again at the beginning of June, so that, by the middle of that month, it amounted to 354.1 million marks, compared with 470.8 millions a year ago, but only 208.7 millions at the beginning of this year.

Imports in May were very large. Their value amounted to 819.3 million marks, as against 766.5 millions last year. Exports amounted to 497.7 millions, compared with 489.9 millions in May last year. The balance of trade is, however, not so adverse as these figures would seem to indicate, for imports were influenced by several chance causes, such as the import of three vessels and of machinery for certain industrial undertakings and so on. In regard to exports, the real season only starts a little later, when shipments of timber products get under way.

The economic activity which marked the last few years and reached its highest point last year has also left its impress on last year's State finances. Revenue amounted altogether to 5,072 million marks, and exceeded the Budget estimates by close on 580 million marks. In the expenditure, too, there were certain increases, but the final balance sheet showed a surplus of over 30 million marks, whereas the Budget had closed with a deficit. The actual result is, however, even better. Of the expenditure, redemption of the national debt accounts for 322 million marks. This redemption is in addition to 535 millions converted by the 5½ per cent. State loan of 1928. It should further be pointed out that a by no means insignificant part of the expenditure is made up of investments of capital, including over 400 million marks for extending the railway network and the Imatra power station, State business undertakings and other purposes which are expected directly to increase the revenue of the State.

At the end of May the electric water-power station constructed by the Government at Imatra was inaugurated. In accordance with the decision of the Diet in 1921, the work has been carried on since 1922. Now that the first phase of the work is completed, the Imatra power station develops 81,000 h.p.; in its final form the power will be increased to 216,000 h.p. The cost of the power station amounts to approximately 355 million marks, including the erection of the main lines with subsidiary stations for distributing the power throughout the whole south of Finland. The new station will be of great importance to the industry and agriculture of the country. In addition, several towns will draw their supply of electricity from the station for lighting purposes and the electrification of the railways is being planned.

At the beginning of June a meeting was held to constitute a new bank, under the name of Maakuntain Pankki Osakeyhtiö, formed by the amalgamation of three older banks. The share capital of the new bank is 125 million marks, its reserve funds 66 million marks, and its total balance sheet about 1,300 million marks. Thus, Maakuntain Pankki Oy. becomes the third in size of the Finnish joint-stock banks.

SOUTH AFRICA.—ELECTIONS—MINES—WAGE BOARD.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, June 5.

THIS is written within one week of polling day, but it cannot be said that the elections are causing any great stir so far. Most of the argument turns on the attitude of the parties towards the native question. Occasionally one hears references to other matters, such as the financial record of the late Government, railway and Customs questions, or emigration. For a party which professes such anxiety about the future of the white race, the Nationalist attitude towards emigration is decidedly curious. Their general course is apathetic and their references to emigration and emigrants are seldom courteous. Not long since the mining industry imported thirty or forty winding-engine drivers—young married men for the most part—and both wings of the Pact became hysterical on the subject. Latterly, the Government have, by their own actions, provided a curious comment on the existing history of the emigration and on their own attitude. In Angola (Portuguese West Africa) there were some Afrikander families who had lived in that territory since the 'seventies, when their forebears trekked there after one of the numerous quarrels of the Republican States. Recently these families wished to return—and their reasons read astonishingly like the grievances of the Transvaal Uitlanders in 1899. The Portuguese, on their part, seem to have regarded the Boers without enthusiasm. The Union Government solved the situation by moving the whole body from Angola to the Mandated Territory of South-West Africa, at a cost to the Union taxpayer of about £500,000. The reason for putting up the money was the "poor and helpless condition of the people."

The mining industry appears not to be greatly interested in the outcome of the election. Backveld Nationalist candidates certainly accuse the South African Party of being "in the pockets of the mining magnates." If this be so, it cannot be said that the industry profited much when the South African Party were in power. There are signs, however, that the next Government (whatever its political complexion) will be more likely than any of its predecessors to order matters so that it may become profitable to work a lower grade of ore than is generally payable at present. It is known that the present Government mining engineer has very much in mind the existence of important tonnages of ore at or not far below the present pay level. The Chamber of Mines told the Mining Industry Board in 1922 that there were at that time nearly 700-million tons of ore valued at 3 dwts. and upwards in the mines then producing. There were somewhat over 400 million tons at 5 dwts. and over. It is sometimes overlooked that a mine as a going concern can always treat individual blocks of ore so long as their value exceeds the actual breaking and hoisting costs, although it is far below the general working costs. The extent to which this factor affects the life of the mines naturally depends on the ratio of the quantities of various grades of ore. In official and political circles, and in the Press, there are nowadays more references than formerly to the future of the industry, and it seems not impossible that the next Government will give more sympathetic attention to railway questions, Customs questions and labour questions as they affect the mines. The Reef mines in total are the holders of ore reserves of about 90 million tons—say three years' milling. Some individual figures at December 31st last, with crushing figures for 1928, are: Springs, approximately 3,000,000 at 9.10 dwts. (830,600 at 9.725 dwts.); Modder Deep, 3,000,000 at 9 dwts. (530,300 at 10.569 dwts.); Crown Mines, 11,000,000 at 6.7 dwts. (2,611,000 at 6.540 dwts.); New Modderfontein, over 9,000,000 at 8.7 dwts. (1,662,000 at 10.813 dwts.); Government Areas, 11,000,000 at 8.9 dwts. (2,383,500 at 9.063 dwts.). Any important change of Government policy might affect the figures of payable ore reserves very materially.

The Wage Board has recently submitted to the Minister a report on its work during three years. In its general comments the Board refers to the fact that the Wage Act (No. 27 of 1925), under which it operates, does not distinguish employees by colour, and that the Board has no power to function as a colour-bar body or to recognise diverse standards of living; it can recognise diverse standards of skill. The Board claims that there have not been any dire effects from wage regulation, and states that, in making 2-lb. loaves of bread, the difference in cost between the employment of Europeans at the regulated rate and natives at much less was one-fifteenth of a penny per lb. in four representative firms. An almost certain result of wage regulation in South Africa will be to hasten a change in the somewhat old-fashioned methods in use in so many small industries here. The whole organisation of the country has in the past depended on the supply of cheap manual labour. In future, the supply is unlikely to keep pace with the demand, while the native is becoming more skilled and more ambitious in his social requirements. If at present the Board claims "an absence of any dire economic effect," it may easily happen that in future the claim may be that it has encouraged important economic advance.

Letters to the Editor.

GOLD AND THE DOLLAR.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your interesting and able article on the above subject which appeared in your issue of the 22nd instant is a valuable survey of the money market as it exists to-day. I agree entirely with your advocacy of removing any justification for the rumours that there had been any interference with the freedom of the exchange. Should the dollar exchange remain at gold shipping point, and there is a desire to prevent the gold reserve from being unduly depleted, can the Bank of England and the Treasury not take advantage of the power provided in the "Currency and Bank Notes Act, 1928," and reduce the fiduciary note issue? That would tend to tighten up money somewhat, but it would enable the Bank to control the situation and affect favourably the rate of exchange, and, in the long run, prove beneficial to the general trade of the country. Confidence is what is desired, and the trouble is that neither Mr Snowden nor Mr Pethick Lawrence at the Treasury inspire confidence. Mr Snowden made a speech during the General Election which indicated ignorance on the subject, and Mr Pethick Lawrence addressed a question some time ago to the Chancellor of the Exchequer which also showed that he did not understand the question. It may be said, leave it to the permanent officials, but surely the country is entitled to be governed by men who know their job, and, frankly, I have no confidence in the present administration.—I am, sir, your obedient servant,

D. M. MASON.

June 26, 1929.

[The Bank is able, by means of its open market policy, to exercise a fair measure of control over the situation. We cannot see that the drastic proposal recommended by Mr Mason would give the Bank any power that it does not possess and use to-day, nor that it would be of any help in the special circumstances now prevailing. In reply to Mr Mason's attack upon the new Ministers, we would point out that the British Constitution definitely refrains from placing the government of the country in the hands of experts. Moreover, when Mr Snowden was last at the Treasury he deservedly won the confidence both of the country and also of the City of London.—ED., *Econ.*]

THE RHODESIAN COPPER BOOM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am interested to read the remarks of your correspondent reproduced in your issue of June 15 under the heading of "The Rhodesian Copper Boom." It appears to me, however, that his criticism of the market position in Roan Antelope shares is unwarrantably pessimistic in tone. Apparently your correspondent has not yet realised that, owing to the discovery and development of large bodies of copper sulphide ore, Rhodesian copper mining has entered upon a new phase during the past three years, and that a state of semi-industrial stability is foreshadowed akin to that attained on the Rand.

I have a close acquaintance with the circumstances in the cases of Bwana M'Kubwa and Roan Antelope, and ask you to take note of the following points of difference between the two properties, differences which nullify comparison. These points will be appreciated by anyone familiar with the problems of copper production.

Bwana M'Kubwa Co. treats at its old mine only a comparatively small tonnage of complex oxide ore which has not proved particularly amenable to the process of treatment employed. This process had not previously been tried out at other properties.

At its new N'kana mine sulphide ore has been opened up, but treatment of this ore has not yet commenced.

Roan Antelope, on the other hand, has a plant under construction to operate on a very large scale on the simple sulphide ore, which will be treated by ordinary well-known flotation processes. The plant is being designed by one of the foremost metallurgical engineers from the American copper fields. An immense tonnage of simple sulphide ore is being progressively indicated by drilling and mining to an extent sufficient to satisfy the judgment of highly-experienced engineers of the world's great metal-producing corporations.

The history of the Bwana M'Kubwa Co. provides no criterion by which to judge the ultimate value of the Roan Antelope Mine or its neighbours, the Mufulira Mine of the Rhodesian Selection Trust and the N'Kana Mine of the Bwana M'Kubwa Co., where also similar sulphide ore bodies are being actively developed for exploitation.

The future offers a field for guesswork for us all, but surely intelligent anticipation can foresee great possible expansion of output and greater efficiency of operation beyond that considered by your correspondent.—I am, your faithfully,

Gerrard's Cross, June 24, 1929. P. L.

[Our correspondent's remarks, as we read them, did not question the potentialities of the Rhodesian copper fields, but rather drew attention to the considerable difference between the present "market capitalisation" of many companies and the amount of capital actually obtained for development purposes by some of the concerns in question.—ED., *Econ.*]

Books and Publications.

THE GRAIN TRADE DURING THE WORLD WAR.*

THE purpose of this work itself is "to place on record a discussion of the policies and accomplishments of the Food Administration Grain Corporation and its successor, the United States Grain Corporation, in carrying out the mandates of Congress regarding the guaranteed price for wheat, and in providing an adequate supply of cereal foods for ourselves and the Allied nations."

* "The Grain Trade during the World War." By Frank M. Surface. London: Macmillan & Co., Ltd., St. Martin's Street. 25s. net.

The work, therefore, is a record of vast economic experiments. Moreover, it is an authoritative record, because Mr Surface, as economist for the United States Grain Corporation, was himself most intimately associated with the working of the Food Administration, and has been able, not only to make full use of official records, but also to supplement these by personal contact with the responsible heads of the undertakings themselves. His work, therefore, is a most valuable addition to the economic history of the war, and is an engrossing story of the measures taken to safeguard the production and distribution of one of the most vital munitions of war.

Although the United States of America did not enter the world war as a belligerent until April 16, 1917, the accumulating effect of the European disruption had been felt in that country from the commencement of the struggle. The Allies, being denied their normal supplies of wheat from Russia, Bulgaria and Roumania, while the submarine activities of the enemy excluded a large proportion of Australian and Indian wheat, were compelled to draw to an increasing extent upon the North and South American States, and the position was already becoming critical when the United States declared war upon Germany. Uncontrolled buying by Allied and neutral countries in the American market, actuated largely by the insistent need for supplies regardless of price, was a most influential factor in the unstable and partly demoralised conditions obtaining in this market. The record of the steps taken, once it was realised that Government intervention was necessary, is very fully and most ably set forth in a series of twenty-four chapters, which present the operations of the United States Food Administration in their many-sided aspects.

The vastness of the problems faced from the outset may be appreciated from the concise statement contributed in a preface by Mr Julius H. Barnes, President of the Grain Corporation, and later chairman of directors. Briefly stated, the objects which the directors aimed at were to redeem the national pledge of Congress for a guaranteed price for wheat; to conserve home consumption; to stimulate production, and to direct its flow in such a way that neither in quantity, nor quality, nor price should advantage be taken of the Allies; to avoid, on the one hand, the incurrence of operating losses and, on the other, the levying of profits at the expense of either Americans or Allies; to leave a field for the maintenance of private enterprise which would enable the resumption of normal trade activities with a minimum of dislocation when victory had been achieved.

Reference may be made in particular to those sections of the work which deal with the problem of a guaranteed price. The phrase "stabilisation of prices" is apt to interject itself rather easily into present-day discussions of agricultural policy, and there is here a valuable record of one of the biggest experiments ever conducted in this sphere of agricultural marketing. The determination of a "fair" price, having regard to the areas on the margin of profitable production, on the one hand, and to the need for preventing an undue rise in the cost of living, on the other hand; the reaction of wheat growers to the guaranteed price; the relation between the home and foreign markets and the necessity for the maintenance of a centralised selling agency—the Grain Corporation—in the face of consolidated buying on behalf of the Allies, are all features of a problem involving tremendous issues, and from them it is possible to derive a fuller appreciation of the scope which exists at the present time for a stabilising policy. The war-time psychology no doubt simplified the problem at that time.

Tense drama underlies the narrative of the fateful winter of 1917-1918, when the Allied demands were most insistent and the conditions on the American side were probably at their worst. Chapter 11, dealing with this part of the subject, quotes freely from the cables which flashed across the Atlantic at this time, and is full of such phrases as "situations of extreme gravity," "areas of food vacuum," "critical and anxious," "most critical juncture," "nothing short of a calamity," and so on. The detailed account of the co-ordination of shipping and railroad facilities and of the Grain Corporation's operations is a story of great achievement in the face of tremendous odds, and, though the stars in their courses may have refrained from taking part, blizzards and intense cold interfered so much with rail and water transport as almost to prevent the efforts of the United States to meet the most urgent needs of the Allies.

Further interesting sections of the work are the chapters dealing with legislative activity; the statistical summary of the Grain Corporation's activities and the methods by which these colossal dealings were financed. The work is rounded off with a series of appendices containing the text of the Food Control Act, and other legislation forming the basis of the Grain Corporation's authority, and copies of the various report forms used in the compilation of the necessary statistical information during the control.

That the success of these bold economic experiments under circumstances which in many ways gave a certain rigidity to the conditions in which they were conducted, was not complete is not surprising, and it is worth while repeating the considered opinion of Mr Julius H. Barnes in this connection: "That even when war has broken down the usual influences that, through supply and demand, chart the field of opportunity for individual effort, even when men and communities surrender in the spirit of war-sacrifice those rights and opportunities which they should otherwise sturdily defend, even when those placed in authority reach decisions with a devotion to an exact and equal justice which borders on consecration, even with all these influences at play, the most skilful business judgment, the most profound desire for justice, the most exalted ideal of public service, cannot prevent in Government operation instances of public and private injury."

ECONOMIC CONTROL IN AUSTRALIA.*

The voyage of adventure upon which Mr Smith takes his reader is disappointing. It ends nowhere. Exploration is to be undertaken under the author's guidance among the Australian experiments in rationalisation and safeguarding. Mr Smith writes after visiting Australia, and after much study in the library of the London School of Economics. He is able easily to show that the methods of exercising "a conscious control over the economic system" practised in Australia are legion. There are innumerable tribunals, and boards and commissions, whose reports and statistics are the basis of the book. "Economic friction due to inertia, ignorance, the anti-social preferences of individuals, and the inconvenient division of resources in industry" is, we see, being "attacked in a forcible if somewhat unsystematic manner." Great masses of people must, it would seem, be "inert" or "ignorant" or dominated by "anti-social preferences" for so much economic control to be needed in Australia, though the population of the half-dozen States of the Commonwealth is, after all, but equivalent to that of half a dozen English counties. Mr Smith revels in contemplating it all, yet every now and again he is shaken by dreadful doubts. "Helping people," he soliloquises, "often makes them apathetic, and if control helps them to do the wrong thing, results may be far worse than if they had been left to their own efforts." So Mr Smith drifts along, and never arrives. Moreover, the look-out kept on board is defective at times. Thus he quotes from the report of an Australian Royal Commission of 1923 that "the whole of the overseas shipping of England is in the hands of the shipping combine known as the Inchcape group" without any exclamation at the gross inaccuracy of the statement. And the references to improper political pressure contained in the last report of the Australian Tariff Board appear to have escaped notice. It should be explained that the book does not profess to do more than state some of the methods of economic control which are being used, and to relate them to economic theory, but if, as indicated from time to time, the facts are altogether incomplete, comment should have been reserved, unless the author, if he had had a strong view of his own, had bluntly challenged criticism by giving it.

* "Economic Control: Australian Experiments in Rationalisation and Safeguarding." By N. S. Smith. (London). P. S. King and Son, Ltd. 1929. 15s.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

A Picture of World Economic Conditions at the Beginning of 1929. (New York) National Industrial Conference Board, Inc., 247 Park Avenue. $2.50.

This useful survey is divided into two sections. The first contains information as to industrial production, wages, employment, prices, foreign trade and finance in each of twenty-one countries and in the United States. The second consists of articles specially written by distinguished nationals of the principal countries.

Industrial Standardization. (New York) National Industrial Conference Board, Inc., 247 Park Avenue. $3.50.

Part I. is descriptive, and deals with the structure of the standardisation movement as expressed in the work of individual concerns, societies and organisations. In Part II. an attempt is made to discuss in the light of available evidence the economic advantages obtained and the social problems involved.

Artificial Silk (Rayon), Its Manufacture and Uses. By Thomas Woodhouse. Second edition. (London) Sir Isaac Pitman and Sons, Limited, Parker Street, Kingsway. 7s. 6d. net.

This interesting account of the processes involved in the manufacture of rayon is well illustrated, and should be easily intelligible to the general reader.

Ce Qu'il Faut Connaître de la Finance Internationale. By Jean Compeyrot. (Paris) Boivin et Cie., 3 and 5 Rue Palatine. 8 frs.

Without being too elementary, this little book aims at bringing home to the ordinary reader the importance of the growth of international interdependence in financial matters.

Automatic Weaving. By Wm. A. Hanton. (London) Ernest Benn, Limited, Bouverie House, Fleet Street. 21s. net.

An illustrated, technical treatise on the more important types of automatic looms.

The American Merchant Marine Problem. (New York) National Industrial Conference Board, Inc., 247 Park Avenue. $2.50.

The facts and the controversial matters relating to the problem are here collected and discussed with the object of providing a basis for a clearer public understanding of the issue.

The Cost of Living in the United States in 1928. (New York) National Industrial Conference Board, 247 Park Avenue. 50c.

This is a supplement to "The Cost of Living in the United States, 1914-1927," published in April, 1928, and the detailed price tables continue those in the earlier publication up to the end of 1928.

New Colonial Policy. By Dr Hjalmar Schacht. (Berlin-Wilmersdorf) R. Hauptmann, Saalfeldersti. 7.

Though this paper was first read in 1926, Dr Schacht's views on colonial policy are still a matter of keen interest, and this translation makes them readily available to English-speaking readers.

Foreign Affairs, July, 1929. Published by the Council on Foreign Relations, Inc., 25 West 43rd Street, New York. $1.25.

Articles in this number include: "An American Substitute for British Blockades," by Charles Cheney Hyde; "The Lateran Treaties," by André Géraud; and "Federal Reserve Policy: Its International Implications," by Franz Schneider, jun.

Savory's Insurance Share Annual, June, 1929. (London) Thomas Skinner and Co., Gresham House. 5s. net.

The results of the last ten years are summarised for each of the companies dealt with, and a detailed summary of the last three profit and loss accounts is given. There is also a record of absorptions and of alterations in issued capital.

Atkin's Manual, 1929. (London) Geo. D. Atkin and Co., 1 Drapers' Gardens, E.C. 2.

The investor can find here full particulars of electric light, power and traction, motor omnibus and rubber and cocoanut companies. He is also provided with interest tables and with summaries of the Electric Lighting and Tramways Acts and the Electricity Supply Act of 1926.

The Austrian Year Book, 1929. Edited and published by the Austrian Federal Press, Department of the Federal Chancellery, Vienna.

The strong point of this volume, which is an unusually slim specimen of its kind, is not so much in its economic and statistical section as in its general descriptive chapters on politics and recent economic history.

Les Valeurs de l'Afrique du Nord, 1928-1929. (London) Crédit Foncier d'Algérie et de Tunisie, 18 Saint Swithins Lane.

This volume contains particulars of a large number of companies of every kind which are concerned in the development of North Africa.

The Public Debts of Australia. By J. R. Collins. (London) Australia House, Strand.

A revised reprint of articles which appeared in *The Times* of April 13th and 15th.

The Boundary Dispute Between Bolivia and Paraguay. Translated from the Spanish of Jose Aquirre Acha by Andrew Boyle. (Birmingham) Baker's Great Bookshop, 14-16 John Bright Street. (London) Bolivian Legation, 16 Grosvenor Place.

This brief description of the points at issue states the case from the Bolivian point of view.

The "Will to Work." By G. H. Miles. (London) George Routledge and Sons, Limited, 68-74 Carter Lane. 6d. net.

An interesting booklet by the Assistant Director of the National Institute of Industrial Psychology.

Zeitschrift für Nationalökonomie. (Vienna) Verlag von Julius Springer, 1 Schottengasse 4. Rm. 14.40.

It appears from the introduction to this first issue that the practical side of economics is not to be neglected, but it so happens that on this occasion all the articles deal with such purely theoretical subjects as "Elasticity of Demand for Substitutes," "The Mathematical Theory of Economic Equilibrium," and "Psychological Economics in France." Though the book is in German, the writers are of all nationalities, and include such well-known economists as Professors Liefmann, Birck and Marco Fanno. There is also an appreciation of the late Professor Allyn Young.

Scottish Chartered Accountants. Official Directory, 1929-30. (London) Wm. Blackwood and Sons, 37 Paternoster Row.

Contains a list of Scottish chartered accountants, lists of members and officials of the society, rules for admission, and the syllabus of the qualifying examinations.

Speculation in Securities. Address delivered by E. H. H. Simmons. (New York) Stock Exchange.

An interesting address by the President of the New York Stock Exchange.

Deutscher Wirtschaftsatlas. Compiled by Prof. Dr. Ernst Tiessen. (Berlin) Verlag von Reimar Hobbing.

Less an atlas than a collection of ingenious diagrams, this volume should prove a fascinating aid to the understanding of German economic geography.

Hyvät Ja Huonot Ajat. By W. A. Lavonius. (Helsingfors) Suomi Life Insurance Co.

A study, in the Finnish language, of industrial fluctuations.

"Lancashire Betrayed." By Ernest E. Canney. Forewood by F. Holroyd. (Manchester) John Heywood, Limited, Deansgate. 3s. 6d.

A collection of essays on cotton trade politics.

Unemployment and Purchasing Power. By P. W. Martin. (London) P. S. King and Son, Limited, 14 Great Smith Street. 4s. 6d.

As the experienced reader will divine from its title, the thesis of this book is that unemployment is largely due to deficient purchasing power. The remedy suggested is "for the Government to negotiate a loan with the banks in such a way as to increase the total quantity of money in circulation and to use the funds thus obtained to finance public works."

The Countryman. July, 1929. Edited and published by J. W. Robertson Scott at Idbury, Kingham, Oxford. 2s. 6d.

An interesting feature of the current number is a first instalment of the replies of a large number of prominent men to the question "What can be done for agriculture?" The replies are anonymous, but a list of the contributors is given.

Bericht über die Lage von Handel, Industrie und Schiffahrt in Jahre 1928. (Danzig) Druck von A. Schroth.

A useful collection of statistics relating to the trade and industry of Dantzig.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2.

Report of the Ministry of Labour for the year 1928. Cmd. 3333. 2s. 6d. net.

Department of Overseas Trade: Economic Conditions in Denmark. March, 1929. 1s. 6d. net.

The Stock Exchange.

THE HALF-YEAR ON THE STOCK EXCHANGE.

THE past half-year has been a period of difficulty and disappointment for the professional Stock Exchange operator, and of severe, if wholesome, disillusionment for the amateur. The extensive upward movement of values which first took definite shape about the beginning of 1926 reached its peak last January, but the rise of Bank rate from 4½ per cent. to 5½ per cent. on February 7th proved to be the signal for a moderate but extensive reaction which is still in progress. Given a more favourable monetary background, prices might conceivably have withstood the psychological influence of a general election, a series of industrial reports showing a falling-off in profits reflecting last year's setback in trade, the "indigestion" of a capital market in which earlier issuing zeal had outrun prudence, the collapse of numerous mushroom concerns, and the reorganisation of older but unfortunate businesses. The deciding factor, however, was the tightness of money—a phenomenon whose causes must be sought in far-reaching international movements. To this extent the Stock Exchange may regard the setback of the last five months as part of the price paid, in common with the whole money market, for the tangible benefits of London's position as an international monetary centre.

Gilt-edged securities showed themselves extremely sensitive week-to-week changes in the monetary outlook, though the general election had but slight influence on prices. The following table shows the extent of the half-year's variations in a number of representative Home, Dominion and Foreign Government stocks:—

Government Stocks.

Security.	1929. Highest Price.	1929. Lowest Price.	Price, Beginning of 1929.	Price, June 27, 1929.	Rise or Fall in Half-year (% of Opening Price).	Yield. Beginning 1929.	Yield. June 27, 1929.

x = ex dividend.

The rise in money rates put an end to hopes of a conversion operation during the present summer in respect of Five Per Cent. War Loan, which remains a millstone round the neck of the British Treasury. Indian Loans developed appreciable instability, but Dominion and Colonial issues, though never active, held their own to a gratifying extent. Foreign stocks reflected the rise in Bank rate, but were subsequently firmer, the signature of the Reparations agreement acting as a bull-point for European issues, while, among South Americans, Brazilian stocks obtained support after an extensive decline.

Corporation, Public Utility and Industrial fixed preference stocks showed moderate price variations:—

Other Fixed Interest Stocks (Railways excepted).

x = ex dividend.

The relative stability of these stocks may be ascribed both to their conservative *clientèle*, and to the very slight extent to which their outstanding total was increased during the half-year. While it may not have been true to say of London, as of New York, that to sell a bond was practically impossible, the unpropitious conditions of the issue market were exemplified by the paucity of new emissions, and the large amounts underwriters were frequently compelled to take up in respect of such issues as were made, though in some cases the issuing houses would seem to have cut prices too finely.

Fluctuations in Home Railway stocks were again extensive, though the effect on prices was less depressing than that of the corresponding movement in 1928. The public was pleasantly surprised by the amount of the reductions in working expenses achieved last year by the "Group" lines, but remained unconvinced that the railways were holding their own against their road competitors:—

x = ex dividend. xr = ex rights.

Among foreign railway stocks a more or less steady upward tendency in South Americans reflected the consistent improvement in economic conditions as evinced by the reports of various companies—particularly that of Antofagasta, whose shares enjoyed a prolonged rise on well-founded anticipations of a bonus.

The entry of America as a willing buyer of British industrial shares renders advisable some distinction between "American-favoured" and other securities. The classification adopted in the two following tables is not, however, to be regarded as water-tight, since it is difficult to say where America's interest begins and ends:—

American-Favoured Industrial Securities.

x = ex dividend. † Free of tax.

Broadly speaking, though much was heard of American "penetration" in connection with the efforts of a number of concerns (including the Argentine railway companies) to limit effective "foreign" influence in their affairs, and the unsuccessful attempt of the General Electric Co. to differentiate between British and other holders as regards a new share issue, the evidence suggested that America's "investment" purchases of British shares were of no more than moderate proportions, especially during the latter part of the period.

The two preceding tables afford an instructive commentary on the stability of the best-known British "business" shares in an unfavourable environment, apart from stocks such as Associated Electrical, Margarine Union, and Leyland Motors, in the "international" group, and Imperial Continental Gas, in the "home" group, which enjoyed a substantial rise, and a few companies like Dunlops, British Celanese, and Royal Mail, which developed somewhat striking weakness for individual reasons. Electric-supply shares maintained their popularity on the steady progress of the national electricity schemes, but in various groups which showed noteworthy activity last year, including artificial silk and gramophones, the growth of competition focussed market attention on the larger concerns, of assured earning power, to the exclusion of their newer and weaker rivals. Bank, insurance and investment trust securities, the semi-gilt-edged aristocracy of the ordinary share market, were unable to hold their ground completely in the face of the adverse monetary conditions which prevailed.

The collapse of the boom in shares of low denomination was one of the most striking features of the half-year. The process of "deflation" started with the catastrophic decline in Ner-Sag shares and the prosecution of that company's ex-chairman, and was accentuated by the liquidation of various companies whose fall was hastened by their inability to obtain adequate working capital as a result of weak underwriting. The decline extended to all the main types of recent speculative promotion—"patent," "parent," film, gramophone, automatic photography, and greyhound-racing companies—the losses suffered by many holders who had purchased "at the top" being extremely severe:—

x = ex dividend. † = Free of tax.

Apart from a short-lived spurt of activity early in the half-year, following a sharp rise in the price of the commodity, the rubber market was idle and featureless, while the removal of the tea duty failed to stimulate interest in tea shares, in view of the uncertain outlook for the commoner grades of leaf. Dealings in oil shares were, for the most, "professional," the various efforts made to place oil conservation on an effective and enduring basis having little positive result. The Chilean nitrate position was strengthened by the adhesion of American interests to the official selling scheme and the negotiation of a "stabilisation" agreement with the synthetic producers of Europe. The largest British producing company passed under American control. Kaffirs had an uneventful half-year, but activity in the shares of companies owning Rhodesian copper deposits attained spectacular dimensions, the pace being set throughout by powerful inside interests. Tin prices failed to bear out the prognostications of the more optimistic of the two opposing parties into which the industry is divided, and copper shares (other than Rhodesian) reflected the vagaries of the market for the metal, which slumped extensively after a hectic rise.

In reviewing the outlook for Stock Exchange values it is essential to distinguish the immediate and ephemeral from the long-term factors which must ultimately dominate the permanent investor's calculations. A Labour Government has assumed office without any serious upset of prices, though the shares of motor-manufacturing and other "protected" industrial concerns must remain susceptible to variation until the Government's intentions with regard to safeguarding and the McKenna Duties are made known. So long, however, as the monetary situation remains uncertain, and even threatening, a revival of speculative interest in securities is unlikely, and the steady growth of *investment* resources, which, week in and week out, provides the real sustaining-power of Stock Exchange prices, may not immediately exercise its full beneficial effect. In the long run, prospects of a revival have their basis, as regards gilt-edged stocks, in the hope that sterling will successfully weather the autumnal strain, and, as regards industrials, partly in the expectation that the improved conditions now obtaining in many basic national trades will, in due course, be reflected in published statements of earnings, and partly in the likelihood that renewed American interest in British securities will be encouraged by the demonstrably higher dividend yields obtainable on those shares than on many of their counterparts in New York.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. July 9.	ACCOUNT. July 11.

THE loss of £3,414,310 in bar gold to Germany, followed by the withdrawal of £2,804,562 on June 27, overshadowed all else this week. The gilt-edged market refused to believe that Bank rate would be put up on Thursday, and this view was proved correct, but British Government securities were naturally affected, especially as the Berlin exchange rate conspicuously remained below gold point. That peculiar and passing causes existed for the weakness of this exchange was, perhaps, inadequately realised at first. Gilt-edged stocks, which were additionally affected by a semi-official £5,000,000 debenture issue for the Agricultural Mortgage Corporation and by money requirements in view of the end of the half-year, set the tone to the whole market, and everywhere business for the new Account was slow. As the King's Speech next Tuesday drew nearer, political doubts appeared to be bulking larger than at any time since the General Election, but they actually reflected not so much the fear of a Labour Government as the uncertainty which precedes any momentous announcement. A contrast was furnished by a number of American favourites, which benefited by the renewed activity of Wall Street.

The gilt-edged market was characterised by more pressure to sell than in recent weeks, though dealers would in any case have marked prices down as a protective measure in view of the events in the money market. Funding Loan was particularly affected, dropping ¼ on Monday, ½ on Tuesday, and ¼ on Wednesday. Treasury Bonds suffered among short-dated securities, but declines were general throughout the British Government list. India Loans inevitably shared in the prevailing movement, and although little was done in Dominion and Colonial stocks a few sales served to depress prices in a number of instances. Recent new issues, including Commonwealth Fives and City of Montreal Four-and-a-Half per Cents., were weaker, while Central Electricity Board debentures fell to 2½ discount.

The foreign market stood out for a time against the prevailing current, but became less firm on profit-taking in mid-week. The Reparations report was still an appreciable bull-point for a number of European issues. Brazilians reacted after a fresh gain of ground on Monday, while among Far Eastern stocks the 1913 Reorganisation Loan came into prominence on rumour of the pending payment of a coupon.

A tentative revival of investment buying for all Home Railway stocks except Southern was suggested by Monday's events, but, as has so frequently been the case, the movement lacked stamina and quickly collapsed. The traffic figures were satisfactory, the North-Eastern heading the list with an increase of £31,000 as compared with a year ago, while the Southern showed a small gain for the first time for some weeks. The North-Eastern redeemable debenture issue was successful, small applicants receiving full allotment, while the larger subscribers obtained varying proportions of the sums applied for. Among foreign railways, Argentines were firm before encountering profit-taking, the publicity given by recent restrictive measures in the matter of foreign holdings having, paradoxically, served to draw American attention to their investment possibilities. Great Western of Brazil and Leopoldina improved on good traffic returns, while Antofagasta and Nitrate Railways moved upwards on expectations of an increased demand for nitrate as a result of the price reduction accompanying the agreement between Chilean and European producers (discussed on page 1465).

The effect of the week's events, plus a slight amount of forced selling before Pay Day, was to induce a spirit of the utmost caution all through the industrial markets. The tendency spread to investment as well as speculative business, many of the investment trusts and other large buyers choosing to stand fast until the outlook had cleared. It was left to America to support her favourites, such as Columbias, International Nickels, and electrical manufacturing shares, in conjunction with the stronger tone in New York. H.M.V., however, were weaker on selling induced by the new issue. Courtaulds lost ground, and British Celanese reflected further fears as to the nature of the coming report. The approach of the date of the King's Speech was responsible for a general decline in brewery shares, on the expectation that Mr Snowden would decline to confirm the concessions to the trade embodied in Mr Churchill's Budget proposals, and that the Labour Government would appoint a Commission to go into the liquor question as a whole. Similar speculations as to a possible increase of the tobacco duty induced selling of Imperials and others in the tobacco group. The news of an agreement between the Chilean Finance Minister, the I.G., and Imperial Chemical Industries, for the "stabilisation" of the nitrogen industry encouraged useful buying of the last-named company's shares. Marconis were also better on the official announcement that the cable-wireless merger had become operative. Cement shares, however, lost rather than gained ground on the news of the closer merger of the "Horne" companies and the subsequent disclaimer by the Associated Portland Cement Co. of any amalgamation negotiations (as described in an "Investment Note" on page 1467). Insurance shares were dealt in to a very small extent, and bank shares remained on the dull side.

Rubber shares were an idle market, and the turn lower where changed, the commodity again failing to show any well-marked price tendency. Tea shares suffered a measurable decline, the week's auctions affording no evidence that stability had been reached as regards the selling price of the commoner teas. Oils were irregular, the dull tone of the market being slightly ameliorated by the heartening views of the world situation put forward at the Shell and Anglo-Persian meetings. Mining shares came within the orbit of the week's monetary fears, but on the whole gave way less than might have been expected. Paris was a further depressing influence in the Kaffir market. Rhodesian activity was nipped somewhat in the bud by Tuesday's gold withdrawal, but became partially in evidence again on Thursday, after the period of subscription for new Congo Border and N'Changa shares had expired. Tin shares sagged in sympathy with the instability of the price of the metal, despite the semi-official promise of an early announcement on the "rationalisation" of the industry. Copper-producers' shares opened dully, but improved on a slight rise in the market, Tinto being bought from Paris.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The market feels that the worst of the Reserve tight-money policy is over, and is encouraged by the exceptionally high rate of corporations earnings for the half-year and by the good prospects for the rest of the year. The share market advance, though ragged, continues, with activity centred in public utilities, best-grade rails and steels. Earnings of the last named are at a record level. Mining shares are steady, oils rather weak and chemicals strong. The remainder of the market is indifferent, with little net change in prices, and average prices, which are calculated on the more active issues, are not at a new high level. Rails are cheered by another month of higher earnings, May reports showing a 20 per cent. gain over a year ago. Some disappointment is felt at the Washington attitude to Reserve participation in the International Bank, but it is hoped that a way may be found to more indirect co-operation. There is much satisfaction at the settlement of the vexatious religious question in Mexico, and due credit is given to Ambassador Morrow. The issue market is active, especially in foreign loans, which are well taken. Ready subscription to recent domestic stock offers reveals a good underlying investment demand.

PARIS.

The persistence of the fall in prices has forced the liquidation of bull positions of long standing. It has even caused realisations on some shares which of late had been remarkable for their firmness, such as Banque de France and Suez. The latter, after keeping between 25,000 and 26,000 ever since February, suddenly fell below 24,000. These realisations weighed the more heavily on the market by reason of the continuing scarcity of business. On the other hand, several buying orders in a single session sufficed to bring about an appreciable rise. Otherwise, apart from the shares of electricity generating and distributing companies, which are still holding up not far below their highest, the general tendency of the market appears to be weak.

BERLIN.

After a recovery on June 21, the Bourse relapsed into dullness which lasted until the middle of the present week, and quotations declined all round. Artificial silk stocks particularly weakened, Vereinigte Glanzstoff dropping to 40 points below the highest price reached after the announcement of the agreement with Dutch Enka. Selling, which at times was heavy, was in part attributable to the need for money for the month-end settlements. Interest continued to be shown in steel and coal stocks, Vereinigte Stahlwerke being notably firm. Salzdetfurth and other potash stocks were relatively well supported. Farbenindustrie went ex dividend on June 25th. On both Wednesday and Thursday the tone was fairly firm, and the upward movement of steel stocks continued. Interest was also attracted to Reichsbank and to shipping shares, and foreign buying of Siemens and Halske was reported. There was a slight reaction on Thursday afternoon, dullness prevailing.

AMSTERDAM.

During the past week business remained restricted, and the uncertainties of the sterling rate provoked an irregular tendency. In sympathy with the Berlin market artificial silk shares were weak, and the Enka-Glanzstoffe fusion had a less favourable influence. Among other industrials, Margarine Unie had a firm appearance, but Philips were listless. Tobaccos also were lower, and rubbers reacted, but sugars fluctuated little. The report of the Trading Co. of Amsterdam made an unfavourable impression. Shipping shares were dull, and the oil market easier. Prices went gradually lower all round as the week proceeded. The money market was easier, with the private discount rate $5\frac{3}{16}$-$5\frac{5}{16}$ per cent., and the prolongation rate $4\frac{3}{4}$ per cent.

INVESTMENT NOTES.

Industrial Shares and the State of Trade.—The review of the state of trade given this week in our *Monthly Supplement* contains many points of interest to ordinary shareholders in British industrial companies. Experience shows that, whenever the annual reports of many companies reveal a stationary or declining tendency in profits, the share market is liable to become dull and heavy. On the other hand, when increasing profits and dividends are reported and prophecies of such a condition are steadily borne out by events, markets show a buoyancy highly gratifying to all shareholders. For some time past the company reports dealt with in these columns have reflected the indubitable setback suffered by trade as a whole last year. In other words, the dullness of industrial shares at the moment is partially due, not to current industrial conditions, but to circumstances which existed some time ago, since most companies do not issue their accounts for three to six months after the end of their financial year. Our *Trade Supplement* shows that the activity of British industry has been significantly accelerated since the beginning of 1929; that the numbers of the unemployed have been reduced by approximately one-fifth, and that the seasonal falling off in trade which is usually experienced in the summer months has not yet shown itself on a large scale. The coal trade reports a firm export market; the outlook for the iron and steel industry is described as promising for at least the next two or three months (after which time, however, new Continental plant may come into production and increase the already formidable competition in the industry). Cotton prices are steady, though the volume of trade done has been disappointing. Too much importance should not, of course, be attached to the results of a comparatively short period, especially in view of the possibility that labour questions may shortly assume considerable importance in more than one industry. It may be hoped, however, that the recent trade improvement will be maintained, and will ultimately be a factor in the recovery of industrial share prices.

Argentine Railways and Foreign Holdings.—Extraordinary meetings were held on Friday, June 21st, of shareholders in the Buenos Ayres Great Southern Railway, the Buenos Ayres Western Railway, and the Entre Rios Railway, to consider resolutions preventing persons of other than Argentine or British nationality from holding more than an aggregate of 20 per cent. of the issued shares or stock of any class or from becoming directors of the companies. The resolutions, which was carried unanimously, were described as being purely precautionary, foreign holdings being negligible in the case of the Great Southern and amounting only to 1 per cent. in that of the Western. The "safeguarding" of British ownership of the leading Argentine railways is proceeding steadily, the above resolutions following an alteration in the articles of the Buenos Ayres and Pacific, a few weeks ago, disfranchising foreign shareholders (without, however, placing any limit on the extent of their holdings). Next Wednesday the shareholders of the Cordoba Central will, in turn, consider a "disfranchising" resolution. Our views on the desirability and the probable effects of changes conceived on these lines have been set out in a series of articles on "American Buying of British Securities" (see the *Economist*, June 8, 15 and 22, 1929, pages 1292, 1350 and 1386).

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

Agreement in the Nitrogen Industry.—Events in the nitrogen industry have moved rapidly during the last few weeks. Discussing the outlook on May 11 last (page 1056), we hazarded the view that the stage might shortly be set for co-operation between natural and synthetic nitrogen producers. In speedy succession has come the news of the re-financing of the Lautaro Company under American auspices, with a construction programme sufficient to enable that company alone to double the Chilean output, followed by the announcement of an agreement between the Chilean Finance Minister, the I.G. Farbenindustrie, and Imperial Chemical Industries, providing "a substantial basis for the stabilisation of the nitrogen industry." In future a common policy will be followed as regards propaganda, experiment, and research, while "stabilisation" will involve an immediate reduction of 10s. a ton in the price of nitrogenous fertilisers. The present Chilean Government has consistently shown itself capable of taking a long view of the interests of one of the most important of Chilean industries, and may be congratulated on its wisdom in making terms with the largest European producers and thus obviating the possibility of its nitrate revenues being lost in the bottomless pit of "financial assistance" to Chilean companies engaged in a possible price-war with their synthetic competitors. The output of synthetic nitrogen has doubled in the last three years, and, although the triumph of the "Guggenheim" over the "Shanks" process may significantly reduce the costs of production of Chilean nitrate, the balance of advantage in any long drawn-out struggle would inevitably have rested with the large European chemical interests. An official statement expresses the hope that the agreement between the three largest producers of nitrogenous fertilisers in the world, outside the United States, may pave the way for the stabilisation of the whole nitrogen industry, since it is proposed to invite the other groups of nitrogen producers to come into line. The consumer of nitrogen, which has become an essential raw material of agriculture in many parts of the world, is not, of course, a party to the present agreement. There is no reason to suppose that the possibilities of research work, such as has so largely extended the range and variety of fertilisers in recent years, are likely to reach their effective limit in the near future. It may be hoped, therefore, that the readiness of producers to "pass on" the economies of improved knowledge and technique will suffer no diminution as a result of the new arrangements.

International Artificial Silk Developments.—Simultaneously with the meeting of the Silk Federation at Barcelona, important negotiations were undertaken between the leaders of the Dutch and German artificial silk industry, with a view to arriving at an agreement to bring the two countries into the *entente* which already include the Italians and the Courtauld-Glanzstoff and Snia Viscosa groups, the object being to prevent another overproduction crisis similar to that which proved so costly to the industry last year. The outcome, writes a correspondent, is a scheme for a Glanzstoff-Enka alliance. A new company known as the General Artificial Silk Union is to be formed, which will exchange fl. 2,000 of its shares for every fl. 2,000 of the Enka Co., fl. 5,000 of Mackubee and Rm. 2,700 of Glanzstoff. The new alliance is one of obvious importance to the world industry. The total output of the new group has been estimated at 60,000 kilos daily. Both Enka and Glanzstoff have large American subsidiaries, whilst Enka has, in addition, subsidiaries in Great Britain and Italy, and Breda is extending its interests in this country, after establishing subsidiaries in France and Spain. Courtaulds, with their worldwide connections, will have a direct interest in the new alliance, which almost automatically includes Snia Viscosa. Snia in turn are connected in some measure with the other Italian producers through the recently formed Italian convention. The position of the French Comptoir is still somewhat of a mystery, but there is every likelihood that sooner or later they may come into closer contact with the International Cartel. A more stabilised market would, of course, benefit both the producer and consumer of artificial silk, so long as those concerned continue to share with the consumer the fruits of improving knowledge and technique.

General Electric.—There is little in the General Electric report to suggest the grounds on which the price of the £1 shares was run up to 80s. by American buying during January. A slightly increased profit is shown for the year ended March 31, 1929, and over 16½ per cent. was earned on the ordinary shares, though the dividend remains at 10 per cent. Even at the present price of 51s. cum dividend, the yield is little more than 4 per cent. on dividends and 6⅔ per cent. on earnings:—

(Years ending March 31)	1927.	1928.	1929.
	£	£	£
Profits	1,030,853	1,057,867	1,084,077
Debenture interest	232,515	229,190	222,380
Depreciation	195,612	195,433	206,055
Pension fund	18,344	21,405	24,662
Net earnings	584,382	611,839	630,980
"A" preference dividend	117,000	117,000	117,000
Number of times covered	*4·9*	*5·2*	*5·3*
"B" preference dividend	135,000	135,000	135,000
Number of times covered	*2·3*	*2·4*	*2·5*
Ordinary *earned*	*14·7%*	*15·9%*	*16·7%*
Ordinary paid	7½%	10%	10%
Ordinary amount of dividend	169,023	225,365	225,365
To reserve	140,000	130,000	130,000
Increase in carry-forward	23,359	4,474	23,615

The reserve account now stands at £1,230,000, and £362,072 is carried forward. A laudable feature of the General Electric report is its habit of stating the liquid resources of the company at the end of the financial year. On this occasion they amounted to £1,519,000, compared with £1,780,000 a year before, and it is noticeable that "cash" in the balance sheet has fallen from £698,187 to £436,296. Possibly these reductions reflect the postponement of the proposed issue of "British shares," which would have supplied the company with abundant cash for the purpose of accelerating the redemption of the 7 per cent. debentures, which were described by the chairman as a blot on the balance sheet. Referring to the past year, the directors report that the demand for general electrical commodities steadily expanded, and thus counteracted, to some extent, a tendency towards lower prices. The volume of overseas trade is stated to have been well maintained. The company's branches in India and Argentina again experienced a successful year, and some improvement was visible in South Africa, but in Australia and China conditions remained difficult.

Marconi's Wireless Telegraph.—The action brought by the Venture Trust on behalf of themselves and other holders of the £1 ordinary shares of the Marconi Co. for an injunction to restrain the Marconi Co. from carrying the Cables-Wireless merger scheme into effect was decided in the Chancery Court last week. The injunction was refused on the grounds, firstly, that, as the offer of shares to Marconi shareholders was made by Cables and Wireless, Limited, which was not a party to the action, the Court had no right to interfere; secondly, that as the Marconi directors had not yet fixed the terms on which they proposed to sell the company's communication assets to Imperial and International Communications, Limited, the Court could not interfere unless it were proved that the directors of Marconi were about to commit a breach of duty. The judge took the only possible view that there was no ground for supposing that the Marconi directors would be influenced by their double position as directors of Marconi and of the merger companies, and would sacrifice the interests of the Marconi Co. by selling their communication assets at an insufficient price. Resolutions approving the merger were confirmed at an extraordinary meeting of the Marconi Co. on Wednesday last. Cables and Wireless have certified that the merger has become

operative, and that, on and after the evening of July 15th, the special register referred to in the plan and deposit agreement (described in the *Economist* of May 25, 1929, page 1176) will be closed. As regards the committees representing the £1 Marconi shareholders, we understand that their view as to the desirability of remaining out of the merger remains unchanged, but that they have decided not to proceed with the formation of the proposed holding company in view of insufficient support from the smaller £1 shareholders. The object of the investment trust company to hold £1 Marconi shares was mainly to provide a free market for the smaller £1 shareholders. Now that this scheme has been abandoned the market in the £1 Marconi shares will virtually disappear. The larger £1 shareholders, it is believed, will definitely remain out of the merger. As Mr Justice Clauson remarked, in the Venture Trust case, the £1 shareholder is entitled to refuse the offer of shares in Cables and Wireless, and if he does so, he will still remain a £1 shareholder in the Marconi Co., and be entitled to receive its dividends and have a certain vote. In view, however, of the fact that little or no market will remain in the £1 Marconi shares, it would seem advisable for the smaller shareholders to accept the offer of shares in Cables and Wireless.

Amalgamated Anthracite Collieries.—The report and accounts for 1928 of Amalgamated Anthracite Collieries are significant as being the first issued since the virtual doubling of the size of the company last summer. They include the trading results from August 1st and September 1st last respectively, of the colliery properties taken over or brought under the company's control at that time. A trading loss of £243,255 and a total loss of £309,461 are recorded for the year to December 31, as compared with a small profit (£7,857) for the preceding fifteen months. In neither period was any depreciation provided on plant or machinery, and naturally no dividend is recommended on either class of shares, but explanations of the special character of a large proportion of the 1928 loss were given by Lord Melchett at the annual meeting. The greatly expanded balance sheet shows colliery and other property at £8,376,951, against £4,122,379 a year ago, and holdings in associated companies at £2,170,829 (at cost, less reserve for losses) against £99,253 only. The enormous item, £3,587,285, ascribed to creditors and credit balances (including advances from bankers and balance of purchase price of properties), accounts largely for the fact that current liabilities exceed liquid assets by no less than £2,541,488. A debit balance of £270,835 is carried forward. In these conditions, shareholders will be the more grateful for the information that since October last the company has been operated at a profit, and that earnings for the first five months of the current year are estimated at £158,000. This is attributed to the policy carried through last year of "rationalising" the anthracite industry, which has resulted in approximately four-fifths of the industry being brought under a single control; though all the advantages of the merger will not be realised for some time to come. The £1 ordinary shares of Amalgamated Anthracite are quoted at 8s. 6d., the 7 per cent. cumulative preference, on which no dividend has yet been paid, at 15s.

Yorkshire Amalgamated Collieries.—The affairs of Yorkshire Amalgamated Collieries have a special interest, since the company represents one of the very few colliery mergers, outside the anthracite industry, effected since the publication of the Samuel Report. In 1927-28, the first period of the merger company's existence, two of the four constituent concerns declared a dividend, but in the year to March 31 last only one. This company reports a profit of £21,460; the other three, whose accounting periods end at different dates, suffered losses of £1,238, £11,489 and £40,962 respectively, and in the case of the last two no depreciation was written off. The merger company shows a profit of £1,530, and after £20,000 has been reserved to meet trading losses and interest charges in excess of the amounts taken into account in the valuations upon which the amalgamation was based, there remains £5,448 to carry forward.

	Period ending March 31, 1928.	Year ended March 31, 1929.
	£	£
Profit	30,804	1,530
Preliminary expenses	6,885	...
Reserve to meet trading losses, &c..	...	20,000
Increase or decrease in carry forward	+ 23,918	— 18,470

The accounts are presented in a new and businesslike form, the balance sheet of the merger company being followed by those of each of the four constituent companies. The directors express the opinion that the operations of the Central Collieries Commercial Association (known as the Five Counties marketing scheme) have achieved to a large extent the objects for which the association was formed—it was stated, indeed, at the meeting that exports of coal from the Humber during the year ended March last showed an increase of 80 per cent. over the previous year; but, it is added, the improvement in prices during the winter was barely sufficient to compensate for their extremely low level during the earlier part of the year. It is a favourable commentary on the amalgamation policy that the further loans advanced to the Rossington Main Colliery (where development has been completed and better results are now being obtained), and to the Maltby Main Colliery (which also shows considerably improved results), have enabled both concerns materially to reduce their working costs. The £1 ordinary shares were last marked at 6s. 1½d., the 4s. deferred at 9½d.; both are, of course, to be regarded as "lock-ups."

United Automobiles Services.—The shareholders of the United Automobiles Services have learned with surprise and not a little interest of a difference among their directors as to the acceptance of offers for the purchase of the company's undertaking. United Automobiles Services has a capital of £100,000 in 7 per cent. cumulative preferred shares and £510,314 in ordinary shares. The area served by the company is mainly in the north-east of England, although it has buses running as far as Edinburgh and London. It now covers 1,774 miles of route with nineteen main depôts. The company builds vehicle bodies in its factory at Lowestoft, both for its own buses and for other users. In addition to its passenger traffic receipts, it derives a considerable revenue from parcels traffic, advertising, sales of petrol, and the building of vehicle bodies in its Lowestoft factory. For the last few years it has paid dividends of 7 per cent. In a circular dated June 20th, however, the directors stated that difficulties had arisen on account of competition and the higher costs of operation resulting from the petrol tax, which made it probable that dividends could not be maintained. The circular added that two separate offers for purchase of the company's undertaking had been considered: (*a*) a cash offer of 27s. 6d. per ordinary share from Tilling and British Automobile Traction, Limited, which specified that the total number of shares purchased should not be less than 51 per cent. of the total ordinary share capital, or, if the percentage purchased was less than 51 per cent., that the company should issue new shares at 23s. to make up the required percentage; (*b*) a proposal of the London and North-Eastern Railway Co., under which shareholders would receive shares in a new company plus a small sum in cash. This circular ended by recommending the acceptance of the Tilling and British Automobile cash offer. Two directors protested against the issue of this circular, on the ground that the London and North-Eastern Railway Co. should be given a chance of making a better offer. The railway company proceeded to act upon this suggestion and made a fresh offer of 30s. in cash for the shares, subject to acceptances being obtained for not less than 51 per cent. of the ordinary capital. United Automobiles next received a request from the Tilling and British Automobile Traction for permission to amend their cash offer, but the prospect of further competition between the would-be purchasers was obviated by an eventual agreement whereby Tillings associated themselves with the railway company's offer, on equal terms. Shareholders are given up to July 4th (with an extension in the case of foreign holders) to signify their acceptance, which the board unanimously recommends. The price of 30s. will probably appear advantageous to many holders, since the shares could have been sold in the market at about 29s. only, and, if held, would be liable to a reduction of dividend in future. The railway companies and the big omnibus combines are well advised to avoid extravagant competitive bidding, which can only react ultimately on railway or road passenger fares.

Hudson's Bay.—It was announced after the annual meeting that the 500,000 new ordinary shares, the issue of which had been foreshadowed in the report, were to be offered to shareholders at the price of £4 per share, payable in four equal quarterly instalments, in the proportion of one new share for every four ordinary shares now held, fractions being ignored. On the news the old shares have fallen to 5¼ ex dividend, at which price the terms of the new issue represent a bonus of about 5s. The eagerness of the company to augment its capital is not wholly popular, though only three dissentients opposed the necessary resolution. The governor, who had previously expressed his confidence in the prosperous development of the Western Provinces of Canada, made it clear that liquid funds were required in order to keep pace with the natural growth of the company's trade, consequent on the rate at which, in his first-hand view, the country is progressing. The company has made it a rule to pay cash for all purchases, and expanding trade demands the carrying of larger stocks, while in Calgary, Edmonton and elsewhere extension programmes are calling for heavy capital expenditure, in addition to commitments that have been entered into over a period of years in connection with the fur trade and transport. The governor's faith in the future of Western Canada is a fact of first-rate significance for the shareholders.

Ship Canal Portland Cement.—The annual report of the Ship Canal Portland Cement Manufacturers for the year ending March 31, 1929, contains an announcement that the time has arrived for the practical merger of the shareholdings in Greaves, Bull and Lakin, and Holborough Cement and the ordinary shares of the Dunstable Portland Cement by means of an exchange of shares. The basis of the exchange is to be one 4s. ordinary share of Ship Canal for each 5s. ordinary share of Greaves, Bull and Lakin, and five 4s. ordinary shares of Ship Canal for one £1 ordinary share of Holborough Cement, the Dunstable terms not yet being arranged. These companies belong to what is known as the "Red Triangle" group, in which Mr H. S. Horne is a leading figure. This group has lately absorbed J. and W. Henderson, Ltd., of Aberdeen, and it is now stated that negotiations have been completed for the acquisition of another cement manufacturing business in the South of England. It may be recalled that the "Red Triangle" group were engaged last year in a price-cutting war with the Associated Portland Cement group and other members of the Cement Manufacturers' Association. The war came to an end in November when the "Red Triangle" group joined the Cement Manufacturers' Association. Having regard to the competitive conditions which prevailed for the greater part of the year ended March, 1929, and the depression of the principal industries in those areas directly served by the company, the directors of the Ship Canal Portland Cement Manufacturers' Association consider that the earnings of the company were satisfactory, particularly as the benefit from the various acquisitions made during the year did not accrue to the company for the whole period. The following statement shows the earnings and distribution of profits for the last three years:—

Years ended March 31.	1927.	1928.	1929.
Ordinary capital (4s. shares)	£280,000	£500,000	£1,000,000
Net profit	60,397	138,708	137,741
Pref. dividends	7,107	11,250	11,250
Depreciation	40,000	50,000	40,000
Available for ordinary	13,290	77,458	86,491
Per cent. earned	4·8%	15·4%	8·6%
Per cent. paid	7½%	10%	8%
To reserve	4,750	...	12,000*
Carried forward	11,204	38,662	33,153

* To debenture redemption account.

It will be seen that the company earned only 8.6 per cent. on its ordinary share capital last year, as against 15.4 per cent. in the previous year. The fact that earnings have not expanded although the effective ordinary share capital was doubled during this period is evidence of the adverse conditions encountered. The balance sheet is not over impressive. Stocks on hand, debtors and cash amounted at March 31st to £403,511, against which there were creditors of £71,701 and secured bank loans of £511,250. The company's capital now consists of £150,000 in preference shares, £1,000,000 in ordinary shares of 4s. and £175 in deferred shares of 1s., with £600,000 6½ per cent. first mortgage debenture stock ranking in priority. The premiums received from new issues of shares have enabled an investment reserve to be built up, but the total reserves amount only to £243,213. The 4s. ordinary shares, quoted a year ago at 10s. 9d., stand to-day at about 7s., yielding only 4.6 per cent. on dividends of 8 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—The Ottoman Bank, Bank of British West Africa, Hudson's Bay Co., Bleachers' Association, J. Lyons and Co., Elder Dempster, Globe Telegraph and Trust, Anglo-Argentine Tramways, "Shell" Transport and Trading, Yorkshire Products Investment, Amalgamated Anthracite Collieries, Tanah Datar Rubber Estate, Union Corporation, Aramayo Mines in Bolivia and Twyfords. The chairman of the Ottoman Bank reviewed recent obstacles to the economic development of Turkey. Major Isidore Salmon, at the Lyons meeting, mentioned that the abolition of the tea duty has cost the company a considerable sum, not all of which will, however, fall upon this year's trading. The chairman of Yorkshire Products Investment Co. ventured to prophesy that no area in the country was faced during the next decade with a bigger programme of public works and building developments than South Yorkshire. It was pointed out at the Union Corporation meeting how the character of the business was changing in the direction of a greater interest in industrial ventures other than mining. The Hudson's Bay and Amalgamated Anthracite meetings are referred to in earlier notes.

CAPITAL ISSUES.

The only public prospectus of the week was of considerable importance and interest, the *Agricultural Mortgage Corporation*, formed some months ago to provide long-term credits for agricultural purposes, offering £5,000,000 of debenture stock. The Bank's share capital has been subscribed by a number of the principal British joint stock banks, and loans to a total of some £2,500,000 have already been negotiated, repayable over a period not exceeding sixty years. The issue opened on Wednesday. The debentures are a trustee investment yielding a full

5 per cent. for not less than 30 nor more than 60 years. The terms may instructively be compared with those of a recent offer, the Central Electricity Board loan (4 per cent. at 83), which was not a trustee security. Unfortunately, money market conditions were entirely unpropitious, the issue synchronising with a week of heavy gold exports from the Bank of England.

Agricultural Mortgage Corporation, Limited.—Issued share capital consists of 650,000 £1 shares (19s. paid). Issue at par of £5,000,000 5 per cent. debenture stock, 1959-89. The stock, which is a trustee investment, will be redeemed over the years 1939-89 by a ½ per cent. cumulative sinking fund, applied in purchase at or under par, or invested as trust funds. The corporation reserves the right to redeem in or after 1959 at par. The corporation was formed in pursuance of the Agricultural Credits Act, 1928, to make loans on first mortgages of agriculture or farming estates, properties or lands in Great Britain, and to make loans in accordance with the Improvement of Land Acts, 1864 and 1899, for effecting or paying for improvements for agricultural purposes. The principal assets will consist of the mortgages or securities held in respect of loans; in addition a guarantee fund, now amounting to £617,500, has been established by the Treasury.

Grace National Bank

East Hull Gas Company. — Offer for sale [by tender of £64,000 5½ per cent. perpetual debenture stock (minimum price, par). Issued stock capital amounts to £236,077, and loan capital to £54,005. Revenue for 1928 was £17,384, and interest on loan capital, including present issue, require £6,325. Accumulated funds of the company at December 31st totalled £52,639.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction:—**Rhymney Valley Sewerage Board**; issue of £250,000 *5 per cent.* redeemable stock, 1954; debt outstanding at March 31st was £555,000.

OIL OUTPUTS.

ANGLO-ECUADORIAN OILFIELDS, LIMITED.—The production for May is cabled as 13,683 tons.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The result for the month of May are as follows: Production of oil, 37,060 tons; deliveries, 41,110 tons. These production figures make a total of 269,350 tons for the first eight months of the current financial year, compared with 182,060 tons for the corresponding period of the previous year.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended May 29th:—Venezuela, 36,532 barrels; Trinidad, 13,109 barrels; total, 49,641 barrels. Production for the week ended June 5: Venezuela, 40,087 barrels; Trinidad, 11,840 barrels; total, 51,927 barrels. Production for the week ended June 12th: Venezuela, 38,844 barrels; Trinidad, 12,585 barrels; total, 51,429 barrels. Production for May: Venezuela, 163,280 barrels; Trinidad, 66,655 barrels; total, 229,935 barrels. Deliveries for May: Venezuela, 160,430 barrels; Trinidad, 77,769 barrels; total, 238,199 barrels. Production for the week ended June 19th: Venezuela, 39,729 barrels; Trinidad, 11,419 barrels; total, 51,148 barrels.

LOBITOS OILFIELDS, LIMITED.—The production of the Peruvian Company for May is cabled as 27,362 tons.

STEAUA ROMANA (BRITISH), LIMITED.—The production of the Steaua Romana Co., Bucharest, for the month of May was 68,940 tons.

TAMPICO OIL.—The total production on the company's properties in Mexico during May was 20,140 barrels, in respect of which the royalty due to Tampico Oil, Limited, amounted to 1,510 barrels.

THE ATTOCK OIL CO.—Production for May, 32,818 barrels.

THE BRITISH BURMAH PETROLEUM CO.—Production of crude oil by this company for the month of May amounted to 39,567 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during the month of May amounted to [illegible] per cent. barrels, or approximately 34,094 tons. The total for [illegible] ordinary 1,655 barrels) is a record production for any month in the history of the company.

THE MEXICAN EAGLE OIL CO.—The production for the week ended June 1, 1929, was 237,000 barrels. The production for the week ended June 8, 1929, was 234,000 barrels. The production for the week ended June 15, 1929, was 239,000 barrels.

THE VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended June 1st was 122,893 metric tons (previous week ended May 25th, 126,164 metric tons). Production for the week ended June 8th was 129,179 metric tons (previous week ended June 1st, 122,893 metric tons). Production for the week ended June 15th was 126,981 metric tons (previous week ended June 8th, 129,179 metric tons). The production for the week ended June 22nd was 125,386 metric tons (previous week ended June 15th, 126,981 metric tons).

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during May, 32,100 tons; oil purchased during May from other companies, 44,550 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, June 5, 1929, amounted to 2,251 tons.

VENEZUELAN CONSOLIDATED OILFIELDS, LIMITED.—Total production for the month of May, 13,047 barrels (1,864 tons). Well P.S. No. 1, depth 1,260 ft. Total production for week ended June 1st, 2,688 barrels (384 tons). Production for week ended June 15th, 2,975 barrels (425 tons). Production for week ended June 22nd, 3,255 barrels (465 tons).

COMPANY MEETINGS, &c.

THE OTTOMAN BANK.

SATISFACTORY RESULTS OF THE YEAR.
POSITION AND PROSPECTS IN TURKEY.
SIR HERBERT LAWRENCE'S REVIEW OF CONDITIONS IN THE NEAR EAST.

The sixty-second annual general meeting of shareholders of the Ottoman Bank was held, on the 25th instant, at Winchester House, Old Broad Street, London, E.C.

General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

The Secretary (Mr W. P. Sheppard) having read the notice convening the meeting,

The Chairman said: Gentlemen, I have been informed that this meeting is properly constituted, and I presume that it is your pleasure that the report and balance sheet circulated among you should be taken as read. (Agreed.)

Before referring to business matters I have to report with the deepest regret the loss which we have sustained since our last meeting by the death in September last of the Baron de Neuflize. He was the oldest member of the general committee, to which he was appointed in 1896, and since 1919 he had been chairman of the Paris committee. For a period of more than 30 years, Baron de Neuflize gave to our establishment, for which he had a particular regard, the benefit of his wide experience and of his well-known expert knowledge. His personal qualities contributed no less in inspiring our affection and respect. I have no doubt that you will share the very deep regret at the loss of such a colleague.

CONDITIONS IN TURKEY.

The past year was not favourable to the economic development of Turkey. As in all countries which are essentially agricultural, the weather is a factor of the utmost importance. Since the exceptional campaign of 1925 a series of severe winters and rainless summers has not ceased to counter the effects of the considerable extension of land under cultivation. The drought has never been so prolonged nor the yield so meagre as in 1928.

The wheat crop, in particular, suffered so seriously that the importation of foreign flour on a large scale is inevitable. Even in the regions of Konia and Afion-Karahissar—considered the granary of Anatolia—the scarcity of supplies would have ended in real disaster save for the energetic intervention of the public authorities.

Livestock did not escape the ravages of the cold, and last year in the Eastern vilayets the rate of mortality reached 20 to 25 per cent.; the results have yet to be shown in the mohair and woollen markets, the importance of which is known to you.

It is pleasing to note the slow but continuous recovery of silk culture in the region of Broussa, and the stability in the production of cotton in the Adana district. In certain respects the fresh and considerable decrease in the production of tobacco may be regarded as advantageous. It facilitates the liquidation of old stocks and tends to relieve the post-war crisis, which the direction of the monopoly is also meeting by a limitation of the cultivated area and by a better selection of seed.

"AN UNHEALTHY SITUATION."

The unfavourable results of the agricultural campaign reduced still further the weak purchasing powers of the country population, who are the real consumers of imported articles.

In normal times piece goods are the chief import. These in particular remained a heavy market, although the trade, at great sacrifices, succeeded in reducing the excessive stocks resulting from too generous credits in the past. The mistakes made have been costly, and bankruptcies in Stamboul, which in 1927 numbered 28, rose to 72 for the year 1928. It is certainly to the credit of our management that we have not been directly affected by that situation. Nevertheless, the quality of discountable bills is becoming poorer, and the average length of credits longer, while requests for renewal are certainly more frequent. These are evidence of an unhealthy situation which cannot fail indirectly to weigh on the operations of our branches, obliging them to display an ever-increased caution in the employment of our funds.

The Customs statistics reflect the seriousness of the situation and its influence on foreign exchanges. For several years past the total of imports and exports shows a constant decrease. From 434,000,000 Turkish pounds in 1925 it fell to 421,000,000 in 1926 and to 370,000,000 in 1927.

In so far as a smaller capital was required to finance the autumn export season, the business stagnation had the advantage of avoiding a return of the critical monetary stringency of October 1927. Although the cash position of the banks was more elastic, the necessary result has been a smaller yield in interest.

As we mentioned last year, our establishment was entrusted by the Government with the task of exchanging the old Turkish currency notes for the new issue. As a result of our arrangements and the special precautions taken, we were able to carry out this operation without any immobilisation of the circulation of the country.

In the order of public finance I am glad to record the progress accomplished since the installation of the régime, in the establishment of the Budget and the organisation of the Treasury. For the year 1928–29 the Budget has been balanced, without new fiscal charges, at 207,000,000 Turkish pounds. On the other hand, the Treasury benefited by the non-utilisation of the amounts set aside for the service of the exterior debt and by a fresh issue of metallic currency authorised to the extent of 5,000,000 Turkish pounds.

GOLD BASIS RESUMED FOR LOAN SERVICE.

We are happy to state that the resumption of the service of the Ottoman loans on a gold basis is to-day an accomplished fact. The agreement signed in Paris on June 13, 1928, having been ratified by Parliament and approved by the bondholders, came into force on May 15th. Two coupons have already been paid out of old provisions, and from the beginning of this month the budgetary execution of the plan comes into force. Our bank took part in the negotiations which paved the way for this equitable settlement, as well as in the actual operations which its application necessitates. By the terms of the new contract it has also been charged with receiving the Customs revenues given in guarantee, and the distribution of the annuities due to the bondholders.

THE RAILWAYS.

The railway policy of Turkey, however useful from a national point of view, constitutes an addition to their foreign indebtedness by reason of the important orders for material which are required for new constructions. These in 1928–29 absorbed 29,000,000 Turkish pounds of the Budget credits as against 22,000,000 in 1927–28.

In addition to an extensive railway programme, the Government, having decided to nationalise the exploitation of the Anatolian railway, the Mersina-Adana railway, and the Port of Haidar Pacha, concluded a convention towards the end of 1928 for the repurchase of these lines.

In the same order of policy the National Assembly has quite recently approved agreements made with the Smyrna-Cassaba, the Smyrna-Aidin, and the Oriental railways, in order to re-adapt the exploitation of these lines to the new economic conditions.

In reviewing other events of interest since our last meeting, I must not fail to refer to two capital reforms for the modernisation of Turkey—the adoption of international numerals and the obligatory use of the Latin alphabet.

Also it is of importance that the Turkish Government, using the faculty left to it by our Conventions of 1924–25, has expressed the intention of founding a State bank and gave us, in November last, formal notice of such intention. Nothing could be better for the prosperity of Turkey, and the interests engaged therein, than an issuing bank, framed—so as to assure both a stable and an elastic currency—upon lines which take into account the post-war experiences of other countries, and inspiring confidence in the great financial centres.

EGYPT, PALESTINE AND CYPRUS.

The year in Egypt has been tranquil and prosperous.

The present Government has embarked on a long programme of public works, at an estimated cost of 30,000,000 Egyptian pounds.

The cotton crop for the year 1927–28 amounted to 6,000,000 kantars. It is thought that for 1928–29 it will be more than 7,500,000 kantars. Cotton exports for 1928 were valued at 45,000,000 Egyptian pounds, against 39,000,000 Egyptian pounds for the preceding year.

In Palestine the general financial situation has been somewhat easier throughout 1928. Fewer bills have been protested, though there have been numerous small failures.

On the whole, the depression which began in 1925 as a result of the land speculation in 1923 and 1924 shows signs of passing.

Reports on the 1929 agricultural situation are favourable. Rains have been abundant and record grain and orange crops are anticipated.

Conditions in Cyprus during the year were disappointing from an agricultural point of view, the cereal yield being 50 per cent. below that of 1927.

The Agricultural Bank of Cyprus, Limited, which was formed by us in 1925, has made further progress, and the number of co-operative credit societies increased during the year from 96 to 270. In order to provide the further sums required, our London office arranged an issue of £200,000 five per cent. agricultural bank bonds, which were placed on the London market in January last. With the authority of the Colonial Office the interest on these bonds is guaranteed by the Cyprus Government

IRAQ.

In Iraq agricultural development continues as steadily and rapidly as the best interests of the country require.

In 1928, however, owing to adverse weather conditions, the value of the date crop was below the average figure, and agricultural produce generally did not reach the exceptionally high yield of the preceding year.

The acreage under cotton was considerably larger than in any previous year.

The Turkish Petroleum Co. have continued their drilling programme with results which are believed to fulfil the best expectations.

The Government follows an active policy in the matter of irrigation, and productive works in the form of barrage and regulators, within the resources of the Budget, are in progress.

The inauguration by his Majesty the Shah of a railway line linking up the north and south of Persia was an event of moment in the economic development of the country. The construction has been started both from the north and from the south; on the Caspian Sea from the Port of Pehlevi, and on the Persian Gulf from Khor Musa.

The Persian Government are, further, undertaking the building of a barrage near Ahwaz on the Karum River, which, when completed, will be capable of irrigating a vast and fertile area.

The Russian trade competition in Persia weakened somewhat by the end of 1928, and this had led to a noticeable movement of trade between Persia and Iraq.

LEVANT COUNTRIES.

In spite of a certain slackening in the activity of the Levant countries under the French Mandate, the Banque de Syrie et du Grand Liban, which occupies the first place in their economic machinery, was able to increase its dividend from 10 per cent. to 11 per cent. These States have agreed to the same terms as Turkey for their part in the Ottoman Debt, and our filiale undertakes for the Syrian Debt the same duties as those entrusted to the Ottoman Bank for the Turkish part.

In Athens the bank which we created last year under the title of the British-French Discount Bank, Limited, has made an encouraging start. It has just opened a new office at Piræus, and we have good hopes that it will not be long before the support which it enjoys, both in Paris and London, will assure for it an honourable rank among the foreign banks working in Greece.

Macedonia has not yet recovered from a stagnation of long duration, and this state of affairs is reflected in the results of our branches of Salonica and Cavalla.

YUGOSLAVIA AND RUMANIA.

Concerning Yugoslavia, it became clear during the year 1928 that the Banque Franco-Serbe, in which your establishment was interested, should be reorganised with a view to writing off certain bad debts arising from the far-reaching economic crisis. It was also felt desirable to have a preponderant interest in the bank instead of the former plurality of interests. With the help of the Banque de Paris et de Pays Bas and of the Société Financière d'Orient, our Paris office took this task in hand, and so obtained a unity of direction and management which augurs well for the future.

Exports from Rumania for 1927 exceeded imports, but the indifferent harvest and the state of the oil industry were reflected in trade generally. Currency continued scarce, and banking business, including that of the Bank of Roumania, Limited, in which we are interested, suffered a shrinkage.

Turning to the London and Paris offices, there has been a considerable development in the acceptances of the bank, thanks to our international relations and the favourable tendency of the discount market in Paris. As you will have remarked in the figures of the balance sheet, these acceptances now appear on both sides as a separate item

PARTICIPATION IN PLACING OF LOANS.

I should also draw your attention to our participation in the placing of loans recently issued on the great financial markets by various States in Eastern Europe desirous of reorganising their currency, with the support and under the direction of the principal issuing houses. Among such operations I may mention the Bulgarian Seven-and-a-Half per Cent. Stabilization Loan, the London portion of which, in conjunction with our friends, Messrs J. H. Schröder and Co. and Messrs Stern Bros., we successfully floated during the year.

Our Manchester branch continued to suffer from the depression which has paralysed for so many years the business of Lancashire. At Marseilles and Tunis our business has developed in normal fashion, and in order to complete our Mediterranean chain of branches we have opened an office at Nice, where there is an Eastern clientele to whom our establishment was already well known.

ANALYSIS OF GENERAL RESULTS.

Having reviewed as usual the different regions of the Near East to which our activities extend, I now come to the analysis of our general results.

The accounts which we are submitting for your approval have been drawn up with our traditional prudence. Those elements on the credit and debit sides which the exigencies of our business compel us to maintain in other currencies than those of the balance sheet have been converted into pounds sterling at the rates ruling on December 31, 1928.

Doubtful debts have been amortised, and our holding in bills has been conservatively valued.

As drawn up, the accounts for 1928 show an available balance of £239,004, approximately the same as last year. With the carry-forward of £22,244, the sum at our disposal amounts to £263,248.

Faithful to the policy which was inaugurated in 1926, and followed since with your approval, we propose to divide this sum into two practically equal parts, one for distribution to the shareholders, the other for a further strengthening of our provisions for eventualities.

If you agree once more to follow our recommendations, we propose the distribution of a dividend of 5s. a share, which in Paris will be paid free of tax. This dividend will be payable from July 2 next in Constantinople, London, and Paris.

From the remaining amount of £138,248 a sum of £115,000 will be placed to provision for eventualities, and the balance of £23,248 will be carried forward.

NEW APPOINTMENTS TO GENERAL COMMITTEE.

In order to fill the vacancies left in your general committee by the deaths of our regretted colleagues the Baron de Neuflize, M. Georges Heine, and Mr M. S. Spencer-Smith, we have nominated Messrs Jacques de Neuflize, René Bechmann, and A. A. Jamieson, who, like their predecessors, belong to banking houses with whom we have traditional relations. You will be asked to ratify these elections. As chairman of the Paris committee, the Baron de Neuflize has been succeeded by M. Raoul Mallet, who has been a member of the general committee since 1902.

Finally, I desire to mention our staff of all grades, who have continued to give loyal and devoted service to the bank and deserve our thanks; with which, I am sure, you will wish to associate yourselves.

Now, gentlemen, I beg to move: "That the report and accounts now read be received and adopted; that the dividend for the year ended December 1, 1928, be fixed at the rate of 5s. per share, and that this dividend be payable in Constantinople, London, and Paris on July 2, 1929." Before I put the resolution to the meeting I will answer any questions addressed to me.

M. Raoul Mallet seconded the resolution, which, in the absence of question or of comment, was put to the meeting and carried unanimously.

The Chairman next moved: "That Messrs Jacques de Neuflize, René Bechmann and Archibald G. A. Jamieson be and they are hereby elected members of the general committee."

Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., seconded the motion, which was unanimously approved.

The Chairman also moved: "That Messrs Charles de Cerjat, Horace Finaly, E. W. H. Barry, and Lord Hillingdon be and they are hereby re-elected members of the general committee."

The motion was seconded by Lieutenant-Colonel Sir Albert Stern, K.B.E., C.M.G., and unanimously approved.

Mr A. Hood proposed a vote of thanks to the chairman for the very able speech he had delivered, and to the committee of management and the staff of the bank, both at home and abroad, for their good work during the past year.

Mr E. Bradbery seconded the vote, which was unanimously accorded, and, the chairman having briefly acknowledged the compliment, the proceedings terminated.

TANAH DATAR RUBBER ESTATE, LIMITED.

DIVIDEND OF 5 PER CENT.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The seventeenth annual general meeting of the shareholders of Tanah Datar Rubber Estate, Limited, was held, on the 26th instant, at the registered offices, 7 Martin's Lane, Cannon Street, London, E.C., Mr W. Arthur Addinsell (chairman of the company) presiding.

Mr J. Lewis, on behalf of the secretaries (Messrs Bright and Galbraith, Limited), read the notice convening the meeting and the report of the auditors.

The chairman said: Gentlemen,—Since we met last year, I regret to say we have lost the benefit of the counsel and advice of our friend Mr Hawkins B. Varwell. He served his day and generation in a remarkably able way and every one of his colleagues on this board very much feels his loss.

I move: "That the directors' report and accounts for the year ended December 31, 1928, as submitted to this meeting, be approved and adopted, and that a dividend of 5 per cent. for the year be declared and paid."

SATISFACTORY NET PROFIT.

Having regard to the disturbing factors which beset the rubber industry during the calendar year 1928, I venture to think that the net profit earned by this company over that period must be considered satisfactory. It should be specially noted that this profit is arrived at after charging a total of £1,549 against revenue for depreciation, which can best be described as a book entry only, and does not represent actual outgoings. Your directors feel justified in recommending a dividend of 5 per cent. for the year.

You will see from the report that the crop harvested was higher by approximately 45,000 lbs. only as compared with the previous financial period, and in this connection I would remind you that this company voluntarily assumed the compulsory measures in force in the British rubber-growing colonies throughout the six years of restriction.

I would also emphasise the point that not only were exports restricted, but, what is more important, output was faithfully curtailed also. In consequence, when the Stevenson scheme was abolished at the end of October last, our estate was carrying only a normal stock of surplus rubber.

The industry would indeed have been better served if every company had observed the spirit and letter of the restriction scheme in a similar manner.

As regards estate works, although we do not consider it desirable to publish costs figures, I am able to assure you that economy compatible with efficiency has been the order throughout the year under review, and working costs show a reduction under all main headings.

Your directors have not hesitated to follow recommendations submitted by the agricultural experts, whose services are at our disposal through our local agents, Messrs Harrisons and Crosfield, Limited, in carrying out programmes of contour terracing and manuring, believing that attempts to secure a cheap rate of production at the expense of the sound agricultural condition of the property is false economy.

POSITION AND OUTLOOK OF THE INDUSTRY.

The chairman then gave particulars (which have already been published) regarding Edensor Rubber Estate, Limited, and of the company's interest therein. He proceeded:—

I have addressed several shareholders' meetings during the past week and have referred to the present position and outlook for our industry.

Notwithstanding its population and prosperity, surely there is a tendency to pay too marked attention to the activities of the United States of America in special branches of industry. This particularly applies to the consumption of rubber, because admittedly America is by far the largest consumer, but in my opinion too much publicity is given in market circles to American statistics, to the exclusion of details of consumption by other countries and continents. When the full world's statistics for this year are published, I feel confident it will be found that the rate of consumption outside America has advanced at least in equal ratio.

I therefore claim that we have every right to be optimistic as regards the long view, and I am quite hopeful that in future years the economic price of rubber will be such that this company will be able to pay something more than a 5 per cent. dividend, which rate, I am sure, would be admitted on all hands as not a sufficient annual return for the capital outlay and risks incidental to this industry.

Mr Edward F. Slade, J.P., seconded the motion, which was unanimously adopted.

The retiring director and the auditors were re-elected, and the proceedings concluded with the customary vote of thanks.

BANK OF BRITISH WEST AFRICA, LIMITED.

SUCCESSFUL YEAR—INCREASED PROFITS.

The 35th annual general meeting of the Bank of British West Africa, Ltd., was held on the 27th instant, at 37 Gracechurch Street, London.

The Rt. Hon. the Earl of Selborne, K.G., G.C.M.G. (the chairman), first referred with great regret to the loss the bank had sustained by the death of their late general manager, Mr Leslie Couper, C.M.G., and said that Mr David W. Paterson had been appointed to fill the vacant position.

Referring to the balance sheet, the chairman said that current deposit and other accounts were higher by £156,000, while drafts issued showed an increase of £66,000, and bills for collection £443,000, but their liability on acceptances given for customers was down. The cash balance was lower by £333,000, but their holding of Treasury Bills, at £890,000, was an increase of £545,000 as compared with the previous year. Trade bills showed a shrinkage of £404,000, partly due to the lower prices of West African produce, and to some extent accounted for by the increase of £364,000 in loans, advances, &c. Under the heading of investments, a rise of £65,000 was recorded. The profit for the year amounted to £128,330, which was £3,381 more than in the previous year, and they had again allocated £25,000 to contingency fund, but had utilised £30,000 for writing down premises and furniture instead of £25,000. The directors recommended a final dividend of 3½ per cent., making 6 per cent. for the year, less tax, thus maintaining the dividend paid last year. If these figures indicated slow, he believed they also indicated sure, progress. The lands in which the bank did its business shared the vicissitudes of the Old World and not the wealth of the New World. When international trade again flourished in Europe they would very soon feel the effects in Africa, and trade would revive there. The best political news which could come to them would be that the question of Reparations was settled once and for all, and of this there seemed fair hope.

West Africa was visited last year by Sir Samuel Wilson, Permanent Under-Secretary of State for the Colonies, and the result of that visit must be helpful to the Colonial Office in dealing with the various problems it had to handle, and beneficial to the colonies. At the meeting of the bank two years ago, Sir Graeme Thomson, Governor of Nigeria, spoke of the need for improved methods of extracting palm oil. He (the speaker) hoped that there would soon be some definite progress to report in connection with that matter, which was regarded as being so important for Nigeria. On the Gold Coast, Sir Ransford Slater was actively engaged in trying to improve the quality of cocoa, which meant so much to the colony, and the possibilities of co-operative societies among the farmers were receiving close attention. Sir Joseph Byrne had completed his first period of service in Sierre Leone, where he had been busy providing more and better roads, and they had to welcome Sir Edward Denham as the new Governor of the Gambia.

Since the last meeting the bank had opened two new branches in Nigeria—at Makurdi on the Benue River, and at Maiduguri in Bornu—and the new premises at Abonnema, Abeokuta and Kano had been completed.

Prices of commodities exported from West Africa had fallen very seriously in the consuming countries, and the decrease had been most severe in the case of cocoa, which was approximately £20 per ton lower on May 31st, as compared with the same date last year. In the same period, palm oil fell £3 per ton; palm kernels £4 per ton; ground nuts £3 per ton; and tin £30 per ton. This, of course, meant a shrinkage of imports into West Africa and a general contraction of trade and of Government revenue. In conjunction with so many other interests they hoped for the day when a definite improvement would increase the wealth of the countries with which the bank was so closely associated, and at the same time help to diminish unemployment in England, which manufactured such a large proportion of the goods imported by West Africa.

The report and accounts were unanimously adopted.

J. LYONS AND COMPANY, LIMITED.

SUCCESSFUL RESULTS—RECORD PROFITS.

CONTINUED EXPANSION.

17,500,000 "CORNER HOUSE" CUSTOMERS.

MAJOR ISIDORE SALMON'S REVIEW OF POSITION AND PROSPECTS.

The thirty-fifth ordinary general meeting of J. Lyons and Co., Limited, was held, on the 24th instant, at the Trocadero Restaurant, Piccadilly Circus, London.

Major Isidore Salmon, C.B.E., D.L., J.P., M.P. (one of the managing directors), presided.

DIRECTORS' REPORT.

The report of the directors for the year ended March 31, 1929, states that :—

The balance from trading account shows :—	£	s.	d.
A profit of	908,950	5	6
Amount brought forward from last year	30,813	19	2
Total	£939,764	4	8

From this amount is to be deducted :—	£	s.	d.
Dividend on 5 per Cent. Preference Shares paid to November 30, 1928, and proportion provided for period to March 31, 1929	32,353	5	0
Dividend on 7 per Cent. Preference Shares paid to March 31, 1929	259,191	15	7
Dividend on 8 per Cent. Preference Shares paid to March 31, 1929	80,000	0	0
Dividend on 6 per Cent. Preferred Ordinary Shares paid to September 30, 1928, and proportion provided for period to March 31, 1929	24,000	0	0
Interim Dividend (1s. 8d. per share) on Ordinary and "A" Ordinary Shares already paid for the half-year ended September 30, 1928	133,022	15	0
Interim Dividend (4d. per share) on Proportional and "B" Proportional Profit Shares already paid for the half-year ended September 30, 1928	15,833	6	8
And the Directors propose to deal with the balance as under :—			
To place to reserve (making a total of £1,175,000)	100,000	0	0
To pay a dividend of 2s. 10d. per share on the Ordinary Shares and "A" Ordinary Shares for the half-year ended March 31, 1929	226,138	13	6
To pay a dividend of 6.8d. per share on the Proportional and "B" Proportional Profit Shares for half-year ended March 31, 1929	26,916	13	4
To carry forward to next account	42,307	15	7
Total	£939,764	4	8

The amount of £125,000 received in respect of premiums on shares has been added to the reserve, making a total of £1,075,000 appearing on the balance sheet.

The expenses of issue amounting to £1,572 1s. have been charged to trading account.

During the financial year the following establishments have been opened :—

150 Fenchurch Street, E.C.,
336-338 Green Street, Upton Park,
24 Russell Street, Covent Garden, W.C. 2,
841-843 High Road, Leytonstone,
Old Steine, Brighton,
27-28 High Street, Weston-super-Mare,
13 Tavern Street, Ipswich,
13 The Walk, Norwich,
Maison Lyons, Compton House, Liverpool,

and the new laboratories in Hammersmith Road, W. 14.

Additional premises have been acquired and will be opened in due course, and negotiations for other premises are proceeding.

Since the issue of the last report the board has suffered a great loss in the death of three directors—Mr Alfred Salmon (the chairman), Mr S. M. Gluckstein and Mr J. Joseph. Mr Alfred Salmon joined the board in the first year of the company's existence, and had been managing director for 30 years; Mr S. M. Gluckstein and Mr J. Joseph joined the board together in 1914. They had all rendered the most valuable services to the company and were held in the highest esteem both by their colleagues and the staff, by whom their loss is keenly felt.

Messrs I. M. Gluckstein and B. S. Gluckstein retire from the office of directors, and, being eligible, offer themselves for re-election.

Messrs G. Dee and G. A. Pollard, employee directors, retire and are eligible for re-election.

Messrs Turquand, Youngs and Co., the auditors, retire and are eligible for re-election.

CHAIRMAN'S SPEECH.

Mr Geo. W. Booth (secretary) read the notice convening the meeting and the report of the auditors.

TRIBUTE TO LATE DIRECTORS.

The Chairman said :—Ladies and Gentlemen,—We are recording to-day the results of the thirty-fifth year of the company's trading, but before proceeding to make any review of the business I must pay a tribute to the memory of those who have gone from us since the last annual meeting. The hand of death has been heavy upon us : first, Mr S. M. Gluckstein, then my brother, our late chairman, Mr Alfred Salmon, and within the last two months Mr Jack Joseph. It is not an easy task, for I have been associated with these men from childhood, and there was a close bond between us. I cannot attempt to differentiate between them in their value to the company. My brother was with the company from its inception, and his experience alone, coupled with his ability, which was undeniable, made him a tower of strength to the company. Mr Sam and Mr Jack, as they were generally called, came straight into the business from school, and, after serving an arduous apprenticeship, acted as managers, and in due course came to a seat on the board. They, too, were men of marked ability with only one thought—the welfare of the business. All these men were entirely single-minded in that respect, and only those who worked with them can know the extent and intensity of their efforts. This is a feeble tribute, but it is a tribute of knowledge and affection; and I do not stand alone, for it is felt equally by all of my colleagues and by the staff who had the privilege—and I know they accounted it a privilege—of coming in contact with them.

PERSONAL INTEREST IN WELFARE OF STAFF.

It is a frequent complaint that those who are in control of large companies lose all personal contact with the staff, but whether that be the case or not, these men showed that it was not at all a necessity to lose such contact, for they had a personal interest in the welfare of the staff and took an effective part in their collective activities. I do not think it will be out of place to say that the lovableness of their characters was felt by all who knew them, whether in the company or in the wider sphere outside it where they endeavoured to put into practice ideals of the service of humanity which they all shared and which were shown in personal effort to assist their less fortunate fellows. The world is the poorer for their loss, though we hope and believe it is the richer for their example.

I am sure you would wish that we should record on the minutes of this meeting a resolution of sympathy and regret, and that a copy should be sent to their widows and families. I will ask you, please, to stand so as to signify your assent to this suggestion.

The shareholders present then stood for a few moments.

THE CHAIRMANSHIP.

The Chairman, continuing, said : Ladies and Gentlemen,—You will understand that I am presiding at this meeting by virtue of my appointment as chairman of the board, and I should like to take this, my first, opportunity of giving expression to a view which originated with my late brother, who, unfortunately, did not live to give effect to it—that the appointment of chairman should not depend on succession arising out of death or old age, but that members of the board should be called upon to fill the office for set periods. I hope to see this idea put into practice and to have the pleasure and privilege in due course of supporting my successor in this responsible and honourable position.

There is another point I should like to make : It is a severe test to any company when in one year three men of the quality of our late colleagues are withdrawn from the administration. That we can withstand the test speaks volumes for the organisation of the administration and shows the soundness of our policy of constantly introducing into the company new blood and putting it through the training necessary for positions of authority. That policy has been followed right from the company's inception and is particularly justified in the present circumstances. The younger men have had the advantage of understudying and assisting and of profiting by the experience and maturer judgment of their elders until they in turn are qualified to undertake more and more important tasks in the administration. Thus, whilst those who have gone from us were ideal personalities for the tasks they undertook, their influence and the tradition of their policy and work are being continued by men younger perhaps in years but full of energy and of ambition for the company's future.

YEAR'S RESULTS.

Now to turn to the company's trading. The year's results, I think, sufficiently establish our claim that we are giving to the public what it wants and at a price commensurate with quality and efficient service. With your permission, I propose to depart somewhat from our usual custom and to dispense with the lengthy reading of the items of the profit and loss account and balance sheet and a recital of their variation from the previous year. They are really so regular, the changes arise so naturally out of the normal development of the business that the comments on them are of little service to anyone. When there is anything of serviceable interest to note I shall comment upon it.

You have seen that the profits for this year have reached the substantial figure of £908,950. You know that is larger than last year or any other year, and you expect me, naturally, to tell you that the amount of business has increased. That is the fact, and the profits are in a reasonable proportion. These profits remain after providing substantially for redemption of leaseholds and for depreciation, as well as providing liberally for possible bad debts. Provision for bad debts is a necessity where there is an expanding credit business, but it is pleasing to be able to report that the percentage of this undesirable expense is quite small. The profits also include dividends from subsidiary and associated companies, but, of course, these are a very small proportion of the £908,000. I need hardly say that the dividends do not represent the whole earnings of those companies, for the policy of gradually building up reserves is followed there as in our own case.

LARGE INCREASE IN RESERVE.

One or two other figures, perhaps, call for a passing reference; the first is the amount of debtors, which shows a substantial increase on the figure of last year. This is only commensurate with increased business, and has been adequately discounted, as I have mentioned previously, by the allowance for bad debts. The amount invested in associated companies appears as a less figure. Certain provisions have been made for contingencies, and certain figures have been transferred to the subsidiary companies account, which is included in the first item of assets on the balance sheet. Then as to the reserve; you will have noticed from the report that the whole of the amount received in premiums on the issue of 7 per cent. preference shares last July—namely, £125,000—has been added to this account. It now stands on the balance sheet at £1,075,000, and will be further increased by the £100,000 proposed to be allocated to it out of the year's profits. The small amount of expenses of the issue—namely, £1,572—was charged to trading account.

EFFECTS OF ABOLITION OF TEA DUTY.

While I am dealing with profits it may be well to say something about the effect of Budget changes upon them. The abolition of the tea duty cost the company a considerable sum of money. Ours is a business where it is impossible to reduce stocks in anticipation of changes to such a point as not to be affected by them. If it were possible we should do so on every occasion, notwithstanding that sometimes we might be in pocket by holding stocks—it is not our practice to gamble on stocks or money rates—and each year we do reduce them to the practicable minimum. But when we have done so there is still a large amount in our warehouses, and, as I have said, the loss of 3.4 pence per lb. on our stocks of tea—for the price to the public was reduced the same day as the announcement—amounted to a substantial sum. This figure was assessed before we made up the accounts for the year, and an amount was set aside so that all of it will not fall upon us in this year's trading. We thought it wise to make this provision notwithstanding the fact that we shall have some reduction in rates in the coming year under the Derating Act. How much or how little that will be I am not in a position to say, but whatever the figure it is already earmarked; it will go to the benefit of the consumer. In fact, he is already receiving it because the reduction in the price of all our teas is more than the actual duty remission, since the vast bulk of our tea, being Empire grown, bore duty only at the lower preferential rate.

PARTICIPANTS IN COMPANY'S PROSPERITY.

Three classes are interested in the company's turnover and expect to share in the results—the public whose servants we are; the staff who serve the company; and the shareholder who supplies the wherewithal which enables the business to be carried on.

As regards the first; they benefit from an expanding business in that we are able to give better value, reduce prices, and increase the efficiency of our service.

Labour expects to take more in wages, that is to say, the individual looks for improvement in his scale of wages, and it is expected also that expanding business will provide for the employment of more people. This expectation is realised notwithstanding the increasing use of machinery, in fact, I might almost say because of it. Not only is there an increase in the scale of pay, but we are employing some 8,000 more people than we did ten years ago.

As to the third participant; when one considers the enormous capital provided by the shareholder by which the power of employment is created, the proportion of the surplus which goes to him is not unreasonable. A comparison of profits to capital over a series of years shows that there is a tendency to a reduced ratio, which is what one would expect because of the fact, as I have just said, that there are two others who must participate—namely, the public and the staff. If it were not so, profits would all go to the shareholder, who would be getting more and more interest for his capital out of all proportion to his risk, and that would hardly be fair, for indeed the risk, with increasing business, steadily diminishes. But, of course, there is a sounder reason than that; if the public and staff did not also share in the prosperity the expansion would soon cease; there would be diminished turnover and consequently diminished profits. The difficulty is—need I say it?—to keep a just balance between the three, and it is by the skill or otherwise of this balancing that companies rise or fall. Well, ladies and gentlemen, this company is rising, so we shall assume that so far the skill has been forthcoming.

THE MANAGING DIRECTORS.

I may mention here that the board has again this year given the same privilege to the three managing directors and has allotted to each of them 2,500 "A" ordinary shares at par. And at the risk of being egotistical, I am going to introduce a further personal note. While my brother Alfred was alive—he was a host in himself if only by reason of his long experience—it was not thought necessary, in spite of the colossal—I think the word is justified—colossal increase in the company's business, to have more than three managing directors, although there had originally been four. Since his death we have divided that work among four, and Messrs Maurice Salmon and Jack Joseph were added by myself and my brother Harry Salmon. The death of Jack Joseph has necessitated another change, and after reconsidering the matter, we have now increased the number of managing directors to five by the appointment of Messrs Montagu Gluckstein and Julius Salmon. I wish I could say that this was going to lighten our labours, but that will not be the case in view of the rapid progress of the company.

EXTENSIONS AT CADBY HALL.

The growth of business is very well illustrated by the expenditure on buildings and equipment. Cadby Hall factories (which you were informed last year are by no means limited to the provision of the goods sold in our teashops) are no sooner extended than they are found too small for the amount of work, and it is scarcely an exaggeration to say that building never ceases. We have been fortunate in securing, from time to time, land adjoining to provide for these extensions. During the past 18 months we have pulled down a large part of the flats on the east side, the tenancies of which have fallen in, and there we have erected a large block, consisting of a goods dispatch with its consequential clerical provision, and also a floor of administrative offices more in keeping with the requirements of so large a central organisation.

We have also completed our new laboratories, which are now probably among the most completely equipped in the country, not fitted only for daily needs (and the demands are in such a business as ours of the most exacting character), but also fitted for recording all such matters of scientific interest as can be of service to us and for training a staff who shall be capable of meeting such calls as the future may make upon us.

POPULARITY OF CORNER HOUSES.

I should like also to say a word or two about another section of our business—the Corner Houses. The one in Oxford Street, which was opened just before the last annual meeting, has met with general approval and is so much established in the public confidence that one wonders how we got along without it. In the course of the week its customers are counted in tens of thousands. It is, therefore, obvious that it fills a public need.

The popularity of our other Corner Houses continues and even increases; in fact, the Strand Corner House, at its present size,

cannot meet the demands made on its seating capacity. We accordingly bought in April, 1928, premises known as the Grand Hotel Annexe for an extension. It was our intention to commence the work of enlargement during the financial year and the new site has been cleared in readiness. We have since, however, bought two further adjoining premises in the Strand which will enable us to build an extension on a still more satisfactory scale when, in 1930, we have vacant possession of the whole. The numbers of customers at our Corner Houses as a whole will give you some idea of the magnitude of this section of our business and, I think, astonish you. During the past 12 months we have served in these establishments no fewer than 17,500,000 customers. No wonder the name Lyons is known the world over, just as the word "Nippy" has become a universal term for "waitress." We have also made use of that word for many of our commodities—to quote one example, chocolates—and it has so caught the public fancy that we receive many applications for our consent to its use in various directions, which, naturally, we have to refuse. We regard "Nippy" as a valuable trade mark, and it is, of course, registered; so that we have taken and shall continue to take any steps that may be necessary to protect our rights.

THE TROCADERO.

I would also like to say a word regarding the Trocadero, where you are to-day. Many of you will doubtless be aware that in February last a fire occurred here which, though causing considerable damage—fully covered by insurance—happily did not seriously interfere with our business. We have taken the opportunity, while reinstating the damaged portions of this building, to combine with that work a scheme we have for some time had in mind for the grill room and some needed improvements in the Empire room. In the grill room we are improving and extending the stage, installing an up-to-date ventilation system, and have devised a means of doing away with a number of pillars which were not only unsightly but also obstructed a clear view of the stage and orchestra from some parts of the room. The Empire room is also being considerably improved, so that instead of being, as at present, virtually two rooms with a narrow connecting opening, it will become one large and magnificently proportioned room capable of accommodating 450 persons for banquets, &c.

This, I think, exhausts the matters of interest, but I must not omit once again to express the thanks of your directors to the staff, who continue with unabated energy those loyal services we are accustomed to expect and receive from them and without which, as has been previously said, the efforts of the administration would be of no effect.

In conclusion, may I say that the policy laid down with such foresight by our predecessors on the board will be continued by us, with such modifications as changing times and past expereince may dictate? We believe we can claim that the company of Lyons is the greatest and, we hope, the most efficient catering concern in being, and we intend, if work and foresight can do it, to maintain that position.

I shall now move: "That the report of the directors and the balance sheet submitted to this meeting be and are hereby adopted; that the payment of interim dividends of 1s. 8d. per share on the issued ordinary and 'A' ordinary share capital of the company and 4d. per share on the proportional profit and 'B' proportional profit share capital of the company for the half-year ended September 30, 1928, be and is hereby confirmed; and that a dividend be paid for the half-year ended March 31, 1929, of 2s. 10d. per share to the holders of ordinary and 'A' ordinary shares of the company and 6.8d. per share to the holders of proportional profit and 'B' proportional profit shares of the company who were on the registers on June 7, 1929."

A SPIRIT OF ENTERPRISE AND PROGRESS.

Sir Henry Harris, K.B.E., in seconding the resolution, said he wished to congratulate his old friend Major Salmon upon his accession to the chair of this important company. He had been associated with Major Salmon in many fields of public work, and could testify to the ability, energy, industry, and business acumen which he brought to bear upon everything he undertook. It might be indiscreet to inquire whether at the recent election, of which he was a happy survivor, he adopted the motto "Safety first," but he (the speaker) expected that, in the direction of this undertaking, Major Salmon would combine safety with that spirit of enterprise and progress which had always animated the board of this company and which had enabled them continually to find new worlds to conquer. The able and interesting speech of the chairman on the present occasion confirmed his opinion and showed that the board did not intend to rest upon their laurels. The distinguishing quality of the board had been imagination—the capacity for foreseeing what the public would appreciate and providing it. The Corner Houses were a notable example of this, as was shown by the fact that 17½ million customers had been served in them during the past year. He was sure that, under the able guidance of the chairman, the company would continue its career of prosperity.

The resolution was carried unanimously.

Mr Harry Salmon (one of the managing directors) proposed the re-election of Mr I. M. Gluckstein and Mr B. S. Gluckstein as directors of the company.

Mr Shield seconded the motion, which was unanimously adopted.

Major M. Gluckstein then moved the re-election of Mr G. Dee and Mr G. A. Pollard as employee directors of the company, which was seconded by Mr Livermore and unanimously agreed to.

On the proposition of Mr A. J. Wood, seconded by Mr E. Woolf, Messrs Turquand, Youngs and Co. were reappointed auditors of the company for the current year.

The chairman having announced that the dividend warrants would be posted that evening,

Mr Shield proposed a hearty vote of thanks to the chairman, directors and staff, which was seconded by Mr Pinto and carried with acclamation.

The chairman briefly acknowledged the compliment, and the proceedings terminated.

"SHELL" TRANSPORT AND TRADING COMPANY, LIMITED

PROBLEM OF OVER-PRODUCTION.

VISCOUNT BEARSTED'S REVIEW.

The annual general meeting of the "Shell" Transport and Trading Co., Limited, was held, on the 25th instant, at the Cannon Street Hotel, Cannon Street, London,

The Rt. Hon. Viscount Bearsted, M.C. (the chairman), presiding.

The chairman, in the course of his speech, said: The capital of the company has been increased during the year by the issue of 333,333 ordinary shares of £1 each. These were issued to the Burmah Oil Company in pursuance of an arrangement to which I will refer later. The premium on these shares amounted to £1,354,165 6s. 3d., and this amount has been credited to the reserve account, bringing it up to the figure of £6,354,165 6s. 3d. The balance to the credit of the profit and loss account is £84,000 more than in the previous year, which is sufficient to enable your directors to pay the same dividend of 25 per cent., free of tax, on the increased capital. I think we can all congratulate ourselves on this result. Our cash position has been bettered during the year by nearly £1,700,000, and the earning capacity of our investments in other securities has remained unimpaired, and even improved.

INCREASED WORLD'S PRODUCTION.

I began my survey last year by calling your attention to the enormous increase in the world's production, and the main outstanding fact to-day is the same tendency. At the same time the rate of increase has not been on the same high scale as in 1927, when it was 22,500,000 tons, whereas during 1928 it was only 9,000,000 tons. During 1928 the United States of America tota production actually dropped below that of 1927. But I would not have you think that this is due to natural causes, but rather to that voluntary restriction to which I called your attention last year.

Coming to a more up-to-date survey, the increase is more imminent and more marked. The average daily production of the United States for the first three months of the current year has shown an increase of 200,000 barrels. This brings the problem of over-production once more to the front.

There have been many conferences with a view to handling the situation, not only in the interests of the producer, but also in the interests of the consumer. The first step has been taken by the formation of an American Export Association, and I take this opportunity of emphasising the fact that this Export Association is not to be regarded as an instrument for raising prices, but as the first step towards the active rationalisation of the oil trade.

ADVANTAGES OF RATIONALISATION.

I would go a little further, and endeavour to define what I actually mean by rationalisation. I take it to be generally admitted that it is to the best interest of the consumer, the producer, and the distributor that there shall be stability of supply and stability of price, subject only to such minor variations in world conditions of freight, exchange, and finance as may naturally occur, and which are not directly influenced or influencable by the oil trade. But overproduction must inevitably tend to instability. It means that at times there will be a glut of oil and low prices, which will restrict development of new fields. This will be succeeded by a period of higher prices during the temporary scarcity pending the bringing in of the arrested development, and such alternations will continue. To my mind rationalisation is the intelligent prevention of such alternating periods. We can never hope to get away from human fallibility, and it is not to be expected any perfect scheme can be evolved; but there is very much that can be done, and I believe we are slowly but surely getting on to the right road. I would take this opportunity of appealing to all concerned to put personal interests and desires for immediate advantage aside, and to concentrate on the framing of a large and sound policy to which all can willingly subscribe.

In view of what I have just said, you will not be surprised to hear that during 1928 the market for petroleum products was a very variable one, and on the whole prices were lower than in 1927. Our only resort against low prices has been increased business, and this policy has again proved successful, since our production rose from 17,000,000 tons in 1927 to 22,000,000 in 1928.

There is one other feature of last year to which I should like to make brief reference: the closer co-operation between the Burmah Oil Company, the Anglo-Persian Oil Company, and ourselves, which has resulted in the formation of a joint selling association in the British Indian market, and also in a similar organisation covering part of Asia and the East Coast of Africa. Moreover, the Burmah Oil Company have now become holders of 1,000,000 shares in your company.

INCREASE IN CONSUMPTION.

The rise in production has been met by a steady increase in consumption, which has been fostered by new uses that are continually being found for petroleum products.

I would say a few words on the particular countries in which we are interested. We have had our full share of the world increase. In the Dutch Indies our production rose by 500,000 tons, or roughly 14 per cent., in Sarawak by 6 per cent., in Egypt by 20 per cent., in Roumania by 6 per cent., in the United States by over 30 per cent., and in Venezuela by over 50 per cent. In the Argentine our interests have been quite successful on the development side, and we feel convinced that the near future will show that the confidence we have shown by investing a considerable amount of money in the Argentine oil industry has been justified.

PRICE OF PETROL.

I should now like to touch upon the increase in the price of petrol which took place on March 1st of this year. It is to be regretted that the full explanation of the rise, as furnished by ourselves and the other companies concerned, was not given the same degree of publicity as was given to the vast amount of prejudiced and uninformed criticism at the time of the announcement of the change. This is not the time or place to discuss the causes of that rise in detail, but I do want to emphasise that prior to March 1st, with the exception of a rise of 1d. per gallon in February, 1926, petrol had fallen uninterruptedly for over five years, and, after allowance is made for the 4d. per gallon tax now included in the price, it is one of the few commodities now selling below its pre-war price.

I would make one other comment on this subject. It has been suggested that we have changed our views and our standpoint in the matter of Russian oil, but I would expressly deny that this is the case, and would reiterate that when an agreement was about to be entered into with the Russian producers for the purchase of certain quantities of oil f.o.b., we stipulated as a condition that part of the purchase price should be reserved as compensation for the former owners of oilfields in Russia. The Soviet Government objected to this condition on the grounds of principle, and to meet their wish to disguise any lack of principle on their part, we agreed that the purchase price should be subject to a rebate which, as was known to the Soviet Government's representatives from the beginning of the negotiations, would be reserved for these former owners. I can only express the hope that other purchasers of Soviet products will take the same line.

The provident fund of the united companies now amounts to about £20,000,000 sterling, and comprises 29,000 members. It may also interest you to hear that this company has 121,000 registered shareholders and at least 50,000 holders of bearer warrants. Among our registered shareholders are no less than 13,500 shareholders of one share each, and I commend this fact to those who suggest that great companies such as ours are conglomerations of large capitalists.

I want to assure you that, whether rationalisation comes or not, this company and its associates have never been in better condition, and that you can look forward to the future with the utmost confidence.

The report and accounts were unanimously adopted.

ELDER DEMPSTER & COMPANY, LIMITED.

DEVELOPMENT OF WEST AFRICAN TRADE.

The nineteenth ordinary general meeting of Elder Dempster and Co., Limited, was held, on the 25th instant, at Fenton House, 114 Fenchurch Street, London. The Rt. Hon. Lord Kylsant, G.C.M.G. (the chairman) presiding.

The secretary (Mr. Joseph P. Baillie) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: For 60 years our vessels have been engaged in transporting goods and produce, as well as passengers and mails, to and from West Africa, and during the year under review the services of the company over every route on which we trade have been fully and regularly maintained.

In recent years an increasing amount of attention has been focussed upon the possibilities of trade in West Africa, and in welcoming this gratifying evidence that the opportunities for development which present themselves there are being more widely appreciated, Elder Dempster and Company, as pioneers of the seaways to West Africa, are entitled to credit for their share in the opening up and progress of the British West African Colonies.

After paying the debenture interest and the dividends on the preference shares, we recommend the payment of a dividend on the ordinary shares of four per cent., less income tax, and that the balance of £142,838 be carried forward.

FLEET.

The fleet now consists of sixty-nine steamers and motor-ships of 317,907 tons gross register, and has been maintained in good condition.

We have, as you know, steadily pursued the policy of providing not only for existing requirements in the West African carrying trade, but, wherever possible, of anticipating them. I referred last year to the five new cargo motor vessels we had recently built for the West African trade. At the present time, we have under construction a fine passenger motor liner for our Express Mail Service and eight cargo motor-ships, which we expect to be delivered during the latter months of this year or in the early part of 1930. These ships will embody the cumulative results of our experience in the West African trade in the form of the most up-to-date equipment for efficient and expeditious working.

WEST AFRICAN PRODUCE.

The interests of Elder Dempster and Company have always been closely bound up with the march of progress in the important British colonies which constitute the West African group. These tropical territories grow and export large quantities of valuable commodities for which there is an increasing world demand.

Palm kernels and palm oil constitute the primary exports of Nigeria and Sierra Leone, whilst the Gold Coast is the world's largest producer and exporter of cocoa.

As regards palm kernels, it is regrettable that there has been a further falling off in the quantity imported into the United Kingdom from West Africa, whilst Germany again increased her importation of palm kernels.

The reason why Germany attracts so large a proportion of palm kernels from West Africa is that when the valuable edible oil has been extracted from the palm kernel, the residue is manufactured into palm kernel cake for feeding cattle. For this product industrial Germany has, in the vast agricultural hinterland behind it, a ready and assured market, an advantage which the seed crushers of Great Britain do not at present enjoy. Further careful investigation might well be made as to whether greater use could not be made in this country of the potential market we have in our agricultural areas for palm kernel cake.

Next in importance to palm kernels comes the export of palm oil, of which Nigeria alone supplies some 75 per cent. of the world's annual consumption.

Whilst this staple industry of West Africa has grown to large proportions, and the world demand for its products continues to increase, it is satisfactory to find that there is now more general appreciation of the difficulties which the industry must meet and overcome, as the result of the success which has attended the adoption of the plantation system of cultivation in Sumatra. The scientific methods followed on the Sumatran oil palm plantations have resulted in the production of palm oil of more uniform quality and containing less acid, which commands a higher price in New York, whither most of the Sumatran oil is shipped, whilst it is estimated that, with more scientific treatment, double the quantity of oil could be produced than by the present admittedly inefficient and wasteful methods of the West African natives.

For some years the Gold Coast has been the world's largest producer and exporter of cocoa. During 1928 the Gold Coast contributed 45 per cent. of the world's total supply of cocoa beans.

The report and accounts were unanimously adopted.

BLEACHERS' ASSOCIATION, LIMITED.

INCREASED PROFIT—DIVIDEND MAINTAINED.
IMPROVED POSITION AND PROSPECTS AT HOME AND ABROAD.
INTERESTING REVIEW BY SIR ALAN J. SYKES.

The thirtieth ordinary general meeting was held at Blackfriars House Assembly Rooms, Manchester, on Friday, June 21, 1929, at 12 noon. The chairman, Sir Alan J. Sykes, Bart., in proposing the adoption of the report and accounts, said :—

Ladies and gentlemen,

Before proceeding with the business of the meeting, I desire to refer to the loss that the company has sustained during the past year by the death of Mr John T. Taylor, a director of the company, who had been connected with the bleaching trade for many years, and had acted as manager of one of the branches of Bleachers' Association—the Tenterhouse Bleaching and Dyeing Co., Limited—since it was purchased about ten years ago.

Mr Taylor had for many years been connected with various organisations affecting the bleaching trade, and his advice and counsel will be much missed.

THE ACCOUNTS.

With regard to the accounts, you will find that these have been drawn up in the form to which you have been accustomed in previous years.

In the items on the capital and liabilities side of the balance sheet, there are no noticeable changes to record. The total amount of sundry creditors, however, is lower by about £224,000, and a large portion of this decrease is due to the smaller sum that we are owing to our bankers compared with a year ago.

The general reserve fund stands in the balance sheet at £875,000, and it is proposed this year to increase it by a further sum of £100,000, which we are able to do by reducing the amount carried forward to a small extent. This will bring the total of the reserve fund to £975,000.

The balance on profit and loss account I will deal with later when I come to the allocation of the profit for the year.

Turning to the property and assets side, you will notice that the land, buildings, &c., now stands at £10,158,177.

The remaining items in the balance sheet need no comment, and any differences that occur merely represent normal fluctuations in connection with the business of the company.

PROFIT, DIVIDEND AND RESERVE.

With regard to the profit and loss account, the net profit for the year shows an increase of £2,781, which, with a slight increase in the carry-forward, makes the available balance £898,179 as against £888,433, showing an increase of £9,746.

Before arriving at this figure, you will see from the accounts that the sum of £443,308 has been spent on repairs, maintenance, and reorganisation of works, and the shareholders can be assured that this money has been spent in such a manner as to ensure that their property and assets have been kept in a high state of efficiency.

After deducting an interim dividend paid on the ordinary shares during the year of 6d. per share, the directors recommend that after providing for the three months' preference dividend to March 31, 1929, amounting to £33,996, a final dividend on the ordinary shares for the year be paid at the rate of 1s. 6d. per share making a total of 2s. per share for the year. This absorbs a further item of £284,530, and the dividend for the year is at the same rate as a year ago.

The directors then propose to add a sum of £100,000 out of the available balance to the general reserve fund of the company, and to carry forward a balance of £282,818 to next year's account.

You will have realised from the figures that I have quoted that our trading results during the past year show remarkably little variation from those of the preceding year, and this similarity is also a characteristic of the published records of the volume of our trade.

EXPORTS OF BLEACHED COTTON PIECE-GOODS.

In the twelve months ended March 31, 1929, the exports of bleached cotton piece-goods amounted to 1,375,661,000 square yards, and in the twelve months ended March 31, 1928, to 1,334,727,000 square yards, an increase of about 3 per cent. in the last year.

But, although the volume of trade would appear to account for the maintenance of our profits at about the same level as last year, the achievement of that result has been by no means as easy as the trade statistics would appear to indicate.

COST OF PRODUCTION.

In addressing you last year, I referred to our policy of effecting, wherever possible, reductions in the cost of production, and of translating these reductions, without jeopardising the interests of our shareholders, into reduced prices to customers. The reductions in price which I then referred to have been operative throughout the past financial year, and these, together with other and later reductions of lesser magnitude, have in the aggregate involved a quite substantial decrease in our revenue.

Thus, although the volume of our trade has been fairly well maintained, we have only succeeded in maintaining our profit in the face of a decreased revenue by economies which have enabled us, in one direction or another, to reduce our costs to a corresponding extent. In this, the major problem confronting British industry to-day, we are faced with special difficulties, for, as I have told you on a previous occasion, two-fifths of our cost of production is represented by the cost of labour and one-third by overhead charges of a more or less fixed character.

Despite the difficulties inherent in reorganisation under these conditions, we have steadily progressed in our plans for effecting economy, and I am glad to take this opportunity of acknowledging the assistance which the directors have received from our managers and executive officials in carrying out this important work.

TRADE IN THE PRINCIPAL MARKETS—INDIA.

The reference which I have made to the fact that the volume of our total export trade in bleached cotton piece-goods has shown such little variation within the last two years would be incomplete if I did not for a moment dwell upon the distribution of that trade to our principal markets.

In our largest market, India, I am glad to say that we have, during the past financial year, improved somewhat upon the previous year's trade, which in itself, was the best year we have had in that market since the war, and the promise of the early months, to which I referred in my speech at the last annual meeting, has been fulfilled. Foreign competition in India has never assumed serious proportions in the trade in bleached goods, but it is, nevertheless, a matter of some satisfaction to be able to say that, such as it is, it is rather less than it was. We have slightly increased our share of the trade within the last financial year, and our foreign competitors have secured only 5·3 per cent. of the volume of India's total imports of bleached goods.

CHINA.

Last year I had to deplore the fact that China, which used to be our second largest market, had been reduced to sixth in order of importance, but I was able to point to indications of improvement, and here again I am even more pleased to be able to say that the promise of better times has materialised. China has again taken her place as our second largest customer for bleached cotton piece-goods. Not with a volume of trade equal to that of the pre-war years, but still more than double that of our last financial year. And if China can make so marked a recovery in the earlier days of her relief from internal strife, the future is surely not without promise. The horizon is still not so clear as we could wish, and the renewed threat of internal conflict and the fall in the rate of exchange are factors which militate against expanding trade. Nevertheless, in the first five months of 1929, our exports of bleached goods to China were more than 50 per cent. above the quantity exported in the corresponding months of 1928. Here again we have the satisfaction of knowing that the expansion in our trade in bleached goods with China has been relatively, as well as absolutely, greater than that of our competitors, or, in other words, that we have secured a rather larger share of the trade than we held in the previous year.

EGYPT AND THE NEAR EAST.

In Egypt conditions have not been quite so favourable, but our exports of bleached goods to that market in the period corresponding to our financial year were less than one per cent. below those of the previous year. Trade in this market has been somewhat depressed by reason of the large stocks which were being carried, but the early months of this year appear to indicate that conditions are improving, and in the five months January to May, 1929, we exported to Egypt 60 per cent. more bleached goods than in the corresponding months of 1928.

Our trade with the Near East showed some diminution during the past year, as also did that with South America, but, except in the case of the Argentine, the early months of the present year show some recovery in both of these groups of markets.

ARGENTINE AND BRAZIL.

In connection with trade in Argentine and Brazil, it will be of interest to our shareholders to know that one of our managing directors, Sir William Clare Lees, has been appointed a member of the British Mission, which, under the chairmanship of Lord d'Abernon, will examine and report upon our economic relations with Argentina and Brazil. On this mission, which is a small body composed of four members, Sir William has been selected as the representative of the textile trade. The mission, after some preliminary work in England, leaves on August 2nd to visit these two leading South American States.

We must congratulate Sir William on his appointment to such an important Government Mission.

WEST AFRICA.

Our exports to West Africa have continued to show that satisfactory expansion which has characterised recent years.

THE FAR EAST.

The extent to which our trade is dependent upon the demand from Far Eastern markets is revealed in a striking manner if our exports of bleached cotton piece-goods are analysed to show the proportion taken by each continent.

EXPORTS OF BLEACHED COTTON PIECE-GOODS FROM THE UNITED KINGDOM.

Continent.	12 months ended March 31, 1929. Thousand sq. yds.	Percentage of total.
Europe	42,361	3·1
Asia	877,609	63·8
Africa	222,127	16·1
America (North and South)	136,609	9·9
Australasia	42,526	3·1
Unallocated	54,429	4·0
Total exports	1,375,661	100·0

Asia absorbs nearly 64 per cent. of our total exports of bleached goods, and next in importance are Africa, with 16 per cent. of the total, and America with nearly 10 per cent. The remaining 10 per cent. is divided between Europe, Australasia, and a residue which the Board of Trade statisticians are unable to allocate to specific countries.

ENCOURAGING SIGNS.

The brief review of the trade in bleached goods in a few of our principal markets, which I have been able to give you within the limits of a speech of reasonable length, contains, I think, signs sufficiently encouraging to permit a moderate optimism for the future, particularly having regard to the improvement in the demand from the Far East, and the importance of that area to the bleaching trade.

I wish that it were possible to exhibit for each section of the cotton industry as favourable a picture of our foreign trade as that which I have been able to draw of the bleaching section, but, unfortunately for Lancashire, other sections of the trade have not been able to withstand the onslaught of foreign competition with quite the same degree of success that we have. Not that they are less efficient or less enterprising, but in the main because our foreign competitors have found it less easy to reach the standard which British bleachers have established throughout the markets of the world.

EXCEPTIONAL POSITION OF THE TRADE.

An analysis of our exports in the different categories of finish illustrates the exceptional position which the bleaching trade has occupied in the past year relatively to other sections of the trade.

EXPORTS OF COTTON PIECE-GOODS OF ALL KINDS FROM THE UNITED KINGDOM.

Description.	Twelve months ended March 31, 1928. Thousand sq. yds.	% of total.	1929. Thousand sq. yds.	% of total.	Percentage increase + or decrease − in 1928–29 compared with 1927–28.
Grey	1,323,595	31·9	1,066,927	27·7	− 19·4
Bleached	1,334,727	32·1	1,375,661	35·7	+ 3·1
Printed	589,735	14·2	518,198	13·4	− 12·1
Dyed	754,446	18·2	754,254	19·5	− ·03
Coloured cottons	150,322	3·6	139,967	3·6	− 6·9
Total	4,152,825	100·0	5,855,007	100·0	− 7·2

In a comparison of the twelve months ended March 31, 1929, with the corresponding period in the previous year, the exports of bleached goods increased by 3·1 per cent., and those of dyed goods were practically maintained, the decrease being only ·03 per cent. In all other sections exports decreased, grey cloth by 19·4 per cent., printed goods by 12·1 per cent. and coloured cottons by 6·9 per cent.—the average decrease for piece-goods of all kinds amounting to 7·2 per cent.

It is of interest to note that in 1928–29 the exports of bleached goods formed over 35 per cent. of the total exports of all kinds of piece-goods. This is the highest proportion we have yet attained and compares with an average of less than 28 per cent. in pre-war years. Bleached goods appear now to be firmly established as the largest section of our exports of cotton piece-goods, and, with dyed goods, continue to show the least relative decline in comparison with the average pre-war volume of trade.

Although I have referred to the more favourable position which we have been fortunate enough to occupy, it should not be thought that we are satisfied with the present state of trade, for, although our share of the total has been more than maintained, that total is far less than is required to keep Lancashire fully occupied.

In the quest for the solution of the problems with which we are faced, the work of the Joint Committee of Cotton Trade Organisations, with which we are closely associated, is of outstanding importance in co-ordinating the efforts of every section of the trade.

THE HOME MARKET.

I have dealt at some length with our export trade for the reason that it forms by far the larger part of our output, but our interest in the home market is by no means insignificant.

In the home trade, demand has been restricted by changes in taste and fashion, but, apart from these, the prospects for our own, as for any other trade, depend ultimately upon the purchasing power of the British public, and it will not, therefore, be out of place if, for a moment, I deal briefly with those indications which are available of the improvement in British industry. For signs of improvement there undoubtedly are, although we still have far to go before we can fully employ the available population at the present standard of life.

For some time past the Board of Trade has recalculated the quarterly values of our imports and exports at the average values of 1924, and has furnished us thereby with an index to the volume of our foreign trade. From this index we learn that in the first three months of this year the monthly average of our total net imports exceeded that of the corresponding quarter of 1928 by more than 2 per cent., and that of the year 1924 by 13½ per cent. Imports of raw materials (the basis of much of our trade) exceeded the corresponding figures of 1928 by no less than 24 per cent., and those of the year 1924 by 12 per cent.

British exports in the first quarter of 1929 exceeded those of the first quarter of 1928 by nearly 7 per cent., and were 1½ per cent. greater than the average of the year 1924.

Movements of shipping show a definite increase in the first three months of this year compared with those of last year, and although the tonnage of merchant ships under construction at the end of the quarter was lower than at the corresponding date last year, the new tonnage commenced within the quarter was 6 per cent. greater this year than last.

The production of pig iron has been rather less this year than last, but steel production in the first quarter exceeded the 1928 figures by 10 per cent., and the average of 1924 by 17 per cent.

The weight of saleable coal raised in January, February, and March this year was nearly 3 per cent. greater than in the corresponding months of 1928, and this year's figures have provided the best monthly average since 1924, and have come within 10 per cent. of the monthly average of 1913. The weight of coal exported in the first quarter of 1929 exceeded by more than 9 per cent. the quantity shipped in the corresponding period last year, and on the railways also the tonnage of coal moved was nearly 9 per cent. greater.

A USEFUL INDEX TO INDUSTRIAL PROSPERITY.

The London country cheque clearings and the provincial bank clearings afforded a useful index to industrial activity, and, in the aggregate, these were rather greater during the first quarter of 1929 than in the corresponding quarter of 1928. Also the daily average is greater this year than in the year 1924, and the comparison assumes an added significance when it is remembered that wholesale prices were lower in 1929 than in 1928, and not less than 16 per cent. lower than in 1924.

New capital issues in the first three months of 1929 exceeded those in the corresponding period of 1928 by 10 per cent., and,

moreover, a greatly increased proportion of the capital raised was for use within the United Kingdom.

Encouraging as are these indications of improvement, it must be remembered that, although British industries generally may show signs of expansion, the prosperity of the cotton trade depends upon a series of factors that are more or less peculiar to itself, and it is to these that we must look for a return to better times. Chief amongst them are the purchasing power in our Far Eastern markets, and our ability to place our products abroad at prices which are competitive with those of foreign producers based upon cheaper labour and longer working hours.

The former is largely beyond our control, but in the latter there is a great deal that Lancashire can do for herself, and much is already being done. I am convinced that the co-ordinated efforts of every section of the trade which are at the present time so much in evidence will, if steadfastly pursued, do much to re-establish our position in the markets of the world.

THANKS TO THE STAFF.

Before I conclude, you would, I feel sure, wish me to refer to the work which has been done by the staff and workpeople during the past year. A brief review such as the one I have given you of our activities cannot possibly convey to you any adequate idea of the patient and loyal work, the sum total of which you will find written in the balance sheet of the company. So to one and all, managing directors, central office staff, managers of our branches, engineering and transport staff, I say on your behalf, as well as my own, "Thank you."

The motion for the adoption of the report and for the declaration of the dividend was seconded by Mr Arthur K. Davies and carried.

The retiring directors and auditors were re-elected, and the meeting terminated with a vote of thanks to the chairman.

UNION CORPORATION LIMITED.

INCREASED PROFIT AND DIVIDEND.

MR P. M. ANDERSON'S REVIEW OF THE CORPORATION'S INTERESTS.

Mr P. M. Anderson presided at the ordinary general meeting of shareholders of the Union Corporation, Limited, held on May 30th at Johannesburg, and in the course of his remarks said: The revenue side of our profit and loss account shows an advance from £441,940 for 1927 to £520,447 for 1928, an increase of 18 per cent. Our net profit at £428,582, which compares with £386,160 for the preceding year, has not risen to the same extent, not because our recurrent expenses are higher—they are in fact £8,915 lower on the year—but because, in view of the exceptional improvement in revenue, we have thought it wise to make provision for £30,000 in respect of income tax and £15,000 in respect of expenditure on new offices.

The dividend we pay is 5s. 6d. per share against 5s. paid for 1926 and 1927, and the sum carried forward is increased on the year from £103,013 to £116,595.

Our reserve account shows the largest advance in our history at £630,569 as against £484,213. If the amount carried forward is added to the amount of the reserve account, you will note that our open reserves are £747,165, or over 85 per cent. of our capital. Our open reserves increased by £159,938 last year, which is about twice the rate of the few preceding years.

Our share and debenture holdings at £1,896,684 show an addition of £311,126. Our cash assets, including British and other Government and Municipal securities held, stand at £1,641,081, which compares with £1,856,389 a year earlier, though if we include the sundry debtors items of £128,913, the bulk of which consists of temporary loans or the ordinary utilisation of cash, the figure is raised to £1,769,994. Our total liabilities figure at £1,802,640, as compared with £1,861,146, and, as in the past, these show, by comparison with our cash assets, a high degree of liquidity.

CHANGING CHARACTER OF THE BUSINESS.

You will doubtless have gathered, from what has been said in previous years, that the character of our business is to some extent changing, and that we are taking a greater interest in industrial ventures other than mining. This is due partly to the fact that the scope for gold mining on the Rand has become limited with time, though we have found a further promising outlook for our energies in connection with the East Geduld Mines, Limited. We are quite prepared to consider industries which are developing in the Union of South Africa, and have examined many such proposals, but we should not render the country any good service by encouraging enterprises which do not hold out a very definite prospect of a successful career. Going further afield in South Africa, we have turned our attention to the Northern Rhodesian copper fields, where much systematic work of an exploratory character has been carried on, and has disclosed the existence of an extensive copper-bearing formation that promises to become a large and profitable producer of the metal. Furthermore, in accordance with the policy pursued for some time, we have continued to study many industrial and other propositions in Europe and America, and have taken an interest during the past year in two or three new directions, notably in connection with the Polyphonwerke Aktiengesellschaft.

PROSPECTING IN NORTHERN RHODESIA.

The chairman reviewed the position of the Modderfontein Deep Levels, Limited, Geduld Proprietary Mines, Limited, and East Geduld Mines, Limited, as detailed at the recent annual meetings, and continued:—

In the northern portion of Northern Rhodesia, in the vicinity of the Belgian Congo border, extensive copper-bearing formations are being prospected over a large area mainly by three separate organisations—the Rhodesian Anglo-American, Limited, the Rhodesian Selection Trust, Limited, and the Rhodesian Congo Border Concession, Limited. The geological indications are being systematically followed up by extensive boring operations in selected areas, and these are being followed in turn by shaft-sinking and development.

The work done so far has by no means defined the limits of the ore bodies where work is going on, nor has active prospecting covered the whole of the field in which ore zones may be expected. In view of the very promising outlook for copper mining in the district, we have acquired an interest in several of the more important of the companies operating there.

POSITION OF THE SAN FRANCISCO MINES OF NORTHERN RHODESIA.

By reason of the heavy fall in base-metal prices which occurred in the year to September 30th last, the San Francisco Mines of Mexico, Limited, showed a small reduction in its dividend from 4s. to 3s. 9d., but the drop, we hope, is only temporary, as metal prices are now higher and the mine is in a very good condition. You will be glad to know that the Mexican rebellion, while it meant that railway communications were temporarily interfered with, so that there was interruption in the realisation of products, did not affect production. Indeed, March showed a rate of profit on almost a record scale. As shown by the published returns, the working profit for the December quarter was £91,000, for the March quarter £120,000, and for April £47,000. The first seven months of the current financial year, therefore, show a working profit of £258,000, as compared with £189,000 for the corresponding period of the previous year. The profit for the whole year as a consequence promises, with the better level of metal prices now ruling, to show appreciable improvement.

BRITISH ENKA ARTIFICIAL SILK.

Operations of the British Enka Artificial Silk Co., Limited, for 1928 resulted in a trading loss of £2,292, to which have been added depreciation charges, debenture interest, and sundry outgoings, so that a net loss of £82,325 appeared in the balance sheet. Technical difficulties were not overcome as rapidly as expected, and market conditions developed unfavourably, resulting in a severe cut in selling prices, and it proved desirable to curtail production at the No. 2 factory.

An encouraging feature is that the company has reached the stage in the development of its business at which it can turn its attention to the spinning of fine denier and other classes of rayon—the new name for artificial silk—which offer a better margin to producers than the standard viscose rayon forming the basis of the trade.

HOLDING IN THE POLYPHONWERKE AKTIENGESELLSCHAFT.

Early in the past year we acquired an appreciable holding in the Polyphonwerke Aktiengesellschaft, which is the second largest manufacturer of gramophones and gramophone records in Germany, and occupies an important position internationally. For the three years, 1926, 1927 and 1928, the net profits have been Rm. 797,000, Rm. 2,047,000 and Rm. 3,136,000, while the corresponding dividends have been 9 per cent., 14 per cent. and 20 per cent. During the year the company's capital was increased from Rm. 10,000,000 to Rm. 17,000,000, the difference being issued at a considerable premium, with the result that the company has been provided with large funds for the development of its business. The 1927 dividend was paid on a capital of Rm. 10,000,000, and last year's dividend on Rm. 12,500,000, and, though the issued capital is now much higher, the rate of dividend which has been reached should be maintained for 1929.

The report and accounts were adopted.

HUDSON'S BAY COMPANY.

DEVELOPMENT OF SALESHOPS.

INCREASE OF CAPITAL APPROVED.

A general court of the Governors and Company of Adventurers of England Trading into Hudson's Bay was held, on the 25th instant, in the Fur Trade Sale Room, Beaver House, London.

Mr Charles V. Sale (the governor) presided, and expressed the regret of Mr Vivian Hugh Smith and the Hon. A. J. P. Howard, members of the committee, in not being able to be present owing to absence abroad.

The secretary (Mr J. Chadwick Brooks) having read the notice convening the meeting and the report of the auditors,

The chairman, in moving the adoption of the report and accounts, said: In the profit and loss account you will find a total of £556,000. Of this £427,000 comes from trading, and nearly £128,000 from interest on instalments in respect of land sales, which is taxable as the profits of trade. On the other side there are charged, as you will see, the usual expenses, and £75,000 placed to the reserve for equalisation of dividends, leaving a profit of £475,000 to be carried to the balance sheet.

In the land account we record an increase of £30,000 in the cash received from the sale of lands, and have transferred £17,000 from the reserve created some years ago for Edmonton Improvements. The net results for the year to the proprietors are a distribution of 10 per cent. from land and 15 per cent. from trade on the ordinary shares, and 5 per cent. on the £2,000,000 of preference shares, making in all £600,000. The various reserves have been increased by £215,000, and the amount carried forward, taking land and trading together, shows an increase of £91,000.

THE FUR TRADE.

After stating that their association with Messrs Job Brothers, Limited, of Newfoundland, had already proved its value and that they had acquired a further share in the business, he went on to say: The period under review has been a difficult one for the fur trade, owing to the scarcity of furs and a widespread epidemic of influenza among the Indian and Eskimo population. Measures for conservation in several of the provinces, particularly as regards beaver, have diminished the available number of such skins, and competition for the catch near the lines of communication has consequently been very keen, but the benefit of these welcome and necessary measures will come to us in the future.

The steady invasion by travellers and prospectors of regions regarded hitherto as remote is a noteworthy feature of the present time and a precursor of change. The last section of railway from the prairie lands to Hudson's Bay, projected so long ago, reached Churchill on March 29th. The opening of this channel of communication will have important consequences since it shortens the distance from Great Britain to the centre of the North American continent.

Nevertheless, this new line has already justified the courage and faith of the Minister of Railways by the opening up of rich mineral areas, and it will have another result of wider consequence to British trade, for, as it shortens the overland haul from the ocean to the central parts of North America, it will draw an inflow of merchandise through Churchill, not to Canada only, but to the United States as well, and, if we narrow our outlook to our own immediate concerns, it is of importance to us, since it opens up the North. With this new era before us comes the need for transformation in the conduct of your fur trade, but, as it comes, so we believe we shall be ready.

SALESHOPS.

I am glad to renew the assurances given a year ago that trade in the saleshops is responding in a satisfactory manner to the policy of expansion. There is a long way to go before we reach our ideals, and some time to wait for the full harvest of our endeavours, but, prepared and preparing as we are for the future of a great and growing country, you may look forward with confidence to the results of your adventure. There is a saying of old that "husbandry is governed by the most uncertain of circumstances, winds and tempests," and, trading as we do with a population depending to a great extent on agriculture, we suffer from the same uncertainties.

The grain and root crops of 1928 promised well, almost up to the time of harvest, but threshing yields were adversely affected, in quantity, if not in quantity, by an early frost, and owing to bountiful harvests in other countries, the low price declined in September 1928 to $1·10 per bushel, compared with $1·33 in September 1927, but the quotation yesterday was $1·24.

The weather on the prairies during the autumn and winter was mild and open when cold and snow were to be expected. Such unusual conditions disorganise the course of trade, for they upset the time-table of stocks prepared far in advance and calculated for each week in succession, and sometimes for each day in the week. But, despite all this, there is a definite and encouraging all-round improvement in this important department.

LAND DEPARTMENT.

In the land department we had good reason for expecting a record year, but the sale of land and the collections of instalments fell away very suddenly in the autumn, owing to the disappointing quality of the harvest and a sharp decline in the wheat market. Taking the year as a whole, figures are satisfactory, and you will notice just a shade of improvement in the sale of townsites, which brought in £12,965, against £11,740 a year ago.

The first four months of this year, from February 1 to May 31, show the same tendencies—a decline in respect of farm-lands and an increase in respect of townsites. We have sold 84,000 acres of farm-lands against 110,000 acres a year ago, and townsites for $44,000 against $11,000. Total gross receipts are $886,000 against $1,100,000 in the corresponding four months of last year, but do not forget that the comparison is made with a period in which the sales and collections were exceptionally good.

The townsites have been a source of anxiety and expense to us during the last 15 years, but ever since 1925 we have been preparing for the demand which must come, and may come soon. Our largest interest lies in the City of Edmonton, where we still hold several hundred acres north of the railway, but within the City limits. There we have, by an exchange with the City, consolidated, as far as it was possible to do so, our unsold lots.

All our sales in this area are subject to building restrictions of a reasonable nature so as to preserve the amenities of the neighbourhood, and we are considering a limited scheme for building loans which has proved successful elsewhere. We think Edmonton, as the gateway to the Nortn, has a great future, but it is only by thus making our property approachable and attractive, and by assisting in its development, that we can hope to bring buyers to our market.

SETTLEMENT WORK.

Just a few words on the work of the Hudson's Bay Co. Overseas Settlement, Limited, in which, with the Cunard Steamship Co. and the Canadian Pacific Railway Co., you are interested. During the last eighteen months we have found place for nearly 2,000 people on the land in Canada, including over 230 young men who passed through our training farm in England. The numbers also include the family scheme which the Canadian Pacific Railway and ourselves undertook in co-operation with the Oversea Settlement Department. As our share, we are equipping 100 farms in the Vermilion district, and 89 families have already been settled.

It is an interesting work, and, if the experiment succeeds, it will pave the way for something more extensive. There is, without doubt, plenty of room in Canada for men who commence with a willingness to work, and a peaceable disposition, and it will interest you to know that the great majority of farmers who apply to us for helpers express preference for men of the British race. This, I think, disposes of the fallacy that British settlers are not wanted in Canada.

REASONS FOR INCREASE OF CAPITAL.

In conclusion, the Governor, dealing with the reasons for the proposed increase of the capital by the issue of 1,000,000 new shares, of which they would limit the immediate issue to 500,000 shares, said: We have made it an invariable practice to pay cash for all purchases, this being, of course, a great lever in buying our merchandise at lowest prices. As our trade increases—and it is increasing rapidly—larger sums are required to maintain this practice. The need is not perhaps so apparent in the balance sheet, because the annual accounts are closed both in Canada and in London on those dates in the year on which stocks are at the lowest point. Thereafter they increase up to a peak in the autumn months. For this purpose we can profitably use a sum of approximately £1,000,000.

In Calgary we are expending about £400,000 in an extension which is wanted to keep pace with the growing trade of that city. In Edmonton we are erecting a warehouse in which we shall consolidate several activities now housed in different buildings, most of which are rented. This will cost about £50,000, and a like sum will be required for an extension to the saleshop in Victoria. Certain expenditures in connection with the fur trade and transport, taken over several years, will absorb between £100,000 and £200,000.

We have no programme beyond these items at the present moment, but, as the buildings now under construction approach completion, we shall have to decide, according to circumstances as they will then exist, how far and to what extent it is advisable to construct or reconstruct our buildings in other Western cities.

The report and accounts were adopted and the proposed issue of capital was approved.

ANGLO-ARGENTINE TRAMWAYS COMPANY, LIMITED.

RECORD TRAFFIC FIGURES.

TRANSPORT PROBLEMS—NEED FOR CO-ORDINATION.

The forty-fifth ordinary general meeting of the Anglo-Argentine Tramways Company, Limited, was held, on the 25th instant, at Winchester House, Old Broad Street, London, E.C.

Sir George A. Touche, Bt. (the chairman), presided.

The secretary (Mr J. S. Anderson) read the notice convening the meeting and the auditors' report.

TRIBUTE TO LATE MR SANFORD.

The chairman said: Before proceeding with the business of the meeting I feel sure you will desire to associate yourselves with an expression of regret at the loss of our old friend and oldest colleague, Mr Charles Henry Sanford, who died in December. During the 39 years for which he was a director he rendered many services to the company. His great interest in its affairs remained with him to the last, and his experienced advice was always helpful. His practical concern in the welfare of the company's *personnel* and particularly in the children of the operating staff, and workmen in Buenos Aires, won for him an affection and gratitude which will remain, like the home near Buenos Aires which bears his name, a lasting tribute to his kindly beneficence.

The name of another director who was with us a year ago is missing from the list, but, happily, on other grounds. Sir Frederick Sykes, who brought a special knowledge of transport problems to our counsels, is now occupied with the difficult and important duties of Governor of Bombay. We hope he will return to us when his term of office has expired.

OPERATING RESULTS.

The date of the balance sheet now submitted to you, December 31, 1928, marked the termination of the 52nd year of the company's existence. In presenting the report and accounts for that year we are glad to announce that the prosperity which Argentina has enjoyed was reflected in the volume of traffic handled by the company, if not in the financial results to the company. During the 12 months under review the traffic surpassed all records. The number of passengers carried was 570,079,027, or 9,331,473 more than in 1927, when the previous highest total of 560,747,554 was reached.

The car miles run aggregated 70,477,031, compared with 69,861,752 in 1927. Receipts amounted to £4,719,180, as against £4,658,618, an increase of £60,562. Expenditure also increased. At £3,693,048 it was £46,070 more than in 1927. This was accounted for largely by higher maintenance costs due to the additional strain imposed on rolling-stock and installations through acceleration of services.

The appropriation to renewals reserve was £372,416, as against £368,666 in 1927. Of this £280,000 was absorbed by expenditure on renewals. The balance carried to net revenue account was £1,026,132. To this has been added £26,044 from interest and minor receipts in London, making a total of £1,052,176. Against this there is charged the annuity to the City of Buenos Aires Tramways Company, interest on the debenture stocks, sinking fund quotas for redemption of debenture and share capital, and dividends on the first and second preference shares. These amount in all to £1,027,464.

SUPREMACY OF THE TRAMWAYS.

In view of the controversy about the comparative merits and capabilities of tramways and omnibuses, the proportions of traffic in the City of Buenos Aires are worthy of notice. As you are aware, the City of Buenos Aires is now well supplied with omnibuses. The total number of passengers carried by them in 1928 is estimated at 190,000,000. The total number of passengers carried by all the tramways in Buenos Aires during the same period was 675,000,000, of which our proportion represents about 75 per cent. The significance of this comparison lies in its contradiction of the common belief that omnibuses everywhere can equal if not surpass, tramcars in fulfilling the modern transit needs of large populations.

Whatever may be the case elsewhere, the figures show that, in Buenos Aires, with a fixed population of more than 2,000,000, the tramway maintains its supremacy as the principal and most popular means of urban communication. Even a co-ordinated system of omnibuses could not usurp the function of the tramways, though, as an auxiliary, it would prove valuable.

Apart from the greater comfort which tramcars afford, by reason of their smoothness in running and their safe adaptability to the heavy loading in rush hours, their economy in operation makes them the cheapest means of travel. Further—and this is of great importance to all cities whose inhabitants comprise an appreciable industrial community—workmen are given the benefit of reduced fares and special services, neither of which features belongs to the operation of omnibuses. The number of workmen's tickets issued by the company during 1928 at the single fare of 5 cents for any distance—that is to say, half the ordinary fare—was 38,817,986, and represents a substantial percentage of the total number of passengers carried on the surface lines.

OMNIBUS COMPETITION.

The motor omnibus question in the Argentine has to be viewed from a different angle from that to which we are accustomed here. Here we have large well-paved towns, with great populations, at no great distances apart, linked up by arterial roads. It is a condition of things which lends itself to the development of a mobile form of traction.

In the Argentine main roads, as we know them—or perhaps better than we know them—belong to the future. It is an assured future, but, for the time being, the scope for the use of motor omnibuses is limited. Their roads in the central areas of Buenos Aires and the larger avenues would do credit to any great modern city, but, owing to the rapidity of expansion, those in the outer limits are not yet suited for omnibus traffic. The strain on the vehicles is excessive, the cost of operating heavy, and the life short. Under such conditions there is every temptation to concentrate in the central streets where the cream of traffic is to be gathered. In that way the omnibuses tend to increase rather than to relieve the existing congestion.

The provision of a public utility should be governed by duty to the public as well as by considerations of profit. But the problem created in Buenos Aires by the advent of the omnibuses has not yet been solved in accordance with the wholesome rule.

TAXICAB PROBLEM.

Matters have not improved during the past year. In September last other competition made its appearance in the form of taxicabs plying for collective hire. The vehicles employed in these Jitney Services are of greater capacity than the ordinary taxicab, and are run at the busiest hours of the day in considerable numbers in the most frequented thoroughfares. They operate indiscriminately, with official toleration rather than sanction, and subject to none of the conditions imposed upon the tramway and the other organised services. Their entrance into the arena of the traffic struggle has aggravated the difficulties of an already very serious situation. Not only do they prejudice our receipts, but, like the pirate omnibuses, they help to nullify our efforts to improve the services. Progress through the principal thoroughfares has been rendered so slow as to be a matter of general concern.

MEASURES OF ALLEVIATION.

Any measures of relief would be welcomed by the public. An experiment of the municipality, made in August, regulating parking and the circulation of horse-drawn vehicles in the central zone, showed that much could be done by organised methods of control to improve speeds in the congested areas.

In the interests of the community the company has continued to pursue its policy of bettering services, on both the surface and underground lines, wherever that course has been practicable. More commodious and comfortable cars, with larger platforms and higher speed capabilities, have been introduced on the surface lines, and still further improvements are contemplated in this type of rolling stock. Alterations in the entire fleet of subway cars, increasing their carrying capacity by about 30 per cent., were, in great measure, completed by the close of the year. A shortening of time schedules is being introduced to ensure more rapid handling of the increasingly dense traffic on the underground system. Indeed, we have had to widen some of the station exits to the streets to relieve pressure at peak hours.

These measures, with the progressive replacement of trailer cars by motor-cars, and the general speeding up of services, all form part of a comprehensive plan, initiated by the company, for assisting in the alleviation of the city's transport troubles. But there can be no real cure while the chief causes of traffic congestion remain.

NEED FOR CO-ORDINATION.

The confusion which exists, and tends to increase, makes clearer, with every passing day, the need for replacing the haphazard development of transport facilities by a scheme of co-ordination in conjunction with the extension of underground lines. Proposals laid before the municipality by the company embody a scheme of this nature. In other great cities of the world—notably in London—co-ordination has been recognised as the only enduring basis on which to cater adequately and economically for the transport demands of large and concentrated communities under modern conditions.

The needs of Buenos Aires to-day are no less insistent. Sooner or later they will be met by the adoption of similar methods, for nothing stays its march of progress.

The best solution lies in a combination of tramway, omnibus, and subway. Each have their part to play: the tramways to provide transit in thickly populated areas, the omnibuses a quick means of developing and expanding these areas, and forming feeders, and the subways, with their speed and regularity, best of all.

INCREASED SUBWAY TRAFFIC.

The increase in the traffic handled on our present subway is a noticeable feature of the year's operations. As in previous years it has been helped by our omnibus service, which connects with that part of the system. Some 6,000,000 more passengers were carried in the subway than in 1927. The time is approaching rapidly when this line will be taxed to the limit of its present capacity. This emphasises the urgency of the work on station improvements on which we are now engaged. As you are aware, the line runs for 4½ miles under the busiest thoroughfare of the city. The increasing extent to which it is used by the populace is an indication of the degree of relief which eventually will be brought to the general traffic situation when the company's other subways have been constructed.

THE "AD REFERENDUM" AGREEMENT.

The final plans for the second subway, which will run between the big railway termini at Retiro and Constitución, were presented during the year for the approval of the authorities. We are now awaiting such action on the part of the municipality as will render procedure with the work of construction economically possible. I refer to the ratification of the *ad referendum* agreement signed in 1925, with the Intendente of Buenos Aires, which provides for equitable adjustments in the pre-war tariffs, still in force, notwithstanding the post-war burdens imposed upon and borne by the company.

Throughout 1928 we continued to hope for a decision of this question. But the auguries were not encouraging. It is fair to remember the special circumstances of the year. The intervention of the National elections and their disturbing influence on the business of the council hardly allowed our hopes to become expectations. The subject is now being studied actively by the authorities.

In spite of many disappointments, we still anticipate a result which will not only ensure a reasonable measure of prosperity to the company, but, with it, the well-being of its 11,000 employees and their dependents, and bring about the provision of one of the vital needs of the city—the extension of its underground transport system.

The agreement with the municipality would enable us to increase the wages of our men, who have fulfilled their duties with a great loyalty. There is a clause providing for the increase, and there is no provision to which we would more readily respond. In their interests, as well as in that of the travelling public, we hope there will be no avoidable delay.

I fear to-day's story must sound rather like a sermon which has been preached before. Its text is "Patience." An old proverb, quoted by Chaucer, says "The Patient Conquer." You have learned, through a dreary experience, that the business of transport operation in Buenos Aires entails, in these times, many difficulties demanding constant effort, and the exercise of a very great patience. But we expect to win through, because our interests are identical with those of the citizens of Buenos Aires.

TRIBUTE TO STAFF.

Neither we nor our admirable general manager in Buenos Aires (Mr Rongé) regard the difficulties as insurmountable. On the contrary, he and his loyal staff, supported by all the help and encouragement we can give them from this side, are actively engaged in overcoming these difficulties one by one.

In this, as in every task performed in the service of your interests, it affords us satisfaction to be able to pay tribute to the efficiency, devotion and good will which characterise the efforts of all the company's officers and personnel, and which have never failed us yet. Such qualities are assets no balance-sheet can show, but they constitute a real factor in the safeguarding of the company's affairs, the fulfilment of its obligations, and the conquest of difficulties.

I move: "That the report of the board of directors and the audited accounts for the year to December 31, 1928, now presented to the meeting, be and are hereby received and adopted."

Mr William Morris: I have pleasure in seconding the motion.

The Chairman: Has any shareholder any observation to make?

No comments being made by shareholders, the resolution was put to the meeting and carried unanimously.

The formal business having been transacted, votes of thanks to the chairman and staff terminated the proceedings.

AMALGAMATED ANTHRACITE COLLIERIES, LIMITED.

RATIONALISATION POLICY JUSTIFIED—IMPROVED OUTLOOK.

The fifth annual general meeting of this company was held, on the 24th instant, at the Victoria Hotel, Northumberland Avenue, London. The Right Hon Lord Melchett, F.R.S., LL.D. (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that they had during the past financial year been faced, like all other companies in this country, with a year of depression, of acute competition, of irregular working, and of low prices. In other directions it had been a year of completing that scheme of amalgamation and centralisation of control of the anthracite industry on which they had originally set out some years ago. They now controlled 80 per cent. of the total output of the Welsh anthracite industry.

One of the advantages they had already gained by their amalgamation was the entire reorganisation of the Canadian business. They were now in a position to assure the Canadian merchant both as to the quality of the output and as to the stability of the price, instead of his being in the difficulty in which he had found himself in the past, when a large number of people shipped different qualities at different prices to his market. He was quite certain that the Canadian market, which they had established with so much care and trouble, would be a very remunerative market in the future.

During the first nine months of 1928 the depression was unprecedented. Then this merger was formed, and from October they had been working at a profit. The profit for the last three months of last year was not very great, but they had turned the corner from a heavy loss to a profit. Since that date their profits had substantially increased, and the profits which they estimated they had earned for the first five months of the current year were £158,000. That, at any rate, was a change in the right direction, and it was entirely a justification of the policy which they had pursued of endeavouring to rationalise the industry.

EFFECT OF BOARD'S SOUND POLICY.

But for the steps which they had taken they would never have been able to make use of the railway rebate, a very useful addition to their profits, which they had been able to retain instead of having to hand it over, as would formerly have been the case, to the importers from other countries. It had enabled them already to make very many useful and economical alterations in their organisation—central control of sales, a central purchasing department, pooling of wagons, and central power stations—and he was glad to say that at the present time out of 37 collieries that were working 34 were now working good time, while the other three were red vein anthracite collieries, which had little to do in the summer. Out of 45 collieries, eight were closed because they could be more economically worked from the adjoining collieries, or the collieries themselves could be worked except at a permanent loss. But, out of the 37 working collieries, 34 were working good time, and their forward sales for the rest of this year and into the next year were very satisfactory. They were able slowly to re-establish a much better range of prices for their qualities, and they were able to recover markets from which they had been to a large extent eliminated.

FORWARD SALES.

Their forward sales for the rest of the current year and into next year were very satisfactory. They were able slowly to re-establish a much better range of prices for their qualities, and they were able to recover markets from which they had been to a large extent eliminated.

On the whole, their relations with those engaged in the collieries had been of a very friendly character, so far as their own pits were concerned. They had succeeded in re-establishing their people on a relatively steady and regular time basis. He felt certain that with reasonableness on both sides, a spirit of give-and-take, and a real desire—which he was sure existed from his experience of the responsible leaders of trade unions over the last 18 months—to see unemployment diminish in the mining industry, if they were left alone without outside interference the coal industry could succeed in re-establishing itself on an economic and reasonable basis.

Sir David R. Llewellyn, Bart. (deputy chairman), in seconding the motion, said that the true barometer of trade and of the well-being of the country was the quantity of coal exported. There was a prevalent opinion that coal was done for, and that through the inroads of oil and water power abroad the demand for coal would never be in the future what it had been in the past. That was a great mistake. The demand for coal was still increasing, and since the war it had been increasing more rapidly than it ever had done in any period of modern history.

The resolution was carried unanimously, and the proceedings terminated with a cordial vote of thanks to the chairman, directors and staff.

ARAMAYO MINES IN BOLIVIA.
DEVELOPMENT POLICY—FALL IN TIN PRICES.
MR CARLOS V. ARAMAYO'S REVIEW.

The ninth ordinary general meeting of Aramayo Mines in Bolivia Co. was held, on the 21st instant, at the company's offices, 16 Quai de la Poste, Geneva, Mr Carlos V. Aramayo (the chairman) presiding.

The chairman, in moving the adoption of the report and accounts, said: The balance of the profit and loss account at December 31, 1928, as remitted by the local management in Bolivia, shows a profit of Swiss francs 4,833,857·85 (£193,354) as the result of the year's work, and the final figure of profit in 1928 is Swiss francs 4,801,094·99 (£192,044). It will be remembered that the corresponding figure in the previous year was Swiss francs 6,932,370·58 (£277,295). The decrease of nearly two million Swiss francs in the net profits is due almost entirely to the very sharp fall in the price of tin, which began at the end of 1927 and which unfortunately still continues.

The sale of black tin (60 per cent. concentrate) during the period under review was 4,229·5 tons at an average price of £114 14s. 8½d., as against 4,045 tons sold in 1927 at an average price of £143 18s. 10d.

The sale of silver in the form of precipitated sulphide was 1,683,180·46 troy oz. at a price of 28·3d., as against 1,629,427·90 troy oz. sold in 1927 at an average price of 26·7d.; and that of rich silver shipping ore was 21,911·62 troy oz. at 24·6d., as against 63,110·45 troy oz. in 1927 at 22·8d.

The sale of copper cement was 348·9 tons at an average price of £31 5s. 4d., as against 323·96 tons sold in 1927 at £30 4s. 1½d.

The quantity of bismuth sold during 1928 was practically the same as in 1927, but the prices obtained were lower, with a consequent decrease of £11,000 in the profit arising from this item.

The total output of black tin in the various mining sections of the company was 4,199·35 tons, as compared with 4,248 tons in the previous year; while that of fine silver in the form of precipitated sulphides, rich shipping ore and copper cement was 2,167,744·29 troy oz., as compared with 1,722,195·76 oz. in 1927.

This is the highest figure yet reached by the company for fine silver, and the increase is being more than maintained in the current year.

The output of copper cement in 1928 was 325·92 tons, against 324·24 tons in 1927; and that of metallic bismuth in bars, residues and rich shipping ore was 124,765·00 tons, as compared with 68,312 tons in the previous year.

The cost of production of black tin was £84 5s. 9d., as compared with £73 19s. 3½d. in 1927.

WORK IN THE MINES.

The total number of metres driven during the year was 1,625·25 metres as against 1,432·70 metres in 1927. There was a decrease in Chocayo of 773 metres, while there was an increase of 185·5 metres in Chorolque, of 58·1 metres in the Tasna bismuth mines, and of 26·25 in the Tasna tin mines.

Ore reserves at Chocaya were considered to be so far ahead of operating requirements that again development was restricted; but this year it has been decided to continue it on a more extensive scale. The central shaft is being sunk to the 302 level—that is, the level of the Oploca tunnel—with the object of opening up the block of ore contained between this level and the 264 gallery, which is at present the lowest working level.

At Chorolque the pumping apparatus lowered the water level under the San Bartolomé adit to 70·7 metres below the collar of the shaft, which had been sunk 100 metres before the inrush of water in November 1926.

The development of the lodes down to and on the 32-metre level showed such decreasing mineral values that the combined work of investigation and exploitation of this deep level zone ceased to provide profits, and the section for the first time in its history failed to show a profit in the yearly accounts.

It is curious to note that the composition of the lodes down to the 32-metre level continues to be of a perfectly oxydised character, thus showing that the oxydised zone penetrates to the most unusual depth of 2,000 ft. below the outcrop of the principal lode.

WATER TUNNEL BEING DRIVEN.

When it was found that, contrary to expectations, the water level in the shaft was not falling any more rapidly, and that therefore the volume of water still filling the underground caverns must be larger than had at first been supposed, it was considered that the cost of prolonged pumping operations could no longer be justified and an alternative scheme was submitted by the new management, which comprised the driving of a water tunnel of some 950 metres in length from a point situated in the south-west corner of the mountain, at Fierro Unu, to intersect the perpendicular line of the shaft at a point 130 metres below the collar. The probable cost was calculated at £12,000. The scheme, after due consideration, was adopted by your directors.

Driving operations began last November and, according to the latest advice, have advanced 450 metres. It is expected that the tunnel will be finished by the end of the year, and that it will then be possible to carry out development work on 100 metres of virgin backs without pumping expenses.

The geologist of the management firm has completed his first study of the Chorolque mining section, and has recommended that three other drives be carried out in search of fresh ore bodies, on and above the San Bartolomé level.

In spite of the fact that pumping operations ceased in October last, and notwithstanding the very heavy rainfall sustained in the early months of the year, the water level under the San Bartolomél adit has only risen to the 44 metre line, thus indicating the very vast cubic capacity of the water deposits which have already been drained by the pumps. It will now be left to the new water tunnel to complete the drainage.

Steps will be taken to make use of this water, as it flows from the tunnel, to operate the large tin-bearing deposit of natural debris which lies at the foot of the southern face of the mountain, locally called the Yana-Salli face. Although the potential value of this deposit has always been borne in mind, it has not hitherto been ranked as a positive asset because of the lack of water.

ORE RESERVES.

Of the 866·5 metres of development work driven in Chocaya in the course of the year, only 412·1 metres were concerned with the development of new ore, while 354·5 metres consisted of raises and winzes driven into known ore to make ready for economical and rapid extraction. Moreover, it so happens that most of the new ore was opened up by the 264 N.E. level and the 303 N.E. level, and that no development work has as yet been carried out above these points to determine the vertical height reached by the new ore zones. For this reason it has not been thought that this new ore could as yet legitimately be considered as proven ore, and the official estimate of new proven ore opened up during the year has therefore been kept down to the conservative figure of 8,520 tons, running 6·12 per cent. tin and 13·5 oz. per ton of silver.

As an example of the conservative character of the mine assay plans, it may be mentioned that in 1928 49,581 tons of ore were crushed, with an assay value of 5·3 per cent. tin and 59·2 oz. of silver—that is to say, with a metal content of 2,627·79 tons of fine tin and 91·22 tons of fine silver, whereas the mine assay plan for the corresponding area showed only 36,729 tons of ore with a metal content of 1,985·20 tons of fine tin and 83·66 tons of fine silver.

A fresh estimate of the Chocaya ore reserves as at January 1, 1929, has been made by the new management, and the figures given are 243,283 tons of ore, with a value of 4·51 per cent. tin and 46·6 oz. of silver.

The tonnage of silver-tin ore milled (after kiln-roasting) was 43,510 tons, assaying 67·5 oz. of silver to the ton, as against 44,167 tons in 1927 assaying 52·68 oz. to the ton.

The tonnage of ore concentrated for tin, mostly from the silver lixiviation tailings, was 41,047 tons running 6·26 per cent. tin, as against 40,108·52 tons in 1927 assaying 6·21 per cent. tin.

CURRENT YEAR'S OUTPUT.

During the first five months of the present year (1929) 17,551 tons of Chocaya ore have been milled. The tonnage handled has been deliberately restricted pending the installation of new appliances, which are intended to increase the percentage of tin recovery.

The total output of products to May 31st of the current year has been 1,677 tons of black tin, as against 1,788 tons in the same period last year; 1,191,178 oz. of silver, as against 738,000, and 90 tons of copper as against 86.

TIN MARKET.

Your directors have viewed with concern the continued weakness of the tin market, which has considerably reduced the profits of the company for the year under review, and which threatens to do so again in the current year. Low prices may ultimately have the effect of squeezing out many of the high-cost concerns, and of thus causing a shortage of supplies with a violent reaction in values. But it is felt that such market fluctuations cannot but be prejudicial to both consumers and producers, and that therefore any reasonable scheme of co-operation tending to control output and to stabilise prices should be examined with care and sympathy. It is with this in view that your directors have agreed to be signatories of the British American Tin Company, which has recently been formed with the object of pursuing more formally the preliminary conversation which have already taken place.

The report and accounts were unanimously adopted.

GLOBE TELEGRAPH AND TRUST COMPANY, LIMITED.
CONFIDENCE IN THE FUTURE.

The fifty-sixth ordinary general meeting of the Globe Telegraph and Trust Company, Limited, was held, on the 25th instant, at Winchester House, Old Broad Street, London, the Rt. Hon. the Earl of Midleton, K.P. (the chairman), presiding.

The chairman first referred to the loss the company had sustained by the death of Sir John Denison-Pender. In moving the adoption of the report and accounts, the chairman said the gross receipts amounted to £359,191, as against £354,860. The net income was £347,389, making with the balance brought forward of £52,322, a gross total of £399,711. It was proposed to pay a dividend of 10 per cent. on the ordinary shares, and carry forward £77,370. The changes in capital investments had been small in the period under review. There was one large investment, the American Telegraph and Cable Company, and negotiations were still proceeding with the Western Union Telegraph Company.

In regard to the two important mergers during the year, the Mackay companies had now become the Postal Telegraph and Cable Corporation and the International Telephone and Telegraph Corporation, and there was now £16,800 5 per cent. gold bonds, £12,690 debenture stock and 4,553 $100 shares of the preference stock of the Postal Telegraph and Cable Corporation and 1,518 $100 shares of the International Telephone and Telegraph Corporation. With regard to the cable and wireless merger, they held £2,915,000 in the shares of the three great cable companies and they had no hesitation in signifying their assent to the exchange of those shares for what was offered them in an undertaking which was the only means of safeguarding the position of Great Britain in the communications of the world. The past year, though it had seen no change in issued capital, had seen the greatest development in the value of the securities held by the trust in the fifty-four years of its history. They had complete confidence in the future of the merger company, but as would have been gathered from statements made at the cable company's meetings, the new Cables and Wireless Company's dividend on the 7½ per cent. stock could not be declared until July 1930, when the working of the present year had been ascertained.

The report and accounts were unanimously agreed to and the formal resolutions enlarging the board's powers of investment were approved.

YORKSHIRE PRODUCTS INVESTMENT COMPANY, LIMITED.
WIDESPREAD ACTIVITIES.

The statutory meeting of Yorkshire Products Investment Co., Limited, was held, on the 21st instant, at Grosvenor House, Park Lane, London, W.

Mr A. O. Edwards, the chairman of the company, who presided, said that the company had been formed for the purpose of investing in companies engaged in the production of building, road-making and refractory materials, together with the merchanting and factoring of other goods in connection with those industries. The centre of their activities lay in South Yorkshire, and the company now controlled a group of businesses which, by reason of the unification of control, were capable of being managed with every regard for economy, and were also in good shape for the expansion of their interests as occasion offered; it was not their intention to expand the activities of the company, however, unless control was obtained of the businesses acquired. The brickmaking activities of the company embraced, in addition to common bricks, all the higher grades of bricks and terra-cotta; they controlled the output of 10 modern, well-equipped brickworks in South and West Yorkshire, and in the near future would be turning out a greater variety of high-grade architectural bricks than any other brick-making organisation in England. Equally important was the company's interest in a number of well-equipped sand and gravel quarries; they controlled a chain of 12 quarries, and the increasing use of the materials produced convinced the board that on that side of the business there were many active years in front of them. They also owned at Warmsworth Cliffs, near Doncaster, the largest magnesian limestone quarries in England, whence a large business was done in high magnesian hydraulic building lime, and also in stone for road making, &c. Their works for the production of special firebricks were so full of orders that a considerable extension of their plant had been necessitated.

A marketing and distributing organisation for the whole of their group had been established, and they were interested in carrying out important public works through their ownership of Edcaster, Limited, which old-established business, in addition to carrying out engineering contracts in Yorkshire, had recently developed a valuable connection in London.

As to the outlook, he believed there was no area in the country which was faced during the next 10 years with a bigger programme of public works and building developments than their own home area in South Yorkshire. The volume of business in sight justified the belief that the coming 12 months would be favourable to the company, and the board looked with every confidence to an increasingly profitable business for it.

TWYFORDS, LIMITED.
THE SANITARY POTTERY TRADE.
A SUCCESSFUL YEAR.

The 34th ordinary general meeting of Twyfords, Limited, was held, on the 27th instant, at the Institute of Chartered Accountants, Moorgate Place, London, E.C.

Mr J. T. Webster, J.P. (chairman and managing director), who presided, said that the balance sheet this year had to take into account the financial rearrangement of last year, which included the issue of bonus shares and debenture stock, so that they now had an issued capital of £348,613 in ordinary shares and £69,722 of 6 per cent. debentures. His forecast of a year ago that all indications pointed to a busy period for them had been fulfilled. He had also said that they were less certain about the level of selling prices, and, as a fact, quite substantial reductions had had to be made to maintain their trade in some of the overseas markets. Taking that into consideration the profit of £58,757, as against £54,990, was a matter for congratulation. The board recommended the payment of a final dividend of 5 per cent., making 10 per cent. for the year, with a bonus of 2½ per cent., and they also proposed to add £10,000 to the reserve fund, bringing that up to £35,000, and £2,500 to the employees' pension and benevolent fund, leaving the slightly increased carry-forward of £38,752. The 12½ per cent. distribution on the increased capital represented a slightly higher return than the 15 per cent. paid last year on the original capital, and shareholders also had the additional benefit of the debenture interest. In the balance sheet no credit whatever was taken for the company's valuable goodwill, and the investments, totalling £203,408, were valued on a sound and conservative basis. In every respect the financial affairs of the company were in a strong and healthy condition.

As to prospects, the board saw no sign of any lessening of the demand for the company's products, but uncertainty respecting selling prices rendered it it impossible to estimate the future trend of profits. The board did know, however, that the company's sanitary wares, recognised throughout the world for their excellence, continued to be held in the same high repute as ever amongst the building and plumbing trades; also that the company's potteries were being continually tuned up to ensure the utmost efficiency. They were happy in the good relationshp which continued to exist with the company's employees to whom the thanks of the directors were due, and were cordially given.

The report and accounts were unanimously adopted, and the allocation of profits recommended was approved.

Decrease in Debt	2,999		
	12,512		12,512

The total ordinary revenue for the week amounted to £12,325,300, as compared with 13,614,400 in the corresponding week last year. Income tax amounted to £200,000, as compared with £20,000, and super-tax to £320,000, as compared with £530,000. Estate duties were lower at £1,960,000, against £2,330,000; Customs and Excise were also lower at £2,536,000 and £7,041,000, against £2,890,000 and £7,080,000 respectively; while special receipts brought in £485,300, as compared with £924,400. The National Debt was reduced by £2,998,900, as shown below :—

BULLION.

The following statistics of imports and exports of gold for week ended June 27, 1929, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	£	Exported from Great Britain and Northern Ireland.	£
From—		*To*—	
France	2,754	Austria	15,000
Irish Free State	10,000	Poland (includ. Danzig)	1,700
British West Africa	39,011	Germany	37,400
British South Africa	766,678	Netherlands	2,100
Other Countries	277	Belgium	1,001,705
		France	17,422
		Switzerland	44,428
		United States of America	$16,500
		British India	23,917
		Other Countries	205
Total declared value of imports	818,720	Total declared value of exports	1,961,234

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follow:—

1929.	ARRIVALS.	£
June 21		Nil
" 22		Nil
" 24	For. coin bought & Sovs. from abroad	14
" 25		10,000
" 26		Nil
" 27		Nil
	Total	10,014

1929.	WITHDRAWALS.	£
June 21		Nil
" 24	Bars sold	Nil
" 25	Bars sold	1,721
" 26	Bars sold	1,873,718
" 27	Bars sold	1,540,592
		2,804,564
	Total	6,220,595

Net withdrawals, £6,210,581.

Messrs Samuel Montagu and Co. write as follows on June 26, 1929:—

GOLD.

The Bank of England gold reserve against notes amounted to £162,469,470 on the 19th instant (as compared with £163,241,482 on the previous Wednesday), and represents an increase of £8,563,155 since April 29, 1925—when an effective gold standard was resumed.

The exchange with Germany remaining favourable to the export of gold to that country, there was a keen demand for the gold on offer in the open market yesterday. About £777,000 was available, and of this £20,000 was secured for India and £37,000 for the Home and Continental trade. The balance of £720,000 was taken for Germany, and in addition, both yesterday and to-day, large withdrawals were made from the Bank of England for that quarter—as indicated in the figures given below. There was a net efflux of gold of £3,405,970 during the week.

SILVER.

The week under review has been quiet, and at 24½d. and 24 5/16d. for cash and two months' delivery respectively, prices remained unchanged for three consecutive working days. China has both bought and sold and the Indian Bazaars also worked both ways, having made some forward sales besides buying to cover bear positions. American operators have continued to sell without pressing silver on the market, being usually willing to meet the moderate demand at current rates. In the return of the Bank of France dated the 14th instant, the holding of demonetised silver coin showed a decrease of about 100,000,000 francs as compared with the return of the previous week. The following were the United Kingdom imports and exports of silver registered from mid-day on the 17th instant to mid-day on the 24th instant:—

IMPORTS.	£	EXPORTS.	£
Mexico	77,500	Poland	160,548
Netherlands	10,150	Egypt	29,149
Irish Free State	6,400	British India	44,765
Other countries	194	Other countries	5,693
	£94,244		£240,155

INDIAN CURRENCY RETURNS (in lacs of rupees).

Reports and Notices.

Lieut.-Colonel G. K. M. Mason, M.P., has been elected to the board of the Guardian Assurance Co., Limited.

We are informed that Mr L. F. A. d'Erlanger, of Erlangers, Limited, bankers, has joined the board of Olympia, Limited.

Mr Louis Sterling, the Managing Director of the Columbia Graphophone Company, Limited, has accepted appointment as a director of Herrburger, Brooks Limited, in place of Mr William Boosey, who has retired from the board.

The Royal Exchange announces that its court of directors has accepted with regret the resignation of Mr W. G. Ross, chief cashier to the corporation, who has completed 40 years' service. Mr R. E. F. Johns has been appointed to succeed him.

MISCELLANEOUS.

IMPERIAL AIRWAYS, LIMITED.—Miles flown for March 84,337, against 67,928; miles flown since April 1, 1928, 1,006,531, against 834,622. Ton miles for March, 62,806, against 45,126; ton miles since April 1, 1928, 810,328, against 575,669. Receipts for March, 1929, £44,686, against £29,176. Receipts since April 1, 1928, £460,802, against £398,400.

LONDON BRICK COMPANY AND FORDERS, LIMITED.—At an extraordinary general meeting the increase of capital from *£1,400,000* to *£2,000,000* by the creation of *600,000* ordinary shares was unanimously approved. It is proposed shortly to issue to shareholders 200,000 ordinary shares at par. Shareholders will have the right to apply for one new share for every five old shares held. It is understood that the increase of capital is required to finance extensions to the company's works, and thus enable it to further its policy of displacing foreign bricks.

THE MILLOM AND ASKAM HEMATITE IRON COMPANY, LIMITED.—Payment of Dividend on the Preference Shares for the year ending September 30, 1928, will be posted at end of June.

SPIERS AND POND, LIMITED.—The profit on trading for year ended March 31, 1929, amounted to £139,279, against £136,237 for preceding year. The sum of £6,556 is put to reserve, making reserve £110,000. The ordinary dividend is 15 per cent., against 12½ per cent. The carry-forward is £6,246. Cash has risen from £45,329 to £64,970. Investments are shown separately and total £205,258, against £129,508. The company's holding of British Government securities has increased from £61,021 to £91,546.

PLATT BROTHERS AND CO., LIMITED.—The 31st annual Report and Accounts shows that the net profit for the year ended March 31, 1929, after deducting income tax, depreciation and all expenses, amounts to £116,054, against £73,291 for preceding year. Adding the amount brought forward and deducting debenture interest and the 4½ per cent. and 7 per cent. preference dividends there is a balance of £58,412, which the directors propose to carry forward. No dividend is paid on the ordinary shares. The balance sheet shows:—Home and foreign investments at £785,828, against £783,977; sundry debtors at £1,469,727, against £1,434,160; cash and bills on hand at £394,920, against £386,459; reserve fund stands at £1,000,000. Meeting at Oldham, July 4, 1929, at 2.30 p.m.

BEECHAMS PILLS LIMITED.—The first report covers a period of fifteen months to March 31, 1929. The net profit amounted to £255,949. Income tax account absorbed £42,000 and provision for directors' fees £3,500. The participating preferred dividend at the rate of 10 per cent per annum absorbed £105,575. The dividend on the deferred shares absorbed £80,000. The deferred shares were allotted on February 1, 1929, and the dividend is equivalent to 34¼ per cent. per annum. The carry-forward is £24,874. Total assets are £1,875,254. Goodwill and trade marks, at cost, stand at £946,349. Cash is at £68,356.

TWYFORDS LIMITED.—The profit for year ended March 31, 1929 is £58,757, against £54,990 for preceding year and £38,704 for year ended March 31, 1927. The ordinary dividend is 10 per cent. for the year and a bonus of 2½ per cent. is paid, making 12½ per cent. for the year, subject to deduction of income tax. The sum of £10,000 is put to reserve, and £2,500 is put to employees' pension and benevolent fund. The carry-forward is increased from £38,710 to £38,752. Nothing is down for goodwill. Investments at cost are at £203,408, against £172,757. Cash is at £23,954, against £42,428.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

A spell of warmth and sunshine during the past week proved beneficial to cereal crops, winter wheat giving every promise of a good yield. Spring crops have also progressed favourably up to the present, but good soaking rains are necessary to relieve the parched state of the ground, while hay crops are suffering from lack of sufficient moisture to ensure normal growth. Supplies of native wheat were in small compass and held for full rates, imported varieties also responding to higher forward offers. A firm tone prevailed in the floating and forward cargo section, sellers showing more reserve in face of stimulating cables from North and South America. The market just now is very sensitive to weather and crop news, and both Winnipeg and Chicago prices quickly responded to unfavourable reports regarding spring sowings in Canada and the United States, also disappointing yields of winter wheat in the latter country. Rains are evidently needed in both Northern and Southern hemispheres in order to afford the young crops a good start, and similar conditions obtain in Europe. In these circumstances, buyers were more in evidence, and a good business was put through, chiefly in La Plata and Australian qualities which offer the best value for price. It is reported that American farmers are showing more anxiety to press sales of old wheat for export in order to make elevator room for the new crop, also that Government assistance would not be forthcoming unless a serious decline occurred in prices. So far there is no evidence of pressure on this side, though offers of hard winter wheat are made at prices still much above buyers' views. Weekly shipments are maintained at a good pace, and arrivals in this country were on a larger scale, but floating supplies marked a substantial decrease. Of feeders, maize proved an active market, and prices hardened, partly in sympathy with wheat, but chiefly on a better consumptive inquiry

from the Continent. Near cargoes of Plate offer with fair freedom, but shippers are more reserved regarding distant loadings, even at the premium obtainable. African varieties very firm, and climatic conditions being unfavourable for conditioning, there are practically no offers from this direction. Malting barley quiet, but feeding sorts firmer following heavy purchases by Germany of North African types, with Moroccan and Persian in request on U.K. account. Oats firm, but general trade without improvement.

Wheat—Again firmer. No. 2 Northern Manitoba, ex ship, 49s.; No. 3 ditto, 48s.; No. 4 Manitoba, 46s. 3d.; No. 5, 41s. 9d.; No. 6, 37s. 9d.; No. 2 mixed Durum, 40s. 6d.; Rosafe, 63½ lbs., 42s. 3d.; Barusso, 63½ lbs., 42s. 3d.; Australian, 45s. 3d., ex ship, per 496 lbs.; English, 9s. 8d.-9s. 10d. per 112 lbs.

Flour.—Firm. London straight run, 35s. per sack delivered. Of imported, Manitoba patents range from 35s.-37s. 6d.; Minneapolis, 35s.-36s. 6d.; Australian, 31s.-32s. 6d. ex store, per 280 lbs.

Maize.—Firm. Plate, landed, 38s. 6d.; ex ship, to arrive, 36s. 9d.; June-July, 36s. 9d.; July-August, 36s. 9d.; August-September, 37s.; September-October, 37s. 3d., per 480 lbs. Yellow maize meal, £10 5s. per ton f.o.r. London.

Barley.—Maintained. Californian, ex ship, 41s.-45s.; Chilean, ex store, 40s.-50s.; Australian, 41s.-44s. 6d.; Smyrna, 42s.-45s. per 448 lbs. Algerian/Tunisian, ex ship, 28s. 3d.; Canadian feed, 29s.; ex ship, 30s.; landed, No. 3 Canadian Western, ex ship, 31s. 6d.; landed, 32s. 9d.; No. 4, ex ship, 30s. 6d.; No. 2 Federal American, ex ship, 28s. per 400 lbs. English malting, 10s. 3d.-10s. 8d.; feed, 9s. 6d.-10s. per 112 lbs.

Oats.—Quietly steady. Plate, landed, 24s.; ex ship to arrive, 22s. 6d.; No. 1 Canadian feed, 23s. 3d.; No. 2 ditto, 22s. 3d. ex ship, mixed Canadian feed, ex ship to arrive, 18s.; landed, 19s. 3d.; Chilean, white, ex ship to arrive, 27s. 6d.; landed, 29s.; German, landed, 27s.; ex ship to arrive, 26s. per 320 lbs. English, 9s. 4d.-10s. per 112 lbs. Scotch, landed, 29s. per 336 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.
Estimated sales of home-grown wheat—				
1 week to June 22	Qrs. 71,440	Qrs. 148,160	Qrs. 114,225	Qrs. 52,595
41 weeks to June 22	9,408,372	10,460,318	11,357,467	12,756,091
Average price of English wheat per cwt.	s. d. 9 7	s. d. 10 10	s. d. 12 9	s. d. 13 8

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

Weeks ended.	Quantities Sold.			Average Price per Qr.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1929.	Qrs.	Qrs.	Qrs.	s. d.	s. d.	s. d.

June 23, 1928..	148,160	11,241	9,350	10 10	10 10	12 7

AMERICAN WHEAT MARKETS.

Lack of rain where rain was needed, together with unwanted rain in areas where harvesting was already in progress had a bullish effect on prices. Later these were reinforced by news of crop damage, of frost in Alberta, and of unfavourable conditions in the South-West. This caused some speculative buying, but part of the advance was afterwards lost owing to improvement in the weather and rumours that Europe was buying Argentine wheat. Quotations :—

Nearest Future.	Jan. 4, 1928.	Jan. 2, 1929.	June 27, 1928.	June 12, 1929.	June 19, 1929.	June 26, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	156⅛	122	135⅛	114⅛	116⅛	124⅛
Chicago (No. Winter)— Cents per 60 lb.....	166⅛	116⅜	136⅛	105⅛	109⅛	113⅜

Visible supplies of wheat in Canada at 63,674,000 show a decrease of 1,837,000 as compared with the previous week's figures. Supplies a year ago stood at 60,396,000

THE COAL TRADE.

Our Sheffield correspondent writes :—The export market continues fairly steady, with an easier tendency in prices. Buyers seem disposed to hold off the market as regards future supplies in the expectation of lower rates. Present supplies are ample to meet the demand. Trade in house coal has declined further. Furnace coke is firm with an increased demand, although sales for central heating have ceased. The home market for foundry coke is badly depressed. South Yorkshire best steams are quoted at 16s. 6d. f.o.b. Blast-furnace coke is quoted at 14s. 6d.; foundry patent-oven coke, 18s. to 24s., and beehive quality, 22s. to 27s.

Our Glasgow correspondent writes :—Business is still hampered by a scarcity of tonnage, which is preventing shippers from taking up the quantities for which they are committed and necessitating idle time even in quarters where substantial orders are in hand. Shippers in a position to put vessels forward can secure concessions as a rule in round coal, but nuts are maintaining their prices. Shipping prices are approximately as follows :—Lanarkshire.—Ell best, 14s.; splint best, 16s.; splint second, 15s 6d.; navigation, 17s. 6d.; navigation second, 15s.; steam, 13s.; Hartley, 16s. 6d.; trebles, 14s. 6d.; doubles, 13s. 3d.; singles, 12s. 6d.; pearls, 11s. 6d.; dross, 10s. Fife.—Screened navigation, 17s. 6d.; first-class steam, 14s.-14s. 6d.; third-class steam, 12s.-12s. 6d.; trebles, 14s. 6d.-15s. 6d.; doubles, 13s. 6d.; singles, 12s.; pearls, 11s. Lothians.—Prime steam, 13s.; secondary steam, 12s. 6d.; trebles, 14s.; doubles, 13s. 6d.; singles, 12s. 3d.; pearls, 11s. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 16s. 6d.; steam, 13s. 3d.; trebles, 13s. 9d.; doubles, 13s. 3d.; singles, 12s. 9d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes :—On the Cardiff coal market this week the scarcity of tonnage has been a serious handicap to exporters and colliery owners. The Baltic seems to have absorbed an unusually large proportion of the smaller sea-going tonnage, and so marked has been the shortage of shipping at the Bristol Channel ports that colliery stems have been disorganised to an exceptional extent. Large coals have consequently been easy. Salesmen, however, have adhered to the minimum price schedule; and while the strength of the smaller classes of coal, and particularly of nuts, peas and beans, has been firmly maintained this week, collieries have found it extremely difficult to find tonnage to lift their current outputs of these grades. The following are the current approximate quotations :—Best Admiralties, 19s. 9d. to 20s.; seconds, 19s. to 20s.; best drys, 19s. to 19s. 6d.; Black Veins, 18s. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. 9d. to 14s.; cargo smalls, 12s. to 12s. 9d.; coking smalls, 14s. to 14s. 6d.; anthracite, best large, 33s. to 36s. 6d.; Red Vein large, 23s. to 27s.; machine-made cobbles, 40s. to 44s.; French nuts, 42s. to 44s.; stove nuts, 39s. to 42s. 6d.; rubbly culm, 10s. 6d. to 10s. 9d.; foundry coke, 27s. 6d. to 36s. 6d.; patent fuel, 20s. 6d. to 21s. 6d.; pitwood, ex ship, 28s. 3d. to 28s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange :—Although trading in some departments of the iron and steel trades has been quiet, the general volume of business must be considered satisfactory, as it has shown an improvement when compared with the corresponding periods of previous years. In the pig-iron department prices are firm and have an advancing tendency and there does not appear to be any surplus pig iron on the market. The recent price advances have not yet made it possible to import Continental pig iron in any quantity, but reports are current that a few parcels have been sold in the more accessible districts. In the semi-finished steel department business is active and remains principally in the hands of the British works. Although Continental material is still being imported, it is in comparatively small quantities and buyers have to be contented with contracts for forward delivery and at prices which show little advantage when compared with those quoted by the British works. The demand for finished steel materials is still irregular, and reports from the various districts regarding the position of the works producing this class of material vary considerably. Generally speaking, however, although business has been confined chiefly to contracts for small quantities, works operations have been well maintained, although some of the British works would be glad to obtain new business to ensure the even running of their plant. The export demand is on a restricted scale, and this is one of the disappointing features of the market, but is attributed generally to the prevailing financial stringency in the principal overseas markets.

The upward tendency in the North-West Coast hematite pig-iron trade that manifested itself two months ago persists, and makers look for a steady, if gradual, increase in the volume of business. With twelve furnaces in blast between Workington and Ulverston, they are disposing readily of their output, and they have already on their books orders representing a substantial proportion of their make during July and August. Despite keen East Coast competition, they are obtaining a considerable share of the business offered by the Continent and America, and they have, of course, large Scottish, Midland and South Wales needs to satisfy. The only unsatisfactory feature of the position is the uncertainty as regards a continuance of the local absorption on the present scale. Steel-makers in the district cannot keep their mills in full operation, and hardly that for more than three weeks in four, and new business is coming very slowly. There is, then, at present no prospect of additional furnaces being put into draught, and the general belief is that it may be winter before such a step becomes necessary. While there is no actual scarcity of supply, there is no pressure to sell, and prices are firmly maintained, Bessemer mixed numbers being £4 3s. 6d. per ton delivered at Glasgow; £4 7s. per ton delivered at Manchester; £4 7s. per ton delivered at Sheffield; £4 10s. delivered at Birmingham. Low-phosphorus iron is in steady request at 2s. 6d. to 5s. per ton higher than the above figures, and there is a fair market for malleable iron at 99s. per ton delivered, while ferro-manganese, the output of one of the furnaces at Workington, is in rather better demand at £14 per ton. The steel trade is dull and orders hard to come by. The mills at Workington have been rolling rails for South America and home railways and steel bars for Scotland during the past month. Native ore quoted at 17s. 6d. to 18s. 6d. per ton, according to grade, is a fair production for local, East Coast and Scottish smelters. The coal trade is slack, and unless Scottish competition in the Irish market can be met, the output will shortly have to be reduced. It was expected that prices would be reduced this week, though not to the extent that they have been in Scotland. Cross-channel shipments are below the average. Best round coal for shipment is quoted nominally at 20s. per ton; washed doubles, 20s. per ton; washed singles, 19s. per ton; washed smalls, 17s. to 18s. per ton, all f.o.b. Best house coal is 30s. per ton; house nuts, 28s. 4d. per ton. Gas coal is 28s. per ton, and West Coast coke, 17s. 6d. to 18s. 6d. per ton.

Our Middlesbrough correspondent writes :—The market for Cleveland iron is practically idle owing to scarcity of supplies. The position of producers does not hold out any likelihood of their being able to increase the make for the open market, and the quantities held by second hands have been depleted to such an extent that very little is left for early delivery. Recent purchases of inland irons by large local consumers have been of great assistance, but the quantities now offering are considerably reduced. Only very small lots of Cleveland were obtainable at Tuesday's weekly market, and 72s. 6d. was easily obtained for No. 3, with the usual differences for other qualities, No. 1 being 75s., No. 4 foundry 71s. 6d., and No. 4 forge 71s. Shipments of pig iron to 25th instant amount to 21,441 tons, compared with 30,338 to same date in May. Hematite is in good demand, both on home and export account, and a further expansion in business is anticipated with the improvement in the steel trade where works are busily employed, in almost all departments, and some have orders in hand that will carry them on to the end of the year. The price for mixed numbers is firmer and makers are generally asking 74s. 6d. per ton, although some iron might still be got at 74s. from second hands. Orders for five large steamers have just been placed on the North-East Coast, two at Hebburn, one at Blyth, and two on the Tees, one of the latter being a 16,000-ton Diesel engine tanker for Danish owners. In the steel trade prices are unchanged from last week, with a fair amount of business passing. Coke is in increasing demand, and supplies are not offering freely; 20s. 6d. is now a minimum figure for ordinary qualities delivered furnaces. The ore market is very firm, with tonnage extremely scarce. On to-day's freight best Rubio is 23s. 6d. to 24s. c.i.f. Tees.

Our Sheffield correspondent writes :—The market for Midlands and Derbyshire foundry pig iron has shown increased activity lately, despite the continued quietness of most of the foundries. Prices were advanced a shilling last week and a further general advance of 1s. 6d. at the end of the present week is almost certain to be announced. Users of Midlands pig iron have been buying forward more freely recently than for a long period. Forge iron is quiet. The market for heavy steel scrap continues brisk, with prices firm. Supplies are sufficient, but there is no surplus. There is a ready overseas market for basic scrap. Activity in the local heavy steel branches has tapered off, as is usual towards July. Good business is being done in special lines of steel, and several recent departures are meeting with much success. There is also more trade passing in various kinds of tools, particularly those used in engineering and construction. Prices of steel material are firm, but no further advances are being made. The tendency of prices of foreign material continues in an upward direction. There are many instances of slackness in the various Sheffield industries and the unemployed roll is maintained at the former high level. The cutlery and plate branches leave much to be desired.

Our Glasgow correspondent writes :—In the West of Scotland there is no important change in the position in the iron and steel industries. Structural and engineering establishments are keeping the makers of sections fairly well employed filling their requirements, but the demand for shipbuilding material is not so satisfactory. During the past week it is reported that the Blythswood Shipbuilding Company, Limited, of Scotstoun, have booked an order for a single-screw passenger and cargo vessel to be engined by Messrs D. and W. Henderson, Limited, of Partick; and Messrs Scotts' Shipbuilding and Engineering Company, Limited, of Greenock, have secured a contract for a twin-screw passenger and cargo motorship. At the sheet mills there is some improvement in the tonnage booked, but good export orders have been taken at a slight reduction on recent figures.

Our Cardiff correspondent writes :—There have been no special features in the South Wales steel and tinplate trades this week. Business generally has been rather quiet, and in the sheet market the control of prices for thick gauges has been removed. Quotations for tinplates were slightly higher at 18s. 3d. to 18s. 6d., compared with 18s. 6d. to 18s. 9d. last week, and also those of galvanised sheets, which are quoted between £13 10s. 6d. and £13 12s. 6d., compared with £13 12s. 6d. and £13 15s. a week ago. Steel-bar prices, local and foreign, are unaltered. Shipments last week totalled 161,407 boxes, compared with 127,401 boxes the previous week, and stocks in warehouses have been reduced to 185,000 boxes, compared with 219,841 boxes in the corresponding period of last year.

OTHER METALS.

Tin.—The standard market presented a quieter tone, and with sellers more in evidence, a weaker tendency was discernible, while influenced by lower Eastern cables. Sales totalled 1,480 tons, cash at £202 5s. to £200 12s. 6d. and £201 2s. 6d., and three months, £206 to £203–£204 7s. 6d. Sales in the East were reported at £209 5s. to £206 10s. and £208 per ton c.i.f. terms. Stocks in London and Liverpool warehouses for week ending June 22nd amounted to 8,339 tons, compared with 1,548 tons at corresponding period last year.

Copper.—With buyers showing decidedly more interest, a firmer market resulted, and offers reservedly made, though later profit-taking imparted slight irregularity and top points were not maintained. 2,750 tons changed hands, standard cash at £73 18s. 9d, £73 12s. 6d., three months, £73 7s. 6d., £73 17s. 6d. and £73 2s. 6d. per ton.

Lead.—A fair consumptive demand was dealt with, and tone barely steady. Turnover, 2,000 tons, good soft foreign pig, June, at £23 17s. 6d., £23 18s. 9d. and £23 12s. 6d.; July, £23 16s. 3d. to £23 15s.; August, £23 12s. 6d., £23 10s.; September, £23 11s. 3d. to £23 12s. 6d.-£23 10s. per ton.

Spelter quiet but fairly steady. 1,350 tons sold, June, at £26 2s. 6d., £26 3s. 9d.; July, £25 17s. 6d., £25 15s.; August, £25 15s.; September, £25 17s. 6d. to £25 13s. 9d.; October, £25 16s. 3d. to £25 12s. 6d. ton.

Aluminium quiet. Ingots and bars for home delivery, £95 per ton.

Antimony dull. English regulus, spot, £48 to £52 10s.; China, ditto, £34; July-August, £31; ditto, crude, July-August, £21 10s. c.i.f.

Antimony Ore.—July-August buyers, 4s. 6d. per unit, with few offers c.i.f.

Antimony Oxide.—July-August, £31 ton.

Wolfram firm. Chinese, July-August sold, 34s. c.i.f. to Continent, but further offers were not available. Straits quality, quoted 33s. per unit c.i.f.

Quicksilver steady. Spot, £22 2s. 6d. to £22 7s. 6d. bottle.

Tin Plates quiet. I.C. coke, prompt and forward, 18s. 4½d. to 18s. 7½d. per box, f.o.b. Swansea.

THE COTTON TRADE.

Liverpool, June 26th.

Spot sales for the week 20th to 26th (inclusive) are 38,000 bales, of which 23,410 are American, 3,200 Brazilian, 1,750 Argentine, 1,850 Peru, 4,050 Egyptian, 2,700 African, 730 East Indian, and 310 sundries. Imports for the same period are 36,057 bales, composed of 16,357 bales American, 4,798 Argentine, 922 Peru, 8,332 Egyptian, 4,307 African, 1,241 East Indian, and 100 sundries. Quotations to-day are: American Middling, 10·35; Egyptian Sakel, 15·95; Egyptian Uppers, 11·28; Brazilian Fair, 10·35; Peruvian G.F. Mod-Rough, 12·50; Peruvian G.F. Smooth, 11·20; West African Middling, 10·30; East African G.F., 11·50.

Manchester, June 26th.

Cloth manufacturers have continued to report an absence of bulk orders. India is decidedly disappointing. Dealers and merchants are nervous as to political events, and there is a determination to limit commitments as much as possible. Better advices have come through from China, and rather more contracts have been arranged. There has been no particular activity for any of the minor outlets.

VICTORY BONDS

For full list of drawn numbers of Victory Bonds, see

The Financial News

The Saturday issues of The Financial News include a complete list of Friday's business done on the London Stock Exchange, together with a record of the less active shares in which markings have appeared in the Stock Exchange lists during the week.

The Financial News is on sale at all newsagents and bookstalls throughout the country.

DAILY, TWOPENCE.

Head Offices :

14, 18 & 20, Bishopsgate, London, E.C. 2.

Competition for contracts amongst manufacturers tends to increase. It is a struggle for spinners of American yarns to prevent loss of ground. When sales take place, margins are worse than a month ago. Some spinners of Egyptian numbers are meeting with an increased demand, but orders do not flow with any freedom. The market is overshadowed by the wages dispute, but there is no real apprehension just at present.

COLONIAL WOOLS.

[FROM A CORRESPONDENT.]

The proposal made by the Australian Graziers' Federal Council to raise money for advertising wool has raised a fair amount of interest among importers and users in this country, and everybody concerned is quite prepared to give the scheme their blessing, though it is felt that it will not be an easy matter to get to the root of the trouble. It is very regrettable indeed that the price of wool has fallen so much that it is in danger of becoming an unprofitable commodity. Many firms have suffered serious financial losses. Spinners and manufacturers have been struggling for years to hold their place in the competitive race, but they have been well nigh beaten by artificial silk and other substitutes. They will still be able to render valuable service in advertising wool by keeping abreast of the times in the production of yarns and in turning out wool fabrics of attractive design and colour. Australia is apparently having a dry winter. No information about good rains has been received for a considerable time, and this is somewhat alarming, although water is not needed so much during the winter season. Very soon shearing will be general in Australia. Prices in Brisbane this week for the new clip of autumn-shorn wools appear to have been largely in sympathy with those recently current at Sydney. Japan purchased freely of the fine qualities, while the home trade and the Continent did some picking up. The price must be right if Bradford is buying, for most of the importing topmakers are well supplied with stocks purchased in Australia last February, March and April. Unfortunately, these purchases are now too dear, and though some firms are now less pessimistic than a month ago, they have still a keen struggle before them, particularly as there is no improvement in consuming centres in the West Riding.

THE WOOL TRADE.

Our Bradford correspondent writes: The trade is simply marking time and waiting for something to turn up. The clearing up sales in Australia are hardly a sufficient guide to the state of the raw material market, and it is to London that traders are looking for a lead. The auctions open in Coleman Street Wool Exchange on July 9th, and it seems certain that the verdict then given will determine the policy to be pursued for the next two months. Probably few traders expect anything of a spectacular nature at the next series of auctions, but it is felt that if the sales went with a swing, and prices showed even a slight hardening tendency, it would bring out business that is being held up simply on account of the lack of confidence. This uncertainty is everywhere apparent at the present time, and is quite as pronounced in Continental consuming centres as it is in the West Riding. Hand-to-mouth business is the order of the day in all sections of the industry, and in the circumstances it is very difficult to find a real market price for tops and yarns. Some of the larger firms are resolutely standing out against accepting lower prices for their fine tops, but the weak seller is still to be found, and spinners know where concessions can be obtained. Unfortunately, it does not help spinners much, for the simple reason that they in turn are being squeezed by users who know that stocks are plentiful and orders are badly needed for machinery requirements. The market, therefore, remains weak and irregular, and is much in need of a fillip to set demand running again in more normal volume.

HIDE, LEATHER AND ALLIED TRADES.

British market hides have shown a sharp advance, and at the Manchester auctions on Tuesday prices of best ox were higher by ½d. to ½d. per lb., best selections making 6¾d. to 7¼d. The advance is puzzling tanners, and some of the largest concerns are seriously thinking of stopping input of hides until there are signs of a better demand for sole leather. The oversea market is steadier, but lower prices seem probable. South American fregorifics are a shade firmer, and Argentine ox have sold on a basis of 8¼d. At the sales by inscription of 22,000 Leibig Colon hides, heavy ox made from 8¾d. to 9d., an advance of ¼d.–¾d. on prices made at the previous inscription. Dry River Plates have also advanced, B.A. Americanos realising 12¾d. Cape dry hides are selling better, but tanners refuse business at the higher prices asked. First and second Capes have sold at 12¾d. and 11¾d. respectively. Australian hides are steady, and dry-salted Queensland meatworks hides have sold at 9½d., with wet salted quoted at 7½d. Latest cables from Chicago report the hide market as steady, with best heavy packer steers selling at 17½ cents. Although business appears to be unevenly distributed, the demand for sole leather has improved. Shoe manufacturers, who are in receipt of orders are taking the better selections of dry hide bends of 6, 10 and 10-12 lbs. average, and for these prices are firm. Repairers are also now taking fair-sized quantities of wet salted and English bends up to 12 lbs. average, some of their customers now finding out the drawbacks of rubber substitutes owing to the hot weather. Shoulders and bellies meet with a fair demand at unchanged prices. More business is passing in upper leathers, and quite good sales of willow and glacé kid have of late been made, prices being a little firmer. Patent remains slow, but makers of men's shoes are taking box calf and sides in fair-sized quantities at the lower rates of prices. Curriers are meeting with a rather better demand for wax butts and semichrome, but the lining trade with the U.S.A. is now rather dragging in view of the uncertainty of the tariff question. Shoe manufacturers are fairly well employed, but complain that orders do not come up to expectations in view of the summer season.

THE TIMBER TRADE.

[FROM OUR OWN CORRESPONDENT.]

Imports of building woods last month were only 411 loads (of 50 cubic feet) in excess of those to hand in May last year, thus there is nothing out of the normal in the volume of receipts for the first month of the new shipping season. So far as the first five months' receipts are concerned, Finland, Russia and Sweden have sent larger quantities this year, more than making up for the large deficiency of Polish wood, and the smaller quantities from Latvia. In all, some 10,000 loads in excess have been received this year, to swell the fairly large stocks that have wintered in the U.K. The demand, however, has been so exceptionally satisfactory in the metropolitan area that stocks on that market can be considered light in view of June demand and the prospects for building construction. In addition to the improvement in April, the costs of buildings for which plans were passed in May outside the L.C.C. area amounted to £7,461,500, as compared with £5,625,000 for the corresponding month a year ago, so that the prospects are exceptionally good from the Midlands and South of England, and ought soon to get better in the coal, shipbuilding and cotton areas. The weak spot at present in the softwood market is floorings and matchings, stocks being very heavy, but here again the demand for new house requirements and other sources of consumption has been exceptionally good, and with anticipation of favours to come from the change of Government may go even more rapidly into consumption as the summer progresses. As regards the free-on-board and c.i.f.

markets, Finnish and Swedish sales have been larger than a year ago, and approximately the shippers have cleared quite two-thirds of their annual export quantities. The U.K. has bought well and cheaply, and the Continent also is much more active. Supplies of mahogany logs are decreasing this year, and other hardwood logs are also coming in on a smaller scale, especially from the United States. Empire countries on the whole are hardly keeping up with their last year's shipment volume, although there is plenty of time this year for improvement. Teak is a very strong market, both spot and for forward business, but in each of these departments little is being done. For sawn hardwoods the market continues dull, and both c.i.f. and spot values are unsteady. Plywood supplies and demand are growing prodigiously, the excess of imports this year over last amounting to 29½ million square feet, while from European manufacturing areas we hear of factories being very active.

VEGETABLE OIL AND OILSEEDS.

There is rather better tone in the markets, and oils available for prompt or near delivery are scarce and firmer. Linseed oil on spot is held for £29 12s. 6d., and for June delivery £29 per ton naked ex mill, but later positions continue at a small discount. Consumers, however, are only buying to cover immediate requirements. Cotton oils are firm, and crude Egyptian have advanced to £28 15s. on spot, but is obtainable for June-August delivery at £28 5s., while common edible is now quoted £32 on spot. Ground nuts oil is easier, but soya and other seed oils are about unchanged. In the oilseed section, linseed is somewhat firmer in sympathy with the advance in wheat and on account of the smaller quantity on passage unsold and estimates of a reduced exportable balance. Plate on spot is quoted around £15 17s. 6d., and this figure has been paid for July-August to Hull. Some interest is displayed in Indian linseed, and for Calcutta to London up to £17 13s.½d. has been conceded. Cotton seed is firmer, and old crop black Egyptian has advanced to £9 2s. 6d., while new crop has been dealt in at £9 7s. 6d. September, and £9 5s. November-January. Soya beans are in some demand on Continental account, current value being around £10 15s. early shipment.

OVERSEAS PRODUCE.

FOOD BEVERAGES, &c.

SUGAR.—There is a good steady inquiry from manufacturers and distributors alike, which has resulted in the lifting of quite extensive quantities from the spot, and prices advanced 1½d., but in most cases 3d., more money was registered. Messrs Tate and Lyle's goods, 3d. dearer both London and Liverpool. Cubes now 26s. 3d.-26s. 9d. as to quality; London granulated, 23s. 4½d.; T.L., 23s. 1½d.; ditto, month forward, 23s.; yellow crystals, spot, 21s. 10½d.; castor, A, 27s. 4½d.; B, 25s. 9d. Other British makes of granulated, 22s. 4½d. to 22s. 6d., with Cupar 22s. 9d. ex works. White Mauritius, spot, London, 20s. 1½d. to 21s. 1½d. as to sample. Czecho granulated, ready, 10s. 9d.; November-December, 10s. 9d. f.o.b. Hamburg. J Dutch, ready, 10s. 9d.; W.S.R. and H.U.M., ready, 11s. f.o.b. Rotterdam. Cuban 96 per cent. centrifugal, July-August, to the U.K., 8s. 9d. c.i.f. Cuban produce continues on the move and the "Pool" disposed of 50,000 tons, 96 per cent. July-August shipments, to refiners and operators at 8s. 9d. c.i.f. terms. Terminal sections a shade easier and trade pursued a quieter course. Of raws, August sold 8s. 0½d., 7s. 11½d.; December, 8s. 7½d. to 8s. 4½d.; March, 8s. 11½d., 8s. 9d.; May, 9s. 2½d. to 9s. White, August, 10s. 5½d. to 10s. 3d.; December, 11s. Cuban receipts for past week totalled 50,278 tons, against 27,383 last year; exports, 66,318, against 55,974; stocks, 1,371,317, against 1,180,591. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending June 22nd, 121,494 tons against 137,983 last year.

COFFEE.—Market conditions continue very quiet apart from steady absorption of London cleaned Costa Rica, and prices for most other descriptions favoured the buyer.

COCOA.—There is only a moderate amount of business in spot lots at late prices. Forward positions steady but quiet. Accra July-August, quoted, 41s. 6d.; October-December, 43s. f.o.b. Terminal, July, sold, 42s. 9d. to 44s. 6d.; September, 45s. 1½d. to 45s. 6d.; December, 45s. 6d. to 45s. 9d. and 46s. 1½d.; January, 45s. 7½d. to 46s. 3d.; March, 46s. 6d. to 46s. 10½d.

TEA.—Indian sales of 49,465 packages met with good competition and a steady market resulted. In fact, prices were quite unaltered except for weakness in commonest and stalky kinds. Ceylon sales of 30,030 came to a somewhat quieter market. Quality still marks a falling off. Finest broken orange pekoes and flavoury leaf teas suitable for export sold firmly while in small supply, but otherwise prices were distinctly easier. Java and Sumatra sales met a fair demand at occasionally easier prices.

RICE.—Market remains firm for all Eastern grain on reserved offers. Spanish and similar varieties unaltered.

BEANS.—Butters steady, unaltered. Rangoon haricots firm, and spot lots, sellers, 15s. 9d.

PEAS.—A better demand sprang up for Japanese and prices responded. Spot, London, sold, 17s. to 18s.; afloat, steamers "Nagpore" and the "Carnarvonshire," sold, 16s. 3d.; May-June, nominally, 17s. 3d., sellers having withdrawn; June-July, also July-August, sellers, 17s. 9d.; new crop, September-October, sold, 18s. 10½d., now 19s. 9d. asked; October-November, sellers, 19s. 6d. c.i.f. London.

SPICE.—Pepper market steady on spot and there was a fair business in forward positions at irregular and rather easier prices. Lampong and other black qualities on spot, 1s. 4¼d.; white, 2s. 4¼d. Lampong, May-July, sellers, 1s. 3¾d.; August-October, sold, 1s. 2½d.; Muntok, white, May-July, sellers, 2s. 4d.; August-September, sold, 2s. 0½d.; August-October, 1s. 11⅝d. London stocks reduced 57 tons on the week. Cloves dull, unchanged. Sago flour, to arrive, 11s. c.i.f. Tapioca nominally unaltered. African ginger, spot, London, 62s. 6d.

FRUIT (Dried).—Currants quietly steady. Pyrgos quoted 44s.; Amalias, 45s.-45s. 6d.; Zante, 45s.-46s.; Vostizza, 50s.-56s.; Australian, 44s.-51s. Sultanas, Smyrna, practically cleared. Australian, new, 40s.-62s.; old, 32s.-34s.; Cape, bleached, 52s.-65s. Raisins dull. Valencia, common to good, 42s.-45s.; Lexias, new, 45s. Figs in small supply, bags, genuine, common to fine, 27s. 6d.-35s.; new, September shipment, 21s. 6d. c.i.f. Dates in fair demand for new crop. Siar, spot, 13s. 6d.-15s. 6d.; first tide, 14s.; Khedrowie 17s. cwt.

EVAPORATED FRUITS.—Market steady, but business slow to expand. Peaches and apricots neglected, but plums firm and reservedly offered. Californian plums, 20's-30's quoted 66s.-67s.; 30's-40's, 58s.-59s.; 60's-70's, 44s.-45s. Pears, Lake County, 80s.-100s.; Australian, 75s.-76s. Apricots, South African Royal, 57s. 6d.-117s. 6d.; Australian, 67s. 6d.-100s.; peaches, Californian choice, 54s.; extra choice, 56s.; fancy, 60s. Apples, Californian spot, sliced, extra choice, 77s. 6d. Almonds, quiet and tendency weak. Mazagan, 125s.; Mogador, 125s.; Majorcas, 127s. 6d.; Bitter-Jordan, 180s.-210s. cwt.

CANNED GOODS.

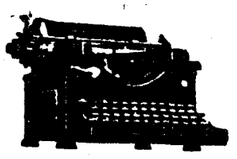
CANNED FRUITS.—A brisk demand continues for all descriptions of Californian fruits and prices firm, but forward business restricted, owing to high selling limits. Pears and apricots are clearing readily, peaches being held for extreme rates on reduced crop. Australian varieties also sell well at full prices. Singapore pines steady on spot, with improved inquiries, while forward quotations appear attractive. Small stocks of Hawaiian are firmly held. Tomatoes move off quietly, but tone fairly steady, and shippers refrain from pressing.

CANNED FISH.—Sardines steady, with Portuguese in larger supply. Portuguese clubs, 5s. per dozen tins. Lobsters firm, with moderate inquiries, and best halves quoted 140s. to 145s. Salmon in good demand at hardening rates in sympathy with high forward offers. Red talls, spot, 43s.-46s. 6d.; pink ditto, 26s.-28s. 6d.; halves, 33s.-36s. 6d. Japanese crab in good request, finest quality ruling at 98s. -102s. 6d.

CANNED MEAT.—Corned beef unaltered, but ox tongues firm on limited offerings, also Danish lunch, which continues in good demand. Danish boned hams sell readily and market firm, also Dutch veal and brawn.

CONDENSED MILK AND MILK POWDERS.—Market steady. Full cream, sweetened, English, spot, 40s.; Dutch ditto, 37s.; July, 37s. 6d.; August-September, 38s. 3d. Machine skimmed, sweetened, English, spot, 24s. 6d.; Dutch ditto, 22s. 6d.; July, 22s. 6d.; August, 23s.; all in 5-cwt. barrels. Powders, Spray process, F.C. 26 per cent., 2 by 56 lb. tins, orated, 92s.; M.S. (1-cwt. cases), 41s.; Roller ditto, F.C. 26 per cent., 72s.; M.S., 31s. 6d., all nett, duty paid, ex-wharf London. On the grocery side, F.C.S., 19s. 6d.; M.S.S., 9s. 6d., basis per case, usual packing. Danish cream, evaporated, unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 48 by 14 oz., 20s. per case.

HONEY.—Market steady, but generally quiet, with increased supplies available. Jamaica, good amber to fine pale, 49s. to 55s.; dark to fair amber, 40s.-47s. 6d.; San Domingo, white set, 50s. New Zealand, dark amber, 50s.-55s.; medium, 55s.-65s.; light, 65s.-85s.; white and water whites, 65s.-87s. 6d. cwt.



Royals SAVE more than they COST!

Because they do more work, better work—easier work, for a longer time, at less expense. Compare Royal work—it's the work that counts.

RUBBER.

Nothing occurred to alter the market to any appreciable extent either way. General state of trade is decidedly sluggish, while manufacturers would appear to be in possession of adequate stocks for the time being. The undertone is one of steadiness, but the fact of New York remaining under London parity forms a barrier to any sustained upward move. Sheet, spot, and June, sold 10½d. to 10 9/16d.; July, 10½d.; July-September buyers, 10⅝d.; October-December, sold, 10¾d.; January-March sellers, 11¼d. Hard Para, spot, sold, 11d. London stocks 525 tons down, including 15 tons correction under an inspection; landings, 1,089; deliveries, 1,599; stocks, 30,617, compared with 40,085 at corresponding period last year. Liverpool stocks reduced 218; landings, 42; deliveries, 260; stocks, 4,515.

GENERAL.

JUTE.—A quiet market and prices easier. Firsts, June-July and July-August, continent, sellers, £30; new crop, August-September, £31; September-October, October-November, and November-December, £30 17s. 6d. Lightnings, June-July, £29; August-September, £29.

HEMP.—Market remains very quiet, and prices tend against sellers. J No. 2, June-August, quoted £37 15s.; K sellers, £32 10s.; L No. 1, June-August, £32 15s.; L No. 2, £30 10s.; M No. 1, £30 10s.; M No. 2, £26 10s.; G, £38 10s.; H, £33; S No. 1 quoted £53 10s.; S No. 2, £49 10s.; S No. 3, £39 10s.; C No. 2, £31 10s.; C No. 3, £28 10s. c.i.f. African sisal quieter. No. 1 f.a.q., June-August, quoted £39 12s. 6d.; marks from £40 10s. to £41. No. 2 f.a.q. quoted £37 10s. c.i.f. Manila receipts for last week, 28,000 bales, against 28,000 bales at the same time last year. Estimate for next week, 31,000, and following week, 27,000. Shipments from Manila last week: to United Kingdom, 4,000 bales; Continent, 4,000; U.S.A., 6,000; Japan, 8,000; and other countries, 1,000. Local stocks, 216,600 bales.

SHELLAC.—In quiet request. T.N. spot, 197s. 6d.; August, 194s.; October, 198s. 6d. cwt.

COPRA.—Stability was again the distinguishing characteristic in this market. Fair inquiries continue to circulate, and a gradual tightening of the general position is the natural sequel to reduced offers being put out by shippers. Doubtless this is brought about by low prices current over rather a prolonged period. Straits S.D., June-August, Rotterdam, quoted £21 7s. 6d.; August-September, sold, £21 7s. 6d.; Dutch East Indies, quoted, £21 2s. 6d.; Ceylon, £22 5s. To Marseilles, mixed, excluding Padang, July-August, sold £20, and buyers; smoked South Sea, quoted £19 17s. 6d.; sun-dried, £20; palm kernels to Hull, June-July, £16 12s. 6d.; Hamburg, ditto, £16 12s. 6d.; July-August, £16 12s. 6d.; August-September, £16 15s. ex c.i.f. per ton.

MISCELLANEOUS.—Coconuts, quoted, 16s. to 22s. per 100. Coir yarn, Ceylon, £19 10s. to £37 10s.; Cochin, £23 to £41; Ceylon bristle, £18 15s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 1s. 10½d.; Java, 2s. 3½d.

The Economist
MONTHLY SUPPLEMENT.

New Series. SATURDAY, JANUARY 26, 1929. No. 68.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics." 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

At the opening of the New Year it is always difficult to determine the trend of business. The rush of Christmas trade is succeeded first by the holiday period and then by stock-taking. The public, after their Christmas buying activity, are naturally inclined to refrain from further purchases, and this tendency is accentuated by the fact that numerous large periodical payments fall due immediately after Christmas. Thus those manufacturers who are directly supplying the public's needs cannot look for any marked revival in demand during early January. This statement, of course, does not apply to manufacturers of "capital" goods, such as plant and equipment, nor to those primarily interested in export trade; while of those engaged in supplying the home consumer, a large proportion will now be engaged in filling distributors' shelves with spring and summer goods. Still, even allowing for these factors, there is no doubt that in early January the course of business is subject to temporary interruptions.

Allowing for this disturbance, the present trend of trade is on the whole good. Encouraging reports are being received from such staple industries as coal, iron and steel, engineering and cotton. It may seem misleading to speak of an encouraging situation in the coal industry at a time when the distress in the mining areas has become so acute as to call for a big and sustained national relief scheme, but the position to-day is both simple and tragic. At the cost of closing down numbers of pits and of throwing hundreds of thousands of miners out of work, the rate of output has been reduced to a point where it corresponds to demand. The result is the paradox of acute unemployment on the one hand, as against firm markets and a hardening tendency in prices on the other, though prices are still too low to yield any profit to owners.

In the other heavy trades, the most encouraging event is the revival of activity in the shipbuilding industry. This is proving a distinct help both to iron and steel, and to marine engineering. Partly as a result of this, the steel trade is anticipating better conditions during the next few months, though this forecast is tempered by fears of a summer setback similar to those experienced in previous years. The engineering trades also report a cheerful tone. In the cotton industry prices seem fairly steady, and this is bringing fresh orders. China, too, is at last buying more freely, and this is a great gain for Lancashire.

The unemployment returns must be interpreted in the light of the disturbance to trade caused by Christmas. During the first three weeks of December there was a definite improvement, but this was followed by a setback immediately after Christmas. If this can be ascribed to the holiday factor, the general trend is encouraging. Improvements were recorded in such important trades as coal-mining, iron and steel, shipbuilding and textiles, and declines were confined to fishing, pottery, pig-iron, building, hosiery, and cocoa and chocolate.

Apart from the disturbance usual at the end of the year, monetary conditions remain stable, though signs of stringency are beginning to develop. This is the natural result of the inflow of revenue, while, in addition, the Bank of England must be beginning to take into account the need of replenishing the gold losses of the past few months. The reduction in the Reichsbank's rate lessens the danger of further losses to Germany, but the New York exchange still remains at the point at which it pays America to take gold, and recent shipments to America make it clear that the Bank will have to exercise care. Commodity prices remain steady, and unless gold shipments to the United States continue into the spring months there now seems little ground for fearing that developments in the money market will be such as to counteract the improving tendency in trade which now is becoming apparent.

Conditions abroad show little change from a month ago. United States trade remains active, and reports from the Empire are reassuring. On the Continent, French and Belgian trade conditions are good, while the German iron and steel trades are beginning to recover from the effects of the November lock-out. South American news is little different from a month ago.

Reports from the Far East are encouraging with respect to both China and Japan.

HOME INDUSTRIES.

Iron and Steel.—Trade last month was disturbed by the Christmas holidays, but the general tone and outlook were both promising, and rather more active conditions are anticipated during the next few months. The revival in the shipyards has proved distinctly helpful, while the decline in imports in December is also regarded as encouraging. Some uncertainty is felt as to the future course of German prices, but home prices remain firm and the industry has improved its position since last summer.

Coal.—A distinct improvement has been recorded in the South Wales coal trade, and the general tone is good. Export trade in Durham and Northumberland is also satisfactory, a definite revival having occurred during January. Some of this demand has spread to the Yorkshire fields, and Scottish pits are disposing readily of house and gas coal. Though the country's coal production to-day is far below the full capacity of the industry, demand is fully commensurate with the present rate of output.

Engineering.—The year has opened with a fairly cheerful tone. An increase in activity in the shipyards has been reflected in better orders for marine engineers. Locomotive builders are still very active, and now enjoy a definite advantage in the world's markets. There is a fairly steady demand for textile machinery and power plant, while the machine tool trade has recently had little of which to complain. The outlook for agricultural machinery is now thought to be a little better than during most of last year.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925.

INDEX of ACTIVITY in the ELECTRICITY INDUSTRY.

March	89	163	107				

Owing to the new orders placed by the Electricity Supply Board, December was an active month. 1929 promises to be a good year. In addition to the orders from the Supply Board a big new contract for generating plant has just been received from Rotterdam.

Motor Industry.—Since the Motor Exhibition, the private car section of the motor trade has experienced a satisfactory degree of activity. The commercial and passenger carrying vehicle section continues at a high level of production, orders from railway companies being no doubt in some measure responsible. Motor-cycle manufacturers are also well employed.

Cotton.—Our Manchester correspondent writes:—Trade has been disorganised by the holidays, but apart from these disturbing influences there has been a tendency for yarn and cloth demand to broaden, and there are indications of buyers showing increased confidence in current prices. Here and there an increased turnover has taken place. The feature of interest has been the better news from Shanghai, and freer buying for China generally in standard makes and fancies. Most of the buying for India has been in light fabrics and specialities, and a fair amount of business has been done. Rather better support has been met with from other centres. In some places idle looms have been restarted.

Woollens and Worsteds.—There is a fair amount of inquiry for tops, and quotations remain steady, but yarn prices are very irregular on account of the keen competition among spinners for orders to keep machinery employed. Prices still remain the main difficulty, for while users hold that even current quotations are too high, there seems no likelihood of any immediate decline in raw material values.

Linen.—Spinners are well supplied with orders. Fresh business has been inclined to lag since the holidays. Manufacturers are passing through the quiet period usual at the beginning of the year.

Artificial Silk.—The market has now adjusted itself to the reduction in the prices of both yarns and fabrics, which took place last month, and business in every section is now expanding well. There has been a marked improvement in demand from India and the East, and a steady trade is maintained with the Colonies and Brazil.

Boots and Shoes.—Trade has not yet recovered from the holidays, but there are hopes that further orders will be coming to hand before long.

Pottery.—This industry has been passing through a period of inactivity as distributing houses have mainly been busy with stocktaking and winter sales, and have not been replacing orders.

Chemical Industry.—Exports in 1928 were 8 per cent. above those for 1927, while imports were not appreciably different. Since Christmas there appears to have been a development in home demand, accompanied by the usual fairly satisfactory export activities.

Building Trades.—Little change took place in employment between November and December, Wales and Northern Ireland and the North of England remaining the least satisfactory districts. A slight improvement was recorded in the brick industry.

Agriculture.—Conditions were fairly favourable for outdoor work, and in many areas it was possible to keep cultivation well forward during December. Early-sown corn was promising, except on wet heavy soils, where some patchiness and lack of colour were noticeable. Potatoes were keeping well. Milk yields were usually about normal.

Shipping.—Chartering is less active than a month ago, but grain freights have been firm. Rates on outward coal have been irregular with a weaker tendency.

London Retail Trade.—Reports indicate good sale business. The colder weather has stimulated the demand for woollen materials and inner and outer garments of a heavier type, so that the clearance of winter merchandise has been fairly successful. Stocks are low, and the prospects for next season good.

BRITISH EMPIRE.

In Canada last December's Christmas trade achieved record volumes and provided general evidence of prosperity. The outlook for the current quarter is looked on as satisfactory, except in some areas where crop results were disappointing and country merchants are finding some difficulty in financing their winter commitments.

The weather in Western Australia, South Australia and

† Excluding persons in the coal mining industry who ceased work on account of the dispute.

Victoria and inland parts of New South Wales has generally been favourable for the wheat harvest. The wool clip should approach a record in weight, but prices may average about 10 per cent. below last year's rates. Export of butter shows a marked gain on the two previous seasons. Victoria has experienced a particularly good dairying season. Definite though not pronounced gains have been made by trade generally.

In India weather has been seasonable in most parts. Standing crops are good and prospects fair. The condition of cotton in the Punjab is generally below normal owing to damage by insect pests and adverse weather in many districts, and the yield is below normal.

In South Africa trade conditions generally are good. Towards the end of November good rains were well distributed over all four Provinces. The major portion of West Karroo has also had its share.

UNITED STATES OF AMERICA.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London, and may serve as an indication of the main features in the business situation as it existed last month:—

*** Preliminary estimates made by Messrs Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureaux of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices.**

The year closed with industrial activity at a high level, 1928 proving a record year in the steel and automobile industries. Car loadings and railroad earnings for last year were above those for 1927. During December buildings contracts underwent a seasonal decline, but the recovery of the textile industry continued.

EUROPE.

The French iron and steel trades remain active, but the coal trade has been disturbed by strikes in the Loire and South of France. Trade generally continues fair.

The Belgian coal and steel industries have become more active since the New Year and steel prices in particular show a hardening tendency. The textile trades closed the year under more satisfactory conditions.

German industrial conditions are fairly good though the steel trades have hardly yet recovered from the effects of the November lock-out. The outlook for prices, too, is uncertain. The textile industries have undergone a slight improvement, and the chemical trade remains good. Dutch industries maintain their activity.

Norwegian shipyards are now busy, and the Christmas agreement between employers and workers in the iron industry has distinctly improved the outlook. In Denmark agriculture and building have been interrupted by cold weather, but the general business situation is thought sound.

Italian industries made good progress during December. This was accompanied by the usual seasonal increase in unemployment. Austrian Christmas trade was fairly good, but not up to last year's level, and unemployment, too, increased during December. Elsewhere in Europe conditions show little change from a month ago.

SOUTH AMERICA.

The Argentine maize crop is being affected in some districts by lack of rain, but other crops are in better condition. Chilean trade underwent little change during November, but retail trade experienced its usual seasonal activity, and the general outlook was thought promising. Business in Brazil was dull during December, but Peruvian conditions were described as normal.

FAR EAST.

Latest reports from China confirm the view that trade is becoming more active as a result of the greater political stability. This is shown by the orders now being received in Manchester. It is, however, clear that progress will be extremely slow, and according to an American report no important development can be expected during the early part of the current year.

Business conditions in Japan improved slightly during December. Activity in the cotton industry was maintained, but the raw silk market remains quiet.

ELECTRICAL PRODUCTION.

IN the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods:—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, Excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, &c.	Textiles, Cotton and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

Compared with December, 1927, progress has been disappointing. The most active centres last month were Manchester, Liverpool, Bristol, and to a lesser degree Birmingham and the Midlands.

INDICES OF BUSINESS ACTIVITY.

WITH certain exceptions, the December figures of our series of Index Numbers of Business Activity suggest that the condition of industry is still one of stability rather than progress. The volume of employment, apart from a fractional improvement in "heavy" industry, shows no signs of expansion. In comparison with the previous month, the indices of net imports of raw materials and of consumption of cotton make a better showing, but the increase in both cases is largely in the nature of a seasonal movement, and the December figures are substantially below those for the closing month of both 1924 and 1925. The same comment applies equally to last month's figures of the index numbers of provincial bank clearings and consumption of coal and electricity. A further fall is recorded by the figure of iron and steel consumption, which stands at the lowest level reached during the past year. Apart from postal traffic and London bank clearings—indices whose course is not closely indicative of industrial development, the best feature is the relatively satisfactory volume of exports of British manufactures.

In the following table we give the quarterly figures for October-December of our indices of British manufactured exports, and of total foreign trade turnover:—

Average 1924 = 100.	Exports British Manufactures.	Foreign Trade Turnover.
October-December, 1924	102	109
" " 1925	105·5	109·5
" " 1926	90	105·5
" " 1297	113	112
" " 1928	111	112

In comparison with 1927 there is a small decline in the quarter's volume of manufactured exports—whereas the figure for July-September, 1928, was nearly 3 per cent. higher than that for the third quarter of 1927.

Turning to the annual averages for 1928, which—except in the case of the belatedly published railway traffic returns—have now been added to the yearly series in the table below, it will be seen that the instances in which an increase over 1927 is shown are net imports of non-ferrous metals, consumption of rubber and electricity, employment in miscellaneous services, shipping movements, postal traffic, London bank clearings, and exports of British manufactures. On the other hand, net imports of raw materials, consumption of cotton, iron and steel, and coal, employment in "heavy" industry, provincial bank clearings, and total foreign trade turnover, all show a heavy fall on the year.

In the following table we summarise for purposes of ready comparison annual means of ten of the more important indices of the series, excluding 1926 as an abnormal year:—

1924 = 100.	1925.	1927.	1928.
Net Imports—			
Raw materials	107	113	101
Consumption—			
Cotton	116	113	103
Coal	93	106	99
Electricity	101	109	110
Total employment	101	105	105
Provincial clearings	102	102	100
Shipping movements	98	105	106
Manufactured exports	101	104	108
Foreign trade turnover	102	107	106
Average	102	107	104

In appending to the foregoing figures the "crude" (unweighted) average for each year, we have no intention of framing as yet a single index of business activity. It may, however, not be wide of the mark to suggest that the activity of 1928, so far as it can be statistically measured, should be represented by a figure about midway between the level of 1925 and 1927.

The Economist
MONTHLY SUPPLEMENT.

New Series. SATURDAY, FEBRUARY 23, 1929. No. 69.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

To judge from current statistics and reports, the New Year has opened well. The overseas trade returns are good; machinery exports in particular have achieved a post-war January record. There has been a distinct improvement in the production of steel, and some increase in activity in the iron trade. Fresh furnaces have been blown in since the New Year, and there is every ground for hoping that further furnaces will come into operation within the next few weeks. The engineering outlook is more promising, and shipbuilding has maintained its new vitality. Finally the coal trade, helped in part by the wintry weather, is at last able to report comparative activity. The weak spot is the textile trades. Bradford reports that the renewed fall in raw wool prices is restricting production, and while conditions in the cotton industry are not wholly unsatisfactory, demand for piece-goods has been restricted by the Bombay riots and the Chinese New Year holidays, and the decision of the spinners of Egyptian cotton to introduce short time bears an ominous appearance. The general situation seems to be that, as in previous years, a spell of comparatively good trade is being experienced which should last until April. Moreover, it is very satisfactory to be able to add that the current quarter is in some respects proving a more active period than the first quarter of last year.

* Average weekly figures.

There are, however, two factors which may militate against a continuance of the present activity. These are the rise in Bank rate and the imminence of the General Election. As regards the former, industrial opinion seems to be divided. The first news of the increase to 5½ per cent. came undoubtedly as a considerable shock to industry, especially as there had previously been a general hope that the increase would be avoided. Now that there has been time for reflection, it is admitted that the extra one per cent. may not be a fatal addition to the burdens on industry, though it is naturally held to be unfortunate that any fresh obstacle should have been placed at present in the path of improving trade. At the same time, it is agreed that too much can be made of the increase, especially if it soon becomes apparent that an early reduction can be expected. Besides this, traders are no longer operating under the fear of an increase, and if under the new conditions of a 5½ per cent. rate the Bank can pursue a slightly more generous open-market policy, the increase from industry's point of view will not be a pure loss with no compensations.

The approaching election is a more serious factor, and one that will grow in intensity with the approach of polling day. At present it is exciting a sense of uncertainty of a particularly unfavourable kind. Without entering into any controversial political questions, this much can be agreed upon as common ground. Whatever the complexion of the new House of Commons and whatever the composition of the new Government, both will be intimately concerned for many years with matters acutely affecting trade and industry. A cursory inspection of the programmes of all the political parties is sufficient to prove this fact. Apart from the merits of any of these programmes, it is only natural that traders are today feeling some difficulty in laying their plans ahead, simply because they feel uncertain as to how far their plans will need modification when the result of the election is known. In fact, it is quite conceivable that whatever party comes into power, traders may after the election recover their confidence, because then they will know where they stand. For this reason many are hoping that the new Parliament will at least be of a staple composition.

As regards the state of employment, there was the usual increase in unemployment immediately after Christmas, but during January the figures steadily improved. There was a marked falling-off in the volume of work available in the building and allied trades, but this is a seasonal movement due to the inclement weather. There were a fair number of other decreases in employment, which were spread over many industries, but against these must be set improvements in ship-building and ship-repairing, marine engineering, linen textiles, and hat and cap manufacture. Employment in the coal industry underwent little change, a decline in the number

wholly unemployed being offset by an increase in the numbers temporarily stopped.

Abroad, Empire trade conditions remain on a satisfactory basis, while American activity is well maintained. European trade remains much the same as in previous months, with the exception that some disturbance to business has been caused by the severe weather. Little change is reported from South America and in the Far East; the end of the year passed in Japan without serious difficulty.

HOME INDUSTRIES.

Coal.—Conditions this month have been comparatively active. Most collieries are working full time and a certain number of closed pits have been reopened. This activity is common to home and export trades, and is in part the consequence of the recent cold weather. The frost, however, in addition to stimulating trade, has also caused some dislocation to shipments through delayed steamers and the freezing of apparatus at the docks.

Iron and Steel.—Conditions this quarter are proving comparatively active, and production is on a larger scale than a year ago. This month's increase of 1s. a ton in Cleveland pig iron is significant, and the reports from most districts state that the outlook is assured, at any rate until Easter. In several areas stocks have been reduced, and fresh furnaces have been blown in. The revival in shipbuilding has proved of material assistance.

Engineering.—The year has made a good start, and January exports of machinery established a post-war record for that month. The immediate prospects of the textile machinery and marine engineering firms are good. The demand for locomotives, though slightly less than for last year, is still well maintained, and the machine tool section remains at its recent level of output. Agricultural engineering is still depressed, but the outlook is becoming more hopeful, and should the unofficial negotiations with Russia bear fruit, this section will be one of the first to benefit. Structural engineering is still dull, mainly as the result of the cold weather, and there was little activity among makers of prime movers.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925.

1929.			
January	92	122	99

The sharp improvement in the export index is due to the incidence of two very large orders. At home the industry has received few new contracts, but has been active in preparing tenders for the Central Electricity Board. In all sections the industry has been satisfactorily engaged.

Motor Industry.—In the private car section, factories are well supplied with orders, and exports reached the highest level for many months. In the commercial and passenger vehicle section, the demand remains at a very satisfactory level, while exports show a further advance. Cycle and motor-cycle manufacturers continue to be busy, with an encouraging demand from overseas markets.

Cotton.—January has proved a disappointing month, as although raw material prices have been stable export orders for cloth have been on a restricted scale. Indian demand has been restricted by the Bombay disturbances and by the Calcutta dealers' embargo upon imports, while operations for China were checked by the New Year festivities. Latest news from the Far East, however, is satisfactory, with prospects of an early expansion in trade. Egypt, the Near East and the Continent have given a fair amount of support, but trade with the Continent has been limited. Home demand has broadened. In the spinning section the introduction of short time by the Egyptian branch is a discouraging event.

Wool.—The recent decline in raw material prices has had a depressing effect upon the industry, and spinners are finding some difficulty in keeping machinery in operation. The spring goods trade has been retarded by the cold weather, but export demand for piece goods is fairly satisfactory.

Linen.—Irish flax is firm and is finding a ready sale. Spinners executed some additional sales in fine counts and have good orders still in hand. Weavers are finding business rather better, and more looms are working.

Rayon.—The market is showing slow but steady expansion, and though there are heavy stocks of poor-grade yarns which show little sign of being reduced, business in the better grades is fairly good. High-class fabrics are in fair request for the Dominions and the home trade, and there has been a moderate turnover in mixture fabrics for India and Brazil.

Boots and Shoes.—Business is slightly more active than at the end of last year, but manufacturers are still suffering from lack of orders.

Pottery.—With the exception of sanitary ware the conditions of the industry are fairly quiet. The earthenware section is now awaiting the Board of Trade's decision on their Safeguarding application, and this is causing some uncertainty.

Chemical Industry.—Generally trade is good. The general effects of the holiday season this year have lasted longer than usual. Both January exports and imports were larger than in the two preceding years, the improvement in exports being mainly due to heavier shipments of ammonium sulphate and coal tar products. With regard to home trade, the pharmaceutical section is at last sharing in the increased activity which hitherto has been confined to heavy chemicals.

Building Trades.—Employment has been seriously affected this year by bad weather, and the January figures showed an unemployment percentage of 19.9 per cent., while the corresponding percentage for painters alone was 33.7 per cent. Wales and Northern England remain the worst areas.

Agriculture.—Owing to snow and frost little cultivation work was possible, but, despite this, field work was as forward as usual at the end of January. Breeding ewes generally were in a good healthy condition, as were cattle and sheep, and the milk yield was about up to average.

Shipping.—The shipping trade in February has been without any particular feature. Grain freights are remaining unchanged, and there has been a sharp advance in rates on coal to the Continent consequent on the cold weather and dislocation of shipping owing to ice in the Baltic.

Retail Trade.—Climatic conditions have stimulated the demand for warm clothing, but otherwise the cold has given a set-back to general trade. White sales show fairly good results.

* Preliminary estimates made by Messrs. Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureaux of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices.

Trade underwent a further expansion during January. The steel industry is operating at over 87 per cent. of its capacity, automobile production is at a record seasonal level, and construction contracts are improving. Car loadings are well above last year's level, and the cotton mills report an increase in activity.

BRITISH EMPIRE.

Canadian retail trade has fallen away since Christmas, but wholesale houses report that their orders compare favourably with those of previous Januarys. Factories are well supplied with orders, but outdoor work is restricted by the cold weather, and the employment position is not very good.

In Australia good rains have fallen in Queensland, but floods have been experienced in New South Wales. The latest wheat crop reports show a yield of nearly 160,000,000 bushels. The current wool clip is proving in excess of earlier estimates, but the fall of wool prices makes it difficult to forecast ultimate results this season.

South African conditions remain unchanged.

India reports that the 1928 monsoon was good and well distributed. Last year's jute crop was satisfactory, and sowings of cotton and oil seeds showed an advance on those of previous years. Crops generally are in a distinctly favourable position, and this year's export surplus should be well up to standard.

EUROPE.

The French coal industry remains active, though transport has been impeded in places by the frost. There is a keen export demand for French iron and steel products, and prices show a rising tendency. The position of the textile trades is fairly good, but there are signs of irregularity.

The Belgian coal industry is extremely active, and little change is reported in the steel trades where conditions are satisfactory. The cotton market is firmer.

The German steel industry is stagnant, while the coal trade, after a fairly active January, has suffered some dislocation owing to the severe weather. The chemical industry remains satisfactory, but the textile trades are somewhat irregular.

In Scandinavia, Norwegian shipbuilders report increased activity, and Swedish industry has lately recorded some improvement.

Conditions in Italy were satisfactory during January, and though some irregularity was noticeable there are signs of a coming improvement in trade. The steel trade in particular has experienced, during January, a full measure of activity. Apart from the general interruptions to business caused by the severe frost, conditions in Central Europe have been fairly satisfactory.

SOUTH AMERICA.

Beneficial rains have now fallen in the Argentine maize area, and it is reported that this year's exportable surplus will exceed 4,000,000 tons. Brazilian business conditions improved during January, but are still not very active. The Chilian situation remains satisfactory, but business in Peru is experiencing the dullness usual during the planting season. Uruguayan conditions are fairly good.

FAR EAST.

The end of the year was passed in Japan with little financial difficulty, and the money market continues to display an easy tendency. There were a few country bank failures reported. Recent trade returns show that the Chinese boycott on Japanese goods did not have a very serious effect. The January trade figures show the lowest adverse balance for several years. Chinese trade has been restricted by the New Year holidays, but confidence is gradually returning. There are hopes in Lancashire and elsewhere of a definite revival as soon as the holidays are over.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10th, 1926 (pages 57–8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods :—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The most active areas are the Midlands, the West of Scotland and the North-East Coast. Lancashire as a whole is fairly good, with the Liverpool transport consumption particularly active. There are signs of improvement in Yorkshire.

INDICES OF BUSINESS ACTIVITY.

THE picture presented this month by the figures (averaged for the three months ended January 31st) of our series of index numbers of business activity is in many ways more encouraging than has been the case for some time. There are still, it is true, certain aspects of the situation which must be considered unsatisfactory, and it would be premature to deduce from the latest movements of the indices that a marked " trade recovery " is positively developing, even in an embryonic stage. None the less, from an examination of the figures a number of features emerge which suggest that in some directions, at least, business activity is showing signs of incipient expansion.

To mention first the adverse factors in the industrial position—the volume of employment in " general " industry contracted (partly from seasonal causes) during January; the apparent consumption of iron and steel continues to decline; compared with the figures for the corresponding month of 1925 and 1926, the current indices of net imports of raw materials, cotton consumption, employment in " heavy " industry, and provincial bank clearings, all stand at lower levels; and the figure of total employment represents a definite set-back in contrast with January, 1928. These are all weighty items on the debit side of the account.

On the credit side, however, there is, in the first place, the sustained improvement in the volume of exports of British manufactures, the January figure being the highest recorded in any month during the past five years. In the next place, it will be seen that a slight recovery in the index figure of employment in " heavy " industry is taking place, that net imports of non-ferrous metals and apparent consumption of cotton both display a rising tendency, and that a great expansion has occurred in the volume of raw material imports, the comparatively low level of whose index figure has been one of the most depressing features of the past nine months. Finally, the course of the indices of fuel consumption, taken together, is not unsatisfactory, even when due allowance is made for seasonal considerations.

Comparing the January figures as a whole with those for the corresponding month of past years, it will be observed that the three index numbers which make the poorest showing are those of iron and steel consumption, employment in " heavy " industry, and provincial bank clearings. The fact that the provincial clearings' index is now 5 per cent. lower than a year ago, whereas the indices of shipping movements and exports of British manufactures are, respectively, 7 per cent. and nearly 2 per cent. higher than in January, 1928, suggests that home trade activity has decreased as a result of depression in certain branches of manufacturing.

[NOTE.—*A full explanation of the data on which the series of index numbers is based, and the methods of calculation employed, was published in the " Supplement " of March 24, 1928. It should be borne in mind that the monthly figures are in each case averages of the three months ended with the latest month shown, and that except in the case of imports of non-ferrous metals, no correction for seasonal trend has yet been instituted in the series. The index of postal traffic, however, is based on comparison, not with the annual average for 1924, but with the figure for the corresponding month of that year.*]

The Economist
MONTHLY SUPPLEMENT.

New Series. **SATURDAY, MARCH 30, 1929.** **No. 70.**

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

BUSINESS and employment alike were affected during last month by the severe weather prevalent in this country and also over a large part of Europe. It caused a heavy increase in unemployment in the building and allied industries, where work was largely brought to a standstill, and canal, river, dock and harbour services were also affected. On the other hand, there was a substantial improvement in the coal industry, and at some pits a shortage of skilled men was reported. The freezing up of transport facilities in Eastern and Central Europe diverted a fair amount of coal orders to England, and, while it is too early to write with any certainty, there is good ground for hoping that much of the business lost during the 1926 coal stoppage to European collieries has now been regained.

Apart from the industries affected by the frost, there was, on the whole, a slight improvement. Pig-iron manufacture, general and marine engineering and shipbuilding and repairing are all reported to be better, while elsewhere the textiles trades—with the important exception of cotton—clothing, boots and shoes, pottery, and shipping, are all better. To sum up recent employment figures, the substantial improvement recorded in the second week of March is significant. In most of the staple industries of the country there has been a definite improvement.

This serves to prove one very important fact, which is that the increase in Bank rate to 5½ per cent. has not had the unfavourable effect upon trade that was feared in some quarters. Employment is, in reality, better, and the price-level remains stable, with perhaps a slight rising tendency. At the same time, it must be emphasised that the prevailing monetary uncertainty has not been beneficial to trade, and if the outlook had of recent weeks been more assured, it is conceivable that the improvement in trade would have been still greater. Industry has shown itself able to withstand a 5½ per cent. Bank rate. It by no means follows that a further increase to 6½ per cent. would not have a deleterious effect.

Such danger as exists, however, lies elsewhere. Firstly, there is evidence that rationalisation in those industries where any progress has been made has already reduced the total volume of employment. This, of course, is inevitable, as one of the main objects of rationalisation is a reduction in the amount of employment per unit of production, but it is important to realise that the theory is already being borne out by the fact. The Balfour Committee's final report envisages still further reductions in the volume of employment as first one and then another industry re-conditions and rationalises itself. The implications of this prediction merit serious study to-day before their actual realisation.

Next, if the more immediate outlook be considered, it must be remembered that, on the basis of recent experience, we are now approaching the danger point of the year. During the last four or five years trade has always been relatively active up till Easter, only to be followed by a serious setback during the summer months. In one or two cases there has been a definite cause, such as the return to gold in 1925, and the industrial troubles of the following year. On other occasions, as last year, no definite reason was apparent. This year an event is imminent which, unless regarded in its proper proportions by the business world, could quite easily cause a setback to trade. This event is the approaching General Election.

So far it is not easy to decide whether the election has had much effect upon the course of trade. The engineering industry is described as being already under its shadow, while an iron and steel correspondent takes the more robust view that it will have no effect until the campaign is actually in progress. This last is clearly the view that it is essential for industry to take, and, if it should be generally accepted, the chances of the election giving a setback to trade will be greatly lessened. Whatever the result of the election, there seems no ground for supposing that the immediate effect on the trade of the country will be serious. Of whatever texture the new Government may be, industry will have ample warning of any new legislative proposals before they can take effect. Traders who allow their political apprehensions to interfere with their business are not only displaying fears of eventualities that are very unlikely to occur, but are also doing no service to their own interests or to those of the country.

As regards Empire trade, Canadian news is satisfactory. The Australian agricultural situation is also promising, despite the fall of wheat and wool prices. Un-

employment, however, is increasing. The outlook in both New Zealand and South Africa is good. The Indian rainfall is stated to be "moderate and seasonal," and standing crops are, on the whole, doing well.

United States industrial activity is well maintained and automobile production has attained a new record. European trade has been dislocated by the frost and the consequent interruption of transport. Continental iron and steel makers are well supplied with orders, though the German outlook does not appear very reassuring.

HOME INDUSTRIES.

Coal.—Partly as a result of the frost, export trade has undergone a marked revival, and by the middle of March many collieries both in Wales and on the North-East Coast were booked up well into April. Home demand for industrial fuel is fair, but orders for house coal, although still considerable, are falling away with the advent of the warmer weather.

Iron and Steel.—The hardening tendency of iron ore and coke prices is causing some difficulty in the pig-iron section, and possibly accounts for the reluctance of makers of pig iron to blow in fresh furnaces. The improved demand for pig iron has consequently run stocks down to a low level, and it is not impossible that a further advance in the price of Cleveland pig iron will be made before long. Steel makers are now experiencing fairly satisfactory conditions and are using more scrap, but here again prices have an upward trend. The outlook of the trade generally is well assured for the next few weeks, and there are no signs as yet that the approaching election is having a retarding influence.

Engineering.—Foreign demand for locomotives is still well maintained, and machine tool makers have lately improved their position. Marine engineering firms remain relatively well employed. Some interest has been taken by the makers of textile machinery in the unofficial Trade Delegation to Russia, and it is expected that this will result in the receipt of fresh orders from that country.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925.

January	92	122	99
February	92	126	101

Export trade was well maintained last month, the major share of this business consisting of orders from the Dominions for generating plant and switchgear. Home trade is of moderate dimensions.

Motor Industry.—The seasonal activity in the private car section continues, although there is a falling-off in exports, as compared with the preceding month. In the commercial goods and passenger section, the hitherto satisfactory demand is maintained, while exports show a marked increase as compared with the same month of last year. Motor-cycle manufacturers are also busy, with an encouraging increase in exports

Cotton.—The feature of the trade situation has been the advance in raw cotton prices, which has resulted in higher rates for yarn and piece goods. This advance enabled most spinners and manufacturers to sell for a time on a freer scale, but latterly trade has again fallen away. Nevertheless there has been a considerable increase in the amount of business done in cloth for India, especially in the lighter styles. An improved demand has also been experienced for China, and increased support has come from Singapore and Java. Clearances in the home trade have been better. Although weaving production is very irregular, a few more looms are running than a month ago. Sales of American yarns have also increased, but prices have remained bad, and some spinners have experienced a less satisfactory margin. Some improvement has also shown itself in the demand for Egyptian yarns, but here, too, producers have had to accept unsatisfactory rates.

Wool.—After their recent fall, prices have become more stable. As a result, the general tone of the industry has improved. Greater interest is now being shown in Botany yarns, and prices are still satisfactory. Spinners are able to display greater resistance to low offers. The piece-goods section is now experiencing its usual seasonal activity.

Linen.—The demand for Irish flax has recently not been quite so brisk, and prices are unchanged. There is a fair demand for yarns, which approximately balances current production, but some mills are reported to be making further reductions in their output. Small orders are being received by weavers, and there is keen competition for delivery, but prices remain bad.

Rayon.—Business is now more satisfactory, though still below the level reached last year before the trade depression. Good quality yarns, both acetate and viscose, are selling fairly well. The leading producers of the former type have increased the prices of their fine denier warps by 1s. per lb. Stocks of low-grade yarns are large, and price cutting continues. Business in dress fabrics, particularly those made entirely of rayon, is good.

Boots and Shoes.—The demand for spring goods has been delayed by the cold weather experienced in February, but during the last few weeks a revival has taken place, and the general position of the industry is now more satisfactory. Some firms have already received large orders, and there is a feeling that distributors are now only holding small stocks.

Potteries.—China manufacturers have booked good orders at the British Industries Fair. The conclusion of the ceramic printers' dispute has removed one serious obstacle to the improvement of trade.

Chemical Industry.—The past weeks have been comparatively uneventful. Carbolic acid and benzoles are firm, and naphthas have appreciated. Heavy chemicals have continued unchanged after the recent fairly general reduction among the more important items.

Building Trades.—The industry during recent weeks has been dislocated by the very cold weather. Plumbers have been well employed, but other occupations have suffered severely. The brick industry, too, was adversely affected by the weather.

Agriculture.—The frost-bound condition of the land rendered ploughing and sowing impossible almost everywhere during February. Autumn-sown crops made little or no progress. Early-sown wheat appeared to have been rather less affected by the frosts than early-sown barley and oats. Although severely cut in some areas, seeds in many districts were fairly satisfactory. The condition of ewes was fair, and it was anticipated that the fall of lambs would be about average. Cattle were in fair condition, but sheep on turnips had not done so well owing to the frozen state of the roots. Milk yields showed a downward tendency in some districts.

Shipping.—Apart from a reaction in coal freights, after their recent cold weather activity, there have been few developments of note in the freight market during the past month. Grain chartering has absorbed a substantial volume of tonnage, but vessels have been freely offered and rates, where changed, have had a weaker tendency.

Retail Trade.—Business generally has been irregular during the past month, but there are now signs of a better tone.

BRITISH EMPIRE.

Business conditions in Canada remain satisfactory, but it is believed that the purchasing power in rural areas, especially those in the West, is below previous anticipations. Nevertheless, even in the prairie provinces, wholesale and retail trade is satisfactory.

In Australia trading in wheat and wool has been active. Weather conditions have lately become more favourable to the dairying industry, and this has resulted in increased production and a long export season. Unfortunately, unemployment is reported to be increasing.

Conditions in New Zealand remain prosperous, and the February trade returns constituted a record for the month. The outlook generally seems favourable, and it is stated that, in a comparatively brief time, the Dominions should be able to absorb immigrants.

Reports from India state that standing crops are doing well except in certain parts of the Punjab, where they have been affected by the severe cold. Sugar-cane harvesting is progressing in most districts, but growth has been somewhat affected by drought in parts of the central districts. Railway traffics were better during 1928 than in the previous year.

In spite of drought in certain districts, the South African outlook is good. Last year's budget yields a surplus of £1,700,000.

UNITED STATES OF AMERICA.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London, and may serve as an indication of the main features in the business situation as it existed last month :—

* Preliminary estimates made by Messrs. Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureaux of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices.

Active industrial conditions were experienced during February, and there was a general expansion in business. The steel industry was operating at over 98 per cent. of its capacity. Automobile production attained record levels, and the cotton mills remained active, with an improved outlook. Building contracts are below the level of last year, but car loadings are again higher.

EUROPE.

In France the break up of the frost has promoted the free movement of coal, and consumers' stocks are now being replenished. Iron and steel prices remain stable, and order books are well filled, but current demand has perhaps lately become a little quieter. The textile industries are only moderately active.

The Belgian iron and steel trade is well supplied with forward orders, prices remain firm, and the coal trade retained high prices during the cold weather. Operations in the port of Antwerp were rendered difficult by the frost.

In Germany the outlook of the iron and steel industry is uncertain, as demand has been dislocated by severe weather conditions. Ruhr coal production fell away during February, but has lately shown signs of improvement. Chemical trades remain satisfactory.

Business conditions in Holland were rendered abnormal by the freezing up of the waterways, and unemployment in certain trades has been severe.

Norwegian paper mills are well supplied with orders, and shipbuilders are well occupied. Industrial employment in Denmark was well maintained during February, while agriculture was severely impeded by the frost. Swedish trade was badly hampered by the freezing up of the Baltic.

In Central Europe coal production in Czechoslovakia in 1928 achieved a post-war record. Hungary continues to make progress, but foreign demand for Hungarian corn has lately not been very satisfactory, and prices offered have been low.

SOUTH AMERICA.

Cold, dry weather is accelerating the ripening of maize in Argentina, where the harvesting of wheat, oats and linseed has been completed and ploughing is beginning for the next season's crops of fine cereals. The economic situation in Uruguay is satisfactory, exports having recently reached their seasonal maximum level, while a steady demand for imported goods has been in evidence. In Chile general conditions may be stated to be continuing the promising progress made during 1928. Stocks of nitrate are reported to be accumulating, as purchases of the fertiliser in Europe have been delayed, owing to the exceptional frosts experienced; somewhat abnormally heavy purchases are to be anticipated shortly. Moreover, the Chilean Government has already intimated that some form of assistance to the industry will be continued after June next, when the present scheme of allocating bonuses to producers *pro rata* to their production ends. Trade in Brazil remains quiet, except in the importation of cotton textiles, for which orders have been placed in anticipation of the pending increase in import duties. Harvest prospects in Peru appear to justify a degree of optimism with regard to the trade outlook. The Central American countries are deriving benefit from an increased demand from both Europe and the United States for their mild grades of coffee.

FAR EAST.

Japanese commodity markets remained dull, but the high price of raw cotton has imparted some strength to yarn prices, while silk also was firm. The discount market remained quiet owing to the delay in the usual seasonal demands for funds. Some slight activity was apparent on the call market, but bonds and shares remained inactive. In China the political situation continues to improve, and clearances of goods to Shanghai are consequently better. Orders are beginning to come forward to Shanghai from various parts of China.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10th, 1926 (pages 57–8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods :—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The improvement in the figures between January and February is partly the consequence of the frost, which has increased the consumption of electricity in the coal fields, and also the general consumption for heating purposes. Still, even after allowing for this abnormal factor, the general trend of the indices is satisfactory.

INDICES OF BUSINESS ACTIVITY.

In considering the conclusions to be drawn from the latest figures of our series of index numbers of business activity, it is necessary to bear in mind that February, the month added this time to the three monthly averages, held two working days less than November, the month automatically displaced from the averages, and one working day less than February, 1928. In addition, February's abnormally severe weather, both in this country and on the Continent, might be expected to have affected the figures for that month in several distinct ways. The natural results of the great frost would be an increase in internal coal consumption, restriction of employment in the building and allied trades, some degree of shipping dislocation through ice-blocks, and some interruption of imports originating in Europe.

When due allowance is made for these factors, the general impression conveyed by last month's indices is not unfavourable. Net imports of raw materials reacted, it is true, from the level recorded in January; there was a recession in the apparent rate of consumption of cotton and rubber; iron and steel consumption (as a result of curtailment of imports from abroad) fell to a remarkably low figure; the volume of employment in "General" industry underwent a set-back; and there was a contraction (partly seasonal, partly due to the exceptional weather) in shipping traffic at British ports, and in the volume of exports of British manufactures. On the other hand, employment in "Heavy" industry showed an appreciable expansion; net imports of non-ferrous metals continued to rise; the indices of consumption of power (even when discounted by weather considerations) made a good showing; and the upward movement of the significant index based on provincial bank clearings suggests that the rate of turnover of internal commerce has begun to improve.

Moreover, when the figures for last month are contrasted with those of a year ago it will be seen that in a number of instances the current figures point actually to a slight betterment in the situation, *e.g.*, retained imports of raw materials, cotton consumption, consumption of electricity, shipping movements, and exports of manufactured goods, all show advances. Against these indications of improvement there must be set a fall in the figure of iron and steel consumption from 106 to 66, a decrease in coal consumption and (save in the case of "Miscellaneous services") a contraction in the volume of employment. How far this contraction reflects "rationalisation" economies, and how far slackening of business activity is open to some doubt. It is also questionable how far the index figure of merchandise carried by the railways, a figure which works out for 1928 at 93, as compared with 99 in 1927, requires to be adjusted by a "correction" to compensate for the steady growth of road transport.

Weighing favourable against disappointing factors, we may sum up the present position by saying that the course of our series of index figures, taken as a whole, continues, as has been the case for some months, to provide no conclusive signs of a definite trade revival, but rather to suggest that, on balance at least, no ground is being lost—a suggestion with which our hopes of better times must at present be satisfied.

[NOTE.—*A full explanation of the data on which the series of index numbers is based, and the methods of calculation employed, was published in the "Supplement" of March 24, 1928. It should be borne in mind that the monthly figures are in each case averages of the three months ended with the latest month shown, and that except in the case of imports of non-ferrous metals, no correction for seasonal trend has yet been instituted in the series. The index of postal traffic, however, is based on comparison, not with the annual average for 1924, but with the figure for the corresponding month of that year.*]

The Economist
MONTHLY SUPPLEMENT.

New Series. SATURDAY, APRIL 27, 1929. No. 71.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

In judging the present trade indications, there is one all-important factor that must be taken into account. This is that, on the analogy of recent years, April is the critical month of the year. For the past six or seven years, the first quarter has always shown signs of promise, but in each year as soon as May was reached the revival in trade has been suddenly nipped in the bud. On some occasions an obvious cause for this set-back appeared, as witness the adaptation of price levels in 1925 and the general strike in the following year. At other times, as, for example, a year ago, there was no apparent reason for the check, but, nevertheless, it occurred. Once more the year has reached its turning-point, and the outlook must be considered in that light.

On the whole, the omens are favourable. Unemployment recorded a substantial improvement during March. Part of this recovery was due to the resumption of work in the outdoor occupations following the break-up of the frost, but in addition to the improvement in building there was a shrinkage of unemployment in such staple trades as coal mining, iron and steel, general and marine engineering, textiles, clothing and pottery. The only setback was a slight one in shipping services, and altogether the returns of unemployment for the end of March are the most encouraging that there have been for a long time.

To turn to more recent reports from industrial centres, these are of a more variable character. In the coal trade, export demand has lately been good, but this was the result of the dislocation of the Continental coal trade caused by the frost. The European mines are now once more getting into their swing, and it is a moot question how much we can hold of our newly-won ground. On the whole, the outlook is not too bad, but Scotland reports a lack of business and prices generally are inclined to weaken in iron and steel.

Iron and steel production is increasing, and present indications are that the peak for the year will be reached in May, which is the normal practice. A set-back is anticipated in the summer, though if the railways take early advantage of the development programme indicated for them by the remission of the passenger duty, the setback may not be very pronounced. The main cause of anxiety to the steel industry is the recent falling-off in new orders for ships. This will not make its effect felt until the autumn, as the yards now have plenty of work on hand, but unless the demand for tonnage is renewed, steel-makers fear that their output will suffer before long.

Engineering has improved its position since the new year. Some textile machinists have obtained good orders from Russia as the result of the trade delegation, and marine engineers are very busy and do not share the anxiety regarding the shipbuilding outlook that is felt in the steel trade.

The textile trades are less reassuring. Demand for cotton goods has fallen away during the last few weeks, and the industry is far from satisfied with the present position. The wool industry is, perhaps, a shade more confident, while reports from the linen and rayon trades are, on the whole, good: In general, it would seem that there is, this year, a fair chance of escaping the May set-back to British trade. Even if the election retards business while it is actually in progress, there is equally likely to be a rebound once the result is known and uncertainty is allayed. The outlook in the heavy industries is, on the whole, encouraging, especially in comparison with previous years. Here much depends on how far we can retain the new coal export trade, won back early this year, and on how far the falling-off in orders for ships persists and adversely affects other trades, such as iron and steel and engineering.

The monetary outlook is more settled, and it is significant that, whereas a month ago, the market was discussing the possibility of a rise in Bank rate, they are now less inclined to expect it. These hopes, like the fears of a month ago, are likely to prove unfounded. A 5½ per cent. rate is enabling the Bank to hold its own, and slowly to augment its supplies of gold in readiness for the autumn strain, but it is doing little more, and at the moment a decline even to 5 per cent. seems very unlikely. At the same time, industrial conditions seem to be accommodating themselves to high money rates, and the knowledge that conditions are likely to remain stable is in itself a help.

Abroad, Empire news, is, on the whole, good, though perhaps not quite so satisfactory as in previous months; still, the breaking of the Queensland drought is a very

satisfactory feature. American industry continues to prosper, while on the Continent, the more important trades have lately been engaged in recovering from the disturbances of the severe weather of February. The damage wrought was apparently very severe. South American news is on the whole satisfactory, though the position in Brazil is difficult and commercial affairs in Mexico are hampered by the political situation. Far Eastern reports are not quite so satisfactory, as the position in China is not so reassuring as a month ago.

HOME INDUSTRIES.

Coal.—Current export trade remains active, but there are signs that German and Polish producers have now recovered from the effects of the cold weather of February and are once more becoming able to compete on normal terms. This fact makes the outlook for the British industry less certain, and already in Scotland there are signs of weakness. At home the demand for house coal is undergoing its seasonal shrinkage in volume, but orders for industrial fuel are well maintained.

Iron and Steel.—Production is well maintained, and this year seems likely to reach the seasonal peak in May, which is the month in which the maximum output is usually recorded. The position consequently is better than that of last year, when the peak was reached as early as March. The recent unofficial but effective advance of 1s. 6d. per ton in Cleveland pig-iron is also indicative of the state of trade, and there is good ground for hoping that the May set-back in trade will this year be largely avoided. To-day the chief ground of anxiety is that orders from the shipbuilding industry are beginning to fall away, but even so, the shipyards have enough work in hand to last them for some time.

Engineering.—Trade has lately undergone a slight improvement, and the outlook is more hopeful than at the New Year. The election may be the cause of a slight recession during May, but even if this is the case, there should be a recovery the following month, when the result of the election is known. Meanwhile, at least one firm of textile machinists has secured a large order from Russia as a result of the trade delegation to that country. The locomotive section remains very busy, and the recent slight improvement in the agricultural machinery section is maintained. There is no change to record in the machine tool trades, but marine engineering firms remain busy.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925.

March	88	126	97

Little change is noticeable in the home industry, the chief feature of interest being the news that the Central Electricity Board has already placed orders for transformers and switchgear to the value of £3,000,000. Export business is satisfactory. Continental demand has improved, mainly owing to the weakening of German competition.

Motor Industry.—The private car section remains fairly satisfactory, although greater seasonal activity might have been expected. The commercial vehicle section continues at a high level, with a brisk demand for coaches. Exports in both these sections are encouraging, and exceed by a good margin those for the corresponding month last year. A high level of activity in maintained in the motor cycle and cycle industries, both in home and overseas markets.

Cotton.—Since a month ago cotton spinners and manufacturers in Lancashire have tended to lose ground. Order lists are lighter, and stocks in some quarters have increased. The decline in trade for India has been largely due to the political disturbances and to increased nervousness on the part of dealers abroad and merchants on this side. China trade has also met with a set-back, but cables received during the last day or two are rather more promising. A fair scattered business has been done for several minor outlets, but very little support has come from Egypt and the Near East. A fair amount of activity has shown itself in the home trade. Spinners of American cotton continue to meet with difficulties, and prices are worse than ever. No relief has been met with by Egyptian spinners, and it has been decided to continue the organised short time in this branch for another month.

Wool.—Inquiries for tops and yarns have lately been a little better, but prices for merinos still seem rather high to buyers. In the piece-goods trade, men's fabrics are selling well, but business in dress goods is slow.

Linen.—Irish flax markets are now closing down, with prices firm. Some business is reported in Baltic flax. Yarns are moving slowly, but demand is sufficient to balance production. Looms are decidedly better employed, and some of the largest factories are fully engaged. Exports of finished linens are well up to the average.

Rayon.—There has been a gradual increase in demand for rayon yarns. The good qualities and fine filament types in both acetate and viscose are in keen request, but there is still a surplus of the lower-grade viscose yarns, and price-cutting among the smaller companies is still a menace. Business in the dress-goods trade is active, both for the home market and the Dominions, but in other directions foreign business is quiet.

Boots and Shoes.—Owing to the stablisation of raw material and prices the outlook is becoming rather better, and Northampton makers report production to be improving. Export trade is maintained, and home stocks in the hands of retailers are reported to be running rather low.

Pottery.—Shipments of china have decreased in value, but good overseas orders for sanitary ware have come to hand, and employment in this section remains satisfactory. Employment is also good in the electric accessory and encaustic tile branches.

Chemical Industry.—Overseas trade during March was dull compared with that of March, 1928, and thus followed a similar feature of the February trade. On the first three months of the year there is still, however, a favourable balance to 1929. Since Easter there has been a progressive development in business both at home and abroad, and in particular the pharmaceutical markets have enjoyed quite a reasonable demand. In consequence, it is to be expected that April business will show a return to the better levels of last year.

Building Trades.—As a result of the favourable weather and the general resumption of work, employment improved greatly during March in both the building and brick trades. London and the South of England remain the most satisfactory areas.

Agriculture.—Excellent progress was made with cultivation and sowing during the latter half of March, and good seed beds were obtained even on heavy soils. With the advent of the warmer weather, some improvement was noticeable in autumn-sown crops, but much re-sowing will be necessary. Good progress was made with the preparation of land for potatoes, and some earlies have been planted. The fall of lambs in lowland districts was satisfactory, but in some hill districts prospects were not very promising owing to the poor condition of the ewes. Pastures were very bare until the end of the month. Milk yields were about up to average.

Shipping.—The freight market for cargo shipping in April has been inactive, except for the sustained demand to load grain from the Argentine. Elsewhere business has been quiet, and rates have had a weaker tendency.

Retail Trade.—In spite of the recurrence of cold weather during early April, retail trade maintained its level, and there is every prospect of improvement in the near future.

BRITISH EMPIRE.

Farming operations in Canada received a passing check from severe blizzards experienced in early April, but this set-back should soon be overcome, and meanwhile general business conditions remain favourable.

Reports from Australia state that this year better rains have fallen in the Eastern States than have been experienced for many years. In Western Queensland the drought is now definitely broken. This auspicious opening of the autumn season is inspiring wheat growers and other farmers with fresh confidence.

India reports light rainfall in the North-East districts, which has greatly benefited standing crops. Elsewhere the weather remains dry, and rain is badly needed in the Punjab. In the North-West provinces farming operations are progressing favourably and standing crops are doing well.

South African trade has lately been quieter, but this is believed to be mainly due to the seasonal trend, and the outlook remains satisfactory. Farming prospects are good, especially for pastoralists, who are now assured of adequate winter feeding throughout the greater part of the country.

UNITED STATES OF AMERICA.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London, and may serve as an indication of the main features in the business situation as it existed last month:—

* Preliminary estimates made by Messrs. Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureaux of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices. *x* Not available.

Trade and industry were maintained at high levels during March, and, from the preliminary returns, it is evident that new records have been established both for the month and for the first quarter of the year. With the single exception of construction projects, the basic industries have been unusually active since the beginning of the year, trade in general has shown definite expansion, and goods have moved through distributive channels in a satisfactory manner. Inventories are relatively low; consumer purchasing power is high; the agricultural situation appears to have improved; and, in spite of the unsettled condition of the money market, there is a general air of confidence on the part of business men.

EUROPE.

The French coal industry is still engaged in replenishing stocks which were depleted during the February frosts. The iron and steel trades remain firm, with good export demand. Conditions in the textile industries are irregular, the cotton trades being perhaps the least favourable.

The Belgian coal trade is active, but the iron and steel industries are quieter, with some signs of anxiety regarding new orders.

The German industrial situation shows little change. The iron and steel industry has not yet recovered from the depression caused by the frost, while the coal trade is still overshadowed by the wages negotiations now in progress.

In Holland the chief event of the month was the increase in the Bank rate. So far there is little sign of any adverse effect internally.

Scandinavian trade has been crippled by the prolonged frost, which impeded shipping until nearly the end of March. Employment in the leading Swedish industries, however, has been good, while Norwegian manufacturers regard the outlook with confidence.

In Austria business has still to recover from the dislocation caused by the February frost.

SOUTH AMERICA.

There have been no outstanding developments in Argentine conditions during the past month, although mail advices indicate that the maize crop has been rather severely affected by dry weather, and it is possible that the yield may be 30 to 40 per cent. less than last year. The lack of rain, however, has assisted the farmers with their threshing operations, and has facilitated the carting of wheat to the stations. Business in general in the Republic has been quiet, on account of the summer holiday season, but the economic situation remains intrinsically sound, and prospects for autumn trade activities are favourable. The commercial movement in Chile is maintained, and the recent tone in the import markets appears to indicate anticipations of an increased retail demand during the approaching autumn and winter seasons. With the recent improvement in weather conditions in Europe, the demand for Chilean nitrate of soda became more active, and heavy deliveries have been taking place. The Brazilian situation is difficult, with monetary stringency in evidence, and caution is necessary in executing orders. The Peruvian markets are generally dull, orders being restricted to those necessary to cover immediate requirements, and in Mexico commerce is overshadowed by the continuance of the revolution. In Central America, business is generally normal, although it is to be noted that some measure of stringency is in evidence in Colombia, the Banco de la Republica having raised its rediscount rate from 7 to 8 per cent.

FAR EAST.

Japanese foreign trade was perhaps less satisfactory during the first quarter of 1929 than at the same period in the preceding year, but according to the Japanese Finance Minister the settlement of Tsinan will promote an improvement of trading with China. The same authority added that the Government are endeavouring to remove the embargo on the export of gold at an early date. Meanwhile business remains slow. At the end of March the Chinese outlook seemed less favourable owing to the anxiety regarding the agricultural situation. Later reports are slightly more hopeful. The Shanghai market was reported to be steady, with a fair demand for cotton goods at steady prices. The Japanese boycott has come to an end.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods:—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The March figures are not very satisfactory. The chemical index records progress, but compared with a year ago the figure for the heavy industries is barely holding its own, while during the current year the marine transport index has definitely receded.

INDICES OF BUSINESS ACTIVITY.

THE "corrected" averages of our series of Index Numbers of Business Activity for the three months ended March 31st suggest that the gradual betterment, of which faint and tentative signs have been discernible since the beginning of the year, continued, on the whole, to make slow progress last month. An encouraging feature in March was the material expansion in the volume of employment, particularly in the case of "Heavy" industry, the index figure for which now stands at a level higher than that recorded for any month since May, 1928. Employment in "General" industry, some sections of which had suffered a setback through the abnormally severe weather in February, also recovered during March; and the total numbers of persons employed in British industry at the end of last month was greater than at any time last year—the three-monthly average figure, being, of course, still adversely affected by the slackness of employment in January.

Turning from employment to other phases of business activity, it will be seen that, despite the fact that Good Friday fell this year in March, the indices of consumption of coal and electricity make a satisfactory showing. Even when due allowance is made for the effects of an unusually cold spring in stimulating demand for domestic purposes, the fact that both these power indices were higher in March than in the corresponding month of any of the past five years is an encouraging indication that production in many branches of industry must have been proceeding at a fairly high rate—an indication supported by the substantial recovery which has been made since last November by the index of provincial bank clearings. The latest figure for iron and steel consumption is still disappointingly low (the three-monthly average being depressed by the poor results of January and February), but in this direction also March witnessed a materially better tendency. The decline in the indices of net imports of raw materials (revised figures for which are now available for the first quarter of the year) and of non-ferrous metals is a normal seasonal movement, whereas the consumption of cotton, which normally slackens in March, recorded an encouraging expansion. It is satisfactory, moreover, to note that the quarterly figure of net imports of raw materials works out at 124, against 111 in the first three months of last year.

With regard to other indices, London bank clearings, it will be noted, continued to reach fresh high levels. The volume of Postal traffic, on the other hand, was fractionally lower (calculated as a three-monthly average) than a year ago. The tonnage of merchandise carried by the railways—the latest figures for which relate to the month of January—makes a poor showing, but the index of shipping movements throughout the past quarter has been appreciably above the figure for the first three months of 1928.

In the following table we give the quarterly figures for January-March of our indices of exports of British manufactures and of total foreign trade turnover.

Average 1924 = 100.

	Exports British Manufactures.	Foreign Trade Turnover.
January-March, 1924	96	95
" 1925	108	107.5
" 1926	106.5	107
" 1927	100	112
" 1928	108	109
" 1929	109	110.5

An encouraging feature of the foregoing table is the revelation of a steady growth in our manufactured exports during the past two years, despite the depression in certain of our staple industries.

The Economist
MONTHLY SUPPLEMENT.

New Series. SATURDAY, MAY 25, 1929. No. 72.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

THIS time last year, after a promising first quarter, trade was showing faint but unmistakable signs of flagging. This year there is as yet no indication of a similar setback, and most industries which have recently recorded an improvement continue to do so. This is the more encouraging as the reaction last year was due to no visible cause, whereas during the past few months not only has there been an increase in Bank rate, but there was reason to fear lest the imminence of a General Election might exercise a seriously disturbing influence.

Unemployment has been diminishing during the past few weeks. In addition to the marked seasonal improvement in the building trades there has been also a fall in the unemployment figures for several staple industries, notably shipbuilding and marine engineering, clothing, boot and shoe manufacturing, and the silk, artificial silk and lace industries. In coalmining, in the cotton, linen and jute industries, and in the textile finishing trades, on the other hand, the numbers unemployed increased. Taken as a whole, however, the figures are more encouraging than they have been for some time.

The coal trade has exhausted the special impetus given to it by the temporary paralysis of Continental competition, but its prospects are none the less improved as compared with those of a year ago. An important contributory element in this is the greater activity of the heavy industries. The iron and steel trades expect to reach their seasonal peak in the current month, but there is so far no reason to anticipate anything more than a normal summer recession. Much depends on the future course of orders from the shipyards, and this is difficult to predict. Similar doubt attends the prospects of Continental prices. At the time of writing they are still firm, and competition in consequence continues to be less keen than it was a few months ago.

In spite of slightly disappointing foreign trade returns for April, engineering activity has been well maintained, and the outlook is felt to be hopeful. The motor industry reports a satisfactory position, with increasing exports of vehicles. Though electricity production shows the usual seasonal decline, output is on a higher level than last year, and the fact that this increase is evenly spread over the various groups is a healthy sign of the state of general industrial activity. The weakest point is to be found in the textile trades. The narrowly-averted lock-out in the cotton industry and the prospect of labour troubles in the Bradford district are symptoms of a state of affairs which is far from satisfactory. The best that can be said is that the position is growing no worse, and therefore need not be regarded as evidence of any general declining tendency. The rayon and linen trades have experienced a slight improvement, and similar reports of a moderate upward movement are forthcoming from the chemical, pottery and boot and shoe industries.

The least satisfactory feature of the situation is the uncertain monetary outlook. During the past month the pronounced weakness of sterling in relation to the dollar has dissipated whatever hopes were previously entertained that the Bank of England would be able this summer to lower its discount rate, and the latest developments in the United States render it possible that a further increase in Bank rate may have to be made here. Although there is no reason to think that the present level of discount rates is affecting adversely production or commerce, a rise in Bank rate to 6½ per cent. could hardly fail to have a somewhat restricting effect on business.

Reports from the British Empire are encouraging. Weather news is satisfactory and crop prospects normal. In Canada and South Africa industrial conditions are said to be favourable. Business in the United States continues to be prosperous. On the Continent the industrial situation is improving, and though money market conditions are stringent in most countries, this is having comparatively little disturbing effect. In some South American States, on the other hand, especially in Brazil, dear money is making itself felt as a depressing

influence. Otherwise South American news is good. There is little change in conditions in the Far East; conditions in China remain very uncertain.

HOME INDUSTRIES.

Coal.—Output has recently diminished, and in consequence a steadier tone is again apparent. Inquiries for current shipment are good, and in the home market, though domestic demand is showing the usual seasonal decline, industrial consumption, at any rate of coking coal, has a prospect of improving with the increased activity of the heavy industries. The South Wales minimum schedule of prices for large coals has been raised by 6s. per ton.

Iron and Steel.—Production continues along the same lines as last month and it still appears likely that the peak will be reached in May, though there is no reason to anticipate that, if a recession does occur, it will be anything more than the usual seasonal decline. The decision of the Associated Steelmakers to raise prices by 5s. per ton is significant, though it is apparently a reflection of a state of opinion by no means unanimous. Orders for structural steel are coming in well, but it is doubtful whether orders for the shipbuilding industry will keep pace with the contracts completed. The firmer tendency of Continental prices, which has been a marked element in the market conditions of the last few months, has not yet abated, but it would be rash to count on its indefinite continuance. The apparently less favourable character of the April trade returns is due to a redressing of the import-export balance after the unusual conditions of the previous cold spell; for the first four months as a whole the returns show an improvement.

Engineering.—Activity has been well maintained during the past month, and it may be said that as yet there is no sign of any definite adverse influence. Actually the unemployment insurance index for the engineering trades as a whole, at April 22nd, was the lowest recorded for any month since 1920-21. Sections of the industry which are in a relatively favourable immediate position are:—Textile machinery, lifting machinery, machine tools, locomotives and marine engineering, although the current activity of the last-named branch must before long diminish unless there is a satisfactory maintenance of shipbuilding orders. There has occurred in recent weeks a slight recession in constructional engineering, and in the section devoted to prime movers, boilers and other power equipment. The foreign trade returns for machinery in April were somewhat disappointing. The decrease, however, was almost entirely attributable to the miscellaneous group; while perhaps the most gratifying feature of the returns is the definite, although slight revival in the activity and exports of the agricultural machinery section.

1929.			
January	92	122	99
February	92	126	101
March	88	126	97
April	86	145	100

On balance the index for this month is satisfactory. The Central Electricity Board has placed further orders to the value of £2¼ million, bringing th e total placed within the last twelve months to £8½ million. There are signs of activity in the industrial sphere; these have not yet been translated into orders, but the industry is expecting to benefit before long from the results of the rationalisation movement.

The Motor Industry.—The general position of the motor industry is satisfactory. The private car section has been active, both for home and export markets, and the commercial vehicle section has been fully supplied with orders. The motor-cycle industry continues to enjoy a large volume of export business, though the home market has been a little disappointing. The export of British motor vehicles, after a period of depression, seems definitely on the upgrade.

Cotton.—During the past month prices in the Manchester market have tended to favour buyers, chiefly owing to the decline in raw material rates. Although inquiry in yarn and piece-goods has been fairly extensive, trade has been slow in expanding. The outlook for supplies of American cotton has tended to improve, and fairly favourable advices are being received with regard to the prospects for the growth in Egypt. There has not been any general activity in piece goods for abroad. Most of the demand for India has run on dhooties and other light fabrics. News from China has not been of a character to stimulate trade, and owing to the abandonment of the Japanese boycott English goods are meeting with more severe competition in Shanghai. A fair miscellaneous business has been done for Egypt, the Near East and South America, but very little support has come from the Continent. Home trade demand has been fairly active. Spinners continue to experience a very unsatisfactory state of affairs. Egyptian spinners have abandoned short time after three months' working, but the situation in this section still leaves much to be desired, and buyers have operated from hand to mouth.

Wool.—Prices, especially those of fine crossbreds and merinos, are still tending downwards. The resultant uncertainty, together with the unsatisfactory state of the yarn market, is causing buyers to continue their cautious policy. In the piece-goods section some irregularity is being caused by the uncertainty as to the outcome of the Safeguarding inquiry. Resistance to proposed wage reductions may become widespread.

Linen.—The Irish fiax acreage is expected to show an increase over last year. Enquiry for piece-goods on export account is fair and home demand continues steady. In Scotland business has been quiet, but there are distinct signs of improvement.

Rayon.—The turnover in rayon yarns of all qualities in April has shown a considerable improvement on the previous month. Orders for low-grade viscose yarns have been more numerous, but the actual prices obtained have frequently been uneconomic. The stock position has been slightly relieved. Dress goods have sold well at home and abroad, but in other lines the overseas trade has remained quiet.

Boots and Shoes.—The slight improvement is maintained, and there has been more absorption of unemployed labour in the country districts, but the trade is still only moderately active for the time of year. Orders are still small, and mainly for immediate delivery.

Pottery.—The April trade returns show a continuation of the slow improvement in exports, with the United States still the best overseas market. Imports of general earthenware are still increasing. There is a slight increase in unemployment as compared both with last month and with last year.

Chemical Industry.—Chemical trade in general has been fairly satisfactory during the last few weeks. Creosote, dyes and ammonium sulphate are mainly responsible for this advance; potassium and sodium compounds in general still show a decrease. Drugs have also maintained the slight increase recorded last month. Prices have remained substantially unchanged over the month, with the exception of those for essential oils, which, after a period of fluctuation, are now steady on a dull market.

Building Trades.—Employment showed a further general improvement during April, especially in the skilled trades. The most unsatisfactory districts are still Wales, Northern Ireland and Northern England.

Agriculture.—Winter corn crops made little growth, and at the end of April were badly in need of warmth and moisture. Sowing of spring corn was completed under most favourable conditions, but cold weather prevented any material growth. Planting of potatoes was nearly completed. Preparation of land for root crops was generally more forward than usual. Pastures were bare and quite insufficient to carry the stock turned out to grass. Dairy cattle and sheep on roots have done moderately well, but milk yields of cows were slightly below average.

Shipping.—The freight market during May has been somewhat quiet, and rates have been irregular. The weakness of grain prices has had a restrictive effect on chartering from North America, but the Plate has continued to absorb a large volume of tonnage and a fair business in coal and miscellaneous cargoes has been available.

Retail Trade.—The continued cold weather has been against the fashion trade, and the Whitsuntide demand has been smaller than usual, otherwise retail trade generally shows an increase over the corresponding period last year.

UNITED STATES OF AMERICA.

Industrial activity continues at a record pace, and general business is well above last year's level, though prosperity is by no means evenly distributed. There is a slight diminution in activity in the cotton industry. Again the weak spot is the state of the money market. Uncertainty as to the Federal Reserve Board's intentions continues to temper the optimism engendered by the favourable industrial situation.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London, and may serve as an indication of the main features in the business situation as it existed last month:—

* Preliminary estimates made by Messrs. Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureaux of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices.

BRITISH EMPIRE.

Sowing in Canada is well advanced, and a considerable increase in the crop acreage is anticipated. Industrial conditions are still highly satisfactory, and in some lines manufacturing capacity is being strained to the utmost. The banks continue to keep a tight hold of the monetary situation.

The position in the agricultural areas of the Eastern States is at present distinctly favourable. Over South Australia dry conditions continue. Dairymen generally are in a satisfactory position, with grass well established and ample supplies of winter fodder assured.

India reports general rainfall towards the end of April and the prospects of crops are said to be fair to good. It is hoped that remission of the tea duty will increase consumption of Indian tea in Great Britain.

In South Africa rains have fallen during February in parts of the Cape, Transkei and Natal. The position of the manufacturing industries is, on the whole, satisfactory. The Government propose expending the sum recovered from diamonds on the rich State diggings in Namaqualand on gigantic irrigation and other schemes.

EUROPE.

In France the condition of the coal industry continues to be satisfactory. Activity in the iron and steel trades is sustained, though export trade is slightly less brisk. Conditions in the textile industries remain irregular.

The heavy industries in Belgium are still active, and both the home and the export markets for coal are satisfactory. The linen industry is still depressed, but there has been some improvement in the cotton and wool trade.

The German trade position improved during April, and employment increased rapidly. Coal production is well maintained. The iron and steel industries are envisaging the possibility of Germany's withdrawal from the international Cartel.

Apart from the fact that the money market is still inclined to be tight, business conditions in Holland are fairly favourable. The electrical industry is expanding, and other principal industries are showing satisfactory activity.

In Scandinavia trade conditions continue their gradual improvement. Norwegian foreign trade is slightly more satisfactory. The Swedish timber market is in a satisfactory position, and the paper pulp market is strengthening. The outlook in Denmark is regarded as satisfactory.

Economic conditions in Central Europe appear to be recovering from the set-back resulting from the bad weather early in the year. As far as can be seen at present the crop damage in Czechoslovakia is less than was originally feared. The Czechoslovakian china industry is in a satisfactory position. Trade conditions in Hungary are satisfactory, but the money market and Bourse reflect the uncertainties of the international credit situation.

SOUTH AMERICA.

The agricultural situation in Argentina is being affected by lack of rain in some of the inland districts, but ploughing operations for the next crops of wheat, linseed, and oats are proceeding near the littoral. The situation in Uruguay is generally satisfactory. The volume of retail sales in Chile appears to have increased, following the normally quiet summer season. A significant and substantial advance occurred in copper shipments, which attained as high a figure as 142,820,000 pesos, against 83,030,000 pesos. The growth in the foreign trade of the Republic is reflected in a corresponding increase in the Customs revenue for the period. In Brazil, stringent credit conditions continue to depress business. Trade conditions in Peru remain seasonally dull, although encouraging reports have been received from the agricultural districts. Colombian conditions show little change; the monetary situation continues stringent. Shipments of coffee from Guatemala during March were heavy. Some 70 to 75 per cent. of the last crop has already been exported, and only a small proportion of the yield remains unsold. Heavy exports of coffee have also taken place from Salvador, where the cheaper grades have continued in good demand. This season's crop of the commodity in Nicaragua turned out short, but prices have remained firm, and the outlook for the next harvest is promising.

FAR EAST.

Japanese foreign trade improved in April, but exports have not yet regained the level of last year. There is some tendency to a stringency in the money market, and the share market is dull. The Chinese market continues to be erratic and the outlook for the cotton industry is uncertain. There are indications of general labour unrest, but no serious demonstrations have taken place recently. Moderate rains in North China give promise of a fairly normal wheat crop.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods:—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

As compared with the corresponding figures for last year the April figures show a decided improvement, fairly evenly spread over all sections. Indications point to a maintenance of this higher level.

INDICES OF BUSINESS ACTIVITY.

THE picture presented by the latest figures of our Index Numbers of Business Activity is on the whole satisfactory. Despite one or two disappointing features, it suggests that up to the end of April, at any rate, industry succeeded in avoiding the recession which has repeatedly occurred at this period in recent years. Indeed, not only does the ground gained gradually since last Christmas appear certainly to have been maintained, but in some directions—even when full allowance is made for the fact that only half the Easter holidays fell this year in April—there are signs of further improvement.

Bearing in mind that the monthly figures in the following table are three-monthly averages, it will be noted that the four indices of volume of employment continue to record a steady recovery. In the case of "Heavy" industry the index figure for the single month of April (before averaging) showed a decline as a result of greater unemployment among coal miners, but, even so, the April figure was appreciably better than that for January, and the "corrected" average registers an increase over March. Among other industries improved demand for labour last month was fairly general, and in this respect the situation is now much as it was a year ago, before last summer's unfortunate reaction.

Another encouraging feature is the substantial betterment in the index of consumption of iron and steel. As an offset to this recovery, the indices of cotton consumption and of retained imports of raw materials in general have fallen somewhat more heavily than should be expected at this season on the analogy of their trend in recent years, but it should be remembered that both these indices rose so markedly in the early months of 1929 that a compensatory decline is not surprising. The fall in the index of exports of British manufactures is similarly attributable largely to the fact that in January (the month now excluded from the current average) exports were abnormally large.

With regard to the remaining index numbers, consumption of power appears to have been maintained at a good level; shipping movements still keep ahead of last year; and non-ferrous metals are entering into consumption at a satisfactory rate. Moreover, though the volume of provincial bank clearings has a downward tendency which is disquieting at this season of the year, the index of London bank clearings is maintained at a high level. Since Stock Exchange and other purely "financial" turnover has not been great of recent months, it is possible that the relatively greater increase of London clearings, in comparison with the provincial figure, during the past three years, is in part an interesting reflection of the shift of industry from north to south—a movement accompanied by the concentration of head offices in the capital.

A glance at the comparative figures of the entire series of indices for the month of April in each of the past six years will serve to show that, except in the case of "Heavy" industry, the general situation of British trade has undoubtedly improved in the lifetime of the late Government. The trouble is, firstly, that the improvement has failed sufficiently to out-distance growth of population and, secondly, that mal-adjustment between supply and demand in particular areas, types of productions, and classes of labour has not yet been overcome.

The Economist
MONTHLY SUPPLEMENT.

New Series. SATURDAY, JUNE 29, 1929. No. 73.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

In one respect, the past few weeks have been the most notable period of the year, for they have definitely confirmed previous hopes that the set-back to trade witnessed in the early summer of recent years has this time been escaped. It would be wrong to say that trade has recently made substantial progress, but despite the General Election and the obscure monetary outlook, the volume of the first quarter of the year has been well maintained, and this in itself is a great gain. The May export figures were most encouraging, iron and steel production was better than in April, and railway receipts were higher. The unemployment percentage, it is true, was still unchanged in the aggregate, but improvements were recorded during May in such staple industries as building, constructional engineering, transport services and the linen trades. Declines were registered in general engineering and the pottery trades, while certain extensions of holiday stoppages also added their quota to the unemployment returns. In the coal trade, an increase in temporary stoppages outweighed a decline in the numbers wholly unemployed.

Regarding the unemployment figures as a whole, they suggest that there has been a definite decline in the numbers permanently out of work, and if this interpretation is correct, it shows that on balance the changes have been in the right direction. This is in accordance with the general course of trade. The engineering industry is now taking a definitely hopeful view, while the iron and steel trades are feeling some degree of assurance at any rate for the next three months. Textiles remain weak. The stability in cotton prices has so far proved of little benefit to the industry, and the woollen and worsted trades are still failing to make any real progress.

The industrial world has received the result of the General Election and the advent to power of the Labour Party with almost complete equanimity. Without entering into purely political questions, it may be said that once the result of the election was known, much of the prevailing uncertainty disappeared, and the entry into office of Mr MacDonald and his colleagues caused few initial qualms. On one or two points, such as the safeguarding question, certain trades are anxiously awaiting information of the new Government's intention, but in general the industrial world is disposed to give the new administration a chance to prove itself.

A matter that is receiving far more attention from traders is the monetary outlook. A 5½ per cent. Bank rate has now been in force for nearly five months, and during that period the Bank has succeeded in adding to the gold stocks, but even so the higher rate has failed in one of its main objects, namely that of bringing the American exchange back to parity. For the last few weeks, the exchange has indeed been at or below the lower gold point, and over £1,000,000 of gold has been withdrawn from the Bank for America and an additional £13,300,000 for Germany. It is true that this may be due to special circumstances, but it means that the outlook for the autumn is not encouraging, and the possibility of a 6½ per cent. rate has to be envisaged. There is no purpose in burking the fact that such a rate would impose a heavy burden upon many traders, and if any hesitancy is now apparent, it may well be ascribed to that cause. Even to-day, there are one or two general signs of weakness. The price-level has lately had a downward trend, and imports of raw materials were the least favourable section of the May trade returns.

To sum up, it is a distinct gain that the early summer set-back has been escaped, and that the change of government has had no unsettling effect upon trade. There seems good ground for hoping that the summer of 1929 will compare favourably with those of previous years. The danger lies in the autumn, and all that can be said to-day is that there are still three months to elapse, during which time events may well dispel present apprehensions. It is, perhaps, wisest to-day not to seek to look too far ahead.

News from the Empire is on the whole good. Rain is needed in the Canadian prairie provinces, and this is holding back business a little. Weather conditions are variable in Australia, and there is little change in the general trend of business. The South African situation remains satisfactory, and, in India, rainfall has been normal everywhere except in Assam, where damage has been caused by floods.

American industrial activity is well maintained, though

* Average weekly figures.

not in every respect quite up to the records registered during recent years. Still a substantial advance on the general level of last year has been recorded. Little change has taken place in Europe, where the heavy industries remain good, and the textile trades less satisfactory. The business outlook in Germany has become a little more encouraging. In South America, more rain is needed in the Argentine. Brazilian trade is restricted by credit stringency, but Chilean news is more encouraging. In the Far East the political outlook in China has become less hopeful.

HOME INDUSTRIES.

Coal.—Export markets remain firm, though South Wales complains of excessive supply of large coal and of a certain shortage of tonnage. The North-East Coast is fairly well booked up for the rest of the year. The house-coal trade is experiencing its usual summer slackness, but the demand for steam and industrial coal is fairly well maintained, with a tendency towards improvement.

Iron and Steel.—This industry has so far succeeded in escaping the usual summer setback, and the outlook seems to be assured for the next two or three months. By that time it is feared that fresh plant will have been brought into operation on the Continent, and this may deprive British makers of part of their present trade. Meanwhile, there is a definite shortage of Cleveland pig iron, and prices have an upward trend. Quotations for selling manufactured products are also firm, and Sheffield reports a better demand for certain kinds of finished steel.

Engineering.—The outlook here is hopeful. Employment is well maintained and no apprehension is being aroused by the advent into power of the Labour Government. The weak spot in the industry is the fact that prices are still unremunerative, but it is recognised that, even if the volume of production has improved, it must take some time for prices to recover. The marine engineering branch is good, and construction engineers are now a little better placed than three months ago. The textile machinery section is also improving, though, apart from one big order, there is no definite news of further business from Russia. Agricultural engineers have improved their ground a little, but have still much leeway to recover. Makers of prime movers, boilers, etc., are steady, but the machine-tool section has definitely lost ground.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925.

March	88	126	97
April	86	145	100
May	84	143	99

Activity is well maintained, and the general tone is hopeful. Trade has lately consisted of a large collection of small orders. In the export markets Europe has placed a few orders for generating plant, switchgear, meters, &c., and one or two large government contracts for telephone and telegraph material. There is a revival in inquiries from India and South Africa.

Motor Industry.—In the private car section a satisfactory demand is maintained, while exports show a further improvement. The commercial vehicle section shows no sign of slackening, and exports continue at a high level. In the cycle and motor trade a high demand from overseas is still being experienced, though the home market appears quieter.

Cotton.—Only minor fluctuations have occurred in raw material rates, and quotations for most yarns and piece-goods have been unchanged. Notwithstanding such favourable conditions, the trade has been disappointing, and most spinners and manufacturers have lost ground. There has been very little alteration in the prospects for supplies of raw cotton, improved crop reports being offset by news of impending boll-weevil danger. Rather more favourable crop advices have recently come from Egypt. The general inquiry in piece-goods for abroad has been poor. Advices from India have not been at all encouraging, but towards the end of the month improved news has been received from China. With the exception of South America, the minor outlets have not given active support, but steady buying has taken place in home trade goods. It has been a poor month for spinners of American yarns, while operations in Egyptian yarns have been irregular.

Wool.—Prices have lately shown signs of greater stability, but producers are still unwilling to make any forward move, and are awaiting the London auctions of next month. Demand consequently is at a low ebb in all sections of the industry.

Linen.—Demand for yarn remains firm, but there are few signs of expansion. Prices are still unremunerative. Quiet conditions prevail in the weaving section, but this is usual at this season of the year.

Rayon.—There has been a further substantial increase in demand for rayon, but the improvement has been almost entirely for yarns for manufacturing home trade fabrics. Producers of acetate yarns are behind with delivery of certain qualities. There has been a bigger turnover in low-grade viscose yarns. Price-cutting has continued, though lately there has been a slightly harder tendency.

Boots and Shoes.—Shoe manufacturers are busier, and many now have enough orders in hand to last them for some weeks to come. Sole leather is in better demand.

Pottery.—The May export figures are regarded as encouraging, but unemployment shows little signs of improvement, and much short time is still being worked. Some apprehension is felt over the new American tariff, which, it is feared, will abolish the preference now given to British bone china over Continental felspar china.

Chemical Industry.—The improvement noted a month ago has been well maintained during May, overseas trade showing an increase over the corresponding month last year. This increase is chiefly due to an advance in ammonium and sodium compounds, drugs, medicines and dyes. Overseas trade in coal-tar products has reacted since April, this being largely due to a decrease in exports of creosote. Home prices have remained more or less steady over the month, markets being quiet as a result of the Whitsun holiday and the General Election.

Building Trades.—Conditions are now variable, as while there is a considerable amount of unemployment in certain trades and in certain parts of the country, elsewhere a shortage of bricklayers is reported. The fact that the housing subsidy is due to be reduced in September means that a certain amount of overtime is being worked in order to complete houses in time to rank for the subsidy at its present level.

Agriculture.—Cereals improved during May, but were still rather backward owing to lack of moisture and warmth. Early potatoes were expected to be up to average, and the main crop, where showing, looked well and healthy. Sowing of mangolds and sugar beet was practically completed, and, where showing, plants appeared strong and healthy. Although somewhat backward, hops appeared a fairly good plant. Yields of seeds and meadow hay were expected to be well below average. Live-stock did fairly well under the dry conditions, although there was a deficiency of grass. Milk yields were about up to the average.

Shipping.—A moderately active business is reported in outward coal chartering and rates in the near Continental trades are firm. With regard to homeward markets, Argentine demand for tonnage to load maize has been well maintained. Elsewhere business has been quiet, North America and Eastern requirements being small, and the general level of cargo freights has a declining tendency.

Retail Trade.—The more seasonable weather has stimulated an improvement in trade. Retail business generally shows a good increase over the corresponding period last year.

BRITISH EMPIRE.

In Eastern Canada good weather has been experienced, but the prairie provinces are badly in need of rain. Business conditions are more or less stationary, as dealers are hesitating till the forecasts of the western crop are more reassuring. Industrial activity, however, is maintained at a satisfactory level.

There has been little change in business conditions in Australia during the past month. Good rains have fallen over the greater part of Victoria, but rain is required in Northern Mallee and also in the Western Central and Western Riverina districts. New South Wales also requires rain. Seasonal conditions in Queensland are generally favourable and in Western Australia good, but dry conditions prevail in South Australia.

Conditions in South Africa in both wholesale and retail trading centres during the past month have been satisfactory. Good rains have fallen, and the farming outlook is generally good. The latest estimates of the maize crop indicate that there will be an exportable surplus equal to that of last season. The prospects for the citrus crop remain good. Sugar crop conditions remain satisfactory. The wool market is easier.

In India, with the exception of Assam, the weather and rainfall have been normal, and standing crops are doing well. Assam crops, however, have suffered considerable damage from flood, but Bengal jute crop prospects are very fair.

UNITED STATES OF AMERICA.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London, and may serve as an indication of the main features in the business situation as it existed last month:—

AMERICAN TRADE STATISTICS—MAY, 1929.

* Preliminary estimates made by Messrs. Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureaux of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices.

Business and industrial activity was unusually high during May. The steel industry operated at over 85 per cent. of its capacity. Automobile production, though slightly reduced, continued at its record pace, and construction contracts were of good volume though slightly below last year. Car loadings established a record for the season, and wholesale and retail trade in general was well above the 1928 level.

EUROPE.

In France the coal and iron trades remain firm and active. An improvement was recorded in the textile industries during last month. The coal trade in Belgium is very active, and consumers are finding it difficult to fill their needs. The iron and steel trades are well maintained. The textile industries show few signs of improvement.

In Germany railway traffic has lately increased, while other encouraging signs are an expansion in the consumption of coal and a decline in unemployment. Manufacturers generally are complaining of a shortage of capital. The output in the heavy industries is satisfactory, but reports from the textile trades are variable.

Business conditions remain quiet in Italy, but some improvement has taken place in the motor and textile industries.

Norwegian crop prospects were hopeful at the end of May, and unemployment generally is better. Timber prices are firm. In Denmark agriculture has benefited from favourable weather conditions, and unemployment generally has been lower for the time of year than it has been since 1925. In Sweden some anxiety is felt as to the world monetary outlook, but paper and pulp prices are firm. Timber sales are making good progress, and there has been a definite improvement in the steel and engineering trades.

The Austrian iron industries remain fairly active, but no improvement is reported in the textile trades. The unemployment figures are better, but this movement may be seasonal. Producers in both Austria and Hungary are viewing the monetary outlook with some anxiety.

SOUTH AMERICA.

Argentine conditions have continued to be affected by insufficient rainfall. Latterly an improvement in this respect has been reported, but further rains are needed. The quantity of wheat available for export is considerably heavier than was the case this time a year ago, but that of linseed somewhat less. Substantial gold shipments have been arranged from Buenos Aires both to New York and London, but there can be no doubt of the ability of the Republic to sustain such exports if necessary for a considerable period. The situation in Chile continues satisfactory, mining and industrial activity and good agricultural crops marketed at enhanced prices having all contributed towards an expansion. There is still no sign of any improvement in Brazil, where credit conditions remain stringent. In the Sao Paulo coffee-growing areas the weather, though colder with some hail, continues generally favourable. Peruvian raw cotton markets have been more active, but business in sugar has been very quiet. Elsewhere business is generally quiet. Mail advices from Colombia indicate that the state of the river Magdalena is good, and that a larger proportion of the coffee crops than had been expected is likely to be gathered this season. In Ecuador the movement of the cocoa crop is slow, and business in coffee is quiet pending arrivals from the new harvest. Shipments of coffee from Guatemala are taking place normally. In Salvador the unwashed brands of coffee have been in considerable demand, but large stocks of washed coffee remain in the hands of dealers.

FAR EAST.

Money rates in Japan were easy during early June, but bonds and shares are dull after a short rally. At the first spring cocoon auctions held at the end of May slightly higher prices were obtained. Recent cables from Shanghai are to the effect that there is an improved demand for cotton goods from Yangtse districts, and prices had a slight upward trend. Internal trade, however, is depressed as a result of the uncertain political outlook and the prospect of further hostilities.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods:—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Ship-building, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles Cotton, and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

Current figures continue to compare favourably with those of a year ago. The textile index is perhaps the weakest spot.

INDICES OF BUSINESS ACTIVITY.

From the latest evidence afforded by the movements of our series of Index Numbers of Business Activity the conclusion emerges that the upward trend manifested by British industry during the first four months of 1929 was continued up to the end of May. The improvement has not been pronounced or uniform, and in certain directions the indices for the last three months' averages are not altogether satisfactory or encouraging for the future; still, when allowance is made for the fact that the month of May was broken this year by the Whitsuntide holidays, the impression conveyed by the Index Numbers as a whole is that a critical season has been passed without the onset, so far, of any visible industrial reaction.

Turning, in the first instance, to the least reassuring elements in the picture, it will be observed that the "corrected" three-monthly averages ending with May show a decline in the case of consumption of coal and electricity, employment in "heavy" industry, provincial bank clearings, and London bank clearings. The cause of the recession in the last-named index, whose current level is still well above that of the past five years, is clearly the curtailment of new issues and of Stock Exchange activity which relatively dear money has produced during the past quarter. Of greater significance in direct relation to the activity of internal commerce is the downward course of the index figure of provincial bank clearings. This index, it may be recalled, is adjusted to allow for changes in the average level of commodity prices; and, while a seasonal decline is to be expected, on the analogy of the past years, between February and August, the latest figure, 101, is the lowest for the month of May recorded (except in 1926) since 1924.

On the other hand, it will be seen that net imports of raw materials and non-ferrous metals make a strikingly good showing; that shipping movements continue to record the greatest activity witnessed since the war; and that the index of British manufactured exports is distinctly favourable. Foreign trade, in short, appears to be slowly but surely expanding in the aggregate, if not in all branches, and it is somewhat surprising, therefore, to find a sagging tendency in the figure of provincial bank clearings. Last month we suggested that the explanation might lie in the tendency discernible lately for the head offices of many industrial concerns to be transferred from provincial cities to London. Another possible explanation, however, is that turnover of business in the home trade is not keeping pace with the expansion of exports.

If this be so—a conjecture which cannot be verified in the absence of data regarding stocks in distributors' hands—we may perhaps have to expect an adverse reaction on employment in future months. Up to the end of May, however, with the exception of a slight seasonal contraction in the numbers at work in the coal fields, the indices of employment maintained their recent rate of recovery, the improvement being well "spread" over the range of industrial occupations. Moreover, though the indices of power consumption, following their normal seasonal trend, showed a fall last month, the mean of the figures for coal and electricity combined compares very favourably with the corresponding figure for May in previous years.

With regard to the other indices in the series, the apparent consumption of cotton increased last month in compensation for the reduced visible intake of April, whereas the internal consumption of iron and steel declined on the month (the rise in the "corrected average" reflects improvement as compared with February) higher home production being more than offset by increased exports. Rubber consumption continued to run high, and postal traffic was well maintained.

In conclusion, it may be noted that, if the years 1926-27 be omitted as a period distorted out of its true perspective by the coal stoppage and its temporary aftermath, the only indices which do not point to greater activity in May than in the corresponding month of any year since our Index Numbers were begun are those of coal, iron and steel consumption, employment in "heavy" industry, and provincial bank clearings. Allowing for these exceptions, the remaining indices reflect an expansion of industry which is no small achievement for this country to have accomplished in five difficult years.

THE PAST YEAR.

No reader can rise from a conscientious study of the pages which follow this article without the predominant impression that, so far as Great Britain is concerned, 1928 was a year of disappointment. The outward and visible sign of this disappointment was that the year on balance showed an increase of around 14 per cent. in the volume of registered unemployed; and the disappointment was keener because the year started with an upward movement in trade and industry, which, after three or four months, faded away unaccountably and unexpectedly. Once again the dark side of the picture is represented by our basic industries, with coal still in the deepest depression of all. But while this *malaise* of our basic industries must necessarily loom large, it should not cause us to forget that a host of lesser industries enjoy activity and even prosperity. Apart from the coal-mining areas, the South of England may almost be said to have had a prosperous year. But looking at the situation as a whole, one has to admit that the total volume of production, after starting on a rising curve, ended the year below the level at which it started.

Having fully admitted the disappointments, we find some justification for regarding 1928 as a year of no small promise for the future. Quite possibly it will be remembered in history as a year in which the foundations of recovery were laboriously laid. It was a year of realisation and of facing facts. It seemed to bring a change in the mental attitude of industrialists from the idea that revival would come by itself to the painful conviction that it could only come through sacrifice and arduous self-help. This conviction was reflected in some very important beginnings of the great task of reorganising the chief industries of Britain on a basis of greater efficiency as regards both production and marketing. Hopeful, too, for the future is the spade-work that has been done by the Melchett-Turner Conference towards the establishment of secure peace and more effective co-operation between the partners in industry.

In the realm of domestic trade and finance there are perhaps three particular features arising out of the detailed reviews given on the later pages of this issue which call for special attention. In spite of a setback in the summer, the returns of overseas trade for the full year reveal at least some improvement on those of 1927, and there was a reduction of nearly £35 millions

in the import excess on the published merchandise figures. It is probable that the country's final balance of international payments was last year more favourable than for a number of years past. That is one feature. Another is that, thanks to the prescience of the Bank of England, money rates were stable throughout the year. The Bank has been severely criticised in some quarters because it failed to take advantage of the influx of gold early in the year to reduce its discount rate and broaden the basis of credit. The answer to that is that if the Bank had done so the subsequent drain on gold would in all probability have been intensified with the result of an autumn Bank rate higher than that which has actually been in force. The stability which the Bank secured in monetary conditions was definitely preferable in the national interests to a lowering and subsequent raising of the rate, which would have brought with it both disturbance and disappointment. The third feature to which we referred was the activity on the Stock Exchange and new capital markets, which ended with fluctuations until the close of the year, when the King's illness cast a shadow over markets. This activity was not from all points of view wholesome. It centred mainly in shares connected with luxury trades. Fierce speculation and a series of boom fluctuations will, as some events already show, leave a trail of trouble for many rash investors.

In public finance the year was possibly the least eventful since the war. Government conversion issues were limited to dealing with short-dated securities which had practically passed into money market hands, and the Budget introduced by Mr Churchill in April centred on one main idea which was favourable to trade and industry. The de-rating scheme around which Mr Churchill's fourth Budget was built has the sound aim of relieving productive industry from taxes levied in an unsatisfactory and illogical manner, and although it is open to substantial criticism from many points of view, it will in the course of time bring some relief where relief is wanted. The de-rating scheme, however, has this corollary; it means that Mr Churchill has mortgaged revenue to such an extent that it will be very difficult for him within the limits of sound finance to produce a popular Budget to lay before the electors.

In the international sphere there were one or two outstanding events—all of a favourable nature. The prosperity of the United States continue. M. Poincaré, by legally stabilising the French franc on a gold basis, rounded off the work of post-war financial reconstruction in Europe. The closing weeks of the year brought a very welcome change in China, and hopes are now high that the long years of civil war are over and are to be replaced by something approaching unified government and a growth of confidence and economic well-being. This change should redound to the advantage of our exporting industries, in particular to that of Lancashire. Last but not least the signature of the Kellogg Pact has provided the statesmen of the world with a new foundation on which, by their wisdom, they may rear a structure of firm international security.

On the whole the new year 1929 has started under fairly favourable omens, and of all omens the formation of the Lancashire Textile Corporation is perhaps the most favourable. This event adds a very important chapter to the story of reorganisation with which much progress was made last year. It is sometimes assumed that a general election must create a substantial disturbance to trade. But there seems to be little reason why this half-truth should be applicable to the election to be held during the summer. The Labour Party have unmistakably gravitated from revolutionary Socialism to a very much milder level of economic proposals. If we are not mistaken the country has in the past year come to realise more clearly than before that the causes of its troubles are many-sided and cannot be cured by any one specific remedy. With this realisation growing apace we expect to see the common sense of the electorate give short shrift to pro-proposals for wild and dangerous experiments.

OVERSEAS TRADE.

In comparing the 1928 figures with those of previous years, three important facts must be borne in mind. The first is that the early months of 1927 were governed by the abnormal conditions which were the aftermath of the coal stoppage. Imports of coal and iron, in particular, were unusually heavy. The next is that prices generally were lower in 1928 than in 1925, to an extent which probably more than accounts for the percentage decline in imports and exports between the two years. The third is that one cause of this year's fall in the value of re-exports is the collapse of rubber prices that occurred last spring :—

CALENDAR YEAR.

	1928.	Inc. or Dec. on 1927.		Inc. or Dec. on 1926.	
	£	£	%	£	%
Imports	1196940354	— 21,400,796	— 1·76	—123,774,836	— 9·4
British exports	723,427 455	+ 14,346,192	+ 2·0	— 49,053,247	— 6·5
Re exports	120,352,491	— 2,600,348	— 2·1	— 33,684,308	— 21·8
Total exports	843,779,946	+ 11,745,844	+ 1·4	— 83,637,555	— 9·0
Excess of imports over total exports	353,160,908	— 33,146,640	— 8·6	— 40,137,281	— 10·2

If due regard be paid to these factors, the 1928 figures compare quite favourably with those of preceding years. The improvement is not sensational, but there is distinct evidence of its existence. In particular, as the following table shows, the adverse balance was not only less than that in 1927 for the first four months of each year, when 1927 was subject to abnormal conditions, but also for the last eight months, when no distorting influence was at work. This table also illustrates both the unfortunate setback which occurred in the summer of 1928 and the extent to which the ground so lost was recovered in the autumn :—

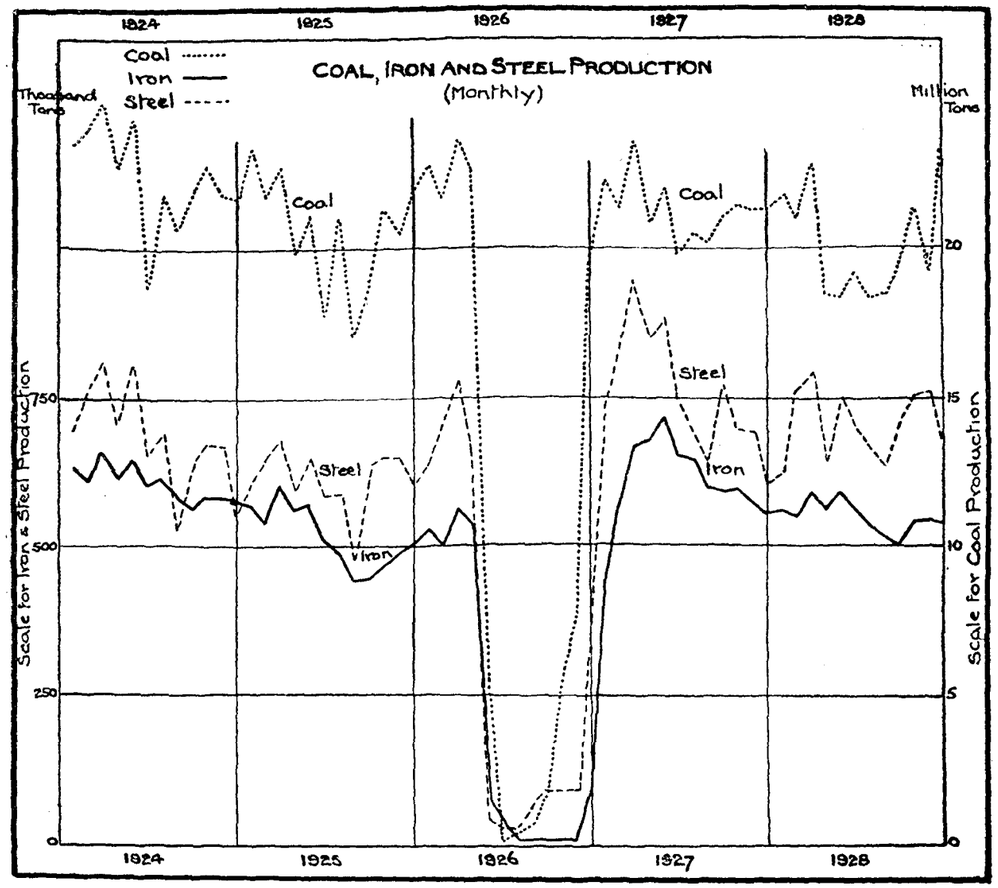
MOVEMENTS of MERCHANDISE TRADE BALANCE.

	Imports in 1928	Total Exports in 1928	Excess of Imports in 1928.	Excess of Imports in 1927.	Excess of Imports in 1925.
	Million £	Million £	Million £	Million £	Million £
January	100·4	70·0	30·4	48·3	46·6
February	98·8	68·9	29·9	30·2	27·0
March	110·5	76·2	34·3	40·6	29·7
April	96·8	66·2	30·6	36·3	37·1
First four months	406·5	281·3	125·2	155·3	140·4
May	99·4	70·4	29·0	20·8	25·6
June	99·4	71·0	28·4	32·7	41·5
July	95·4	69·3	26·1	27·6	22·5
August	97·7	71·0	26·7	21·9	17·2
September	87·7	63·5	24·2	32·7	26·7
October	102·6	73·2	29·4	34·4	28·4
November	106·8	74·6	32·2	26·2	40·1
December	101·4	69·5	31·9	36·3	53·9
Last eight months	790·4	562·5	227·9	232·6	255·9
Full year	1,196·9	843·8	353·1	387·9	396·3

To consider the 1928 returns in greater detail, the next table shows them distributed into the three main categories of foodstuffs, raw materials, and finished goods. The decline in foodstuffs is probably a matter of price. Raw material imports are discussed later. Trade in finished articles is on the whole reassuring. Comparing the 1927 and 1928 exports, we have recovered at least an appreciable part of our lost ground :—

	1925.		1927.		1928.	
	Retained Imp'rts	Exports.	Retained Imp'rts	Exports.	Retained Imp'rts	Exports.
	Mln. £	Mln. £	Mln. £	Mln. £	Mln. £	Mln. £
Food, drink, and tobacco	538·0	55·0	512·8	52·3	504·4	54·3
Raw materials and articles mainly manufactured	334·5	84·4	280·8	76·4	268·3	70·2
Articles wholly or mainly manufactured	288·1	616·6	297·3	564·0	292·0	578·6

These views are reinforced by the following table. This illustrates the falling-off in our coal exports, and also places in its proper perspective the present agitation for the safeguarding of iron and steel. Since 1927, imports have fallen from £33·7 to £23·9 millions, which is hardly evidence that "abnormal"



foreign competition exists to-day. In contrast to the imports, exports are moderately well maintained :—

	1925.		1927.		1928.	
	Retained Imports.	Exports.	Retained Imports.	Exports.	Retained Imports.	Exports.
	Mln. £.	Mln. £.	Mln. £.	Mln. £.	Mln. £.	Mln. £.
Coal	0·02	50·5	6·6	45·5	0·04	39·1
Iron and steel and manufactures thereof	23·7	67·9	33·7	69·4	23·9	66·8

Finally come two tables showing in detail imports and exports of some leading commodities. Taking imports first, 1928 does not perhaps compare very favourably with the previous years, though possibly if the 1927 returns were corrected for the abnormalities of the first four months of that year, the comparison would be more reassuring :—

SOME FOODSTUFFS and RAW MATERIAL IMPORTS.

	Quantity.			Value per Unit.		
	1925.	1927.	1928.	1925.	1927.	1928.
				£	£	£
Coal tons	10,944	2,419,310	27,252	1·85	2·73	1·45
Raw cotton centals	18,941,929	15,483,393	15,057,681	6·53	4·27	5·25
Sheep and lambs' wool ,,	7,268,591	8,219,899	7,807,141	9·88	7·29	7·75
Flax, hemp, and jute tons	336,281	399,826	332,284	52·1	38·4	39·0
Raw rubber centals	1,957,593	3,245,794	2,460,839	14·2	7·64	4·65
Beef cwts	13,740,607	14,464,452	13,334,194	2·68	2·39	1·09
Mutton and lamb ,,	5,474,392	5,522,557	5,645,883	4·10	3·16	3·46
Wheat ,,	96,854,178	110,435,815	103,578,380	0·710	0·616	0·556

Tea lbs	490,566,747	537,001,747	509,975,917	0·077	0·077	0·070
Tobacco ,,	190,838,270	223,646,125	220,925,108	0·089	0·086	0·081

Exports are more satisfactory. Our coal shipments are little below the 1925 level, and iron and steel exports are the best since 1923, the year of the Ruhr occupation. The same applies to textile machinery, while machinery in general has in 1928 outstripped every year given in the table. The weak spot is textiles, all of which are relatively bad :—

SOME LEADING EXPORTS.
Quantity (000's omitted).

The final point of interest is our real balance of trade. The official estimate has not yet been issued, but there seems no doubt that it will reveal a substantial improvement upon last year. In fact, the 1928 surplus may well turn out to be the largest since 1922.

HOME TRADE.

Industrially, the history of 1928 was disappointing During the first quarter of the year the steady expansion in business activity which characterised 1927 appeared to be continuing. After the Easter holidays, however, there came a check to progress, and, as the spring turned to summer, signs of a definite setback became more pronounced. The percentage of unemployment among insured workpeople rose from 9.6 per cent. at the end of April to 11.7 per cent. at the end of July, and at the end of the year was 11.2 per cent., in comparison with 9.8 per cent. at the end of 1927. The causes of the recession are obscure. On the whole it would appear to have been failure of the home market rather than of export demand, which occasioned a halt in industrial progress, since our manufactured exports continued throughout the year to make a rela-

tively satisfactory showing. At the end of the year there were indications of recovery, slow, partial, and hesitant.

* * * *

In the following table we summarise certain of our index numbers of business activity :—

(1924 = 100.)

Annual average.	1925.	1926.	1927.	1928.
Net imports, raw materials	107	107*a*	113*a*	101
Consumption of—				
Iron and steel	89	57	133	88
Cotton	116	98	113	103
Rubber	137	175	197	212
Consumption of fuel—				
Coal	93	72	106	99
Electricity	101	92	109	110
Employment in "heavy" industries	90	57	87	81·5
Total volume of employment	101	95·5	105	105
Postal traffic	103·5	103·5	109·5	114
Provincial clearings	102	94	102	100·5

a Excluding coal imports.

The foregoing figures corroborate on the whole the conclusion that trade expansion was definitely arrested last year, and that in some directions a fresh depression developed. On the other hand, the figures of total volume of employment and consumption of electricity suggest that the set back was partial, and that in many sections of industry a satisfactory rate of activity was maintained.

* * * *

Once again it has to be recorded that the least encouraging features in the industrial picture were provided by the "basic" trades. The coal industry, despite various schemes for "concerted selling," continued to make heavy losses though low prices. The iron and steel trades were depressed throughout the year, but during the last quarter faint signs of slight revival were apparent. The older textile trades, both cotton and wool, suffered from poor export business, but the rayon industry continued to progress. Building was quiet. Retail trade was fairly well maintained.

* * * *

Our statistics of the profits of joint stock industrial companies record for 1928 a substantial recovery in net earnings. The accounts of 1,709 concerns whose reports were analysed last year showed an increase in net profits of 7.2 per cent. over those earned by the same companies in their previous financial year. The quarterly figures are as follows :—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in 1927.	Reports Published in 1928.	Increase. £	Increase. %
First quarter	504	£ 53,645,330	£ 61,822,534	8,177,204	15·2
Second quarter	556	57,729,860	58,477,637	747,777	1·3
Third quarter	237	21,170,777	23,221,775	2,050,998	9·7
Fourth quarter	412	35,036,441	36,120,801	1,084,360	3·1
	1,709	167,582,408	179,642,747	12,060,339	7·2

A year ago an average decrease of 3 per cent. was disclosed, in comparison with an increase of 6.3 per cent. in 1926, and 8.7 per cent. in 1925. The present increase of 7.2 per cent., which reflects a satisfactory recovery from the set-back occasioned by the industrial troubles of 1926, was accounted for mainly by higher earnings of breweries, iron, coal, and steel, shops and stores, textiles, and "miscellaneous" companies. The profits of rubber-producing concerns, whose substantial increase in 1926 tended to obscure in these statistics the adverse effects of the coal stoppage, recorded last year a heavy decline, and oil earnings also showed a striking fall. Our analysed figures of profits may therefore be taken as indicative of distinctly better conditions in "home industries" proper, at least during periods up to June 30th of last year—since there is a "lag" of three to six months on the average between the end of the companies' working years and the publication of our quarterly statistics.

In 1928 the ratio of profits to total ordinary and preference capital rose from 10.5 to 11.1 per cent. On the other hand, as may be seen from the following table, there was a further fractional decline in the average rate of dividend paid on the nominal amount of ordinary capital :—

PROFITS on CAPITAL.

	Return on Preference & Ordinary Capital. %	Average Dividend on Preference Capital. %	Average Dividend on Ordinary Capital. %
1909	7·4	4·3	6·3
1910	8·2	4·5	7·0
1911	9·9	4·9	8·5
1912	10·2	5·2	8·5
1913	11·7	5·1	10·2
1914	10·9	5·0	10·0
1915	10·2	4·8	9·0
1916	13·2	5·1	11·0
1917	13·3	5·1	10·3
1918	13·6	5·1	11·1
1919	13·0	5·3	10·7
1920	15·2	5·0	12·6
1921	10·3	5·2	10·2
1922	7·0	5·2	8·4
1923	9·8	5·3	9·3
1924	10·3	5·4	9·8
1925	10·9	5·5	10·3
1926	11·3	5·4	11·1
1927	10·5	5·3	10·8
1928	11·1	5·4	10·6

The average rate of interest paid on debenture capital was 5.02 per cent., as compared with 5.08 per cent. last year, while the ratio to total ordinary and preference capital of the amounts carried to reserve was higher at 2.5 per cent., against 1.8 per cent. in 1927.

* * * *

Taking the year as a whole, whole-cargo shipping freights in 1928 were lower than in any year since 1911. Our index number of "tramp" charter rates shows a mean figure for the year of 98.8 (1913 = 100), as compared with 109.6 for 1927, 102.5 for 1925, and 113.4 for 1924. During the first six months of the year cargo tonnage available greatly exceeded demand. During the autumn, however, grain chartering was active, and an all round improvement in freights occurred. The total volume of traffic (laden and partly laden) was well maintained, and passenger lines are reported to have had a moderately good year. The total amount of tonnage in the world is still substantially in excess of current requirements.

Competition from road transport continued to effect the railway companies adversely, as regards both passenger and goods traffic. It will be seen from the following table that total freight train traffic declined in the first ten months of the year by no less than 7·3 per cent. in comparison with that of 1927, decreases being shared more or less evenly by merchandise, minerals, and coal.

Description.	Great Britain. (All Standard Gauge Railways.) Aggregate, Jan.-Oct., 1928.	Inc. (+) or Dec. (-), compared with the corresponding period of 1927. Units.	Per Cent.
Freight train traffic (excluding free hauled)—	Tons.	Tons.	
Merchandise	48,496,149	— 3,358,443	— 6·48
Minerals and merchandise	50,945,887	— 4,705,003	— 8·45
Coal, coke and patent fuel	152,917,343	— 11,930,562	— 7·24
Live stock	2,135,840	— 39,017	— 1·79
Total	254,495,219	— 20,033,425	— 7·30
Net ton-miles (excluding free-hauled)—			
Merch'ndise(includ. live stock	4,521,809,276	— 124,620,974	— 2·68
Minerals and Merchandise	2,842,628,035	— 171,091,801	— 5·68
Coal, coke and patent fuel	6,467,923,677	— 673,253,652	— 9·43
Total	13,832,360,988	— 968,966,427	— 6·55

Consequent upon the introduction of the new general railway classification on January 1, 1928, there is a small margin for inaccuracy in comparison of the figures of "merchandise" and "minerals and merchandise" in 1928 with those for 1927. It may be added that the total tonnage carried monthly in 1913

amounted on the average to about 30.5 million tons, so that the freight traffic of 1928 may be estimated at about 83 per cent. of the pre-war year, against 90 per cent. in 1927, and 87 per cent. in 1925.

* * * *

The year has been one of special interest in the railway world because on January 1, 1928, the new system of railway charging provided for under the Railways Act, 1921, began. The change from the old to the new system was effected with practically no disturbance, thanks to the satisfactory negotiations that had taken place between the railway companies and the traders, who were represented by the Traders' Co-ordinating Committee. The Government has made provision in the Local Government Bill, 1928, for the relief of 75 per cent. of the local rating on industrial undertakings, including railways, docks, harbours, and canals. In the case of transport concerns, the whole of the relief has to be passed on to their users in order to assist the trade of the country. In the case of the railways, the relief is to go solely to selected traffics of the coal, iron and steel, and agricultural industries. The railways, however, should benefit by the improved trade resulting from the relief given. The financial results of 1928 show a smaller revenue than in 1927 by nearly £9,000,000, and since the net revenue of 1927 fell short of the "standard" revenue provided for by the Act by £4,000,000, it is clear that there must be a serious deficit in the net revenue for distribution as dividends for 1928, even if the economies amount to half the loss of revenue in 1928 in the case of the L. and N.E. Railway, as forecast by Sir Ralph Wedgwood. Dock charges remained unaltered during the year.

The value of cheques, bills, &c., paid at the Bankers' Clearing House last year, constituted in the aggregate a fresh high record, the increase over 1927 amounting, as will be seen below, to 6.3 per cent. :—

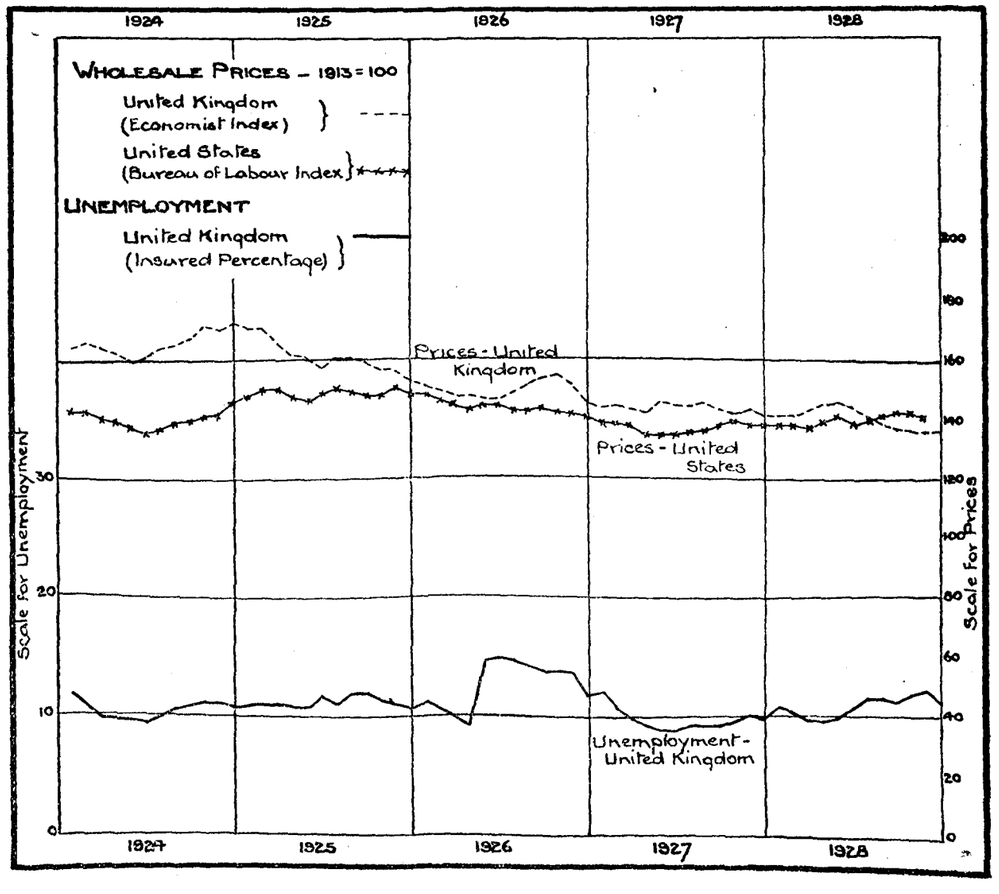
(000's omitted).

	1928. £	Increase in Comparison With 1927. £	%	Increase in 1927 Comparison With 1926. £	%
Town Clearing	39,311,117	+ 2,491,435	6·7	+ 1,473,253	4·1
Metropolitan Clearing	1,854,90	+ 96,158	5·4	+ 97,275	5·8
Country Cheque Clearing	3,039,422	+ 66,597	2·7	+ 154,959	5·4
Grand Total	44,204,729	+ 2,654,188	6·3	+ 1,725,487	4·3

It will be observed that nearly 94 per cent. of the increase in the grand total over 1927 was accounted for by the growth of Town clearings, which reflect activity in the short money market, the Stock Exchange, and the flow of new capital issues, rather than expansion of commerce. The Country clearings, which provide a more significant index of general trade conditions, failed to maintain the rate of increase recorded a year ago, but, considering the depression in many staple industries, it is satisfactory that there should have been an actual increase, albeit small. The aggregate of the eleven provincial clearings showed a fall of £36 millions, or 2.1 per cent., on the year, the most serious declines being recorded by Sheffield (11 per cent.) and Leeds (7.1 per cent.). Bradford, Manchester, and Newcastle clearings were also lower, whereas those of Birmingham and Bristol rose by over 3 per cent. in each case. The total of the provincial clearings showed marked increases in the first two quarters, and (considerably larger) decreases in the last two quarters of the year.

COMMODITY PRICES.

On the average, wholesale prices, as measured by our Index Number, were nearly 2 per cent. lower in 1928 than in 1927, increases in the price of cereals, meat, and textiles being more than offset by lower quotations in the "other foods," minerals, and "miscellaneous" groups. In its revised form (a full ex-



planation of which was given in the *Economist* of December 15, 1928) our Index Number yielded for 1928 an average figure of 98.1 (1927 = 100), as compared with 104.0 for 1926, 112.0 for 1925, and 115.7 for 1924. Fluctuations during the year were largest in the case of cereals and meat. Movements in the other groups were less pronounced, but, as will be seen from the following table, a general decline developed during the last seven months of the year, and at the end of 1928 the complete index figure was nearly 4 per cent. lower than a year ago :—

1927 = 100.

Average 1928	103·6	93·8	105·1	92·1	95·8	98·1

Wheat and flour prices were firm during the first four months of the year, but thereafter declined until October; they ended the year, although steadier towards the close, at a substantially lower level than at the end of 1927. Maize quotations rose during the first half of the year, broke sharply in the third quarter, and subsequently recovered. Rice, barley, and oats were all lower at the end of the year than at the beginning. Potatoes, following their normal seasonal trend, rose by 50 per cent. on balance in the first half of the year, and ended where they began. Beef and mutton were on the average both dearer in 1928 than in 1927. Between January and May the price of English sides of beef rose from under 5s to 7s 4d per 8 lb, increases also occurring in the prices of Argentine beef, and of both home-grown and imported mutton. From June onwards, however, meat prices generally re-acted, quotations at the end of December being only a little above the level of December, 1927. Among "other foods," butter and cheese were slightly dearer in 1928 than in the previous year, but there were appreciable reductions in the prices of tea, coffee, cocoa, and sugar.

After a weak opening in January, cotton prices advanced up to June, re-acted in July-August, and finished the year with American cotton (middling) about ½d per lb cheaper than at the close of 1927. The rise in wool values, which began in the summer of 1927, went on until May, 1928, after which a gradual recession took place. The price of silk moved within narrow limits during the year, but between spring and autumn flax fell (after an abrupt rise in the first quarter) by nearly 20 per cent.; jute fluctuated considerably, reaching a "peak" in August, without much change on balance at the end of the year; hemp, on the average, was considerably lower in price than in 1927.

In the minerals group coal prices were comparatively stable throughout the year round about the level established at the end of 1927. Iron and steel quotations were altered only by a rise of 1s per ton during March in the price of No. 3 Cleveland pig iron. Among metals, tin was prominent with a fall from £265 to £214 per ton in the first six months of the year. In the late autumn there was a recovery to £240, succeeded by another recession to £226. Lead and spelter were both cheaper in 1928 than in 1927. Copper prices, on the other hand, were firmer, a sharp increase being registered in the December quarter.

Among the "miscellaneous" articles included in our Index Number, No. 1 petrol rose in price by 3¾d after the Budget, whereas fuel oil prices were reduced by 2s 6d per ton in January, July, and again in October. Rubber fell from 1s 8d per lb at the beginning of the year to less than 8½d at the end of April. During the following eight months fluctuations were between 8½d and 9¾d. There was no change in timber prices during the year, but the price of cement was reduced by 7s per ton in October. Hides were dearer than in 1927, the quotation for best ox rising to over 10d per lb in August; subsequently, however, there was a sharp reaction. Creosote declined steadily in value throughout the year.

In the next table we give the figures of our Index Number converted (by the method explained in the *Economist* of December 15th last) to a percentage of the average level of 1913 :—

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168·5	215·8	214·7	149·3	122·6	166·2
,, 1925	168·4	204·2	194·6	139·8	126·2	160·9
,, 1926	151·7	195·3	152·6	149·8	120·7	149·4
,, 1927	147·6	202·2	157·0	125·1	116·1	143·7
End June, 1927	155·5	199·4	157·3	123·9	113·9	144·1
,, Dec., ,,	143·7	198·6	160·9	117·8	117·8	141·9
,, June, 1928	166·4	187·3	172·3	114·2	111·3	144·5
,, Dec., ,,	144·0	182·4	159·6	117·7	106·1	136·5
Average, 1928	152·9	189·7	165·0	115·2	111·2	140·9

At the end of 1928, it will be observed, the average price-level, thus measured, was 36.5 per cent. higher than in 1913, whereas at the end of 1927 it was 41.9 per cent., and for the whole of 1924, 66.2 per cent. higher. At the end of last December the index figures for "other foods" and textiles were considerably above, and those for minerals and "miscellaneous" commodities much below the general average.

In the final table we show the annual changes which have occurred in each group of prices since 1924 :—

Yearly Averages (1924 = 100).

	1925.	1926.	1927.	1928.
Cereals and meat	99·9	90·0	87·5	90·7
Other foods	94·7	90 6	93·8	87·9
Textiles	90·6	71·1	73·1	76·8
Minerals	93·6	100·3	83·7	77·1
Miscellaneous	102·9	98·4	94·7	90·7
Complete index	96·8	89·9	86·4	84·8

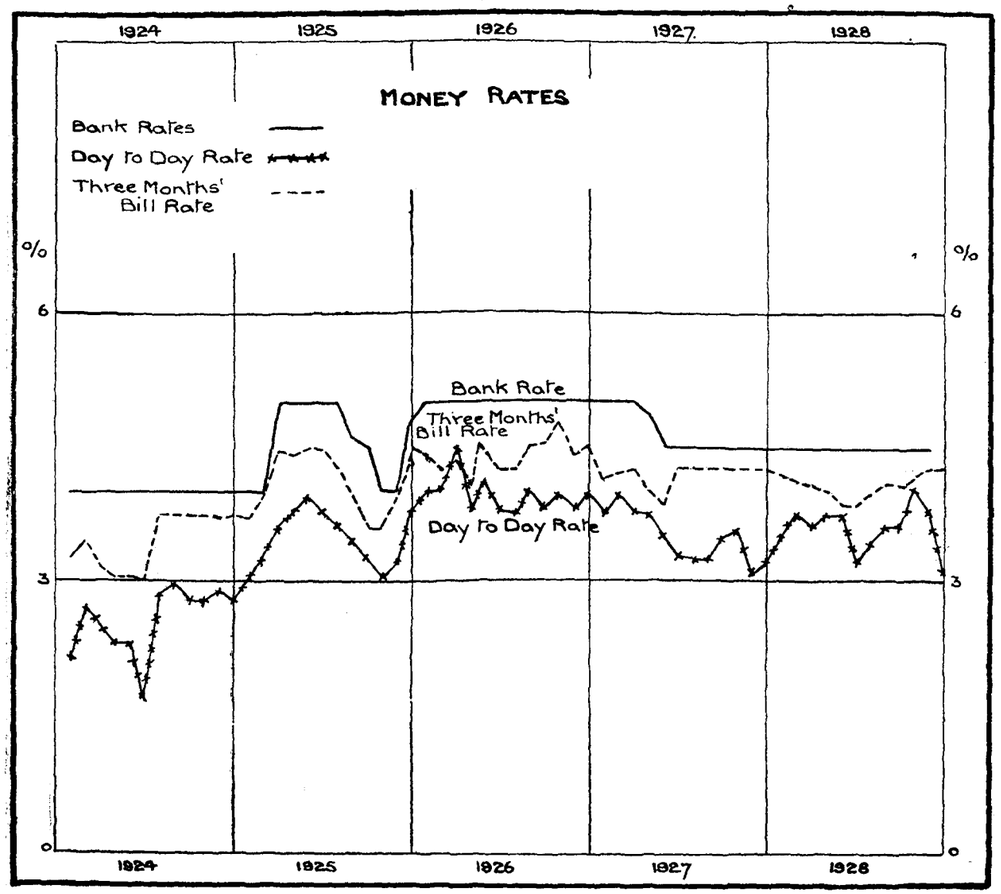
It will be noted that, as compared with 1924, the average figures for textiles and minerals in 1928 both indicate a fall of 23 per cent., against declines of 12 per cent. in the case of "other food," and 9.3 per cent. in the case of cereals and meat, and in the "miscellaneous" group.

Retail prices—allowing for their usual seasonal tendency to decline in summer—underwent little alteration in 1928. The following table shows the average percentage increase, as compared with July, 1914, for all the items included in the Ministry of Labour's cost of living figure for the past nine years :—

Average Percentage Increase since July, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

Month (beginning of)	1920.	1921.	1922.	1923.	1924.	1925.	1926.	1927.	1928.
	%	%	%	%	%	%	%	%	%
January	125	165	92	78	77	80	75	75	68
February	130	151	88	77	79	79	73	72	66
March	130	141	86	76	78	79	72	71	64
April	132	133	82	74	73	75	68	65	64
May	141	128	81	70	71	73	67	64	64
June	150	119	80	69	69	72	68	63	65
July	152	119	84	69	70	73	70	66	65
August	155	122	81	71	71	73	70	64	65
September	161	120	79	73	72	74	72	65	65
October	164	110	78	75	76	76	74	67	66
November	176	103	80	75	80	76	79	69	67
December	169	99	80	77	81	77	79	69	68

In no other year since 1914 has so little fluctuation in this index number been recorded as in 1928. The figure for retail food alone was 62 at the beginning of the year, declined to 54 on May 1st, and rose gradually to 60 at the beginning of December.



MONEY MARKET.

Apart from the unification of the note issue and the expansion of the Bank of England's weekly return, which both took place right at the end of the year, the fundamental fact of the history of 1928 is that it witnessed first a gain by the Bank of England of £24 millions in gold and then a loss of £22 millions, without any change in Bank rate.

Discount rates, of course, did not escape the influence of these gold movements. In the first week of January the market broke away from the "controlled" discount rate of 4 5/16 per cent. on three months' bank bills tacitly enforced by the Bank during the preceding autumn, and despite an immediate attempt by the Bank to regain control, and in the face of a rise in the New York rediscount rate from 3½ to 4 per cent. on February 2nd, market rate had fallen by the end of March to 4 per cent.

Monetary conditions were fairly easy in April, but difficult in May, partly because the New York rate went to 4½ per cent. in the middle of that month. June was a period of relative ease, due to a sudden influx of gold from the United States. The arrival of this new gold raised the total influx for the second quarter of the year to a round £15 millions, brought market rate down to 3⅞ per cent., and led to talk of an imminent reduction in Bank rate. Fortunately the Bank of England took the long view, and in the midst of the summer ease kept its eye on the approaching autumn strain. During the first half of the year it had already partially neutralised its acquisition of £21 millions in gold by the sale of £12 millions of its securities. In July and August it intensified its neutralisation policy, for against further gold acquisitions of only £3 millions it sold £19 millions of securities. The net result for the first eight months of the year was a sale of £31 millions of securities, against a gain of £24 millions in gold.

On July 7th, New York went to 5 per cent., and there followed a severe struggle between the American reserve banks and the Wall Street bulls. This struggle drove money rates up to a high level, so high that New York began to attract funds from all over the world. The movement of money to New York set in at the end of the summer and continued throughout the autumn. In September there was added the usual seasonal flow of money to America in payment for cotton and grain, and since this year London resumed its former function of financing American produce shipments, by the end of September the strain had become severe. The Bank's foresight was fully justified.

The history of the autumn was a simple one. During the last four months of the year the Bank lost £22 millions in gold. By no means all of this went to America, for financial cross-currents between London, Paris, Berlin and New York diverted much of it to Germany. Market rate, which had been 3¾ per cent. at midsummer and 4¼ per cent. at the end of August, rose by the end of the year to 4⅝ per cent., and whereas in June the market was talking of a lower bank rate, by November it was beginning to envisage an increase.

The Bank, however, continued its policy of gold neutralisation. Just as earlier in the year it had sold securities against its acquisition of gold, so in the autumn it bought securities to balance its gold losses. Between August 31st and December 19th it bought £16 millions of securities against its gold losses to date of £22 millions. These figures give the key to the Bank's technique. Last year it deliberately abandoned changes in its rate as an instrument of control. Instead it relied entirely on its open-market policy, which it used as an instrument of neutralisation.

We append our usual table of money rates :—

FOREIGN EXCHANGES.

The past year provided the first real test of a general gold currency system under post-war conditions. The European exchanges are not, indeed, all stabilised, for Jugo-Slavia has still to complete negotiations for a stabilisation loan, similar plans in Roumania were interrupted by an internal political crisis, and Portugal finally decided to reject the terms of the proposed League loan; but the process of fixation of the exchanges was steadily continued with the restoration of the Norwegian krone to pre-war gold parity, at the cost of considerable deflation, with the stabilisation of the Greek and Bulgarian exchanges at 375 drachma to the £ and 675 leva to the £ respectively, and, most important of all, with the devalorisation of the franc. In order to strengthen the position, heavy holdings of foreign currencies were accumulated by the Banque de France, gold was imported in large quantities from New York, and when the rate was stabilised on June 24th at 124.21f to the £ a gold reserve of £232,950,000 was disclosed. These operations have been reflected in other foreign exchanges, particularly in the dollar, which weakened in the earlier part of the year on account of the big losses of gold to Paris, Berlin, and London. The New York rediscount rate at that time stood at the comparatively low figure of 3½ per cent., but the situation was completely altered by the outburst of bull speculation on the New York stock market. Money rates in Wall Street were forced to rise, call money standing at one time as high as 12 per cent., and the consequent influx of money caused the dollar quotation in London, which had been 4.88 15-32 on May 30th, to fall to 4.84¾ on October 5th, and in the latter part of the year to remain in the neighbourhood of gold export point. Up to September 10th the Bank of England had been increasing its gold supplies, but between then and the end of the year it lost nearly £23 millions, finishing with a net deficit of £1,321,962. Berlin as well as New York has been responsible for this efflux, for dear money in Wall Street deflected the Reichsbank purchases to London and Paris, who in her turn has withdrawn funds from London to lend to Berlin. Hence Reparation transfers have not been sufficient to prevent the movement of the mark against sterling, the rate actually moving from 20.48½ on January 9th to 20.33 on July 28th; the franc has been steady since the stabilisation, though still above par, and the only European currency in which there has been any real opportunity of speculation has been the peseta, which fluctuated considerably early in the year, but which has since been kept firm by energetic control of the exchange. The South American rates have not undergone any noteworthy movements. The continued political disturbances in China, and her very large imports of silver, have been reflected rather by the yen, which depreciated by 1½d in the second quarter of the year than by the tael, which has remained weak, but on the whole steady.

The following table is extracted from statistics published by Messrs Samuel Montagu and Co. :—

NEW CAPITAL ISSUES.

Like its predecessor, 1928 was an active year for new capital in the London market. Each of the first three quarters of the year showed an increase over the corresponding period of 1927. The last quarter fell considerably short, but the gloom cast over the City by the grave illness of the King must be taken into account, together with the fact that in the last quarter of 1927 an exceptionally high level was reached. The total of new capital raised during the year amounted to £369 millions, an increase of £14 millions on 1927. The British Government borrowing included in that total is £84 millions. Excluding this sum, which contrasts with £66 millions in the previous year, the aggregate amount raised in 1928 was £285 millions, as compared with £289 millions in 1927, £226 millions in 1926, and £196 millions in 1913. The total raised for use at home, apart from Government borrowing, increased by no less than £39 millions, whereas the amounts destined for use in the Dominions and in foreign countries fell by £37 millions and by £6 millions respectively. The figures for British Government borrowings do not include floating debt operations; they represent cash receipts of £86,961,000 from the 5 per cent. Treasury bonds, 1933-35, the results of whose issue were disclosed in January, 1928, less the excess of encashments over sales of Saving Certificates. The issue of Treasury bonds by tender last August is not included in the figures, nor is the conversion offer of 4½ per cent. Treasury bonds, made on November 29th, cash applications for which amounted to £46 millions. The other figures throughout represent new money, and exclude issues or portions of issues made for purposes of repayment, replacement, or conversion.

There has been a striking expansion year by year since 1925 in the amount of new capital, other than Government borrowings, raised for use at home. Excluding all operations by the British Government, the amount raised for domestic employment in 1928 represented 63 per cent. of the total, in comparison with 49 per cent. in the previous year, and 34 per cent. in 1912. As compared with the figures for the two pre-war years, the total raised for foreign countries last year shows a marked decline, while Dominion borrowing (particularly under the head of "other" purposes) fell sharply after the notable expansion recorded in 1927. Of the Dominion Government loans, approximately half, as was the case in 1927, went to Australia. The Government of India borrowed £7 millions early in the year, and in May the New Zealand Government raised £5 millions. The balance went to Kenya, Tanganyika, Southern Rhodesia, Newfoundland, and Fiji. The total foreign Government borrowing included £6½ millions for Greece, and £1½ millions for Bulgaria. The remainder was destined for South Africa—Brazil, Chile, and Peru. British corporations were less active in the market than in 1927—the largest issues being made, for £5 millions in each case, by the London County Council in May, and Birmingham in October. Only four foreign corporations, including three German cities, raised loans, but there were nine issues by Colonial corporations, the most prominent being for £2 millions on account of Sydney, New South Wales. Railways played a much smaller rôle than in the previous year, the only Home Railway issue being made by the Underground Electric Railways of London, and consisting of £4 millions in 5 per cent. debentures (of which £1,832,400 was for refunding). There was no issue by a Colonial railway in 1928, and only two foreign railways—the Buenos Aires Central and the Buenos Aires Gt. Southern—raised money in London. A great increase in issues by companies which can be classified under the heading "Exploration and Finance" was once more due to the vogue for investment trusts; an aggregate of £42½ millions was reached, against £28 millions in 1927. "Patents" were another group to show a striking increase. Film issues also were prominent, and great activity was displayed by promoters and companies formed to exploit new processes in the gramophone, radio, and artificial silk industries. A feature of the year was the repeated over-subscription of speculative issues, the attractions of whose deferred shares as gambling counters were more regarded by the public than their merits as an investment. In most instances, however, appeals to serious investors met with a fair response. Tables of new issue statistics will be found in an appendix.

GOLD PRODUCTION.

The estimated gold production of 1928 exceeds that of 1927 by one million pounds, the rise being attributable solely to the Transvaal output. The following table, compiled by Mr Joseph Kitchin, shows the steady rise in the relative and absolute importance of the Transvaal gold production :—

(In Millions of £'s at 84s 11½d per fine oz.)

Year.	Transvaal.	The Rest of the Empire.	Total British Empire.	Foreign Countries.	World
1913	37·4	21·2	58·6	36·1	94·7
1914	35·7	20·8	56·5	33·9	90·4
1915	38·6	22·0	60·6	35·8	96·4
1916	39·5	20·0	59·5	34·0	93·5
1917	38·3	17·8	56·1	30·2	86·3
1918	35·8	15·2	51·0	28·0	79·0
1919	35·4	14·7	50·1	24·9	75·0
1920	34·7	13·4	48·1	20·9	69·0
1921	34·5	12·9	47·4	20·6	68·0

1926	42·3	15·2	57·5	24·5	82·0
1927	43·0	15·3	58·3	24·2	82·5
1928	44·0	15·3	59·3	24·2	83·5

* Output temporarily reduced by strike of white miners.

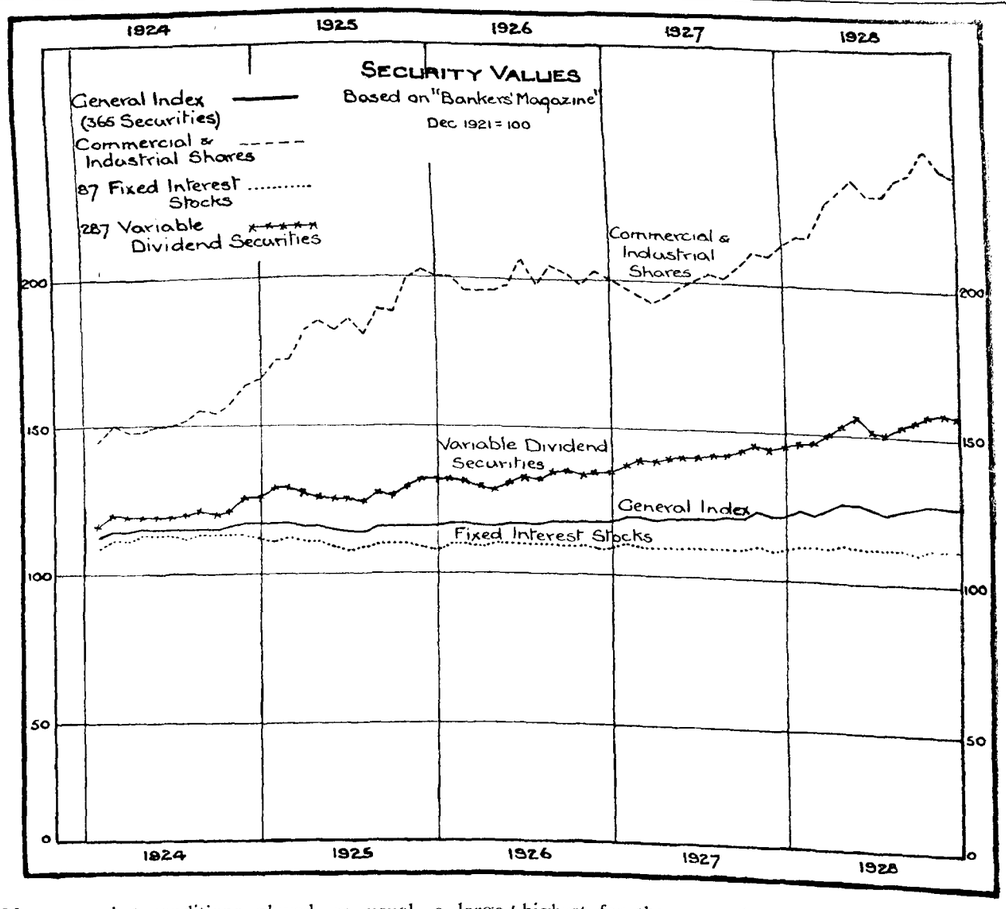
The chief events of the year which affect the demand for gold are summarised by Messrs Samuel Montagu and Co. in their annual bullion letter. The legal stabilisation in June of the French franc fixed its gold content at 65.5 milligrammes of gold 9/10ths fine, and ultimately the Mint is to strike gold coins of 100f. Meanwhile the Bank of France strikes coins at a seignorage of 40f per kilogramme. The Bank of Spain, as part of its stabilisation policy, shipped £2,000,000 to England at end of October, but this proved an isolated shipment, as other means were found of controlling the exchange. During the first seven months of the year the United States exported $500,000,000 in gold, of which $308,000,000 went to France, $94,000,000 to South America, $27,000,000 to Germany, and $32,000,000 to Great Britain. £4,000,000 arrived in the London market from Russia. The destination of the gold sold in London was rendered uncertain by frequent purchases made by undisclosed buyers, but the outstanding feature of the year was the steady outflow of gold from England to Germany. During the period July to December £20,000,000 was acquired in London by Germany. During the autumn shipments were also made from London to New York, to some extent coincident with the movements to Germany. This outward movement to the United States practically balanced the influx during the earlier part of the year. Official statistics reveal gold imports from all countries of £47,808,055, and exports of £60,523,701. The Bank of England's gold reserve against notes was £151,468,435 on December 28, 1927. It rose to a record level of £173,907,475 on September 12, 1928, and then reacted to £153,783,646 for December 26th.

THE STOCK EXCHANGE.

In spite of many spectacular features, the year 1928 was not such a period of all round appreciation as its predecessor had been. Movements became definitely selective, and a considerably higher degree of knowledge, of skill, and, indeed, of good fortune was required by the successful investor. The upward movement in a wide range of industrial stocks, which followed the settlement of the coal dispute, and persisted throughout 1927, notably increased its momentum in the early months of 1928. In June a set-back occurred in New York and the Continental bourses, as well as in London, accentuated by the tragic death of an international financier, Captain Loewenstein, early in July. The resulting shake-out was succeeded by a fresh rise in values after the summer holiday, but the movement was more professional in character and narrower in its range than before. While the earlier phase might claim both origin and justification in the improved earnings of British companies, comparison being in most cases with a period affected by the coal stoppage, the autumnal rise coincided with the general realisation of a set-back to industrial activity. The illness of the King was a further limiting influence, and stocks in December had a downward trend. Despite a moderate revival of activity on the eve of Christmas, the year closed on a note of caution.

For the rest, events of 1928 emphasised the increasingly international character of Stock Exchange dealings, a tendency exemplified by the growing American interest in certain British securities, and the manner in which America was apt on occasion to set the pace in the more speculative markets on this side. On the whole, however, Stock Exchange feeling was more conservative in London than in New York, the range of price fluctuations during the year being much less in the case of "domestic" than of "international" securities. A by-product of the year's activity and the increasing attention given to Stock Exchange matters in the popular Press was a flood of capital issues on behalf of new companies, whose deferred shares, frequently of low denomination, rose and fell in startling fashion, engrossing outside attention to an extent entirely disproportionate to their real importance in Stock Exchange life.

In contrast to the conditions prevailing in the market for ordinary shares, fixed interest stocks showed relatively small changes in value, but over the whole year a slight upward movement was discernible.



Money market conditions played, as usual, a large part in determining the course of gilt-edged values. No change was made in Bank rate, but whereas money was easy in the spring, it became much tighter in the autumn, when the exchanges moved against this country, and the Bank lost practically the whole of its earlier accessions of gold. The Treasury staged no large-scale conversion operation, being content to publish an offer at the end of November, designed to provide for £173,000,000 of impending maturities. A new departure was the quotation, from April onwards, of Funding Loan and Five per Cent. War Loan in New York. The firmness of corporation and public utility stocks reflected in part the absence of any considerable additions during the year to the sum total of these stocks outstanding. Dominion stocks did not receive any great attention, but the hope that a period of settled conditions, rendering overhaul and economic reconstruction possible, was in store for the country, caused a substantial rise in Chinese bonds. South American issues gained ground, for they were priced low at the beginning of the year.

A severe decline in the ordinary stocks of the home railway groups, a particularly serious matter to trustees and others of the very numerous body of holders of these securities, was due mainly to the fact that the weekly traffic figures ran consistently below those of 1927, as a result partly of unsatisfactory trade conditions and partly of increasing road transport competition. The falling off in quotations would probably have been less extensive had the railways seen fit to publish *net* instead of *gross* traffic figures, for the statements made in respect of the June half-year showed that substantial economies in costs had partially offset the drop in receipts. As it was, by November so little business was taking place that quite a small transaction would produce an altogether disproportionate price movement. The April prices were the highest for the year; the lowest were reached early in December. Increased traffic returns, on the other hand, strengthened London Electric and Metropolitan District stocks.

American and Dominion railways continued their 1927 upward movement. Canadian Pacific rose sharply to a maximum in November, falling away later. American lines enjoyed the sun of the whole country's prosperity and confidence, while the upward movement of Indian railways became more uniform. It was a fair year for Argentine lines, though the operation of the Mitre Law compelled two of the principal companies to reduce their charges. San Paulo continued prominent, but Central American railways were mostly out of favour.

The industrial markets again staged the larger part of the year's activity and fluctuations of fortune. There was a steady flow of investment resources into high-grade banking, insurance, and investment trust shares, and though the peak points were frequently not maintained, the yield on many of these stocks had been reduced to meagre dimensions by the end of the year. The meteoric leaps of certain less important miscellaneous shares, principally of low denomination, received more publicity than they deserved. Artificial silk, gramophone, and cable and wireless shares having a market in New York as well as in London, participated in the remarkable Wall Street boom, and were centres of great activity. A steady interest was taken in well-known industrials of most kinds. The iron, coal, and steel group was naturally dull, a field for skilled buyers only; textiles weakened in apprehension of the same industrial malady, and newspapers were less favoured. But these were weak patches; elsewhere the general tone was firm, and selected stocks here and there rose considerably.

The decision of the Government to terminate the rubber restriction scheme brought about a drop in the value of rubber shares from which the market at no time till after the close of the year showed any sign of recovery. The low prices which a heavy tea crop fetched made tea shares somewhat cheap. Oils, without becoming buoyant, made a better showing than in the previous year. The mining section was much less favoured than usual as a hunting-ground of the speculator, who was inclined to seek more profitable opportunities in the industrial group. The South African market seldom showed any features of interest. Rio Tinto, largely affected by Paris, was prominent among copper shares. Some attention was attracted to the tin market, where a sharp division of opinion existed, but did not greatly alter prices on balance either way. We append our usual table of seniority values compiled by "The Bankers' Magazine":—

December, 1921 = 100.

	Fixed Interest Securities.	Variable Dividend Securities.	Total
June, 1926	110·2	133·6	118·7
December, 1926	108·8	135·7	118·0
June, 1927	110·1	141·5	120·4
December, 1927	111·2	146·9	122·8
January, 1928	112·4	147·9	124·0

THE AGRICULTURAL YEAR.

The year 1928 will be remembered for unusually long spells of brilliant sunshine and heat. To the farmer, in spite of difficulties caused by drought, the year was one of high production with very favourable conditions for all farm operations, and an unusually quick and easy harvest. All the chief crops were estimated as above average in yield, with the exception of seeds hay. There was a reduction of no less than 239,000 acres, or 14.6 per cent., in the acreage of wheat, so that the total production was relatively small, notwithstanding the good yield. The reduction of arable land was 199,000 acres, or 1.9 per cent., the loss on wheat being nearly made up by the increased acreage of other corn crops, particularly barley. The returns of live stock have in recent years tended to compensate for reduction of cultivation, but in 1928 there was a reduction in all classes of farm animals with the exception of pigs. Cattle decreased by 249,200, and sheep by 686,200. For the first time for some years past the milking herd showed a diminution. The significance of this will be more apparent when the next returns are collected in June. There is no evidence of any falling off in the demand for milk, and it is probable that the reduction by 1.4 per cent. of cows and heifers is due to accidental causes. The reduction by 1.8 of ewes kept for breeding is attributable to uncertainty in the mutton market.

There was an appreciable improvement in the general level of prices of farm products. In 1927 the index number—taking 1911-13 as the base—ranged from 137 in November to 149 in January. In 1928 the range was from 139 in October to 154 in May. There was, as usual, a great difference in the figures for the various products. The index numbers for each of the chief products in December, 1928, with the comparative figures for the preceding year, were:—

	1927.	1928.		1927.	1928.
Wheat	134	131	Fat cattle	116	127
Barley	135	124	Fat sheep	144	150
Oats	131	129	Bacon Pigs	120	136
Hay	120	108	Milk	166	171
Potatoes	175	145	Butter	147	150
Wool	150	166	Cheese	155	179

The slump in the price of corn, and especially of wheat, in the autumn largely accounts for the fact that the record for the year was not more satisfactory. Live stock and dairy produce were again the backbone of the farmer's economic position.

The imports of agricultural products in 1928, as compared with 1927, are shown below (the figures representing thousands of tons):—

	1927.	1928.		1927.	1928.
Wheat	5,522	5,179	Oats	295	372
Flour	548	448	Maize	2,096	1,651
Barley	825	648	Corn offals	449	515
Chilled beef	521	478	Hams	45	48
Frozen beef	150	131	Fresh pork	16	19
Frozen mutton	276	281	Butter	291	306
Bacon	428	442	Cheese	147	150

The most significant event in connection with agriculture was the dispute between the National Farmers' Union, and the milk distributors. The representatives of the distributors put forward proposals for a decrease in the price paid for milk to the farmers. This was resisted, and a deadlock arose, both sides declaring that no compromise was possible. Wiser counsels prevailed, and a settlement was reached, but the incident marks an important stage in the growing solidarity of farmers. For the first time a powerful combination of middlemen was faced, and, in effect, defeated by organised agriculturists. The bickering of the National Farmers' Union against the Government continued during the year. In the Rating Bill proposals are included to take all farm land out of the area of rateability, but this does not become operative until October next.

The possibility of the introduction of foot-and-mouth disease from the Argentine, where it admittedly exists, was the subject of a scare which induced the Government to send Lord Bledisloe to ascertain the facts. He found that the precautions taken made the risk of the conveyance of the infection in refrigerated meat negligible.

LABOUR CONDITIONS.

The year 1928 has not equalled the peaceful record of 1927, but fewer days were lost through industrial disputes than in any other year on record. With the same exception, the number of workpeople involved was the smallest since 1905. These are the Ministry of Labour's figures for each year since 1919:—

Year.	Number of Disputes Beginning in Year.	Number of Workpeople Involved in Disputes Beginning in Year.		Aggregate Duration in Working Days of All Disputes in Progress during Year.
		Directly.	Indirectly.	
1919	1,352	2,401,000	190,000	34,970,000
1920	1,607	1,779,000	153,000	26,570,000
1921	763	1,770,000	31,000	85,870,000
1922	576	512,000	40,000	19,850,000
1923	628	343,000	62,000	10,670,000
1924	710	558,000	55,000	6,420,000
1925	603	401,000	40,000	7,950,000
1926	323	2,724,000	10,000	162,230,000
1927	308	90,000	18,000	1,170,000
1928	302	80,000	44,000	1,410,000

The unemployment rate at an average of 10.9 per cent. was worse than that of 1927 at 9.7 per cent., though for the first three months of the year it was better than in the corresponding period of 1927. The monthly figures of numbers unemployed are as follows:—

NUMBERS (INSURED and UNINSURED) REGISTERED at EMPLOYMENT EXCHANGES, &c.

1927.			
December 19	1,127,000	June 25	1,239,000
1928.		July 30	1,354,000
January 30	1,199,000	August 27	1,367,000
February 27	1,139,000	October 1	1,384,000
April 2	1,071,000	October 29	1,421,000
April 30	1,171,000	November 26	1,439,000
May 21	1,143,000	December 17	1,312,000

The set-back which occurred between March and June was almost entirely accounted for by increased unemployment in the coalmining, shipbuilding, textile, and boot and shoe industries. The following table shows

the movements of the unemployment percentage in recent years :—

PERCENTAGE UNEMPLOYED AMONG INSURED WORKPEOPLE IN GREAT BRITAIN and NORTHERN IRELAND.

End of—	1922. %	1923. %	1924. %	1925. %	1926. %	1927. %	1928. %
January	16·2	12·7	11·9	11·5	11·0	*12·1	10·7
February	15·7	11·8	10·7	11·3	10·4	10·9	10·4
March	14·6	11·1	9·9	11·1	9·8	9·9	9·5

December	12·2	10·7	10·9	10·4	*11·9	9·8	11·2

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

The Ministry of Labour reports that wage rates generally showed little change in 1928, and the great majority of workpeople were unaffected by wage movements. In the industries and services for which statistics are available there was a net reduction, affecting 1,608,000 workpeople, of £163,050 in weekly full-time wages, and a net increase, affecting 212,000 workpeople, of £21,150. The net decrease of £141,900 compares with a reduction of £357,800 in 1927. The coal mining, building, and transport industries together accounted for over 96 per cent. of the net decrease in 1928. The building industry underwent a reduction of ½d an hour in February under the cost-of-living sliding scale, and railway workers made an all-round sacrifice of 2½ per cent. of earnings as from August. The principal increases were in the shipyards, the electricity supply industry, and some branches of the jute, silk, and bleaching and dyeing industries. The *Ministry of Labour Gazette* states that when account is taken of all the information in possession of the department, including that relating to agricultural wage rates, which are not included in the foregoing figures, the weekly full time rates of wages of those classes of workpeople for whom information is available averaged from 70 to 75 per cent. above the level of July, 1914.

There was very little change in hours of labour during 1928. Increases were reported for 900 people, averaging about 3⅜ hours per week, and the hours of 1,500 workers were reduced by an average of nearly three per week. There was a net aggregate reduction of 1,150 hours per week, as compared with an increase of 59,000 in the preceding year. The principal change was a reduction of four hours per week for Cardiff tramway and omnibus workers.

A.—EUROPE.

FRANCE.

General.—The year 1928, like 1927, was devoted in France to the restoration of the nation's credit, at any cost; and with the success which the world now knows. The success may be gauged by the fact that the franc, which, in July, 1926, appeared to be likely to follow the German mark into hopeless bankruptcy, stood at the end of 1928 in as sound a position as the pound and the dollar. Legal stabilisation of the franc on June 25th, at practically the figure t which it had been maintained for the previous 18 nonths, brought to an end the period since the beginning of the war, during which the French currency unit had been arbitrarily maintained by law at its old legal nominal value of within a fraction of tenpence, and fixed it henceforward at a shade under twopence (124.21 to the £). This capital modification had no appreciable effect on the country's economic life, which had adapted itself to the pending legal change in the status of the franc during the 18 months' preparatory period of "stabilisation in fact." Prices, on the whole, remained stationary throughout the year; production increased appreciably; home and foreign trade remained good, although affected adversely, to a slight extent, by the coming into operation of certain new commercial treaties; wages and profits remained satisfactory; unemployment continued non-existent and there was no sign of popular discontent, with the exception of a small number of unimportant strikes due almost entirely to outside agitation. General elections in April resulted in a slight swing of the pendulum towards the Right, an appreciable loss of ground by both Communism and Socialism, and the advent of a new Poincaré Ministry, purged of the Radical-Socialist elements who had formed an appreciable proportion of the previous Cabinet.

Trade and Production.—French exports in 1928 totalled 51,346,799,000f (41,080,629 tons), against 54,924,759,000f (37,994,267 tons) in 1927, and 59,677,930,000f (32,548,504 tons) in 1926, there being a drop of 3,577,960,000f in value, and a rise of 3,086,363 tons. The difference in value was due to a falling off of 3,775,510,000f (with an increased tonnage of 2,854,806 tons) in exports of raw materials, and a drop of 644 millions in manufactured goods, exported foodstuffs having been 842 millions more. Imports totalled 53,448,265,000f (49,106,307 tons), against 53,049,878,000f (49,369,840 tons); the drop of 1,342,919,000f in imported foodstuffs (chiefly wheat), and of 381,140,000f in raw materials being more than compensated for by a rise of 2,122,445,000f in imported manufactured goods. The year's foreign trade resulted in a balance against France of 2,101,466,000f, as compared with a favourable balance of 1,874,881,000f in 1927 and of 80,000,000f in 1926. Coal production totalled 52,429,468 tons, as compared with 52,845,820 tons in 1927, 52,477,522 tons in 1926 and 40,840,000 tons in 1913 (since when the Alsace-Lorraine pits have been brought within the French frontiers and the northern collieries been re-equipped with modernised plant). The fractional falling off in 1928 was the outcome of the over-production (plus a general lowering of consumption), which followed the temporary spurt due to the suspension of production in Great Britain owing to the great coal strike. The French metallurgical industry in 1928 experienced a degree of prosperity which marks the year as one of the best yet registered, both in production (an index figure of 130 representing production in November, as against 100 in 1913), and business activity. The total output of iron was 10,097,000 tons, as against 1,326,000 tons in 1927 and 9,071,000 tons (Lorraine output included) in 1913. The total output of steel was 9,387,000 tons, as against 8,306,000 tons in 1927 and 6,976,000 tons (Lorraine steel plants included) in 1913. Quotations for iron rose 5 per cent. during the year, and those for rolled steel about 15of per ton. The

number of blast furnaces in activity rose from 144 in January to 153 in December, and most of the plants were appreciably improved. The textile industry suffered somewhat during the year from German and other competition resulting from the new tariffs, its index figure for production in November having been 100 (the same as before the war), compared with 99 in November, 1927, and 105 in March last. The motor-car industry showed remarkable progress, its production figure (based on 100 as representing 1913) being returned in November at 599, after 687 in July. Engineering trades had a production figure of 143 in November, against 118 at the end of 1927, and extractive industries one of 122, against 115 in 1927. The rubber trades index figure rose from 580 in December, 1927, to 637 in November; and that for the building industry from 69 to 114. The gross receipts of the seven French railway companies (including the State system) in 1928 totalled 14,576,975,000f, or 1,583,993,000f (12.10 per cent.) more than in 1927. It must be recalled, however, that the accounts for 1928 comprise 53 weeks owing to leap year, and that heavy additional taxation was imposed on the railways during the year. The number of trucks loaded during the year was 23,174,707, against 22,070,122 in 1927 and 23,410,271 in 1926. Shipping dropped fractionally during the year, both inward and outward bound tonnage figures being consistently lower.

Crops.—The 1928 wheat crop, according to Ministry of Agriculture figures, totalled 75,566,580 quintals, or 416,000 quintals more than in 1927, the average yield per hectare being returned as 14.59 quintals, against 14.22 in 1927, with a specific weight of 76.53 kilos against 74.36 (although the area under wheat was 273,150 acres less than in 1927). The crop of mixed wheat and rye (meteil) was also larger by 370,000 quintals, or about 37 per cent. The beet sugar crop for 1928 is estimated at between 750,000 and 775,000 tons, which, although larger than usual, will still render it necessary (after allowing for the normal quantity of exports of the native product) for France to import some 385,000 tons from her colonies or elsewhere to meet her requirements of 875,000 tons. The wine crop was again abundant.

Commodity Prices.—The mean general index figure for wholesale prices during 1928 was returned as 633 (based on 100 as representing similar prices in 1923), the monthly figure having varied from 646 (highest) and 629, as compared with a mean figure of 628 in 1927 and the record figure of 854 touched in July, 1926. The figure for retail prices in Paris at the end of 1928 was 596, as against 523 at the end of 1927, 599 at the end of 1926, 463 at the end of 1925, and 389 in 1924. The figure representing the cost of living by a Paris workman's family of four persons (based on 100 representing prices in 1914) was returned for the last quarter of 1928 as 531, against an average figure of 514 for 1927 and of 517 for 1926.

Money and Stocks.—The Bank of France discount rate, which was reduced from 7½ per cent. to 6½ per cent. on December 16, 1926, and then successively to 4 per cent. on December 29, 1927, was brought down to 3½ per cent. on January 19, 1928, and still remains at that figure. On the latter date also the rate for advances on securities was reduced from 6 per cent. to 5½. Owing to the conversion of one, three, six, and 12-month Defence Bonds into two-year descriptions, money for short-term loans was superabundant during the year, but for long-term loans was difficult to obtain at normal rates. The average rate offered by new issues of stocks and bonds during 1928 ranged from 7.25 per cent. in January to 6.05 per cent. in December (against 8.55 per cent. in 1925, 9.45 per cent. in 1926, and 7.65 per cent. in 1927). The balanced Budgets of 1927 and 1928 and the advent in June, 1928, of legal stabilisation (which wiped out the balance of the debt of 23,900,000,000f owing on January 5th to the Bank by the State) revolutionised the whole currency situation and confirmed the general feeling of renewed confidence in the State. The investing public again came into the market on a substantial scale, and quotations of public loan stocks steadily rose. Three per cent. Rentes, which stood at 51 on January 5, 1927 (against 44.20 in May, 1926), and closed the year at 62.60, reached 66 at the end of 1928; 5 per cent. Redeemable 1920 Rentes, which reached their lowest (58f) in July, 1926, opened 1927 at 78f, and reached 98 by the end of that year, were quoted at the end of 1928 at 110; 4 per cent. (Caillaux) Rentes (with guarantee against the exchange), which were quoted at 106.90 at the end of 1927, had soared to 122 by the end of 1928; 6 per cent. 1920's, which stood at 68.75 in January, 1927, reached 94½ on December 30 that year, and closed at 101½.

Public Finance.—The total revenue for the year, derived through the Budget, was 43,687,035,800f, against 41,246,467,000f in 1927, which latter year yielded 5,636,411,000f (or over 13 per cent. more than its predecessor. A further sum of 6,829,977,389f was received by the Caisse d'Amortissement for debt extinction purposes (including the yield from the tobacco monopoly and the special taxes now allocated to the Caisse). These figures do not include the revenue of the Postal Department, which is dealt with by an independent Budget. The year resulted in a realised surplus of 3,368,000,000f over and above Budget estimates, as compared with a surplus of some 1,500,000,000f in 1927, and of about 150,000,000f in 1926. The Caisse d'Amortissement at the end of the year had a liquid available balance of 6,342,000,000f, and the Treasury balances at the Bank of France amounted to 5,765,000,000f. The total amount of floating debt bonds (two-year National Defence Bonds) in circulation at the end of the year was 35,500,000,000, as compared with 49,000,000,000f in 1926, while the rate of interest paid on these bonds had been brought down from 6 per cent. to 4 per cent. The only Government loan issued during the year was an offer of 5 per cent. 75-year Rentes, for the conversion and consolidation of 6,700,000,000f of Treasury Bonds, and the balance of an issue of 10-year Credit National Bonds maturing for payment. The subscription was 20,850,000,000f, of which 10,640,000,000f was in fresh money, that sum being the maximum which the Treasury wished to obtain.

GERMANY.

Currency and Credit.—The credit situation was influenced by a continuous but moderate setback in trade activity. Credits declined considerably, the Reichsbank's combined discounts and advances dropping from 3,207 to 2,803 million marks; but there was a considerable inflow of foreign short-term credits. Late in the year the money market was very fluid, and interest rates declined sharply. The Reichsbank's discount rate, which was raised to 7 per cent. on October 4, 1927, was, nevertheless, maintained unchanged. The foreign exchanges were weak during the second half of the year, and the Reichsbank's resulting purchases of gold led, despite the contraction of credits, to an increase in circulation. At the end of the year the combined circulation of Reichsbank and Rentenbank notes was 5,460 million marks, as against 5,280 millions at the beginning. The Reichsbank's reserve increased, and its ratio (gold and exchange) to circulation rose from 47 to 58.5 per cent. The gold reserve increased from 1,865 to 2,729 million marks. The capital market did not improve. Home loans issued totalled approximately 1,038 million marks, as against 927 million marks in 1927; foreign long-term loans 1,549 million marks, against 1,529 million marks, of which 1,153 millions were subscribed by the United States and 186 millions by Great Britain. Bankruptcies numbered 8,048, as against 5,513 in 1927.

Public Finance.—Revenue receipts were satisfactory, and amounted in the first three-quarters of the financial year 1928-29 to 6,811 million marks out of the 8,862 million marks Budget estimate for the whole 12 months. The revenues controlled for Reparations purposes came in satisfactorily, the yield in the first nine months of the financial year being 2,095 million marks out of 2,760 millions estimated for the 12

months. The Budget for 1929-30 was not submitted before the end of the calendar year. The total is officially forecast at 9,900 million marks, or 358 millions more than in 1928-29, 312½ millions of the increase representing an addition to the Budget contribution to Reparations. Owing to the falling away of 125 millions coinage profits and of 175 millions surplus carried over from 1927-28, the total additional requirements will exceed 600 million marks. This will be made good by increasing the beer, spirits, property, and inheritance taxes, by retaining 120 millions out of the subventions due to the States and municipalities, and by increasing the contribution from posts; and a sum of 90 millions additional is expected from existing taxes.

Prices and Wages.—Prices and the cost of living were relatively stable. The official wholesale index number moved from 139.6 in December, 1927, to 139.9 in December, 1928. In December, 1928, the chief index groups were agricultural products, 134.1; raw and half-manufactured materials, 134.1; manufactured goods, 159.5. The cost-of-living index rose from 151.1 to 152.7. Owing to construction of new houses, in which rents are not controlled, the house-rents index rose slightly. Despite the trade set-back, the wages movement, which was influenced by numerous strikes and lock-outs, was upward. In December, 1928, the average weekly skilled wage in 12 industries (including railways) was 52.25 marks, as against 50.44 marks in December, 1927; unskilled, 40.47 marks, against 37.01 marks. These figures represented tariff wages, and the actual wages earned were considerably higher.

Agriculture.—The crops yield was larger than in 1927, and the quality was much better. The bread-cereals crop exceeded that of 1927 by around 23 per cent. The officially-estimated yields were :—

(Metric Tons. 000's omitted.)

	1927.		1928.
Wheat	3,280	....	3,854
Rye	6,833	....	8,522
Oats	6,347	....	6,996
Barley	2,738	....	3,347
Potatoes	37,550	....	41,269
Sugar-beet	10,854	....	11,011

Industry.—Industry was somewhat less active than in 1927. The industrial-production index (based on 100 as average of 1924-26) was only 116.5 in October, against 125 in October, 1927. The number of publicly-supported unemployed declined from 1,561,000 in January to 647,000 in July, but thereafter rose rapidly, and at the end of the year was 1,829,400, exceeding by more than half a million the number at the end of 1927. Early in the year the production of the heavy industries was well maintained, but it declined later. Production in the coal, iron, and steel branches was affected by a lock-out in November, which involved 220,000 persons. While output of coal declined slightly, there was a large increase in output of lignite. The potash industry enjoyed a very good year. Engineering suffered from a slight decline in the home demand, but its exports increased considerably. Manufacturers of railway rolling stock continued to suffer from lack of orders. The electro-technical industry was very well occupied. Paper manufacturers also enjoyed prosperity. The home market for manufactured goods showed some signs of saturation; and the textiles and footwear industries were seriously depressed, but signs of improvement were visible late in the year. The artificial silk industry was active, but there were complaints of foreign underselling in the home market. Production figures are :—

	Metric Tons. 1927.		1928.
Coal	153,595,443	..	150,875,814
Lignite	150,852,085	..	166,224,159
Potash (Syndicate's sales)	1,239,392	..	1,424,200
Pig-iron	13,102,528	..	11,804,330
Ingot steel	16,310,682	..	14,517,165

Coal prices were raised in May. Prices of steel and rolling-mill products were raised in January and again in May. Industrial fusions of first magnitude were not reported, but progress was made towards concentrating the locomotive-construction concerns. The shipbuilding industry was badly depressed, and suffered from a three months' shipyard strike in the last quarter of the year.

Foreign Trade.—The foreign-trade balance continued passive. The import surplus was considerably smaller than in 1927, but, owing to the continuing heavy demand for raw materials, it was larger than was anticipated early in the year. Imports of foodstuffs declined, those of materials increased, and imports of manufactured goods remained at almost the same level as in 1927. The export of foodstuffs increased considerably. Exports of raw and half-manufactured materials underwent a very small change. Exports of manufactured goods continued to increase. The considerable increase in total exports mainly fell to the manufactures group. The net exports of heavy iron and steel and of machinery considerably exceeded those of 1927. Comparative figures (without precious metals and Reparation deliveries in kind) are :—

(Millions of Marks.)

	Imports.		Exports.
1913	10,769	.....	10,097
1927	14,143	.....	10,218
1928	13,995	.....	11,640

A new commercial agreement was concluded with Russia. A Bill carrying out the recommendations of the Geneva Economic Conference of May, 1927, and reducing the import duties on certain goods, was submitted late in the year.

Stock Exchange.—The Bourse was in general dull, the turnover being smaller than in 1927. On a basis of 100 as average quotation of 125 selected stocks in 1926, the stocks index moved from 139.99 at the end of 1927 to 138.07 at the end of 1928.

ITALY.

Foreign Trade.—Excluding precious metals and Reparations deliveries and adopting the corrected figures of the Central Institute of Statistics, the figures for 1928 and previous years were as follows, those for November and December, 1928, being provisional :—

(In Millions of Lire).

	Imports.*		Exports.*	Excess of Imports over Exports.
1910-13	3,496	..	2,528	..(a) 968 ..(b) 968
1920	18,105	..	8,742	.. 9,363 .. 3,049
1921	17,227	..	9,300	.. 7,927 .. 2,012
1922	15,765	..	10,698	.. 5,067 .. 1,240
1923	17,189	..	12,757	.. 4,432 .. 1,055
1924	19,381	..	16,529	.. 2,852 .. 643
1925	26,200	..	21,015	.. 5,185 .. 1,071
1926	25,879	..	21,175	.. 4,704 .. 939
1927	20,374	..	15,615	.. 4,759 .. 1,259
1928	21,990	..	14,493	.. 7,497 .. 2,042

* In paper lire. (a) Paper lire. (b) Gold lire.

The increase in the imports was due partly to the bad agricultural yields in 1927, which caused abnormal imports of foodstuffs, and partly to the increase of raw material imports in comparison with 1927, when industry was shy of embarking on big imports owing to the revaluation process. The increase in raw material imports should, in due time, lead to increases in exports. Already in November and December, 1928, exports were higher than in the corresponding months of 1927. The excess of imports over exports was bigger than in the six preceding years and in the pre-war years. If, however, we calculate it not in present gold lire, but in gold pre-war lire, according to the indices of the Milan Economical Board, imports shrink to 4,354 millions lire, exports to 3,032, and the excess to 1,322, a proportion of imports not much higher than in 1910-13.

Crops.—Agricultural production had a mixed record in 1928 :—

(In Thousands of Tons).

	1909-13 (Average).		1923-29 (Average).		1927.		1928.
Wheat	4,989·8	..	5,727·7	..	5,329·1	..	6,221·5
Maize	2,548·6	..	2,592·6	..	2,219·6	..	1,650·7
Rice	475·0	..	627·6	..	696·1	..	631·5
Grapes	7,096·6	..	6,883·7	..	5,795·8	..	7,496·0
Cocoons	40·8	..	509·0	..	50·7	..	..
Potatoes	1,654·8	..	2,033·5	..	1,945·3	..	1,489·8
Hemp	83·5	..	92·5	..	83·0	..	85·7

Maize and potatoes felt the consequences of the terrible drought; grapes did well for the same reason; and better methods of cultivation brought good results for wheat, making it possible to surmount the difficulties of weather.

Industry.—Perhaps the best index of industrial activity is the production of electrical energy, which increased from 6,720.2 million kilowatts in the first 11 months of 1927 to 7,573.8 in the corresponding months of 1928. Imports of oil, benzine, and oil derivatives increased from 751,105 tons in the first 11 months of 1927 to 810,170 in the corresponding period of 1928; while coal decreased from 10,253,046 to 8,325,356 tons. But in 1927 stocks were being replenished after the British coal dispute. In the same period imports of jute increased from 46,688 to 50,484 tons; of raw cotton from 191,287 to 211,767; of natural wool from 32,434 to 40,599; of washed wool from 3,961 to 5,011 tons; of dried cocoons from 1,287 to 2,660 tons. Broken iron, steel, and pig-iron imports increased also from 651,526 to 801,906; copper from 53,821 to 69,575; lead from 14,424 to 24,575 tons; spelter from 8,821 to 9,304 tons; while aluminium fell from 2,918 to 668; and tin from 3,946 to 4,027 tons. Imports of nitrate of sodium increased from 46,119 to 70,452; of sulphate of ammonium from 12,344 to 13,475; of potash from 22,426 to 46,939; and other chemical fertilisers from 142,846 to 144,067; while those of mineral phosphates fell from 816,810 to 560,092 tons, and calciocyanamide from 29,593 to 21,196.

The Passing of the Revaluation Crisis.—The gradual passing of the revaluation crisis, which was at its worst in the concluding months of 1927 and in the first quarter of 1928, is indicated by the fact that the 1928 imports of raw materials, in contrast to those of 1927, show more increases than decreases. The liquidation of weak firms is continuing; monthly average failures, which were 617 in 1913 and 654 in 1926 and had risen to 886 in 1927, rose further to 933 in 1928. The number of unemployed, which varied in 1926 between 79,678 (June) and 181,493 (December), and in 1927 between 214,603 (June) and 414,283 (December), increased further in January, 1928, to a maximum of 438,211, decreasing regularly to a minimum of 234,210 in July, and rising in December to 363,551, or 51,000 less than the corresponding month of 1927.

Some index numbers are given below :—

	Bank Notes Issued.*	Paper Price of Gold.	Wholesale Prices. In Paper Lire. (average).	Wholesale Prices. In Gold Lire.	Cost of Living.
1913	100	100	100	100	100
1921	845	457	538	117	541
1922	788	409	529	129	500
1923	755	421	536	127	494
1924	793	443	553	125	526
1925	847	486	646	133	611
1926	803	501	654	131	653
1927	787	378	527	139	567
1928	757	367	491	134	532

* End of the year.

As to the wages, no up-to-date statistics are available for number index-making for 1928. It is probable that, while in 1926 wages varied between five and six times pre-war level, they are to-day about five times.

Savings and New Issues.—Deposits in postal saving banks, which had risen to 504 at the end of 1926 (basis 1913 = 100) had decreased during the revaluation crisis to 460 in October, 1927. In November, 1928, they were again at 494. Deposits in ordinary saving banks rose similarly from 475 in June, 1927, to 562 in November, 1928. Deposits in the six largest ordinary banks between October, 1927, and October, 1928, rose from 569 to 635; of the People banks from 652 to 676; of the regional banks from 776 to 816. Net increases in the capital of joint-stock companies, which amounted to 2,128 million lire in 1923, 4,895 in 1924, 8,032 in 1925, 3,931 in 1926, falling to 1,840 in 1927, increased again to 2,698 in 1928. In 1928 the issue was also authorised of 1,187 million lire of bonds and debentures.

Money and Stocks.—The official rate of discount, which had remained for years at 7 per cent., was lowered to 6.50 per cent. on March 5th, to 6 per cent. on April 1, and to 5.50 per cent. on June 25th, remaining there until, in the first days of the New Year, it was again raised to 6 per cent. Correspondingly, the private rate of discount from 8-8.50 per cent. at the beginning of the year decreased in summer and autumn to 5.25 per cent., again to rise slightly at the end of the year to 5.50 per cent. Prolongation rates, which had fallen to 5.50 and 6.25 in July and, October, hardened somewhat in November and December to 6 and 7 per cent. The Bourse improved. According to the Bachi index number (base December, 1913 = 100) the highest level was reached in February, 1925, at 183.05. After that date there was a more or less continuous sinking of quotations, until the low-water mark was reached at 97.80 in June, 1927. In December, 1927, the index number was 123, rising to 129.40 in January, 1928, to 151.28 in May, and closing the year at 141.34.

Public Finance.—The Treasury accounts for the financial years 1924-25 to 1927-28 closed with surpluses of 417, 468, 436, and 497 million lire. The first semester of the current 1928-29 financial year closed with a surplus of 21 million lire. State internal debt, which had reached a maximum of 96,163 million lire on June 30, 1924, and was 90,361 millions on June 30, 1927, had fallen, thanks to the cancellation of the Treasury debt to the Bank of Italy as a consequence of the revaluation of the bank's gold reserves, to 86,423 millions at December 31, 1927. At December 31, 1928, the total debt is 87,006 million lire, to which must be added the 100 million dollars of the Morgan Loan, reduced in the meantime to 95,177,650 dollars.

RUSSIA.

Currency and Credit.—The year witnessed further expansion of credit and increase in currency circulation. While the rouble exchange was formally maintained at Moscow, its internal value declined, and on Continental exchanges it was sold at a discount. In the business year ending September 30, 1928, the State Bank's circulation rose from 990 million tchervonetz-roubles to 1,064 million tchervonetz-roubles; circulation of unsecured Treasury notes from 461 to 711 millions; total circulation, including coins, from 1,628 to 1,971 millions. By December 31st the State Bank circulation had risen further to 1,122 millions, Treasury notes to 763 millions. In the expansion of credit the industries producing for consumption, in particular textiles and leather, had an increasing share.

Finances.—The public debt increased during the financial year by 555 million roubles, and was 1,298 million roubles on October 1, 1928. Revenue receipts in the financial year 1927-28 totalled 6,796 million roubles, and exceeded the estimate by 5 per cent. The Budget for 1928-29 totals 7,731 million roubles. It provides for a large increase of expenditure on capitalisation of industry and agriculture, and is balanced only with aid of 800 million roubles loans. According to the Budget Commission of the C.E.C., the finances are in a condition of serious strain.

Prices.—Both wholesale and retail prices rose. In the business year 1927-28 the wholesale index number moved from 1,700 (1,000 in 1913) to 1,761; retail index number from 1.98 (1.0 in 1913) to 2.11. In the first months of the new business year there was a further rise. Industrial prices were fairly stable, but agricultural prices rose very much, and in December (wholesale) were 1,664, against 1,872 industrial.

Agriculture.—Crops for the fourth year in succession were satisfactory. The cereals crop was returned at 74,750,000 metric tons, or 1 million tons more than in 1927. The geographical distribution of the crops was unfavourable, being best in Siberia and in other districts remote from the chief consuming centres and the ports. The State buying-up campaign met with great difficulties. An official plan, based largely upon extension of State and collective farming, for increasing

the crops yield by 30-35 per cent. in five years was published.

Industry.—The value of output of industry in 1927-28 was returned at 21½ per cent. higher than in 1926-27. Industry continued to suffer from shortage of capital and of raw materials, in particular foreign materials and iron. The average production cost was reported to have declined 5 per cent. The relative volume of private industry declined. The seven hours' day was introduced into numerous State concerns with varying results, and there were complaints of deterioration of labour discipline in certain branches, in particular coal and engineering. Pig-iron production in 1927-28 was 3,282,000 tons, steel 4,143,000 tons, rolled products 3,286,000 tons. Pig-iron production remained nearly 1 million tons behind the pre-war figures, whereas the other heavy metal branches nearly caught up. The engineering, paper, textiles, and leather branches all reported increased output. Oil output of the three trusts, Baku, Grozny, and Emba in 1927-28 was 11,399,137 tons, against 10,084,984 tons in 1926-27. The programme for 1928-29 was fixed at 12,960,000 tons. Production of 1927-28 exceeded that of 1913 by 31.3 per cent. Export of oil products in 1927-28 was 2,728,000 tons, against 2,038,000 tons in 1926-27 and 948,000 tons in 1913. Export of oil to most countries, in particular to India, Turkey, and Spain, greatly increased, but to Great Britain was stagnant and to France declined.

Foreign Trade.—Foreign trade in 1927-28 showed a considerable passive balance, imports (European frontiers) being 820,059,000 roubles, exports 635,841,000 roubles. Germany continued to lead as seller to Russia, her deliveries in 1927-28 being 242 million roubles, as against 45 million roubles by Great Britain, and 181 million roubles by the United States.

POLAND.

Agriculture and Industry.—Record figures have been registered in 1928 in all domains of production. In agriculture crops other than wheat yielded better results in 1928 than before the war. In the coal industry the pre-war level has been already reached. The output of coal amounted in 1913 to 3,393 million tons monthly, as compared with an average of 3,338 million tons during the first ten months of 1928. The same rapid expansion may be observed in other branches of industry as shown by the figures below :—

MONTHLY AVERAGES—'000 TONS

	Oil.	Pig Iron.	Steel.	Rolled Products.
1927	60·2	51·5	103·7	76·5
1928 (Sept.)	62·5	56·4	127 2	91·5
(October)	62·5	62·9	139·5	103·1

The sugar campaign has given much better results this year than in 1927-28. To the end of November 4,382,000 tons of white sugar have been produced, as compared with 3,813,000 tons during the same period in 1927-28. In the cotton industry the number of spindles is nearly as great as in 1914. The only important industry which has not recovered its pre-war importance is the wool industry.

Finance.—Financially the year 1928 has been very satisfactory. Revenues have increased rapidly. During the first seven months (April-October) revenues yielded 1,646.3 million zlotys, as compared with 1,419.6 millions during the same period of 1927-28. Expenditure increased from 1,253.9 millions in 1927-28 to 1,574.5. For the first eight months of the year the surplus of revenues amounts to 101 million zlotys, which corresponds to 150 millions for the whole year. Though in comparison with the previous year this surplus has decreased, it is nevertheless an indication of a sound financial policy.

Foreign Trade.—Foreign trade has been characterised by a great excess of imports. During the first eleven months of the year imports amounted to 3,123.7 million zlotys, exports to 2,298.8, so that the deficit reached 825 million zlotys. This excess of imports had no detrimental influence on the economic condition of the country. The efflux of foreign currencies was maintained within very narrow limits. At the end of 1928 the reserve of gold and foreign currencies amounted to 1,335 million zlotys, as compared with 1,391 on November 10, 1927. During this whole period the total decrease did not exceed 56 millions.

HOLLAND.

The development of financial and economic conditions in Holland during the past year has been very favourable. A great advance of trade and industry and an improvement in the financial position were apparent at the end of 1928.

Foreign Trade and Prices.—For the year 1928 imports and exports in comparison with those of 1927 were as follows :—

Quantity (in 1,000,000 Kg.).			Value (in Million Guilders).		
	Imports.	Exports.	Imports.	Exports.	Balance.
1926	28,346	15,822	2,441·9	1,749·2	692·7
1927	28,619	14,338	2,548·9	1,899·7	649·2
1928	29,821	15,725	2,684·0	1,986·0	697·7

Index figures of wholesale prices for the year in comparison with former years were :—

	General Index Figure. (1913 = 100.)	Foodstuffs Only. (1913 = 100.)
1922	160	160
1923	151	143
1924	156	156
1925	155	155
1926	145	144
1927	148	153
1928	149	157

Public Finances.—Receipts from direct taxes amounted to Fl. 492,305,000, as against Fl. 503,210,000 for 1927. The lowering of the income-tax and other duties have contributed to this decline.

Money and Stocks.—The quotation for "prolongation"—advance of money on stock collateral—moved between monthly averages of 4.7379 and 3.8105. The average for the year was 4.1613, against 3.8108 in 1927. Bank rate remained unchanged at 4½ per cent. Issues of new capital amounted to Fl. 669 millions, against Fl. 502 millions in 1927. Of the 1928 total, 309 millions, or 46 per cent. of the total, was raised on foreign account, as against 340 millions, or 68 per cent., in 1927. Private discount rate varied between the average of 3.84 for March and 4.39 for November. The international importance of the money and stock market in Holland increased. Business on the stock market during the year was very satisfactory. Prices improved, especially for industrials and oils. Colonial stocks, such as rubber and sugar, dropped sharply. The active business is reflected in the yield from the tax on Stock Exchange transactions, which rose to 6,988,847 guilders for the first eleven months of 1928, against 5,579,479 for the corresponding period of 1927. Shares of many different foreign companies received a good deal of attention on the Amsterdam stock market.

Shipping.—During 1928 the harbour traffic of the port of Amsterdam totalled 3,870 ships, of a tonnage of 9,217,128, as against 3,318 ships of a tonnage of 7,765,962 tons in 1927. The increase during 1928 is 552 ships, of a tonnage of 1,451,166. For the port of Rotterdam harbour traffic for 1928 totalled 12,291 ships, with a tonnage of 20,456,343, as against 13,155 ships, with a tonnage of 21,242,557 tons, in 1927. The decline in the Rotterdam tonnage during 1928 is 864 ships, with a tonnage of 786,413.

Bankruptcies.—The number of public bankruptcies during the eleven months of 1928 was 2,976, against 3,284 during the same period in 1927.

BELGIUM.

Prices, Production, Trade, and Traffic.—Wholesale prices have remained stable during the year 1928, at a gold level corresponding to about 123 (1914 = 100). A rise in the wholesale prices of export articles, such as steel, window-glass, materials for construction, was, however, to be noted at the end of the year. Retail prices and the cost of living are continuing to adapt themselves to the monetary stabilisation rate adopted in October, 1926. The index of retail prices has risen from 812 to 852 in a year, but the upward movement is partly due to the dry summer.

Industrial activity has been very satisfactory. The situation of industries working for national consumption has improved owing to a rise in the purchasing power of the population; but home markets do not yet seem to have recovered their full capacity. Export industries have enjoyed another good year, notwithstanding heavier costs of production. Metallurgy has ended the year well and the coal trade is in a satisfactory position in spite of higher wages.

Unemployment touches only certain branches, such as the textile industry. Out of 1½ million workmen there are only 4,000 totally and 20,000 partly unemployed. In many occupations there is a scarcity of labour.

PRODUCTION.
(Thousands of Metric Tons.)

	Coal.	Pig-iron.	Steel.
1913	22,842	2,485	2,467
1926	25,320	3,399	3,339
1927	27,574	3,751	3,705
1928	27,543	3,905	3,820

FOREIGN TRADE (Belgian-Luxembourg Customs Union).
(In Millions of Francs.)

	1927.	1928.
Imports	19,180	31,564
Exports	26,621	30,145
Excess of imports over exports	2,559	1,419

Sea-going vessels entered at Antwerp harbour were 23,604,000 tons, against 23,490,000 in 1927 and 14,139,000 in 1913. The traffic of Ghent was 2,256,000 tons, against 2,054,000 in 1927 and 1,061 in 1913. During the first 10 months the railways worked 6,468 millions of ton-kilometers, against 6,596 last year, and carried 189 million passengers, against 180 last year.

Money, Exchange, and Stocks.—Money has remained very easy in 1928. Bank rate, which reached 7½ per cent. in March, 1926, and had fallen to 4½ per cent. in November, 1927, was reduced to 4 per cent. in July, 1928. Short-loan capital, partly of foreign origin, is abundant in Belgium.

The situation of the National Bank of Belgium and of the Belgian franc is very strong. There has been a notable strengthening of the gold and gold exchange reserve, and a considerable increase of bank-notes in circulation :—

NATIONAL BANK of BELGIUM.
(In Millions of Francs.)

Reserve—	Jan. 5,1928.	Jan. 3, 1929.
Gold	3,665	4,519
Gold bills	2,571	3,075
Discount	2,924	3,361
Notes in circulation	10,382	11,965
Ratio of reserve to notes and deposits	55·05%	58·76%

It is known that the real reserve ratio is more than 58.76 per cent., some of the gold bills being included in the ordinary discounts.

The Brussels Stock Exchange witnessed a boom in May, followed by a depression, which is not yet ended. According to the index of the National Bank of Belgium (January, 1928, = 100), shares were at the beginning of May and June, 1928, at 129; at January 2, 1929, they were at 118. State securities and bonds have risen on the average 8 per cent. since January, 1928.

Shares issues have been particularly important in 1928, reaching 12,250 millions of francs (£72 millions), against 5,950 millions of francs in 1927. Issues of debentures have amounted only to £70,000.

Public Finance.—During 1928 fiscal receipts attained 9,260 million francs, against 7,730 millions in 1927. This increase is partially derived from arrears of taxes, but the ordinary receipts are more than satisfactory. The 1928 fiscal year will show an important surplus, notwithstanding the rise of expenses and the redemption of 1,800 million francs of public debt.

The public debt amounted at the end of September, 1928, to 56,000 million francs (£320 millions), against £200 millions at the beginning of the war.

SPAIN.

Last year marked another period of steady progress in the financial reconstruction of this country. The ordinary Budget, balanced in 1927, for the first time in twenty years, showed in 1928 a fair surplus of 183 million pesetas. The biennial Budget for 1929 and 1930 estimates expenses at 3,370 millions and revenue at 3,399; but this figure is very conservative, as the revenue actually collected in 1928 was 124 millions higher. The surplus will probably exceed 150 millions in 1929, and seems therefore consolidated. But there is, besides, the extraordinary Budget which required the issue of debt for 500 millions, mainly devoted to public works, and a further 300 millions of railway debt, included in the large plan of extension and coordination of the railway system which is being executed. At the beginning of the year a big operation was achieved with success, consisting in the conversion of 3,407 millions Internal Consolidated 4 per cent. Debt, into 3 per cent. and 4 per cent. issues, redeemable in 70 years.

Money and Business.—The year was one of cheap and plentiful money, record issues, and buoyant Bourses. The issues amounted to 2,220 millions, against 1,003 in 1927, and reached by far the largest figure since 1921. Government issues were made at 4.50 per cent., corporation and industrials at 5 and 5½ per cent. The mean rate works out at 4.936, against 5.753 last year, and is the lowest mean rate for many years.

Stimulated by the large supply of money, the Bourses of Madrid, Barcelona, and Bilbao were very active, and quotations rose all round. The Madrid Bourse alone negotiated 1,698 million pesetas, against 1,168 in 1927. The capital appreciation during the year amounts to about 300 millions for gilt-edged securities, 122 millions for the Monopolies (Tobacco, Telephones, Petrol, and Matches), 208 millions for banks, with an aggregate capital of 645 millions—*i.e.*, 33 per cent. Electric company shares were also attractive and railways very firm. On the other hand coal mines are in a difficult position, and the cotton and wool industries of Catalonia are languid. It is difficult to say, therefore, how far the apparent increase of wealth in the country is due to real economic development and how far to the inflation produced by the large Government expenditure on the big reconstruction schemes of railways, roads, water and irrigation, air-lines, steamship companies, foreign trade banks, &c., initiated, organised, and paid or guaranteed by the present Government in the formidable experiment of State intervention which they are carrying out.

In spite of this the price index does not point to a big inflation, but to a moderate increase. Compared with the mean prices for 1927, the index of last November shows the following changes :—

	Mean for 1927.	November, 1928.
Animal food	205	214
Vegetable food	167	176
Drinks, &c.	179	176
Fuel and electricity	163	149
Textiles and hides	141	150
Metals	154	157
Building materials	207	208
Chemicals, &c.	147	141
Total index numbers	172	176

The aggregate increase is of four points only, in spite of a bad harvest.

Exchanges.—Although some of the factors already mentioned are favourable to the value of the peseta, there remain two very important ones which act against it—*i.e.*, the bad harvest and the adverse trade balance, which has been as follows :—1925, 659 millions; 1926, 542 millions; 1927, 688 millions, and is probably bigger in 1928, owing to the large imports of wheat and maize to cover the insufficient

harvest. The peseta therefore lost ground throughout the year, the sterling rate increasing from 28.22 to 30.12 in October, until the Government decided to intervene, through the Bank of Spain, and arranged important credits in sterling and dollars. At the end of the year it was getting a hold on the market, and the rates were practically pegged at 29.76 to the pound and 6.12½ to the dollar. The Finance Minister then announced his intention of tackling the monetary question, and a Commission is already at work on the question whether the peseta should be stabilised or revalorised, and whether Spain should adopt the gold standard or the gold exchange standard. Most technical men are inclined to legal stabilisation, but others consider that some preliminary problems should be first settled, such as the total balancing of both Budgets, a definite foreign trade policy, and the reduction of the excess of imports over exports. Anyhow, the Finance Minister has announced that 1929 will see definite steps taken in that direction, and has already raised the discount rate to 5½ per cent.

SWITZERLAND.

From the economic point of view 1928 was the best of the past eight years in Switzerland. Trade and industry showed an increasing activity, conditions were particularly good for banking and hotels, all railway receipts were higher, unemployment continued to decrease, and the Federal, Cantonal and municipal finances further improved. The estimated deficit of 15,000,000f for 1927 in the Federal accounts was deduced to 1,580,000f. The ordinary Budget of the Confederation for 1928 showed estimated expenditure at 331,550,000f, and revenue at 322,230,000f leaving a deficit of 9,320,000f, which will be transformed into a surplus of at least 1,500,000f. The Budget for 1929 estimates expenditure at 350,800,000f and revenue at 352,800,000f., thus leaving a surplus of 2,000,000f, the first surplus recorded in a Federal Budget since 1898. At the end of 1927 the total debt of the Confederation was 2,184,142,000f, but it was reduced by about 20 millions in 1928, and will be further reduced by 45,000,000f in 1929. Traffic receipts are increasing year after year, and the Railway Board is now preparing for a reduction in goods transport rates. Receipts aggregated 418 million francs, against 390 millions in 1927, expenditure reached 254 millions, compared with 252 millions in 1927, thus leaving a surplus of 164 millions, against 135 millions the year before. At the end of 1928 the first stage of the electrification of the railways was completed; 1,035 miles out of a total of 1,806 miles, that is about 60 per cent., are now electrified, and the use of electricity resulted in a saving of 35 million francs in 1928.

The official discount rate remained unchanged at 3½ per cent., while unofficial rates oscillated between 3¼ and 3½ per cent. The sterling exchange opened at 25.30 in January, it rose to 25.34 in March, and closed at 25.17 at the end of December. There was great activity in the Swiss Bourses, and the average value of 109 State and industrial securities on the Swiss market rose from 242.59 per cent. in January to 256.12 in September, closing at 252.83 in December. Crops were unsatisfactory owing to the abnormally dry summer, but they were better than in 1927; the total value of agricultural production was about 1,456 million francs in 1928, as against 1,390 millions the year before. Exports totalled 2,134 million francs, compared with 2,023 millions in 1927, while imports aggregated 2,744 millions, compared with 2,563 the year before. The adverse balance was therefore 610 millions, against 501 millions in 1927. The number of unemployed fell from 14,212 in January to 5,373 in June, but it rose again from seasonal causes to 9,700 in December.

The index number of wholesale prices (July, 1914, = 100) was 145 in January and 144 in December, while that of retail prices (July, 1914, = 100) was 164 in January and 163 in December.

SOUTH-EASTERN EUROPE.

AUSTRIA.

The amount of foreign capital employed in Austria was considerably reduced in 1928. Short-term debts probably went down from 120 million dollars to 80 millions, but there was a slight increase in long-term debts. The gradual accumulation of capital afforded the banks the possibility of getting credits at home on more favourable conditions than were offered abroad. Savings deposits have risen from 1,500 to 2,000 million schillings, and amount to 30 per cent. of the pre-war level. The most recent statistical investigations show that no more than 1.5 per cent. of income is derived from capital investments and house ownership. Of the 2.1 million persons liable for income-tax 75 per cent. are in the category of staff employees and workers. By reason of the foreign tourist traffic, the higher dividends enjoyed by Austrian possessors of foreign shares, further sales of Austrian enterprises, land and real estate, and revenues from transit traffic and commission business it was possible to achieve a favourable balance of payments. The visible trade balance shows a deficit of 1,040 million schillings, as against 1,086 million schillings. However, exports of finished goods show an increase, and unemployment was kept down for a great part of the year. The output of ores, crude iron, and steel was greater, and a better course of business for the paper, electricity, and brewing industries permitted greater exploitation of the capacity of industrial plant. The degree of occupation in industry rose from 68 to 75 per cent. Seventy-six stock companies were liquidated, either voluntarily or compulsorily. Insolvencies and bankruptcies were not so numerous as in the previous year. The farmers had a good harvest, but prices were less satisfactory, and the indebtedness of all agricultural concerns rose. In recent trade-treaty negotiations farming interests gained the advantage over industry. The Stock Exchange was completely stagnant, even though individual companies have again declared dividends of 7 to 8 per cent. Speculators devoted their attention to foreign markets.

CZECHOSLOVAKIA.

In 1928 Czechoslovakia made further progress in her economic stabilisation and development. In many ways the year was even more prosperous than 1927. Production in all branches of industry has again increased in comparison with 1927, so that the number of unemployed reached the lowest figure in October, 1928, with a total of only 29,397, and in November, 29,919. There was unpredecented activity in the building trade. The volume of foreign trade increased to a total of 40,425 million crowns, compared with 38,062 million crowns in 1927.

(In Million Czech Crowns.)

	1927.		1928.
The exports amounted to	20,125	..	21,229
The imports amounted to	17,937	..	19,196
Export surplus	2,188	..	2,033

There was a large increase in the export of manufactured articles, especially in shoes. On the other hand, there was also a corresponding increase in the imports, both of raw materials and of manufactured goods, leaving, however, a surplus of 8,745 million crowns in the export of manufactured goods.

The currency remained stable, and the position of the Bank of Issue was considerably strengthened by the increase of the holdings of gold and gold currencies to some 3,500 million crowns, whereas the circulation of banknotes amounted to about 7,000 million crowns on the average. The official bank rate remained at 5 per cent. during the whole year. In 1928 the last remains of the Floating Debt were consolidated and the American Loan of 1925 was paid off through a conversion operation on the home market. The Budget shows again a surplus of 9 million crowns, and the State expenditure appears to be stabilised at around 9,500 million crowns a year. The wholesale

index number stood at 955 in December, 1928, as compared with 987 in June, 1928, and with 975 a year ago, whereas the index of retail prices was at 900 on November 1st and 928 on June 1, 1928. The total of capital issues in 1928 amounted to 300 million crowns. There was again a slight rise in the number of bankruptcies, but a decline in creditors' arrangements, whereas the total excess of liabilities over assets was again lower than in the previous year (353 million, as against 426 million). The harvest in 1928 was slightly better than in 1927, with an increase in the yield of wheat, barley, and rye, but a decrease in the yield of sugar-beet and oats.

HUNGARY.

General conditions were satisfactory in 1928. The financial part of the reconstruction which was worked out by the League made further progress. Treasury receipts in the budgetary year ending on June 30th amounted to 961.4 million pengös (£34,500,000), as against 901 million pengös in the previous fiscal year. Taxation is heavy; several tax remissions were made during 1928 without, however, endangering the equilibrium of the Budget, which produced a surplus of 95 million pengös in 1927-28. There will be a much smaller surplus this year owing to the increased pay of civil servants and the effect of the tax remissions.

The Government has appointed Dr Bud, the Finance Minister, to work out an economic programme as Minister of Economics without portfolio. Hungary, after trying a highly protective tariff policy in 1925, considerably lowered her tariffs without obtaining equivalent reductions from her neighbours for the agricultural surplus of the country. The high industrial tariffs proved to be an onerous burden on this mainly agricultural country, and it may be hoped that their reduction will improve economic conditions.

The grain harvest was excellent, but the fodder crop was very much behind last year's average. The large grain surplus brought very low prices, and farmers were so reluctant to part with their stocks that the year ended with a deficit of foreign trade amounting to 366 million pengös, as against 346 millions of 1927. Imports were at 1,185 millions pengös, as compared with 1,146 millions in 1927; exports totalled 819 million pengös, as against 800 millions. The heavy adverse balance is explained by the foreign borrowing of Hungary, amounting to 260 million pengös for long-term loans, and about 100 million pengös for short-term and merchandise credits. These credits were used mainly for investments in order to increase the productive capacity of the country. The money market was easy in the first half-year, but rates went up as the American short-term credits were withdrawn in the second half of the year, and the National Bank was compelled to raise its discount rate from 6 to 7 per cent. on October 1st. Owing to the scarcity of internal capital, and the withdrawal of the foreign short-term credits, the bills portfolio of the National Bank had increased at the end of December to 417 million pengös, as against 332 millions in 1927, whereas the metal cover had decreased, owing to the temporary stoppage of the grain export, to 255 millions, against 311 millions in 1927. Bank balance-sheets are very satisfactory. Profits and dividends are 10 to 15 per cent. higher than in 1927. The consumption of coal has increased, but that of iron has declined. Consumption of sugar, milk and liquor has so substantially increased that it is suspected of an adverse effect on the savings of the country. Wages and prices do not show any substantial change. The Stock Exchange was dull throughout the year.

ROUMANIA.

The event of outstanding importance is the fall of the Liberal Government under Monsieur Vintila Bratianu, and the coming to power of the National-Peasant party, led by Monsieur Maniu. The country has made an important step forward in democratic government by shaking off the iron grip of a party which had dominated the political situation since the war. The change was the direct result of the late Government's economic policy. Meanwhile, the economic situation of Roumania has not shown a change for the better. The stagnation of business prevalent in 1927 became more and more acute as the past depressing year wore on. The Treasury receipts to the end of December show a deficit of 7,500 million lei, which will be aggravated by an important loss in the administration of the railways. The foreign trade balance is deficient by over 5,000 million lei, against a favourable balance of about 4,000 million in 1927. The harvest of maize, the most important cereal for this country, amounted to 2.5 million tons only, against 3.5 million tons in 1927 and over 6 millions in 1926. The export of cereals is down to a minimum, owing to the low prices in the world markets. On the other hand, the production of petroleum has made good progress; but export has been unremunerative owing to the low world prices. The industries of the country have not done well, although protected by a high tariff. They are handicapped partly by the diminished purchasing power of the population, partly by lack of funds, The result of these adverse circumstances is seen in the enormous increase in protested bills, bankruptcies, and moratoria. Nevertheless, there is now hope that with the new direction of economic policy a gradual return to prosperity will be effected. effected. But the road will be hard.

JUGOSLAVIA.

The year 1928 marks an improvement on 1927. Maize and hay have been poor, but wheat yielded a bumper harvest of 28.7 million quintals, 47.5 per cent. above the average. Exports improved in quantity, but little in value, amounting for 11 months to 5,875 million dinars. With imports for the same period at 7,286 millions, as against 6,648 in 1927, a considerable trade deficit is certain. This partly explains the shrinkage of the National Bank covering from 452 million gold dinars at the end of 1927 to 339. Fortunately, the increased imports are chiefly in the form of investments, consisting of railway material, rolling stock, industrial plant, and hardware. Besides railway and road construction, other symptoms of activity have been the growth of municipal enterprise, the continued boom of the timber industry, and the rise of a new textile industry. The index figure remained stable at 1,566, as against 1,558 in 1927, but bankruptcies fell to 917, compared with 1,060 last year. The deficit in the Budget for the first half-year amounted to 768 million dinars. Banks are preparing to pay the same dividends as last year—*i.e.*, from 6 to 10 per cent., with occasional increases. Foreign capital helped the amalgamation of a number of bigger banks, and showed interest in industrial enterprise and mining. Government securities improved throughout the year, in spite of the severe political crisis, which much injured internal trade and for a time stopped the influx of foreign capital.

BULGARIA.

As a consequence of relatively poor crops and of unfavourable prices of agricultural products, the foreign trade balance closes with a deficiency of at least 800 million leva, as against a credit balance of 510 million leva for 1927. The earthquakes in April checked the slowly improving tendency of the financial situation. The conclusion of the Stabilisation Loan, on the other hand, was a timely help to the weakened position of the Treasury and the National Bank, and rendered possible the effective stabilisation of the currency. Monetary conditions improved further; the official discount rate was reduced from 10 to 9 per cent. Business has improved, and there has been a marked increase in buying on the part of peasant consumers. Agriculture showed increased activity, backed by a growing use of better methods of cultivation. In spite of a rise of 33⅓ per cent. in Customs duties, import trade has been, and continues to be, active.

SCANDINAVIA.

DENMARK.

In 1928 prices and foreign exchange quotations in Denmark were very stable. The official wholesale price index showed a figure of 153 in January, 155 in June, and 151 in December. For the entire year of 1928, as for 1927, the index figure was 153, but in the latter part of 1928 a considerable improvement in the prices of export goods took place, and this was very important to agriculture. For the first half-year the index for export goods showed a figure of 131 and for the last six months it was 146, while the figure for import goods was reduced from 149 to 145. The crops were considerably better than in 1927, and the general agricultural situation has thus improved in the latter part of 1928. The aggregate agricultural exports are estimated to amount to about Kr. 1,160,000,000, against about Kr. 1,100,000,000 in 1927. In the period January-November the exports of bacon reached a total of 250,100,000 kilos, against 230,700,000 kilos in the corresponding period of 1927. At the same time, the exports of butter were increased from 129,900,000 kilos to 135,400,000 kilos, while the exports of eggs declined from 39,500,000 scores to 36,400,000 scores. The deficit of the visible balance of trade is estimated at Kr. 100,000,000 for the entire year, against Kr. 111,000,000 in 1927 and Kr. 135,000,000 in 1913. For the first 11 months of 1928 the value of imports was Kr. 1,591,000,000, against Kr. 1,497,000,000 in the corresponding period of 1927, while at the same time the value of the exports was increased from Kr. 1,413,000,000 to Kr. 1,510,000,000. In the manufacturing trades there was some improvement, and the percentage of unemployed month by month was below the figure for the corresponding month of 1927, viz., 29.6 per cent., against 31.8 per cent. in January, 15.5 per cent., against 18 per cent. in June, and about 25 per cent., against 31.6 per cent. in December. The income of the mercantile marine in foreign trade will presumably have been a little less than last year, but is believed to be as much as Kr. 180,000,000 to Kr. 185,000,000. The Budget for 1929-30 shows income estimated at Kr. 320,000,000, against estimated expenditure Kr. 316,000,000.

NORWAY.

The return to the gold standard was made as from May 1st, the krone rising slowly from 18.31 to the pound in January to 18.22 in May. Since July the sterling quotation has been practically stationary at 18.19. Foreign-trade statistics show a surplus of imports over exports of about 325 million kroner, as against 306 million kroner in 1927. On the other hand, the net earnings of shipping, whaling, and tourist traffic exceed those of 1927 by several million kroner, so that the net deficit of the foreign balance of 1928 approximately equals that of 1927, viz., about 75 million kroner. Industry had a year of progress and increased activity, and in certain branches wage agreements secured peace for a couple of years ahead. It was a difficult year for agriculture and forestry. The fisheries recorded increased catches and net earnings, and whaling experienced a period of expansion and unusual public interest. To shipping the first half-year was a dead period, while the second half-year brought a considerable improvement of the position. The joint-stock banks had a year of consolidation and reconstruction, and the last stages of the return to normal conditions are now practically accomplished. With most of the banks the turnover has been on the increase. The money market was tight during the first quarter of the year, and Bank rate rose from 5 to 6 per cent. Later on the stringency relaxed, and since March 27th the Bank rate has been 5.5 per cent. Unemployment figures were lower than in 1927, and the cost-of-living index sank from 194 to 184.

SWEDEN.

The events which set their stamp on economic development of Sweden in 1928 were the labour disputes in the sawmills, pulp and paper mills, and the iron mines—the most important export industries of the country. These disputes broke out at the beginning of the year, and lasted in the three first-named branches until the middle of April, and in the mines until the end of August. As the value of the exports of these industries amounted in 1927 to about £50 millions, or 56 per cent. of the total exports of the country, it will be evident that the effects of the conflict must have been widespread. Production in the leading industries fell, according to *Svensk Finanstidning*, from 120 in 1923-4 (end of 1927 = 100) to 70 in February, and remained at a very low level until May. After the termination of the disputes there was a rapid recovery, and since October the index number maintained a remarkably high level. The final result of 1928 was therefore satisfactory, even if not so good as the exceptional year 1927.

As far as one can judge, the excess of imports will amount to about Kr. 170 millions, as compared with an excess of exports of Kr. 36 millions in 1927 and an excess of imports of Kr. 70 millions for 1926. The decline in shipments of iron ore was 56 per cent. to 4.25 million tons. Against this the mechanical industries show a continued and vigorous expansion; motors, 18 per cent.; ball-bearings, 20 per cent.; electrical machinery, 26 per cent., and telephones, 36 per cent. Similarly, in the iron and steel industry there is visible the beginning of a recovery. The considerable excess of imports is largely to be attributed to the poor harvest of 1927. Fortunately the 1928 harvest was considerably better. The demands on the money market connected with the unfavourable balance of payment, export of capital, and the rising tendency of discount rates abroad compelled the Riksbank, which at the beginning of 1928 lowered its discount rate to 3½ per cent to raise it to 4 per cent. in May and 4½ per cent. in August.

FINLAND.

The economic progress which marked the last few years reached its climax in 1928, only to slacken in some spheres, and even to fall off to some extent. Owing to a cold and rainy summer and autumn the harvest turned out less favourably, its value being estimated at 4,300 million marks, compared with 5,280 millions a year before. Imports were heavier than ever before; their value came to 8,012 million marks, as against 6,386 millions in 1927. Exports, on the other hand, amounted to approximately the same figure as for 1927, or 6,243 million marks, so that there was a surplus of imports amounting to 1,769 million marks. Industry worked at full pressure, and its gross production was estimated at 13,500 million marks, compared with 12,382 millions for the previous year. Owing to the worse position of the timber market, the output of the sawmills was restricted, and exports of sawn goods fell off to 1,146,500 standards from 1,283,100 standards in the record year 1927. At the same time, the production of the paper trade increased appreciably, and exports of cellulose increased 30 per cent., of mechanical pulp 35 per cent., and of paper 9 per cent. Plywood exports grew by 45 per cent. Building operations deserve special notice, as they were exceptionally active, and were considerably in advance of conditions during the preceding record year. Owing to the circumstances referred to, the demand for credit was extraordinarily large. During the first half of the year the banks were able, thanks to ample deposits received, and by increasing their own funds, to satisfy demands without difficulty, but since June there has been a growing stringency on the money market. The Bank of Finland was obliged on two occasions to raise the bank rate by altogether 1 per cent. to 7 per cent., but the stringency grew in spite of this up to the end of the year, when a considerable relaxation set in. The year was satisfactory for the banks, which generally show favourable annual results. Several of them have raised their dividends. During the year two large foreign loans were taken up, a Government loan of 15 million dollars in February at 5½ per cent. interest and a loan of 10 million dollars in October at 6 per cent. by the Municipal Mortgage Bank. The former was used entirely for redemption of older foreign indebtedness.

THE NEW BALTIC STATES.

The completion of the first decade of the independent existence of the New Baltic States offers a convenient opportunity to investigate the economic progress made in that period. Here we must emphasise the great difficulties which had in every case to be overcome, such as the creation and stabilisation of new currencies, erection of an efficient financial and administrative organisation, repair of war damage and communications, the introduction of agrarian reform, and the general consolidation of the machinery of the State. On the top of these difficulties there had in some instances also to be faced the problem of feeding and housing a large starving population. Bearing these facts in mind, the progress made has been remarkable if uneven; of necessity it has been slow, and by no means the least of the many obstacles has been that of interesting foreign trade and capital, and inspiring confidence abroad. It is, then, fair to say that perhaps the most difficult stage has been passed and that the auguries for the future, if no internal or external political complications supervene, are satisfactory.

ESTONIA.

The economic position showed a decided upward curve during the first half-year, but during the last six months there was a marked decline. Agriculture suffered from a partial if not general failure of the harvest, but full crop results are not yet to hand. Barley and oats especially showed a shortage, although other cereal crops are said to have been satisfactory, and the resulting necessity to import seed, corn, and animal foodstuffs led to a considerable expansion in the imports of foodstuffs and so helped to cause the first slightly unfavourable balance of trade since 1925. Details of flax production are not available, but the quality of the crop is said to have suffered from unfavourable weather. Potato production fell 25 per cent. below the normal. The financial position shows decided improvement with the reform of the currency and the erection of the State bank for long-term credits, and the strengthening of the position of the Eesti Bank credit conditions are much easier than in 1927, and money and other rates considerably lower all round. The general easing of credit conditions has also contributed in part to the increased import of agricultural machinery, manures and means of transport, so that given favourable conditions, trade and agriculture should show a better result next year. The trade balance shows a deficit of 4.2 million Ekr, imports being 131 million Ekr, and exports 127.1 million Ekr, a total turnover of 27.9 per cent. more than in 1927. In that year imports stood at 96.4 million Ekr, and exports at 105.8 million Ekr. Imports during 1928 were greater by 36.2 than in 1926 and 1927. Exports were higher by 20.1 per cent. Amongst exports dairy produce, timber, textiles, paper, and leather goods show the principal increases. Butter exports at 33 million Ekr showed an increase of 20 per cent. The cost of living index continued its previous rise, and on September 1st stood at 112, as against 105 on January 1, 1913, being taken as 100. As regards banking and finance, loans granted by the joint stock banks at end of September, 1928, totalled Ekr. 64.4 millions, an increase of 36 per cent. on the same period of 1927. Bills in circulation rose from 215 millions to 235 millions. Loans granted by the State banking institutions showed a similarly satisfactory expansion. Deposits were 40 per cent. higher in the joint stock banks, and 50 per cent. higher in the Co-operative banks. An important industrial development last year was the production of motor spirit from oil shale on a commercial basis, and the placing of this production on the market.

LITHUANIA.

Agriculture, cattle breeding and forestry are the principal industries of the country, and in agriculture, grain, and flax cultivation and dairy farming are the most important sections. The 1928 harvest was late, owing to a cold summer, and final results are not yet available. As compared with 1927, the production of the principal crops in 1,000 tons is approximately as follows:—

	1927.	1928.		1927.	1928.
Rye	540 ..	480	Oats	240 ..	286
Wheat	145 ..	198	Peas	56 ..	65
Barley	187 ..	160	Vetch.....	60 ..	54

Root crops as a whole are likely to be inferior to those of last year. Co-operative production and sale of agricultural and dairy products made further progress. Butter export is an important feature, and increased from 500 tons in 1924 to 2,000 tons in 1927, and satisfactory progress is expected to be recorded for 1928. Foreign trade is well maintained, but the visible trade balance has been unfavourable for the past two years. The values in millions of lits during recent years have been as follows:—

	Imports.	Exports.	Surplus (+) or Deficit (—).
1923	156	146	— 10
1924	206	266	+ 60
1925	252	246	— 6
1926	240	253	+ 13
1927	265	245	— 20
1928 (11 months) ..	272	234	— 38

The principal exports are flax, foodstuffs, cellulose, woodpulp, and rough timber. The absence of local industries accounts largely for the unfavourable trade balance, but over 3,000 tons of machinery were brought in during 1927, and industry is slowly developing, the chief hindrance being lack of capital. Factories of all kinds have increased from 3,000 before the war to 5,400 in 1927. The entrepôt trade is an important feature, and during 1927 over 22 per cent. more freight to a total of 1,500,000 tons was carried than in 1926. In banking the combined balance of 30 establishments showed an increase of 352 million lits or over 25 million lits on the 1927 figures. Foreign currencies—securities held were 67 million lits, as against 62 millions, and net profits were 3.5 millions, as against 2.6 millions. Discounts increased by 14 millions to 54 millions, and loans by 27 millions to 104 millions. The Budget has shown a favourable balance since 1918-19, revenue increasing from 95 millions to 185 millions between that date and 1928 (eight months), and expenditure from 90 millions to 172 millions. The excess of revenue over expenditure for the eight months of 1928 amounted to 13.5 millions. The continued failure to settle the disagreement with Poland, and the closing of this frontier to traffic and trade, still act as a clog to Lithuania's economic development, but it is hoped that the good offices of the League of Nations will lead to a satisfactory settlement.

LATVIA.

Progress has been made in the period under review, but the absence of recent statistics makes a correct estimate difficult to arrive at in some directions. Imports have increased in value from 107 million lats in 1922 to 130 millions in the first half of 1928; and exports from 101 million lats to 120 millions in the same periods. The monthly average of imports and exports has shown a constant increase month by month both in weight and value. A period of intensive development is indicated in the near future, and the importance of Latvia as the bridge between West and East should not be overlooked in view of possible developments in Russia. This transit trade totalled 472,000 tons in 1925, 626,000 tons in 1926, 846,000 tons in 1927, and 442,000 tons in the first six months of 1928. Railway and steamer traffic generally show a similar expansion; new railway extensions have been built or are projected, and the mercantile marine exceeds its former tonnage. The financial position of the Bank of Latvia is again satisfactory, an increase in turnover being recorded, whilst the general position is liquid to a satisfactory degree.

B.—BRITISH EMPIRE.

CANADA.

By common consent the year 1927 was reckoned the most prosperous in the Dominion's history, but according to all the accepted indices it has been surpassed by 1928. The Dominion Bureau of Statistics, in its monthly review, published a series of weighted indices of the seasonal volume of business based on the six-year period from 1919 to 1926 (= 100) and corrected where necessary for seasonal variation. The subjoined tables give some of the figures for November, 1928, as compared with November, 1927 :—

	November, 1927.		November, 1928.
Carloadings	121·0	....	133·5
Bank debits	152	....	160·1
Trade	124·5	....	132
Manufacturing	140·3	....	173
Building construction	184·5	....	167·0
Mining	151	....	169
Forestry	175	....	194
Newsprint	221·8	....	258
Pig iron	64·5	....	162
Steel	123·23	....	165·5
Automobiles	88·0	....	156·9

Only the construction figures show a decline, but it was due to temporary conditions, and in reality the country experienced a building boom—an increase of 18 per cent. over the total for the first eleven months of 1927. Many new enterprises in the field of hydro-electric development were launched. The majority of manufacturing plants were operated well up to their full capacity, and some of them for the first time in many years were compelled to reject orders. The iron and steel plants and railway equipment firms have had an excellent year, and the motor plants, the farm implement, furniture and cotton mills, were all busy as a result. The woollen mills also did not fare badly, but they are still agitating for better protection from British competition. Employment figures throughout the year were higher than ever before, and the problem of winter employment is not serious at present. The inflow of British immigration was again disappointing, but a large supply of cheap foreign labour was admitted.

Mining, Fishing, &c.—The mining industry in recent years has become an increasingly important factor in the national economy. Remarkable results were obtained during the year from some proven mines like the Frood properties of the International Nickel and Mond Nickel companies, and a great deal of exploration and development work was undertaken. The only real black spot in the economic horizon of Canada has been the newsprint industry, which, as the result of a sharp fall in the prices of newsprint caused by over-production, has been passing through a very difficult time. Both the great railway systems have had a record year and show a notable increase in their net earnings. The purchasing power of the rural community will be rather lower this winter than last; otherwise, all the signs count to a continuance and probable expansion of prosperity in 1929.

Foreign Trade.—The data for the twelve-month period ending November 30th, which are given below with parallel figures for 1927, will not be materially different from the calendar year's total :—

TWELVE MONTHS ENDING NOVEMBER 30.

	1927.		1928.
	$		$
Imports	1,085,630,230	..	1,210,959,686
Exports (Can.)	1,226,481,091	..	1,349,181,137
Exports (For.)	19,919,356	..	23,893,368
	2,332,030,677	..	2,584,034,191

There has accordingly been a gain of approximately 252 million dollars in the aggregate foreign trade, which is almost equally shared between imports and exports. The trade balance would have been substantially larger if the prices of grain, which constitutes the largest item of export, had not fallen. Canada's total trade with Britain in this period increased by some 47½ million dollars, of which 10 million represent increase in imports.

Banking and Federal Finances.—There was an abundance of domestic capital available for all reputable enterprises, and the money markets of the United States have not abated their partiality for Canadian investments, while London is also showing a kindlier disposition to them. During the twelve months ended November 30th demand deposits increased by 16 million dollars, and saving deposits by 93 million dollars. In the same period there was an advance of 158⅛ million dollars in current loans.

Despite the tax reductions of the last Budget Federal revenues amounted for the first three quarters of the current fiscal year to $347,838,102, as compared with $325,551,698 for the parallel period of 1927. Expenditures during the same period have risen from 259 to 269½ millions. The net national debt stood on December 31, 1928, at $2,218,603,434, as compared with $2,281,479,535 on December 31, 1927.

Commodity and Security Prices.—The downward price tendency revealed in 1927 continues, and the general wholesale index of the Dominion Bureau of Statistics is computed at 147 for the year, as compared with 152 in 1927. The decline was largely due to the fall in grain prices. The cost of living was practically unchanged as compared with 1928. Clothing was higher in price, but fuel was lower, and food, rent, and sundries were practically stationary. The stock markets have enjoyed another boom year. The investors' index of the Bureau of Statistics, which takes 100 as the base for 1926 and covers 103 of the best-selling industrial and public utility stocks rose from 152.2 in January to 193.4 at the end of December.

Crops.—The largest single industry of the Dominion is still agriculture, which, with its ancillary occupations, gives employment to almost half the population. The acreage planted to field crops in 1928, placed at 59,410,000 acres, showed a notable gain over the figures for the two preceding years, which were respectively 56,172,000 and 53,108,000 acres, and up to the beginning of August there was, particularly in the Western provinces, the promise of one of the best grain crops on record. The ultimate volume of the yield was well in excess of 500 million bushels, whereas the highest previous yield was 475 million bushels, and the average for the quinquennial period 1922-26 was about 390 million bushels. The yield of barley, estimated at about 135 million bushels, was also a record, and other crops were abundant. Unfortunately the quality of the crop was seriously impaired by the autumn weather, and the following figures, published by the Bureau of Statistics, reveal that the aggregate value of the field crop of Canada for 1928 will be substantially lower than the figure for 1927 and 1926 :—

VALUE OF AGRICULTURAL PRODUCTION.

	$
1928	1,051,043,000
1927	1,134,192,600
1926	1,104,983,100

The dairying industry had a good year, and there was a notable change in its orientation, as the butter export trade has practically vanished on account of heavier domestic consumption and an increased demand for milk and cream from the United States. Thanks to higher prices the livestock industry has improved its position.

AUSTRALIA.

Production.—The dry weather prevailing at the beginning of the year 1927-28 did not affect production as seriously as was feared. The wool clip amounted to 2,670,000 bales, which was slightly in excess of the estimate, and only 42,000 bales below the previous year's figure. Prices were slightly higher this year, averaging 19.92d per lb. The 1928-29 clip is estimated at 2,800,000 bales. The area under wheat for the 1927-28 season was about 12¼ million acres, and the total yield 116,743,666 bushels. Better weather conditions cause the coming season's estimate to be placed at 160,000,000 bushels, from an area of 14 million acres. The production of butter totalled 280,770,000 lbs, compared with 252,531,059 lbs in 1926-27. Exports to the United Kingdom amounted to 82,924,500 lbs, valued at £5,710,062, representing 83.5 per cent. of the total exports. Wine production amounted to 16,000,000 gallons, a decrease of about 3½ million gallons on the previous year. The estimate for 1928-29 is over 19,000,000 gallons, a record vintage being expected.

Trade.—The following table shows Australia's total oversea trade, and reveals a continued excess of imports over exports :—

Year.	Imports. £		Exports. £
1913	79,749,653	....	78,571,769
1925-26	151,638,178	....	148,562,209
1926-27	164,744,927	....	144,775,541
1927-28	148,116,549	....	141,595,159

The value of imported goods decreased in most classes. The United Kingdom was not affected by the decrease to the same extent as the United States, where £5,000,000 less was spent on luxury goods, motor cars, &c. Australian imports from the United Kingdom amounted to £63,097,058, and exports to £52,809,000; for the United States the figures are £34,593,142 and £8,955,000 respectively. The principal items of export were :—

Commodity.	1926-27. Quantity.	Value.	1927-28. Quantity.	Value.
	Lbs.	£	Lbs.	£
Wool	770,071,100	60,053,358	742,689,400	66,066,545
Wheat	4,435,518,900	20,785,414	3,182,541,400	14,629,899
Flour	986,928,200	6,254,316	867,590,000	5,229,463
Butter	76,516,500	5,447,224	99,164,400	6,903,890
Frozen meat	205,713,300	3,685,414	215,758,300	3,565,297

Finance.—The following table shows the accounts of the Commonwealth and States as at June 30, 1928 :—

	Revenue.	Ordinary Expenditure.	Loan Expenditure.	Gross Public Debt.
	£	£	£	£
New South Wales	44,320,330	45,415,326	14,278,000	245,247,907
Victoria	26,566,864	26,730,217	9,016,208	158,033,469
Queensland	16,718,070	16,707,564	4,038,884	111,733,969
South Australia	11,346,903	11,621,834	4,932,317	90,612,402
Western Australia	9,807,909	9,834,415	4,680,259	76,427,764
Tasmania	2,962,687	2,867,605	404,486	24,872,785
Six States	111,722,763	113,176,961	37,350,154	706,928,296
Commonwealth	76,670,222	82,120,459	*33210588	494,129,100
Total	188,392,985	195,297,420	70,560,742	†1,201,057,396

* Including £24,497,985 loans to the States.
† After deducting £123,433,781 for debts twice counted, the total gross debt amounts to £1,077,623,615.

In the New South Wales Budget the figures of all business undertakings were separated from the ordinary Government finance. The figures given above are made up as follows :—

	Revenue. £		Ordinary Expenditure. £
Governmental	19,052,791	....	19,276,596
Business undertakings	25,267,539	....	26,138,730
	44,320,330	....	45,415,326

Another change is the reclassification of the sources of revenue into (1) revenue from taxation, (2) earnings of departments, and (3) receipts from the sale of State assets, such as land, timber, and minerals. The plan of the estimates of expenditure has been altered to show in much greater detail the cost of each department, and there are separate estimates of business and industrial undertakings. The public debt of Australia per head is £172. The Commonwealth raised six loans during the financial year 1927-28; three in London, totalling £22,000,000; two in New York, totalling £18,493,784; and one conversion and redemption loan in Australia of £36,000,000. Of the money raised in London and New York, the Commonwealth's liability is £13,600,165, and that of the States £26,893,619. The Financial Agreement for the co-ordination of all oversea borrowing, whether by Commonwealth or States, necessitated an amendment to the

Constitution, which was ratified by a majority of 1,462,982 on November 17, 1928. This agreement ensures freedom from clashing between Australian applicants to the London market, and an adequate sinking fund, which will extinguish all existing debts in 58 years, and all future debts within 53 years. The net earnings of all the railways for the year amounted to £9,942,000.

Banking and Prices.—The net profits of the Commonwealth Bank amount to £170,830 for the half-year and £493,640 for the year ending June 30, 1928. The reserve fund is £389,272. Under the Commonwealth Bank (Savings Bank) Act of 1927, all Savings Bank business is transferred from the Commonwealth Bank to the Commonwealth Savings Bank, whose profits for the half-year to June 30, 1928, are £179,994, and whose reserve fund is £1,165,295, of which £1,075,298 was transferred from the Commonwealth Bank. The retail cost of living figure, taking the year 1914 as 100, fluctuated during 1927-28 from 151.8 to 158.6 and stood at 149.7 in September last.

NEW ZEALAND.

In New Zealand the year witnessed a remarkable increase in production and export and a continued economy in purchases abroad, with the result that the year ended with an excess of exports over imports of £11,302,215. This, except for one abnormal post-war year, is a record trade balance for New Zealand. Two years previously the Dominion had an excess of imports over exports of £4,613,988 :—

FOREIGN TRADE of NEW ZEALAND.
(Million £'s.)

	1924.	1925.	1926.	1927.	1928.
Imports	48·5	52·6	49·8	44·7	44 8
Exports	52·6	55·2	45·2	48·4	56·1

Public Finance.—The following is a condensed statement of the national balance-sheet for the past two financial years, and only the principal items of revenue and expenditure and the respective total amounts are shown :—

(000's omitted.)

REVENUE.	Year Ended March 31.		EXPENDITURE.	Year Ended March 31.	
	1927.	1928.		1927.	1928.
	£	£		£	£
Customs	8,252	7,942	Interest	8,450	8,397
Beer Duty	621	609	Sinking Fund & Funded Debt Reduction	1,295	1,360
Stamp and Death Duty	3,379	3,504	Pensions	2,515	2,511
Post and Telegraphs	3,226	3,323	Post and Telegraph Expenses	2,343	2,297
Income & Land Tax	4,654	4,328	Education	3,900	3,756
Railways (interest on capital liability)	2,043	2,130			
Total Revenue	24,943	25,123	Total Expenditure	24,355	24,944

The gross debt at March 31, 1928, was held as under :—

Where Held.	Amount.
	£
New Zealand	107,470,429
Australia	4,168,850
London	139,756,973
	251,396,252
	Gross Annual Charge.
	£
Interest	11,070,353
Annual sinking funds	7,000
Repayment of funded debt	386,224
Public debt repayment account	1,053,559
Total gross charge	12,517,136

For the year 1926-27 revenue is estimated at £24,676,900 and expenditure at £24,498,549.

Production.—A healthy progressive increase in production was shown for the year in all the chief export lines. In dairy produce, wool, mutton and lamb, honey, apples, and skins and hides, besides smaller lines, there were substantial increases over 1927 in the quantities exported. This was a most satisfactory feature. Farmers have shown during the year a marked determination to improve their pastures by artificial manures applied, and also to cull out their flocks and herds. The present year opens with bright prospects. The following are the values of the principal exports for the past two calendar years :—

	1927.	1928.
	£	£
Wool	12,961,744	16,679,098
Butter	10,915,390	11,302,667
Cheese	5,582,596	6,695,951
Frozen meat	8,631,368	9,631,017

INDIA.

Trade.—After recovering approximately to pre-war level in 1927-28, India's grand total of exports, imports, and re-exports during the eight months April to November, 1928, amounted to Rs. 386 crores. While imports totalled 166 crores (−0.1 per cent.) exports, including re-exports, rose by 10 crores, or 5 per cent., to 220 crores; imports of treasure (private and Government) increasing by 294 lakhs to 23,93 lakhs, Exports of treasure advanced by 2,44 lakhs to 4,91 lahks, due mainly to larger shipments of silver. The total visible balance of trade in these eight months was 34,25 lakhs, against 27,13 lakhs in April-November, 1927, and 17,19 lakhs in 1926. In the same period a decline of Rs. 4 crores in imports from the United Kingdom has coincided with larger imports from Germany (plus one crore), France (plus half a crore), Italy (76 lakhs), and other European countries, purchases from Japan meanwhile declining by one crore and from the U.S.A. by three crores. Imports of cotton piece-goods declined in yardage and value, despite the prolonged suspension of production in Bombay mills resulting from labour troubles. Steel manufacture has been resumed, after a period of labour disputes, and it is calculated that, within a few years, the Indian output of finished steel will reach 600,000 tons, while the steady increase in consumption will prevent any decline in imports. In certain other cases, however—as, for example, matches and cement—expansion in local manufacture threatens eventually to eliminate imports.

Finance and Exchange.—The process of adjustment to the new ratio is proving difficult and prolonged, and compensatory measures are required in respect of industries whose difficulties have been accentuated. The chief economic requirement of India is an intensive and concerted effort to increase the very low purchasing power of the cultivator by implementing the recommendations of the Agricultural Commission. The financial outlook remains promising; the chief problem will be to satisfy the insistent demand for further sacrifices of Central revenues to meet Provincial exigencies. The appointment of a Banking Commission is forecast.

SOUTH AFRICA.

At various dates during 1928—some locally appropriate and some otherwise—almost the whole Union had good rain. In certain districts of the central Cape Province this had been so long delayed that its arrival served rather to assist in rehabilitation than to prevent disaster. The price of wool latterly showed some weakness, but it closed at more than 1s per pound as against the pre-war price of 6d. The 1928 maize crop was 19,169,613 bags, the third largest on record. It was exceeded in 1923 and 1925, but exceeded 1927 by 5.01 per cent. The actual result differs by less than 50,000 bags from the final estimate of the Agricultural Department.

Public Finance.—The Budget revealed a surplus of £1,750,000, revenue being £29,672,000 and expenditure £27,922,000. The policy of the Treasury appears to be to create surpluses by conservatism in estimating revenue, especially Customs Revenue.

Trade and Production.—According to figures published by the Department of Customs and Excise, direct overseas imports and exports of the Union of South Africa and the Mandated Territory of South West Africa are expected to amount respectively to about £75·3 millions and £39.6 millions (latter figure excluding gold and diamonds). Exports of gold amount to about £45·5 millions. The gross duty on the imports amounted to about £10 millions. Gold production will once again constitute a record for the industry, by a margin of some scores of thousands of ounces, although the exact figures are not yet available. The diamond trade is flourishing even amid the difficulties of constant fresh discoveries, whilst the prospects of platinum and an awakening interest in base metals adumbrate a sound future for the South African mineral industry. The recent prosperity of the primary industries might well make the Government cautious in the details of its policy of fostering manufactures in view of the comparatively elementary stage of development of the country as a whole.

Prices throughout the Union have been fairly steady with a tendency downward if anything. The Union's figures of cost of living increase in various parts of the country in relation to pre-war levels vary between 26 and 42 per cent.—much of which is due to internal policy in customs and railage matters.

IRISH FREE STATE.

Agriculture and Trade.—The economic recovery of the Irish Free State, which started in 1927, made more rapid headway in 1928. Cattle prices advanced substantially during the year, the size of herds reached record levels, and exports increased, both of live and dead meat. The dairying industry continued to expand, and the grading of butter on the same lines as that of eggs produced similar good results, the standards sold improving on this market, under the pressure of Government inspection. The new central butter marketing organisation started operations in the spring, and marketed about three-quarters of the Free State output. A minority within the scheme has caused some trouble, and the future of the project is in doubt. Crops on the whole were satisfactory, though with wide differences in various localities. The acreage under sugar beet and the output of the sugar factory was larger than in 1927. The Agricultural Credit Corporation also started granting credits in 1928; over 1,000 applications were received, and over £100,000 loaned to farmers.

The unfavourable balance of trade has been reduced by 25 per cent. in less than two years. The continued extension of road traffic has brought on a crisis on the railways, and certain sections will presently revert to single track. Clothing and boots and shoes were produced in greater quantities for the domestic market. The electricity board set up by the Government is proceeding with its programme to electrify the country. Both on construction and on finance the Shannon power project continues to hold to schedule. Ford's motor plant at Cork has been transferred to Manchester, and the tractor plant of the company shipped from Detroit to Cork, which, it is expected, will mean the employment of about 3,000 hands at the Cork works—three times as many as the motor production employed.

Finance.—By making earlier collection of certain excise duties, &c., on the lines of the devices adopted by Mr Churchill in his 1927 Budget, the Budget of the Irish Free State for 1928 was prepared without any large increase in taxes. With the further decline in excise concurrent with the drop in beer and spirits production, and the approaching disappearance of the pool of income-tax arrears, the 1929 Budget seems to demand either increased taxes or economy, though the commitments of new undertakings are already fixed. The new paper currency was issued. Bank clearings increased 4 per cent. in the year, the first break in the hitherto uninterrupted decline since 1922.

C.—OTHER COUNTRIES.

UNITED STATES OF AMERICA.

General Conditions.—The year 1928 witnessed unusually high industrial and business activity, and all previous records were surpassed. Beginning in an atmosphere of doubt with fairly heavy unemployment, the outlook for the year was uncertain. By March a marked and substantial industrial expansion had set in which was maintained throughout the year. Records of production were shattered in the basic industries, while increased corporation profits reflect the high rate of consumption. Net profits of the leading corporations (industrials, utilities, and railroads combined) during 1928 will probably set a new record for all time.

The favourable factors in the industrial situation at the end of the year were a widespread confidence in existing conditions; a relatively high rate of employment at high wages, with the cost of living fairly stationary; agricultural purchasing power improved; inventories low; and an expanding export trade. These factors were offset to a certain extent by high money rates, a frenzied stock market, and some evidences of price-cutting in order to secure sales volume.

Banking.—Money rates were considerably higher in 1928 than in the preceding year, although commercial credit was available throughout the year at fairly stable and moderate rates as a result of deliberate policy by the banks. Call loans in January averaged 4.25 per cent., contrasted with an average of 8.75 per cent. in December. Brokers' loans totalled $5,091,427,000 for the week ended December 26, 1928, compared with only $3,717,662,000 on December 28, 1927. Commercial loan rates rose from about 4 per cent. in January to 5½ per cent. at the close of the year. The volume of credit extended by the Federal Reserve banks was increased during the year from $1,598,000,000 on December 28, 1927, to $1,899,000,000 on December 26, 1928. Holdings of United States Government securities by the Reserve banks fell from $603,000,000 in

Bishopsgate, E. C. 3

NATIONAL BANK OF COMMERCE IN NEW YORK 1839

1927 to $232,000,000 in 1928. Discounts and advances to member banks rose by $558,000,000 to $1,167,000,000, while open market bill purchases were greater by $104,000,000. The gold reserves of the Federal Reserve banks fell during the year by $155,000,000, which was a much smaller loss than the net loss of gold to the United States, the latter amounting to about $400,000,000. The ratio of reserve to the combined note and deposit liabilities of the twelve Federal Reserve banks fell to 61.6 per cent. on December 26th, as compared with 66.8 per cent. on December 28, 1927. Bank clearings for the year totalled $634,358,711,000, as compared with $555,151,414,000 in 1927.

Public Capital Issues.—These were slightly lower in volume than in the preceding year, judged by figures for the first eleven months of the year. The total will probably reach approximately $9,500,000,000, as compared with the record established in 1927 of $9,871,000,000. The total new foreign loans floated during 1928 numbered 210, and the nominal capital of the new issues amounted to $1,188,879,000, or $185,000,000 less than in 1927, with refunding operations amounting to $237,000,000 additionally during the same period. Foreign refunding operations in 1928 were on a larger scale than in any year since 1924. The total foreign capital issues for the year amounted to $1,425,789,000, as compared with $1,593,000,000 for 1927.

Production and Trade.—Steel production in the past year reached a new high level with a total output of ingots of 50,300,000 tons, a marked increase over last year's production of 43,041,000 tons, and 7 per cent. increase over the previous record year, 1926, when total output reached 46,936,000 tons. Contrary to precedent, the last half of the year made a better showing than the first, with operations at the close of the year at nearly 86 per cent. of capacity. Pig-iron output for the year was 37,837,804 tons compared with 36,232,306 tons in 1927. The total unfilled orders on the books of the United States Steel Corporation, on December 31, 1928, amounted to 3,976,712 tons, as against 3,972,874 tons on December 31, 1927, and 3,960,969 tons on the same date in 1926. Production of automobiles and trucks broke all records with a total of 4,630,000 units, of which 4,044,000 represent passenger cars, as compared with a total of 3,400,000 units and 3,066,000 passenger vehicles in 1927, and 4,300,000 units and 3,936,000 passenger cars in 1926, the previous record year.

The volume of new building construction in 36 States (the only States for which statistics are available) was the greatest of any year on record with contracts totalling $6,404,770,000, an increase of 5.3 per cent. over the 1927 figure, and 3.9 per cent. over the previous record total of $6,120,994,000, established in 1926. Engineering contracts awarded in the United States during 1928 totalled $3,578,585,000, as against $3,253,766,000 in 1927, the construction consisting chiefly of waterworks, sewers, bridges, streets and roads, &c. Railroad car loadings totalled 51,576,731 for the year, representing a decrease of 0.1 per cent. compared with 1927. though through greater operating efficiency freight traffic earnings were increased. Railway passenger traffic in 1928 was the lowest in twenty years. Production of bituminous coal was lower in 1928 than in 1927 or 1926, with 492,755,000 net tons last year, compared with 517,763,000 tons in 1927 and 573,367,000 tons in 1926. Merchandise exports for the year 1928 were valued at $5,129,132,000, against $4,865,375,000 for 1927. Total imports for the year were $4,089,930,000, against $4,184,742,000. This is the largest excess of exports since 1921. Commodity prices remained remarkably steady during the year.

Public Finance.—The gross public debt of the United States Federal Government has been reduced from a maximum of about $27,000,000,000 in 1919 to about $17,309,749,000 by December 31, 1928, representing a reduction during the calendar year 1928 of $726,603,315. The Government's financial position on December 31, 1928, was about $233,000,000 behind that of December 31, 1927. If the ratio of receipts to expenditure is maintained for the remaining half of the fiscal year, there will be a surplus on June 30, 1929, as the excess of receipts for the last fiscal year was $398,828,000. The principal Treasury operations during 1928 centred in the refunding and retirement of the Third 4½ per Cent. Liberty Loan, which matured September 15, 1928. This brought to a close the vast operations begun some eighteen months before by which over $5,000,000,000 in maturing issues of Liberty bonds were retired or refunded.

ARGENTINA.

Production and Export.—The year 1928 shows some increase in the volume of production and a well-maintained average of prices for the most important articles. Estimated values of the export trade for the first 11 months give a total of $950,979,000 gold, this being $25,436,000 gold above the 1927 total for same period, or 2.7 per cent. Comparative tabulation of the quantities shipped to the end of November for the last three years reads thus :—

Shipment.	First 11 Months, 1926.	First 11 Months, 1927.	First 11 Months, 1928.
Wheat.....tons	1,992,279	3,993,216	4,923,860
Maize ..... „	4,113,328	7,591,777	5,972,923
Linseed ..... „	1,662,652	1,799,837	1,850,691
Oats..... „	525,600	580,988	295,004
Quebracho extract .... „	208,558	229,445	240,302
Chilled beef.....quarters	4,395,154	5,543,563	4,965,084
Frozen „ ..... „	2,124,438	2,382,533	986,533
Mutton & lamb ....carcases	1,894,806	2,963,766	2,969,456
Wool .....bales	291,238	310,509	280,675
Cotton ..... „	109,088	44,503	80,689

Diminished demand by Great Britain, and restrictive measures enforced on the Continent, explain the drop in meat exports. According to recent indices, built up by the newly established Bureau of Economic Investigation attached to the Banco de la Nacion, prices of cereals and wool have risen as compared with 1927, all other produce showing a slight decline in values. Taking 100 as the basic figure for all agricultural and pastoral produce prices for 1926, the index figure for 1928 (October) is 109, as against 106.3 for 1927. Railway traffics (July 1st to December 28th) are up by £250,000 compared with same period in 1928.

Import Trade.—For the first 11 months of 1928 imports are valued at $825,584,000 gold, being $47,104,000 gold, or 6 per cent. above the 1927 returns for same period; in both instances estimated actual values, not tariff values, being considered. For the first 10 months of 1928 and 1927 the following table indicates, mainly in a quantitative sense, the chief increases in Argentina's purchases :—

(In gold dollars, 000's omitted.)

	1927.	1928.
Foodstuffs, tobaccos, liquors.....	61,700	66,800
Textiles	118,700	143,500
Chemicals and drugs	33,900	34,800
Paper	21,500	24,400
Wood	20,100	19,000
Iron and steel	68,300	89,800
Machinery, including motor-cars..	73,100	95,300
Non-ferrous metals.....	23,500	26,400
Stone, earth, glass, ceramics	23,300	27,600
Fuel and lubricants	96,700	107,800
Rubber and rubber goods	19,900	18,400
Sundries.....	34,300	40,800
Total	595,000	694,600
Specie	66,600	99,400

The increase in the values here shown springs from a considerable increase in the amount of merchandise imported, prices having steadily fallen. Taking 100 as basic for 1926 (imports first ten months), the 1927 index gives 97.6, and that for 1928 only 89.9. Total liabilities in commercial failures to year-end were $148,424,916 paper, as against $221,504,828 paper for the year 1927.

Banking and Finance.—During the first half of 1928 the exchange was favourable to Argentina, rates fell below specie point, permitting the import of approximately £20,000,000. The best rates touched were 102.80 N.Y. (January 2nd) and 47 57-64d

London (January 30th), banks' cable drawings. During the third quarter exchange fell away and approximately £2,000,000 gold was shipped. Gold stocks at the year-end are roughly £128,000,000, of which £98,000,000 is in the Conversion Office and £30,000,000 in banks (£28,000,000 with Banco Nacion). No national borrowing of importance marked 1928, and the various parcels of internal credit bonds offered to the market by the Ministry of Finance have been readily absorbed, prices of 6 per cent. national and mortgage bonds rising throughout the year until at the close they stand at or above parity. A marked increase in the number and importance of private local investors is characteristic of the year, but applies only to Cedulas of the National Mortgage Bank and to National and Provincial bonds. Dealing in shares of public companies—industrials, &c.—has declined 7.6 per cent., compared with 1927. The Budget for 1929, passed with a total of $732,797,000 paper cash and $158,000,000 paper bonds, means an increased outlay of about $55,000,000 paper; which sum additional revenue is expected to provide without fresh taxation. Customs receipts—Buenos Aires—to December 26th were $352,626,126 paper, or $34,540,208 over the 1927 figures. Local money market conditions have been easy to weak throughout 1928, with rates for discounts and advances averaging 6 per cent., and much business done under that figure. Competition accounts for the paradoxical fact that there has been no reduction in the rate paid for deposits—namely, 4 to 5 per cent. per annum. Total bank deposits on November 30, 1928, were $4,022 million paper, an increase of $372 million in twelve months, while discounts and advances at $2,970 million paper only shows an increase of $140 million.

BRAZIL.

The commercial situation was dull throughout the year. The new Minister of Finance (Senhor F. C. de Oliveira Botelho, ex-President of Rio de Janeiro State) adopted Dr Washington Luiz's financial reforms, as he considered a stabilised exchange essential for the country's welfare. Federal Government indebtedness was modified and amortisation and interest on numerous loans resumed. Further recourse to paper currency or treasury notes to balance public revenue and expenditure was arrested. Increased vigilance in tax collection considerably benefited revenue. The Caixa de Estabilizacao, working efficiently, received gold from various sources and issued convertible notes in increasing volume; a steady increase in the building-up of metallic reserve took place. In May the gold milreis value was officially established in terms of paper currency at Rs. 4.567, corresponding to a little over 5.116-128d to the milreis.

The foreign debt, amounting to £109,284,477, 335,553,830f, and $156,890,267, showed an increase of £6,853,657 and $36,506,433, and a decrease of 935,067f on the previous year's figures. The consolidated internal debt amounted to 2,435,367,300 milreis, or 43,306,000 milreis more than in the previous year. The inflow of gold resulting from State loans was substantial.

Agriculture and Industries.—Agricultural production was estimated at over 9,350,000 tons of various crops, the average value being £187,000,000, a slight increase. Coffee, notwithstanding long-continued frosts which damaged crops in Paraná and Sao Paulo, where snow fell for the first time since 1892, took first place, followed by maize, tobacco and sugar.

The Administration retained entire control over coffee shipments, but while the major part of the crop was disposed of by producers, it was considered improbable that they received the full benefit of the high range of currency prices maintained by the Coffee Defence Institute. Prices were well maintained throughout the year, despite the growth of production in other countries. At $220 a bag, coffee gave the planter and other coffee interests a handsome return on capital. The Brazilian 1929-30 crop, at first estimated at 20,000,000 bags, was later judged at 30 per cent. below that figure owing to lack of rain. From all other sources 7,000,000 bags, or a total of 27,000,000 bags, were estimated against world consumption of 24,000,000 bags. For the first half of the year sales realised £35,196,000, representing 75 per cent. of the value of Brazil's exported articles. For preserved meat and animal products export prices showed a rising tendency, similar improvements being recorded in the case of raw cotton, cacáo and oil-producing fruits.

The greater part of Brazilian raw cotton was consumed within the country, and several additional textile mills, fitted with British machinery, were erected. While production of raw cotton continued to decline, special attention was given to improving the standard of quality and also to constancy in classification of types. British exports of cotton fabrics decreased in comparison with those from the United States, which shipped also considerably larger quantities of cotton and rayon mixtures. Manufacturers reported more favourably regarding business, losses through failures being fewer, except in Rio. On the other hand, sales were substantially less in value than normally. New iron foundries were established, and the number of pottery, china, aluminium, glassware and furniture factories increased. Good quality cement was manufactured in two or three new centres. The Ford Industrial Company of Brazil was formed with a capital of 8,000 contos, the principal stockholder being the Ford Motor Company, the object of the company being the planting of rubber trees, the extraction of rubber and manufacture of rubber articles. Trade with Argentina continued to expand.

General economic conditions improved slightly, industrial stocks being disposed of more freely. The cost of living increased materially, touching 280 (1913 = 100).

CHILE.

Political conditions, except for certain unimportant Ministerial changes and a Communist plot—easily suppressed—earlier in the year, were tranquil; but an earthquake, one of the worst recorded, besides destroying hundreds of lives, caused £6,000,000 material damage. The National Treasury service was reorganised and provincial and communal treasuries placed under General Treasury's supervision. The 1928-29 Budget, estimating receipts at $1,123,000,000 and expenditures $1,068,000,000, showed a $55,000,000 (paper) surplus. To reduce extraordinary debt and provide funds for public works, fiscal 8 per cent. bonds for an unlimited amount at par were issued, occasioning decline in mortgage bond issues. All Government bonds, if accepted by the national Government at par for any guarantee, were exempted from income-taxes. The Central Bank assumed the duties of the Fiscal Treasury abroad, and superintendence of all Government requirements in foreign markets. State railways earned during seven months sufficient to defray all expenses, and leave 27,000,000 pesos net profit.

Banking.—Bank deposits increased by 38,000,000 pesos in the first half-year. The Central Bank showed increased profits and a large active balance. All banking operations were placed under the joint control of the superintendent of the Bank and Banco Central de Chile. The Instituto de Credito Industrial (Industrial Credit Institution) was established to aid small local industries by debenture loans. Cajá de Credito Hipotecário floated an American 6 per cent. (and 1 per cent. amortisation) loan for $20,000,000 (33 years), to amortise its 8 per cent. bonds. Taken over at 91¾, the issue was offered publicly at 95¾, and oversubscribed. For a local $25,000,000 7 per cent. (and 1 per cent. amortisation) loan, applications totalling $61,598,000 were received. Two other American loans for $45,912,000, 33 years, at 6 per cent. (and 1 per cent. amortisation), at 89½; and $4,000,000, 21 years, 7 per cent. (and 1 per cent.) at 100¼, were floated. Outstanding fiscal debts were paid off and the national finances put on a more solid basis. Twenty-three municipalities applied for permission to issue loans at varying interest and

amortisation rates. Contracting rates were unified at 7 per cent. for internal and 6 per cent. for foreign loans, while all foreign loans appreciated following a slight fall after the December earthquake.

Public works estimated to cost 1,575 million pesos (246,500,000 pesos during 1929) were started. All oil concessions, except to Chilian subjects, were suspended. Several measures affecting trade and shipping were passed, and a new Customs tariff was issued. A new insurance law was promulgated tending to further nationalisation of commercial activities. The harvest was delayed 45 days, and crops, while of average quantity, were inferior in quality. Diplomatic relations between Chile and Perú, severed since 1913, were resumed.

Nitrates.—The nitrate position greatly improved, nearly 70 of the oficinas, employing 45,000 men, being in operation at the close of the year. The Government, though it again helped the industry, refused to alter export duties during the year July, 1928, to June, 1929. Should the Stickstoff Syndicate reduce its prices, all deliveries for consumption are entitled to a bounty or premium equivalent to such price reduction, enabling the Chilian product to be marketed on equal terms. From July 1 duties were paid by 90 days' sight bills without interest, to keep the oficinas working and ease the immediate financial situation for the producers; in November the Finance Minister authorised credits to producers for payment of export duty. Under the new arrangement, the Nitrate Producers Association's "Sales Corporation" began in September, and prices were fixed for various markets. The industry's prospects seemed brighter than for several years, notwithstanding that some producers found difficulty in meeting expenses.

OTHER SOUTH AMERICAN STATES.

Colombia.

The year, generally, was favourable. National revenue for 1929, estimated at 65,658,668.96 pesos, and expenditure at 60,097,804.33 pesos, showed a surplus of 5,560,864.62 pesos. Banking was almost uniformly favourable, and several new branch establishments were opened. Exchange was steady throughout. In June, specie was the highest on record, at 97,986,396.24 pesos. Foreign loans contracted included the following:—In March, for public works, Federal 33-year, 6 per cent. issue for 35,000,000 pesos, in New York; Caldas Department, 12,000,000 pesos, 20 years, 7 per cent., at 13 per cent. discount; Cundinamarca Department, 12,000,000 pesos, 33½ years, 7½ per cent.; Mortgage Bank of Bogotá, £1,600,000 (£1,000,000 in London, £400,000 at Amsterdam, and £200,000 in Switzerland); Agricultural Mortgage Bank, $5,000,000, 6 per cent., 20 years; Antióquia Department, $12,350,000 for road construction. Coffee production was satisfactory, both in quality and quantity, with steady prices and good profits; the cattle and hides industries prospered and cotton cultivation was extended.

Ecuador.

The national Budget balanced at 51,588,000, and the extraordinary Budget at 12,327,450 sucres. Eight million sucres, loaned by a Swedish syndicate in return for the match monopoly, were used to found an agricultural mortgage bank. A mortgage bank, authorised capital 15,000,000 sucres, was started in Quito, with a branch at Guayaquil. The cacáo crop was small, coffee and hides realised lower prices.

Peru.

Economic conditions were at first dull, but they brightened considerably towards the close of the year, mainly as a result of the success of the $35,000,000 national loan. The 1928 Budget, balancing at £P11,113,650, was passed; that for 1929 showed £P12,450,636 revenue and £P12,927,472 expenditure. Exchange on London remained steady round about 23 until the autumn, when it rose to between 19 and 20 per cent. premium. The Deposit and Consignment Bank was appointed to collect all revenues excepting those serving as specific guarantees for foreign loans; a new tariff law went into effect, and the Emergency Law was suspended. The Peruvian Corporation returned its guano concession in exchange for a fee-simple title to the railways in operation; several new concessions for railways, irrigation, highway construction, silk, condensed milk factories, &c., were granted. Agriculture was fairly prosperous, and crops generally good. Oil, sugar and ore exports reached higher levels. Cotton production was affected by absence of rains. Sugar prices showed uncertainty, and a local planters' committee was formed to safeguard the industry. An agricultural experiment station was opened at Ica, and new coffee-raising areas were settled. Mining activities were normal. Unemployment lessened, full quotas of labour being engaged in mining, oil and textile industries and railway construction. Renewal of diplomatic relations with Chile beneficially affected business. The gold cover of the note circulation of the Banco de Reserva advanced from 84 to 91 per cent. The Peruvian Corporation for the first time in its history paid the full 5 per cent. preference dividend.

Uruguay.

The public debt, $215,751,856.06, compared with $218,144,479.85 in the previous year. Wheat, maize and linseed were fair; wool, especially higher qualities, sold at remunerative prices, but scab and worm were noticed in certain districts. A law was sanctioned conceding to the State bank free administration of gold held in excess of $55,000,000. Seventeen banks were in operation, and a new institution, Banco Constructor e Industrial del Uruguay, was launched with an initial capital of $1,000,000, to be increased to $3,000,000.

Bolivia.

Frontier disputes with Paraguay threatened trouble, but were peacefully arranged. Economic conditions remained depressed, and collections were difficult. The exchange was steady. Mining showed little change; a loan of 4,000,000 bolivianos was contracted for the construction of a highway from La Paz to Yungas.

Paraguay.

A $1,000,000 (Argentine paper) Government 7 per cent. loan, was raised for public works. The entire Budget was renewed owing to non-presentation of a fresh budget for the 1927-28 period. The City of Asunción Budget was authorised at 13,580,500 pesos. Money remained scarce and payments were delayed; wholesale houses restricted up-country credits. Export trade was poor, with lower prices for staple products; imports changed little. Tobacco and yerba maté were affected by heavy rains. The cotton crop, twice that of the previous year, realised an average price of $5.50 per kilo; ginned cotton reached 2,400 tons. Dr. José P. Guggiari was elected President. Threatened rupture with Bolivia was avoided.

Venezuela.

The Budget showed a favourable balance of 113,000,000 bolívars; the national debt was 78,000,000 bolívars. An agricultural bank, capitalised at 30,000,000 bolívars, and a labourers' bank capitalised at 6,000,000 bolívars, were initiated. Petroleum companies continued their development, and production exceeded 10,000,000 barrels monthly. The coffee crop, which is expected to reach 1,000,000 bags, was retarded by rains; a fair-sized cacáo crop of superior quality was garnered.

Mexico.

Political unrest continued. General Obregón, President-elect, was assassinated, and several foreigners murdered. An economic social consultative commission, with representatives of the Government, the workers, manufacturers, business men, farmers, bankers, scientific societies and consumers was appointed; 376 co-operative agricultural societies, 24 co-operative forestry societies, one co-operative transportation association, and nine agricultural banks were organised. Banking credits and the value of the peso were

regulated. Reserves for national petroleum deposits were created, and a petroleum law for settling foreign disputes was introduced. Land, over 4,000,000 hectares in area, was distributed between 500,000 holders. The financial situation improved: while petroleum tax returns remained disappointing, tax revenues exceeded estimates. Revenues increased 12,000,000 pesos (£1,200,000) compared with the previous year. The sum payable for the service of the foreign debt was fixed at 32,500,000 pesos (£3,250,000). The 1929 Budget, estimated at 270,000,000 pesos, showed a reduction of over 21,000,000 pesos from the Budget of previous year. The Anglo-Mexican Claims Commission sat and adjourned.

West Indies and Central America.

Exceptionally violent cyclones visited certain West Indian islands, occasioning widespread material damage and numerous fatalities. Haiti suffered severely, but Central American States escaped. The Costa Rica coffee harvest was 25 per cent. under normal, and price 8 per cent. lower. General trade was dull, but credit continued sound. San José Municipal Highway Commission raised 5,000,000 colónes for streets, sewerage and drainage system construction The public debt amounted to 80,047,942.41 colónes. Guatemala's public debt totalled 18,608,219.34 quetzales; business was poor, commercial credits restricted, and interest rates around 1 per cent. per month. The coffee crop promised well. An Economic Commission of seven members reported upon national finances. Panamá's foreign debt amounted to $10,245,500. A consolidation bill was passed, in March, and a New York 5 per cent. loan of $12,000,000 was raised to redeem outstanding 1914 and 1926 loans, the surplus being employed on public works. In El Salvador, premature coffee ripening, with heavy rains, caused anxiety; but conditions improved later. In Nicaragua political calm, after violent revolutions, was restored; business improved, retail sales increased, and credit conditions became better. The Budget of Honduras balanced at 10,705,620 pesos; trade conditions were normal, but banana shipments were excellent, and coffee and other food crops good. Cubá's foreign debt reached $83,379,300, and internal debt $10,064,200. A 50,000,000 pesos loan was raised in New York for public works construction. In Dominica, an English specialist arrived to co-operate with Government engineers in the extension of irrigation works.

MALAYA.

Malaya's economic position depends to a very great extent on the prosperity of her two staple products—rubber and tin. The uncertainty which has pervaded the rubber market during the whole of 1928, and more particularly since the announcement early in the year, that the restriction regulations would cease to operate on November 1st, has affected the price of the commodity, which fell from 1s 6d per lb to 1s within a month, and later to under 8d per lb. Since the removal of restriction the price has showed a tendency to improve, and the stocks in Malaya, 32,905 tons on December 31st, are not unduly high. The price of tin has not reached the abnormal heights of a few years ago, but has remained for the most part steady, and has offered a good return to its producers. The output of tin in the F.M.S. last year amounted to 61,898 tons, an advance on 1927 (52,176 tons), and on 1926 (45,946 tons). The estimated revenue of the Federated Malay States for 1928 was £11,165,625, and the expenditure £12,041,666. The expenditure of the Straits Settlements was assessed at £4,357,289; the actual figures in all three cases are not yet available. Malaya's financial position has been particularly sound for some years past, in spite of the fluctuations in the prices of rubber and tin, which have affected every section of the population. The financial

policy of the administration continues on sound lines, and progress is being made with extinguishing the public debt. Apart from rubber, exports of which amounted to 408,695 tons (gross) last year, some interest continues to be taken in the oil palm, for which a prosperous future is predicted if its cultivation is carried on on scientific lines. Exports of oil palm and oil palm kernels are increasing steadily each year, as the area in bearing expands. Interest is also being taken in the nipah palm, with the object of obtaining alcohol for industrial purposes. The Singapore pine canning industry has received encouragement from the efforts of the Empire Marketing Board, and the exports of Singapore pines are on the upward grade. The railways continue to provide a substantial source of income to the States, and further stretches of line have been opened duing the year. Upwards of 1,120 miles of line are now open. The system employed for licensing "chandu" (opium) shops has again resulted in satisfactory returns to the Government.

JAPAN.

The post-crisis financial consolidation has made good progress during 1928. But no general trade revival materialised. Many branches of staple industries continued working short time. The foreign trade record was discouraging during the latter half of the year. With less good crops of rice and cocoon the agricultural situation was far from reassuring.

Public Finance.—The working Budget for 1928-29 estimated expenditure at 1,709,126,000 yen, a decrease of 49.8 millions upon the preceding year, and of 70 millions upon the estimates which fell through owing to the dissolution of the Diet. The national accounts for the first six months ended September 30th last disclosed revenue amounting to 428,796,000 yen and expenditure to 609,337,000 yen, as compared respectively with 409,571,000 yen and 623,666,000 yen for the corresponding period of 1927. Tax revenue revealed a fairly large increase of 8.8 million yen. The Budget estimates for 1929-30 show estimated expenditure of 1,752,816,000 yen, against estimated revenue of 1,580,138,000 yen. This is an increase of 43.6 million yen upon the current year. Of the deficit of 172.6 millions, 91.2 millions is to be met by a new loan and the rest from the preceding year's surplus. The total national debt rose by 379 millions to 5,766 millions during the first 11 months of 1928.

Money.—Money remained easy throughout the year. Funds were in plentiful supply, and short loans were sometimes offered at as low as 1.1 per cent., the lowest on record. Despite the "emergency loans" advanced to combat the banking crisis of last spring, note expansion was checked by the successful attempt of the Bank to regain control by selling securities, and the note circulation did not rise far above the average level of 1,200 million yen except during month-ends. The yen exchange fluctuated very widely during the year, the range being from \$44$\frac{3}{4}$ to \$48$\frac{1}{4}$ in terms of the American dollar. The American dollar was quoted at \$45$\frac{7}{8}$ and sterling exchange at 1s 10$\frac{11}{16}$d on December 24, 1928, as compared with \$46$\frac{1}{4}$ and 1s 10$\frac{3}{4}$d at the same date in 1927.

Trade.—From January 1st to December 20th imports were valued approximately at 2,120,496,000 yen and exports at 1,909,781,000 yen. As compared with the corresponding period of 1927, imports rose by 17 millions, while exports fell by 16 millions, the apparent adverse balance being thus 33 millions higher at 210 millions. For the first 11 months imports of rice fell by 46.8 millions, raw cotton by 76.5 millions, oil cake by 13 millions, while raw wool rose by 14.9 millions, wheat by 11 millions, iron and steel by 11 millions, and machinery by 10 millions. On the export side, cotton yarns and manufactures fell by 40.5 millions and raw silk by 18.4 millions, while sugar rose by 8.8 millions and flour by 7.8 millions.

Production and Prices.—The rice crop is officially estimated at 59,701,000 koku, or a decrease of 2,403,000 koku against the actual yields of the preceding year, but 1,698,000 koku above the five years' average. The wheat crop is placed at 21,120,000 koku, against 20,938,000 koku in 1927. The output of cocoons totalled 89,893,000 kamme, or a decline of 1,083,000 kamme upon the preceding year.

The Bank of Japan's index number of wholesale commodity prices (taking the average for July, 1914, as a basis) was 182.2 for November last, as against 177.2 a year ago.

THE DUTCH EAST INDIES.

The present economic position of the Dutch East Indies is in most ways satisfactory. Good profits have been yielded by the principal agricultural undertakings as a whole, though the shadow and uncertainty due to the removal of rubber restriction in British territories has had its repercussions in Java, Sumatra, and other rubber-producing Dutch islands. The rice crop has greatly increased during the past two years, and only small imports from foreign sources are now necessary. According to the most recent reliable foreign trade estimates, imports have increased by about 17 per cent., and exports by 7 per cent. Import trade prospects have greatly improved during the last year. Exports from Java of some of the principal products for the first seven months of 1928 were:—Cinchona bark, 3,525 tons; robusta coffee, 22,050 tons; S.H. sugar, 339,541 tons; S.H. No. 16 sugar, 126,336 tons; dry milled tapioca, 136,648 tons; leaf tea, 35,936 tons; rubber, 34,211 tons; tin, 17,348 tons; native rubber continues to be produced in large quantities in Sumatra and Borneo. The railways and postal services have prospered, and the increase in railway traffic during the last twelve months for which figures are available was 5,000,000 fl. The Government coal mines, on the other hand, have not been so successful owing to the low price of imported coal and difficulties in obtaining native labour. Sumatra is becoming increasingly important as a trading centre, and as a productive territory. In the East Coast district there are upwards of 70,000 hectares of British rubber out of a total of 217,000 hectares. The oil palm is coming rapidly to the fore, and there are over 30,000 hectares under this crop in the East Coast district. This crop will soon be able to challenge the West African interests. Capital to the extent of upwards of 40,000,000 fl is sunk in oil palms on the East Coast, as compared with 305,000,000 fl in rubber, 120,000,000 fl in tea, and 7,000,000 fl in copra. Budget figures for the past year are estimated at: — Expenditure, 793,066,696 fl; revenue, 747,544,315 fl. The deficit is accounted for mainly by the fact that the colony provides substantially for naval needs, and that a substantial sum is sent home to Holland. Considerable extensions have been made in the trade relations between the Dutch East Indies and Australia, and special facilities are being granted to Australian exporters. Java and Sumatra tea and coffee find favour in Australia, and special tariff remissions have recently been made in favour of Dutch East Indian coffee.

CHINA.

The year now ended has witnessed a remarkable recovery from the ravages of anarchy and internal chaos. Its opening followed closely upon the dramatic break-away from Russian influence, and for twelve months the Chinese nation has been working out its own salvation without alien guidance. Progress towards the ultimate goal of national unity has undoubtedly been made, and although large areas of the country are still subject to militarist rule, there is, in Nanking, the nucleus of a national Government capable of development into a stable central authority. The present leaders have achieved no paltry triumph in concluding tariff treaties with the various Powers, and their success in this respect has strengthened their somewhat nebulous claims to represent the vast Chinese nation.

Beneath the froth of political strife trade has, as usual, carried on in the face of many serious obstacles. Manchuria and the surrounding provinces have enjoyed the protection of Japanese authority, and trade there has accordingly continued to progress. The final struggle for Peking caused serious interruption to the trade of Shantung and Chih-li, and for some months the coal-mining districts were the centre of hostilities. Railway communication between Nanking and Tientsin passed into the absolute control of the military, and is not yet completely restored to civil use. Trade on the Yangtsze has made further recovery from the blight which descended upon it two years ago, but piracy is still a menace, and irregular taxation has been a heavy burden on goods destined for the markets which lie hundreds of miles up the river. Canton and the provinces for which it is the centre have slowly gained ground since the expulsion of the communists in December, 1927, and although brigandage and piracy are rife, there has been a far greater volume of merchandise traversing the waterways than at any time during the past four or five years. The Province of Yunnan, which is practically an independent state, is reported to have had a poor year, chiefly by reason of the export of opium being hampered by an increasing demand for "squeeze" while in transit through neighbouring provinces.

The anti-Japanese boycott, following upon the Tsinan incident, has been maintained throughout the country, and has been particularly intense in Canton. As the year closes the boycott appears to be relaxing, and may soon die out. In the meantime the imports of Japanese goods have fallen off appreciably, and have, in some lines, been replaced by foreign goods. The substitution is, however, not likely to be permanent in view of the advantage held by Japanese manufacturers in low cost of production and short lines of communication.

As regards China's exports there has been some improvement during 1928, but produce from the interior is still hindered in its journey to the coast, except in Manchuria. The coolie traffic, a most important branch of the export trade, has received a set-back by reason of the state of the rubber industry in Malaya.

The outlook for the future is certainly brighter, and there is less apprehension as to the capabilities of the political leaders. The inauguration of tariff autonomy will, no doubt, give rise to a good many difficulties, and it is questionable whether Nanking's guarantee to abolish likin and all irregular duties can be made effective. Much will depend upon the co-operation of provincial authorities whose existence has been threatened by a decision of the Nationalist Government—a decision which appears likely to remain inoperative.

The Customs Revenue figures for 1928 testify once again to the amazing vitality of Chinese trade. The total collections for the year amounted to Haikwan Taels 82,332,000 (at exchange 2s 11$\frac{1}{16}$d, equivalent to £12,028,000), an increase over 1927 of Haikwan Taels 13,597,000, and exceeding the record figures of 1926 by Haikwan Taels 4,210,000. The twelve principal ports all show increases over 1927 except in the case of Harbin and Amoy, where the collections were less by Taels 16,000 and 54,000 respectively. Compared with 1926, the individual port collections are at about the same level with the exception of Canton, which collected Taels 4,618,000 in 1926, but only Taels 3,074,000 in 1928. The inability to recover the ground lost in 1927 may be partly due to the anti-Japanese boycott which has been enforced with greater strictness in Canton than at other ports. All foreign loan services secured upon the Customs revenue have been met, and interest on similarly secured domestic loans has been paid in full. The set-back of 1927, the first since 1918, has been more than made good, and provided the Customs service is kept immune from political interference there is every hope of the steady advance of trade revenue being resumed.

I.—THE CORN TRADE.

The fall in wheat prices has been the main event in the trade, after that the appreciation in maize. The Continent has taken Indian corn so freely that Argentina, the principal exporter of the staple, has had a highly prosperous year, placing grain to the extent of over fifty millions sterling. In barley there has been little change, but the excellent quality of the harvest in Great Britain and Ireland and on the Continent has been highly gratifying to maltsters, brewers and distillers. Thus far very little good barley has reached this country from the New World. The scarcity of good oats has continued, and with small imports the low price averaged for English oats must be attributed to other causes than those connected with Free Trade. India has increased her exports of oily nuts (arachis) by 40 per cent. Manchuria, under Japanese tutelage, continues to sell large quantities of oily (soya) beans. The exports of small pulse from India and British Colonies have been very disappointing. The most remarkable development of business during the year has been in Canadian breadstuffs, of which the twelvemonth's exports were 415,433,000 bushels, against 296,742,000 in 1927. As Canadian wheat is—or has been—in high favour with millers, the fall in wheat prices may be ascribed to the influence of these Dominion exports more than to any other single cause. The critical element in the position to-day resides in the low gradings of the Canadian crop, which have recently been about 23 per cent. fit for the loaf, 31 per cent. of "borderland" type, and 46 per cent. feed wheat. The borderland type, No. 4 in the Canadian scale, is just admissible by millers for bread-making purposes in poor years, but its admission of a percentage of frosted, imperfectly ripened and otherwise unfit grains removes it from the category of fair average milling wheat.

Production of Wheat.

An excellent summer from the Atlantic to the Vistula gave good wheat crops to Western and Central Europe, but Eastern Europe did not enjoy good conditions. In the New World a decidedly favourable wheat harvest was reported from the United States, and a first from Canada, where the dreaded late August frosts were escaped. The anticipated culmination of Canadian wheat area with the year 1927 proved erroneous. The 1927 crop was grown on 22,457,000 acres, that of 1928 on 24,115,000. The northward extension of wheat culture is facilitated by the "creation" of new rapidly maturing varieties of wheat. The Canadian farmer can now rely on a choice of sorts safe to ripen in 95 days, and agricultural botany still hopes "to create and fix" a 90-day wheat. The Indian wheat crop of April proved to be overestimated, and the agricultural situation in India is admittedly serious. Probably more wheat *per capita* is eaten, but this is assignable not to taste or prosperity, but to declines in the production of rice and small pulse. The Antipodean countries show Argentina ever increasing her wheat area, the remarkable agrarian law of August, 1925, powerfully promoting arable culture, though at the expense of sheep-farming. Australian wheat areas tend slightly to increase, but the question of freights is here dominant. The eight chief countries in the wheat trade show the following production, in millions of cwt:—

	1914.	1923.	1924.	1925.	1926.	1927.	1928.
British Isles..	33·4	30·0	27·0	26·0	27·6	29·9	26·0
U.S.A.	427·3	423·9	471·5	366·2	453·6	457·0	480·0
Canada	86·0	262·9	147·0	227·7	219·1	243·0	268·0
India	171·2	198·9	197·0	175·5	174·6	175·0	160·0
Argentina	85·6	139·5	112·9	119·0	117·0	120·0	140·0
Australia	20·0	64·8	83·2	65·0	90·0	68·0	80·0
Germany	77·4	56·7	50·4	59·0	60·0	70·0	75·0
France	154·8	156·6	153·0	177·3	135·0	152·0	160·0
	1,095·7	1,333·3	1,242·1	1,215·7	1,276·9	1,316·3	1,389·0

The British yield per acre, 18.1 cwt, was good, but the fall on the acre was serious. Canada had a yield of 20.8 bushels per acre, against 19.5 in 1927. The eight lesser producing regions have increased their total contribution from 300,000,000 cwts to 332,000,000 cwts, mainly in consequence of Italy growing 126,000,000 cwts against 105,000,000 cwts in 1927. Roumania and Bulgaria claim to have increased their wheat production, but the evidence in exports is lacking. Spain has not increased its wheat yield and North Africa is also stationary as a producer. Soviet Russia, to which were assigned by us 200,000,000 cwts for 1927, claimed to have produced rather more than double that quantity, but so far were the figures supplied to the Rome Institute from proving accurate that the lesser reckoning was almost certainly excessive; nor for the 1928 crop, confessedly smaller than that of 1927, do we venture to take a higher figure than 160,000,000 cwts. The Ministry of Agriculture in its report for August 31st on wheat at the end of a cereal year took the step of anticipating net imports by Soviet Russia in the trade year commencing September 1, 1928. Reckoning 332,000,000 cwts for the lesser Powers and 160,000,000 cwts for Soviet Russia, we have a total wheat yield of:—

	Cwt.
1924	1,641,100,000
1925	1,750,700,000
1926	1,776,900,000
1927	1,816,300,000
1928	1,881,000,000

The world production of wheat in 1928 was almost certainly a record since the war, but as extra population is estimated to require an extra supply of not less than 40,000,000 cwts annually, the fall in wheat prices cannot be assigned to increased production. The remarkable essay published by Sir Daniel Hall (formerly Permanent Secretary to the Ministry of Agriculture) on May 7th last asserted that more and not less wheat production was requisite, and was to be obtained through the cheapness and abundance of nitrogenous manure. The fall in prices, in his view, was due to "the weakened purchasing power" of civilised and wheat-eating peoples; in other words, the civilised world is rationing itself.

Supplies of Breadstuffs.

Deliveries of English wheat at the statute markets never afforded a very good clue to total supply into the mills, and since the poultry demand has grown so greatly the index is of still less value. We shall estimate for 1928 that a million tons of wheat grown within the British Isles—the official figures never envisaged Scotland or Ireland—reached purposes of human consumption. This probably is as near as estimates can get; it certainly can involve no degree of error sufficient to affect main conclusions from totals of all supply. These conclusions are that less bread is being eaten and that the 1927 recovery has not been maintained; "the bad figures" for 1926 are, of course, those of the Strike year. Imports in 1928 were large in March and April owing to heavy arrivals from Argentina and Australia; this feature is likely to repeat itself in 1929. The December heavy arrivals were from Canada, and this, too, is a feature which tends to recur. Winter freights come into force on December 1st, and a great effort is made to ship before that date. The small arrivals in September and October are the consequence of a certain slowness in getting the new crops of Canada and the U.S.A. despatched. Grading is requisite, and, as one may imagine, not a little bargaining. The total arrivals of 1928 have not only been very moderate in themselves, but have included less overseas flour than usual. Our mills in 1928 have held their own very well indeed.

Imports (Thousands of Tons)

	1925.	1926.	1927.	1928.
January	409	578	466	382
February	321	308	427	416
March	451	435	524	644
April	421	420	538	521
May	455	331	523	468
June	442	501	654	476
July	512	516	475	494
August	393	570	565	506
September	405	480	535	397
October	440	400	410	380
November	407	402	519	460
December	609	456	431	662
Total	5,265	5,396	6,067	5,695

Adding a million tons to the imports in order to cover the home wheat supply, we get the following totals of breadstuffs consumed in the British Isles:—

	Tons.
1924	7,511,000
1925	6,522,000
1926	6,467,000
1927	7,082,000
1928	6,696,000

It is probable that 310 lbs per capita now suffice for the population, where the new century began with 350 lbs. The diminution began before the war, but it was accelerated by the six years of State control.

The Production of Spring Corn.

Increased production of maize in the U.S.A. and Argentina has been achieved without loss of average quality; increased production of barley in Canada and the United States has accompanied a noteworthy lowering of the standard; reference was made in our review last year to this as a tendency; it has now become a marked fact of great seriousness. Oats were in 1928 a good crop almost all the world over so far as yield per acre goes, but quality in North America was much below the level of ordinary seasons.

Production (in Millions of Cwts).

Australia might do much to supply us with barley and oats, but has apparently no chance of competing against Argentina as a shipper of maize. A freight only half as high, fine waterways to the coast, and wages less than half the Australian unite to make competition out of the question. The Rouse Institute attributes 390,000,000 cwts of barley to North Africa.

Market Prices.

The nation has saved about £7,000,000 in the year in the cost of bread, and it has obtained an improved loaf (in aspect at least) at the reduced price. This is due to the greatly increased percentage of Canadian wheat available. Owners of horses and users of oatmeal have had to pay old prices, and maize, owing to the keen Continental competition for Argentine supply, has advanced more than 10 per cent. in price. Feeding rice has kept up in demand, so that the comparatively high price appears to meet with acquiescence. Feeding sugar has fallen nearly 20 per cent. on the year, and the competition between growers of beet and cane looks like making 1929 a year of record use of this fattening food. The movement towards rapid growth and early maturity in live stock runs parallel with the demand for saccharine and sweetened feeds, of which an unique choice is now upon the market. Cheap potatoes are a substantial boon, especially to the poorer classes. This cheapness and plenty extends to the Continent. The low price of malting (which includes distilling) barley helps "the trade" to bear the very high rate of current taxation on all forms of alcohol. It is adverse unfortunately to arable culture in the barley counties, which, boasting soil and situation peculiarly adapted to the crop, are extremely reluctant to change their traditional forms of agriculture.

Mark Lane Prices per Cwt at the Beginning of Years Named.

The price of bread varies between 18s 8d and 23s 4d per cwt in the area of Greater London, and is usually 23s 4d at seaports and watering-places. Over the majority of British counties 18s 8d is the price. Before the war the ratio of fair average bread to like flour was as 7 to 5, but bakers now claim that it should be as 8 to 5. As regards Greater London two definitions are requisite: (1) what constitutes household bread; (2) what percentages of home and imported wheat are contained in the London flour mixture.

ROBERT J. SMITH, *Chairman.* GEORGE F. PAISLEY, *Director.*

GLASGOW, *4th January*, 1929.—We have audited the Books and Accounts of the Scottish Automobile and General Insurance Company, Limited, for the year ended 31st December, 1928, and we beg to report to the Shareholders that we have obtained all the information and explanations we have required. In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the Company's affairs, according to the best of our information and the explanations given to us, and as shown by the Books of the Company.

M'FARLANE, HUTTON & PATRICK, C.A., *Auditors.*

The price of flour made from sound English wheat gives the nation a clue to the cost at which "the staff of life" can be efficiently provided. Any price above this is a "comfort or luxury payment" for appearance and colour.

Imports of by-products, while showing steady increase of the past three years, do not reveal on a somewhat longer comparison any such "increasing dependence on the foreigner," as has been in some quarters asserted. In thousands of tons, imports for the last half-dozen years have been:—1923, 314; 1924, 517; 1925, 418; 1926, 346; 1927, 449; and 1928, 515. Imports of oilcake appear to have culminated in 1926, the returns, again in thousands of tons, being:—1923, 322; 1924, 372; 1925, 467; 1926, 507; 1927, 497; and 1928, 382 only.

Speculation has been less in 1928 than in 1927, and with a new cereal year from September 1st, disposition to buy forward has been below the average. On October 12th the speculative holdings of wheat "for orders" were just half a million quarters, against 1,290,000 a year previously. To-day a futures market in Canadian wheat is in contemplation, but this may fairly be regarded as a case where enterprise is to be distinguished from speculation. The creation in London of an entrepot for fine quality wheat is contingent on both British and Continental millers and merchants being able to arrange for supply beforehand. The Canadian wheat pool has somewhat reduced its range of operations; attempts to form a league of holders to embrace Soviet Russia and the Australian Commonwealth creation in London of an entrepot for fine quality wheat is fully adhered to, and on October 1st its members received 24s per quarter (480 lbs) on account of new crop. This enables them to tide over the winter, and further instalments are released to the farmers as the grain is actually placed. The following table shows the quantity and value of our imports of wheat, &c., in 1913, 1927 and 1928:—

FRUIT.

As recorded by the Ministry of Agriculture, the acreage of fruit is maintained on the general level of recent years, but is not up to what it was in the pre-war year of 1913. The total acreage of orchards is returned at 248,000 acres, which is substantially the same as the 1927 figure. A greater decrease is recorded in small fruit, the 69,200 acres returned in 1927 having fallen to 64,700 acres, a reduction of 4,500 acres (or 6.5 per cent.) in the current year. This shrinkage is mainly due to a reduction in the strawberry acreage, which has gone down by 2,800 acres to 20,000 acres. There is every reason to believe that the 248,000 acres of top fruit are a more highly productive agency than the pre-war 243,000, and that the output stands for a much higher grade article. The acreage in potatoes decreased, but the yield estimated at 3,513,000 tons for England and Wales is nearly half a million tons more than in 1927, and to them are to be added 1,032,000 tons, the produce of Scotland, also on a less acreage. The yield per acre is 7.2 tons, compared with the ten-year average of 6 tons. The year will stand out in the history of the industry for two things, both of which are emphatically in the interest of the home-grower. We refer to the order under the Merchandise Marks (Imported Produce) Act, 1926, under which imported fresh apples have to bear an indication of origin, either "Foreign" or "Empire," and to the introduction and operation of national standardisation of grade and package in its application to the marketing of home-grown fruit. 1928 is no different from any other year with regard to adverse weather affecting the success of activities in food production. Pests have also played their part, but not to an epidemic extent, although aphis was troublesome and scab prevalent. In no kind of fruit was there actual scarcity, and, on the other hand, there were no gluts. —*The Fruit Grower.*

The following table shows the area and yield of potatoes in the last three seasons for this country and some of the largest of the world's producing areas, as estimated by the International Institute of Agriculture:—

	Area (Thousand Acres)			Yield (Thousand Centals of 100 lbs).

(a) Including mares kept for breeding.

Pedigree Cattle.—The year 1928 has been a time of anxiety for all breeders of pedigree live stock. The series of outbreaks of foot and mouth disease, the lack of demand for export in the early part of the year, and the crowning touch on the second day of the Royal Show at Nottingham of an outbreak (for the third year in succession) near York proved a severe blow to the industry. The recently opened quarantine station has been helpful as far as South Africa, Northern Rhodesia and Ireland are concerned, but, unfortunately, Australasia and Canada have so far not fallen into line. During the latter part of the year the export trade has been more vigorous, the Russian Government experts being keen buyers for their Department of Agriculture. There have been numerous public sales, many of which have been disappointing, but the trade has been of a more level description. There have been many inquiries for pure bred live stock from Australasia and the United States, but up to the time of writing export has not been allowed except through Scotland, after 60 days' quarantine. There have been fewer home sales of the red, white and roan shorthorns than usual, and prices and averages have been lower than in 1927, but prices of dairy shorthorns have on the whole been well maintained. A better trade has been experienced for Friesians during the past year. Bulls made up to 400 gs. and cows up to 480 gs., nearly forty animals reaching three figures. Herefords still maintain their popularity, and have recently found a fresh opening in Russia. Jerseys have made little improvement in the past two years.

Horses.—The heavy draft horse has been in demand, but at lower prices than in the preceding years, and the overseas trade has been small. High prices have been

the exception for Clydesdales. Suffolks have also felt the effect of the down trade. At the Society's show and sale in March prices averaged £51 5s for mares, £72 11s for stallions and £63 12s for geldings.

Pigs.—The trade continues to be depressed. The large whites have again proved the best sellers, and there has been a fair number of sales. There have been fewer public events among the middle whites and scarcely any Berkshire sales. Breeders of large blacks have also had a poor year, and among the other breeds there has been little doing. The cost of feeding stuffs still remains too high. Outstanding prices have been few and far between, but we understand the Russian Department of Agriculture paid three figures privately for some of their large whites. There has been a great drop in prices of middle and large whites since 1927. Scarcely any sales of Berkshires have been held. A number have been exported to Brazil and there has been a fair private trade. Prices of large blacks again are considerably down on last year's figures.

Sheep.—The sheep trade has again felt the general depression, although commercial prices have been maintained. In the first half of the year the export trade was slow, but during the time of the Royal Show many prospective buyers were present from distant parts of the world. Later in the season the Russian Department of Agriculture sent their representatives, who purchased several hundred Lincolns, Hampshires, Romneys and Oxford Downs. There was a great demand from South America at the Romney Marsh sale at Ashford. This has helped to stimulate the home trade. A fair number of sheep have been shipped from Scotland to Canada.—*Mr Harry Brown, in "The Farmers' Red Book."*

Fat Stock.—Fat cattle prices in 1927 had reached the low level of 27 per cent. above pre-war, and the index figures during the last three months of the year were considerably below the annual average, but from this point prices began to rise again, and by June, 1928, the average for second quality cattle was 55s per live cwt, as against 46s 9d in June, 1927. A decline has since occurred, but not to the same extent as in 1927, and the index for 1928 was 11 points higher at 38 per cent. above pre-war. A very similar movement occurred in the case of fat sheep, although the peak of the rise was in April and May, 1928, and the index for the year was 17 points higher at 67 per cent. above the base years. With fat pigs, however, prices showed little variation throughout 1928 except a slight rise in values during the period January to April, and the average prices of both bacon and pork pigs in December, 1928, were practically the same as those in January. As compared with 1927, the index figure for bacon pigs was 9 points lower at 35 per cent. and for pork pigs 17 points lower at 38 per cent. above pre-war.

PERCENTAGE INCREASE in the PRICES of FAT STOCK during the Years 1922 to 1928, as Compared with the Average of the Three Years, 1911-13.

The Agricultural Market Report.

POULTRY.

The following is extracted from an annual review by Mr Edward Brown, secretary of the National Poultry Council:—So far as evidence can be obtained, the consumption of eggs in 1928 was greater than ever before. Inclusive of dried and liquid supplies, the average is more than 170 eggs per unit of population per annum. The consumption of poultry, however, is about 1¼ fowl yearly per unit. During the year notable advances have been made. One of these is indicated by the passing of the Dogs Act (Amendment) Act, which, for the first time, has placed owners of poultry on an equality with those of larger stock, so far as worrying or killing by dogs is concerned. Steps taken by the Ministry of Agriculture have eventuated in adoption of regulations for grading and marking eggs. The season of 1928 was favourable. While profits have not been equal to those of the immediately post-war period, they have been satisfactory. Breeders of productive poultry report an excellent demand for stock, &c. Imports of eggs in shell at 26,467,410 great hundreds in 1928 were 8.7 higher than in 1927. Supplies from France, Egypt, Belgium, China, Canada and Australia showed the most marked increase, though the two last-named countries do not yet contribute very largely. The declared values of these imports, at £17,766,531, was 11.6 per cent. greater than in 1927. China, including Hongkong, is responsible for 98

THE STANDARD LIFE
ASSURANCE COMPANY
(A mutual office of over 100 years standing and offering Unrivalled Security).

issues
A New Form of Policy
under the
ANNUAL CASH BONUS PLAN
A With Profit Policy
at
A Non Profit Premium

Under this plan the cash bonus paid annually can be applied to reduce each premium payable.
The Bonus increases yearly and the Premium decreases yearly with the result that Life Assurance is obtained at Minimum cost.
Before effecting a Policy under terms obtained elsewhere ask for particulars of the terms available under this Scheme and compare the relative cost.

The results will surprise you.

Write to-day for booklet "A.J.19" stating age next birthday and class of Policy desired when full particulars will gladly be sent you without any obligation on your part.

The STANDARD LIFE ASSURANCE COMPANY
LONDON 48 QUEEN VICTORIA ST. E.C.4 / 15a PALL MALL S.W.1
ESTABLISHED 1825
DUBLIN 59 DAWSON STREET
HEAD OFFICE - 3 GEORGE STREET EDINBURGH

per cent. of the supplies of dried and liquid eggs. The following table shows net imports :—

	Quantities. Cwts.	Values. £	Per Cwt. s d
1927	640,028	3,066,344	95 9
1928	583,680	2,718,792	95 4

The imports of live and dead poultry into Great Britain and Northern Ireland in 1928 were :—

Country.	Quantities.	Values.
Alive—	No.	£
Irish Free State	1,020,768	180,043
Other countries	161,146	16,855
Total alive	1,181,914	196,898
Dead—	Cwts.	£
Latvia	71,512	321,180
France	70,349	459,163
Austria	31,422	161,044
Hungary	40,938	207,287
United States of America	19,013	123,509
Irish Free State	105,133	661,324
Other countries	150,646	751,246
Total dead	490,213	2,687,753
Less re-exports	21,399	120,632
Net total dead	468,814	2,567,121
Gross total, poultry		£2,764,019

Estimates based upon census returns and average values of eggs and poultry in 1928 are :—

	£
Estimated production in England and Wales	25,321,089
Estimated production in Scotland	2,685,914
Estimated production in Northern Ireland	3,429,992
Total production in Britain and Northern Ireland	31,436,995
Imports of eggs and poultry, including dried and liquid eggs, less re-exports	23,249,342
Total (wholesale) consumption	£54,686,337

On the above estimates the production in Britain and Northern Ireland was greater by £1,946,384 in 1928 than the previous year, and the total consumption by £3,307,805.

FISH.

Billingsgate Fish Market has passed through a satisfactory year, according to the *Fish Trades Gazette*. The official figures give the total weight of fish handled at Billingsgate up to the end of November as 171,148 tons, of which 21,311 tons arrived by water. With a fair average prevailing during this month, the grand total should not fall very far short of 200,000 tons, an enormous quantity of fish, which, perhaps, the mind finds difficulty in visualising. Despite keen competition, the country order trade has recovered much of its old stability, and this department appears to be definitely on the up grade. Undoubtedly the demand has existed chiefly for prime quality fish, though friers' classes constitute a by no means unimportant section of Billingsgate's trade. The shellfish trade, taken on the whole, can be regarded as having been satisfactory, though the enhanced prices ruling for oysters and some other classes has militated against a truly brisk demand. In the cured fish department there has been little development, though trade has maintained a fairly consistent standard. Undoubtedly the demand for cured classes is in need of a decided stimulus. Possibly no other port has done more in the past year to establish and popularise a regular service of Danish fish, and Dutch senders, too, have reason to pay tribute to the Metropolitan markets.

The salmon trade has not been really successful. Almost without exception the Scottish, Irish, English and Welsh rivers have done badly, the total catches falling very far short of 1927. Conditions in Canada, Newfoundland and the United States have been no better. Grimsby has enjoyed an exceptionally prosperous year. Altogether, over three-and-a-half million cwts of fish were marketed and disposed of by the wholesale merchants, curers, &c. The increase in value is more striking, for on a total of £4,447,000, there is a surplus over 1927 of over £146,000. Hull figures for the eleven months of 1928 show that there were 3,365 voyages, and that 2,255,105 cwts of fish, of the aggregate value of £2,127,680, were landed at Hull, as compared with 3,263 voyages which yielded 2,301,370 cwts of fish of the total value of £1,893,519 for the corresponding eleven months of 1927. Results were less good at Milford Haven and Scarborough, but the other chief ports enjoyed a successful year.

The Board of Trade returns of landings of sea fish of British taking in 1927 and 1928 include the following :—

TWELVE MONTHS ENDED DECEMBER 31.

Kinds of Fish. (England and Wales.)	Quantity. 1927.	Quantity. 1928.	Value. 1927.	Value. 1928.

II.—COLONIAL AND FOREIGN PRODUCE.

TEA.

The following is extracted from Messrs Brooke Bond and Co.'s annual review :—The year has been one of persistent deflation, and now the tea market is probably in a more healthy condition than for some time past. At the end of November, 1927, the quotation for common tea was 1s 6½d. It has since been down to 9½d, and is now in the neighbourhood of 1s. The speculative fever of 1927 gave way to acute depression in January of the following year, and by April the price of all tea had fallen materially—good, fine, and indifferent were all being thrown overboard, and at this time good tea could be bought at very attractive prices. Eventually values were adjusted—really poor tea continued to decline, but there was a sharp reaction in better sorts, and the difference in the value of poor and good tea is now more clearly defined by price than ever before. The statistical position during the spring and early summer of this year looked very bad—the bonded stocks on March 31st being no less than 54 millions in advance of the previous year—but as the year progressed more tea went to markets outside the United Kingdom, and gradually month by month the surplus stock has been disappearing, until on November 30th the excess was only 11 millions. Direct shipments to outside markets from the countries of production show a gratifying increase of 30½ millions for the year to date against an increase in production of 27½ millions. India, too, is undoubtedly absorbing more of the present crop for local consumption, and total shipments to this country may be less than is generally expected. Consumption in this country continues to be very satisfactory, and with the lower prices demand is returning to Indian and Ceylon tea. We strongly emphasise the fact that it is only when the price of Empire-grown tea is high that the blenders increase their use of Java, Sumatra, and China tea.

Labour is still short in Northern India, but during the past year of over-production this has probably been an advantage. In other producing countries there is ample labour for all requirements.

The following table gives the exports from India :—

EXPORTS FROM NORTHERN INDIA TO ALL COUNTRIES. APRIL 1ST TO OCTOBER 31ST.

	Season 1927-28. Lbs.	Season 1928-29 Lbs.
U.K. (Calcutta and Chittagong)	178,352,157	171,273,117

Africa, North	92,300	231,443
" South	1,079,305	938,401
All other places	366,450	416,685
Total	204,176,290	204,340,659
Bombay by rail	3,093,434	2,836,536
" sea	1,355,262	2,217,801
Indian ports	396,355	663,666
Burma	1,709,430	1,903,102
Total	210,730,771	211,967,764
From SOUTHERN INDIA :—		
United Kingdom	19,213,477	24,766,404
Colombo	1,943,683	1,883,102
Other places	415,933	415,848
Total	21,573,093	

This year's crop has been disappointing in quality, the quantity of choice tea being very small. Tippy tea has also been in unusually small supply.

The following table gives the exports from Ceylon from January 1st to October 25th for the last two seasons :—

	1927. Lbs.	1928. Lbs.
United Kingdom	118,661,589	118,2-9,404
Continent	6,160,161	7,982,228
America	18,496,180	22,476,231
Australia	22,013,128	25,018,588
China	3,071,269	1,936,788
Other countries	18,580,328	25,792,041
Total	186,982,655	201,555,280

The tea growers of Ceylon are in a particularly happy position, as Ceylon tea is fetching relatively higher prices than any other growth. The quality of this year's crop has been above average, and latterly some very choice teas have been seen by the trade. Planting continues in Central Africa, and a few years hence quite important quantities will be available from this source. The first small consignment of Kenya tea was sold in London some months ago, and was favourably commented upon. Tea growing is developing in Malaya, and is reported to be doing well, production per acre being heavy. Another new tea growing centre is the Karen Hills, situated in Burma. A few small invoices have been sold in London and realised good prices. With improved manufacture this tea would compare with good Darjeeling.

The following tables give exports from the Netherland East Indies for the last two seasons :—

From JAVA (JANUARY to SEPTEMBER)—

	1927. Lbs.	1928. Lbs.
Holland	21,646,542	20,934,872

The crop has been very disappointing in quality. Only limited supplies of good Keemun were available.

Russia has been China's best customer this year, the low prices ruling for common grades of Indian and Java tea militating against the demand for common Congou from the European and North American markets.

The Board of Trade figures for the United Kingdom for 1913, 1927, and 1928 are as follows :—

	1913. Lbs.	1927. Lbs.	1928. Lbs.

Re-exports total	57,555,651	85,587,060	96,030,492

COFFEE

The main feature of the coffee situation in the past year was the fact that the Brazilian Coffee Defence Institute retained complete control of the market in face of the production in Brazil for the 1927-28 season of the largest crop ever harvested. At the opening of the past season—that is on July 1, 1927, interior stocks in Brazil under the control of the institute amounted to 3,312,000 bags, and by the end of the season, June 30, 1928, the figure had increased to 11,672,000 bags. By means of the financial assistance of the institute the industry was able to hold this large surplus, and by regulating shipments from Brazil to accord with the requirements of consuming countries prices were maintained throughout last year at a level generally above that of 1927. Brazilian production for the 1927-28 season was 25,500,000 bags, and that of other countries 8,100,000 bags, making a total of 33,600,000 bags. Against this large supply there was a big increase in the world's consumption, which amounted to 23,500,000 bags, compared with 21,300,000 bags in the preceding twelve months. The crop now coming forward in Brazil is much smaller than the preceding one, and the interior stocks may be expected to show some reduction during the remainder of this season. —*The Times Annual Commercial Review.*

COCOA.

The world's requirements of cocoa during the past year failed to keep pace with the production, and a situation of oversupply was created which adversely affected values, especially in the latter six months, when there was a marked depreciation in values. After some ease in January firm markets were experienced until June. In July the market displayed signs of weakness and in August prices dropped 6s to 8d per cwt, West Indian and Central American varieties being chiefly affected. The main reason for the weakness was an excess of supply on dull markets, but the situation was aggravated by nervousness over the dissolution of the marketing agreement, which had been in force for some years, between four large firms in the export trade of the Gold Coast. With prospects of a larger West African crop, drooping markets were experienced during the remainder of the year, most varieties closing from 12s to 13s per cwt below the prices ruling at the close of 1927. A notable exception, however, was Ceylon cocoa, which, owing to shortness of supply, experienced firm markets throughout the year, prices recording an advance of 10s to 20s per cwt on the twelve months. The spot quotations in London of three varieties of cocoa at the close of each quarter of last year and at the close of the three preceding years are given below :—

	African, West Coast.	Trinidad, Good to Fine.	Ceylon, Good to Sup.
Dec. 31, 1925	43s to 45s	66s to 73s	90s to 100s
Dec. 31, 1926	70s to 71s	78s to 80s	80s to 87s
Dec. 31, 1927	62s to 66s	74s to 77s	85s to 93s
March 31, 1928	63s to 64s	76s to 80s	85s to 100s
June 30, „	63s to 68s	76s to 78s	95s to 115s
Sept. 30, „	54s to 58s	64s to 70s	95s to 112s
Dec. 31, „	48s to 52s	61s to 66s	95s to 114s

An innovation in the home market was the inauguration on May 21st of the London Cocoa Terminal Market for trading in future delivery, the basis of the contract being 10 tons of fair fermented Gold Coast cocoa, ex-wharf London, the seller having the option to deliver certain other varieties. This was followed by the opening in September of the new Liverpool Cocoa Exchange, also for the purpose of trading in futures.—*The Times Annual Commercial Review.*

The Board of Trade returns for 1913, 1927, and 1928 are as follows :—

IMPORTS, CONSUMPTION, and STOCKS.

	Quantity. 1913.	1927.	1928.	Value. 1913.	1927.	1928.

SUGAR.

The year opened in January with a steady tone and at a quotation of 13s, c.i.f., for 96 per cent. sugars—Cubans, Domingos, and Peruvians—and of 16s 6d to 17s, c.i.f., for B.W.I. preferential sugars, the equivalent of 13s to 13s 6d, c.i.f., with preference deducted. During February and March there was an easier tone, with a decline of 1s to 1s 3d per cwt, but in April this decline was fully recovered, and at the close of the month the opening quotations were again recorded of 13s and 17s, c.i.f., respectively. During these first four months the United Kingdom refiners were enabled to buy large parcels of Cuban sugars. These purchases enabled United Kingdom refiners to hold their own against their active competitors. The unsatisfactory condition of British sugar refineries had long been a matter of serious consideration. The competition of home grown beetroot sugars, which enjoyed an extravagant subsidy, and the active, and ever increasing, competition of foreign refined, had proved very disastrous. The Budget reduction of 2s per cwt on all raw sugar used in their refineries was highly appreciated by the British refiners, as it enabled them to monopolise all British markets to the extinction of foreign refined. The foreign sugars most affected by this change were those of Czechoslovakia. United Kingdom refiners, availing themselves of their good fortune, immediately began to increase their weekly outturn, both in London and Liverpool, and one of the closed Greenock refineries at once again began work. There was no change of importance in the quotations of raw sugar during May and June. In July there was an easier tone. It had become apparent that the Java crop, then being reaped, was likely to exceed all expectations, and there was the fear that this largely increased crop could not be disposed of unless at a reduction in values. Towards the close of July the Cuban Corporation, as they were making slow progress with the sale of their sugars to American refiners, resolved to make a further sale of 300,000 tons of their reserved sugars, and they were successful in placing the entire parcel with Messrs Tate and Lyle, of London, at 2.34 c, f.o.b., the equivalent of about 11s 9d, c.i.f., for the United Kingdom, for August-December shipment. This was the most important sale ever made to one firm at one time, involving, as it did, about £3,500,000 in payment. The Java trust succeeded in making important sales, as occasion occurred, to both West and East, and until recently they had only a balance of about 280,000 tons remaining unsold, and these they disposed of about the middle of December, at a price supposed to be about 12½ guilders. These large operations had a depressing effect on all markets, and raw Cubans continued to drop from 11s 9d, c.i.f., in August, to 9s 6d in November, the lowest price of the year, and the lowest since October, 1925, when a few transactions were made at 9s, c.i.f. There has since been a slight recovery, and the closing price is 10s, c.i.f., for January-February shipment. The outturn of the present Java crop has exceeded all early expectations, being 550,000 tons in excess of the last. This is accounted for by the scientific management of the cane cultivation, and the thorough and economical working of their factories, and above all by the wonderful yield of the new cane which they have adopted, POJ. 2878. Dr Mikusch, of Vienna, estimates that the European sugar consumption of the past year has been 9,589,000 tons, against 8,657,000 tons for the previous year, showing an increase of 930,000 tons. Home-grown sugar has this year produced about 220,000 tons, against about 210,000 tons last year, and the saccharine results in general have been extremely satisfactory, being in many cases 20 per cent. instead of the usual 16 to 18 per cent. Several factories have now resolved to work imported cane when the beetroot season is over, that they may have full work during the whole year. By their circular of December 6th, Messrs Willett and Gray estimate the crops of the world at 26,611,000 tons, against 25,250,000 tons.

Increase in meltings of raw sugar in 1928, 10,010 tons.

Refined.—The changes in the sugar duties made by the Budget this year have greatly benefited home refiners. When the beet crop is finished the refining of imported raws will be resumed. The price of Greenock fine granulated at the beginning of the year was 29s, duty paid. For the first four months the price ranged between 29s and 28s, the latter figure being the quotation immediately before the Budget. Thereafter there was a constant sagging until the middle of October, when 24s 6d was the price, and now, at the end of the year, the quotation is 24s 3d. Foreign refined is now of little interest to the home trade, as since the Budget it has been held for prices above our parity. There is still a little business passing in special descriptions like cubes, and castor, and some to manufacturers who have an export business and get the full drawback. Dutch and Czecho granulateds were quoted at 16s early in January. By the middle of February the price was 15s, at the end of March 15s 6d, and at the time of the Budget 15s 3d for immediate delivery and 15s for November-December. Thereafter the market record was, "little doing," and at gradually easing prices. For ready Continental granulated the price is now 12s, f.o.b. Throughout the year buyers in all countries have acted very cautiously on account of the huge supplies of sugars available, and buying was generally restricted to actual requirements. There is more confidence now, and some show of interest in future deliveries.—*Messrs Wm. Connal and Co., Glasgow.*

THE CANADA LIFE ASSURANCE COMPANY.
Established 1847.
OUTSTANDING FEATURES FOR 1928:
Business in Force ... £181,201,500
Total New Business Paid for in Year ... £34,256,183
Assets £32,278,973
SURPLUS EARNED DURING THE YEAR £1,152,028
The rate of interest earned during the year was over £6 per cent.
The Company has increased the bonuses to Policyholders during the last six years, and has made arrangements to still further increase them during the next few years.
The undivided surplus at 31st December, 1928, was £2,036,643.
The Company issues most liberal Policy and Annuity Contracts, and has recently revised and considerably reduced its rates for non-profit Policies. Fullest particulars will be furnished on application to the nearest Branch Office, or to the Head Office for Great Britain:
2, ST. JAMES'S SQ., LONDON, S.W.1.

TOBACCO.

The year 1928 was marked in the tobacco trade by few events of outstanding importance, according to the *Tobacco Trade Review*. It witnessed a considerable improvement in organisation in the distributive sections of the trade. According to recent official records, there has been a remarkable increase in the use of Empire-grown tobacco. It is stated that at least half the pipe tobacco now smoked in Great Britain is of Empire origin, and the figures continue to show a steady increase. The rate of progress is not so great as regards cigarettes, yet it is well known in the trade that a certain brand of cigarettes placed on the market by one of the branches of the "Imperial" has found a vast public. There can be little doubt that the preferential rate of import duty on tobacco of Empire origin has had much to do with this. Once the flavour of Empire tobacco is appreciated there is no doubt the demand for it will increase still further. A list of 491 brands of tobacco and cigarettes which are Empire grown has been prepared by the Empire Marketing Board. Importers of Havana cigars still complain of poor business. Before the war the average number of Havana cigars imported into this country was 75,000,000 per year. The post-war figures are between 35,000,000 and 40,000,000. The most conspicuous facts which emerge from the table below of our overseas trade in tobacco are the great increase in the entries of unmanufactured tobacco for home consumption, against a small decrease in entries of the manufactured product; the substantial rise in re-exports; and the rapidly increasing part played by British India as a source of the raw material.

† December shipments estimated.

The past year has been memorable for the removal of the restriction scheme, and the trend of the market has been entirely changed by the Government's decision. The three important associations connected with the trade—the Growers, the Manufacturers, and the Rubber Trade Association of London, which latter includes growers, dealers and brokers—gave evidence before the Committee of Civil Research, and were unanimous in their advice that the Government should take restriction off gradually over two or three years after lowering the pivotal price considerably. The action the Government took caused rubber to fall from 1s 6d to 8d per lb. The planting industry is now in a much better position financially to meet any difficulties ahead and to weather the storm than it was in November, 1922, when the scheme was inaugurated. Plantations have also benefited largely by the long rest to their trees. Full potential production has come two or three years earlier than was generally expected. The total native acreage in the Dutch East Indies is very uncertain, and what effect a low price for rubber will have on the output is also difficult to estimate.

Our production estimate turned out fairly correct up to the end of October during the Restriction year, though we had rather less from the Dutch East Indies on account of the low price stopping smuggling and probably tapping. There is a reduction in the imports into Singapore in the whole year 1928 of 33,000 tons, of which 30,000 tons were wet rubber. On December 10th last our London stocks were reduced to 16,517 tons from 63,200 tons at the beginning of the year, and the New York stocks to 61,950 on November 30th from 100,100 tons on January 1st, showing a total reduction of 84,000 tons. This great reduction in the stocks of England and America has been mostly discounted by the accumulated supplies on the estates, as the plantation companies, in view of the fact that restriction was to end in October, decided to start producing their full output at once, and to ship this extra quantity after the restriction year was finished. The stocks on estates of 100 acres and over were returned at the end of October, 1928, as :—Malay Estates, 69,100 tons; Ceylon Estates, 6,700 tons; Malay dealers, 5,400 tons; Ceylon dealers, 6,800 tons; Singapore and Penang, 12,000 tons.

We estimate the principal countries' consumption to be :—

	1926. Tons.	1927. Tons.	1928. Tons.
America	365,000	371,000	441,000
England	40,000	45,000	48,400
France	39,000	36,000	38,000
Germany	23,000	39,000	39,000
Belgium	2,500	6,500	8,000

We estimate the world's consumption as follows :—1925, 560,000 tons; 1926, 545,000 tons; 1927, 586,000 tons; 1928, 675,000 tons.

The use of reclaimed rubber has increased during 1928, in spite of the much lower price for crude, though there are distinct signs of a slackening in the demand during the past few months. We do not think that its use in tyres has been increased, although the percentage of reclaimed compared with crude increased from 45·4 per cent. in the first nine months of 1927 to 47·7 per cent. in the same period of 1928. According to the figures of the Rubber Associa-

tion of America 202,000 tons have been used, though these figures are of doubtful accuracy. We hear that the demand has been for the better-grade tyres, and at present prices this is likely to continue. We began the year with the price of spot standard crepe and ribbed smoked sheet at 1s 8d; with a slow market the price fell a penny during January, and on February 2nd declined to 1s 5⅜d, but recovered quickly to 1s 6⅛d until February 9th, the day of the Prime Minister's announcement, when prices fell 2d per lb to 1s 4d. The market then fluctuated rather sharply, and declined to 1s 1¼d before the end of the month; on March 14th business was done down to 11⅛d, advancing up to 1s 1⅜d by the 30th. On April 4th the Government announced in the House of Commons that restricton would cease at the end of October (the restriction year), and the price rapidly fell to 10¼d, and on April 11th to 8⅜d per lb, and on the 18th to 7⅜d, which was the lowest price of the year. With the knowledge of restriction coming off, and that producers were accumulating stocks on the estates, fluctuations have been very small; a good part of the surplus rubber was sold ahead and buyers simply waited for the large supplies to arrive. The market remained between 8d and 9d until the end of May, when it advanced to 9⅜d, and the market kept steady at 9d to 9½d until the end of August, and since then between 8⅞d and 9d per lb, closing the year with spot price for sheets at 8⅞d. During the last half of the year there has been a premium for crepe of ⅛d to ¼d per lb, which still continues. The consumption of plantation sole crepe has been about the same in quantity as in 1927—we believe about 4,000 tons. It has at times felt the competition of the home remilled. Prices have fallen from 2s 3d to 1s 1d in sympathy with the rest of the market, but after the slump in the spring the market was very disorganised, and sales were effected at very varying prices. During the past two months there has been a steadier and sounder trade, and a large part of the old stocks has been cleared.

UNITED KINGDOM STATISTICS, 1928.

THE OIL INDUSTRY.

Another year of over-production—that is the monotonous record of the oil industry in 1928, though the American oil industry redoubled its efforts to restrict the output of crude oil. The restriction in the Seminole fields in Oklahoma and in the Yates Pool in West Texas was continued and restriction was further imposed in Ventura and other fields in California and in the Hendricks Pool in West Texas. As a result the crude oil output of the United States began to fall. From a daily average of 2,419,800 barrels at the beginning of 1928 it had dropped to 2,333,900 barrels a day by the middle of May. At this time a temporary shortage in gasoline developed. Gasoline prices had begun to rise in February and went on rising until August. In September restriction broke down in Oklahoma when an independent operator contested the legal powers of the Oklahoma Corporation Commission to restrict the total output of that State to 700,000 barrels a day. Thereupon the output of Oklahoma began to rise. Meanwhile a series of deep sands had been tapped in the Santa Fé Springs in California under conditions which made restriction impossible. Finally the increase in pipeline facilities in West Texas led to a rising output in the Yates and Hendricks Pools. By the end of December the State of California was producing 714,000 barrels a day, against 624,000 barrels at the beginning of the year, West Texas was producing 340,000 barrels a day against 260,000 barrels, and the total output of the United States had risen to no less than 2,591,000 barrels a day. As the supply of gasoline increased the idea of a gasoline shortage vanished and gasoline prices fell and went on falling for the last three months of the year. One of the curious features of the market situation last year was that the rise in oil prices in America was not reflected in Great Britain or to any extent on the Continent. The price of petrol in Great Britain was actually reduced at the end of March by 1d a gallon ex pump in the London and Home Counties areas, and by 1½d a gallon ex pump outside those areas. The 4d petrol tax imposed in the Budget resulted in an increase in the price of petrol by 4½d a gallon (the ½d being added to cover the cost of collection of the duty) and at this level the price of petrol remained in spite of the increase in gasoline prices in America. Fuel oil and diesel

BANCA COMMERCIALE ITALIANA

Established in 1894. Head Office: MILAN. Capital: 700 million Lire. Reserves 540 millions.

Branches in every centre of commercial and industrial importance in Italy, and in most of the best known tourist resorts; also in London, New York, Constantinople and Smyrna.

Affiliated and Auxiliary Institutions in France (Paris and Riviera), Switzerland, Czecho-Slovakia, Poland, Austria, Hungary, Bulgaria, Roumania, Greece, Egypt, Morocco, Brazil, Argentina, Chile, Uruguay, Peru, Colombia, Ecuador, etc.

ALL OF WHOM TRANSACT BANKING BUSINESS IN ALL BRANCHES.

TRAVELLERS' CHEQUES ISSUED payable in all parts of the world.

London Office:

32, Threadneedle St., E.C.2.

A. JOEL, Manager.

Correspondents to the Italian Treasury.

oil prices were reduced at the beginning of the year and in June, as the following table shows :—

FUEL OIL in U.K.

	Bunker Fuel Oil. Per Ton.	Bunker Diesel Oil. Per Ton.
	s d	s d
December 31, 1927	75 0	90 0
January 1, 1928	70 0	85 0
June 1, 1928	67 6	82 6

Fuel oil for internal use, 75s at the beginning of year, 72s 6d on January 30th, 70s on May 2nd and 67s 6d on October 11th.

As regards the world production of crude oil last year it is only possible to give estimated figures. The United States, as a result of the increase in output in the last half-year, produced practically the same amount as in 1927—namely, 900,000,000 barrels. The decline in the output of Mexico continued, but every other oil-producing country, with the exception of India, increased its output, Venezuela leading with a rise of 66.5 per cent., followed by Colombia with a rise of 37 per cent.

WORLD'S CRUDE OIL PRODUCTION.

The record of oil history in 1928 cannot be closed without mention of the move taken by the big international oil combines towards world co-operation in marketing. The first step was taken by the Burmah Oil Company when it acquired rights to one million shares in Shell Transport and Trading Company, the junior member of the Royal Dutch-Shell group. As the Burmah Oil, next to the British Government, is the largest shareholder in the Anglo-Persian, its acquisition of Shell shares made an alliance between Anglo-Persian and Shell a practical possibility. It came, therefore, as no surprise that an agreement was entered into between the Anglo-Persian and the Asiatic Company of the Royal Dutch-Shell group for the pooling of their distributing organisations in the East outside India and China. Towards the end of 1928 the Standard Oil Company of New Jersey formed the American Oil Exporters' Association, which was subsequently joined by every American oil company of importance, including the Standard Oil Company of New York and the Vacuum Oil Company, which are responsible for the import of Russian oil into India. Whether the American Oil Exporters' Association will come to some arrangement with the Anglo-Persian-Burmah Oil alliance in the East is at present uncertain, but the object of all these co-operative arrangements is that each member of the combine should draw upon the nearest source of supply (belonging to any other member of the group) in order to meet the requirements of its particular market. Co-operation on these lines means enormous economy in transport and marketing expenditure. This movement has rightly been described as "rationalising" the oil industry on its marketing side. It has taken many years of over-production to make the leaders of the oil industry act so rationally.

III.—BEER, WINES AND SPIRITS.

BEER.—The Budget included two items of relief. One was a reduction in the sugar duty by ¼d per pound. The other was a proposal to give a relief of 75 per cent. toward local rates payable by productive industries. In the case of breweries, it was estimated that such relief would amount to about £400,000. The number of barrels brewed again shows an increase, and the rise in specific gravity has been continuous since 1923, as the following table shows :—

Year to March 31.	Duty. s d	Standard Barrels. Great Britain and all Ireland.	Bulk Barrels.	Average Gravity
1914	7 9	36,057,913	37,558,767	1,052·80
1915	23 0	33,099,411	34,765,780	1,052·35
1916	23 0	30,292,977	32,110,608	1,051·88
1917	24 0	26,626,039	30,163,998	1,048·54
1918	25 0	13,816,173	19,085,043	1,039·81
1919	50 0	12,925,087	23,764,533	1,030·55
1920	70 0	25,115,196	35,047,947	1,039·41
1921	100 0	26,729,883	34,504,570	1,041·61
1922	100 0	23,513,774	30,178,731	1,042·88
1923	*100 0	18,564,212	23,948,651	1,042·72
1924	*100 0	19,890,033	25,425,017	1,043·04
1925	*100 0	20,954,392	26,734,825	1,043·12
1926	*100 0	21,034,419	26,765,610	1,043·23
1927	*100 0	19,745,199	25,100,461	1,043·28
1928	*100 0	12,962,997	25,359,754	1,043·31

* *Less a rebate of 20/- per bulk barrel.*

The yield of beer duty in 1927-8 was £83,318,692, as compared with £84,196,090 in the previous year. The current rate of duty is 932 per cent. higher than the pre-war rate. The acreage, estimated yield, and average price of hops are set out in the following table for a number of years :—

Year.	Acreage.	Produce. Cwts.	Yield per Acre. Cwts.	Average Price. £ s d
1915	34,744	254,101	7·3	6 7 0
1917 *	16,946	225,763	14·4	8 15 0
1918 *	15,666	138,491	8·8	18 15 0

—Messrs White, Tomkins and Courage, Limited.

WINES AND SPIRITS.—The following information is extracted from *Ridley's Wine and Spirit Trade Circular* :—After an anxious time in 1927, when the duties on wines and spirits were increased, practically all sections of the trade found fresh business difficult to obtain. Various methods of stimulating a greater inflow of orders were tried by merchants, but none can succeed in the absence of moderate prices. As was anticipated, no further radical modification of the Chancellor's 1927 revenue-producing scheme were connoted in the 1928 Budget, but an increase was effected in the import duty on "British wines" (from 1s to 1s 6d per gallon), which have secured a large share of the business formerly held by Spanish red and other lower strength Portuguese wines. The enormous growth of the business in basis wines is shown by the fact that the Chancellor estimated the revenue from that source to yield £70,000 additional by the extra sixpence. During the first half of the year expansion in the wholesale section was much hindered owing to the very slow exhaustion of the heavy stocks accumulated in anticipation of the 1927 Budget. During the twelve months the importations of all wines totalled 13,654,889 gallons, which compares with 18,526,222 gallons in the preceding year and 17,976,007 gallons in 1926, thus revealing decreases of 4,871,333 gallons and 4,321,118 gallons respectively. The quantity of foreign and colonial wines on which duty was paid last year was 13,501,366 gallons, as compared with 16,947,550 gallons in 1927, a decline of 3,446,184 gallons, and 16,828,240 gallons in 1926, a fall amounting to 3,326,874 gallons. Of the wine from foreign and Empire sources cleared for consumption, the only countries recorded as showing an increase on the previous year were Italy and "other British countries." Wines of colonial origin have, taken as a whole, suffered a decline, although not of such extensive proportions as that of foreign wines. The consumption of Australian wines fell from 2,305,151 gallons to 2,161,842 gallons, a decrease of 143,309 gallons, while "other British countries" increased to the extent of 77,394 gallons, the quantities being 329,660 gallons and 252,266 gallons respectively. Business in foreign and colonial spirits during the past year has been on much the same lines as in recent years. Consumption shows a slight decline as compared with the preceding twelve months, but imports have been on a rather heavier scale. Clearances were 1,669,819 proof gallons as against 1,764,488, a decrease of 94,669 proof gallons, and imports rose by 536,755 to 4,379,970 on 1927's total of 3,843,215 prof gallons. The excessively heavy duty continues to militate against the consumption of rum and brandy, the respective losses being 74,513 and 27,997 proof gallons, but Geneva shows an increase of 5,502 proof gallons. The statistics relating to the home consumption during 1928 of British spirits are not yet published, but taking an estimate by adding the figure for the last quarter of 1927 to that for the first three quarters of last year, there has to be recorded a decline from 11,398,665 to 11,084,263 proof gallons, amounting to 314,402 proof gallons. The export trade in wines of both foreign and Empire origin shows a decrease of 61,235 gallons, last year's total being 761,630 gallons against 822,865 gallons in 1927. Imported spirits which were reshipped reveal a fair gain, the figures being, in 1928, 844,543 proof gallons as compared with 767,286 proof gallons in the preceding year. Home-made spirits exported amounted to 7,697,381 gallons, an improvement of 641,380 proof gallons over 1927, when 7,056,001 proof gallons were exported. Several countries participated in this increase, the chief of which were Canada and India. From the same source we extract the following table, showing the imports and clearances for the past two years of wines and spirits :—

	1927. Imports.	1927. Clearances.	1928. Imports.	1928. Clearances.
	Gallons	Gallons.	Gallons.	Gallons.
French (Still)	2,332,546	2,304,826	2,067,089	2,004,780
Do (Sparkling)	851,291	805,368	782,353	692,130
Port	6,498,181	6,889,684	5,012,196	5,014,519
Spanish (Red)	1,586,525	1,783,486	1,157,043	1,008,004
Do (White)	1,518,951	1,437,322	1,363,744	1,249,859
Italy	667,846	650,069	718,309	681,122
Germany	307,852	313,143	238,343	232,348
Madeira	55,514	46,173	38,642	28,355
Empire wines	4,666,159	2,557,399	2,191,322	2,491,502
Other countries	81,649	161,963	85,848	101,747
Total	18,566,514	16,949,433	13,654,889	13,501,366
Brandy	457,408	571,174	495,004	543,172
Rum	2,119,272	882,332	2,282,155	807,823
Other sorts	1,307,142	311,023	1,602,811	318,824
Total	3,883,822	1,764,529	4,379,970	1,669,819

Clearances of French still wines fell off by 299,459 gallons, and imports declined correspondingly. The decline in finer wines has been less, but clearances of champagne fell off 111,420 gallons as compared with 1927. The heaviest decrease is in the case of port, of which 1,874,759 gallons fewer were cleared last year. Scotch whisky has experienced a slightly more prosperous year. The French vintage was good.

IV.—RAW MATERIALS.

COTTON.

The year opened with cotton weak and demand lifeless. Conditions throughout the ensuing months were rarely free from disappointments of one kind or another. The first Bureau estimate published in August rather encouraged the prospect of lower prices and the September report was construed in a similar vein. Overseas customers doggedly refused to provide for anything beyond immediate necessities. Little could be accomplished either for India or China, and had it not been for a steady demand from the minor markets the prevailing apathy would have been still more pronounced. During November the shifting of speculative interest in the raw material in New York to extraordinary movements in stocks and shares was a notable feature, but mill activity in the industrial area of the United States was by this time showing definite signs of expansion, and prospective buyers found prices moving steadily against them. No change of any moment has occurred since, and the year finished with values well maintained, but with demand still lacking both in weight and variety.

The difference between the highest and lowest price of middling American spot cotton in 1928 was nothing like as great as in the preceding year. In 1927 the margin was nearly 6d per lb—6.80 to 12.67—in 1928 it was less than 3d—9.72 to 12.53. From 11.08 in the early days of January the quotation was under 10d before that month closed, but by the end of April, owing to the reported lateness and poor progress of the new crop, a recovery to 11.67 had taken place. Complaints of deterioration and infestation by boll-weevil carried the price to 12.53 in the first week in July, but this proved to be the highest point of the year; six weeks later the rate was down to 10.21 and in September the lowest point—9.72—was touched. The main cause of such a reversal in sentiment was the publication of the acreage figures, which were much larger than had been anticipated, and gave a cultivated area of 46,695,000 acres, compared with 42,683,000 a year previously and a final reckoning of 41,905,000. The consumption returns which appeared about the same time were a further blow to bullish enterprise, but the first Bureau estimate of the crop provided a surprise. Private reckonings had varied from 14½ to 15½ million bales, and 14,291,000 was therefore distinctly less than the market had expected. The September report called for an augmentation of the prevous forecast, and 14,439,000 bales was the revised figure given. Values tumbled down and hedging operations proved much too persistent for the limited buying which sought to bring about a readjustment.

In its October report the Bureau claimed unfavourable climatic developments as the reason for a drop to 13,993,000 bales, but public opinion was more or less prepared. An addition of 140,000 bales to the October estimate was shown in the November issue, and the final estimate published in December predicted a total of 14,373,000 bales. The 1927-28 crop was 12,955,000 bales, as against the first estimate of 13,492,000 bales and the final one of 12,789,000 bales. The 1926-27 crop amounted to 17,977,000 bales and that of 1925-26 to 16,104,000 bales.—*Messrs Robert Barbour and Brother, Limited, Manchester.*

International Cotton Statistics.—The International Federation of Master Cotton Spinners reports the world consumption of American cotton for 1927-8 at 15,407,000 bales, as compared with 15,780,000 bales in the previous year. World spinners took 25,540,000 bales of all kinds of cotton, as against 25,881,000 bales in 1926-27. At July 31, 1928, the total mill stocks of American cotton were 2,212,000 bales, compared with 3,056,000 in 1927; of all kinds of cotton, 4,787,000 bales, against 5,407,000 in the preceding year. Probable consumption for the current season has been estimated at about half a million bales less than that of last year.

The following table shows the Board of Trade figures of total imports of raw cotton and the value theerof, during the years 1913, 1927, and 1928 :—

WOOL.

The following information is extracted from the annual report of Messrs Schwartze, Buchanan and Co. :—The past year has proved disappointing. A year ago trade had improved both in England and on the Continent, and under this stimulus, coupled with the prospect of a material shortage in the Australian clip, prices had appreciated during the latter months of last year. Unfortunately, however, during the earlier months of this year, a strong buying movement developed with hardening prices due, in large part, to the fear that supplies would be short in the second half of the year. When, later on, it became apparent that the estimated decrease in production had been grossly exaggerated, consumers, who had all along protested that they could not pay any advance in prices, held back and bought only from hand to mouth. This state of affairs continued for months, manufacturers counting on securing their supplies at a lower level, topmakers holding firm in the belief that manufacturers would ultimately be obliged to come out with their orders. In July and August business was very dull and tops accumulated to such an extent that it became evident that lower prices would have to be accepted. The break occurred towards the end of August, but no one anticipated so marked a decline or such a lack of confidence as was shown in the September sales. At that time and in October tops were sold, at times, at extraordinarily low prices, and it was these low priced tops and the cheaper wool which enabled spinners and manufacturers to obtain fresh orders on a new basis and to put a lot more wool into consumption. This, with the strength of the Australian markets owing to Japanese competition, caused confidence to a large extent to be restored and, with stocks of tops reduced to normal proportions, the concluding sales of the year were marked by keen and well sustained demand at a somewhat higher level than in September. The first series of London sales opened with a strong tone and the demand throughout was keen, especially on the part of the home trade. Prices for all merinos, with the exception of poorly grown wools, showed a slight appreciation, shafty wools suitable for Yorkshire and short scoureds benefiting the most. Crossbreds showed rather a greater advance than merinos, especially the fine medium sorts. The strong demand continued in March, Yorkshire again taking a prominent part, with the result that broad haired wools and medium and coarse crossbreds appreciated still further, as did the general run of scoureds, especially short pieces and carbonising sorts. A lull took place in the consuming centres in April when it began to be known that the decrease in Australia would be materially less than anticipated. It was with considerable relief, therefore, that when the May sales opened, the decline was found to be less than expected, and the fact that prices hardened as the sales progressed went far to re-establish confidence for the time being. But business gradually became slacker during the interval and in July prices for merinos were barely maintained, though medium and coarse crossbreds were rather dearer. The fall, when it did come in the September series, was much more severe than anyone anticipated, amounting in the latter part of the series to an average decline of 15 per cent. from the highest point. Gradually the lower price level revived the demand and confidence was restored. The year closes with spinner wools 12, topmaking 8 to 9, fine crossbreds about 4 per cent. lower, but medium 8, and coarse about 5 per cent. higher than in December, 1927. As compared with July, 1914, spinner wools are about 60, the general run of topmaking wools about 55, medium and inferior pieces about 50, fine crossbreds 45, and medium and coarse crossbreds about 40 per cent. higher.

With the exception of Queensland, weather conditions in Australia have been, on the whole, fairly satisfactory, and the decrease in production in Australia turned out to be much less than expected. South America showed a smaller decrease than anticipated, and South Africa a slight increase, while New Zealand showed a considerable increase.

We give below our usual statement of the value per lb clean of a few representative descriptions in July, 1914, and in December in recent years :—

	N.S.W. Good.	Queensland. Good.	Victor'n. Good.	South Aust. Average.	Cape. Short Washing.	Australian and N.Z. Crossbred.			
						Fine (Sup'r)	Fairly Fine.	Med.	Coarse.

Head Office: MANCHESTER. 165 Branches in Lancashire, Cheshire and the West Riding of Yorkshire.

dom in the years stated, the figures for 1928 being for the twelve months ending November:—

(In million lb.)

	1913.	1926.	1927.	1928.
Imports, foreign and colonial wool	801	811	822	794
Re-exports, ditto	307	338	346	337
Retained	494	473	476	457
British clip retained	95	61	57	73
Total retained by trade	589	534	533	530

The quantity of wool retained in 1928 was almost exactly the same as in each of the two preceding years. Probably the actual consumption did not differ materially from the quantity retained; whereas in 1927 it is estimated that about 555 million lb was consumed, and in 1926 about 515 million lb. The drop in the consumption has been greater than would appear from the above figures dealing with virgin wool, as there has been a decline in the consumption of pulled wool, though to what extent it is difficult to estimate.

JUTE, FLAX AND HEMP.

Only slight fluctuations were experienced during the first months of 1928. During the summer there was practically no speculation. Spinners, having received conflicting reports with regard to the crop, preferred to await the arrival of the first parcel before buying bulk. Thus little business was done in Italian hemp until October, and even then purchases were very meagre. PC/SB, which opened in September at £65 to £67, declined steadily, and the lowest price at which business was done in the U.K. was £62 15s c. and f. U.K. Though this price was far below the equivalent of the actual unselected hemp in Italy, only small orders were booked. A greater interest was shown both by German and U.K. spinners in November-December, when fair sales were effected and prices began to rise. An improvement of the yarn market in Italy, followed by heavier buying by the Italian mills, contributed to the strength, and PC/SB closed at the end of the year at £66 to £68. The crop has proved the most irregular experienced for many years.

Russian Hemp.—The demand for Siretz has been good throughout the year, and supplies arriving at Riga moved steadily into consumption at prices which gradually advanced during the season. The quality has been satisfactory. Towards the end of the year the scarcity of Central European peasant hemps and tows and the high prices asked for French hemp led to an expansion in the demand for Russian. Continental spinners have again been the chief buyers, and Germany in particular has secured large parcels on their arrival in Riga. Values of Siretz, which at the beginning of the year ranged from £35 to £48, now stand at from £42 to £55 per ton.

Flax.—The bulk of the season's buying took place towards the end of December, 1927, and in the early days of January, 1928, and a rise in prices of about £10 per ton ensued, bringing Livonian flax up to £110 basis R, and BKKO to £115 basis I. From the end of January until the beginning of May markets were dull, and only occasional purchases by spinners against actual requirements were recorded. Prices remained more or less stationary. From June onwards there was a tendency for prices to recede, and the first transactions of any note took place in October, when some 5,000 tons of Russian flax were sold at equivalent to £90 basis I for BKKO. Further large quantities were disposed of at an advanced price, and the sales of Russian flax to date amount to about 8,400 tons. This quantity is said to be more than 50 per cent. of the total allotted for export this season. Two outstanding items of general interest to the trade relieve what is otherwise a disappointing year. One is the establishment on a small scale of the export from Poland under standard marks of fully worked and correctly graded flax. The second item is the decision of the Lithuanian Government to establish control over the export of flax from Lithuania. It is hoped that this will result in an improvement of the standard.

East Indian Hemp.—Sawnee old crop rose from £25 to £34 per ton between January and June. The spot market was consistently bare throughout the year, and despite the absence of active demand from spinners, prices advanced sharply as the shipment period approached. Fine Sawnee closed at £31 per ton and Philibit at £24.

Jute.—The year closes with the price of firsts at £32, slightly higher than at the opening last January with £31. Fluctuations have been violent owing to conflicting reports as to the weight of the crop and uncertainty regarding the results of weather conditions which prevailed during the early growth of the plant. Extensive speculation by native dealers and heavy buying by the prospering industry in Calcutta have contributed to the extreme fluctuations. The actual outturn of the 1927-28 crop amounted to over 11,000,000 bales—an excess of between 800,000 and 900,000 bales over the estimate. Consumption, however, has been steadily increasing, and although we experienced depression in early March, firsts dropping to £28 per ton, the market quickly reacted on reports of smaller sowings, culminating in July at a price of £40 for August-September shipment. A month of great instability ensued. By the end of August it was reported that the Government forecast would, in all probability, exceed the general expectation; this proved correct, and the Directors figure was 9,916,000 bales, causing a rapid decline to £31 per ton; since then the market has been almost stationary. Arrivals in Calcutta to date indicate that the Government forecast is again likely to be exceeded, but this has had no appreciable effect on a market supported by substantial orders into autumn for the manufactured article. Of paramount interest is the announcement that the Calcutta mills have decided to adopt a 60-hour week from July 1, 1929.

Manila.—Prices fell continuously from January to October. S1 dropped from £66 10s to £44; J2 from £42 to £32 10s; K from £39 to £29; and L2 from £36 to £23 10s. Receipts at 1,400,000 bales show an approximate increase of 10 per cent. Trading conditions improved towards the end of the year and brought about a considerable reduction in supplies. The new year began with stocks of 121,000 bales in Manila and 15,130 bales in the United Kingdom.

SILK.

The year 1928 has recorded more sales in silk goods than any of its predecessors. Parallel to this the production is increasing. During the year July 1, 1927, to July 1, 1928, it has reached a total of 46 millions kilos, which shows an increase of 50 per cent. in six years. The balance between supply and demand has been fairly stable this year and there have been but few sudden fluctuations in quotations. The first months of the year were featureless. The favourable results of the legislative elections stimulated business in France during April; but soon the market became quiet again under the influence of the drop in Japan silks just before the cocoon markets. At the same time America was obliged to slow up her looms in order to guard against overproduction of woven silks. Prices became easier. From July it seemed likely that the quantity of silk from all parts at the disposal of European and American manufacturers during the year 1928-29 would be only slightly greater than that of 1927-28. Business became a little more lively and August saw prices very firm or rising for most sorts. On September 11 a Silk Exchange, organised by a group of business and financial men, was started in New York.

Things were calm during autumn, especially in Europe, but the production markets remained very firm. The news of a good wheat harvest in America strengthened the situation, without diminishing the resistance of buyers against an upward movement of prices. The Far Eastern markets have been kept up by American purchases, European consumption markets remaining dull. The steady increase in the consumption of silk in the world, the development of the resources and needs in America which is its chief outlet and the low level of market prices which favours transactions, suggest that the present condition of the silk trade is, on the whole, a healthy one.

THE ARTIFICIAL SILK INDUSTRY.

The price situation in the rayon (artificial silk) industry has during the year been a matter of considerable concern and the stability which characterised 1927 was not completely continued. The supply of coarse yarns and poor qualities exceeded the demand, with the result that there was cutting among weaker holders. The leading viscose producers maintained prices fairly well until the end of the year, when they made reductions partially on account of competition, but chiefly from a desire to stabilise the market and develop consumption. Towards the end of the year a very serious position developed in Germany, where the relations between the members of the Viscose Convention became strained, resulting in the early part of 1929 in a break-up of the Convention and a period of uncertainty in prices. In America prices have been on the whole well maintained. The strength of the International Cartel will be severely tested during the critical period while the German and other European markets are working back to stability.

Progress on the technical side has been very marked both in regard to the production of better yarns and better fabrics. The strength of the new "Lilienfeld" yarn is very great, and it will be introduced under the auspices of Courtaulds, Limited, this year. Permanent dull lustre effects have been obtained, and above all the number of filaments has been increased, giving a yarn of better all-round appearance and feel. Progress has been made in the acetate side of the business, but primarily in the production of cheaper raw acetate.

Company developments have been many, and a large amount of new capital has been put into the industry in this as in other countries. There is a movement on foot to effect amalgamation of some of the smaller companies.

The total amount of yarn subjected to excise duty in the first nine months of 1928 was 38,006,408 lbs., against 27,450,019 lbs. in the corresponding period of 1927 and 18,755,422 lbs. in 1926. Imports during last year showed very little change, but there was an expansion in exports, though not proportionately to the increase in total sales, except in the third quarter of the year, when there was a slight fall in the amount of yarn consumed here. The export trade in manufactured goods has expanded well, and this applies especially to the mixtures of cotton and rayon, which have been in keen demand in the Colonies and in South America as well as in the Eastern markets. Threats of tariff revisions are in some cases imperilling this trade, notably in Brazil. Imports of manufactured goods have not increased to the same extent. The foreign trade in rayon hose has shown slow development, whilst lace in which rayon is used has increased materially in volume. Exports of rayon waste have been a feature of the year, but there are plans in hand to develop its use in this country on a large scale. In fabrics the use of silk and wool in conjunction with rayon is increasing and the all-rayon material is distinctly popular.

HIDE AND LEATHER TRADES.

Tanners and curriers will not look back on 1928 with much pleasure. Activity was marked in January, and prices reached high limits. Best English ox hides were making as much as 10½d to 11d per lb. in February, and Argentine fregorific ox at one period touched 15½d per lb. By the end of the year best market ox hides had fallen to 8¼d and South American fregorifics to 11¾d, the demand for leather being so poor that many tanners were working on a greatly reduced input of hides. Early in the year an inspired propaganda was launched in the Press, to the effect that as meat eating was on the decrease the supply of hides had become scarce, and hide sellers made the most of their opportunity. About March signs were evident that leather consumers would not follow the rising market, as shoe manufacturers especially were unable to pass on the advances in their materials to the large footwear buyers to a sufficient extent to cover themselves. By October it was evident that stocks of sole leather had accumulated owing to the cautious policy adopted by consumers. Tanners of dry hide bends at once reduced quotations by two or three pence per lb, whilst the tone of market hide and wet salted bends was weak and little business was done. A feature of the year's trading has been the increased competition of sole substitutes of rubber origin.

Imports of wet hides for 1927-28 totalled 810,282 cwts and 692,792 cwts, and of dry hides 722,086 cwts and 809,252 cwts, showing how great must have been the demand for a cheap bend from the shoe manufacturing side. Exports of British hides for the same periods reached a total of 151,588 cwts and 150,431, America taking about 16,000 cwts more in 1928 than in the previous year.

Last year British tanners exported sole leather valued at £1,369,232, as against £1,313,658 for 1927; a substantial proportion of this was sent to oversea countries which impose a duty on its entry—South Africa, for instance. On the other hand, imports of sole leather for 1927-28 were valued at £792,627 and £1,630,994, Continental tanners finding this a ready market for cheap parcels when they needed money badly. Tanners of rough dressing leather have also had a worrying time during the past year owing to fluctuations in prices of hides.

Curriers of kip leather had a harassing time of it last year, as values of rough tanned goods fluctuated a good deal and great difficulty was often found in obtaining leather under contracts made with shippers from India. Cheap semi-chrome met with a fair demand at low prices, but waxed and russet butts showed a further decline, probably due to the competition of chrome leathers, and to the lack of orders for stout boots from the mining districts. Chrome calf and side tanners have about held their own in special lines, but some idea may be gathered of the severity of foreign competition from the fact that the value of imported upper leathers for 1927-28 reached the huge totals of £7,510,757 and £7,786,992 respectively. The import of box and yellow calf from Germany last year was valued at the high figure of £1,111,401, though British tanners managed to export calf leathers last year to the value of £673,071.

Although distributors of footwear made large profits last year, manufacturers did not share in them much, and again some of the old-established firms went out of business. Big failures have been comparatively few, but it is certain tanners and merchants have had to "nurse" their customers a good deal. The demand for women's shoes has been fairly consistent during the year, whilst makers of sports and children's shoes have also been better supplied with orders than those who specialised on men's wear. The export section remained quite good, boots and shoes valued at £5,072,282 being sent overseas last year, as against £4,5959,573 for 1927. The value of imported footwear for 1927-28 totalled £1,867,299 and £1,894,132, the major part coming in from Switzerland and Czecho-Slovakia, where labour is apparently cheaper.

The following is a statement of imports and exports of hides and leather during 1913, 1927 and 1928:—

† Under the designation of "Leather" are comprised the following articles, viz.: Hides, tanned, tawed, curried or in any way dressed; Goatskins, tanned or dressed as leather; Sheepskins, tanned or dressed as leather.

CHEMICALS.

Chemicals.—According to an article in the *Manchester Guardian Commercial Annual Review*, 1928 was a year of quiet, but sound constructive work. Imperial Chemical Industries formed, in conjunction with the Chase Securities Corporation, the Finance Corporation of Great Britain and America, with a capital of over two millions. Its main object is to bring the financial strength of America to the use of industrial purposes in the rest of the world, and great developments in processes and plant are foreshadowed. The I.C.I. has also linked six Scottish fertiliser manufacturers in Scottish Agricultural Industries, Limited, and other companies were also absorbed. The trade in chemicals was satisfactory during 1928, largely owing to the increased demands of the newer industries—artificial silk, motor and electrical engineering, fertiliser foods, &c., with their supply trades, such as the lacquer and enamel, solvent, safety glass, and oil manufactures. In heavy chemicals many plants have been improved, and some of the less efficient plants closed down, particularly among those manufacturing alkali products, while some extensions of manufacturing capacity, notably for ammonia soda and caustic, have taken place. The sulphuric acid industry has also been reorganised. Activity in the production of fertilisers grew throughout the year. Britain has maintained a leading position in the manufacture of synthetic nitrates, and a further increase in home production is foreshadowed in the

THE DOMINION OF NEW ZEALAND

THE LAND OF GREAT OPPORTUNITY.

New Zealand offers the best investment for

CAPITAL, INDUSTRY, ENTERPRISE.

Last year Gt. Britain received from New Zealand:

23% of her **BUTTER** Supplies from abroad.
53% ,, ,, **CHEESE** ,, ,, ,,
55% ,, ,, **MUTTON & LAMB** ,, ,,
33% ,, ,, **TALLOW** ,, ,, ,,
23% ,, ,, **WOOL** ,, ,, ,,

New Zealanders, per capita, are Britain's best customers. Last year they purchased manufactures, etc., from British Mills to the extent of £14 - 16 - 6 per head.

Offices of the HIGH COMMISSIONER FOR NEW ZEALAND.
415, STRAND, LONDON, W.C.2.

erection in Scotland of a plant capable of producing 10,000 tons a year. Further advances have been made in dyestuffs, and it is estimated that Great Britain now produces 10 per cent. of the world's output of aniline dyes. British exports of dyestuffs rose from £.8 millions in 1927 to £.9 millions in 1928; those of chemicals other than drugs and dyestuffs were £15.7 millions in 1927 and £17.5 millions in 1928.

Nitrates.—The steady improvement in the position of the Chilean product during the last two years, which has been due to the diminution of discrepancy between its price and those of synthetic nitrates, is now expected to make further headway as the result of a new selling agreement instigated and subsidised by the Chilean Government. A Nitrate Selling Corporation was formed in June to carry out the scheme, and already greater stability has been imparted to the market. The subsidy for the first twelve months is expected to approach £2,000,000. The following table shows the deliveries during recent years :—

Stocks in Chile at December 31	879,000	1,274,000	519,000	*922,000
Total supply in sight at December 31	1,720,500	1,819,000	1,495,500	*2,086,500

* Estimating production in December at 285,000 tons, and shipments at 200,000 tons to Europe and Egypt, 70,000 to the United States, and 15,000 tons to other countries.

Messrs Aikman (London), Limited, estimate the production of nitrogenous fertilisers for the twelve months ending June 30, 1929, at 1,975,000 tons of pure nitrogen, of which Chilean nitrate will represent about 500,000 tons. Consumption is only expected to fall short of this figure by an amount sufficient to increase stocks to a level appropriate to the new selling arrangements. The German output of synthetic nitrogen products for 1928-29 has been forecast at 780,000 tons, an increase of 18.2 per cent.

JUTE TRADE.

Conditions of a more satisfactory character marked the course of the jute trade during 1928, states the *Glasgow Herald*. Spinners and manufacturers enjoyed freedom from standing machinery, and were permitted to work at capacity throughout the period. The year opened under very favourable prospects, as the result of a large amount of business done in the latter months of 1927. The activity of the past eighteen months was largely accounted for by unexpected requirements of both North and South America. This business is usually destined for Calcutta, and was therefore regarded as a fortunate stroke for the Dundee market. Dundee not only met the required delivery, but also accepted lower prices than Calcutta speculators hoped North and South America would be compelled to concede. This produced a general stimulating effect, and other markets that had still been intending to defer were forced into buying. The jute crop that did duty till the middle of 1928 was the second largest on record, amounting to 11,209,000 bales, as compared with the Government forecast of 10,229,700 bales, an excess of about 1,000,000 which has been registered for some years. The present crop, according to the Government forecast, is placed at 9,916,000 bales. About 8,000,000 bales have already been accounted for, forming a record quantity for the first half of the season. It is freely assumed that the Government forecast will again be exceeded. One of the great features of the raw material market during the latter part of the year was the maintenance of comparatively high prices alongside of imports of such very large dimensions. The yarn market was very encouraging all the time in respect of freedom in selling and forward contracting. Spinners are better booked up than manufacturers, and the trade at large is somewhat in a dilemma over future prospects, in view of Calcutta mills having decided to increase from 54 to 60 hours per week commencing July 1st. This has been a factor greatly responsible for the firm grip that has been kept on raw material prices, whereas it has tended to keener competition in the sale of cloth. Notwithstanding, there is nothing discouraging as regards the first half of 1929.

VEGETABLE OILS AND OILSEEDS.

The oilseed crushing and extracting industry had rather a better year than in 1927. A considerably increased quantity of seed, &c., was dealt with in the mills, as a result of the stronger demand for oilcakes and meals on both home and export account. On the Continent, as well as here, the oilcake trade was the dominating factor, and the result was a production of oil in excess of demand. Gross imports of oilseeds were 1,207,991 tons, and of nuts and kernels 343,435 tons—together 1,553,426 tons, as against 1,321,020 tons in 1927, an increase of over 232,400 tons, equal to 17.5 per cent. The quantity of oilseeds re-exported was almost infinitesimal, while those of nuts and kernels (chiefly copra) were 24,145 tons, or 6.9 per cent. of the gross imports in that section. Imports of linseed at 348,567 tons were slightly down, but cottonseed, soya beans, rape-seed and ground nuts all showed a substantial advance. Palm kernels were 23,000 tons less, but this was more than compensated for by increased imports of other nuts and kernels, the net increase being 55,457 tons, or 19 per cent.

Supplies of practically all kinds of oilseeds were again ample to cover requirements. World shipments of linseed were approximately the same as in 1927: 2,148,475 tons, against 2,170,450 tons. Whereas Argentina shipped about 60,000 tons more, India shipped 50,000 tons less. Of the total shipments no less than 1,751,675 tons were destined for Europe, or 56,225 tons over the previous year, and 354,675 tons in excess of 1926. The quantity shipped to the United States and Canada to supplement the domestic crops was 396,800 tons, against 475,000 tons. The Plate crop is likely to prove a record and to permit of considerably more than two million tons being available for export. Egypt shipped a much smaller quantity of cotton seed, but the deficiency was more than offset by increased quantities from India. The average price of Plate linseed on the spot at Hull was £15 17s 6d per ton (delivered terms) and near shipment £15 12s 6d, almost the same as in 1927. Indian linseed was offered at practically prohibitive figures. Prices of Egyptian cottonseed (black) ranged from £12 per ton down to £9 5s. Raw linseed oil was in fair demand and values were stable, the average being about £29 ex Hull. Competition of Continental linseed oil was again very strong. Crude Egyptian cotton oil opened at £36 (the highest) and declined to £29, recorded in August and again at the end of December. Soya and other seed oils fluctuated but little and the general tendency was downwards. Palm kernel oil was again exported in bulk in moderately large quantities, mainly to the United States. There was a very substantial decrease in the imports of crude soya and rape oils from the mills of the Far East. Imports of linseed oil mainly from the Continent were slightly in excess of those of 1927, and were actually 500 tons more than the quantity of the English product exported. Palm, coconut and olive oils at 125,000 tons constituted 58 per cent. of the gross imports of vegetable oils. The export trade in vegetable oils produce or manufacture of the United Kingdom showed some little improvement on 1927, but did not attain the level of some preceding years. The following is a summary of the official returns :—

	1925. Tons.	1926. Tons.	1927. Tons.	1928. Tons.
Unrefined oils	111,197	104,304	90,024	96,193
Refined oils	24,419	19,906	16,645	16,570

The production of the mills of the United Kingdom, estimated from the commercial yield of oil from the net imports of oilseeds, nuts and kernels was 400,597 tons, an increase of 38,416 tons over the preceding year, but still a considerable way behind 1924, when a total of 519,374 tons was recorded. The comparative figures are as under :—

	1925. Tons.	1926. Tons.	1927. Tons.	1928. Tons.
Linseed oil	112,832	119,367	117,388	115,774
Cottonseed oil	101,344	89,471	89,441	95,576
Other seed oils	63,595	23,089	31,758	44,549
Palm kernel oil	105,766	96,872	82,593	72,186
Ground nut oil	49,568	38,655	18,626	47,908
Coconut, &c.	48,320	37,103	22,375	24,424
Total	482,025	404,557	362,181	400,597

The tendency in recent years for imports of vegetable oils to increase was checked to some extent. Net receipts were 16,508 tons less than in 1927, and consisted of refined 14,594 tons and unrefined 196,360 tons, as against 17,034 tons and 208,572 tons. The approximate position of Great Britain's vegetable oil supply is indicated by the following summary :—

	1925. Tons.	1926. Tons.	1927. Tons.	1928. Tons.
Home production	482,025	404,557	362,181	400,897
Deduct British exports	135,616	124,210	106,669	112,923
Net remaining	346,409	280,347	255,512	287,674
Add net imports	177,497	214,673	224,588	208,080
Total remaining in U.K.	523,906	495,020	480,100	495,754

The consumption of oilcakes and meals in the United Kingdom is estimated at 1,350,000 tons, or 30,000 tons more than in 1927. The c.i.f. value of the gross imports of oilseeds, nuts and kernels, vegetable oils and oilcakes was £33,895,554, against £31,159,650 in 1927, and the f.o.b. value of British exports of oils and cakes £5,893,503, against £5,588,582. Re-exports of all kinds were £971,071, against £821,395.

TIMBER.

The year may be summed up as a period of extreme difficulty, in which few encouraging features developed, says the *Glasgow Herald*. In all departments of the trade intense competition existed, owing to the absence of sufficient business to go round. The building trades, however, provided the market with its chief outlet, although the bulk of material going into consumption was of the cheaper class. Housing work in most parts of the country was inclined to taper off, and with the reduction in the subsidy no improvement can be looked for in this direction. Colliery requirements remained at a low ebb, while wagon builders in consequence likewise experienced a dull period. The railway companies proceeded with considerable work. In the furniture manufacturing trades demand continued to be restricted. In the softwood market building trade requirements in white and red pine formed the chief item in the consumption. Prices on the whole were fairly steady, but the unloading of cheap Russian stocks rather upset the market. Next in importance comes Oregon pine, the demand for which remained active throughout the year. Values fluctuated to some extent, touching their lowest in the early summer, and their highest during the last month of the year. Despite the advance in price, Oregon pine remains the cheapest finishing wood on the market. Among other Pacific Coast woods, clear spruce, Port Orford cedar, and Californian yellow and sugar pine were in more limited request. The outlet for Quebec yellow pine ruled on moderate lines. The pitch pine market witnessed variable activity throughout the year, partly owing to the fluctuations in the shipbuilding demand. The hardwood market generally experienced a somewhat lean year, the two outstanding exceptions being teak and mahogany. In the former the demand was substantial, particularly for shipbuilding specifications. A firm tendency characterised the market, prices gradually moving upward. Throughout the year the demand for mahogany ruled on fairly active lines, African wood of desirable quality being in best request.

BUSINESS FORECASTING AND ITS PRACTICAL APPLICATION (2nd Edition)
By WILLIAM WALLACE, M.Com. (Lond.)
A clear exposition of the modern methods of forecasting business conditions and interpreting the cyclical movements of trade. The book takes a sane, common-sense view.
"Admirably presented."—*Economic Review.*
"Of decided practical value."—*The Economist.* Net 7/6

MODERN FINANCE & INDUSTRY
By A. S. WADE, City Editor of the *Evening Standard.*
A plain account of the British Financial System and of its functions in relation to Industry and Commerce, for the practical business man and the investor.
"The writer is constantly taking his readers behind the scenes and persuading them to view City institutions through his eyes."—*Economist.* Net 5/-

INDUSTRIAL COMBINATION IN ENGLAND (2nd Edition)
By PATRICK FITZGERALD, B.Sc. (Econ.)
An impartial and searching inquiry into the development and activities of industrial combines and associations. The standard British text-book on the subject.
"This book is most opportune."—*Economic Journal.*
"A dispassionate record of thorough investigation."—*Journal of Royal Statistical Society.* Net 10/6

INVESTMENT PRINCIPLES AND PRACTICES (English Edition)
By RALPH E. BADGER, Ph.D.
A comprehensive guide to the governing factors in investments, types of securities, the mathematics of investments, and how to proceed to buy or sell. A very complete work, full of enlightenment to the financially interested reader. Net 21/-

SIR ISAAC PITMAN & SONS Limited
Parker Street, Kingsway, London, W.C.2

Struggle—and—transition" states the *Iron and Coal Trades Review*, these are the outstanding characteristics of the coal industry at the moment. There has been for some time too large a capacity for output existing in the country; control of markets has therefore become impracticable under the existing organisation, and values of coal have been brought down so seriously as to become unprofitable. Apart from this, the cost of production has in many cases been increased by the irregular working of the collieries. The rehabilitation and the reconstruction that were carried out during 1927, partly in order to restore the industry from the state of disorganisation into which it had fallen during the long stoppage of 1926 and partly to make it possible for us to meet the fierce foreign competition with which we were faced after the first quarter of 1927, were also the leading features of the owners' policy in 1928. The producing side of the industry has been able to make some headway in the reduction of costs, and is now in a sounder economic condition. In the June quarter of 1927 the average net costs of production for the whole country were 16s 0¾d, while the commercial disposals averaged 15s, showing a debit to the industry of 1s 0¾d. The policy of the owners, on the lines of "rationalisation"—as it is popularly termed—were reflected by the corresponding figures for the June quarter of 1928, when net costs were brought down to 14s 6d, a decrease of 1s 6¾d during the twelve months. Unfortunately commercial disposals have shown an even greater decrease, and at 13s 1d per ton averaged 1s 11d less in the June quarter of 1928 than in the corresponding quarter of 1927, with the result that the average debit on the industry was actually increased by about 4¼ per ton, and averaged 1s 5d.

Notwithstanding the more economical consumption of coal in the production of power, and the increase in the output of hydro-electricity and the extended use of fuel oil, the world's production and the consumption of coal are greater now than fifteen years ago. But while there has been such marked progress towards maximum economy in coal consumption, there has been a rapid and widespread expansion of production, with the result that, notwithstanding the existing large demand for coal, it does not approach anything like the present-day capacity of the producing units. The progress which has been made in the economical employment of pulverised fuel not only holds out great hopes for an increased demand for coal for all industrial purposes, but promises to have a direct influence upon the demand for coal for ship's bunkers. There is now the promise that more efficient and economical results can be obtained than are forthcoming either from oil-fired boilers or from the use of the internal combustion engine.

There has been a notable movement during the past year towards the "rationalisation" of the coal industry on the selling side. The chief plan is that known as the "Five Counties Scheme," which claims to control about 100,000,000 tons per annum, or nearly one-half of the present national output. South Wales and Monmouthshire have also put a scheme into operation. Scotland has managed to secure restriction of output and thus to some extent the reduction of competition in her markets, by the voluntary agreement amongst her owners to close down some of their least effective units, compensation being given out of a tonnage levy on inland sales. Under the Midlands scheme, in place of the actual closing of the pits, control of output is secured by submitting all undertakings to the operation of a percentage quota on an agreed basis. Even in its modified extent the internal control thus established by the industry itself has met with a certain measure of success, and has prevented a continuance of the over-production, with its sequel of uneconomic price-cutting. It is generally known that inter-district negotiations are in hand with a view to enlarging the scope of the present local agreements.

The past year has seen some important amalgamations, particularly in the anthracite section of the industry, 90 per cent. of the anthracite production being now under one control. Altogether nearly 200 pits, normally employing about 136,000 workers, have been dealt with, resulting in a very substantial reduction in the original number of undertakings. The following district reports are from the same source:—

South Wales.—There is no doubt that the year 1928 will go down in history as the most disastrous ever experienced by the Welsh coal trade, but Welsh coalowners were greatly encouraged by the partial recovery in trade in the last few weeks in the year. December also brought with it some relief, estimated to average about 7½d per ton, resulting from the Government measure of de-rating. More regular working of the pits also meant some reduction of costs. Events abroad also appeared to be working in the direction of reducing competition. As to the position of the Welsh collieries that have come to grief, all the best-equipped of the enterprises passed into other hands that could provide ample funds to carry them on.

Northumberland.—Amalgamations of collieries have not extended to Northumberland, except in the case of one small group. An important development took place in February, however, the colliery owners by general agreement fixing minimum prices for shipment for practically all classes of coal. These prices were as follow:—Steam: Davisons, Cowpen, Bothal, 13s 6d; Newbiggin, Bentinck, 13s; Tyne primes, 12s 9d; Hastings, West Hartley Main, &c., 12s, f.o.b. Unscreened: Davisons, Cowpen, Bothal, 12s; Newbiggin, Bentinck, 11s 6d; Tyne primes, 11s 8d; Hastings, West Hartley Main, 10s 6d, f.o.b. Smalls: Tyne primes, 9s; Davisons, Cowpen, Bothal, 8s to 8s 6d; ordinary qualities, 8s, f.o.b. The scheme has justified itself, in spite of its inability to recover trade with the Scandinavian countries. This has practically ceased owing to Polish competition, but the collieries more or less resigned to this loss, but hoping that the trade would eventually be regained, set out to find other markets with a great measure of success. The general position is better than it was a year ago.

Durham.—Prices have been considerably higher than in Northumberland. Prime gas coals ranged between 14s 9d and 15s 3d f.o.b., and second-class gas coals from 12s 9d to 13s 6d. These prices have resulted in heavy losses.

South Yorkshire.—Though business in 1928 has been more encouraging, both owners and workers have suffered badly from the small volume of trade. There is evidence that already the foreign markets lost since the war have been to a material extent recovered by means of the Five Counties selling scheme.

The following tables, compiled from figures published by the Mines Department of the Board of Trade, covering about 96 per cent. of the industry, show output, costs and proceeds for the first three quarters of 1928, as compared with recent periods:—

Great Britain.	1927.	1928.		
	First Quarter.	First Quarter.	Second Quarter.	Third Quarter.
Tonnage disposable ....tons	58,222,345	56,829,836	50,662,183	49,460,446

* End of year. † Whole industry: Pig-iron and steel branches not separately classified before 1923.

Little apparent progress was made in 1928, and employment, production and prices alike were disappointing. At the same time there is reason to hope that 1928 will prove to have been a year in which the foundations for real progress were made, and though little more than a moderate improvement is anticipated in 1929, it is not impossible that the industry has already passed through its worst phase.

Last year falls into three parts. The first, which lasted until Easter, was relatively the best. As the preceding table shows, the production of pig-iron reached 592,000 tons in March, and that of steel 793,000 tons in the same month, while the number of furnaces then in blast was 150. These were the best figures for the year. In the same month the price of Cleveland No. 3 G.M.B. pig-iron was raised from 65s to 66s per ton, and the Board of Trade's price index number for iron and steel also touched its peak for the year.

Despite a relatively high level of pig-iron production in

JACK SHEPPARD, the Notorious Robber.

THE CHATWOOD SAFE

The value of a safe is the degree of service rendered when attacked by the burglar or tested by the ordeal of fire.

To appreciate this important fact it is only necessary just for once to see a Safe lying amongst the burning debris after the collapse of a building following a fire.

Then to visualise what your own safe contains and ask yourself what your position would be and how you would feel in similar circumstances.

The Chatwood Safe will give you contented confidence. It has stood the greatest of all tests—the test of time, and is the cheapest Safe that can be bought having regard to the degree of security offered.

THE CHATWOOD SECURITY

May, the summer proved disappointing. It is not easy to detect the cause of this falling-off, for foreign competition, which has been so serious a factor in the preceding year, was by last summer steadily declining, imports for June, 1928, being only 210,000 tons of iron and steel, as against 284,000 in January. Exports, too, though below the March level, exceeded the January figure for each of the summer months right through to September, the worst month of the year. There is little doubt that the cause of the summer set-back in the industry was the general depressed state of internal trade, especially in the engineering and shipbuilding industries, which between them absorb so large a proportion of the output of iron and steel. In short, it was not so much a case of competition between makers in different countries as a general contraction in demand.

This second period of disappointment lasted until towards the end of September, when it was succeeded by the third period, which was one of renewed hope and slightly increased vigour. In October the number of furnaces in blast went up from 131 to 136, pig-iron production from 504,000 to 544,000 tons, and steel production from 719,000 to 756,000 tons. Pig-iron imports had by then become almost negligible, while the price rebates for steel plates, &c., granted in 1927 to such consumers of steel who pledged themselves to buy only from British makers, had by the autumn of 1928 succeeded in drawing into the scope of the scheme practically every shipbuilder in the country. November witnessed two further developments. The first was the lock-out in the German industry. During the few weeks of its duration the surplus of Continental material free for shipment to England was still further reduced, while British exports rose from 377,000 tons in October to practically 400,000 tons in November. The second and more far-reaching development was a revival in activity in the British shipyards. It is reported that two Tees-side builders have now sufficient orders to keep them occupied until the autumn, and if this experience becomes general it will make a radical alteration in the outlook for the steel trade. Already the revival in shipbuilding and also in trade generally has gone far enough to make prospects in the iron and steel trades hopeful for the next two or three months, though it remains to be seen if 1929 will be free from the usual summer set-back in this and other trades.

While steel-makers are insisting that rationalisation can only partially bridge the gap between British and foreign costs, it is equally true that in many instances 1928 witnessed the laying of the foundations of a better organisation in the industry. Many companies have lately recast their balance-sheets, writing down their capital to conform with their actual assets, and these have at least succeeded in earning a small profit. Besides this several important amalgamations either took place or were foreshadowed during the year. These schemes embrace such well-known firms as Vickers and Cammell Laird, Cargo Fleet Company and South Durham Company, and Dorman, Long and Bolckow, Vaughan. It looks as if steel production on the North-East coast will soon be under the control of a very limited number of large undertakings.

The following table, which is taken from the *Iron and Coal Trades Review*, shows the world production of pig-iron and steel:—

Abroad, 1928 was a fairly good year for the American industry, steel production attaining a record in the history of the country. The German industry found 1928 a difficult year. The Swedish iron ore strike, which lasted for seven months, meant that Germany lost one of her main sources of ore. Home demand for iron and steel, too, was restricted, and at the end of the year came the lock-out in the industry itself, which caused further dislocation. France and Belgium enjoyed unabated activity, despite a rise of around 10 or 20 per cent. in Belgian prices during the year.

MINOR METALS.

SILVER.

The silver market during the year 1928 has been noteworthy for the way in which prices have been maintained. Supplies have been augmented to a large degree by the further demonetisation of silver coin by the Indian Government, France, and Belgium. In this maintenance of prices China has played the chief part and the political situation in that country was the dominant factor throughout the greater part of the year. Fluctuations in the prices fixed in the London market have generally been narrow; the widest fluctuation was in May, during which month there was a range of 2⅛d. In January the lowest prices of the year were reached, viz., 26⅛d for cash and 25⅝d for two months' delivery—quoted on January 19th, and it was not until the month of May that the market showed signs of greater activity. The situation in China had assumed a more disquieting appearance and the intervention of Japan caused a great deal of activity in the silver market. Speculative anticipation that silver might be needed for the payment of Japanese troops, should the situation develop to such an extent as to lead to their employment in China, was the immediate factor responsible for the sharp upward movement of prices.

The quotations rose steadily, and on May 21st the largest daily movement for more than a year was recorded—a rise of ⅜d in both quotations. The upward trend culminated on May 24th when the prices were fixed at 28⅞d and 28⅝d for the respective deliveries. These proved to be the highest quotations of the year. Shipments of Indian Government silver have been received in London from time to time, and official figures show that the imports of silver into the United Kingdom from India amounted during the year to about 22,000,000 ounces. In addition, about 4,500,000 ounces are known to have been purchased in Bombay and shipped to China. In the reports on the administration of mints at Calcutta and Bombay for the year 1927-28 reference is made to the establishment at the Bombay mint of an electrolytic silver refinery, the estimates for which have received the sanction of the Government of India. Although it may be some time before the refinery is in operation, it is apparent that the great silver using countries of the East may later have a source of supply from which silver will be obtainable in a form suited to their needs. Happily the crisis in China was passed without the serious outcome which at one time looked imminent, and prices at once began to reflect the more tranquil conditions in that country. Towards the end of June prices had sunk to slightly above 27d, the average for the next two months remaining at about the same level. The publication of the text of the French Stabilisation Bill revealed that provision had been made for a silver currency to take the place of the 5, 10 and 20 franc notes of the Bank of France, which were to be withdrawn from circulation before December 31, 1932, then ceasing to be legal tender. The announcement of these proposals was productive of a bullish feeling in the Indian Bazaars, where it was thought that the French Government might enter the silver market as a purchaser for coinage. It was apparent, however, that such a happening was extremely improbable. The returns of the Bank of France indicated that the silver then held was sufficient for their needs. It was stated in July that the French Government were willing to acquire old five franc pieces at 10 francs (new) per piece. This price being equivalent only to about 24¾d per standard ounce it was found more profitable to sell to refiners as, on the basis of London prices, even after allowing for cost of refining, &c., there still remained a substantial margin. Refineries on the Continent were unable to cope with all of the coin acquired, and a considerable proportion was treated in London. Thus refineries here enjoyed a period of more activity than for some time past.

Meanwhile stocks of ready silver in London had grown. These contracts were, in the main, of a speculative nature, and at maturity were either covered by sale, or in the majority of cases extended for a further period. The fact that actual delivery of the silver was not taken naturally caused an accumulation of stocks, and the price for cash was quoted at a discount—as much as 7/8d on August 27th and for several days following. Cash silver remained at a discount practically throughout the rest of the year.

The following is an estimate of the 1928 production compared with that of preceding years.

SILVER PRODUCTION (in thousands of fine ounces.)

COPPER.

At the beginning of the year the price of standard copper was £61 1s 3d per ton cash and £61 per ton three months. Values advanced smartly, and on January 25th dealings took place at £63 5s cash and £62 16s 3d three months. During February the market had a drooping tendency, and on March 1st the lowest prices of the year were reached—viz., £60 cash and £59 17s 6d three months. The weakness of the London standard market was due to the weakness of the electrolytic market in New York. The more important American producers, however, refused to make any concessions in prices, with the result that values slowly recovered, and during the first half of June the price of both cash and three months standard copper rose to £64 7s 6d. For the next three months there were only minor fluctuations, but about the middle of September a great change came over the market. The strength of the statistical position of refined copper, due in part to the policy of restricting output adopted by the leading American producers and in part to the rapid expansion in American consumption, was suddenly realised. A world-wide buying movement ensued, and values rose rapidly until by the end of October cash standard was sold at £68 7s 6d and three months at £68 17s 6d. Between that date and the middle of December, quotations moved within narrow limits, but on December 18th, influenced by reports of damage caused by an earthquake in Chile, the market developed great strength, and by December 31st touched £74 10s for cash and £73 5s for three months, the highest prices of the year. The year witnessed a great expansion in demand. The excellence of American trade seems to have taken the big producers by surprise. Demand outran production, stocks fell to a dangerously low level, and works were at times unable to get the metal wanted for immediate requirements. Consumers throughout the world became alarmed, and a buying movement was started in the middle of September which in the course of six weeks raised values nearly £6 per ton. By the end of October the price of electrolytic copper in America had reached 16 cents per lb, a price which exceeded the expectations of producers when they formed the Copper Exporters Inc. in October, 1926. At this level the price would probably have been stabilised but for the earthquake in Chile.

LEAD.

The highest prices were reached on the opening day, when £22 11s 3d per ton was paid for prompt and £22 13s 9d per ton for forward. The lowest prices were touched on March 1st, when prompt was sold at £19 3s 9d per ton and forward at £19 12s 6d. At the close of the year the value of prompt was £22 per ton and of forward £22 6s 3d per ton. As will be seen from the subjoined table production during the last two years has been very

Messrs Lewis, Lazarus and Son report that reliable figures of consumption are not available, but during the last quarter of the year there was undoubtedly a substantial increase in demand in the U.S.A., and stocks in that country have shown a diminishing tendency for some time. Under existing conditions the current level of prices is reasonable—erring rather on the low side. As with other non-ferrous metals, there has been a tendency among producers towards some form of working arrangement. In the month of September a meeting was held in London at which delegates representing about 80 per cent. of the world's production of pig lead were present. A committee is now being formed to arrive at an accurate knowledge of the true statistical position. This is now being done and the conference will meet again in March. On November 14th a new organisation called the Lead Industries Association was established in New York by representatives of the leading lead mining, smelting and manufacturing companies. The main objects of the association are the collection of statistical information and the promotion of the welfare of the lead industry, but it will probably be found that the chief usefulness of the Association will be in eliminating uneconomic competition. It starts with strong support.

SPELTER.

At the beginning of the year the price of prompt spelter was £26 1s 3d per ton and of forward spelter £26 per ton. During January the tendency was towards slightly higher values, but early in February the market became weak, and by the latter part of the month the price of prompt had fallen to £25, and of forward to £24 18s 9d. Weakness continued during March and the first half of April, but reports that the efforts towards the formation of a zinc cartel were meeting with success induced a more confident tone, and by early May £26 7s 6d was paid for prompt and £26 for forward. On May 7th, write Messrs Lewis, Lazarus and Son, a meeting of European zinc producers was held in Brussels, and although complete agreement was said to have been secured no very tangible conclusions were arrived at. Before long values tended to ease, and for nearly six months the market was depressed, the lowest prices of the year being touched early in November when prompt spelter was sold at £23 15s and forward at £24 1s 3d. From this point there was a sharp rally consequent upon reports that American and overseas producers were favourable to an international zinc cartel, and by the middle of December the highest prices of the year were reached—viz., £26 18s 9d for prompt and £26 17s 6d for forward. At the close of the year the prices were respectively £26 17s 6d and £26 5s.

TIN.

The highest prices in 1928 were those at the beginning of the year—viz., £266 per ton for cash and £262 10s per ton for three months. From then until the middle of February there was a steady decline to £227 5s per ton for cash and £228 per ton for three months. In the early part of June, when the market became very weak, and towards the end of the month business in cash was done at £207 5s per ton and in three months at £204 10s per ton. Rumours that Chinese mines in the Federated Malay States were being forced to close down brought about a short-lived rally, but lack of confirmation of these rumours was followed by the market touching on July 3rd the lowest prices of the year—£205 15s per ton for cash and £203 10s per ton for three months. At this level bears began to cover freely not only against their short sales but also against a very large option position which was due to mature in the months of August and September. Prices rose rapidly until July 26th, when business was done at £223 10s per ton for cash and £220 per ton for three months. But the improvement was not maintained, and by the end of August values had fallen back to £208 15s per ton for cash and £205 5s per ton for three months. From this point the market came under the influence of the actions, actual or rumoured, of the "Group" and to a lesser extent of the impression that the opening of the National Metal Exchange in New York would be followed by a broadening of interest in the metal. From the end of August, apart from occasional periods of hesitation, values rose steadily until December 3rd, the opening day of the National Metal Exchange, when prices touched £241 15s per ton for cash and £240 15s per ton for three months. Unfortunately, the expectations of the immediate activities both of the "Group" and of the National Metal Exchange proved to have been exaggerated. Disappointed holders started to liquidate, and a heavy selling movement stimulated by weakness on Wall Street ensued, and on December 10th cash was done at £220 per ton and three months at £218 per ton. From this level there was a rally, but between that date and the end of the year values fluctuated between £229 and £222 15s.

From the subjoined table it will be seen how considerable the increase in production was during the year :—

—*Messrs Lewis, Lazarus and Son.*

Tinplate.—It has been a fairly satisfactory year to the works in general, in spite of the fact that none of them have been running to full capacity, and that they have been standing idle for definite periods from time to time under the stabilisation arrangement. The tinplate trade has been the most cheerful section of the steel trade during the year, and there is evidently an undercurrent of quiet confidence in the future of the trade, as more new mills have been, and are being, erected in South Wales. The same process is going on in other countries, and there appears to be an intelligent anticipation of an increasing demand for tinplates from all over the world, caused largely by the greater appreciation of the use of canned foods. Perhaps the most notable event in the year's history of the trade has been the agreement with the American makers (which came into force on October 1st), by which it is sought to allot to Britain and America their proportionate shares of the export trade of the world. It has been accepted by the great bulk of the British makers, who are allotted 70 per cent. as against the American 30 per cent. of the combined export trade of the two countries.

Prices.—At the opening of the year the current business figure was 18s, and this continued with slight variation for three or four months, when the market improved slightly, and 18s 3d, 18s 4½d, 18s 6d ruled till July. In August the ruling price became 18s, and this continued to the end of the year with little variation. Frequently, however, it has been possible to secure supplies at 1½d less than the official minimum.

Bars.—Opening at £5 12s 6d for Siemens quality, the price remained unchanged until April. By the beginning of June the price was £6, which remained unchanged to the end of the year. Foreign bars opened at £4 17s 6d, but reached £5 5s in March and £5 10s in June, about 10s below Welsh. In the second half of the year the prices varied between £5 5s to £5 12s 6d, which was the closing figure, only 7s 6d below the Welsh bars. The imports have been :—1926, 714,903 tons; 1927, 764,649 tons; 1928, 538,935 tons.

§ Average for four quarters. ‡ According to "Fairplay."

The total tonnage built in the world during the year 1928 amounted to 869 vessels of 2,699,239 tons gross, an increase of 414,000 tons, or 18 per cent., on the output in 1927. Launchings from British yards totalled 1,445,920 tons (220,000 tons more than a year ago), while foreign production was 1,253,319 tons, an increase of 194,000 tons in comparison with the previous year. It will be seen from the table above that British launchings were larger in the first three quarters of the year than the volume of new work commenced, which steadily declined under the influence of depression in the cargo freight market, until, in the December quarter, a moderate freight recovery engendered fresh confidence on the part of shipowners and led to the placing of substantial orders for new ships. At the beginning of the year tonnage under construction in this country amounted to 1,580,000 tons. By the end of September this figure had fallen to 1,090,000 tons, and at the end of the year, despite an improvement in the fourth quarter, work in hand was 337,000 tons less than the corresponding total twelve months earlier. The following table gives comparative figures of tonnage under construction in this and other countries at the end of each of the past four years :—

WORK in HAND DECEMBER 31.

	1925.		1926.		1927.		1928.
U.K.	885	....	760	....	1,580	....	1,243
Germany	234	....	211	....	472	....	388
Italy	310	....	240	....	183	....	93
France	167	....	143	....	115	....	163
Holland	109	....	145	....	175	....	182
Denmark	61	....	41	....	98	....	83
Sweden	55	....	39	....	101	....	99
World total	2,069	....	1,933	....	3,119	....	2,618

The British percentage of the total in hand at the end of 1928 was 47·5, against 51 per cent. at the end of 1927, and an average of 57 per cent. in 1913. Thus, despite the increase in output from British yards in 1928, it is difficult to say that the industry gained ground during the year. Moreover, it must be borne in mind that last year's production, as well as that of 1927, included a certain amount of arrears from the dislocation of 1926. The position is more clearly indicated, from a "long-period" point of view, by the following table, in which production at home and abroad during the past three years is shown in relation to (*a*) the average for 1908-10 (a period of shipbuilding depression), (*b*) the pre-war maximum of 1913, (*c*) the average of the post-armistice "boom" years 1919-20, and (*d*) the average of 1923-25 :—

OUTPUT of NEW TONNAGE.

Period.	Thousand Gross Tons Launched. U.K.	Abroad.	World Total.	British Percentage of World Output.	Output as Percentage of Average 1908-10. British	Foreign
Average 1908-10	1,021	777	1,798	57	100	100
1913	1,932	1,401	3,333	58	189	180
Average 1919-20	1,838	4,665	6,503	28	180	600
Average 1923-25	1,057	971	2,028	52	103	125
1926	640	1,035	1,675	38	63	133
1927	1,226	1,060	2,286	54	120	136
1928	1,446	1,253	2,699	54	141	161
Average 1926-28	1,104	1,116	2,220	50	108	142

It will be observed that, taking the mean of the past three years, British output has been only 8 per cent. greater than in the depression of 1908-10, whereas foreign production has been 42 per cent. larger. In 1928 alone the output from British yards was 41 per cent., and that from foreign yards 61 per cent. greater than the level of 1908-10, and the British proportion of the total was 54 per cent., in comparison with 57 per cent. in the pre-war period. examination of the post-war figures as a whole leads to the conclusion that British yards are unlikely ever again to build as large a proportion of the world's new shipping as before the war.

As regards types of vessel, it is of interest to note that of the 2,699,000 tons launched in the world during the past year, only 34 per cent. is exclusively dependent on coal for propulsion, 560,000 tons of the steamers being fitted for oil-burning, and 1,183,229 tons representing motor-ships, whose growth may be seen from the following table :—

† *Omitting wooden vessels.*

It is a significant tribute to the reliance placed on internal combustion engines by foreign builders that of the 82 vessels of 6,000 tons and over launched abroad last year no less than 61 were motorships. In this country there were 64 vessels launched of 6,000 tons and over, of which 34 were motorships. The tankers launched in the world in 1928 had a total tonnage of 646,851 tons (as compared with 542,437 tons in 1927), of which 300,348 tons were in this country.

The Clyde district occupied first place in 1928 amongst British shipbuilding centres, showing an output of 571,948 tons. Then follow the Tyne (300,508 tons), the Wear (207,646 tons), the Tees (132,966 tons), Belfast (75,738 tons), and the Mersey (73,197 tons). The largest increase, as compared with 1927, took place on the Clyde, the figures for which are 148,225 tons higher than those for the previous year. The figures for Belfast show a decrease of 31,443 tons. The largest vessels launched in this country during the year were three 20,000-ton liners for the Canadian Pacific service.

Turning to foreign countries, it will be seen from the first of the foregoing tables that at the end of 1928 a considerable increase had taken place in the tonnage building in France, while there were large decreases in Italy and Germany, as compared with the position at the end of 1927. German output in 1928 included the two largest vessels, the "Bremen" and "Europa" (46,000 tons), launched in the world during the year, and totalled 374,416 tons, an increase of 87,000 tons on 1927. Italian production, 58,640 tons, showed a fall on the year of 42,000 tons, and was lower than in any years since 1917. Denmark and Sweden—138,712 and 106,912 tons—both launched record outputs, and Dutch and Japanese launchings were also substantially higher than in the previous year.

As regards the future immediate prospects in British yards are favourable, and the orders placed during the past three months will ensure fair activity up to the end of the summer at least. Whether the freight market will be able to absorb the new tonnage launched and under construction without another onset of depression is somewhat doubtful, and prices have been cut to a comparatively unremunerative level in order to keep yards going. Unemployment in the industry remains severe.

* This figure, being based, in part, on averages for May to November, when no coal freights were obtainable, and homeward freights consequently at an abnormal level, is not comparable with the figures for preceding years.

From the point of view of gross earnings per ship-mile, there can be little doubt that 1928, the eighth successive year of depression, has been worse for most classes of cargo shipping than any of its seven lean predecessors. The reason for this unfortunate, but not altogether surprising, condition of affairs lies primarily within the shipping industry itself. Although the underlying cause of the prolonged post-war period of low freights has been, and still is, the failure of international trade to regain its pre-war rate of expansion, the factor immediately responsible for the set-back in freight rates during the past year, in comparison with 1927, was the somewhat over-optimistic placing of orders for new tonnage during the short-lived improvement of freights in the winter of 1926-27. Between July, 1927, and July, 1928, the total tonnage owned in the world increased by 1,762,000 tons gross, as compared with an average annual increase of only 400,000 tons gross during the three previous years, while the British increase was 600,000 tons, against an average in 1924-27 of only 70,000 tons a year. This great expansion in twelve months of the world's available carrying space—making due allowance for the fact that new tanker tonnage represented a considerable proportion of the total—proved to be more than world demand could absorb. The consequence has been, inevitably, a reaction in freights and increased unemployment of ships. The following table summarises the fluctuations during the past two years in the figure of idle tonnage in the principal ports of Great Britain and Ireland. Averages for each quarter of 1923-26 are added for purposes of comparison :—

Laid up on—	Average. 1923-26.	1927.	1928.
	Thousand Tons Net		
January 1	566	365	372
April 1	427	240	363
July 1	704	420	496
October 1	510	273	415

In contradiction to the evidence of a smaller volume of inward and outward cargoes, the returns of laden shipping entered and cleared at ports of this country indicate that the movement of ships was slightly more active in 1928 than a year ago. The percentage of the total, especially in the case of outward clearances, taken by British vessels is increasing. The year opened with quiet conditions in the outward coal market, but from July onwards the market recovered appreciably. In July the unusual chartering of a number of vessels to load grain for Russia alleviated the pressure of unfixed tonnage in European waters, and from August until the close of the year the normal seasonal activity of the overseas grain trade was sufficient to cause coal shippers to pay higher values for ready outward tonnage. Throughout the year the key to homeward rates has been temporary fluctuations in demand for space to load grain. Freights for other tramp cargoes, such as ore, timber and nitrates, underwent relatively little alteration from month to month.—*Mr A. Vallance, Secretary, National Maritime Board, writing in "Lloyd's List Annual Review."*

* End of year. † Whole industry: not classified separately before 1923.

The year 1928 was far from satisfactory in the engineering trades generally. Though exports of machinery were about 7 per cent. higher in value than in the preceding year employment remained slack throughout the year and there were 2,547 more unemployed in December than at the end of 1927, the percentage in marine engineering being much above the average for all trades. Wage rates in general engineering remained unchanged.

General Engineering.—At the close of the year some contracts were obtained for both home and oversea railways. Machine tool engineering works have been fairly well employed, especially in Scotland, where the trade is reported to be healthier than it has been for some years. The tube trade improved during the second half of the year, but without any recovery in prices. Structural steel has suffered from competition in its overseas markets and from curtailed public expenditure at home. The textile branch has been fairly well employed during the latter part of the year, but the agricultural machinery section remained stagnant almost throughout.

JAMES STEUART, Chief Manager.

Electrical Engineering.—The year has been remarkable for the amount of British electrical plant installed in Colonial and foreign stations, though the value of total exports for 1928 fell slightly below that for 1927. At home large contracts were placed by the Central Electricity Board. The tendency to increasing size of generating units still continues. The following is an index of activity in the electrical industry of Great Britain, and is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association :—

(1920 = 100.)

May	88	200	116	November	85	105	93
June	94	234	128	December	93	103	96

The output of electricity in Great Britain expanded by approximately 7 per cent. last year, as compared with 1927. The following average figures of electrical production in the chief areas of the country are based on the index numbers which appear regularly in the Monthly Supplement of the *Economist* :—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, Excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Railway Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, &c.	Textiles, Cotton and Wool.
Monthly Average.						
1924	114	122	111	132	112	102
1925	121	124	130	151	126	111
1926	119	100	138	162	134	120
1927	146	143	158	210	163	139
1928	156	150	177	237	190	147

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

Motor Vehicle Manufacture.—The past year has, on the whole been satisfactory, though both production and exports failed to reach the level of 1927. The Society of Motor Manufacturers and Traders estimates the total output of vehicles and chassis at 211,000, as compared with 213,000 in 1927, 132,000 in 1924, and 22,000 in 1912. Exports were as follows :—

	Number.	Value. £
1912	6,461	2,461,530
1924	15,596	4,861,060
1927	36,325	8,828,521
1928	33,090	7,249,260

The British proportion of exports to Empire markets has risen, in spite of a serious falling-off in certain directions, notably Australia. No progress is recorded in sales to Continental countries or their possessions, but some new markets have been opened elsewhere. Home consumption increased satisfactorily.

Marine Engineering.—One of the principal features of the marine engineering work of 1928 was the large number of methods which were adopted for increasing the economy of all types of propelling machinery. High pressure steam, superheating, and air preheating were all exploited much more than in previous years; exhaust steam turbines were fitted to a number of vessels having triple, and even quadruple, expansion steam engines, thus increasing greatly the fuel economy of the vessels concerned.

BUILDING TRADES.

At the beginning of 1928 there was a falling off in the speed with which houses were being built under the various Building Acts. In the early months the percentage of work carried out by the trade was, housing 62 per cent. and general building 38 per cent. There was, in fact, a general decline in the volume of building work during those early months of the year, but with the prospect of the cessation or diminution of the amount of the subsidy greater activity in housing became manifest as the year advanced. House construction became preponderant, the figures assuming the ratio of 68 per cent. for housing and 32 per cent. for general building. During the last three months of the year there has been considerably increased activity in housing, and this is likely to continue until the withdrawal and reduction of the subsidies at the end of the coming summer. The Ministry has notified that in September next the subsidy will be withdrawn from houses built by private enterprise, while that on houses built by local authorities will be reduced. The latest official return of housing is for the year ended September 30, 1928. This shows a considerable falling off in the number built compared with the corresponding period in the previous year, the figures being for the year 1927, completed houses, including non-subsidy houses, 289,151, while for 1928 the total number was 185,722. In February last there was a reduction in the wages of tradesmen and labourers alike of ½d per hour under the cost-of-living sliding scale of the National Joint Council for the Building Industry. There is no likelihood of any similar reduction until February of next year. This reduction in wages, however, represents a decrease of about 2 per cent. in building costs. During the year there has been a considerable fall in the prices of building materials of nearly all descriptions, and consequently during the latter half of 1928 there has been an increased tendency among industrialists to erect new buildings and extend existing premises. London, by reason of the falling in of leases and for extension purposes during recent years has enjoyed perhaps more than its share of building prosperity, although the inclination to build is fairly general in most thriving industrial centres.—*Chamber of Commerce Journal.*

SOAP AND GLYCERINE.

British trade in soap was well maintained during 1928, but glycerine was still suffering from the serious decline recorded a year or two ago, and no very substantial improvement is at present in sight. As will be seen from the following table, the total export of all classes of soap was 1,637,814 cwts, showing a slight increase in weight and a small decrease in value compared with 1927 :—

	1,536,827	1,624,360	1,637,814	3,638,086	3,824,542	3,797,885

The greater part of the exports consist of household and laundry soap, two-thirds of which goes to the British Empire. Imports have dropped somewhat, the decline being most marked in the soft soap category, though the laundry and household class has also dropped. On the other hand, the imports of toilet and shaving soap again advanced, and now nearly equal the exports. A remarkable feature in the toilet soap trade is that the value per cwt of the exports is nearly £9, whilst for the imports it is only about £4 per cwt. The deduction that the quality exported is higher than that imported my be qualified by the possibility that in the exports there is a higher proportion of shaving soap than in the imports, and this would disproportionately raise the value of the exports. There is very keen competition for the toilet soap markets of the world, and especially for the British market in these soaps. America, France, and even Spain are redoubling their efforts to capture as much of it as possible. In order to stem the tide of foreign toilet soap one large British maker has recently introduced a good quality toilet soap under a well-known name and at a very low price. But, as a general rule, the British makers of toilet soap are concentrating on the highest qualities at good prices, for which there is a good market in many parts of the world, of which America itself is one of the most important. A considerable amount of scientific research is now being undertaken by the British soap industry.

VI.—TEXTILES.

THE COTTON TRADE.

During the first six or seven months of the year there were many occasions when strained relations between employers and operatives cast a cloud of uncertainty over the market and the whole industry. In the closing months of the year, however, happier relations were resumed. Meanwhile, possible means of increasing the volume of business and of restoring prosperity to the American section of the spinning trade were being actively discussed. Mills in the American section of the trade were recommended to curtail production by the equivalent of a fortnight's stoppage during the months of September and October, and this policy appears to have been followed in a great many instances; but there has been reason to believe that the Master Spinners' Federation has at last aban-

* Million linear yards. *a* End of year. † Beginning of each month.
‡ Trade Union figure; other figures are Unemployment Insurance returns.

A fair amount of business was done in the first three months of the year. During the first quarter of 1927 there was some really heavy buying, but the same scale was not reached in 1928, partly, no doubt, because American cotton was 2d or 3d a pound dearer in the later period. The cost of cotton restricted the effective demand for shirtings and other heavy styles of cloth, while business in light goods was affected by the embargo of the Marwari Chamber of Commerce at Calcutta on purchases of dhooties for April, May, and September shipment, and on light white goods for March, April, and May shipment. Nevertheless, both home and foreign customers provided useful orders, and the turnover was fairly satisfactory, though margins, as a rule, were very poor. Round about April and May better reports began to come in from Hongkong, but this phase did not last very long. April was not an encouraging month. The Marwari Chamber at Calcutta extended its ban on purchases of light white goods to cover shipments during June and July, and the Bombay mill strike, which began at the end of the month, also had a restrictive influence on Indian business. Home trade buying fell off sharply after Whitsuntide, and demand from this source remained very patchy right up to the end of the year. Towards the end of August, however, the market was helped by an appreciable increase in the demand for bleached goods, to which India, China, the Near East, Egypt, and, indeed, most of the foreign outlets contributed something. More demand came in from the smaller Far Eastern markets, helped by a revival of the anti-Japanese boycott, and business was done in some styles which had not been bought from Lancashire for many years. The market here reached a useful level of activity, chiefly owing to Eastern buying. By the beginning of December, however, this more satisfactory state of affairs showed signs of ending, as several mills were started again, while the demand for cloth fell off somewhat. Indian demand for dhooties and light whites, which after the end of October had reached very useful proportions, began to fall away.

The most conspicuous improvement of the year has been in trade with China. The year's shipments were nearly double those of 1927, and were back again to the level of 1925 and 1926, the increase being very marked in whites, dyed goods and greys. At times there was very heavy buying, especially in white shirtings and lighter bleached cloths, and there are grounds for hoping that these better conditions will continue. Of the South American markets the Argentine, already by far the largest buyer, did an increased business. Less and less mention was made of business with the United States, and in the second half of the year there was a very marked falling-off in business with all parts of the Continent. Buying for the home trade, which reached a fairly satisfactory level during the first three months of the year, was generally very cautious and restrained in the later months. The Egyptian section as well as the American experienced a falling-off in export business. Buying on the part of Germany and the Netherlands was on a more modest scale than in other recent years, and Indian business was restricted; but there was a slight improvement in the China market. The introduction of the new labour laws in Japan in the middle of 1929 should also reduce Lancashire's handicap.

The following is a list of cotton and yarn quotations for the year :—

Queensland scoured, super combing. † End of year. *a* Thousand linear yards.

The clouds of depression and difficulty which have hung about the wool textile trade in recent years, especially in the West Riding, were not dispelled during 1928, and the great majority of firms in all sections of the industry will regard it as a very unsatisfactory year. During the last quarter of 1927 and the first quarter of 1928 there were high hopes that a prolonged period of recovery had set in, but they were destined to be unfulfilled. There was a spurt of activity, and output was greater than at any time since the coal stoppage in 1926, whilst there was corresponding briskness on the Continent. This fleeting spell of prosperity created an atmosphere of optimism which was not justified by subsequent events, and it added new difficulties to those which remained unsolved. The chief of these was that values of raw material were carried to a higher point during the 1927-28 season than could be sustained, and the subsequent reaction involved heavy losses for those who held stocks and made it still more difficult for users at all stages of production to secure profitable business.

Trade leaders have submitted industrial conditions in this country and throughout the world to a keen and searching analysis with a view to finding out what is wrong and what would put things right, but they are far from unanimous in their conclusions. There is a notable effort being made internationally to secure a service of statistical information which will enable the probable course of supply and demand to be anticipated with a greater degree of accuracy; while other trade problems affecting the industry are being handled with an increasing prospect of

solution by the International Wool Conferences which have been held in recent years, the next meeting of which is to take place in Bradford in 1929. The only concrete proposal which has emerged so far is a renewal of the application for import duties with the support of the principal trade union organisation, acting on a majority vote. The following table shows the prices of tops on the dates given :—

* Per gross.

Imports of yarns were about the same as in 1927, and imports of tissues were slightly greater. In both cases they were about one-half of the pre-war imports. Exports showed very little change compared with 1927, apart from a decline in tops. Speaking generally, however, trade was better than in 1927 during the first half of the year, but this improvement was largely wiped out by a setback in the second half of the year. In the case of yarns the decline was mainly due to reduced shipments of worsted yarns to Germany and Japan, partially compensated for by increased exports of woollen yarns. There was a substantial increase in exports of tissues to Europe, whilst exports to China were the best since 1925. There was not much change in South and Central America, on the whole, nor in the Near East. Exports to Japan, the United States, and Australia, however, were down.—*Extracted from the Annual Review of "The Weekly Wool Chart," Bradford.*

LINEN TRADE.

Hopes of improvement during 1928 were negatived by the increasing price of flax. Imported flax, which cost under £50 a ton in 1913, was £85¾ in 1926, £79¼ in 1927, and no less than £99¾ in 1928. With the raw material again at double the pre-war price, it was hardly to be expected that the trade could flourish, and the following table shows that in the oversea business results achieved were decidedly better than could have been looked for in such adverse circumstances :—

* Not recorded. † Linear yards in 1913. ‡ Linen-lace, and embroidery has been added to imports in 1920 and after. § Included in "All Other Goods." ‖ Not in the piece.

The most unsatisfactory sections are piece goods, handkerchiefs, and damask table linen, since these account for £407,000 out of the decrease of £512,000 in total exports. Shipments of finished thread were maintained remarkably well, and those of "all other goods" tolerably so. As regards handkerchiefs, however, it is worth noting that the quantity shipped, though lower than in 1927, was higher than in any other year since quantities were first recorded in 1920.

ITALO-BELGIAN BANK

(Banque Italo-Belge, Société Anonyme).

Capital subscribed and paid - Frs. 100,000,000
Reserve Funds - - - Frs. 90,000,000

Head Office: ANTWERP.

London Office:
100 OLD BROAD STREET, E.C.2.

Branches:
FRANCE—Paris. ARGENTINE—Buenos Aires.
URUGUAY—Montevideo.
BRAZIL—Sao Paulo, Rio de Janeiro, Santos, Campinas.

Correspondents in all the Principal Places in South America.

The Bank transacts every description of Banking Business. Clean Bills and Documentary Bills negotiated, advanced upon, or sent for collection. Drafts and Letters of Credit issued and Cable and Mail Transfers effected on Branches and Correspondents. Documentary Credits opened or Confirmed. Coupons and Drawn Bonds collected and negotiated.

ARE YOUR SAVINGS SMALL?
No matter—Every £5 can earn you interest.

Perfect security and a first-class return. This is no longer the prerogative of the wealthy investor. You too may have it, even though your capital be but a few pounds, by putting your money into the 1st, 2nd and 3rd Co-operative Investment Trusts. Any money so invested is spread over no less than 700 different concerns in 37 different countries chosen by a board of experts and watched day in, day out, with constant vigilance. A Withdrawable Preference Share in the Co-operative Investment Trusts costs £5. *It pays 5% interest and if* held for certain periods 5½%. Interest is paid even over the shortest period and you can withdraw your money at the shortest notice. For every £5 Preference Share issued the Trusts hold £20 of investments. Already more than 30,000 small investors have benefited from the Trusts. Your *own savings are sufficient.* Fill in the coupon below and get full particulars.

1ST 2ND & 3RD CO-OP INVESTMENT TRUSTS

(D) THE FOREIGN TRADE OF THE UNITED KINGDOM.

	Imports.		Exports.	
	1927.	1928.	1927.	1928.
	£	£	£	£
I.—Food, Drink, and Tobacco—				
A. Grain and flour	110,969,996	97,637,377	5,597,815	5,338,013
B. Feeding-stuffs for animals	8,418,242	9,185,875	2,955,391	3,333,116
C. Meat	103,464,070	109,248,909	1,669,532	1,629,978
D. Animals, living, for food	15,510,297	16,034,355	142,261	172,728
E. Other food and drink, non-dutiable	164,741,934	173,879,043	33,508,977	34,434,135
F. Other food & drink, dutiable	116,243,609	108,101,783		
G. Tobacco	19,178,475	17,825,215	8,404,526	9,363,791
Total, Class I.	538,526,621	531,912,557	52,278,502	54,271,761
II.—Raw Materials and Articles mainly Unmanufactured—				
A. Coal	6,611,420	39,496	45,530,795	39,061,644
B. Other non-metallic mining and quarry products and the like	6,258,372	5,606,703	1,895,654	1,898,816
C. Iron ore and scrap	5,702,578	4,822,484	877,620	1,104,564
D. Non-ferrous metalliferous ores and scrap	15,700,099	16,542,609	1,949,330	1,785,722
E. Wood and timber	49,666,787	42,565,213	539,738	445,980
F. Raw cotton & cotton waste	67,751,604	80,707,021	1,217,901	1,382,618
G. Wool, raw, and waste, and woollen rags	63,816,344	63,922,920	10,471,194	10,290,034
H. Silk, raw, knubs and noils	1,828,518	1,899,967	72,382	37,508
I. Other textile materials	16,131,464	13,981,365	233,489	540,757
J. Oil seeds, nuts, oils, fats, resins, and gums	45,090,534	44,746,420	5,449,147	5,378,994
K. Hides and skins, undressed	23,018,506	26,057,403	2,579,480	3,088,716
L. Paper-making materials	12,788,863	10,181,792	1,367,363	1,429,547
M. Rubber	25,417,228	11,839,360	293,276	255,613
N. Miscellaneous raw materials and articles mainly unmanufactured	11,954,452	11,936,907	3,874,800	3,468,019
Total, Class II.	351,739,719	334,819,690	76,352,169	70,168,532
III.—Articles Wholly or Mainly Manufactured—				
A. Coke & manufactured fuel	134,936	9,609	3,656,561	3,671,419
B. Earthenware, glass, abrasives, &c.	11,865,882	10,895,429	13,011,648	13,076,303
C. Iron & steel & manufactures thereof	34,032,026	24,158,492	69,383,416	66,801,576
D. Non-ferrous metals and manufactures thereof	32,592,542	33,115,018	19,862,012	16,373,730
E. Cutlery, hardware, implements, and instruments	7,304,644	7,632,408	8,828,534	9,137,605
F. Electrical goods & appar.	4,256,833	4,711,335	11,878,275	11,629,139
G. Machinery	15,919,046	16,731,445	49,920,843	53,749,151
H. Manufac. of wood & timber	7,313,937	8,425,869	2,316,957	2,502,790
I. Cotton yarns & manufacs.	9,915,407	10,732,848	148,794,942	145,304,242
J. Woollen and worsted yarns and manufactures	16,096,809	17,288,115	56,755,955	56,896,582
K. Silk and silk manufactures	16,181,161	14,465,141	2,426,087	2,406,061
L. Manufactures of other textile materials	15,784,665	15,613,307	27,060,722	29,464,139
M. Apparel	18,659,308	19,606,026	25,824,536	26,182,731
N. Chemicals, drugs, dyes, and colours	15,502,422	15,367,796	23,402,723	25,414,223
O. Oils, fats, and resins manufactured	38,620,362	37,822,129	9,162,860	8,958,598
P. Leather and manufactures thereof	16,759,934	19,506,931	8,344,068	9,369,946
Q. Paper and cardboard	16,429,946	17,269,991	9,132,264	9,292,897
R. Vehicles (including locomotives, ships, & aircraft)	12,130,721	9,565,349	35,414,273	46,965,401
S. Rubber manufactures	2,531,683	3,349,368	3,297,029	3,444,968
T. Miscellan'sarticles, mainly or wholly manufactured	30,320,306	31,749,859	35,436,877	37,990,042
Total, Class III.	322,412,540	318,016,455	563,913,782	578,628,519
IV.—Animals, not for food	2,653,196	3,064,520	1,898,016	1,995,333
V.—Parcel Post, non-dutiable articles	3,009,074	9,127,132	14,638,794	18,363,310
Total	1,218,341,150	1,196,940,354	709,081,263	723,427,455

Trusteeships and Executorships also undertaken.

BRITISH TRADE WITH SOUTH AMERICA

BANK OF LONDON & SOUTH AMERICA · LIMITED ·

Estd. 1862

Appointing Overseas Agents

Not only is it important to your export trade that an overseas agent should be of good financial standing, but his sales organisation must be adequate, and he must have the confidence of his public.

In order to help those firms entering the South American Market, or extending their existing connections, this Bank is prepared to arrange suitable commercial introductions and give relevant statistical information.

✱

A Monthly Review of Market information in English or French is issued free on application.

S. J. MOORE, President. J. A. McLEOD, General Manager.

AUDITORS' REPORT TO THE SHAREHOLDERS:

We have examined the above General Statement of Liabilities and Assets as at December 31st, 1928, and compared it with the books at the Chief Office and with the certified returns from the Branches. The Bank's investments and cash on hand at the Chief Office and at the Toronto and Montreal Branches were verified by us at the close of business on December 31st, 1928. We have obtained all the information and explanations that we have required, and in our opinion the transactions of the Bank which have come under our notice have been within the powers of the Bank.

We certify that in our opinion the above statement discloses the true condition of the Bank and is as shown by the books of the Bank.

TORONTO, CANADA, 16th January, 1929.

D. McK. McCLELLAND, F.C.A., of Price, Waterhouse & Co.
A. B. SHEPHERD, C.A., of Peat, Marwick, Mitchell & Co. } Auditors.

LONDON OFFICE: 108, OLD BROAD STREET, E.C.2.

E. C. MACLEOD, Manager.

The Bank of Nova Scotia conducts a general banking business. Fully equipped for Exchange, Collection and Letter of Credit Transactions with all parts of the World. Particular attention is devoted to business with Canada, Newfoundland and the West Indies where Branches of the Bank have long been established—over 300 Branches.

THE CASE FOR FREE TRADE.

The public memory is short, and although it is only six years since the country definitely rejected Mr. Baldwin's plea for power to instal a general Tariff, no apology is needed for an attempt to re-state the fundamentals of the case for Free Trade. In effect, Mr. Baldwin, having learnt nothing from his disaster in 1923, is again asking the electorate this year to empower him to revolutionise the fiscal system of this country. The plea is less direct and more insidious than in 1923. He asks now for authority "to extend the 'safeguarding' experiment." To some this may sound harmless. But the bare fact is that if Mr. Baldwin and his party are returned to power at the General Election, they will regard themselves as in-possession of a mandate to extend customs protection to any and every industry upon whose individual application a Committee, without reviewing the needs of the country as a whole, may pronounce favourably.

"Safeguarding," as even the Home Secretary and the Chief Conservative Whip have in terms admitted, is Protection. It is haphazard and high Protection that the people of this country are asked to allow Mr. Baldwin to extend indefinitely. While, therefore, the line of advance adopted by Mr. Baldwin and his colleagues makes it necessary to meet and refute particular arguments relating to the Government's several experiments in Protection, there is at the same time urgent necessity to realise that the attack is against the foundations of our fiscal system and to refresh our memories as to what those foundations are. It is the object of the following pages to re-state, in the simplest terms, the underlying principles of the Free Trade case, and at the same time to refute the misleading arguments from the particular to the general which Ministers are inviting us to accept as a result of our recent experience of spasmodic Protection.

SECTION I.—INTRODUCTORY.

SUMMARY OF THE CASE.

THE arguments for Free Trade as contrasted with a policy of Trade Restriction are partly economic and partly political, and may be summarised under these heads:—

ECONOMIC.

Foreign trade is the exchange of goods (or services) which a nation is better fitted to produce for those which it cannot produce so efficiently. It is, in effect, the result of international division of labour, analogous to division of labour between individuals. It leads to a greatly increased production, and is a benefit to both parties.

This exchange cannot be one-sided—that is to say, exports cannot continue without corresponding imports except as a loan, in which case the imports will come later, when the interest has to be paid.

Great Britain lives by exchange to a greater extent than any other great country. Nearly 30 per cent. in value of the goods and services produced in Great Britain are exported in exchange for imports. Indeed, the physical resources of these islands could not maintain a population of 47 millions in any other way—still less so at the comparatively high standard of living enjoyed to-day.

Exports include not only merchandise, but also the work of the British mercantile marine, while the commercial activities of London are also among the most important of our exports, by means of which we buy our necessary imports. The prosperity of these activities depends now, as it has always depended, upon the maintenance of free markets.

To restrict imports means curtailing the ability of our customers overseas to purchase our goods and services. It would compel capital, enterprise, and labour now engaged in export business to try to find occupation in supplying the home market. Particular trades might benefit, but the total production of the country would be diminished, employment as a whole reduced, and the standard of living lowered.

The policy of Trade Restriction is therefore a policy of impoverishment. Under Free Trade, in spite of all the difficulties of the times, the standard of living in Great Britain is (with one small exception) the highest in Europe.

These arguments are not rendered invalid by the disturbances resulting from the war.

The tragedy of unemployment, however, remains in consequence of the reduced volume of world trade and the small volume of commerce sailing the seas. This particularly affects shipping and shipbuilding. The greater part of unemployment is in export trades or those dependent upon shipping.

This, so far from being cured, would be aggravated by a restriction of imports. It is obviously impossible to transfer Labour and Capital from these trades to others without a great loss of efficiency, fixed capital, acquired skill, &c. We cannot mend the troubles of Lancashire by fostering the home output of lace, silks, cinema films, or even fine chemicals.

This Supplement can be obtained in pamphlet form from "The Economist" Office, 6 Bouverie Street, E.C.4. Price 4d.

(Ready Tuesday, April 16th.)

POLITICAL.

Imperial Preference is not of practical importance as a remedy for unemployment. While every attempt to increase trade with the Dominions, or any other country, is welcome, it is not possible to create a sudden or great diversion of national trade routes.

It is equally idle to suppose that the Dominions are prepared to see an enormous increase in their purchases of British manufactures. On the contrary, their tariffs are designed more and more, especially since the war, to create and bolster up their own home industries. British goods have a preference in the Dominions, it is true, but this means that while British goods pay, say, a 20 per cent. duty, others pay a 30 per cent. duty. The post-war changes of Dominion tariffs, even after allowing for the preferences granted, have meant a rising duty on British goods. In view of the determination of the Dominions to establish their own industries, the idea of "Free Trade Within the Empire" is outside the sphere of practical politics.

In spite of the recent industrial efforts of the Dominions, it remains true that without food duties there can be no real Imperial Preference.

The argument that while it is a good thing to have Free Trade, we can only attain it by putting on a tariff to use as a weapon to push down other people's tariffs is belied by history. The raising of tariffs provokes yet another layer of bricks on the tariff walls of neighbouring countries, and frequently leads to tariff wars. The history of the last 30 or 40 years shows that we have been at least as successful as Protectionist countries in securing favourable terms for the entry of our goods.

A more hopeful method of lowering tariff walls is to use our diplomatic and financial position to encourage greater freedom of commerce in Europe, and to continue to serve as the chief inspiration of those sections of opinion abroad which are constantly striving, sometimes successfully, sometimes unsuccessfully, to modify the restrictive policies of their respective countries. This movement has been set in force by the World Economic Conference of 1927, and is slowing gathering momentum.

It is essential for Britain to help on this movement with all her power. It is only possible to develop a policy of political co-operation between nations if there is some degree of economic co-operation. Free Trade in economic affairs is the counterpart of the work of the League of Nations in political matters. They stand as a joint policy against the alternatives of Protection, competition in armaments and aggressive nationalisation.

Protection leads to political corruption.

These points are expanded and illustrated in the following pages.

WHAT BANKERS AND BUSINESS MEN THINK.

One of the best short summaries of the general case for Free Trade is to be found in an Appeal, signed by practically all the greatest bankers of London, issued in May, 1921. The following are some extracts from this document:—

"It is as true as it was a hundred years ago that foreign commerce conduces to the wealth and prosperity of a country by enabling it to import the commodities which other countries are best able to supply, and to export in payment those articles which from its own situation it is best adapted to produce: that freedom from restraint is calculated to give the utmost extension to foreign trade and the best direction to capital and industry: and that the maxim of buying in the cheapest market and selling in the dearest, which regulates every merchant in his individual dealings, is the best rule for the trade of the whole nation.

"The policy of trying to exclude the productions of other countries, with the well-meant design of encouraging our own, cannot increase the volume of commerce or the total volume of employment here. But it may well compel the consumers, who form the bulk of our population, to submit to privations in the quality or quantity of the goods they buy. The importation of foreign goods does not diminish the activities of our people, because such goods can only be paid for by the produce of British capital and labour. The advocates of a restrictive system are too apt to lose sight of the elementary fact that nations, or rather individual members of nations, buy foreign goods because they need them, not to benefit others, but to benefit themselves, and pay for [redacted] producing goods which the foreigner in his turn **We cannot limit imports into this country witho[redacted] our export trade, and striking a grave blow at [redacted] wide commerce on which this island kingdom principally depends.**

"Trade is exchange. No nation which lives by trading with others can prosper unless other nations prosper too. We hold to-day great stocks of goods. We are ready to manufacture more. There is a large and insistent demand for them abroad. But owing to the paralysis of Continental commerce—due in part to the restrictive barriers which the new States have set up between themselves—the would-be buyers of our goods have not the means to pay for what they want. **We have to build up the market that we need by encouraging Continental nations to export to us. For it is only by exports that they can re-establish their credit and provide funds for the payment of their debts.** In such a situation we believe that all expedients to control and hamper imports into this country, whether by licences, tariffs, or any other means, can only . . . prevent the natural recovery of trade. Legislation of this nature, while it may increase the profits of a few selected industries, cannot fail to check our output as a whole, and to increase the costs of production to a level which may make it increasingly difficult for British traders to compete successfully with others in the markets of the world."

The following is an extract quoted from a memorandum signed in 1927 by leading manufacturers, bankers and business men in every country in Europe:—

"There can be no recovery in Europe till politicians in all territories, old and new, realise that trade is not war but a process of exchange, that in time of peace our neighbours are our customers, and that their prosperity is a condition of our own well-being. If we check their dealings, their power to pay their debts diminishes and their power to purchase our goods is reduced. **Restricted imports involve restricted exports, and no nation can afford to lose its export trade. Dependent as we all are upon imports and exports, and upon the processes of international exchange, we cannot view without grave concern a policy which means the impoverishment of Europe.**

"Happily, there are signs that opinion in all countries is awaking at last to the dangers ahead. The League of Nations and the International Chamber of Commerce have been labouring to reduce to a minimum all formalities, prohibitions and restrictions, to remove inequalities of treatment in other matters than tariffs, to facilitate the transport of passengers and goods. In some countries powerful voices are pleading for the suspension of tariffs altogether. Others have suggested the conclusion for long periods of commercial agreements embodying in every case the most-favoured-nation clause. Some States have recognised in recent treaties the necessity of freeing trade from the restrictions which depress it. And experience is slowly teaching others that the breaking down of the economic barriers between them may prove the surest remedy for the stagnation which exists. On the valuable political results which might flow from such a policy, from the substitution of goodwill for illwill, of co-operation for exclusiveness, we will not dwell. But we wish to place on record our conviction that the establishment of economic freedom is the best hope of restoring the commerce and the credit of the world."

SECTION II.—THE NATIONAL ASPECT.

"SAFEGUARDING" *IS* PROTECTION.

Before considering the demerits of Protection in detail, it is necessary to consider one fruitful ground of misconception. This is that a policy of Safeguarding, as enunciated in recent Ministerial utterances, is not inconsistent with a belief in the "abstract doctrine" of Free Trade. Mr Churchill is an exponent of this theory, as witness a [redacted] delivered by him at Manchester on January 21st [redacted] which he said: "So far as the Government were [redacted] there was no question of a revolution in the fiscal system—the establishment of a general system of Protection being made an issue at the next election. He agreed that there was the question of safeguarding industries which established their case, but that was a matter for business men. He presumed that in that audience the majority were Free Traders, as he was himself." Mr Baldwin himself has taken a similar view. At Newcastle a few days later he said: "Protection, as we use the term in politics, is a different thing. Protection is made applicable to everything: Safeguarding is made applicable to the things that need it and can prove that they need it."

Utterances such as these contain two major fallacies. The first is the claim that "Safeguarding" should be regarded from a "business" as opposed to a "political" standpoint. Such a plea is a favourite device of party politicians trying to foist unpopular and unsound proposals upon the electorate, and in this instance, as in others, can be rebutted very easily. Any proposal that calls for action on the part of Parliament necessarily comes within the sphere of politics, and the only ground on which it can be removed from this sphere is that the measure in question is an agreed measure approved by members of all parties.

The second claim that there is a distinction between "Safeguarding" and Protection is as fallacious as the first. It can be answered in two ways. The first is that of quoting admissions by other members of the Government. Two will suffice. In a debate with Sir Herbert Samuel on February 19th, Sir William Joynson-Hicks said:—"I agree there is no difference between 'Safeguarding' and Protection, but there is a difference between a general tariff and Protection granted under certain conditions." This admission goes half way towards bridging the gap that Mr Baldwin claims to exist. The second half of the bridge was built the previous autumn by Commander Eyres-Monsell, the Government Chief Whip. In his own constituency he said: **"I have always been a Tariff Reformer, but it is no use kicking against the pricks. The country will not have it all at once, so they will have to take it a bit at a time—which is being done by 'Safeguarding.'"**

Apart from such confessions of the Tariff Reformer's true faith, the real answer to this claim lies in a consideration of the procedure adopted by admittedly protectionist countries such as the United States of America. There, a permanent Tariff Commission is charged with the investigation of definite trading conditions and claims for amendment of the tariff and with the consequent recommendations to the Government and Legislature. The distinction between such a body and the permanent Safeguarding tribunal now proposed by the British Government is simply one of scope and efficiency, with the advantage on this score heavily in favour of the protectionist country. Again, Mr Baldwin's belief that a "general tariff" necessarily imposes duties upon all imported articles is hopelessly wide of the mark. Apart from the fact that the term "general tariff" possesses a totally different meaning, not even the most highly protectionist country imposes duties upon all imports. To cite the United States again, the list of "free imports" in the Fordney Tariff of 1922 comprises more than two hundred paragraphs, some of which include a large number of separate articles, while the late President of the United States has declared that this free list comprises no less than 65 per cent. of American imports.

Evidence such as this is amply sufficient to dispose of the claim that there is any real difference between "Safeguarding" and Protection. If returned to power Mr Baldwin promises almost unlimited scope for extension of "Safeguarding," for he has stated that no industry, except agriculture, shall be debarred from claiming a duty before the tribunal. In plainer words, he will open the door wide to General Protection.

And, be it remembered, the Tariff history of all countries clearly proves that, once duties are imposed, it is a matter of almost insuperable difficulty to remove them.

HOW WE LIVE.

A nation, like an individual, lives by producing those goods and performing those services for which, by tradition, experience and general capabilities, she is best qualified, and by exchanging them for those goods and services which she needs and which other nations can produce or perform more efficiently than she can. The process of exchange is known as foreign trade, and the wider and freer the opportunities for foreign trade are, the greater will be the prosperity of that nation and the comfort and well-being of her citizens.

The fundamental principle of foreign trade is that the more a country buys from the world, the more she can sell to the world. It does not follow that she will sell to the same countries as those from which she buys, for trade circulates through many channels before it returns to its starting-point. Mr. McKenna, addressing the shareholders of the Midland Bank in 1922, said: "Modern industrial and transport conditions have brought all countries into such close trading relationship as to make each an integral part of the trading world as a whole. . . . If Russia fails to buy tea in China or India, our Eastern market for cottons is narrowed, the United States sells less raw cotton to us, and our shipping, banking and insurance business is impaired. Illustrations could be multiplied indefinitely, showing how the trade of each country is linked up with that of the whole world."

Before the war, a well-known example of triangular trade lay between England, India and Germany. England sent cotton goods to India, who paid for them by sending her low-grade raw cotton to Germany, who, in turn, paid by exports of dyes to England. Since the war, England has severely restricted her imports of German dyes. This has broken the whole circuit, and it is significant that, since the war, Indian purchases of Lancashire piece-goods have fallen below their former volume.

The Empire Marketing Board have recently issued a series of posters for exhibition in British factories. They read somewhat as follows: "A contract is now in execution in these works for Australia. When it is complete, how are we to get more contracts from Australia? By buying, and getting your wife to buy, Australian products." They conclude with a list of such products as Australia sends to England. Now, the underlying argument of these posters is undeniably true, and they possess a distinct educative value. **But there is no especial magic about Empire as opposed to world trade, and a similar poster could be exhibited with equal force if the contract had happened to have come from Czechoslovakia.**

There is no mystery as to the broad essentials of the goods and services with which we supply other nations, and the goods and services which are received from them in return. Approximate figures of the country's balance of payments are published each year by the Board of Trade, and those for 1924 and 1928 are given below.

These two years are selected, not with any reference to the term of office of the present Government, but because they represent the year of the last Census of Production and the latest year available:—

	1924. £ million.	1928. £ million.
Goods and services supplied by the United Kingdom:—		
(1) Exports of British produce	801	723
(2) Net exports of bullion	12	Nil
(3) Net earnings of British ships	140	130
(4) Commissions of British merchants, bankers, insurance houses, &c.	75	80
(5) Interest on British investments overseas	220	285
(6) British Government receipts from overseas	Nil	13
	1,248	1,231
Goods and services supplied to the United Kingdom:—		
(1) Imports of foreign goods, less *re-exports*	1,137	1,076
(2) Net imports of bullion	Nil	6
(3) British Government expenditure overseas	25	Nil
	1,162	1,082
Surplus	86	149

The first lesson of this table is that the more goods we import, the more goods we export. Between 1924 and 1928, imports fell by £61,000,000; exports likewise fell by £78,000,000. The next is that it is futile to argue that our exported goods and services can be paid for otherwise than by imported goods. They cannot be paid for in the buyer's currency, for that is no use to the British manufacturer, merchant or shipowner, who must have sterling with which to pay his wages, rent, rates, taxes, &c. They cannot be paid for in gold, for the world's gold stocks are quite inadequate to meet the turnover of a single year of international trade. Britain's share of the world's gold is only £150,000,000 to set against her share of the world's foreign trade turnover of over £1,000,000,000. The next lesson is that, so far from Great Britain importing too many foreign goods, what she does import falls short by £100,000,000 or so of what she needs to pay for the goods and services she supplies to the world. This deficit is made up by Britain's loans made each year to the world, or, in other words, one-tenth of the goods and services she supplies the world with each year are sold by her on credit and not for cash. There is clearly a limit to the amount of credit Great Britain can give to the world, and so it is equally clear that any policy designed to prevent the rest of the world selling goods to Britain—and selling such goods as the rest of the world, taken country by country, is best able to supply—will render it difficult for the rest of the world to buy from Britain as much as it has done in the past.

The next point to consider is this: Of what do our £1,076 millions' worth of imports consist? Their broad composition is as follows:—

Description.	£ million.
Food, drink and tobacco	504
Raw materials	268
Manufactured goods	292
Animals and parcel post	12
Total retained imports	1,076

To this must be added £120 millions' worth of re-exports, raising the total of imports to £1,196 million. Now, no advocates of Protection to-day suggest seriously the imposition of duties upon food, though in agricultural districts they are hard put to it to explain why Protection is rejected because it will raise the price of foods, when in industrial districts they have already argued that Protection does not mean higher prices. Nor do they advocate the taxing of foreign raw materials, most of which cannot be produced in this country. So the point at issue really narrows down to the £292 million of imported manufactures—or, adding the £26 million of re-exports, the grand total of £318 million.

Of what is the total composed? This is shown in the following table:—

Description.	£ million.
Manufactured oils, fats and resins	38
Non-ferrous metals and manufactures thereof	33
Iron and steel	24
Apparel	20
Leather and manufactures thereof	20
Paper and cardboard	17
Woollen and worsted yarns and manufactures	17
	169

These seven categories account for more than half the total, and the list is a very fair sample upon which to work.

The most obvious point about this list is that many of these articles are "manufactured" goods only in name; in reality many are raw materials. The exact distinction between raw materials and manufactured goods is an almost impossible one to draw, for the simple reason that one man's finished product is another's raw material; and the Protectionist who declares himself in favour of only taxing manufactured goods and not raw materials inevitably impales himself upon the horns of this dilemma. This list by itself illustrates the point, and elsewhere it is calculated that, of the total of £292 million of imports of manufactured goods, £65 million beyond question consist of raw materials. If such border-line cases as leather, steel billets and worsted yarn be also classed as raw materials, this last figure would be greatly expanded. In fact, it is probably true to say that well over half the total of imported manufactured goods consists of the raw material of some important trade.

In such cases taxation is open to the same objections as in the case of goods which are actually classified as raw materials. Their exclusion by means of a Customs duty might conceivably help the industries concerned in their production; but it would be at the expense, firstly, of the industries that use these goods as their raw material, and, secondly, of the export industries and merchanting, distributing and shipping interests of the nation as a whole.

There is no evidence that an expansion in imports of manufactured goods entails increased unemployment; in fact, so far as the evidence is conclusive, it points to the contrary conclusion. This is shown in the following table:—

	Imports of Manufactured Goods. £ million.	Average Unemployment Percentage.
1922	230	13·3
1923	257	11·4
1924	300	10·5
1925	320	11·3
1927	322	9·7
1928	318	10·9

(The year 1926 is omitted, as the coal stoppage vitiates all statistics relative to that year.)

The average of imported manufactured goods for these six years was £291 million, and of unemployment 11.2 per cent. In 1922 and 1923, imports were below the average, and unemployment above the average. In 1924, 1927 and 1928 imports were above the average and unemployment below. **Thus, in these five years the statistics definitely show that imports of manufactured goods helped rather than hindered employment at home.** The only exception to the rule was 1925, when relatively large imports coincided with an unemployment percentage just above the six-year average.

It is no accident that this is the case, for it follows from the undeniable fact that the trades where unemployment is severest are either the export trades of those trades such as building and distributing, which, by their very nature, are entirely free from foreign competition.

We come now to the most essential factor in Britain's economic position. To Britain export is more vital than to any other country in the world. The importance of the export trades to the country's economic welfare and also the volume of employment available cannot easily be overemphasised. The following paragraphs contain the expert and unassailable estimate of the importance of Britain's export trade made for the *Economist* by Professor Bowley: The "

1924 is estimated at £1,630 million, or, including agriculture and fisheries, £1,870 million, after allowing for goods transferred from industry to agriculture and *vice versa*. The gross value of exports was £800 million, f.o.b. From this must be subtracted the cost incurred between the factories and the ports and the value of imported raw materials, &c., contained in the exports; and a rough estimate leaves £530 million as the value of the "net output" for export at the time the goods leave the factories or other places of production. **On this basis it appears that between 25 and 30 per cent. of the whole product of industry, mining, and agriculture is exported; of industry and mining alone the proportion is over 30 per cent.**

Professor Bowley, after reviewing other factors which come into play in estimating our total national income, reaches the conclusion that **as much as one-quarter of the national income depends on the existence of foreign trade. This aspect of the problem is vital. Of our total material production nearly 30 per cent. is exported. In the case of America the percentage probably does not exceed 7½ per cent. The calculation shows the overwhelming importance of our export trade, whose position Protection could not help and could hardly fail to jeopardise.**

The Professor's analysis drives home the old lesson that, whereas our economic life is so adjusted as to render it necessary for one person out of four to derive his livelihood from foreign trade, to-day only one person in five is able to do so. **To recover our prosperity and to reduce unemployment we must in the long run sell more to the world. We can only do so by buying more from the world.**

UNEMPLOYMENT AND PROTECTION.

The Protectionist, ignoring the fact that as a nation we cannot sell abroad unless we buy, puts forward the specious plea that in proposing to restrict imports he has a "cure for unemployment." Admittedly unemployment is our most serious problem, and if it were true that Protection offered even the faint hope of any cure for this disease, we should be the first to plead for its trial. **But an examination of recent unemployment returns and of the relation borne by our imports of manufactured goods to employment in different industries completely demolishes this argument.**

In order to compare last year's trade figures with those of unemployment at the end of the year, we have taken the Ministry of Labour's return relating to a date just before the Christmas holidays. On December 17, 1928, the number of persons, aged 16 to 64 inclusive, recorded as unemployed in all industries other than fishing was 1,329,135. From this total we may at once deduct the number out of work in occupations palpably "unprotectable." By this term we mean industries (*a*) in which there is no "import problem," *e.g.*, mining and shipbuilding; or (*b*) in which labour is essentially "sheltered," *e.g.*, building and internal transport; or (*c*) in whose case "safeguarding" would on any grounds be self-evidently useless as a stimulus to employment, *e.g.*, shipping, food and distribution:—

INDUSTRIES TO WHICH PROTECTION CANNOT BE APPLIED.

	Number Unemployed Dec. 17, 1928.	Percentage of Total Unemployment.
1. Mining and by-products	230,867	17·3
2. Building, public works, and constructional engineering	165,844	12·5
3. Distribution and commerce	99,719	7·5
4. Internal transport	93,080	7·0
5. Hotel, entertainment and various services	76,636	5·8
6. Shipbuilding and marine engineering	69,773	5·2
7. Food, drink and tobacco	39,751	3·0
8. Government	34,655	2·6
9. Shipping	26,180	2·0
10. Printing and publishing	10,336	0·8
11. Gas, water and electric supply	10,016	0·8
Total of above	856,857	64·5

Here is an enormous mass of unemployment, nearly two-thirds of the total, concentrated in these 11 industries and occupations clearly debarred by their character from encouragement by import duties. There remains, then, the balance of 472,278 persons unemployed in other manufactures.

INDUSTRIES IN WHICH PROTECTION IS TECHNICALLY POSSIBLE.

	Number Unemployed, Dec. 17, 1928.	Percentage of Total Unemployment.
1. Metal industries	157,826	11·9
2. Textiles	153,852	11·5
3. Apparel	63,205	4·7
4. Bricks, pottery, earthenware, glass	27,882	2·1
5. Vehicles	23,395	1·8
6. Woodwork	14,412	1·1
7. Chemicals, oils, &c.	12,791	1·0
8. Leather	6,198	0·5
9. Rubber	4,572	0·3
10. Paper	4,527	0·3
11. Miscellaneous	3,618	0·3
Total of above	472,278	35·5

Observing at once that the number out of work in the first two categories represents two-thirds of the total unemployment in this group, and that the aggregate unemployment in categories 3—11 represents only 12 per cent. of the total unemployment in the country, we may now turn to an examination of our manufactured imports and exports.

In 1928 the total value of our retained imports of articles described in the Board of Trade Returns as "wholly or mainly manufactured" amounted to £292 millions, against corresponding exports totalling £579 millions. From the import side of the account we may start by deducting £65 millions, the value of unfabricated non-ferrous metals, mineral oil, plywood, and undressed hides and skins (all essentially raw materials rather than manufactures), leaving retained "manufactured" imports at £227 millions. The export total requires also to be reduced for purposes of comparison by the omission of £26 millions made up of unfabricated non-ferrous metals, coke, and ships. Adjusted thus, the total import and export figures can be analysed as under:—

	Retained Imports. £ Miln.	Exports. £ Miln.
1. Textiles	51·3	234·1
2. Metal industries	57·9	151·2
3. Chemicals, oils, &c.	18·0	34·4
4. Vehicles	8·7	31·4
5. Apparel	18·2	26·2
6. Earthenware, pottery, glass	10·7	13·1
7. Leather	8·5	9·4
8. Paper	17·0	9·3
9. Rubber	3·2	3·4
10. Woodwork	5·8	2·5
11. Miscellaneous	27·7	38·0
Total	227·0	553·0

In our concluding table we show for the eleven manufacturing groups—in which we have arranged our sets of figures so as to obtain as accurate a basis for comparison as possible—firstly, the percentage of the total "manufactured exports"; secondly, the percentage of the surplus of exports over retained imports; and, thirdly, the proportion of the total unemployment in these industries (35.5 per cent. of the national aggregate) attributable to each group:—

FOREIGN TRADE AND UNEMPLOYMENT.

	Percentage of "Manufactured" Exports.	Percentage of "Export Surplus."	Percentage of Total Unemployment in these Industries.
1. Textiles	42·4	56·1	32·6
2. Metal industries	27·3	28·6	33·2
3. Chemicals, oils, &c.	6·2	5·0	2·7
4. Vehicles	5·7	7·0	5·1
5. Apparel	4·7	2·5	13·4
6. Earthenware, pottery, glass	2·4	0·7	5·9
7. Leather	1·7	0·3	1·3
8. Paper	1·7	—2·4	1·0
9. Rubber	0·6	0·1	1·0
10. Woodwork	0·4	—1·1	3·0
11. Miscellaneous	6·9	3·2	0·8
Total of above	100	100	100

It will be seen that 92.9 per cent. of unemployment in industries where protective duties are a possibility lies

in groups 1—6, which in turn account for 88.7 per cent. of our total " manufactured exports " and 99.9 per cent. of the net " manufactured export surplus." In other words, " safeguarding," if confined to industries not predominantly " exporting," would affect only 11.3 per cent. of the unemployment in the whole of these groups of trades, a figure which represents about one-fortieth part of the country's aggregate unemployment. **Hence it follows that when " safeguarders " claim to have a *remedy for unemployment, they are ipso facto either* claiming that " exporting " industries can be stimulated by a tariff (a "reductio ad absurdum"), or, alternatively, are propounding a nostrum inapplicable, as we have shown, to 39-40ths of the disease it professes (illogically, at that) to cure.**

THE PROTECTIONIST EXPERIMENT.

OUR PRESENT TARIFF.

Duties levied on goods entering the United Kingdom at the present time can be broadly divided under two headings, those Protectionist in intention or effect, and those of a purely revenue character, to which countervailing duties exist in the case of British-produced goods. There are also certain duties which rest on the border-line between the two classes, these being the duties on silk, *artificial silk*, and refined sugar.

Duties of the " Protectionist " order are as follows:—

(*a*) " McKenna Duties," first imposed during the war to check importation of what were then classed as luxury articles. They were repealed by the Labour Government in 1924, and re-imposed by the present Government in the following year. Their scope was extended in subsequent years. They are at the rate of 33⅓ per cent. *ad valorem* on the following goods, those of Empire origin receiving a preference of one-third:—

Clocks, watches and component parts; cinematograph films; motor cars, commercial vehicles, motor cycles and accessories, component parts and tyres for all motor vehicles; musical instruments and accessories.

(*b*) " Key Industry Duties," imposed under the Safeguarding of Industries Act of 1921, and renewed and modified by the Budget of 1926. They are due to expire *in August, 1936, unless their tenure is prolonged* by further legislation. No duty is payable on imports from the Empire. Imports from all other oversea countries are charged *ad valorem* duties at the rate of 33⅓ per cent., unless otherwise specified, in the following list:—

Optical glass and *optical instruments and components* thereof 50 per cent. *ad valorem*; scientific glassware, lamp-blown ware and laboratory porcelain; galvanometres, gauges and scientific measuring instruments; component parts of dutiable scientific instruments; wireless valves; ignition magnetos; arc lamp carbons (1s. per lb.); hosiery latch needles, metallic tungsten and compounds of thorium and other rare earth metals; amorphous carbon electrodes, excluding primary battery carbons and arc lamp carbons (*v. supra*); molybdenum and vanadium compounds; and all synthetic organic chemicals (other than synthetic organic dyestuffs, colours, and organic intermediate products imported for use as such), analytical re-agents, fine chemicals, and chemicals manufactured by fermentation processes.

(*c*) " Safeguarding Duties," imposed under the procedure laid down in the White Paper issued in the spring of 1925. These duties are as follows:—

Lace and embroidery, 33⅓ per cent. *ad valorem*, as from July 1, 1925; fabric and leather gloves, 33⅓ per cent. *ad valorem*, as from December 22, 1925; gas mantles, 6s. per gross, as from December 22, 1925; cutlery, 33⅓ per cent. *ad valorem*, as from December 22, 1925; packing and wrapping paper, 16⅔ per cent. *ad valorem*, as from May 1, 1926; translucent pottery tableware, .28s. per cwt., as from April 19, 1927; buttons, 33⅓ per cent. *ad valorem*, as from April 28, 1928; enamelled hollow-ware, 25 per cent. *ad valorem*, as from June 13, 1928.

In every case under this heading the duties were imposed after an investigation and recommendation by an *ad hoc* Safeguarding Committee appointed to inquire into the matter.

(*d*) Next come several border-line cases. These include:—

(1) Hops, a duty of £4 per cwt. on imported hops was imposed in 1925, to last for four years.

(2) Silk and artificial silk. These duties were imposed in 1925, and vary according to the class of material and the stage of manufacture. In every case, however, the *Customs* duty upon the imported article is heavier than the corresponding Excise duty upon the home article, and so they are a distinct border-line case.

(3) Refined sugar. The changes in the sugar duties made in the 1928 Budget gave a definite measure of preference to home-refined sugar.

(4) Petrol. The tax of 4d. per gallon on petrol and kindred oils imposed in the 1928 Budget does not apply to oil of home origin.

Duties of the " Revenue " order, in addition to the border-line cases of silk, artificial silk, refined sugar and petrol, cited above, are these:—

Beer, playing cards, coffee and chicory,* cocoa,* preserved fruit, matches, spirits,* sugar,* molasses,* glucose,* saccharine,* articles containing sugar or sweetening matter,* table waters, and wine.* In the case of those items marked with an asterisk, a preferential duty is imposed on articles of Empire origin, which as a rule equals five-sixths of the full duty. Preserved fruit of Empire origin is admitted free, spirits only enjoy a small preference, Empire wines enjoy preferences at varying rates, while the preference upon Empire sugar was stabilised in 1925 at 4s. 3½d. *per cwt. for a period of ten* years, unless the duty upon foreign sugar is reduced below that level.

For the financial year 1927-28 the net receipts from Customs duties were as follows:—

	£
(*a*) McKenna duties	3,563,181
(*b*) Key industry duties	632,510
(*c*) Safeguarding duties	1,507,977
Protection duties	5,703,668
Protection duties	5,703,668
Border-line cases†	5,084,543
Revenue duties	101,159,266
Total	111,947,477

The receipts from purely protective duties are thus only £5,700,000 out of a total Customs revenue of £111,900,000. The border-line case of £5,084,543 comprises £317,135 for hops, which is a purely protective duty; the balance of £4,767,408 represents the yield of the Customs duties upon silk and artificial silk.

" SAFEGUARDING " PROCEDURE OLD AND NEW.

The Safeguarding policy pursued by the present Government, during 1925-29, is embodied in the White Paper entitled: " Procedure and Enquiries," which was laid before Parliament in February, 1925. An essential feature has been that the Board of Trade retained a preliminary right of veto over all applications. None has been referred to a committee unless the Department was satisfied that the applicant industry could " reasonably be regarded as of substantial importance," and that there was *prima facie* evidence of abnormal, unfair competition, &c. Cases that have survived this preliminary scrutiny have been examined by Committees in the light of evidence, counter-evidence and cross-examination, designed to ascertain whether the retained imports complained of are abnormal in quantity; offered for sale here at prices below those at which similar *goods* could be profitably manufactured in the United Kingdom, and seriously prejudicial to employment in the applicant industry: also, whether the " exceptional competition," if any, comes mainly from countries " where the *conditions* are so different from those in this country as to render the competition unfair " (e.g., by reason of depreciated currencies, subsidies, or inferior conditions of employment in the matter of wages or hours). The question of reasonable efficiency and economy in the applicant industry has also been raised, and the further question (important to note) " whether the imposition of a duty on goods of the class or description in question would exert a seriously adverse effect on unemployment in any other industry, *being an industry using goods of that class or description in production.*"

† Excluding refined sugar, which is included under revenue duties. The petrol duty, estimated to yield £12,000,000, was not in force in that year.

As rules of procedure, these " instructions to committees " have been seriously criticised because of their vagueness, notably in the matter of the words " abnormal " and " exceptional," which, being undefined in the White Paper, have given rise to endless arguments and have, in fact, been differently construed by different committees. But, though this may have been inconvenient (and in any case some such limiting terms were obviously *necessary if Mr Baldwin's* pledge was to be conserved) more serious criticism could be levelled at the policy involved in the particular instruction quoted above as to the probable effect of a duty on *employment* in other industries. **The instruction is so circumscribed that, as the Balfour Committee has pointed out, it affords quite inadequate safeguards for the interests of third parties, including those of the general consumer.** It might be difficult for the latter to be a party at the Enquiry, but at least it seems indefensible to consider the tariff application of a particular industry in practical isolation from the broad interests of our national industries generally, and to confine the right of consideration to such industries (if any) as may happen to be direct customers of the applicants for raw material. The dangers inherent in such a policy have been accentuated by the practice of appointing *ad hoc*, and quite unrelated, amateur committees to conduct the Enquiries.

The principal changes proposed by the Government (House of Commons, November 14, 1928), to take effect if and when Mr Baldwin is returned to power, are:—

1. The removal of the preliminary Board of Trade veto;

2. The establishment of a single standing tribunal to hear all cases.

3. The repeal of the clause which at present requires an applicant industry to be of substantial importance (thus opening the door to a flood of small Enquiries which must rapidly overwhelm the time-table of any such Tribunal);

4. The removal of all reference to " abnormal " or " exceptional " competition—it merely being required henceforth to show that the foreign imports complained of are being imported for sale in the United Kingdom " in quantities substantial in proportion to consumption in this country "—a very different matter. As against this the applicant industry will have to show " that it could *materially* increase its present output." Presumably, this is meant to safeguard the position where the home industry is quite unlikely to be able to supply the needs of the country; but, if this is the object, the wording will require to be very much more strict, for surely almost any industry could successfully maintain that it " *could* materially increase its present output."

With regard to the potential effect on other industries, the wording of the rule is to be varied to read as follows: " Whether the imposition of a duty . . . would exert a seriously adverse effect upon employment or costs of production in any productive *industry*, including agriculture." **The difficulties of constructing a tariff by this " piecemeal " method are only surpassed by the grave danger that in practice one tariff after another will be recommended as not being calculated (in itself) " seriously " to injure employment elsewhere, while the cumulative effect of such innocent looking duties will be to create at no distant date a new fiscal environment poisonous in the extreme to industries—some of them large exporting industries—to whom these tariff favours are inapplicable or denied.**

" SAFEGUARDING " DUTIES.

In the vigorous attempt that is being made to create an illusion of triumph for the policy of Safeguarding, a principal method adopted is to lump together the import and export figures respectively of all trades which have *in recent years become subject to protective duties*, even though many of these duties were not imposed either for safeguarding purposes or under such conditions as are insistently declared to be necessary to justify safeguarding. In this way the silk and artificial silk, the motor-car and the gramophone figures are habitually trotted out as if they were all of a piece with the figures of those trades which have been protected in pursuance of the declared policy of the Government. **This does not suggest on the part of these apologists an over-confidence in the actual " Safeguarding " material which is at their disposal.**

The illusion, however, tends to become formidable when we are now informed, on the basis of total figures recently given in the House of Commons, that (if we compare the year 1924 with 1928) " the exports of Safeguarded articles have gone up by nearly £10 million, while the exports of non-Safeguarded articles have gone down by about £50 million." Therefore, it is worth while (though it seems lamentable that it should be necessary) to point out that the £10 million increase is amply accounted for by the returns for artificial silk, motor-cars and gramophones (all of which from well-known natural causes are expanding trades)—with the necessary corollary that the " Safeguarded " trades show a decreased and not an increased return in exports. With regard to the so-called " non-Safeguarded " industries the £50 million decline only looks imposing until we are reminded that one single item, *viz.*, " cotton yarns and manufactures," is responsible for a decline of nearly £54 million! **Surely nothing more need be said to discredit this method of hotch-potch statistics. It is worthless as a sign-post for fiscal deductions.**

In a series of articles last autumn the *Economist* surveyed in some detail the particular Safeguarding experiments conducted by the present Government in respect of lace, cutlery, gloves, gas mantles, wrapping paper, pottery, buttons and enamelled hollow-ware. Nothing has since transpired to modify in any essential points the impressions we then gathered. A piece-meal survey, however useful in itself, still leaves open for debate the more serious question of the cumulative effect of these detailed adventures on the structure and well-being of our national trade as a whole. It would be quite possible for duties in every *case materially* to benefit particular industries (selected irrationally for tariff favours) and yet to prove a disastrous national liability in the end. But so far as we have gone at present *the quantum of benefits* accrued even to the alleged beneficiaries is none too clear.

Lace.—The Lace Duty was born out of misleading figures and seems doomed to maintain its reputation. Before the 1925 Tribunal the Applicants submitted percentage estimates of home sales which yielded a result now known to have been wrong to the extent of about £2 million! This makes us cautious in accepting at their face value the estimates of their current propaganda, which claim (*e.g.*) that their home sales have actually increased by 125 per cent. during the duty period. Indeed, the claim is incredible, for after allowing for the fall in exports, this would mean that the sale of Nottingham products had enjoyed a net increase of over £3 million. This, in view of the trifling increase in employment, is absurd. Obviously the returns on which the claim is based are no true index to the state of the industry as a whole. Are they confined to the fancy trimmings section (*which is the only section* that is subject to competition from imports)? If so, we have to note that imports in 1928 were actually higher than in 1924, and that therefore an increase in *Nottingham home sales* can only have been due to an extension of demand. The suggestion is made (we understand) that though fashion is indeed the cause of this expanded demand, the enlarged orders would, but for the duty, have been captured by the foreigner instead of by Nottingham. We think, however, this claim has been much over-stated, especially in view of the proportionately large increases in sales of

artificial silk lace trimmings—an item in which the evidence at the 1925 Enquiry tended to show that Nottingham needed no price protection. Happily the revival of the fashion for lace is likely still further to help the trimmings factories. The major part of the industry (curtain goods and plain net) needed no safeguarding, as at no time have imports equalled 1 per cent. of the British production. **Our re-export trade has certainly suffered.**

Cutlery.—Here again very wrong figures were submitted to the Tribunal. The production was given as 2½ million dozen instead of over 6½ million dozen pieces. It is hard to be patient with discrepancies so wide. As recently as February this year it was admitted by the Government in the House of Lords that there was no perceptible improvement in this safeguarded industry except in the matter of safety razor blades. This is not surprising, since the bulk of the imports that were complained of were cheap pen-knives, scissors, etc., separated in price and quality by a very wide gulf from the Sheffield products, and these imports continue.

The recent expansion of the safety razor trade is well known, but the claim that it is due to safeguarding will not bear investigation. The only "imported" blade which competes with the safety razor blades made in this country is the Gillette, which is merely "finished" in America from Sheffield Wafer Blanks exported for the purpose, and the safeguarding duty, being calculated only on the small value of the American finishing process, is so small that it has not affected the selling price of the article. The import of these blades manufactured in Sheffield and edged in the U.S.A. is vastly higher than it was before the duty. The very cheap German blades (which can be bought as cheaply as 1s. per packet) cater for quite different markets and do not affect the question.

Gloves.—There has been some improvement in employment in the leather glove industry. British production is higher than it was just before the duty, though the increase is by no means so marked as is pretended, since the J.I.C. estimate persists in giving the 1924 British production as only 433,000 dozen pairs, when, in fact, the Census of Production shows that it was 533,000. On the other hand, the case of fabric gloves seems to be a supreme example of safeguarding failure. After years of safeguarding there is a production of less than 300,000 dozen pairs per annum in this country against an importation of nearly 1½ million dozen pairs. **The public, who are buying five pairs of foreign gloves to every one pair of English, are bearing directly or indirectly a tax of nearly £300,000 per annum paid to the Treasury.** Such employment returns as are available seem to indicate that there are actually fewer workers employed on fabric gloves than there were when the safeguarding enquiry took place, though less short time is being worked. The annual consumption of fabric gloves is much higher than it was, but the share of the trade enjoyed by the British glove makers is distinctly less than it was in 1924.

Gas Mantles.—Though foreign imports have been practically stopped—not by the duty but by the payment of a substantial annual British subsidy to the German manufacturers—British production has not materially increased. The industry, which is too diffuse and is over-capitalised, enjoys a practical monopoly of this market, without, however, improving its export trade.

Packing and Wrapping Paper.—Here we are dealing with an article which is an essential raw material to many British industries. The effects of the duty are a little obscure. Stress is being laid upon the increased manufacture of kraft papers in this country; but it is well known in the trade, firstly, that we had already lagged terribly behind in this matter, and, secondly, that a factor more important than the duty was the advent in 1926 of the Sale of Food (Weights and Measures) Act, which practically destroyed the demand for "Royal Hands" and produced in the grocery trades a substitute demand for coloured sulphites, etc.

A fall in the price of wood pulp has, of course, affected all wood-pulp papers. The landed value of Scandinavian wrapping paper has fallen by over 10 per cent. This clearly is not due to "the foreigner dropping his price to meet our duty"; for the price fall is even more marked in the case of printing and writing papers, which are not dutiable. **But the British industrial user of imported kraft has been robbed of the benefits of the price fall (which his Scandinavian competitor enjoys) by reason of the Customs duty of 16⅔ per cent.**

Pottery.—We have not seen it claimed that Longton unemployment has been relieved by the heavy safeguarding duty on imported felspar china. On the other hand, clamour has arisen against a certain quantity of foreign earthenware which is now being imported in place of the cheapest foreign china. The broad facts are that there is less foreign domestic pottery being imported to-day than there was before the duty; but nevertheless unemployment in the domestic section of the British industry is worse to-day than it was. A heavy fall in the export trade (which is a very substantial matter for the Potteries) is the ostensible cause. How far this fall is due to increased competition which British earthenware is meeting in foreign imports of felspar china is a matter of controversy; but it is significant that Czecho-Slovakia reports a fall of 67 per cent. in her china exports to England since our duty, but that this loss of trade has been "more than made up" by increased sales in neutral markets.

Of the remaining two duties (buttons and enamelled hollow-ware) it is too early to attempt an estimate.

It remains, therefore, unproven, as the Balfour Committee has said, whether on balance even the protected industries themselves have gained; while of the disturbing effects of the duties in other branches of the national life no estimate is possible.

MOTORS AND SILK.

The Prime Minister and his colleagues now publicly link the McKenna with the Safeguarding duties. Indeed, they quote motor cars and artificial silk as striking examples of the "success" of "Safeguarding"! But is there any justification for the Safeguarders' claim that these industries owe their expansion to Protection? Let us examine some of the facts and figures relating to these three industries.

MOTOR CARS.

With the spread of the motoring habit, and the increasing use of motor vehicles for commercial purposes, the expansion of the motor industry was inevitable whatever the fiscal system in operation. The industry has been protected since 1915, except for eleven months, August 1, 1924, to June 30, 1925. It was only after 1922, however, that the industry began to expand on a big scale. Here are the production figures of British cars (excluding commercial) since 1922:—

1922	38,419	1925	133,500
1923	64,000	1926.....	158,699
1924	107,000	1927.....	161,920

(It has been stated recently by representatives of the trade that the production for 1928 fell below that of 1927.)

These figures show that the output more than quadrupled in five years. It is significant that the greatest increase occurred in 1924 and 1925, which included the Free Trade period. **Thus the prophecies of disaster so confidently made by Protectionists in 1924, when the duties were removed, were completely falsified by events.** Why did the production of cars increase so rapidly after 1922? Solely because of the coming into vogue of the small car. This is proved by the fact that of the 161,920 cars produced in 1927 no fewer than 121,400, or 75 per cent., were produced by three firms—Morris, Austin, and Singer. The other 45 firms produced only 40,500 cars between them. The "Big Three," of course, specialise in the small car. Nearly 90 per cent. of the cars produced in this country are of 14 horse-power or less.

The effective Protection enjoyed by British manufacturers—especially the manufacturers of small cars—is the horse-power tax, which has meant concentration on engines of low horse-power to ensure a low tax. American cars, on the other hand, are of high horse-power, which means a high tax. The reason why English people do not buy American cars to any extent was explained recently by Sir Herbert Austin, who said that they "could not afford to pay the heavy tax necessitated by their big horse-power."

It has already been shown that the greatest increase in production of cars took place in 1924 and 1925. What of exports? Here are the official figures (to the nearest thousand):—

July to June.	£	July to June.	£
1922–23	3,000,000	1925–26	9,700,000
1923–24	4,900,000	1926–27	10,400,000
1924–25	8,600,000	1927–28	9,200,000

It will be seen that the increase during the year ending June, 1925, which was the Free Trade year, was nearly £4,000,000—a far greater increase than in any year under Protection. In fact, since 1925 there has been only a comparatively small increase, and in the year ending June, 1928, the exports declined considerably, and were only £600,000 more than in the Free Trade year three years earlier. And if we take the calendar years the exports in 1928 were £800,000 less than in 1925. **Obviously the restoration of the McKenna duties has not assisted our export of cars.**

There are no separate official figures of employment for the motor industry; the Ministry of Labour groups them with those for cycles and aircraft, neither of which is protected. In this combined group the yearly increases have been as follows:—

Year ending June.	Increase on previous year.
1925	13,705 or 7·6 per cent.
1926	10,102 or 5·2 per cent.
1927	6,548 or 3·2 per cent.
1928	7,015 or 3·3 per cent.

Thus, the greatest increase in employment took place during the Free Trade year ending June, 1925. The increase in 1928 was less than half what it was under Free Trade.

Safeguarders generally quote the total figures as though they related only to the motor-car industry. This is erroneous and misleading. A considerable proportion belongs to the motor-cycle industry. Though coming under the McKenna duties this industry is practically unaffected by them, as there is little or no foreign import. In this industry we are supreme, and are ousting competitors from foreign markets. Since 1922 our exports of motor cycles have increased eight-fold. Furthermore, the enormous expansion of the pedal-cycle industry—which is not protected—also accounts for a large part of the increase. Exports of cycles increased from 201,000 in 1924 to 339,000 in 1928. Then there is the aircraft industry—also not protected—which is expanding, and must be given credit for part of the increase. Moreover, it must be remembered that the employment figures include workers in the innumerable garages and repair shops throughout the country, and these form a substantial proportion of the total. These facts should be borne in mind when Safeguarders quote figures of employment in what they call the "motor industry."

A review of all the facts and figures reveals no justification for the claim that Protection has caused the expansion of the motor industry. It made its biggest stride in the Free Trade year.

ARTIFICIAL SILK.

Safeguarders claim that the development of the artificial silk industry is due to Protection. But it was expanding rapidly before the duties were imposed in 1925. In fact, it was the phenomenal prosperity of this industry that attracted a Chancellor of the Exchequer in need of additional revenue. Although his professed object in imposing the silk duties was the raising of revenue Mr Churchill gave them a protective turn of about 20 per cent. in favour of the home producer. With the increasing popularity of artificial silk fabrics the continued expansion of the industry was natural and inevitable, whether it had Free Trade or Protection.

Protectionists boast about the growth of artificial silk exports since the duties were imposed. Of course, they have increased, but they increased at a much greater rate under Free Trade. During the three years ending 1924 the exports of artificial silk yarns and manufactures increased by 153 per cent. During the three years ending 1928 they increased by only 88 per cent. Thus the rate of increase under Free Trade was nearly double what it has been under Protection.

Take re-exports. During the three years ending 1924 re-exports increased by 400 per cent. During the three years ending 1928 they decreased by 4 per cent. The rate of increase in imports has certainly declined under the duties, but the value increased from £5,500,000 in 1924 to £7,000,000 in 1928.

The price of artificial silk is certainly lower than in 1925, but this cannot be attributed to Protection. In the first place, there has been a drop in the world price. And Mr Churchill has himself admitted that his tax has intercepted a reduction in price which otherwise would have reached the consumer in this country. Moreover, as Mr Courtauld pointed out recently, several new producers, being short of cash, last year "incontinently" threw their productions on the market at any price they would fetch, "well below any possible true cost." In consequence, Messrs Courtaulds themselves had to reduce their prices last December by an average of over 15 per cent, which, as Mr Courtauld said, "has cut a very big slice off our margin of profit." This fall in price, therefore, had nothing to do with Protection, except that new producers came into the industry without adequate financial resources—hoping probably to benefit under the shelter of Protection—and found themselves in difficulties.

THE CASE OF IRON AND STEEL.

The Prime Minister has promised that, if the Conservative party is returned to power at the General Election, a Committee shall be appointed to hear the case of the iron and steel industry for protective import duties. The advocates of Protection for the Iron and Steel industry claim that imports are large and "abnormal"; that they come mainly from countries which enjoy "unfair" competitive advantages—lower wages, smaller capital costs, and lighter taxes and social charges—and pursue an unfair commercial policy—"dumping" in one form or another; that this substitution of foreign for British steel reduces the output of British plants, lessens British employment, hurts profits, and is generally harmful to the British industry. All these disadvantages could—so the safeguarders allege—be swept away if a duty were levied on imported iron and steel. Such a duty, suitably framed, would—so they assert—neither raise prices nor injure the consuming trades; but it would enable production in British works to expand, it would increase employment, and its beneficial effects would gradually percolate throughout the iron and steel industry, and, indeed, the whole nation.

The protectionists' case—which we have tried to state as fairly as the limitations of space will allow—bears at first glance a plausible aspect; but it is really based on faulty reasoning and a fundamental misunderstanding of the present situation.

In the first place, in so far as their case rests on the exceptional conditions of the years immediately following the war, when world-wide disturbance and disorganisation loosed many hurtful forces, or on the confused circumstances of the later years of currency inflation and stabilisation abroad and the return to the gold standard at home, the steady march of events towards stability has undermined its foundations. In the conditions of the post-war world, where vast territorial changes have been made, and the iron and steel industry in France, Belgium and Germany reorganised almost from top to bottom, current imports of iron and steel, though larger than just after the war or in 1913, are probably not "abnormal." And the slow but very persistent increase in real wages which has proceeded in Europe ever since the stabilisation of the Continental currencies is relentlessly decreasing any such spurious advantages as remain from the earlier epoch

of inflation and disorder and bringing all producing countries abroad down to the bedrock of natural advantages, skilled, efficiency and organisation.

In the second place the advocates of protection appear to misunderstand the effects of a tariff on iron and steel, and they, therefore, greatly underestimate the injury it would cause. They claim that a properly framed duty—though neither its amount nor the range of products it would cover has ever been stated—would exclude the great bulk of imported iron and steel, and yet would not raise prices. But where would the excluded iron and steel go? Foreign producers would not see themselves shorn of their British markets without making the most strenuous efforts to find other outlets elsewhere. **Competition on the international markets would become ruinously intensive, and, in the outcome, British exports would probably fall more or less commensurately with the volume of excluded imports.** To-day Great Britain makes roughly 8½ million tons of steel, imports three million tons, and exports 4½ million tons. Under protection she might import only one million tons; but her exports would fall probably by about two million tons, and her total output would remain stable at roughly 8½ million tons. Her lost two million tons of exports would be divided between Germany, France and Belgium, who would have to find markets for that tonnage in order to maintain their own output at their present figures; and during the period of readjustment the struggle in terms of prices would be calamitous. Moreover, as we show elsewhere, the policy of trade restriction must hamper seriously the activity of our merchant shipping, and hence lead to a contraction in British shipbuilders' demand for iron and steel.

Turn to the claim that an import duty would not raise prices. A large volume of production is expected (though that, as has just been shown, would not be obtained by Protection); and it is asserted that increased output, by enabling overhead charges per unit of product to be reduced, would keep prices down to their existing level. If this were so, then either it would be possible for steel masters to do this to-day and so take over tonnage now bought abroad; or else, if impossible to-day, it will still be impossible under Protection, and prices will rise. From this dilemma there is no escape. And since the mere introduction of a tariff would of itself bring in no cheapening influence, it follows that, in all likelihood, prices would rise under protection. At present about 50 per cent. of the British output of steel is exported directly, and between 65 and 75 per cent. indirectly. A rise in the price of steel in consequence of Protection would jeopardise the exporting position of all the using trades. But these trades, on a conservative computation, employ seven times as many workers as the heavy iron and steel industry alone, and the value of their net output is nearly six times as large. **Hence, neither employment nor production nor the nation's income would be increased by a tariff on iron and steel; on the contrary, apart from other contemporaneous influences, they would be diminished.** To impose a tariff on iron and steel at the advice of the Safeguarding Committee, which would have listened simply to the appellant industry and not reviewed the broad requirements of the nation's economic life as a whole, would be to take a dangerous leap in the dark. **Moreover, once having granted Protection to a major industry such as this, the country would be on the high road to a complete reversal of its fiscal system.**

The third mistake made by those who prescribe Protection as a remedy for the iron and steel industry's present ills springs from faulty diagnosis. They claim that to-day foreign competition is unfair. They overlook the fact that before the war wages and social charges, and perhaps also the cost of capital, were lower abroad than in Great Britain, and that the British steel trades, in the decade before the war, nevertheless prospered marvellously. Even though since the war there may have been changes in these factors of production to Britain's disadvantage, the changes are by no means sufficient to explain the present depression. The true cause lies in the change in **relative** costs, a change which has come about primarily—as the Balfour report asserts and as outstanding British steel masters have admitted—because the **average** foreign plant has been made far more efficient in recent years than the **average** British plant, and also because the organisation of the industry on the Continent is much closer knit and much stronger than in Britain. It is no answer to these statements to claim that the best British concerns are at least equal to the best concerns abroad, or to explain Britain's relative inferiority by pointing to history. The fact remains that, for reasons by no means wholly discreditable, Britain's iron and steel industry has not advanced as far or as fast as that of her rivals, aided by the events of the war or the currency inflation of the peace.

Because this relative backwardness of the British industry and the existence of excessive productive capacity are the tap roots of the present difficulties and discontents—and not "unfair" foreign competition as the safeguarders erroneously claim—Protection, which could do nothing for these troubles, is no remedy. Only by drastic reorganisation and sweeping modernisation can the industry be restored to health. **Protection would probably not even remove the symptoms; it would certainly leave the full adaptation of the iron and steel industry to the new conditions of the modern world, it would hamper the nation as a whole in its current task of industrial reorganisation, upon the successful completion of which depends the reattainment of full national prosperity.**

INVISIBLE EXPORTS—THE CITY.

We, as a people, live not only by producing goods, but also by rendering service. Those within the latter category have as much right to claim that their livelihood should not be interfered with as have those within the former category. The shipper, the merchant, the distributor, on the one hand, and the banker, the financier and the underwriter on the other, all perform a necessary service, and the equally vital services of those engaged in transport, both by land and sea, must not be forgotten. Without services such as those specified it is safe to say that firstly no goods could be produced at all, and secondly, if they were, they would be left to moulder in the manufacturers' warehouses, and the consumers' needs would go unfilled.

London renders these services not only to our manufacturers and exporters, but also to importers of foreign goods and to the world at large, and the widespread field covered by these services decreases their cost to all who make use of them. Our exporters need ships to carry their wares overseas. Without imports those ships would have to return in ballast, and the exporter would quickly find that his freight for the outward voyage would be fixed so as to cover the cost of the trip both ways. Our manufacturers and exporters both depend on the banks for financial aid, and the banks make them advances, open for them credits, and accept and discount their bills. Our banks also perform these services for manufacturers and traders all over the world, and as with the shipowner, the widespread nature of their business enables them to offer to all their clients the finest rates.

It is no accident that Great Britain has become the world's carrier and financier. It is due to three essential things. The first is Britain's geographical situation at the gateway of Europe to the West. The second is the long maritime traditions and experience of the British nation. The third is that Free Trade throws the ports of Britain wide open to the world. **Close our ports with barriers of Customs duties, red tape and formalities, and our maritime and financial supremacy would speedily become endangered. Once that were lost, a large source of the national income would disappear, and with it our power to finance and carry our own trade at the cheapest rates.**

In 1928 British ship-owners earned for the country £130,000,000 from abroad. British bankers, financiers and insurance houses earned another £65,000,000, and "other services," including expenditure by visitors to our shores, accounted for a further £15,000,000. Finally, interest on British capital invested overseas brought us in £285,000,000, making, with £13,000,000 of Government receipts from abroad, a grand total of "invisible exports" of £508,000,000. This sum fell due to us in 1928, and was just as much an export item in the nation's trading account as were the £723,000,000 of British goods shipped overseas. For every seven pounds' worth of goods we sell abroad we sell five pounds' worth of services, and those who render the services are just as important and have just as much claim to consideration as those who make the goods.

A glance at the Stock Exchange Official List, crammed with securities of all climes and countries, should be a sufficient argument to convince any open-minded person who doubts whether Free Trade is good for the City, and his conviction would be still more emphatically confirmed if he could turn over the contents of the portfolios of the discount houses. The City maintains its great population with a standard of prosperity that is the envy of humbler centres, because its bankers, financiers, accepting houses, discount houses, produce merchants and all the subsidiary industries that live on them have assisted in the financing of world development, world production and world trade. British capital has been poured out all over the globe, increasing its productive power, and British credit supplies all the world, through our acceptance and discount machinery, with unrivalled facilities for financing the period between production in one part of the earth and consumption in another. Any restriction on the free passage of goods between one country and another, and especially across the borders of Great Britain, the great *entrepôt* of international trade, tends at the same time to restrict the profits of the City, which earns so much of its livelihood from the free movement of goods and of capital and of credit.

London's business has been built on international trade and the international connections, in finance and credit that trade has brought with it. **To lend money to all the world and then try to restrict our imports is to invite all our debtors to repudiate their obligations, by making it difficult and expensive for them to pay their debts by the only means by which international debts can finally be paid, namely, by the delivery of goods and services.** For the present it is understood that we only propose to tax manufactured articles, and so all those to whom we have lent money to produce food and materials will not, at first sight, be directly affected. But the manufacturers, shut out of our market, will, if the proposed tariff be at all effective, be less eager buyers of food and material, and examples have of late years been plentiful that show how trade dislocation, wherever it may be, has an effect that spreads in widening circles and makes itself felt in most unlikely places. British investors and financiers having given hostages to fortune by lending money all over the world, would indeed be blind to their interests if they favoured any policy that restricted the paying and purchasing power of the customers whose solvency affects their own prosperity so closely. In fact, the interests of the City are so international that this country has been accused of following a bankers' and financiers' policy in allowing borrowers to come here for money and leaving them free to spend it wherever they like. It is true that is a bankers' policy, because our international banking has often got financial business in competition with foreign centres owing to the absence of restrictions on the spending of the money lent. But bankers are not so shortsighted as to favour a policy which would be bad for British trade and their home customers, and in practical fact we cannot lend money abroad without stimulating our exports. There is no need to restrict borrowers in this respect, because when they borrow in London they, or somebody else to whom they hand the credit on, can only take the proceeds in British goods and services. As the City editor of *The Times* aptly observed some years ago, we lend British legal tender, and it can only, ultimately, be spent in Great Britain. **By restricting the movement of British capital we increase unemployment by restricting British trade. By restricting foreign trade we do likewise, and tariff tinkerings can only have the effect of leaving the City with fewer loans to float, fewer securities to deal in, and fewer bills to accept and discount.**

PROTECTION AND AGRICULTURE.

Protection for agriculture might appear to be ruled out of consideration by the repeated assurances of Protectionists that they have no intention of imposing duties on food. **For the immediate future, no doubt, it is. But in the long run the growth of protective duties on manufactured imports is the road that leads to food duties; for the simple reason that you cannot go on indefinitely making farmers pay more for what they have to buy and at the same time resist their plea for artificial raising of the prices of the goods they have to sell.**

It is therefore as well to examine the effects which might be expected from the imposition of duties on agricultural produce. It is perhaps superfluous to labour the depressing economic consequences which would result from such an artificial raising of the cost of living, with its repercussions on wages and on the cost of the social services. But in case there are people who believe that this would not be too great price to pay for the restoration of British agriculture, it may be worth noting that the evidence is all against the belief that import duties would materially help the farmer. The prices of agricultural products are fixed in the international market by the size of the surpluses available in the exporting countries, and as the amount of these surpluses is largely beyond the control of the producers, the necessity of disposing of them somehow is likely to override the effect of a tariff. Countries like Switzerland and Norway, which have attempted to check the effect of surpluses on the home market, have seen the uselessness of duties and have tried to meet the situation in other ways.

Granted, then, that there is no case for "Safeguarding" agriculture, what are Protectionists asking of the farmer? They are asking him, as a class one of the most distressed groups of producers in the country, to sit by and watch—or rather not even that, but to work strenuously on—while one by one other industries, some more needy and many very much less needy than himself, receive palliative measures which raise the price of everything he has to buy. The wider the Protectionist net is spread, the more tightly the farmers are squeezed between the upper and the nether millstone, as witness the plight of the farmers in the United States. Fertilisers, tools, machinery, labour, dairy equipment, household appliances, building materials, power, almost everything the farmer uses, will cost him more, whereas his products will at best remain stationary, and are more likely to fall in consequence of the general reduction of purchasing power. Further, Protection may very well intensify the competition of foreign agricultural products with his own, since the partial closing of a given market to certain commodities, in so far as it is not balanced by a diminution of exports, must lead to greater imports of those commodities to which the market is still open. The farmer will stand a good deal, but he is already becoming vocal, and it is hardly to be expected that he will stand this. Then what are the Protectionists going to do?

So much for the economic aspects of the question. It is, however, not uncommon for persons who are too acute to suppose that purely economic benefit could accrue from protecting agriculture to contend that such Protection is none the less desirable on other grounds. Arguments of this kind are mainly two, of which one is almost exploded. We grow at present about one-fifth of our wheat requirements, and it has been demonstrated often enough that it is out of the question for us to produce the remaining four-fifths, as would be necessary if we were to be able to withstand complete economic isolation in time of war. But in the event of such isolation, how could we prosecute a war without supplies of those minerals which are indispensable to the manufacture of munitions, and which no amount of Protection would enable us to produce for ourselves? No, the seas must be kept open at all costs, and since complete self-sufficiency is absolutely unattainable, merely to diminish, in a small

degree, and at great expense, our dependence on foreign grain, would be about as useful as adding a few more yards to a fire-escape that did not reach within hundreds of feet from the ground.

The argument that agriculture should be preserved and extended for the sake of the national health is appealing, but vital statistics are far from supporting the view that our rustic population is healthier than that in urban areas. The idea that we need agriculture in order to preserve a national balance of occupations and retain the amenities of the countryside is also attractive to most people; but so is the belief that people whose occupations are sedentary should dig their own gardens, wash their own cars, and walk to their place of business. Yet most of us are driven by financial considerations to employ jobbing gardeners and mechanical transport, in order to earn money in the time thereby saved. To support Protection for agriculture on this ground alone is to assert that this country can afford an expensive national hobby.

It seems clear that the agricultural problem alone is sufficient to place the Protectionist on the horns of a dilemma. It is equally out of the question to grant tariff Protection to agriculture or to protect other industries and leave agriculture permanently to pay the piper.

THE CANDLE-MAKERS' PETITION.

Bastiat's parody of the Protective fallacy may be *vieux jeu*, but so is Protection; and if our rulers propose to feed us on mildewed straw, as Mr Lloyd George once pleasantly put it, we have the right to answer them with logic that is as old as their effort, and likely to be much more effective. Bastiat, then, in his *Sophismes Economiques*, translated and published under the title "Fallacies of Protection" (Cassell and Co.), gives a petition to the Chamber of Deputies, alleged to have been presented by the Manufacturers of Candles, Wax Lights, Lamps, Candlesticks, Snuffers, and of the Producers of Oil, Tallow, Resin, Alcohol, and generally of Everything connected with Lighting. This petition complains of the intolerable competition of a foreign rival who "absolutely inundates our national market" with light at a fabulously reduced price. This rival is the sun, and the petitioners pray for the exclusion of sunshine by the shutting up of all openings, holes, clefts, or fissures by which it enters houses. The petitioners show that if this is done all forms of French production will be encouraged. More tallow consumed will mean more oxen and sheep, and there will be multiplication of meadows, meat, wool, hides and, above all, manure—the basis and foundation of agricultural wealth. Navigation is to hum; thousands of vessels will proceed to the whale fishery, and France will rejoice in a navy capable of maintaining her honour. "Only have the goodness to reflect, gentlemen, and you will be convinced that there is, perhaps, no Frenchman, from the wealthy coalmaster to the humblest vendor of lucifer matches, whose lot will not be ameliorated by the success of this our petition." This parody is nearly 80 years old, but it is an amazingly close echo of Protectionist bleatings of to-day.

SECTION III.—THE INTERNATIONAL ASPECT.

THE ECONOMIC CONFERENCE AND FREE TRADE.

It is frequently assumed by protectionists that Free Trade is a British idiosyncracy, shared perhaps by one or two other insignificant little countries, but not subscribed to by enlightened and progressive economic powers. A complete answer to these people lies in the fact that, when the League of Nations called a World Conference of economic experts representing the educated public opinion of almost all civilised countries, the result was a report of which by far the largest section was devoted to recommendations tending to increase the freedom of international commerce. The Conference reported that tariffs, which are now for the most part higher than before the war, are seriously hampering trade. For the most part they have arisen out of abnormal circumstances created by the war. Some were imposed in an attempt to ward off imports promoted by depreciated currencies; others in an attempt to keep in being industries which had been abnormally expanded; others were imposed for bargaining purposes and never adequately reduced in the subsequent negotiations, while the argument in favour of protecting certain industries required for national defence, has, says the report, "often been abused to cover exclusively economic objectives." The result is that the nations find themselves in "a situation which is equally harmful to their own economic life and to their international economic relations." The case for Free Trade could scarcely be more clearly and emphatically stated than in these, the actual words of the Report: **"It is too often overlooked that the attempt to stimulate artificially industries which would not otherwise flourish in a country may check the development of those activities for which it is most naturally suited. . . . In such cases the loss is borne by consumers, who have to pay more for the products of the protected industry, and by those engaged in the industries that would otherwise have a larger possibility of export."**

In pursuance of this unequivocal principle the Conference goes on to recommend, among a number of other measures for diminishing the obstacles to international trade, the following lines of action:—

1. That nations should take steps forthwith to remove or diminish those tariff barriers that gravely hamper trade, starting with those which have been imposed to counteract the effects of disturbances arising out of the war.

2. That States should proceed to the conclusion of commercial treaties on lines and under conditions calculated to ensure the attainment of the aims mentioned herein.

3. That, in future, the practice of putting into force, in advance of negotiations, excessive duties established for the purpose of bargaining, whether by means of *tarifs de combat* or by means of general duties, should be abandoned.

4. That the Council of the League of Nations should be requested to instruct its Economic Organisation to examine, on the basis of the principles enunciated by the present Conference, the possibility of further action by the respective States with a view to promoting the equitable treatment of commerce by eliminating or reducing the obstructions which excessive Customs tariffs offer to international trade.

That is what world public opinion is aiming at. It is generally conceded that, in such a concerted movement, Great Britain, by reason of the peculiarities of her economic situation, stands to gain more than any other country. She should, therefore, if only out of the purest selfishness, be its most eager supporter, and for her to put any obstacle in its way would be sheer insanity. Such, however, is the intricacy of the various tariff systems of the countries involved that progress is bound to be slow. The work is going on, and has been going on ever since the Conference in 1927, as the minutes of the International Chamber of Commerce show. That it is not even more difficult than it is is due to the existence of one or two countries like our own which have a long tradition of Free Trade, or at least of moderation in tariffs, which form a nucleus of the development towards which the League of Nations is endeavouring to guide the world. **Could anything burke this movement more effectively than the defection of that country which has always been the chief standard-bearer of liberty in international trade? If, while other countries are slowly and painfully trying to move in the right direction, the vanguard of the movement begins to backslide, what must be the effect?** And what sort of respect for British integrity shall we command if we appear to be trying to go one better than Æsop's fox, and, while recommending other countries to cut off their tails, furtively visit a surgeon in the hope of regrafting our own?

PROTECTION AND POVERTY.

One of the most unfair advantages which Protectionists take of the lack of economic education among that section of the electorate which is most keenly touched by the prices of the necessities of life is that of assuring them that only through tariffs can their standard of living be maintained. They are, for example, told that unless imports from countries having lower real wage rates can be excluded, their own remuneration will sink to the level of that in competing countries, and it is easy to construct a specious argument on these lines, especially as Protectionists can always appeal to the convenient case of the United States. It is true that the United States workman has the highest real wages in the world, in spite of living behind the world's second highest tariff wall. The case of the United States is entirely peculiar, and that country is in itself the greatest Free Trade area in the world. But if Protectionists choose the line of argument which consists in correlating the tariff levels of various countries with their standards of living, they will be well advised to stop short at America, or they will find that they are holding a two-edged weapon. We give below the tariff level indices for certain European countries prepared for the Geneva Economic Conference. The indices, which relate to the year 1925, represent "the average of the percentages which the duties imposed by any given country constitute of the values of the commodities which go to compose the whole catena of goods normally entering into international trade." Side by side with these we give the indices of real wages, based on food only, as compiled by the International Labour Office, for an important town in each of these countries, for October, 1928. The countries are arranged in descending order of tariff levels:—

Country.	Tariff Index.	Real Wage Index.	City.
Spain	41	52	Madrid.
Poland	21	42	Warsaw.
Czechoslovakia	19	47	Prague.
Italy	16	46	Rome.
Germany	13	70	Berlin.
Austria	12	43	Vienna.
France	12	58	Paris.
Sweden	12	88	Stockholm.
Belgium	9	51	Brussels.
Denmark	6	108	Copenhagen.
United Kingdom	5*	100	London.
Holland	4	83	Amsterdam.

* Owing to the narrow range of goods covered by the British tariff this figure has little significance.

Note the marked rise in the level of the indices in the real wage column as it is traced down into the less protected countries. The United Kingdom, Denmark and Holland, which are the most nearly Free Trade countries surviving in a Protectionist Europe, are three of the four most prosperous countries as measured by working-class consumption of food, and the fourth, Sweden, is decidedly one of the less Protectionist countries on the list. **The four most highly protected countries, on the other hand, have a real wage level averaging less than half that of Great Britain. Whatever the casual relation may be, it is evident that Protection and high wages are not, in Europe, to be found in conjunction.**

IMPERIAL PREFERENCE.

The conception of a zollverein or customs union of the British Empire is not a new one, and to some it possesses many attractions. Many who are prepared to concede that a tariff wall around Great Britain alone would be an absurdity are drawn to the idea of making the British Empire a self-contained economic unit surrounded by a tariff wall, much as the United States of America are to-day. **Such a conception, however, is both economically and politically false, and also impracticable.**

Firstly, the idea of the world being split up into three or four large economic units, each having as few dealings as possible with its fellows is one that no supporter of the cause of world peace can view with equanimity. From commercial rivalry, the tariff war and the competition for raw materials it would only be a short step to international suspicion, hatred and distrust, culminating in the threat of war. The Economic Conference at Geneva in attacking trade barriers was laying the foundations of world peace just as much as those of world trade, and any attempts to divide the world into large watertight compartments is not only doomed to failure, but is also running counter to the spirit of Geneva.

Still on more immediate and practical grounds, the conception of Imperial Preference stands condemned. **It remains as true to-day as when Mr Joseph Chamberlain said it a generation ago, that, without taxes on staple foodstuffs real Imperial Preference is impossible.** Six years ago, Mr. Bruce, of Australia, made no secret of the fact that preference on foods and wool chiefly interest his country, and this contention is amply proved by the following table to be equally true to-day:—

BRITISH IMPORTS FROM AUSTRALIA.

(In £'s million)

	1922.	1928.
Wheat	10·2	6·2
Meat:—		
Frozen beef	2·2	2·2
Frozen mutton	3·7	1·8
Wool	27·4	20·1
Total of above	43·5	30·3
Total imports of all kinds	64·9	54·5

Last year these four items, none of which even the most enthusiastic trade restrictionist proposes to tax, comprised nearly three-fifths of our imports from Australia, while of the remaining two-fifths a substantial proportion falls within the same categories of foodstuffs and raw materials. The same is true of Canada, as the following table bears witness:—

BRITISH IMPORTS FROM CANADA.

(In £'s million)

	1922.	1928.
Wheat	13·8	22·1
Wheatmeal and flour	5·3	3·5
Bacon	4·3	1·4
Cheese	4·5	4·9
Barley and oats	2·7	1·7
Butter	1·5	...
Total of the above	32·1	33·6
Total imports of all kinds	54·9	57·1

Both these tables show that unless we are prepared to impose customs duties upon imported foodstuffs and raw materials, the preferences we can grant to the Dominions will not satisfy them, but will certainly cause discontent and irritation to our trade as a whole.

Besides, if we cannot give a real measure of preference to the Dominions without going against our own vital interests, neither can they give us a preference upon our own goods without departing from the tariff policy to which rightly or wrongly they are committed. This policy has as its main purpose the giving of what they consider to be adequate protection to their own industries. Their common practice is to reckon out what the net duty will be on British goods—that is the full duty less the preferential rebate—and fix the full duty sufficiently high to make the net duty protective. The tendency has always been for the net rates of duty charged upon British goods to advance in every revision in the Dominion tariffs. The fact of the matter is that Australia, at least, is committed to an artificial stimulation of her manufacturing industries, and with this general policy the preferential treatment of goods of British origin will not be allowed to interfere. Such a policy we believe to be misguided, from Australia's own standpoint as well as from that of ourselves. But we hold with still greater emphasis that it is Australia's right to pursue this or any other policy, if she thinks fit to do so. **We have, then, to dismiss from the realm of practical politics the idea that Empire Free Trade is possible.**

Some people appear to be attracted to the project of Imperial Preference mainly by the idea that national safety demands that we should make certain of an adequate supply of foodstuffs from within the Empire in case of war. In the first place, as we have seen, Safeguarding does not seriously touch this question, because foodstuffs are excluded from its scope. But those who harbour this idea of securing adequate food supply from the Empire in war time would do well to study what happened in the course of the Great War, 1914-18. At the crisis of the war considerations of distance and shipping scarcity made it impossible for us to take the usual quantities of wheat from Australia and India, and we had consequently to take more from countries nearer at hand. When the great stress of the war came, we found it necessary to take less from the Empire and more from foreign countries, and learnt the danger of relying in war-time on supplies from the Antipodes.

Another main lesson of the war was that we were dependent not only on men and food, but also upon raw materials and munitions; and for safety in regard to the supply of these the only logical policy is to keep open for ourselves the widest possible field from which to draw them.

The final objection to Imperial Preference is like the first, based upon higher, if less tangible, grounds. The British Empire is a family of independent peoples. Now it is well-known that in any family the introduction of money matters is a fruitful source of friction, and, at times, of ultimate disruption. This argument applies with equal force to any attempt to found the unity of the Empire upon the basis of tariffs and preferences with the inevitable consequence that sooner or later the interests of various members of the Empire will diverge. To urge upon the Empire the introduction and maintenance of Imperial Preference is to do no service to the Empire, but is very much the reverse.

SECTION IV.—SOME GENERAL POINTS.

FREE TRADE AND THE EXPORT OF CAPITAL.

Correspondence in the columns of the *Economist* has revealed a new line of Protectionist argument. It is that the increased modern mobility of capital has, for some obscure reason, knocked the bottom out of the case for Free Trade. The question which agitates the waters of controversy is this: Is the investment of a given sum abroad necessarily followed by a corresponding export of goods? Plainly, in so far as the capital is used in the direct purchase of British goods a fresh export is set up. It is suggested, however, that, even with the addition of the financial and trade commissions which are invariably reaped by a country like Great Britain over this sort of transaction, the direct stimulus to exports, visible and invisible, only accounts for what may be a small portion of the amount invested. **The answer is that since an export of capital at bottom consists in placing a sterling credit with the foreigner, the realisation of that credit must eventually react to the extent of its full amount in favour of the outward balance of trade.**

The Protectionist's next argument is that the supply of British capital under present conditions is inadequate for home purposes, and that Protection would encourage the concentration of investment in our own industries. **Once more Protection stands naked of defence, for the greatest need of capital reorganisation and development is in those trades which cannot be protected.** Moreover, the number of speculative issues successfully floated in the London Stock Exchange proves that there is more free capital ready to expand and refit British industry than British industry is ready to absorb. No reason for Protection can be found in the easy flitting of capital abroad. With or without Protection, the artificial silk and motor industries, and all other protected and protectable trades would not want for all the British capital which their genuine competitive position warranted, and a redirection in their favour of new capital investment will only accentuate the difficulties of the unprotectable trades.

You have forgotten, breaks in the Protectionist, the capital now exported to develop Britain's industrial competitors. We have already suggested that to interfere with that capital export is to prejudice our exporting industries. That argument would, of course, be nullified if the retention of capital were caused by the expansion or reconditioning of those industries themselves, or by the general advancement of the nation's industrial prosperity. **But, on the contrary, our assertion is that Protection diminishes the aggregate production of the country, and by harming the unprotected trades in larger measure than it benefits its favourites, in no way increases the average return on capital invested here compared with investment overseas.** That is the key to the direction of new capital movements, and even were that balance further altered by natural processes in favour of home industry, we should continue to believe that in the development of overseas markets, by our continued investment abroad, lies greater advantage to the whole industry of the country than is offered by spoon-feeding with deleterious patent medicines.

PROTECTION AND LARGE-SCALE PRODUCTION.

One of the most specious arguments advanced by industries which prefer a claim to protective duties is that which is based on the economies to be realised from large-scale production. They point out that at present their plant is occupied to an extent very far short of its full capacity, and contend that if the home market were secured to them, the resultant spreading of overhead costs over a larger output would so lower the price per unit that they would at one and the same time benefit the home consumer and recapture their foreign market. The number of unwarranted assumptions contained in this argument is remarkable.

In the first place, a protective duty can only protect if, at the outset, it results in a rise in price. Now the home producer, in casting covetous eyes at that part of the home market which is at present supplied by imported goods, cheerfully assumes that it would still be there if the price were very substantially raised. But would it? Many things would not be bought at all if it were not for the availability of cheap foreign supplies, and it is quite possible that the elasticity of demand for many commodities may be such that the total amount purchased after the price has been raised by the imposition of a duty is less than that part of the total consumption which was formerly purchased from home producers. The home manufacturer that is, gets the whole market, only to find that it has shrunk to smaller dimensions than that part of the market which previously fell to his share.

Supposing, however, that the demand for the protected commodity is not so elastic as that, and that the British manufacturer secures his market without much loss by shrinkage. The result, at best, could only mean a substantial increase in his output if the former imports bore a very substantial proportion to the total production, so that the new outlet for his product was considerable. But considering the size of the British market, and the large proportion of our staple manufactures which is exported, these conditions are not likely to be fulfilled in many cases. It is for the countries with a vast internal market like that of the United States to talk about the economies of large scale production which result from exclusive access to the home market. As regards this little island the argument cannot possibly have any general application.

Apart, however, from the difficulty of securing the home market by the proposed means, and from the size of the market when it is secured, this line of argument overlooks the very essence of our present trade. A

degree of specialisation so high that, while exporting some 129 million square yards of woollen tissues we import 33 million square yards of a different type, surely lends itself more to large-scale economies than a system in which we should aim at making every possible variety for the home market, and not so much of any one kind.

It is a typical flaw in Protectionists' arguments that the case for each industry is argued as though that were the only industry under consideration, but when the effect of simultaneously protecting a large number of industries is contemplated, the whole picture is transformed. **It may be possible, in certain circumstances, artificially to curtail the imports of a certain commodity without detriment to exports of that commodity, but it certainly cannot be done without checking exports of some kind, and the protection of industries as a whole must check exports as a whole.** Then what becomes of the large market which is to reduce unit costs? Again, the price rise, even if it were as protectionists allege, only temporary, when extended to commodities in general, by its effect, both directly and indirectly through wages, on general costs of production, would act anything but favourably upon our competitive power in international markets.

Considering that a favourite line of attack upon Free Trade is that which consists in calling it theoretical and doctrinaire (" all very well on paper, but out of touch with practical considerations "), it seems surprising that Protectionists should have been guilty of one of the oldest and most frequently exposed errors of the early economists. In talking so lightheartedly of building up large industries by artificial means, they gaily assume that capital and labour are completely liquid things which at once take the shape of any mould into which they are poured. But actually, capital is highly specialised machinery, and labour is supplied by highly localised human beings, often with highly specialised skill. Beating swords into ploughshares may be comparatively easy, but the beating of high explosives into sugar, or silkmills into blastfurnaces, is a tax on the ingenuity even of tariff reformers. The flow of national resources into the right channels is sluggish enough in all conscience; if every Government is to be allowed its own system of dams and sluices to deflect it into the courses which its supporters prefer, how much of the fluid will escape absorption into the sand?

There is, however, one clinching argument which renders all others unnecessary. Those members of the Balfour Committee, who favoured the protectionist view, were prepared to make the benefit to the consumer a condition of the granting of a duty. **If any industry is so confident of the results on prices and exports of a given increase in the scale of production that it is prepared to accept protection on the understanding that prices are ultimately to be lowered, what is to prevent its going ahead without a duty, planning for a substantial increase in output at a consequently lower cost per unit, and capturing the market at once? Its demand for a duty is a precise measure of its lingering uncertainty. Failure to accept this challenge gives away the whole case; acceptance of it would render Protection unnecessary.**

PROTECTION, CORRUPTION AND DISTRACTION.

We are apt to be proud of the comparative purity of the public political life of this country. There is a vital danger that Protection would introduce a prevalence of lobbying, log-rolling, and even of actual corruption. In the hey-day of the old Tariff Reform campaign of 25 years ago, this danger was explained in very graphic terms by no less a person than the brother of Mr Joseph Chamberlain. Mr Arthur Chamberlain said that " under protection he could earn more in a day in the lobby of the House of Commons than by a year in his factory." These were the words not of a politician, but of a sober business man, and the little experience this country has so far had of protection indicates that this assertion has a certain basis of truth.

Mr Arthur Chamberlain's statement is merely an echo of the experience in protectionist countries with which every student is familiar. One notable quotation must suffice. Mr Thomas Walter Page, lately Chairman of the Tariff Board of the United States, in the book which we quote elsewhere, says:—**" Liberal campaign contributions, expensive and misleading propaganda, costly and expert lobbying, astute distortion of evidence, and the personal prestige and consideration enjoyed by men in control of great affairs, are among the means at the disposal of ' big business ' for securing duties needlessly high.** And the power to divert the effects of the law is as important as the power to make it. The more monopolistic the control of an industry may be, the more completely it is able to dictate the prices that consumers must pay, and producers must receive for its raw material. Accordingly, duties which have been declared necessary for the maintenance or expansion of an industry may merely swell the profits of those who control it. This obvious advantage explains why the American tariff has been called " the mother of trusts."

Safeguarding is bad for the manufacturer, bad for the merchant and bad for the politician as well. The moment it is known that a trade has submitted to the Board of Trade an application for a safeguarding duty, a spirit of unsettlement pervades the whole trade. Merchants who are accustomed to draw their supplies from both home and foreign sources immediately find themselves in a state of uncertainty. Their temptation is to load themselves up with stocks of foreign goods, so that they can be well prepared for the duty, should it be imposed. On the other hand, should the application be turned down, they will find their warehouses hopelessly over-stocked, and their working capital sunk in goods, of which it will take them months to dispose. The manufacturer in his turn finds himself conducting his business with one eye on his works and the other on the Safeguarding Committee which is investigating his claim. There will be frequent consultations with his Trade Association and the counsel arguing his case, frequent journeys to London to give evidence before the Committee, or merely to see how things are going. During all this time, his mind will be distracted from his main job, and until the question of the duty is settled, he will be unable to lay his plans ahead, and get on with his job. **A man who is lying on his back waiting for sweets to be dropped into his mouth can hardly be an effective pursuer of industrial efficiency.**

LESSONS FROM PROTECTIONIST COUNTRIES.

The Protectionist would have us believe that large-scale unemployment is the peculiar property of Britain, and is due to the effect of our adherence to the policy of free imports. This, of course, is absurd. One only has to look to Germany to find a counterpart of our unemployment problem, while it is not so long ago that the United States herself had an unemployment figure compared with which ours is insignificant.

Approaching the matter from the opposite angle, the Protectionist also tells us that the prosperity of America is due to Protection. This is equally misleading. The difference in the circumstances of America and this country can hardly be over-emphasised. The size of its territories is twenty-five times, and of its population nearly three times, that of the British Isles. Within its borders are produced the vast bulk of the food and raw materials required by its people. Its home market is of preponderating importance. It has been estimated that over 90 per cent. of the total trade of the United States is in the home market, and its trade, let it be remembered, is carried on between a large number of constituent States under conditions of free and unhampered exchange. **The fact is that the United States is the finest example that history has yet provided of a great Free Trade Unit nearly self-dependent.** If Protectionist theories are sound, why should not the Northern cotton mills of New England have protection against goods made by cheap negro labour in the Southern mills, and why has no one attempted to

cut up the United States into twenty tariff zones? **The United States indeed is a standing sermon to Europe on the obstacles to prosperity presented by a series of tariff walls.**

But the United States has an even more important lesson to teach the British Protectionist, for her own experience of the working of tariffs bears out in almost every important point the arguments which lie at the base of the case against trade restriction. The truth of this will quickly be realised by anyone who reads a very notable book entitled "Making the Tariff in the United States." Its author, Mr Thomas Walker Page, was Chairman of the United States Tariff Commission in 1921. He speaks, therefore, with unassailable authority, and, in producing this book, he had the assistance of the trained staff of the American Institute of Economics, who can hardly be suspected of unfairness or bias. Here are some of the points which Mr Page deduces clearly from American experience. He first of all demolishes the idea that it is possible to make the foreigner pay, "with rare or merely temporary exceptions." He writes: "The effect of American tariffs has been to raise the price that must be paid for imports in the American market." Again, **"The only way in which a tariff can give protection to domestic industries is by keeping the price of imports in the domestic market above the foreign level, and the only intelligible reason for doing this is that it enables domestic producers also to sell at better prices."** Mr. Page is equally clear on the effect of import duties on export trade, and here his words imperatively demand British attention. Although he is speaking of America, to whom foreign trade is of comparatively small importance, he writes: "The effects of duties on imports upon commercial relations are frequently injurious to export trade, and, therefore, indirectly to domestic industry." Among the other important points that he makes, is to dispel the delusion that any country can help its trade by tariff bargaining. A study of its experience, he tells us, led the Tariff Commission to disapprove of the use of the tariff for bargaining purposes.

Mr Page's book is a veritable gold mine for the Free Trader, but we must reluctantly leave it in order to advance another example of tariff experience. This example we take from protectionist Australia. The official Tariff Board of Australia in 1926 warned its Government "as to the danger of the tariff being used to bolster up an ever-increasing cost of production irrespective of any consideration being given to the ever-widening gaps between the standards maintained in the Commonwealth on the one hand, and the Continent of Europe on the other." This warning was not heeded, and a year later the Commissioners described the situation as "critical." "The situation," they say in their report for 1927, "calls for the serious consideration of all parties, classes, and individuals, of the Commonwealth, otherwise it can see nothing but disaster ahead." A remarkable chapter in this report deals with what the Commissioners call "the abuse of protection"—abuse by industrial unions, abuse by the protective manufacturers, and abuse even by the primary producer. The Report states that one feature of the situation is "the use made by manufacturers of profits arising as result of a high degree of protection." The consumer, it is made clear, does not get the benefit. Again, **"The Protectionist system under such circumstances can be made a convenient shelter for obsolete plants and methods."** As for the Australian farmer, his plight is very black, as it is painted: "Whilst frequently protesting against alleged burdens heaped upon him by the secondary producer, he himself demands complete immunity at any costs from overseas competition, and is not always on his guard against sheltering inferior products and inefficient methods." This report, too, like Mr Page's book, lays stress upon the hampering effect of the tariff on exports of manufactured goods.

When we remember that Britain relies on the export of manufactured goods as the basis of her livelihood, and that her greatest industrial need to-day is to press on with reorganisation instead of waiting for favours from the State, these lessons from actual tariff experience become of infinitely enhanced importance. They are lessons that Britain cannot possibly afford to ignore.

THE WORLD LOOKS TO BRITAIN.

To compress within the space allotted to this Supplement even the main arguments against Trade Restriction is as impossible as to put a gallon of water into a pint pot. We have, for instance, been able to give all too inadequate space to the vast range of international considerations involved. The circumstances have constrained us mainly to look at our problems from the view-point of British national advantage, for it is mainly from that angle that the British electorate will regard it when, in a few weeks, they have to make a great decision.

From the purely national point of view our brief discussions of certain outstanding points have led us to these, among other, main conclusions:—That to our livelihood as a nation export of goods and services is vital, and Protection (which is synonymous with "extension of Safeguarding") will jeopardise our exports. That Protection cannot remove or even decrease unemployment. That Protection would gravely hinder that work of industrial reorganisation for efficiency, which is the only road to recovery of prosperity. That Protection means log-rolling and corruption. That our greatest and most distressed industry, agriculture, has everything to fear and nothing to hope from Mr Baldwin's fiscal policy. Such great considerations, if generally comprehended, should alone be sufficient to cause the British people to record once again their wholesale condemnation of a policy of Trade Restriction.

Even in our discussions of the international aspect of Free Trade we have in these pages approached the matter mainly from the standpoint of the material advantage of this country. A great movement is on foot in Europe towards a saner fiscal policy, and from that movement Britain above all nations stands to benefit. **It is almost inconceivable that any British Government should choose this moment for a British backsliding into Protection, which would deal a death-blow to that movement and would lead Europe back into the rut of exclusive and embittered nationalism, which was the most dangerous legacy of the Great War.** Yet that is precisely what Mr Baldwin proposes. The importance of that grim, stark truth cannot be over-emphasised.

In the few lines that remain to us we would venture to lift the matter for a moment on to a broader and a higher plane. A writer in a great American publication recently said:—"Suggest to an American or an Englishman that he has no right to create tariffs, which, while of dubious benefit to himself, are ruinous to this or that group of foreigners, and he would stare in genuine amazement at the suggestion that the ruin and misery of foreigners is any concern of his or should influence his conduct in the slightest degree." Here, indeed, is food for thought. The economic interdependence of the nations of the world has grown so greatly that it is no longer possible or desirable to consider policy on purely national lines. Britain, from her own view-point, of all nations, can only be prosperous in a prosperous world, and the broader view goes hand in hand with the narrower. **The policy of economic liberalism is Britain's tradition and her mission to the world. It is the only policy which harmonises with the world's desire for Peace and Security.**

The Geneva resolutions were a *cri du cœur* from the peoples of all nations who have suffered from the narrow nationalistic policy of trade restrictions. It is in the power of Britain to help them at the same time as she helps herself. **If Britain now refuses to stray from the path of true economic statesmanship, history may say of her that she saved her own people by her fiscal constancy and the world by her example.**

MODERN BULGARIA.

THE first twenty-five years of its existence as an independent State witnessed a remarkable advance in the economic organisation of Bulgaria. In the years which followed, the *tempo* of economic expansion was unfortunately checked by the political aspirations of an ambitious ruler. Many Bulgarians lived outside the frontiers of the State, and the achievement of national unity called for an increase in military equipment; the Balkans became an armed camp. The attitude of the Great Powers towards the Eastern Question was not exactly calculated to inspire moderation amongst the newly-liberated Christian peoples of the Peninsula, and, in this atmosphere of mutual distrust, disaster overtook the Bulgarian nation. The Second Balkan War deprived the country of much of the territory which had been so hardly won from the Turks, and also led to the loss of the Dobrudja, the granary of Bulgaria. Two years later the peasantry found themselves engaged, as allies of the Turks, in a war against Russia—which they still regarded as the liberator of 1878—and, when the Armistice came in October, 1918, Bulgaria stood alone, defeated and discredited, and faced with the suspicion and distrust of all her neighbours.

The war was disastrous in every sense. National aspirations remained unsatisfied, and the people suffered from the systematic exploitation of their food supplies by their German allies. The old political parties were completely discredited, and the lead passed into the hands of the Agrarians under the late M. Stambouliski. The new *régime* certainly stressed the fact that the peasantry were the dominant power in the State, but unfortunately it was based upon the opposition between town and country, which the Agrarian Party exploited to the utmost. Faced with the danger of complete extinction, the intellectual classes forced the issue, with the aid of the Macedonian element and the military, in the *coup d'état* of June 9, 1923, and for the next two years terrorist methods continued in force. In the throes of economic reconstruction, Bulgaria thus suffered, for six years, the anguish of party strife raised almost to the point of civil war. Since the advent to power of the present Prime Minister, M. Lyaptcheff, however, there has been a marked improvement in the general situation. Passions have been calmed, and political life has returned to more normal channels. The importance of a policy of economic development is being realised as never before, and serious attention is at last being paid to those problems of reconstruction which still await solution.

One of the most pressing needs of the country was the settlement of large numbers of refugees from Macedonia and elsewhere who had sought a new home in Bulgaria as a consequence of the peace settlement. More than 200,000 of these refugees were homeless and without any real hope of being absorbed in the economic life of the nation. The Bulgarian Government therefore appealed to Geneva for assistance in dealing with a problem which its own limited resources made it impossible for it to solve itself, and, in 1926, a Refugee Settlement Loan* was issued under the auspices of the League of Nations. The application of the scheme of settlement was entrusted to a Special Commissioner of the League of Nations in Bulgaria. This post has been held since its inception by M. René Charron, and he, and his devoted band of fellow-workers, Bulgarian and foreign alike, are to be congratulated upon the excellent work they have accomplished. The land was given by the Government, but it had to be surveyed, prepared for settlement, and allotted to the refugees, for whom seed, cattle, houses and materials have also had to be provided by the League Commissariat. Up to the present 1,121,247 decares of land have been surveyed, of which 863,074 decares have already been allotted to 24,454 families. Nearly 160,000 persons have thus been established in what are virtually model villages, and their activities will this year contribute to the national wealth. It is noteworthy that the overhead expenditure in 1928 only amounted to 3.6 per cent. of the general total expenditure. Indeed, the whole enterprise has been conducted in a remarkably efficient manner, and when land has been allotted to the remaining 10,000 families, which have not yet been provided for—a process which should be finished by the middle of next year—it is to be hoped that the technical experience and efficiency embodied in the organisation of the Commissariat will not be allowed to go to waste. It might well be preserved by the Bulgarian Government in order to carry out the all-important task of the consolidation of peasant strip-holdings. It is only when this problem, and that of afforestation—for which the existing system of compulsory labour service might well be utilised—are taken seriously in hand that Bulgarian agriculture will be placed upon a really satisfactory footing.

It should be noted that part of the proceeds of the Refugee Settlement Loan was used for the redemption of 1912-13 Treasury Bonds, while certain sums have also been made available for railway construction and the drainage of marshes. The issue of the loan and the advent to the country of considerable sums of foreign exchange out of the proceeds greatly eased the situation of the National Bank, which had become somewhat critical in 1926, and thus helped to save Bulgaria from a serious financial crisis.

In the main, this first League loan was issued in order to deal with a specific problem, which has now been solved. It assisted, of course, in the general re-establishment of the financial and economic life of the country, but much still remained to be done. With a view to the

*Nominal amount, £2,400,000 and $4,500,000. The net amount realised was £2,112,000 and $3,915,000. One of the conditions of the Loan was that Bulgaria should come to terms with her pre-war creditors. This was effected by a consolidated loan agreement concluded in 1927.

solution of these wider problems, the Bulgarian Government appealed once again to the Council of the League, and the Financial Committee elaborated a plan of reconstruction which was finally accepted by Sofia. Towards the end of last year a second and larger loan was therefore issued under the auspices of the League, and this provided a net yield of £5,001,931.* The proceeds of this loan are earmarked for certain specific purposes, which are summarised below:—

	£
1. For the National Bank of Bulgaria	1,500,000
2. For the Agricultural Bank	500,000
3. For the Central Co-operative Bank	150,000
4. For the Reimbursement of Certain Budget Liabilities	1,100,000
5. For Means of Communication	1,250,000
6. For Repairing Damage caused by the Earthquakes	500,000

An essential feature of the scheme is that the National Bank should be independent of political control, and should be in a position to guarantee the stability of the national currency. The Agricultural Bank and the Central Co-operative Bank have been provided with new working capital, and provision has been made for improving the railway system of the country. To help in the general application of the reform programme, a special adviser has been appointed by the Council of the League to the National Bank of Bulgaria. This post is filled at present by M. Charron, the Commissioner of the League in Bulgaria. Considerable progress has already been made towards making the position of the Bank much more liquid and towards maintaining it in its *rôle* of a central bank of issue. In the financial sphere, the introduction of the system of monthly budget estimates has produced excellent results, and, with the assistance of the League, Bulgaria is now well on the way towards complete recovery.

The situation of recent years has been complicated by the fact that the harvest yields have been decidedly poor, while the earthquake shocks of 1928 caused very considerable damage. These factors have had a marked effect on the trade position, as the following figures show:—

	1928.	1927.
	(In million Leva.)	
Imports	7,192	6,174
Exports	6,379	6,684
Balance	− 813	+ 510

Export figures were still further reduced last year because considerable quantities of cereals were held back in the hope of obtaining higher prices, which did not, in fact, materialise, while the increase in imports was stimulated by the over-readiness of certain foreign houses to grant excessive credits to Bulgarian importers. These factors are not likely to be permanent, and a good harvest this year would do much to redress the balance. So long as such conditions remain, however, it is clear that the National Bank must keep a watchful eye over its stock of foreign exchange. A more cheerful picture is presented by recent Budget returns. For the first eleven months of the financial year revenue is higher and expenditure less than was anticipated. The actual receipts for the period April 1, 1928, to February 28, 1929, amounted to 6,470 million Leva, as against 6,021 million Leva for the corresponding period of 1927-28.

There can be no doubt that things have taken a decided turn for the better in Bulgaria. The lean years cannot last for ever, and the programme of reconstruction, now well in hand, offers considerable promise for the future. Budgetary progress would be still greater if the organisation for the assessment and collection of taxes were thoroughly overhauled, while the needs of agriculture must perforce receive greater attention at the hands of the Government. But, in the main, a visit to Bulgaria at the present time gives one the definite impression that things are settling down, and that the will to work on more modern lines, and the will to succeed in the process, are much greater to-day than they were even two years ago.

* 7½ per cent. Stabilisation Loan. (*a*) London issue of £1,800,000 nominal, of which £100,000 was taken up in Czechoslovakia and £200,000 subscribed in Amsterdam; (*b*) New York issue of $13,000,000 nominal, of which $1,000,000 were placed in Belgium, $1,500,000 in Italy and $1,500,000 in Switzerland; (*c*) Paris issue of 130,000,000 francs nominal.

PUBLIC FINANCE.

By M. Nicholas Stoyanoff, Director of the Public Debt Office.

Since the War the Bulgarian budget has been burdened by a number of expenses such as the liquidation of war costs and the obligations undertaken in accordance with the terms of the Treaty of Neuilly. In addition, the National Bank had credit balances, amounting to some 800 million marks, with a number of German banks, and these lost practically all value as a result of the depreciation of the German currency. A substantial part of the cover for Bulgarian paper money thus disappeared at a time when the existence of budget deficits made inflation almost inevitable. The loss of parts of Thrace and the Dobrudja reduced the national revenue, while the advent of considerable numbers of refugees from the ceded territories added to the expenditure. Efforts to increase the yield of taxation and to reduce government expenditure proved entirely inadequate to meet this abnormal situation.

Before discussing the budgetary situation as a whole it will be as well to summarise some of the heavy external charges which the country has had to meet. From 1919 to the end of 1928 Bulgaria has paid the following sums:—

In respect of	Million gold francs.
Foreign Debts	
Reparations (Art. 121, Treaty of Neuilly)	155·2
Occupation Expenses (Art. 133, Treaty of Neuilly)	36·0
Expenses of Inter-allied Commission, International Court of Arbitration, and other obligations under the Treaty and the Greco-Bulgarian Convention for the Settlement of Minorities	15·5
	128·3

This total of 335 million gold francs represented a heavy burden for the national finances and, as many of the payments began in 1919, they made for inflation and budgetary disorder. In 1922, however, a Law was passed restricting the note issue and limiting the debt owed by the State to the National Bank. This measure, combined with a settlement of the Reparations question which, while in many respects unsatisfactory, nevertheless marked an important step forward, enabled the Government to stabilise the Lev at the approximate level of 4 Swiss centimes in the following year. Further progress was made in December, 1923, when a Law was passed concentrating transactions in foreign exchange exclusively in the hands of the National Bank, while the value of the Lev was fixed at 3.74 Swiss centimes. This level remained unchanged for five years, and was maintained by the Law of November 28, 1928. The present gold parity is established at 0.04545 gr. of pure gold to the Lev, which gives an equivalent of 673.66 Leva to the £ sterling.

BRITISH-BULGARIAN CHAMBER OF COMMERCE
7, Ulitza 15. Noemvri,
SOFIA.
This institution aims at encouraging economic relations between Great Britain and Bulgaria. It publishes a monthly bulletin in English and provides an information service on all questions likely to be of interest to British industry and trade. Further particulars will be gladly furnished on application to the above address.

The advent of more stable currency conditions was accompanied by a noticeable improvement in the budgetary situation. The closed accounts for ordinary and extraordinary receipts and expenditure, calculated in gold francs according to the parity of the Lev, present the following picture over the last three financial years:—

(In millions of gold francs.)

Year.	Total Receipts.	Total Expenditure.	Deficit.
1925–26	239·9	267·9	28·0
1926–27	246·8	254·0	7·2
1927–28	250·3	250·6	0·3

Even when allowance is made for the fact that the deficit in the first two of these years was swollen by the inclusion of certain sums on account of war requisitions debt which had actually been repaid in previous years, but was only then included in the Treasury accounts, the tendency towards budgetary equilibrium stands out clearly from these figures.

The Geneva protocol of March 11, 1928, granting Bulgaria a Stabilisation Loan under the auspices of the League of Nations, fixed the following limits to the total expenditure of the country:—

Financial Year.	Million Leva = Million gold francs.	
1928–29	6,750	252·7
1929–30	7,000	262·1

Expenditure out of the proceeds of the Stabilisation Loan itself is excluded from these totals in both cases.

For the financial year 1928-9, the gold franc equivalent of receipts, which are estimated to cover ordinary expenditure, fall into the following main categories:—

	Million gold francs
Direct Taxation	34·4
Indirect Taxation	99·1
Other Taxes and Imposts	23·8
Railways and Ports	43·7
Posts, Telegraphs and Telephones	9·9
State Properties	14·8
Municipal Contributions towards Education	16·7
Other Sources	11·7
Total	254·1

If to the 99 millions of indirect taxes we add 15 millions obtained from stamp duties (included above under the heading "Other Taxes and Imposts"), we arrive at a total of 114 millions, or approximately 45 per cent. of ordinary revenue. The yield from direct taxes, on the other hand, only accounts for 13½ per cent. of the total.

The problem of Reparations is one of considerable importance for Bulgarian public finance. Article 121 of the Treaty of Neuilly fixed the amount at the enormous total of 2,250 million gold francs, spread over 37 years and bearing interest at the rate of 5 per cent. This would have necessitated an annuity of over 134 million gold francs, which would have swallowed up almost the whole of the budgetary receipts for the financial year 1921-2. An arrangement was, therefore, come to, and incorporated in the Sofia Protocol of March 21, 1923, which was signed by the Bulgarian Government and the Inter-Allied Commission. The debt was divided into two parts. Part "A" was fixed at 550 million gold francs, with interest at 5 per cent., and was to be paid by means of half-yearly instalments in 60 years as from October 1, 1920. The schedule of payments then arrived at was the following:—

Financial Year.	Yearly Instalments payable half-yearly. Gold Francs.
1923–24	5,000,000
1924–25	6,000,000
1925–26	7,000,000
1926–27	8,000,000
1927–28—1931–32	10,000,000
1932–33	20,000,000
1933–34	32,805,336
1934–35—1982–83	43,395,336

The total amount payable according to this schedule, in respect of capital and accumulated interest, between 1923 and 1983 is 2,255,266,800 gold francs. Up to the present the fixed instalments have been paid regularly, though, in consequence of the very heavy damage caused by earthquake in Southern Bulgaria in April, 1928, the instalment due on October 1st last was postponed in agreement with the Reparations Commission. The balance of Reparations, the so-called Part "B," amounting to 1,700 million gold francs, bears no interest and does not fall due until 1953.

In December, 1927, an agreement was arrived at for the payment of the pre-war foreign debts of the country according to certain agreed percentages of their gold value. Beginning with 35 per cent., 37 per cent. and 49 per cent. in 1927—the amount varying with the different loan issues in question—interest payments are to be made on a sliding scale, the full amounts being reached in 1948, in certain cases, and in 1951 in the others.

On December 31, 1928, Bulgaria's total foreign indebtedness amounted to 1,308 million gold francs—including the sum of 664 millions in respect of Reparations Part "A," with interest accumulated to that date: 382 millions of consolidated pre-war debt: and 222.5 millions for the two loans issued under the auspices of the League of Nations. The internal debt amounted to less than 183 million gold francs. The total debt, external and internal, works out at 236 gold francs *per capita*, while the average yearly income has been estimated at 320 gold francs *per capita*. The expenditure for the service of the public debt in the financial year 1928-9 stands at 17.4 million gold francs in respect of the foreign debt: 14 millions for reparations and occupation debts: and 27.3 millions for internal debts and pensions. This total of 58.7 millions compares with total budgetary receipts for the same year—including the gross receipts of State undertakings such as railways, &c.—of 254.1 millions.

Of recent years the efforts made by Bulgaria to re-establish order in the financial sphere have been crowned with a considerable measure of success. This has been due to the hard work of her population and, in part, to the assistance of foreign capital. At the same time the burdens of the Peace Settlement swallow up a substantial proportion of the results of these efforts, and the situation will become still more difficult when the annual instalment of reparations is increased in 1932.

THE NATIONAL BANK.

By M. Asen Ivanoff, Governor of the National Bank of Bulgaria.

The reorganisation of the National Bank is one of the essential features of the programme of financial consolidation which Bulgaria has taken in hand under the auspices of the League of Nations. The National Bank itself was founded in the early days of national independence, and it will shortly be celebrating its fiftieth anniversary. It played a great part in developing the country after centuries of Turkish misrule, though this necessarily involved a departure in several directions from its normal functions as a central bank of issue. The period of war and currency inflation made its situation somewhat precarious, as almost the whole of its assets were immobilised. It was thus most difficult for it to fulfil its fundamental duties of safeguarding the national currency and controlling the financial life of the country. From 1918 to 1922 an unfavourable balance of trade led to a great diminution in its supply of foreign exchanges, and the Lev depreciated rapidly. The fixing of a definite limit to the advances made by the Bank to the Government, the introduction of restrictions on imports, and the concentration of all foreign exchange transactions in the hands of the Bank brought about a considerable improvement in the situation, and, apart from certain slight variations, the currency has, in point of fact, been stabilised since the beginning of 1924. The National Bank may well be proud of the manner in which it handled the difficult problems of these critical years. Its reserves of foreign exchange were at times reduced almost to nothing.

NATIONAL BANK OF BULGARIA

(Bank of Issue of the State.)

Capital - - Leva 500,000,000 fully paid up

Reserves - - Leva 1,164,167,000

Head Office - - SOFIA

BRANCHES:

The Bank undertakes the collection of foreign bills, coupons, etc., and has specially organised services for commercial and travellers' letters of credit and transfers of money, and facilities for submitting tenders to the State and Administrative Services. Foreign Exchange transactions, etc. Correspondence invited.

Cable address: NATIONALBANK

Thanks, however, to its business relations abroad, more particularly with London, and to the good repute it had always enjoyed in earlier days, it never failed to obtain the resources which it so badly needed.

In one of the most critical periods, at the end of 1926, Bulgaria concluded a loan, with the blessing of Geneva, for the settlement of her refugees. Without making it an actual condition of the issue in question, the Financial Committee requested that the Statutes of the Bank should be modified in certain particulars. Considerable improvements were introduced in consequence by a Law passed in November, 1926. The application of these new principles, together with the advent of foreign exchange into the country as a result of the loan, greatly eased the situation of the Bank, but it was not until the issue of the Stabilisation Loan proper that really fundamental reforms were introduced. The Financial Committee rightly insisted upon the absolute necessity of establishing the National Bank on thoroughly up-to-date lines, and this was accomplished by a Law passed in October, 1928, which embodied much of the experience in central banking obtained since the war in a number of European States. The Bank is still a State Bank, but the Government undertakes, in the Protocol, to guarantee its independence from every kind of political influence. A technical adviser, with well-defined powers, is appointed to the National Bank by the League of Nations. The Protocol also contains a plan for the definitive reorganisation of the Bank as a joint-stock concern, and the Government undertakes to apply this "at a time to be fixed by common agreement between the Council of the League of Nations and the Bulgarian Government." The new statutes lay down that a cover of 33⅓ per cent. must be maintained in respect of notes in circulation and other sight liabilities of the Bank. This cover may be either in gold coin or bullion, or else in bills on gold countries. There is no stipulation as to the proportion which these two types of cover should bear to one another.

The Loan, which was issued towards the end of 1928 in the United States, in London, and in certain Continental centres, produced a net sum of approximately £5,000,000. Of this, £1,500,000 was specially earmarked for the National Bank for the repayment of advances made by it with or without State guarantee, and for the partial amortisation of the debt owed to it by the State. When this sum was paid over to the Bank on December 5, 1928, the "Law concerning the stabilisation of the Lev and the currency circulation of the Kingdom of Bulgaria" came at once into force. The Lev was stabilised at the rate of 92 Leva to one gramme of pure gold, while, as from the same date, the six months' limit set to the further duration of the restrictions in force concerning the purchase and sale of foreign currency came into existence. It should, however, be noted that this limit may be extended with the consent of the Technical Adviser appointed to the Bank. On December 7th, for the first time, the Bank published its weekly balance sheet in the form laid down by the new statutes. Thanks to the assistance of a portion of the proceeds of the loan, the stock of foreign exchange at the end of December was double that of the previous month, while, by the same date, the Bank had been relieved of over a thousand million Leva of its non-liquid assets. The percentage of cover advanced from 36.46 per cent. at the end of November to 49.38 per cent. at the end of December, and to over 50 per cent. at the end of January last. Under these conditions, the Council of Administration felt justified in reducing its rate of discount from 10 per cent., which had been the rate for over four years, to 9 per cent. on December 15, 1928. Since that time the cover has diminished somewhat in consequence of an unfavourable balance of payments, which, it may be added, is not unusual at this time of the year.

Relieved of the "frozen" assets which had previously made its position so difficult, the Bank is now much better able to satisfy the economic needs of the country. Its discount portfolio reached a total of 620 million Leva in January—or approximately double the average level of 1927 and the first half of 1928—and, on March 15th last, it exceeded 700 million Leva. Part of this total is made up of agricultural bills with more than three months to run—the limit permitted actually being nine months. This type of discounting is authorised provided that it does not amount to more than one-third of the total of bills discounted. Facilities of this kind are, of course, indispensable for a country where agriculture provides the lion's share of the national wealth.

The transactions which are no longer permitted under the new statutes are being slowly liquidated. The most important of these is the granting of long-term credits, such as mortgages, for which the Government founded a special Mortgage Bank last year. Certain transactions, however, such as advances against merchandise, are authorised provisionally for a period of two years. This is a fortunate proviso, since warrant-credits, which are so urgently needed in the country, are virtually unobtainable.

The Bank, as we have seen, is now in a position to take its proper part in the economic life of the country. Its assets are already much more liquid, and will become still more so as "forbidden transactions" are gradually eliminated, and as the State pays back its debt to the Bank. Its reserves of foreign exchange have been greatly increased—and it has to be borne in mind that important sums from the two loans do not yet figure in its balance sheet. The influence of the Bank is slowly leading to the establishment of more normal financial conditions, and the reduction in the rate of discount last December has not been without effect in this direction. Its influence will be even greater if and when the Government, for its part, introduces certain changes in the laws regulating commercial transactions. It must, of course, be admitted that the chances of the harvest represent a certain risk for a predominantly agricultural country like Bulgaria. But much can be done to increase the efficiency of the rural population and to augment their production. An agricultural policy is, indeed, the necessary complement to the work of financial reconstruction. In this wider sphere the National Bank, which has itself undergone a salutary process of reconstruction and regeneration, will be able to play a part not unworthy of its past traditions.

BANKING.

By M. Nicholas Momtchiloff, General Manager of the Bulgarska Banka.

During its relatively short existence as an independent State, Bulgaria has made considerable progress in the world of banking, both as regards the number of institutions and their capital and resources. There are three distinct categories of banks, differing from one another not so much in their methods of operation, but rather in the way in which their capital is constituted. The National Bank, which has already been described, and the Agricultural Bank are State institutions; the Central Co-operative Bank and the Union of Popular Banks represent the interests of a number of member societies; while the Joint Stock Banks engage in deposit banking and are beginning to take a larger part in industrial and financial enterprises.

The Agricultural Bank, which is the oldest banking institution in the country, is owned entirely by the State, and exists primarily to provide credit accommodation for the land-owning peasantry. Its situation on December 31, 1928, may be summarised as follows:—

	Million Leva.
Capital	421
Reserves	28
Loans against promissory notes	617
Loans against securities	1,073
Mortgage Loans	209
Advances to Co-operatives	1,025
Loans under State guarantee to Municipalities and Refugees	420
Total Assets	4,026
Deposit and Current Accounts	3,586

This Bank has been instrumental in providing credits for agriculture in many difficult years, and is undoubtedly responsible for much of the progress that has been made during the present century. The credit requirements of agriculture, however, call for considerable new resources which the Agricultural Bank, at at present constituted, does not possess. Its own resources are certainly inadequate for the proper organisation of long-term credits for the rural population.

UNION OF POPULAR BANKS

Sofia, Place Slaveikoff 7.

Co-operative Society, transacting banking business of every description. Possesses the largest banking organisation in the country owing to its 142 Affiliations and 50 Correspondent Banks.

Capital and Reserves Leva 500 millions.
Assets aggregating Leva 1,500 millions.

"ZADRUGA" Limited Liability Company

Affiliated to the UNION OF POPULAR BANKS.

Sofia, Place Slaveikoff 7.

Export of Cereals and Agricultural produce of every kind. Import of Electrical Engineering Implements, Electro-Motors, Dynamos, etc., Machinery and Tools for handicrafts and industrial uses. Specialises in the construction of Electric Power Stations. The Company is in touch with most of the Power Stations established with the assistance of the Popular Banks or financed by them.

BULGARSKA BANKA

Joint Stock Company

SOFIA

Capital - Leva 30,000,000 paid up
Reserves - Leva 4½ millions

Branches at PHILIPPOPOLIS, SLIVEN, VARNA & PERNIK

Extensive connections throughout the country and abroad. Every kind of home and international banking transactions effected. Specially organised for collecting foreign clean and documentary drafts and outstanding payments of every description.

Commercial and financial information as well as legal advice given to correspondents free of charge.

Cable address: PROMICHLENBANK. Codes used: Peterson's 1st and 2nd

The Central Co-operative Bank is an association of 373 co-operative societies situated in all parts of the country. The principal items in its balance sheet of December 31, 1927, were the following:—

	Million Leva.
Capital and reserves	44
Deposits and sundry creditors	323
Loans and advances	350

In spite of the difficulties inherent in the organisation of credit on a co-operative basis, this Bank has succeeded in making considerable progress during the past five years. It has provided cheap and easily accessible credit facilities for its member societies and has thus helped to spread a knowledge of banking methods even in out-of-the-way country districts. The Union of Popular Banks performs very similar functions as a central agency for 112 small co-operative banks. The aggregate capital and reserve funds of its member banks amount to 257 million Leva, those of the Union itself to 22 millions. Its deposit accounts amount to 101 millions, as against loans and investments of 116 millions. The number of popular banks has been increasing steadily and the accommodation they provide for small traders, artisans and the like is slowly circumscribing the activities of rural money-lenders.

Joint Stock Banks have made considerable progress in Bulgaria during the past twenty years. Certain items from their combined published balance sheets will be found in the following table (gold Leva for 1911, paper Leva thereafter):—

Joint Stock Banks.	1911.	1919.	1924.	1927.
Number	38	87	117	116
Capital (million Leva)	33·4	292	577	791
Reserves (million Leva)	4·5	56	77	128
Deposit and current accounts (million Leva)	96·6	1,144	3,439	4,983
Net profit (million Leva)	3·5	34	69	87

These banks vary in importance. Side by side with relatively large concerns with considerable resources at their disposal, there are a number of very small banks, more especially in the provinces, which work exclusively with local credits and are occupied chiefly in discounting small bills and in making direct loans to traders and private individuals. The combined published balance sheets of the principal Joint Stock Banks are summarised in the next table:—

(In million Leva).

	1911.	1919.	1924.	1927.
Number of banks	4	7	9	9
ASSETS.				
Cash in hand and with other Banks	3·3	112·8	414·2	468·2
Bills discounted	25·4	108·0	547·8	1,421·8
Debtor accounts	60·0	654·6	1,836·4	1,991·7
Securities	2·8	39·8	19·9	31·7
Participations	...	11·5	27·6	29·0
Sundry assets	0·3	2·8	22·7	63·3
LIABILITIES.				
Premises, &c.	1·1	3·7	52·4	69·3
Capital paid up	19·0	99·2	235·7	331·7
Reserves	2·2	17·0	36·0	65·4
Deposit and current accounts	70·0	709·8	2,495·3	2,537·5
Sundry liabilities	0·1	15·7	122·3	116·0
Net profit	1·7	11·5	31·7	48·2
Dividends	1·3	7·5	23·2	31·5

Of the nine principal banks, three are entirely Bulgarian undertakings with no participation of foreign capital. As to the rest, French interests are represented in five, German, Italian and Belgian in one each, Austrian in three, and Hungarian in two. There is no British participation in any Bulgarian bank.

It is unfortunately not possible to give statistics of the aggregate volume of deposits in all Bulgarian credit institutions. The data in the next table were compiled at the National Bank and every effort was made to

National Bank	108·2	115·4	107·6	97·3
Total	324·1	364·5	378·1	423·2

While there are gratifying signs of an upward movement in recent years, the total deposits have not yet reached the pre-war level if allowance is made for the change in the value of gold itself.

Deposit business predominates in Bulgaria and branch banking has made considerable headway in the last few years. On the other hand, fifty small provincial banks have recently formed a "Central Institute of Provincial Banks," which is of great assistance to them in rediscounting their bill portfolio and providing cheap credit facilities. There is no bank of an exclusively industrial character in Bulgaria, though some of the larger banks have industrial interests and are beginning to enter into financial combinations for the issue of State and municipal loans. It is intended that long-term mortgage credits should gradually be concentrated in the hands of the "Banque Hypothécaire de Bulgarie." This institution was established in 1928 with foreign capital and enjoys special privileges, which are designed to strengthen the security behind its mortgages and to guarantee a minimum profit for its shareholders.

Like most Bulgarian institutions, banking is of very recent growth and is still engaged in adapting itself to local conditions. There is a certain dispersion of effort and lack of co-ordination in general policy, though, so far as the larger banks are concerned, the position can certainly be described as sound. Their earning power remains satisfactory, and, if the process of amalgamation could be speeded up, the situation would soon become even more promising in this respect.

AGRICULTURE.

By M. Ianaki Moloff, Professor of the University of Sofia, former Minister of Agriculture.

Bulgaria is essentially an agricultural country. Three-quarters of its population are engaged in this oldest of occupations, and agriculture provides 94 per cent. of the total exports, as well as the lion's share of the raw materials used in industry. Capital investments in land improvements, agricultural machinery, cattle, buildings, and the like, are of infinitely greater importance than those in industrial undertakings and handicrafts. Moreover, small holdings predominate throughout the countryside. A law passed in 1924 (The Agricultural Exploitations Act) fixed the maximum amount of land which might be owned by any one proprietor at 300 decares (75 acres), though exceptions are made in the case of rationally organised rural holdings, where a maximum of 2,000 decares (500 acres) is allowed. Larger undertakings of this kind are not, however, numerous; there are only eighty of them in the whole country.

A comparison of the results of agricultural activity before and after the War is somewhat complicated by the fact that the pre-war years showed a number of quite good harvests, while the post-war period has had an unusually large number of indifferent seasons to face. The financial results are further influenced by the world-wide fall in the prices of agricultural as compared with industrial products. Even when account is taken of these factors, the situation has not, however, been a very cheerful one. If we compare the period 1921-5 with the years 1906-10, we find that each acre of land has only yielded five-sixths of the revenue, and each individual actively engaged in agriculture has only produced

CENTRAL CO-OPERATIVE BANK OF BULGARIA SOFIA

Established by Special Law in 1910.

Capital, Reserve and other Funds Leva 130,000,000

some three-quarters of the value of the output of the earlier period. These conditions have led to a diminution in the real well-being of the peasant population, and have greatly hampered the normal economic development of the country and of its finances.

The backwardness of Bulgarian agriculture is due, in no small measure, to a lack of co-ordination between the different factors of production. While there is an abundance of labour, there is a chronic shortage of capital equipment, in the form of agricultural machinery, horses and manure. This disproportion has been growing greater of recent years. If the amount of labour applied to 100 acres of agricultural land in 1900 be taken as 100, it is calculated that the corresponding figure for 1910 was 111.1, and for 1920, 133.6. The number of cattle and horses has diminished markedly during the post-war period, and three times as much fodder as is now produced would be required for the proper feeding of the cattle. Wooden ploughs are still very common, and number 452,560, as against 278,075 iron ploughs in use in the country.

Extensive cultivation predominates, at the expense of a more intensive utilisation of the soil. Cereals occupy 59.8 per cent. of the total agricultural area, over 18 per cent. of which lay fallow each year, on an average, during the period 1922-6. The cultivation of fodder grass is relatively very limited, while industrial plants, with 2.3 per cent., vegetables, with 1.85 per cent., and vineyards, with 1.3 per cent., only play a very subordinate *rôle* in the agricultural economy of the country. Stock-raising is also very much neglected, the first place being taken by sheep, which provide meat, wool and milk for the peasantry. The cattle are small and unproductive, and here, as in the case of poultry, little care is taken in the selection and improvement of the breeds.

Under these conditions the output of Bulgarian agriculture must necessarily be unsatisfactory. The following table shows the average yield, in quintals per hectare, of the principal crops before and after the War:—

	Annual Averages.	
	1908–12.	1922–26.
Wheat	10·3	9·0
Rye	9·5	8·6
Mixed Grain	10·9	9·5
Barley	10·3	9·5
Oats	7·5	7·1
Maize	10·7	9·9
Rape-Seed	9·2	7·3
Tobacco	7·6	8·7
Potatoes	38·8	38·5
Sugar-Beet	176·3	155·0

In judging these figures, account must be taken of the poor harvests experienced since the War, but, in any case, the absence of any proper order in the utilisation of the land, and the fact that no scientific rotation is followed, go far to explain the extremely low level of these yields.

The total annual value of the agricultural production of the country for the period 1922-6 has been estimated at 664.4 million gold Leva (francs). The principal items entering into this figure are:—

Cereals	440·7	million gold francs.
Industrial plants, including tobacco	72·5	do.
Fodder	36·1	do.
Beans and lentils	11·6	do.

The relative importance of the various crops in the export trade of the country has changed considerably. The percentual share of the different categories in the years before the Balkan Wars and after the Great War is shown in the following table:—

	1906–10.	1921–26.
Cereals and products thereof	77·1%	40·3%
Fruit, vegetables and products thereof	1·4%	1·9%
Tobacco	1·6%	37·2%
Animals and animal products	19·9%	20·6%

It should be noted that the new territories kept by Bulgaria after the Second Balkan War contain rich tobacco areas which make a notable contribution to the foreign trade of the country.

It is now generally realised that a turning point has come in the history of Bulgarian agriculture. The changes to be expected must include the reclamation of waste land, the reduction of the area left fallow, and the devotion of greater attention to cattle and hogs in place of sheep. Due attention must be paid to the special conditions prevailing in the different localities. With this end in view, a special section has been instituted at the University of Sofia and a number of experimental stations have been established in various parts of the country. Stud farms have also been started, and much care is being devoted to the raising of breeds of cattle, horses, hogs, poultry and silk-worms suited to Bulgarian conditions. Agricultural education is also an obvious need, and schools and special classes are being organised with permanent and itinerant teachers.

State encouragement is also given to the co-operative movement, which is full of promise for the future well-being of the rural population. At present there are 2,927 co-operative societies in the country, of which 1,211 are credit societies. The entire organisation is supervised by the Agricultural Bank and by the Central Co-operative Bank. In addition to its normal banking functions, the Agricultural Bank purchases and distributes machinery, seeds, artificial fertilisers and the like to the agricultural population and also aids in the marketing of such products as tobacco and cocoons. Rural insurance is also being organised and the veterinary system overhauled. There can be little doubt that these measures, combined with undertakings for irrigation, reclamation of waste land, and afforestation, will, in due course, produce considerable results and will help the country, in the near future, to overcome its present financial difficulties and enter upon a new era of prosperity.

TRANSPORT.

By M. L. Bojkoff, General Manager of the State Railways and Ports.

In 1878 the territories comprised within the modern Kingdom of Bulgaria had less than 340 miles of railways, which were exploited by private companies on a concession basis. After fifty years of national independence the country has a railway network of 1,812 miles, owned entirely by the State. Normal-gauge lines account for 83.5 per cent. of this total, and, at the present time, 505 miles of new line are actually under construction, of which approximately 70 per cent. are normal gauge.

	1911.	1926-27.
Length of system (kilometres)	1,908	2,305
Locomotives	196	440
Passenger carriages	275	458
Freight wagons	4,486	6,596
Passengers carried (thousands)	3,486	8,530
Passenger kilometres (millions)	234	578
Goods traffic (thousand tons)	2,037	2,880
Ton kilometres (millions)	270	481
Capital invested (gold francs)	293	389
Coefficient of exploitation	63%	74%

While these figures bear witness to a considerable increase in the activity of the railways, much still remains to be done to enable the system as a whole to meet the needs of the country. A number of urgent repairs are called for, and new lines are essential. The Stabilisation Loan floated under the auspices of the League in 1928 provides the following sums for the transport services:—

	Million Leva.
Railways:	
For the needs of exploitation	568·5
For construction of new lines	72·3
Ports:	
For certain specified purposes	31·5
Roads:	
For making new roads	172·7
Total	845·0

Thanks to these provisions, it is now possible to purchase abroad certain quantities of rails, switches and road material, together with a limited amount of rolling stock.

Bulgaria possesses two main harbours—Varna and Bourgas—and a number of secondary ports on the Black Sea, together with eight or nine ports worth mentioning on the Danube. The traffic of these ports for the year 1926-27 is summarised in the following table:—

	Ports.		
	Black Sea.	Danube.	Total.
Vessels arriving	3,939	11,535	15,474
Net registered tonnage (thousands)	1,551	2,294	3,845
Passengers arriving (thousands)	25·8	62·8	88·6
Goods unloaded (thousand tons)	110·5	225·9	336·4
Goods loaded (thousand tons)	225·6	130·5	356·2

Considerable development is taking place in road transport. In 1878 the total length of paved roads (*chaussées*) in the country was only 2,300 miles. To-day this has increased to 8,785 miles, and a further 3,860 miles are now in course of construction. The number of motor cars, lorries and motor cycles has increased from 425 in 1920 to 2,116 in 1928. While these figures still remain extremely small in comparison with those of Western Europe, it is nevertheless interesting to note that regular motor services are now run on some 3,750 miles of road. There is as yet no regular air service in Bulgaria, though aeroplanes of the *Cidna* line land at the air port of Sofia on their way from Paris, *via* Bucarest, to Constantinople. The organisation of air transport on a more adequate basis is, however, expected in the near future.

INDUSTRY.

By Dr Asen Tchakaloff, Head of the Economic Research Department, National Bank of Bulgaria.

When Bulgaria became an independent country in 1878 her economic activities were confined to primitive agriculture and a number of well-developed handicrafts. Domestic industries, however, were not able to face the competition of manufactured imports from more advanced countries. In the country itself there was an abundance of raw materials and a plentiful supply of cheap labour, but there were no adequate facilities for exploiting them to the full. A certain number of small industrial undertakings sprang up to take the place of the old handicrafts, and some of these received a certain amount of official encouragement, but it was not until 1895 that the State actively intervened to support industry. A law passed in that year created a series of privileges, such as the granting of Customs exemptions on imported machinery, the reduction of railway rates on articles manufactured in the country, and a certain number of tax concessions, with a view to encouraging home industry. The policy thus initiated was on the same lines as that adopted by Hungary, Roumania and Serbia, where conditions were very similar to those of Bulgaria. In the main these privileges were only accorded to larger undertakings using mechanical power and working up raw materials produced at home. The law of 1895 expired in 1928, but it was then renewed, with slight modifications, for another fifteen years.

The law for the encouragement of industry, passed in June, 1928, protects such undertakings as work up raw materials or semi-manufactured products with machinery using at least ten horse power, employing at least ten workmen, and having a minimum capital of £800. These concerns enjoy, in addition to the privileges already enumerated in connection with the law of 1895, the grant of facilities for the acquisition of land for building purposes, the use of materials on favourable conditions, and a preference in all contracts for the delivery of goods to the State and its administrative undertakings.

Of recent years Bulgarian industry has shown marked signs of expansion, as will be seen from the following

table, which refers to industrial concerns enjoying State protection:—

	1911.	1921.	1927.
No. of undertakings	345	469	1,052
Capital invested (£ millions)...	3·6	5·0	8·0
Workers employed	15,886	55,717	90,326

In the year 1927 the value of the industrial output amounted to over £11 million, of which the flour mills, which use local raw material exclusively, accounted for some 27 per cent., and textile factories, three-quarters of whose raw materials have to be imported from abroad, contributed 16 per cent. About 30 per cent. of the capital invested in Bulgarian industries is in foreign hands, but the sugar industry, with an annual output estimated at some £900,000, works almost entirely with foreign capital. The production of cigarettes is worth some £400,000, while the manipulation of tobacco for export represents a total of £900,000. The vegetable oil industry, which uses Bulgarian raw materials almost exclusively, has shown considerable progress since the War, and its yearly output is now valued at £350,000.

With the exception of certain special industries, such as the distillation of rose oil, practically the whole industrial output of Bulgaria is destined for home consumption. With the introduction of high protective duties in Turkey and Greece the export of flour to those countries has dwindled away almost to nothing. While industrial products represented 10 per cent. of total exports in 1910, the figure had fallen to 4.8 per cent. by 1926. Manufactured goods still account for about three-quarters of the total imports of Bulgaria, though their share fell from 77 per cent. in 1926 to 74 per cent. in the following year, while imported raw materials rose from 18 per cent. to 21 per cent. during the same period.

There is little doubt that the protection granted to local industries results in a loss of revenue for the State (estimated at £300,000 in 1925) and an increase in prices to the consumer. The disadvantages of the system are being realised more and more in official quarters, as well as amongst the general public, and there are already signs of a new orientation of policy.

The general mineral resources of the country are as yet but little known, though coal, copper and lead are already worked, and salt deposits have recently been discovered at Provadia, in Northern Bulgaria. The principal undertakings at present are the three collieries which exploit the lignite deposits of the Pernik-Vladaia district. They belong to the State, and are responsible for 83 per cent. of the total coal output of the country. The Pernik basin covers a territory of some 300 square kilometres, and offers considerable possibilities for increased production in the future. The development of the coal industry is summarised in the following table:—

	(In Thousands of Metric Tons.)			
	1911.	1926.	1927.	1928.
State Collieries	252	1,051	1,065	1,239
Private Collieries	17	155	173	180
Exports	...	37	10	9
Imports of Coal	184	4	...	...
Imports of Coke	5	7	7	...

In 1927, 7,493 workers were employed in the coal-mining industry, and the capital invested in the State mines was approximately £500,000. The average wholesale price per ton was 17s., while the railways took over 43 per cent. of the total coal produced.

The ore output of the country is as yet very small. In 1927 it only amounted to 10,943 tons of copper ore, 1,229 tons of lead ore, 16,789 tons of copper and lead ore, and 6,720 tons of lead and zinc ore. This is nearly all exported, Belgium being the principal customer.

SAPOUN

JOINT STOCK COMPANY.

Established 1913.

Soap Manufacturers.

Specialities: Soap for domestic and industrial use. Production organised on the most modern lines.

"Standard"
Technical & Industrial Company, Ltd.

Sofia, Boul. Vitoscha 5.

The largest technical enterprise in the country.

Sole Agents for Bulgaria of the National Gas Engine Company, Ltd., Ashton-under-Lyne (England).

All kinds of industrial installations. Large stocks of tool making and wood working machinery, engines and pumps. Leather and Balata beltings, all kinds of steam and water valves, technical goods, etc.

THE USTREM TRADE COMPANY LIMITED

3, Ulitza Moskovska, SOFIA.

Agents of Foreign Industrial, Engineering and Building Concerns.

SPECIALLY ORGANISED FOR TAKING PART IN ADJUDICATIONS FOR DELIVERIES TO THE STATE AND ADMINISTRATIONS.

CORRESPONDENCE INVITED.

FOREIGN TRADE.

By Dr Slavtcho Zagoroff, Lecturer in Statistics, University of Sofia.

The value figures of Bulgaria's foreign trade show an enormous increase since the war, on account of the depreciation of the Lev. When allowance is made for this factor by calculating the post-war returns on the basis of the average price level for the years 1900-10 (which, incidentally, was the same as that for the year 1908), the following results are obtained:—

(Million Leva of 1900–10).*

Year.	Imports.	Exports.	Balance.
1919	61	39	−22
1920	93	87	− 6
1921	119	116	− 3
1922	120	180	+60
1923	163	137	−26
1924	156	176	+20
1925	202	161	−41
1926	151	152	+ 1
1927	171	185	+14
1928	189	167	−22
Average, 1919–23	111	112	+ 1
Average, 1924–28	174	168	− 6

Both imports and exports are now higher than they were in the period 1908-12, but the population has increased still faster. This stands out clearly in the following table:—

	Index Numbers.		Per Head in Leva of 1900–10.	
	Imports.	Exports.	Imports.	Exports.
1908–12	100	100	...	...
1911	110	130	41	38
1912	110	103	40	30
1919	38	32	12	8
1920	58	69	18	19
1921	73	92	25	24
1922	74	142	24	36
1923	101	108	32	27
1924	96	139	30	34
1925	125	127	38	31
1926	93	120	28	28
1927	105	145	31	34
1928	117	131	34	30

The total value of Bulgaria's foreign trade in 1928 amounted to approximately £20,000,000, and thus works out at some 70s. per head of population.

Since the war the balance of trade has been more or less in equilibrium. In the first five years (1919-23) there was a slight surplus of exports over imports. This was due in part to the depreciation of the Lev, which encouraged exports, and in part to the Greco-Turkish War, which provided, for the time being, a favourable market for Bulgarian products. In the last five years (1924-28), the balance of trade has, on the whole, been unfavourable, a state of affairs made possible by the obtaining of foreign credits by the Government and by private individuals.

The foreign trade of the country may be summed up by saying that Bulgaria imports cotton and iron goods, and exports tobacco and cereals. Textile goods alone account for a third of total imports and amounted, during the past five years, to an annual average of some 2,000 million Leva. They came mainly from England, Italy and Germany. Metal goods, machinery and the like, together accounted for a further 2,000 million Leva, and were imported from Germany, Belgium, Austria and England. The remaining third of Bulgaria's imports was made up of a variety of articles, of which leather and leather goods (300 millions), petroleum, chemicals and vegetable oils (approximately 200 millions each) and dyestuffs (150 millions) were the most important. On the export side, agricultural products predominated to the virtual exclusion of all others. The basic commodity, tobacco, amounted to an annual average of approximately 2,000 million Leva, and was sent, above all, to Germany, Italy, Czechoslovakia and Austria. Cereals came next, with a total of some 1,500 millions, the principal customers being Greece, France, Germany and Belgium. Viewed very generally, Bulgaria's imports consisted as to 70 per cent. of manufactured articles, compared with 20 per cent. of raw materials and semi-manufactured goods, and the balance of foodstuffs. Her exports were made up of 50 per cent. foodstuffs and animals, 47 per cent. raw materials, and only 3 per cent. of manufactured articles. Considerable changes have taken place in this respect since the War. The acquisition of important tobacco lands, the growth of population, and the loss of the cereal districts of the Dobrudja are sufficient to explain the advance in the absolute and relative importance of raw materials and semi-manufactured goods, much the most important of which is tobacco, and the fall in the export of cereals.

In the period immediately before the Balkan Wars, Bulgarian imports came, for the most part, from Austria-Hungary (25 per cent.), Germany (19 per cent.), England (15 per cent.), Turkey (10 per cent.), and France (8 per cent.). Since the War the direction of foreign trade has changed considerably. This is shown in the next table, which indicates the percentual share of the most important countries in the import trade:—

Country.	Annual Averages.	
	1919–23.	1924–28.
	Per Cent.	Per Cent.
Germany	17	21
Italy	20	14
England	15	12
Czechoslovakia	3	10
Austria	8	9
France	8	7
Turkey	7	2

Immediately after the war communications with Central Europe were cut off almost completely, and Italy was the first country to renew transport and credit relations with Bulgaria. In later years, imports from Germany have increased steadily in importance.

On the export side there have been even greater changes. The three countries which were formerly the most important markets for Bulgarian products—Turkey (23 per cent.), Belgium (23 per cent.), and England (11 per cent.)—now only play a very secondary *rôle*. The situation in this respect during the past ten years is summarised below:—

Country.	Annual Averages.	
	1919–23.	1924–28.
	Per Cent.	Per Cent.
Germany	15	22
Greece	5	12
Austria	9	11
Italy	14	10
France	7	7
Turkey	14	3

The decline in the importance of Constantinople, the growth of foreign competition in Turkey and Belgium, and the change in the nature of the commodities now available for export, have resulted in a greater diversity of customers than was previously the case. Germany's share, which is made up, for the most part, of tobacco, eggs, skins and rape-seed, is, however, steadily increasing, while England hardly imports anything worth mentioning from Bulgaria.

* These and the other statistical data in this article were calculated in the Statistical Seminar of the University of Sofia. They differ from the official returns, which need correction in two important particulars—(*a*) the value of tobacco exports, (*b*) the division, according to years, of goods imported for account of the State.

THE PAST TWELVE MONTHS.

THE past twelve months have been a momentous period in the history of British banking and of the London money market. They have witnessed the amalgamation of the Treasury and Bank of England note issues, the withdrawal of money from all over the world into the New York stock market and the long-drawn and, in the end, vain fight of the Bank of England to maintain stable money rates. On the more theoretical side of central banking and international finance, they have seen the development and fresh interpretation of old-established monetary theories, and in particular of the use of the discount rate and of open market policy as different and to some extent rival methods of exercising control.

To take first the purely domestic question of the amalgamation of the note issues under the Bank of England. This has already received ample treatment in the pages of the *Economist*, and there is no need to cover the ground again. There is, however, one important result of the amalgamation which merits some consideration. Under the terms of the 1928 Act the fiduciary limit of the Bank's note issue was fixed at £260,000,000. Thus the total number of notes issued by the Bank was equal to this amount, plus the gold held by the Bank in its Issue Department. Out of its total issue, the Bank was bound to supply to the banks and to the public such notes as were required, and the balance of notes not required constituted the reserve held in the banking department. This, of course, is in accordance with its traditional practice, but the result to-day is very different from what it was a year ago. The reason is that the country's demand for notes is a fluctuating one, rising above normal at holiday periods and tending to fall below normal during the early months of the year, when the bulk of the taxes are being collected. While the currency note issue was in being, the brunt of these fluctuations fell upon the currency notes, which expanded or contracted in number accordingly. Now it falls upon the Bank of England's note issue, and as the total issue only varies with the Bank's gold stocks, it falls in particular upon the Banking Department's reserve. Hence, while in the past the reserve depended wholly upon the Bank's gold stocks, to-day it depends jointly upon the Bank's gold stocks and the extent of the country's demand for currency.

An example of this is found in the week before Easter. Then the following changes occurred:—

Bank's gold stocks	+ £907,699
Note circulation	+£7,917,371
Reserve	−£7,009,672

This shows how seasonal demands for currency to-day deplete the Bank's reserve in the same way as a loss of gold. The only difference is that the depletion is of an internal character, and the loss is automatically made good when the special demand for notes is over. Hence it is less permanent and severe than a loss of gold to foreign centres, which is not necessarily made good at an early date or even at all. The important points for the general public to realise are that a depletion of the Bank's reserve at holiday periods need cause no anxiety, but that a permanent growth in the country's demand for currency would have serious reactions.

Turning now to more general monetary history, during most of the past twelve months the Bank of England has had to contend with the flow of money to Wall Street, complicated by cross-currents between various European centres, in their turn largely the aftermath of the completion of the stabilisation of Continental currencies. As matters turned out, several European central banks felt it advisable to add to their gold reserves just at the time when the flow of money to New York was at its height, and this added to the difficulties of the situation. In so far as Germany was concerned, subsequent history has shown that the Reichsbank's gold acquisitions in the autumn of 1928 were more than justified, for April witnessed heavy gold withdrawals, which culminated in the sensational events of the last week of the month. Other central banks, however, have succeeded in retaining their gold acquisitions of last year.

Still, Europe was only a complicating factor, and the main external influence upon London was beyond question New York. In the early days of the past twelve months the Wall Street stock boom had comparatively little effect, for between April 4th and September 5, 1928, despite a net rise in New York call rate from 5 to 7½ per cent., and despite two increases in the New York rediscount rate, the Bank gained £19.4 millions of gold, part of which came from New York itself. Money in London was, on the whole, easy, with the market rate of discount at times down to 4 per cent., or even lower, and at mid-summer the Bank was subjected to severe criticism for not making money more plentiful and for not lowering its rate.

As those in control shrewdly suspected, these summer months were but the calm before the storm, and by the end of the year the position had completely changed. Between September 5th and January 9, 1929, the Bank lost £22.1 million of gold, and by February 6th another £4.6 million had gone. A day later the Bank gave up the struggle, and raised its rate from 4½ to 5½ per cent. The next seven weeks were a time of great anxiety. Some time elapsed before any substantial amount of gold was obtained by the Bank, and for several weeks it was feared that the New York rediscount rate might go up again, and drive London up to 6½ per cent. It was not until after Easter that the situation began to clear and that these fears were dispelled, and the main cause of this was the deliberate action of American banks directed towards excluding foreign money from Wall Street and driving it back home.

This is the history of the past twelve months. It remains to consider the policy the Bank pursued during the critical period. To begin with, the Bank relied mainly on the open-market weapon which it used to carry out a policy of "neutralisation." Thus, from January to September of 1928, it "neutralised" its gold acquisitions of £21.6 million by reducing its earning assets by £17.2 million, while during the autumn it tried to continue its neutralisation policy by adding to its earning assets in proportion to its gold losses. The whole object of the policy was the maintenance of monetary stability at home, and in the summer months at least it had the effect of reducing the Bank's earning assets sufficiently to affect its year's profits. Despite the self-restraint involved by this policy, in the end it broke down, for the Bank found that conditions did not permit of its replacing its earning assets to the full extent justified by its gold losses. Worse still, the open-market weapon itself in the end proved ineffective, and the Bank had to raise its rate.

The period has not been without its lessons, the chief of which is that changes in money rates may have effects very different from the ordinary teaching of monetary theory. Thus, in the late summer, the rise in call rate in New York did not have the effect of damping down speculation, but, on the contrary, simply acted as a magnet to attract money from all over the world and to pour it into Wall Street, where it merely served as fresh fuel to the fire. To come to more recent days, the rise in the Reichsbank's rate was initially taken as a warning that conditions in Germany had become unsound. This view of the situation was hardly justified, but it did not prevent the rise in the German bank rate from being the signal not for an improvement, but for a momentary collapse in the mark exchange. A few weeks earlier, the increase in the Dutch bank rate was not so much a warning to London that foreign rates were rising, as an assurance that Amsterdam was aligning herself with London in her demonstration against New York.

The final lesson is perhaps the most important. It is that when stock prices are rapidly rising, high money rates are only an ineffective deterrent which penalises the innocent without troubling the guilty. The only remedy against rampant speculation is to cut off funds altogether. It is probably true to say that what saved London and brought Wall Street more under control during March and April were the steps taken in New York to prevent foreign funds from gaining any access to Wall Street at all. In short, a new weapon in international finance was tried, which in the peculiar conditions prevailing this year proved effective where open-market policy had failed, and the discount rate weapon was hardly sufficient. Credit restriction and higher rates penalise innocent and guilty alike, except that the innocent trader suffers keenly, and the guilty speculator can often afford to laugh at the restraint. The events of the past year have seen the beginnings of a new technique, which, if maintained and developed, may succeed in rationing the speculator without injuring the trader. If such a new weapon can be forged, and also if international action can be taken towards making better use of the world's limited supplies of gold, the excitements of the past twelve months will not have been in vain.

WALL STREET AND THE BANKS.

(BY A CORRESPONDENT.)

BEFORE January, 1928, the Federal Reserve authorities in America were using their influence in favour of easier credit to help the European exchanges and to try to counteract some slackening in the autumn of 1927 in the rate of industrial activity in the United States. The result of that policy, in the words of Governor W. Harding, of the Boston Federal Reserve Bank, was that "it undeniably served as an encouragement to speculation," which was fostered in turn by the unusually high industrial and business activity in America that in March, 1928, had become a marked industrial expansion. Security prices rose and the general public, attracted to Wall Street by the possibilities of making large paper profits in security speculation, set up a snowball effect on Stock Exchange prices; higher security values attracting more public speculation and this in turn further advancing prices by its added demands for securities. This development is well reflected in the following figures:—

Date.	Security Price Index.*	Total Demand Loans to Brokers.† $ millions.	New Call Money Rate. %	Borrowings at Federal Reserve Banks of Reporting Member Banks. $ millions.
Nov., 1927	131·3	3,134	3·60	276
Dec., 1927	135·5	3,481	4·43	388
Jan., 1928	137·4	3,393	4·15	314
March, 1928	141·1	3,580	4·48	362
July, 1928	147·8	3,768	6·06	854
Sept., 1928	161·6	4,690	7·40	822
March, 1929	196·1	6,210	9·80	740

* As compiled by Standard Statistics Co. for 340 industrials (1926 = 100).
† As reported by New York Stock Exchange.

They show, apart from special year-end and other influences, that security prices were advancing, an increased proportion of securities was being dealt in by the aid of credit in the form of loans to brokers through member banks, and these member banks were in turn increasing their borrowings from the Reserve Banks, chiefly to meet an increase in demand for currency and security sales by the Reserve Banks.

The Reserve authorities consider that their business under the Federal Reserve Act is "effectively to discharge their function of so managing the credit facilities of the Federal Reserve system as to accommodate commerce and business." They decided that too great a proportion of credit facilities was being diverted to Stock Exchange speculation, and accordingly, in July, 1928, started that struggle with Wall Street which has continued since. The policy of cheaper credit was abandoned, discount was raised progressively to 5 per cent. and Government securities sold in the open market. Call money rates in New York were so driven up above those existing elsewhere by these means that funds began to flow into New York from all over the world to take advantage of the high yield obtainable on call loans. Speculation was unchecked and unrepentant. Capital appreciation more than repaid high interest charges to carry stocks, and the Reserve Board found itself, after an attempt to do so, unable to shake the optimism of Wall Street, where from July, 1928, onwards security prices steadily advanced. The higher call money has been forced, the more foreign funds, officially unwanted, have been attracted. The result has been to draw so much credit from other centres that many European countries have been forced to protect their reserves by raising their official discount rates. At first England took practically the whole brunt of this strain from New York, but since the Bank rate increase here on February 7, 1929, other countries have been forced to use the same weapon, and Holland, Italy, Poland, Hungary, Austria and Germany have all increased their discount rates since, while in Canada an unofficial embargo on gold exports exists.

Quite obviously so long as there was a sufficient interest differential caused by high call money rates between New York and other centres, funds would be transferred to New York if there were no restrictions on such procedure. The average rate on new call money loans in New York rose steadily from July, 1928, while in addition demand increased as speculation became greater. Brokers' loans grew, and increasing security prices made more funds necessary to carry the same nominal value of a security. For July 6.06 per cent. was the average call money rate, for August 6.91 per cent., September 7.40 per cent, December 8.86 per cent.

These rates certainly gave a good interest differential, and even by June, 1928, it was estimated in certain quarters that funds transferred to New York from Europe were around £50 million. This would seem at first sight a high figure, as foreign banks did not make a profit immediately there was a disparity in interest rates by transferring funds to New York. Such funds have had to bear a tax of 12 per cent. and a bankers' commission of 5 per cent. on the interest they earned when loaned to brokers, so that at least one-sixth of the rate at which they were employed was swallowed by taxation. Moreover, unless an exchange risk was taken the lending banks had to sell forward dollars against their spot purchases, and differences on these transactions had to be taken into account one way or the other in obtaining the net yield of the full transaction. The first transfers in the early part of 1928 were, however, effected more cheaply since sterling exchange was tending to fall, and so afforded the chance of an increased profit if the first transfer were left uncovered. In addition, banks here placed the funds through the London offices of the New York banks at a fixed charge, and so evaded the tax payment on foreign funds employed directly in New York. Thus, up to June, 1928, there was a considerable attraction in transferring funds, and the figure already mentioned becomes understandable on such an explanation.

In that month, however, the practice of lending in London was somewhat abruptly stopped after protests had been lodged by New York banks not possessing offices here. The cheapness of discounts here in June and July, however, when the rates for prime three-months bills averaged only 3.82 per cent. and 3.99 per cent. respectively against a call money rate in New York of over 6 per cent., made it profitable to leave the funds already transferred in Wall Street and started the second phase of the flight of credit westwards. The very cheapness of discount in London enabled American banks to borrow here by drawing and discounting sterling bills in August and September around 4⅜ per cent., so that even though the loss on the covering forward exchange transaction was substantial, there

was a net balance of profit in so borrowing and lending in call loans in New York at over 6 per cent. A large volume of purely finance bills covered by American Stock Exchange collateral was in consequence negotiated on London, and further substantial transfers of funds thus took place at this time. It is perhaps worth noticing from this point of view, even allowing for the re-transfer of acceptance business to London from New York, that the London clearing banks' statements showed an increase in acceptances of £24,000,000 from June to August, 1928.

At this time the sterling dollar exchange was helped by American purchases of War Loan and Funding Loan, and discounts consequently remained weak and uninfluenced instead of firming up and making American borrowing less profitable, as they did later when exchange fell away in the early part of this year, no longer supported to the same extent by such transactions. Such a method of American borrowing thus probably received some help from New York itself.

During all this time the Reserve Board dallied with the situation and succeeded only in maintaining call money at a high rate, and thus attracting further foreign funds. Although it was thought in September that foreign banks had invested as much as they cared to do in call loans, November saw further transfers from England despite amendments made to the New York Clearing House rules aiming at a curtailment of private lending in Wall Street.

Voluntary transfers in the latter part of 1928 were, so far as can be ascertained, on the small scale, but a third and possibly the final phase of the credit flight westwards was inaugurated. High call money rates caused depreciation of the exchanges in New York, and over £9,000,000 in gold was drawn into New York in January alone this year from this cause. A great part of this came from London, but more recently Germany has also in effect sold gold in New York. The loss of gold, or fear of such loss, has been the proximate cause of European discount rate increases, which in turn have rendered further transfers of funds to New York less profitable, and so checked that flight of credit to New York which was fraught with disadvantage for all nations.

The Reserve Board, moreover, seems to have realised recently that a policy of increasing call money rates to stop speculation is likely to defeat its own ends, and different measures have in consequence been adopted. There was evidence in March this year that pressure was being brought to bear on member banks, while New York banks announced to foreign customers that further loans to brokers would be at the lenders' risk. This has driven foreign funds out of Wall Street, and recent high call money rates have, in fact, been in the nature of famine rates offered for money not there. Furthermore, the Reserve Banks are now believed to insist that for every call money loan made a proportion of acceptances must be bought, thus automatically reducing the amount that can be lent on Wall Street and bringing down the rate on commercial paper. Both these developments have led to the re-transfer of considerable sums to London, and the recent weakness in discounts is in part attributable to the investment demand here of such repatriated sums.

An estimate of the volume of foreign funds lent in Wall Street at the height of the boom puts the figure at one billion dollars, but this is probably considerably too high. It is not possible to break down sufficiently the American statistics to find out how much foreign money has actually gone into brokers' loans in the ways described, but briefly there was an increase in brokers' demand loans in 1928, made by reporting member banks in New York City of 1,800 million dollars. Of this increase 70 per cent. was for account of "others," including foreign customers and non-banking sources. A great part of this latter increase thus represents the European funds attracted by the high call money rates in Wall Street, but it would not be safe to assume that the total increase of around £250 million all represents foreign funds so employed. Some part of the increase in the total of brokers' loans represents the financing of business turnover formerly carried out by commercial paper or bank advances, as Mr Szarvasy recently pointed out, and thus the full increase cannot be considered as an increase to carry securities on credit or as representing a large inflow of funds from foreign banks for this purpose. "Loans for account of others," as the one division of brokers' loans is called, and which includes the sums lent by foreign banks, also includes the cash surpluses of prosperous corporations in America which report large sums in cash, undoubtedly to a considerable extent lent on call.

Recently, except at month ends and on other special occasions, call money rates in New York have not offered sufficient attraction for foreign funds, and the position seemed to be that those employed there were being repatriated as they fell due. In this connection it is interesting to compare the estimate already mentioned with the statement by Mr Lamont, Secretary of the Department of Commerce, that a recent survey revealed that only 207 million dollars foreign funds were now utilised in brokers' loans in the United States. This seems to show that the first estimate was unduly high, and that probably there was a fair repatriation of funds from Wall Street during April. This month the tendency has been less decided.

THE AMALGAMATION MOVEMENT IN AMERICAN BANKING.

(BY OUR NEW YORK CORRESPONDENT.)

AMERICAN banks have reached the two thousand million dollar class for the first time this year, an event which has meant the passing of another financial milestone, while the new institutions created by recent mergers in New York have broken into the exclusive ranks of the big five banks of London. In order of total resources, the leading banks of the two countries stand now as follows:—Midland, Lloyds, the National City Bank, Guaranty Trust Company, Barclays, Westminster, National Provincial, and Chase National Bank.

The National City Bank of New York has long been the largest in capitalisation. For a few days this year it was surpassed in resources by the Guaranty Trust Company following the latter's merger with the National Bank of Commerce, but with the acquisition of the Farmers' Loan and Trust Company the National City jumped back into the lead of American banks.

The accompanying table indicates the capital, deposits, and total resources of the principal English and American banks according to their published statements of December 31st, and after giving effect to the National City and Guaranty Trust mergers:—

(Dollars converted into pounds sterling at $4·87.)

Bank.	Capital.	Deposits.	Resources.*
	£	£	£
Midland	13,432,868	394,591,227	497,714,034
Lloyds	15,810,552	352,161,963	439,790,378
National City Bank of New York	22,587,268	316,284,763	430,928,900
Guaranty Trust Co. of New York	14,373,716	303,586,529	408,937,124
Barclays	15,858,217	335,081,222	386,063,756
Westminster	9,320,157	294,086,580	340,508,305
National Provincial	9,479,416	290,310,253	329,698,671
Chase National Bank of New York	12,320,328	231,372,001	293,697,790

* Includes customers' liability for acceptances, etc.

The growth of American banks through mergers is the natural response to the demands of growing industry and increasing personal wealth. Because loans that may be made to any single borrower are restricted by law to 10 per cent. of the bank's capital, surplus and undivided profits, the capitalisation must grow to meet the requirement for higher commercial loans. And because of the rapid expansion of the trust department of banking, large-scale organisation and the wise guidance that can be commanded by large institutions have been sought in many bank consolidations.

The union of a national bank with a trust company has been the most common marriage recently. Therein lies a threat against the integrity of the Federal Reserve Bank system, for the tendency has been towards the preservation of the trust company's charter and the abandonment of the national bank's charter. Membership in the Reserve system is compulsory for the national bank but optional for State banks. There has been no sign yet of the withdrawal of trust companies from the Reserve system, but in any crisis or even in a period of mild dissatisfaction with Reserve Bank policies there is the danger that withdrawals may occur, weakening the power of the organisation that was created to unify and stabilise American finance.

The merger movement in New York has been gathering momentum for many years. In the first quarter of this century, in fact, more than seventy-five banks were gathered up into twenty units that are being still further reduced in number and enlarged in size. The principal unifications this year have been the National City Bank with the Farmers' Loan and Trust; the Guaranty Trust with the National Bank of Commerce; the Hanover National Bank with the Central Union Trust Company; the Chase National Bank with the American Express Company; the Bank of America N.A. with Blair and Company, Inc.; and the Chemical National with the United States Trust.

The Blair acquisition by the Bank of America marked a new departure. It was the absorption of one of the oldest and largest security underwriting and distributing organisations by a commercial bank. It is likely that similar mergers will be made between other security dealers and banks as a defensive move against the increasing strength of security company affiliates of powerful banks. Two years ago there were only four major securities corporations belonging to New York banks, but their number has increased and their influence has been felt by many of the independents. There is, of course, some question as to the wisdom or even the ethics of combining a trust company with an organisation devoted to the underwriting of new securities. A few of the trust companies have avowed their intention never to submit to such an affiliation.

The ultimate object in the consolidation movement is larger banking profits. Larger resources accommodate larger customer demands, with the economies that are expected to go hand in hand with mass production, whether of automobiles or credit facilities. The truly economic merger, an ideal rarely met, avoids duplication of facilities, permits expansion and development of good accounts, adds new services, and provides greater diversification of executive control.

No matter how large American banks may grow in dollars, it is unlikely that they will ever attain the power of the great English banks. For one thing, chain banking in the United States is hampered at present by the difficulty in crossing State boundaries, and in addition a few experiments in the linking of scattered banks under single ownership have not proved fortunate. But aside from the legal and business difficulties, bankers have a genuine respect for public opinion which would cry out against a "money trust" if the nationalisation of a powerful institution were to be attempted. The field for growth is in the extension of branch banking within a community and the centralisation of direction of individual banks. Along these lines it will not be surprising to see the expansion of several more financial organisations within a very few years into the two thousand million dollar group.

GERMAN BANKING DURING THE PAST YEAR.

(BY A CORRESPONDENT.)

THE year 1928 was for the German banks, as far at least as domestic developments were concerned, comparatively free from sensational happenings. It was, however, by no means devoid of interest. While trading activity considered over the whole year was on a slightly higher level than in 1927, witness the higher yield of the turnover tax, as the year progressed a decline in the volume of business became evident, showing itself mainly in continually falling statistics of production. This tendency was not reflected in the figures of the banks. Creditors (mainly time and demand deposits) increased steadily, the total on December 31st for the six principal banks (representing three-fourths of the private banking strength of the country) being 28 per cent. higher than at the end of the previous year. Turnover, while not increasing proportionately with deposits, showed nevertheless an average rise of 16 per cent., and in the case of some individual banks, notably the Darmstädter und Nationalbank with 30 per cent., the rise was considerably greater. Although towards the end of the year the money market became somewhat easier, probably as a result of the release of funds owing to the declining activity of business, it is evident that in Germany to-day the demand for credit is always largely in excess of the supply. There is thus constant pressure to take up the slack, as it were, and this explains why apparently no diminution of the volume of outstanding bank credit ever takes place without sharply restrictive measures.

The continued demand for credit could only be supplied by extensive recourse to the foreign money markets, and, in fact, the developments in this respect were the most interesting features of the banking year. There has been some discussion regarding the advisability of allowing short-term credits from abroad to flow into the country through the agency of the banks. The latter decided, however, that even if they were to refrain from accepting foreign deposits to a large extent, foreigners wishing to take advantage of the interest rates in Germany would find other and less satisfactory methods of doing so, so that harm rather than good would result. During the year the banks' liabilities towards foreigners increased very largely. It is, in fact, probable that the greater part, if not the whole, of the rise in deposits is to be attributed to foreign credits in one form or another. Early in the year a large part of the inflowing funds came from the United States, but when in the summer the well-known developments on the American markets supervened and withdrawals took place, London, Paris and Brussels stepped in to fill the gap. The net result was, according to the *Frankfurter Zeitung*, an increase in the proportion of foreign creditors to total creditors for the principal banks from 35 per cent. at the end of 1927 to 43 per cent. on December 31, 1928. During the same time the funds held by Americans probably declined both absolutely and relatively, while those held by European centres, particularly by the newcomers to this field, France and Belgium, increased very largely.

The dangers inherent in this position were fully realised. They have, indeed, manifested themselves somewhat unpleasantly in the developments of the last few weeks, which will be referred to in a later paragraph. The banks, however, have been exceedingly cautious in building up a reserve position sufficient to protect themselves, independently of recourse to the Reichsbank, against heavy withdrawals from abroad. In view of the international situation, it is obvious that an international run on the banks is far more probable than any domestic difficulties of the kind, and the banks have made their preparations accordingly. In the published balance sheets, which are analysed in the second of the annexed tables, no distinction is made between domestic and foreign

assets, but references in the annual reports enable an approximate idea of the position in this respect to be gained. The first line of reserve against foreign liabilities consists of demand deposits with first-class foreign banks entered under the item "Balances with banks." Probably over 80 per cent. of this item, or approximately one milliard marks, consists of deposits of this kind. The utility of this reserve is, of course, enhanced by the fact that it is available on demand, while foreign liabilities are mainly fixed-time deposits and acceptance credits falling due on definite dates. The second line of reserve is formed by considerable holdings of sterling and dollar bills. Although no indication of their amount is given by the banks, it is a matter of common knowledge that these holdings are very considerable, though they may vary somewhat according to the prevailing market rates. Another important reserve item is formed by the advances against goods, which are mainly in foreign currencies and secured on readily saleable merchandise. It is probable that the holdings under these three heads together amount to some 60 or 70 per cent. of the total liabilities in foreign currencies. The remainder is mainly, probably entirely, covered by other assets in foreign currencies of a less liquid nature, since, as a matter of principle, most banks only relend foreign currency deposits in the same currency. While, of course, in the event of a currency crisis debtors might have difficulty in obtaining the necessary foreign exchange to meet their liabilities, the first and second line reserves would be sufficient to give the banks a considerable breathing space, and, in fact, there seems little doubt that they would be able to cope with any conceivable situation.

There were some interesting changes in the distribution of assets during the year. Discounts and Treasury bills rose by 35 per cent. Advances against goods rose by nearly 80 per cent., this being due not so much to any increase of trade as to a more extensive employment of foreign acceptances for financing internal trade. This is, in fact, an important development of German banking practice. Foreign acceptance houses place acceptance lines at the disposal of German banks for very low commissions. The German banks pass these lines on to their customers, who draw on the acceptance house, the bills being then discounted in the markets concerned. Since the cost of financing by this method is considerably less than by using the German acceptance market, this method has become more and more popular. The item on the assets side corresponding to these credits is the "Advances against goods," while on the liabilities side they are entered under the general heading of "Creditors." Debtors rose by some 15½ per cent., but as this was not proportionate to the total increase in resources, liquidity improved. The method employed by banks in Germany to calculate their liquidity deserves attention. This may be seen from the annexed Table No. II. Cash, deposits with banks, discounts and Treasury bills are reckoned as first-class liquid assets, and their proportion to liabilities remained unchanged at 40 per cent. during the year. Collateral stock advances, advances against goods and quoted securities are looked on as second-class liquid assets. It will be seen that the proportion of first and second-class liquid assets to liabilities rose to some 62 per cent., a rise of over 3 per cent. since December 31, 1927. This compares favourably with the proportion customary in other countries.

Table No. 1 gives the combined results of the principal banks for the year. Gross profits remained almost unchanged in spite of the increase in turnover. This was mainly due to the reduction in the margin between debit and credit rates of interest and a fall in profits on securities, syndicate holdings and permanent investments. Expenses of management and taxes rose slightly, and net profits were also somewhat higher. Dividends remained unchanged in each case. The Darmstädter und Nationalbank, by making a reserve appropriation of 5 million marks, brought its reserves on a level with its capital—at 60 millions each. The Deutsche Bank and the Handelsgesellschaft also made considerable appropriations to reserve out of refunds by the American Alien Property Custodian. The most important fusion to take place was that of the Commerz-und Privatbank with the Mitteldeutsche Kreditbank, the culminating point of a period of expansion by the Commerz-und Privatbank which has placed it nearly on a level with the four D-Banks.

Before concluding, the developments since the New Year deserve attention. The main feature from the banking point of view was that foreign funds ceased to flow in on balance. This was due mainly to the reduction in the margin between German and foreign interest rates. On January 11th the Reichsbank discount was lowered to 6½ per cent. At the same time, higher rates prevailed in London and New York. During January and February the German banks, on their own initiative, allowed a part of their time deposits to run off, since the interest demand was, after the easing of the German money market, too high to permit profitable employment of the funds. In March, however, foreign bankers, mainly in European centres, began to withdraw funds largely in connection with the high rates in New York. This continued in April. In the meantime, the Reichsbank had suffered heavy losses of gold and foreign currencies, and had been obliged to raise the discount rate to 7½ per cent. These losses were due mainly to the deficit on the balance of payments and to Reparations transfers; the withdrawals of foreign credits from the banks played but a small part, particularly as they were to some extent met out of the banks own reserves. The attacks by the Paris Press on the German discount policy and the apparent deadlock reached by the Reparations Conference resulted in still heavier withdrawals, mainly by French and Belgian banks. Taken in conjunction with a certain nervousness on the part of some German circles, leading to conversions of marks into dollars, this produced a serious position on the foreign exchange market. The situation was immediately brought under control and confidence restored by the combined action of the banks and the Reichsbank, the great value of the independent exchange reserves of the banks being immediately apparent. In spite of the successful handling of the position, the action of French and Belgian banks has given food for thought, particularly as at the same time the French Press was blaming German manœuvres for the situation French banks had largely created. These events show the inherent difficulties of a banking and business situation so dependent upon sensitive international factors. The Darmstädter und Nationalbank, indeed, pointed out in its annual report that the trade depression might bring compensating advantages by enabling Germany to rely more upon her own resources. Nevertheless the stability of the currency has been proved once again, and the banks have shown conclusively that there are no grounds for timidity regarding the safety of foreign deposits.

TABLE I.

Combined Table of Earnings and Distribution of Profits for Deutsche Bank, Disconto-Gesellsch., Dresdner Bank, Darmstädter-u. Nat. Bank, Commerz- u. Privat Bank, Berliner Handelsgesellschaft in 1928:—

	In Mill. RM.	As % of 1927 Figures.
Turnover in milliards	981·87	116·26
Profits on securities, syndicate investments and permanent holdings	22·02	68·93
Profit on commissions	231·13	101·48
Profit on interest, &c.	194·80	107·10
Net profit without carry-forward	447·95	101·43
Management expenses	316·65	101·65
Taxes	52·08	105·28
Total taxes and expenses	368·73	102·15
Net profit	87·97	102·30
Dividends	54·94	100·00

TABLE II.

Combined table of the balance sheets of the above banks:—

LIABILITIES.	In Mill. RM.	As % of 1927 Figures.

Premises	182·39	100·45
Guarantees	503·59	119·00

THE BANK BALANCE SHEETS.

THE general monetary history of the past twelve months has already been discussed, but as it is concerned primarily with the Bank of England and the London money market, it is advisable to supplement it with a more detailed consideration of the experience of the joint-stock banks. The tables given later on perforce only refer to the end of 1927 and 1928, for more recent figures, of course, are only available in the form of the clearing banks' monthly averages. Taking these last, and comparing March with March, the following results for the nine English clearing banks emerge:—

	March, 1928. £ million	March, 1929. £ million	Difference. £ million
Deposits	1,672·6	1,739·3	+66·7
Acceptances	156·5	222·1	+65·6
Cash	238·8	239·5	+ 0·7
Call money	145·6	131·3	−14·3
Bills	195·5	214·3	+18·8
Investments	259·5	268·9	+ 9·4
Advances	928·8	980·3	+51·5

In interpreting these results, it must be remembered that March is the last month of the Exchequer year, and that owing to the completion of revenue collection, deposits and bills are both at a seasonal minimum. This, of course, does not vitiate the comparison shown in the last column of the tables.

The first lesson to be drawn from this table is that the clearing banks have merited a great tribute from the nation for increasing the supply of credit granted by them to their customers during a year when their own supplies of cash remained virtually unchanged. Call money is slightly down on the year, but the market knows that it is in the position of a buffer-state, and that it can only have what is left after other demands have been satisfied. On the other hand, the increase of £66.7 million in deposits shows that the

NINETY-SECOND YEAR OF PROGRESS

1836		1928
£10,851	TOTAL INCOME	£12,892,792
£65,602	TOTAL FUNDS	£23,141,526

country's supply of money has kept pace with the growth in trade, while the corresponding rise of £51.5 million in advances suggests that the banks have played their part in fostering an improvement in trade. The growth of £18.8 million in bills also appears hopeful, though it may be in part due to the fact that there were more Treasury bills outstanding last March than in the previous year. Finally comes the increase of £9.4 million in investments. This may represent acquisitions of new Government stock, but it may equally reflect purchases from the general public, who have used the money so obtained for more directly productive purposes. In any case, the clearing banks have beyond question done well by the country.

The comparison for British banks as a whole can, as stated, only cover the calendar year of 1928. To take capital first, the English joint stock banks have increased their capital by £1,270,492. Part of this increase arises from Martin's absorption of the Lancashire and Yorkshire Bank, while £767,000 was due to the Midland Bank's new issue to shareholders and staff. The increase in reserves calls for no additional comment, in view of the traditional practice of British banks of equating their published reserves to their paid-up capital. The Scottish figures also call for little comment, and the contrary movements in the Irish figures are largely explained by the changes made in the balance sheet of the Ulster Bank.

CAPITAL and RESERVES.

		1927.	1928.	
		£	£	
English joint-stock	Capital	76,443,600	77,714,092	+1,270,492
	Reserves	63,000,200	63,802,413	+ 802,213
English private (Capital and Reserves)		2,775,000	3,300,000	+ 525,000
Scottish	Capital	11,409,500	11,491,000	+ 81,500
	Reserves	13,755,700	14,393,288	+ 637,588
Northern Irish	Capital	1,800,000	2,200,000	+ 400,000
	Reserves	2,600,000	2,300,000	− 300,000
		171,784,000	175,200,793	+3,416,793

The increase in deposits corresponds fairly closely with those of the clearing banks for the year ended last March, and the differences are not great enough to call for any further notice.

CURRENT and DEPOSIT ACCOUNTS.

	1927.	% of Liabilities.	1928.	% of Liabilities.	Inc. or Dec.	
	£		£			%
English joint-stock	1,892,948,300	86·8	1,951,477,697	83·5	+58,529,397	+3·5
Private	30,366,800	78·5	31,004,479	77·2	+ 637,679	+2 1
Scottish	241,965,600	81·1	248,800,247	81·0	+ 6,834,647	+2·8
Northern Irish	49,341 500	82·4	49,649,399	82·5	+ 307,899	+0·6
	2,214,622,200	86·0	2,280,931,822	83·0	+66,309.622	+2·9

The next table shows the cash holdings and call money of the banks of Great Britain and Northern Ireland. The most striking feature of the year was the increase of 12.7 per cent. in the cash held by private banks.

CASH in HAND and at BANK of ENGLAND, and MONEY at CALL and SHORT NOTICE.

	1927.	% of Assets.	1928.	% of Assets.	Inc. or Dec.	
	£		£			%
English joint-stock banks	492,652,300	22·6	493,841,201	21·1	+1,188,901	+ 0·2
Private banks	3,613,600	9·3	4,072,927	9·8	+ 459,327	+12·7
Scottish banks	61,223,800	20·5	63,322,077	20·5	+2,098,277	+ 3·4
Northern Irish banks	7,657,900	12·8	7,306,211	12·1	− 351,689	− 4·6
	565,147,600	22·0	568,542,416	20·7	+3,394,816	+ 4·6

Most of the banks distinguish cash in hand and at the Bank of England from money at call and short notice, and as far as is possible the distinction is made in the following table:—

ENGLISH BANKS (EXCLUDING BANK OF ENGLAND).

Year, December 31.	(1) Total Cash in Hand and Money at Call and Notice.	Cash in Hand and Money at Call where Shown Separately. (2) Together.	Per Cent. of (1).	(3) Cash in Hand and at Bank of England.	Per Cent. of (2).	(4) Cash at Call and Short Notice.	Per Cent. of (2).
	£	£		£		£	
1908	194,134,000	172,774,600	89·2	91,740,600	53·1	81,034,000	46·9
1913	235,957,800	212,752,100	90·5	115,489,600	54·4	97,262,500	45·6
1914	276,045,900	250,722,700	90·8	169,520,500	67·5	81,202,200	32·5
1915	262,453,200	247,313,700	94·2	178,919,500	72·4	68,394,200	27·6
1916	369,459,900	343,429,600	93·0	247,973,500	72·2	95,456,100	27·8
1917	427,855,200	404,036,700	94·1	238,500,400	59·0	165,536,300	41·0
1918	481,220,000	464,701,200	94·5	270,135,700	59·4	184,565,500	40·6
1919	452,755,400	429,569,100	94·8	320,194,400	74·7	109,374,700	25·3
1920	449,153,400	428,678,800	95·6	304,510,400	71·0	124,168,400	29·0
1921	438,519,100	413,735,100	94·1	304,341,300	73·4	109,393,800	26·6
1922	423,091,700	402,081,300	95·0	289,023,000	71·9	113,058,300	28·1
1923	413,531,700	395,651,000	95·5	293,555,400	73·2	106,095,600	26·8
1924	437,889,000	418,775,100	95·6	298,777,300	71·4	119,997,800	28·6
1925	441,787,400	419,335,397	94·9	291,512,412	69·5	127,822,985	30·5
1926	444,014,400	422,955,570	95·2	294,221,862	69·6	128,733,708	30·4
1927	492,652,373	471,351,662	95·7	305,169,423	64·7	166,182,239	35·3
1928	493,841,201	474,508,373	96·0	289,492,870	61·0	185,016,507	39·0

Comparing 1928 with previous years, the English banks were rather more generous to the market than they have been since the war, the percentage of call money having risen to 39 per cent. The interesting point, however, for 1928 is the extent to which the aggregate of bankers' deposits now shown in the Bank of England's return enables an idea to be formed as to the composition of bank cash on the one hand and as to the number of notes in the hands of the public on the other hand. The cash holdings of the English banks which show them separately, amounted, on December 31st, to £289 million. To allow for the few banks who do not show cash separately, the cash holdings of English banks should be raised to £303 million. Add, say, £45 million for Scotch and Irish banks, and the total of British bank "cash" becomes £348 million. Now the Bank return best related to December 31, 1928, was that for January 2, 1929, though owing to the practice of window-dressing for the end of the year, and then releasing surplus cash at once, the relation is a very loose one. Still, on January 2nd, the Bank returned a note circulation of £378 million, and bankers' deposits of £84 million. These figures suggest that the banks' holdings of notes and subsidiary coinage were around £250 million, and that the distribution of the note issue between the banks and the public was something in the ratio of £3 held in the tills of the banks to £2 held in the note cases of the public. More than this cannot be deduced until the banks think fit to divide their cash holdings into the three items of "coin," "notes" and "balance at the Bank of England."

Coming to the chief earning assets of the banks, investments for the whole country show an insignificant decline of £2,379,000. The English banks have added to their investments, but this is more than offset by the decline in those held by the Scottish banks.

INVESTMENTS.

	1927.	% of Assets.	1928.	% of Assets.	Increase or Decrease.	
	£		£		£	%
English joint-stock banks	290,544,200	13·3	293,156,061	12·5	+ 2,611,861	− 0·9
Private banks	6,417,700	16·6	5,820,754	13·9	− 596,946	− 9·1
Scottish banks	86,592,300	29·7	83,378,785	27·1	− 5,213,515	− 5·8
Northern Irish banks	18,818,900	31·4	19,638,930	32·6	+ 820,030	+ 4·4
	404,373,100	15·7	401,994,530	14·6	− 2,378,570	− 0·6

Discounts and advances show a satisfactory expansion in England and Scotland alike. It is unfortunately impossible to distinguish discounts from advances for the whole country, but the subsidiary table for the English joint-stock banks shows that the increase is fairly well spread.

DISCOUNTS and ADVANCES.

	1927.	% of Assets.	1928.	% of Assets.	Increase or Decrease.	
	£		£		£	%
English joint-stock banks	1,220,983,100	56·0	1,268,803,457	54·2	+ 47,820,357	+3·9
Private banks	22,912,500	59·2	24,169,112	57·7	+ 1,256,612	+5·5
Scottish banks	138,745,800	46·5	149,622,489	48·6	+ 10,876,689	+7·8
Northern Irish banks	32,813,700	54·8	32,653,916	54·2	− 159,784	−0·5
	1,415,455,100	55·0	1,475,248,974	53·6	+ 59,793,874	+4 2

The English joint-stock banks, however, do make the distinction, and the result is shown below:—

ENGLISH JOINT-STOCK BANKS.

	1927.	1928.	Increase or Decrease.
	£	£	£
Discounts	237,376,400	259,250,704	+ 21,874,304
Advances	983,606,700	1,009,552,753	+ 25,946,053
Total	1,220,983,100	1,268,803,457	+ 47,820,357

Lloyds Bank goes further and divides its bill portfolio into three main classes. At the end of December last, its holding of Treasury bills was £40.6 million, an increase on the year of £5.2 million; of British bills, £10.3, an increase of £0.9 million, and of foreign bills, £1.2 million, or a decrease of £3.2 million. Treasury bills, therefore, more than account for the net increase of £2.9 million in bills of all kinds, which confirms a previous passage in this review relative to the growth in the bill portfolios of the nine English clearing banks. At the same time, Lloyds bank may not at that time have had a typical bill portfolio, and in this connection Mr Tennant's remarks at last January's Westminster Bank meeting may be recalled. He said: "We do not separate our Treasury bills, for the simple reason that it is a mere matter of chance how many we happen to hold at a particular date." This argument directs attention to the need of interpreting changes with care.

Last year, Lloyds Bank meeting was the occasion for some revelations as to the composition of bankers' advances, and this year both Mr Beaumont Pease, at Lloyds Bank, and Mr McKenna, at the Midland Bank, gave copious details. Space precludes the reproduction of these, which will be found in our issues of February 2nd and 9th, but Mr McKenna succeeded fairly in proving that the claims of trade and industry received adequate attention, and that last year's activity on the stock exchange had not diverted an undue amount of credit from commerce.

We conclude with a table giving the aggregate liabilities and assets of the banks of the United Kingdom, excluding the Bank of England, whose figures are summarised elsewhere.

LIABILITIES.—(000's omitted.)

	1926.	1927.	1928.	Inc. or Dec.
	£	£	£	£
Capital and reserves	170,170	171,784	175,201	+ 3,417
Undivided profits	8,728	8,499	8,786	+ 287
Deposits	2,167,566	2,214,622	2,280,942	+ 66,320
Acceptances	118,488	150,586	244,233	+ 93,647
Notes, drafts, &c.	28,486	30,884	28,625	− 2,259
	2,493,438	2,576,375	2,737,787	+ 161,412

ASSETS.—(000's omitted).

	1926.	1927.	1928.	Inc. or Dec.
	£	£	£	£
Cash in hand and money at call and notice	513,625	565,148	568,542	+ 3,394
Investments	422,482	404,373	401,994	− 2,379
Discounts and advances	1,399,515	1,415,455	1,475,249	+ 59,794
Premises and cover for acceptances	157,816	191,399	293,857	+ 102,455
	2,493,438	2,576,375	2,739,642	+ 163,267

The most striking increase of all is that in acceptances, which reflects the return of this class of business from New York to London, consequent upon the lower rates ruling here last autumn. Banking practice in the compilation of these items, however, is not uniform, and so it is hardly safe to interpret that increase at its full face value.

BANKING PROFITS.

BANKING profits are among the most stable phenomena of the universe, and the experience of the great British institutions in 1928 proved no exception to the general rule. The tables given in another column show that the English, Scottish and Irish banks all reported a slight increase in aggregate net earnings, though the variation, as compared with the figures for 1927, was no more than 3.3 per cent., 2.2 per cent., and 4.3 per cent. in the three cases respectively. The English banks thus recovered the greater part of the slight falling-off in earnings recorded in 1927, while the figures of the Irish banks were the highest since 1923, and of the Scottish the highest for any year shown in our table. General working conditions were rather more favourable to the banks than in 1927. Short-loan rates in the money market were slightly lower, but the margin between this rate and that paid by the banks on their deposits was £1 2s. 6d., as against £1 2s. The margin between deposit rate and market rate, however, was the lowest for six years, as the following tables show:—

	Average Bank Rate.	Average Market Rate (3 months)	Average Short Loan Rate.	Average Deposit Rate.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1914	4 0 9	2 17 7	2 4 3	2 2 4
1918	5 0 0	3 11 9	3 5 6	3 1 3
1919	5 3 0	3 18 10	3 9 7	3 3 10
1920	6 14 4	6 7 11	5 3 7	4 14 4
1921	6 2 4	5 4 3	4 12 8	4 2 4

1926	0 9 9	1 10 3	1 1 1
1927	0 8 2	1 11 10	1 2·0
1928	0 7 0	1 3 0	1 2 6

It would seem that the possibility of a return to a narrower margin than 2 per cent. between bank rate and deposit rate is not seriously entertained by any of the English institutions. The depression of the "heavy" trades had doubtless an adverse influence on bank earnings last year, but the figures published each month by the London Clearing Banks showed a considerable, and fairly consistent, rise in such "profitable" items as deposits, advances and discounts. The large amount of business accruing, directly and indirectly, as a result of the activity of the Stock Exchange, should have brought in additional revenue, and no allocations are likely to have been necessary, at the time the annual accounts were drawn up, for depreciation of security values.

The following tables show the aggregate net profits and appropriations of the three geographical groups of banks in each year since 1908:—

ENGLISH.

* Three banks of Northern Ireland.

Dividend policy last year was, as usual, conservative, the banks appropriately setting the example to all other British companies in this respect. The English 74¼ per cent. of last year's profits, the Scottish banks no more than 59½ per cent., and the Irish 59 per cent., the corresponding ratios for 1927 being 74, 63 and 50 per cent. respectively.

Differences may, however, be discerned between the policies of different institutions. Among the "Big Five" English banks, for instance, Barclays distributed 72½ per cent. of the net earnings of 1928, Lloyds 78 per cent., the Midland 72½ per cent., the National Provincial 81 per cent., and the Westminster 63 per cent. Changes in the rate of dividend were again few and far between. The Bank of Scotland raised its rate by a further 1 per cent. to 18 per cent., while the Royal Bank of Scotland paid 18 per cent. against a

"regular" 16 per cent., the additional 5 per cent. (making 21 per cent.) paid a year ago being a special bicentenary bonus from sums set aside, but no longer required, for depreciation on investments. The District Bank celebrated its centenary this year by issuing a bonus of one fully-paid £1 share, carrying a maximum dividend of 10 per cent., for every two existing shares. The figures for the individual banks, set out on page 12, suggest, finally, that the continuous process of annual enhancement of reserves, "visible" and "internal," was fully maintained in respect of the year 1928.

BRITISH BANK SHARES.

THERE would be little to say about the Stock Exchange values of bank shares during the last twelve months had it not been for the rise in Bank rate on February 7th. British bank shares are essentially of an investment character, and make slight appeal to the speculator. In practice, the investor takes the stability of the bank for granted, even though he discriminates between fully-paid shares and those on which there is an uncalled liability. He expects of the bank directors that they will see to profits being maintained at a stable level, and in general he expects dividends, in the case of the "Big Five," at any rate, to remain largely unchanged. His real reason for buying the shares is that they offer him a security that is virtually "gilt-edged" nowadays, and a yield round about ¼ per cent. higher than that of British Government stocks. That relation to Government stocks is a permanent one; the two can be classed together in examining the effect of an alteration in money rates. A rise in Bank rate does not lessen the security of either Government or bank issues, but it does permit of money being employed with comparable safety in other and more profitable directions. For a time, consequently, sellers predominate over buyers, and prices fall. As an influence on Stock Exchange quotations, this is far more important than the likelihood that with dearer money it will be easier for banks to make their profits. Figures compiled by the "Banker's Magazine" show that the market value of 13 typical British bank shares, with a par value of £59,685,000, decreased from £194,983,000 in the middle of April, 1928, to £194,976,000 at a similar date in April, 1929—a negligible difference, but important when compared with a rise of 2 per cent. in the previous twelve months. Just before the change in Bank rate their value was over £202,000,000. What our own computations bring out is that a distinct fall occurred in English bank shares over the year, whereas those of Scottish banks appreciated on balance actually more than in 1927-28. Our index figures represent the price of £100 of stock or shares, taking the average of ten English and five Scottish banks:—

At April 30.	Average Price of Bank Shares. English.	% of 1909.	Scottish.	% of 1909.	Price of Consols.	% of 1909.
1909	322	100	364	100	85	100
1910	316	98	369	101	81½	96
1911	315	98	359	99	81½	96
1912	299	93	354	97	78½	92
1913	296	92	343	94	74⅝	88
1914	307	95	336	92	75	88

1916	239	74	235	65	58	68
1917	241	75	237	65	55	65
1918	257	79	256	70	55½	65
1919	311	97	289	79	55½	65
1920	282	88	269	74	47	55
1921	229	71	211	58	47½	56
1922	280	87	240	66	59	69
1923	297	92	258	71	59½	70
1924	299	93	286	79	55	65
1925	305	95	323	88	57	67
1926	308	96	322	88	55	65
1927	302	94	321	88	55	65
1928	321	100	335	92	56½	66
1929	319	99	352	97	55	65

The explanation of these contrasting movements is made clear by the following tables, which show separately, for the principal English and Scottish institutions, the rates of dividend paid during the last two years, together with share prices and yields at the end of April, 1928 and 1929, respectively. Since the former date the Westminster has split its £20 shares, £5 paid, into four £5 shares, £1 paid, and their readier marketability in the new form has brought their yield nearer to that of the £1 fully-paid shares. The District celebrated its centenary by issuing, as a bonus, one new fully-paid £1 "B" share, with limited dividend rights, for every two existing shares; the latter were then each split into three so as to become £5 shares, £1 paid.

(t) Includes 5% special bicentenary bonus. Yield worked on 16% basis.

The chief reason of the rise in the Scottish index number is now seen to be the increased dividends declared by the Bank of Scotland and the Royal Bank of Scotland (if the bicentenary bonus distributed by the latter in respect of 1927 is ignored).

Our final table sets out the prices, dividends and yields of a number of fully-paid shares of small denominations, and has interest as showing, by comparison of yields with those in the tables above, the way in which the feeling against investment in partly-paid shares still exists. The Commercial Bank of Scotland is not a genuine exception, for though in the table the fully-paid shares have the appearance this year of being the cheaper of the two classes, the dividend on them is limited to a maximum of 10 per cent., the rate which is at present being paid, whereas the £20 shares, to which all surplus profits belong, were split on May 7, 1929, into 5 £4 shares, £1 paid, with a maximum liability for calling of an additional £1 8s., while new £4 shares, £1 paid, ranking *pari passu* in all respects, are being offered at 30s. premium to holders of these £4 shares, as split, in the proportion of two for five.

BANK OF ENGLAND.

The Bank of England received its first charter in 1694. Its capital is now £14,553,000, in fully-paid stock, which is a "trustee" security. For each year from 1904 to 1913 the dividend was 9 per cent., free of income tax. From 1914 to 1921 it was 10 per cent., less tax, for 1921-22 11½ per cent., and since then 12 per cent. The price of the stock on April 30, 1929, was 252, giving a yield of £4 15s. 3d. per cent. The authorised note issue against securities is now £260,000,000, this being the amount laid down by the Currency and Bank Notes Act of 1928. The Government Debt of £11,015,100 forms part of the security. All notes issued in excess of this amount must be covered by an equal amount of gold, unless the Bank obtains authority in accordance with the procedure laid down in the Currency and Bank Notes Act, 1928, to exceed this limit.

THE LONDON & LANCASHIRE INSURANCE Co LTD

Security - £13,606,358.

Chief Administration: 7, CHANCERY LANE, W.C.2.

GOVERNOR: F. W. PASCOE RUTTER.

ToEMPLOYERS

A word about

Group Insurance

GROUP Insurance will give your employees insurance at wholesale rates.

For about 1 per cent. of the annual wages bill, all your employees can be insured for a full year's salary and other benefits. This takes the place of charitable disbursements or gratuities to widows and other dependants, and makes your liability constant and readily determined.

The proved effect of Group Insurance has been to establish a new bond between an employer and his workers. It is a generous response to modern demands, and a copy of the new booklet showing the direct use of Group Insurance to every large employer will be posted on request.

* Year ended 31 March.

IS YOUR INCOME SAFE?

Dividends have a habit of crumbling. No matter how carefully you arrange your investments, you can never be sure that next year will not find you worse off than you are to-day. Can you afford to take the risk?

You can get a guaranteed income for life if you purchase a Canada Life Annuity. It is, humanly speaking, equivalent in safety to a Government pension. It cannot shrink. What you contract to get is paid you punctually, And you get a much larger income.

FOR INSTANCE—

A man of 62 who takes out a Canada Life Annuity for £1,000 gets a yearly income of £100 16s. 2d. A woman of 67 gets a yearly income of £102 0s. 10d. for the same investment.

OVER 10% PER ANNUM

Other ages pro rata, on equally generous terms. You can invest any amount from £100.

The Assets of the Canada Life Company are £33,000,000 and are under direct Government supervision. The Company also issues very attractive Life and Endowment Policies, full particulars of which will be sent on application. Write at once to the Canada Life—the oldest Dominion Life Office, and the office that gives the best value for Annuities.

Write to-night (stating age) to J. R. Wandless, F.I.A.

CANADA LIFE ASSURANCE Co.

Assets £33,000,000

(Established 1847.)

2 St. James's Square, LONDON, S.W.1.

(E.)

STATE BANK OF THE U.S.S.R.

Created by Decree of the Soviet Government of October 12th, 1921.

	Chervonetz.

Receive £1,000 more than you pay!

A whole-life Policy for £1,000, with profits, at age 30 next Birthday, premiums ceasing at age 65,

will cost annually 25 16 4
less rebate of Income Tax at 2/- in the £ 2 11 7
Net Cost £23 4 9

Assuming that the current rate of Bonus is maintained, the sum assured will be increased by £24 each year—an amount in excess of the annual net cost, as above!

Consequently, no matter when a claim occurs, a sum of about £1,000 in excess of the premium payments will become payable.

Write for particulars suitable to your age.

WESLEYAN & GENERAL ASSURANCE SOCIETY

Chief Offices : : Birmingham

ITALO-BELGIAN BANK

(Banque Italo-Belge, Société Anonyme).

Capital subscribed and paid - Frs. 100,000,000

BRANCH IN INDIA: Bombay.

The Bank is prepared to transact Banking business of every description in and connected with Persia, Mesopotamia, India and the Near East.

DISCOVERY.

¶ Over 400 years ago, Balboa crossed the Isthmus of Panama from the Atlantic Coast and discovered the Pacific Ocean.

¶ To-day, the Isthmus is traversed by the Canal, while other vital arteries of modern commerce are provided elsewhere by the great railway systems which link the two Oceans.

¶ The great and growing trading development of the New World is also largely dependent upon complete international banking facilities, and these are afforded by

The British Crown and the Indian States: An Outline Sketch drawn up on behalf of the Standing Committee of the Chamber of Princes by the Directorate of the Chamber's Special Organisation.

Demy 8vo. 272 pp. Map. **10s. 6d.**

I. A Consideration of the Evolution of Political Relationship between the Crown and the States. II. An Examination of some aspects of the Fiscal Questions at issue between the States and the Government of India.

A Study of Interest Rates.

By KARIN KOCK.

Demy 8vo. 264 pp. Cloth, **12s. 6d.**

This book is an examination of the factors governing the rates of interest on different kinds of loan in a modern loan market. In studying the changes in the margin between the different rates, the author has analysed the development during the after-war boom and depression of the American, English and Swedish loan markets.

Just Published.

England and the New Gold Standard, 1919 to 1926.

By WILLIAM ADAMS BROWN, Junr.

320 pp. 11 Charts. Cloth, **15s.**

An account of the Transition from the Old Gold Standard to the New: 1919 to June 1920, Gold Regains a World Market. The Sterling-Dollar Exchange finds its Own Level—June, 1920, to February, 1922. Gold—as an Instrument of Deflation. The Sterling-Dollar Exchange reflects Unsolved Problems of Reconstruction—March, 1922, to February, 1924. Gold Inflation begins and is checked. The Sterling-Dollar Exchange-Marking Time—February, 1924, to April, 1925. The Disappearance of the Gold "Premium." England Returns to the Gold Standard. The Conflict of Opinion and Economic Interest in England. The New Gold Standard. The New Gold Standard begins.

A NEW INDEX OF
BRITISH NATIONAL PROSPERITY.
By G. D. ROKELING,
With a foreword by SIR JOSIAH STAMP.
Reprinted from "The Economist."
This booklet contains an attempt to construct from existing published data a measure of the real national income of Great Britain and of the income per head. The Index is based upon a new calculation of industrial production, the statistics of employment and the income from national investments.
Price 2/6
Obtainable from:—

PITMAN'S
NEW BOOKS

THE BILLS OF EXCHANGE ACT, 1882.

By Maurice H. Megrah, B.Com. (Lond.), Cert. A.I.B., Sir Edward Stern Scholar in Commerce at London University, 1922.

AN ANALYTICAL APPROXIMATION: With Brief Notes on Analogous Instruments and the Stamp Laws.

6/- net. An exceptionally useful book for all banking men and banking students. It comprises an easily followed analysis of the 1882 Act, rearranging the code in clear language.

THE STOCK EXCHANGE GAZETTE SAYS: "The book is not a legal treatise on bills of exchange, but is a thoroughly good explanation of the law that governs such instruments. . . an open sesame to what in the past has been an Act of Parliament to be regarded with awe."

BANKERS AND THE PROPERTY STATUTES OF 1925 AND 1926.

By R. W. Jones, Cert. A.I.B.

Carefully prepared by a recognized expert on the subject, this book sets forth the principles in the new Property Statutes which more particularly affect Bankers when dealing with land as security. A most useful work.

(*Ready Immediately.*) **Price about 10/6 net.**

DICTIONARY OF THE WORLD'S CURRENCIES AND FOREIGN EXCHANGES.

By William F. Spalding, F.I.B., F.R.Econ.S.

The popularity of this complete work of reference, embracing every known currency and exchange in the world, is confined not only to banking circles, but to all interested in the subject. **30/- net.**

IRISH FREE STATE BANKS.

BANK OF IRELAND.

The report for the year ended December 31, 1928, is as follows:—The net profits of the bank for the year ended December 31, 1928, after meeting all charges and providing for bad and doubtful debts, interest due on deposits, and rebate on bills not at maturity, amount to £564,667, to which must be added a sum of £83,350 brought forward from December, 1927, making a total of £648,017. Out of this total an interim dividend of 8½ per cent., less income tax, absorbed £200,077. The governors and directors having transferred £150,000 to the rest, now recommend that a final dividend of 9 per cent., less income tax, be declared for the year ended December 31, 1928, which will absorb £211,846, making, together with the dividend paid on August 1, 1928, a distribution of 17½ per cent., less income tax, for the year, leaving a surplus of £86,094 to be carried forward.

	26,694,780		26,694,780

The report of the directors for the half-year ended December 31, 1928, states that the profits, after deducting expenses, providing for interest on deposits, rebate on bills, and for all bad and doubtful debts, amount to £90,644; to which has to be added the balance from the last account, £48,151; making a total of £138,795. The directors recommend the payment of a dividend for the half-year at the rate of 14 per cent. per annum, free of income tax, £52,500; and, after transferring to contingencies accounts £10,000, and applying in reduction of premises account £20,000, and placing to staff pension fund £10,000, there will remain to be carried to the next account £46,295—£138,795.

NATIONAL BANK, LIMITED.

The report for the half-year ended December 31, 1928, states that the profit and loss account, including £25,825 brought forward from June 30th last, shows a balance of £191,693 available for distribution. The board have declared a dividend for the past half-year at the rate of 14 per cent. per annum, or 14s. per share (£10 paid), less British tax at 4s. in the £. The dividend absorbs £84,000, leaving a balance of £107,693 to be dealt with. Of this sum the directors have transferred £15,000 to the reserve fund, £15,000 in reduction of bank premises account, and £50,000 to income tax and contingencies account. £27,693 has been carried forward to profit and loss new account.

AUSTRALASIAN BANKS.

AUSTRALIAN BANK OF COMMERCE, LIMITED.

The report presented at the meeting on July 24, 1928, states that the balance of profit and loss for the year, after making full provision for all bad and doubtful debts, deducting rebate on current bills, and expenses of management, directors' and auditors' fees, interest on fixed deposits, rates, etc., amounts to £276,724, less graduated land and income taxes for the year, £59,983—£216,741. From this amount the following appropriations have been made:—Transfer to reserve fund, £40,000; interim half-yearly dividend at the rate of 8 per cent. per annum was paid in January, absorbing £88,320; and a final half-yearly dividend at the rate of 8 per cent. per annum is now recommended, amounting to £88,320—£176,640—£216,640; balance, £101; brought forward from last year, £26,664; leaving to be carried forward, £26,765.

BALANCE SHEET, June 30, 1928.

BANK OF AUSTRALASIA.

The report for the year ended October 15th last states that, after providing for rebate on bills current, for British, Australian and New Zealand rates and taxes, and making provision for bad and doubtful debts and other contingencies, the net profit for the year amounted to £675,192. To this has to be added £139,568 brought forward from the previous year's account, making a total of £814,760. From this £280,000 was paid as an interim dividend on October 5th last, and the directors have now appropriated a further sum of £315,000 to pay (on the increased capital of £4,500,000) a final dividend of 7s. per share, making, in all, £595,000, equal to 14s. per share, and representing for the year a distribution at the rate of 14 per cent., free of income tax. The directors have also transferred £80,000 to bank premises account. There will remain £139,760 to be carried forward to the next account. The amount of the premium received on the 100,000 new shares issued last year, viz., £600,000, has been added to the reserve fund.

BALANCE SHEET—October 15, 1928.

INDIAN BANKS.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

According to the report for the year ended December 31st last, net profit, after providing for all bad and doubtful debts, was £834,156, inclusive of £206,893 brought forward from the previous year. The interim dividend at the rate of 14 per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £624,156, and the directors propose to pay a final dividend at the rate of 14 per cent. per annum, together with a bonus of 6s. 3d. per share, making 20¼ per cent. per annum for the whole year, free of income tax; to set aside £40,000 on account of contingencies, and to carry forward the balance of £186,656.

BALANCE SHEET—December 31, 1928.

MERCANTILE BANK OF INDIA, LIMITED.

The report for the year ending December 31, 1928, states that the net profits for the year, after providing for bad and doubtful debts, and including £164,846 brought forward from last account, amount to £415,047. From this sum has to be deducted £84,000, being the interim dividend of 8 per cent., less income tax, on the "A," "B" and "C" shares paid in September last. The directors have added £30,000 to the reserve fund, £15,000 to the officers' pension fund, and written £40,000 off freehold banking premises. They now recommend a final dividend on the "A," "B" and "C" shares of 8 per cent., less income tax (making 16 per cent. for the year), leaving a balance of £162,047 to be carried forward.

NATIONAL BANK OF INDIA LIMITED.

The report for the year ending December 31st last states that the net profits for the year, after providing for all bad and doubtful debts, amount to £530,829, and adding £276,500 brought forward, the available total is £807,329. An *ad interim* dividend at the rate of 20 per cent. per annum, free of income tax, was paid on September 14th last, amounting to £200,000. The directors now recommend a further dividend at the same rate, and an addition of £50,000 to the reserve fund, raising it to £3,000,000. They propose to write £30,000 off house property account and to add £50,000 to the officers' pension fund, leaving a balance of £277,329 to be carried forward.

ANGLO-INTERNATIONAL BANK, LIMITED.

The report submitted at the meeting held on Friday, March 15, 1929, covers the year ended December 31, 1928. The period under review, it is stated, has shown steady development, while substantial progress has been made in liquidating the the affairs of our predecessors. The profits for the year amount to £103,085, to which must be added the balance brought forward from the previous year's accounts, £52,447, making an available balance of £155,532, from which it is proposed to place £10,000 to premises amortisation and £125,000 to contingency reserve, leaving a balance to be carried forward of £20,532.

THE DOMINION OF NEW ZEALAND

THE LAND OF GREAT OPPORTUNITY.

New Zealand offers the best investment for
CAPITAL, INDUSTRY, ENTERPRISE.

Gt. Britain received from New Zealand in 1927 :

23% of her BUTTER Supplies from abroad.
53% „ „ CHEESE „ „ „
55% „ „ MUTTON & LAMB „ „
33% „ „ TALLOW „ „ „
23% „ „ WOOL „ „ „

The Dominion's exports last year were £12,000,000 higher than the imports. New Zealanders, per capita, are Britain's best customers. Last year they purchased manufactures, etc., from British Mills to the extent of £14-10-0 per head.

BANK OF LONDON AND SOUTH AMERICA, LIMITED.

The report for the year ended September 30, 1928, states that the net profit, after making ample allowance for bad and doubtful debts, income tax and rebate of interest on bills not due, amounts to £456,997, to which has to be added £201,231 brought forward from last year, making a total of £658,228, out of which an interim dividend of 4 per cent., paid in June last, amounted to £141,600. From the unappropriated balance, viz., £516,628, the directors recommend the following distribution:—To dividend of 7 per cent., payable December 17, 1928, making 11 per cent. for the year, subject to income tax, £247,800; to contingency reserve account, £60,000; to profit and loss carried forward, £208,828—£658,228.

BANQUE BELGE POUR L'ETRANGER.

Since publication of the report the following changes have been made:—With the co-operation of friends in several countries we have converted our Egyptian branches into an independent bank under the style of Banque Belge and Internationale en Egypte. Our Rumanian branches have been taken over by the Banque Commerciale Roumaine, one of the leading banks in that country, and our ally, the Allgemeiner Boehmischer Bankverein, is about to be amalgamated with the Boehmische Union Bank. The Banque Franco-Belge de Bulgarie has joined forces with the Banque Balkanique, which was formed many years ago by the Wiener Bankverein. The new institution, the Banque Franco-Belge et Balkanique, thus represents a union of the Bulgarian interests of our group. In all of these new connections we retain an appreciable interest. Finally, our Constantinople branches have been transferred to the Banque Francaise des Pays d'Orient.

BRITISH BANK OF SOUTH AMERICA, LIMITED.

According to the report for the year ended December 31, 1928, the gross profits, after allowing for rebate of interest on current bills and drafts, for interest on deposits, and after making ample provision for bad and doubtful debts and contingencies, amount to £364,992; this, with the balance of £107,930 brought forward from the previous year, makes £472,922. After deducting all charges at the head office and branches, amounting to £264,274, there remains £208,648 available. A dividend on account of 10s. per share, amounting to £50,000, was paid in September last, and it is recommended that a further dividend of 10s. per share, amounting to £50,000, be now declared, payable on May 3rd, making, for the year, a distribution of 20s. per share, or 10 per cent., subject to income tax, on the paid-up capital of the bank of £1,000,000. After making this transfer and paying this dividend, there will remain the sum of £108,648, which the directors propose to carry forward. On July 1st last the Monte Video branch of the bank was taken over by the Anglo-South American Bank, Limited.

HAMBROS BANK, LIMITED.

The report for the year ended March 31, 1928, states that after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, and income tax, the accounts show a profit of £370,979, to which falls to be added the balance brought forward from last year of £86,624, making an available total of £457,603. After setting aside £150,000 to contingency reserve account, £35,000 to premises account, and allowing the sum of £60,000 for the interim dividend of 6 per cent., free of income tax, paid on October 28, 1927, the directors now recommend the payment of a further dividend of 12 per cent., free of income tax, making a total of 18 per cent. for the year, free of income tax, and that the balance of £92,603 be carried forward.

H. GURNEY AGGS, J. R. BETHELL, } *Directors.*

We report to the Shareholders that we have obtained all the information and explanations we have required. We have verified the Securities representing Investments of the Company, those held against Loans made by the Company, and all Bills discounted in hand. We have also verified the Cash Balances and vouched the Securities and Bills given as collateral Security for Loans, and we have now to report to the Shareholders that the foregoing accounts agree with the books, and that, in our opinion, the above Balance Sheet is properly drawn up, so as to exhibit a true and correct view of the state of the Company's affairs, according to the best of our information and the explanations given to us, and as shewn by the books of the Company.

DELOITTE, PLENDER, GRIFFITHS & CO., *Chartered Accountants.* } *Auditors.*

NATIONAL BANK OF EGYPT.

The report presented at the meeting held in Cairo on March 21, 1929, states that the gross profit for the year ended December 31, 1928, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for doubtful debts, amounts to £1,127,579; after deducting from this sum: for directors' fees £14,000, for current expenses £461,957—£475,957—there remains £651,622. In conformity with Article 49 of the bank's statutes, a dividend of 4 per cent. is payable on the share capital, £120,000; after this distribution there remains £531,622; adding to this the balance brought forward from last year, £210,173, the amount available is £741,795. The directors consider it prudent to allocate to special reserve for contingencies a sum of £100,000, which leaves £641,795. From this amount the directors recommend the payment of an additional dividend of 14 per cent. on the share capital, which will absorb £420,000, and to carry forward the balance of £221,795. The total dividend for the year will thus be at the rate of 18 per cent., equivalent to £1 16s. per share.

BALANCE SHEET—December 31, 1928.

SWISS BANK CORPORATION.

After deduction of expenses and taxes, making provision for bad and doubtful debts, &c., the net profit for the year ended December 31, 1928, amounts to £615,892. The board propose to allocate to pension fund, £20,000; to the reserve fund for the extension of the head office premises in Basle, £40,000; to pay a dividend of 5 per cent. on the paid-up capital (according to Art. 36 of the articles of association), £280,000—£340,000; leaving a balance of £275,892. After deduction of the statutory participation of directors, £27,589, the remainder, £248,303, together with the amount £276,611 is at the disposal of the general meeting. The board propose to pay a further dividend of 3 per cent. (making in all 8 per cent. for the year 1928), which will absorb £168,000; to place to reserve fund, £80,000—£248,000; and to carry forward, £28,611.

YOKOHAMA SPECIE BANK, LIMITED.

The report for the half-year ended December 31, 1928, states that the net profit of the bank, after providing for all bad and doubtful debt, rebate on bills, &c., shows 17,346,622 yen, inclusive of 8,281,611 yen brought forward from last account. The directors propose that 3,000,000 yen be added to the reserve fund, and recommend a dividend at the rate of 10 per cent. per annum, which will absorb 5,000,000 yen. The balance, 9,346,622 yen, will be carried forward to the credit of next account.

BANKING DEPARTMENT

Current Accounts are opened for Shareholders and Customers or Friends introduced by them. Interest at the rate of 2½ per cent. per annum, credited annually, is allowed upon the minimum monthly balance, provided it is not under £20. No commission is charged for keeping Accounts, but the opening lodgment must not be less than £20, nor the minimum balance less than £10.

Money is received on Deposit in sums of £1 up to £500 subject to seven days' notice of withdrawal. Amounts over £500 are received on special terms as to notice. Interest is allowed from date of deposit to date upon which withdrawal notice expires, and is credited or paid half-yearly, on 30th June and 31st December.

The Directors reserve to themselves the power to return Deposits or change the rate of Interest.

Country and Foreign Drafts, Dividends, Coupons, Annuities, Pensions, etc., received and placed to credit. Drafts, Circular Notes and Letters of Credit issued.

American and Canadian Express cheques cashed and Foreign money exchanged.

Truth

"Truth lies at the bottom of a well," said a philosopher, but this is only half a truth.

Truth may be a living thing both in our ordinary and business life, for a sincere attachment to truth, modern and scientific, is a sure bulwark for the mind.

The habit of truth makes a man exact in all his relations with his fellow men. His word is his bond. It means that in business the thing he sells is exactly what he says it is without equivocation.

The Chatwood Security stands for truth. It is exactly what we say it is. It is not offered on a price competitive basis, but to those who desire to have the best. We refuse business offered at a price which would require us to lower our standard of craftsmanship.

J.E.S.

THE CHATWOOD SECURITY

THE CHATWOOD SAFE Co., Limited,
Bankers' Engineers,
SHREWSBURY, England.
