A noteworthy feature is the decrease of 54.6 million guilders in the value of imports during the first quarter of 1929, compared with the corresponding period in 1928. The value of exports during January-March, 1929, was also 13.6 million less than during January-March, 1928. This is probably the result of the severe frost, which still made transport difficult during the greater part of February and part of March. The weight of imports and

exports during the first quarter of the years 1926-29 was as follows:—

Jan.-March.	Imports.	Exports.
	(In metric tons.)	
1926	6,121,194	3,052,415
1927	6,448,362	3,376,169
1928	6,848,473	3,603,578
1929	5,668,939	3,212,300

A considerable decrease (approximately 1,180,000 tons) will be noticed in the weights for January-March, 1929, compared with the first quarter of 1928. During January-March, 1929, approximately 220,000 tons less of industrial coal and bunkers were exported than in January-March, 1928. This, therefore, accounts for more than half of the decrease in the weight of exports during the first quarter of 1929.

The value of imports from Germany and Belgium was considerably less during January-March, 1929, than in January-March, 1928. There was also a slight decrease in the value of imports from France, Great Britain and the Dutch East Indies. There was a decrease in the case of goods exported to Germany, Great Britain and France; on the other hand, there was a slight increase in the value of exports to U.S.A., and a not insignificant increase in the case of Belgium and the Dutch East Indies. During the first three months there was a great increase in the value of the following industrial products, among other things: Ships were exported to the value of Fl. 13,829,000 (Fl. 4,086,000 in January-March, 1928); wireless sets, etc., to the value of Fl. 17,941,000 (Fl. 4,857,000 in January-March, 1928); and electric incandescent lamps to the value of Fl. 8,367,000 Fl. 6,414,000 in January-March, 1928).

The *Financial and Economic Review* of the Statistical Department of the Amsterdam Bank, however, observes:—

"We must not forget to look at the reverse side of the medal. The prosperity of Holland is very largely dependent upon the profits earned in the colonies. It is very generally known that the most important products—rubber and sugar—have brought in considerably less profit than in the previous year. Recently there has been another counteracting factor which is, it is true, international, but to which Holland has offered a protracted resistance. Money rates show a tendency to rise, and the Netherlands Bank has been compelled to follow the examples of others and bring up its Bank rate more closely to the general level. In this connection the United States money market is being anxiously watched, for this market, dependent as it is upon the Stock Exchange, exerts great influence on the prices to be paid for industrial capital. So far, the increase in the Bank rate has not had much influence on the index figure of wholesale trade, but it is doubtful whether this state of things will continue."

The index figures for the first quarter, as issued by the Central Bureau for Statistics, are shown below, and are compared with the corresponding figures for last year:—

INDEX FIGURES OF WHOLESALE PRICES. (1913 =100.)

	General Index Figures.		Index figures for Foodstuffs.	
	1928.	1929.	1928.	1929.
January	153	146	160	153
February	150	146	158	155
March	152	147	161	156

The Dutch issues market has been extremely quiet. The total value of the issues offered to the Dutch public in April amounted to only 13.2 million guilders, compared with 25.4 in March, 1929, 100.9 in February, 1929, and 37.6 in April, 1928. There were no conversion loans. With the exception of the holiday month of August, 1928, the aggregate for the issues in April, 1929, is the lowest since January, 1928. The division of the stock into shares and bonds is practically unchanged. For comparison we give below the figures for the home and foreign stock issued during the first four months of 1929 and 1928:—

	Home.		Foreign.		Total.	
	(In millions of guilders.)					
	1929.	1928.	1929.	1928.	1929.	1928.
January	53	25	7	16	60	41
February	61	32	39	28	100	60
March	4	39	20	48	25	87
April	6	6	6	30	13	37
	124	102	72	122	198	225

The cool reception which the last Dutch municipal loan met with may be regarded as a warning that, with a few exceptions, the rate of interest (4½ per cent.) on such issues will have to be raised if the loans are to be successful. The position of the Amsterdam money market is clearly reflected in the average rates for "prolongations" during the month of August. The figures were 5.892, compared with 5.0685 in March, and 3.9125 in April of last year. The average rate during the first quarter of 1929 was 4.7836, compared with 3.9435 in 1928.

The position of the Netherlands Bank has had a favourable trend since the recent rise in discount rates, so that it may be assumed that the measure has been effective. Owing to the slackening in the bills market the central bank was even able to import gold from Germany during the last few weeks. The following table, which shows a rise in the amount of foreign bills held, clearly demonstrates how considerably the position of the Netherlands Bank has been strengthened:—

	Foreign Bills.	Miscellaneous Accounts.	Gold.	Total.
	(In millions of guilders.)			
April 2nd	33·9	44·3	422·5	500·7
April 15th	59·1	47·7	422·2	528·9
April 29th	89·3	45·6	432·2	567·1
May 6th	121·7	41·6	437·0	600·3

Of late there has also been a change for the better in the position of the Treasury. In the first two months of the current year the Government receipts amounted to Fl. 82.7 million, as compared with an estimate of Fl. 78.5 million, and a yield of Fl. 80.4 million in the corresponding period of last year. The general results may, therefore, be described as favourable.

There has been a striking increase in the returns of the registration duties. The chief explanation is to be found in the founding of important companies in Holland at the beginning of the present year. The registration duty paid on such occasions, and also when companies already formed increase their capital, constitutes a gauge of the state of trade. It reflects much more rapidly than, for instance, the income tax the upward and downward movements of economic life, so that the sharp increase in the yield of the registration duty affords a certain amount of support to the contention that economic conditions in Holland are, in general, satisfactory.

ARGENTINA.—MONEY PRESSURE AND GOLD MOVEMENTS—CEREAL EXPORTS—POLITICS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, April 25.

GENERAL trade movement in Argentina during the month of April has been on the quiet side and the local money market is feeling the pressure due to deferred exports and somewhat heavy imports, coupled with the tendency toward dearer money observable in London and New York. It is reasonably probable that the Argentine Government will shortly be looking for further foreign loans, and offers have already been made by a group of American bankers to supply such funds as are required. It is, however, understood that the offer has been declined, at any rate for the time being. What terms are proposed is not known, but incidentally it has been stated that a syndicate is in course of formation, presumably in the United States, for the express purpose of financing Argentine public works, including those undertaken for provincial and municipal account. Local discount rates remain unchanged at 6½ per cent. to 7 per cent. for first-class trade bills, with 7 per cent. to 8 per cent. for overdrafts, while as much as 5½ per cent. has been paid for bank to bank money on 30-day terms. Some comparatively small shipments of gold have been made to New York, but current rates of exchange leave so small a margin of profit on such business as to make it hardly worth the doing. Indeed, it may be said that Argentine gold exports at the present time are, after all, but the natural reflux of the excessive amount brought hither last year. For, apart from the $136,000,000 gold which figure in the cash in hand of the Buenos Aires banks, there are in the Conversion Office $484,135,836 gold, which is practically the figure recorded a year ago, when the stock of gold held by the banks was some $35,000,000 gold less than it is to-day. It is, therefore, incorrect to link up the actual gold shipments with the tendency to dearer money now characteristic of this market, which, considered as a whole, is in a healthy condition.

Cereal exports have been characterised by a very brisk movement of new maize, and a tendency to revise pessimistic estimates as to the yield of this grain. There is now talk of an exportable surplus of 5,000,000 tons, notwithstanding which prices are firm at $7.95 paper per 100 kilos. for spot and future shipments. Wheat prices are lower at $9.25 paper spot, and shipments have been heavy, though a considerable quantity is reported to have left this country unsold, while up-country stocks at the railway stations are unusually large for this period of the year. Linseed, of which close on a million tons have been shipped, is steady at $15.55 paper spot and $15.75 for July shipments, there being little likelihood of any United States tariff changes affecting the sales of this season's crop. For general produce the ruling prices are below those current twelve months ago, and it is reasonably certain that the trade balance for the first quarter of the year would, if it could be exactly calculated, show a marked diminution in the total favourable to Argentina. In actual practice this is translated into a firm demand on the part of remitters and a somewhat reduced offer of export paper, banks' cabled rates being 47½d. and 104.65, drawing on London and New York respectively. In Continental currencies the only notable movement has been in the peseta, now quoted at 6.62 to the gold dollar, cable drawing, which figure reflects not only European quotations for this currency, but also, to some extent, local pessimism regarding the course of political event in Spain.

In matters political there are many rumours and little concrete information regarding the Congressional programme. Administrative affairs are still sadly in arrears, but at last three directors have been appointed to the board of the National Mortgage Bank, which is thus in a position to work off some of the heavy outstandings due to a period of inanition, which has prevailed since October last. There are said to be no less than $434,000,000 paper in applications for mortgage loans awaiting consideration. The probable issue of further series of Cédulas has led to a slight reaction in the quotation for this popular security. In the freight market chartering has been brisk, and for May loading, San Lorenzo/U.K./Continent, 25s. has been obtained, with 26s. from Santa Fé. The quarantine restrictions enforced on account of an alarm of yellow fever in Brazilian ports have caused a good deal of inconvenience and some loss to shipping interests, all boats touching at Brazilian ports being condemned to six days' rigorous quarantine in the outer roads of Buenos Aires. It may not be out of place to add that as yet no case of yellow fever has actually been reported among any of the vessels thus detained.

SOUTH AFRICA.—NAFTE CASE—POLITICS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, April 30.

IT is not usually possible for the observer of passing social or political events to view one or another and say "this will be history." A case which has occupied a great deal of South African attention during recent weeks does, however, offer temptation to the prophet—the case known in the daily newspapers as "The Nafte Case." The South African farmer undoubtedly believes in the "inalienable right of every citizen to wallop his own nigger." It is arguable that, given the conditions of rural South Africa and the peculiarities of the native, reasonable corporal punishment is the best punishment for petty crime. The consciously culpable native generally prefers punishment in that form as against police court procedure, which bewilders him, and imprisonment in company with the vicious. In practice, of course, private corporal punishment is contrary to law, but is frequently resorted to and far too frequently abused. Nafte and one of his European farm assistants punished a native for some trivial offence by tying him to a tree and flogging him. The native died, and his assailants were tried separately, on charges of culpable homicide. The servant was sentenced to a fine on a charge of common assault. The evidence against the farmer was exceptionally damaging, and, whilst no South African jury would find a European guilty of murder under such circumstances, the prisoner in this case was found guilty of culpable homicide, but with a recommendation to mercy. The judge who tried the case discarded the recommendation to mercy on the grounds that, had there been no extenuating circumstances—in the opinion of the jury—he presumed they would have found the prisoner guilty of murder, and that, therefore, the verdict of culpable homicide rendered the recommendation unnecessary. The judge sentenced the prisoner to seven years' hard labour and ten lashes, referring, when passing sentence of lashes, to the aggravated brutality of the crime. The sentence was passed almost a month ago; it has since been the subject of every process of appeal which the South African law affords. It has been specially considered by the Cabinet, but has not been altered. There are many people in the country to whom the notion of even a moderately severe sentence on a European for assaulting a native is still incomprehensible. Dutch newspapers of standing have described the sentence as absurd. During the elections we shall hear more of the matter, especially in view of the part which racial questions were destined to play in any case. The case will probably take its place besides the "Slachter's Nek" case during the Governorship of Lord Charles Somerset, references to which still appear from time to time in country political speeches.

Nominations of candidates for election to the Union Parliament are fixed for May 15th, whilst polling will be on June 12th. The last Delimitation Commission fixed the total number of seats at 148, which is only two less than the maximum fixed by the Act of Union; of these seats 58 are in the Cape, 55 in the Transvaal, 17 in Natal, and 18 in the Free State. For the 55 seats in the Transvaal it is expected that there will be 111 candidates. The industrial area of the Witwatersrand contains 21 constituencies, all of which will be contested by the S.A. Party, whilst there will be five Nationalist candidates, 14 Labourites, and three Independent. Of the total of 111 Transvaal candidates, 54 are South African Party, 38 Nationalists, 14 Labourites, and four Independent.

I was informed a few days ago on excellent authority that the most probable result of the election is an almost exact deadlock between the S.A. Party and its opponents. The figures shown to me estimated that the South African Party on the one hand and its opponents on the other would each obtain upwards of 70 seats—in other words, that the majority on major questions would be likely to be three or four at the outside in a full House. Should this forecast be correct, it seems almost inevitable that some sort of central party will be formed, from which one might hope for attention to the more pressing economic questions. This realignment seems to be rendered even more likely by the divisions which exist in the two main parties to the pact. The difficulties of the Nationalist Party in the Transvaal have certainly not been diminished by the fact that letters from Mr Tielman Roos indicate that his health is not yet restored, and that it is doubtful whether he will be able to return to South Africa for some time.

Letters to the Editor.

THE UNEMPLOYMENT ISSUE.

TO THE EDITOR OF THE ECONOMIST.

Sir,—A paragraph in your article on "The Unemployment Issue" raises in an acute form the question of how the Lloyd George scheme would react upon Great Britain's balance of trade, and, therefore, upon the possibility of maintaining the gold standard in its present form without a further measure of deflation, which would, of course, destroy any good effects which the scheme might have. The paragraph reads (page 1096):—

Nor need we fear a serious restriction of our capital investments abroad, which would hit the export trades that

normally receive orders as the result of these investments. It is quite possible, as we have said, that the raising of a substantial loan might have the effect of causing some influx of capital, either for short- or long-period investment, and this would reduce our *net* export of capital. It need not, however—as the Treasury memorandum seems to assume—reduce our foreign issues, or our physical exports in proportion; but would rather tend to increase our imports on account of the increased demand for food, etc., by the wage-earners and for raw materials by industries providing the commodities used in the enterprises.

Now Messrs Keynes and Henderson argue that the proposed development loan would divert investment away from foreign issues, and thus, by reducing our flow of investments abroad, would ease the pressure on the Bank of England's gold stocks, and enable it to create the easier monetary conditions which the scheme requires. But you, unlike Mr Keynes, believe that there is an intimate connection between our foreign capital investments and our exports of goods, so that a reduction of the former would be followed rapidly by a diminution in the latter, thus cancelling any advantage to our aggregate balance of payments. You, therefore, hope and believe that foreigners would be tempted to invest in Great Britain on a larger scale than at present.

Your argument raises two definite questions. First, is an influx of capital in fact likely to occur as a result of the Lloyd George scheme? Earlier in your article you say that it will come through the stimulus of higher interest rates. If interest rates in general do rise, that of itself will surely have a depressing effect upon industry. Mr Keynes has attempted to meet this point by arguing that it would be only in the gilt-edged market that interest rates would rise, and that industry will not, as a consequence, have to pay more either for its capital or for financing its exports. But if the rise in interest rates is going to be confined to the gilt-edged market, it can hardly have the effect you anticipate of attracting money from abroad. For that purpose interest rates in general would have to rise, and particularly short-term money rates. Indeed, the paragraph quoted above clearly envisages such an eventuality. Whether it would, in fact, happen is a somewhat dubious proposition. Quite apart from the present level of money rates in New York, high interest rates in Germany must continue for many years to come so long as that country is compelled to pay Reparations annuities, and it is highly unlikely that raising a loan in Britain of the type proposed would cause interest rates in general to rise enough for us to compete successfully with Germany for the world's surplus capital.

Even supposing, however, that capital does flow in from abroad, it is not going to ease the Bank of England's position. On your own arguments, if an outflow of capital leads immediately to an increase of exports, then surely an inflow will lead to increased imports as a result of orders placed abroad by those who borrow the foreign capital. But, even apart from this, imports, as you admit in the above paragraph, will rise directly industry expands to normal levels because of the increased demand for food and raw materials. I suggest, in addition, that the price-level of imports would rise also, since it is at present abnormally low owing to our trade depression. This will tend to create an import surplus, which may, in the first year of the scheme, when the loan is being floated, be counteracted by a reduction in net foreign lending, but, in the long run, will cause an efflux of gold. In other words, I argue that trade is depressed not from lack of a "jolt," but because of the over-valuation of sterling and the disproportionately high money wage level. The Liberal proposals do nothing to remedy these evils. Until they are remedied, a trade revival is impossible, and any artficial expansion of employment must necessarily be counteracted by a deflationary policy on the part of the Bank of England.—Yours, etc.,

DONALD BARBER.

Trinity College, Cambridge, May 19th.

[We cannot find space to meet all the points raised in this letter, but surely Mr Barber is too pessimistic in thinking that Great Britain cannot hope to retain for herself a slightly increased share of the world's capital or increase her imports of food and material sufficiently to keep the whole population properly fed and occupied without either a crippling rise of interest rates or imperilling the gold standard by a serious loss of gold.—ED., *Econ.*]

Books and Publications.

THREE BOOKS ON FREE TRADE.*

IF any of our readers are still wondering how to cast a vote on the fiscal issue next week, they might consider the plan of giving up newspapers and reading instead the three volumes noted below, which make a very timely appearance. Of the three, Mr Nathan's is the most ambitious, and his historical treatment of his subject is excellent. Unfortunately he is not so successful in his exposition of the theory, and once at least is definitely at fault. The book is a useful contribution to fiscal literature, but the gap on the library shelf is still waiting for a really comprehensive theoretical treatment of the case for Free Trade.

The little book by Messrs Comyns Carr and Rowland Evans is exceedingly good of its kind. Both theory and statistics are carefully and ably handled, nor do the authors allow themselves to try to prove too much from any given data. Every "wobbler" on the "safeguarding" question should buy it. The Liberal Council pamphlet is, of course, frankly *ex parte;* but it presents very useful figures well and handily presented, and is a needed antidote to some of the extravagant claims now being voiced by people who ought to know better.

THE COAL INDUSTRY OF THE EIGHTEENTH CENTURY.†

THE dependence of modern industrial civilisation upon the dual basis of coal and iron is the theme of many books dealing with the history and characteristics of our own time. All whose curiosity as to the manner in which this dependence came about has led them to study the economic history of the eighteenth century are already deeply indebted to Mr Ashton for his book on *Iron and Steel in the Industrial Revolution.* A companion work to this, *The Coal Industry of the Eighteenth Century,* he has now fittingly provided in collaboration with Mr J. Sykes. Together they have sought with immense industry the materials for their work in libraries, in the offices of collieries, and in the muniment rooms of landed proprietors. The result is a most valuable monograph on a period of history which is only now beginning to receive the attention which it deserves. In so far as the materials allow, and the authors do not disguise the fact that ample though they are in bulk, they fall far short of what could be wished, the book presents a concise, well-planned survey of the industry as a whole.

During the 18th century not only was the coal industry on a very much smaller scale than to-day, but it was very unequally developed; the Northern coalfields of Northumberland, Durham and Cumberland being by far the most important owing to the absence of cheap methods of transport by land. How this fact developed the considerable coastal trade in coal, particularly between the Tyne and the Thames, and how the miners, sailors and coal dealers of London endeavoured to manipulate the traffic to their own advantage is a story of great interest which loses nothing of its fascination in the pages of the present work.

Of equal value to those at present engaged in the industry will be the account of the characteristics of the men who worked in the pits two hundred years ago, the methods they employed, their earnings, and their relations with their employers. Anything like full statistics of wages and of output are unobtainable, and it is not possible to get a comprehensive view of the economic position of the industry as a whole. Conditions were liable to too much local variation for a single formula to fit them, even were adequate statistical data at hand.

* "Free Trade To-day." By H. L. Nathan. London: Gollancz. Pp. 383. 5s. "Safeguarding Under the Searchlight: An Enquiry into the Origin and Results of the Safeguarding Duties Separately Examined." London: British Periodicals, Ltd., for the Liberal Council. Pp. 88. 1s. "The Lure of Safeguarding." By A. S. Comyns Carr, K.C., and D. Rowland Evans. London: George Allen and Unwin. Pp. 126. 3s.

CAN LLOYD GEORGE DO IT?

6d. 6d.

THE LIBERAL PLEDGE EXAMINED

by

J. M. KEYNES

H. D. HENDERSON

◆

"The best pamphlet likely to be seen in this struggle. Polished, compact, cutting, bristling with pointed phrases; better than any speech yet made for any party."

—J. L. Garvin in the "Observer."

"It should be in the hands of every elector, whatever his opinions, who desires to know the truth in this matter."

—"Daily News."

"Readers who spend sixpence on this pamphlet."

"It is brilliantly done. One may say with confidence that the election will produce no pamphlet so readable, so cogent, or so powerful. Readers who spend sixpence on this pamphlet, put on their thinking caps and settle down to its study, will be instructed, exhilarated and convinced."

—"Daily Chronicle."

"An astonishingly brilliant piece of writing."

"A remarkable demonstration in the art of political propaganda. An astonishingly brilliant piece of writing. Mr. Keynes and Mr. Henderson have proved that a political and economic argument, though it may be a source of instruction, can also be an entertainment. Few serious contributions to political thought can have been more aptly pointed with wit and lively phrasing."

—"Manchester Guardian."

THE NATION

AND ATHENAEUM

38, Great James Street, Bedford Row, London, W.C.1

Nevertheless, the book does afford a fuller view than had been obtainable elsewhere in such compass, for the authors have not allowed their scientific caution in statement to preclude them from offering qualified generalisations on such topics as wages, royalties and the profits of middlemen.

Although the book does not disturb to any great extent views already generally accepted by students of the economic history of Great Britain in modern times, it places the development of the coal industry in proper perspective, and yields the satisfaction which comes from a solid piece of work well and honesty performed.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Industrial Fluctuations. By A. C. Pigou. Second edition. (London) Macmillan and Co., St. Martin's Street. 25s. net.

This edition contains many modifications and some new material. The analysis, both of causes and remedies, is carried somewhat further than in the first edition.

The Economics of Instalment Trading and Hire Purchase. By W. F. Crick. (London) Sir Isaac Pitman and Sons, Limited, Parker Street, Kingsway. 5s. net.

A development of growing economic importance is here described and criticised within the limits of some 120 pages. There is an interesting appendix on the cost of instalment facilities.

Labour and Internationalism. By Lewis L. Lorwin. (London) George Allen and Unwin, Limited, Ruskin House, Museum Street. 12s. 6d. net.

The New York edition of this book received notice in our issue of May 4th.

Wheat Prices and the World Wheat Market. By Vladimir Prokopovich Timoshenko. (New York) Cornell University.

A statistical study which has special reference to the competition between North America and Eastern Europe in the West European market.

The Western Way. By Frederic J. Stimson. (London) Charles Scribner's Sons, 7 Beak Street. 12s. 6d. net.

The author of this volume is an enthusiastic exponent of the gospel of democracy. His book is a discussion of the achievements, past and future, of the democratic system, more especially of that system as practised in the United States.

The Mexican Agrarian Revolution. By Frank Tannenbaum. (New York) The Macmillan Co. $2.50.

The scope of this work is wider than its title indicates. It gives a very complete picture of the social structure of Mexico before and after the Revolution, and should be of great value for comparative study of agrarian systems.

Vicende dell' Oro e della' Argento. By Federico Marconcini. (Milan) Società Editrice "Vite e Pensiero."

A very thorough treatise, in Italian, on the history of gold and silver in the nineteenth century, with special reference to the Latin Monetary Union. It contains an interesting chapter on the silver policy of the United States, 1878-1893.

Economia Bancaria. By L. Pace. (Rome) Officine Grafiche e Cartotecniche Italiane, Viala della Milizie, 36.

This substantial Italian volume on banking theory is well illustrated from the experience of a number of countries. Generous space is devoted to questions of international finance.

Strukturwandlungen der österreichischen Volkswirtschaft nach dem Kriege. By Dr Hans Bayer. (Leipzig and Vienna) Franz Deuticke.

A valuable treatise, in German, on changes in the economic structure of Austria since the war.

Some Aspects of Rationalisation. By Sir Mark Webster Jenkinson. (London) Gee and Co. (Publishers), Ltd., 6 Kirby Street. 1s. net.

This interesting paper, referred to in our Stock Exchange leading article of March 30th, is now available to the public.

The Value of a Balance Sheet. By Sir Mark Webster Jenkinson. (London) Gee and Co. (Publishers), Ltd., 6 Kirby Street. 1s. 6d. net.

Reprinted, by general request, from a very illuminating lecture delivered in March, 1928.

The Statesman's Year Book. Edited by M. Epstein. (London) Macmillan and Co., Limited, St. Martin's Street. 20s. net.

An invaluable source of statistical and general information about almost every country of the world.

Rating Law and Practice. (London) Central Association of Accountants, Limited, 5 Salter's Hall Court, Cannon Street. 1s., post free.

These articles were written before the passing of the Local Government Act, 1928, and are principally an exposition of the Rating and Valuation Act, 1925.

Tolley's Handbook of Income Tax, Super-Tax and Sur-Tax. By Chas. H. Tolley. (London) Waterlow and Sons, Limited, London Wall and Birchin Lane. 1s. net.

Useful tables and examples are provided for the bewildered taxpayer.

The Canadian Securities Manual, April, 1929. Compiled by Strathy R. Mackellar and Joseph S. Eakin. Thirteenth edition. (London) Andrew Holt and Co., 7 Gracechurch Street.

Contains unusually full information for inventors about each of the principal companies.

Prosperity for England. By Sir Charles Fielding. Published by the Author at Billingshurst, Sussex.

This pamphlet suggests an alternative to the Lloyd George proposals, in which the unemployed are to be occupied, not in road making, but in wheat growing.

International Labour Review, May, 1929. (London) George Allen and Unwin, Limited, 40 Museum Street. 2s. 6d.

Articles in this number include: "Accident Prevention and Factory Inspection"; "General Principles of an International Convention on the Conditions and Contracts of Employment of Foreign Workers: III."; and "Workers' Agricultural Programmes in Austria, England and Germany."

Journal of the Franklin Institute, May, 1929. (Philadelphia) Franklin Institute of the State of Pennsylvania, 15 South 7th Street. 60c.

This number includes an article on "Nitrogen and the Fertiliser Industry," by Charles J. Brend.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2.

Registered Provident Societies in Great Britain. General Summary, 1926 and 1927. 4d. net.

Return Showing, by Police Districts, the Number of Persons dealt with for Motoring Offences during the Period July to December, 1928. 4d. net.

An Account of the Public Income and Expenditure of the United Kingdom in the Year ended March 31, 1929. 2d. net.

Accounts of the Metropolitan Police Fund, April 1, 1928, to *March* 31, 1929. 4d. net.

The Stock Exchange.

ELECTRICITY SUPPLY COMPANIES.

THE Central Electricity Board, whose progress we discussed in last week's *Economist*, is issuing a loan. Some £3,000,000 of 4 per cent. stock, repayable 1959-1989, is being offered at 83. We refer in greater detail to this operation on page 1174. Apart from the supreme importance of this loan as a definite milestone in post-war power development in Great Britain, the issue directs attention to the position of the big electrical supply companies under the national electricity scheme, which is a subject of first importance to the investor. It will be recalled that the regional schemes prepared by the Electricity Commissioners under the Electricity Supply Act, 1926, necessitated, first, the selection of stations in which the generation of all supplies of electricity was to be concentrated; secondly, the inter-connection of these stations by a system of main transmission lines, popularly called the "grid"; and, thirdly, the standardisation of the frequency of the alternating current systems. The Central Electricity Board is the authority set up under the Act to operate the selected stations, to erect the "grid," and to carry out the changes of frequency. The wholesale side of the electricity supply industry is, in effect, vested in this Board. The Electricity Commissioners have prepared and handed over to the Board for operation five schemes dealing, respectively, with Central Scotland, South-Eastern England, Central England, North-Western England and North Wales, and Mid-East England. We will briefly consider how these schemes are likely to affect the revenues of the big electricity supply companies whose shares are dealt in on the Stock Exchange.

The companies we have selected for this examination are Newcastle-upon-Tyne Electric Supply, Clyde Valley Electrical Power, Scottish Power, Yorkshire Electric Power, Lancashire Electric Light and Power, and Midland Counties Electric Supply Co. We have omitted South Wales Power because the scheme for the area covered by this company has not yet been worked out by the Electricity Commissioners, although there is little doubt but that the company's station in the Taff Valley will be "selected" by the Commissioners. In view of the depression in the coal-mining and industrial areas which the company serves, the South Wales Power has perhaps most to gain from the realisation of the national electricity scheme. We shall deal in a later issue with the London companies, which form a separate group under the leadership of the London Power Co. and the County of London Electric Supply Co., but we may add, in passing, that the latter is actually controlled by the Greater London and Counties Trust.

The Newcastle-upon-Tyne Electric Supply Co., which is the largest producer of electrical energy in Great Britain, is in a unique position. Its area of supply extends over the whole of the industrial coal-producing areas of Northumberland and Durham and into the East, North and West Ridings of Yorkshire. Supply is given to over 100 towns and villages, 180 coal mines, 100 shipyards and works, and six tramway and railway systems, including the electrified lines of the North-Eastern section of the London and North-Eastern Railway. The company possesses perhaps the most efficient generating stations in Great Britain. But, as its system is not of standard frequency, its whole area of supply is being left alone for the present by the Central Electricity Board. In view of the cost of changing the frequency in this wide area it is thought that it will be a number of years before the Central Electricity Board assumes control of the company's stations.

All the other companies we have mentioned own generating stations which have been "selected" by the Electricity Commissioners for the various regional schemes. This means that the companies operate their stations on behalf of the Central Electricity Board. They must supply electricity to all authorised distributors at a certain agreed cost and they must buy back at the same cost the electricity which they require for their own distribution business—the cost being reckoned as all generating expenses, a proper proportion of management and general establishment charges attributable to the station, depreciation and interest ranging from not less than 5 per cent. to not more than 6½ per cent. on all capital expenditure (including working capital) on the station, and a proper proportion of the Board's running expenses. This arrangement benefits the companies owning the "selected" stations because, the stations being worked continuously at practically full load the cost of generating plus the proportion of the Board's expenses is less than the generating cost would be under the companies' own management when a large part of the plant is always kept idle either to meet emergency purposes or because it is built in advance of trade requirements. The Central Electricity Board exercises no control over the distribution business of the generating companies. Having obtained their supplies wholesale at the agreed cost from their generating stations—thereby effecting great economies—the companies are free to charge the consumer any price they like for their distribution service.

We shall next consider how this arrangement affects the big companies individually, apart from the Newcastle-upon-Tyne Electric Supply. The Clyde Valley Electrical Power, which is one of the most progressive supply companies in Great Britain, serves a large and important industrial area and distributes power to shipyards, collieries, iron and steel works, engineering and paper works, tramways, several county councils and many towns and villages. Its big generating stations on the Clyde—Motherwell, Yoker and Clyde's Mill—are "selected" stations and all are being extended, while the Central Electricity Board has carried out a change of frequency to standard. The company cannot fail to benefit from the economies effected in generating costs.

The Scottish Power supplies a number of diversified industries, as well as corporations, in the counties of Linlithgow, Clackmannan and Stirling, and controls all the companies operating in the Grampian area. Its one large generating station—Bonnybridge—has been taken over as a "selected" station.

The Yorkshire Electric Power covers the Yorkshire coalfield and the chief manufacturing centres of the West Riding. It supplies six corporations and fifteen urban district councils, as well as various electrical companies. All its big generating stations—Thornhill, Barugh and Ferrybridge—are "selected" stations. In the case of Ferrybridge, which is newly constructed, the company will have the advantage of obtaining its bulk supplies at a cost of production based on a full load operation, which it could not have hoped to reach under its own management for a number of years.

Midland Counties Electric Supply covers the whole of the counties of Leicestershire, Warwickshire, Derbyshire and Nottinghamshire (with the exception of certain restricted areas), and its principal generating power stations—Warwick, Hinckley and Spondon—have all been "selected." Midland Counties will particularly benefit from the Central Electricity Board's operation because, apart from the six towns which it serves, it has hitherto depended largely upon a number of scattered and diverse local industries which have never permitted its generating stations to operate at full capacity.

The Lancashire Electric Light and Power supplies electricity in bulk to four corporations, nine urban district councils and a large number of collieries, textile companies, paper makers and engineering works. All its big stations are "selected"

stations; those at Radcliffe and Padiham are in full operation while the one at Kearsley is still under construction. The progressively managed Lancashire Electric Light has always been building plant in advance of trade requirements and the Board's control of the new Kearsley station will mean that the Company will obtain a steady revenue from that plant much earlier than it could otherwise have expected.

It will be apparent that all these companies cannot fail to derive benefit from the " selection " of their big power stations for the purpose of bulk generation by the Central Electricity Board. Out of 328 stations existing in the five areas for which schemes have been adopted, only 106 stations have been " selected," and yet it is estimated that these five schemes will release for revenue-earning purposes plant to the value of about £10,000,000 which is now standing idle.

The earnings and dividend record of the six companies over the past three years is shown in the following table:—

	Newcastle-on-Tyne.			*Clyde Valley.*			*Scottish Power.*

All these companies show a steady increase in earnings over the last three years, with the exception of Scottish Power and to a lesser extent Lancashire and Midland Counties. In the case of Scottish Power, no credit was taken for interest on the substantial struction of the works of the Grampian Electricity Co. Moreover, Scottish Power increased its capital by the issue of 500,000 ordinary shares at 24s. in 1927 and of 600,000 shares at 26s. in 1928. It is clear that the whole of this new capital is not yet productive. The Lancashire Electric has also expended a large amount of capital in the construction of new plant which is not yet remunerative, and last month it announced the issue of 600,000 ordinary shares at 27s. to meet in part the cost of the new station at Kearsley.

The dividend policy is notably conservative in the case of Clyde Valley, Newcastle-on-Tyne and Yorkshire Electric, the two former distributing less than half their earnings. With the exception of Clyde Valley, all the companies have recently issued new ordinary shares on bonus terms to their shareholders. The next table shows the highest and lowest prices for the ordinary shares for the last three years, the present market price and the dividend and earnings yields obtainable:—

	1926.		1927.		1928.		Present Price.	Div. Yield.	Earnings Yield.
	H.	L.	H.	L.	H.	L.		%	%
Clyde Valley £1	31/-	26/6	32/7½	28/3	41/6	32/3	33/-	4·9	12·5
Newcastle-on-Tyne £1	24/9	19/9	24/6	19/7½	30/3	22/9	27/6	4·4	10·2
Scottish Power £1	26/6	23/-	28/9	24/4½	33/10½	26/3	32/-	5·0	5·4
Yorkshire £1	31/6	24/6	32/9	27/-	38/9	31/6	34/-	4·8	8·6
Midland Counties £1	24/4½	18/9	24/6	20/6	33/-	23/4½	32/-	4·1	4·2
Lancashire £1	27/6	23/-	27/9	21/1½	32/6	27/-	29/6	5·2	5·2

It will be observed that, compared with other industrial shares, the dividend yields obtainable from these big electricity supply companies are low, but, in view of the prospect of large economies in operating expenditures and steadily increasing earnings under the national electricity schemes, the market prices cannot be regarded as unreasonable. This particularly applies to Clyde Valley, Newcastle-on-Tyne and Yorkshire Electric, whose earnings so largely exceed their dividends. We may possibly except the shares of Midland Counties, the market price of which has risen on alleged buying for control by the Greater London and Counties Trust.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
May 28.	May 30.

The Whitsun holiday left its mark on the Stock Exchange, which remained in listless mood. A slight accumulation of business having been dealt with, and no outside event occurring to give a lead—apart from the threatening weakness of the exchanges—the underlying cheerfulness of markets, which had coloured the previous fortnight's business, became less notably in evidence. Hesitation, dominated by uncertainty regarding the international money situation, caused an appreciable all-round weakening after midday on Wednesday. The long Account, moreover, was drawing to its close. Only in the Rhodesian copper market, thanks to professional operations, was there a show of activity. Too many restrictive influences are at work to make the more favourable conditions at all probable until the election is over and the monetary cloud has been dissipated. After May 30th, much will depend on the nature of the verdict given at the polls.

Gilt-edged stocks were dull, without much change, after the holiday, but suffered something like a relapse on Wednesday, the market being intimidated by the possibility of a rise in American money rates, following the recommendations of the Federal Advisory Council. The New York exchange fell below $4.85, and the Bank of England's purchase of £663,134 of bar gold was not regarded as having averted the danger of gold exports and a rise of Bank rate. Three-and-a-Half per Cent. Conversion Loan and Funding Loan fell ¼ and Five per Cent. War Loan ⅜. Treasury Bonds showed a more extensive decline. The tone next day was a shade less dull, the " no change " decision of the Bank inspiring the view that every effort would be made to avoid an increase on polling day. Indian Loans were again easier, but Dominion and Colonial stocks, though quiet in the extreme, were generally steady.

Quotations moved, for the most part, within narrow limits in the foreign market, where no public interest was shown. French loans were firm on reports of agreement among the creditor delegates at Paris, but German bonds lost further ground in view of the rejection of most of the Reparation " reservations " and the resignation of a delegate. Brazilians were dull, and, among Far Eastern stocks, Chinese declined on the prospect of open hostilities between the Government and General Feng.

Home rails reflected the dull tendency of other markets. Quotations continued slowly to sag, despite the nebulous promises of assistance given by two of the political parties (dealt with in a subsequent " Investment Note " in this issue). In happier times more attention would have been attracted to the encouraging traffic returns, which showed a rise in receipts compared with those of pre-Whitsun week last year, on all lines but the Southern. Foreign rails were heavy, Argentine stocks losing ground on Wednesday, while Antofagasta reacted after its long rise.

The inevitable pre-election dullness in the industrial markets was accentuated by the uncertainty of the New York position, public interest being insufficient to allow of effective resistance to any lead which America chose to give. In view of the cumulative force of the depressing factors present, however, the fact that most price declines were of narrow dimensions was a not unencouraging sign. Dealings began in the certificates representing " assenting " stock and shares in the cable and Marconi companies (as described on a later page), prices showing some recession on market tendencies generally. The leading gas issues did not maintain their early firmness, and in other cases where semi-speculative movements had recently occurred, such as the aviation, commercial motor and gramophone groups, a moderate reaction was recorded. Carreras came on offer after their previous rise, other tobacco shares weakened, and activity in the brewery group, especially in Distillers, suffered a setback. Rayon shares were inclined to harden before reactionary conditions set in on Wednesday, but other textiles offered a fair resistance to the general tendency, the settlement of the threatened cotton lockout having a good effect. Associated Electricals were sold from America, and International Nickel reflected much the same tendency, despite an encouraging report for the first three months' operations of 1929 (discussed in a subsequent " Note "). Insurance shares were irregular, but few changes occurred in bank share prices.

The rubber share market opened actively on the rise of quotations for the commodity, as a result of extensive New York demand, but stock was not easy to obtain. Profit-taking and a marking down of prices quickly supervened on the reaction in the commodity in mid-week. Tea shares were harder than of late, but failed to live up to their early promise of firmness. Oil shares proved largely unresponsive both to the rise in mid-Continent crude prices—the wisdom of which was questioned at a time when the industry was striving to avoid an increase of production—and the " Hoover plan " to support " regulating " efforts. Recent dividends (set out on another page) have not encouraged any extension of speculative commitments.

Monetary fears affected Paris even more than London, sales of Kaffirs from that centre offsetting the firmer tone of Johannesburg on hopes of a South African Party victory at the polls. The Rhodesian market remained in the hands of the large inside interests, who were reported to have staged a sudden rise in Congo Borders, before the receipt of a favourable cable, with a view to pending market developments. Tin shares were undecided, in the absence of any definite trend in the price

of the metal, but in the copper group Rio Tinto had a sharp relapse on extensive selling in Paris, Tharsis also being marked down. Quotations for the metal again pursued a downward course.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Attention has been centred on the controversy over Federal Reserve powers, which reveals the principal regional banks desirous of raising rates, while the Board is closely divided and continues to refuse its permission. Many students of banking hold the latter wrong both in its assumption of authority and its policy. An increase in rates is generally expected failing striking stock market developments and a reduction in brokers' loans. The modest decline of $45,000,000 in the latter this week is somewhat disappointing, but does not reflect Wednesday's weak market. On the whole, shares have held remarkably well in discouraging circumstances, with no tendency towards disorderly liquidation, and a moderate volume of business passing. Industrial news remains good. The steel industry maintains its pace, and automobile makers are reducing operations less than was expected. The Ofallon decision is an important victory for the railroads, but is believed unlikely to have much effect on rates.

PARIS.

Influenced by the hope of an agreement being reached by the Conference of Experts, the Bourse maintained a fairly firm tone during the week. This was due principally to professional buying, investors still holding off the market. The tendency became easier, however, as the week progressed, and numerous declines were shown, on balance, over the period. Banks, chemicals and elecrticity shares were the most favoured descriptions, while Mexican Eagle made further progress. Rubbers were stimulated by the firmness of the commodity. Rio Tinto and Huelva Copper suffered a sharp reaction. Wagons-Lits also lots ground, and Kali-Sainte-Thérèse had a setback.

BERLIN.

Friday, May, 17th, witnessed a rising and active market, the first for nearly a fortnight, and there was a complete reversal of sentiment, towards which the fall in the foreign exchanges and a favourable monthly Railways Corporation report contributed. After the holidays the rise continued, steel, electrical, and potash shares being the chief gainers. On Wednesday, however, owing to fears of the New York discount rate being advanced, there was a general reaction, and Thursday was dull and somewhat weak, though certain favourites made gains.

AMSTERDAM.

After the holidays, the Bourse opened firm, though business, apart from industrials, was somewhat restricted. Large transactions were effected in Margarine Unie, and artificial silks received more interest, keeping a firm tone. Philips fluctuated little, but Ford shares improved. Oils were easier, Royal Dutch weakening on the announcement of a 24 per cent. dividend, the same rate as last year. Sugar shares were a strong market, and rubbers improved, but tobaccos were dull and shipping shares irregular. As the days went on the market weakened all round. The money market remained firm, with the private discount rate 5⅛-5⅜ per cent., and the prolongation rate 6 per cent.

INVESTMENT NOTES.

Central Electricity Board Loan.—A pending issue of £3,000,000 4 per Cent. Stock, at the price of 83, by the Central Electricity Board, not only signalises the emergence of a new British borrower of the first rank, but marks a definite stage in a process destined to influence the fortunes of British industry for many years to come—the "rationalisation" of the electricity supplies of this country. Under the Electricity (Supply) Act, of 1926, the Board were constituted in order to construct main transmission lines (commonly known as "the grid"), to concentrate generation at standard frequency in the most efficient stations, to supply electricity in bulk for distribution, and by these means to increase the availability of electricity throughout the country and reduce the cost of production. We described the progress made by the Board towards the carrying out of its task, in an article in our issue of last week (page 1,100), and in a leading article on page 1171 of this issue we estimate the effect of the new schemes on the earning power of some of the largest electric power companies. In order to fulfil its duties, the Board may borrow up to £33,500,000, subject to the consent of the Electricity Commissioners. The latter has so far sanctioned the borrowing of £13,900,000, of which £5,400,000 is in respect of "standardisation of frequency," and £8,500,000 for main transmission lines and other purposes. The present issue forms part of this £13,900,000, and will be redeemed by a cumulative sinking fund, beginning not later than 1935, to be provided out of the Redemption Funds which the Board are required to set aside for the amortisation of their capital expenditure. Any stock not previously purchased at par or under will be repaid at par not later than May, 1989, but the Board has power to redeem the whole on three months' notice after May, 1959. The Board will obtain its revenue from two sources—the sale of electricity in bulk and a levy (by the Electricity Commissioners) on the whole electricity supply industry of the country equal to interest and sinking fund on money borrowed for "standardisation of frequency." The Board are satisfied that when the schemes they have adopted are in full operation their revenue will provide ample margin over the ser-

vice of their loans. This latter consideration is of dominant interest to the investor since, although the Board have the right to a Government guarantee of their obligations if the latter should ever be required, that right is not being exercised as regards the present issue, the security for which is squarely based on the Board's own earning power. Presuming redemption at the latest date, *i.e.*, sixty years hence, the stock gives an interest yield of £4 16s. 5d. per cent., and a yield, including redemption, of £4 17s. 8d. per cent. The credit status of the Board is, of course, of the highest, in view of its semi-public nature and the national importance of its functions. In arriving at the terms of this initial appeal to the public, those concerned would seem to have had two main considerations in mind. In the first place, they have decided that a long-term stock, offering the prospect of substantial capital appreciation—not immediately but ultimately—would be both attractive to the investor and economical to the Board. In the second place, they have, in effect, suggested that the Board's securities, though not of trustee status, compare broadly in investment appeal with the long-term issues of such borrowers as the Metropolitan Water Board, the London County Council or the Port of London. A first issue of this kind must naturally be regarded as, in some respects, a "trying-out" of the possibilities of the market. For this reason, and in view of the bearing of future borrowing on the whole question of cheap power for British industry, it is to be hoped that every effort will be forthcoming to ensure the success of the present loan, the lists for which will close on or before next Tuesday.

Home Rails and the Election.—Home railway matters have been prominently in the public eye during the last week or two, owing to the proposed measures for assistance included in the programmes of the political parties. Mr Baldwin has pledged his party, if returned to power, to an immediate investigation of the whole problem of the modernisation and reorganisation of the railway system, and has stated that the Government would be prepared to contemplate "financial assistance" were a practical scheme of reorganisation forthcoming. The form which such assistance might take has not been stated, but it may be surmised that Mr Baldwin has in mind an extension of the Trade Facilities system, under which the railways could raise the necessary new capital under Government guarantee at "gilt-edged" rates of interest. Holders of the £1,000 million of outstanding railway securities, and railway users generally, while welcoming such evidence of outside interest, will be inclined to press for more detailed particulars. While none would deny that the scope of possible administrative reforms on all the railways is a wide one, it should not be forgotten that many millions have already been spent in recent years in improving equipment and technical efficiency, which stand higher to-day than at any time before or since the war. The railways may well argue, further, that the most fruitful form which "assistance" might take would be an endeavour, calculated on the one hand to improve the state of British trade as a whole, and on the other to regularise the position of the railways *vis-à-vis* their road transport competitors—the present system of law and taxation being alleged to discriminate unfairly in the latter's favour. In any case, Mr Baldwin's "investigation" could scarcely be carried on without reference to the deliberations of the Royal Commission appointed last year to consider the whole question of national transport. The difficulties of carrying through further "reorganisation" schemes, involving new capital expenditure on the grand scale, are exemplified by the proposals for reforming the system of wagon ownership and control which are being strenuously urged by a popular London daily newspaper. Out of a total of approximately 1,300,000 railway goods vehicles in the country about half are privately owned, and the majority, especially of the latter type, are of a capacity which experts the world over stigmatise as uneconomically small. On the average, a wagon makes a loaded trip not more than once every six or seven days. The disappearance of the private wagon would obviously reduce the amount of "unprofitable" effort expended on shunting and "empty" return journeys, while the economies of the larger wagon may be inferred from an example given by an experienced railway statistician.* With a coal train of average capacity and average wagon-loading, the substitution of 20-ton for 12-ton wagons would result in a saving of 25 per cent. in siding accommodation, of 11 per cent. in the total weight to be hauled, of 40 per cent. in the number of wagons used, and of 17 per cent. in their cost. These are impressive figures, but unfortunately the railways have at present some £65 million invested in their own wagons, many of which are of relatively small capacity, while privately-owned wagons have a capital cost estimated at £40 million. Over 90 per cent. of the private wagons are employed in the coal trade, their excessive number being due largely to the existence throughout the country of a multitude of retail dealers, who buy their coal in small consignments and use the wagons as a species of warehouse, unloading day by day as customers' orders come in. Colliery equipment, port appliances and railway yard arrangements are also based on the wagon of relatively small capacity. The problem is thus formidable to a degree, and it is difficult to see to what extent the raising of the large amount of capital, inevitable in any rapid change-over from smaller to larger working stock, would be facilitated by the application of Trade Facilities provisions, seeing that the yield on railway debentures, at their present market prices, approximates closely to that on British Government stock. Altogether, the investor in home railway securities, while rightly demanding that each of the many avenues for increasing efficiency be ceaselessly explored, would be well advised to pay no undue attention to agitations and promises made in the dust and heat of a general election.

The Tea Outlook.—Tea companies suffered in general last year through the inevitable effects of over-production. Because crops were heavy, prices weakened, and the loss outbalanced the gain. The four companies in the Finlay group, whose reports were published this week, illustrate the ordinary experience; in each case the tea crop was larger than in 1927, the average price per lb. from 1⅞d. to 2¾d. lower, and profits and dividends less. There has seldom been a more difficult time at which to make any forecast of the future with confidence, owing to uncertainties which the repeal of the duty has introduced. The household demand for tea in this country is not likely to be specially increased by the reduction in price, though the cheaper an article the more carelessly it is used, and unconscious consumption by waste may grow even though there be no conscious tendency to "drink more tea." But as the duty on Empire tea was only 3½d. instead of the 4d. on foreign teas, the removal of the duty, which has been followed by a reduction in the retail price of all teas, Empire or foreign, by the full 4d., gives a fillip to Java teas by bringing them into competition on equal terms with India and Ceylon. British imports of Java teas have grown rapidly in the last three years, and with this extra stimulus they are likely to threaten the common Empire teas more and more seriously. The same train of cause and effect should, however, bring advantages to higher-grade teas, in that the blender, who is able to obtain his common tea more cheaply, will be in a position to use a larger proportion of quality tea; for it is a characteristic of the tea trade that the levelling-out of price fluctuations is done in the blending, and temporary alterations of price to the consumer are avoided. The production of quality teas from Darjeeling, Upper Assam and Ceylon is limited, as production per acre cannot be increased without lowering the quality of the crop, and labour difficulties confine the possibilities of extending the acreage of gardens, which in any case is a costly and long process. The effect of the Budget, therefore, is likely to be adverse to common Empire teas, but, taking a long view, to buttress up the position of the companies producing high-grade teas. But for the present the tea trade is in confusion, because, since the removal of the duty, there are no longer any stock figures published. Import and export figures, of course, continue to be avail-

* Mr W. V. Wood in "Railways," p. 85. (London) Home University Series. Thornton Butterworth, Limited.

able, and it is possible to obtain stock figures for the London warehouses, which are computed to cover 90 per cent. of the tea imported. But though determined efforts are being made to obtain figures from other ports and from private warehouses, it is at least doubtful whether they will achieve success, and for the interim period at least the market will have to struggle along with incomplete and unrepresentative statistics. As stocks were unduly high, for obvious reasons, when the last official figures were published, and as the above estimate of 90 per cent. may become far away from the truth, it will be well to remember how misleading statistics in the tea trade have proved to be on previous occasions, and to avoid rigid inferences from such figures as may be available for the next few months. For this reason, and because it is too early to speak of crop prospects, even the most general arguments must be treated with reserve at the moment.

Cable-Wireless Merger Arrangements.—The official circular relating to the cable and wireless merger, issued to the shareholders concerned on the eve of the Whitsun holiday, contains nothing new regarding the terms of exchange, but sets out a plan under which stock- and shareholders assenting to the offer are to deposit their certificates with the Bank of England. Such holders will receive an interim certificate of registration, which will answer the purpose of a share certificate. Under the deposit agreement, " assented " shares are transferable by a special form obtainable from the Bank of England, and every transferee is automatically bound by the terms of exchange. Corresponding arrangements have been made as regards the share warrants outstanding in the case of the Marconi company. These arrangements are calculated to expedite the inevitably heavy clerical work involved in the merger—some 40,000 registered shareholders are involved in the operations, apart from holders of share warrants—and to obviate the possibility of " assented " shares coming into the ownership of " non-assenting " transferees. It is intended, in due course, to convert the fully-paid shares of Cables and Wireless into stock transferable in multiples of £1. The latter will rank for dividend as from January 1st last, but no dividend will be paid on the " A " and " B " ordinary before the accounts for the whole year 1929 have been audited and adopted in general meeting—a proviso to which some slight exception has been taken in the market, since it means, in effect, that holders of these shares will receive no dividend until the summer of 1930 at the earliest. All agreements are conditional on acceptance by holders of 60 per cent. (or a similar percentage as specified in certain provisions) of each class of ordinary stock and shares, and of Marconi preference, on or before June 28th next, or such later date as may be provided for, the latest date in any case being July 31st next. The only cases in which the issue remains in doubt are those of the Marconi £1 ordinary and preference shares, representative committees of which have issued a circular advising holders not to sign the form of acceptance issued by Cables and Wireless. The circular refutes the argument of the Marconi directors, in their last report (discussed in the *Economist* of May 18th, page 1,119), by pointing out that the contention that future Marconi dividends are unlikely to be more than 20 per cent. (equivalent to a total distribution of £450,000 each year), can scarcely be reconciled with the merger company's allotment to Marconi shareholders of shares carrying fixed dividends of £792,500 a year *plus* 65 per cent. of the " B " ordinary shares entitled to surplus profits. It is made clear that the committees are not opposing the merger scheme as a whole, but only the terms offered to the Marconi £1 shareholders. It remains to be seen whether the arrangements suggested for the issue of units against the deposit of £1 shares with the Prudential Assurance Co., which are now declared to be " practically completed," will provoke a sufficiently widespread response to put the committees into a position to demand substantial concession as the price of the abandonment of their policy of remaining outside the merger.

Fine Cotton Spinning Combine.—Further progress is reported in connection with the proposed combine of Lancashire firms spinning Egyptian cotton, to which reference was made in last week's *Economist* (page 1103). The promoters now state that the directors of 15 companies, controlling 31 mills, containing over three million spindles, have agreed upon terms whereby the amalgamation can take place. Special meetings of the shareholders and loanholders in the individual firms have been called for May 29th with the object of securing ratification of the provisional arrangements. According to an official announcement, writes our Manchester correspondent, the suggested new company will be capitalised on a reasonable and economic basis. A feature in the merger is that every class of interest has been safeguarded, and all securities which are offered in the merger company are considered to be of substantial value. On the average of past results the share capital on the new basis would seem to have been written down to a dividend-paying level. Income debentures are being offered to certain classes of loanholders in some of the mills, and are fully covered as to interest and sinking fund on the basis of past results, while the operation of a 1 per cent. sinking fund should tend to stabilise prices. Steps will be taken to obtain Stock Exchange quotations for the income debentures and the ordinary shares. The banks, who are largely interested in the various companies to be amalgamated, will accept these income debentures as securities for a substantial proportion of their indebtedness. The underlying idea of the merger is to prevent unremunerative price-cutting. It is estimated that the yarn production of the combined mills will be about 50 million lb. a year. So far, the name of the merger company has not been given, and the names of the directors have not been announced. It is well known, however, that the negotiations have been carried through by several leading Lancashire gentlemen with a wide knowledge of the fine-spinning trade, who are closely associated with the concerns to be amalgamated. It is also understood that two well-known London financial houses, Messrs M. Samuel and Co. and the British, Foreign and Colonial Corporation, are interested in the merger, and that new money—to an amount estimated in some quarters at £2½ million to £3 million—will be introduced.

Fine Cotton Spinners.—The Fine Cotton Spinners' and Doublers' Association has altered its dividend every year since the war. In 1927-8, when earnings were equivalent to 15.8 per cent., the ordinary distribution was raised from 10 to 15 per cent., though earnings had been falling short of dividends in previous years. In common with the general experience of Lancashire, 1928-9 was a difficult period for the company; profits fell by 42½ per cent., and the dividend has been reduced to 9 per cent., £100,000 being taken for the purpose from reserve for equalisation of dividends. This and other reserves now amount to £1,422,126 in the aggregate, a useful though not a liberal total for a concern capitalised at £11,100,000.

(Years ended March 31)	1927.	1928.	1929.

Fixed assets show little change on balance at £6,098,928; sundry investments (including, apparently, trade and outside investments) stand at £4,713,732, against £4,513,119 a year ago. Among floating assets, stock-in-trade is £526,244 higher at £3,233,229, and debtors £174,504 lower, both comparisons suggesting a slackening turnover. The cash holding has fallen heavily from £774,540 to £143,709. On the other side, loans show a reduction of some £72,000, but amounts owed to creditors are up by £288,109. It is now clear that the generous dividend policy pursued in respect of 1927-28 has tended to reduce net working capital. The £1 ordinary shares, quoted at 2$\frac{11}{16}$ at this time last year, now stand at 1$\frac{15}{16}$, and yield £4 13s. 6s. per cent. on the basis of a 9 per cent. dividend.

International Nickel.—Consolidated accounts have been issued for the International Nickel Co. and its subsidiaries covering the quarter ended March 31st last, and they certainly make a satisfactory showing. As the figures of Mond Nickel are now included, comparison with previous results is scarcely possible, but earnings for the three months amounted to $7,391,661; total income, $7,860,709; net operating income, $6,584,282; and profit (after deducting depreciation and other charges), $5,590,191. Preferred dividends absorbed $589,876, and the balance available for the common stock was equivalent to 36 cents per share. A balance of $2,251,168 remained undisturbed. Assets totalled $174,964,567 gross, of which $120,815,967 was represented by property and $23,838,609 (among current assets amounting in all to $53,191,963) by call and time loans. Current liabilities were only $9,200,120. The capital surplus was $48,350,737, the earned surplus $19,390,547, in addition to insurance and contingent reserves and a retirement system reserve. The company reports that the demand for nickel has been very well maintained both in America and in Europe, and as a result of the visit of the President of the company to England an extension of the property of Mond Nickel has been decided on. Caution may be detected in the reference to the development of the Frood mine, which " is continuing in a very satisfactory way," but " it has always been stated that a considerable period must elapse before any practicable output would be obtained " . . . " with care and time the prospects which have already been forecast for this mine will unquestionably be realised." It is reasonable to read into this an encouragement to the genuine investor and a rebuff to the speculator.

Imperial Continental Gas.—Whatever stockholders may think of the dividend recommended, the expansion in the profits of the Imperial Continental Gas Association is, taken by itself, impressive. It appears that the rate of earnings on the capital stock has risen from 9½ per cent. in 1926 and 13¾ per cent. in 1927 to 24½ per cent. in 1928. After paying 15 per cent. as dividend, an allocation of £70,000 is made to reserves, which received nothing last year, and a small distribution is made to the staff, marking the beginning of a scheme of profit sharing:—

(Years ended December 31.)	1926.	1927.	1928.
	£	£	£
Profit	149,213	217,167	387,259
Capital stock *earned*	*9·4%*	*13·7%*	*24·5%*
Capital stock paid	10%	10%	15%
Capital stock amount of dividend	158,080	158,080	237,120
Reserves	...	...	70,000
Staff bonus	...	...	2,371
Increase or decrease in carry-forward	−8,867	+59,087	+77,768

The output of gas increased by 5.79 per cent., as compared with 1.79 per cent. for the previous year, and the units of electricity sold showed an increase of 18.6 per cent. It is unfortunate that the company has seen fit to compress its accounts this time into small compass, for a concern of such standing can have no justification for such a retrograde step. Not only is comparison with the previous year no longer given, but all the investments, which used to be set out in a classified list, have been piled together, as have the reserves. It breeds confidence to see reserves of £3,809,244 on a capital of £2,198,831, but the stockholders are entitled to ask why they are no longer allowed to know the composition of the reserves, and, more important still, to know, as of old, what proportion of the investments are in gilt-edged securities, in foreign gas and electricity companies, and in miscellaneous foreign securities. Under the Association's new Act of Parliament an increase of the authorised ordinary capital stock by £1,024,000 is recommended, of which £524,000 will be offered to stockholders in proportion to their stockholdings, at £200 per £100 stock, some £245 below the present market price, which, in its turn, is £50 below the maximum boom price of not long ago.

African and Eastern Trade Corporation.—The accounts of the African and Eastern Trade Corporation for the year ended September 30, 1928, show a loss of £96,953, which suggests that Sir Robert Waley Cohen made a good bargain with the Niger Company when he obtained for the African and Eastern half the £13,000,000 capital in the merger company, United Africa. At the general meeting on May 23rd Sir Robert may, however, prove to the satisfaction of shareholders that the loss for 1928 was due to non-recurrent causes and that the merger company has started its life with a clean bill. The following table shows the trading results of the African and Eastern over the last three years:—

	1926.	1927.	1928.
	£	£	£
Ordinary capital	4,000,000	4,000,000	4,000,000
Net profits	284,698	407,612	*96,953* loss
Preference dividends	120,642	161,576	124,782
No. of times covered	2·36	2·52	...
Available for ordinary	164,056	246,036	...
Earned per cent.	4·1	6·15	...
Paid per cent.	6	8	Nil
Carried forward	301,416	266,452	44,717

The balance sheet, as at September 30, 1928, shows a total of £19,143,931, but the auditors who have conducted an examination of the company's affairs have declared that the assets must be written down by the extent of the reserves, namely, £2,345,141. Allowing for this reduction the net assets accruing to the 4,000,000 ordinary shares amount to £4,089,556, which would justify the chairman's claim that the shares are worth their par value. The surplus of current assets over current liabilities amounts to £1,588,750, of which cash and bills receivable represent over £1,000,000.

Oil Dividends and V.O.C.—The oil dividends announced in the last week have been received with mixed feelings. The Anglo-American Oil Co. declared a dividend of 7½ per cent. for the year 1928, as against 12½ per cent., which was not earned, in respect of 1927. Seeing that the Anglo-American Oil Co., in the petrol statement which was submitted to the Government, showed that on the bulk of its petrol trade it could not be making any profit even after the recent rise in petrol prices, assuming that it bought its supplies at the current market rate in America, there should be no occasion for surprise at a dividend of only 7½ per cent. It will be interesting to see from the accounts whether even this reduced dividend has been earned. The Burmah Oil Co. announced a final dividend of 10 per cent., making 20 per cent for 1928, as

OTIS & CO.
Established 1899

Underwriters of Stocks and Bonds

Cleveland Chicago New York Philadelphia

Members New York Stock Exchange

was declared in 1927. Dividends have not yet been restored to the 30 per cent. rate which was the order before the oil price cutting war in India was declared. Since the settlement of the company's fight with the Standard Oil group, oil prices in India have recovered, although not quite to the level ruling before war broke out. Trinidad Leaseholds surprised the market by raising its interim dividend in respect of the year ending June, 1929, from 10 per cent. to 12½ per cent. The directors at the same time warned shareholders not to expect an increased final dividend, but declared that results so far known justify the raising of the dividend for the whole year from 27½ per cent. to 30 per cent. On the other hand the 1928 dividend of 22½ per cent. declared by the V.O.C. Holding Co. did not come up to market expectations, but the accounts, which have just been issued, show that the company has again distributed as much as it received in dividends from Venezuelan Oil Concessions. The report of the latter company showed that oil proceeds and value of oil stock was less than 10 per cent. higher at £4,442,351 although the production of crude oil increased by about 70 per cent. from 2,978,219 to 5,084,000 barrels. This was explained by Lord Bearsted at the general meeting of the company in February last. Fuel oil constitutes more than 75 per cent. of the company's crude oil, and fuel oil prices were never lower than they are to-day. At the beginning of 1928 cargo lots of fuel oil were quoted at Gulf ports at 2⅝ cents per gallon. At the end of 1928 the price had fallen to 1⅝ cents per gallon. Lord Bearsted stated that prices were likely to remain at a low level for some time. The dividend declared by Venezuelan Oil Concessions was 111½ per cent. (against 106½ per cent. in 1927), absorbing £1,114,877, practically the whole of which accrued to the V.O.C. Holding Co., as it holds over 99 per cent. of the capital. The financial results of the V.O.C. Holding Co. are shown in the following table:—

	1926.	1927.	1928.
	£	£	£
Capital	3,597,112	5,397,412	5,398,212
Dividend from V.O.C.	443,679	851,619	891,601
Interest and fees	2,029	43,333	94,771
Gross profits	445,708	894,952	986,372
Net profits	426,820	863,213	971,790
Dividend { Amount	431,653	863,714	971,678
Dividend { Rate	15%	20%	22½%
Carry-forward	3,850	3,349	3,461

The total of the balance sheet showed an increase of approximately £1,000,000, chiefly as a result of two dividends from the Venezuelan Oil Concessions being received in one year. Cash amounted to £1,301,536, and treasury bills to £502,158. The shares were slightly easier on the dividend announcement at 4 3/32.

Amsterdamsche Bank.—This Dutch institution reports an increase in earnings during 1928 from 17,605,000 guilders to 18,505,000 guilders, as a result of gradually improving business conditions in Holland:—

(In thousand guilders.)

	1926.	1927.	1928.
Receipts	18,505	17,605	18,505
Expenses	6,005	6,060	6,285
Gross profit	12,500	11,545	12,220
Depreciation	2,506	1,496	1,407
Reserves	3,998	3,997	3,750
Tantiemes	843	896	1,269
Taxes	478	480	567
Dividend { Amount	4,675	4,675	5,225
Dividend { Per cent.	8½%	8½%	9½%

The balance sheet shows a capital of 55 million guilders and reserves of 44½ million guilders. Acceptances on December 31 last amounted to 37½ million guilders and deposits to 74.8 million guilders.

Shell Union Oil Corporation.—The 1928 accounts of the Shell Union Oil Corporation, which is the subsidiary of the Royal Dutch Shell group in the United States, show the recovery in oil fortunes which followed the rise in gasoline prices in America last year. This was supplemented in the case of the Shell Union by a further expansion of operations, the net production of crude oil being 47.8 million barrels as against 36.6 million barrels in 1927, and the refinery through-put being 60.2 million barrels against 53.5 million barrels. The following table shows the earnings and distribution of profits in the last three years:—

	1926.	1927.	1928.
	$	$	$
Gross income	65,044,900	46,798,724	68,538,816
Depreciation and special reserve	33,230,574	33,471,231	44,012,082
Interest on debentures and amortisation	Nil	1,962,740	4,119,486
Net income	31,518,965	11,344,915	20,395,021
Preference dividends	1,035,173	381,270	...
Available for common divs.	30,483,792	10,963,645	20,395,021
Earned per share	$3·04	$1·09	$2·04
Common dividends per share	$2·00	$1·40	$1·40
Carried forward	35,288,572	30,628,358*	37,023,379

* Less premium on preference stock called for redemption in May, 1927.

In December, 1928, the Corporation increased its capital by the issue of 3,000,000 shares of common stock at $10 per share. This increase was necessitated by the constantly increasing expansion of the Royal Dutch-Shell companies in America. Last year the Corporation began the construction of a new refinery at Houston, in Texas, which follows on the new refineries at Chicago and at Dominquez, near Los Angeles, California. The new pipe lines, which have been constructed, now enable the Corporation to ship crude oil from West Texas direct to the refineries at Arkansas City, Wood River and East Chicago, and to the refinery at Houston for coastwise or overseas shipment. The directors add in their report that the Corporation is co-operating to the utmost with the efforts to bring about a more rational development of new oilfields by restriction of output. The common shares of the Corporation are quoted at $28½.

Namaqua Copper.—The effects of the advance in the price of the metal are strikingly exemplified in last year's results, writes our mining correspondent. In 1927 a loss of £14,150 was made, absorbing practically the whole of the credit balance. For the past session, with a slightly reduced output, there was a profit of £10,060, permitting the payment of a dividend of 2s. 6d. per £2 share, now standing at £1 5s. The last preceding distribution was 2s. 6d. in respect of 1926. The company has investments, chiefly gilt-edged securities, to the value of £22,600. Developments in the various mines last year gave very mixed results, but in the end the ore reserves at 72,100 tons, value 4.42 per cent. copper, show only a small decline. In addition, 67,000 tons of mineral, averaging 1.9 per cent., are under treatment at the precipitation works. The results of a visit of inspection to the properties were made known at the meeting.

Oriental Consolidated.—A certain amount of British capital is invested in this New York enterprise, which has for many years past operated a gold property in Korea. Its results are of interest for this reason and in relation to those of the British-owned Chosen Syndicate, which holds neighbouring properties. The latest annual report of the Oriental shows that during 1928 some 238,800 tons were crushed for a yield averaging slightly over one United States dollar. The operating profit amounted to 241,700 dollars, but after providing for depreciation and the like there was a net loss of 47,800 dollars, as against 74,100 dollars for 1927. Once again 5 per cent. has been paid, the amount involved (214,700 dollars) being deducted from the net surplus and reserves, which thereby are reduced to 1,537,700 dollars. At 393,000 tons, having a gross value of 1,864,500 dollars, the ore

The List of Applications will be closed on, or before, Tuesday the 28th day of May, 1929.

CENTRAL ELECTRICITY BOARD.

ISSUE OF £3,000,000

Central Electricity 4 per Cent. Stock, 1959-1989,

Issued under the Electricity (Supply) Act, 1926, and the Central Electricity Board Borrowing Regulations, 1928, pursuant to a Resolution of the Board, dated the 17th day of May, 1929.

Interest will be paid Half-yearly on the 1st May and the 1st November.

PRICE OF ISSUE £83 PER CENT.

The GOVERNOR AND COMPANY of the BANK OF ENGLAND are authorised by the Central Electricity Board to receive applications for the above issue of Stock, payable as follows:—

On Application	£ 5 per Cent.
On Tuesday, 18th June, 1929	£18 ,,
On Friday, 26th July, 1929	£20 ,,
On Friday, 23rd August, 1929	£20 ,,
On Friday, 13th September, 1929	£20 ,,
	£83 per Cent.

The Stock now issued and the interest thereon are a first charge on the whole undertaking and the net revenues of the Board.

The Board reserve power to create and issue further stock ranking *pari passu* with the Stock now issued.

The revenue of the undertaking will be derived from the sale of electricity in bulk and by a levy by the Electricity Commissioners under Section 9 of the Electricity (Supply) Act, 1926, on the whole of the electricity supply industry within Great Britain of annual sums equal to the Interest and Sinking Fund charges in respect of money borrowed for the "standardisation of frequency." The Board are satisfied from detailed estimates of the financial operation of the several Schemes which have been adopted by the Board as mentioned in the Statement appended that when those Schemes are in full operation the revenue will provide ample margins over and above the amount required to meet the interest and sinking fund charges in respect of the total expenditure on the said Schemes. Considerable progress has already been made in the construction of main transmission lines and several sections will be in operation during the latter part of this year.

The Stock will be redeemed by a Cumulative Sinking Fund, commencing not later than the year 1935, sufficient to repay the whole of the Stock by its maturity date. This Sinking Fund will be provided out of the Redemption Funds which the Board are required to provide for the amortisation of their capital expenditure and will be applied in the purchase of Stock when the price, exclusive of accrued interest, does not exceed par, and any balance which cannot be so applied will be invested temporarily in accordance with the Borrowing Regulations. Any Stock not previously redeemed will be repaid at par on the 1st May, 1989, but the Board reserve the right to redeem at par on any interest date on or after the 1st May, 1959, all Stock then outstanding on giving at least three months' previous notice by advertisement in two London daily newspapers.

The Central Electricity Board were constituted by the Electricity (Supply) Act, 1926. Their main functions in the development of the supply of electricity are to construct main transmission lines (commonly known as "the grid"), to concentrate generation at standard frequency in the most efficient stations, to supply electricity in bulk for distribution, and by these means to increase the availability of electricity throughout the country and reduce the cost of production.

The Board may, subject to the consent of the Electricity Commissioners, borrow £33,500,000. Of this sum the Electricity Commissioners have already consented to the borrowing by the Board of £13,900,000, of which £5,400,000 is in respect of "standardisation of frequency," and £8,500,000 in respect of the construction and acquisition of main transmission lines and other purposes. The proceeds of the present issue will form part of the said sum of £13,900,000.

The Board are acting under statutory powers in carrying out the Schemes referred to in the Statement appended, and the proceeds of the present issue will be used to repay temporary advances of monies already expended on, and to provide further funds for, the construction and acquisition of main transmission lines: the cost of standardisation of frequency: and other authorised purposes including payment of interest on the Stock until the 31st December, 1936, if and so far as the expenditure does not become remunerative at an earlier date.

The Register of the Stock will be kept at the Bank of England. The Stock will be transferable by ordinary Transfer Deed in multiples of one pound.

Applications which must be accompanied by a deposit of £5 per Cent. will be received at the Bank of England Loans Office, 5 & 6, Lombard Street, E.C. 3. In the case of partial allotment the balance of the amount paid as a deposit will be applied towards payment of the first instalment; should there be a surplus after making that payment such surplus will be refunded by cheque.

Applications must be for sums of £50 or multiples thereof.

Instalments may be paid in full after allotment under discount at the rate of 4 per Cent. per annum. In the case of full payment being made before the 18th June, 1929, discount will only be allowed from the latter date. Default in the payment of any instalment by its proper date will render the deposit and any instalments previously paid liable to forfeiture and the allotment to cancellation.

Interest on the Stock will be payable half-yearly on the 1st May and the 1st November. Warrants will be transmitted by post. A first Interest payment of £1 per £100 will be made on the 1st November, 1929.

Scrip Certificates to Bearer with coupon attached for the interest payable on the 1st November, 1929, will be issued in exchange for the allotment letters. Fully paid Scrip Certificates may be registered on and after the 18th June, 1929.

A Commission of 5s. per £100 will be paid to Bankers and Stockbrokers on allotments made in respect of applications bearing their stamp.

Prospectuses and Application Forms may be obtained at the Bank of England Loans Office, 5 & 6, Lombard Street, E.C. 3, or at any of the Branches of the Bank; of Messrs. Mullens, Marshall, Steer, Lawford & Co., 13, George Street, Mansion House, E.C. 4; at any Stock Exchange in the United Kingdom, or at the Offices of the Central Electricity Board, Trafalgar Buildings, 1, Charing Cross, W.C. 2.

BANK OF ENGLAND,
LONDON, E.C. 2.
24th May, 1929.

STATEMENT.

The Board consists of a Chairman and seven Members, appointed by the Minister of Transport pursuant to Section 1 of the Electricity (Supply) Act, 1926. The present Members are:—

SIR ANDREW R. DUNCAN, *Chairman*.
THE RIGHT HON. THE LORD BARNBY, C.M.G.
SIR JAMES DEVONSHIRE, K.B.E.
MR. FRANK HODGES.
SIR JAMES LITHGOW, BART.
MR. W. WALKER.
SIR DUNCAN WATSON.
MR. W. K. WHIGHAM.

The procedure under the 1926 Act (Section 4) is for the Electricity Commissioners to prepare and transmit to the Board Schemes relating to the respective areas specified therein, and:—

(*a*) determining what generating stations (whether existing stations or new stations) shall be the stations (in the Act referred to as "selected stations") at which electricity shall be generated for the purposes of the Board;

(*b*) providing for inter-connection, by means of main transmission lines to be constructed or acquired by the Board, of selected stations with one another and with the systems of authorised undertakers for the supply of electricity, and, where the scheme relates to a specified area, for inter-connection by means of such lines of the system of the Board in that area with the system of the Board in any other area with respect to which a scheme is then in force or may subsequently be made;

(*c*) providing for such standardisation of frequency as may be essential to the carrying out of the proposals for such inter-connection as aforesaid.

The Board publish the Schemes as transmitted by the Electricity Commissioners and, after considering them and any representations made on them by authorised undertakers and other persons interested, and after holding such inquiries, if any, as they think fit, adopt the Schemes either without modifications or subject to such modifications as they think fit.

After a Scheme has been adopted it is the duty of the Board to construct or acquire the main transmission lines specified therein and to arrange for the carrying out of any standardisation of frequency required thereby.

Progressively as the Board's transmission system inter-connecting the selected stations and other undertakings is constructed, the selected stations will come, group by group, to be operated under the Board's directions, and the Board will purchase all the electricity generated at those stations at a price, unless otherwise agreed, equal to the cost of production, ascertained in accordance with Section 7 of the 1926 Act, and come under obligation to supply electricity, either directly or indirectly, to the owners of the selected stations and to every other authorised undertaker within the area of the Scheme who requires a supply under Sections 7 and 10 or one of them. The prices which the Board may charge for the electricity so supplied are regulated (*a*) as to the electricity supplied to the owners of selected stations by Sections 7 and 13 of the 1926 Act and (*b*) as to electricity supplied to other authorised undertakers by Section 11 of that Act. Under Section 7 the price at which electricity shall be supplied by the Board from a selected station to the owners of that station shall, unless otherwise agreed, be either the adjusted costs of production together with a proper proportion of the Board's expenses or according to the tariff to be fixed under the Act, whichever is the lower, provided (Section 13) that the price for electricity sold to the owners of selected stations shall not exceed the cost at which they could have generated it for themselves. Section 11 provides that, subject to the provisions of the Act as to the sale of electricity to the owners of selected stations, the price to be charged by the Board for electricity supplied by them to authorised undertakers shall be in accordance with such tariff as may be fixed by the Board from time to time, and the tariff shall be fixed so that over a term of years to be approved by the Electricity Commissioners the receipts on income account shall be sufficient to cover the expenditure on income account including interest and sinking fund charges, with such margin as the Electricity Commissioners may allow.

In order that the electricity to be supplied by the Board shall be suitable for use by every authorised undertaker within the area of a Scheme, it is necessary that the undertakings should, in general, be operated at the same frequency, and a standard frequency of 50 cycles per second has been adopted. The procedure for effecting the necessary changes of frequency required by a scheme is regulated by Section 9 of the 1926 Act. That Section provides for the expenses of such standardisation being borne in the first instance by the Board and empowers the Board to borrow money for that purpose. The Section also enacts that the Board shall be repaid by the Electricity Commissioners in each year the sums required to meet the interest and sinking fund charges in respect of moneys so borrowed by the Board, and that the payment of such sums shall be treated as part of the expenses of the Commissioners. Under Section 9 of the 1926 Act and Section 29 of the Electricity (Supply) Act, 1929, as amended by Section 7 of the Electricity (Supply) Act, 1922, the Electricity Commissioners are empowered to recover the moneys payable by them to the Board under the said Section 9 from all the Joint Electricity Authorities and authorised undertakers within Great Britain.

The rapid growth of the Electricity Supply industry can be judged from the figures given below, which are taken from the Official Returns of the Electricity Commissioners. These figures show the total amount of electricity generated during the last few years by all authorised undertakers and railway and tramway authorities in Great Britain; a few non-statutory undertakings are also included but generation by private plants is excluded:—

Year ended.	Units generated.
31st March, 1922	4,884,666,038
31st March, 1923	5,738,718,485
31st March, 1924	6,661,524,272
31st March, 1925	7,415,375,529
31st March, 1926	8,122,961,823
31st March, 1927*	8,365,857,198
31st March, 1928	9,927,850,630

* Year of General Strike.

It will be seen from these figures that the annual output of the Industry in Great Britain has increased in six years by over 100 per cent.

The following Schemes have been adopted by the Board:—

(1) Central Scotland Electricity Scheme, 1927;
(2) South East England Electricity Scheme, 1927;
(3) Central England Electricity Scheme, 1928;
(4) North West England and North Wales Electricity Scheme, 1928;
(5) Mid-East England Electricity Scheme, 1929.

The Board expect shortly to receive from the Electricity Commissioners Schemes for the remaining areas in the Country.

reserves in the several mines show a falling off of 92,000 tons in quantity with a small decrease in average value, developments in one of the properties having proved disappointing. The ten-dollar shares are quoted on the London Stock Exchange at 11s. 3d.

Anglo-American Corporation.—In the course of his speech at the annual meeting, held in Johannesburg, a fairly full report of which has been cabled over, Sir Ernest Oppenheimer stressed the importance of the native labour factor. He remarked that even a small increase in the average efficiency of a force of nearly 200,000 would mean much to the mines, particularly the low-grade properties. Dealing at some length with the diamond position, Sir Ernest said the corporation's only new interest was in the Cape Coast Exploration, which appeared likely to control the bulk of the diamondiferous areas south of Port Nolloth; the one farm so far systematically prospected was estimated to contain diamonds worth over £2½ million. The sensationally rich deposits owned by the Union Government, also the Merensky claims, in Namaqualand, would prove short-lived, and their produce would be marketed over a series of years. Production to-day as a whole approximated to the average of the past 23 years, and a considerable contraction in the output of alluvial stones might be looked for in the second half of the current year. On these grounds the corporation had confidence in its diamond shareholdings.

CAPITAL ISSUES.

After the pre-Whitsun rush of prospectuses the week's offers were of minor importance, apart from a momentous new issue by the *Central Electricity Board*, the underwriting of which was arranged towards the end of the week. This operation is discussed in an Investment Note on page 1174. Including this issue, the figures for the week were £2,873,520, bringing the total for the year up to £152,366,834, excluding conversions, against £214,921,583 for the corresponding period of 1928. Of the two other issues, *Dominion-Scottish Investments* was a new Canadian trust company, which proposes to place a large portion of its resources in the securities of Canadian enterprises. In addition to the board of directors, there are Canadian and British advisory committees, the latter consisting of the chairman of the Anchor-Donaldson Line and the chairman of the Clyde and Mersey Investment Trust. The auspices are, therefore, satisfactory. Whatever the worth of the *British Filograph Co.'s* patents for recording sound on a thread, to invite the public to risk their money on a commercially untried invention is, on principle, objectionable. This issue was not underwritten, but the directors were aware of applications for 200,000 shares out of the 600,000 offered.

ISSUES OF THE WEEK.

Central Electricity Board.—Issue of £3,000,000 4 per cent. stock, 1959-89, at £83. Capital and interest are a first charge on the whole undertaking and the net revenues of the board. The stock will be redeemed by a cumulative sinking fund, commencing not later than 1935 and sufficient to repay the whole by maturity, which will be applied in purchase at or below par. The board reserves the right to redeem at par in or after 1959 all stock then outstanding.

Dominion-Scottish Investments, Limited.—Offer for sale of 20,000 units, consisting of one $50 per cent. cumulative redeemable preference share and one $25 common share, at $78.50 per unit. Preference shares are redeemable at 5 per cent. premium after 1934 at company's option; until 1934 holders have the right to subscribe at par for two common shares for every five preference shares held. Authorised capital consists of 100,000 preference and 200,000 common shares; 60,000 units are being offered in equal proportions in Montreal, Toronto and the United Kingdom. The company is incorporated in Canada to carry on investment trust business.

British Filograph Company, Limited.—Issue at par of 600,000 (out of 1,250,000) 2s. shares. The company acquires patents and patent rights for Great Britain and Ireland, Europe, and the British Empire (excluding Canada) of inventions for recording and reproducing sound on a thread, and will manufacture and sell recording and reproducing machines and gramophone attachments for use with thread records. The purchase price for patents and rights and an option on rights in U.S.A., Canada and the Argentine is £45,000 in shares and a call on a further 200,000 shares at par. Working capital is estimated at £47,000.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introductions:—**Gerrard Wire Tying Machines Company, Limited**; issued capital £100,000 in 2s. shares; incorporated in 1924; net assets are valued at £101,314; and profits have been:—1924-25, £23,838; 1925-26, £25,449; 1926-27, £14,429; 1927-28, £32,871; 1928-29, £37,051. **John Lewis Partnership, Limited**; issued capital, 151,250 £1 7½ per cent. cumulative preferred ordinary and 12,000 £1 deferred ordinary shares, together with 958 £1,000 deferred bonds; incorporated (*inter alia*) to acquire a reversionary interest in shares of three companies, and intended to form the basis of a scheme of co-partnership between the employees. **Indestructible Paint and Standard Varnish, Limited**; 60,000 £1 7 per cent. cumulative preference and 58,000 £1 ordinary shares are being issued, the latter ranking *pari passu* with 75,000 existing shares; incorporated in 1924 as manufacturers and dealers in paint, enamels, distempers, varnishes, stains, dyes, lacquers, polishes, colours, etc. **Anglo-Norwegian Holdings, Limited**; issued capital, 20,000 $100 7 per cent. cumulative preferred shares redeemable at company's option at $110, and 420,000 common shares of no par value; incorporated in the Province of Quebec, Canada, to acquire an interest in the Antarctic whaling industry; each preference share gives the right between 1929 and 1931 to purchase two common shares at $7.50 per share, and a further 40,000 common shares are under option to vendors at that price. **Mansfield (Holdings), Limited**; issued capital, 159,550 £1 7 per cent. cumulative preference and 240,450 £1 ordinary shares, together with £100,000 6½ per cent. first debenture stock, 1935-53; acquires control of five companies manufacturing bricks, cement, etc.

At the annual meeting of stockholders of the Lietuvos Bankas, held April 27th, 1929, 7 p.m., at the Bank's offices, Kaunas, presided over by Professor A. Voldemaras, reports of the Directors, of the Advisory Board and of the Auditing Committee were presented. The reports were by motion unanimously carried, ordered received and filed. It was further voted to pay to the stockholders 9 per cent. dividend.

COMPANY MEETINGS, &c.

WIGGINS, TEAPE AND CO. (1919), LIMITED.

OUTPUT AND SALES AGAIN INCREASED.

CURRENT YEAR'S OUTLOOK.

The tenth annual general meeting of Wiggins, Teape & Co. (1919), Limited, was held, on Friday, May 17th, at Winchester House, Old Broad Street, London, E.C.

Mr Keith Barlow (chairman of the company) said: Ladies and gentlemen, with regard to the general trade of your company, I am glad to be able to report progress, both as regards output and sales, and you may be interested to know that the Wiggins, Teape & Co. (1919), Ltd., mills had an increased output of 14 per cent., as compared with 1927, and the Stoneywood mill of Alex. Pirie & Sons, Limited, had an increased output of 9 per cent., as compared with 1927. I am pleased to say that, with the exception of the necessary shuts for alterations to the plant and machinery, we were able to keep all our mills running full time. This has not only been of benefit to the shareholders, but also, as you will appreciate, to the operatives at the various mills. In my speech last year, I mentioned that your home sales in 1927 showed an increase of 9 per cent., as compared with 1926. I am glad to be able to report that in 1928 they again show an increase of 6 per cent., as compared with 1927. Our export side, which in 1927 showed an increase of 4½ per cent., as compared with 1926, again shows an advance in 1928, the increase being 11 per cent.

NEW PAPER-MAKING MACHINE.

You will remember that at last year's meeting I reported that we had placed an order for a new paper-making machine for the Stoneywood works of Alex. Pirie & Sons, Limited, which I said I hoped would be in operation in the late autumn of 1928. I am glad to say that this expectation was realised and the machine was started up on November 30th, and while, as is usual with all new machinery, many adjustments had to be made, I am pleased to inform you that, from the start, the machine turned out exactly the class of paper at which we were aiming. Owing to special treatment, we are able to guarantee that these papers will lie flat in the printing machines, and this, we are certain, will be of great value to the printers.

PHOTOGRAPHIC MILL.

It has been my practice in past years to say a special word with regard to the photographic branch of your company's business. The profits of our Photographic Mill show a slight reduction during the year under review, but I am pleased to state that the sales of Photographic Papers were maintained. I feel that one can now say that the photographic branch of our business is established on a sound footing, and I should like to take this opportunity of thanking the British Sensitisers, our customers, who have helped us in every possible way to establish this entirely new industry in this country.

You will see that, after transferring a sum of £50,000 to general reserve, thus raising the account to £232,495, we are able to recommend a dividend of 8 per cent., less income tax, on the ordinary share capital of the company.

PROSPECTS FOR 1929.

With regard to the current year, though the results for the first three months are not so favourable as those for the corresponding months in 1928, the profits for April, 1929, show an advance on those for April, 1928. Judging from Press reports, it would appear that the general trade of the country is showing signs of improvement, and this improvement is already being reflected on your company's order book. Should this state of affairs be maintained, I think we may look forward with confidence to meeting you this time next year with a satisfactory balance sheet. The only proviso I have to make is that the effect of the forthcoming General Election might, at any rate for a time, tend to retard business.

After the directors' report and accounts had been adopted and the dividend approved, the retiring directors were re-elected and the auditors re-appointed.

CHEVIOT RUBBER, LIMITED.

EXCELLENT RESULTS.

The nineteenth annual general meeting of Cheviot Rubber, Limited, was held, on the 17th instant, in the Council Room of the Rubber Growers' Association, 2-4, Idol Lane, Eastcheap, London, Brig.-Gen. the Hon Charles Lambton, D.S.O. (the chairman), presiding.

Mr C. B. Hester, representing the secretaries (Messrs Guthrie and Co., Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The issued capital amounts to £194,043 10s., against £170,000 shown in the 1927 balance sheet. The increase is accounted for by 180,435 shares taken up by shareholders in response to the offer of new shares at 3s. 6d. each made in February, 1928, and 60,000 shares issued at 3s. each, to which I shall refer later. Cheviot property account is increased by £11,888. £1,150 of this sum represents expenditure on immature areas, and the balance the net cost of 475 acres of land acquired adjoining Cheviot, of which 410 acres are planted with young rubber. In connection with this purchase, and, as part of the terms, an option over 60,000 shares of the company's unissued capital was granted to the vendors at 3s. per share. This option was exercised. The company was itself previously interested, in conjunction with three other companies, in experiments which were being conducted on this land, and, the area being no longer required for experimental purposes, the rubber planted on it was taken over by this company on the terms mentioned. The net cost to the company works out at only £26 per planted acre, and the transaction is, therefore, an advantageous one to us. The planted area at Cheviot now totals 3,057 acres. At Middleton 680 acres approximately were planted in 1928, which, with the 1927 area, brings the total up to 986 acres. The planted area owned by the company is, therefore, 4,045 acres, of which 2,635 acres are mature and producing. We have arranged to plant up a further 500 acres at Middleton this year.

Budgrafting on Middleton is in progress and will be continued during the current year. Successful work has been achieved on this division in spite of persistent malaria to which the staff and labour force have been subjected, and a lack of rainfall, which added to the difficulties by making heavy supplying necessary. All possible counter-measures are being taken against malaria, which the Board trust will result in a definite improvement. The staff at Middleton deserve our fullest commendation for the work accomplished under heavy handicaps.

PAST YEAR'S OUTPUT.

Following the announcement of the abolition of restriction in April, 1928, Cheviot estate was gradually brought into full production, and the output for the year amounted to 1,141,000 lbs., against an estimate under 40 per cent. restriction of 753,700 lbs.

The acting manager and the staff deserve special credit for the successful manner in which labour was secured and trained for tapping. Cheviot estate is reported to be in its customary good order, and cultivation works, which I informed you last year had been temporarily suspended in order to concentrate on the organisation of tapping, are now being fully resumed. The high yields obtained on Cheviot are due to the regular cultivation works

(National Joint Stock Bank)

HEAD OFFICE: HELSINKI (HELSINGFORS), FINLAND
Established 1889.

carried out in past years, as well as to richness of soil, and the policy which has proved so successful will be continued in the future to the fullest extent.

The first-class condition in which Cheviot estate stands to-day is due very largely to the skilful work and ability of Mr A. P. Cranna, who has been manager of the estate since 1921. Mr Cranna now vacates this position in order to take up duties as a visiting agent, in which capacity we shall fortunately still have the benefit of his experience and advice. The management of the property has been entrusted to Mr G. P. Barnet, who has had many years' successful managerial experience.

Profit for the year amounted to £31,023, compared with £33,358 for 1927. When I addressed you last year such an excellent result would have seemed extremely unlikely, but, thanks to heavy yields and economical working, the result comes very close to that for 1927, when the price ruling for rubber was practically twice that ruling during 1928. It is with great satisfaction, in the circumstances, that the Board are able to recommend a dividend of 10 per cent. (less tax), after placing £5,000 to general reserve and providing the customary sum of £3,000 for estate amortisation. With premiums received as a result of the new issues, general reserve now totals £43,189, while amortisation reserve totals £28,000. Our financial position is maintained at its usual high level, cash and British Government securities amounting to over £90,000.

A rapid expansion in American consumption has absorbed the stock which accumulated in the East prior to 1st November, 1928. The removal of this stock and the continuance of a good rate of consumption both in America and in other countries offer some prospect of a more stable market than we have seen for some time past.

Mr J. G. Hay seconded the motion, which was carried unanimously, and a vote of thanks to the Chairman and to the agents and staff in the East concluded the proceedings.

INDIA GENERAL NAVIGATION AND RAILWAY COMPANY, LIMITED.

INCREASED PROFIT.

The annual ordinary general meeting of the India General Navigation and Railway Company, Limited, was held, on the 22nd instant, at Winchester House, Old Broad Street, London.

Mr S. G. L. Eustace (the chairman), in the course of his speech, said: The profit for the year amounts to £179,725, against £137,411 for the previous year, an increase of £42,313, and an indication that the sums we have lately expended on block account are beginning to yield a return. During the year the total volume of goods carried has shown a considerable increase, which one may attribute to the normal expansion of trade, and it is therefore of some satisfaction that with the additions made to your fleet we were able to meet this increased demand.

During the year we have placed in commission nine steamers and six flats, while two steamers and three barges were withdrawn from the running fleet. Capital expenditure amounted to over £350,000—a considerable sum, but, owing to delays, it includes the completion of the programme of new construction for the previous three years. This additional block is now beginning to earn a return, but in order to meet the continual increase in the demand, it is necessary for us not only to replace obsolete vessels, but to continue building further vessels, and we hope during the current year to be able to place six more steamers and possibly twelve more flats in commission. In order to meet a demand in another direction, we are placing three more motor boats in commission. The boats are required for services in the rivers in the Delta district of a similar nature to that of motor buses in this country.

We have placed £15,000 to the debenture sinking fund, as against £3,500 in previous years. During the year we have been able to purchase Rs. 83,000 of our debentures at somewhat under par value, and it is intended to continue this policy as and when the debentures are on offer. £72,391 is being allocated to general reserve, which will assist us very considerably in financing our building programme. After making the provisions as set forth in the profit and loss account, and bringing in the sum of £19,072 carried forward, there remains £102,657, out of which the board recommend an addition to the usual preference dividend, a final dividend of 7½ per cent. on the ordinary shares, making a total distribution of 10 per cent. for the year, and leaving £24,897 to be carried forward.

COMPETITION FROM RAILWAYS.

Earnings up to date show a falling off compared with the previous year, but we can only hope that an improvement may be shown later on. As mentioned last year, we are faced with serious competition from the railways. The railways in India are under control of the Government of India, which functions through the Railway Board. All extensions to existing railways or new railways have to receive the sanction of the Railway Board, and two cases have arisen which affect us in no small degree. In the first, we endeavoured to obtain the sanction of the Railway Board to the construction of a small railway or tramway, on the right bank of the river Bramaputra, which would not only act as a feeder to our river services, but would assist materially in developing a large area. This proposal was objected to by the Railway Board as it was likely to be in competition with a proposed extension of the Eastern Bengal Railway to the same district. This extension, however, could not be carried out without a Government guaranteed return on the outlay, as it was not expected to be a paying proposition. After two years' delay we now learn that not only is the railway to be built under guarantee, but that sanction may be accorded to our tramway also which, however, calls for no guarantee. We may, therefore, find ourselves in competition with a guaranteed concern, which you will agree is a serious matter for us.

In the other case, we have for years run an efficient service from Goalunde to Naraingunge, and we have lately, in order to improve this service, built and equipped first-class fast and efficient steamers at a cost of £34,300 each. We now learn that it is proposed to construct a costly State railway from the Nairaingunge district to a point opposite Goalunde, which will be in full competition with our service. While money is urgently needed to build railways so as to develop those parts of the country which have no railway or water transport service, and there are many, it seems incredible that it should be expended on a railway which will enter into acute competition in a district already well served with water transport. We are given to understand that the sum of 27 lacs of rupees has already been allocated during the current year for the purposes of inaugurating the projected extension (estimated to cost 189 lacs of rupees) from Naraingunge district, which will discourage and may even kill the existing private enterprise.

The report and accounts were unanimously adopted.

JOHN M. NEWTON AND SONS, LIMITED.

CONTINUED PROGRESS—GOOD PROSPECTS.

The third ordinary general meeting of John M. Newton and Sons, Limited, was held on the 21st instant, at the Holborn Restaurant, London, W.C.

Mr John Newton (the chairman) said that the net profit to be dealt with amounted to £35,106, and the directors recommended a final dividend of 22 per cent. on the ordinary shares, making 37 per cent. for the year, which was the same distribution as that made last year, but on a larger capital. It was only during the past year that the company began to obtain the full value from the amalgamation of its four different concerns taken over during 1927, and the gross sales for the past year had exceeded those of the previous year by about 7 per cent. Unfortunately, there had been a considerable amount of competition and cutting of prices, which had had a detrimental effect on the trading profits, but this had been made up by the extraordinary receipts in connection with the subsidiary companies. The current year showed a continued increase in sales, the turnover was on a very satisfactory basis, and, with the present political uncertainty out of the way, he anticipated that further progress would be made during the remainder of the year.

With regard to the accounts, he thought it would be agreed that the financial position of the company was one of considerable

strength. The total liabilities, including the issued capital of £160,600 shown in the balance sheet, amounted to £196,713, against which there were tangible assets, not including goodwill, amounting to £199,961, all of which were liquid and easily realisable. The goodwill stood at only £40,000, which was equal to one year's purchase, and was a very conservative figure, as this item constituted a really valuable asset. The name of "Newton" was generally linked up with glass and glass with "Newton," and the number of live accounts being dealt with month by month was steadily increasing, the number at the present moment being something like 50 per cent. higher than those which existed at the early part of 1927. During this year the company had extended its premises by taking over new and important works. Trade investments, £36,684, had been taken in at cost, although their present market value was considerably above that figure.

Dealing with the subsidiary companies, the chairman said that the new works at the Plymouth branch were very near completion, and would be in full operation within the next few weeks. The directors anticipated that this branch would prove to be a valuable asset.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 18, 1929 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	4,900	From Revenue	11,370
Interest, &c., on Debt	5,452		
Sinking Fund	615		
Decrease in Balances	247		
Decrease in Debt	129		
Sundries	27		
	11,370		11,370

The total ordinary revenue for the week amounted to £11,370,000, as compared with £12,235,491 in the corresponding week of last year. Property and income tax amounted to £1,060,000, and supertax to £340,000, against £1,050,000 and £570,000 respectively a year ago. Customs receipts were lower than a year ago, being £1,365,000 against £1,870,000, but Excise brought in £6,970,000, against £6,325,000 in the corresponding week of last year.

The National Debt was reduced by £129,000, as shown below :—

BULLION.

The following statistics of imports and exports of gold for week ended May 23, 1929, are issued by the Statistical Department of H.M. Customs and Excise :—

Imported into Great Britain and Northern Ireland.	£	Exported from Great Britain and Northern Ireland.	£
From—		*To*—	
France	5,140	Poland (includ. Danzig)	1,550
Argentine Republic	200,000	Germany	34,020
British South Africa	774,781	Netherlands	5,834
		France	8,842
		Switzerland	10,200
		Austria	10,250
		Morocco	2,000
		Other Countries	491
Total declared value of imports	979,921	Total declared value of exports	73,187

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follow :—

1929.	Arrivals.	£	1929.	Withdrawals.	£
May 17	Bars bought	17,000	May 17		Nil
„ 18	Sovs. from abroad	200,000	„ 18		Nil
„ 21		Nil	„ 21	Bars sold	27,416
„ 22	Bars bought	663,134		Sovs. for export	5,000
„ 23		Nil	„ 22	Sovs. for export	2,000
			„ 23	Bars sold	47,968
Total		880,134	Total		82,384

Net arrivals, £797,750.

Messrs. Samuel Montagu and Co. write as follows on May 22, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £161,140,187 on the 15st instant (as compared with £160,213,172 on the previous Wednesday), and represents an increase of £7,233,872 since April 29, 1925—when an effective gold standard was resumed.

About £750,000 of gold from South Africa was available in the open market to-day. The weakness of the exchange with Germany led to some enquiry from that quarter, but about £663,000 was secured by the Bank of England, as will be seen from the figures given below, and the Indian, Home and Continental Trade requirements absorbed £80,000. There was a net influx of gold of £846,806 during the week.

SILVER.

The market has felt the lack of support and a fresh low level since August, 1927, was touched on the 18th instant, when prices reached 25d. for both cash and forward deliveries. The Shanghai exchange still showing weakness, there has been a certain amount of selling from this quarter, and America has continued to offer silver in this market. Altogether, the demand was insufficient to withstand the fairly general selling experienced during the week, as, save for some bear covering which caused a reaction of 1s. 8d. yesterday, buyers have not been much in evidence.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 13st instant to mid-day on the 18th instant :—

Imports.	£	Exports.	£
Germany	11,335	Egypt	102,469
Netherlands	10,300	British India	182,165
Canada	22,233	Other countries	6,065
Other countries	11,015		
	£54,883		£290,699

Indian Currency Returns (in lacs of rupees).

	May 15.	May 7.	Apr. 30.
Notes in Circulation	18,283	18,293	18,366
Silver coin and bullion in India	9,840	9,851	9,939
Silver coin and bullion out of India	...	...	...
Gold coin and bullion in India	3,222	3,222	3,221
Gold coin and bullion out of India	...	...	...
Securities (Indian Government)	4,323	4,323	4,323
Securities (British Government)	898	897	883

The stock in Shanghai on the 18th instant consisted of about 76,300,000 ounces in sycee, 130,000,000 dollars and 6,880 silver bars, as compared with about 78,900,000 ounces in sycee, 127,000,000 dollars and 8,200 silver bars on the 11th instant.

Reports and Notices.

The Canadian Pacific Railway offices in Paris have been removed to more commodious premises at 24 Boulevard des Capucines.

James Philip Van den Bergh, B.A., and Mr John Ingham have been appointed to the board of Van den Berghs, Limited.

Sir John Buck Lloyd has been appointed a Director of the Clerical, Medical and General Life Assurance Society.

Mr J. J. Atkinson, General Manager of the Royal Insurance Co., Limited, Liverpool, has expressed his wish to retire after over fifty years of continuous service with the company, and the directors have, with reluctance, acceded to his request. It is the directors' intention to offer to Mr Atkinson a seat on the board.

The Directors of the Employers' Liability Assurance Corporation, Limited, have appointed Sir Campbell Stuart, K.B.E., to be a Director of the General Board in London.

BANKS.

CENTRAL HANOVER BANK AND TRUST COMPANY.—The merger of the Central Union Trust Co. of New York and the Hanover National Bank into the Central Hanover Bank and Trust Co. became effective at the close of business on May 15th. The new company has a capital of $21,000,000; surplus, $60,000,000; undivided profits, $19,117,707; deposits, $445,969,666; acceptances, $32,734,573; and total assets, $582,741,370. The head office of the Central Hanover Bank and Trust Co. is 70 Broadway, New York. The London representative of the company is Mr. C. Noël Hume, 1 and 2 Gracechurch Street, E.C. 3.

HAMBROS BANK, LIMITED.—The balance sheet for year ended March 31, 1929, compares with year ended March 31, 1928, as follows :—

Liabilities.	Mar. 31, 1928.	Mar. 31, 1929.
	£	£
Paid-up capital	1,000,000	1,400,000
Reserve	1,050,000	1,050,000
Profit and loss	212,603	220,674
Deposits.....	18,918,559	18,520,140
Acceptances.....	10,872,317	12,518,116
	32,053,479	33,708,930

Assets.	Mar. 31, 1928.	Mar. 31, 1929.
	£	£
Cash.....	5,542,956	5,872,487
Bills of exch'nge	3,802,382	3,970,704
Investments in British Govt. securities.....	3,030,143	3,378,375
Other investm'ts	930,797	1,054,856
Advances.....	7,421,397	6,460,906
Acceptances	10,872,317	12,518,116
Premises.....	453,487	453,486
	32,053,479	33,708,930

The net profit is £347,670, against £370,979 for preceding year. The dividend is 22½ per cent., less tax, while 6 per cent. is paid on the £1 "A" shares. The sum of £150,000 is put to contingency reserve account, as last year. The sum of £91,073 is carried forward.

RUBBER, &c.

LINGGI PLANTATIONS, LIMITED.—The output for 1928 amounted to 2,890,800 lbs., as compared with 2,681,465 lbs. for 1927. The estimated output for 1929 is 3,552,000 lbs. There remains to be delivered out of 1929 crop 1,029,280 lbs. at an average price of 10.55d. per lb., and for delivery in 1930, 483,840 lbs., at an average price of 10.78d. per lb. The profit for the year 1928 was £50,578, against £83,635 for 1927. The ordinary dividend is reduced from 10 per cent. to 7½ per cent. The carry-forward is reduced from £18,783 to £17,982.

MISCELLANEOUS.

THE CABLE, TELEPHONE AND GENERAL TRUST, LIMITED.—The Cable, Telephone and General Trust, Limited, announce that the offer to purchase the ordinary shares of the Bogota Telephone Co., Limited, has now been accepted by the holders of a sufficiently large percentage of the shares of that company. Completion of the purchase will, therefore, be proceeded with and transfer deeds will be issued to shareholders who have accepted the offer. Payment will be made on the return of duly executed transfers, together with relative share certificates, after the usual three days for examination.

GRESHAM TRUST, LIMITED.—The report for 1928 shows a net profit of £92,746, as compared with £58,455 for 1927, at which time the capital was one-half the present issued capital. The new capital, however, was not fully paid until July 9, 1928. Dividends are paid at the same rate as last year, the 6 per cent. cumulative participating preference shares receiving a participating dividend at the rate of 4 per cent., making 10 per cent. in all for the year, and the ordinary shares receiving 32 per cent. A full year's dividend on the new capital has been paid for the whole year. £20,000 is placed to general reserve as compared with £10,000 last year, and the carry-forward is £27,775 this year, as compared with £11,028 last year. The ordinary shares which were issued during the year were issued at a premium of 1s. per share, and the share premium of £25,000 arising therefrom has been carried to general reserve. The entire expenses of this issue have been written off. Investments are shown in the balance sheet at a figure of £467,441, the market value at April 30, 1929, being £477,600.

SALAR DEL CARMEN NITRATE.—A meeting is called for May 31st, at Winchester House at noon, to consider an agreement for the sale of the undertaking and assets of the company to the Liverpool Nitrate Co., Limited.

SANTIAGO NITRATE COMPANY.—The Santiago Nitrate Company has entered into a provisional agreement for the sale of its oficina, nitrate grounds, plant and stocks in Chile to the Liverpool Nitrate Co. for £35,250.

BOOTS PURE DRUG COMPANY, LIMITED.—The Directors of Boots Pure Drug Company, Limited, announce that subject to completion of audit the net profits for the year ended March 31st, 1929, amounted to £750,152 (last year £701,973) and that a bonus will be paid to the ordinary shareholders as registered May 21, 1929, of 1s. per share, free of tax (as against 9d. per share less tax). Accounts will be posted May 29th.

SIEMENS BROTHERS AND COMPANY, LIMITED.—The Report for 1928 shows a profit of £335,758, as compared with £356,736 for 1927. The ordinary dividend is maintained at 7½ per cent., less tax. The carry forward is increased from £250,041 to £313,360.

ISLAS DEL GUADALQUIVIR, S.A.—The response of the holders of founders' shares to the offer to them of the 7 per cent. notes of the company having proved insufficient to justify the Board in proceeding to allotment, the directors have decided to return the subscriptions received and to make other arrangements to provide the necessary finance for the continuance of the Company's operations.

INDUSTRIAL AND GENERAL TRUST, LIMITED.—The report for year ended March 31, 1929, shows a credit balance of £378,237, against £382,250 for preceding year. The sum of £50,000 has been transferred to "B" reserve fund, increasing reserve funds to £1,200,000. The ordinary dividend is 17½ per cent. for the year, against 17 per cent. for preceding year. The carry-forward is increased from £73,297 to £88,372. The investments of the Trust number 990 and they are fully set out and summarised in the report.

MANCHESTER SHIP CANAL.—The following is the latest monthly approximate traffic return:—

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

The marked improvement in climatic conditions has considerably brightened agricultural prospects in the United Kingdom. Cereal crops gave responded to a spell of warmth and sunshine which was much needed, and pastures now present a healthy appearance. Native wheat continues in small supply, and prices tended in buyers' favour following the weakness of imported varieties and general lack of demand. The floating and forward cargo section has again relapsed into a quiet state following recent liberal export sales of Canadian grades on Continental account. Favourable new crop prospects and selling pressure from both North America and Argentina resulted in a further downward movement in prices, which found buyers rather indifferent pending further developments in the situation. Liberal quantities are still available for export from the Argentine, shipments being well maintained, with a seasonal increase from Canadian ports. United States sellers still seek an outlet for their surplus holdings, but so far, offers are not yet sufficiently attractive to arouse buying interest, and further concessions are apparently necessary in order to move stocks and make room for the new winter crop now on the eve of harvest. Feeding stuffs are also easier in sympathy with wheat, and with increased pressure on the part of Plate maize shippers a very depressed market resulted. Wheat futures moved in sympathy with the general situation, and although trading was less active than of late, interest was well sustained in this section.

Wheat easier. No. 2 Northern Manitoba, ex-ship, 45s. 9d.; No. 3, ditto, 44s. 6d.; No. 4 Manitoba, 42s. 9d.; No. 5, 39s. 9d.; No. 6, 35s. 6d.; No. 2 mixed Durum, 39s.; Rosafe, 64 lbs., 42s.; Barusso, 63½ lbs., for shipment, 41s. 9d.; Australian, 44s. 3d. ex ship, per 496 lbs.; English, 9s. 6d.–9s. 9d. per 112 lbs.

Flour dull. London straight run nominally 32s. 6d.–33s. 6d. per sack delivered. Of imported, Manitoba patents range from 33s.–36s.; Minneapolis, 34s.–36s.; Australian, 32s. 9d.–33s. 3d. ex store, per 280 lbs.

Maize declined sharply in sympathy with lower c.i.f. offers. Plate landed 38s., ex ship to arrive, 36s. 3d. to 34s. 9d. as to position; May–June, 34s. 9d.; June–July, 35s.; July–August, 35s. 3d. per 480 lbs. Yellow maize meal, £10 5s. per ton, landed.

Barley weak. Californian, ex ship, 43s.–48s.; Chilean Chevalier, ex store, 45s.–58s.; Australian, 41s.–44s. 6d.; Smyrna, 44s.–47s. per 448 lbs. Algerian–Tunisian, ex ship, 30s.; Canadian feed, 27s. 6d.; No. 3 Canadian Western, ex ship, 30s. 6d.; landed, 32s.; No. 4, ex ship, 29s. 3d.; No. 2 Federal American, landed, 29s. per 400 lbs. English malting, 10s. 6d., 11s. 3d.; feed, 9s. 8d.–10s. per 112 lbs.

AMERICAN WHEAT MARKETS.

During the early part of the week demand was inactive, and this, coupled with favourable weather news and some bear selling, caused a slight decline. This was partly recovered later on reports of bad weather with some crop damage, better export demand, and bear covering. Quotations:—

THE COAL TRADE.

Our Sheffield correspondent writes: The holiday stoppage at the Yorkshire collieries was rather longer than last year, and the outlook for the industry is not so good as two months ago. Exports in April were below the March figures. Business in all sections is steady. Supplies of blast furnace coke have improved following the cessation of home and export demand for heating purposes. Consumption at the furnaces tends to increase, but the output is ample, and prices rather easier. Best South Yorkshire steams are worth about 15s. 6d. at pits. Blast furnace coke fetches about 14s. at ovens.

Our Glasgow correspondent writes: Generally speaking, the collieries are better off for work than they have been for a week or two, and there is now less price-cutting going on. The Lancashire field, however, has not shared in the improvement as much as the other districts, and the collieries there are still finding a good deal of short-time working necessary. Nuts, as a whole, are firm, with doubles a good spot, and large coal mostly steady. Shipping prices are approximately as follows:—Lanarkshire: Ell best, 14s.; splint best, 16s.; splint second, 15s. 6d.; navigation, 17s. 6d.; navigation second, 15s.; steam, 13s. 6d.; Hartley, 16s. 6d.; trebles, 14s. 3d.; doubles, 13s. 6d.; singles, 12s.; pearls, 11s.; dross, 10s. Fife: Screened navigation, 17s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles 14s. to 14s. 6d.; doubles, 13s. 3d.; singles, 12s. 6d.; trebles, 14s.; doubles, 13s.; singles, 12s.; pearls, 11s. Ayrshire: Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 13s. 6d.; trebles, 13s. 9d.; doubles, 13s. 3d.; singles, 12s. 6d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes: The collieries in the South Wales coalfield were idle on Monday, Tuesday and Wednesday this week, and consequently business on the Cardiff coal market has been practically at a standstill. The docks have been working since Tuesday, and loading operations have reduced very considerably the pre-holiday stocks at the various sidings. It is too early yet to form any opinion as to how far this factor will counteract the easy conditions which were so marked a feature of the market before the holidays. It is now officially announced that the Egyptian State Railways have placed orders for 180,000 tons of Monmouthshire large coals at 19s. 9d. per ton c.i.f. Alexandria with Messrs Wm. Milburn & Co. and Messrs Pyman Watson & Co., whose prices were 3d. per ton above the lowest tender. It is also reported that a portion of the order of the Central Brazilian Railways for the supply of 200,000 tons of coal has been placed in Poland. The following are the current approximate prices: Best Admiralties, 19s. 6d. to 20s. 6d.; seconds, 19s. to 19s. 9d.; best drys, 19s. to 19s. 3d.; Black Veins, 18s. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 9d. to 18s.; best steam smalls, 13s. to 13s. 6d.; cargo smalls, 11s. 6d. to 12s.; anthracite best large 33s. to 36s. 6d.; Red Vein large, 23s. to 27s.; machine-made cobbles, 40s. to 44s.; French nuts, 42s. to 44s.; stove nuts, 39s. to 42s.; rubbly culm, 9s. 6d. to 10s. 3d.; foundry coke, 27s. 6d. to 36s. 6d.; patent fuel, 19s. 6d. to 21s. 6d.; pitwood, ex ship, 25s. 6d. to 25s. 9d.

IRON AND STEEL.

Our Middlesbrough correspondent writes: Owing to the Whitsuntide holidays there was no iron market here yesterday. The Cleveland pig-iron position still remains very strong. Producers are well sold into the second half of the year. Any fresh business has therefore to be done through merchants, who are asking the following prices: No. 1, 72s. 6d.; No. 3 G.M.B., 70s. and upwards; No. 4 foundry, 69s.; No. 4 forge, 68s. 6d. East Coast hematite is in fairly good demand, and makers are quoting 74s. per ton for mixed numbers. Supplies are comparatively scarce and makers are well sold ahead. With regard to manufactured iron and steel, the chief event of the past week has been the rise of 5s. per ton in steel plates, joists and angles, probably on account of the activity in the steel trade and also the recent increase in the price of raw materials. This, of course, will eventually increase shipbuilding costs, but as most of the shipbuilders, who have work on hand, have contracted for some time ahead, it will take time for the increase to have effect. Quotations are on the following basis, subject to the usual rebates for home consumers: Steel ship plates, £8 12s. 6d.; steel ship angles, £8 2s. 6d.; iron bars, £10 15s.; steel rails, £8 10s. The ore and coke markets are very steady, with prices firm at about 23s. for the former and 19s. for the latter.

Our Sheffield correspondent writes:—Work in the local steel trade was resumed this week after the holiday more generally than was the case last year, a fact which indicates improving conditions. The position, however, continues patchy and there are numerous instances of quietude. Users of Sheffield steel are paying increases of about 7s. 6d. per ton, which sum is too small to be passed on to their customers. Depression continues in railway steel and acid steel. Demand for heavy forgings and castings has fallen off. Trade in foundry pig iron fails to expand, most of the foundries being quiet, but prices of raw materials are being maintained. Makers of heavy tools used in quarries, shipyards, and engineering works report more active conditions than for a long period. Users appear to be replenishing their exhausted stocks. The file factories are short of work. Reports from the plate and cutlery branches are unfavourable for the most part.

Our Glasgow correspondent writes:—Conditions in Glasgow and surrounding districts remain quiet but business is fairly steady, steel works being able to keep going although not too well provided with specifications for forward delivery. Towards the end of last week steel prices were advanced by 5s. per ton, to-day's quotations being £8 12s. 6d. for ship plates and £8 2s. 6d. for sections, delivered Glasgow station—subject to the rebate of 10s. per ton to users of all British steel. It is announced that Messrs. William Beardmore and Co., Limited, have secured a contract for thirty-two locomotives for the Indian State Railways. These will be built at Messrs. Beardmore's Dalmuir works. At the sheet works business is rather quiet but prices are firmer and the minimum price now quoted for galvanised corrugated sheets 24 G. is £13 15s. per ton f.o.b. Glasgow.

Our Cardiff correspondent writes: In the South Wales tinplate and galvanised sheet industries work was suspended during the earlier part of the week, and the usual Tuesday meeting of the Swansea Metal Exchange was not held. It was expected that the holidays would have the effect of diminishing stocks; otherwise the position is unchanged.

OTHER METALS.

Tin.—The market displayed fair activity, but with selling orders prominent values marked some irregularity following fluctuating Eastern cables. Stocks in London warehouses for week ending May 18th were returned at 978 tons, compared with 999 tons at corresponding period last year. Standard cash changed hands at £197 and £196 5s. and £196 15s.; three months, £200 to £199 10s. and £199 7s. 6d. In the East, sales were reported on the basis of £202 5s. to £201 5s. per ton, c.i.f. terms.

Copper proved a quiet market and prices eased on realisations. Standard cash sold at £75 5s., and three months, £73–£73 5s. and £72 12s. 6d.

Lead in fair request, but prices barely steady as offerings proved in excess of requirements. Good soft foreign pig, June, sold at £23 15s.; August, £23 12s. 6d. to £23 11s. 3d.

Spelter market generally steady with dealings on a fair scale. May sold at £26 15s. to £26 16s. 3d.; June, £26 11s. 3d. to £26 12s. 6d.; August, £26 11s. 3d.; September, £26 11s. 3d. per ton.

HARRISONS & CROSFIELD LTD
East India Merchants.
The Company Offers Facilities to Plantation Companies in the Development of Estates and Sale of Produce.
1-4, Great Tower Street, London, E.C.3

Aluminium steady. Ingots and bars for home delivery, £95 ton.

Antimony quiet. English regulus, £50 to £52 10s.; foreign, spot, £35 to £35 10s.; May–June, £31 to £31 10s. c.i.f.

Wolfram firm on short supplies. Straits, quoted, 31s. per unit c.i.f.

Quicksilver steady. Spot, £22 2s. 6d. to £22 5s. per bottle.

Tin Plates maintained. I.C. coke, prompt and forward, 18s. 6d. to 18s. 9d. per box, f.o.b. Swansea.

Tin easier. Cash sold, £196 5s.; three months, £198 17s. 6d.

Copper further eased. Cash sold, £72 5s.; three months, £71 7s. 6d.

Lead easier. May sold, £23 12s. 6d.; August, £23 7s. 6d.

Spelter weak. May sold, £26 15s.; June, £26 10s.; August, £26 10s.

THE COTTON TRADE.

Liverpool, May 22nd.

Spot sales for the week 16th to 22nd (inclusive) are 22,000 bales, of which 15,880 are American, 950 Argentine, 1,450 Peru, 1,150 Egyptian, 1,550 African, 800 East Indian, and 220 sundries. Imports for the same period are 47,518 bales, of which 20,232 are American, 241 Brazil, 427 Peru, 20,015 Egyptian, 4,472 African, 2,117 East Indian, and 14 sundries. Quotations to-day are: American Middling, 10·28; Egyptian Sakel, 17·85; Egyptian Uppers, 11·62; Brazil Fair, 10·53; Peru G.F. Mod-Rough, 12·50; Peru G.F. Smooth, 11·28; West African Mid., 10·38; East African G.F., 11·70. As usual during the Whitsun week with Manchester closed, the interest in cotton is negligible, and very quiet markets have ruled.

Manchester, May 22nd.

Business in the market during the past week has been disturbed by the Whitsuntide holidays, and most of the Manchester merchant houses have been closed all week. In spinning and weaving districts irregular holidays have been observed. Mail advices from India do not improve, and very few cables have been received making offers for cloth. China auction news has been rather better, but fresh business remains at a low ebb. Not more than a sorting up trade has been done for Egypt, the Near East and South America. More encouraging clearances have been reported in goods suitable for home consumption. Rates in American and Egyptian yarns have been steady, but the turnover has been limited.

THE WOOL TRADE.

Our Bradford correspondent writes:—The holidays have accentuated the general slackness in trade and little attempt has been made to do anything. In some cases mills are closed for an extended period owing to the paucity of orders, and it is indicative of the irregularity of trade that in a few cases rush orders are being put through necessitating a certain amount of overtime. This, however, is quite exceptional, the majority of mill owners being in anything but a comfortable position as regards work for the machinery. Quotations are nominally unchanged on the week for both tops and yarns, but there is nothing to suggest that prices would be any firmer than they were a week ago, especially in fine qualities. The demand for tops and yarns has been very restricted for several weeks, and although wool prices now appear to be on an attractive level, users show no inclination to look ahead and make provision for the future. There is just the possibility, however, that tops on to-day's basis may ultimately prove to be right, for it would take very little expansion in machinery consumption to bring about

a considerable improvement in values. Under existing conditions replacement costs seem to be out of the question, but unless there is a further marked decline in wool there will have to be a readjustment of values sooner or later. This also applies in the case of by-products, noils, laps and all kinds of waste being relatively dear as compared with wool and tops. Generally speaking, little expansion in demand is expected until after the General Election.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The trade is again indebted to Dalgety and Co., Limited, for cable information giving wool exports from Australasia from July 1, 1928, to April 30, 1929. These show that the total was 3,009,000 bales—2,366,000 from Australia and 643,000 from New Zealand, increases of 37,000 and 19,000 bales respectively compared with the corresponding period of last year. This increase is significant, for it means that the decrease of previous months has been entirely wiped out, and the increase may be expected to become larger until the end of the current wool year. It is quite reasonable to expect that the production will ultimately be shown to be larger than in 1927–28. The balance of the current season's wool remaining for sale is, of course, of some importance, and there is plenty of wool available to meet all requirements. Questions are already being asked about the size of the 1929–30 clip, and various views have been expressed. As far as one can see, there is little likelihood of the next clip being more than this year, though it may be rather finer. The South African clip may be expected to be larger, and perhaps a little deeper grown, splendid rains having fallen over the greater part of the country during the season. In any case, there is no need for the trade to anticipate any shortage of supplies. The paramount need is an improvement in consumption requirements in this country, on the Continent, and in the United States. There is still too much combing, spinning and weaving machinery standing. Another artificial wool fibre has been announced, the American Manufacturing Co. claiming to have discovered a substitute possessing all the characteristics of wool. One does not feel able to accept this claim. Though substitutes are undoubtedly filling their place in textile manufacturing, there is quite as much encouragement as ever for the production and sale of wool.

HIDE, LEATHER AND ALLIED TRADES.

Few auctions of hides have been held this week owing to the Whitsun holidays, and at some of these, values have shown a slight decline. The position, however, is regarded as steadier, as there is more confidence in trade circles following a better demand for leather. Oversea hides are a shade firmer, although buyers are not yet inclined to speculate. South American fregorifics are firmer, and Argentine ox are now selling at 7¾d. In saladeros, 20,000 Liebig Colon hides have been sold, heavies making 7 11/16d. to 8¼d. Dry River Plates have showed an advance, and B.A. Americanos are quoted at 11d. Africans share the advance, whilst there is more inquiry for Australian hides, best Queensland meatworks making now 8¾d. to 8¾d. Latest cables from Chicago report the packer market as firm, with best heavy steer hides selling at 15 cents as against 14 cents last week. Considering it is more or less a holiday week, the trade passing in sole leather has been of fair dimensions. Shoe manufacturers are ordering light bends for immediate wants, and as tanners are now more firm on prices, "bargain lots" seem getting scarce. Repairers are still slack, and this affects the demand for wet salt salted bends considerably. Offal is slow, but there is a brisk demand for shoulders which will cut cheap soles. Upper leather continues to go out in small parcels as prices seem still unsettled. Box and willow calf are moving off better, and the demand for black and brown glacé kid is still good. Curriers of kips are rather slack, but expect better business as trade in the industrial districts improves. Retailers of footwear made large sales of shoes prior to the holidays, and this will mean orders for filling up lines in the near future.

Financing Shipments to S. America

Through the medium of branches and agencies situated at all strategical points, the Bank of London & South America does everything possible to further trade between Great Britain and Latin-American countries. Shipments are financed, status reports issued on South American firms, and a Monthly Review of existing market and other conditions is supplied free on application.

JUTE TRADE.

May 22nd.

A very quiet state of affairs meantime prevails in the jute trade. The raw material situation is unique, in that sellers are very reserved and are not offering to sell the new crop beyond a few small parcels. Recent very unfavourable weather conditions for the growing crop of fibre have created fears of damage done by excessive rains. The uncertainty which surrounds the raw jute market has the effect of causing consumers of jute goods to withhold their orders for anything larger than small quantities to meet their immediate requirements, and the demand for jute yarns is also on a very limited scale. The trade appears to be waiting for more settled conditions in raw jute, and also to see what effect the increase of production by the Calcutta Mills of six hours per week as from July 1st next will have on the markets. Consumers are allowing their stocks to run to a very low level, but at the same time, through their hand-to-mouth attitude of buying, they have compelled spinners and manufacturers to reduce their prices for yarns and cloth to a point below the comparative cost of the raw material. The value of good First Marks is £34 10s. and Lightnings £32 10s., August shipment, while Daisee assortment is offered at £31 for September–October, and Tossa assortment is nominal at £32 10s. for September–October. Old crop jute is now of very little interest, and holders of spot parcels can only dispose of their holdings when they are prepared to consider cheap prices. Jute yarns have now come to a level below which spinners are not prepared to go. Common 8 lb. cops have shown no change during the past fortnight at 3s. 4d. and 8 lb. spools at 3s. 5d., at which some small sales are being made. Some inquiry has been received for export account. Twist is steady at from 5½d. to 5⅝d. for 3-ply 8 lb., and sacking yarns are not being further reduced than 3⅜d. for 24 lb. weft and 5⅜d. for 8 lb. chains. Rove is ruling at the lowest rates which have prevailed for some years past at £17 for 200 lb. and £27 for 48 lb. Fine yarns are firm and steadily selling. The value of 14 lb. carpet warp is 5d. Occasionally manufacturers are entering fair orders for jute cloth, but these are few and far between. The general tone of the market is dull, and the majority of manufacturers can give immediate delivery. The price of 10½ oz. 40 in. is 4⅜d., and 8 oz., 3⅜d. Linoleum hessians are very quiet, but heavy goods makers are gradually filling themselves up with orders for sacking, bagging and tarpauling, though at very cheap prices. Calcutta goods have gone weaker owing to a great lack of demand.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

With the general opening of navigation in the north of Europe, the new importing season of our building and general utility woods is now in full operation. It promises to be a fairly busy one for the trade, and for consumers—one in which supplies will be obtainable at more reasonable rates than have existed for years past. Imports of deals, battens and boards have been received in larger quantities this year compared with last, but this increase has been set off largely by the most satisfactory state of deliveries from docks during the past two months; this is so especially from the metropolitan docks, where stocks, although fairly large compared with the demand, are but moderate in extent; the new arrivals coming in by every tide being about the normal for the time of year. Although the spot market supply and demand appears to be in favour of holders, it is somewhat surprising to note the severe competition existing in selling. In this respect consumers have had the pull of the market for months past, whilst on the other hand European producers cannot be said to be making much money. Planed and dressed woods for floorings and matchings are in heavy stock, but here again the demand from docks has been exceptionally good during April and the present month—which shows conclusively that, besides the fact that private yards may require replenishing from dock stocks, some good building work is in progress. In the latter connection, we notice that in the April official returns the average unemployment in the building industry is but 10·1 per cent., and that skilled workers, excepting slaters and plasterers, are well under that percentage, thus showing that the industry is not in a bad state for the time of year. The poor demand for plasterers we attribute to the greater use to-day of plywood and composition boards in place of lath and plaster, whilst new roofings compete with slates. The costs of buildings outside the Metropolitan area for which plans were passed last month, vide "Ministry of Labour Gazette," were £7,116,900 against £4,843,100 in April last year. European shippers have been selling their cut rather more quickly than usual this year, but are not getting full price returns. Therefore, with a good sustained demand in the United Kingdom and on the Continent (the latter also has bought largely and well), there is a likelihood of f.o.b. prices stiffening later on in the season, which would be a change from the experiences of many years past. The hardwood section of the trade complains of quietness in demand. Imports, on the whole, are a little lower than last year to date, but considering the very large quantities that have arrived this year there must be a good consumption in

OVER ONE HUNDRED YEARS OF SERVICE.

SCOTTISH UNION & NATIONAL INSURANCE COMPANY.

ASSETS EXCEED - £15,000,000

FIRE. LIFE. ACCIDENT. MARINE.

London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1.

the aggregate, although "to go round" hardly seems enough for the ever-increasing number of operators. The greater use of plywood and also the smaller styles of furniture in these days of space economy in the home, no doubt account to some extent for the disappointing hardwood demand. C.i.f. and spot prices generally are firm.

VEGETABLE OILS AND OILSEEDS.

Markets opened after the holiday with a rather better tone. Linseed oil is in fair demand, and with spot supplies scarce, the value has advanced to £29 5s. per ton naked ex Hull mill, though £28 12s. 6d. is about the value for June–August, and £28 15s. for September–December. Cotton oils are in better request, and dearer crude Egyptian being held for £27 5s., and common edible for £30 10s. on spot and for May–August delivery. Other seed oils are harder, and up to 10s. per ton dearer. In the oilseed section, linseed on spot is rather scarce, though large quantities of seed are now on passage to Europe. These are in excess of 200,000 tons, the greater proportion being destined for the Continent. For spot, £16 2s. 6d. is now wanted, while Plate on passage is worth around £15 15s., with May–June shipment at the same figure, and July and August a little more. Cottonseed is in fair demand, and black Egyptian to Hull is reported done at £9 3s. 9d. for May–June loading. Bombay is easier at £8 7s. 6d. The demand for oilcakes continues to decline, and prices have again an easier tendency.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Without exception, prices took a rather unexpected dip. At the lower range, a moderate business was effected, but trade buyers are still chary with regard to carrying any excess of stock. The world's stock of the commodity remains heavy, and is intensified in a great measure by keenness of rivalry between the old-established refiners in the United Kingdom and home-grown factories, several of the latter, now that native roots have been all worked up, continuing to operate on imported raws. Thus available quantities of the finished article become more than adequate to requirements. Sugar is unremuneratively cheap from the producers' point of view, but one cannot say that from the consumers' side. An import duty of over 100 per cent. put quite a different aspect on the market from this particular angle. Messrs. Tate and Lyle reduced quotations 3d., and home-grown declined from 1½d. to 3d. according to factory, with a cut of 6d. for parcels lying in London depot. Imported descriptions disclosed sympathetic weakness. Raw refining sorts quiet and easier inclined. Messrs. Tate and Lyle's cubes now 25s. 3d. to 25s. 9d. as to quality; fine granulated, 22s. 10½d.; London, 22s. 4½d.; T.L., 22s. 1½d.; ditto, month forward, 22s.; yellow crystals, spot, 20s. 10½d. Home-grown and granulated from imported raws, 21s. 6d. to 21s. 10½d., as to factory, with Ely and King's Lynn depot, London, 21s. 3d. T.L. granulated, ex refinery, sold 21s. 7½d. White Mauritius, spot, London, 20s.–20s. 4½d. as to sample. Foreign kinds for shipment quite idle. Czecho granulated, May–June, 10s. 6d.; July–August, 10s. 6¾d.; November–December, 10s. 6d.; January–March, 10s. 9d.; April–June, 11s. f.o.b. Hamburg. Dutch J and Dinteloord, ready, 10s. 7½d; November–December, 10s. 9d. f.o.b. Rotterdam. Others call for no comment. No change to note in the position of Javas. Terminal sections dull. Of raw, May quoted, 7s. 9d.; July sold, 7s. 9½d., 7s. 7½d.; August, 7s. 11½d., 7s. 9d.; December, 8s. 3¾d., 8s. 1½d.; white, August sold, 10s. 3d. to 10s. 0½d. cwt. Cuban receipts last week, 101,892 tons, against 49,627 last year; exports, 120,158, against 66,068; stocks, 1,525,697, against 1,318,194. Centrals, 11, against 4. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending May 18th amounted to 132,072 tons, against 129,861 last year.

COFFEE.—Spot market quiet, unaltered.

COCOA.—Quieter. Accra F/F intermediate, 40s.; October–December, 43s. 3d. f.o.b. Terminal, September sold, 46s.; March, 47s. 9d. cwt.

TEA.—Market remains virtually closed for the holidays.

RICE.—Market generally quiet, but prices for Burma gradually harden owing to reduced quantities coming along from up-country and dwindling stocks at ports of shipment. Two Stars, spot, London, selling at 13s. 9d.; ditto, May–June held for 13s. 0¾d.; No. 3, ditto, to Levant, 13s. 2½d., and S.Q. Cuba, 13s. 7½d. c.i.f.; Spanish forward, 17s. 3d. c.i.f.; Egyptian, spot, small sales at 18s. 6d.; Californian, spot, 19s. 6d. sellers and 18s. forward c.i.f. Saigon No. 1 round grain, April–May, 12s. 9d. in singles, c.i.f. United Kingdom and Continent. Siam Garden No. 1, March–April, 15s. in singles. Special, 15s. 7½d., and super, 16s. 6d. c.i.f. United Kingdom or Continent. Italian, April–May shipment cleaned 19s. c.i.f. United Kingdom in doubles.

BEANS.—Butters quiet, steady. Rangoon haricots still very unsettled and actual rates difficult to gauge, while market is rendered largely nominal. Rangoon afloat, 14s. 3d.; May, 13s. 3d.; May–June, 13s. c.i.f. London. Madagascar butters, spot, 39s. 6d. to 42s. "Clan Macbeth," 38s.; "Eugene Grossos," also "Coleburt," 37s. 6d. c.i.f. London.

PEAS.—Market quiet; rather featureless. Japanese, spot, London, 20s.; afloat, 17s. 3d. to 18s.; April–May, 17s. 10½d.; May–June, 17s. 9d.; June–July, 17s. 9d.; July–August at 17s. 10½d.; new crop, August–September, 19s. 6d.; September–October, 19s. 3d. Dutch marrowfats, prompt, 21s. 6d. Imperial blues, 18s. 6d.; smalls, 17s. 6d., f.o.b. terms. Maples quiet. Tasmanian not offered. No. 1 New Zealand, afloat, 61s. 6d.; April–May, 61s. 6d.; May–June, 60s. 9d. Calcutta, May–June, 57s. 9d.; Karachi, 55s. c.i.f.

SPICE.—Pepper market quite firm, fair demand. Lampong May–July buyers, 1s. 3½d.; August–October, 1s. 2½d. Muntok, May–July, 2s. 2½d.; August–October, 1s. 11⅝d. London stocks of black 32 tons higher on the week, and 32 up also for white. Cloves: market quiet, steady. Zanzibar, spot, 1s. 5½d.; March-May, 1s. 6¼d.; August-October, sold at 11¼d.; September-November quoted 11d.; October-December, 10⅞d. Pimento firm. Spot, London, 1s. 3d. per lb.; July-August steamer, 123s.; August-October buyers, 115s. per cwt. c.i.f. London. Tapioca steady. Singapore, flake, to France, May-June sellers, at 18s. 6d. c.i.f. Seed: Penang for shipment April-May, 16s. 9d. c.i.f. Java, flake, Bendorejo, on the spot, 25s. 9d.; and May–June shipment, 24s. c.i.f. Banthong flake, April-May, 20s. 6d.; medium pearl, 20s. 6d.; seed, 19s. 3d. c.i.f. Sago flour steadier. Sarawak near 11s. 4½d. and forward, 11s. 6d. Ginger, spot, London, sold 59s. forward, quoted 60s. cwt. c.i.f.

FRUIT (Dried).—Currants firm on light supplies, but trade quiet. Pyrgos, quoted 45s.; Amalias, 45s. 6d. to 46s.; Zante, 46s. 6d. to 47s.; Vostizza, 50s. 54s. Further arrivals of Australian sold steadily at 47s. to 55s. Sultanas, quiet, and Smyrna practically cleared, the few remaining lots ruling at 45s. to 50s., with some choice Cretan at 55s. to 59s. Australian were less in request, common to good quoted 30s. to 36s.; fine to choice parcels, 50s. to 68s. Raisins dull of sale. Valencia, common to good, 42s. to 48s. First-hand offerings of Australian are mostly absorbed, and second-hand lots more firmly held. Figs in small supply, bags genuine, common to fine, 28s. to 33s. Dates quiet. Siar, spot, 14s. to 16s.; first tide, 14s. cwt.

EVAPORATED FRUITS.—All descriptions move off freely and market firm. Californian plums, 20's to 30's, quoted 66s. to 67s.; 30's to 40's, 58s. to 59s.; 60's to 70's, 44s. to 46s. Pears, Lake County, 76s. to 100s. Apricots, South African Royal, 57s. 6d. to 117s. 6d.; Australian, 70s. to 85s. Peaches, Californian choice, 54s.; extra choice, 56s.; fancy, 60s. Apples, Californian, spot, sliced, extra choice, 77s. 6d. Almonds quiet. Mazagan, 135s.; Mogador, 132s. 6d.; Majorcas, 140s. Bitter-Jordan, 185s. to 210s. cwt.

CANNED GOODS.

CANNED FRUITS.—Firm conditions prevailed in this section, a good demand being dealt with for all descriptions, the probable decrease in the Californian new pack being an influencing factor. Australian fruits move off readily as supplies become available. Singapore pines also in better request, while both South African and Hawaiian are held for full rates. Tomatoes were in less request both spot and forward.

CANNED FISH.—Sardines in steady demand. Portuguese clubs, 5s. per dozen tins. Lobsters: only small supplies of new pack are yet available, and best halves held for 145s. to 155s. Salmon firm, and in better request. Red talls, spot, 44s. to 46s.; pink ditto, 26s. 6d. to 27s. 6d.; halves, 33s. 6d. to 36s. 6d. Japanese crab sparingly offered at full rates, finest quality ruling at 97s. 6d. to 100s.

CANNED MEATS.—Corned beef and tongues quiet, but late rates were maintained. Danish boned hams also realise firm rates. Brawn also firm and moving freely.

CONDENSED MILK AND MILK POWDERS.—Market remained steady. Full cream, sweetened, English, spot, 42s. 6d.; Dutch ditto, 37s. 6d.; May to July, 37s. 9d. Machine skimmed, sweetened, English, spot, 25s.; Dutch ditto, 22s. 6d.; May-July, 23s.; all in 5 cwt. barrels. Powders: Spray process F.C., 26 per

Danish cream, evaporated, unsweetened, 40 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 40 by 14 oz., 20s. per case.

HONEY.—Market quietly steady. New crop, ivory white, set, Jamaican, 57s. 6d.; good amber to fine pale, 49s. to 55s.; dark to fair amber, 42s. to 47s. 6d. New Zealand, dark amber, 50s. to 65s.; medium, 55s. to 65s.; light, 65s. to 85s.; white and water whites, 65s. to 87s. 6d. per cwt.

RUBBER.

Market presented a quiet tone and prices after opening steadily, eased slightly, though there was no undue selling pressure. Standard sheet, spot, and June, sold, 11½d., 11⅛d.; July, 11⅛d. to 11⅛d.; July–September, 11⅛d. to 11⅛d.; October–December, 1s. 0½d. to 11⅛d. and January–March, 1s. 0⅜d.; to 11⅛d.; January–December, 1930, 1s. 0⅜d. to 1s. 0⅜d. London stocks reduced 172 tons on the week, landings being 1,254, deliveries 1,426, stocks 30,955, against 48,705 last year. Liverpool stocks 168 tons lower, landings 116, deliveries 284, stocks 4,216.

GENERAL.

JUTE.—A quiet market pervaded this market. Firsts, May–June quoted, £30 7s. 6d.; June–July, £30 7s. 6d.; new, August–September, sellers, £31 7s. 6d. ton. Hamburg stocks, 12,000 bales lower on the fortnight at 121,827 bales.

HEMP.—Fully steady regarding Manila descriptions, moderate buying disposition being met with marked reserve. J No. 2, June–August, quoted, £37 5s.; K ditto, £32 15s.; L No. 1, £33; L No. 2, £30 10s.; M No. 1, £30 15s.; and M No. 2, £26 5s.; H, £33; with G grade, £37 15s.; S No. 1, £55; S No. 2, £48 10s.; S No. 3, £39; C No. 2, £30; C No 3, £27 10s. Manila receipts for the past week, 31,000 bales, against 27,000 at same time last year. Estimate for next week, 27,000, and following week, 31,000. Shipments from Manila last week, 9,000 bales to U.K./Continent; 11,000, U.S.A.; 4,000, Japan; and 1,000 other countries. Local stocks, 6,000 bales up at 208,000. African Sisal in demand and stronger. Good marks, June–July, quoted, £39 10s., and No. 2 grade from £38 to £38 10s. ton c.i.f.

SHELLAC.—Market firm. T.N., spot, 200s.; August, 197s.; October, 201s. cwt.

COPRA.—Market dull, with trade inclined to drag, the natural sequel being weaker prices. Straits, sun-dried, May–June, to Rotterdam, quoted, £22; June–July, £22 2s. 6d. Dutch East Indies, May–June, £21 15s.; June–July, £21 16s. 3d. Ceylon, June–July, £23 5s. South Sea to Marseilles, June–July, smoked, sellers, £20 17s. 6d.; S.D., £21; plantation Rabaul, also hot-air dried, £21 5s.

PALM KERNELS.—Quiet. For shipment, April–May, £17 1s. 3d., sellers, to Hull, ex ship. To Hamburg, May–June, £17 1s. 3d.; July–August, £17 3s. 9d. c.i.f.

BABASSU KERNELS.—Market slow, and April–May, quoted £21 5s. c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 16s. to 24s. per 100. Coir yarn, Ceylon, £19 10s. to £37 10s.; Cochin, £23 to £41; Ceylon bristle, £18 15s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 1s. 10½d.; Java, 2s.

METROPOLITAN CATTLE.—May 22.

THE MONEY MARKET.

The sharp set-back in the price of speculative stocks on Wall Street, which made an immediate rise in the Federal Reserve re-discount rate seem less probable, and the acquisition by the Bank of the greater part of the gold coming from South Africa, caused the money market this

week to adopt a rather more hopeful tone after stringent conditions over the week-end, and market discount rate fell away after being up to 5 7/16 per cent. on Monday. Money has been throughout distinctly usable; payment for £6 million Government of India Bills and an excess of Treasury bill issues over maturities to the tune of £15 million caused some difficulty at the beginning of the week, when up to 6 per cent. was paid for new day-to-day money, and the market had recourse to the Bank on a small scale. The Government of India gave some relief by appearing as a buyer of bills, and the joint stock banks have not been calling heavily, with the result that by Wednesday money was obtainable at 5 to 5¼ per cent., and on Thursday afternoon the market rate had fallen 4¼ to 4½ per cent.

* * * *

At the end of last week, following the weakness of sterling on New York, and the fear of higher Federal Reserve rates, discount rates were remarkably high. The nine-months India Bills having fetched an average of £5 18s. 1d. per cent., on Friday £45 million Treasuries were allotted at an average of £5 8s. 2d. per cent. On Tuesday came the news of heavy selling of stocks on Wall Street, and conditions at once became easier. June bills, which on Monday were changing hands at 5 7/16 per cent., found buyers at 5 11/32 on Wednesday, when the India bills were quoted at 5 7/16. The Bank at that time was a buyer of three-months bills at 5 5/16, thus adding to the ease of the market. The Continent has also been a buyer of bills this week at that price, and there has been no evidence of the continuance of the recent influx of bills from Berlin. The rate further declined on Thursday to 5 5/16 on three-months bills, and 5⅜ on India Bills.

* * * *

On Wednesday the Bank announced the purchase of £489,211 of bar gold, out of a total consignment of about £560,000, the remainder being taken for India and the trade. The price paid was 84s. 11d. against 84s. 11⅜d. last week. By this time sterling was considerably firmer on New York at 4.85, but the result was surprising in view of the strength of marks, then standing at 20.34¼. It is understood, moreover, that the South African gold bought on German account last week was never exported, being immediately resold to the Bank, which would explain the apparent excess of the Bank's acquisitions over the amount available in the market. These facts, whether or not their explanation is to be found in an understanding between the Reichsbank and the Bank of England, have considerably diminished the uneasiness which would otherwise be felt at the strength of marks, which on Wednesday touched 20.43¾, re-acting later.

	May 30, 1929.	May 23, 1929.	May 16, 1929.	May 9, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	5½	5½	5½	5½	4½ (Feb. 7,'29)
Banks' Deposit Rate	3½	3½	3½	3½	2½ (Feb. 7,'29)
Discount { Call	3½	3½	3½	3½	2½ (Feb. 7,'29)
Discount { Notice	3¾	3¾	3¾	3¾	2¾ (Feb. 7,'29)
Market rate (3 months' bills)	5⅛–5 3/16	5 5/16–⅜	5⅛	5 3/16–⅛	...

The Bank return this week contains no particular surprises. The chief change is the increase of £9 million in Public Deposits, reflecting the week's excess of Treasury borrowing. This is offset by a decline of £1 million in Bankers Deposits and by an increase of £4 million in Government and Other Securities. Discounts and Advance are also up by £1 million, the Bank having appeared as a buyer of bills as well as lending a little to the market. In spite of the Bank's purchases, the circulation was reduced by £2 million, against a net gain of gold totalling £522,643. These movements have resulted in a decline both in the "proportion" and the "reserve ratio," the former to 54 13/32 and the latter to 42 7/32.

NEW YORK MARKETS.

Our New York correspondent cables:—The reduction which has already been made in Reserve credit, along with the growing lack of confidence in business conditions, is probably beginning to influence the Federal Reserve Board, which is not now expected to sanction an advance in the discount rate. Relief is felt that the predicted sharp advance in call money for month-end requirements did not materialise, but some monetary stringency between now and the next tax date, June 15th, would not be surprising. The ease of money indicates the extent to which stocks are being liquidated, as well as the usual seasonal movement. It is thought, nevertheless, that the Treasury will be obliged to pay 5 per cent. or more on its large forthcoming short-term issues.

THE STOCK MARKETS

Not unnaturally little business was transacted on the Stock Exchange in the days preceding the result of the General Election. Assisted by signs of a recovery in the American exchange, and by the Bank's acquisition of gold at a lower price, gilt-edged stocks improved in welcome fashion, the market being encouraged by Monday's slump on Wall Street to believe that speculation there was being successfully fought. Home Rails were idle, but with a few upward changes. Buyers and sellers were alike scarce in the industrial markets; American weakness forced all the "international" counters down, until bear closing and the subsequent rally in New York restored support, but the majority of British industrials moved only within narrow limits. The oil and rubber share markets were unexciting, but tea shares had a firmer appearance. A continuance of professional operations in Rhodesian coppers, with some sensational advances, overshadowed all else in the mining markets.

THE COMMODITY MARKETS.

Such symptoms of trade improvement as have recently manifested themselves appear to be maintained. Coal remains steady, though in some districts the market is quiet; the position in South Wales has improved. Conditions in the iron and steel trades are fair, and the tinplate market is steady. Business in cotton piece-goods for overseas markets has been very restricted, but the home demand is healthy. Bradford trade is impeded by uncertainty as to raw material prices, the result of the Safeguarding enquiry, and the outcome of the election. The improvement in hide and leather is so far maintained, and there is greater activity in the footwear manufacturing centres. Wheat has again fallen several points.

THE FOREIGN EXCHANGES.

Features of a fairly active Foreign Exchange market this week have been the strength of Paris and Berlin as a result of month-end requirements and the recovery of sterling against the dollar. The tendency in the early part was generally against this country. New York recovered to 4.85 1/32 from 4.84 15/16, and Montreal lost ¼ at 4.88½. Paris went from 124.12 to 124.03 after being 124.0½. Berlin jumped from 20.38 to 20.34, some business being done on Wednesday at 20.32¾. Madrid was again weak at 34.40. Switzerland was unchanged. Stockholm improved from 18.15¼ to 18.14, and Copenhagen gained ½ at 18.20¼. Helsingfors lost fractionally at 193. Constantinople again showed hesitation at 1003. The South American exchanges were very steady, Buenos Aires losing 1/32d. at 47 5/32d. and Montevideo ¼ at 48¼d. In the Far East the rupee and the yen both showed some weakness at times, the former losing 1/32d., on balance at 1s. 5⅞d. and the latter 1/16d. at 1s. 10 1/32d., after having been below 1s. 10d. Batavia lost ¼ at 12.10¼. In the forward markets dollars were rather more in demand at narrower discounts of 7/32 cent and 15/32 cent for the two periods. The premiums on Paris fell away from 4 centimes to one centime for one month and from 7 centimes to 4 centimes for three months. Forward Brussels are now at discounts of ½ and 1½ centimes as against premiums of ¼ and ½ centimes last week. Forward pesetas were less sought at narrower premiums of 9 and 27 centimes, and the discounts on forward marks increased to 6 and 15 pfennigs, actual borrowers being down at these levels. Silver lost 3/16d. for both quotations at 24⅝ on weak European advices and lack of support. Hong-Kong was unchanged at 1s. 11⅞d., whilst Shanghai lost ¼d. at 2s. 5¼d.

THE ELECTION AND AFTER.

THE electoral battle is over. But Press exigencies compel us to write while the dust of conflict is still hanging over the arena and has only cleared sufficiently to show us conditions as the battle has left them in one-third of the stricken field. Certain considerations regarding the interpretation of these early results are suggested on a later page. Meanwhile, pending full knowledge of the verdict of the people, we may indulge in a few reflections on certain main features of the campaign and upon certain effects which that campaign appears destined to produce upon the immediate political life of the country.

The most prominent feature of this election has been the absence of the passionate and acrimonious controversy which has embittered so many elections in the past. Not only has the propaganda of all three parties been unusually free from mutual recrimination and defamatory attacks on personalities, but there has been no yawning gulf across which the contestants could glare at each other with hatred and malice. In fact, the lack of fire has been due largely to the lack of explosive material. On the single spectacular issue—unemployment—the proposals of the three parties have differed only in ways and means of dealing with a problem which all three have recognised as being of primary importance. Over the fiscal issue the Conservatives have cast with some success a cloak of obscurity, while Labour has been at pains to keep the Socialistic aspects of its programme in the background. Hence it is not surprising that foreign observers, as witness the comments of representative Continental newspapers, have been somewhat at a loss to understand what the parties have been fighting about.

It is possible, moreover, that the foreign observer "hot for certainties" in our political life has been greatly mystified by the *rôle* played since the Dissolution by our "popular" Press. Whereas the independent journals (due allowance in the case of the Conservative *Observer* being made for Mr Garvin's right to chasten most whom most he loves) have followed in the main their traditional party allegiances, the "Combine" newspapers have adopted an attitude tending rather to bewilder than enlighten the electorate. The "Berry" chain of papers has, it is true, given its readers a consistently straight lead towards support of the Government, but the groups controlled by Lord Beaverbrook and Lord Rothermere, though ranked usually as Conservative organs, have taken a line more significant by its implications than illuminating by the clarity of its advice. Thus the *Daily Express* and its associated newspapers, having "featured" railway rationalisation as the optimum policy during the major part of the campaign, ended by advising readers at the polls to eschew, in effect, their party loyalties and "size up their candidates as though they were a company board choosing a new managing director." The hope held out was that by wise selection on personal merits among individual candidates a "business House of Commons" might be elected in which "the backbencher of ability and knowledge will swiftly make himself felt." On lines scarcely more lucid, if differently phrased, Lord Rothermere, in the group headed by the *Daily Mail*, appealed to his readers that they should "keep out the Socialists," and at the same time so allocate their votes as to produce the "salutary result" of a minority Government. Presenting first a somewhat ostentatious bouquet to the Liberal "shadow" Cabinet, the *Daily Mail* proceeded in its final summing up of the election campaign to state roundly that an absolute majority would be undesirable either for Mr MacDonald or Mr Baldwin, whose Election Address it had searched in vain for "any sign that he would do better next time." Whether this indirect way of saying: "Vote Liberal" will have any discernible effect on the *Daily Mail* group's millions of readers remains, as we write, to be seen. Mr Baldwin, hero of the "Big Circulation" Press in 1924 and 1926, may be pardoned if he has rested his hopes of victory "*non tali auxilio nec defensoribus istis.*" For our own part we take leave to doubt whether the "popular" Press, save only when it is vouchsafed by fortune such a "stunt" as the Zinoviev letter, has sufficient influence on public opinion to produce any considerable turnover of votes.

Be that as it may, and in whatever way the final allocation of seats among the parties may work out, the important fact will remain that the six hundred and fifteen members of the new House of Commons will return to Westminster with vivid impressions derived from close-quarters observation of the trend of popular opinion on certain vital matters. This salutary experience cannot fail to produce results, and we would go as far as to say that, even if the Conservative Government were to find itself returned once more with a full and effective majority, its policy in regard both to unemployment and to foreign policy would, as a result of contact with the constituencies, become sensibly modified. Three issues have, by general admission, monopolised the attention of the country—unemployment, peace, and the fiscal issue. Whatever its value in terms of votes, the Liberal unemployment plans have won the careful attention of the thoughtful, and at least touched the imagination of the thoughtless. Now that one party has deliberately laid before the country specific proposals and detailed plans, and since a nation-wide discussion has ranged round those plans, it is unlikely that the next Government, whatever its political texture may be, will pursue the policy of comparative inertia adopted by the last Administration. Even those sections of the country where unemployment is not obtrusive have had the urgency of the problem firmly impressed upon their minds. The country will expect any Government, and any Government will feel obliged, to move somewhat boldly. In that sense the influence of the Liberal proposals will exceed that which is symbolised by actual representation in the House of Commons.

Very much the same thing is true of the question of foreign policy. Candidates of all parties in all parts of the country have been surprised at the keen interest shown by the electors in such subjects as disarmament, Anglo-American friendship, and the general work of establishing peace and security on a firm basis. Here, again, the contact of Ministers, actual or potential, with a very definite and strong trend of public opinion can hardly fail to make its mark on the policy of the new Government and the attitude of the new Parliament. To them the country will unquestionably look for an enlightened and active peace and disarmament policy.

One more thing that is certain about the next House of Commons affects the third great issue of the election—Free Trade *versus* Protection. Mr MacDonald has deeply committed his party to Free Trade, and to the Liberals one and all it is an essential tenet. In addition to this, there exists among the Conservatives a by no means negligible band of Free Traders. The meaning of this is that, unless the Conservatives achieve a clear majority of substantial proportions over the two other parties combined, no extension of "Safeguarding" on the wholesale lines suggested by Mr Baldwin will be possible. In any case, we cannot conceive any composition of the House of Commons under which an irresistible demand would not at least be made for the application of the conditions recommended by the Balfour Committee to be imposed on "Safeguarded" industries. These, it will be remembered, include the establishment of a time-limit for duties, the obligatory furnishing by the industries in question of full and regular information to the Board of Trade, and the opportunity for the case of the consumer to be laid fully and properly before the "Safeguarding" Tribunal. Unless, therefore, the polling results prove to have exceeded the hopes of Conservatives themselves, the worst of the threat to our fiscal system will have been eliminated.

The temper of the electorate has been such that our future legislators' contact with it can hardly fail to have been useful. The people have shown themselves interested not in words but in concrete plans; and no newly elected or re-elected member can go to Westminster without feeling that fiddling while Rome burns and anachronistic foreign policy are repugnant to the British people at large. They will feel, too, that while opposition to reaction or dangerous experiment is equally widespread, there yet remains a wide field of common agreement in which even a minority Government would function effectively in the direction of contributing to world settlement and reorganising for domestic prosperity.

THE WORLD COMMUNITY.

"DISARMAMENT is a world problem. It can only be solved by the world as the world organised in a community."

Any man or woman who has some inkling of the kind of world in which we find ourselves to-day will be interested in these two sentences, for they deal with the fate of the question of our times, and they answer it in positiveful question. It is possible to disagree with the answer here given in terms. It is not possible, except through sheer lack of knowledge or understanding, to disagree with the terms in which the problem is stated or to deny that, whatever the right answer may be, our success or failure in discovering it is going to be the determining factor in world destinies in the immediate future, and perhaps for many hundreds of years to come. These sentences, then, are interesting as they stand; but their interest is enhanced when we state their context. They are quoted from a book* on disarmament just published by an ex-official in the Secretariat of the League of Nations, who recently retired after six years' service at Geneva, where he was Director of the Disarmament Section. Here, at once, is a portent, and a most encouraging one: the portent of an "expert" who testifies that the technical problem on which he has specialised can only be solved within the framework of a non-technical and general organisation of society. This is a welcome relief from the practice of most "experts," who love to exercise their ingenuity in reducing the great universal human problems to terms of their own technique and then asserting that this is the only road to solution. Señor Madariaga, unlike the common run of his profession, proceeds from the particular to the general and not from the general to the particular. His ability to take this line is perhaps to be explained by the fact that he is not merely an expert but a man of affairs and not merely a man of affairs but a man of letters. Moreover, Fortune has established him in a place that commands a wide and well-proportioned view of the world of to-day; for Señor Madariaga happens to be a citizen of one of those European countries which preserved their neutrality during the European war. These countries were "of" the war, for they suffered from the war materially almost as much as the belligerents and also suffered from it spiritually because they were bone of the bone and flesh of the flesh of a civilisation which the war was rending asunder under their eyes. But they were not "in" the war, and, therefore, their vision was not clouded by war-madness. As a former official of the Secretariat of the League and as a man of letters and as a Spaniard, Señor Madariaga writes with threefold authority. We have only to add that he has a clear and penetrating intelligence, a pretty wit, and a humane feeling that is patently sincere inasmuch as it is unclouded by sentimentality. We had almost forgotten to say that he has a nice command of the English language, for in reading his book, we were very seldom conscious that the language in which it was written was not the author's mother tongue.

Señor Madariaga's book is divided into three parts. The first, which bears no title, states the problem and does this, as it ought to be done, in psychological terms. The second part, entitled "historical," records the various attempts made—not only inside the League, but also outside it—to grapple with the problem of disarmament from the drafting of the Covenant onwards. The third part, entitled, "prospective," deals with what has to be done and with how certain "Powers," on present showing, are likely to help or hinder. In the second part Señor Madariaga is writing at first hand of transactions in which he has himself been intimately concerned, and of which he must have a more continuous knowledge than anybody. As was to be expected, this is the most authoritative and lucid account of these ten years of international dealings over disarmament that has yet appeared. Yet the other two parts of the book are even more interesting—a fact which speaks much, both for the book and for the writer.

The reader should particularly mark the chapter in Part III., in which Señor Madariaga, in the light of his first-hand knowledge, appraises the policies of half a dozen countries. "Next to the United States, the heaviest responsibility in the slow pace of disarmament must be attributed to Great Britain. The facts are there and stare us in the fact." And so they do when Señor Madariaga courteously but frankly proceeds to marshal them. In this inverted roll of honour, Russia comes third, France most gloriously at the tail, and Italy only just one place above her. Here is food for reflection for us "English-speaking peoples," who thank God daily that we are not as other men are: Junkers, Fascists, Bolsheviks, warmakers. As this Latin observer sees us, we look uncommonly like those insufferable people who load men with burdens grievous to be borne and themselves touch not the burdens with one of their fingers.

At this point your Nordic practical man will strike "an Anglo-Saxon attitude" and ask: "Well, what is it that our Latin friend wants us to do?" And he will perhaps be disconcerted to find that Señor Madariaga has a short, plain and practical answer ready for him. The World-Community must possess a court with compulsory jurisdiction on all questions of a judicial character. The World-Community must possess a political organisation with powers to seek the solution of disputes of a non-judicial character by all possible means; to deal with any and every threat of war; and, if necessary, to lead the world in any action, moral or even physical, against law-breaking nations. Finally, the World-Community must possess a technical organisation which will gradually bring under the world-control the study and solution of a growing number of problems which are taking on a world-wide scope.

Does such a World-Community, with such functions and powers, amount to a "super-state"? Does its establishment commit the existing local States to a surrender of their sovereign independence? These are the first questions that will occur to minds set in the nationalistic ruts of the immediate past. Yet we are not sure that it is possible to answer them or even worth while making the attempt to do so. Supposing that we could define the constitutional implications of Señor Madariaga's desiderata in precise judicial terms, we should only find that history had moved on while we were busily preparing to imprison her in the strait-waistcoat of a formula. For this World-Community is the goal towards which the tide in human affairs is inevitably set; and however hard we try to swim against it, "we shall follow just the same," as the Stoic poet divined in his day. The practical question is not whether we shall fulfil our destiny but in what attitude and what spirit we shall go to meet it; and this is a matter of life and death, for this irresistible unification of the world is going—according as we react to it—to turn either to our salvation or to our destruction.

The world is travelling towards unification. There is no doubt of that. The issue has been settled already by the inventors of railways and steamships and aeroplanes, telegraphs and telephones and wireless, newspapers and cinemas, sewing-machines and safety-razors and motor-cars. And this unification will evolve, as its ultimate form, a World-Community. There is no doubt of that either; for we have no intention of giving up the use of all this "high-powered" machinery, yet the use of it is going to be prohibitively dangerous and destructive unless it is placed under some effective universal control. The one thing that we have to worry about is whether the process by which the World-Community is to be established is going to be violence and conflict ending in the peace of exhaustion, or whether it is going to be reason and co-operation ending in the peace of self-control.

If we wish to measure the importance of the issue at stake, we may remind ourselves that, in the past, communities which were virtually World-Communities for practical purposes have occasionally been brought into existence by the process of violence, and that in all these cases the harvest has been Dead Sea Fruit. Consider the community of this kind with which we are most familiar, the Roman Empire, under which, for a few centuries, the celebrated Pax Romana embraced the whole circuit of the Mediterranean and half Europe. The first step towards its foundation was a series of general wars in which Rome "knocked out" all the other great Powers of her world and thus attained the "world power" which Germany failed to attain in the War of 1914-18. The next step was that Rome repudiated responsibility for reconstructing a shattered world (in much the same spirit as America has been repudiating her share in a similar responsibility to-day). This second act condemned the Ancient World, including Rome herself, to two centuries of social revolution and civil war. After that, the World-Community took shape in the hands of Augustus, who effectively endowed it with all the functions and powers which Señor Madariaga sets forth. The Roman Empire has made an enduring impression upon the imagination of subsequent generations; but the point to mark is this: It failed to save the wonderful civilisation of the Ancient World; and the reason for this failure was that it came too late and came by violence. That is the way in which we moderns, likewise, shall get our World-Community sooner or later if we go on rebelling blindly against the spirit of our own times. But there is not much consolation in a death-bed repentance. Let us lay foundations of the World-Community, this time, before we have committed suicide.

* "Disarmament." By Salvador de Madariaga, Professor of Spanish Studies in the University of Oxford; late Director of the Disarmament Section in the League of Nations Secretariat. (London: 1929. Milford. 15s.)

THE ECONOMIC FUTURE OF AUSTRALIA.

CYNICS are wont to observe that if "some power" were to give ear to Burns's invocation and bestow upon us the power of seeing ourselves as others see us the "giftie" would not be altogether welcome. That this scepticism is not wholly justified has been splendidly proved by the reception in Australia of the report of the British Economic Mission.* This Mission consisted of four members nominated by His Majesty's Government in Great Britain to proceed to Australia and "confer with the Commonwealth and State Governments, with the Development and Migration Commission, and the leaders of industry and commerce in Australia on the development of Australian resources and on any other matters of mutual economic interest to Great Britain and the Commonwealth, which may tend to the promotion of trade between the two countries and the increase of settlement in Australia." In interpreting this the Mission took as its keynote the guiding principle that the maximum commercial intercourse would follow the maximum of Australian prosperity. The members travelled widely, and in addition endeavoured to make full use of the investigations of others. Their function was thus to co-ordinate and reflect the views held by well informed and thinking persons throughout Australia. This, no doubt, accounts for, and perhaps justifies, an admonitory tone in the report which might well have aroused resentment had the opinions expressed been purely those of an outside body.

Apart from a number of detailed recommendations relegated to an appendix, the Mission concentrated its main attention on three principal fields: Public finance, together with questions of development and migration which are closely bound up with it; tariff policy; and wage regulation. The budgetary situation they (unlike Mr Bruce in his recent speech before the Conference of Premiers) found to be satisfactory, the average annual deficit for the past six years amounting to only 4s. per head. But the position of Australia's public indebtedness is regarded as unsound, though the Mission is careful to emphasise that there is no question of the country's ample power to discharge her obligations. The steady increase in the combined public debt of States and Commonwealth, which in 1928 amounted to £174 per head, is not *per se* unwise, but it requires for its justification some certainty that the development schemes for which the loans are floated should become self-supporting within a reasonable time. They have evidently not done so, and the Mission quotes instances, as, for example, the Murrambridgee Scheme, of heavy expenditure on irrigating land which is then not used for the purposes for which it was intended. Sometimes this is due to pressure of sectional interests, often to the failure to conduct an adequate preliminary investigation to make sure of the suitability of the means to the end in view. The report, therefore, recommends a very close scrutiny of the purposes of proposed loans, and it further suggests that much more development work might be left to private enterprise with some partial Government guarantee. As a probable indirect aid to prudence in borrowing it welcomes the Financial Agreement by which the Commonwealth will borrow on behalf of itself and the States, and competition between the Australian Governments in the loan market will be eliminated.

Another institution which helps in the control of borrowing is the Development and Migration Commission, whose duty it is to investigate schemes for which loans are proposed under the £34 million Agreement. The purpose of this Agreement is to afford assistance from the British and Commonwealth Governments to migrants from Great Britain, but assisted migration has been declining of recent years, and the Mission points out that the limitations of the scheme practically confine the field to the production of wheat and sheep products. Moreover, there are difficulties, clearly explained in the report, caused by the obligation on individual States to absorb specific numbers of immigrants in connection with such schemes, and the Mission recommends the abolition of these requirements. In this connection the opportunity is also taken to stress the tendency, already recognised, towards extending the development, at great expense, of unsettled country when the same expenditure applied to intensive cultivation of land already partly developed might be much more profitable.

All measures designed for the increase of Australia's prosperity will, however, in view of this report, be rendered nugatory if costs of production cannot be reduced, and the most important issues raised in this connection are the tariff and the Arbitration Acts. Here a committee not composed of Australian citizens is on delicate ground, but the Mission supports its views by well chosen quotations from the reports of the Commonwealth Tariff Board and is careful to give weight to the arguments which may be adduced in favour of protection. It recognises that the objects of protection are not purely economic and that a young country may choose to impose a tariff for the sake of promoting diversity of occupation, or in order to ensure self-sufficiency in the production of essential commodities in the event of war. The paragraph on which this is conceded, however, concludes with the words: "She may be prepared to pay for these objects through economic sacrifice; but, if this be necessary, it is important that she should make the sacrifice with her eyes open and be ready to count the cost." As to the nature of this economic sacrifice, the report does not mince matters: "The combined operation of the tariff and the Arbitration Acts has raised costs to a level which has laid an excessive and possibly even a dangerous load upon the primary industries." This burdening of the primary industries, together with the vicious circle of rising prices and rising labour costs, and the consequent crippling of Australia's power to export manufactured articles, are heavily stressed, but as the Mission recognises that Protection is the settled policy of Australia, and that it would, therefore, be idle to suggest the abolition of the tariff, its practical suggestions are confined to the removal of abuses and anomalies. The point is made that administrative additions to the tariff are "gravely to be deprecated," as containing always the possibility of abuse. In point of fact, certain anti-dumping duties imposed on the products of various European countries whose exchanges have depreciated have been within the past few weeks done away with by administrative order on the ground that these currencies are now stabilised. Then the report proceeds to distinguish between weakness (for "Protection, as its very name implies, is designed for the weak")

due to infancy, temporary ailment, or inefficiency. In the first two cases it concedes that temporary protection may be defensible if a careful watch is kept to see that it is removed in due course, and it suggests a series of precautions on the same lines as those proposed by the Balfour Committee to guard against protecting inefficient industries. Moreover, if artificial assistance is to be given, Sir Arthur Duckham and his colleagues hold that this is better done by means of a bounty, the cost of which can be exactly measured. In order to carry into effect these suggestions, the Mission recommends the institution by the Commonwealth Government of a full scientific inquiry into the economic effect of the tariff and the incidence of its duties.

In the matter of wage-regulation and the settlement of industrial disputes which is closely bound up with the question of Protection, the representatives of both workmen and employers agree that the present system is not fulfilling its purpose. The Mission feels strongly that if arbitration in these matters must continue, at least overlapping between the spheres of Commonwealth and State jurisdiction should be eliminated. There is at this moment some prospect of a movement in this direction: Mr Bruce has just announced to a Conference of Premiers that if the States do not hand over to the Commonwealth Government the control of all industrial matters he will introduce a measure for the repeal of existing arbitration legislation. The Premiers have notified the States' refusal, so Mr Bruce will presumably proceed to carry out his threat. Whatever the fate of such an attempt may be, it will at least secure a much-needed discussion of the position.

The great strength of this report lies in the timeliness rather than in the originality of its proposals. Enlightened opinion in Australia knew these things before, but was prevented from acting on them by the opposition of Labour and of extreme protectionists. It is the merit of the Economic Mission that it so gauged the economic situation on the one hand and the psychological situation on the other as to formulate a report which just gave the needed impetus. Australian Press comment has been extraordinarily favourable with the exception of a very few extremist organs, and the present Conference at Canberra, referred to above, which was called by the Commonwealth Prime Minister to discuss the proposals, affords convincing evidence of the impression made by the report. Moreover, in the session which followed its publication in Australia, an Act was passed to establish a Bureau of Economic Research. This again was no new idea; the Government had intended such action for some time but had been hesitating over the constitution of the proposed Bureau. In the appendix to the report the British Economic Mission recommended the establishment of an independent body, free from political influence and responsible directly to the Commonwealth Government. Here again these suggestions came at the right moment to supply a needed impulse, and it says much for the progressiveness of Australia that she does not mind whether suggestions appear to originate within or without the country, so long as they seem to her appropriate.

FOREIGN COMPETITION IN STEEL.

(BY A CORRESPONDENT.)

FOREIGN competition in steel, which developed rapidly in the last few years before the war, Germany being our most formidable and successful rival, progressed further in the first seven or eight years after the war, France and Belgium coming forward as great rivals. But in the last year or two the competition has eased, and British steel has taken a new lease of life. Our competitive powers in the heavy trades have been substantially strengthened by the fact that Continental prices have increased as follows in the last twelve months:—

FRENCH AND BELGIAN STEEL PRICES, F.O.B., ANTWERP

	A Year Ago.	Now.
Steel blooms	83s. to 87s.	95s. to 99s.
Steel billets	90s. to 93s.	103s. to 106s. 6d.
Steel sheet bars	95s. to 96s.	107s. 6d. to 108s.
Steel joists	94s. to 95s.	101s. to 102s.
Merchant steel bars	106s. to 107s.	121s. to 122s.

German prices have moved up concurrently, whilst at no period since the war have American prices been strongly competitive. In recent months pig iron has ranged from 5s. to 15s. a ton dearer in the United States than in Britain, and galvanised steel sheets, a leading export line, have been from 50s. to 60s. a ton dearer at the works, hundreds of miles inland in the United States, than they have been quoted f.o.b. in our country. Whereas iron and steel costs were 13 per cent. lower in America than in Britain before the United States Steel Trust was formed in 1901, it has been calculated since the war that American costs have been 37 per cent. higher than British costs. The only considerable market for American steel outside the United States is Canada. Even in this market competitive conditions are now such that nearly all heavy iron and steel products, and many medium products, can be delivered in the Dominion by British manufacturers at lower prices than the corresponding American goods can be sold there. Whereas our raw materials and finished products have only to stand the cost of very short rail hauls, plus low sea freights, all the American goods have to stand extremely long and expensive overland hauls. Canada imports nearly 233 million dollars worth of iron and steel from the United States in a year. Our people are now making a bid for the business, and they have productive costs, transport costs, and the Canadian Preferential Tariff all in their favour.

It is important to observe that it is excessive cost of transport that keeps American competition weak in heavy goods. A ton of American steel, by the time it reaches a port of shipment, has carried over $17, or about 70s., in inland transport charges. That is because the ore in the States is about a thousand miles from the coal, and has to stand two rail hauls and a long Lakes voyage before it gets to the furnaces, and because the iron and steel works, on account of the coalfields position, are mostly between 300 and 500 miles from seaboard. Against about £3 10s. transport cost per ton on American steel for export, we have mines, works and ports so situated that much of our steel carries only about £1 in inland transport charges. Even taking a plant near Sheffield, nearly in the middle of our country, and nearly as far from a port as it is possible for British works to be, our inclusive transport costs —assemblage of the materials and then the transport to the ship's side—were less than 29s. per ton of finished steel, even before the recent rail rate reductions were made. A ton of steel can be carried from Sheffield to the St. Lawrence ports of Canada for a considerably less inclusive transport cost than a ton of American steel can be carried from United States works to those Dominion ports.

Germany has most often been our chief competitor in exports, but costs are now so high in that country that even the pre-war scale of lavish export bounties is insufficient to give Germany her old-time lead. Before the last wage advances in Germany it was found that German iron was 28 per cent. dearer than before the war, and steel ranged from 15 to 40 per cent. dearer, whereas the average level of British iron and steel prices was less than 13 per cent. above pre-war. The Germans, like the Americans, have a transport cost disadvantage as regards heavy materials and products since their plants are all a long way from ports.

In France, too, the inland transport distances are very long—about six times as long as our average haul; and wages all along the line from mining to manufacturing and transporting are increasing greatly. The French exporters are getting uneasy, for they visualise a great increase in the competitive power of Britain. Belgium is in the strongest competitive position; but her wages and other costs have substantially increased in recent months, and, in spite of her low ton-mile rail rates, Belgian steelmakers pay more per ton, point-to-point, than our manufacturers pay, for the works in Belgium are some 80 miles from port, whilst we have works within sight of docks in some cases.

One point in the export trade problem not generally understood is that tonnage figures do not tell the full story. Value is the true test of competitive power, and many of our exports range from £15 to £20 per ton in value, whereas most of the foreign exports range only from about £3 10s. to £6 per ton in value. In tonnage of exports we are behind France, Germany and Belgium; but in value we have the leading position. Here are the tonnage returns for last year:—

IRON AND STEEL EXPORTS, IN TONS, 1928.

From—	
France	4,697,500
Germany	4,645,800
Belgium (with Luxemburg)	4,463,000
Britain	4,261,300
United States	2,347,800

It is noteworthy that our exports of pig iron, a low-priced material, have declined by nearly one-half as compared with pre-war, whereas our exports of more highly-finished and high-priced goods have substantially increased.

The factors in our improved competitive position are not far to seek. Apart from the increase in foreign costs of production, our shipping freights are very little higher than before the war, and all our exports are dependent on shipping. Our rail rates are about 50 per cent. higher than before the war, but as our hauls are very short this makes little difference in the total point-to-point, or works-to-docks, charges. On the other hand, the American increase of 60 per cent. in rail rates is over enormous distances and adds hugely to the total transport cost. The Continental rail rate post-war increases, ranging from 25 to 75 per cent., are all for hauls much longer than ours, and, therefore, our foreign rivals are considerably more handicapped than we are by railway rates. The third factor is that great economies have been effected within our steel works. Obviously, an industry which, in the last few years, has paid about 25 to 50 per cent. more for its fuel, about 75 per cent. more for labour per man-hour, and about 200 per cent. more per ton in rates and taxes, and has yet sold its products at prices only 13 per cent. higher than before the war has made great headway in reducing costs. Finally, there is our improved commercial organisation. In 1927 our steel makers launched a home-made steel rebate scheme—that is, they offered rebates to those consumers who bought only British steel in specified periods. One result of that is that scarcely any foreign steel is to be seen in our shipyards to-day. A few months ago our steel makers formed an export agency, which has already secured substantial orders from the Canadian market. The agency is now turning its attention to other markets. If our costs can be kept down our trade will grow, for the world demand for iron and steel is pronouncedly on the up grade, and it is probable that large railway and other steel-using plans now projected in various parts of the world will materialise during the next few years.

THE POSITION IN ROUMANIA.

(BY OUR BUCHAREST CORRESPONDENT.)

THE raising of the rate of discount of the National Bank of Roumania from 6 per cent., where it had stood unchanged ever since 1920, to 8 per cent. at the beginning of this month and to 9½ per cent. on the 13th, automatically accompanied by the increase in the rate for advances against collateral from 7 per cent. to 10½ per cent., has definitely annihilated the hopes of those who expected cheaper money as an immediate consequence of the stabilisation and foreign loan. This rapid increase in the official rates by 3½ per cent. in a fortnight is primarily a measure of defence by which the central monetary institution endeavours to check the considerable demands for foreign exchange made on it lately. The same aim was pursued when it was decided recently to diminish the payments on account of the debts of the State and the railways to the home industries and to place no more orders, payable during the current year, in foreign countries. When it became known that part of the proceeds of the foreign loan was to be used by the State to reduce its indebtedness to home industries it was hoped that these funds would come to the relief of the money market. These hopes, however, were not borne out by events. In order to be able to finance home industries, which were crippled by the enormous outstanding debts of the State and the railways, the Roumanian banks had contracted extensive overdrafts in foreign countries, and the money which now became available by the disbursements of the State was used by the banks to pay these foreign debts.

us your banking orders on SWEDEN
Skandinaviska Kreditaktiebolaget
KREDITBOLAGET

Hence the demand for foreign exchange. This explains also the small but persistent contraction in the note circulation of the National Bank. The following figures will show the importance of the movement of funds at the National Bank during the period from March 9th to April 27th last:—

(In million lei.)

	March 9th.	April 27th.	Increase.	Decrease.
Gold reserve	8,275	8,641	366	...
Foreign bills	3,655	2,520	...	1,135
Total reserve	11,930	11,161	...	769
Other foreign bills	1,660	387		1,273
		Total decrease		2,042
Sight liabilities:—				
Note circulation	20,152	19,968	...	184
Other sight liab.	11,094	6,560	...	4,534
	31,246	26,528	...	
		Total decrease		4,718
Proportion of gold reserve to sight liab.	26·48%	32·57%		
Proportion of total reserve to sight liab.	38·18%	42·07%		

The minimum proportions of the gold reserve and of the total reserve to the sight liabilities allowed by the Statutes are fixed at 25 per cent. and 35 per cent. respectively.

The principal item in the "Other Sight Liabilities" is represented by the proceeds of the stabilisation loan and of the funds received under the German convention, which on March 9th stood at about 9,500 million and on April 27th at approximately 4,500 million lei. The foreign bills fall into two categories, those forming part of the reserve, described by the National Bank as "expressed in legal money and practically convertible into exportable gold," and other foreign bills. The total stock of these has fallen in the period of 1½ months under review by about 2,000 million lei, whereas the sight liabilities, apart from the note circulation, have been reduced by about 4,500 million. It appears, therefore, that 2,000 million of the State disbursements, or 45 per cent., have left the country. It is probable that the movement has continued after April 27th.

Other important changes in the situation of the National Bank are shown in the following figures:—

(In million lei.)

	March 9th.	April 27th.	Increase.	Decrease.
Assets.				
Discounts	7,109	8,465	1,356	...
Temporary advance to the Treasury	1,700	2 000	300	...
Advances to popular banks etc.	4,180	1,672	...	2,508
Various debtors	4,400	1,266	...	3,134
Liabilities.				
Various creditors	4,466	2,493	...	1,973
Time deposits	...	710	710	...

Special mention must be made of the temporary advances to the Treasury, which have now reached the limit of 2,000 million lei allowed by the Law of Stabilisation. A new departure is represented by the time deposits, which are accepted by the National Bank at 6 per cent., and for which bonds are issued discountable at the National Bank at its official rate. The reduction in the advances to the popular banks, co-operative societies, etc., payable by the State, has taken place in accordance with the provisions of the Law of Stabilisation, which obliges the State to pay off these long-term credits. Transactions of great importance are also reflected in the

decrease of the various debtors by over 3,000 million and the reduction of the various creditors by almost 2,000 million lei.

The rise in the official rates followed, of course, by a rise in the rates charged on advances by the principal banks, has caused no small uneasiness in commercial circles. Dear money, however, has proved one of the principal handicaps of trade during the last few years, and, in view of the acute crisis now ruling, the higher rates are particularly unwelcome. Money is not, in fact, scarce at the present moment. Deposits at the banks are said to be on the increase. The situation of the National Bank has gained in liquidity. Nevertheless, the chief characteristic of the present crisis is the pronounced contraction of credit caused by the insecurity of the situation evident in the large number of failures. The high rates of interest are, therefore, only partly making good the large amounts of bad debts which the banks must carry on their books. The seriousness of the situation is aggravated by the severe slump in prices on the Stock Exchange. Government stocks and other fixed-interest-bearing securities have naturally fallen in value on account of the rise in the Bank rate. But the share market has also suffered, and almost to an unprecedented degree. It appears that the general crisis is now forcing holders to realise their shares.

The situation of the Treasury, as shown in the last published returns, is causing grave concern in Government circles as well as in the whole business community. For the period from January 1st to March 31st last the receipts, compared with the proportionate amount of the budget estimates, show a deficit of 3,814 million lei. But what makes the position more disquieting is the fact that the receipts are 750 million less than in the corresponding period of last year. It will be remembered that last year's budget deficit was very large. It was met by means of the foreign loan. To cover current expenditure by a loan again would be very unsound finance. Already the Government has taken 2,000 million lei from the National Bank, and has, therefore, no more facilities in this quarter. This advance, moreover, must be repaid before the end of the year. The only possibility of making both ends meet lies, therefore, in economy on the budget estimate of the year's expenditure. The Government, to judge by their utterances, fully realise the position. But whether sufficient cuts in the expenditure can be made is doubtful.

As has been pointed out before in the *Economist*, the possibility of amelioration in the present grave economic situation of Roumania depends, to a large extent, upon this year's harvest. Never have eyes turned with more anxiety to the crop reports. Although it is too early yet to form a definite opinion, the prospects of the harvest are considerably brighter than they appeared to be a month ago. The weather lately has been very favourable indeed, and the spring sowings are expected to make up in some measure for the loss caused by the severe winter. The Government has gone to considerable lengths to help the farmers, especially in the famished districts. It is realised, however, that the creation of an organised credit system for the purposes of agriculture is imperative, and reports of an offer by a British syndicate in connection with the creation of the agricultural credit bank which is under consideration has raised no small amount of interest.

INDIA'S FOREIGN TRADE IN 1928-29.

(BY OUR CALCUTTA CORRESPONDENT.)

THE official statistics now available indicate that in the official year ending March 31st the value of India's imports from oversea countries increased, as compared with 1927-28, by Rs. 3 crores, or 1 per cent., and amounted to Rs. 253 crores, while the total exports, including re-exports, rose by Rs. 9 crores, or 3 per cent., to Rs. 338 crores. The exports of Indian merchandise increased by Rs. 11 crores, or 3 per cent., but re-exports declined by Rs. 2 crores, or 18 per cent. The grand total of imports, exports and re-exports amounted to Rs. 591 crores, as against Rs. 579 crores in the preceding year, an increase of Rs. 12 crores, or 2 per cent. Overtly, therefore, the new exchange ratio has neither stimulated imports nor checked exports. Certain industries, notably the Bombay cotton mills, remain depressed, but the causes must be sought in other directions. This is now so widely recognised that the agitation against the eighteenpenny rupee, despite occasional fitful protests, may be said to have practically faded away.

The lower level of bullion imports which succeeded the abnormal acquisitions in 1924-25 (when the net imports jumped to 93.99 crores) remained operative in 1928-29, confirming the official belief, which is widely endorsed in India, that in normal conditions it seems unlikely that India's absorption of gold and silver will revert to the pre-war level, owing to the growth of the investment habit. In 1928-29 imports of treasure (private and Government) increased by Rs. 2,40 lakhs to Rs. 37,29 lakhs. Gold bullion rose by Rs. 46 lakhs to Rs. 11,41 lakhs, and sovereigns and other British gold coin by Rs. 2,69 lakhs to Rs. 9,40 lakhs, while other coined gold was valued at Rs. 40 lakhs, as against nearly Rs. 48 lakhs in the preceding year. The value of silver imported declined by Rs. 55 lakhs to Rs. 15,92 lakhs, and that of currency notes by Rs. 14 lakhs to Rs. 15 lakhs. Exports of treasure advanced by Rs. 3,22 lakhs to Rs. 6,35 lakhs, due mainly to larger shipments of silver.

India's visible balance of trade in merchandise and treasure during the twelve months April to March, 1926-27, 1927-28 and 1928-29, is shown in the following table. The figures are arrived at by combining the balance of transactions in (*a*) private merchandise and (*b*) treasure (private account). The balance of remittance of funds is also shown with details at the end of this table. In these balances the sign plus (+) indicates net export and minus (−) net import.

	Twelve months, April to March. 1926–27. Rs. (lakhs).	1927–28. Rs. (lakhs).	1928–29. Rs. (lakhs).
Exports of Indian merchandise (private)	+301,44	+319,15	+330,13
Re-exports of foreign merchandise (private)	+ 8,01	+ 9,54	+ 7,83
Imports of foreign merchandise (private) (*a*)	−229,98	−246,73	−251,42
Balance of trade in merchandise (private)	+ 79,47	+ 81,96	+ 86,54
Gold (private)*	− 19,40	− 18,10	− 21,20
Silver (private)*	− 19,79	− 13,89	− 13,04
Currency Notes (private)	− 14	− 24	− 12
Balance of transactions in treasure (private)	− 39,33	− 32,19	− 34,36
Total visible balance of trade	+ 40,14	+ 49,77	+ 52,18
Council bills, purchases of sterling and other Government remittances to the United Kingdom (*b*)	− 2,82	− 37,77	− 41,02
Sterling transfers on London sold in India	+ 1,93	...	...
Transfers of Government securities	+ 3	+ 28	− 1
Interest drafts on India in respect of Government of India securities	− 34	− 35	− 36
Balance of remittances of funds	− 1,20	− 37,84	− 41,39

(*a*) Exclusive of the value of railway materials (Rs. 124 lakhs, Rs. 312 lakhs and Rs. 182 lakhs in the twelve months April to March, 1926-27, 1927-28 and 1928-29 respectively, imported direct by State Railways working under company management which was not paid for in the ordinary way, and not therefore taken into account in arriving at the balance of trade.

(*b*) This head includes, in addition to Council Bills (1) sterling purchases in India and (2) payments in India to local bodies, *i.e.*, against proceeds of sterling loans floated by them in London and taken over by the Secretary of State.

* These exclude transactions which do not enter into the balance of trade.

Of India's imports last year, goods to the value of 137 crores came from countries within the British Empire, compared with 136¼ crores in the preceding year, and of these totals 113 crores represented imports from the United Kingdom, against 119 crores from the same source in 1927-28. One of the most remarkable features of the year's trade was the importation of large supplies of wheat from Australia and Canada, the total imports from the former, mainly owing to these purchases, rising from under two to nearly 8½ crores, and from the latter from under two to over three crores. The total tonnage of wheat imported from all sources ran to 558,390 tons, against less than 70,000 tons a year previous and just over 40,000 tons in 1926-27; and it is convenient to mention here that imports of rice totalled as much as 125,426 tons, compared with 68,954 tons in 1927-28 and 40,476 tons in 1926-27. Although it is gratifying to think that India is able to indent upon the world's supplies of grain on this scale in years when her own crops yield less than is required for domestic consumption, a less satisfactory aspect of the problem is that, if the necessary capital, skill and energy were forthcoming, India should be quite capable of feeding her own population without external assistance; in fact, the recourse to foreign supplies indicates, in the most conclusive fashion, the importance of carrying the recommendations of the Agricultural Commission into effect with the greatest possible energy and the least possible delay. In the course of a pamphlet recently circulated, entitled "Economic Milestones on the High Road to India's Prosperity," the Bengal Chamber of Commerce wrote:—

> "There will probably be few to dissent from the proposition that India should at least grow enough food to feed her own population, and it will probably also be agreed that this aim can be achieved only by maintaining a sufficient area under food crops to make possible, *in normal years*, a considerable export of foodstuffs to other countries. A surplus available for export in good years becomes a reserve available for local consumption in years of poor outturn. In view of this consideration, the decline in the export of wheat, and the increasing inability of Burma rice to hold its former position in the principal international markets, affords matter for grave concern, and points to the urgent necessity of bringing the methods of producing these two important crops into closer accord with modern conceptions of scientific cultivation. India, in her present stage of economic development, cannot afford to drift into the position of becoming a large importer of foodstuffs."

No aspect of India's economic position requires closer scrutiny than her increasing dependence on imported foodstuffs, including not only wheat and rice, but sugar, salt, &c.

In view of the importance of reciprocal trade, it is a matter of some concern that, while exports of Indian merchandise to the United Kingdom declined 9 crores to 70 crores, exports to Japan increased from 29 to over 34 crores, to the United States from 36 to 39 crores, to Belgium from under 11 to over 13 crores, to France from under 16 to over 17 crores, and to Italy from under 13 to nearly 15 crores. It may be recognised, however, on the one hand, that the United Kingdom still remains incomparably the largest purchaser of Indian products (India importing British goods valued at 113 crores, against sales totalling 70 crores to the United Kingdom), and, on the other, that larger purchases depend, to some extent, on an improvement in the average quality of Indian products.

Among staple imports increases were recorded in dyes and colours, electrical goods and appliances other than machinery, machinery of all kinds (plus 3 crores), paper, and vehicles (principally motor), while decreases occurred in cotton goods (minus two crores), chemicals, drugs and medicines, glassware and earthenware, iron and steel goods, other metals, woollen goods, &c. In the cotton piece-goods trade, further declines in imports from the United Kingdom coincided with further increases in imports from Japan. Indian millowners are pressing for a further increase in the import duties on cotton goods, and, in the event of such an increase being deemed expedient for revenue purposes, it remains to be seen whether, as in the steel tariff, any attempt will be made to differentiate between British goods and imports from other sources.

Notes of the Week.

The Verdict of the Boroughs.—At the time of going to press, the votes have been counted in about a third of the constituencies of the country. These are in the main those in London, the great cities, the chief boroughs and the industrial districts. In them Labour have made a net gain of 53 seats, and practically reversed their position *vis-à-vis* the Conservatives. Even if they maintain the same rate of progress in the constituencies still to be counted, however, it is unlikely that they will secure an absolute majority, though they may be the largest party in the House. At the same time, the vagaries of our electoral system are so irrational that it is unwise to forecast even on the basis of so large a proportion as one-third of the country. The total Labour poll in these 200 seats at the last election was about 2¼ millions in 1924 against 2¾ millions this year, and their seats 115 against 62. The Conservatives, on the other hand, have polled 2½ millions, which is about the same as in 1924; but their seats have fallen from 123 to 72. The Liberals, with a poll of nearly 1½ millions against 900,000 in 1924, have two seats less than before. The party have, however, secured the return of Sir Herbert Samuel, who will greatly add to their influence in the House of Commons. The Minister of Labour has been defeated, and the Foreign Secretary only squeezed through by the skin of his teeth in Birmingham, where the Labour party has made a net gain of six seats. On the whole, the polls are somewhat smaller in proportion to the electorate than five years ago. The newly-enfranchised women have voted in very substantial numbers, but the verdict in these areas where Labour was expected to make its greatest advance is not appreciably different from that which was expected on the basis of the by-election results of recent times. The result of the election as a whole depends upon whether or not the Conservatives will be more successful in repulsing the attacks of the Liberals in the counties than they have been in meeting the Labour onslaught in the industrial districts. But they can hardly fail to lose their majority. It may be taken as certain that in the coming Parliament there will be a majority for Free Trade and for a more active policy of peace.

A Reparations Agreement in Sight.—After much toiling and tossing it almost looks at the time of writing as though the Committee of Reparation Experts will safely make port. If they succeed in doing so it will be a great personal triumph for the members of the Committee who have had to find a compromise between apparently irreconcilable views which were very tenaciously held. Without authority to commit their Governments or to implement their decision, yet knowing that it was useless to produce a solution which would not be honoured at home, the Committee have laboured with great pertinacity. But, as we have more than once observed, the Committee has gone so far in recognising the need for modifying the annuities provided under the Dawes plan that it had become impracticable to throw up the sponge altogether and leave the maximum annuities still in force. Some new agreement—at all events for the near future—was imperative, and it seems to have been achieved. The outstanding fact is that Dr Schacht has accepted the figures now agreed by Germany's creditors as a basis of discussion, and, as we write, it seems that the German reservations alone remain to be dealt with. It is understood that the difficult problem of meeting the various Allied claims has been assisted by postponing the date of the application of the Young plan until September 1st, and charging the full Dawes annuities for the five months until that date, which gives a small surplus over the original figures of the plan. A significant feature of the agreement relating to the distribution of the proceeds is that no provision is made for the military expenses of the occupation of the Rhineland after September next. The period of occupation is, of course, entirely outside the province of the Experts, but, as our Paris correspondent has pointed out

more than once, Dr Schacht has raised problems which are, in fact, political. It is not, however, unduly optimistic to hope that this calculation of the Experts will prove to be an accurate anticipation. The agreement does not provide for the settlement of the Belgian marks claim, which must now be discussed and settled independently. Greater secrecy than hitherto has been preserved with regard to the last stages in negotiation, and comment on the scheme as a whole must wait for the publication of the report.

King Amanullah in Exile.—On Thursday, May 23rd, at Chaman, King Amanullah crossed the frontier from Afghanistan into India with a small party, including his consort, Queen Surayya, and his brother, Inayatullah Khan, the king of a day. The unveiling of Queen Surayya—begun on the royal journey from Bombay to Europe last year and continued, after return to Afghanistan, in a public ceremony at Kabul—was intended to be a symbol of the emancipation of the country, but proved to be one of the chief stimuli of the fanatical reaction. Thereafter, the setting of the shadow-king Inayatullah upon the throne was intended to save the Durani Dynasty at the sacrifice of the single member of the house who had sown the storm. But the whole dynasty has reaped the whirlwind; and, though Nadir Khan in the Khost Hills is still a claimant to the throne, the Son of the Water-Carrier for the time being reigns more or less securely in the Duranis' stead. Thus, once more, Amanullah is to make the journey from Bombay to Europe, *quantum mutatus ab illo*, who made it with such pomp and ceremony a few months ago. In the circumstances, King Amanullah and Queen Surayya may consider themselves lucky to have escaped with their lives; for the pioneers of Westernisation in Oriental countries are usually offered no other alternatives than victory or death. This Afghan pioneer is at least free to join the company of exsovereigns who have " lived comfortably ever after " at Montreux or Surbiton or Cannes. Yet we fear that this may be a mortifying experience for him; for if he has suffered for being " too previous," he has only been ahead of the times in Afghanistan by a year or two; and he will almost certainly live to see the Westernisation of that country—the enterprise that has cost him his throne—resumed and completed by the very stalwarts who have cast him out for daring to bring the abomination of desolation into the Islamic holy of holies. At the moment, no doubt, the Afghan doctors of the Islamic law and the Ghilzai tribesmen are jubilant. They imagine that in the Son of the Water-Carrier they have found a ruler after their own hearts: a ruler who will not profane the faith or extort taxes or impose conscription or compel decent civilised Muslim men and women to wear those outrageous Western clothes.

> " But at my back I always hear
> Ford's winged chariot hurrying near;
> And yonder all before us lie
> Deserts of vast Modernity."

Though these ingenuous tribesmen and ulama may not know it, their doom is assuredly sealed. For Mr Ford and Mr Singer and Mr Gilette are apostles of Western civilisation whose powers are immeasurably greater than an Amanullah's, because they convert by salesmanship and not by the sword; and Habibullah, the Water-Carrier's Son, for all his prowess, can hardly fail to succumb to the charm of their wares now that he possesses the wherewithal to buy them. Or are we after all reckoning on the obvious just once too often? For it is just conceivable that Habibullah might turn out to be the Judas Maccabaeus of these latter-day saints of the Islamic world.

The Little Entente.—Last week, at Belgrade, representatives of the three States members of the Little Entente—Czechoslovakia, Jugoslavia and Roumania—held one of their periodical meetings to take stock of how their common interests stand. The official communiqués were as colourless as usual; but we may infer that, though the links between the three States may not have been relaxed, they certainly have not been drawn closer. The Entente rests upon three sets of bipartite treaties which were negotiated on the morrow of the peace settlement, have been renewed since then from time to time, and remain in force to-day. The gist of these treaties is an agreement to take common action, in case of need, in order to uphold the peace treaties against certain countries that would like to see them revised. The country envisaged in the treaties between Czechoslovakia and each of her two partners is Hungary, while in the treaty between Jugoslavia and Roumania the terms of reference are extended to cover Bulgaria as well. This limitation of the scope of the Little Entente is important; for while Hungary, at any rate, though hardly Bulgaria, may cause the Czechoslovak and the Jugoslav and the Roumanian Foreign Minister to pass some sleepless nights, now and then, Hungarian irredentism is not really the greatest anxiety in the minds of any of the three. The Jugoslav Foreign Minister's worst nightmare is the Italian penetration of Albania, the Roumanian's is the Russian claim to Bessarabia, the Czechoslovak's is the *Anschluss* of Austria to the German Reich. Hence Roumania has her defensive treaty against Russia with Poland; Czechoslovakia enters with Poland and France into the Pact of Locarno in order to make herself secure against Germany; while Jugoslavia scans the international horizon for some Power who will support her against Italy without leaving her in the lurch if the worst comes to the worst. But, in these major troubles, no member of the Little Entente is willing to pledge itself to come to the rescue of the others at the risk of sharing their possible fate. The first rift in the lute was over Russia. When the Soviet Government proved to be intransigent in its refusal to recognise the lawfulness of the transfer of Bessarabia from Russia to Roumania, the Roumanian Government tried to induce the Governments at Prague and Belgrade to make the integrity of the Roumanian frontier towards Russia their business as well as the integrity of the Roumanian frontier towards Hungary. But Czechoslovakia and Jugoslavia, being Slavonic countries situated at a comfortable distance from the Russian border, politely but steadily refused to meet Roumania's wishes in this matter. Roumania, however, has given them tit-for-tat during the last two years, when the " forward policy " of Italy in South-Eastern Europe has been causing increasing anxiety to Jugoslavia. It was now Roumania who, being at a comfortable distance from the scene of trouble, could afford to assume an air of detachment and even to coquette with the Power which was showing itself such an awkward neighbour to one of Roumania's partners. The Russian and the Italian complication have rather lowered the vitality of the Little Entente, but they have by no means killed it. Indeed, it cannot afford to die so long as " the Awakening Magyars " live; and then its members have a general common interest in their concern to prevent the treaties for the protection of minorities from working more effectively than they have done hitherto. Moreover, they have a common interest with France in maintaining the sacrosanctity of all the four European peace treaties as a single inviolable and immutable European system—lest some Hungarian or German or, may be, Russian or Italian Samson, by uprooting one pillar, should bring the whole top-heavy structure down about the ex-victors' ears. It will be seen that the Little Entente is by no means yet played out.

" Dollar " Wheat.—The downward movement of wheat prices, which has made steady progress during the past three months, reached this week a point at which the cost of the commodity in the Chicago and Buenos Aires markets stands at about pre-war level. The following figures indicate the extent to which the quotations for futures have recently declined:—

1929.	July Wheat, Chicago. Cents per bushel.	June Wheat, Buenos Ayres. Pesos per quintal.
End March	124½	9·80
End April	118⅜	9·35
May 28th	100	8·05

The causes of this slump in wheat prices are not obscure. At the end of the last cereal year (July 31, 1928) the carry-over of the world's wheat-exporting countries was estimated by the Rome Institute of Agriculture to amount to 222 million bushels, while the exportable surplus for 1928-29 was put at 1,180 million bushels, against estimated requirements of 845 million bushels on the part of the importing countries. The institute, in its Crop Report for last month, raised the figure of exportable surplus to 1,241 million bushels. Exports in the first seven months of the season were put at 576 million bushels, leaving 665 million bushels available for export between March 1st and July 31st. So far, lower prices seem not to have stimulated consumption to an extent as great as the market anticipated, and it is expected that the exporting countries' carry-over at the end of the cereal year will reach the high total of 360-365 million bushels. Given this position—with favourable new crop advices from Canada and the United States—and the recent fall in prices is seen to have been inevitable. The reactions on the American " prosperity cycle " may well be important.

The American Investor and Europe.—While the immediate explanation of the recent weakness of sterling in relation to the dollar is to be found in special and, it may be hoped, transitory causes—e.g., transfers from London to New York of French and other balances attracted by the high rates obtainable for call money in Wall Street—there is growing recognition of the fact that America's position as the creditor of Europe may have an uncomfortably permanent influence on the dollar-sterling exchange. This exchange, which is a barometer sensitive to the balance of payments not only between Great Britain and America, but between America and Europe as a whole, has this year had to carry the burden of a predominantly westward flow of payments relieved to a far less extent by the factor which until recently has tended to disguise the real situation—American loans to Europe. The following table, based on figures taken from the *Bulletins* of the Federal Reserve Board, shows clearly how the direction of the American new issue market has recently changed.

AMERICAN NEW ISSUES (EXCLUDING REFUNDING).
(Million dollars.)

	Domestic Total.	Foreign To Europe.	Foreign Total.	Foreign per cent. Total.	Europe per cent. Foreign.
Year 1927	6,151	564	1,382	*18*	*41*
Year 1928	6,728	581	1,247	*16*	*47*
1st Quarter, 1928	1,404	179	327	*19*	*55*
1st Quarter, 1929	2,227	38	233	*9·5*	*16*

It will be observed that in January-March, 1929, not only was the proportion of foreign to total new issues reduced to half that of a year ago, but the percentage of the total foreign issues destined for Europe declined, in comparison with the first quarter of 1928, from 55 to 16 per cent. If the cessation of American lending to Europe indicated by the last quarterly figures proves to be a permanent feature of the next few years, a serious complication in the monetary outlook has to be faced.

Industrial Production.—As estimated by the Board of Trade, the volume of production of British industry in the first quarter of 1929 was 1.6 per cent. greater than in the fourth quarter of 1928, and 0.8 per cent. above the level of the corresponding quarter a year ago. Comparative figures for the ten groups of industry on which the estimate is based are summarised below:—

INDEX OF PRODUCTION. (1924 = 100.)

	March Quarter, 1928.	December Quarter, 1928.	March Quarter, 1929.
1. Mines and quarries	96·2	91·9	98·9
2. Iron and steel	105·6	105·2	111·5
3. Non-ferrous metals	121·6	119·8	115·7
4. Engineering and shipbuilding	117·4	111·5	119·0
5. Textiles	106·9	101·2	101·7
6. Chemicals	110·5	115·1	108·3
7. Paper and printing	(*a*)	(*a*)	(*a*)
8. Leather and boots	120·0	91·4	103·2
9. Food, drink and tobacco	98·7	104·8	97·5
10. Gas and electricity	(*a*)	(*a*)	(*a*)
Total (*b*)	109·3	108·5	110·2

(*a*) Complete separate data not available.
(*b*) Including various industries not specified above.

The salient feature disclosed by the foregoing figures is the marked revival of activity in the " heavy " industries (Groups 1-2). Against this improvement, the index of production of textiles in the March quarter was approximately 5 per cent. lower than a year ago, and a decline was recorded also by the chemical and allied trades. Activity in non-ferrous metals was appreciably less than in the March quarter of 1928, whereas engineering and shipbuilding showed an increase of 1.4 per cent., lower shipbuilding output being offset by an expansion in electrical engineering. The reduction by about 1 per cent. of activity in the food, drink and tobacco trades, as compared with a year ago, is surprising. Taken as a whole, however, the Board of Trade's estimate bears out the conclusions which we have deduced from the *Economist's* indices of Business Activity, that the first three months of 1929 witnessed a definite, if unevenly distributed, upward movement of British industrial production.

A High Quarter's Mortality.—A striking reflection of the severe climatic conditions of February and March this year is to be found in the mortality statistics now issued by the Registrar-General for the first quarter of 1929. Deaths numbered 204,293, an increase of 67,978 over the corresponding quarter a year ago. Over 11 per cent. of the total deaths registered were attributable to influenza, with respiratory and circulatory ailments occasioned by the cold as contributory factors in this high mortality, whose rate was 21.0 per mille of population, against 13.9 per mille in the first three months of 1928. With the single exception of the March quarter of 1919, in which influenza occurred in severe epidemic form and the recorded death rate was 21.3 per mille, last quarter's rate of mortality was the highest record in any first quarter of the present century. The live births registered in the quarter numbered 160,181, so that the natural decrease of population was 44,112, as compared with an increase of 31,611 a year ago.

Cotton Trade Hours.—At the end of last week, writes our Manchester correspondent, there was a meeting of the Committee of the International Federation of Cotton Spinners' and Manufacturers' Associations in Brussels, and it is reported that Mr William Howarth, on behalf of the English members, submitted a statement upon the desirability of securing in all countries a uniform 48-hour week and the abolition of overtime and double shifts. An attempt was made to persuade the representatives of Continental countries to allow the subject to be placed on the agenda of the forthcoming International Cotton Congress, which is to be held at Barcelona this autumn. The Continental spinners, however, objected to this course, but finally they agreed that Mr Howarth should prepare a paper setting out the views of the English members on the proposal, and that the Committee at its next meeting, after having received the considered views of the affiliated associations, should decide whether the subject should be dealt with at the International Congress. Some surprise has been expressed in Lancashire at this attitude of the English representatives on the International Committee. Most of the countries on the Continent have a 48-hour week, but it is possible to obtain modifications from the different Governments, and a certain amount of overtime is allowed, which means that the mills run longer hours than in this country. There seems to be very little probability of spinning employers on the Continent agreeing to the English proposal. It is being suggested that possibly this attempt is being made with little hope of success prior to another endeavour to increase the working hours in Lancashire mills, and, if an agitation of this kind is begun, it will be pointed out that there is no likelihood of the unfair competition from the Continent being removed.

Cotton Industry in Japan.—Mr Arno S. Pearse, the general secretary of the International Federation of Master Cotton Spinners' and Manufacturers' Associations, has just arrived in Manchester after an extensive investigation of the cotton industry in Japan. It is understood, writes our Manchester correspondent, that at a later date he will issue an exhaustive report, but he has

already published a summary of his conclusions. He points out that the Japanese cotton spinning and manufacturing industry could never have achieved its present position without that group instinct which is generated by the family system, and is still characteristic of Japan. The second cause for Japan's rapid advancement is the speculation which permeates all classes. According to an official publication of the Japan Cotton Spinners' Association, at the beginning of the world war the mills in Japan had to contract purchases of raw cotton at about 30 yen per picul to cover their requirements for a whole year or longer, twice as much as they used to do in normal times. In the course of time the price of raw cotton steadily advanced to 100 yen and more, followed by a still greater advance of cotton yarn prices in Japan. Mr Pearse points out that none of that cotton was hedged. He was surprised to find that not one of the big combines hedged their cotton purchases. He was assured time after time that it is quite a common occurrence for these combines to have 30,000, 50,000 and at time even 80,000 bales unhedged. The profits made during the war have enabled them to build up such huge reserves that the average reserves of all the mills belonging to the Japan Cotton Spinners' Association, which is to-day 97 per cent. of the total spindles of Japan, is 60 per cent. of the paid-up capital. The third cause of the strength of the industry is to be found in the organisation. In the first instance, there are four mill combines controlling 60 per cent. of the whole industry. There are three very large cotton-buying firms which also undertake the selling of the manufactured goods, and they cut out any intermediary between themselves and the wholesale dealer in China, India, etc. One big advantage is the cheaper costs of labour in spinning as well as in weaving. According to information received, the labour cost for 20's yarns is about ½d. per lb. cheaper than that of the cheapest countries in Europe. As regards the labour cost of weaving, the fact that the average number of looms per operative in the big combines is 5.5, against three on the Continent and four in England, shows that there is a considerable advantage there. The wage for looking after 5.5 looms in Japan is 3s. 6d. per day, and the production per loom is higher, certainly not lower, than in England for similar cloths. The abolition of nightwork in Japan as from July 1st has led many people to believe that this would be the cause of a considerably increased cost of production in Japan, but that is not so. The Japanese millowners have worked for two years organised short time to an extent of fully 23 per cent., but only 15 per cent. was latterly carried out. This 15 per cent. has now been given up. The new working hours are two shifts of 8½ hours per day for 28 days per month. Mr Pearse is full of admiration for the welfare work which the various cotton firms in Japan are carrying on. About 80 per cent. of the operatives live on the premises. The mill workers in Japan are all able to read and write, and he considers their general standard of education to be quite equal to that of the mill operatives of England. Every operative had a bath daily, and the dormitories in which the operatives slept were an example of cleanliness and comfort.

Conditions in Jugoslavia.—Our Belgrade correspondent writes:—The new Government continues its work of administrative reform. Four more ministries have been abolished—those of Religion, Health, Agrarian Reform and Posts and Telegraphs—and their activities transferred to the remaining twelve. Departments are being cut down, and the administrative procedure revised and simplified. The dismissal of a number of officials, as well as the impeachment of others for abuse and corruption is having a salutary effect on administrative discipline as a whole. Even more important is the establishment of the Privileged Agrarian Bank with a subscribed capital of 300 million dinars (£1.1 million), which is to give credit to agriculture directly, through its branches, and through the peasant co-operatives. The bank, which is to be an autonomous body controlled by the State, will enjoy all the privileges of the State Mortgage Bank, and is to have a dividend of 6 per cent. guaranteed by the State. It is expected to command soon a credit of 500 million dinars, which, together with the credit of the co-operatives, should go a good way towards relieving peasant indebtedness. This, estimated two years ago at between 2 and 3 milliard dinars (£7 to £11 million), was contracted mostly during the reconstruction period and the years of agricultural boom, when peasants incurred heavy capital outlay. The two poor harvests of the last years and the heavy interest rate in the interior (from 18 per cent. to 30 per cent.) have both prevented the peasants from reducing this debt by a considerable amount and from finding the necessary capital for further intensification of production. This, in its turn, in a country predominantly agrarian as Jugoslavia is, has very adversely affected trade, business in general and State receipts, as well as the national balance of payment. Trade is, at the moment, very dull and responsible for many business failures, especially in Serbia. The adverse balance for the first quarter is 339 million dinars, as compared with 541 million during the first quarter of last year. It is for this reason that harvest prospects are watched with anxiety. The extremely severe winter—the severest for over sixty years, with weeks of 50 degrees of frost—has exhausted stocks of fodder, entirely ruined the opium crop in South Serbia, much affected the fig and olive in Dalmatia, and damaged spring wheat in Serbia between 10 and 20 per cent. On the other hand, 250,000 hectares, or over 10 per cent. more than last year, were sown this winter, the area under spring wheat having increased from 1,832,000 to 2,031,000 hectares, and that of other cereals by 64,000 hectares. The demand for artificial manure is growing relatively fast, and, except for local damage due to cloudbursts and floods, conditions for spring sowing have been very good. With the present abundant humidity of the soil prospects are good, unless, owing to the extreme lateness of the sowing, severe droughts should overtake the corn while ripening. On the harvest will depend also the successful execution of the budget, which amounts to no less than 12,464 million dinars (£45 million), receipts balancing expenditure. This is made obvious from a comparative table of the last five budgets as compared with actual receipts and expenditure, the figures in several cases being only approximate, pending official confirmation:—

(In million dinars.)

Budgetary Year.	Budget. Receipts.	Budget. Expenditure.	Actual. Receipts.	Actual. Expenditure.
1925–6	12,356	12,356	12,063	11,777
1926–7	12,504	12,504	11,906	11,592
1927–8	11,477	11,477	10,910	10,957
1928–9	11,629	11,592	...	...
1929–30.....	12,464	12,464	...	...

The difficulties of the budget may be alleviated to some extent by the reduction of ministries and officials carried out after the publication of the budget, as well as the better yield of direct taxation due to the recent reform. The clearing of the floating debt from the Swedish loan is also expected by the Minister of Finance to lower tenders made to the Government. This loan has been now discounted by Rothschild's in London at the rate of 7 per cent. plus ¼ per cent. bankers' commission for the last two instalments of 15 million dollars, and will be used to clear all State floating debts up to March 31, 1928. The money from this loan will also serve to improve the cover of the national bank, which is now around 600 million dinars, to an amount of 1,350 million dinars, a sum well in excess of anything registered recently.

The Outlook in Argentina.—Writing on May 10th our Buenos Aires correspondent says:—There are unmistakable signs of a coming change in the Argentine financial weather, but by this it ought not to be understood that there is any immediate danger ahead. Partly owing to local circumstances, and partly on account of the international financial situation, there is already noticeable among local capitalists a disposition to mark time before investing their surplus funds in enterprises of any magnitude. During the past 18 months there have been several costly building schemes put into execution in Buenos Aires, almost all of them being based on long-term credit facilities of one kind or another; and there is again a feeling that perhaps after all the present supply of costly flats, to be let at between eight hundred and a thousand pounds a year, has more than caught up with the demand.

Moreover, cereal production, satisfactory as regards quantities, is now realising prices that, in the case of wheat, are lower than have been known for 15 years; and, as there are available for export at least 3,750,000 tons of wheat, and the prospects in the northern hemisphere are uniformly good, there is small chance of a recovery. Of maize the exportable surplus is put at 4,000,000 tons, while of linseed there is still close on a million tons available for shipment. Compared with the first quarter of 1928 the drop in value of all Argentina's exports is estimated by the Bureau of Economic Research of the Banco de la Nación to be at least 13.3 per cent. When the April prices are taken into the reckoning this percentage will be considerably higher. It stands to reason that, with unusually heavy import figures and reduced receipts for the sale of exports, the prospects of an early recovery in Argentine exchange are slight. Hence further gold shipments may be expected, unless and until important foreign loans are arranged. Offers of funds from the United States have been formally made, without, however, any exact specification of terms. President Irigoyen declined these offers, which were understood to be based on the taking over of constructional and finance work in connection with sundry Government schemes that have already been projected. It is reasonably probable that these offers will be renewed, probably with better success. Meanwhile money rates may be called 6 per cent. to 7 per cent. for first-class discounts, with 7 per cent. readily paid for current account advances. This latter form of credit has of recent years greatly increased. In March, 1926, the total of current account advances for all Buenos Aires banks was 887 millions paper; in 1929 it had reached 1,078 millions, while discounts had fallen from 1,652 millions to 1,566 millions in the same period. Deposits have, however, not yet felt any serious restriction, while the cash in hand of the banks still maintains a very high level, and the gold in the Conversion Office at the end of April, despite some special shipments, stands slightly higher than it did at the end of March. The actual figures were $484,039,247, against which there are notes in circulation to a total of $1,393,107,429. Exchange during the month of April was steady, and, at date, banks' cable rates are 47 7/32 and 104.75 drawing, on London and New York respectively, which is but 1/32 and 0.10 below the quotation for April 15th. The depreciation in the Uruguayan dollar, now quoted at $102.40 Argentine gold to the $100 Uruguay, is viewed with some concern by the many interests having connections on both sides of the Plate. It was suggested that Uruguay ought to ship part of her reduced stock of gold, but that suggestion is not likely to be entertained. Congress, due to meet on May 1st, has not yet held a session, and it seems only too certain that sterile political debate will be the order of the day when the jockeying for position ends and the two chambers assemble for the transaction of business. It is, however, rumoured that one of the first measures to be dealt with concerns the expropriation of oil deposits throughout the republic. Unusually warm weather for the time of year, and a general feeling of uncertainty, handicaps both retail and wholesale business. Failures for April were again heavy, the total liabilities being close on $16,000,000 paper, and it is feared that they will be on the up grade during the next few months.

American Duty on Hides and Leather.—Our leather trade correspondent writes:—Cabled reports to hand this week to the effect that the American House of Representatives have passed the Tariff Bill, including a duty of 10 per cent. *ad valorem* on hides, 20 per cent. *ad valorem* on boots and shoes, and 12½ to 30 per cent. on leather, have created a good deal of anxiety in trade circles. During the past three years Great Britain has done a large and increasing trade in leather with the United States, the value of exports of all kinds for 1926-27-28 being £1,601,147, £2,506,035 and £2,939,377 respectively. The figures include sole leather, rough dressing leather, such as welting shoulders, split hides for automobile work, and large quantities of linings for shoes dressed by English curriers of rough East Indian kips. A fair amount of low-priced glacé kid has also been sent to the United States from this country, but it is anticipated that, if the duties are imposed, it will practically put an end to business in this direction. There is a strong feeling against the duties in view of the fact that America sends millions of pounds worth of dressed leather into Britain every year, which often undersells the home production. Britain exported boots and shoes to the United States last year valued at £353,071, and the imposition of a duty of 20 per cent. will seriously handicap this trade.

American Developments in France.—It is announced by *La Situation Financière et Economique* (our Paris correspondent writes) that Messrs Schneider and Co., the proprietors of the great Creusot armament works, have entered into contracts with the Westinghouse Electric and Manufacturing Co. and the Westinghouse International Electric Co., of New York, with a view to undertaking electrical material construction in France under the Westinghouse patents. A special company is being organised under these agreements for carrying on the well-known electrical material construction plant at Champagne-sur-Seine. Following the policy recently adopted by many other French manufacturing concerns, who have acquired important interests in Belgian colliery undertakings, the Schneider firm has now taken a large interest in the Ressaix colliery.

Canada and the United States Tariff.—Our Ottawa correspondent writes:—The publication of the provisional draft of the new American tariff Bill has terminated a period of suspense for the people of Canada. The politicians were particularly nervous about it, as the course of Canadian politics has often in the past been affected by tariff making at Washington. The general impression in Canada is that the proposed tariff changes, while they will adversely affect a variety of Canadian interests, are nothing like so disastrous for the Dominion as had been foreboded. On the basis of the trade returns for the fiscal year ending March 31, 1928, as published by the Dominion Bureau of Statistics, a survey reveals that only some forty-three million dollars, or less than a tenth of Canada's exports to the United States, will be affected by the proposed increases. Even in the realm of agricultural produce two of the most important export items, live cattle and potatoes, have so far escaped interference, although the representatives of the cattle States in the Republic are continuing their pressure for duties. The worst sufferers from the new duties will probably be the shingle manufacturers of British Columbia, who in 1928 sold nearly three-fourths of their output in the American market. Their spokesmen declare that the proposed duty of 25 per cent. will compel them to cut their prices from $4 to $3 per thousand to meet the competition of composite roofing in the American market, and in view of prevalent wage conditions such a cut would be ruinous. The doubling of the duty on fresh beef will cut down exports of this commodity to the U.S., but the trade is already diminishing. At first sight the heightened duties on cream and milk, which have already come partially into force by executive decree under the flexible provisions of the tariff would seem to be a hard blow to the dairy farmers of Eastern Canada, who have been shipping large quantities of milk products to New York and the New England States. But the truth is that the Canadian dairymen of this region have available for recapture a local market which they left open to the dairymen of New Zealand, who last year sold 15 million pounds of butter to Canada. In these circumstances the Liberal politicians and Press of Canada are minimising the effect of the tariff changes and arguing that they offer no ground for a rash adventure in retaliation. The *Manitoba Free Press*, which gives independent support to the King Government, takes the view that, in comparison with the forecasts of a tariff deliberately designed to shut Canadian products out of the American market, the draft Bill is mild, and that the damage done to Canadian trade will not be very considerable. It feels that considerations of an international character were not absent from the deliberations of the Ways and Means Committee, and that there was evidence during the tariff discussion in the U.S. of an obvious

desire not to tread on Canada's toes. The *Financial Post* of Toronto, which is not a party organ and is usually very critical of the United States, delivers the verdict that, while some of the new schedules will bear hardly upon Canadian interests, the changes promise to prove much less onerous for the Dominion than anybody anticipated, and that there is no cause for Canadians to get unduly excited. However, the Conservative Press is proceeding to stimulate local Protectionist sentiment by representing that the tariff changes which affect Canada are a deliberate blow aimed at the Dominion by a selfish economic imperialism, and that the Canadian people will be untrue to their traditions if they do not force the King Government to undertake immediate reprisals or turn them out of office as servile trucklers to the United States. Ministers have so far remained silent upon the subject with the exception of the Minister of Agriculture, who declared that the new tariff was not nearly as bad as he had apprehended. At present the situation here resulting from the American tariff is that the Conservatives have got some good talking points for a Protectionist campaign, but not as many or as good as they had hoped. The striking feature of the American tariff in relation to Canada is that it hits hardest provinces like Ontario and British Columbia, where Protectionist sentiment is always strong and lets off comparatively lightly those provinces where low tariff views predominate.

Latin-American Trade with U.S.A.—The steadily increasing value of Latin-American markets, from the trade point of view, is apparent, writes a correspondent, from the figures published up to the end of December last year. From these it appears that the whole world's commerce with those countries has again improved, but no single trading nation has registered more marked advancement on balance than that of the United States. The trade carried on with the twenty Latin Republics amounted to $1,780,000,000, a total even better than that of 1927, when the record figure of $1,763,000,000 had been touched. Compared with 1913, the value of this trade was no less than 139.35 per cent. greater. Imports into the United States valued at $948,143,000, although marking a decrease of 1.17 per cent. in value from the previous year, showed an improvement over the pre-war period of no less than 122.08 per cent.; exports over the same period, aggregating $831,466,000, showed an improvement of 162.65 per cent., at the same time establishing an expansion of 3.41 per cent. beyond the trading of the previous year. The net showing, however, was unequal, for, while the ten States of North America —Mexico, Guatemala, El Salvador, Honduras, Nicaragua, Costa Rica, Panama, Cuba, the Dominican Republic and Haiti—registered declines of 14.16 per cent. upon their exports to the United States, the ten countries of South America—Argentine, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay and Venezuela—showed an advance of 10 per cent. Taking the value of the whole of the twenty Republics' exports to the United States, there was, as stated, a decline of 1.17 per cent. In regard to the imports into Latin America from the United States, while the ten North American Republics took 4.16 per cent. less, the ten South American Republics took 9.83 per cent. more. While Brazil remained by far the largest exporter to the United States, increasing her shipments—principally coffee—by 8.68 per cent., Colombia registered the largest percentage advance among purchasers of American goods, the increase in her imports from the United States marking an advance of 20.33 per cent. Ecuador followed with an increase, over the same period, of 19.23 per cent.; Brazil came third with 12.77 per cent., and Argentina fourth with 9.42 per cent. Within this period all ten Republics of South America increased their business with their big neighbour by 9.83 per cent., and the whole of the twenty Latin American States registered an all-round augmentation of their purchases from the United States by 8.41 per cent.

Canadian Timber Resources.—The Canadian Government has arranged a national forestry conference, at which officials of the Federal Forestry Department, provincial representatives, and the experts of private corporations will attempt to determine what exactly are the pulpwood resources of Canada. Upon this subject two conflicting schools of thought have long existed. Mr F. D. J. Barnjum, a well-known lumberman of Nova Scotia, has for years plastered the Canadian papers with doleful letters about the plight of Canada's forests, and other pessimists have echoed his views. These people have contended that Canada's forest resources are being exhausted at a dangerously rapid rate, and that, unless a halt is called, and a policy of rigid conservation and replacement adopted, the Dominions will soon discover that one of its most valuable assets has been improvidently wasted away. They hold that the depletion of the forests has already had serious consequences for farming, as it has removed the most effective vehicle of moisture storage in many areas, and that a shortage of pulpwood supplies for newsprint and other mills is inevitable. But another body of equally authoritative opinion holds that these apprehensions are unjustified, that Canada has still huge untapped reserves of forest wealth in her northern hinterland, and that the operations of nature assure an adequate rate of replacement in the regions which have been stripped. The projected conference, which will meet in Ottawa some time in June, will attempt to ascertain which of these two schools has a sounder basis for its views. The statistical information which it will have at its disposal will be exhaustively analysed to discover how long at the present rate of consumption the pulpwood forests of Canada will be able to meet the demands now being made upon them, and whether or not they will reproduce themselves with sufficient rapidity to make the supply of pulp material inexhaustible. Evidence will also be adduced to show what natural reproduction and scientific culture are doing to husband Canada's forest wealth, and to afford some guidance about the relative importance of replanting and forest protection. Experts of the Forestry Department at Ottawa assert that its fieldmen are at present planting 5,000,000 new trees annually, but they also admit that, for the achievement of real progress in reafforestation, it would be necessary to allow for the growth of 5,000,000,000 new trees every year, and that the simplest expedient is to conserve by every means known to modern science the natural new growth in all the forest areas of the Dominion.

French Discrimination Against Foreigners.—Our Paris correspondent writes:—A fresh instance of the French dislike of the presence of the foreigner amongst them has occurred during the present week. The opportunity arose on Tuesday, during the discussion of the new Rent Bill, which proposes to extend for some years further the special conditions enjoyed by old tenants whose holdings date from or before the war. These number some 950,000 in the whole country, and include about 5,000 British residents in Paris. All these are paying rentals limited to double the number of francs they paid down to the end of the war (which means that they are paying two-fifths of the war and pre-war gold value), and they have still some years to run before they can be brought back under common rent law conditions. The new Bill proposes a fresh scale of gradual increases of rent on that fixed in 1926, with fixity of tenure until 1934 for tenants who paid 6,000 frs. during the war, and varying *pro rata* periods for smaller rentals until 1938, when tenants with original rentals of 500 frs. will be brought back under the common law. By a vote of 318 to 266 the Chamber decided to exclude foreigners from the benefit of the new law. This amendment was strongly opposed by the Government on the ground that such discrimination would be in direct conflict with the terms of existing treaties between France and some forty other nations, by which each party binds itself not to impose on the other's nationals conditions which are not imposed on its own people in the other's country. A similar attempt against foreigners was made a few years ago, when a law was actually passed prohibiting aliens from possessing real estate in France. On that occasion both the United States and the British Governments protested vigorously through diplomatic channels, and the new law was quietly allowed to drop. Should the Senate endorse the Chamber's decision further similar action will apparently be called for.

Swiss Railway Electrification.—Our Swiss correspondent writes:—The first stage of the electrification programme of the Swiss Federal Railways was terminated at the end of 1928, as scheduled by the Railways Board. All the main lines are equipped with electricity, the total electrified mileage being 1,035 miles out of a network of 1,806 miles. Switzerland is thus occupying the first place among the countries which are electrifying their railways, the second place being held by Sweden and the third by Italy. The completion of the first stage of electrification is an unquestionable success, both from the technical and financial point of view, which is all to the credit of Swiss engineers and statesmen. The total expenditure, which had been at first estimated at £30,400,000, hardly reached £25,000,000. Apart from a sum of £1,200,000 granted by the Federal Government in the form of a subsidy, the capital needed by that important work was raised in Switzerland by means of loans on which the Federal Railways are paying yearly interest amounting to about £850,000. The savings realised, thanks to the use of electricity, now exceed the sum of the interest and the yearly instalments for the gradual repayment of the capital invested. It is furthermore estimated that the capital now produces an interest of 6 per cent., as against 5 per cent. when steam engines were used. In 1928 savings aggregated £1,420,000; £720,000 were saved on coal—corresponding to a decrease in consumption of 450,000 tons over 1916; £520,000 were saved on the wages bill; £160,000 on the upkeep of locomotives and rolling stock. The total economy is expected to be still higher in 1929, when the consumption of coal will be reduced by another 50,000 tons, as the 85 per cent. of the train traffic will be assured by electric engines, and when the consumption of electric power will reach 420,000 kilowatts-hour. The railways expended about £5,500,000 on the building of six big water-power plants, and preparations are now being made in view of constructing a seventh. The Federal Railways are using the monophased current supplied by these six plants and by seven private plants, which can altogether yield a total force of 490,000 kilowatts. The Federal Railways will in a few weeks be in possession of 55 power coaches and 367 electric locomotives, some of which can reach a velocity of 51 miles an hour, others 40 miles, while 60 can be driven by one man. These locomotives—all built in Switzerland—are in many ways superior to steam engines; they haul a load of 300 tons while a steam engine only hauls 210 tons at a lower speed, and the distance every day covered by an electric locomotive averages from 375 to 440 miles, which makes it possible to obtain a better employment of the rolling stock and at a lower cost. The programme for the second stage of electrification is ready; it provides for the equipment of 261 miles of branch lines, but the Federal Railways show some reluctance in pushing on with that scheme within the next four or five years. They object, on the one hand, that the existing water-power plants just meet the present needs of the railways, and that the extension of the electrified network would necessitate the expensive building of a new hydro-electric plant; on the other hand, it is felt that the Federal Railways should for some time curtail all expenditure so as to reduce their debt. But the Federal Government seems willing to help the railways by granting them a subsidy, in which case the second stage of electrification might begin next year. It is true that the situation of the Federal Railways is not flourishing; their consolidated debt, which was £54,552,000 in 1910 and £59,777,000 in 1913, rose to £103,417,000 in 1926 and £107,330,000 at the end of 1928, the yearly interest on the debt being £4,427,000 last year. Until 1927, the yearly surplus of the Federal Railways was less than the interest to be paid on the debt. In 1927, the surplus reached £5,138,900, and £6,617,000 in 1928, so that the financial situation may be regarded as improving, though strict economy is still needed. It is generally felt that the time has come for the Railways Board to enter decidedly on a debt redemption programme. The Federal Government will probably grant the railways a sum of £1,600,000 to make good part of the losses suffered during the war, but now that the surplus obtained, thanks to electrification, is reaching unexpected figures, the railways ought to establish a redemption plan which might ease their position within a short period.

Guardian Eastern Insurance Co., Limited.—Formed in 1919 under the auspices of the Guardian with the particular object of transacting all classes of insurance in the Near and Far East, the hopes entertained at the inception of this company have, so far, not been realised. As a result of the world-wide post-war depression, and of the unrest in some parts of the Orient, economic progress has been generally retarded, and the company now finds itself nearly 10 years later with a total premium income, excluding life, of under £100,000 in respect of a paid-up capital of £130,000, made up of 650,000 shares of £1 with 4s. paid up. With so small a premium income in relation to capital, progress has been very slow, and only two dividends have been paid, namely, 5 per cent. for each of the last two years. Fortunately the company has been conservatively managed, and the reserves, amounting to over 100 per cent. of the premiums, are very satisfactory. The Guardian Eastern had an unfavourable trading year in 1928, as will be seen from the following table:—

	1927. Amount of Profits. £	1927. % of Premiums.	1928. Amount of Profits. £	1928. % of Premiums.
Fire	6,424	10·1	−4,092	−6·6
Accident	3,400	25·2	−1,430	−8·2
Marine	− 890	−6·4	−1,097	−5·5
Life	...		1,000	
	8,934		−5,619	
Income debited to profit and loss account	1,991		+ 52	
Total net trading surplus	6,943		−5,567	
Net interest earnings	7,187		8,570	
	14,130		3,003	
Dividend	5,200(5%)		5,200(5%)	
Net addition to free reserves	8,930		−2,197	

Accompanying the 1928 report is an announcement of an offer by the Guardian of an exchange of shares on terms which we imagine shareholders of the Guardian Eastern will have no hesitation in accepting. At the present time the Guardian holds 208,697 out of 650,000 shares issued, and is prepared to increase its interest to 90 per cent. of the total by an exchange of shares on the basis of one Guardian share for each 30 Guardian Eastern shares. This is an advantageous offer, since one Guardian share yields an annual income of 8s., compared with only 6s. in respect of 30 Guardian Eastern shares. Moreover, the uncalled liability on each Guardian share is £2 10s., whereas that on 30 Guardian Eastern shares amounts to £24—a considerable reduction.

Guardian Assurance Co., Limited.—As will be seen from the following table, the Guardian experienced favourable underwriting results last year:—

	1927. Amount of Profit. £	1927. % of Premiums.	1928. Amount of Profit. £	1928. % of Premiums.
Fire	151,606	14·0	146,600	13·7
Accident	31,581	4·7	47,920	6·7
Marine	− 1,104	− ·9	3,372	2·1
Life	25,000		25,000	
	207,083		222,892	
Less:—				
Items debited to profit and loss account	87,276		56,759	
Transferred to investment reserve and contingency fund	...		120,000	
Total net trading surplus	119,807		46,133	

Apart from the "Alliance," the fire underwriting profit is the highest earned by any of the large composite offices,

this result being due to the abstention of the company from American business. The premium income in this department last year was £1,068,000, being some £13,000 less than the 1927 figure, but premiums in other departments show increases, and the total in all departments, excluding life, is about £15,000 higher at £1,950,785. The dividend has been maintained at 80 per cent. for the fifth year in succession, but whereas previously this distribution has necessitated a small draft on trading surplus, interest earnings last year were sufficient for the purpose with a small margin. The life department was responsible for the issue in 1928 of new policies for net sums assured of £1,303,188, compared with £1,287,103 in 1927. The life fund now amounts to close upon £6 million, and the next quinquennial valuation is due to be made at the end of this year. The announcement of the offer to shareholders of the Guardian Eastern is referred to in our analysis of that company's accounts. The acquisition of the remaining share capital of the Guardian Eastern would involve the creation by the Guardian of 14,710 new shares. The annual dividend requirements on these, at the present rate of 80 per cent., would be £4,700, but in exchange the Guardian would receive the whole interest earnings of the Guardian Eastern, amounting last year to £8,600, plus trading surplus, if any.

Oversea Correspondence.

FRANCE.—REPARATIONS—BUDGET—CAISSE d'AMORTISSEMENT.

(FROM OUR CORRESPONDENT.)

PARIS, May 29.

AMID all the welter of confusing detail attending the recent efforts of the experts to round off the draft of their plan, two facts now appear to have been established: (1) That the Allied and American experts have, for all practical purposes, arrived at an agreement as to figures; and (2) that Dr Schacht's reservations, which he still maintains, are to be treated as "political" factors and left to be dealt with by the Government themselves. The best the experts will be able to do will be to lay down the basis of a solution, the practicability of which will depend entirely on the degree to which the Allied Governments can come to an agreement with Germany on the political factors involved in a settlement. It is, nevertheless, even more evident to-day than a week ago that there will be nothing in the form of a rupture, and that Mr Young will shortly be able to present some kind of report. This report will undoubtedly to a great extent clear the ground for the pending diplomatic action, but it is yet too early to suggest whether this will operate through the usual channels or involve the organisation of yet another special international conference.

Seeing that some days ago the difference between the Allied experts and Dr Schacht had been brought down to a matter of 80,000,000 marks a year only, the question of Germany's capacity to pay (reduced although the suggested annuities are) has been in principle disposed of. The difficulty of settling down to provide for payment of the costs of the Army of Occupation and the various Allied commissions, although these are comparatively trifling matters in themselves, is typical. These charges are at present covered by the Dawes plan annuities; the Young plan excludes them from the annuities. Before these items can be effectively dealt with by the experts, therefore, it is necessary to know how long the occupation of the Rhineland will last, and that only the Governments can fix. The German demand, too, that the amounts owing by the succession States for former Austro-Hungarian State property (attributed to them by the peace treaties) shall be allocated towards the liquidation of Germany's later annuities, can also obviously only be dealt with by the Allied Governments.

In the report on the Washington and London agreements, presented this afternoon to the Foreign Affairs Commission of the Chamber, M Jacques Stern points out that the French Parliament has the choice of three courses: (1) To ratify the agreements unconditionally, (2) to ratify subject to a safeguard clause being attached to the agreements and under the condition that the French payments shall be subordinate to Germany keeping her engagements towards France, (3) to refuse ratification and accept the consequences, beginning with the payment of the $400,000,000 due to the Washington Government on August 1st for the American war stocks. There are indications that unconditional ratification is regarded by the majority of the commission as unthinkable, and that a substantial number of the members favour prompt liquidation of the commercial debt as an entirely separate matter, leaving the political debt to be settled by further negotiations. The situation of the Treasury is now such that payment of the £80,000,000 due on August 1st would present no serious difficulty.

The Budget for 1930, the general provisions of the draft of which are now known, provides for an increase of over 3,000 millions in both expenditure and receipts, as compared with that for 1929. The comparative totals are as follows:—

	Budget voted in 1929.	Draft Budget for 1930.	Differences.
Expenditure ...	45,386,130,503f	48,665,916,698f	−3,279,786,195f
Revenue	45,430,717,348f	48,722,103,976f	−3,291,386,628f
Estmtd. Surplus	44,586,845f	56,187,278f	− 11,600,433f

The new Budget contains no spectacular provisions, but is a measure of sober and well-considered attention to public needs at an exceptionally difficult period for all categories of taxpayers. When it is realised that, in spite of increased expenditure amounting to 3,900,000,000 frs. (representing the total accorded by the Finance Minister out of 6,000 millions of new credits demanded by the various departments), M Chéron has found it possible to reduce taxation by 1,500,000,444 frs. merely by "readjustments" of existing imposts, the nature of the task accomplished will be understood. The new Budget is at the same time of a thoroughly democratic character, and affords substantial relief to the creative economic forces of the country. The bulk of the proposed new expenditure of 3,300 millions is to be devoted to social betterment and development of national productive works. Military expenditure is 224,000,000 frs. larger (of which one-half is for improving the food, clothing and housing of the soldier, and the other half for frontier defence and war material), in spite of a reduction of 42,000 men. For the Navy additional credits of 197,000,000 frs. are asked, of which 84,000,000 frs. are for new construction. A further 29,000,000 frs. is asked for in regard to the colonial army.

The 1929 Budget raised the limit of abatement from 7,000 frs. to 10,000 frs. (the French abatement allowance being thus even now only one-half of that prevalent in Great Britain). The 1930 proposals, if adopted, will reduce by a further 700,000,000 frs. the burden of direct taxation on citizens with large families and will also reduce succession duties on small estates. A striking feature of the reductions is that out of the total of 1,500,000,000 frs. only 1,000 millions will be borne by the Budget, the remaining 500,000,000 frs. being at the cost of the Caisse d'Amortissement; in other words, the revenue of the Caisse for debt redemption purposes will be reduced, if these modifications are carried into effect, by some £4,000,000 a year. The policy of the Caisse, however, has never been to regard debt extinction as an end in itself, but as an essential for bringing about financial restoration. By sacrificing a portion of its revenue the Caisse will contribute directly towards fiscal reorganisation and thus create new sources of revenue for itself. The Caisse's new policy of buying in Rentes on the Bourse has already proved successful to the point that the Budget for 1930 will be able to reduce the amount required for the public debt service by over 200,000,000 frs. By its success in launching the last big conversion loan at 4½ per cent., moreover, the Caisse has enabled further large savings to be effected. Exact figures are now available which show that the amount of debt converted by that loan (March 31) was 7,528,000,000 frs. By its broad views and bold policy the Caisse has already given strength to the market, and its directors are in full sympathy with the policy of tax reduction which is the feature of the 1930 Budget Bill. Put in a nutshell, the Caisse is satisfied to lose £4,000,000 of revenue from transfer tax on property recouping the difference in other directions that will be sales and succession duties because it counts firmly on less onerous for all concerned. Figures now published show that from June 30th to December 31st last the public absorbed (two-year) Defence Bonds at an average rate of 333,000,000 frs. per month. Large numbers of these Bonds were, of course, converted under the last large loan.

GERMANY.—CREDIT—BALANCE OF PAYMENTS—INDUSTRY—APRIL FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, May 28.

THE currency situation last week improved further, and it seems that the Reichsbank has attained its aim, which was to reduce the volume of its credits without resorting to a new advance in the discount rate. It is believed that the discount rate will remain unchanged, unless New York or London takes the lead. The situation here remains abnormal only in that the official rate has been out of relation to the very much higher market rates; and, as long as this condition prevails, the Reichsbank, it seems, will have to continue the present system of restricting the volume of discounts. The bank's return for the 23rd, the date by which the credit restriction policy was expected to have full effect, shows a decline of 270 million marks in discounts, advances and securities. Circulation fell by only 161 million marks. This small decline is due to the acquisition by the bank of 90 million marks of foreign exchange, which is booked to legal-cover exchange. The discounts sum, 2,523 million marks, is still larger than in any preceding third week of the month, but this is partly explained by inclusion of Treasury bill discounts, which began to appear separately in the portfolio only this year. The legal-cover ratio increased further, to 47.7 per cent., or to 43 per cent. if Rentenmarks are counted. There was continued selling of exchange, mainly, it seems, by Western industrial concerns which needed money for their month-end liabilities. The Reichsbank showed no desire last week to buy dollars, but it seems to have supported sterling, apparently out of fear that the Bank of England rate might be advanced without waiting for a lead from New York. The dollar declined further to, on May 28th, 4.195, sterling to 20.344. The effect of this sharp drop in the exchange is to retard the return of German funds sent abroad and to check foreign investment in mark securities. In the money market day-loan rates began to decline late last week, and the supply early this week was abundant, but month loans continued dear and hard to obtain. To-day's rates were: Day loans, 7½-10 per cent.; month loans, 10-11 per cent.; private discount, 7⅞ per cent. No business is done in trade bills. The commercial banks yesterday advanced their credit and debit interest rates by 1 per cent. The new charge for credits is 9½ per cent. plus ⅛ per cent. per month commission, or altogether 11½ per cent. Normally the bank's charge is only 1 per cent. above the Reichsbank rate, but this assumes a real relationship between the official rate and the market position, which does not at present exist. The banks have to face a heavy demand for loans from business, and their deposits, as shown by the balance sheets for April 30th, are declining. Deposits of the six chief banks on that date totalled 10,035½ million marks, as against 10,404½ million marks on March 31st. Discounts show a corresponding sharp drop. The liquidity ratio declined, and was 56.4 per cent., as against 58 per cent. The balance-sheet total fell from 11,969 to 11,596 million marks.

The official balance of foreign payments for 1928 (which naturally in part consists of estimates) shows a considerable improvement over that of 1927 in that the passive balance on the current accounts (trade, services, interest and reparations) was about 1 milliard marks lower, and the net movement of capital into Germany, wherewith a balance was created, was correspondingly smaller. The official trade value figures are, as in past years, corrected for errors, imports being put at 351 million marks lower than is given in the returns and exports at 145 million marks higher. The corrected figures are: Imports, 13,716 million marks; exports (including 658 million marks Reparation deliveries in kind), 12,444 million marks. The passive effect on trade was, therefore, 1,272 million marks, as against 2,987 million marks in 1927. The main features of the 1928 account (showing net balances) are given below:—

	Millions of Marks.		
Current Payments—			
Trade	− 1,272		
Shipping and services		+ 294	
Reparation payments at home		+ 69	
Reparation payments	− 2,000		
Interest	− 735		
Travel and emigrants	− 70		
			− 3,714
Movement of Capital—			
Gold and exchange gain of note banks	− 931		
Foreign investments in Germany		+ 3,559	
German investments abroad.....	− 1,846		
Short-term credits to Germany...		+ 1,588	
Other capital movements, to balance.....		+ 1,344	
			+ 3,714

The unaccounted-for capital import of 1,344 million marks probably represents the yield of securities exported otherwise than through German banks (securities sold through German banks are included in the table), and not directly traceable, and increase of short-term indebtedness to abroad of business concerns. The balance of payments in 1928 is strictly in accord with the state of national business.

The wholesale-prices index for May 22nd shows 135.6, which is 6 points behind the high level of July, 1928. The agricultural products group shows a new sharp drop. The labour market continues to improve.

Coal production in the first four months of the year totalled 52,503,447 metric tons, as against 52,179,439 tons in the same months of 1928. The Ruhr Syndicate has advanced its per-ton assessment from 2 marks to 2.30 marks. This is a result of the recent increase in the proportion of sales to the "contested districts," which has had the effect of reducing the average price received. Output of rolling-mill products in April was 978,473 tons against 833,308 tons in April, 1928. The activity in the semi-products export market has ceased and prices (under Belgian influence) are somewhat weaker. A lock-out affecting 50,000 employees in the Silesian textiles industry has begun. The credit stringency has affected the textiles branch everywhere. Numerous bankruptcies are reported. In the cotton spinning branch a reduction of working time by 40 per cent. is being discussed. In the woollen industry conditions are rather better. The I.G. Farbenindustrie and some other concerns have taken over 40 per cent. of the capital of the German Ford Motor Co. This company was founded with 5 million marks capital in 1925, and the capital was this year increased to 15 million marks. The President of the Directorate of I.G. Farbenindustrie, Privy Councillor Dr. Bosch, will join the Board of Supervision of the German Ford Co. The official communication concerning this transaction lays stress on the use of German materials by the Ford company in Germany and also on the purchase of German materials by the Ford companies elsewhere.

THE BRITISH LINEN BANK.
Incorporated by Royal Charter, 1746.
Capital and Reserve Funds, £3,400,000.

Total merchandise	1,231,010	983,524	4,292,581
Thereof deliveries in kind	66,822	52,602	240,880
Gold and silver	936,610	2,492	946,162
Totals	2,167,620	986,016	5,238,743

The improvement in the trade balance is a necessary consequence of the reversal in the movement of capital which has taken place this year; and indicates a return towards the conditions of 1926.

AUSTRIA.—LOAN PLANS—TRADE—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

VIENNA, May 27.

IN view of the resistance of Italy on the Reparations Commission and of the unfavourable situation of the international money market, the Investment Loan—the greatest hope for which was reposed in America and in the Western States of Europe—has misfired, and the possibility is now being discussed of issuing Treasury bonds at home redeemable in two to three years. An amount of 100 million schillings could probably be disposed of to the banks and savings banks. The banks, however, are not enthusiastic about the plan of a domestic loan, as they are not overburdened with liquid funds, and for many months the Stock Exchange has not permitted the issue of fresh shares for the enterprises with which the banks are connected.

The situation of the Austrian textile industry is unfavourable. In addition to the Neunkirchen mill, the Guntramsdorf mill is to be closed down, and the Trumau-Marienthal mill will greatly reduce its activity. The boot and shoe industry is also in a bad way, and efforts are now being made to put a stop to Czechoslovakian dumping. Whereas in the year 1925 there were 41 boot factories working, with a yearly aggregate output of seven million pairs, there are now only 21 in operation, with an output of a million and a half pairs. The leather industry, too, is in an unsatisfactory state. It is an interesting fact that Austrian export trade has changed its direction. Exports to Germany have fallen off, while those to Poland, Hungary, and the Balkan countries have increased, though, it must be said, at the cost of a relaxation of payment conditions. Expectations here in regard to the approaching trade treaty negotiations with Germany are not running high, the general opinion being that there will be no great change from the present state of affairs. The promotion of domestic brown-coal raising is important. The home requirement of brown coal is already being covered to an extent of 82 per cent. from the domestic fields. During the first quarter domestic brown-coal production showed increase of 100,000 tons over the corresponding period of last year. It should be mentioned that the increase in coal consumption is due less to the demands of industry than to household requirements. The Graz-Köflach railway, which owns large coal mines, and the majority of whose shares is now in the possession of the Alpine, has almost become financially sound after living through a crisis so serious that the shares became almost valueless.

The future of the Austrian money market still remains a problem. Several Czechoslovakian banks have lately offered loans in Vienna, for the Vienna banks are still paying 7 per cent. to 7¼ per cent. for dollar credits. The National Bank is doing its best to maintain its present rate, and, if it is at all possible, will not increase it. At the middle of May the Bank's Bills receivable Account stood at 186.5 million, as against something over 207 million schillings at the end of April, so that more than 20 per cent. of the fiduciary circulation was covered by the Bills Receivable Account, a condition which has not obtained for a long time, apart from the last day of the year. At the end of April deposits with the Vienna banks and saving banks amounted to 1,252 million schillings. These deposits are being added to more slowly now, because business activity is at a low pitch, and special earnings are lacking. For call money on savings books the banks give 4¾ per cent., and for time money the public gets up to 6 per cent.

The Vienna Stock Exchange still shows no signs of animation. The Vienna security holdings also suffered severe losses through the collapse of the Budapest banking house, Simon von Krausz, as a number of Hungarian shares, held in this country, fell considerably; moreover, big sales have been made in Vienna for some time now for Budapest account in Hungarian bank and industrial stocks. It is of some consolation to the shareholders of the Danube Steamship Co. that the Government now appears to be disposed to grant the company a subsidy for the purpose of maintaining the passenger services on the upper Danube. The company had declared that it would not resume this traffic this year without such an assurance.

NORWAY.—MONEY—BANKS—TRADE—SHARES—PRICES.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, May 24.

THE monetary position in Norway is apparently only to a small extent influenced by the international position, as the market has remained very quiet during the last two months. This fact may be due to several circumstances, among which may be mentioned the influx of foreign exchange resulting from whaling operations, and the increase of balances abroad other than those disposed of by the Norges Bank. The latest return of the Norges Bank shows a slight contraction of the item "Notes in Circulation," from 302.5 million kroner on May 15th to 301.7 million kroner on May 22nd, while deposits at sight have risen by some 700,000 kroner. Discounts and loans went up from 272.8 million to 275.1 million kroner, while balances abroad and holdings of foreign bills were reduced by some 2 million kroner. It does not seem, therefore, that there need be any fear of a rise in the Bank rate; but still, so long as the international money markets remain in their present condition, the general feeling is that there is no telling what may happen in this respect.

The operations of the private joint-stock banks during the past months of the current year have been favourable, especially during the first two months, while March showed a comparatively important decrease in deposits. The official statistics for 1928 record the fact that the item "Balance in Account with Foreign Banks," which in December, 1927, showed a balance of 85 million kroner in favour of the foreign banks, had turned by September, 1928, into a balance in favour of the Norwegian banks. The balance amounted to 5.4 million kroner in December, 1928, and stood at 5.0 million kroner at March 31, 1929. The process of liquidation of the banks under public administration has been going on smoothly, and at present only three banks, with total assets of about 50 million kroner, are left under official administration, the others having either gone into liquidation or been reconstructed.

The foreign trade figures for April have just been published, and show an excess of imports over exports of nearly 35.8 million kroner, against 27.8 million kroner in April, 1928. This development is due to a heavy rise in imports, viz., from 75 million kroner in April, 1928, to 98 million kroner this year, a rise which is only partially offset by an improvement in the export figures, viz., from 47.7 million to 62.8 million kroner. The rise in imports is chiefly due to an increased import of vessels, cars and machinery, while the rise in other import items, such as drapery goods, cereals, produce, and raw and half-finished materials, is comparatively small. The rise thus chiefly falls on instruments of production, a fact which, to some extent, alleviates the concern that may be felt at this substantial increase in imports. Among the export items, paper and pulp and fertilisers show the greatest rise.

According to the official figures, the Lofoten cod fisheries this season have been unusually good, the total returns being 130.5 million kilograms, a result which exceeds all previous records. The total value of the fishery to the men engaged in it is calculated at 17.6 million kroner, against 16.6 million kroner last year. The Finmark fisheries, which have not yet come to an end, have hitherto not been very good, but an improvement may still take place.

The bond and share markets have been rather quiet lately, with a firm tendency in Government stock, especially as regards the high interest-yielding bonds. Banking, industrial and shipping shares have been rather featureless, while the turnover in whaling shares has been on the increase with rising quotations. According to the Central Bureau of Statistics, the general price index at May 15th shows a decline of 2 points to 152, as compared with 154 on April 15th.

FINLAND.—THE MONEY MARKET—BUSINESS—FOREIGN TRADE—THE DIET.

(FROM OUR CORRESPONDENT.)

HELSINKI, May 18.

THE money market has been quiet lately. The position is still marked, it is true, by the stringency experienced since the middle of last year, but there is a tendency towards improvement. This is clearly seen in the position of the Bank of Finland. The foreign balances of the bank, which usually are reduced by two or three hundred million marks or even more between the beginning of the year and the end of April, fell off this year to an extent of only about 70 millions, and grew by another 12 millions during the first week in May. Credits, on the other hand, were about 90 millions less on May 8th than they had been at New Year, whereas last year they rose by 250 million marks, and in 1927 by 50 millions during the corresponding period, while the note reserve, which usually decreases at this season, has gradually increased from 209 millions at the end of last year to 395 millions on May 8th. The bills rediscounted by the joint-stock banks at the Bank of Finland have also been reduced to some extent, from 677 millions at the end of 1928 to 542 millions at the beginning of May. In comparison with the corresponding figures for past years at the same date, however, barely 3 millions last year and 5 millions in 1927, it is apparent that the position is still strained.

The position of the joint-stock banks has been tight during the last few months. Credits have not, indeed, increased anything like as much as last year, only by 325 million marks, compared with 845 millions, but at the same time deposits were much smaller than then. Against an increase of over 520 millions during January-April last year there is now a rise of scarcely 250 million marks. Thus the difference between the credits and deposits of the joint-stock banks has again grown this year, though only by a bare 75 millions, as against about 320 millions during the same period last year. That the banks were nevertheless able to reduce their rediscounting at the Bank of Finland was solely due to the fact that they were in a position to increase their net indebtedness abroad.

In general, trade is somewhat reduced from the record pace of the early part of 1928. It is, however, clear that the development of the money market has not had serious consequences for economic enterprises, at any rate, so far. The number of protested bills and their amount were, indeed, two or three times as large as during the same time last year, but on the contrary the number of bankruptcies was no greater than in previous years. It is natural that the business done on the Stock Exchange was very small. It looks, however, as if things had touched bottom. Industrial production increased appreciably in the course of last year, though financial results were often unsatisfactory.

For the completed four months the value of imports amounted to 1,899 million marks compared with 2,292 millions last year and 1,677 millions for the same time in 1927. Exports amounted to 1,056 million marks for January-April as against 983 millions last year and 997 millions in 1927. For this season of the year, when exports of sawn timber are quite at a standstill, there is, as usual, a considerable surplus of imports. It amounted to 843 million marks, thus showing a considerable improvement over last year, when the surplus of imports amounted to 1,309 million marks.

On April 19th the Diet was dissolved by the President. The immediate cause was the defeat by the Diet of the Government's proposals for improving the conditions of pay of civil officials. Before the dissolution the Diet had dealt with a number of important measures. Among these the following should be mentioned: the law regarding the prolonging of export credits, the laws regarding loans for improving agriculture and the regulating of production, importation and trade in cattle food and fertilisers, the granting of State guarantees to the Mortgage Society of Finland and the Industrial Mortgage Bank of Finland for taking up foreign bond loans, and amendments of the regulations for the Bank of Finland.

CANADA.—WEATHER—SEEDING OPERATIONS—GRAIN PRICES—BUSINESS OUTLOOK.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 15.

THE spring has been decidedly backward and unpleasant in Canada and spells of cold wet weather have hampered the farmers in their seeding operations. In Quebec and the Maritime provinces practically no seeding had been done at the end of April and farm work is still behindhand. In Ontario, weather conditions were rather better but not as good as usual. On the prairies seeding, which became general about April 23rd, began rather earlier than last year, but it proceeded under discouraging conditions, as the weather was cold and heavy night frosts occurred frequently. Snow and rain halted farming operations, but were far from unwelcome as the reserves of moisture in the soil were in many places inadequate. In Manitoba the seeding of wheat is practically completed and it is about 90 per cent. completed in Saskatchewan, but Alberta has still at least 20 per cent. of its wheat acreage to seed. Some wheat is above ground but it has actually suffered from its early start as it has been damaged by frost. The cold weather has retarded growth and as a result pasturage on the prairies is abnormally poor for this time of year. British Columbia has also had a poor spring and live stock are experiencing difficulty in finding sufficient feed, moisture and warmer weather being urgently needed; however, fruit trees show a good bloom and promise an excellent crop. Altogether the spring of 1929 has been the least satisfactory of recent years, but a spell of warm weather accompanied by timely rains would soon improve conditions. The indications are that the anticipations of a substantial increase in the acreage planted to wheat will not be realised.

As far as the farmers of western Canada are concerned, a much more serious blow than the new American tariff has been the sharp slump in wheat

prices which has already carried them about 25 cents below their peak for the year and brought them to the lowest level for some years. The loss will run into millions of dollars as there is no immediate hope of the market strengthening, and it will be distributed among farmers, the grain trade, the milling and baking companies and speculators. Comparatively little grain remains on the farms, but there is a huge quantity in the elevators and a serious grain blockade has developed at Montreal and other points. The co-operative wheat pools are being blamed for holding back their grain, but their secretary has issued a statement denying this charge and asserting that the pools were quite satisfied with the present situation as they had foreseen it and taken steps to prepare for it. He also asserted that the pools had already assured for themselves a good average price for the whole year's operations and that the latest debacle illustrated the inadequacies of the present grain marketing system which permitted vast quantities of grain to be dumped on the world market regardless of the relation of demand to supply. The slump is chiefly attributed to the advertisement given to the world of the difficult position of holders of wheat in the United States by the announcement that the American railways, under pressure from the Hoover administration, were about to put in force emergency rates for export wheat to facilitate its disposal. The Canadian railways have now met the American cuts by reducing their rates from the Great Lakes to tidewater, but this move can do little to stimulate the export of Canadian wheat because Canadian transport rates are on a water basis and were already at a lower level than American rates.

The disposal of the balance of the wheat crop of 1928 at what would be regarded as a reasonable price will now present a difficult problem and a heavy carryover into the next crop year now seems almost inevitable. In view of the heavy crop of American winter wheat which is now assured, prices are not likely to rise for many months, and consequently the Canadian graingrowers are very pessimistic about their immediate future. The slump in grain prices will materially diminish the amount of money which would come into the farmers' hands this summer and the business community is beginning to realise that it would do well to prepare for a curtailment of trade in the prairie provinces. There is also some disquietude about the future of the mining industry on which such high hopes have been based. The latest annual report of the Hollinger mine was a very disappointing document, and other well-known mines which were reported to offer a certainty of continuously rich yields, are not living up to expectations. There are rumours abroad of a plan for the merger of some of the leading mines in the Porcupine district to permit economies, but, anyhow, at the moment most mining stocks are a drug upon the market, and many investors are mourning the disappearance of capital which has been sunk in mining ventures. Add to this the difficulties of the newsprint industry which have not been solved and the omens at present point to a slackening of Canadian business in the latter half of the year. But for the moment there are no sign of any real recession and the carloading figure for the week ending May 4th, placed at 67,449 cars, while it shows a slight decline of 481 cars from the figure for the previous week, is still 3,070 cars above the figure for the parallel week of 1928.

NEW ZEALAND.—TRADE—BANKING—PUBLIC FINANCE—TRANSPORT.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, April 22.

TRADE returns now published for the March quarter show that both quantities and values of exports have been maintained at a high level, and the exceptionally favourable balance of overseas trade is continued. Exports for the quarter were valued at slightly more than £24 million, nearly a million higher than last year, and, for the year ending March, 1929, at £57 million, an increase of over £2 million on the preceding year. Imports for the quarter amounted to £7.6 million, slightly less than for the first quarter of 1928, and for the year totalled £45 million. The favourable balance for the year's trading amounts to £12 million, compared with £10½ million for the preceding year. It is expected that this fortunate position will be well maintained throughout the export season, which normally ends in June.

The very favourable trade situation continues to be reflected in satisfactory banking returns, and the March quarter's figures show that ample funds are available. During the past year deposits have increased from £52.3 million to £58.2 million, while advances and discounts combined have increased only from £46.1 to £46.4 million. Free deposits, however, increased by only £1.3 million, while fixed deposits expanded by £4.1 million, and Government deposits by nearly £½ million. The extraordinary concentration of funds in fixed deposits has occasioned considerable discussion. It is possible that lower rates of interest on both fixed deposits and advances would reduce fixed deposits and expand advances, and so lead to a more normal ratio between deposits and advances, but, in view of the high bank rates ruling in Britain, the United States and Australia, it would probably be more remunerative to use New Zealand funds elsewhere than to reduce local rates. In some quarters it is suggested that export of private capital has occurred during the past year. Australian securities are rapidly increasing in popularity in the share markets, and for the past year, while the trade balance was £12 million in the Dominion's favour, the balance of payments was favourable to the extent of only about £5 million. Since new loans raised abroad approximately balance interest payments abroad, it is difficult to account for so great a discrepancy. No adequate figures are available for other invisible items in the balance of payments, but an excess of exports over imports of about £2 million is usually sufficient to balance payments, and this leaves about £5 million unaccounted for. Part of the difference may be due to a reduction of immigrants' capital, for net immigration amounted to only 800 in 1928, compared with 12,000 in 1926, and the remainder to overseas investments by New Zealanders. In any case, the high level of fixed deposits, the low level of advances, the possible export of capital, and the failure of imports to expand with exports, all indicate that, despite very favourable trade conditions, the Dominion has not yet fully recovered confidence after the depression of 1926-27.

In a recent statement on public finance, the Prime Minister (Sir Joseph Ward) announced that a deficit was expected for the financial year ending on March 31st. Preliminary figures show that this will be approximately £550,000. Customs were £302,000 and income tax £89,000 short of the estimates, while expenditure on pensions has exceeded the estimate. Such a deficit is extremely unusual in New Zealand. In order to secure greater control and systematic review of the expenditure of loan moneys, Sir Joseph proposes to amend the form of the public works estimates so that they may show the estimated total cost of each work, when authorised, the total expenditure on each work to the end of the last complete financial year, and the estimated amount required to complete the work.

Other important changes announced by the Prime Minister are the speeding up of State advances, loans to settlers and workers from December 10, 1928 to April 16, 1929, having amounted to slightly more than £2 million, and the cessation of work on certain new railway projects, the Palmerston North deviation and the Rotorua-Taupo line, which are not expected to prove paying propositions. Widespread support has been given to this restriction of railway building, as the railways find difficulty now in paying their way, and these projects were regarded as likely to increase rather than diminish these difficulties. A Transport Ministry, under the Hon W. A. Veitch, Minister for Public Works, has also been formed, mainly with a view to the more satisfactory co-ordination of road and rail transport.

JAPAN.—INDUSTRIAL PROFITS—BANKING—TRADE—PRICES.

(FROM OUR CORRESPONDENT.)

TOKIO, May 8.

ACCORDING to Mitsui Gomei Kaisha's half-yearly analysis of profits of Japanese joint stock banks and industrial joint stock undertakings, the aggregate net profits of 300 banks for the second half-year of 1928 show a substantial increase at 93,619,000 yen, as against 62,472,000 yen for the first half of that year. In making comparison with the preceding half-year, however, it must be remembered that in the June half-year of 1928 a few Osaka and other provincial banks recorded a huge combined loss of 47 million yen as the worst sufferers from the after effects of the banking crisis in 1927, and when we eliminate the figures of those banks individual banks generally disclose decreased earnings reflecting easier money and lower money rates ruling during the period. On the other hand, net profits of 1,200 industrial companies totalled 273,899,000 yen, representing a decrease of 25,970,000 yen against those earned by the same concerns in the first half of 1928. This decline is mainly accounted for by heavy losses of a few large concerns in the groups of brewery, sugar, shipbuilding and mining. Electricity and gas, textiles, and many other sections continue an upward movement in profits, though trust companies, machinery and tools, trading companies and stores, and warehouses make a poorer showing, and the rubber companies show a steep decline. A small but welcome recovery is also recorded by such industries as iron and steel and land, mortgages, &c., which have long been in depressed state. The following table, which classifies the 1,200 companies into 24 groups, together with 300 banks, gives the comparison of last three half-years:—

BANKING AND INDUSTRIAL NET PROFITS.

	No. of Companies.	2nd half-year, 1927. Yen.	1st half-year, 1928. Yen.	2nd half-year, 1928. Yen.
Trust companies...	34	3,995,264	4,930,436	4,408,127
Electricity and gas	145	91,128,303	90,385,843	92,766,736
Textiles	104	38,986,321	39,729,510	40,228,258
Artificial silk	5	1,767,303	2,384,809	3,218,918

Land, mortgages, &c.	60	4,542,804	4,788,392	5,073,982
Rail and road transport	154	31,511,747	31,145,592	31,765,365
Warehouses.....	28	2,111,817	2,098,237	1,291,840
Shipping	24	7,918,063	5,935,776	7,462,991
Rubber	13	993,623	1,041,665	178,344
Miscellaneous	123	12,473,617	15,815,421	16,368,214
Total	1,200	251,160,192	299,869,164	273,899,442
Banks	300	85,714,693	62,472,858	93,619,353
Grand total ...	1,500	336,874,885	362,342,022	367,518,795

The bank amalgamation movement is fast gathering momentum. According to the recent report of the Treasury, the number of commercial banks has decreased by merger by 252 during 1928—as against a decrease of 134 during 1927—the total number being thus reduced to 1,031 at the end of last year. Of the decrease, nearly 80 per cent. is accounted for by small institutions whose capital does not exceed one million yen, showing that small local banks are being rapidly forced into large combinations. The following table shows the comparison of the existing number of banks at the end of 1927 and 1928 dividing them into groups according to the size of capital:—

Size of Capital. Yen.	Number of Banks. Dec. 31, 1927.	Dec. 31, 1928.	Number of Diminution.
Under 100,000.....	140	99	41
Exceeds 100,000.....	350	250	100
,, 500,000.....	327	267	60

The record of foreign trade during last month is fairly satisfactory. The April return shows that imports at 212,735,000 yen were 24,681,000 yen higher than in the corresponding month of last year, and exports at 176,543,000 yen were 16,750,000 yen higher, the import excess being 7,925,000 yen larger. Though the increase in imports is largely accounted for by raw cotton, there is a noticeable expansion in iron and steel and machinery, while the chief declines are in rice, sugar and oilcake. On the export side, raw silk and cotton goods are mainly responsible for the expansion of exports. The increase of 6.8 per cent. in silk and 40 per cent. in cotton manufactures—the two staples which dominate Japan's trade—can be considered encouraging.

The Bank of Japan's wholesale index number for April recorded a fall of one-half of one per cent., the total being 225.13 as against 226.23 for March. Fourteen articles advanced, nineteen declined, and twenty-three remained unchanged. The noteworthy rise is in timber, on which import duty was raised at the end of March.

Letters to the Editor.

LIPTON'S CAPITAL REORGANISATION.

TO THE EDITOR OF THE ECONOMIST.

DEAR SIR,—Knowing the world-wide reputation which the *Economist* enjoys for its encouragement of equitable dealing in matters of finance, I am writing with some confidence to beg that you will make known the following facts in connection with the reduction and reorganisation of the capital of Liptons, Ltd.

I gather from the Stock Exchange Year Book that the 5 per cent. cumulative preference shares of the company rank first for dividend and capital, and I searched the scheme to see in what way the priority has been made effective. To my amazement, I found that it is proposed to write down each of these shares to 12s. (which will be sub-divided into one 5 per cent. non-cumulative first preference share of 10s. and two ordinary shares of 1s. each). The shares are, in fact, to be written down as drastically as the 9 per cent. preference shares over which they have priority, the only difference being that the rate of interest on the new shares to be substituted for the latter is reduced from 9 per cent. to 6 per cent.

Dealing first of all with the question of the priority for capital, the revised balance sheet on the last page of the circular letter to the shareholders dated the 24th instant, shows that the assets, after drastic reductions, amount to £2,729,947; that the debenture stock and other liabilities ranking before the 5 per cent. preference shares amount to £1,707,447; and that the balance, £1,022,500, is more than sufficient to meet in full the existing £1,000,000 of 5 per cent. preference shares. What has become of the priority?

Turning to the effect of the proposed reconstruction on income, the table on the top of page 3 of the circular letter referred to above shows that when the assumed profit available for dividend is £50,000 the 5 per cent. preference shareholders receive £28,146, which is equivalent to £2 16s. 3d. per cent. (instead of 5 per cent.) on the existing capital of £1,000,000, whereas the 9 per cent. preference shareholders receive £19,888, equal to £3 6s. 3d. per cent. (instead of nil) on the present capital of £600,000. Again, what has become of the priority?

I am quite aware that if the available profits should ever reach or exceed £100,000 the 5 per cent. preference shareholders would receive some compensation for the great concessions that are demanded of them, but past experience does not encourage them to place much value on this contingency. Moreover, the special reserve of £50,000 to be created for the

maintenance of dividends on the first preference shares should not have much weight in the balance, for the board expresses the belief that if the scheme goes through future profits should be sufficient to pay the revised preference dividends—in other words, they should amount to at least £43,000 a year. I am prepared to admit that in a reorganisation of capital in such circumstances as Lipton's are now placed the 5 per cent. preference shareholders (and, indeed, the debenture-holders) might be asked to agree to some sacrifice, but I submit that the facts I have endeavoured to place before you prove that they are being treated very unfairly.—Yours very truly,

J. A. ARCHER.

Christow, Grove Road, Sutton, Surrey.
May 29, 1929.

Books and Publications.

TORYISM—NEW AND OLD.*

"HISTORY teaches us," says Sir Reginald Mitchell Banks, early on in a vigorous little book, written with all the cheery animus of an Election manifesto, "that the Tory Party is always in danger of losing its creative qualities and forgetting its highest ideals at those very moments when the nation suffers from panic and calls upon it to concentrate on the destruction of the Jacobin." A cynic might add that "the nation" is much less apt to suffer from panic and to call upon it (or anyone else) to concentrate on the destruction of the Jacobin, than to demand that certain regenerative steps should be taken by its government, which the Tory Party interprets as panic and a Jacobin hunt. But such ruminations were not, perhaps, fairly to be expected from an active politician at this date in the calendar. His point of view is given by the passage later on (on Foreign Affairs) in which he recalls that: "My generation, after all, remembers 1897. We remember the might, majesty and dominion of that Empire which we adored in the symbolic person of Victoria. We remember, too, the Recessional—

> 'Still stands thine ancient sacrifice,
> An humble and a contrite heart.'"

Surely here—and elsewhere, too—at moments Sir Reginald has his tongue in his cheek? When engaged in abuse of the other side, and, notably, of the wicked Socialists, he has an entertaining fire and vim; but when he elevates his voice to lofty peroration, the sense of the hustings hovers over him. His logic may be assessed by his comparison of the opposition to Safeguarding with the opposition to chloroform in midwifery cases—"no such bigotry must be suffered to prevent industry bringing forth her offspring painlessly and in profusion"!

Dr Haden Guest is quite unable to forgive the party he has left, and his rancour involves him in the awkward position of trying to prove, at one and the same time, that the Labour Party is, as his title implies, turning its back upon Socialism, and that the "moderate men" in it are going to be driven by their scarlet tail into heady and super-Socialist courses. His pages make it very difficult to comprehend by what process of reasoning Dr Guest ever convinced himself that he was in sympathy with the Labour Party. What he writes about it here might have been written by a leader-writer in the *Morning Post*. His book is a psychological document, but it is his own psychology rather than that of Labour that it illuminates.

Toryism and the People is a much more serious work than either of these. It is the fruit of solid research into the obscure but very interesting period between 1830 and 1846—a period as to which Mr Hill remarks that "at the present time, when the doctrines of individualism have lost their influence alike over the intellect and the imagination, it is less difficult to estimate the relative position of Tory and Liberal social ideas than in the days of unquestioned Liberal supremacy." His main thesis is that Toryism, rooted in the soil, essentially the expression of a "country" party, resisted the present dominance of machinery, which, to its opponents, seemed a beauteous examplification of the irresistible workings of pure economic law, and looked back longingly to a past which they saw as a "half legendary paradise." Toryism, as he defines it, "never had anything in common with what is generally understood as democracy—the right of all, irrespective of property or intellect, to a share in government": the parliamentary party, "had it dared, would have resisted the introduction of a State-aided national system of education"; its alliance with the resistance to the new Poor Law and the curious associations into which it was brought with the masses of operatives who were bitterly disillusionised by Reform, was artificial in basis. Mr Hill is of opinion that the Toryism he describes has passed away—"Tory ideas could not be brought into harmony with proletarian conditions." But this does not detract from the value or interest of his study, which are great. It is full, too, of most fascinating side lights; such, for instance, as are to be found in his account of the progressive decline of mechanics' institutes, as members "would cease to yearn for useful knowledge and their institute would become a club. . . . The ordinary village labourer, faced with the alternative of imbibing useful knowledge at the mechanics' institute or beer at the local Conservative working men's society can never have been much in doubt"; or of the high moral sensitiveness which induced a "Whig Duke to act as chairman at a meeting of London wet nurses to consider the propriety of discouraging the consumption of Godfrey's Cordial and Daffy's Elixir until the opium question shall have been settled with Christian-like justice to the Chinese."

MANAGERIAL PROFIT-SHARING.

THE appearance of Mr Balderston's detailed monograph on managerial profit-sharing in the U.S.A.* is symptomatic of the growing cleavage between the function of ownership and the function of management in modern industrial organisation, and of the consequent emergence of an industrial bureaucracy inspired by the stimulus of fluctuating gain. What substitute stimulus can be devised to extract the last ounce of initiative and efficiency out of the salaried executive, of whatever grade, whose effort may contribute "the something extra" over and above due compensation to invested capital? Mr Balderston's answer is managerial profit-sharing, which he defines as "the sharing of net income with management on a definite basis, fixed in advance." What this precise basis shall be is necessarily a matter demanding careful adaptation to the conditions of the firm or group concerned; and his summary of sixty-five profit-sharing schemes in actual operation show a remarkable diversity in this respect. But he is able to distil a number of instructive and convincing generalisations from his recorded facts, and the widest of is that, although the progress of managerial profit-sharing is slow, by reason, he surmises, of demarcation and measurement difficulties plus business conservatism, it is remarkably sure. As compared with rank and file profit-sharing schemes, it has a strikingly low mortality rate. Existing schemes, given the predetermined basis, have been characterised by "exceptional success," and all things considered, Mr Balderston regards it as strange that the system has not been adopted more widely. Perhaps as a result of his lucid and informative exposition it will be.

* "Managerial Profit Sharing." By C. Canby Balderston. John Wiley & Sons, New York. P . + 127. $2.50.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

The Age of Grey and Peel. By the late H. W. Carless Davis. With an Introduction by G. M. Trevelyan. Oxford University Press, Warwick Square, London. 15s. net.

We welcome the publication in book form of the Ford lectures for 1926. The value of an analysis, by an historian of Professor Davis' calibre, of the ideas and character of the Whig and Tory parties will be recognised not only by historians, but by everybody who is interested in modern politics.

Unemployment. Some International Aspects, 1920-1928. (London) P. S. King and Son, Limited, 14 Great Smith Street. 5s.

This international survey of unemployment is divided into three sections, dealing respectively with "Unemployment and Monetary Fluctuations," "Unemployment in the Coal-Mining and Textile Industries," and "Unemployment and International Migration." There is a large collection of graphs based on the statistics of each of the principal countries.

League of Nations. Memorandum on Production and Trade, 1913 *and* 1923-927. (London) Constable and Co., Orange Street. 2s.

This publication is divided into four sections, dealing repectively with population, production, trade and the relative movements in the prices of raw products and manufactured articles.

League of Nations. International Statistical Year Book, 1928. (London) Constable and Co., Orange Street.

This invaluable publication of the Economic and Financial Section of the League of Nations contains the usual statistics for each of the principal countries of territory, population, production, trade, transport, public finance and prices.

Commerce. By S. Carter. (London) Oxford University Press, Warwick Square. 3s. 6d. net.

An introductory book on the organisation of wholesale and retail trade. There are chapters on currency and banking, the stock exchange, insurance and transport.

Interrelationships of Supply and Price. By G. F. Warren and F. A. Pearson. (New York) Cornell University, Agricultural Experiment Station.

This very interesting statistical study is based on the price movements of a wide variety of farm products. The treatment is very thorough, and includes an examination of the relationship between wholesale and retail prices.

The Process of Inflation in France, 1914-1927. By James Harvey Rogers. With the assistance of his students, August Maffry and Robert E. Landman. (London) Oxford University Press, Warwick Square. 25s. net.

In addition to the material indicated by the title, there is a chapter on exchange, prices and circulation in Germany, 1918-1923, and two chapters of theoretical analysis, in which the apparatus of Fisher and Keynes is employed.

Taxation in the Modern State. By Alzada Comstock. (London) Longmans, Green and Co., Limited, 39 Paternoster Row. 10s. 6d. net.

This volume aims at filling a gap in the text-books of public finance by analysing those tendencies in post-war national practice which appear likely to become permanent.

Bankers and the Property Statutes of 1925 *and* 1926. By R. W. Jones. (London) Sir Isaac Pitman and Sons, Limited, Parker Street, Kinsway. 6s. net.

Sets forth those principles in the new law which more particularly affect bankers when dealing with land as security.

The Arithmetic and Practice of the Foreign Exchanges. By A. G. Sugg. (London) Sir Isaac Pitman and Sons, Limited, Parker Street, Kingsway. 3s. 6d. net.

An extremely useful handbook for bank clerks and others who have occasion to make practical exchange calculations. Much of it would also be of use to the theoretical student in making his conceptions more concrete and vivid.

Federal Finance in India. By K. T. Shah. (Bombay) D. B. Taraporevala and Sons, Kitab Mahal, Hornby Road. Rs. 6s.

This is a reprint of a course of lectures delivered at Patna University.

The Technique of Speculation. By P. S. Seward. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 5s. net.

This might be described as a text-book for speculators.

Foreign Office Organisation. By Henry Kittredge Norton. Supplement to the Annals of American Academy of Political and Social Science.

A comparison of the organisation of the British, French, German and Italian Foreign Offices with that of the Department of State of the United States of America.

The Annals of the American Academy of Political and Social Science. Women in the Modern World. (Philadelphia) American Academy of Political and Social Science, 3622-27 Locust Street.

Le Danemark. (Copenhagen) Published by the Foreign Office and Statistical Department.

A description, in French, of the social and economic organisation of Denmark. The treatment is in guide-book form.

The Railway Year Book for 1929. (London) The Railway Publishing Co., Limited, 33 Tothill Street. 5s. net.

A very complete handbook containing all manner of information directly or indirectly connected with railways. There are maps; generous statistics; details of associations and institutions; and, in the case of British railways, a chronological list of important events dating back to 1602.

The Oil and Petroleum Year Book, 1929. By Walter E. Skinner. (London) Walter E. Skinner, 15 Dowgate Hill. 7s. 6d. net.

Contains the usual statistics of petroleum production and financial details of oil companies.

Industry Year Book and Directory, 1929. (Calcutta) Industry Book Department, Keshub Bhaban, 22 Shambazar Bridge Road. Rs. 5.

A useful guide book to the economic organisation of India.

The Official Year Book of New South Wales, 1927-28. Compiled by T. Waites. (Sydney) Alfred James Kent. 7s. 6d.

A satisfactory feature of this very complete year book is its efficient index. The information given is comprehensive and the provision of statistics lavish.

The Corn Trade Year Book, 1929. *International Grain Trade Statistics.* By G. J. S. Broomhall. (London) "Corn Trade News," St. Mary's Chambers, St. Mary Axe. (Liverpool) Northern Publishing Co., Limited. 7s. 6d. net.

Contains statistics of acreage, production, yields, trade, prices, shipments and stocks of wheat, maize, barley, oats and rye.

Interim Report on Protein Content as a Factor in Grading Wheat. (Ottawa) Council on Scientific and Industrial Research.

The Realist, June, 1929. (London) Macmillan and Co., St. Martin's Street.

Articles in this number include "The Conquest of the Wastes," by Sir John Russell; "Trade Unionism's Future," by W. Milne-Bailey; and "Schools or Scholars," by M. Alderton Pink.

Oil Facts and Figures, May, 1929. (London) F. C. Mathieson and Sons, 16, Copthall Avenue. Price 1s. 6d.

Gives valuable statistical information concerning oil companies.

OFFICIAL PUBLICATIONS RECEIVED.

COMMONWEALTH OF AUSTRALIA

BUREAU OF ECONOMIC RESEARCH

Applications are invited for the position of Director of the Bureau of Economic Research. The powers and functions of the Bureau and conditions of service, etc., of Director are set out in the Economic Research Act, 1929, which may be examined at undernoted address.

The term of appointment will be seven years with salary at the rate of £1,500 per annum. Applications marked "Research," setting out particulars of age, qualifications, experience and war service, if any, should reach the OFFICIAL SECRETARY, COMMONWEALTH OF AUSTRALIA, AUSTRALIA HOUSE, STRAND, W.C.2, not later than 12 noon, 1st July, 1929.

The Stock Exchange.

THE TIN OUTLOOK.

WHEN last we reviewed the outlook for tin shares (*Economist*, October 6, 1928) the price of tin was recovering from the year's lowest level of £206, which it reached in July last. This recovery carried the price to over £240 a ton, but it was short lived. By the end of the year the price had fallen to £225, and, after a period of comparative stability between £220 and £225, it experienced a sharp fall in April, which brought it to £196 a ton. At the moment of writing it has improved to £199.

In October, last year, we described the tin outlook as extremely uncertain, and cited the sharp conflict of opinion in the trade on the future of prices. There is the same outlook, the same conflict, to-day. It is almost impossible for an investor who is outside the trade to take any but the long view of the tin situation. Nevertheless, thanks to the publications of the Anglo-Oriental Mining Corporation, more statistics are now available than used to be the case, and it is worth the investor's while to examine the trend of production and consumption figures this year.

The "visible supply" returns of the London Metal Exchange are admittedly incomplete. They are made up of stocks landing or warehoused in Great Britain, the United States and Holland and tin afloat to Great Britain, the United States and Europe from the Straits, Batavia and China, but they do not include stocks of tin and tin-ore in the Straits Settlements, the Dutch Indies, China and Hong-Kong, or of tin-ore afloat from Bolivia and Nigeria to Europe or tin in course of smelting and in consumers' hands. The Anglo-Oriental Mining Corporation supplements the "visible supply" returns by estimating the stocks held in the Straits Settlements.* These two sets of figures up to April are given in the following table:—

	(Long Tons). "Visible Supply" (Metal Exchange).	Visible Supply, *plus* Stocks in East (Anglo-Oriental Mining).
At end December, 1927 ...	15,733	19,553
„ December, 1928 ...	24,563	26,817
„ January, 1929	24,237	27,351
„ February, 1929 ...	26,402	30,359
„ March, 1929.....	26,632	30,492
„ April, 1929	26,353	28,986

It will be seen that, since December, 1928, the "visible supply" returns of the Metal Exchange show an increase of 1,790 tons, and those of the Anglo-Oriental an increase of 2,169 tons. The Anglo-Oriental Mining Corporation goes further and estimates world production and consumption by making use of Government and trade returns and estimating the production of "common" tin in Great Britain, which is not usually given in the returns. These supply and demand estimates are shown in the next table:—

	(Estimates of Anglo-Oriental Mining) In tons. World Production.	World Consumption.	Excess of Supply.
12 months, 1927	139,579	137,826	1,753
12 months 1928	159,128	152,586	6,542
4 months 1929.....	55,476	53,213	2,263

These estimates, showing an over-production of 6,542 tons for the twelve months of 1928 and of 2,263 tons for the first four months of 1929 (the latter figure confirming the increase in the "visible supply," plus stocks in the East, returns of 2,169 tons), largely account for the sensational fall in the price of tin in 1928 and the further reaction in April, 1929.

* These estimates are arrived at by taking the difference between the metal equivalent of ore supplies arriving in the Straits for smelting and the shipments of tin from Penang and Singapore.

But the economic situation is scarcely so discouraging as these figures would suggest. To ascertain the trend of production and consumption it is advisable to compare the position as shown by three months' moving averages in each case. These averages, using the production and consumption figures of the Anglo-Oriental Mining Corporation, are shown in the following table:—

Monthly average of 3 months ending—	In tons. World Production.	World Consumption.
December, 1928	14,170	13,169
January, 1929	14,650	13,654
February, 1929.....	14,457	12,391
March, 1929	13,802	12,802
April, 1929.....	13,685	13,265

These monthly average figures have recently disclosed a declining trend for production and an ascending trend for consumption—in other words, a tendency for supply and demand to balance. An outstanding fact of the trade returns this year has been the record figures of deliveries of tin in the United States, which consumes more than half the world's output. For the four months of 1929 United States deliveries amounted to 32,155 tons, against 26,175 tons in the corresponding quarter of 1928, an increase of 23 per cent. In view of the 50 per cent. increase in the production of automobiles in the United States and Canada and the 7 per cent. increase in the United States production of tin plate, in the first quarter of this year as compared with the first quarter of 1928, these "record" deliveries of tin in America are not surprising. The trend of tin consumption is unmistakably upward. That the trend of production is downward is not so apparent, but it is significant that the returns published for 1928 by the Warden of Mines, Federated Malay States, have disclosed the fact that when the price of tin falls below the level of £220 a ton there is a distinct falling off in output from the less efficiently managed concerns. Thus, during 1928, the Federated Malay States labour force declined by about 11 per cent. in the larger mines and by about 15 per cent. in the smaller. It is reasonable to draw the conclusion that, if it had not been for the extensive dredge construction programmes which became operative in 1928, the decline in the total labour force in the Straits would have been much more extensive. The fact that the dredges entering operation in 1929 are chiefly not additions but in *substitution* of existing methods of production suggests that a downward trend for Straits production is probable. Until another four months' figures are available it is, however, unwise to say more than that the chances of production and consumption balancing in 1929 are distinctly better than they appeared at the beginning of the year.

At this point the investor may remark that even if he is persuaded to take a definite view of the economic outlook of the tin industry, he must perforce buy the shares of individual tin-producing companies "in the dark," for, without local or technical knowledge of the dredging or mining operations, the monthly returns of output are meaningless. The force of this objection cannot be denied. Of course, if the price of tin were to advance steadily, most tin shares would automatically be quoted higher on the Stock Exchange. For practical purposes of investment, the buyer of shares should keep to the freer markets (the tin share market is proverbially narrow) or follow the managements known to be efficient and sound, or buy only the shares of the finance and holding companies. We give in the next table the prices ruling to-day and in October last of four Malayan companies, one Nigerian, one Burmese (Tavoy) and one of the holding companies (Tin Selection Trust) of the Anglo-Oriental group which we gave in our article of October 6, 1928, together with the last dividends and the estimated dividend yields:—

Shares.	Prices. Nov./28	To-day	Divs. for Year. %	Est. div. Yield. %
Malayan Tin, 5s.	28/6	25/9	65 to June, '28 ...	10·7
Siamese Tin, 5s.	23/6	15/–	40* to Dec., '28 ...	13·3
Kamunting Tin, 5s. ..	18/9	15/1½	40 free to June,'28	10·0 free of tax.
Idris Hydraulic, 5s....	18/6	15/–	40 to Dec., '28	11·9
N. Nigeria (Bauchi) pref. 10s.	32/6	26/3	50 to June, '28 ...	17·3
Tavoy Tin, 4s.....	25/9	10/9	35 $\frac{6}{12}$ to June, '27	(†)
Tin Selection Trust, £1	36/3	23/–	15 to Dec., '28	13·5

* Est. final at 10%, 1927 divs. were 50%.
† Yield impossible to estimate as int. div. passed.

It will be seen from this table that the fall in the price of these leading tin shares has been severe. Allowance has been made in the calculation of the dividend yields for a reduction in dividends from 65 per cent. to 55 per cent. in respect of Malayan Tin Dredging for the year ending June, 1929, from 40 per cent. to 30 per cent. tax free in respect of Kamunting for the year to June, 1929, from 40 per cent. to 35 per cent. in the case of Idris Hydraulic for the year ending December, 1929, and from 50 per cent. to 45 per cent. for Northern Nigeria (Banchi) for the year to June, 1929. The yield of 17.3 per cent. obtainable from Northern Nigeria (Bauchi) participating preference shares is notable seeing that the hydro-electrification of the Bauchi plateau has brought down the operating costs of this company to the level of the lowest costs in Malaya. The yield of 13½ per cent. on Tin Selection Trust shares is perhaps misleading because this company has recently increased its capital by 50 per cent., but allowance must be made for the earnings to be derived from the new capital. The other holding companies of the Anglo-Oriental group are London Malayan Tin Trust and London Tin Syndicate. Half the investments of the parent, Anglo-Oriental Mining Corporation, are spread between these three holding companies.

We repeat that, although the chances of balancing tin production and consumption this year have improved, the only safe view for the investor to take is the long view. The Warden of Mines of the F.M.S. stated in his annual report that, on the present basis of dredging operations, the dredging ground now held would be more or less worked out in about fifteen years. High prices for tin would naturally stimulate the search for new deposits. Meanwhile, we understand that in order to husband their resources and check the selling of metal at uneconomic prices, the tin producers of the British Empire, which account for over half the world output, are meeting together to consider plans for some measure of output reduction. While the price of tin remains under £200 a ton there is a strong incentive for British tin producers to co-operate. And shareholders should exhort them to do so.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 11.	June 13.

APART from "shop" activity in Rhodesian mining shares, little business was undertaken before Polling Day in any of the markets. Sellers were not greatly in evidence, and consequently through these dull days the tone remained satisfactorily steady. The Wall Street slump, accompanied by a slight improvement in the dollar exchange from the dangerously low level reached last week, brought about a general rise in the gilt-edged market on the presumption that speculation in New York was being checked to some effect. Anglo-American counters, on the other hand, naturally suffered, though Tuesday's rally in New York enabled them to regain some ground. The results of the new Commonwealth of Australia loan and the Central Electricity Board issue became known on Wednesday, when dealings in them started. Underwriters were left with 48 per cent. of the former, not an unreasonably large amount considering all the adverse factors—our money position *vis-à-vis* New York, the absence of good news from the Reparations Conference, and the nearness of the General Election—

which were becoming intensified throughout the time the lists were open, so that there was nothing to encourage last-minute conversions or applications. Underwriters of the Central Electricity Board issue were left with as much as 79 per cent., but here, too, in considering the largeness of this proportion, it must be remembered that a less favourable time could scarcely have been met with; the lists were only open from Saturday till Tuesday, and investment demand generally, within these few days of the election, was at a very low ebb. The price advanced from 1 to ¾ discount on the first day; the Commonwealth scrip closed that day at ⅝ discount.

After a quiet Monday gilt-edged stocks improved all round as the week went on, helped by the Bank's acquisition of £489,211 out of £577,000 of African gold on Tuesday, at a price ½d. lower than last week. Four-and-a-half per Cent. Conversion Loan was weaker at 98 before going ex-dividend on Tuesday, but with the rest picked up afterwards, and the Three-and-a-half per Cent. was in particular demand. Treasury Bonds were also a better market. India loans were uninteresting, though the Three per Cent. fluctuated slightly. Apart from the new Commonwealth stock, there was nothing of note in Dominion and Colonial issues.

Only the narrowest movements occurred in the Foreign market. On more hopeful prospects of a Reparations settlement European loans hardened slightly all round. All classes of Peru Corporations were lowered, but Brazilians had a firmer appearance. A number of Chinese loans recorded advances on Monday, but otherwise the Far Eastern section was featureless.

The Home Railway market was quiet, if not idle, but prices were better where changed, North-Eastern junior stocks being gainers. The week's traffic returns were not directly enlightening, as they compared the Whit-Monday week this year with the pre-Whitsun week of 1928. The indications of the traffic returns to date are dealt with in a subsequent "Investment Note." Among Foreign Rails irregularity set in, though here again no great interest was shown at any time. Antofagasta rose 2½ to 110½ before the announcement on Tuesday of a stock bonus of £15 per £100, the new stock ranking for dividend as from January 1st last; a slight reaction followed. Apart from a weakening in Leopoldina, Brazilians were steady, and Argentines rose slightly. Canadian Pacifics developed irregularly, falling to 226 on American selling, recovering to 232½, and then reacting once again. The rights were actively dealt in up to 5.

Not unnaturally business in the industrial market was extremely restricted. Falls were general on Monday in shares having an international market, prominent among these being Nickels, Associated Electrics and Columbias (the latter in spite of a one-in-five bonus at £5 per share), but subsequent bear closing, coupled with a Wall Street recovery, carried them upwards again two days later. This was the general story. Margarines, United Molasses and Marconis, to name a few in which business was not wholly lulled, all responded to bear support after more or less extensive realisations. Continental selling sent down Imperial Continental Gas, Hydro-Electrics, and, to a less extent, Primitivas. There was little business in textiles, and artificial silks showed no decided movement. Motors were dull this week, whereas Electric Light shares had renewed spurts of activity. Waring and Gillow received good support on the publication of the report, but reconstruction proposals caused a slump in Lipton's ordinary. Both these subjects are dealt with in "Investment Notes." Insurance shares eased slightly; movements in bank shares were of little account.

Rubbers remained an idle and uninteresting market, with no abundance of either sellers or buyers, though a slightly more cheerful tone could be detected when, on Wednesday, the gradual weakening in the price of the commodity was arrested. Tea shares, though quiet, had a firm appearance; irregularity was noticeable at the resumption of the auctions after Whitsun. In oils, business was as restricted as elsewhere. Shells and Mexican Eagles came in for some demand, and Burmah Oil was harder on the report, but small declines occurred in other directions. The mining markets were dominated by professional operations in Rhodesian coppers. Kaffirs refused to give way under French selling, and in fact a few upward changes were recorded, but the turnover was negligible. Following on the "inside" rise in Congo Borders last week, a general advance, proceeding in some cases by leaps and bounds, was brought about in Rhodesians. Rio Tintos moved down and up sharply, the company's interest in Congo Borders being adduced as a reason for support. Other coppers provided little interest, while tin shares were inclined to sag again.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Early in the week liquidation reflected credit uncertainties accentuated by the break in wheat and a belief that the Reserve authorities' deflating policy was beginning to hurt business. A brisk rally occurred before Thursday's holiday, assisted by the elimination of weak holders, "short" covering and superabundance of call money at the lowest rates of the year. Pressure was heaviest in farm implement and motor shares, reflecting a decreased rural purchasing power and the enforced withdrawal of support from pools which had held up prices. Copper shares show moderate recovery. Belated recognition of the importance of the Supreme Court's railroad valuation decision was reflected in buying of good railroad shares, many reaching new high levels. Bonds improved after fresh weakness, but new issues remained at a low ebb. Industrial news remains favourable, despite a certain slackening in steel and slight sales congestion in the automobile industry.

PARIS.

The Bourse this week was a prey to bearish influences. The Committee of Experts had not succeeded in reaching smooth water: the New York market was on the donk grade: and the international monetary situation was disquieting, the Bourse fearing that the French money market would in the long run feel the repercussion of any rise in the discount rate in London and New York. These discouraging considerations had less influence on prices than might have been apprehended, the technical position of the market being extremely sound. Falls predominated, however, and once again it was bank shares which were most affected. French industrials reacted likewise, on a relatively small amount of selling; Lyonnaise des Eaux, in particular, went down. Substantial realisations of Serbian issues were effected in anticipation of the decision of the Hague Court.

BERLIN.

Uncertainty about the Paris Conference and the continuance of dear money were the chief influences affecting the Bourse a week ago. The new week made a very dull start, and selling on Paris and Vienna account was reported. Renewed optimism about the conference led to buying in on Tuesday, and the general tendency of markets was firm and fairly active. The cash markets which comprises the great mass of less active stocks, did not share in the general improvement. Wednesday and Thursday were firm and active days, on prospects of a settlement at Paris.

AMSTERDAM.

At the beginning of the week the Bourse was quiet and price movements were irregular, owing chiefly to the uncertainties of the international monetary position and the less favourable news of the Paris Conference. The tone was firmer on Tuesday, especially among industrials. The announcement of the amalgamation between Dutch Enka and Vereinigte Glanzstoff caused artificial silks to improve, and Margarine Unie and Philips, after a reaction, also advanced. Sugars and oils were lower, rubbers eased, and tobaccos were dull. Shipping shares moved irregularly. As the week went on the market became definitely strong. The money market was easier, with the private discount rate 5⅜-5 7/16 per cent., and the prolongation rate 5½-5⅝ per cent.

INVESTMENT NOTES.

Railway Dividend Prospects.—In happier times on the Stock Exchange the comparatively favourable trend of recent home railway traffic figures would doubtless have been more faithfully reflected in market prices. The outlook, indeed, is less discouraging for the ordinary stockholder than at this time last year, as the following table shows:—

GROSS RECEIPTS FOR 21 WEEKS.

Inc. (+) or Dec. (−)	London, Midland & Scottish Rly.	London & North Eastern Rly.	Great Western Rly.	Southern Rly.
1928 compared with 1927.	£'000.	£'000.	£'000.	£'000.
Passengers, etc.	+ 135	− 150	− 36	+ 50
Merchandise, etc.	− 850	− 634	−268	−146
Coal and coke	− 586	− 245	−323	− 98
Total goods	− 1,436	− 879	−591	−244
Total, goods and passengers	**−1,301**	**−1,029**	**−627**	**−194**
1929 compared with 1928.				
Passengers, etc.	− 354	− 235	−138	−124
Merchandise, etc.	− 564	− 314	+ 3	− 75
Coal and coke	− 342	+ 578	+210	+ 79
Total goods	222	+ 264	+213	+ 4
Total, goods and passengers	**− 576**	**+ 29**	**+ 75**	**−120**

The 1928 figures include the pre-Whitsun traffic but not that of the succeeding Bank Holiday week, while the 1929 figures embrace the whole of the Whitsun traffic. Allowing for this, the figures suggest that the railways have not yet succeeded in stopping the slow but persistent drain of passengers from their systems to the roads—or, at least, have been unable to attract new passengers in sufficient numbers to compensate, so far as gross receipts are concerned, for the reductions made in "effective" fares under extended excursion and cheap travel facilities. The "merchandise" figures are more difficult to interpret. British industry as a whole has been more active this year than last, but the reductions in freight charges conceded to the heavy industries under the "de-rating" scheme tend to lower the figures of *gross* receipts to some extent. The conclusion suggested, on the whole, is that while the railways may not be completely holding their ground against their road competitors, the *rate of loss* of traffic has been markedly checked. The most noteworthy feature, however, is the extensive recovery in coal receipts, which has more than offset the decline under other headings on two of the four systems, and significantly reduced it on the other two. What are the prospects as regards interim dividends, based on results of the first half of 1929 which will be announced in approximately two months' time? Were the railways, during the remaining five weeks of the half-year, to record each week the average gain or less, as compared with 1928, shown during the four weeks preceding the Whitsun holiday, the Midland and Scottish would finish the half-year with a decline as compared with the first six months of 1928 of something like £585,000 in gross receipts, the North-Eastern with a gain of approximately £290,000, the Great Western with one of about £135,000, and the Southern with a drop of about £175,000. Last year the railways pleasantly surprised the investing public by announcing "economies" in working expenditure during the half-year of £1,000,000 on the Midland and Scottish and the equivalent of £750,000 on the North-Eastern, and of about £270,000 on the Southern. These figures were subsequently shown to be much less than half of those attained in the full year. It is scarcely likely, in view of what was said by the various chairmen at the last annual meetings, that further economies have been made this year of the full dimensions of those attained in 1928, but there is no reason to regard the possibilities of "rationalisation" as having been exhausted on any of the lines. Other considerations require to be taken into account, such as the recoupment by the railways of their reductions under the de-rating scheme, and the continuing effect of the "cut" in wages and salaries agreed to in August last (which in five months last year produced reductions of £418,501 and £180,591 on the Midland and Scottish and North-Eastern respectively.) On the whole, the North-Eastern and the Great Western should be, and, the Midland and Scottish and the Southern may be, in a somewhat better position as regards net receipts than they were twelve months earlier. It is questionable, however, whether those in control will regard this improvement as sufficient to warrant an increased interim dividend distribution, particularly as the railways are not yet by any means out of the wood as regards their major problems and difficulties.

Lipton's Capital Proposals.—From the year 1924, when ordinary dividends suddenly ceased, Lipton's has passed through a decidedly lean period. Twelve months ago the directors reported that a reduction of capital would probably be necessary in order to adjust the values of certain assets which, owing partly to a writing-up in 1923, stood in the books at an excessive figure, and to deal with additional capital losses in respect of further closing of shops and departments. A scheme has now been submitted, drawn up in collaboration with two distinguished accountants, Sir William McLintock and Sir Gilbert Garnsey, who hold that the proposals are equitable as between the various classes of shareholders, and recommend their

acceptance. The appearance of the balance sheet, before and after the necessary writing down, is shown below:—

[As at January 5, 1929]	Before Writing Down.	After Writing Down.	Amount to be written off.
	£	£	£
Goodwill	1,445,620	100,000	1,345,620
Properties and estates	774,254	690,410	83,844
Plant, etc.	632,817	375,366	257,451
Interests in subsidiaries	190,539	183,635	6,904
Government securities	73,680	73,680	...
Debtors	375,344	375,344	...
Stocks	856,423	856,423	...
Cash	75,089	75,089	...
	4,423,765	2,729,947	1,693,818

In addition to the £1,693,818 shown above some £146,102 is required for anticipated losses on the further closing down of shops and factories. There were also as at December 31st last arrears of dividend of £137,500 on the first preference and £202,500 on the second preference shares. The ordinary share capital amounts to only £1,250,000, so the preference shareholders must necessarily shoulder part of the burden of sacrifice. It is proposed, therefore, that the £1 ordinary shares be written down to 1s.; that the 600,000 issued £ 1 9 per cent. cumulative second preference shares be written down to 12s., and then subdivided into one 10s. 6 per cent. non-cumulative second preference share and two 1s. ordinary shares; that the 1,000,000 £1 5 per cent. cumulative first preference shares be written down to 12s., and subdivided into one 10s. 5 per cent. non-cumulative first preference share and two 1s. ordinary shares; and that the arrears of preference dividend be cancelled. In contrast to some other reconstruction schemes, recognition is given by their admission to a share of the equity in the company to the rights of preference shareholders. The writing down of the ordinary shares involves the holders concerned in a purely nominal loss, since their interest in the equity of the company is identical by whatever outward symbol it be expressed. The real loss which such shareholders incur in this instance is the giving up to the old preference shareholders of 71.91 per cent. of the equity. They would appear, however, to have little ground for complaint of this treatment. Strictly speaking, all their money is lost, but if they accept this scheme they will receive some dividend as soon as distributable profits exceed £43,000, instead of having to wait empty-handed for an indefinite number of years. The proposed changes in dividend rights can be set out as follows:—

Class of existing Share.	Claim on Profits.	
	Old basis.	New basis.
First preference ...	First £50,000	First £25,000, *plus* 44·94% of excess* over £43,000.
Second preference	Next £54,000	Next, £18,000, *plus* 26·97% of excess* over £43,000.
Ordinary	Excess over £104,000	28·09% of excess* over £43,000.

* Subject to the setting aside of one-fifth of the dividend on the ordinary shares, until the fund thus created reaches £50,000.

Preference shareholders may be reluctant to sacrifice their arrears of dividend, but they too must consider how distant, otherwise, is their chance of obtaining anything. A correspondent, whose letter appears on page 1217, questions whether full and effective recognition has been given to the prior claims of the first preference shareholders. That the latter are being asked to make a tangible sacrifice can scarcely be disputed. Supporters of the present proposals, however, would probably urge that the choice must be made between a scheme which will grant something to all classes of shareholders, or a return to the status quo. It is true that the two classes of preference shares suffer equal capital sacrifices, but the effect is to cut down the fixed dividend of the first preference by half, of the second preference by two-thirds. If the company settles down to earn less than £25,000 a year, the first preference shareholders will receive the whole. If profits range between £25,000 and £98,629, they will certainly receive less than under the old régime, while on earnings over £25,000 and up to £77,232 the second preference will be receiving more. Appropriately, however (for this is the only condition under which the first preference could, on the old basis, have any hope of eventually beginning to receive their arrears) if earnings do rise soon above the £100,000 mark, they stand to gain much more than any other class of shareholders. Nor is this an unreasonable supposition; the business is improving, for a small profit (£1,556) is reported in the period April 1, 1928-January 5, 1929, whereas there was a loss of £88,538 in the previous twelve months and a loss of £40,601 in the year before that. The directors express their belief that, if the scheme goes through, profits "in the future" should be sufficient to pay the revised preference dividends, and, given normal trading conditions, there should be a gradually increasing surplus available for distribution on the ordinary. Three minor points call for mention. The new first preference shares, though non-cumulative, are to be safeguarded by the creation of a special reserve fund, as described above, sufficient to pay two years' dividends. Stronger voting power will be obtained by the present preference shareholders; hitherto first preference and ordinary shares have each carried one vote, but second preference shares none except when their rights were affected or their dividends in arrear, whereas in future all ordinary shares, but not preference shares, will carry one vote. Finally, in pursuance of its general cleaning-up policy, Lipton's has abandoned the savings-bank scheme which it initiated 21 years ago, and the item "savings banks deposits" has disappeared from its liabilities. It is pardonable to recall that critical reference to the dangers of this appendage was made in the *Economist* as long ago as October 10, 1908.

Marconi's Wireless Telegraph.—The general meeting of the shareholders of Marconi's Wireless Telegraph Co., on Wednesday of this week, was interesting for a number of reasons, but in one sense disappointing. Lord Inverforth, the chairman, dealt with the future of the Marconi Co. very frankly, but did not attempt to meet the objections of the £1 shareholders to the terms of the offer of shares in Cables and Wireless. He stated that, in the opinion of the directors, the allocation of shares was fair, and that the £1 Shareholders' Committee was taking on itself a serious responsibility in giving advice which was unsound. He did not, however, attempt to deny the legal status of the shareholders in the payment of dividends, the amount of dividend on a £1 share being twice as much as that on a 10s. share. The Marconi Co., as Lord Inverforth stated, does not go out of business. It disposes of its communication assets to the Communications Co. in exchange for shares (on a basis which has not been disclosed), but it will continue to carry on its sales and manufacturing business and to derive royalties from patents. As regards the revenue from patents, Lord Inverforth anticipated a substantial reduction in the future, as the principal broadcasting patents, from which the company had derived such large profits, expire during this year or in 1930. In the last two years these royalties amounted to about £250,000, which was more than half of the total profit, after paying debenture interest and preference dividends. On the other hand, although it will take time before complete co-ordination of the cable and wireless companies can be effected, the revenues of the Communications Co. will be increased by considerable economies in operating expenditure. While, therefore, it is reasonable to anticipate a steadily increasing revenue coming to the Marconi Co. from (*a*) its manufacturing and sales business and (*b*) its shares in the Communications Co., it remains true that, when these revenues are distributed in dividends, a £1 share obtains double the dividend received by an old 10s. share. Dr O'Biern, the chairman of the Irish Shareholders' Association, made it clear, of course, that the 10s. shareholders would not have accepted any less favourable terms than those offered. Lord Inverforth had no difficulty in showing that the company was justified in coming into the merger, not only because it was faced with a rate war with the cable companies, who were in possession of large cash resources, which the Marconi Co. did not possess, but also because the Government had taken the exploitation of the "beam" system for Imperial communications out of the hands of the Marconi Co., which had invented and developed it, for a consideration only of a royalty of 6¼ per cent. on the gross traffic receipts. The Marconi Co., in agreeing to the merger, rightly made it a condition that the Imperial "beam" stations, which had been acquired by the Government from the company for less than the cost price, should be handed over to the new Communications Co. The Government did well out of that bargain, seeing that it received about £4,000,000 for the three "beam" stations, which it had obtained from the Marconi Co. for about £960,000.

New Capital Issues in May.—In the table below we show the new capital raised in London by issue to the public or shareholders in May; some comparative figures for 1929 and 1928 are also given, together with the monthly averages for preceding years:—

(000's omitted.)

Monthly Average.	United Kingdom.	British Possessions.	Foreign Countries.	Total.
	£	£	£	£
1924	7,051	6,023	4,370	17,444
1925	12,918	5,077	1,356	19,351
1926	10,765	4,431	4,036	19,232
1927	17,240	8,318	4,039	29,597
1928	21,965	5,263	3,526	30,754
	Govt.	Other.		
	£	£		
Jan.–Mar. 1928	*28,570*	*16,215*	*7,201*	*4,345*	*56,331*
April, 1928	*Dr. 250*	*10,707*	*4,523*	*980*	*15,960*
May, 1928	*Dr. 300*	*18,590*	*8,381*	*3,589*	*30,260*
Jan.–Mar., 1929	617	18,757	8,797	4,147	32,318
April, 1929	*Dr. 150*	24,896	3,686	1,865	30,297
May, 1929	*Dr. 200*	9,746	15,406	241	25,193

The British Government figures for this year represent solely the difference between sales and encashments of Savings Certificates. A remarkable rush of industrial and speculative prospectuses preceded the Whitsun holidays, but the second half of the month, except for an important issue on behalf of the Central Electricity Board, was practically bare. Prominent among earlier issues to the public were two of an industrial character, comprising £1,600,000 in ordinary shares for the British Power and Light Corporation and £748,800 (net) in convertible debentures for Allied Ironfounders, a "rationalising" combine in the cast-iron industry. Speculative prospectuses had a chilly reception, as was inevitable in view of monetary difficulties, election uncertainties, and the dullness of Stock Exchange business as a whole. Two investment trust issues emanated from Canada, and the Canadian Pacific Railway and the Canadian Bank of Commerce also made issues to shareholders on favourable terms, the former involving some £10 million of new money, the latter some £2 million. The "British Possessions" total was further augmented by a "shareholders only" issue of some £2,200,000 made by Roan Antelope Copper Mines. Not included in the above figures is £12,403,734 of Commonwealth of Australia 5 per cent. stock, intended for the conversion of a similar amount of Queensland stock, and offered in the first place to Queensland stockholders for conversion; this was the first outward sign in London of the working of the law under which the Commonwealth has taken over the debts of the separate States. The "foreign" total for the month was negligible, and included no Government or municipal borrowing.

Waring and Gillow.—Though last year was in some respects a difficult period for the great London stores, substantial progress is indicated by the report of the well-known furnishing business of Waring and Gillow. Net earnings showed a further increase of no less than 42 per cent., and the dividend on the ordinary shares has been raised from 10 to 15 per cent., some £25,000 again allocated to general reserve, and the "carry forward" strengthened by £27,000.

(Years ended January 31)	1927.	1928.	1929.
	£	£	£

Ordinary amount of dividend	50,000	50,000	75,000
To general reserve	...	25,000	25,000
Inc. or dec. in carry-forward	−551	+ 2,152	+27,260

The balance sheet suggests increased turnover and enhanced liquidity, debtors and creditors being each higher by some £200,000, cash and investments in War Loan by £100,000, and stock-in-trade by £20,000. Fixed assets show relatively little change, but the item "plant, machinery, vans, motors, etc.," has grown from £31,415 to £55,708. The only item showing a fall among the assets [which total £3,362,977 against £3,067,068) is "investments in and accounts due by subsidiary companies," which have declined from £265,006 to £201,925. Reserves of various kinds amount to £330,750 in all. The directors report that in addition to the increase in the volume of trade, they were successful in obtaining further important contracts at home and abroad. The 10s. ordinary shares at the market price of £1 3/16 *cum* dividend, yield 6 11/16 per cent. on dividends and about 10 per cent. on the basis of last year's earnings.

Callender's Cable and Construction.—Callender's profits are proverbially steady, and though some had anticipated a slight reduction in 1928 owing to unexpected delay in proceeding with the national electricity schemes, the accounts actually show a small increase. The sum of £10,000 is set aside as the nucleus of a pension fund, and £5,000 is required to pay stamp duty on new capital authorised. The dividend is not raised above 15 per cent.—though nearly twice as much was earned—but £186,000 from the reserve fund is to be capitalised in the form of a one-in-five bonus to ordinary shareholders. There will still remain reserves, including the carry-forward, of £784,246.

(Years ended December 31)	1926.	1927.	1928.
	£	£	£

Pension fund	...	...	10,000
Increase in carry-forward	93,971	97,878	96,081

* *Plus* a 20 per cent. capital bonus.

The balance sheet is as strong as usual, and shows no significant change save an increase in the investments item from £607,416 to £671,067. The directors report that, though 1928 was marked by the absence of large cable contracts, at home or abroad, the general business remained steady, and in many directions improved materially, while since the beginning of 1929 the outlook has distinctly improved. Work has been commenced on the Electricity Board's order for the S.E. section of the southern grid, an important contract for underground mains has been received from the London Power Co., and several contracts in India have recently been secured. Since the date of the balance sheet, an old-established Manchester cable manu-

UNDERTAKE

THE PROVISION AND ISSUANCE OF CAPITAL FOR APPROVED INDUSTRIAL UNDERTAKINGS BOTH IN THE BRITISH EMPIRE & ELSEWHERE

RIVER PLATE HOUSE,
SOUTH PLACE,
E.C. 2, LONDON.

facturing business has been purchased, at short notice, the transaction being carried through by the sale of an additional 130,000 shares (which will rank for bonus) to a firm of bankers. Reference to this purchase (of which further particulars are promised at the meeting next Thursday), to the probability of the bonus issue, and to the general outlook for cable manufacturing companies was made in an article in the *Economist* of March 2nd (p. 451). The present price of the £1 ordinary shares is around 88s. 6d., cum 2s. final dividend and bonus, and the yield £4 3s. 2d. per cent., presuming the continuance of the 15 per cent. dividend.

James Finlay.—The old-established business of James Finlay and Co., which is interested in tea, cotton, and jute in India and Ceylon, besides acting as merchant bankers and as agents for steamship and insurance companies, succeeded, in spite of all trading difficulties, in fully maintaining its profits last year. It was remarked in these columns last week that all the four tea companies forming what is known as the Finlay-Muir group reduced their dividends in respect of 1927-8, but it should be remembered that the final dividends from that group are not payable till June and do not, therefore, figure in the 1928 accounts. The company's trading income in fact, declined from £174,793 to £147,109 last year, but the difference was counterbalanced by an increase of £31,668 in dividends from investments. The dividend on the ordinary shares is maintained at 25 per cent., which has been paid regularly since the concern became a public company five years ago.

(Years ended December 31.)	1926. £	1927. £	1928. £
Profit	486,136	502,516	506,500
Preference dividend	30,000	30,000	30,000
Ordinary { *earned*	*30·4%*	*31·5%*	*31·7%*
Ordinary { paid	25%	25%	25%
Ordinary { amount of dividend	375,000	375,000	375,000
To general reserve	80,000	100,000	100,000
Increase or decrease in carry-forward	+ 1,136	— 2,484	+ 1,500

The balance sheet, though showing a slightly lower total of gross assets, is extremely strong, for reserves—which receive £14,763 from profit on sale of investments in addition to an allocation (as in 1927) of £100,000—now amount to £2,173,528, and the balance carried forward is £278,562, while the issued capital of the company is only £2,000,000. Investments stand at £3,757,527 against £3,595,967, and there is a £600,671 surplus of liquid assets over current liabilities. At the market price of 5$\frac{11}{12}$, *cum* final dividend of 3s., the £1 ordinary shares yield £4 13s. 6d. per cent.

New York Central Railroad.—Though the net income of the New York Central Railroad decreased in 1928 from $58,565,145 to $50,334,485, it will be seen from the following table that a big fall in non-operating income approximately corresponds to the difference, and that drop is largely explained by the fact that a windfall of more than $9,000,000 was received in 1927 in the shape of an extra dividend from the Michigan Central Railroad, whereas no extra dividend was paid by that company in 1928.

(Years ended December 31)	1927. $	1928. $
Railway operating revenues	383,377,311	381,733,244
Railway operating expenses	293,399,836	288,250,203
Rents, taxes, etc. (net debit)	28,108,603	31,226,343
Total operating income	61,868,872	62,256,698
Total non-operating income	42,608,679	34,594,741
Deductions from gross income	45,912,406	46,516,954
Net income	58,565,145	50,334,485
Dividends	30,462,783	34,854,879
Sinking funds, etc.	159,704	175,851
Surplus	27,942,658	15,303,754

The dividend for the year was raised from 7$\frac{3}{4}$ to 8 per cent.; earnings per share were equivalent to 10.86 per cent., against 13.90 per cent. in 1927. A balance of $258,798,617 to credit of profit and loss was carried forward to 1929, being in all $40,871,702 higher than the amount brought in. The report declares that traffic during the first six months of 1928 was substantially less than in the corresponding period of the previous year, but a sharp recovery occurred during the last six months—a reversal of the trend in 1927. Freight tonnage showed a small reduction, but revenue therefrom increased slightly. Considerable falls were recorded in the tonnage of bituminous coal and iron ore, but better showings were made in respect of anthracite (thanks to rate adjustments) and automobiles. Passenger revenues again decreased, though the number of passengers carried was actually greater.

Burmah Oil.—The directors of the Burmah Oil Co., in their report for 1928, remind their shareholders that the accounts cover some six months of a "rate war" in the Indian kerosene market. On the settlement in June, 1928, of that fight with the Standard Oil Co., which had been importing Russian oil into India, the prices of kerosene were advanced into line with world prices, but the 22.7 per cent. decline in net profits shows how expensive a rate war can be in the oil business. The earnings and distribution of profits over the last three years are set out in the following table:—

	1926. £	1927. £	1928. £
Issued ordinary capital, Dec. 31..	6,868,256	6,868,256	6,868,256
Net profit after income tax but before depreciation	2,994,072	2,311,305	1,861,361
Depreciation (fields and plant)	491,254	396,533	381,735
Net profit after depreciation	2,502,818	1,914,772	1,479,626
Preference dividends (less tax)	263,750	268,125	261,875
Available for ordinary shares	2,239,068	1,646,647	1,217,751
Earned on ordinary shares*	37·25%	29·97%	20·26%

Ordinary dividends { Amount (less tax).	1,811,502	1,227,500	1,199,083
To reserves	370,000	370,000	370,000
Brought forward	395,903	453,469	502,416
Carried forward	453,469	502,416	151,084

* After adding back tax.

It will be observed that 1928 net profits are not much more than half those earned in 1926. Oil prices have, of course, declined since that year, and the dividends received from the company's Anglo-Persian holding have been substantially reduced. The misfortunes of the last two years not doubt convinced the directors that they should broaden the basis of the company's investment in the oil industry. For that reason they acquired last year one million ordinary shares in Shell Transport and Trading Co., and financed the purchase by an issue to shareholders of £4,000,000 5½ per cent. debenture stock convertible into B.O.C. Anglo-Persian Share Trust shares (equivalent to Anglo-Persian shares) within five years. The balance sheet shows the effect of this transaction, the investments being some £4,790,000 higher at £11,622,491. The directors' report concludes with the notice that as the agreement with Finlay, Fleming and Co. as managing agents terminated on December 31st, and as certain of the directors (including the chairman) participated as partners of that firm in the agents' commissions, the Burmah Oil directors' remuneration is now to be increased.

Rhodesian Copper Revival.—With business in other mining sections virtually at a standstill, writes our mining correspondent, the renewal of interest in Northern Rhodesian copper shares appears all the more striking. It was set going by well-informed buying of Congo Border shares, which have this week attained a record quotation. The latest drilling result of the company is not only the best so far reported, but proves the extension of the deposit for a further 1,500 ft. on the strike. An even larger relative advance has been secured by the shares of the Southern Rhodesian Base Metals. At one time in 1926 these touched £7 12s. 6d.; last year they went under 5s. on an adverse report having been issued on certain mines and operations suspended. The company, has, however,

one property upon which extensive deposits have been indicated, and as a pilot treatment plant is in course of erection there seems ground for the claim that the S.R.B.M. will be the first of the new producers. At any rate, the recent buying is understood to have been of influential character. The shares of trust companies interested, and some of the junior shares, have naturally participated in the movement.

Russo-Asiatic.—Details have been published of the scheme for segregation of the assets of the Russo-Asiatic Consolidated, whose principal object is to separate the Siberian interests and to unify the other holdings, clearing the way for the payment of dividends when profits become available. It will be necessary to form a new company to take over the Russian claims. This concern will have only about £50,000 cash, but there is ground for the belief that if and when the return of the properties is secured ample American capital will be available for their exploitation. The Mining Trust, which is to acquire the other assets of the Russo-Asiatic, together with the kindred holdings of the Urquhart group, will have a capital of £6,000,000 in £1 shares, 3,000,000 of which are to be issued as purchase consideration and 1,500,000 will be subscribed at par. Ultimately the Trust will hold a 76 per cent. interest in the Mount Isa Mines (Queensland), a 55½ per cent. interest in the Mines de Villemagne, and 67 per cent. in the Mines de St. Sebastien d'Aigrefeuille (lead-zinc properties in France), 40 per cent. interest in the "final" Ellyou Goldfields Co., also the benefits of an agreement to explore the territories of the North Charterland Concession. Some criticism has been directed to the terms upon which the Urquhart group interests are to be acquired, but a little inquiry shows that the 277,000 Mount Isa and 500,000 Ellyon Goldfields shares at the prices ruling on the date of publication of the scheme represented more than the £1,129,100 payable for them, altogether apart from the various other interests and options to be taken over. Moreover, the purchase consideration, plus £581,400, is to be applied in subscribing at par for 1,710,600 shares of the Trust. It is true that 500,000 Mining Trust shares will be under option for two years at par to the subscribers; such a proviso is, however, quite usual. Russo-Asiatic proprietors will receive one new Russo-Asiatic 2s. 6d. share for each now held and one Mining Trust £1 share in respect of every eight Russos.

I.G. Farbenindustrie.—The failure of this German chemical trust to pay an increased dividend this year caused considerable disappointment to shareholders. The outside opinion that the considerable increase in net profits justified a dividend advance is not shared by the company, which states in its report that, in view of the business and political situation it was considered desirable to use the additional profit for writings down and strengthening the reserve. The latter receives an addition of nearly 12 million marks and is brought up to 200 million marks. The amount written off—71.8 million marks as against 74.7 million marks in 1927—is criticised by some shareholders as unnecessarily large, since buildings (excluding land), railways, and plant are valued at only 378 million marks. The profit and loss account shows the following position:—

(Year ending December 31.)	1926. (In marks.)	1927.	1928.
Gross profit	186,074,526	224,303,485	257,139,238
Net Profit	68,718,255	100,812,133	118,458,169
Ordinary Dividend { Amount	65,993,320	95,595,576	95,915,736
Ordinary Dividend { Rate	10%	12%	12%

Since 1926 net profits have risen much more than gross profits as a result of the proportionately very small increase in administration and general expenditure. The balance sheet shows only small changes in the book value of land, buildings, railways, and participations in other concerns, but plant and apparatus has risen from 160 to 224 million marks, stocks of materials, fuel, and goods from 245 to 342 million marks, and bank deposits from 166 to 228 million marks. Debts due to the company are 500 million marks against 412 million marks; bank debts 82 million marks against 67 million marks, other current liabilities 330 million marks against 320 million marks. The report states that further good results have been attained by "rationalisation" of processes and business methods. The year 1928 was satisfactory for the chemicals industry taken as a whole. The company's total turnover increased, and it extended its plant, and established new works which in great part are already working at a profit. Business was good in such branches as dyes, inorganic products and intermediates, solvents, and pharmaceutical chemicals. The output of nitrate fertilisers increased. Reference is made to the crisis in artificial silk, despite which the company's export sales increased. The demand for photographic goods exceeded the company's production capacity and the factories were extended. The total number of workers employed, including those at work in the company's mines and in controlled concerns, was 154,596 at the end of last year.

Electricity Supply Companies—A Correction.—We regret that in an article, published in our issue of last week, dealing with Electricity Supply Companies, the statement was made that the County of London Electric Supply Co. is controlled by the Greater London and Counties Trust. We have been authoritatively assured that the statement in our article is erroneous and entirely without foundation.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Insurance, Eastern Telegraph, Eastern Extension Telegraph, Western Telegraph, Marconi's Wireless Telegraph, Fine Cotton Spinners' and Doublers' Association, Central Mining and Investment Corporation, Phœnix Assurance, British Rubber Estates of Java, Anglo-American Oil, Nitrate Producers' Steamship, La Guaira Harbour Corporation, Imperial Continental Gas Association, Province of Buenos Ayres Waterworks, V.O.C. Holding, African and Eastern Trade Corporation, Gresham Trust, W. J. Bush and Co., Crown Mines and International Telephone and Telegraph Corporation. We deal with the Marconi meeting in a note above. The chairman of the Fine Cotton Spinners described the prospect as dark, with some bright places on the horizon, one being the likelihood of fashion bringing cotton dresses back into favour. At the Central Mining meeting Sir R. Sothern Holland referred to native labour difficulties in South Africa, and gave an explanation of the decline in the Indian demand for gold. The report of International Telephone and Telegraph described the development of the company's connections throughout the world, and the policy followed as regards their operation.

COMPANY MEETINGS, &c.

ROYAL INSURANCE COMPANY, LIMITED.

INCREASED FIRE INCOME—FAVOURABLE LOSS RATIO.
SATISFACTORY NET NEW LIFE BUSINESS.
INTERIM BONUS INCREASED TO 42s. PER CENT.
MR GLAZEBROOK'S REVIEW OF POSITION AND PROSPECTS.

The eighty-fourth annual general meeting of the shareholders of the Royal Insurance Co., Limited, was held, on the 27th ultimo, in the board room of the company's head office building, No. 1 North John Street, Liverpool.

Mr W. R. Glazebrook (the chairman) presided.

The notice convening the meeting having been read by the general manager (Mr J. J. Atkinson),

The Chairman said:—Ladies and Gentlemen,—Before proceeding with the business of the meeting I would wish to refer to the death during the year of our old friend Mr John Rankin, who was associated with the company as a director for nearly 40 years, and occupied this chair for four years during his long term of office. Mr Rankin will long be remembered by his colleagues as a man of sound judgment and a director who took great interest in the affairs of the company.

A few days after our last annual meeting our sub-manager, Mr Alex. D. Robertson, who was then seriously ill, died, and I would like to pay tribute to the valued services he rendered to the company. The loss of his wise counsel, level judgment and keen enthusiasm is deeply felt by us.

I will now proceed to deal with the results of the past year's working as disclosed in the report and accounts which are already in your hands, and which, I presume, it will be your wish to take as read.

FIRE DEPARTMENT.

The income in this department shows an increase of approximately £38,000, which is satisfactory in these days of strenuous and widespread competition. The loss ratio at 45.82 per cent. can, I think, be regarded as thoroughly satisfactory and reflects credit upon the management for the care with which the business of the company is selected. The expense ratio remains at practically the same level as last year, and, after adjusting the reserve for unexpired risks on the customary basis of 40 per cent., a handsome profit of £818,065 is transferred to profit and loss account, representing nearly 12 per cent. of the premium revenue. That profit has been contributed to by all sections of our business, and I am glad to be able to record that the improved experience in the United States to which I made reference last year has continued. There have been no major catastrophes to record during the past year with the exception of a conflagration in Fall River, Mass., in February, causing damage estimated at over £1,000,000, and a disastrous hurricane in September last, when extensive damage was done, particularly in the State of Florida and in the Island of Porto Rico. Our interests, however, in both occurrences were fortunately very moderate.

The year has been by no means free from problems due in part to the ever-increasing keenness of competition. The growth of a spirit of nationalism in many parts of the world continues to manifest itself in the enactment of laws requiring the deposit of funds and other measures hampering the development of foreign insurance companies. I hope for the eventual recognition of the fact that insurance is an international industry which develops its greatest efficiency when its natural growth on free economic lines is unrestricted. Legislative interference on discriminatory lines is to my mind opposed to the best interests of communities in general, and the history of insurance contains repeated instances of payments by foreign insurance companies proving of vital moment in repairing the effect of conflagrations.

LIFE DEPARTMENT.

The net new business transacted by the company during the past year amounted to £3,634,190, practically on a level with that corresponding to the previous year, and following upon the marked expansion of that year the result should, I think, be looked upon as quite satisfactory.

This is the last year of the current quinquennium, and I am sure it will have been gratifying not only to the shareholders as evidence of the vitality of the department but also to Royal policyholders to learn that, on the advice of our actuary, the directors have increased the interim bonus on with-profit policies from 40s. to 42s. per cent., particularly as this follows so closely on the previous increase in the interim bonus declared in 1927. We have not overlooked the needs of those who require or prefer non-participating policies yielding a large immediate cover at a low rate of premium. I may be permitted to remind you that the Royal was one of the first companies to recognise that changed monetary conditions and improved mortality experience demanded reconsideration of the then existing standards of practice, and our first reduction of non-profit rates was made in 1915. Subsequent events proved that step to be fully justified, and on the situation being again passed under review it has been possible to effect a further reduction in the without-profit rates, the third since we first gave attention to the subject. I can confidently recommend the Royal non-participating policy as a very attractive contract for those who desire this class of cover.

I would also call your attention to the substantial increase in the life funds, which now amount to the imposing figure of £20,825,826, representing an increase on the previous year of £1,213,000.

MARINE DEPARTMENT.

I am sure you will agree that the profit of £85,308 which we are transferring from the marine account to the profit and loss account in respect of the year 1927 is, in all the circumstances, very satisfactory, and one upon which our underwriters are to be congratulated.

As regards the market generally, conditions do not show any important measure of improvement, and leave much to be desired. There are still too many instances of weakness on the part of leaders in failing to insist on adequate rates and proper conditions, probably through fear of losing business which they would really be better without on the terms offered.

In spite of the difficult conditions, we are able to show a satisfactory profit, and I feel that I can point to the results of the year just closed as a clear justification of the policy we have followed, more especially as those results were obtained by conservative underwriting methods without extraneous aids. I congratulate our chief underwriter, Mr Stitt, and his colleagues.

As regards the 1928 account, the premium income of £1,175,882 represents an increase of some £145,000 over 1927, and the ratio of first-year paid claims is 25.15 per cent., against 23.97 per cent., a slight increase, but I think the position of this account may be regarded as satisfactory so far.

ACCIDENT DEPARTMENT.

In the personal accident section of the business the premium income shows a small increase of £7,362, which arises from both the home and foreign fields. The claims have been slightly higher and the resulting profit is, therefore, somewhat reduced. In spite of "Safety First" efforts the toll of the road continues unabated, and the dangers that so beset us nowadays are a constant reminder of the necessity for adequate personal accident insurance.

The "Employers' Liability" premiums show a small expansion, and the profit on this very difficult business is again, I venture to say, a very satisfactory one. Though we may hope that, with improving trade, our premiums from this department will grow, I hardly think that it is wise to count upon similar profits from this account in the future.

The general insurances account shows a healthy expansion in premium of £247,341, to which practically every section has contributed a share. For such a large account the profit of £126,546 shown is a somewhat meagre one, and this is due principally to the difficulties experienced in America in securing adequate underwriting profits there. The business of the Royal Indemnity Co. forms a large proportion of the account, and I fear that the instability of conditions in that field and acute competition make it difficult for us to foresee any expansion of profit in the immediate future,

though the capable executive of that company make every possible effort to attain that end.

We have lately had the pleasure of a visit from Mr F. J. O'Neill, president of the Royal Indemnity Co., who has been doing valuable work in improving the character of the business of the company over which he so admirably presides. His difficulties have not been lessened by the fact that about 80 new casualty companies, financed to the extent of from 70 to 80 million dollars, have been formed in the United States during the last 12 months.

Our accident operations in the foreign field are steadily being extended wherever conditions seem favourable. The adoption from time to time of the principle of workmen's compensation in other countries affords openings in this direction, and the Royal is doing its share in providing facilities in such cases to employers for obtaining insurance protection against their responsibilities for accidents to their workpeople.

MOTOR DEPARTMENT.

Conditions in the motor department, which forms a part of our general insurances account, continue difficult and require constant vigilance. The rapid world-wide increase in the number of motor vehicles on the road continues unabated, and statistics show that for some years past the ratio of the number of accidents to every 100 vehicles insured has steadily increased. The tendency of modern motor-car design is to provide higher speeds, the continuous improvement of road construction creates increased traffic, and these suggests that no diminution of accident frequency should be looked for in the immediate future. Competitive conditions render it difficult to ensure that the rates of premium charged are maintained at a level corresponding to the less favourable accident experience. The severe frosts of last winter in our own country caused a large influx of claims, amounting in the aggregate to a considerable figure, but it may be hoped that those conditions may be regarded as exceptional, and also that motor owners will have gained from them valuable experience in the safeguarding of their vehicles from frost damage.

Notwithstanding these adverse influences, I am pleased to say that we were able to record a modest profit on last year's operations, and it may be hoped that the consideration which various Government committees are giving, or have recently given, to the problem of improving traffic conditions and of instituting controls in the interest of public safety, will have a salutary effect upon the results of the business in the not distant future.

PROFIT AND LOSS.

On the income side of this account the interest earnings show a further satisfactory advance of some £36,000. The profit of £53,000 realised on sale of investments calls for no special comment. The remaining entry represents the underwriting profit for the year, and the total of £1,131,000 has only once been surpassed, viz., in 1919, and then by a relatively small amount; 1919 was, you will remember, an exceptional year of general prosperity, not only in our own but other businesses.

On the other side of the account is the provision for dividend and interest on debenture stock. Expenses not charged to other accounts represent £50,615. Provision for income tax calls for £200,000, an increase of £50,000 on the amount it was necessary to reserve for that purpose last year; and in accordance with our usual practice we are writing £50,000 off freehold house property account. In order to strengthen further the underwriting accounts transfers of £200,000 and £300,000 have been made to the fire and general insurance funds respectively, raising the reserve in respect of our fire business to 104 per cent., and of our general insurance business to 86 per cent. of the respective premium incomes, thus augmenting still further the high standard of security which it has been our practice to observe.

BALANCE SHEET.

There is no marked change in the balance sheet to which I think your attention should be drawn, beyond the increase of over £2,100,000 in the funds of the company as a result of the year's operations. The total funds now reach a figure little short of £40,000,000. The uncalled capital reduction fund disappears from the liability side, the shares now having a nominal value of £1 with 10s. paid up, following your acceptance of the special resolutions submitted to you last year. As regards the assets side of the balance sheet, I am glad to be able to repeat what I have said on previous occasions, that there is a margin of safety between the market price and the figure at which the investments appear in the accounts.

This concludes my review of the past year's working, and in submitting these accounts for your acceptance I would like to remind you of the widespread nature of the company's operations, the variety of the forms of insurance we offer to the public, and the many countries throughout the world, each with its own problems, where your representatives are advancing the interests of the company.

The present year hardly gives promise of a continuance of the high level of prosperity we have enjoyed for the past year. So far as it has gone we have no reason to be dissatisfied, but the incidence of losses both at home and in many places abroad is materially higher than last year. Your directors continue their interest unabated in the direction of the company's multifarious activities, and arrangements are being made for a visit to the United States, where our interests are of exceptional importance, by three or four of our directors.

GENERAL MANAGER'S RETIREMENT.

And now may I refer to the letter which I issued to you with the balance sheet announcing the impending retirement of our general manager?

I want to pay our sincere tribute to the unstinted devotion which Mr Atkinson throughout his long service of nearly 52 years has given to the interests of the company. It has been my privilege to be associated with him as chairman for five years. I have learned to entertain a high sense of respect for his wide knowledge of a business necessarily technical in its character and an admiration for his sound and wise judgment. Mr Atkinson has attained many distinctions in the insurance profession, and I am sure has commanded the universal respect of his colleagues in the business. He was president of the Chartered Insurance Institute some few years ago, and is at the present time chairman of the British Insurance Association.

The directors have acceded with reluctance to his desire to lay down the reins of office which he has held for the past eight years. Mr Atkinson's long years of service entitle him to the relief from the strain on his health of active business cares for which he has asked, and it only remains to me to offer him for myself, for the directors, and for you the best of good wishes that he may for many years enjoy happiness in his retirement, confident in his recollection of the gratitude we owe to him for his achievements in the interests of the Royal.

The directors have invited Mr Atkinson to join them on the board, and I am sure that this will be in accordance with your wishes as enabling us to retain the benefit of his experienced counsel.

CO-ORDINATION WITH LIVERPOOL AND LONDON AND GLOBE.

For some time past your directors have shared with their colleagues on the board of the Liverpool and London and Globe the opinion that closer co-ordination between that company and the Royal would be advantageous to you as shareholders.

The retirements of the respective general managers of both companies at one and the same time left the directors faced with a new situation, and gave them wide freedom for the consideration of the best means of achieving that co-ordination.

You will have learned from the notice enclosed with the balance sheet that our first objective was to secure identity of *personnel* upon the boards of directors of the two companies themselves.

There has always been close association between the boards, as a number of my colleagues have, like myself, been directors of both companies. It only needed, therefore, that those directors who sat on the board of one company only should be elected to the board of the other to bring about the identity necessary to allow of concurrent direction of the affairs of both companies.

I have no doubt that these measures will approve themselves to your minds.

NEW EXECUTIVE APPOINTMENTS.

On the executive side the directors have thought well to follow the same principle, and have appointed Mr Robert M'Connell to be the general manager of the two companies.

Mr M'Connell joined our service 33 years ago, and for the past 20 years has filled with distinction the post of London manager of the company.

The esteem in which he is generally held is evidenced by the fact that he has served as president of the London Insurance Institute and of the Chartered Insurance Institute.

In Mr M'Connell the directors felt that they have a man of proved ability and of the highest standing in the insurance world, fully able to maintain the high traditions of the company.

Mr Walter Carter, our deputy manager here, goes to London to take control there as manager of the offices of both companies, and he brings to those important duties a wide experience gained in our home service and in the United States.

Mr F. J. Williams and Mr J. D. Simpson have been appointed assistant general managers at the head office.

Mr Williams has travelled widely and has an extensive knowledge of the foreign field. He has served the company for 32 years, many of which were spent in South America. Last year he was made a sub-manager of the company.

Mr Simpson has for 25 years been in the service of the Globe at home, in Canada and the United States. After his return from a tour of the Antipodes last year he was made London manager of that company.

The directors are confident that all these changes will approve themselves to you as securing to the service of the two companies men with wide experience, capable of giving efficient supervision to the shareholders' interests.

I beg to move "That the report, accounts, and balance sheet be adopted, and that a dividend of 3s. per share, less income tax, be payable on or after Tuesday, the 28th inst., making, with the interim dividend paid in November last, 6s. per share, less income tax, for the year 1928."

Mr Frank Henderson (chairman of the London board) seconded the motion.

Mr John Hedges (a shareholder) congratulated the company—the largest fire insurance company in the world—upon the successful management and the large profits of its fire department.

The motion was carried unanimously.

Mr A. Allan Paton, C.B. (deputy chairman) proposed the re-election of Mr Frederic A. Bates, Sir Edmund F. Bushby, Mr P. R. England, Mr T. H. Jackson and Mr Evelyn S. Parker as directors of the company.

This was seconded by Mr Arthur E. Pattinson and agreed to.

VOTE OF THANKS.

Mr W. A. Weightman proposed the following resolution :—"That the thanks of this meeting be presented to the directors of the company and to the London board, also to the members of the company's local boards and to its officers and agents at home and abroad, and to the boards of directors and officials of allied companies for their valuable services during the past year." On behalf of the shareholders Mr Weightman paid a tribute to the long and able service to the company of Mr J. J. Atkinson, whose retirement, he said, was regretted, but whose appointment as a director met with approbation. He added that Mr Robert M'Connell, who was coming to Liverpool from London to assume the dual post of manager of both the Royal and the Liverpool and London and Globe Companies, could be assured of a very cordial welcome from shareholders. (Hear, hear.) Mr W. Carter, who was to take over the position of London manager, would be missed from Liverpool.

Mr J. H. Clegg seconded the motion, which was carried with acclamation.

The Chairman, in acknowledgement, said it was the unanimous opinion of the directors of both the Royal and the Globe that the changes about to be made and the co-ordination which was to come into operation would be for the benefit of both companies.

GENERAL MANAGER'S REPLY.

Mr J. J. Atkinson (general manager), who also replied, met with a very cordial reception. He said :—I desire gratefully to acknowledge the kind expressions which have been voiced, and which have been so well received, by the shareholders. Personally, I do not wish to lay too much stress on the wrench in my business life which my retirement from the general managership of the Royal involves. On the whole, I have had a happy time in doing what I conceived to be my duty to the company. (Hear, hear.) I can lay claim to a highly successful career in the Queen and Royal companies, and the results speak for themselves.

It is true that I have been fortunate during the eight years of my general managership in so far as there has been an absence of anything approaching, for example, the disasters of 1905 and 1907, but the keen competition in all sections of insurance business in these days renders the position of executive officers very trying. The Royal is, however, fortified in all directions against possible disasters, and this will be better realised when I tell you that collectively the reserves, measured in terms of premium income, now exceed 100 per cent. in our fire, accident and marine departments. (Hear, hear.)

Indeed, I may use the words of an insurance magnate, who is no mean judge in matters of the kind, in saying that I am passing on to my successor "a fine heritage."

TRIBUTE TO COLLEAGUES AND STAFF.

I cannot speak too highly of the great assistance I have received from my colleagues at home and abroad, and from the staff of the company generally, for, without their whole-hearted co-operation, the excellent results referred to could not have been achieved.

It is quite impracticable in the time at my disposal to say as much as I would like to, but I cannot refrain from striking a special note of appreciation in respect of our business in the United States and Canada, whence so large a proportion of the company's revenue is derived, and to say how much I have been indebted to the company's officials on that side.

The decision of the boards to bring about a closer co-ordination of the affairs of the Royal and Globe, as referred to by the chairman, is, I consider, a great move forward in carrying out the true object for which the companies were brought together some 10 years ago, and the decision will, I feel confident, not only result in economies in the actual working arrangements between the two companies, but prove of very great value in securing unity of policy in Imperial matters.

The appointment of a sole general manager will bring about that fusion of common interests which is so necessary, and will, I trust, create a common brotherhood among the staffs, which will be most advantageous.

I hope that Royal and Globe men will henceforth regard themselves as equally members of one family—(hear, hear)—with one common thought and aim—that is, to raise to even greater heights the prosperity of the great companies they have the honour of serving.

Finally, let me say a word of keen appreciation of the compliment which the directors of the Royal have paid me by their invitation to join the board. I believe that, as a director, I can still continue to render assistance in the interests of the company. I part with deep regret with my colleagues and the staff at head office and elsewhere, and I wish them individually and collectively all happiness and prosperity in their respective spheres of work. (Applause.)

The meeting then terminated.

LA GUAIRA HARBOUR CORPORATION, LIMITED.

INCREASING TONNAGE.

The annual general meeting of the La Guaira Harbour Corporation Ltd., was held on the 29th ultimo, at Winchester House, London E.C., Mr John G. B. Stone presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit of £64,876, compared with £63,366 for 1927, and after paying interest, etc., there was a surplus of £2,050. This made £23,511 to the credit of the shareholders to be dealt with when the financial position allowed. The gross receipts were higher by £9,676, and the working expenses by £8,602. The tonnage coming to La Guaira was increasing, and it must be provided for if they were to cope with it profitably. Individual cargoes were increasing; the number of vessels touching at the port increased, and ships of larger tonnage were constantly arriving. In short, there was every indication of considerable growth in the traffic for the near future, and unless they improved the port they would be considerably handicapped, with the result that expenses would absorb the bulk of the increased earnings.

PLANS FOR EXTENSIONS.

The general manager looked forward to effecting considerable savings in working expenses. The board still had under consideration plans for the extension and improvement of the port which would lead to important economies. They were in consultation with the engineers as to the cost of the proposed work. Estimates had been obtained, and the consulting engineers had been instructed to obtain tenders for a lump sum contract covering all contingencies. The board would then be in a definite position to consider financial arrangements. The consulting engineers stated that if the new works were carried out, the corporation would be able to make a saving in working expenses of over £30,000, apart from any additional tonnage that might be handled.

Regarding the Macuto Railway, competition from motor 'buses had become even more severe. The general manager regarded lack of rolling stock as one of the incentives of increased competition. The corporation were interested as shareholders and Second Mortgage bondholders, and the directors would not recommend embarking further capital unless some satisfactory arrangement were made with the First Mortgage bondholders in the way of co-operation.

The report and accounts were adopted.

THE FINE COTTON SPINNERS' AND DOUBLERS' ASSOCIATION, LIMITED.

A YEAR OF BAD TRADE.

DIFFICULTIES OF THE INDUSTRY.

GLIMPSES OF AN INDUSTRIAL REVIVAL.

MR HERBERT W. LEE'S REVIEW OF POSITION AND PROSPECTS.

The thirty-second ordinary general meeting of shareholders of The Fine Cotton Spinners' and Doublers' Association, Limited, was held in the Memorial Hall, Manchester, on Tuesday, May 28th, 1929.

Mr Herbert W. Lee, Chairman of the Association, presided.

There were also present: Colonel R. W. D. Phillips Brocklehurst and Mr John Graham Peel (Vice-Chairmen); Mr William Howarth (Managing Director); Mr Vernon Bellhouse and Mr Alan Murray Gordon Debenham (the above constitute the Executive Board); Mr John Wallace Adam, Mr Percy Ashworth, Mr George Alfred Barnes, Mr Robert Leslie Bellhouse, Mr Robert W. Bennett, Mr Arthur Lyons Carroll, Mr Archibald E. Dixon, Mr Esmond Mills Dixon, Mr Francis Iredale Dixon, Mr John I. Higson, Mr F. Watkin Hillier, Mr Ernest Mather, Mr Percy Musgrave, Mr E. Lomas Oliver, Mr Edwin Oliver, Mr Ian Maurice Lomas Oliver, Mr Wm. Alfred Perry, Mr John Baird Walker, Mr Philip Bruce Whitehead, and Mr Herbert Stowell (Director and Secretary).

About eighty shareholders were also present.

Letters of apology for absence were read from Mr H. M. Harwood, who is abroad, and from Mr A. E. Rahr and Mr J. A. Wanklyn, who are travelling on the company's business abroad.

DIRECTORS' REPORT.

The thirty-first annual report of the directors for the year ended March 31st, 1929, states that :—

	£	s.	d.
The balance brought forward from last year's account is		200,449	3 10
The profits for the year, after charging £200,000 to depreciation, and providing for directors' fees and bonuses to management, amount to		632,617	11 8
Add Transfer from reserve for equalisation of *dividends* ...		*100,000*	0 0
		933,066	15 6
and after deducting :—			
Interest on debenture stocks ...	£110,000	0 0	
Transfer to welfare fund ...	15,000	0 0	
		125,000	0 0
There remains a balance of ...		808,066	15 6
Out of which have been paid interim dividends as under :—			
On preference shares at the rate of 5 per cent. per annum ...	£75,000	0 0	
On preferred ordinary shares at the rate of 5 per cent. per annum	23,500	0 0	
On ordinary shares at the rate of 8 per cent. per annum ...	176,400	0 0	
		274,900	0 0
leaving a balance of...		533,166	15 6
which the directors recommend should be appropriated in the following manner :—			
To payment of a dividend for the half-year ended March 31, 1929, at the rate of 5 per cent. per annum on the preference shares	75,000	0 0	
To payment of a dividend for the half-year ended March 31, 1929, at the rate of 5 per cent. per annum on the preferred ordinary shares ...	23,500	0 0	
To payment of a dividend for the half-year ended March 31, 1929, at the rate of 10 per cent. per annum on the ordinary shares (making with the interim dividend a total distribution of 9 per cent. for the year) absorbing	220,500	0 0	
Total	319,000	0 0	
Balance carried forward ...	214,166	15 6	
		533,166	15 6

The Directors report with regret that Mr Alfred Edwin Rahr has resigned from his post of executive director owing to reasons of health, and they desire to record his valuable service in that capacity to the commercial side of the association, but are pleased to state that he continues as an active member of the board.

Mr Alan Murray Gordon Debenham has been appointed to the executive board in place of Mr Alfred Edwin Rahr.

In accordance with the articles of association, the following eight members of the board now retire :—R. W. D. Phillips Brocklehurst, John Graham Peel, Robert Wharton Bennett, John Isaac Higson, Edwin Oliver, Frank Watkin Hillier, William Alfred Perry, Robert Leslie Bellhouse.

The board recommends their re-election.

The auditors, Messrs Edwin Guthrie and Co., of 71, King Street, Manchester, retire, and being eligible, offer themselves for re-election.

By Order of the Board,
Herbert W. Lee, Chairman.
William Howarth, Managing Director.
Herbert Stowell, Secretary.

St. James's Square, Manchester.
May 17th, 1929.

THE CHAIRMAN'S SPEECH.

The Chairman, in moving the adoption of the report and accounts, said :—The report and balance sheet has been posted to every one of our shareholders, and I expect you will follow our usual custom and take them as read. You will notice in the report that we have to announce with great regret that Mr A. E. Rahr has retired from the position of an executive director. He has held this post for the past six years, during which time his services have been most valuable to the association, and we have to record our thanks for these as well as for the work that he has done for the association ever since its formation. The reason for Mr Rahr's retirement from this post is one of health, and I can assure you that anyone holding the position of an executive director has to be in very good condition in order to enable him to cope with the very heavy work that is inseparable from such a post. I have pleasure in telling you that since his retirement from this post Mr Rahr has enjoyed better health. He remains a director of the association, and is, in fact, at the present time, in company with another of our directors, Mr Wanklyn, making a business tour for us, which will extend over three months, of markets where we think our trade may with advantage be increased.

A QUESTION OF PUBLICITY.

A great amount of attention has lately been drawn to salesmanship and what goes under the name of publicity. This problem is a very difficult one for our association. If we embark on a campaign of advertisement in the ordinary manner we are in most cases simply calling the attention of our competitors to the markets in which we hope to increase our trade, and we have found that our best method is to expend such sums as we can devote for this purpose in personal visits to the principal users of yarn in every market of the world. It is on such an errand that these two gentlemen are now engaged.

You will notice that we have appointed Mr A. M. G. Debenham to fill the vacant post. As many of you know, Mr Debenham was one of our first apprentices; he rose to be managing director of one of our biggest mills. He is taking up his new duties with ability and the vigour of youth, and you may be satisfied that our choice has been a good one and likely to promote the welfare of the association.

THE BALANCE SHEET : TRADE DEPRESSION AND ITS EFFECTS.

Last year I had the great pleasure of presenting to you a balance sheet that approached the very best that we have ever sent out from our association, but those of you who were present at the last meeting will remember that I indicated to you then that the trade which had been so good for the twelve months preceding that balance sheet had greatly fallen off, and I was not able at that moment to give you a good report of the trade that was passing through. I indicated quite clearly that, should the trade continue for long on the restricted volume that was then in evidence, you could not expect to see a balance sheet with the results that we were at that meeting able to put before you.

YEAR'S ADVERSE FACTORS.

I regret to say that my anticipations of restricted trade and restricted profits have proved correct, and that the balance sheet which I have to present to you to-day does not show a profit to compare with that of last year, and is, indeed, very much below the amount that we consider the association should earn in any average year. There is no question that the year we have just passed through has not only had no pretensions to be an average year, it may quite truthfully be put down as a year of bad trade for the fine section of cotton textiles. It is not possible to point to any one particular feature which has caused this reduction in profits. The chief factor has been a general want of demand for the goods made from our particular yarns. Several times during the year orders have begun to come in well, and we have had reason to hope that the worst of the dull, quiet time was over, but in every case, for some reason which it has been impossible to identify, the trade has quite quickly dropped back into a dull condition, quite unable to keep all spindles running on our class of yarns fully occupied. This has meant that in addition to the difficulty of keeping spindles going we have had to contend with great competition and margins all round have suffered seriously.

One feature is very marked, and that is that this quiet period of trade in our particular qualities of textiles has not only affected our mills and those generally spinning Egyptian cotton in this country, but has also been very marked in the markets abroad, with the sole exception of France, in mills depending upon the same class of trade. It is not, as far as I can see, a question of our being unable as yet in this country to compete in the markets of the world with our particular goods, it is really a distinct falling off in demand in almost every market for this period for the particular goods made from the qualities we spin, and, naturally, under these circumstances, we have not only to compete with great vigour to get our full share of the trade which is going, but we have also to compete against mills in our own country, many of which, in their endeavour to keep full running, in many cases, I am afraid, without a great knowledge of the cost of production and the necessities of the case, cut their prices to a far lower figure than is really necessary, so that we have on the one hand the difficulty of obtaining a sufficient weight, and on the other hand we have to compete against what is really undue cutting of the prices of the yarn. In all the circumstances I think we may contend that we have survived the difficulties of the year in a creditable manner, and that the balance sheet which we are able to present to you to-day is one for which we need not apologise, and one which, under the circumstances, you should find to be not unsatisfactory. (Applause.)

BALANCE SHEET ITEMS.

Turning to the details of the balance sheet itself, and taking, as we usually do, first of all, the assets of the company, you will find that our additions to the properties of the associated mills during the year have only amounted to £28,481, which is rather less than the expansion we have been making in our Associated Mills for some years past. You will notice we have taken the same amount for depreciation as last year, and that we have spent almost exactly the amount thus put on one side in renewals, in addition to which we have expended a sum of £109,800 on repairs, which has been written off profit and loss account, so that the final result is that our associated mills stand in our balance sheet at just about £30,000 more than they did a year ago. In the case of our investments and subsidiary companies you will notice they have increased in value by £200,000; the main items accounting for this increase are the purchase of the Stockport Cotton Doublers, Ltd., and the Victor Mills, Ltd., the payments for which have taken place this year.

STOCKPORT COTTON DOUBLERS, LTD.

I told you when addressing you last year that we had just arranged the purchase of the doubling mills in Stockport, which are now registered under the title of the Stockport Cotton Doublers, Ltd. We have run this concern during the past year and have done so at a profit, and we have no doubt that, in the years to come, it will prove a good investment to the association.

These mills have long been competitors with the doublers of the association, and we, therefore, expect in the future to get an advantage, not only from the profit that we can make on this concern, but also from the help it can give to both the spinners and the doublers in the association.

VICTOR MILL.

The case of the Victor Mill is entirely different. There has been a considerable amount of speculation as to why an association like ours should purchase a mill like the Victor Mill. It will interest you to know that this mill is one of the best-built, best-arranged and most up-to-date concerns spinning really good American cotton in Lancashire. It consists of two mills and a big shed, standing together, and contains 170,000 ring spindles and 1,064 looms, with all the necessary equipment to run them. As a regular thing our policy prevents us from owning looms because we do not in any way wish to compete with our customers in the weaving trade, but these particular looms are heavy looms; they will not compete in the fine trade or have any effect upon the weavers who use our yarns, and who so loyally help and support us both in good and bad conditions of trade. We can, therefore, run these looms without any misgivings. In acquiring these mills we are slightly broadening the basis of operation of the association. We are in possession of mills that can be run for the trade, for which they were put down, or can be adapted for other trades if we should find it more desirable to do so. We take them over with a good managing staff, in whom we have confidence, and our directors of this concern have followed the policy of the Fine Spinners' directors and have resigned all other appointments in the trade in order to devote all their time and energy to the service of the association. (Applause.) At the price we paid for the mills in question I have not the slightest hesitation in assuring you that they will be a valuable acquisition to our association. There are, of course, other smaller alterations in the figures which go to make the total under the head of subsidiary companies, but they are all of a normal nature, and the purchases that I have specially mentioned to you are the only new elements that enter into the account.

STOCK-IN-TRADE.

In the case of the stock-in-trade, you will notice a very considerable increase. This increase occurs in both raw cotton, and in finished yarn. It must be remembered that our stock, which on March 31, 1928, was valued at £2,706,985, was a very small stock for this association, and, although the present stock is considerably bigger, especially in the value of yarns, than we like, still it is not an extraordinarily heavy stock for a company the size of ours. I am glad to tell you that the short-time running which we have joined in for the past two months, and which, naturally, we very much deplore, has enabled us to make some reduction in the value of the yarns we have in stock, and I trust that we shall have an improvement in the trade which will enable us to bring these down to a considerably lower figure before we meet you next year. In any case, the stocks are all well and carefully made. They are priced with great care, and on the conservative side, and we see no reason for any anxiety on their account.

TRADE AND OTHER DEBTORS, ETC.

The trade and other debtors show a reduction on last year of £174,504, which is entirely occasioned by slackness of trade, and the reduction of the turnover during the twelve months, and you will notice that the cash at bankers and in hand shows a very big reduction, which is easily accounted for by the increase in our stocks and by the purchase of the two concerns which I have already mentioned to you. I should perhaps remind you that, since we made our last issue of shares, we have bought four mills. With our stocks kept at a normal figure, our finance is still easy, but if for any reason it should prove desirable to extend further we should have then to issue shares and increase the capital of the association.

LIABILITIES.

Turning to the liabilities, there is no change of any description until you come to the reserve for the equalisation of dividends, which, you will notice, stands at £200,000 instead of £300,000 that we brought it to last year. I shall refer to that again when we come to the profit and loss account.

The insurance fund has increased £3,629, the amount by which the premiums have exceeded the claims during the year.

RESEARCH FUND.

The research fund is reduced by £664, money expended on capital account at our Bollington Research and Experimental Station during the year. You will, I know, hear with great satisfaction that this department of experiment and research which we have at Bollington is working with great advantage to the association, and

although the yearly cost of upkeep is quite considerable, we are convinced that the expense incurred on that account is one which will be more and more beneficial to the trade of the association.

WELFARE FUND.

From the welfare fund we have spent during the year on what is really capital expenditure nearly £19,000. We are really, I think, getting near to the end of the special expenditure for this purpose. We are asking you to-day to put on one side a further £15,000, which should enable us to complete the schemes which we have in hand, or are likely to put in hand, for quite a considerable period. It may seem to you that we have spent a very large amount on the schemes which we have inaugurated for the welfare of our workpeople, but you cannot institute rest rooms, clinics, canteens, playing fields and pavilions without spending a very large sum of money if you are to obtain results for an association of the size of ours, and I am quite certain that if any shareholder should choose to investigate the work that has been done, and the results that we are getting from it, he would be very satisfied that the course we are taking is the right one. (Applause.) It is beginning to be apparent that the work we have done in the mills themselves has ensured better health to our workpeople, much greater freedom from sickness and accident, and I feel sure these good results will make themselves more and more evident as time goes on.

PENSION SCHEME.

You will like me to say a word about the pension scheme, for which you have in past years provided funds for the benefit of your workpeople. We are not asking you this year to put anything further on one side for this purpose. The fund you have already provided will be sufficient for a considerable time to come. The total number of pensions already given since the inception of this fund is 550. 151 of our pensioners have died, and that leaves on the books to-day 399 of our old workers enjoying the pensions you have so generously provided for them. These pensioners from time to time show great recognition of the generosity that the shareholders of the association have shown in providing this fund, which is of such vital benefit to them when they are incapacitated, and have to retire from work.

SUPERANNUATION FUND.

The superannuation fund, which is a contributory scheme, is also continuing its good work, and stands to-day at £14,147 more than it did a year ago.

I must mention also the long service certificates we have this year presented to all workers who have given 40 or more years continuous service in the mills of the association, because we presented these from the shareholders, and the recipients specially desired me to convey an expression of their thanks and gratification to you on the first opportunity. 925 workers have now received these certificates, and it was a great pleasure to note the satisfaction it gave to each one of them to know that their good work over such a long period was recognised by the board and by the shareholders of their company.

Taking the other features on the balance sheet, we have loans of £564,321, which are lower by £71,979 than they were a year ago, and about which there is no special comment to make. Creditors and bills on open account are higher, mainly by an increase, which is a tmporary one, in the trade debtors, but present no special features to bring before you.

PLANTATIONS ON THE MISSISSIPPI.

Before we come to the profit and loss account, I must say a word about our subsidiary companies, and especially about the plantations on the Mississippi, which were devastated by the great flood in 1927. It is a great pleasure to be able to tell you that these plantations have now been brought back into cultivation, and that during the season we have been able to pick a very satisfactory crop of cotton. The rearrangements in connection with the management have also been completed and are working well. The headquarters of the business have been moved from Memphis, which was 150 miles away from the plantations, and where they have been stationed ever since the company was formed, to Scott, the little town in the centre of the plantations, and the whole arrangement in connection with the working of the estates has been simplified and improved. We have not as yet received the profit and loss account for the past year, but we have full information of the chief figures of that account, and it is quite certain that the profits for the year will be satisfactory, and will not only pay the interest on the first gold bonds, but will leave a very considerable surplus outside that liability. Only the interest on the gold bonds has been brought into the present accounts, but if the estates continue to prosper as they have done during the past year, we can expect further additions to our profits in future years. (Applause.)

THE COLLIERY.

The colliery has naturally had a hard year's trade to face, but I am glad to tell you that it has been able to make some profit during the year, which has been taken into our accounts in the usual way.

Our subsidiary companies in this country spinning cotton have not made their usual contribution to the profits of the association. Like the Associated Mills they have found the trading very difficult, and in almost every case the dividend we have received from them has been reduced.

THE FRENCH MILLS.

Our mills in France have again done well, and have given us as good a return this year as they did last. We find trade there at the present time quite steady, and we have no reason to anticipate anything but a satisfactory profit from these concerns in the year which they are now entering. I am not sure that our shareholders fully realise what a fine property we have in these mills in France. They gave us naturally great anxiety after the war in reinstating them and restarting them, and afterwards in regaining our full staff of workers. It was indeed only by building what we call here a garden city that we were able to get over this difficulty. But to-day every mill is in first-rate condition, and fully staffed, is fully working, and our French colleagues are working with the greatest energy, enthusiasm and success. (Applause.)

PROFIT AND LOSS ACCOUNT.

We come now to the profit and loss account, where you will notice that the total profit we have made for the year is £632,617 11s. 8d. It is not by any means the smallest profit that this association has ever made, but, as I said in the beginning, we consider it far lower than we ought to make with average trade in an average year. We have to take into account £200,449 3s. 10d. brought forward from last year's accounts, and we have thought it desirable to transfer from the reserve fund, which you will remember was specially put on one side for the equalisation of dividends, the sum of £100,000. If you deduct from this the £110,000, interest on debenture stocks, and the £15,000 we are asking you to devote to the welfare fund, you will find we have a balance of £808,066 15s. 10d., which you will find again if you turn to the front sheet of the report. From this we have to deduct the interest on preference shares, preferred ordinary shares, and the interim dividend paid on the ordinary shares at the half-yearly term, which came together to £274,900, so that we have a balance of £533,166 15s. 6d. to deal with. From this must be deducted the £75,000 interest on preference shares and £23,500 interest on preferred ordinary shares, and the directors advise a dividend at the rate of 10 per cent. per annum on the ordinary shares of the company, which will absorb £220,500, leaving a carry-forward of £214,166 15s. 6d., which is £13,717 11s. 8d. more than we brought into the accounts. This, with the interim dividend, makes a return on the ordinary shares of the association for the year of 9 per cent.

BOARD'S SOUND DIVIDEND POLICY.

You will no doubt consider that in the dividend which the board recommend they have shown, in face of the reserves we have in hand, a very careful and conservative policy, but you must remember that there are considerable elements of uncertainty about the possibilities of trade for the coming year, which the directors are compelled to take into account when they are considering the dividend to advise. It may be that this carefulness will prove to have been unnecessary, but, on the other hand, it may prove to have been a desirable decision in view of the policy of the association to keep up a steady reasonable return year by year on the ordinary shares of the company.

CURRENT YEAR'S OUTLOOK.

The half-year we are now trading in does not start well. Two months' short time, although it has reduced our stocks, does not for the time being improve our profits.

We have the drawback to trade, and it is a great one, of a high Bank rate; such a rate as 5½ per cent. must always be a handicap to business. We have the upset of the General Election, and the uncertainty of the result of that election. These are all matters which are calculated to make a responsible board walk carefully.

FAVOURABLE FACTORS.

On the other hand, while the prospect is, for the moment, dark, there are some bright places on the horizon. The formation of a combination of considerable size of firms in the Bolton district, spinning Egyptian cotton, which now seems certain to go through, has for one of its objects the stoppage of the insane cutting of prices that has obtained during the past year, from which we, with them, have suffered.

We have information from the retail trades that fashion is more than likely in the near future to bring cotton dresses back into favour, and we are all well assured in that case that our yarns will again be in active demand. We are already receiving valuable relief from reductions in the cost of carriage, and in reduction of shipping freights, and the relief we shall obtain from the De-rating Act will be very considerable, especially as our mills are situated largely in towns where the rating is high. We shall in future enjoy the many advantages that are attached to mills situated in large centres without the disadvantage of heavy rates.

Since I have presided at these annual meetings I have always attempted to give you a general idea of the working of the business, and the features of trade in our favour and the difficulties we have to face.

To-day reporting on conditions that obtain, for the moment at any rate, my report may seem a little discouraging, and you may like to hear that I am personally by no means pessimistic. It is well to remember that you have a solid concern, in splendid condition for the work it has to do, that its real value stands in a most favourable relation to the figures that represent it in the balance sheet. That its basis of operation is a broad one and its trading widespread. We have had, and always shall have, our ups and downs in trading and in profits, but I am sure we may look forward without misgiving and with confidence to the future.

CONDITIONS IN TEXTILE TRADE IN GENERAL.

I have to-day spoken only of our particular concern. I felt there was not time to discuss the textile trade in general. There is, at the moment, very little cheerful to report of its general condition, but action is being taken not only in the formation of groups of mills, but also in combined and concerted action between the various sections of the industry in order to regain the trade that has been lost since the war. We are lending our help in the conferences that take place, and we have hope that success will crown the efforts that are being made.

TRIBUTE TO STAFF.

Before I close I must say a word about our staff. They have been working for the past year under most difficult and trying conditions, but they have never allowed themselves to be discouraged, and each obstacle they have encountered has only roused them to greater effort. The shareholders have, in my opinion, good cause to be satisfied with the work of all ranks, from the board, the executive and the mill managers, right down to the rank and file of the mills. (Applause.)

Colonel Brocklehurst seconded the resolution, which was passed without a single question being asked.

Resolutions as to dividends, the re-election of retiring directors, and the election of auditors, were afterwards submitted and passed unanimously.

A vote of thanks to the chairman for the ability and courtesy with which he had presided over the meeting, and to the directors and staff for their untiring exertions on behalf of the company, brought the meeting—one of singular harmony, as usual—to a close.

PHŒNIX ASSURANCE COMPANY, LIMITED.

NET NEW LIFE ASSURANCES EXCEED £3,000,000.

The ordinary general meeting of the shareholders of the Phœnix Assurance Co., Limited, was held, on the 29th ultimo, at Phœnix House, King William Street, London.

Mr Arthur M. Walters (deputy-chairman of the company), who presided, in moving the adoption of the report and accounts, said:—

Last year our chairman made reference to the fact that recent legislation regarding income tax might render it advisable to make a change in our dividend dates. In the hope of avoiding this, representations were made to those in authority. While, however, the reasonableness of our protest was recognised, the only satisfactory course now open to us is to make the alteration in dividend dates from May 1st and November 1st to June 15th and December 15th. I must ask you to absolve us from responsibility for the need of this change.

FIRE DEPARTMENT.

I now turn to the details of our transactions during 1928, and take first the fire department. The income amounted to £3,362,000, representing a healthy increase of some £75,000. The losses at 48·7 per cent. are rather more than 1 per cent. higher than in 1927. This modest rise is not a matter for uneasiness, and if we could always rely on such a loss ratio there would be but small cause for anxiety.

Our expenses are also 1 per cent. higher, the increase being largely occasioned by circumstances over which we have but little control.

You can rest assured, however, that no effort is being spared to reduce our expenses. The sum of £204,000 is being transferred to the profit and loss account from the fire department, representing 6·1 per cent. of profit, which is not an unreasonable result.

MARINE DEPARTMENT.

The tale that has had to be told, not only by ourselves, but by others for some years past, of the unsatisfactory state of the marine market still stands repetition to-day. In closing the 1927 accounts we are advised that a loss of £5,000 may be sustained. This is considerably better than the position twelve months ago, and the improvement is welcome. Our underwriting account stands by itself without the aid of interest on the funds, so there is during the past year benefit to the company by virtue of having undertaken marine business.

ACCIDENT DEPARTMENT.

The combined net premium income at £3,889,000 remains approximately constant, as against £3,903,000 in 1927. The loss ratio of 58·7 per cent. compares favourably with 58·8 per cent. last year, and we have a transfer of £116,000 to profit and loss. This is quite an improvement on the figure obtained in 1927, and, coupled with the large interest earnings obtained from the accident department, constitutes a valuable portion of our business.

LIFE DEPARTMENT.

We have had the satisfaction of issuing policies carrying new net assurances in excess of £3,000,000, a record for the company. The death rate, while heavy, is still within our expectancy.

The shareholders' proportion of the ascertained profit which has accrued in the life fund enables us to transfer to the profit and loss account the usual amount of £40,000, while the quinquennial valuation of the London Guarantee and Accident Life Fund brings us in a sum of £30,000, so that our life business has contributed handsomely to our prosperity.

PROFIT AND LOSS ACCOUNT.

You will perceive that our interest, dividends, and rents have increased by £13,000, and the total is just short of £600,000. Our various trading accounts give us a total profit of just over £390,000. These items added to the balance of last year's account are disposed of as shown in the account; first and foremost comes the dividend, which calls for £589,000. The recommendation of the board is that the dividend be at the rate of 14s. per share. While this is at the same rate as 1927, through the operation of the relief in respect of Dominion income tax, the amount will be equivalent to an increase of 6d. per share in the dividend.

This is a benefit which we are glad to have obtained for our shareholders. It is but right, however, that I should sound a note of warning. The amount which has now been recovered represents the accumulations of some six years' rebate. Therefore, in the future, anything recovered will probably be small in comparison.

It will be observed that we have transferred £500,000 to the additional reserve.

The various disbursements leave us with a balance to carry forward of just over £1,500,000; this figure will enable you to feel that any sudden and exceptional onslaught that may come upon us will encounter a solid buttress which must be passed before there can be any inroad upon our other reserve funds.

On previous occasions you have been informed that the market value of your Stock Exchange securities is considerably in excess of the figure in the balance sheet. It gives me pleasure to be able to repeat this information to-day.

In addition, we regard our contingencies reserve as the first line of defence should depreciation dissipate our hidden reserve. Our contingencies reserve is independent of the ample departmental funds, with no liabilities ranking against it.

Your business is well spread, your finance cautiously and efficiently conducted, your dividend well secured, and, jointly with yourselves, our policy-holders are able to view with satisfaction and a sense of security the accounts of this old company. With a feeling of confidence that this security will be maintained and in the hope of continued prosperity, I have much pleasure in moving that the report and accounts be adopted. (Applause.)

Mr Bristow Bovill seconded the motion, which was carried unanimously.

CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED.

ANOTHER PROSPEROUS YEAR.

SOUTH AFRICAN MINING INDUSTRY.

SOME RECORD FIGURES.

OIL AND RAILWAY INTERESTS.

SIR R. SOTHERN HOLLAND'S REVIEW

The twenty-fourth ordinary general meeting of the Central Mining and Investment Corporation, Limited, was held, on Wednesday, May 29th, at No. 1, London Wall Buildings, London, E.C.

Sir R. Sothern Holland, Bt. (the chairman), presided.

The secretary (Mr R. A. Macqueen) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, I presume that it is your wish to follow the usual course of taking the report and accounts as read. They have been in your hands for a fortnight and I feel confident that they have given you satisfaction.

The total of the balance-sheet exceeds that of the previous year by over £1,000,000. The difference is almost entirely due to the increase in deposits, arising from the steady growth of our oil companies, which have at present large capital sums at their disposal. In consequence the item under "Head office" creditors has risen by about £1,200,000. South African companies have withdrawn approximately £300,000, thus leaving on balance an increase in deposits for the year of £900,000. On the other side of the account we maintain correspondingly larger liquid resources. The amount shown as "Cash" on December 31st last happened to be exceptionally high in view of a maturity of some importance during the first few days of the current year. We do not as a rule operate with such a large cash balance at the bank, but our daily transactions in the money market are very considerable.

Loans to associated companies have risen, and under the heading appearing in the balance-sheet the amount of £1,400,000 compares with £800,000 (speaking in round figures) in respect of the year 1927. The increase of £600,000 thus shown does not, however, give you the complete picture of the transactions involved, as they included, for instance, repayment by the North Venezuelan Petroleum Company of substantial amounts advanced to them in previous years. Loans were outstanding to the City Deep, Durban Deep and Glynn's Lydenburg companies, but the major portion of the advances outstanding were made to the Anglo-Spanish Construction Company, from whom we have had substantial repayments since the beginning of this year. Owing to the rapid approach of the completion of the work in Spain the new current requirements from that quarter are gradually diminishing. The repayment of the total amount due to that company from Spain for work done or still to be performed will extend well into next year.

INVESTMENTS.

Very little change is shown in the amount invested in "Gold, diamond and platinum mining." The heading "Base metals" has disappeared from the balance-sheet owing to the sale of our copper manufacturing interest at Swansea to the Imperial Chemical Industries, Limited. The interest in "Oil and coal" has been nearly doubled; we have increased our share-holding in Trinidad Leaseholds through the exercise of rights to which we were entitled when the capital of the company was increased; we have acquired a substantial interest in the Tocuyo Oilfields of Venezuela, and have exercised options on shares in the North Venezuelan Petroleum Company. I shall deal with these three companies at a later stage.

The increase of £160,000 in "Banking, railway and industrial" is divided among a number of items, none of which requires special reference. With regard to "Commercial and sundry," there have also been a number of changes and transactions in a year which has been active on the Stock Exchange. I need not go into detailsr but would like to mention that under this heading is included ou holding in the Cape Asbestos Company. We had an opportunity of increasing our formerly insignificant interest in this successful and promising company and are now directly represented on its board.

The profit for the year amounts to £725,000. We recommend the payment of a final dividend of 8s. per share and a bonus of 4s. per share, making, with the interim dividend paid last December, a total distribution of 20s. per share, free of income tax. We also propose the transfer of £150,000 to the reserve fund, which will then amount to the substantial sum of £1,900,000. These results are very similar to those obtained in the previous year.

SOUTH AFRICA'S RECORD GOLD OUTPUT.

I will now turn to your South African interests. The Witwatersrand gold mining industry again experienced a satisfactory year, and the total output of gold—namely, 10,358,596 ozs.—exceeded by 227,966 ozs. the previous highest record, attained in the preceding year.

The realisation of the gold forwarded last year by South African producers to the Rand refinery was effected on lines similar to those in 1927.

The demand from India during the first five months showed an increase over the corresponding period of 1927 and gave promise of a revival in this quarter, which, as mentioned on previous occasions, the producers consider their best market. These welcome indications, however, failed to materialise, and for three months from the middle of June onwards there were no transactions, with the result that the total value of consignments from Durban during 1928 only slightly exceeded that of 1927, in which year shipments were smaller than at any time since the inauguration of sales f.o.b. Durban.

DISPOSAL OF THE METAL.

The details of disposal are as follows:—

	£
9,539,217 ozs., valued at ..... were sold to the Reserve Bank locally under the agreement.	40,460,366
986,428 ozs., valued at ..... were sold in London to India, of which 855,760 ozs. were shipped from Durban to Bombay, and 131,168 ozs. from Durban to Madras, making a total of:—	4,180,888
10,526,145 ozs., valued at	44,641,254

The average selling price obtained, before deduction of expenses on bullion railed to Durban was 84s. 9·828d. for 1928, as against 84s. 10d. for 1927.

In order to arrive at the aggregate of gold exported from South Africa to India, reference must be made to the consignments of sovereigns by the South African commercial banks during the year under review. These amounted to £5,400,000, exceeding by 25 per cent. the sales of bar gold by the South African producers. It is the practice of the banks to sell and ship sovereigns from South Africa to India at varying rates of discount. These transactions provide them with credits in London on favourable exchange terms, and for similar purposes the producers endeavour to realise in India as much of their output as possible.

Experience shows that there is at times a specific demand for sovereigns on the part of Indian banks to satisfy exchange requirements; but when the rate of discount allowed on sovereigns makes the cost of their importation cheaper than that of bar gold there is the inducement, if a demand arises for the latter, for sovereigns to be taken by the purchaser, as facilities for melting them into bars are always at hand.

From this it is apparent that the fluctuation of the discount on sovereigns may entail from time to time an adjustment of the Durban price for bar gold. Fluctuations in foreign exchanges, especially between this country and the United States, also affect the price. It may be recalled that in the early part of last year, owing to the temporary weakness of the dollar quotation, exports of gold were made from the United States to India. The amounts then taken naturally tended to reduce the demand from that country for South African gold, and it became necessary to adjust the Durban price. May I give you an illustration? Towards the end of February the American exchange was 4·88⅛, and the Durban price was reduced to 84s. 8d., remaining at that level until the beginning of July, when the exchange approached parity, and permitted producers to revert to the price of 84s. 10½d., which has been maintained up to the present.

DECLINE IN INDIAN DEMAND EXPLAINED.

The decline in the Indian demand for gold since the record years of 1924–25 may be attributed to a combination of circumstances, of which the more important are as follows:—

(1) For some years prior to 1925 the external trade of India showed a continued satisfactory growth, which gave that country purchasing power for gold, and in 1925 large quantities were bought in anticipation of the sterling value of the rupee being fixed at 1s. 4d. When it became known in the following year that it was recommended to fix it at 1s. 6d., these purchases ceased.

(2) Although the monsoon was favourable in 1928 there was a failure of crops in certain districts, and large quantities of wheat had to be imported.

(3) The cotton crop was satisfactory and tea also had a fairly good season, but the prices realised were low.

These factors affected adversely the purchasing power of India.

(4) Low prices ruling for silver encouraged Indian operators to turn their attention to this metal as offering, in their opinion, better prospects for a rise than gold.

Nearly all the silver recovered at the Rand Refinery was sold and shipped to India, via Durban, and amounted to 1,018,987 fine ounces, showing a slight increase over 1927.

If any excuse be needed for having dealt at such length with the subject of gold realisation, it is, perhaps, only necessary to point out that the Transvaal produced last year gold to the value of £44,000,000, of which this group contributed over 42 per cent. (Hear, hear.)

SOME NOTABLE RESULTS.

In many respects the mines administered by the Central Mining/Rand Mines group achieved some notable results. The tonnage milled, at 13,320,700 tons, was the highest yet recorded, exceeding the figure of 1927 by nearly 500,000 tons. The fine gold recovered—namely, 4,341,053 ozs.—exceeded that of the previous year by over 125,000 ozs. The working revenue was correspondingly greater by over half a million pounds sterling. The total fathomage broken in stopes was greater than in any preceding year, and a record development footage of over 508,000 feet was accomplished being an increase of 8 per cent. as compared with 1927.

On the other hand, the working expenditure of the mines under the administration of the group increased from £13,469,000 to £14,016,000, with a resulting slight decrease in the working profit from £4,484,000 in 1927 to £4,477,000 in 1928. The reason for this decrease, which was fortunately only small, is due almost entirely to the unfavourable results of one mine, the City Deep, to which I will refer later on. If, as is pointed out in the consulting engineer's report attached to the directors' report, this mine were excluded from the comparative figures of the two years in question, it will be seen that actually there would have been seen a slight improvement in the profit results for 1928, notwithstanding the greater development footage accomplished that year. Further, it must not be forgotten that mining expenditure tends to increase on account of the greater cost of operating as mines get deeper. The fact that the unavoidable increase in working costs for that and other reasons was more than offset is, therefore, gratifying evidence of the increased efficiency with which mining operations were carried out. In this connection it is well worth quoting the opinion of a well-known American expert, Professor L. C. Graton, of Harvard University, who recently visited the Rand. He stated at a meeting of the New York section of the American Institute of Mining Engineers that on the Rand there was the greatest collection of mining brains in the world, and that the technical ability and co-operative attitude of these members of the mining profession in solving their common problems and in sharing their knowledge and experience were most impressive to a visitor.

NATIVE LABOUR SUPPLY.

One of the most important problems with which the gold-mining industry is at present concerned is that of an adequate native labour supply. In my address to you at last year's meeting I mentioned that negotiations between the Union Government and the Portuguese Government had resulted in a settlement, the full details of which were not then available. Briefly, under the new Convention, which was completed in September, 1928, it was agreed that the maximum complement of Portuguese East African natives for gold and coal mines should be reduced from 105,000 by 5,000 annually to 80,000, the latter figure to be reached by December 31st, 1933. Owing to the institution of deferred pay and a drastic reduction in the period of service, it may be found difficult to maintain these reduced figures at the maximum number allowed under the agreement. It is true that very slowly one or two of the older mines are coming to the end of their natural lives, but, on the other hand, it must be remembered that the native labour requirements of the gold mines of the Witwatersrand are likely to increase for some years to come, as new areas on the far Eastern Rand are opened up, and as the workings of the older mines become deeper and more extensive. During the past year the industry not only instituted additional measures for attracting British South African natives and widened the scope of its recruiting activities, but also emphasised to the Government the importance of an undiminished supply from Portuguese East Africa, and made representations in favour of the re-opening to recruiting of the territories north of latitude 22 degrees south. Unfortunately the attitude of the Government does not appear to be wholly sympathetic on this vitally important subject.

During the year under review relations between the mining industry and its white employees were generally satisfactory. In September the agreement between the South African Mine Workers' Union and the industry was cancelled by notice given by the union, but a revised agreement on similar lines has been recently concluded. Various points raised by the Reduction Workers' and Engine Drivers' and Firemen's Associations and other trade unions have been settled satisfactorily during the year.

Very full reports are issued by each individual mining company, and the year's results of each mine are tabulated in the consulting engineer's report. Here, gentlemen, I should like to pay a tribute to the services rendered to the corporation by our consulting engineer. I think we are most fortunate in having a man of the character, personality and professional attainments of Mr Brett. (Hear, hear.) It is only necessary, therefore, for me to refer briefly to two or three of the companies under our administration, where a few comments may be of interest.

NEW MODDERFONTEIN.

New Modderfontein Gold Mining Company, Limited, again eclipsed for the year ended June 30th, 1928, previous records in respect of ore milled, gold recovered and working profit, the latter amounting to nearly £2,250,000. When I addressed you last year I stated that great attention was being devoted to the testing of the upper leaders and south reef throughout the mine, and I ventured the opinion that there were good prospects of opening up important tonnages of ore. A record development footage was accomplished mainly on these leaders, and I am glad to be able to report that the results disclosed in the company's past financial year, as well as in the current year, have fully borne out the expectations we have formed concerning the potentialities of these undeveloped areas. In November last the chairman of the company Mr A. W. Rogers, devoted a considerable portion of his speech to a description of these leaders, and drew the conclusion that the addition of some millions of tons of ore to the reserves is assured. A vigorous development policy is being continued. While the work so far accomplished has made certain the addition of large tonnages to the ore reserves, any endeavour to estimate the remaining life of the mine is futile while large areas remain unexplored. I would like, however, to endorse fully the words of the chairman that the position of the company is an enviably sound one.

CROWN MINES.

Crown Mines, Limited, which may be described as the world's largest gold mine, continued milling at an average rate of about 218,000 tons a month, and, with a very slightly lower grade than the previous year, made practically the same profit—namely, £969,093. In spite of periodical native labour shortages the mine accomplished a record development footage of 99,677 ft., or nearly 19 miles, which disclosed very satisfactory values. A gratifying feature of these disclosures was the excellent grade shown by the main reef leader in the deeper portion of the mine below the South Rand dyke, and the fairly satisfactory results still obtained from the south reef development in the western section of the mine. As a result of this work, the ore developed during 1928 was 894,394 tons more than in 1927, and the total ore reserves were increased by over 520,000 tons, a very excellent accomplishment under the circumstances. Capital expenditure was again heavy for the year, and was almost entirely devoted to shaft sinking and equipment. The programme of shaft sinking for the current year and the two following years will call for further heavy capital expenditure, which from that time onward should steadily decrease. Given an adequate supply of native labour, the future prospects of this mine appear excellent.

CITY DEEP.

City Deep, Limited, is passing through a difficult period, as was pointed out last year. Heavy losses were incurred due to the exceptional—and in its rapidity almost unprecedented—decline of the grade of ore developed and percentage of payability, which made it impossible, with the labour force obtainable, to carry out sufficient development work to improve or even maintain the ore reserve position. The mine is accordingly undergoing drastic reorganisation in underground methods with a view to meeting the altered conditions. The success of the new methods evolved will naturally be dependent upon the development values and percentage of payability disclosed. While the work of reorganisation is by no means yet completed, monthly working losses have already declined appreciably, and there is reason to believe that in due course the mine will again be placed upon a profit-earning basis. Apart from the reservation already made, the maintenance of an adequate native labour supply for the purpose of a full milling tonnage is essential.

Before leaving the subject of the gold mines, I cannot refrain from mentioning with regret the passing out of two old mines from the list of companies under the group's administration. I refer to the Wolhuter Gold Mines, Limited, which, under the title of the Wolhuter Gold Mining Co., Limited, commenced operations as far back as 1888, and to the Ferreira Deep, Limited, which started crushing in 1899 and has distributed dividends amounting to £6,637,000.

TRINIDAD LEASEHOLDS.

I will now deal with your oil interests. Very satisfactory progress continues to attend the operations of the Trinidad Leaseholds, Limited, in which this corporation is so largely interested. Although, as you will remember, the issued capital of the company was increased at the beginning of last year from £1,049,250 to £1,311,562, nevertheless the same dividend—namely, 27½ per cent.—was distributed as in the two previous years. In respect of the first six months of the current financial year an increased interim dividend has just been announced. For the most part, lower selling prices were obtained for the various products, but the shortfall in revenue was largely compensated for by increased sales, lower working costs, and a higher recovery of the more valuable constituents in the crude oil treated. In the ten months that have elapsed in the current financial year, production and purchases again show a substantial increase; in fact, the quantity of oil handled is already 104,676 tons greater than for the whole of the last financial year. (Hear, hear.) In recent months there has been some improvement in the price of light products, but fuel oil continues a heavy market. The reason for the decline in the level of oil prices as compared with 1927 was the large overproduction of crude oil in the United States which has continued over many months. As you will no doubt have observed in the press, this situation is now engaging the close attention of all the important oil interests in America, and it is, therefore, reasonable to anticipate that a satisfactory method of meeting it will ultimately be found. The last balance-sheet of Trinidad Leaseholds showed the company to be in a very strong financial position and well supplied with funds to carry out the programme now in hand, which covers the modernising of field equipment and refineries, the provision of additional refinery capacity, &c., and the opening up of the Guayaguayare area lying in the south-east corner of the island. The first-mentioned portion of this programme is well in hand, and its completion is expected early next year. As regards Guayaguayare, recent test drilling has produced such satisfactory results as to merit this field being considered a commercial proposition and justifying its immediate development and exploitation. The laying of a pipe-line to connect this field with the refinery is now in progress.

In the early part of the year Sir Evelyn Wallers, who is now taking an active part in the direction of the various oil interests of the corporation, visited the Trinidad fields. He brought back with him very encouraging accounts of the development prospects and general organisation of the company, and indeed I may say that the fact that the oil industry has passed, and is passing, through such difficult times.

NORTH VENEZUELAN PETROLEUM.

Since the date of our last meeting, the authorised capital of the North Venezuelan Petroleum Co., Limited, was increased from £300,000 to £1,500,000. You will recall that your corporation, together with the Trinidad Leaseholds and the Rand Mines, have been financing the North Venezuelan Petroleum Co. since its original capital was exhausted in 1921, and in consideration of their advances these companies were granted—on certain conditions—options on the shares of the North Venezuelan Petroleum Co. up to a total of £1,100,000. Towards the close of last year the companies above referred to agreed to exercise calls on 300,000 shares, and to take up a further 100,000 shares by October next.

The cash consideration paid to the North Venezuelan Petroleum Company by the Tocuyo Oilfields of Venezuela on the acquisition by that company of the oil rights over the El Mene Area amounted to £500,000. With this money, and after the exercise by the lenders of the call on the 300,000 shares to which I have just referred, the company was able to liquidate its considerable indebtedness. It is now relieved of the heavy interest charges which it had to meet when financing its operations by means of advances from the lending companies, and has thus been placed on a sound financial basis. In addition to the foregoing cash payments, the North Venezuelan Petroleum Company was allotted 500,000 shares in the Tocuyo Oilfields of Venezuela. The flotation of this latter company for the purpose of exploitation marks an epoch in the development of the whole concession. We anticipate that it is the forerunner of the creation of several more subsidiaries in the not distant future. It is considered that the aim of the parent company to bring its vast area to fruition in the shortest possible time will best be served in this way, and that gradually a group of companies will be working in co-operation with each other—a system which has been applied with efficiency and success by this corporation in other parts of the world. At the present time a test well is being drilled in the Aguide area, which is situated about 30 miles to the north-west of the property of the Tocuyo Company, and a second well will be drilled in the near future. As a result of the extensive geological examinations which have been carried out in this area for a considerable time past, the geological staff are very hopeful of finding oil in payable quantities. Geological investigations have been proceeding actively in various other parts of the concession, and we have every reason to hope that the existence of oil in commercial quantities will be established in certain of these areas in due course. We hold a very high opinion of the ultimate value of the properties of the North Venezuelan Petroleum Company.

POTENTIALITIES OF THE TOCUYO OILFIELDS.

The Tocuyo Oilfields of Venezuela, Limited, to which I have just referred, was formed last October to acquire from the North Venezuelan Petroleum Company the oil rights over an area of approximately 85,000 acres at El Mene de Acosta, together with the machinery, plant, stores, buildings, etc., which were on the spot at the date of purchase. For a number of years the North Venezuelan Petroleum Company had carried out exhaustive geological investigations in this district, and, on the strength of the favourable results obtained and the conclusions that had been drawn from them, undertook a programme of test drilling. Up to the time of the flotation of Tocuyo Oilfields of Venezuela three wells had been proved capable of yielding very high grade light oil in commercial quantities. Since then another well was successfully brought in, which gave on test 500 barrels per day of the same high-grade oil as had been encountered in the wells previously sunk. Further test drilling is now in progress. It is clear from the results so far obtained in the test wells and from the very detailed geological examinations carried out at El Mene that the property of the Tocuyo Oilfields of Venezuela possesses great potentialities. On the completion of the railway, which it has been decided to construct, the transport of materials will be much facilitated. The company is fortunate in having a property situated close to the seaboard and to a natural deep-water harbour which can easily accommodate a number of tankers. Preliminary surveys for a pipe-line route from the field to this harbour were recently completed. Work in connection with the general development of the property is already well in hand. We may look forward to speedy progress, as all arrangements regarding organisation are well advanced, and the majority of the carefully-selected staff, including manager, chief engineer, geologists and others are now on the field. In addition to their own geological and technical staff, the company will, when required, have the benefit of the advice and experience of the management of the North Venezuelan Petroleum Company. No effort will be spared by those responsible to bring the company to the revenue-earning stage in the shortest possible time.

Mr Brett, our consulting engineer, visited both Trinidad and Venezuela early this year. You will be gratified to know that his views and impressions concerning the outlook of the three oil companies in which your corporation is so largely interested were wholly favourable.

PROGRESS OF SPANISH RAILWAY CONSTRUCTION.

With regard to the Spanish Railway, in which you are interested through the Anglo-Spanish Construction Company, Limited, good progress has been made and the extensive programme outlined to you last year has been proceeded with energetically.

In addition to the section which was in exploitation at the time of our last meeting, two further sections have now been brought into service; one opened on August 25th last, extending the line northwards from Burgos to Peñahorada, a distance of 22 kilometres, and the other opened on January 23rd of this year, extending the line in a south-easterly direction for 83 kilometres from Cabezon de la Sierra to Soria. The total length of the line now in exploitation has thus been increased to approximately 177 kilometres. The construction of the remainder of the line so far projected, approximately 188 kilometres, is well in hand, and it is hoped to complete it by the end of this year, although it is possible a small section will not be finished until early in 1930. When that time arrives and the whole line between Calatayud and Cidad, a distance of approximately 365 kilometres, has been built and equipped, there will remain the question of the section from Cidad northwards, regarding which we still await the decision of the Government as to the route to be followed.

EXCELLENT QUALITY OF THE WORK.

What has so far been accomplished in this undertaking has been no easy task, and on our frequent visits to the railway we are impressed with the rapidity with which the work has been carried out and the excellent quality of that work. That it is a soundly constructed, well-equipped railroad is naturally a source of gratification to us, as well as to the Spanish Government, and reflects great credit on the ability and tact with which the general manager of construction, Mr. Thompson, and those associated with him are handling the job.

Payment has been received from the Spanish Government for the section between Burgos and Peñahorada. An instalment of twenty million pesetas has also been received on account of the section Cabezon to Soria, and the balance outstanding, which it is anticipated will be settled within the next month or two, carries interest at 5 per cent. per annum. All payments received are subject to certain minor claims for adjustment. The method in connection with the financing of this enterprise, to which I referred last year, has been followed, and it would appear that the peak of the temporary advances made by our corporation can now be regarded as having been passed, and by June or July next year payment for the remainder of the completed line between Calatayud and Cidad should be received.

Labour conditions continue satisfactory and our most recent advices from those competent to judge indicate that the financial and industrial conditions in Spain are thoroughly sound. It is felt there that the recent depreciation in the peseta is temporary only and that appreciable improvement in this respect may soon be in evidence.

Our interests continue to be well served in Spain by Señor Don Ramon de Aguinaga, Señor Don José de Aguinaga, Señor E. Cobian, and those associated with them in the direction of the Santander-Mediterraneo Railway Company, and I would take this opportunity of expressing to them our gratitude for their valuable services and help.

THE OUTLOOK.

I think I have now dealt with all the essential features affecting the corporation's work of last year. Before concluding, it has become customary to say a few words on current affairs and immediate prospects. On the eve of a General Election in this country and facing a General Election in South Africa in a fortnight's time, I am bound to be—if possible—even more cautious than usual, but, relying on our sound financial position and on the efficiency of an organisation whose loyalty and capacity have been tested under varying conditions over many years, we have good reason to entertain a feeling of confidence in regard to the future. (Applause.)

TRIBUTE TO OFFICIALS AND STAFF.

In presiding at our annual meeting it is my privilege to express my appreciation and that of my colleagues of the service rendered to the corporation by the officials and members of the staffs of all grades. To be afforded the opportunity of paying this tribute is a great pleasure to me. The men and women engaged in our various enterprises number many thousands. They are working on your behalf in many different countries and under the most varying conditions. It is our constant endeavour to render these conditions as pleasant as possible, particularly in new countries where the hardships of pioneer work have to be faced. We wish them to know that our sympathies are with them and desire to convey to them our hearty thanks for their zeal and devotion. I am sure that you will wish to associate yourselves with this renewed expression of our appreciation. (Applause.)

I now beg to move: "That the report and accounts for the year ended December 31, 1928, as printed and circulated among the shareholders, be, and they hereby are, received, approved and adopted; and that the payment of a final dividend of 8s. per share and a bonus of 4s. per share, both free of income tax, to shareholders registered in the books of the company at the close of business on May 21, 1929, and to holders of coupon No. 34 attached to share warrants in respect of the year ended December 31, 1928, be, and the same is hereby, sanctioned."

I will ask Mr Phillips to be good enough to second the resolution. (Applause.)

Mr F. R. Phillips, M.C., seconded the resolution, and, shareholders' questions having been answered, it was carried unanimously.

The Chairman announced that the dividend warrants would be posted that evening, and would be payable on the following day (May 30th).

Sir Evelyn Wallers, K.B.E., proposed that Monsieur Maurice de Verneuil and Mr A. W. Rogers de re-elected directors of the corporation.

Mr F. Heim seconded the resolution, which was unanimously adopted.

On the proposition of Mr David Holt, seconded by Mr Hogg, Messrs Cooper Brothers and Co. were reappointed auditors of the corporation.

VOTE OF THANKS.

Mr W. Mosenthal, in proposing a vote of thanks to the Chairman, said he wished to express on behalf of himself and brother-shareholders their very best thanks for the most interesting address given by Sir Sothern Holland, and also once again to convey to him and to the Board their thanks for the very active interest they had taken and continuous activity in furthering the interests of this old and very prosperous corporation, whose name stood out prominently, not only in mining, but also in the financial and industrial world. (Applause.)

Mr Holt seconded the vote, which was carried with acclamation, and the Chairman having made a brief acknowledgment, the proceedings terminated.

ANGLO-AMERICAN OIL COMPANY, LIMITED.

INCREASED VOLUME OF BUSINESS.

VIEWS OF MR. F. E. POWELL.

The forty-second annual general meeting of the Anglo-American Oil Company, Limited, was held, on May 29th, at 36, Queen Anne's Gate, Westminster, London, S.W. 1.

Mr F. E. Powell (the chairman) presided.

The secretary (Mr A. H. Hewett) read the notice convening the meeting.

The Chairman then addressed the shareholders as follows :—

In presenting the report and accounts for the past year, you will naturally expect me to say something as regards the progress of this business.

In view of all the encouraging reports appearing in the Press as to the recovery of prosperity in the oil business, nothing would please me more than to tell you to-day that this company had been able during the past year to return to a full measure of participation as to profits.

Under the conditions prevailing in the United Kingdom markets during 1928, however, that was not possible, and we shall have to wait at least another year for a satisfactory financial return.

The trouble has been that the world has had too much oil to sell. In this country, the regular and more than adequate supplies from the usual sources, supplemented by a flood of supplies from Russia, have forced the selling prices of kerosene and motor spirit below the replacement costs in the world's markets, and all companies have shown heavy losses on those products.

PROFIT AND DIVIDEND.

Fortunately for this company, owing to long-term contracts made with suppliers, this situation was greatly relieved. Aside from kerosene and motor spirit, the other products we handle, such as gas oil, lubricating oil, general merchandise, etc., show a small profit which, together with revenue from miscellaneous sources, makes up a credit total of £432,693 16s. 2d. for the year. This, while much better than a year ago, is not what we expect to earn from our very large turnover, nor shall we be satisfied until it is greatly improved upon.

The surplus fund at December 31, 1927, was £1,517,064 2s. 7d.

After paying the final dividend for 1927, and adding the above profit for 1928, brings this fund up to £1,741,312 7s. 9d., as per the balance sheet.

No interim dividend was declared last December on the 1928 business—the outlook was too uncertain; but it is now proposed to pay a final dividend for that year of 1s. 6d. per share, free of British income tax. This is equal to 7½ per cent. and will be payable June 5th next upon presentation of coupon No. 37. After paying the dividend, the balance remaining in the surplus fund will be £1,425,902 1s. 3d.

The gold notes outstanding were reduced last July to the extent of $2,000,000, leaving a balance of $2,000,000, which will be paid in July next.

The debenture stock remains the same.

Insurance reserves have substantially increased, as losses during the year have been small.

THE COMPANY'S BUSINESS.

As regards the business itself, the volume continues to increase in practically all departments.

The subsidiary companies have all done well except those marketing motor spirit, where competitive conditions have made it impossible to show profits. These conditions, however, have been considerably improved since the beginning of March, when prices were restored. This is partly the result of a trading and purchase agreement made by this company with the Naphtha Syndicate of Soviet Russia on behalf of ourselves and the other national companies. By this agreement the Russians confine their business in the United Kingdom to definite quantities, and are satisfied to sell us further quantities of fuel oil, gas oil and kerosene for this market. The arrangement is one that should operate to the advantage of all concerned, and has enabled United Kingdom prices to be restored to more nearly the world's parity.

Our sales of other products, such as lubricating oil, gas oil, merchandise, etc., have been satisfactory and shown a profit. The sales of ethyl petrol are now on the increase. The sales of oil-consuming devices for the year reached the remarkable total of over 400,000 oil heaters—all-British, made in our Birmingham factory. In addition, we sold over 50,000 Valor Perfection cookers. This result is in spite of keen competition from other sources.

MOTOR LUBRICATING OILS.

For over 40 years this company has been the largest importer and distributor of lubricating oils to this country, but the sales have been confined entirely to some 600 separate oil jobbers and blenders, who have again sold direct to consumers.

These Anglo lubricating oils have been maintained consistently at the highest basis of quality possible, and the company's reputation with its wholesale customers has always been most satisfactory.

Owing, however, to the development of the sales of motor oil to garages by our principal motor spirit competitors, your directors feel that this company should protect its motor spirit trade by also distributing motor oils to garages.

This step has not been taken lightly, but as a result of the above competition, which has resulted in the diversion of some of our motor spirit business to competitors. This cannot be allowed to continue.

Beginning almost at once, therefore, "Pratt's standard motor oils" will be distributed to motorists everywhere through all the principal garages in the country, and the facilities offered and the goods supplied will be of the highest quality.

THE FUTURE OUTLOOK.

Looking into the immediate future, it is hoped by a stabilisation of the production of crude oil throughout the world, that the flooding of our markets with motor spirit, kerosene, fuel oil and, in fact, of all petroleum products in excess of the consumption capacity of those markets will be stayed. To this end strenuous efforts have been made by the American Petroleum Institute to limit the production of crude oil.

The idea in the first instance is to limit the production to the needs of the refineries and not for storage. There is already one hundred million tons of petroleum products above ground, which is double the amount required for any emergency, while this extra investment of capital, and the resultant losses by evaporation, make it a costly business. The Sherman Anti-Trust Law has prevented any agreement among the crude oil operators themselves, but the Governor of the State of California showed the way out by appointing a Commission to study the safeguarding of the natural resources of the State in natural gas and crude oil, and, as a result, the oil operators were told what they had to do, and they are doing it.

The States of Oklahoma and Texas followed suit, so that to-day the producing activities of the larger companies in America are under control. The temporary increases in a particular field should not interfere seriously with this plan, and it is hoped that the smaller men will follow.

If this co-operation fails, then the alternative may spell ruin to all concerned, for by wasting the present natural resources of the country, together with the cost of deeper borings and the search for new deposits, it may well result that crude oil will cost many times what it is costing to-day, with a possibility of a real shortage as well. Fortunately, the large producers outside the United States, in Venezuela, Columbia, Roumania, Persia and the Far East, are also working along similar lines, and with gratifying results.

THE AMERICAN EXPORT ASSOCIATION.

The American Export Association has also been formed with the object of limiting exports from the United States to the quantities exported in 1928, plus any natural increase. This plan should ensure ample supplies for all needs and still not require any excess of refining or production. As a result, distress cargoes will not be forced on the market, prices will be stabilised, and, by correcting irregularities and withdrawing allowances, the result will be the making of more profit. It is not expected, however, that prices for export will be appreciably increased. The foreign markets will then be based on these stabilised export prices, plus charges and a fair profit.

This is the plan in brief, and when you consider that the 1928 basis all round is to be taken as a standard, there cannot be any great harm done to anyone, including the consumer, who is more protected under a stabilising plan than by spectacular and erratic changes in prices or uncertainty as to supplies.

From all the above you can see that those responsible for the welfare of the oil industry are sparing no efforts to establish it for the future on a sane, safe and fairly profitable basis, with a broad outlook that means rationalisation and not demoralisation.

The chairman then moved that the report and accounts as presented be approved. Mr James Hamilton, vice-chairman, seconded the motion after the chairman had asked for questions.

The motion was put to the meeting and approved.

The retiring directors were re-elected. Mr J. Wilkie Frye, for many years in charge of the company's lubricating business, has been made a member of the board.

A vote of thanks to the staff was then proposed and accepted, after which the proceedings terminated.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.

RESULTS OF DIFFICULT YEAR'S TRADE.

Sir Robert Waley Cohen, K.B.E. (chairman of directors), presiding over the 39th annual meeting of the African and Eastern Trade Corporation, Limited., at Liverpool, on Thursday, May 23rd, said the balance carried forward of £44,717 represented what was left after providing out of the amount carried forward last year for the loss of £96,953 incurred as a result of the year's trading and for the sums paid in dividends on the preference shares. They had been anxious to give to the shareholders all the information possible, and the consolidated balance sheet gave a clear and comprehensive view of the position of the whole of the corporation's business. Viewing their business as a whole, their floating assets exceeded the whole of their liabilities by £1,600,000. When last autumn it became known that the corporation had suffered severe losses, their financial facilities were curtailed, but the disclosure of these figures, showing as they do that at this crest of their wave of misfortune they were financing their own stocks to the extent of £1,600,000, re-established confidence, and it was satisfactory that the United Africa Co. was able to start on its career with the good will and confidence of all the great banks and credit houses upon whom active and prosperous trade so largely depended.

PROFIT AND LOSS ACCOUNT.

The profit and loss account showed a loss of £96,953 suffered by the parent company alone during the period under review. The subsidiary companies had also shown losses, and, after adding these in, as well as the profits earned by others, there was a trading loss of £136,720, to which must be added a net claim for income tax of £43,764, based on the profits of the previous year after allowing for such rebates as they were entitled to claim. After debiting all these charges there would remain a final credit to carry forward in the parent and subsidiary companies of £89,556.

COCOA POOL.

They would want to know how these losses arose. By far the largest item was due to the so-called Cocoa Pool. The losses incurred in the Cocoa Pool and in other directions absorbed the whole of these profits and more. Such losses carried with them severe and not easily forgotten lessons, and they should indeed be unworthy of their confidence if they did not profit by them. It would be their constant care to cut off as rapidly as practicable the losing businesses and the losing methods, then to develop to the utmost of their power those which had proved themselves to be profitable, and of the profits earned on the profitable business he though there was reason to draw some degree of hopefulness for the future.

ACCOUNTANTS' RECOMMENDATIONS TO BE CARRIED OUT.

The report of the distinguished firms of accountants who were invited to make a complete investigation for the corporation at the time when he joined their board was received by him last week, and after being submitted to their board was circulated immediately to all the shareholders. Their recommendations appear to be well conceived and wise, and they proposed to carry them into effect in their entirety; they might even decide to go somewhat further in the direction of writing down the valuation of their fixed assets in their balance sheet.

This Corporation has become a holding Company, so that the functions of their Board would mainly consist of disposing of the dividends received from the United Africa Company and appointing and instructing their representatives on the Board of that Company. Accordingly it was proposed to reduce their numbers.

With regard to the future, he hoped that they might find that the spirit of violent and destructive competition which had prevailed in the West African trade in the past would give way to one of constructive effort on the part of all concerned in the trade, and that a new spirit of mutual co-operation and commercial and economic efficiency would prevail.

The appointments of Sir Robert Waley Cohen, K.B.E., and Lieut.-Col. E. H. L. Beddington, C.M.G., D.S.O., M.C., were confirmed, and Messrs. R. B. Miller, Lieut.-Col. Wm. Nicholl, and Mazzini Stuart were re-elected directors.

EASTERN TELEGRAPH COMPANY, LIMITED.

WIRELESS-CABLE MERGER APPROVED.

The ninety-eighth ordinary general meeting of the Eastern Telegraph Company was held on Wednesday, May 29th, at the Cannon Street Hotel, London, Mr. J. C. Denison-Pender, the chairman, presiding, to receive the report of the directors and to consider resolutions dealing with the suggested merger of cables and wireless.

Mr Edward Wilshaw, F.C.I.S., read the notice convening the meeting and the auditors' report.

The Chairman, having explained the reasons for only submitting three months' accounts, said:—I do not propose to go through the figures in detail. I should, however, like to point out that after providing for all expenses, income tax and debenture interest, and for the dividend on the preference stock, there remains a balance of profit of nearly £150,000, so that we have been able to maintain the dividend at the rate of 10 per cent. per annum, free of tax, which we have paid for many years past, and still leave a balance of £24,672 13s. 2d. This amount, together with the balance of £525,764 12s. 10d. brought forward from the preceding year, has been transferred to the general reserve fund, thus closing the company's revenue account as at March 31, 1928. The total reserves at the date of the accounts amounted to £3,730,242.

If the necessary percentage of stockholders and shareholders in the cable and wireless companies agree to exchange their stock or shares for shares in the newly formed company—Cables and Wireless Limited—this will be the last meeting of the Eastern Company under existing conditions. I am glad to think, however, that, having been in existence for fifty-seven years, its name will be preserved, and that it will remain as a separate entity, although no longer operating a telegraph business, but remaining simply as a company holding reserve fund investments and investments in the new Imperial and International Communications Company.

When we met in July last it was stated that we had hoped to tell the stockholders something definite about the negotiations with the Government, and the merger with the Marconi Company, but that as the matter was still in the hands of the Government we were unable to give any further information beyond a statement appearing in the Press that the Imperial Wireless and Cable Conference had been able to arrive at unanimity in putting forward its recommendations. It is now common knowledge that the Conference made a unanimous recommendation as to Empire communications, and also approved the tentative arrangement come to between the Eastern Associated Companies and the Marconi Company for the merging of interests. They also recommended that an advisory committee, composed of representatives of the Home Government and of all the Empire Governments, should be formed. Your directors welcome this condition as they feel confident that on all questions of general policy such committee will be of the greatest value to them.

I should like to take this opportunity of expressing the gratitude of your Board, which I know will be shared by all of you, to Sir William Plender and his partner, Mr Rae Smith, who is here to-day, for their share in bringing about this most important fusion of interests. It has involved an enormous amount of labour and negotiations which took a long time, and it is largely owing to the experience and eminent sense of fairness of Sir William that those negotiations were brought to a successful conclusion, and a conclusion which your directors can so confidently recommend for your acceptance. As a result of this momentous decision two companies have been formed: Cables and Wireless Limited and Imperial and International Communications Limited. The former was designed to hold the ordinary stock and shares of the cable companies and preference and ordinary shares of the Marconi Company. The latter, Imperial and International Communications Limited, to acquire the communications assets of these companies, together with telegraphic services which were either owned or being operated by the Government. This latter company will therefore be worldwide in its ramifications and very comprehensive in its scope.

You have recently received from the Bank of England an offer on behalf of Cables and Wireless Limited to exchange your existing holding of ordinary stock in this company for shares in the new Cables and Wireless Limited, an offer which your directors unanimously and unreservedly recommend you to accept.

It should here be stated that it must not be anticipated that the full dividends on the "A" ordinary shares, or a dividend on the "B" ordinary shares will be paid at the outset, for while we are confident as regards the future of these new undertakings, it must be some time before complete co-ordination, with its resulting economies, can be effected, and before the other benefits which should flow from the combined undertakings can be achieved.

I may say that your directors have given the recommendation their most careful consideration in all its aspects; they believe that it is in your best interests to follow their advice, and they are confident that in due course the future will prove that the advice was sound and worthy of acceptance.

The report was adopted and the resolutions were passed.

EASTERN EXTENSION AUSTRALASIA AND CHINA TELEGRAPH COMPANY, LIMITED.

THE MERGER.

The ninety-fifth ordinary general meeting of this company was held on the 29th ultimo, at the Cannon Street Hotel, London, Mr. J. C. Denison-Pender (the chairman) presiding.

The chairman, in moving the adoption of the report and accounts, said: The reason for the limitation of period of the accounts is that an arrangement was entered into, on the 14th March, 1928, between the Eastern and Associated Telegraph Companies and Marconi's Wireless Telegraph Company, Limited, for the merging of cable and wireless interests. Of this fact, the Imperial Wireless and Cable Conference, which was then sitting, was duly informed. In its report the Conference recommended to the Government the formation of an Imperial Communications Company, which would acquire as from April 1, 1928, the communications assets of the Cable and Marconi Companies: also those of the Government's cable and wireless systems. The recommendation having received Parliamentary sanction, it became incumbent upon your directors to make provision as from the date mentioned for the financial obligations which would arise through the merging of interests of your company with those of Cables and Wireless Limited. You will readily appreciate the fact that the work involved has been very arduous, and that it was not found possible to complete the transaction until a later date than was anticipated. In order to obviate any inconvenience to shareholders, which might have resulted through the non-payment of interim dividends during the transition period, and which action, if followed, might also have caused adverse market fluctuations of your shares, it was decided to pay dividends quarterly as hitherto. You have, therefore, received the usual amounts, at the rate of 10 per cent. per annum, free of tax, on July 15th and October 15th, 1928, and on January 15th and April 15th, 1929, covering the full dividends in respect of the year 1928.

DISTRIBUTION OF DIVIDENDS.

Dating from January 1, 1929, the distribution of dividends to those shareholders assenting to the transfer of their shares to Cables and Wireless Limited will be as stated in the circular letter sent you by the Bank of England on the 17th instant. To non-assenting shareholders, such amount of dividend as is earned on the result of working for the year 1929 will be declared and distributed, but this will not as hitherto be paid quarterly. Whilst our system of cables has, to date, been operated successfully as regards earning powers, and satisfactorily as a national means of communication, we could not ignore the likelihood that, through the increasing competition created by Governments operating cable and radio communications, results might not have been in the future so favourable to cable shareholders. Your directors, therefore, advise your acceptance of the plan for the merger of cable and wireless interests. If the necessary percentage of stockholders and shareholders in the Cable and Wireless Companies agree to exchange their stock or shares for shares in the newly-formed company—Cables and Wireless Limited—this will be the last meeting of the Eastern Extension Company under existing conditions. I am glad to think, however, that, having been in existence for 56 years, its name will be preserved and that it will remain as a separate entity, although no longer operating a telegraph business, but remaining simply as a company holding reserve fund investments and investments in the new Imperial and International Communications Company.

PRIDE IN COMPANY'S RECORD.

One is tempted on an occasion such as this to become reminiscent, and I think we may all look back with pride and admiration at the work which has been accomplished for the benefit of mankind, the commercial and investing public, and the further development of the British Empire. During those years no such success could have been achieved without courage, imagination, resource and prudence. Not we alone, but the community, owe a debt of gratitude to the directors and to the efficient and loyal staff who have administered the company's affairs in the past and who have rendered such service during its history. When we met in July last it was stated that we had hoped to tell the shareholders something definite about the negotiations with the Government and the merger with the Marconi Company, but that as the matter was still in the hands of the Government, we were unable to give any further information beyond a statement appearing in the Press that the Imperial Wireless and Cable Conference had been able to arrive at unanimity in putting forward its recommendations. Shortly after that meeting the Conference issued its report, and you are now well aware of the terms.

The report was unaimously adopted and resolutions making certain alterations in the Articles of Association were approved.

MARCONI'S WIRELESS TELEGRAPH COMPANY, LIMITED.

"CABLES AND WIRELESS" OFFER.

The thirty-first ordinary general meeting of Marconi's Wireless Telegraph Company, Limited, was held, on the 29th ultimo, at the Connaught Rooms, London, the Rt. Hon. Lord Inverforth, P.C. (the chairman) presiding.

The chairman, in moving the adoption of the report and accounts said that the profit for 1927, after payment of debenture interest, and preference dividend, had amounted to £412,971, the estimated comparable figure for 1928 being approximately £408,500. An interim dividend of 20 per cent. had been paid on the ordinary shares in respect of 1927, and a similar dividend for 1928, which dividends would be final, and represented, he thought, a satisfactory result. There was one source of revenue which had proved extremely fruitful during the past few years in which there would, in all probability, be a substantial reduction in the future; that was the company's revenue for royalties for the use of broadcasting patents, which in 1927 had amounted to £251,964, and in 1928 to an estimated figure of £251,368. The explanation was that the principal patents from which the company had drawn such large revenues expired during this year and in 1930, and he considered that the question of the revenue from broadcasting patents was one which must play a considerable part in influencing their decision as to whether they would remain shareholders of the Marconi Company or accept the offer for the exchange of their shares into shares of Cables and Wireless, Limited.

The decision to dispose of the company's interest in what might be called the entertainment side of wireless had been arrived at because the directors were of opinion that the company's principal interest consisted in its wireless traffic services, and in the manufacture and sale of transmitting and receiving stations both for telegraphy and telephony, of broadcasting stations and of wireless apparatus for ships. The directors felt they had acted in the best interests of the shareholders in accepting the offer of the Gramophone Company, and were confident that the result of the transaction would be to strengthen the financial position of the company.

THE MERGER PLAN.

The question which was in the minds of all the shareholders was the merger between their company and the Eastern and Associated Telegraph companies. The report set out in some detail the history of the negotiations which had resulted in the formation of Cables and Wireless, Limited, and since the issue of the report shareholders had received from the Bank of England, on behalf of Cables and Wireless, Limited, an offer to exchange their shares for shares in that great new company. Having regard to the tremendous progress which wireless communication had made during the past three or four years the directors might be asked on what ground they justified their acts in agreeing to a merger of interest with the Cable companies. They had followed the course they did because the Government of this country had decided that the exploitation of the Beam system of wireless telegraphy for Imperial communications was to be taken out of the hands of the company which had invented and developed the system, and was to be made a monopoly of the Post Office.

THE TERMS OF EXCHANGE.

The solution of the problem which the Imperial Conference had evolved would, the board believed, form a landmark in the history of world communications, and the terms which had been offered to the shareholders on behalf of Cables and Wireless, Limited, were such that he felt sure the overwhelming majority of shareholders of all classes would decide to accept. When the reorganisation of the company was begun in 1925, no one would have dreamt it would have been possible to obtain such terms as were now offered. That the directors' action had met with the approval of shareholders was shown by the fact that, without having made any special effort to secure them, the board held proxies for over 1,200,000 shares.

As to the allocation of shares in Cables and Wireless, Limited, amongst the different classes of shareholders, the board were satisfied that the allocation was fair. He also felt it necessary to say that in the opinion of the directors the committee which was urging the £1 shareholders not to accept the scheme was taking on itself a serious responsibility and giving advice which was unsound. Under the merger scheme the whole of the communication assets were being transferred to Imperial and International Communications, Limited, in exchange for shares in that company. The directors were satisfied that the consideration received took full account of the existing and potential value of the assets transferred.

The report and accounts were adopted, and resolutions altering the Articles of Association with a view to carrying out the plan of the Wireless and Cable merger were also approved.

V.O.C. HOLDING COMPANY, LIMITED.

NEGOTIATIONS TOWARDS STABILISING PRODUCTION.

The eighth ordinary annual general meeting of The V.O.C. Holding Co., Limited, was held, on the 28th ultimo, at the Cannon Street Hotel, London, E.C. The Right Hon the Viscount Bearsted, M.C. (chairman of the company) presiding.

The Secretary (Mr W. A. Turner, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, who was received with cheers in moving the adoption of the report and accounts, said that the accounts showed the dividend due from the Concessions Company at £891,601 net; interest received amounted to £94,241 and transfer fees to £529. The net revenue for the year was £971,790, to which had to be added £3,348 brought forward, making a total balance at credit of £975,139. The directors were satisfied that the accounts presented had been drawn up on sound and conservative lines, and recommend the payment of a dividend on both classes of shares of 22½ per cent. less tax, which would absorb £971,678, leaving £3,461 to go forward.

YEAR'S OPERATIONS.

It being a little over three months since he last had the pleasure of addressing the shareholders, there was not a great deal to be added to what had then said, and little to tell them on the 1928 operations beyond the statements made in the directors' report. Reference had been made in the past to results obtained by his company in comparison with those obtained by others. Such comparisons could never be helpful unless made by people fully conversant with the respective conditions of production and methods employed in drawing up the accounts that were being compared. He would say this, however, that he had had a careful study made of the results obtained by their company over the past year, and he was satisfied that as regarded working expenditure, prices obtained and profits realised for the shareholders, they had every reason to feel that the manner in which the company's affairs had been conducted had resulted in profits comparing favourably with other concerns handling similar fields and similar qualities of crude oil.

Production for the first 18 weeks of the current year had been approximately 2,222,000 metric tons, which worked out at the rate of just under 6,500,000 metric tons per annum; the whole of the production had been sold unde the company's four sale of oil agreements.

OIL AT AMBROSIO.

A large area of offset territory had been proved to be productive along the Ambrosio shore line, and owing to the quality of the oil it had been decided to transfer the greater part of the company's drilling equipment from Langunillas. The effect of the change had begun to manifest itself, and the lighter oil production from the La Rosa-Cabimas-Ambrosio field had been increased from under 7,000 tons per day at the end of the last year to well over 8,000 tons per day at the present time.

Apart from the change of drilling programme, the most important step taken by the company had been by way of standardisation of drilling equipment and other materials, by which it was hoped to effect further economies. A second oil line on the Cabimas had been laid, and additional pumps had been installed to increase the loading capacity at that terminal; the new divisional gathering stations in the Ambrosio field, and also at Lagunillas, were under progress of construction. Their small casinghead gasoline plant, originally installed at Lagunillas, was being transferred to Ambrosio, where it was anticipated more profitable operation would be possible owing to the higher gasoline content of the gas in that field.

BOARD'S DIVIDEND POLICY.

It would have been possible for the board to have recommended a dividend of 25 per cent. instead of 22½ per cent. For this company to have paid a 25 per cent. dividend, including taxes, would have necessitated receiving from the Concessions Company in respect of 1928 an additional amount of about £135,000, which would have involved a reduction in the Concessions Company's carry-forward of over £40,000 instead of the increase of over £90,000, as at present.

Several factors had been taken into consideration by the board before the conservative policy in relation to the dividend recommendation had been adopted. The first point was the price of fuel oil; the average posted price of fuel bunkers in New York—the most representative ocean bunkering market in the world—had fallen in 1928 by nearly 30 per cent. as against the 1927 average, while the price for 1929 to date was slightly lower than the 1928 average. The fact that during last year certain of the big oil companies had closed three-year contracts with steamship companies at very low prices prejudiced the future price for fuel oil; many of the contracts had been made on terms which involved the delivery of fuel oil by the sellers at a loss. The future was thus obscure and formed a reason why the company must husband its financial resources.

STABILISATION.

The second point considered was "Stabilisation." In spite of many and continuing attempts to find a basis, there was nothing very definite to tell about the negotiations proceeding for the stabilisation of the production of oil throughout the world. Notwithstanding steadily increasing consumption of oil products over the last few years, untimely and unwise competition between crude oil producers had resulted in a veritable glut of flush production which the markets had been unable to absorb. The folly of the situation had been realised for some time by the heads of the responsible oil companies who know that such production was not permanent, and efforts had been made for some months past to agree to some workable scheme of stabilisation of production on a reasonable basis which would eliminate waste and would provide for the consumer a reasonable price without violent fluctuations.

Many factors had contributed to defer the effective working of a proposal that the 1928 rate of production should be maintained in each region from date of agreement until the end of 1929, but, as the whole idea was economically sound, he hesitated to think that all the efforts made would prove unavailing. As things were, economy in production was largely being ignored because of competitive drilling. the world's supply of oil was being used up at a rate, which was neither necessary nor profitable, and unless better reasons prevailed, they were bound, sooner or later, to suffer from the profligate methods being employed in connection with the production of a commodity which had become a necessity throughout the world, and of which Nature's supply could not be looked upon as unlimited. He referred to the stablisation question because it was most important in connection with their company. If the frenzied rush for production was not moderated, the known oil fields of the world would be forced to give up their supplies prematurely to the prejudice of the future.

The third point the board had considered was the probable future trend of development of the company's properties. Their profit for 1928 had been made in spite of market conditions, as a result of very substantial economies, which had brought down the cost of production. They had about exhausted the possibilities in their campaign for economy, and the time might not be very far off when drilling must go further inland with attendant expenditure for the development of new areas.

The resolution was carried unanimously.

WESTERN TELEGRAPH COMPANY, LIMITED.

OFFER TO SHAREHOLDERS.

An extraordinary general meeting of the Western Telegraph Co., Limited, was held, on the 29th ultimo, at the Cannon Street Hotel, London.

Mr J. C. Denison-Pender (the chairman) said that if the necessary percentage of stockholders and shareholders in the cable and wireless companies agreed to exchange their stock or shares for shares in the newly-formed company, Cables and Wireless, Limited, the present would be the last meeting of the Western Co. under existing conditions. They had recently received from the Bank of England an offer on behalf of Cables and Wireless, Limited, to exchange their existing holding of ordinary shares in the company for shares in the new Cables and Wireless, Limited, an offer which the directors unanimously and unreservedly recommended them to accept. The Western Co. would not in future pay its dividends quarterly under the changed conditions. That was a change which might not be welcomed entirely by any shareholder who did not accept the offer, but those who did would receive proportions of three classes of shares of a nominal value largely in excess of their present nominal holding, and would receive half-yearly in September and March dividends on the preference shares comprised in their new holding, and those would cover a large portion of the present dividends in the case of those who joined the merger.

It must not be anticipated that the full dividends of the "A" ordinary shares, or a dividend on the "B" ordinary shares, would be paid at the outset, for it must be some time before complete co-ordination, with its resulting economies, could be effected.

In Imperial and International Communications, Limited, comprising the cables companies, the Marconi Co., the Government Beam, and cables taken over from the Government, they had seen the fulfilment of that idea of co-operation between wireless and cables which they had heard advanced more than once at meetings of the company.

The resolutions before the meeting were for the purpose of making certain alterations in the company's statutes in order to conform with the recommendations of the Imperial Wireless and Cables Conference. They established that the company should always be under British control and ensured that the predominating shareholding interests in the company should remain British.

The resolutions were approved.

IMPERIAL CONTINENTAL GAS ASSOCIATION.
SUCCESSFUL YEAR'S RESULTS.
INCREASE OF CAPITAL APPROVED.

The 181st ordinary general meeting of the Imperial Continental Gas Association was held, on the 29th ultimo, at Winchester House, Old Broad Street, London.

Colonel H. Le Roy-Lewis, C.B., C.M.G., D.S.O. (the chairman), said that when they had met at the end of February they were assembled to consider a bill to co-ordinate and amend the association's powers. That bill had passed through all its Parliamentary stages, with minor amendments, in almost record time, and had received the Royal Assent on May 10th. Briefly, the purpose of the Act was to co-ordinate the association's powers, which were scattered throughout a series of enactments dating from 1845; to define those powers on many points, the interpretation of which had been open to doubt; and to bring them up to date, that was to say, into line with those which an ordinary limited liability company would enjoy. The first effects of their new Act were already apparent in the simpler procedure for summoning proprietors to the meeting and in the proposals submitted for increasing the capital.

Under the new Act no limit was fixed to the amount of capital which they might raise subject to the consent of the proprietors, and they therefore enjoyed a power which Parliament had but rarely granted. Under their old Acts a definite and somewhat narrow limit had been fixed to the amount of the capital they were authorised to raise. When their fixed capital powers were exhausted it was necessary to apply on each occasion to Parliament for a fresh Act to increase their authorised capital, and in normal times such an Act would take from twelve to eighteen months to obtain. Now, if it was deemed advisable to raise the authorised capital, all that was necessary was that the proprietors in general meeting should pass a resolution to that effect. The important point was, however, that, if they wished to undertake fresh business, they had not to resort to the temporary, and perhaps expensive, expedient of borrowing the necessary capital, while awaiting the sanction of Parliament to an increase in their authorised capital.

NEW CAPITAL PROPOSALS.

They were submitting to the proprietors at that meeting a proposal to raise the nominal capital from £1,976,000, the amount now actually issued, to £3,000,000 by the creation of £1,024,000 of fresh capital, of which £524,000 was to be offered for early subscription at the price of 200 per cent., so bringing the issued capital up to £2,500,000. He had heard criticism passed on the board's proposals to the effect that capital ought to be returned to the proprietors rather than fresh capital created, or, alternatively, that a free capital bonus ought to be distributed. The facts of the case were that for some time past the association had been overspent on capital account, as all expanding enterprises tended to be. Their associated companies had big programmes in hand, and the association had been forced to finance those by bank loans and by the sale of investments. That position ought to be regularised as soon as possible. They could employ with advantage the £1,048,000 of fresh money which the proprietors were invited to subscribe. He would prefer to ask them for that fresh capital rather than submit proposals for returning capital to the proprietors. The former course denoted expansion, the latter course might well indicate stagnation.

To the critic who urged that a free capital bonus ought to be distributed, might he be permitted to point out that the profits would remain the same, and that they would merely have paid stamp duty for the privilege of increasing the number of divisors of that profit. The only way possible to justify the issue of a capital bonus would be to write up the book value of some of their investments, which course might, perhaps, be permissible if they considered the present market values, but would be adopting the policy of the bird-in-the-bush, a fertile source of disillusionment in their time, and one which the board would never prefer to the solid benefits of the bird-in-the-hand. There might, however, be a feeling among the proprietors that the stock had, owing to its high price, become too heavy. If so, the directors would be prepared to consider the question of approaching the Stock Exchange to quote their stocks in £1 units.

TERMS OF ISSUE.

If the proposals were approved, proprietors would receive their letters of rights to that £524,000 of new stock on June 18th, together with their dividend warrants. Of the amount due, 10 per cent. would be payable on application, a further 15 per cent. on allotment, and three instalments of 25 per cent. each on October 15th, January 15th and March 31st next. Each £100 of existing stock would entitle the holder to apply for £26 10s. of new stock, and *pro rata*. In addition to his fixed right, each stockholder could apply for an allotment of stock not taken up. As the stock could only be registered in multiples of £1, fractions of £1 would not be allotted to the proprietors, but would be dealt with by the board in such a way as to give the staff an opportunity to make an investment in the association. Intercalary interest would be paid on the instalments at the rate of 4½ per cent. per annum. The new stock would obviously not entitle the holder to any rights, whether of a capital, dividend, or bonus nature, until after March 31, 1930, when it became fully paid and would rank *pari passu* in all respects with the existing stock. It was their intention to close their accounts on March 31, 1930, in order to enable the dividends of their subsidiary companies, which would be declared after December 31st, to be brought into their next accounts. They would, therefore, have a fifteen months' year, but, after next year, they would settle down to twelve months, always closing on March 31st.

The accounts were presented in a different form. The changed method of presentation was a natural consequence of the evolution of the association from an operating into a holding company.

FORMATION OF LOCAL COMPANIES.

It had been recognised as a governing principle by the board of the association before the war that the operation of public utility services abroad as direct branch establishments of an English company had become an anachronism, and that while an organisation such as the association had built up might have its uses in the past, yet now local capital and local interests ought to be given the opportunity to associate themselves with their undertakings. If they did not of their own initiative recognise the changed conditions under which the world lived, recognition might be forced upon them in a manner not desirable in the shareholders' interests. Some shareholders might remember that in deference to that feeling the following changes had been made before the war. Their Hungarian interests had been incorporated in a Hungarian company; the Compagnie Continentale du Gaz had been formed to absorb their French undertaking; their station at Frankfort had been constituted as a German company in 1909, and at the time of the outbreak of war steps had been about to be taken to convert their Berlin station into a German company. No similar measures had been taken in regard to their Belgian stations, largely because everything could not be done at once. After the war the reasons for carrying through that programme to completion had been far greater, owing to the strong feelings of nationalism which war engendered; while exchanges had been depreciating, it was obviously necessary to stay their hand, but now that objection had disappeared the board had continued the pre-war policy and converted their Belgian enterprises into local companies.

They had every reason to believe that that step had met with general approval in Belgium, and if that was the case a consolidation of their interests would ensue. It would be their policy to allow their Belgian friends to take up a substantial interest in those companies and to seek to create a real community of interest. In consequence, the association was assuming more the character of a holding company, and various items appearing in the old form of accounts had had to be altered or to disappear.

The chairman then dealt in considerable detail with the various items in the accounts, explaining the changes that had taken place. He pointed out that the net revenue from stations showed the satisfactory increase of £154,000 compared with last year. The increase was chiefly due to improved trading, partly the result of the expansion of their business, and also of the more normal economic conditions under which they were now working. The year had also benefited from the fact that in order to prepare the way for the formation of their subsidiary companies in Belgium there had been an adjustment of meter readings so as to start completely clear on January 1 of the current year. That adjustment had been to the advantage of the 1928 accounts, and naturally would not recur. The item of net revenue from stations would probably be of very small importance in their next accounts, for as those stations became subsidiary companies dividends would take the place of stations' revenue.

The balancing item of profit and loss was £428,466, after providing for the payment of the interim dividend at the rate of 5 per cent. They proposed allocating £70,000 to general and specific reserve and the payment of a final dividend on the capital stock of 10 per cent, less income tax, making 15 per cent. for the year, and a profit participating bonus to the staff of £2,371. That would leave a balance to be carried forward of £198,000, or an increase of £78,000.

The resolution was carried unanimously, and the increase of capital referred to by the chairman was approved.

CROWN MINES, LIMITED.
(INCORPORATED IN THE UNION OF SOUTH AFRICA.)
TWENTY YEARS' RECORD.—IMPROVED ORE RESERVES.

The thirty-third ordinary general meeting of shareholders was held in Johannesburg, on April 29th, 1929.

The chairman (Dr Samuel Evans) in the course of his speech said: This is the twentieth annual meeting of the Crown Mines shareholders at which I have occupied the chair, and it may perhaps be of interest to shareholders if, before dealing with the reports and accounts which are before us, I briefly review what has been accomplished since the Crown Mines was established on July 1st, 1909. The first annual meeting was held on March 8, 1910, and dealt with the reports and accounts for the year 1909, covering the work of the Crown Deep during the first half and of the amalgamated company during the second half of that year. I find that, of the 4,976 shareholders registered at the end of last year, 1,167 were on the register in 1909. The number of shareholders registered in South Africa has increased from 453 in 1909 to 1,176 at the end of December last. The average number of shares held by each registered shareholder (exclusive of the holdings of the Rand Mines Limited, and the Central Mining and Investment Corporation Limited), were 107 in 1909 and 134 at the end of last year. In June, 1909, the working mines included in the amalgamation, Crown Deep, Langlaagte Deep, Crown Reef and Robinson Central Deep, were employing 1,200 Europeans and 8,300 coloured workers. We had in our employ last year an average of 2,103 Europeans and 15,738 coloured workers. In 1909, the ore brought to the surface was from an average vertical depth of 1,300 feet. Last year we were stoping at an average vertical depth of 3,386 feet. The vertical depth of the deepest level was 1,700 feet in July, 1909 To day we are down to a vertical depth of 6,500 feet.

At the time of the amalgamation, the mining ground of the Crown Mines totalled 2,216·6 claims, of which 237·3 claims had been exhausted or were north of the outcrop, and 1,979·3 claims were intact south of the outcrop. The company has since bought the undermining rights of 1,119·6 reef-bearing claims at a cost of £539,925, or £480 per claim. 893·7 Main Reef Leader claims and 715·8 South Reef claims have been exhausted or proved unpayable since the amalgamation up to the end of December last, and the company had at the beginning of this year 2,210 intact Main Reef Leader claims and 2,386 South Reef claims.

It is interesting to note that the total quantity of gold—19,651,506 fine ounces—produced in a little over forty years from the area now owned by the Crown Mines, was almost equal to the total gold production of the world—20,488,552 fine ounces—in the first forty years of the nineteenth century, 1801–1840.

THE ACCOUNTS.

I propose now to deal with the reports and the accounts which are submitted for your approval to-day. I think you will agree that they show on the whole a satisfactory state of affairs, although a lower dividend was paid last year. The reduction in our distributable profits was due partly to the extra capital expenditure incurred and partly to the erratic and inadequate supply of native labour. Notwithstanding the heavy capital expenditure, we would have been in a position to pay a dividend above the average of recent years had we had throughout the year a sufficient number of native workers. As you will gather from the reports, there are several directions in which the results of last year's operation constitute records, but what is most important and encouraging, is the fact that our record development of 99,677 feet over a wide area and largely in the deeper portions of the mine below the South Rand Dyke, resulted in an addition of 737,510 tons to our ore reserves and an improvement of 0·2 dwt. per ton in the value of our total ore reserves, which now stand at 10,962,250 tons, having an estimated average value of 6·69 dwts. over a stoping width of 46·4 inches.

Our revenue totalled £3,668,195 as compared with £3,556,679 in 1927. The increase in the capital expenditure—£277,311 as compared with £243,813 in 1927—more than accounts for the lower net profits. Excluding capital expenditure, the net profits for the two years were: 1927, £812,019; 1928, £816,988.

It is estimated that the capital expenditure this year will amount to £230,000 or £47,000 less than last year's figures. The work to be done this year and charged to capital account includes the sinking and equipment of No. 16A and No. 17 shafts, compound additions and pumping plant on 41 level. A large portion of the capital expenditure in recent years has been spent on the sinking and equipment of vertical shafts, which are approaching completion.

Your directors have been subjected to some criticism for not declaring a larger dividend last year. Under the circumstances, and particularly having regard to the uncertainty as to the labour position, I consider that we were justified in what we did. Moreover the net cash carried forward at the end of the year, after allowing for all liabilities, was £89,209, as compared with an average of £141,414 in the previous seven years.

WORKING COSTS.

The working costs last year show an increase of 45 per cent. as compared with 1914, and of 3·8 per cent. as compared with 1927. The increase last year, as compared with 1914, is largely due to the higher cost of European labour, the greater depth of the workings, the decrease in stoping widths from 67 inches in 1914 to 45 inches in 1928, and the greater development footage. White labour shows an increase of £334,628, of which £20,461 are due to increased development. The wage paid per European employed was £80 per annum higher than in 1914, an increase of 26 per cent.

The lower output last year is probably fully accounted for by the greater depth of the workings and the decreased stoping widths. The mine has suffered from a shortage of native labour throughout the year. The tonnage milled was 2,611,000, which is equal to the previous record, but owing to the improvements and the additions which have been made to the plant, it would have been possible to mill a further 150,000 tons had labour been available. Further additions have recently been made to the capacity of our plants, which are now in a position to treat 247,000 tons per month whenever the necessary labour is available. There is no dearth of stope faces, and the mine is capable of producing a much greater quantity of ore per month than has ever been the case before.

CURRENT YEAR'S RESULTS.

The results obtained in the first quarter of this year compared with those of the same period in 1928 are as follows:—

	1928.	1929.
Fathomage broken	47,660	48,834
Tons mined	719,739	704,456
Tons milled	617,000	613,000
Percentage of waste sorted	14·0	13·3
Yield—		
Total—fine ozs.	201,857	204,142
Per ton milled, dwts.	6·543	6·660
Value of yield—		
Total, including silver and osmiridium	£858,781	£868,446
Per ton milled	27s. 10·0d.	28s. 4·0d.
Working costs—		
Total	£653,534	£638,444
Per ton milled	21s. 2·2d.	20s. 10·0d.
Working profit—		
Total	£205,247	£230,002
Per ton milled	6s. 7·8d.	7s. 6·0d.

The improvement in profit for the first quarter of the current year, compared with the first quarter of last year, is due largely to a reduction in development footage, which has resulted in lower costs, and an improvement in the yield. The yield has also been improved by an increase in underground sorting, which has been facilitated by the adoption of the reef packing or shrinkage method of stoping throughout the mine. The waste sorted is used to support the hanging wall and a saving in the amount of timber consumed underground has been effected. Good progress has been made in our main shafts during the current year. At the end of March, No. 16A shaft had reached a depth of 1,766 feet below the 19th level, and had to be sunk a further depth of 1,796 feet. This sinking will probably be completed about the middle of next year, after which the shaft equipment will take nearly another year to complete. No. 17 shaft had reached a depth of 2,573 feet at the end of March, and had a further 1,283 feet to go. It is now in normal quartzite, and if no further serious difficulties are encountered, it should be completed by the end of the year. Before the subvertical shaft sinking can be started, it will be necessary to equip No. 17 shaft with guides and cages and to excavate engine chambers and erect engines for sinking.

The following table shows the results of our development operations for the first quarter of this year, as compared with those of the same period in 1928:—

	1928.	1929.
South Reef:		
Footage sampled	7,450	2,740
Payable footage	5,080	1,510
Average value of payable footage, inch-dwts.	322	314
Main Reef Leader:		
Footage sampled	10,160	9,280
Payable footage	7,590	6,140
Average value of payable footage, inch-dwts.	352	416
Total development footage	27,234	20,117

The reduction in the development footage on South Reef is partly due to a large portion of the South Reef development on the Western Section above the 26th level being completed, and does not indicate any alteration in policy. There is no change of any note in Main Reef Leader development; the values of the ore exposed in the bottom levels of the mine are about the same average as in recent years. As I have indicated, we have every reason to be satisfied with our ore reserves.

The estimated tonnage of payable ore developed during 1928 was 2,862,323, an increase of 894,394 tons in the 1927 figures.

GOLD POSITION.

The position of gold in the world continues to improve. In the past 2½ years there have been serious departures from the self-regulating gold standard recommended by Drs Kemmerer and Vissering, and these departures have been brought about without public enquiry or any reference to the Union Parliament. In the first place, the coinage of half-sovereigns at the Pretoria Mint was stopped about the end of 1926; later, an embargo was imposed on the export of half-sovereigns, and, in the second half of 1927, impediments were placed in the way of supplying the public with half-sovereigns. We have repeatedly applied for half-sovereigns to pay our natives, but are informed that the Reserve Bank declines to supply them in exchange for its notes. Apparently the Union Parliament, and the public generally, knew nothing of this interference with the minting, the export and the circulation of half-sovereigns in South Africa.

It is hardly necessary for me to point out that were the policy which has been pursued in the case of half-sovereigns carried to its logical conclusion, and the coinage of gold at Pretoria Mint entirely stopped, the effect on the gold mining and other South African industries might be disastrous, apart altogether from the injustice to the natives which the abandonment of gold coins would involve. I have dealt at some length with this subject, as it appears to me that Parliament and the public have not yet realised its importance and the urgent necessity of freeing our currency from constant tampering.

The report and accounts were unanimously adopted.

GRESHAM TRUST LIMITED.

HIGHLY SATISFACTORY RESULTS.

The fourth annual general meeting of the Gresham Trust, Ltd., was held on 24th ultimo, at the Cannon Street Hotel, London.

Sir Arthur Wheeler, Bt., D.L., J.P., who presided, said that the results were highly satisfactory. The net profit amounted to £92,746, and the balance available for distribution was £103,775. The board suggested a conservative and adequate allocation; after paying the cumulative dividend of 6 per cent. they proposed a further 4 per cent. for the participating preference shares, making 10 per cent. in all, and 32 per cent. for the ordinary shares; and they recommended that £20,000 should be added to reserve, carrying forward £27,775 to the new year.

The year under review had been interesting because of the large amount of business available, and perplexing because of the difficulty of making wise decisions. The earlier portion of the company's year had witnessed a period of wide speculation and active markets, giving reason for wondering if there were any limit to the purse of the speculating and investing public. Issues were over-subscribed day after day, and there was every evidence that the public were willing to find money for the most venturesome propositions.

The chief difficulty had been to sort the wheat from the chaff, in which work a company such as theirs had an enormous advantage over the individual investor. Before a decision was reached in their case, the business under review had to pass through a sieve of investigation by professional experts, such as chartered accountants and solicitors, as well as the highly skilled members of the Trust's own permanent staff. In addition, every member of the board put in a great deal of time on behalf of the company. When the necessary data had been collected and analysed he proposition was placed before the board by the managing director, with this recommendations. By starting off from that basis shareholders would appreciate that practically everything possible was done to ensure success in whatever investment the board made or in whatever propositions they handled. He would not attempt to forecast what the coming year had in store, but unless something exceptionally unforeseen arose, he was satisfied that a year hence the board would be able to come before the shareholders with a satisfactory account of their stewardship.

The report was unanimously adopted, and the directors were authorised to borrow for the purposes of the company up to an amount not exceeding the sum of £1,000,000.

BRITISH RUBBER ESTATES OF JAVA, LIMITED.

CROP RESULTS AND PROSPECTS.

The nineteenth ordinary general meeting of the British Rubber Estates of Java, Limited, was held on the 27th ultimo, at 2, 3, and 4 Idol Lane, London, E.C.

Mr Stanlake Lee (the chairman) presided, and in the course of his speech said:—The net proceeds of our crops including unsold balances at December 31st last amounted to £196,588, of which 18 per cent. Our revenue from rubber has been a great disappointment. When the amalgamation proposals were put before you in the beginning of last year, the price of rubber was in the neighbourhood of 1s. 8d. per lb. for prime qualities, and the price we took for our calculations was 1s. 7¼d. per lb. for all grades. You all know what happened, however, and instead of selling our rubber crop at an average of over 1s. 7¼d. per lb. we had to be content with 10¼d. per lb., or 9d. per lb. less than that on which our calculations were based. On our crop of 2,057,746 lb. that 9d. represents £77,165, and if you add that amount to the balance of our profit and loss account you will find that the estimate of profit given by us in the memorandum, viz., £118,790, was a very conservative one.

Coffee in 1928 continued to be the faithful friend it has proved to be in the past, and we have every reason to expect that in 1929 results will be even better, as we hope for an equally large crop and our forward sales are at somewhat higher prices than those for 1928.

Tea is a new crop with us, and I am happy to assure you that your directors are satisfied that their decision to add this culture to those of rubber and coffee as principal crops has been amply justified. Crop per acre is satisfactory, and as all the expenditure on extra cultivation will be finished this year, and also our building programme will have been completed, we look forward to some prosperous years.

The total planted area is 12,532 acres, of which 9,606 are mature and yielding crops. The balance-sheet value of that planted area and its equipment is £735,850, which gives a cost per planted acre of £58 14s. 4d., a figure considerably below what is now required to open up, plant, and bring areas to maturity. The 9,606 acres which are mature have earned a profit that represents about £6 13s. per acre, or roughly just under 11½ per cent. gross on our cost price of £58 14s. 4d. per acre.

The report was unanimously adopted.

BARCELONA AND SEVILLE EXHIBITIONS, 1929.

¶ The Anglo-South American Bank has branches in seven cities in Spain—including Barcelona and Seville—as well as Agents throughout the Peninsula.

¶ It is therefore in a unique position to provide complete financial services to intending visitors to the present Exhibitions in Spain.

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST, LONDON, EC2

W. J. BUSH AND COMPANY, LIMITED.

SATISFACTORY YEAR—IMPORTANCE OF SAFEGUARDING ACT.

The thirty-second annual general meeting of the shareholders of W. J. Bush and Co., Limited, was held, on the 24th ultimo, at the Great Eastern Hotel, London, Mr J. M. Bush (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Although there was no general improvement in trade activity during the past year, our turnover was considerably larger and the increase in our net profits was in still greater proportion. This gratifying result may be attributed to various causes. Since the year 1921 we have left, including the amount we now propose to put to general reserve, no less than £205,000 of undistributed profit in the business. In the same period we have written off £62,497 to depreciation of plant, fittings, &c. This has enabled us to modernise our plant and to take up the manufacture of additional products. Our net profit also greatly benefited by the great attention that has been devoted to economy in every direction.

The above figures give some indication of the financial effort we have made to build up a fine chemical industry in this country under the encouragement of the Safeguarding of Industries Act. The discontinuance of the Act would certainly retard the future progress of this branch of chemical manufacture. We have still large capital commitments in respect to factory extensions in this country and abroad, and it is for this reason we propose again to leave a large sum of undivided profit in the business.

Our trade investments show a tendency to grow, and, as our auditors are not in a position to certify as to the correctness of the value placed on shares under this heading, shareholders will be interested to learn that the proportion of earnings equivalent to the company's shareholding in the various companies amounted last year to over 24 per cent. of the value placed upon these assets in the balance sheet. The profit, of course, was not all distributed.

To the net profit of £87,492 11s. 6d. we have to add the amount of £61,624 8s. 1d. brought forward, and to deduct the amount required for preference dividends, £6,250, leaving £142,866 19s. 7d. for disposal. We make the following recommendations:—The payment of a final dividend of 11 per cent. on the ordinary shares making, with the interim dividend already paid, 15 per cent. for the year, the increase of our general reserve by £45,000, which will then stand at £200,000, and the carrying forward of a balance of £60,356 19s. 7d.

The resolution was carried unanimously.

PROVINCE OF BUENOS AYRES WATERWORKS COMPANY, LIMITED.

BUSY AND PROGRESSIVE YEAR.

The twentieth ordinary general meeting of the Province of Buenos Ayres Waterworks Company, Limited, was held, on the 27th ultimo, at Winchester House, London, Mr P. A. Cooper (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: In the past year the most important event in Argentina has been the election, for a second term, as President of the Republic, of that distinguished statesman, Dr. Hipolito Irigoyen. We are glad to think that one of his objects will be to secure rapid progress in public works, and that, provided that those in charge of these services show a proper regard of their duties, they may count upon his encouragement and support. The directors recommend the payment of a dividend of 6 per cent., free of tax. We have had another busy year and a progressive one.

The revision of the rent lists has allowed us to make extensions which otherwise we could not have considered. Many improvements and developments have been planned and executed. The most important is a new super pumping station which incorporates many novel features, and will, when completed, be the largest and best equipped station of the kind in existence. The construction of this great unit has only been made possible by the action of the authorities, who have granted us the use of a strip of land by the side of the Provincial Railway. This land, and important additions which we have bought, will provide wells for many years ahead. We hope the first section of this new station will be in use before the next Argentine summer, and we look forward confidently to being able to expand our capacity as necessity arises. We had serious difficulties to contend with in our rapidly expanding districts, but in spite of these it is always our earnest desire to meet all requirements. We have greatly extended and improved our service.

With a sympathetic and constructive attitude on the part of the public authorities, and energy and skill on ours, we will not only be able to serve our present districts well, but be ready to widen our sphere of action into other districts and other services.

The report was unanimously adopted, and the increase of the capital to £1,500,000 by the creation of 500,000 new shares of £1 each approved.

NITRATE PRODUCERS' STEAMSHIP COMPANY, LIMITED.

POSITION AND PROSPECTS OF SHIPPING INDUSTRY.

The annual general meeting of the Nitrate Producers' Steamship Co., Limited, was held, on the 24th ultimo, at 20 Billiter Buildings, London, E.C.

Sir John Latta, Bt. (chairman of the company) presided.

The Secretary (Mr James A. Walker) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, after paying a tribute to the late Mr Blane, said:—During the closing months of last year an encouraging improvement in the freight market led shipowners to hope that the long period of depression was disappearing. That sanguine view resulted in the placing of orders for new tonnage to an inordinate extent. Rates were steadily recovering from the glut of vessels built under the impetus of Trade Facilities loans. Unfortunately, that ill-advised innovation, the Trade Facilities Act, is being actively copied in foreign countries, and may be indefinitely continued. The inducement, therefore, to create still further unwanted tonnage persists, and already the improvement mentioned has been checked.

Our new Diesel vessel, Anglo Canadian, fitted with Doxford engines, has given every satisfaction; her efficiency and general adaptability have surprised us. There is less time lost in deviating for and loading fuel, while the baneful consequences of striking coal of poor quality, so frequent with steamers, is avoided. Notwithstanding these and other advantages, we find steamers, on present capital values, more profitable for our purposes. We committed the Anglo Canadian to a successful round voyage involving identically the same service in all departments as had just been fulfilled by the Anglo Australian.

THE OUTLOOK.

As to the outlook, this is hardly the moment for prophecy. We are approaching what may prove the most momentous General Election for generations. No analysis, therefore, can be complete that ignores its resultant possibilities. With the rise of Socialism and the pseudo-democratic idealism which it has engendered, our ability to compete in world markets has steadily diminished, while there has been a corresponding increase in unemployment.

As tramp shipowners we have observed that Continental consumers and manufacturers enjoy a great advantage from the lower freights at which shipowners can profitably carry, among other things, foodstuffs and raw materials to their ports, owing to the operating expenses in the process being much less than corresponding charges at British ports, due to a more sane and sensible use of labour. Living on an island, the liquidity of labour in our arterial and key industries is vital to our existence.

In conclusion, the Chairman said: I have the pleasure to propose the adoption of the report and accounts; that a dividend of 7½ per cent. per annum for the final six months of the financial year, together with a bonus of 2½ per cent., both free of income tax, be now paid; that £55,000 be placed to reserve for depreciation, etc.; and that £15,485 1s. be carried to next year's account.

Mr Thomas S. Short, J.P., seconded the resolution, which was carried unanimously.

THE CASE FOR FREE TRADE

A pamphlet of 56 pages reprinted from "The Economist."

The fundamental arguments against Trade Restriction are set out; and the claims of "Safeguarders" examined.

INTERNATIONAL TELEPHONE and TELEGRAPH CORPORATION.

ANNUAL REPORT, 1928.

NEW YORK, MAY 20th, 1929.

To the STOCKHOLDERS:

In view of the continuing extension of the activities of your Corporation, as well as the expanding list of stockholders in the United States and other countries, it is desirable that this report should cover not only the activities and operations for the year 1928 and succeeding months, but generally the development of the International Corporation and again review its purposes and policies.

With the association during 1928 of the Mackay System which includes Postal Telegraph, Commercial Cables, Commercial Pacific Cables and Mackay Radio, with the previous association in 1927 of All America Cables, there was welded together an international communications system with a nationwide telegraph service in the United States, and cables extending to the West Indies, Central and South America, certain principal countries of Europe and the Far East, and serving through connecting telegraph and cable services Canada, Mexico and practically all other countries of the world.

The development of national telephone systems, by the installation of modern equipment as well as by the most advanced engineering and commercial practices, should be of inestimable value in the economic and social development of the countries served. Through interconnection with our communications system, these countries will be further benefited and will in turn add to the comprehensive services of the International System.

The establishment, wherever practicable, of national manufacturing plants for the production of telephone, telegraph and wireless apparatus, cables and accessories, will meet the demands of governments and companies which, by custom or regulations, require national manufacture. The association of these national plants, with the laboratories and other services of the international system, will assure the highest quality and efficiency in their products.

The International Telephone and Telegraph Corporation was not organised with a single profit-making purpose to itself, nor with the desire of imposing American practices in its foreign activities. There appeared to be a fruitful field of service to be rendered in bringing together under one general organisation electrical communications systems, and the extension by the parent company to the associated companies of the technical and financial facilities and direction that might be needed for their intensive and efficient development. The best American practices have been suggested, but never imposed. On the contrary, the management has always been ready and quick to adjust American practices to other national conditions and to adopt such local practices as were conducive to the successful development of the various entities. The combined and co-operative effort of the associated companies of the international System is daily justifying the purposes and policies of your corporation.

The association of the several enterprises now forming part of the international system, in addition to the technical, managerial and financial advantages, should result in appreciable economies and general efficiency throughout the system. In the initial periods of these associations, however, economies are not immediately realised, due in part to duplications which must of necessity be gradually eliminated. It is also well to bear in mind that, particularly during the initial development period of the international system and even in its successive periods of development, large investments are made and will be carried without immediate return of income on such investments, or with inadequate return on investments in companies which are undergoing reorganisation and expansion.

It is generally recognised that wire and wireless communications services are complementary to each other, and the advantage of their association is manifest as it permits of the most efficient and economical use of both wire and wireless in their rsepective fields. In Great Britain, France, Germany and Italy unification of the cable and wireless services, through consolidation or joint working agreements, has been, or is being, effected.

The desirability of consolidating the radio communications services of the Radio Corporation of America with the communications services of the International Telephone and Telegraph Corporation has been recognised by both corporations, and a tentative plan has been agreed upon under which the communications services of the Radio Corporation of America may be acquired by the International Corporation when the law permits.

An agreement was signed on December 31, 1928, between All America Cables, Incorporated, and the Compagnie Française des Câbles Télégraphiques (Paris), which provides for the operation during a twelve-year period by All America Cables of the United States and Haiti Telegraph and Cable Co. and the French Antilles Cable System connecting Cuba, Haiti, Santo Domingo, Porto Rico, St. Thomas, Curaçao and Venezuela, which cables total some 3,200 nautical miles.

On December 11, 1928, an offer was made through a banking syndicate for the acquisition of the ordinary (common) shares of the United River Plate Telephone Co., Limited, the shareholders of that company having been given the opportunity to deposit their shares and to receive in payment either part cash and part stock of the International Corporation, or all cash, and the operation was completed to the satisfaction of all. At this date the International Corporation has acquired 99.9 per cent. of the outstanding ordinary (common) shares of that company.

One of the gratifying results of the acquisition of the United River Plate Telephone Co., Limited, was the increase in the list of British stockholders of the International Telephone and Telegraph Corporation. Temporary certificates were issued to the shareholders of the United River Plate Telephone Co., Limited, who deposited their shares against payment, part in cash and part in stock of the International Corporation, and it is expected that, when the definitive stock certificates are issued, there will be over 1,300 new British holders of the stock of your corporation. The stock of the International Telephone and Telegraph Corporation is listed on the London Stock Exchange.

The United River Plate Telephone Co., Limited, owns and operates the largest telephone system in South America. As of December 31, 1928, the company had 194,566 telephones in service in the Argentine. Of this number, there were 131,154 telephones in Buenos Aires, the capital of Argentina, which has a population of over 2,000,000 inhabitants.

There was acquired by your corporation in July, 1928, the controlling stock interest in Creed and Co., Limited, of Croydon, England. This company, which was established in the year 1912, is engaged in the development and manufacture of automatic printer telegraph equipment and accessories for use on land lines and submarine telegraph cables as well as the manufacture of apparatus and equipment for manually operated telegraph circuits. Due to the development work of Mr F. G. Creed, the founder, and the high quality of their equipment, their apparatus has been distributed throughout the world. Mr Creed, who will continue as chairman of Creed and Co., Limited, will at the same time carry on his development work for the company.

The International Standard Electric Corporation during the current year has acquired a substantial interest in the Ferdinand Schuchhardt Berliner Fernsprech-und Telegraphenwerk, A. G. (telephone and telegraph apparatus factory), located at Berlin. It is planned in co-operation with German industrialists and bankers to develop this and other factories in Germany in order to provide for a larger national distribution of telephone and telegraph equipment as well as to develop an export trade in such equipment.

The Postal Telegraph and Cable Corporation was organised May 18, 1928, to acquire the interests of The Mackay Companies, which include the ownership or operation of Commercial Cables from the United States and Canada to Great Britain and Ireland, France and Cuba, aggregating approximately 27,000 nautical miles; Commercial Pacific Cables from San Francisco to the Hawaiian Islands, Midway Island, Island of Guam, Philippine Islands, and Shanghai, with a branch connecting at the Bonin Islands with the Japanese Government cable to Japan, with a total of slightly over 10,000 nautical miles; Postal Telegraph, with its nationwide telegraph service throughout the United States; and Mackay Radio, with a point-to-point wireless telegraph system between certain principal cities in California, Washington and Oregon and a Pacific ship-to-shore wireless service.

The Postal Telegraph and Cable Corporation, of which the common stock is all held by the International Corporation, has acquired to date through the exchange of securities 98 per cent. of the common shares and 95 per cent. of the preferred shares of The Mackay Companies as well as all but $200,000 of the total of $20,000,000 of 4 per cent. bonds and 4 per cent. debenture stock of the Commercial Cable Co.

All American Cables, Incorporated, which became associated in 1927 with the International Corporation, owns and operates cables and connecting land lines between North America, the West Indies, Central and South America, and its system comprises nearly 27,000 nautical miles of cables and connecting land lines. Its cables and land lines extend to 23 countries and islands and through connecting companies practically every island in the West Indies and all countries of Central and South America are served by this system.

The Cuban American Telephone and Telegraph Co., which is jointly owned by the American Telephone and Telegraph Co. and the International Telephone and Telegraph Corporation, and which owns and operates the three Key West-Havana cables, reported for the year 1928 a satisfactory increase in telephone traffic and, in addition, the carrier telegraph equipment installed on these cables was remodelled and six new channels added so that there are now available nine carrier telegraph channels on the three cables.

The Trans-Andean telephone service connecting Chile with the Argentine and Uruguay was successfully inaugurated by the Presidents of the three countries on June 22nd, 1928. The traffic between the Argentine, Uruguay and Chile will be further increased by the connection of this service with the United River Plate Telephone Co.'s system. Subject to necessary agreements with the Governments concerned and with connecting companies, it is planned to extend this international long distance service through southern Brazil to Sao Paulo and Rio de Janeiro.

During the year 1928 the International Corporation's associated systems in Spain, Cuba and Mexico were placed in communication with each other through the connecting services of the French Post Office, the British Post Office and the American Telephone and Telegraph Co. Telephone service between Spain and the United States was inaugurated on October 13, 1928, by His Majesty King Alfonso XIII and President Coolidge; and with Cuba, the service was inaugurated by His Majesty the King and President Machado on November 13, 1928. Telephone service between Spain and Mexico was established on November 30, 1928.

The International Radio Co. of Argentina, an associated company of International Corporation, is installing a wireless telephone station at Buenos Aires for service with Spain, which it plans to inaugurate in the early fall of this year. This service will be available to the United River Plate Telephone system and the other associated telephone systems in the adjoining countries.

The International Radio Co. of Argentina is also installing a station at Buenos Aires for service with the United States of America and it is planned to inaugurate this service shortly after the end of the current year. The Buenos Aires station, which will connect with the Argentine telephone system and other associated telephone systems, will communicate in the United States with the wireless telephone station and telephone system of the American Telephone and Telegraph Co.

The International Radio Co. of Chile, another associated company, has ordered the equipment for its station at Santiago, Chile, and will establish as promptly as practicable wireless telephone service with Europe and the United States.

The International Standard Electric Corporation has installed on a transatlantic liner short-wave wireless telephone equipment, which will be put under the severest tests with the view of developing ship-to-ship and ship-to-shore commercial wireless telephone service. This should make it possible for travellers to be in constant touch with one or more shore stations as well as with other ship stations. The commercial application of this service will be actively developed.

COMMUNICATIONS COMPANIES.

The Postal Telegraph and Cable Corporation, through its associated companies, Postal Telegraph, Commercial Cables and Mackay Radio, handled an increasing volume of traffic.

Postal telegraph is a very important part of the communication system of the International Corporation, and all necessary steps are being taken to develop its service within the United States as well as to meet its obligations in connection with international communications. A large number of telegraph printers, which receive and send the written message on the same principle as a typewriter, are being installed both in the central operating offices and with customers.

As a result of contracts entered into with the American Telephone and Telegraph Co. and associated companies (Bell system), and, subject to the terms of these contracts, every telephone, whether on the premises of a customer or in a public telephone pay station, may be used to send postal telegrams, and the telephone companies will bill and collect for such telegraph service. This arrangement has already been put into effect in a great number of cities and towns and will be extended as rapidly as possible. Postal Telegraph under these contracts may secure additional facilities within municipalities and between municipalities, and, by these means, extensions to new territory and relief over existing routes can be quickly obtained.

Facsimile telegraph service, known as "Photograms," was inauguarted for the first time in the United States by Postal Telegraph in September, 1928, and its use is being developed.

Commercial Cables during the year 1928 maintained its high standard of service, and with its cables working direct with England, France and Germany an almost instantaneous service is given to these countries.

During the preceding months of the current year there has been a large increase in traffic handled by Commercial Cables. The rates for night letter messages to Great Britain and Ireland were reduced to 4 cents per word and for week-end letter messages to 3 cents per word. Reduction of present rates for these services to other countries will be put into effect as soon as necessary arrangements are made in the countries served.

Mackay Radio inaugurated on May 1st of this year its new short-wave wireless telegraph service between San Francisco and Honolulu, and it is proposed to promptly extend the service to the Philippine Islands.

On the Atlantic the ship-to-shore wireless telegraph service was inaugurated on May 15th of this year by Mackay Radio from its station located at Sayville, Long Island. This station is equipped with a modern short-wave system, and will be arranged to communicate in due course with the other radio telegraph stations being installed in South America and Europe by the International System.

The total number of messages handled by postal telegraph, Commercial Cables and Mackay Radio during the year 1928 amounted to 47,665,930, as compared with 45,329,101 in 1927.

All America Cables, Incorporated, during the year 1928 maintained and developed its efficient services to the West Indies, Central and South America.

Under agreement with the Compagnie Française des Câbles Télégraphiques (Paris), All America Cables took over as of January 1, 1929, the operation of the United States and Haiti Telegraph and Cable Co.'s cable from New York to Cape Haitien and the cables of the French Antilles system connecting Cuba, Haiti, Santo Domingo, Porto Rico, St. Thomas, Curaçao and Venezuela.

As an interesting result of this operation All America Cables has made important reductions in cable rates to Haiti, Santo Domingo, Curaçao and Venezuela, thereby continuing the long-established policy of this company of providing at reasonable rates the best possible facilities to the countries it serves.

The total number of messages handled by All America Cables during the year 1928 amounted to 2,549,456, as compared with 2,372,877 during 1927.

The submarine cables operated by the Communications Companies now total approximately 65,000 nautical miles, and it is planned to supplement the present cable system by the latest type of telephone and telegraph cables to provide for telephone service to certain countries and much greater telegraph capacity to most of the countries served by the international system.

The efficiency and capacity of the cables, wires and wireless equipment now in service may be increased somewhat, but the new types of cables, carrier current for wire service and short-wave wireless equipment will have so much greater traffic capacity that new commercial practices and services must be adopted to absorb these capacities. It cannot be denied that the engineering development of communication facilities in respect to cables, wire and wireless has outdistanced the adoption of more advanced commercial practices in the use of such services. Commercial development studies are being emphasised, and it is confidently expected that within a reasonable time greater facilities and more varied types of service will generally be available, and that, in consequence, the volume of traffic handled by our communication services will be very much greater.

TELEPHONE OPERATING COMPANIES.

The development and expansion of the associated telephone operating companies during 1928 were generally very satisfactory.

The Compañía Telefónica Nacional de España, which undertook to carry out an exacting five year programme as provided for in the concession contract, will complete this programme well ahead of the specified time, and has also placed in service additional

plant to take care of the ever-increasing demand for long distance service.

Spain has to-day one of the very best telephone systems in the world. This development of a complete and highly efficient national telephone system in less than a five year period is an outstanding achievement. Nearly 58 per cent. of the telephones in service are of the Rotary automatic system, a higher percentage of automatic telephones to total stations than exists in any other country in Europe.

In Madrid, where complete automatic telephone service was inaugurated in 1926, there was an increase during 1928 of 5,426 telephones, with a total of 29,362 telephones in service at December 31, 1928. Complete automatic telephone service was inaugurated in Barcelona, Bilbao, Córdova, Málaga, Sevilla and Valencia during the year 1928 and automatic service will be established in Cádiz, Granada, Murcia, Oviedo, Valladolid and Vigo during the current year.

During the year 1928 telephone service was extended to 314 cities and towns, of which 125 were given local and long distance service and 189 long distance service. As of September 1, 1924, when the Compañía Telefónica Nacional de España started to operate, there were but 581 cities and towns with long distance service and at the end of the year 1928 there were 2,051 communities connected and forming part of the Spanish telephone system.

It is worthy of note that, at the time the concession was granted by the Spanish Government, international telephone communications from Spain were limited to inadequate service from Barcelona and Madrid, in addition to the frontier towns, with certain cities of France and Switzerland. The total daily average messages from Madrid and Barcelona were 189 messages. At the present time every telephone in Spain can avail itself of thoroughly efficient international long distance service, connecting with Lisbon (Portugal), Gibraltar, Ceuta (Morocco) and principal cities and towns of Austria, Belgium, Czechoslovakia, Denmark, France, Germany, Great Britain, Holland, Italy, Luxemburg, Norway, Sweden and Switzerland. The average daily messages for the first quarter of 1929 between Spain and Portugal, England, France, Switzerland, Belgium and Germany were over 745 messages. The economic value to Spain, as represented by this large growth in its international communications services, must remain unquestioned.

In addition to the services established with the other European countries mentioned, long distance telephone service was established between Spain, and the United States and Canada, and with the associated companies of the International Corporation in Mexico and Cuba.

As a result of these long distance services in a period of less than five years every telephone in Spain, which in 1924 could connect with not more than 25,000 telephones, may now be connected with over 20,000,000 telephones on this side of the Atlantic in addition to approximately 7,000,000 telephones on the European Continent.

Notwithstanding the economic depression in Cuba, due to the low price of sugar, the Cuban Telephone Company had a net increase of 4,870 telephones. There was an increase of 3,609 telephones in the City of Havana, which city on December 31, 1928, had a total of 50,123 automatic telephones in service.

There was also a satisfactory increase of long distance telephone service with the United States. Through the Cuban American Telephone and Telegraph Company's cables and the wire and wireless system of the American Telephone and Telegraph Company, the subscribers of the Cuban Telephone Company may be connected with over 80 per cent. of the world's telephones.

The development of the Porto Rico Telephone Co.'s system has been somewhat retarded by the economic situation resulting from the devastating hurricane of September 13, 1928, and a short period of rehabilitation is required. An exemplary spirit was shown by the staff and employees in repairing and reconstructing the damaged lines and equipment and putting them back into service with a minimum of delay. There were in service, on December 31, 1928, 12,156 telephones, a decrease of 246 telephones as compared with December 31, 1927, which, however, should be more than made up during the current year.

The Mexican Telephone and Telegraph Co.'s system was increased by 7,020 telephones to a total of 32,085 telephones in service at December 31, 1928. At the end of the current year, with the completion of the exchanges now under construction, Mexico City will be provided with complete automatic telephone service.

The long distance lines, connecting at the American border with the American telephone system, have been satisfactorily maintained under all conditions and the toll service revenues for the year showed an increase of over 190 per cent.

The Chili Telephone Co., Limited, had an increase of 3,543 telephones, with a total of 31,116 telephones in service on December 31, 1928. A special telephone law has been submitted by the President of Chile to the Chilean Congress and, when enacted, it will permit of the organisation of a national telephone company and an intensive development of the telephone system of Chile.

The support which has been received from the Government of Chile has been most gratifying and is an encouragement to intensify the reconstruction and expansion program in order to provide Chile with the best possible telephone service and thereby effectively assist in the economic development of that progressive country.

The United River Plate Telephone Co., Limited, which operates telephone systems in Buenos Aires and other principal cities of the Argentine with connecting long distance lines, became associated with the International Corporation as of January 1, 1929.

In Buenos Aires, the capital of Argentina, the fourth largest city in the Americas and the eighth largest city in the world, there is a real opportunity to plan the development of the plant and service so that the people of Buenos Aires may be justly proud of having one of the best telephone services in the world.

A complete engineering and commercial survey is being made of this property and, subject to satisfactory agreement with the Government of the Argentine, a considerable expansion of the properties and services rendered by this company will be undertaken.

The Montevideo Telephone Co., Limited, which became associated with the International Corporation during 1927, has continued to maintain its services and minor extensions have been made. There have been no major developments, however, pending action on the part of the Government with respect to a new concession contract which would permit of the installation of a complete automatic telephone system in Montevideo and the extension of modern telephone service throughout the Republic of Uruguay.

The activities of the Companhia Telephonica Rio Grandense (Rio Grande do Sul, Brazil) were principally devoted to improving maintenance conditions and rebuilding of certain portions of its telephone and telegraph plant. As a result of these improvements, the company was able to handle an increase of approximately 31 per cent. in telegraph traffic.

During the year direct radio telegraph service was inaugurated between Porto Alegre, Brazil and Buenos Aires, Argentina, which service connects all points in the State of Rio Grande do Sul, Brazil, with all telegraph stations in Argentina.

The Sociedad Cooperativa Telefónica Nacional (Montevideo) and the Compañía Telefónica Argentina (Buenos Aires) have made normal progress; maintenance conditions have been considerably improved and the outstanding achievement of these companies during the past year was the establishment in connection with the Chili Telephone Company, Limited, and All America Cables, Incorporated, of long-distance telephone service between Uruguay, Argentina and Chile.

MANUFACTURING COMPANIES.

The International Standard Electric Corporation's Associated companies have manufacturing plants in Antwerp, Budapest, London, Madrid, Milan, Paris, Shanghai, Sydney, Tokyo and Vienna.

The consolidated sales of the International Standard Electric Corporation and associated companies for the year 1928 totalled $48,976,425 as compared with $43,491,948 for 1927. The increase in sales was 12·6 per cent. and the estimated sales for 1929 indicate an even greater increase than obtained in 1928.

Orders on hand on January 1, 1929, were $30,442,558 as compared with $29,085,166 on January 1, 1928. The increase of orders on hand was particularly satisfactory as the speeding up of production and availability of increased factory capacity has resulted in generally cutting down the delivery time on major equipment from one-quarter to one-half the time previously required.

The generally recognised high quality of the products of our factories, as well as of their engineering services, gives every promise of the continuing development of this principal manufacturing branch of the International Corporation. By the development of national factories, it is possible to cater to the national characteristics and meet the desires of government administrations and companies which favour national manufacture.

The Rotary automatic system, which was developed by the engineers of the International Standard Electric Corporation and is a principal product of a number of the factories of the Standard, has met with increasing success in its operation. Among the principal cities in which this system has been or is being installed may be mentioned Antwerp, Auckland, Barcelona, Brussels, Bucharest, Budapest, Copenhagen, Geneva, The Hague, Madrid, Mexico City, Oslo, Paris, Rio de Janeiro, Shanghai and Zurich. It is expected that, with the continuous development of this system, by our laboratories tending to lower the cost of production, there will be an increasing sale of this machine-driven automatic system.

In other factories of the Standard Corporation the step-by-step automatic system is being produced with increasing distribution to those cities and countries which are using that system and here again our laboratory developments have indicated that we will be able to produce a step-by-step automatic type simpler in construction and lower in cost.

The development of both the machine-driven (rotary) and step-by-step automatic systems will be interesting to watch, for, as may be seen, we occupy a principal position in the development, manufacture and distribution of the rotary system as well as a strong position in the development, production and distribution of the step-by-step system and we are, therefore, able, irrespective of the type of system desired, to maintain our important position in the manufacture and distribution of automatic systems.

The Standard Corporation is also manufacturing improved manual telephone systems and has made marked progress in the development and manufacture of wireless apparatus, long distance telephone cable systems and equipment for the transmission of pictures by wire. The Standard factories and also a number of other cable factories, which have been licensed to manufacture the Standard system, have continued to supply the major portion of the long distance telephone cable systems in Europe and other parts of the world.

The London factory completed the installation during 1928 of step-by-step automatic equipment for the Sloane, Bermondsey and Welbeck exchanges of the London area and, in addition to important orders on hand for the London area, has also in production orders for step-by-step automatic equipment for the Newcastle and Maidstone areas. The London factory has also placed in production an order of 16,000 lines of rotary automatic equipment for Cairo, Egypt.

The Paris factory successfully completed on contract time during 1928 the installation of the first 6,000 line Rotary automatic, equipment for the Paris area and an additional 14,000 lines were turned over to the French Telephone Administration on April 14th of the current year. There are on order for delivery during 1929 and 1930 a total of 34,000 Rotary automatic lines for the Paris area.

The Antwerp factory during the year 1928 completed the Paille Rotary automatic exchange in Brussels and has on hand orders for over 50,000 Rotary automatic lines for Brussels, Antwerp, Liege and Ghent.

A total of 139,860 Rotary automatic lines manufactured by the Antwerp factory were put into operation during the year 1928, the larger part of which was exported for installation in 27 cities and 10 countries. Among the export orders now in production are 16,800 lines for Geneva, Switzerland, 14,000 lines for Copenhagen, Denmark and 9,000 lines for Shanghai, China.

The Madrid factory is now fully equipped and has begun the manufacture of Rotary automatic equipment for the Spanish telephone operating company, which equipment was imported from the Antwerp factory during the initial construction period of the Spanish telephone system.

The Budapest factory has continued its successful production of Rotary automatic equipment and is carrying out in a satisfactory way its principal installation of 70,000 Rotary automatic lines in Budapest, the capital of Hungary.

The Tokyo factory has on order and in production the first nationally made step-by-step automatic equipment. It is expected that the national manufacture of automatic equipment will be considerably developed to provide in a large measure for the increasing demand for telephone service in Japan.

The Shanghai factory showed a very satisfactory improvement in business in spite of the unsettled condition in China and its sales were increased more than 93 per cent. over the previous year. Among the interesting orders received during 1928 was an order from the Canton municipality for 4,000 lines of Rotary automatic equipment.

Compagnie des Téléphones Thomson-Houston (Paris), an Associated Company of the International Corporation, increased its volume of sales for the year 1928 to 78,999,434 francs, as compared with 71,614,504 francs for 1927. Orders on hand on December 31, 1928, amounted to 42,714,337 francs, as compared with 42,449,909 francs at the close of the previous year. Among the sales and installations made during 1928 of the step-by-step automatic equipment manufactured by this factory may be mentioned the exchanges for Rabat, Casablanca and Fez (Morocco) and Tunis (Tunis).

Creed and Co., Limited, of Croydon, England, which became associated with the International Corporation during 1928, has met with increasing success in the manufacture and sale of cable and telegraph equipment and it is planned to enlarge the facilities of this Company during the ensuing year to meet anticipated increase in sales. This is fully borne out by their sales during the first quarter of the current year.

RESEARCH LABORATORIES.

The International Communications Laboratories, Inc., of New York, was organised by your corporation for the purpose of research and development in connection with our cable, telegraph and wireless systems in the United States.

These laboratories will also carry on research and development work in terminal equipment for new types of submarine telephone and telegraph cable.

The European laboratories, which are located at London and Paris, have been extended and supplied with the most advanced equipment to enable the scientific workers to explore the complete field of research and to successfully bridge the gap between this and the practical utility field in a manner which should result in satisfying the national characteristic requirements of our international *clientèle*; improved communications to the user; better and more economical manufacturing methods for our manufacturing companies and in establishing our system as second to none in the type, quality and range of the communication services which it offers.

The London and Paris laboratories are complementary to each other in that the field of research and development is divided between them, but a uniformity of methods is followed which, combined with their location, permits a truly international spirit and outlook. In this connection it is interesting to note that representatives of fifteen nationalities are on their payrolls and that among the employees are graduates of practically every university internationally known for its scientific training.

The practical results already obtained from our laboratories are too numerous to mention in this report. They have extended into the entire field of communications as well as to the designing of apparatus with the view of bringing about, to the fullest extent possible, standardisation and lower cost of production in the factories. Among certain developments of note, the following may be mentioned:—

The development of a new telephone hand set, equal in every way to the best known types but with very distinct advantages both in respect to its manufacture and maintenance as well as greater satisfaction to the users.

As a result of scientific research in our laboratories, a new process of making cable has been evolved which produces a more efficient long-distance telephone cable than any previously known type.

In the radio broadcasting field the development in our laboratories has resulted in our obtaining the order for the world's largest radio broadcasting station, to be located at Prague, Czechoslovakia, and with a capacity of 120 k.w.

The research and development work carried on during 1928 has resulted in 144 inventions which have been considered worthy of patent protection. Some of these inventions have been incorporated in wire and wireless telephone equipment already furnished to our customers. The filing of 715 patent applications in 41 countries and the grant of 273 patents in 31 countries to our manufacturing companies in 1928 shows good progress in the endeavour to secure protection under the patent laws for the products and processes of the International System.

On December 31, 1928, your associated companies owned 1,395 pending patent applications, 5,560 patents and were licensed under more than 3,500 patents and patent applications owned by others. These patents and patent applications are spread over a total of 69 countries.

NEW YORK GENERAL OFFICES.

The expansion of the International Corporation not only made it necessary shortly after moving to our new General Offices in the International Telephone Building at 67 Broad Street to occupy all of the building under lease but it was recognised that the option which was held for the purchase of this building should be anticipated and that the adjoining properties should be acquired, so that an addition to the building might be constructed with a minimum of delay. Accordingly, all of the adjoining property on Broad Street up to and including the corner of South William Street was acquired during 1928, the present building—67 Broad Street—has also since been purchased and construction of the addition to our building has been started. It is expected that such addition, which will more than double our present floor space, will be completed and ready for occupancy by May 1, 1930.

The present building at 67, Broad Street was designed by our own architects and a minimum of alterations will be required in the building of the addition. When completed the entire building will form a unit of attractive architecture which will extend on Broad Street from the corner of Beaver Street to South William Street, with a total floor space of 454,000 square feet and an over-all height of 456 feet including the tower structure above its 33 office floors.

In the building will be installed the central operating rooms of the Postal Telegraph, Commercial Cables, All America Cables and Mackay Radio with ample room for the development of these services.

The International Telephone Building Corporation, a subsidiary of your corporation, has taken title to the present building and the adjoining property as well as to the two buildings of All America Cables at 89, Broad Street and 33-37, South William Street and the 253 Broadway building previously occupied by the Mackay companies.

ORGANISATION.

The stockholders approved at the annual stockholders' meeting held on May 9, 1928 the issuance of 13,000 shares for subscription by employees. This stock was offered to the employees for subscription on a basis of one share of stock at par for each $600 of salary received and with a maximum subscription on the part of any employee for 50 shares of stock. The subscriptions received from 8,592 employees were for a total of 21,491 shares and the stock was allotted *pro rata* to permit all subscribers to obtain one or more shares of stock.

In view of the inadequate amount of stock available for employees' subscription in the past and the keen desire of the old and new employees to subscribe for the stock of your Corporation, the Banking Syndicate, through which was consummated the acquisition of the United River Plate Telephone Company, Limited, was approached with the view of acquiring a block of 60,000 shares of International stock for subscription by the employees. The Banking Syndicate readily co-operated in the transfer of these shares to be made available for subscription by the employees of the International System through a trust in such form and manner as may be determined by your board of directors.

From this block of stock your board of directors has decided to make an immediate offering of stock to officers and employees of your corporation and associated companies. Officers who are directors are not excluded from participation, this being considered a just measure in order not to differentiate between officers of equal rank who may or may not be directors of your corporation; and, as in the past a reasonable maximum number of shares for distribution to any one employee under the offer will be determined. As this block of stock will not in itself be sufficient to take care of the anticipated subscription by the employees in the immediate future, your board of directors has also decided to issue for the benefit of employees an amount of stock not in excess of one-tenth the amount of stock which may be issued from time to time to the stockholders, for cash, at an issue price of not less than the amount to be paid by the stockholders.

The approval by the stockholders at the meeting held on May 8, 1929, of the action above outlines is most gratifying, as these measures will undoubtedly tend to stimulate the interest and efforts of the staff and employees in the development of the International system.

The International Telephone Pension and Benefit Plan as approved by your board of directors was put into effect as of January 1, 1929, for the employees of the International Telephone and Telegraph Corporation and recommendation made that such a plan be adopted as soon as practicable by the associated companies of the International system.

Very careful consideration was given to the preparation of this plan. All well-known pension and benefit plans in the United States and foreign countries were studied and expert actuarial advice obtained and it is believed that the International Telephone pension and benefit plan, as adopted, is considerably in advance of any other known plan to which there is no contribution on the part of the employees.

The outstanding feature of the plan is the continuity of the pension to dependents. Your board of directors felt that protection should be provided, within reasonable limitations, for the dependents of those whose deaths occur in the service and of the pensioners. The education of minor children and the requirements of dependent widows and mothers during the difficult period of readjustment must appeal to all and it is believed that this insurance of the future is one that should be given to the employees and that it will bind them ever closer to the companies they serve.

Your board of directors has also approved a group insurance plan for the International system, which will permit the employees to obtain life insurance to the extent of their annual salaries at a minimum cost to them. This group insurance plan will be promptly placed in effect for the employees of the International Corporation and will be extended to the associated companies as soon as practicable.

Including the employees of the Companies associated since the first of the current year, there are now over 85,000 employees in the cable, telegraph, wireless, telephone, manufacturing and laboratory branches of the International System. These employees, who are distributed through nearly all countries of the world and are keenly interested in the development of their respective national enterprises, are equally interested in the development of the International Corporation because of the benefits derived by their respective enterprises fro mtheir association with our System and of the greater opportunity which they can all find in the International system.

FINANCIAL.

During the year 1928 the outstanding capital stock of your Corporation was increased from 1,301,994 shares to 1,422,785 shares, or an increase of 120,791 shares. Of this number 13,316 additional shares were issued in exchange for outstanding stock of All America Cables Incorporated; 94,475 shares were issued in connection with the acquisition of the Postal Telegraph and Cable Corporation's common stock, and 13,000 shares were made available for subscription by the employees under the third special offer for the sale of International Telephone and Telegraph Corporation stock to employees.

At the end of 1928 there was a total of 16,568 stockholders of the International Telephone and Telegraph Corporation, as compared with 11,682 at the end of 1927. As of April 27, 1929, the total number of stockholders was increased to 18,043, not including all of the new stockholders who will result from the acquisition of the ordinary (common) shares of the United River Plate Telephone Company, Limited.

As of January 1, 1929, your Corporation issued $56,911,400 principal amount of Ten Year Convertible 4½ per cent. Gold Debenture Bonds as authorised by your board of directors on December 10, 1928, to provide for additional capital requirements and for funds necessary to acquire the ordinary (common) shares of the United River Plate Telephone Co., Limited. These Bonds are convertible into common stock of your Corporation after July 1, 1929, on the basis of $200 in bonds for $100 par value of stock and subject to an increasing rate of conversion as well as certain adjustment provisions of the conversion rate. The stockholders of the International Corporation were offered these bonds at a price of $98 for $100 principal amount of bonds and in the ratio of $100 principal amounts of bonds for each 2½ shares of stock held by the stockholders on the date of record, December 21, 1928. Those of the stockholders who did not subscribe were able to dispose advantageously of their rights.

At the Special Stockholders' Meeting held on May 8, 1929, the stockholders approved the change and increase of the authorised capital stock of the International Telephone and Telegraph Corporation from 2,500,000 shares of $100 par value each to a total of 15,000,000 shares without par value. The stockholders also approved the conversion of the issued and outstanding capital stock from $100 par value per share to no par value stock and a split of three shares no par value stock for each share of $100 par value stock now issued and outstanding.

The consolidated balance-sheet and statement of consolidated income and surplus accounts of the International Telephone and Telegraph Corporation and Associated Companies, presented herewith, show the important changes resulting from the expansion of your Corporation.

Regular dividends at the rate of 6 per cent. per annum were distributed quarterly, adequate reserves were established and the balance of net income was transferred to surplus. The net earned surplus at the end of the year was increased by $5,835,659·55, and total earned and capital surplus amounted to $34,709,760·93 at December 31, 1928.

Too much cannot be said for the enthusiastic efforts of the staff and employees of the International System as a whole, but particular mention may be made of the staff and employees of Postal Telegraph, who are out for a traffic record during the current year and an increasing share of the telegraph business of the United States.

For the Board of Directors,
SOSTHENES BEHN, President.

ARTHUR ANDERSEN & Co.,
Accountants and Auditors,
Members American Institute of Accountants

67, Wall Street,
New York.

Auditors' Certificate.

We have examined the accounts for the year ended December 31, 1928, of the International Telephone and Telegraph Corporation; the Postal Telegraph and Cable Corporation and principal associated companies; the International Standard Electric Corporation; and also the associated companies in Cuba, Porto Rico and Mexico. For the associated companies consolidated which we have not ourselves audited, we have been furnished with independent auditors' certificates for all but one of the major companies; we have reviewed properly authenticated company reports for all of the consolidated companies not audited and also for the associated companies not consolidated. The consolidated income account gives effect for the full year to the operating results of associated companies acquired during the year and to interest and dividend charges on bonds and preferred stocks issued during the year to acquire properties, and is based upon the company's provisions for depreciation and its allocation to capital account and operation of general supervisory charges. The property account, as stated in the consolidated balance sheet, reflects preliminary valuations of the principal properties of the Postal Telegraph and Cable Corporation, made by independent engineers.

Upon the basis of the foregoing, we certify that, in our opinion, the accompanying consolidated balance sheet and statement of consolidated income and surplus accounts fairly present the financial position as of December 31, 1928, and the results of operations for the year ended that date.

ARTHUR ANDERSEN & Co.

New York, N.Y.
April 30, 1929.

Decrease in Debt	291		
Sundries	182		
	6,981		6,981

The total ordinary revenue for the week amounted to £6,981,000, as compared with £7,682,000 in the corresponding week of last year. Property and income tax amounted to £54,000, and super-tax to £360,000, against £51,000 and £330,000 respectively a year ago. Estate duties brought in £2,720,000, as against £2,320,000 a year ago. Customs receipts at £3,036,000 showed an increase of £174,000 over last year's figure, but Excise receipts were lower, being £476,000 against £934,000.

The National Debt was reduced by £291,000, as shown below :—

(000's omitted.)

	£		£
National Savings Certificates	– 100	Treasury Bills	+ 6,069
Public Department Advances	– 5,560

ROUMANIA.

A RICH COUNTRY IN EASTERN EUROPE.

If we follow, on the map of Europe, the course of the largest river, we see around its mouth a country in the shape of an almost perfect circle. We also see from the map that this country has, more than any other, large rivers, high mountains and vast plains. It is a country endowed by nature with an immense natural wealth, with enormous possibilities and with a hard-working people—a country waiting only for the necessary means to enable it, from a quite important country in the south-east of Europe, to become the granary of Europe as well as the industrial centre of the Near East. This is Roumania.

But, Roumania is as yet far from that goal. It must be remembered that until fifty years ago it was under a foreign yoke—a kind of Turkish dominion, at the goodwill of the Pashas from Constantinople—that until half a century ago it had neither liberty nor commercial relations with other countries, its industry being limited to a few rudimentary distilleries and coach-building shops, and finally, that its agricultural production was very little developed. The Roumanian soil had not then known the creative power of a ploughshare and other modern agricultural implements were unknown to it.

If we examine Roumania's achievements during the last half-century, without external assistance and by the energy of her people alone, it is easy to comprehend what future is in store for Roumania, especially now that a new and favourable economic policy toward foreign finance, and the beneficial results of the reincorporation of the Ardeal, Banat and Bukovina (great industrial and raw material centres), and of Bessarabia (the Russian granary until a few years ago), raise so many possibilities.

The greatest wealth of Roumania is, undoubtedly, agriculture. But Roumanian agriculture is at present passing through a crisis, firstly owing to the application of agrarian reform during the war and aggravated by the last two bad harvests.

The Roumanian agriculturist, since the war, has enjoyed none of the normal rich pre-war crops. In no year since the war has the production reached 40 million hectolitres of wheat and that only in the old Kingdom. However, in a year, when weather conditions were not altogether adverse—in 1926—the total production reached the figure of 1,225,000 carloads of grain. Nevertheless, it must be remembered that, even in 1926, Bessarabia's contribution was of no account, as this province was ravaged by drought, whereas in a good agricultural year it may produce as much as 400,000 carloads of grain.

Roumanian agriculture is in need of large investments and financing. If the small rural landowners—for Roumania since the agrarian reform has only small landowners—could prepare for drought by a system of irrigation and special cultivation, which has met with such success in other countries, and for excess of moisture by a vast web of drainage canals, Roumanian crops would not fluctuate so violently, and the entire Roumanian economy would be improved.

The second difficulty with which Roumanian agriculture is faced is the scarcity of credit available for the producers. As a remedy for this the Roumanian Government decided to establish a large agricultural mortgage bank of credit for the purpose of redeeming gradually—over a long term and at a small rate of interest—the actual debt at the banks on rural property. The institution, which is still in formation yet, will be supplied mostly with foreign capital.

The second great source of wealth of Roumania consists of products of the sub-soil. The petroleum industry of Roumania produced in 1928 about 4,250,000 tons of oil, and it is worth mentioning that there are in Roumania, more than in any other country, vast reserves of yet undrilled oilfields, which ensure the possibility of production for a long time to come.

Apart from the potential oil-bearing layers of the plains of Transylvania, we must mention the important oil deposits of the sub-Carpathian region; also those situated at the extremity of the Carpathian mountains, mostly in the porous rocks of the tertiary epoch, in regions of Zemesti-Luckeesti, Solonț, Moinești, Doftana, Slănicul, Moldovii, Podeiul, Bogata, Nineasa, Poiana, Săracă, Mosoarele, &c.; and especially those from the chain of more recent formations than the tertiary, in the regions of Bustenari, Câmpina, Drăgăneasca, Colibași, Ocnița-Glodeni, Varfurile, Pucioasa-Vulcana, Ochiuri, Gura-Ocniței, Moreni, Bana, Băicoiu-Tintea, Păcurești, Matița-Apostolache, Berca-Beciu-Policioare, Ceptura, Sărata-Monteoru (in the districts of Dâmbovița, Prahova and Buzău); Govora-Făusești, Săcel-Târgu-Jiu (in the districts of Râmnicu-Vâlcea and Gorj); and Tescani-Câmpei, Pârjol (district of Bacău).

The lands recognised as oil-bearing represent an area of about 20,000 hectares—and the area of land considered as probably oil-bearing is 150,000 hectares. The total area of concessions up to the present is about 517,380 hectares and the area under exploitation is 40,027 hectares.

These vast oil deposits, the richest in Europe, offer, as we have seen, an immense field of activity, which calls for the collaboration of foreign capital. If this collaboration has not yet come up to the level worthy of the object, it is only because the Roumanian Mining Law of 1914 hindered the flow of foreign capital in search of profitable enterprises. But now, thanks to a new law recently promulgated, equality of treatment is guaranteed for foreign and domestic capital, and there are signs that this favourable change will be welcomed by foreign investors.

In addition to oil, the Roumanian subsoil contains important deposits of peat, brown coal, pit coal and anthracite, deposits of which are found mostly in Ardeal and Banat. Up till now these have been exploited on a very small scale. The total yearly production of Roumanian coal was never more than 2,250,000 tons, although by intensive mining the yield of the coal might well reach 10,000,000 tons. However, this kind of fuel is replaced, in many localities of Roumania, by hydraulic energy (and even this is inefficiently exploited) and by the natural gas found in vast quantities in Ardeal and all about the oil fields of Roumania.

Another potential source of great wealth in Roumania is its forestry. The wooded area was increased in size through the annexation of the new provinces. Before the war there were 2,400,000 hectares of forests and there are now 7,500,000 hectares, or 25 per cent. of the total area of the country. Roumania's forestry exploitation varies from the rudimentary methods of some regions of Moldavia and Bessarabia to the most modern system of exploitation in the immense forests of Transylvania and Bukovina. Roumanian timber is sought after all over the world, and Roumanian woodwork has been in insistent demand even for America. The Central European market, France and the Near East are supplied in a very large measure with Roumanian wood.

In order to give a complete picture of Roumania's economic possibilities, the mineral wealth of its subsoil should also be described. Roumania is rich in ores of gold, silver and copper, and has valuable deposits of salt, amber, &c. If all these minerals could be brought to light they would provide excellent raw material for Roumanian industry, which, having at its disposal the two main elements of an industrial country—cheap fuel and raw material—might transform Roumania, within a relatively short time, into the factory of the Balkans and of the Near East.

Roumania, as we have shown above, is thus, from the economic standpoint, one of Europe's countries with a great future. It did not progress as it should have done during the ten years which followed the war, but to-day, thanks to the new *régime* created through the currency stabilisation, the law of commercialisation, the mining law, the credits obtained abroad and the investments in railways and other means of communication, Roumania's economic horizon is greatly enlarged, and there is not the slightest doubt that she will reach the place she deserves through her natural resources, the creative power of her people and the loyal collaboration of foreign capital.

" 30	...	Nil	" 30	...	...
	Total	502,039		Total	30,930

Net arrivals, £471,409.

Messrs. Samuel Montagu and Co. write as follows on May 29, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £161,990,492 on the 22nd instant (as compared with £161,140,187 on the previo us Wednesday), and represents an increase of £8,084,177 since April 29, 1925, when an effective gold standard was resumed.

The bar gold available in the open market yesterday amounted to about £577,000. Although the weakness in the U.S.A. and German exchanges pointed to a possibility of enquiries from these quarters, no purchases were made on either account, and the main proportion, viz., £489,000, was secured by the Bank of England. The balance was divided between India and the Home and Continental Trade. There was a net influx of gold of £437,112 during the week.

SILVER.

The week has seen sharp movements in prices, and, with the dearth of buyers continuing, the tendency has still been downward. Selling has again been general; China, America, the Indian Bazaars

and others having offered silver on an unwilling market. A fall of 1s. 4d. occurred on the 23rd instant, quotations being fixed at 24·$\frac{13}{16}$d. for both deliveries, and at this figure the market became momentarily hesitant. A reaction to 25d. followed on the 25th instant, due chiefly to a temporary reluctance on the part of sellers, but the recovery could not be maintained in the face of the substantial offerings evoked by the rise, and prices receded sharply, 24·$\frac{7}{8}$d. being fixed to-day for both cash and two months' delivery.

The quotation for cash delivery was fixed yesterday at $\frac{1}{16}$d. discount as compared with that for two months' delivery, but level rates were re-established to-day.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 18th instant to mid-day on the 27th instant :—

Imports.	£	Exports.	£
Mexico	162,407	Egypt	68,414
Other countries	13,881	British India	51,892
		Other countries	15,098
	£176,288		£135,404

THE BROKEN HILL PROPRIETARY COMPANY LIMITED.—Report for four weeks ended May 19, 1929:—Coke ovens: Produced 9,427 tons of coke, 115,000 gallons of tar, and 147 tons of sulphate of ammonia; Blast furnace (No. 3): Produced 15,654 tons of pig iron. Open hearth: Produced 19,906 tons of steel. Blooming Mill: Produced 19,681 tons. Slimes flotation plant treated 12,169 tons slimes tailings—producing 1,729 tons oxidised lead concentrates assaying 37 per cent. lead, 17 ozs. silver per ton. Reduction in lead grades due to difficulties early in period since overcome. 1,906 tons concentrates despatched to Broken Hill Associated Smelters. Zinc roasting plant and sulphuric acid plant operated on behalf Electrolytic Zinc Company throughout period.

Reports and Notices.

BANKS.

THE NATIONAL BANK OF AUSTRALASIA, LIMITED.—The ordinary general meeting has closed, report and balance sheet as published adopted, net profit £659,278, reduction bank premises £50,000, transferred to reserve fund account £100,000, and carried forward £157,773. Balance sheet:—Total deposits, £37,341,464; advances, £32,127,195; liquid assets, £13,991,072; total assets, £47,431,823. Sir John Grice and Hon. Sir Frank Clarke, K.C.B., M.L.C., have been re-elected as directors.

RAILWAYS.

THE ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY.—The Directors announce that at the general meeting to be held on June 11th the stockholders will be asked to authorise an increase in the total of the consolidated ordinary stock. The Directors have resolved to recommend that the capital proportion of the cost of the change of gauge be adjusted by the free issue to the consolidated ordinary stockholders on the register at June 11th of £15. Consolidated ordinary stock for each £100 held. The new stock would rank for dividend as from January 1st last.

THE GREAT WESTERN OF BRAZIL RAILWAY COMPANY.—An increase of £73,398 is shown in the net operating receipts for 1928 of the Great Western of Brazil Railway Co. The revenue amounts to £218,187, against £141,731. A deficit of £224,807 brought in is replaced by a net surplus of £16,797, which is carried forward. Revised tariffs for the carriage of goods and passengers came into force on October 1st last. The President of the Republic issued a decree, dated April 26, 1929 (which has since been duly registered), revising the lease contract under which the company's system is operated. It is proposed to redeem the £72,695 of interest arrears debentures outstanding in order to resume the payment of dividends.

MISCELLANEOUS.

INVESTMENT TRUST CORPORATION, LIMITED.—The report for year ended May 1, 1929, shows a total income of £570,263, as compared with a total income of £534,083 for preceding year. Preference dividend absorbed £78,000 against £75,000. Income tax amounted to £66,882 against £61,131. The sum of £185,000 is put to reserve account against nothing in preceding year, but the carry-forward is reduced from £187,525 to £69,389. The reserve account now stands at £1,700,000. The dividend on the deferred stocks is maintained at 20 per cent., less income tax. The valuation of the investments, based as far as possible upon prices current at date of balance sheet, shows an appreciation of about £1,750,000 over their book cost of £8,088,402. Meeting, Gresham House, 24 Old Broad Street, London, on June 5th, at 2.30 p.m.

COLUMBIA GRAPHOPHONE COMPANY, LIMITED.—The directors of Columbia Graphophone Co., Limited, announce that an offer of new ordinary shares will be made on June 5, 1929, to shareholders registered on the books of the company on June 1, 1929, in the proportion of one new ordinary share at £5 for every five shares held, fractions of five shares being disregarded. The new shares will not be entitled to any dividends or bonuses declared or which may be declared for the current year ending June 30, 1929.

CROSSE AND BLACKWELL, LIMITED.—The ninth annual report and accounts show that the total income, including profits of subsidiary companies, amounted to £272,612 as compared with 1927, £207,253, 1926, £190,588. Deducting directors' remuneration, office and travelling expenses, etc., £38,056, and interest on notes £32,475, there is a balance of £202,081, which, with the amount brought forward, makes a total of £253,820. After providing for the preference dividend to December 31, 1928, the directors recommend that £25,000 be placed to reserve account (last year nil), and the balance, £60,070, be carried forward (last year £51,739). The report states that the expenditure on the Baltimore and Toronto factories has now been repaid by Crosse and Blackwell Incorporated, and that American trade is making good progress. During the year the majority of the shares of Dandicolle and Gaudin, S.A., of Bordeaux, has been acquired, and it is proposed to amalgamate this company with Etablissements Crosse and Blackwell Reunis. Goodwill, trade marks, etc., stand at £1,450,000. Cash is at £28,980 against £22,595. Loans from bankers stand at £316,044 against £329,746. Reserve stands at £212,996 against £55,073. Meeting Holborn Restaurant, June 7th, at noon.

BOOTS PURE DRUG COMPANY, LIMITED.—As shown in our issue of May 25th, page 1191, the net profit is £750,152, compared with £701,973, after allowing for repairs £66,989 (against £58,567), depreciation £40,558 (against £42,028), and staff pension fund £35,000 (against £30,000). The reserve fund is strengthened by the addition of £200,000 (against £150,000 last year) and now totals £900,000. Dividends on the ordinary shares absorb £360,000, while the bonus of 1s., tax free (against 9d., less tax), requires £75,000. The balance to be carried forward is raised from £208,307 to £226,709. The pension fund, with the year's allocation, will stand at £190,421, apart from the chemists' pension fund.

INTERNATIONAL MATCH CORPORATION.—The Report of International Match Corporation for 1928 shows net profits available for dividends of $19,098,861, or $8.12 per share on all preference and common shares compared with $7.07 for 1927.

GREAT NORTHERN TELEGRAPH COMPANY OF DENMARK.—Ordinary receipts for 1928 are £44,500 lower than in 1927. Expenditure is £7,500 higher. The actual decline in net profits is about £52,000. In order to propose a dividend of 20 per cent. on the increased share capital the Board have credited the Revenue account with about £133,000 transferred from accrued interest on the reserve fund. Cash at banks on deposit has decreased by about £165,000 during 1928.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

The continued spell of fine open weather over the United Kingdom has further enhanced agricultural prospects, all cereal crops responding to warmth and sunshine, while the condition of pastures leaves little to be desired. Limited supplies of native wheat at the principal statute markets experienced a poor demand and prices disclosed a sagging tendency in sympathy with the general situation, values of imported varieties being further reduced following forward weakness. In the floating and forward cargo section continued selling pressure was the predominant feature, and naturally resulted in a lower price level for all descriptions. The disposal of large surplus holdings in exporting countries, and particularly North America, presents a difficult problem, which apparently can only be solved by bargain prices, thus stimulating European and outside purchases. This would create healthier conditions and ensure a better market for the coming crops. Both Argentina and Canada are competing keenly, but so far United States sellers have made no serious effort to market old supplies, though putting forward offers of new hard Winter wheat. Meanwhile, buyers remain apathetic, and with everything in their favour, there is certainly little inducement to operate freely at this juncture, as bottom prices do not yet appear to have been reached. Crop prospects are satisfactory both here and abroad, and with buying competition lessened by the increased import duty on wheat in France and Italy, sellers are faced with a stiff task in finding an outlet. Part cargoes of Australian afloat sold at 41s .6d., white Pacific, June shipment, 41s., and Rosafe afloat 37s. 3d. per 480 lbs. c.i.f. Futures declined sharply, but a fairly good business resulted, chiefly in the November position. Feeding stuffs proved difficult to vend, even at a further reduction in prices, Plate maize being still pressed for sale.

Wheat, dull and easier. No. 2 Northern Manitoba, ex ship, 43s. 9., No. 3 ditto, 42s. 9d.; No. 4 Manitoba, 41s. 3d., No. 5, 38s., No. 6, 34s.; No. 2 mixed Durum, 37s. 3d.; Rosafe, 64 lbs., 39s. 9d.; Barusso, 63½ lbs., for shipment, 39s. 6d; Australian, 43s. 6d., ex ship, per 496 lbs. English, 9s. 6d.-9s. 9d. per 112 lbs.

Flour, tends easier. London straight run, 32s. 6d. per sack delivered. Of imported, Manitoba patents range from 32s. 6d. to 35s. 6d.; Minneapolis, 33s. 6d.-35s. 6d.; Australian, 32s. 6d. ex store per 280 lbs.

Maize, again easier. Plato, landed, 36s., ex ship, to arrive, 34s., May-June, 34s. 6d., June-July, 34s. 9d., July-August, 35s. per 480 lbs. Yellow maize meal, £10 per ton, landed.

Barley, dull and weak. Californian, ex ship, 43s. to 48s.; Chilean, ex store, 45s.-58s.; Australian, 41s.-44s. 6d.; Smyrna, 44s.-47s. per 448 lbs. Algerian/Tunisian, ex ship, 29s. 3d.; Canadian, food, 27s. 3d.; No. 3 Canadian Western, ex ship, 30s. 3d., landed, 31s. 3d.; No. 4, ex ship, 28s. 9d.; No. 2 Federal American, landed, 28s. 6d. per 400 lbs. English malting, 10s. 6d.-11s. 2d.; food, 9s. 8d.-10s. per 112 lbs.

Oats, easier. Plate, landed, 24s., ex ship, to arrive, 22s. 9d.; No. 1 Canadian feed, 22s. 6d.; No. 2 ditto, 21s. 6d.; ex ship, mixed Canadian food, ex ship, to arrive, 18s., landed, 20s.; Chilean, white, ex ship, to arrive, 28s., landed, 30s. 6d.; German, landed, 28s., ex ship, to arrive, 27s. per 320 lbs.; English, 9s. 8d.-10s. 2d. per 112 lbs.; Scotch, landed, 29s. 9d. per 336 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.

Amoy, Batavia, Bombay, Calcutta, Canton, Foochow, Hankow, Hongkong, Keelung, Kobe, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town of the world.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

AMERICAN WHEAT MARKETS.

There has been a steady decline owing to good weather reports favourable crop prospects and inactive demand. The decline was checked late in the week by improvement in foreign inquiry, rumours that the Wheat Pool was holding for a rise, and talk of the introduction into Congress of a bill for purchasing surplus wheat for export to China. Quotations :—

* Previous day's quotation.

Visible supplies of wheat in Canada at 72,431,000 show a decrease of 3,192,000 as compared with the previous week's figures. Supplies a year ago stood at 62,519,000.

THE COAL TRADE.

Our Sheffield correspondent writes :—The coal market is fairly steady, although trade, both abroad and at home, is a good deal quieter than it was before Easter. The house-coal section is slack and industrial fuel not very brisk. Coke is in fair supply, with an increased home demand. Best South Yorkshire steams are quoted 15s. 6d. at pits.

Our Glasgow correspondent writes :—Steam coal is moving off steadily from Fife, but is dull in the Lothians. In Lanarkshire there is an excess of supplies of all large coal, but the collieries are not disposed to cut prices to any extent. Among nuts trebles and doubles are firmer in Fife and the Lothians, while the smaller sizes are steady all over. Shipping prices are approximately as follows :— LANARKSHIRE.—Ell best, 14s.; splint best, 16s.; splint second, 15s. 6d.; navigation, 17s. 6d.; navigation second, 15s.; steam, 13s. 6d.; Hartley, 16s. 6d.; trebles, 14s. 3d.; doubles, 13s. 6d.; singles, 12s.; pearls, 11s.; dross, 10s. FIFE.—Screened navigation, 17s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 14s. 6d.; doubles, 13s. 6d. to 13s. 9d.; singles, 12s.; pearls, 11s. LOTHIANS.—Prime steam, 13s.; secondary steam, 12s. 6d.; trebles, 14s. 6d.; doubles, 13s. 6d.; singles, 12s.; pearls, 11s. AYRSHIRE : Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 13s. 3d.; trebles, 13s. 9d.; doubles, 13s. 3d.; singles, 12s. 6d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes :—There has been a slight recovery of strength on the South Wales coal markets this week. The docks have been well supplied with tonnage, with vessels at some of them waiting turns at the loading berths, and shipments consequently have been active. Moreover, the recent action of the colliery owners in raising the minimum prices of large coals by 6d. per ton has minimised the influence of "bear" operations on the part of speculative middlemen and quotations are steadier for most descriptions. Collieries are, on the whole, regularly employed and it is estimated that production this week has again exceeded one million tons. The declared f.o.b. values of all the coal exported from the South Wales ports in April showed an increase over that for March of 8½d. per ton, viz., 18s. 5½d. compared with 17s. 9d. The improvement in f.o.b. prices has been continuous since the beginning of the year, and the April value is the highest since December, 1927. The joint audit for the three months ended April will be announced on Saturday and it is fully anticipated that it will show a credit balance for the first time since January, 1927. The following are the current approximate quotations :— Best Admiralties, 19s. 9d. to 20s. 3d.; seconds, 19s. 6d. to 19s. 9d.; best drys, 19s. to 19s. 3d.; Black Veins, 18s. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 6d.; cargo smalls, 12s. to 12s. 3d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite best large, 33s. to 36s. 6d.; Red Vein, large, 23s. to 27s.; machine-made cobbles, 40s. to 44s.; French nuts, 42s. to 44s.; stove nuts, 39s. to 42s. 6d.; rubbly culm, 10s. to 10s. 6d.; foundry coke, 27s. 6d. to 36s. 6d.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 25s. 6d. to 26s.

IRON AND STEEL.

We extract the following from the Weekly Report of the London Iron and Steel Exchange :—Trading in iron and steel is moderately active, but it is only natural to expect that buying will show some slackness after the large business that was transacted immediately before the British steelmakers advanced their prices for structural steel. In addition, the quiet period of the year is approaching, and many of the stockholders have covered their requirements for the time being. Irregular conditions continue to rule in the pig-iron department, with a scarcity of North-East Coast foundry iron, while the supplies of Midland irons seems to be somewhat in excess of the demand; notwithstanding this, however, buying has been on a scale sufficient to maintain prices. In the Continental market conditions remain practically unaltered. The supplies of semi-finished steel material available for this country are comparatively small, and Continental manufacturers easily maintain their prices at the recent high levels. In the finished-steel department the recent indications of weakness in prices have disappeared and quotations are again firm at the levels ruling of late. The steelmakers state that they are in a comfortable position as regards the orders on their books, and have no intention of reducing prices. The export demand from several of the more important markets still fails to materialise, and both British and Continental steelworks are finding conditions disappointing in this respect.

Our Midland correspondent writes :—The iron and steel market is still firm, although the proximity of the General Election is tending to make business quiet. The outlook, however, is very promising, and the recent improvement in trade is expected to continue after the Election is over. Pig-iron production is still not sufficient to cover the requirements, but ironmasters are still adopting a waiting policy to make more certain of the outlook before increasing the production. Further, the shortage of coke is also delaying the blowing in of more furnaces. Works have practically no Cleveland iron to dispose of for some months to come and any business which is being done is through merchants, and prices are on the following basis : No, 1, 72s. 6d.; No. 3 G.M.B., 70s.; No. 4 foundry, 69s.; No. 4 forge, 68s. 6d. East Coast hematite is probably not such an active market, but the position is sound, and producers are fairly well sold for two or three months ahead. The price, however, is maintained at the same level of 74s. for mixed numbers. The recent rise in steel prices has probably somewhat reduced the flow of orders, but as works have satisfactory order books for some months ahead they need not worry over any slight slackness at the moment. The steelworks are working to satisfactory capacity, and there are prospects that this will be further increased in the district shortly. Prices remain unchanged on the following bases, subject of course, to the usual rebates : Steel ship plates, £8 12s. 6d.; steel ship angles, £8 2s. 6d.; iron bars, £10 15s.; steel rails, £8 10s. The ore market is still very firm, with supplies for forward delivery getting extremely scarce. The price of Durham blast-furnace coke also has a tendency to harden, with supplies not quite so plentiful, 19s. being asked delivered furnaces.

Our Sheffield correspondent writes :—A further advance of a shilling per ton on Derbyshire foundry pig-iron was announced this week, making the delivered quotation to this district 68s. 6d. Demand, however, continues poor. Conditions are also quieter in the heavy steel branches. In some quarters it is thought that the recent increases of iron and steel prices have checked the flow of business. Continental steel competition in this market is also rather more active in certain lines, and a few purchases of billets are reported. Several fewer open-hearth furnaces are working in this district than a month ago. Trade continues brisk at the Lincolnshire steel works, and the plants there are running approximately full time with good prospects. The trade in hand tools is steady. Cutlery and plate are depressed.

Our Glasgow correspondent writes :—In Glasgow and the West of Scotland the position in the iron and steel industry is dull. Prices of pig iron remain unchanged, but there is no expansion of business. The recent advance of 5s. per ton in steel prices for home trade has not had the effect of stimulating demand, and the market for both plates and sections is unsatisfactory, and that in spite of the fact that there is at the moment very little foreign competition. In the sheet trade the tone is rather better, and specifications are coming in more freely this week, especially for the thinner gauges, both of black and galvanized. Prices are maintained at last week's levels. Tube makers are still fully employed, and well booked for forward delivery.

Our Cardiff correspondent writes :—On the Swansea Metal Exchange on Tuesday it was reported that inquiries were good and that a fair amount of new business has been arranged with the Far East, South America, and the Continent. Consumers are accelerating contracts as it is feared that rising costs may compel manufacturers to raise the prices of tinplates. Makers are already asking premiums for certain specifications in wasters, and home consumers are taking odd sizes for prompt and forward delivery at 18s. 6d. pre basis I.C. f.o.t. works. Quotations have ruled between 18s. 6d. and 18s. 9d., and for galvanised sheets between £13 12s. 6d. and £13 17s. 6d., compared with £13 12s. 6d. and £13 15s. before the Whitsun holidays. Prices of both native and imported bars are unaltered. Stocks at the end of last week totalled 238,878 boxes, compared with 222,278 boxes at the corresponding period last year.

OTHER METALS.

TIN.—The standard market presented dull features, and value gave way following weakness in American and Eastern cables, with buyers indifferent. Tone steadier later. Stocks in London and Liverpool warehouses for week ending May 25th were returned at 7,986 tons, compared with 1,559 tons at corresponding period last year. Standard cash changed hands at £196 10s., £195 10s. and £196 10s.; three months, £199, £198 10s. and £199 2s. 6d. In the East sales were recorded at £202 to £200 15s. and £201 5s. per ton c.i.f.

COPPER.—The easiness in America was reflected on this side under moderate realisations, but later the tone was steady on a fair trade demand. Standard cash sold £72 15s., £72 5s. and £73 10s.; three months, £72 5s., £71 10s. and £72 7s. 6d. ton.

LEAD market steady, with dealings on a fairly liberal scale. Good soft pig, May, sold £23 12s. 6d. to £23 13s. 9d. and £23 11s. 3d.; June, £23 13s. 9d. to £23 11s. 3d.; August, £23 8s. 9d. to £23 7s. 6d., £23 10s.; September, £23 7s. 6d. to £23 11s. 3d. ton.

SPELTER maintained with a moderate inquiry, chiefly for distant positions. May sold £26 17s. 6d.; June, £26 11s. 3d., £26 10s.; July, £26 10s., £26 7s. 6d.; August, £26 7s. 6d.; September, £26 8s. 9d. to £26 7s. 6d. ton.

ALUMINIUM steady. Ingots and bars for home delivery £95 per ton.

ANTIMONY quiet. English regulus, £50 to £52 10s.; foreign spot, £35; May-June, £31 to £31 10s. ton c.i.f.

WOLFRAM steady. Straits quality quoted 30s. to 31s. per unit c.i.f. terms.

QUICKSILVER quiet. Spot, £22 2s. 6d. to £22 7s. 6d. per bottle.

TIN PLATES maintained. I.C. coke prompt and forward, 18s. 6d. to 18s. 9d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, May 29th.

Spot sales for the week 23rd to 29th, inclusive, with 24th and 25th, exclusive (the market being closed on those dates) are 22,000 bales, of which 16,330 are American, 200 Brazil, 550 Argentine, 1,150 Peru, 1,400 Egyptian, 1,000 African, 1,300 East Indian, and 70 sundries. Imports for the week 23rd to 29th, inclusive, are 58,059 bales, of which 25,390 are American, 217 Brazil, 590 Argentine, 391 Peru, 22,049 Egyptian, 3,376 African, 4,800 East Indian, and 1,246 sundries. Quotations to-day are : American Middling, 10·20; Egyptian Sakel, 17·05; Egyptian Uppers, 11·28; Brazil Fair, 10·45; Peru G.F. Mod-Rough, 12·50; Peru G.F. Smooth, 11·20; West African Mid., 10·30; East African G.F., 11·65.

MANCHESTER, May 29th.

Traders in the market have been slow at getting to work again after the Whitsuntide holidays, and to some extent the General Election has put a check upon business. Prices on the whole show very little change, but there is a fear in some quarters of a decline in raw material rates. Cloth inquiry for India has been of limited dimensions, and most of the offers have been unworkable. Mail advices at the moment are not encouraging, and there seems to be a disposition in all quarters to restrict commitments as much as possible. Only a miscellaneous business has been done for China and auction news from Shanghai has not been healthy, the quantities sold this week being reduced. Odd lots have been booked for Egypt and the Near East, and rather more demand has been about in fine finishing goods for South America and the Continent. Healthy reports on the whole have been received from the home trade. American yarns for home use have moved off slowly, and there are loud complaints of wretched prices being taken by needy sellers. Quotations in Egyptian yarns have been rather more irregular, and trade has not been of any importance.

THE WOOL TRADE.

Our Bradford correspondent writes :—Though there are hopes that with the General Election out of the way business will improve, it is to be feared that the root cause of the depression goes much deeper than the influence of politics. The wool textile industry of the entire world is more or less depressed at the moment, lack of confidence in current values being as much in evidence in Continental centres as it is in this country. Demand in all markets is restricted to small quantities for immediate requirements, and little development can be expected until users in all countries are satisfied that raw wool is again on a firm basis. In Bradford quotations are largely nominal, especially for fine tops and yarns, and there is not enough business in any depratment to test values. There is very little change in the wages dispute, and at present it is hardly affecting the worsted industry, though there is a possibility of the trouble extending. Uncertainty regarding Safeguarding is as pronounced as ever.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

It was not to be expected that the decline in wool values at the Australian selling centres since last February would please pastoralists. Several members of the wool-using end of the trade are surprised that the Australian Press has not already had something to say about the fall, charging buyers with adopting "bearing" tactics. It appears to be recognised that Bradford has never made any deliberate attempt to depress values in either Australia or London. Prices began to decline early his year, because of the weakening of buying power. Users in Yorkshire, France and Germany found a marked falling off in the demand for tops and yarns, which was directly responsible for the sharp decline in values which took place in February and March. Unfortunately, a more rapid decline has taken place in tops and yarns than in wool, and while Bradford buyers in Australia thought at the time that they had obtained raw material at reasonable prices, they are now finding that on arrival in this country it is too dear. In view of present manufacturing conditions, the best that can be expected is that raw material will not decline any further, and some of those associated with the wool and top market are sufficiently optimistic to think that this may be so. Whether this anticipation is realised or not depends very largely on what inspiration is given

by the result of the Parliamentary election. The mere fact of this being over will probably induce the majority of firms to settle down to more serious business.

HIDE, LEATHER AND ALLIED TRADES.

The hide market is steadier with prices of market hides showing very little alteration this week. Tanners are, however, still reducing input until stocks of sole leather are lower and prices more stable. Foreign hides seem inclined to firm up, and quotations at origin are in some instances higher, as stocks are said to be low in shipper's hands. South American hides have been selling well to the United States. Europe also showing more interest in this market. Argentine fregorifics are now selling at 8 7/16d., and the market is reported as being well sold up. In saladero hides, sales of Saltos are reported at 8¾d., and Rio Grandes at 7 15/16d., the latter on Russian account. In view of a strong demand, prices of African hides have advanced, with small supplies, best and second drys making 11¼d. and 10¼d. respectively. Australians are again wanted, and Queensland meatworks hides are selling at 9d. for dry salted. Cables from Chicago report a steady market, with best heavy packer steers selling at 15½ cents. Frequent small orders for sole leather make up an improved turnover for tanners and merchants. Prices are rather more stable, but not sufficiently so to induce speculation. Light bends are wanted by shoe manufacturers, whilst repairers are again taking medium weights of wet salted. Business is, however, rather checked by the fact that there are weak holders of stock who are prepared to sell at below cost of production. Offal is selling regularly with prices rather fluid, shoulders which will cut soles are well in request from makers of ladies' and sports shoes. Dressers of kip leathers are rather slack, the demand for semi-chrome and wax leathers being still slow. As some of them have done a large business with the United States in linings, they are feeling rather anxious at the proposal to place a heavy tax on dressed leather under the American Tariff Bill. Box and willow calf are wanted in small lots, prices being rather weak in view of the anxiety of Continental makers to sell. Patent sells regularly, while the demand for black and brown glacé is well maintained in centres catering for women's and children's shoes. The footwear section is improving, and many manufacturers are now well placed for orders for some weeks ahead.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market produced very little matter for comment. Trade jogs along quietly and previous prices were repeated in the case of spot goods with British makes claiming all attention. Cables from Java still speak of weather conditions being too dry over an extensive area, while according to market gossip, there is some reduction in previous estimate by Mr. F. O. Licht, respecting European area sown. The U.S.A. Tariff Bill has apparently passed the lower House and now awaits presentation to the Senate. Raw refining kinds steady. T.L., granulated, ex refinery, sold, 21s. 7½d.; white, Mauritius, spot, London, 20s. to 20s. 4½d. as to quality. Czecho granulated ready for shipment to the U.K. sold, 10s.; November–December, quoted, 10s. 5½d.; with sales in November–December, 1930, at 11s. 2½d. f.o.b. Hamburg. Dutch J, ready, quoted, 10s. 6d. f.o.b. Rotterdam. White Java unaltered. Cuban 96 per cent., July–August, 8s. 6d. c.i.f. U.K. Terminals, steady, quiet. Raw, August, sold, 7s. 9d.; December, 8s. 2½d., 8s. 1½d.; March, 8s. 5½d., 8s. 4½d.; white, May, quoted, 9s. 8½d.; August, 10s. 0¾d.; December, sold 10s. 6d.; March, 11s. cwt. Cuban receipts last week, 75,465 tons, against 37,379 last year; exports, 110,729 (also 901 old crop), against 66,127; stocks, 1,488,370, against 1,288,713; Central Workings, 8 against 3. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending May 25th amounted to 122,083 tons, against 129,972 at same time last year.

COCOA.—Market very quiet and prices in forward positions gave way. Accra F/F, July–August, quoted, 39s. 6d.; and October–December, sold, 42s. f.o.b. Terminal, July, quoted, 43s. 6d.; September, 45s. 3d.; March, sold, 47s. 4½d., 46s. 10½d. and 47s. 1½d.

COFFEE.—Public sales were resumed this week and while home-trade qualities received fair support at about steady rates, particularly foreign cleaned Costa Rica, export kinds were neglected. Kenya bold sizes, sold, 133s. 6d. to 140s. 6d.; Costa Rica, 130s. 6d. to 140s. 6d.; Vera Paz Maragogipe, 191s.

TEA.—Indian sales were resumed on Monday last and during the week, 51,725 packages were offered. A generally quieter tone predominated, though really fine liquoring teas were well competed for at full rates. Otherwise, market disclosed irregularity with medium about ½d. and common ¼d. per lb. easier. Ceylon sales were heavy at 38,835 packages. A quiet market resulted in the main. A small quantity, finest, sold steadily, but all other descriptions suffered a decline of ½d. to 1d., which, however, was partly accounted for by continued falling off in quality. Java and Sumatra auctions quiet and almost without exception easier. Of China, Keemuns sold 2s. 5d. to 2s. 6d., and there was a good demand for siftings at 6½d. to 7d. Cables from Hankow, record quality of new season's arrivals as decidedly better than last year and Keemuns held for 2s. 7d. to 3s. 3d. per lb. as to quality.

RICE.—All Eastern markets cabled very firm, and offers of Burma grain by shippers are comparatively small, as the native is reluctant to sell. Trade throughout Europe, however, fails to revive, and is held in considerable check by the low rates now current for wheat and maize. This position, however, now becomes changed regarding France, where there is now a better demand for rice owing to the prohibitive import duty imposed on wheat.

PEAS.—Market quietly steady. Japanese, afloat, 16s. 9d. to 17s. 3d.; April–May, Liverpool sold, 17s. 3d.; May–June, London, sellers, 17s. 3d.; new crop, September–October, 19s. c.i.f. Little mention is made respecting Dutch and Maple varieties.

BEANS.—Market firm; fair demand. Madagascar butters, afloat, 39s.; spot, 40s. to 42s. as to sample. Rangoon haricots, May–June, 14s. c.i.f.

SPICE.—Pepper met a quiet demand, but prices denoted no material change. Sales in Lampong black, May–July, at 1s. 3½d.; August–October, 1s. 2½d.; Muntok white, August–October, 1s. 11d. and buyers. London stocks of black reduced 14 tons on the week, and white 33. Tellicherry, March–May, 147s. cwt. c.i.f. Cloves quiet, unaltered. Sago flour, May–June, to the United Kingdom, sellers, 11s. 3d. c.i.f. Tapioca dull on former terms. African ginger, spot, London sold, 60s. cwt.

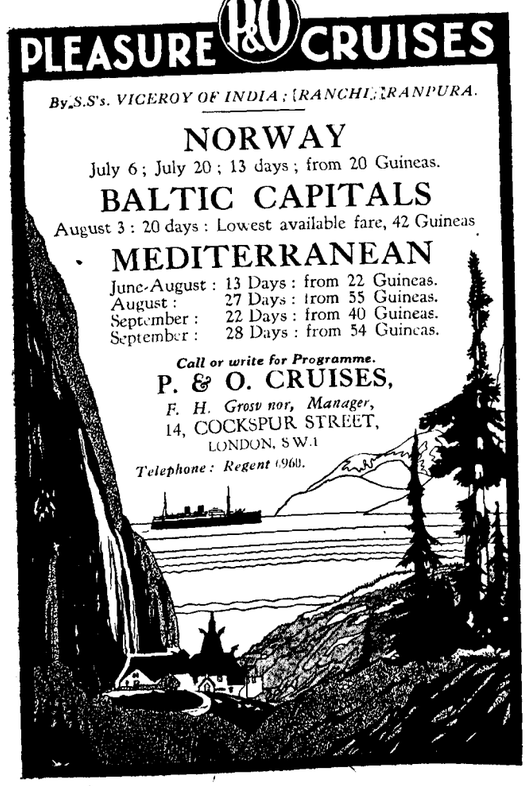
FRUIT (Dried).—Currants in quiet request, but prices fully steady on limited offerings. Pyrgos quoted 45s.; Amalias, 45s. 6d.–46s.; Zante, 46s. 6d.–47s.; Vostizza, 50s.–55s.; Australian, sold steadily at 46s.–56s. Sultanas quiet, and Smyrna practically cleared on spot, but parcels to arrive are engaging attention at about 40s. c.i.f. Choice Cretan quoted at 55s.–59s; Australian, new, 40s.–68s., old, 31s.–40s.; Cape, 52s.–56s. Raisins dull; Valencia, common to good, 40s.–45s.; Lexias, 45s. Figs in small supply, bags genuine, common to fine, 28s.–33s. Dates in fair demand; Siar, spot, 14s.–16s.; first tide, 14s. per cwt.

EVAPORATED FRUITS.—In steady demand and market firm. Californian plums, 20's–30's, quoted 66s.–67s.; 30's–40's, 57s.–58s.; 60's–70's, 44s.–46s. Pears, Lake County, 7s.–100s. Apricots, South African Royal, 57s. 6d.–117s. 6d.; Australian, 70s.–82s. 6d. Peaches, Californian, choice, 54s.; extra choice, 56s.; fancy, 60s. Apples, Californian, spot, sliced, extra choice, 77s. 6d. Almonds quiet and tendency easier; Mazagan, 132s. 6d.; Mogador, 132s. 6d.; Majorcas, 135s.; Bitter-Jordan, 185s.–210s. cwt.

CANNED GOODS.

CANNED FRUITS.—Market firm, with a good demand for most descriptions of Californian fruits, consumption being stimulated by a spell of warm weather. Certain lines are becoming scarce, especially peaches and apricots, which show a hardening tendency. Australian fruits clear readily on arrivals. Singapore pines in moderate request, but prices steady as stocks are by no means large. South African in fair request, Hawaiian being firmly held. Italian tomatoes quiet but without material change in value.

CANNED FISH.—Sardines, market steady; Portuguese clubs, 5s. per dozen tins. Lobsters, new pack in limited supply and best halves held for 145s.–155s. Salmon in better demand, and prices were maintained; red talls, spot, 44s.–46d.; pink, ditto, 26s. 6d.–27s. 6d.; halves, 33s.–36s. 6d. Japanese crab firm, finest quality ruling at 97s. 6d.–102s. 6d.



THE NEW YORK CENTRAL RAILROAD COMPANY

Extracts from the Report of the Board of Directors to the Stockholders for the year ended December 31, 1928.

Operating Income.	Year ended Dec. 31, 1928.	Year ended Dec. 31, 1927.	Increase.	Decrease.
Railway Operations.	6,911·27 *miles operated.*	6,906·21 *miles operated.*	5·06 *miles.*	
Railway operating revenues	$381,733,244 32	$383,377,311 19		$1,644,066 87

CANNED MEATS.—Corned beef and tongues firm, with moderate inquiries. Danish boned hams also realise full rates. Brawn also firm and in request.

CONDENSED MILK AND MILK POWDERS.—Market fairly steady. Full cream, sweetened, English, spot, 42s. 6d.; Dutch ditto, 37s. 6d.; June–July, 37s. 6d. Machine-skimmed, sweetened, English, spot, 25s.; Dutch, ditto, 22s. 6d.; June–July, 23s., all in 5-cwt barrels. Powders, spray process, F.C. 26 per cent., 2 by 56 lb. tins, crated, 90s.; M.S. (1-cwt. cases), 41s.; roller ditto, F.C. 26 per cent., 73s., M.S., 31s. 6d., all nett, duty paid, ex-wharf London. On the grocery side, F.C.S., 20s.; M.S., 9s. 6d., basis per case, usual packing. Danish cream, evaporated, unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 48 by 14 oz., 20s. per case.

HONEY.—Market quiet. Jamaican good amber to fine pale 49s.–55s.; dark to fair amber, 40s.–47s. 6d.; New Zealand dark amber, 50s.–55s.; medium, 55s.–65s.; light, 65s.–85s.; white and water whites, 65s.–87s. 6d. per cwt.

RUBBER.

Market steady, but general course of trade quiet, as manufacturers are not disposed to exceed immediate requirements at the moment. Sheet spot and June sold 10⅝d.; July–Sept., 10⅞d.; Oct.–Dec., 11⅛d.; Jan.–March, 11⅜d. London stocks 62 tons lower on the week, landings being 1,368; deliveries, 1,430; stocks, 30,893; compared with 44,628 at corresponding period last year. Liverpool stocks, 449 tons higher, landings being 559; deliveries, 110; stocks, 4,665

GENERAL.

JUTE.—Market easier, especially for new crop. Calcutta cabled steady for old but lower regarding new, while local stocks have undergone considerable diminution of late. Firsts, May-June, quoted £30 2s. 6d.; June–July, £30 5s.; new crop, Aug.-Sep., sold £31.

HEMP.—Quite a firm market for Manila grades as shippers are reserved in their offers and fair buying disposition shown. J.2, June-Aug., quoted £38 10s.; K ditto sold £33 15s. net; L.1 quoted £24; L.2, £32; M.1, £32 5s.; M.2, £27 5s. African sisal firm, unaltered. Manila receipts for the past week totalled 32,000 bales, against 32,000 last year. Estimate for next week, 32,000, and following week, 26,000. Shipments to U.K./Continent last week, 12,000; U.S.A., 17,000; Japan, 7,000; other countries and local consumption, 5,000. Local stocks 7,000 down at 201,000 bales.

SHELLAC, quieter. T.N., spot, 197s. 6d.; Aug., 193s.; Oct., 195s. cwt.

COPRA.—Intensified depression took possession of this market and which appears unable to absorb the full quantities now coming along. Straits, S.D., June–July, Rotterdam, quoted, £21; Aug.-Sep., £21 2s. 6d.; Dutch East Indies, June–July, £20 17s. 6d.; Ceylon, £22 2s. 6d., to Marseilles; mixed, excluding Padang, June–July sellers, £19 12s. 6d.; smoked, South Sea, sellers, £19 8s. 9d.; sun-dried, £19 15s.; plantation Rabaul, £20; hot-air dried, £20; Manila, £19 15s. Palm kernels, June–July, to Hamburg quoted £16 10s.

MISCELLANEOUS.—Coconuts, quoted, 16s. to 23s. per 100. Coir yarn, Ceylon, £19 10s. to £37 10s.; Cochin, £23 to £41; Ceylon bristle, £18 15s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 1s. 10½d.; Java, 2s. 1d.

METROPOLITAN CATTLE.—May 29.

THE MONEY MARKET.

CONDITIONS in the money market were this week described as dull and apathetic. Three months bank bills were quoted at a weak $5\frac{5}{16}$ per cent., and the rate for short loans was around 4½ per cent., but on Thursday morning money was almost unlendable. The reason for

this was mainly the release of the War Loan dividend on June 1st, which as usual glutted the market with money, but a contributory factor was the lack of commercial bills. Treasury bills, of course, were plentiful, as the Government have lately been making heavy issues in preparation for the War Loan dividend, but it is stated that the Bank has been making large purchases of Treasuries in order to relieve the market.

* * * *

The situation, though for the moment quiet, is not without interest. Evidence of the plentiful supply of money is found in the fact that several of the joint stock banks are believed to have lent a certain amount to the market at 4½ per cent. until June 28th. This date is clearly chosen with a view to the half-year balance sheets, but the fact that the banks have fixed part of their funds for a period as long as three weeks suggests that no immediate shortage of money is anticipated.

* * * *

On the other hand, the Bank of England is believed to hold most of the June maturities, and while the market in its turn is a big holder of July bills, it has been selling them freely this week at rates around 5¼ per cent. These facts do not altogether suggest that conditions are likely to remain easy, unless, indeed, the Bank continues to take up fresh bills as those now in its possession reach maturity. It is these cross-currents that make the position an interesting one, and while no change of major importance is expected, the present apathy may well turn out to be a mask concealing developments beneath the surface.

* * * *

The gold position, too, is interesting, with both the mark and the dollar down to the export gold point. On Wednesday £258,000 was actually bought from the Bank on American account, and while there was little profit in this transaction, it is only fair to call it a normal exchange operation. Germany has not yet taken gold direct from the Bank, but the £500,000 of new gold bought on Tuesday by an "unknown buyer" is believed by some to have passed into German hands. Market opinion, however, differs on this point. Against this, the Bank got £500,000 in sovereigns from South Africa on Monday, and on Tuesday secured £290,000 of new gold at 84s. 11d., so that on balance the Bank is still gaining gold.

The weakness of sterling against the dollar is ascribed to French purchases of dollars in preparation for the repayment of their commercial debt. At present, the whole sum falls due next August, but if the Mellon-Bérenger agreement, which is discussed on a later page, is ratified, repayment will be spread over a term of years. In this event, the French will find themselves in possession of large dollar balances which they will not immediately require. The strength of the mark is largely due to the high level of money rates in Germany, but the approaching success of the reparations conference has led to some foreign buying of German securities, and this has also helped the mark.

NEW YORK MARKETS.

Our New York correspondent cables:—This week's Reserve system statement is complicated by end-of-month settlements; it shows a small reduction in discounts and bills and a slight rise in Government securities, with the ratio little changed at 74.4 per cent. The New York Bank bought bills and securities and increased its discounts, its ratio being lower at 83.3 per cent. There is little expectation of any change in the discount rate, unless it is lowered later on with the idea that severe deflation of shares and commodities, especially wheat, would upset business confidence. There was a better feeling on the share market this week, in the belief that the Reserve Board is ready to ease up its tight money policy. Professionals are doing more, but a return of the old speculation is not anticipated until the Reserve policy becomes clearer and a better idea is obtained of business prospects. Most observers expect business activity to pick up in the autumn after a moderate summer curtailment. Congress is wearing on the nerves of everybody, but it is yet believed that the worst features of the Tariff Bill may be eliminated, and farm relief is apparently going through without the subsidy plan. It is not thought likely that legislation directed at the Federal Reserve system will be undertaken, in spite of the irresponsible talk of some members of the Senate.

THE STOCK MARKETS.

After standing fast, with a certain precautionary marking-down of prices on Friday of last week, during the announcement of the election results, the Stock Markets opened with a firm tone on Monday. Easier conditions supervened subsequently, speculative ardour being absent, though investment demand remained steady. Gilt-edged lost ground slightly on a small shipment of gold by the Bank of England, after a sharp rise early in the week. Home rails were neglected. Industrials showed few features, the markets apparently awaiting a "lead" from outside. Rubber shares were idle, teas quiet but steady, and oils easier after a firm start. Paris showed increased interest in Kaffirs, but Rhodesians failed to maintain their initial outstanding activity.

THE COMMODITY MARKETS.

This week's reports show little change. The coal position remains steady and in some districts export business is improving. Business in the iron and steel trades varies very much as between sections and districts, but there is still no evidence of a seasonal setback. The tinplate outlook is promising. Manchester cotton reports contain little cheerful news, except the announcement of improved business in Egyptian yarns. Uncertainty as to wool values continues to dominate trade in Bradford. Only a hand-to-mouth business is being done in the jute trade. The slight improvement in the hide and leather trades continues, in spite of a slight check to exports resulting from the proposed changes in the United States tariff. Vegetable oils and oilseeds are a dull market. Wheat has rallied to the level of a month ago.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was fairly active, with steady trading, last week, the main feature being the renewed weakness of sterling against the dollar. The New York rate fell from 4.85 1/32 to 4.84 15/16, although Montreal rose ¼ to 4.88⅜. Paris was very steady at 124.03, but Brussels lost appreciably at 34.92. Milan was rather weaker at 92.68, and Madrid again exhibited weakness and irregularity, moving on balance from 34.40 to 34.80. Amsterdam weakened from 12.06⅝ to 12.07¾, and Berlin gained ⅛ at 20.33½. The South American currencies were on the whole steady. Buenos Aires losing 1/32d. at 47⅛d., whilst Montevideo fell away by ⅜d. to 47⅞d. In the Far East the rupee was less firm at 1s. 5 5/16d., and the yen also weakened from 1s. 10 3/32d. to 1s. 9 29/32d. In the forward market dollars for one month's delivery remained at 7/32 cent, but those for three months were at an enhanced discount of ½ cent. The premiums on Paris went from 1 centime to 2 and from 4 centimes to 5, whilst last week's discounts for Belga changed to par for both periods. The Madrid premium narrowed to 5 and 14 centimes, as against 9 and 27 centimes last week. The discounts on forward Amsterdam fell slightly to ⅜ cent and 1⅛ cent, as did those for forward Berlin to 5 and 12 pfennigs. In the silver market prices declined by ⅝d. to 24d. for spot and to 24 1/16d. for forward, chiefly under the influence of China, where silver fell sharply. The China silver exchanges fell away in sympathy, Hongkong losing ¼d. at 1s. 11⅝d., whilst Shanghai lost ⅞d. at 2s. 4⅜d.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

PARLIAMENT AND THE NATION.

THE country has spoken and Mr Baldwin has obeyed. Whatever the shades of meaning which may be read into the election statistics, which we examine in a subsequent article, one thing is clear beyond a peradventure. The people voted for a change of Government. Theoretically, Mr Baldwin could have remained in office for three weeks and awaited his dismissal at the hands of Parliament; and there were those who urged him to take that course. In resisting this advice and placing immediately the resignation of his Administration in the hands of the King, Mr Baldwin, in our view, took the only course consonant with dignity, fair dealing and democratic sense. Postponement would have prolonged uncertainty, to the detriment of trade and finance; and it would have aroused a suspicion, however unfounded, of party intrigue and a lack of willingness to give Labour a fair chance. It is to Mr Baldwin's credit that, faced by the inevitable, he has accepted it frankly and without delay.

So we say good-bye to Mr Baldwin's second Government. He will be remembered in political history as the man who threw away a majority twice in six years. In 1923 he courted certain disaster by his deliberate plunge into Protection; and in 1929 he made the defeat of his Party certain by failure—we might almost say obstinate refusal—to formulate a concrete policy adequate to the great national and international issues of the day, peace abroad and unemployment at home. It is easy to kick the fallen. It is equally easy to adopt the motto *de mortuis nil nisi bonum*. Somewhere between the two lies the true note of the fair obituary of the recent Administration. In a sentence, the late Government fell because the people chafed at a lack of grip and imagination. Yet in the international sphere it can claim the credit of bringing to fruition at Locarno the seeds of co-operation sown by its predecessor; while at home the De-rating Act, marred though it was by superfluous generosities and insufficient concentration on the points where help was most needed, was at least a big attempt to aid productive industry and remove some of the burdensome anomalies of an illogical and anachronistic tax system. Perhaps the most remarkable feature of the past four and a half years has been the degree to which Conservatism has been forced along the road of democracy and progress. Just as the previous Conservative Administration made itself distinguished by granting Home Rule to Southern Ireland, a measure against which the whole force and resources of the Party had been mobilised for thirty years, so Mr Baldwin's second Government has placed on its record the extension of pensions (against the whole theory of which the Conservative Opposition inveighed in 1910) and a spread of the franchise as wide as could have been advocated by the Liberal or Labour Parties. In these acts may be seen some recognition that time and tide wait for no man; but if is a fair question whether this recognition would have gone even as far as it has if Conservatism and Labour had been facing each other over an unbridgeable chasm and Ministers had not realised and felt the existence of an alternative anti-Socialist Party imbued with the spirit of democratic progress.

A balanced judgment in the farewell to the old Conservative Government, if desirable, is academic; a balanced judgment in the welcome to the new Labour Government is of great practical and national importance. We welcome the abundance of available evidence that the country as a whole and its press and politicians are prepared to give the new Government a full and fair chance. Such attempts as have been made to frighten the City with the bogey of Socialist legislation have failed, and, indeed, such attempts have been conspicuously few and feeble. Markets, indeed, have not even repeated the momentary slump which in 1924 occurred, but was followed by strong and rapid recovery. There may be those who remember the previous Labour Administration merely by the blunders over the Campbell prosecution and the proposed Russian Loan which led it to disaster; but larger minds recall a period of uneventful home administration, of successful foreign policy, and of maintained British credit, and realise, moreover, that the oft-criticised electoral efforts of the Liberals have provided safeguards in Parliament against any ill-conceived legislation into which the Labour Cabinet might (by any stretch of imagination) be seduced by the left wing of the Party behind it.

Reassurance, then, springs from the record of the first Labour Government in office and from the present Parliamentary position. Hand in hand with reassurance goes keen expectation. For Mr MacDonald and his colleagues return to power at a moment when circumstances have conspired to provide them with great opportunities. In the international field they are faced with a great new chance of achieving an Anglo-American agreement which would open the door to security and disarmament and economy, while the task of putting through a new Reparations settlement, with all that this implies, greets them on the threshold. We discuss elsewhere Mr MacDonald's record and opportunities in the realm of foreign policy, and need only pause here to say that, since a naval agreement is the key that will unlock the door to Anglo-American friendship and co-operation, there is an urgent need for a strong and enlightened statesman at the Admiralty who, with the full support of his Prime Minister and Foreign Secretary behind him, will not allow the higgling of experts to obstruct the broader lines of negotiation.

But if the new Government's opportunity in the foreign field is great, it is no less striking in the sphere of domestic politics. We are not thinking so much of the practical steps towards free trade and towards the cure of unemployment, in which the Cabinet are assured in advance of the decisive support of the Liberal Party, although they are of obviously first-class importance. We are thinking rather of the supreme opportunity of showing how minority government under the three-party system can be worked to the practical advantage of the country. No real attempt to achieve this has yet been made. In 1924 we had the unsatisfactory position in which the Liberals acted as hewers of wood and drawers of water for the Labour Government, just so long as the limits of Liberal endurance were observed, and no new adjustments of constitutional or parliamentary procedure were attempted. That experiment is not to be repeated. Mr MacDonald is not likely to seek, and the country will not wish him to seek, conditional arrangements or backstairs accommodations with other parties. How, then, is a minority government to stay in office and save the country from a fresh General Election which no one wants, as the new Premier rightly divines, for two years at least? To that question there are three lines of answer. In the first place, there is the unemployment problem to be tackled, and a House of Commons fresh from contact with the electorate will hardly take the onerous responsibility of rejecting practical measures for its solution. There, together with the big international issues that are approaching, and the routine of financial and administrative business, is enough to occupy the attention of the Government for a substantial period. Next, the Government must recognise the limitations of the present position and realise that, if it wishes to stay in power, it must not include in its Parliamentary programme measures which outrage the convictions of the other two parties, and to ascertain the position in this respect a reasonable degree of consultative *liaison* between the leaders of the three parties must be established. Thirdly, the most important of all, it must be clearly established that the Government should not retire from office except in answer to a direct vote by a majority of the House requesting it to do so. Some observers add, as a further *desideratum*, the definite removal from the present and all future Governments of the right to demand a dissolution and the transference of that right to the House of Commons. The passage of that far-reaching constitutional measure would certainly permit of the introduction and full discussion even of proposals which the Government knew would not pass through the House of Commons, and their ventilation in a "free" House would be salutary and instructive. On that matter, however, there are, we realise, abundant grounds for differences of opinion.

Be that as it may, we believe that if the Prime Minister and his colleagues will handle the Parliamentary situation in the light of their hard-earned experience of 1924;

if they will remember that 13½ million votes were cast against at least part of their election programme; if they will grasp the big opportunities that greet them in a broad-minded spirit of peace abroad and business reorganisation at home, then there is no reason why their period in office should not be prolonged and fruitful. Anglo-American agreement, a new Reparations settlement, disarmament, practical schemes for reducing unemployment, the reform of our anomalous electoral system—here is a field wide enough and rich enough for cultivation with the goodwill of the nation and to its material and lasting advantage.

THE FOREIGN POLICY OF MR MACDONALD.

In the statement issued by Mr MacDonald last Saturday, in which he pleaded that "Whatever Government is going to make itself responsible for the conduct of national affairs both at home and abroad at this time ought to have a chance to develop its policy," he referred to his own record and experience in the domain of international relations in the following terms:—

> "The way they broke the development of my policy as Foreign Secretary in 1924 is a thing that ought not to happen again. I was only able to start it and then to leave it to others to develop. They did that with regard to Locarno and the admission of Germany to the League, and then the whole of the policy was dropped. I do not think that is fair or in the interests of the country."

The tone of this statement is militant; the substance is true. In spite of two notorious failures, Mr MacDonald's brief term of office in 1924 was the year of greatest progress and achievement in British foreign policy out of all these ten years that have passed since the signature of the Versailles Treaty. During those months Great Britain took the place in the field of international affairs that is her natural place. She stood out as the leader, in Europe, along the paths of reconciliation and reconstruction. And the point to mark is this. When she assumed this position courageously she found herself able to fill it with effect. The chief credit for that belongs to Mr MacDonald himself, who was responsible, in his double capacity of Prime Minister and Foreign Secretary, for all the larger transactions in the domain of foreign affairs that were put in hand during his ministry. He has refrained from assuming the double burden again; but in 1929, as in 1924, the main issues in foreign affairs touch our vital national interests so closely that, whoever may represent the Government at the Foreign Office, the Prime Minister is bound to take a large hand himself in what is done. Therefore we may expect Mr MacDonald to play almost as great a personal part in the conduct of foreign affairs in this ministry as in the last; and, if we are right in this expectation, it is profitable to recall what he did or tried to do five years ago in order to compare his work then with the work that lies before him to-day.

The remarkable thing about Mr MacDonald's achievement in 1924 in the international field was the quality of his diplomacy: the tact, the forbearance, the good temper, the suppression of personal feeling which he imported into his rôle of Foreign Secretary. The problem with which he was then confronted immediately after taking office was enough to make any statesman quail. He had to deal with Monsieur Poincaré in the Ruhr, with Monsieur Poincaré still apparently at the zenith of his power (for it was not yet evident that he was approaching his fall), and, not least, with a Poincaré driven even more savage and sullen than he would have been anyway as a result of his long war of words with Mr MacDonald's own predecessor at the Foreign Office, Lord Curzon. Anybody who wishes to estimate Mr MacDonald's ability as a diplomatist (when he chooses to be one) need only study the Curzon-Poincaré correspondence of 1923 and then compare it with the MacDonald-Poincaré correspondence of 1924. The former is a melancholy alternation of polemics, each longer than the last, in which either statesman is simply concerned to "score off" his opponent after having long ago abandoned any hope of coming to a constructive agreement with him. Mr MacDonald somehow lifted the correspondence right out of this rut and carried it at once on to human lines in which friendliness and frankness were no longer incompatible; and Monsieur Poincaré, suddenly confronted with this unexpected change of tactics, first shook himself in amazement and then responded in the same spirit—so much so that, just before his fall, he had accepted an invitation from Mr MacDonald to pay him a visit at Chequers and talk things over, heart to heart! This correspondence is the most brilliant thing in the conduct of British foreign policy since the War—and, in passing, we may allow ourselves to say how heartily we wish that Monsieur Poincaré's Mr MacDonald was the Mr MacDonald with whom we always had to deal. If Mr MacDonald has a court jester (a very necessary officer in any Government of which Mr MacDonald is the head), that functionary might well advise his master to try and think of the sixty Liberal members of the new Parliament as so many Poincarés to be appeased. How much more kindly he would think of them if once he saw them in that light! What allowances he would make for their foibles! How vastly the prospects of a long spell of progressive British foreign policy would be improved! But this is by the way. The point that we wish to make is that Mr MacDonald is at his best when he is free from the atmosphere of personal and party resentments and when he is confronted with a problem which he enjoys. In other words, he is at his best in dealing with foreign affairs.

How good that best can be is shown by his record in 1924. His great achievement then, of course, was the preliminary settlement of the Reparations question—the negotiation of the London Agreement that brought the Dawes Plan into operation and that got the French and Belgians out of the Ruhr. In fairness to the Conservative Party, it must be recalled that the initiative in seizing upon the suggestion for an expert inquiry, which had been thrown out previously by the American statesman, Mr Hughes, had been taken by them in the autumn of 1923. It was Mr MacDonald, however, who nursed that seedling until it matured and bore its fruit. His correspondence with Monsieur Poincaré was the crucial stage; and though Fortune then came to his assistance by putting Monsieur Poincaré out and Monsieur Herriot in, it is only fair that Fortune should favour the brave.

Yet, in the long perspective of history, Mr MacDonald's Ministry in 1924 may be remembered less for its solid success in dealing with Reparations than for its efforts in connection with the Geneva Protocol and the Anglo-Russian negotiations. The Protocol is the most comprehensive attempt to solve the problem of security that has yet been made since the war. It is one of those pieces of fine work which, though they may not come to fruition themselves, become fruitful by entering into everything that is accomplished afterwards in the same field. As one of the architects of the Geneva Protocol, Mr MacDonald is perfectly justified in claiming credit for the Pact of Locarno. The Locarno Pact is, in fact, a local application of that method of dealing with the security problem which the Geneva Protocol would have applied universally. And it was carried through to success by the momentum of the Protocol—a momentum which was strong enough to achieve that much even when the more ambitious plan of a world-wide Locarno had been rejected. As for "the Locarno spirit," that, pre-eminently, was a legacy which Sir Austen Chamberlain inherited from his predecessor. It was a compound of the permanent "atmosphere of Geneva" with the cordial personal touch which Mr MacDonald had introduced into his relations with foreign statesman from Monsieur Poincaré onwards.

As for the Anglo-Russian negotiations of 1924, they were, whatever their shortcomings, a strenuous attempt to accomplish what was then an almost superhumanly difficult task. In making this attempt, Mr MacDonald was deliberately exposing his flank to a formidable fire from his political adversaries at home; and even the severest critics of the handling of Anglo-Russian affairs in 1924 can take little comfort from the policy of 1925-29. The Conservative Government's policy towards Russia has been entirely negative, and has not only damaged

British interests—particularly on the tender spot of our export trade—but has placed another stumbling-block in the path of international peace.

How do the great foreign problems of 1929 compare with those of 1924? As regards Reparations, it looks as though Mr MacDonald were now going to reap his full reward for what he accomplished five years ago. Thanks to the provisional settlement that was reached then, it seems as if a more definite settlement is on the verge of achievement at the moment when Mr. MacDonald is assuming office again. A complete evacuation of the Rhineland ought to follow; and if once the Franco-German problem is solved, Mr MacDonald will be free to address himself to the other urgent problems that have been waiting for the re-appearance of a constructive-minded British statesman. The key problem to-day is that of Anglo-American relations, conceived in terms of naval armaments; and here Fortune has favoured Mr MacDonald once again. In 1924 she gave him Monsieur Herriot to work with; in 1929 she has given him President Hoover. The inauguration of the Dawes Plan in 1924 should find its counterpart in 1929 or 1930 in a general agreement for a drastic reduction of naval armaments. The next problem is to make adequate provision for the pacific settlement of international disputes to which we have pledged ourselves in signing the general Pact for the Renunciation of War as an Instrument of National Policy. The first step which the British Government has to take here is plain because it is long overdue. Great Britain has to subscribe to "the optional clause" of the Permanent Court of International Justice, under which we should be pledging ourselves, in advance and in general, to submit to the Court four categories of disputes of a justiciable character. In the wake of these two problems, half a dozen others crowd up for consideration: Russia, Egypt, Minorities, Economic Barriers; but at this stage it would be premature to go into these. Sufficient that in the realm of world affairs Mr MacDonald faces a position pregnant with tremendous possibilities, and faces it, as we have shown, with a record that inspires good hope of achievement.

THE FALL IN WHEAT PRICES.

Though it has become unfashionable now to connect unemployment with sun-spots, economists have often ascribed the cyclical progression of slumps and booms in world production and trade to the influence of the weather through its reaction on staple crops. The immediate reverberations of the recent drop in wheat prices tend to vindicate such theories, but in the contrary sense to that in which the causal sequence was supposed to occur. Not famine crops but abundant crops have become a threat to the "prosperity boom" of the United States, and though the immediate reaction in this country has, indeed, been favourable, since monetary conditions at once relaxed on news of the Wall Street break, the fut effects of abnormally low wheat prices may not be a gether to our advantage.

It was on May 27th that the Chicago prices for M wheat fell below a dollar a bushel for the first time since 1913. At once the Wall Street quotations of leading stocks connected with the agricultural industry began to fall, and soon brought with them the majority of industrial securities. Montgomery Ward, which at the end of April stood at 128½, fetched only 101½ on May 31st. American Agricultural Chemicals fell, over the same period, from 16½ to 10½, National Dairy from 135½ to 63¼, International Harvester from 110 to 94½, and Sears Roebuck from 161 to 143¼. In Montreal, Cockshutt Plow dropped from 41⅞ to 36¼ in the month. Other influences, including the policy of the Federal Reserve Board, were working in the same direction, but the direct connection between Wall Street bear movements and declining wheat prices is proved by the sharp recovery of the stocks mentioned when the price of wheat hardened again on Monday last as a result of reports that official action would be taken by the United States Government to assist in financing the handling of the surplus..

The big drop at the end of May followed the announcement of official crop prospects for 1929-30. But the trade had already adopted an unfavourable view of the chances of a restricted supply this year, and prices had been falling almost without interruption since February.

Wheat Prices.

	Cents per 60 lbs. Winnipeg. No. 3 Manitoba.		New York. No. 2 Winter.	
Average, 1926–27.....	146¾		151½	
Average, 1927–28.....	146⅜		150¼	
Monthly averages:—	*1928*	*1929.*	*1928.*	*1929.*
January.....	143½	120⅜	146	134½
February	141¼	127⅛	148½	141⅜
March.....	147⅜	126⅜	156⅜	138
April	157	123	171⅜	130⅜
May	158½	113⅜	172¼	116⅛

It will be seen from this table, not only that prices have been throughout at a much lower level than last year, but also that the direction of the price-movement has been precisely opposite. Last spring, weather reports were consistently adverse to the prospect of heavy crops, in spite of an unusually large acreage under cultivation, and the fall did not come till August, when it became clear that the season's crop had been much under-estimated. This year the outlook in general has been better, and rumours of lack of moisture in Western Canada, or of widespread frost in the United States, have not undermined the general optimism since January. The killing by frost has, in fact, been unusually small. Nevertheless, there is still plenty of time for current estimates of production to be falsified, as last year's experience proves. The estimate at May 1, 1928, for the year's production in the United States was 486,478,000 bushels, whereas actually 878,964,000 bushels were harvested. The corresponding

estimate for 1929 was 595,335,000 bushels, and this may be just as far out in the opposite direction. News from Canada is promising, and certain of the extra European wheat-growing countries make good reports, but the Indian outlook is poor, some of the news from the Argentine is distinctly unfavourable, and most European countries are still doubtful. It is significant that this week prices have rallied considerably, and there is evidence in the recovery of the last few days that the slump has definitely come to an end.

The most important factor in the price situation is undoubtedly the large carry-over from last year. Surpluses on hand and in prospect are abnormally large. In January the International Institute of Agriculture estimated that against an export surplus of 1,230 million bushels there was a demand for approximately 830 millions, and that therefore the carry-over to next season would amount to 400 million in round figures, or about double the carry-over to the season 1928-29. A later and more accurate estimate put the carry-over at 370 million bushels. In these circumstances a fall in price is not surprising.

Indeed, it is true of wheat as of most agricultural products that the surplus fixes the price. Selling pools have endeavoured to bring better average prices by absorbing the surplus and carrying it over against a period of short supplies. But this year we are likely to see the defeat of that policy by a succession of two good crop years, raising to an impossible level the stocks which it would be necessary to withhold. The Canadian pool has had to face the competition of other countries, especially the Argentine, just as the Rubber Restriction Scheme had to meet the intervention of the Dutch producers, and it would not be surprising to find the Canadian elevator companies in difficulties before long.

The demand for wheat is highly inelastic, and any excess causes a disproportionate fall in price. Figures were quoted in the *Economist* of February 16th last to prove that the larger the aggregate world crop the less the total price obtained for it. In other words, what the farmers are suffering from at the moment is too bounteous a Providence. They should grumble, if they could be assured that Nature would treat all farmers alike, not at the bad weather but at the good.

The effect on the world economic situation of a succession of good harvests would undoubtedly be enormous. The poorer classes would be enabled to raise their standard of living, and the reduced total amount spent on cereals would intensify the demand for other commodities of general consumption. In this way the industrial part of the community gains doubly, and its losses on account of the reduced purchasing power of the agricultural population are more than offset. These considerations help to explain why it has been possible for American industrial prosperity to go side by side with "serious agricultural depression"—in the words of the report on the national income and its distribution made by Professor Copeland to the Committee on Economic Changes. Professor Copeland estimated that the proportion of the income of the United States going to farmers has declined by 3 per cent. over a period of 13 years, and present portents indicate an acceleration of that movement. There is much of comfort in the prospect for the industrial parts of the world, but very little for the British arable farmer.

GROUP PENSION SCHEMES.

In our issues of March 16th and May 18th we printed two articles from correspondents on this subject, the first extolling the merits of schemes on the American pattern and the second championing the cause of the private pension scheme. In the article which follows a third correspondent deals with the subject from the point of view of the British Life Offices.

YOUR correspondent, when dealing with this interesting subject in your issue of May 18th, took exception to the article of March 16th on the ground that it was not free from partisanship; that in fact it was simply "an *ex parte* advocacy of the establishment of a scheme on the methods adopted by American Life Offices." Unfortunately, his own contribution cannot escape a similar criticism; he has expounded the virtues of the establishment of a Private Fund in a manner which is certainly not free from bias.

The naïve comparison of the rate of interest earned by a privately constituted Pension Fund in a single year with that guaranteed by a Life Office for the whole duration of its contracts—thirty or forty years on the average it may be—leaves one with the feeling that a fuller statement of the case would be more satisfactory and might lead to a different conclusion; while the inference, possibly quite unintentional, that the well-known benevolence of the Income Tax Authorities is extended more readily to "approved" private funds than to the annuity funds of the great Life Offices, and that the former are consequently in a better position to serve their members than are the latter, is very unfortunate and may mislead.

The original article on this subject dealt with certain types of pension schemes which are managed by Life Offices with the greatest success both in this country and in America. For some years pension schemes were not pushed forward to any great extent, in so far as they affected the wage-earning classes, by Life Offices at home; the position of our wage-earners, who are required to make weekly contributions to the great State insurance and pension schemes of this country, for some time diverted the attention of the Life Offices from them to the salaried officials of commercial and other bodies for whom many useful schemes were instituted. The period of stress through which industry in the United Kingdom has passed in recent years also acted as a drag on the Life Offices since the times were hardly propitious to approach employers on such a subject. The credit for giving the initial impetus to group life insurance and pension schemes consequently belongs largely to our friends in America; but in the last year or two British Life Assurance Companies, feeling that the time was now ripe, have taken up the subject with vigour, and several of the important offices now recommend, in cases which they consider suitable, and carry through successfully, group schemes for wage-earners.

There is a great variety of schemes available for industrial and other workers and it is on the flexibility of their schemes and the variety of the arrangements they are able to make for the convenience of individual firms that the Life Offices base their appeal. The pension scheme, pure and simple, may be arranged through a Life Office with the minimum of trouble, the pension being based either on a percentage of salary or on length of service. The manner in which the contributions are to be made is, of course, a matter for arrangement to suit the requirements of the particular case under consideration. The privately constituted pension fund is wedded to a system, which has often caused considerable financial upsets and inconvenience in practice, of contributions and pensions both of which are percentages of salary—the latter usually being a percentage of the average of the salary during the last few years of service—and while there is no magic in this arrangement, something very similar can be carried through by any Life Assurance Company accustomed to the business in a case in which a scheme on these lines is regarded as a *sine qua non*.

So far as the female worker is concerned a scheme giving pensions at the retiring age with the usual subsidiary benefits is quite suitable in certain cases if a dowry or marriage benefit be included; but for the great majority of male workers such an arrangement goes only part of the way towards giving security, and it is here that the flexibility of the Life Offices' schemes is invaluable. A scheme which combines life assurance, disability and pension benefits in one comprehensive contract gives complete security to the worker; in the event of his early death, his widow and family are provided for by means of a lump sum or equivalent income under the assurance benefit, and should he be rendered unfit for work owing to disability of a permanent nature it can be provided that a similar lump sum or income be payable to him then. Every eventuality is carefully provided for and the result is complete satisfaction to all concerned. If the full contract should prove to be a rather large undertaking for an industrial firm, in the first instance, a group life assurance and disability scheme should be entrusted to a Life Assurance Co. and the more costly pension benefits can be added in course of time if circumstances should render such a course desirable.

There are two distinct methods by which such schemes can be arranged through a Life Assurance Co. The first is to effect one comprehensive group life assurance and pension policy in respect of the whole staff concerned, individual accounts being kept by the assurance company for each employee in respect of his pension contributions, which are usually returnable in the event of his death while in the service or on his retirement before the pension age is reached. The second method is by means of individual endowment assurance policies on the life of each employee. Under this latter arrangement it is customary for the policies to be written by the assurance company in favour of duly appointed trustees of the scheme who hold the policies for the benefit of the employees or their representatives. Two policies are usually effected on each life, one in respect of the employees' contributions and the other in respect of the contributions of the firm. The manner in which the policies are dealt with is governed by a trust deed and a code of rules drawn up and adjusted to meet the case of each particular firm and subscribed to by the employee as a condition of becoming a member of the scheme. This method has considerable advantages, particularly where the employees are likely to leave the service, since it can conveniently be arranged that a retiring employee takes his policies with him and consequently retains the advantage of insurance cover and pension rights in the future, either at his own expense or with the assistance of his new employer. His right to the policy or policies secured by the contributions of the firm he is leaving is a matter of arrangement, and some payment may be required from him in consideration of the firm's handing over their policies. As the wage or salary of the employee increases, new policies are effected under this arrangement to cover the corrsponding increase in benefits.

Perhaps the most satisfactory method is a group life assurance and pension policy in respect of the wage-earners and an endowment assurance scheme by individual policies for salaried employees, whose remuneration is normally on a higher scale and increases more rapidly as time passes. The wage earners may be divided into classes according to circumstances in such a way as to give appropriate benefits and to charge appropriate contributions in each division. Naturally the relation between the contributions of the employee and those of the firm is a matter of adjustment.

Many such schemes have been arranged by Life Assurance Companies in recent years and their usefulness is being recognised to a continually increasing extent. The question as to whether to institute a private scheme or to entrust the management to a Life Assurance Co. is, of course, very much to the fore just now, but the merits of the latter arrangement cannot fail to appeal in the long run. In this age of specialists such a slogan as "every man his own financier" is unworthy of a moment's consideration and yet this is undoubtedly the idea underlying the private fund.

It is manifestly absurd to suppose that a committee of management drawn from the directors and workers of an industrial firm should be able to obtain better results from the investment of funds left in their charge than can the management of our great Life Offices, who have in their care accumulated funds of many millions of pounds, and who are specialists with large organisations and expert advisers continually devoted to the subject. The committee of management may be composed of men of first-class ability and energy, but the management of a pension scheme and the investment of its funds is not their business—they are amateurs attempting to compete with the professionals.

In some cases the accumulated moneys of a private fund are left in the charge of the directors of the firm, who allow the fund a fixed rate of interest each year. Incidentally, since this rate is fixed and more or less guaranteed, it will seldom, if ever, exceed 4 per cent. per annum, and serious consideration of the history and future prospects of investment yields, bearing in mind the question of possible fluctuation in capital values, certainly does not lend colour to the idea that this rate is too low. Such an arrangement as this is often convenient to the firm; but it is never satisfactory to the worker. Security is the first essential of a pension scheme and if the firm meet misfortune the pension fund moneys invested with it are hardly likely to escape at least part of the disaster. The contract of the Life Assurance Co. is a guaranteed contract; the security of British Life Assurance Companies has stood the test of many years. Not a few private pension funds have fallen on evil times owing to the onesided nature of the business they transact and owing, in some cases, it must be admitted, to the amateurish methods of their management. Disappointment and often serious want falls upon the worker in such a case and when the employer is considering the question of ameliorating the conditions under which his employees work, of binding them to the firm by giving them and their dependents protection and assistance, he should bear in mind that he is not infallible. He knows his own business and would never think of asking a Life Assurance Co. to manage it for him. He should apply the same principle to his pension arrangements and not try to manage the business of a Life Assurance Co. himself. He should seek first of all the utmost security so that there shall be no disappointments, so that the promises which are made when the scheme is instituted will be fulfilled when the benefits are required; and with this security he should seek to utilise the expert knowledge which years of experience have placed at the disposal of the staffs of the Life Assurance Companies of this country.

OUR TIMBER IMPORTS.

(BY A CORRESPONDENT.)

OUR timber trading in sawn soft and planed or dressed woods last year was on quite different lines from those of 1927. In the winter of 1926-27 there was a general impression among timber traders that the end of the coal strike would see considerable trade expansion, and that large supplies from the north of Europe would be necessary. The result was a very large import, choking up docks for four or five months towards the end of 1927 and leaving large supplies on the market in the early months of 1928.

Last year's overseas buying was on much more restricted lines, and if North European shippers had not been prepared to meet the United Kingdom market in the

second half of the shipping season we should have had to report a very much smaller import than that recorded below:—

SAWN, PLANED AND DRESSED WOOD IMPORTS.

	Sawn Loads (of 50 cub. ft.).	Planed and Dressed Loads (of 50 cub. ft.).
1926	4,771,058	605,409
1927	6,025,932	688,616
1928	4,605,723	589,470

PERCENTAGE OF TOTAL IMPORTS OF SAWN SOFTWOODS FROM EACH PRODUCING COUNTRY.

	1926. %	1927. %	1928. %
Russia	15·09	18·98	26·58
Finland	31·81	28·46	26·02
Sweden	18·49	15·31	14·23
Poland (including Danzig)	10·74	13·35	5·86
Latvia	6·28	7·28	8·65
Canada	4·94	5·24	5·32
U.S.A.	3·74	3·91	6·02
Norway	2·18	2·28	2·09
Germany	·81	·93	·52
Other Countries	5·92	4·27	4·72

It will be observed from the percentages of imports of these sawn woods (i.e., deals, battens and boards, used so much in building construction work) that Russia once more heads the list. The increase of exports from that country to the United Kingdom within the past three years is remarkable, and is likely to become more pronounced this year. Imports from Sweden, more a competitor of Russia than is Finland, declined considerably, as will be seen from the following statistics:—

SAWN WOOD IMPORTS.

	1926. Loads (of 50 cub. ft.).	1927. Loads (of 50 cub. ft.).	1928. Loads (of 50 cub. ft.).
Russia	723,730	1,143,615	1,224,281
Finland	1,505,452	1,714,761	1,198,251
Sweden	885,817	922,435	655,386
Other Countries	1,656,059	2,245,121	1,527,805
Total	4,771,058	6,025,932	4,605,723
Values	£21,914,630	28,239,995	21,440,976

In the above table the 1927 import volume is conspicuous, but it was an abnormal year for timber imports, and the conditions are not likely to be repeated unless there is something more tangible to rely upon than expectations.

Planed and dressed woods are complementary to the sawn softwoods in the building trade. The chief exporters are:—

	1926. Loads. (of 50 cub. ft.).	1927. Loads. (of 50 cub. ft.).	1928. Loads. (of 50 cub. ft.).
Sweden	374,200	423,804	360,802
Norway	171,193	153,783	138,698
Finland	37,190	74,209	56,218
Other Countries	22,826	36,820	33,752
Total	605,409	688,616	589,470
Values	£3,465,736	4,037,867	3,393,731

In the percentage of imports of the sawn softwoods we must draw attention to the slightly increasing shipments from Canada. It is to be hoped that this will continue, as it is remarkable that the only important softwood producing area of the British Empire should send us such small quantities compared with those of north of Europe countries.

Another section of the softwood trade, of which not much news is given, is that of softwood logs. Imports for the past three years amounted to 386,667 loads (value £1,881,024) last year and 319,146 loads (£1,237,012) and 281,475 (£1,042,223) respectively for 1927 and 1926. Here, again, Russia has become premier shipper (29.9 per cent.), with Finland (19.1 per cent.) second. America, 16.9 per cent., as a large pitchpine shipper, is third on the list. Canada ought to be well up in export to the United Kingdom, especially with logs from British Columbia, but for the last year only 2 per cent. of our total soft log imports were received from the Dominion, as against 5.1 per cent. in 1927 and 4.17 per cent. in 1926.

In the hardwood section of the trade first reference must be made to mahogany logs and sawn wood, demand for which was well maintained throughout the year. An average of the total imports for the past six years shows that the import trade of mahogany logs is steadily declining in London. The arrivals from all countries to the port of London last year consisted of 24,531 tons, compared with a six years' average of 27,060 tons. Much of this lost trade is due to America importing large quantities of mahogany logs from producing countries, sawing them into planks, and shipping them here, whilst some of the producing countries now ship mahogany lumber, which also tells on our log imports. Of hardwood logs other than mahogany both India and Canada sent more last year compared with 1927. On the other hand, American shipments of logs declined.

Sawn hardwoods form the backbone of the hardwood section of the trade. Imports of these last year amounted to 30,088,154 cubic feet (c.i.f. value, £7,384,258), compared with 28,165,400 cubic feet (£6,853,961) and 23,084,389 cubic feet (£5,988,456) in 1927 and 1926 respectively. The percentages of imports last year were: —U.S.A., 56.8 per cent.; Canada, 15.6 per cent; "Other Countries," 12.3 per cent.; British India, 6.2 per cent.; Poland, 4.6 per cent.; Finland, 2.6 per cent.; and Japan, 2 per cent. American supplies increased considerably last year, yet the percentage is gradually declining. This may be expected to continue, but it is to be hoped that the British Empire forests and those of other parts of the world will be so exploited and advanced as to be making up for any deficiencies from the United States, which in years to come will be using still more of their own lumber.

The table below gives average prices of timber for the past three years:—

AVERAGE C.I.F. PRICES OF IMPORTED WOODS, 1926, 1927 AND 1928

	Per	1926. £ s. d.	1927. £ s. d.	1928. £ s. d.
Mahogany Logs	c. ft.	4 10·4	5 2·5	4 10·8
,, sawn	,,	7 5·1	7 3·0	7 5
Other Hardwood Logs	,,	3 10·3	3 6·7	3 10
Other Hardwood sawn	,,	5 2·3	4 10·3	4 10·9
Softwood Logs	load	3 14 6·5	3 17 8·5	3 11 5·1
,, sawn	,,	4 11 6·2	4 13 9	4 13 1·2
Planed or Dressed	,,	5 14 6·4	5 17 2·9	5 15 1·7
Pitwood	,,	1 17 9·2	1 18 1·2	1 16 9·6

The whole of our timber imports, exclusive of plywood, cost us last year £42,565,243, as against £49,666,787 in 1927 and £39,259,493 in 1926. Though own requirements, it is undesirable that her production should dwindle below a certain minimum. At present her output is below the pre-war level.

THE ELECTION RESULTS.

WHEN we wrote last week the results of the election in only some 200 constituencies were known, but the verdict of London, the large cities and the industrial boroughs has been fully borne out by the returns from the rest of the country. Indeed, the Labour Party did rather better in the declarations on Friday afternoon than might have been inferred from those announced on Thursday night. The net result of the full returns is that, though no party has an absolute majority, Labour comes back with considerably the strongest force.

SEATS.

Assuming that no change occurs in the representation of the four seats still unfilled, the new House of Commons will be constituted as follows:—

	At Dissolution.	Present Election.	Net Gains and Losses.
Conservative	401	260	−141
Labour	162	288	+126
Liberal	46	59	+13
Independent	6	8	+2
	615	615	

Thus Labour has fallen short of a bare majority by 20 seats. They have, however, won some 30 to 40 seats more than most of the forecasts assigned to them. The Liberals, on the other hand, have fallen short of expectations by a similar amount. The net gains and losses of the various parties have been attained as follows:—

	Gains and Losses of			
	Conservative.	Labour.	Liberal.	Independent.
To and from—				
Conservative	...	+111 −2	+30 −1	+3 ...
Labour	+2 −111	...	+2 −17	... −2
Liberal	+1 −30	+17 −2	...	+1 ...
Independent	... −3	+2 ...	... −1	...
Net Gain or Loss	−141	+126	+13	+2

It is, of course, by no means the case that all county constituencies are mainly agricultural, for they include all the mining and many industrial areas, nor are the boroughs all industrial. It is, therefore, not possible to divide the country sharply into industrial and other constituencies. But the following table, which shows the boroughs and counties separately, brings out to some extent the preponderance of Labour strength in the urban and therefore in the more industrialised parts of the country. Figures have been added in italics showing the results in 1924:—

	1929. Conservative.	Labour.	Liberal.	Independent.
London	24	36	2	...
English Boroughs	59	121	11	2
Scottish Boroughs	9	20	3	1
Welsh Boroughs	...	10	1	...
N. Ireland Boroughs	4	...	...	...
Total, Boroughs	96	187	17	3
Total Boroughs, 1924	*183*	*94*	*22*	*4*
English Counties	138	69	22	1
Scottish Counties	11	17	10	...
Welsh Counties	1	15	8	...
N. Ireland Counties	6	...	...	2
Total, Counties	156	101	40	3
Total Counties, 1924	*224*	*58*	*17*	*1*
Universities	8	...	2	2
Universities, 1924	*3*	...	*3*	*1*
Grand total	260	288	59	8
Grand total, 1924	*415*	*152*	*42*	*6*

Summarising from this table, it appears from the following figures that the strength of the Conservative Party lies, as always, in England:—

	1929. Conservative.	Labour.	Liberal.	Independent.
England	221	226	35	3
Scotland	20	37	13	1
Wales	1	25	9	...
N. Ireland	10	...	...	2
Universities	8	...	2	2
	260	288	59	8

The corresponding figures for 1924 were:—

England	350	110	21	4
Scotland	36	26	8	1
Wales	9	16	10	...
N. Ireland	12	...	...	...
Universities	8	...	3	1
	415	152	42	6

The distribution of seats compares with the last three elections as follows:—

	1922.	1923.	1924.	1929.
Conservative	347	258	415	260
Labour	142	191	152	288
Liberal	117	158	42	59
Other	9	8	6	8
	615	615	615	615

Thus, we are back to 1923 so far as the position of the Conservative Party is concerned. But Labour has gained 100 seats at the expense of the Liberals.

VOTES.

Next to the advance in the position of the Labour Party in the House of Commons, the most striking fact about the election is the disproportion between the votes cast and the seats obtained by the three parties. The following are the votes cast up to date—excluding the seven constituencies where there was no contest and the four results still to be declared:—

	Electorate.	Conservative.	Labour.	Liberal.	Other Parties.	Total.
London Boroughs	2,871,167	754,242	784,646	353,737	14,852	1,907,477
English Boroughs	9,502,746	2,968,513	3,401,861	1,642,811	58,642	8,071,827
Scottish Burghs	1,468,055	388,060	519,431	167,551	93,181	1,168,223
Welsh Boroughs	477,474	84,044	188,589	117,311	5,789	395,733
English Counties	10,864,084	3,447,808	2,648,223	2,334,390	59,757	8,490,178
Scottish Counties	1,438,844	381,390	401,432	233,810	11,613	1,028,245
Welsh Counties and Monmouth	1,117,777	205,011	384,965	319,590	2,943	912,509
Northern Ireland	572,539	354,657	...	100,103	55,293	510,053
Universities	69,081	28,049	1,463	11,832	9,263	50,607
Total ..	28,381,767	8,611,774	8,330,610	5,281,135	311,333	22,534,852

Thus the total poll of the Conservative Party is substantially bigger than that of the Labour Party, though they have secured nearly 30 fewer seats. The most striking disproportion, however, is between the votes cast for and the seats secured by the Liberals, for though that party secured nearly one-quarter of the total votes cast it has less than one-tenth of the seats in Parliament. The disproportion reaches fantastic dimensions in the case of the English boroughs, where the party only secured one seat for every 150,000 votes, compared with a seat for every 28,000 votes for the Labour Party.

The disproportion between votes and seats, as the following table shows, has existed in the last three elections, but on this occasion it is more pronounced than ever. The following are the figures:—

	1923. Votes.	Seats.	1924. Votes.	Seats.	1929. Votes.	Seats.
Conservative	5,544,540	258	7,838,225	415	8,611,774	260
Labour	4,508,504	191	5,423,589	152	8,330,610	288
Liberal	4,314,202	158	2,925,142	42	5,281,135	59
Independent	196,789	8	197,673	6	311,333	8
Total	14,564,035	615	16,384,629	615	22,534,852	615
	% of Total.		% of Total.		% of Total.	
Conservative	*38·1*	*42·0*	*47·8*	*67·5*	*38·2*	*42·3*
Labour	*31·0*	*31·1*	*33·1*	*24·7*	*37·0*	*46·8*
Liberal	*29·6*	*25·7*	*17·9*	*6·8*	*23·4*	*9·6*
Independent	*1·3*	*1·1*	*1·2*	*1·0*	*1·4*	*1·3*
	100	*100*	*100*	*100*	*100*	*100*

The figures for the three elections are not strictly comparable, since there are always a few seats uncontested (7 only on this occasion), while the number of candidates has varied. In particular, the number of candidates put into the field by the Liberal Party on this occasion was substantially larger than before. This has been made a cause of complaint against the Liberal Party by many Conservatives, who declare that in putting many candidates into the field who had no hope of success the Liberal Party has split the anti-Socialist vote and presented 50 seats to the Socialists. Mr Churchill has made himself the spokesman of this criticism, not only now, but for some time past in connection with recent by-elections. The argument cannot be taken seriously except by those who believe that the Liberal Party ought to go out of existence—an assumption which means alternations between Protectionist and Socialist Governments. Seeing, however, that a large proportion of the population prefer to vote for a party which is neither socialist nor protectionist, and clearly desire to keep it in existence, the tactics of the Liberal Party in putting a large number of candidates in the field is the only possible one for them, since there is no other way of recording the volume of Liberal opinion in the country. The poll at this election probably does not represent the full Liberal strength, owing to the fact that even on this occasion many constituencies had no Liberal candidate; and even where they were in the field it is probable that many voters, who would have preferred to vote for the Liberal, in fact voted for other candidates in the hope of keeping out the Socialist or the Conservative as the case might be. The policy has, however, demonstrated the strength of the party as an important factor which must be taken into account. The influence of the 5½ million Liberal votes on the political situation is discussed in another column. It is relevant here, however, to consider the bearing of the Liberal vote in relation to the electoral situation.

THE ELECTORAL TRIANGLE.

It is difficult to gauge exactly what the precise effect of the triangular contests has been. Mr Churchill and those who think with him fondly imagine that if the Liberal candidates were out of the way the 5¼ million Liberal votes would be given to the Conservatives. This is a case of the wish being father to the thought. It is, however, patently untrue. Liberal votes would certainly be cast against a Communist or an extreme Socialist. But against a moderate Labour man experience shows, in the few cases where the matter has been tested at by-elections, that in the North at all events Labour gets two-thirds and the Tory one-third of the Liberal votes. At best the Conservatives might hope to get one-half of the Liberal votes. This view is confirmed by the fact that most of the Liberal seats previously held under an understanding with Conservatives have been won by Labour, while in the two-member constituencies where Liberal and Labour ran in harness they won, whereas when Liberal and Tory ran together they lost. Now, when we come to examine the electoral triangle, the results show that out of some 480 triangular contests there were some 300, or practically half the House of Commons, in which no candidate secured a majority. Of these " minority " seats about 120 were won by Labour and 150 by Conservatives. If our assumption as to the division of the Liberal vote is correct, a substantial number of the seats won by the Conservatives on narrow margins would have been won by Labour, and few, if any, of those won by Labour would have gone to the Conservatives. As to the Liberal seats as a whole, an examination of the returns suggests that if the party had not been in the field some 20 of the seats would have been won by Labour and 39 by the Conservatives.

Taking all these factors into account, it seems that if the election had been fought out between Conservatives and Labour alone the latter would have been returned with an absolute majority of seats, and might even have secured a majority of votes.

The unfairness of the working of the system of single-member constituencies, without a transferable vote in a case where one party is definitely smaller than the other two, is illustrated by the total figures given in this article. Its working in particular areas is perhaps even more striking. Somerset, for example, is a county which has a strong Liberal tradition, but has also a small industrial element. Surrey, again, is a traditionally Conservative residential county, but one in which Liberal activity has made substantial, and Labour small, headway. The results for these counties are as follows:—

	Surrey.		Somerset.	
	Votes.	Seats.	Votes.	Seats.
Conservative.....	148,000	7	98,000	5
Labour	45,000	Nil	48,000	1
Liberal	79,000	Nil	71,000	Nil

In many other counties the Conservatives made a clean sweep; the Labour Party captured Durham and several of the large cities, while the Liberals captured Cornwall. Even if it could be assumed that these " solid areas " would balance one another fairly, it is not sound that over large districts important minorities should be entirely unsented. Taking the country as a whole, however, it is clear the areas have not balanced one another. In short, the electoral system has worked very markedly against the Liberals and in favour of the Labour Party, though not to the same extent as it worked in favour of the Conservatives in 1924.

To sum up, so long as there is a third party to vote for, there is little likelihood of either of the three parties securing an absolute majority of the voting strength of the country. The result of the election reflects this situation by giving no party a majority of seats. At the same time, the present voting system results in a very haphazard distribution of seats which favours, now one, now the other, of the larger parties. If this element of hazard is to be eliminated, the choice before the country is between some modification of the voting system or a return to the two-party system, which would compel a substantial part of the electorate either to abstain or to vote for a party with which they are out of sympathy, because they dislike still more the only possible alternative.

Notes of the Week.

President Hoover and Naval Armaments.—Polling day in Great Britain coincided with Memorial Day in the United States—a happy augury of the great international results that may be achieved by co-operation between new, vigorous and progressive administrations in the two senior English-speaking countries. President Hoover, in his speech at the National Cemetery at Arlington last Thursday, left no doubt that he means business in the vital matter of the reduction of naval armaments. His address was supplemented by the Secretary of State, Mr Stimson, last Friday, in a statement that abounded in the same sense. Here is an opportunity for progressive international statesmanship in Great Britain such as we have not seen since Mr Macdonald and Monsieur Herriot had the good fortune to find themselves in office simultaneously five years ago. We are sure that Mr MacDonald has taken note of these two American pronouncements, even in the heat of the election campaign here. We are equally sure that he has fully realised their import and their importance. Since, however, this country as a whole, and most of its citizens to a very large extent of their energies, have been preoccupied during these last days with domestic affairs, it may be well this week to remind ourselves of the significant gesture which has just been made on the other side of the Atlantic in regard to this larger matter of international relations. President Hoover has made his outlook and policy absolutely clear. He has appealed to the public opinion of the United States and of the world to translate the ideals of the " Peace Pact " into action. He contested the sceptical view that the Pact was an empty form of words, and then went on to point out its implications on the assumption that it was meant seriously. He means that, " if we are honest, we must reconsider our own naval armament and the armaments of the world in the light of their defensive not their aggressive use." He took it as a general accepted axiom that " the defensive needs of navies are relative "; recalled that the American demand for parity had been conceded by other nations, and thus approached his central thesis: that agreement must be sought with a view to *reductions* in naval armament. Our " italics " are justified, for the President then went on to explain that it was definitely " reduction," as opposed to " limitation," that he was seeking. In a courteous and ungrudging reference to the disarmament work of the League of Nations, he pointed out that, while in some respects the results had been beneficial, limitation—and limitation upward—had been the practical upshot; competitive building was still in full swing; drastic reduction was the remedy. In putting before his hearers and readers this definite, concrete aim, the President took care at the same time to make it clear that this was not an end in itself, but that the ultimate object of statesmanship must be to introduce a new spirit and a new procedure into the handling of international disputes. He made the point that the drastic reduction of armaments would be a powerful material means of promoting this spiritual end. With the American flair for practical things, the President—taking up the suggestion which he had made through Mr Gibson at Geneva—once more urged the need for a " national yardstick " in order to take the measure of relative naval strengths; and it is reported that an index number formula of this kind has already been worked out by the United States Government as a basis for international discussion. Mr Stimson's supplementary statement was a pertinent reminder of the cost of modern navies—a cost which the American taxpayer does not bear any more gladly than the European taxpayer, for all that he is less heavily burdened. Here, then, is the opportunity for making a great advance towards disarmament—an advance which will affect the whole world, and from which there will be no going back. We hope and believe that this gesture from across the Atlantic will be reciprocated in this country in the large-minded spirit in which it has been made.

The Reparations Settlement.—It is now certain that the Committee of Experts on Reparations will present an agreed report. Indeed, it is expected to be signed at about the time of our going to press, and the American delegates leave for America before the end of the week. The only outstanding question relates to the Belgian marks claim, and it is understood that this is to be settled before the Reparations agreement comes into force. At the time of writing the text of the report is still to be agreed, and some minor details, particularly those in connection with the precise form of the constitution of the Bank for International Settlement, have to be adjusted. We shall not, therefore, attempt to comment until the text is available. It is, however, obvious that the agreement involves an early summoning of a diplomatic conference to put into effect the recommendations of the experts, for, as in the previous case of the Dawes' Report, no one is committed at this stage except the experts themselves. It is hoped that this conference will also deal with the question of the evacuation of the Rhineland. Thus, the Labour Government will have to tackle an international problem of the first importance at the very outset of their term of office. We have every confidence that Mr MacDonald will on this occasion repeat the success which he achieved at the London Conference of 1924.

The Franco-American Debt.—Developments are expected in the near future in the matter of the ratification of the French debt to the United States, and it is worth while to recall the events out of which it arises. The debt consists of two parts, the so-called " political " debt, incurred for strictly war purposes, and the " commercial " debt, which was incurred chiefly in the purchase of surplus war stores. The total involved is in the neighbourhood of £800 million, of which about 10 per cent. consists of " commercial " obligations. In 1926, Senator Bérenger and Mr Mellon signed a funding agreement, which, however, has never been ratified by either party; meanwhile, since M Poincaré definitely undertook the stabilisation of the national finances, payments have been regularly made as if the Churchill-Bérenger and Mellon-Bérenger agreements were legally in force. The most important fact in the situation is that the commercial obligations fall due on August 1st of this year, and the only alternative to payment in full is the ratification of the Mellon-Bérenger agreement, which merges the commercial with the political debt and provides for payment of both over a long period of years. The agreement is, compared with the Anglo-American settlement, very generous to France. If the present value of the proposed annuities is calculated on the basis of a 4½ per cent. interest—the minimum rate laid down by Congress for the United States Debt Funding Commission—the extent of cancellation is over 50 per cent. M Poincaré, however, has taken no steps to ratify, and on May 20th Mr Mellon addressed an inquiry to the French Government asking whether ratification might be expected at an early date. The French reply is understood to have been favourable, but M Poincaré has declared that no action will be taken without full parliamentary discussion, and in view of the connection between the debt question and Reparations has postponed the debate on the matter in the Chamber till June 25th. Meanwhile the Socialist Party has put down for discussion a long resolution, which includes an appeal to the Government of the United States " to consider whether it is possible, wise, and without danger to civilisation and the economic life of the world to compel Europe to export for a long period of years large quantities of gold, while it is subjected by the United States itself to the competition of an output having lighter charges and protected by high tariff walls." The resolution has been ingeniously drafted to attract votes from outside the Socialist Party, and there is known to be considerable feeling of opposition to ratification of the political debt settlement. Recent purchases of dollars by the Banque de France have been taken in the City as evidence that the French Government has no intention at any rate of being forced to ratify the Mellon-Bérenger accord through inability to transfer the capital of the War Stocks debt.

Minorities and the League Council.—This week, in advance of its fifty-fifth session, which is to open on June 10th, the Council of the League is meeting in private committee in order to consider a report on the procedure for carrying out the various minorities treaties, clauses and declarations of which the Council is trustee. The matter was raised last March by the representatives of two States members of the Council, Senator Dendurand (Canada) and Herr Stresemann (Germany). That it should have been raised in two quarters simultaneously signified that the situation was in urgent need of being investigated and overhauled; and each of the statesmen who raised it was on strong ground—Monsieur Dendurand as the representative of an overseas country " far removed from the conflagrations of Europe," Herr Stresemann as the representative of a great European nation which formerly ruled over alien minorities throughout Central Europe, and which now, by the Fortune of War, sees many millions of its own people reduced, in turn, to the status of subject minorities in the new " Successor States." What the Council did was to appoint a sub-committee of three, consisting of Mr Adatchi (Japan) as *rapporteur*, Señor Quinoñes de Leon (Spain) and Sir Austen Chamberlain. In constituting the Committee, the Council deliberately and properly selected representatives of States members that were not directly concerned in the sense that they were none of them bound by specific treaties, clauses or declarations of the kind in question. Indirectly, of course, more than one of the three might be concerned inasmuch as their respective countries had awkward minorities of their own to deal with (albeit minorities unprotected by any international instrument). To a Japanese statesman, for example, the word " minority " could hardly fail to suggest the word " Korea," while to a Spanish statesman it might be similarly associated with the word " Catalans." Clearly a certain unintentional and unconscious bias might creep in; and, indeed every representative of a Government who has got the " governmental point of view " ingrained into his habits of mind, is likely to find it difficult to hold the scales evenly when attempting to do justice between " sovereign independent States " on the one side and mere men, women and children on the other—especially when, *ex hypothesi* this handful of private individuals can never hope to command a majority in a general election. In this point a certain lack of heart was noticeable in Sir Austen Chamberlain's public references to the minorities *à propos* of the present investigation. He seemed a little inclined to regard it as a slight upon the dignity of a Government that any category of its subjects should be entitled to international redress for their grievances; and we shall be surprised if the report of the Committee of three deals with the problem as energetically as its seriousness demands. The issue amounts to this: that, unless a satisfactory status for European minorities is secured, it will be increasingly difficult to maintain the existing European frontiers. A Government which is just taking office ought to be left free to shape its own policy in a matter of this magnitude; and we have no doubt that the new Foreign Minister will give the matter his just attention.

The Second Finance Bill.—It is doubtful whether the new Government will attempt much in the way of legislation before the summer holidays, for after the debate on the Address, most of the available time will be needed for the second Finance Bill, into which were swept many of the minor points that were postponed by Mr Churchill until after the election. One of the first duties of the new Government will be to declare its policy with *regard to these proposals, for though none of them raise* issues of first-class importance, it is by no means certain that the new Chancellor of the Exchequer will adopt them all. The first Finance Bill, apart from clauses necessary for the protection of the revenue—namely, the continuance of the income tax and the duty on hops—contained the repeal of the tea duty and of the betting duty on turnover, and the repeal of the railway passenger duty. The changes which remain to be dealt with are the imposition of a tax on bookmakers' telephones and of a tax on bets

made with totalisators, the reduction of on-licence duties, with certain other changes in the duties on the manufacture and sale of drink and tobacco, and a few small reductions in motor vehicle duties. It will be observed that definite questions of principle, on which leaders of the Labour Party have spoken with no uncertain voice, are raised over these proposals. Mr MacDonald has repeatedly stated his disapproval of the policy of raising revenue from betting, and in the Budget debates both Opposition parties made a great deal of play with the relief of taxation given to traders in alcoholic liquor, estimated to amount in a full year to £590,000. The necessity of reconsidering the financial arrangements of the year without raising any issues of first-class importance will give the Government a respite—if they wish to use it—until the autumn before presenting to the House the legislative programme on which their continued existence will depend.

The New Government and Banking.—In the two years of office on which Mr MacDonald is understood to count as the probable period of the new Government's tenure, there is clearly little prospect of the House of Commons being asked to pass any measures of an undisguised Socialistic character. Those portions of the programme, published after the Blackpool Conference in 1927 under the title "Labour and the Nation," which relate to the nationalisation of land, and of the coal, transport, power, and life insurance industries, are destined in all probability to remain in "cold storage" during the lifetime of this Parliament. Within the limits, however, of what is practicable for a Cabinet which does not command an independent majority in the House, there are possibilities of Government action with regard to banking and credit control which should not be overlooked. In the statement on banking and currency policy issued by the Labour Party last autumn, the positive proposals—apart from the recommendation that an inquiry should be held into the means whereby to secure "qualitative and not merely quantitative use of credit"—were (1) the extension of banking facilities to people with small means by the spread of Municipal and Co-operative Banks; (2) the control of the Bank of England by a "public Corporation containing representatives of such essential factors in the community as the Treasury, Board of Trade, Industry, Labour and the Co-operative Movement." The first of these proposals, despite the adverse report of the Bradbury Committee in 1927, would not provoke serious opposition either from financial circles or, we imagine, from the other Parties in the House of Commons. On the other hand, reform of the constitution of the Bank on the lines indicated would be a major issue on which opinion outside the Labour Party would be sharply divided. The conclusions of the Liberal Industrial Inquiry were such as not to exclude the possibility of the Liberal Party supporting a Bill to amend the Charter of the Bank in respect to the size and composition of the Court of Directors, and there is a case to be made for providing for the co-operation of the Treasury in the inner management of the Bank, but the "new model" contemplated by the Labour Party involves so great a degree of interference with the functions of a central bank by interests open to political considerations that there is no possibility of a Bill on the suggested lines being passed by this Parliament.

The Honours List.—The Birthday Honours List, with which was incorporated on this occasion the list of honours conferred as usual on the Dissolution of Parliament, contained few surprises and gives little ground for criticism. Fitting recognition is given to the services of the eminent doctors who attended the King during his long illness; Mr Bridgeman, lately First Lord of the Admiralty, is duly rewarded with a viscounty for his long years of service in politics, and is joined in that rank by the Lord Chancellor and Lord Plumer. An earldom is conferred on Viscount Inchcape, whose record has been as distinguished in public service as in big business; and the labours of Sir Arthur Balfour and Lord Lee as chairmen, respectively, of the Committee on Industry and Trade and of the Police Commission, are recognised by a baronetcy in the first case and the conferment of a G.C.B. in the second. Sir William Berry, almost the only "popular" Conservative Press owner who remained uncritically loyal to the Party during the election, receives a barony; while Sir John Cadman, a leader among British oil magnates, becomes G.C.M.G., an honour also conferred on Sir Maurice Hankey—for many years secretary to successive Cabinets. Apart from an uneventful and not too extensive list of "political" knighthoods, the conferment of that honour on Dr Chalmers Mitchell will be popular with all who have enjoyed the fruits of his devoted efforts in the Zoological Gardens. From the point of view of public interest, however, the appointments watched most keenly are those to the Order of Merit, which receives on this occasion as new members Dr Robert Bridges and Mr John Galsworthy—both craftsmen in the art of letters whose work it is fitting that the State should honour. Those who share the spirit of kindly irony with which Mr Galsworthy has consistently surveyed the doings of gods and men may be forgiven if they trace the handiwork of the Comic Spirit of Destiny in the coincidence that the creator of the Forsyte Saga, in which was crystallised the essence of "bourgeois" England of Victorian and Edwardian days, should have received this crowning honour at the end of a Parliament which Soames Forsyte would undoubtedly have regarded as the swan song of his class.

World Production and Trade.—A third edition, now published, of the "Memorandum on Production and Trade," which the Secretariat of the League of Nations originally prepared in 1926 for the World Economic Conference, brings up to the end of 1927 the various data previously given of international output and exchange of goods. In the following table world indices of population, production and quantum of trade are analysed in seven Continental Groups:—

1913 = 100.

Group.	Population	Production of Food and Raw Materials (a).		Quantum of Trade.	
	1927.	1924.	1927.	1924.	1927.
Europe, excluding U.S.S.R.	106	93–94	109–110	90	108
Europe, including U.S.S.R.	107	90–91	110–112	85	103
North America	123	118	128–129	127	155
Caribbean (b)	105	169–171	148	133	137
South America	141	121	140–141	91	118
Africa	111	135–136	148–149	97	119
Asia, excluding Russia	107	117–122	123–132	124	152
Oceania	123	122–123	121–123	119	142
World	109	108–110	121–124	99	120

(a) The double figures indicate different results obtained by using pre-war and post-war values respectively, as weights in computing the indices.
(b) Central America, Mexico, and Caribbean Islands.

The chief features of interest disclosed are the striking recovery between 1924 and 1927 in European production and trade, the great increase since 1913 in the population of South America (outdistancing the growth of foreign trade) and the marked expansion in the trade of North America, the Caribbean, Asia and Oceania compared with that of the rest of the world. In 1927, Europe's share of total international trade was 14 per cent. lower than in 1913 (being 50.4 per cent., against 58.4 per cent. of the total), whereas the share of North America had risen by 28 per cent. and that of Asia by 27 per cent. With regard to the world output of raw materials and foodstuffs it is to be noted that production of foodstuffs since 1913 has not grown so rapidly as that of industrial raw materials. In 1927, the foodstuffs index (weighted by values of that year) was 113 and the raw materials index 135. For 1928, provisional figures of 116 and 139 are given. Among individual commodities entering into industrial consumption, the 1927 indices, in descending order of magnitude, are as follows:—Rubber, 550; woodpulp, 179; cement, 179; fertilisers, 139; metals, 134; fuels, 128; textile materials, 122. The fuel index, it may be observed, would have been much lower but for the large increase in petroleum output. With regard to the estimated quantum of world trade, the Memorandum points out that in 1927 the discrepancy between the increase of production and growth of international exchange of goods which has characterised recent years appreciably diminished, but that "it remains to be seen whether this tendency towards the restoration of the old balance will prove to be permanent or not." Finally, the important comment is made that the index figures of raw material production given above probably understate the rate of industrial development, since much progress has been made in more economical use of primary products. For example, in the United States the net value added by manufacture, in terms of pre-war prices, was found to be about 70 per cent. greater in 1925 than in 1914, and in other countries the same tendency is discernible.

Our Index Number.—The downward turn in the course of wholesale prices which took place in April was accentuated last month. Expressed as a percentage of the average for 1927, our index number at the end of May works out at 91.5, a fall of 2.7 per cent. on the month, and of 10.4 per cent. in comparison with May, 1928. Recent movements in the indices of each group are summarised below:—

AVERAGE, 1927 = 100.

End of	May, 1928.	Feb., 1929.	Mar., 1929.	April, 1929.	May, 1929.
Cereals and meat	116·3	101·2	100·9	99·1	92·6
Other foods	94·7	88·5	87·3	86·5	84·3
Textiles	108·6	99·9	100·8	96·7	94·9
Minerals	92·5	96·4	99·7	96·7	95·7
Miscellaneous	97·4	91·4	91·4	90·0	89·5
Complete Index	102·1	95·6	96·1	94·0	91·5

It will be seen that each of the five groups of commodities declined last month, lower food prices being responsible for the greater part of the fall in the complete index figure. In the following table we show the percentage of change in the index figure for each group, and in the value of each commodity individually, in comparison with April, 1929, and May, 1928:—

	Inc. (+) or Dec. (−) per cent. compared with	
	Month Ago.	Year Ago.
Wheat—For.	−12·4	−25·4
Wheat—Eng.	− 0·9	−12·0
Flour	−11·3	−25·0
Barley	+ 5·8	− 0·8
Oats	− 0·8	−26·1
Maize	−11·1	−18·6
Rice	+ 3·0	− 4·6

Petrol, No. 1	...	+14·8
Petroleum oil	...	+14·3
Fuel oil	...	− 6·9
Linseed oil	− 0·9	− 2·4
Tallow	...	+ 4·1
Rubber	+10·3	+10·3
Soda crystals	...	...
Sulph. ammon.	...	...
Creosote	...	−35·5
Miscellaneous	− 0·6	− 8·1

The outstanding features in the cereals and meat group were a seasonal decline in potato prices and substantial decreases in the cost of imported wheat, maize and flour. English mutton advanced in price, but Argentine beef and Danish bacon fell sharply. With the exception of tobacco, "other foods" all cheapened. Among textiles, Egyptian raw cotton, cotton yarn, wool tops, silk, and flax all fell in price, while American cotton recorded a small advance, and hemp was also slightly dearer. In the minerals section a higher quotation for Cleveland pig iron was more than offset by lower values of Welsh coal, lead and copper. Of the "miscellaneous" commodities, rubber rose in price, whereas hides and leather declined. The minerals group, it will be noted, is the only group which does not show a substantial fall in comparison with May, 1928. The figures of our index number, converted to a percentage of the average for 1913, are as under:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924.	168·5	215·8	214·7	149·3	122·6	166·2
,, 1925.	168·4	204·2	194·6	139·8	126·2	160·9
,, 1926.	151·7	195·3	152·6	149·8	120·7	149·4
,, 1927.	147·6	202·2	157·0	125·1	116·1	143·7
,, 1928.	152·9	189·7	165·0	115·2	111·2	140·9
End May, 1928.	171·6	191·5	170·5	115·7	113·1	146·7
End Apr., 1929.	146·2	174·9	151·8	120·9	104·5	135·0
End May, 1929.	136·6	170·5	149·0	119·7	103·9	131·5

Calculated as a percentage of the average for 1924, our index number at the end of May was represented by the figure 79.1, the group figures ranging from 84.7 in the "miscellaneous" section to 69.4 in the case of textiles.

China and Russia.—When Soviet Russian spokesmen survey the failures and triumphs of their foreign policy, they must be particularly galled by the reactions of their Oriental *protégés*. So long as they have had their own backs to the wall, Turkey, China and the rest have been glad enough to echo the slogan of "a common front against Western Imperialism"; and they have not been slow to accept from Moscow the material and moral support which the Soviet Government was ready to contribute to the cause. No sooner, however, have they turned the corner than they have hastened to astonish their Bolshevik benefactors by their ingratitude. Turkey led the way in 1923, the Kuomintang followed suit in 1927. Nor, indeed, can they be blamed, for gratitude is only earned by disinterested kindness; and the Turks and Chinese were well aware that the Russian Communists were only assisting them in their bourgeois national struggles in the hope of ultimately furthering Communist international ends. More than that, if in either country Russian Communism had really succeeded in overthrowing local Nationalism after the joint campaign against Western Imperialism had been won, the result would simply have been to substitute for the ascendancy of Great Britain or Japan or some other "capitalist" power the ascendancy of the U.S.S.R.—and this would be the old story of Russian Imperialism over again. Like father, like child. Russia gone Communist is Russia still; the wolf is a wolf for all his sheep's clothing. And nowhere in the world was this truth more patent than in Manchuria, where the Red Russians have managed to inherit that instrument of White Russian Imperialism, the Chinese Eastern Railway. Hence it is not surprising that ever since 1917, whatever *régime* might be momentarily in power at Moscow or Harbin, at Mukden or Peking, the Chinese have set themselves doggedly to push the Russians out of Manchuria. The late tuchun Chang Tso-lin began the game with the tacit approval of his Nationalist opponents, who were denouncing almost every other feature in his policy. His son and heir, the young general Chang Hsüeh-liang, who has reversed his home policy by making friends with Chinese Nationalism, has been carrying steadily forward the policy of evicting the Russians from Manchuria. It is all very awkward for the Bolsheviks, for they can only defend their hereditary rights in Manchuria by placing themselves in the same category as those infamous "bourgeois" Powers who have been trying, in adjoining parts of China, to save their settlement rights and concessions and "unequal treaties." At last, however, the Soviet Government has apparently become tired of turning the other cheek, and, in reprisal for a recent raid upon the Russian Consulate at

Harbin, they have announced the withdrawal of the customary extra-territorial privileges from the Chinese Embassy at Moscow and from the Chinese Consulates throughout the U.S.S.R. This retort is unlikely to cause much concern to Chinese statesmen, either at Mukden or at Nanking. The interesting question is: What is going to be the policy of Japan in this strange "three-cornered contest" for the control of Manchuria? It began, a quarter of a century ago, as a straight fight between the two foreign "Imperialist" Powers, Japan and Russia, for the division of the Manchurian bear-skin, with China playing bear. Latterly the bear *redivivus* has taken a hand in the game by doing his best to push out both intruders. Since Russia has been the weaker party, the Chinese have taken much greater liberties with Russian interests in Manchuria than with Japanese; and there has been a kind of collusion between the Japanese and Chinese, even while they were at odds in their own field of competition, to assist one another in pursuit of their common object of getting the Russians out of the way. Meanwhile, as Russian strength in Manchuria has continued to decline, Chinese strength has been steadily rising. Will there come a point at which the Japanese will seek to redress the balance by beginning to support the Russians against the Chinese?

Protectionism in the Irish Free State.—Our Dublin correspondent writes:—The result of the Census of Production which was taken in 1926 has been published. The value of the net output of all the non-agricultural industries in the Free State in that year was £24,189,572, of which £2,808,403 was paid in salaries and £11,467,400 in wages. The principal industries in order of importance were: (1) brewing, (2) building and contracting, (3) bread, flour, confectionery and biscuits, (4) railways and tramways, (5) printing and publishing, and (6) tobacco manufacture. Most of the above industries either are naturally sheltered from outside competition or depend on the export trade for their principal market. The former class of industry is already protected, whereas the latter is vitally dependent on the maintenance of low costs of production. Neither class has anything to gain from an extension of protection to other industries. The industries that have been already protected appear of no great importance, and it is obvious that their artificial expansion would confer but minor benefits on the country compared with the injury which it might inflict on the great exporting industries, not to mention agriculture. A salutary object lesson on the danger of assisting one industry at the expense of others is to be learnt from the supplementary report of the Tariff Commission on the duty on woollen goods. The result of the imposition of the duties recommended by the Commission was to raise the price of the raw materials of two other industries, which suffered such damage in consequence that the tariff has now had to be hastily amended. Protectionists are, however, as a rule quite impervious to the logic of hard facts, and it is not surprising to learn that Mr de Valera's party is in favour of more and more protection. Last week the Dail devoted a day to discussing proposals for a duty on flour which had already been rejected, first by the Tariff Commission, and secondly by the majority of the Economic Committee, of which Mr de Valera and two of his followers were members. The proposal was rejected, for the third time, by the Dail, but it would be unduly sanguine to hope that it will not be brought forward again. Indeed, the duty on flour is only one part of a much more comprehensive scheme to make the Free State independent of foreign supplies of foodstuffs. The Economic Committee considered for three months and rejected by a majority a proposal that the import of wheat should be controlled by a public authority, which would also have the power of fixing guaranteed minimum prices for home-grown wheat. Such a measure would be a complete reversal of the agricultural policy of the present Government, which has aimed at the development of the mixed dairy farming industry, the natural type of agriculture for a country with the soil, climate and geographical situation of the Free State. A great deal has already been accomplished in the direction of increasing the quantity and improving the quality of the exports of live stock, butter and eggs, but there is still room for a great further development on these lines. The desire to replace this policy by deflecting farmers by means of subsidies into the cultivation of unprofitable crops is the outcome of an absurd dislike of imports which is based on some atavistic trace of mercantilism. The majority report of the Economic Committee pretty conclusively disposed of all the arguments adduced in favour of this absurd scheme, but it is to be feared that the proposal may prove effective in securing some votes in rural constituencies, where every farmer will picture himself as the recipient of the subsidy and will overlook the fact that he may also figure in the less enviable rôle of contributor to the greatly increased taxation that would be necessary to pay it.

The Elections in Northern Ireland.—Our Belfast correspondent writes:—The elections for the Northern Ireland Parliament were held on May 22nd, while a week later electors were called upon to select representatives for the Imperial House of Commons. One of the final acts of the last Northern Ireland Parliament was to pass a Method of Voting and Redistribution of Seats Act abolishing the system of proportional representation —under which previous elections had been held—and introducing a system of single-member constituencies. This measure was strenuously opposed by the Nationalist members on the ground that it would prejudice their representation. The result of the recent election, however, has been to give the Nationalists eleven seats in the new House as compared with ten at the dissolution of the old House. The system of single-member constituencies has tended to throw into sharper relief the division of political opinion between two main parties—Unionist and Nationalist—and candidates representing other interests fared badly at the polls. The composition of the new Parliament compared with the last Parliament is shown below:

	New Parliament.	Last Parliament.
Official Unionists	37	33
Independents	3	3
Labour	1	3
Nationalists	11	10
Republicans	—	2
Farmers	—	1
	—	—
	52	52
	—	—

Contests occurred in twenty-six out of the forty-eight single-member constituencies (Queen's University returns four members by a system of proportional representation). Of this number eighteen seats were secured by the official Unionist party, five by the Nationalists, two by Independents, and one by Labour. The total electorate in these constituencies was 429,084, and the total votes polled 290,297, or 67.6 per cent. The votes secured by each party are shown below:—

	Votes.	Candidates	Seats won.	Votes per Seat.
Official Unionist	147,099	23	18	8,387
Independent (Unionist)	41,307	9	2	20,653
Nationalist	34,069	5	5	6,814
Independent Nationalist	3,694	1	...	...
Labour	24,960	6	1	24,960
Liberal	18,208	5	...	...
Local Option	9,776	3	...	...
Tenants' Association	2,886	1	...	...
Town Tenants	4,015	1	...	...
Farmers	3,437	1	...	...
Working Class	816	1	...	...

In the election for the Imperial Parliament eleven Unionists and two Nationalists have been returned. Contests took place for nine seats, all of which have been retained by the Unionists. In the case of six seats there were straight contests between Unionists and Liberals, the aggregate polls for each party being:—Unionist, 269,552; Liberal, 100,103.

South Wales Coal Movement.—The joint audit of the South Wales coalfield for the three months ended April last showed a credit balance for the first time since the second quarter of 1924. The period covered was the most active since 1923, and the production, at 10.6 million tons, was the largest since that in the three months ended July 1927, when it amounted to 11.1 million tons. The improving output has been accompanied by declining costs and rising prices. The pit-head proceeds per ton raised averaged 13s. 6.81d., compared with 13s. 2.26d. per ton in the preceding quarter, and with the bottom price of 12s. 8.95d. per ton realised in the three months ended July 1928. The total costs of production averaged only 13s. 4.57d. per ton, which shows a decrease of 3¼d. per ton compared with the preceding quarter, and of 8.34d. per ton compared with the corresponding period last year. The effect of these improved conditions was that the industry realised a credit balance of £99,063, equal to 2.24d. per ton on the total output, compared with a loss in the corresponding period last year of £693,438, or 1s. 3.99d. per ton. The economic wage certified by the auditors was 10.41 per cent. above the 1915 standard rates, compared with 2.10 per cent. above those rates in the preceding three months, but under the agreement the owners are under an obligation to pay a minimum wage rate of 28 per cent. above the base rates, and the deficiency during the three months amounted to £729,743, bringing the aggregate deficiency carried forward under the present agreement to £11,600,351. The average output per man shift worked was, at 21.12 cwts., slightly less than in the previous three months, while the output per man shift worked at the coal face was 44.88 cwts., compared with 45.78 cwts. Because of this slightly reduced production per person, due to an increase in the number of persons employed, the average wage per man shift was 9s. 4d., compared with 9s. 5.78d. in the previous three months. This slightly lower wage, however, compares with 6s. 10d. in 1913, and it is of interest to add that the costs per ton in the last quarter of 13s. 4.57d. compared with 11s. 1.29d. in the pre-war year, and the average pit-head price 13s. 6.81d. with 12s. 1.2d. per ton. Since 1913, however, the output per man shift worked has increased from 18.4 cwts. to 21.12 cwts., or by nearly 15 per cent., and it is for this reason that the wages cost per ton now averages only 8s. 5.94d., compared with 7s. 6.38d. in 1913—an increase of about 12½ per cent.—although, as has been shown, the average wage per shift in the three months ended last April was about 36½ per cent. greater than in the pre-war year, without making any allowance for the increased value of payments in kind, which were estimated by the Board of Trade in its last quarterly statement of the finances of the industry at 3d. per man shift worked.

Safety at Sea.—The International Conference on Safety of Life at Sea, which concluded a six weeks' session in London at the end of last week, adopted unanimously a Convention which is, in the main, a revised version of that drawn up after the "Titanic" disaster, but never fully carried into effect because of the disturbances of the war period. The delegates of eighteen nations were present, and the detailed work was done by a series of committees, into which the Conference divided. Afterwards the results were confirmed by a full gathering. Rules for subdivision of ships by bulkheads were not substantially altered, but there was amplification of provisions under this head. The principle, embodied in the previous Convention, that on ocean passenger ships there should be boats for all on board, was reaffirmed, but, in the light of experience, strong emphasis was placed on the necessity for boats to be kept ready for prompt launching. The desirability of boat drills and musters for passengers as well as crews was also stressed. Requirements as to wireless equipment and watch are to extend to all except cargo ships of less than 1,600 tons gross. The North Atlantic ice patrol arrangements were reconsidered and adjustments made in the division of expenses. Some amendments proposed in the international regulations for preventing collisions at sea were adopted, and also a proposal to standardise the terms on which orders are given to steersmen. On this last point, however, uniformity is to be attained (after two years) by altering the traditional mode of giving helm orders on British ships and others which follow the same rule. This would be a case of the great majority conforming to the practice of a minority. No indication of the trend of discussion on this matter was given till the report of the final signature of the Convention was issued, and the large number of those practically concerned who have opposed this alteration in helm orders will be taken by surprise. Disappointment may also be felt at the exclusion from the Convention of the important question of enforcing internationally agreed regulations for the prevention of overloading. The British standard of load-line legislation is beyond criticism, but it is common knowledge to every shipowner and underwriter that in many countries the position is far from satisfactory. The failure of the Conference to tackle this urgent issue is difficult to understand.

Agriculture in 1928.—The tendencies of recent years in British agriculture have continued in the past year. According to the Report just published by the Ministry of Agriculture,* the net loss of land to agriculture in 1928 was 33,746 acres. The decline of 201,342 acres in arable land was offset to the extent of 116,264 and 51,332 acres by increases in permanent grass and rough grazings in sole occupation respectively. The distribution of the decline was not materially different from that in 1927, and was heaviest in the less important arable areas. The area sown to the three principal cereals is a steadily declining proportion of the total arable acreage, though the amount under barley and oats increased slightly as compared with 1927. The loss in wheat area was 240,437 acres, or nearly 15 per cent. Roots, fodder and potatoes all were grown on smaller acreage, while there was a reduction of 21 per cent. (47,000 acres) in the area under sugar beet. Yields, on the other hand, were in almost all cases exceptionally heavy and of good quality, though fruit crops were below the level of 1927. The numbers of livestock, except pigs, were reduced all round; cattle were 249,000, or 4 per cent., fewer than in 1927; sheep declined by 683,000, or 4 per cent., and there was a decline in the breeding of horses. Pigs increased by over 10 per cent., and were not far behind the record year of 1924. Fowls increased very slightly, but other classes of poultry diminished. As corollaries of these developments, heavier slaughterings resulted in the production of an additional 700,000 cwt. of beef, 75,000 cwt. of veal, 355,000 cwt. of mutton and lamb, and 870,000 cwt. of pigsmeat; milk production for the year, June, 1927-May, 1928, fell by 5 million gallons to 1,147,000 million gallons; egg production increased by 7 per cent.; and the wool clip fell from 56 to 53 million pounds. The total number of agricultural workers diminished, but this was due to a decline in the number of casual workers. Regular workers increased slightly in numbers.

Economic Conditions in Czechoslovakia.—The annual report to the Department of Overseas Trade† on conditions in Czechoslovakia draws a picture of steady economic progress, which is attributed by its author to "a traditional export psychology," aided by low costs of production, industrial peace, hard work and expert specialising. The interesting point is emphasised that the rigorous control which is exercised by the banks over Czechoslovakian industry has enforced a high degree of efficiency in administration and trading. Another contributory cause of the "unruffled economic situation" lies in the sincere efforts which are being made to weld together the Slav and German industrial elements. A successful step in this direction was the recent amalgamation of the Federation of Czechoslovak Manufacturers and the Federation of German Industries in Czechoslovakia. A similar amicable disposition in the

* "Agricultural Statistics, 1928." Vol. LXIII. Part I. H.M. Stationery Office. 1s. 3d. net.

† H.M. Stationery Office. 1s. 6d. net.

economic relations of the country with her immediate neighbours bears fruit but slowly, owing to the fact that Czechoslovakia, being the most highly industrialised country of the group, stands to gain much more obviously than they do from commercial treaties. Internally her position is strong; exports have increased from Kč. 20,135 million in 1927 to Kč. 21,228 million in 1928, and imports from Kč. 17,962 million to Kč. 19,194 million: effective interest on Government debt has been recently reduced from 7½ to 6 per cent.; there is a Budget surplus, though only at the cost of very burdensome taxation; and many branches of industry, including iron and steel and engineering, are flourishing. This report is not drawn up with such constant reference to the point of view of the British trader as is customary with this series of publications; it is, however, indicated that there is a good potential market in Czechoslovakia for British cars. It is also emphasised, and the advice cannot be too often brought home to us in Great Britain, that in these days of intensified competition, a knowledge of foreign languages and personal acquaintance with conditions and methods in other countries, are invaluable, if not indispensable, weapons.

Pioneer Life Assurance.—Established in Liverpool in 1891, it has taken this company nearly 40 years to accumulate total funds now amounting to £637,000. Progress has been slow, partly because the company's organisation has been limited and localised, and partly because it has never transacted any other class of business than without-profit assurances. Nevertheless, the financial position is a satisfactory one. Four years ago an item labelled "Establishment Expenses" figured in the balance sheet for a sum of £79,000. This has been gradually reduced, and on March 31, 1929, stood at £44,000, and is therefore within measurable distance of being entirely eliminated. Against this, moreover, there is an investment reserve fund of £40,000, and, further, the book value of the Stock Exchange securities is stated to be within the market value. New business during the year ended March 31, 1929, has been well maintained in both departments, the total being £89,388 in the ordinary branch and £321,196 in the industrial branch. Having regard to the size of the office and the class of business transacted, the expense ratios are moderate, being 15 per cent. in the ordinary branch and 39.9 per cent. in the industrial branch. The rate of interest earned last year worked out at £4 18s. 1d. per cent. net of income tax. The results of the annual valuation in both branches are set out below, together with those of the preceding years:—

	1927–28.	1928–29.
Ordinary Branch:	£	£
Trading surplus earned during the year ...	3,980	8,593
Investment profits.....	1,869	3,851
Brought forward from previous year	4,782	1,818
	10,631	14,262
Allocations:		
To Shareholders	8,500	9,000
„ Investment reserve fund.....	313	3,000
„ Carried forward to next year	1,818	2,262
	10,631	14,262
Industrial Branch:		
Trading surplus earned during the year ...	13,452	19,948
Investment profits.....	1,842	3,965
Brought forward from previous year	5,333	9,818
	20,627	33,731
Allocations:		
To Shareholders	10,500	12,000
„ Investment reserve fund.....	309	7,000
„ Strengthening of actuarial reserves...	...	5,000
„ Carried forward to next year	9,818	9,731
	20,627	33,731

The dividend for the year has been maintained at the same rate as before, namely, 9⅜ per cent.

Oversea Correspondence.

FRANCE.—REPARATIONS—FOREIGN TRADE—IRON AND STEEL—COAL PRODUCTION.

(FROM OUR CORRESPONDENT.)

PARIS, June 5.

THE experts, after four months' patient work, yesterday surmounted the last of their difficulties, and to-night it is practically certain that their report to the Allied and German Governments will be definitely signed on Friday. A week ago there was every reason to fear that, by reason of the German reservations, much of the experts' work might eventually be either rendered useless or require to be recast, owing to the necessary subsequent diplomatic conversations. The delay, due to the necessity of assuring Belgium that her grievance will be satisfied as to repayment for the worthless German marks left behind by the invaders, gave time for many other potential difficulties to be advanced nearer a solution, with the result that the solution of the main question will be found, when the report is actually signed, to be much more definite than had been expected. Thanks to the excellent work of the experts, the historic interview at Thoiry, over two years ago, has now borne satisfactory fruit. M Briand and Dr Stresemann, however, foreshadowed only a partial mobilisation of the Dawes bonds; American financial and other opinion has so developed that the Schacht-Young plan provides for the mobilisation of the whole of the Reparation debt except that part of Germany's payments which will go to extinguish Allied debts to America. As the result of conversations M Briand will have with Dr Stresemann at Madrid, it is regarded here as almost certain that the outstanding political questions will be taken in hand immediately with a view to an international conference at Berlin in July or August for the express purpose of ratifying the experts' report and settling the questions of evacuating the left bank of the Rhine, etc.

The Young plan, as now modified, provides for the Dawes plan to come to an end on August 31st next, or half way between April 31st last, the date asked for by Dr Schacht, and the end of the year, which was originally proposed by Mr Young. By this the Allies would lose about 800,000,000 gold marks, but this has been made up for by readjustments elsewhere. The actual date when the new plan will come into operation will depend, however, on the political decisions, as it would directly involve the fixation of the date for evacuating the Rhineland. The new proposed scale of payments is understood to range, for the first ten years, from 1,700 million marks to 1,995 millions, and for the 27 following years from 2,000 millions to 2,400 millions, the mean figure for the 37 remaining at 2,050 millions, of which 1,988,800,000 marks will be for Reparations and 61,200,000 marks to meet the Dawes loan service of 1924. Should the Governments decide to prolong the term of occupation and to maintain the various Allied commissions in existence, after the Young plan comes into operation, then it will be for the Governments to find the necessary money, as no provision is made for this expenditure under the new plan.

The unconditional fraction of the average annuity of 2,050 million marks (for 37 years) has been fixed at 660,000,000 marks (of which 500,000,000 marks will go to France and the balance to meet the Dawes loan service). This will be subject to no conditions as to transfer or moratorium, and is thus entirely mobilisable. The French 500 millions will make possible, on a 5 per cent. interest basis, the extinction of 50,000 millions of internal debt, while the whole of the French foreign debt due to the war will be covered by the Reparation payments proper. The payment of the unconditional portion of the German annuities is guaranteed on the security of the German railways.

The system of Reparation payments in kind will come to an end in ten years from the new plan coming into operation, during which period they will diminish from 1,750 million gold marks to 300,000,000 marks a year. The 26 per cent. tax on German imports into France and Great Britain (Reparation Recovery Act) will be reduced to 20 per cent., and will also end in ten years. Germany has withdrawn her demand that the Austro-Hungarian succession States shall contribute towards her Reparation payments, and it is understood that other reservations have also been dropped. The capital of the proposed international bank is fixed at $100,000,000, or 400,000,000 gold marks. Any profits earned after payment of dividends to shareholders, constitution of reserves, interest on deposits, etc., will be used to create a special interest-bearing fund, which will be applied to the payment of the 22 annuities to be devoted to settling debts between the Allies. In the event of modifications occurring in the way of discount or cancellation, in regard to debts between Allies, the corresponding reduction will be divided as to two-thirds to Germany and one-third to the Allies.

In the Chamber yesterday the first step was taken towards ratification of the London and Washington agreements. By 322 votes against 249 on a vote of confidence, the discussion of the various interpellations on the inter-Allied debt question was fixed for June 25th. From the reports of yesterday's debate it is by no means clear whether the Chamber will be asked formally to ratify the agreements or to authorise the Government to proceed to ratification by decree, but it is believed in many quarters that, for tactical reasons M Poincaré will adopt the latter method, in view of the serious hesitation which is known to be felt by many deputies, who are anxious that ratification shall be accompanied by reservations as to safeguard and transfer.

The foreign trade figures for April show total imports of 5,143,715,000 francs, and exports of 4,419,455,000 francs, resulting in an adverse balance on the month of 724 millions. This, added to similar deficits of 754 millions in March, 1,044 millions in February, and 1,471½ millions in January, brings the excess of imports over exports since the beginning of the year up to nearly 3,994 millions for the four months, whereas the total deficit for the whole of 1928 was only 2,101 millions. Much of the increase in imports has been due to a fresh spurt on the part of manufacturers to bring back their stocks of raw materials to pre-stabilisation levels, in view of the general improvement which is expected to follow the settlement of the Reparations and debt problems. It is significant, however, that the detailed figures for the period since January 1st disclose increased imports of manufactured goods totalling 780½ millions and a drop in exports of the same class of products amounting to 305½ millions, which accounts for about 25 per cent. of the deficit, while a further 25 per cent. is due to increased imports and decreased exports of foodstuffs. The detailed figures for the four months are as follows:—

	First four months of 1928.	1929. (000's omitted)	Differences for 1929.
Imports.			
Foodstuffs	3,847,858	4,694,590	+ 846,732
Raw materials	11,409,569	12,641,734	+1,232,165
Manufactured goods	2,396,544	3,077,095	+ 780,551
Totals	17,553,971	20,413,419	+2,859,448
Exports.			
Foodstuffs	2,089,569	1,983,463	— 106,106
Raw materials	4,476,277	4,260,039	— 216,238
Manufactured goods	10,481,515	10,175,982	— 305,533
Totals	17,047,361	16,419,484	— 627,877

Iron and steel production figures for April were both well above those recorded for the corresponding month in previous years. The output of steel was 808,000 tons, as against 736,000 tons in April, 1928, and 680,000 tons in April, 1927, a monthly average of 782,000 tons throughout 1928, of 689,000 tons in 1927, and of 559,000 tons (Alsace-Lorraine plants included) in 1913. The output of iron in April was 871,000 tons, against 834,000 tons in April, 1928, 774,000 tons in April, 1927, and a monthly average of 841,000 tons in 1928, 774,000 tons in 1927, and 749,000 tons in 1913 (Alsace-Lorraine plants included). The number of blast-furnaces in activity in April was 158, with 63 ready to work, under repair or undergoing reconstruction, as compared with an average of 190 in operation in 1913, and 74 ready for work or preparing for it.

Coal production during April totalled 4,553,472 tons in 25 working days, against 4,668,722 tons in 26 working days in March. Although the demand for industrial combustibles remains good, French coalowners are watching foreign competition closely, and especially that from the British coalfields. During the first quarter of the year France absorbed 5,224,867 tons of foreign coal, of which 2,838,000 tons came from Great Britain (1,119,000 tons in March alone), 1,113,814 tons from Germany (almost entirely "Reparation coal"), 964,000 tons from Belgium and Luxemburg, and smaller quantities from Poland, Russia, and elsewhere, including a cargo of 871 tons from the United States. The appreciable rise in British imports of coal to France in March (when most other countries' exports to France fell off) suggests that the strenuous effort your collieries have recently been making to recover the ground lost in Continental markets during the great coal strike is at last bearing fruit. French coalowners are also studying keenly the process of reorganisation which the British coal industry is undergoing, and are anxious to know whether your collieries will continue in future to follow a policy of isolation or will seek to enter into working agreements with Continental producers.

GERMANY.—REPARATIONS SETTLEMENT—CREDIT AND CAPITAL—FINANCE.

(FROM OUR CORRESPONDENT.)

BERLIN, June 4.

THE Reparations settlement has been on the whole well received. The chief visible effects were on the Bourse, which rose immediately, and on credit, in that short-term foreign money was increasingly offered. There are also signs of a disappearance of the hesitation and reserve shown by business circles during the prolonged uncertainty as to the Paris result. During the long negotiations the public, which six months ago was misled by optimists into expecting a future annuity of one-half or even one-third of the Dawes standard, was able to prepare itself for a plan which would impose a very considerable burden. For domestic political reasons the settlement is welcome to the Government, which has yet to pass the contentious 1929-30 Budget, in which, on the basis of the Dawes Plan, there would have been a deficit of some 900 million marks. How much the Budget proper will be relieved is not yet clear, because a question will arise as to the relation between the finances and the railway and industrial bonds debtors who have to contribute 385 and 150 million marks respectively in the seven months of the financial year remaining after September 1st.

The new plan is criticised a good deal in detail; chiefly, as was the Dawes Plan, for what seem to be superfluous complications. The disappearance of the Berlin control organisation is welcomed, although it is admitted that the organisation worked efficiently and, with one exception, without friction. Equal satisfaction is felt that there is to be no prosperity index. This index was always criticised on the ground of unfairness; German economists would not admit that the absolute volume of imports and exports could be a measure of prosperity. They considered that an index in which this was a prominent feature was inconsistent with the Dawes Plan proposition that in the long run the size of the favourable trade balance would determine ability to pay. The new forms given to the "transfer protection" and the internal moratorium are regarded as a practical compromise not based on any

principle. They are hard to reconcile with the theory behind the Dawes Plan, which proclaimed that there could not be any foreknowledge of the amount transferable, and provided in certain contingencies for complete suspension both of transfers and of internal payments. If this theory, and at the same time the familiar assumption that past transfers were made possible only by foreign loans, are both correct, there is no guarantee that even 660 millions a year will be transferable; if so, depriving it of "protection" will not make it transferable. It is assumed that the sum of 660 millions was hit upon as a reasonable-looking basis for international bond flotations. A close examination of the recent German balances of foreign payments, bringing out the connection between the foreign loans and the passive trade balances, favours the conclusion that there will not be any difficulty in transferring 660 millions, or a much larger sum. As a source of profit the International Bank is regarded with scepticism. The obvious comment is made that the bank can make a profit only by using Allied and German capital which in any other use would earn interest. This part of the settlement is regarded as an expedient for avoiding the real difficulties which arose out of Germany's objection to extend the payment term for longer than 37 years.

Very dear money prevailed before the May month-end settlements. The time loans rate was the highest since 1924; but in the new month rates, except for month loans, began to weaken earlier than usual, and the demand fell off. The day-loan rate of June 4 was 7½-10 per cent; month-loans 10-11 per cent. The private discount rate remains unchanged at 7½ per cent. The money market position has been improved by continuing realisations of exchange by native holders; and the dollar and sterling are still weak. The Reichsbank's legal-cover exchange reserve in the return for May 31st increased by 153 million marks, so that in spite of the normal large rise in circulation in the last week of the month, the combined gold and exchange reserve remain at 44.8 per cent., well above the legal minimum. The month-end credit pressure was less than in April, the increase in discounts, advances, and securities being 641 million marks as against 831 million marks, and deposits declined by only 14 million marks as against 184 million marks. The circulation increase of 600 million marks is moderate, if the bank's large purchase of exchange is taken into account. The bank's discounts (including treasury bills) and advances are still the highest on record since the stabilisation, but circulation is lower than at the end of March and April. An improvement in the money market and a reduction of the commercial bank's interest rates are expected as a result of the new inflow of foreign funds; in the meantime the Reichsbank seems not inclined either to alter its discount rate or withdraw entirely the restrictions on new discounting announced last month, but the restrictions seem to be less rigidly enforced. The capital market continues stagnant. The home loans total in January-May was 154 million marks as against 835 million marks in the same month of 1928. Foreign loans in May totalled only 3½ million marks; in the first five months 202 million marks as against 876 million marks.

The ordinary Budget for 1928-29 closed with a deficit. Revenue totalled 10,427.1 million marks, whereof 149.5 million marks were to be received after close of the financial year; expenditure, 10,581.5 million marks. Revenues from taxes, duties and fees exceeded the estimate by 162.4 million marks; but as the gross receipts from taxes, out of which proportional subventions are paid to the states and municipalities, considerably exceeded the estimate, the subventions cost 198.3 million marks above the estimate. The net revenue remaining to the Reich from taxes was, therefore, 35.9 million marks below estimate, but this deficit is reduced to 15.1 by a surplus on other revenue. Expenditure exceeded the estimate by 139.3 million marks; the deficit, therefore, was 154.4 million marks. Under Budget law this deficit must be carried by the Budget for 1930. Extraordinary revenue totalled 217 million marks; expenditure (including 260 million marks lent to the Unemployment Insurance Fund, which is repayable), 656 million marks; the deficit being 436 million marks. Including an uncovered deficit of 465 million marks from 1927-28, the extraordinary deficit to be covered by loan at the end of 1928-29 is 977 million marks.

The wholesale prices index number for May 29th is 134.2. The agricultural products group is down to 122.3. The cost of living index for May is 153.5. The heavy fall in prices since March has not affected the prices of cartellised products, which in general tend upward. Bankruptcies in May numbered 871 as against 906 in April. The number of unemployed fell further to 927,000 in the first half of May. The official Institute for the Study of Trade Fluctuations declares that no trade improvement is in sight, and predicts that "no great rise in the level of stocks can be expected within visible time." The Institute is further not optimistic about the increase of export trade, with the exception of trade in the iron consuming manufacturing branches. The heavy iron export market is active only for pig iron and semi-products. A thin-sheets syndicate under the control of the Wolff group of Cologne and the Vereinigte Stahlwerke A.G. has been founded, to embrace about 50 per cent. of production. Thin sheets are the only iron or steel branch not syndicated in 1925-26, and of late there has been sharp price-cutting. The prospects of renewing the expiring syndicates is not good. The Bismarckhuette of Silesia, now a Polish concern, is to absorb the Kattowitz Mining and Smelting A.G. and the Huta Silesia. Some 35 concerns which manufacture tramcars and wagons for light and private railways are negotiating to found a cartel for control of prices, rationalisation, distribution of orders, and later for conclusion of agreements with foreign associations of the same kind. Since 1928 the manufacturers of wagons for the Railways Corporation have had a loose syndicate.

The textiles situation has not improved. The last Textile Trades Union return shows a continuing increase in the percentage of unemployed members, although unemployment as a whole has been declining. In the linen branch are only 39 per cent. of fully employed members, cotton 52 per cent., and woollen 72 per cent.

BELGIUM.—AGRICULTURAL PROSPERITY—TRADE—INDUSTRY—RAILWAY DIVIDENDS.

(FROM OUR CORRESPONDENT.)

LOUVAIN, May 25.

WHILE agriculture throughout the world is in a state of depression, or even of serious crisis, Belgian agriculture continues to enjoy prosperity. On a journey through the country this is very apparent from the high standard of life; the farms have become very comfortable and are in good repair; they have tractors or at least good horse teams; electricity is used for lighting and motive power. Between 1913 and 1928 deposits in the banking department of the Boerenbond (League of Peasants) increased enormously. This peasants' corporation is at present the fourth financial power of the country, after the Société Générale de Belgique, the Banque de Bruxelles and the Mutuelle Solvay.

Agricultural prosperity is much less marked in the big enterprises (those exceeding 100 acres), which are at present finding labour scarce and expensive. Besides, sugar beet culture on a large scale is at present unremunerative on account of the low level of the world's sugar quotations. It must be remembered, however, that in Belgium farms average 20 acres in size, so that farming is generally carried on by members of one family by themselves or with a few hands from elsewhere.

The growth of market gardening is one of the reasons for prosperity in Belgian agriculture. Cauliflowers, asparagus and strawberries give a high return to careful and unremitting work. This cultivation is carried on with such skill that a market gardener and his family can live by the yield of two acres and a half. Greenhouses also are on the increase; the Boerenbond, for instance, grants loans to agriculturists desirous of constructing them. Another cause of farming prospering is the absence of all serious financial hindrance. Of course, agriculturists borrow money in order to buy land, but this gives rise to no abuse. The Boerenbond supplies about half this capital; for 1927 such loans amounted to less than £50,000. The third reason for the prosperous position of agriculture is the existence of organisations like that referred to above. The Boerenbond comprises 120,000 members, all of them heads of farming enterprises, covering practically two-thirds of the country. It possesses at Antwerp big works which prepare cattle foods and different kinds of manure. Daily production totals 1,000 tons. This organisation also instructs the peasantry by means of lectures and periodicals, for which they show great enthusiasm. A special department covers insurance against miscellaneous risks. Revenue has been largely influenced by these favourable conditions. Since the war a real increase is apparent, though income tax induces agriculturists to return their produce at less than it really is. The following table gives the yield per hectare (2½ acres) as returned, in metric tons:—

	Averages for 1911–1913.	Averages 1927 and 1928.
Wheat	2·60	2·82
Rye	2·20	2·45
Oats	2·30	2·55

It is generally admitted that the total productivity of Belgian agriculture has risen since the war by 15 or perhaps even 20 per cent. A final reason for the prosperous state of affairs is the very low distribution charges. The difference between the price paid by the consumer and what is paid to the producer is very small. This explains the fact that farmers can live very well, while in Brussels milk is sold only at 21.0 francs per litre (1s. 1d. a gallon), receiving as they do about 10d. for milk taken at the farm.

Farm rents have advanced slowly; for leases recently taken out they are, expressed in gold, at about the same level as before the war, in some parts even a little above; leases of long standing are much less.

Industrial conditions in Belgium remain good. Nevertheless, for the first quarter foreign trade turns out less favourable. Exports cover only 88 per cent. of the imports, against 93 per cent. a year ago. This regression is due partly to a crisis in the textile industry, which curtailed shipments. A further explanation is that the rise in the standard of living causes a part of what was formerly exported to be consumed within the country.

Coal mines are again in a state of prosperity which is difficult to explain. Scarcity of labour is slightly reducing output, which on account of the intense industrial activity is barely sufficient. Output per man is 580 kilograms per working day, against 525 in 1913. Metallurgy is in a no less satisfactory position. At present six highly perfected blast furnaces are in process of construction. They will be set in progressively, the first in a few weeks. It is said that they will increase cast-iron production, and in consequence steel production, from 340,000 tons, to-day's level, to about 400,000 tons; the figures for 1913 were 200,000 tons.

The dividend payable at the first of June by the Société Nationale des Chemins de Fer Belges (Belgian Railways Company) will be 2 per cent., though at first 2.7 per cent. was expected. According to figures published in the beginning of 1929 a dividend of 2 per cent. could not be ensured; a tariff increase of 15 per cent. was deemed necessary. For political reasons only an increase of about 8½ per cent. was made, which at that time was certainly inadequate. At present traffic conditions are very favourable, so that the increase will easily give a minimum of 2 per cent.

RUSSIA.—AGRICULTURE—CREDIT—FINANCES INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

THE crops prospect in the greater part of the Soviet Union is still doubtful. In the south part of the Ukraine winter wheat was badly damaged by frost and lack of snow; but according to an official report of May 30th "the condition of winter crops (in the Union generally) is above average." Spring sowing was affected by the lateness of the spring and by unsettled weather. The yield of bread cereals in the crops year 1927-28 (ending June 30th) is put at 73.6 million metric tons, as against 78.3 million tons in the preceding crops year and 96.6 million tons in the same area in 1913. The Council of Labour and Defence has sanctioned a plan for creation in 1930 of 66 "Soviet farms" under the Grain Trust, as a result of which the area of this group of socialised farms will increase from 1½ to 4½ million hectares. The State buying-up campaign for agricultural products in the first half of the current business year (October-March) did not develop satisfactorily. As a result of an increase of 8½ per cent. in buying-up prices, the total quantity of agricultural products bought up was about 4 per cent. larger than in the corresponding half of 1927-28, but there was a sharp decline in food products, in particular grain and meat, the increase falling to raw materials. The decline in buying-up of foodstuffs is officially described as "one of the most alarming factors in internal trade."

The currency situation has not improved. In April circulation increased three times as much as in April, 1928, and since the decline in January-March, in which quarter alone a contraction of circulation can be expected, was only slight, the present absolute circulation is too high, and this is undoubtedly one cause of the rapid price-rise. The movement of circulation (State Bank and Finance Commissariat) since the beginning of the business year, as compared with past years, has been:—

	Millions of Roubles.		
	1928–29.	1927–28.	1926–27.
October 1	1,971	1,628	1,291
January 1	2,028	1,668	1,354
May 1	2,104	1,554	1,300

The large increase in circulation in April is attributed to advance payments of wages, which led to an expansion of credit and also to a drop in bank deposits. In the first half of May circulation declined. According to plan circulation in the current quarter, April-June, is to increase by not more than 75 million roubles. A Bill removing the State Bank from the competence of the Finance Commissariat and giving it increased independence in its credit operations has been submitted. The Commissariat retains power to fix the maximum note issue. The retail prices index rose by May 1st to 2.33 (1 in 1913), and is 15.1 per cent. higher than a year ago, the agricultural group having risen 32.2 per cent. in the year; industrial group 5.8 per cent.

Revenue receipts in the first seven months of the financial year are returned at 4,298 million roubles, as against 3,752 million roubles in the same months of 1927-28. The proportion of revenue received to the estimate for the whole financial year is practically the same as in 1927-28. The proportion of expenditure is somewhat higher, the increase falling to the financing of industry and agriculture. A new decree provides that the Union Budget must be presented to the Council of People's Commissaries by September 20th. The issue of a third Industrialisation Loan is announced. Since the end of the financial year 1922-23 the Union debt has risen from 88 kopecs *per capita* to 10 roubles 29 kopecs. The total debt at the end of the current financial year will (according to the Budget plan) be 1,938 million roubles.

Since October the shortened working day has been introduced into 50 factories of the Russian S.F.S. Republic, with varying results in the matter of productivity. In the machine manufacturing branch the results were good in that while the number of employees had to be increased the gross production increased still more. The rate of increase in railway goods traffic in the present business year so far shows a slight decline as compared with previous years. Plans of industrial production have not been fully carried out. In the first half of the business year (to March 31st) output of the State industries was to exceed that of the same half of 1927-28 by 22 per cent.; the actual increase is 19.7 per cent. Production cost declined 2.5 per cent., as against 7 per cent. planned. Nominal wages rose 7.1 per cent., the real wage a little over 1 per cent. The April production figures for the heavy industries are mostly unsatisfactory. Pig-iron output in the first half of the business year was 1,877,000 metric tons, against 1,622,000 tons in the corresponding half of 1927-28; steel production 2,314,000 tons, against 2,109,000 tons. The Ferrous Metals Board declares that the plan to increase

pig-iron production to 10 million tons by 1933 cannot be carried out unless the centre of gravity of the industry is transferred from the south to the east, mainly to the Urals, where there are iron ore fields containing 800 million tons of good ore. Plans for the building of 38 machine construction shops, to cost 666 million roubles, in 1929-30, and for construction of 60 grain elevators of average capacity 1,640 tons, have been sanctioned. A new tractors construction shop, output 40,000 a year, is to be erected in the Urals. The number of tractors at present in use, nearly all in agriculture, is returned at 30,000. The existing Stalingrad works, which at present can produce at the rate of 20,000 a year, is to have its capacity increased to 40,000. The products of the engineering industries continue to be inferior.

The Amtorg in New York has been negotiating for employment of American technical experts on a great scale, but it complains that the Soviet trusts offer salaries lower than the wages of American workmen, and it advises that a few highly-paid engineers, instead of as is proposed several hundred ill-paid, be engaged. The new agreements with the International General Electric Co. and the Ford Motor Co. provide for the despatch of American engineers to Russia. A new motor car works, with an annual output of 100,000 cars of Ford type, is to be erected at Nijni-Novgorod. A report puts the number of foreign concessions working on February 1st at 68, whereof 12 German, 11 Japanese, 8 American and 7 British; capital invested 51 million roubles, whereof 19 million roubles in manufacturing industries. An official Moscow journal states that 19 foreign manufacturing concessions in 1927-28 earned an average gross profit of 140 per cent. on capital brought from abroad, and 100 per cent. on their own total capital, including former profits employed in Russia; net profits, after deduction of taxes, were respectively 90 per cent. and 64 per cent. The output of the three chief oil trusts is returned as follows (in metric tons):—

	October to March Incl.	
	1928–29.	1927–28.
Azneft (Baku)	4,050,097	3,565,711
Grozneft (Grozy)	2,089,124	1,655,746
Embaneft	114,927	123,023
	6,254,148	5,344,480

Production of the oil refineries of the three trusts was 5,105,376 tons against 3,952,262 tons. The concentration of trust trade in the hands of syndicates is progressing. The trade of the sugar, rubber and leather branches is already completely syndicalised; and according to plan this will be attained, or nearly attained, for 9 out of 19 industries before October. The foreign trade (European frontiers) returns for the first seven months of the business year were: Imports 370 million roubles, against 419 million in 1927-28; exports 399 million roubles, as against 346 million in 1927-28. As compared with 1927-28 the total agricultural export declined a little, but agricultural export other than grain increased 10 per cent. Export of industrial products increased 45 per cent., the greatest increase being of wood. The trade balance was 28,452,000 roubles active, as compared with a passive balance of 72,900,000 roubles in 1927-28.

AUSTRALIA.—SHIPPING CONFERENCE—UNITED STATES TARIFF.

(FROM OUR CORRESPONDENT.)

MELBOURNE, April 24.

THE shipping conference lately held at Sydney between representatives of the oversea steamship lines and representatives of Australian importing and exporting interests to consider the position of the oversea shipping trade in relation to the recent proposal for an increase in freights has had the effect of placing a number of cardinal points in the situation in a clear light before the Australian public. The audited figures presented by the shipowners showed that in recent years trade has been unprofitable, and that, on this ground alone, the increase in freights would be justified. It is also shown in the report drawn up by the conference that there is room for reform in Australian port charges and taxation, and in the delays and expenses incurred through labour troubles. During the five years 1924 to 1928 inclusive, the Government revenues of four of the Australian States have included a total of £3,500,000 from surplus port revenue, and in view of the objections to making port charges a method of raising revenue for general Government purposes and the recommendation of the Imperial Economic Conference held in London in 1928 that this should be amended, the present report states that the cost of transport should no longer be increased by special taxes, which amount to an export tax. This subject, however, has received attention for many years in Australia, but without result. At Melbourne, for example, part of the Harbour Trust gross revenue goes to the State Treasury, and the State Government has never seen its way to forego this item of revenue.

The shipping conference report also calls attention to the desirability of giving immediate effect to the scheme for relieving oversea shipping from double taxation, as recommended by the Imperial Economic Conference in 1923. A number of other matters are proposed for consideration in detail by representative committees to be formed in the Australian States. The central body of these committees will be known as the Australian Oversea Transport Committee, with headquarters in Sydney.

The Commonwealth Government has published its Note to the United States Government on the proposed re-adjustment of the American tariff, with the possibility that this may include an increase in the duty on wool. One of the main features of the situation is that Australian imports from America, which amounted to £34,593,142 in 1927-28, against £41,394,277 in 1926-27, and £37,234,257 in 1925-26, are much greater than Australian exports to the United States, which were approximately £9,000,000 for 1927-28, against £8,578,504 for 1926-27, and £9,953,877 for 1925-26, exclusive of gold shipments. The largest group of imports from America is "vehicles," which totalled £11,047,257 for 1926-27, in addition to which kerosene, lubricating oil and petroleum spirit, etc., amounted to £5,700,656. The principal competitor against America as regards motor cars is the United Kingdom (with a preferential tariff), and as regards oils the Netherland East Indies, from which the imports of oils in 1926-27 were nearly 3¾ million sterling. The Commonwealth Government expresses the hope that the United States Government will do everything in its power to avoid the placing of further restrictions upon the movement of Australian commodities into the United States, but points out that further restrictions by American tariff increases affecting Australian products would inevitably intensify feeling against the American trade preponderance.

Letters to the Editor.

ELECTRICITY SUPPLY COMPANIES.

TO THE EDITOR OF THE ECONOMIST.

DEAR SIR,—The very interesting article in your issue of May 25th on "Electricity Supply Companies" seems to need some amplification of certain points:—

(1) The Clyde Valley Co. should not now be excluded, as you exclude it, from the list of companies which have recently issued new ordinary shares on bonus terms. You will no doubt remember that on April 26th it was announced that new shares were to be offered to shareholders in the ratio of three new shares at par for every four shares held; and the price which your article quotes as the present price of Clyde Valley is, of course, *ex* this bonus.

(2) Your article, perhaps wisely, avoids any reference to the thorny subject of depreciation.

It is not possible to dogmatise about what should be charged for depreciation, nor indeed is it always possible to say with certainty what account any given company has taken of depreciation; but it is, I think, misleading to compare earnings yields of different companies, when some show their earnings after making allocations for depreciation, while others make allocations to reserves which are not labelled depreciation reserves, but serve the same purpose, *e.g.*, the Clyde Valley Co.'s contingency account.

In an attempt to fill in these details I have set out below some calculations as to the real earnings of some of the companies dealt with in your article. I have excluded the Scottish Co. and the Midland Counties Electric Supply Co. because the data which they supply to the public is not, in my opinion, ample enough to enable the investor to form any reasoned judgment of their position.

In calculating the earnings of these companies it is obviously essential to take some account of the changes in their positions which recent emissions of capital have caused, and it is therefore inevitable that one's calculations should be in some sort a guess at the earnings likely to be realised for the current year. In order to make any such estimate as nearly as may be a logical entity I have therefore made the calculations as if they were simply estimates of the earnings of the four companies dealt with for the current year.

In order to deal with the question of depreciation satisfactorily it is obviously essential to deal with it on a comparable basis for all four companies. Without inside knowledge of the various companies' positions, any allocation for depreciation must be to some extent a guess. But for what it is worth I have, in the calculations below, written back the companies' own allocations for depreciation (if any) and made the following assumptions:—

The main part of the capital expenditure of a power company consists of mains, buildings and other civil works. On mains 2 per cent. per annum is severe enough depreciation; on buildings the figure of 1 per cent. would probably be adequate. At a guess, therefore, I have taken the figure of 1¾ per cent. for the total of capital expenditure. This, however, does not, by any means, provide adequately for the depreciation of generating machinery—turbines, boilers, generators, etc.—on which a figure of 5 per cent. per annum is not, I think, excessive.

I have assumed that every 4,000 units generated by a company implies the existence of 1 kw. of generating plant, representing, say, £15 of capital expenditure.

I have, therefore, altogether allowed for depreciation 1¾ per cent. on the total of capital expenditure, plus an extra 3¼ per cent. of £15 per 4,000 units of output—*i.e.*, say, £120 per million units.

Making these assumptions, we have the following results for the companies that I have attempted to deal with:—

Newcastle-upon-Tyne Electricity Supply Co., Limited.

	£	£
The net profit for the year 1928, after providing for income tax, debenture interest and preference dividends, appears to have been		395,916
To which the normal rate of growth might be expected to contribute for 1929, an increase of, say		40,000
While earnings should be increased further by, say, 5 per cent., less tax, on the £1,086,875 of new capital provided by the issue of further shares at the end of 1928, or		43,475
Making a total of		£479,391
Less depreciation at 1¾ per cent. on total capital expenditure of	£7,012,450	
Less depreciation reserves	761,359	
	£6,251,091 or	£109,394
Plus £120 per million on 700 million units	84,000	
		193,394
		£285,997

This is equivalent to 8 per cent., less tax, on the 4,007,681 ordinary shares outstanding, plus a further sum of £30,000. The 5 per cent. non-cumulative preference shares (of which there are 1,537,552 in issue) are entitled to a further 3 per cent. dividend—taking £36,900—before the ordinary receive any dividend in excess of 8 per cent. At a price of 27s. 6d. on the 6 per cent. dividend, the yield is 4.4 per cent. and the earnings yield is 5.8 per cent. (The sum required to pay a 10 per cent. dividend on the preference and ordinary shares, calculated on the same basis as the £286,000 shown above, is £382,106.)

Clyde Valley Electrical Power Co.

	£	£
The net profit (after income tax) for 1928 was		273,497
To which the normal growth might be expected to contribute for 1929 an increase of, say		20,000
Making		293,497
In a full year the fresh cash provided by the issue at par of 900,000 new ordinary shares might be expected to increase earnings (whether by saving interest through the liquidation of temporary loans shown in the balance sheet, £848,782, or otherwise) by 5 per cent, less tax, or		36,000
		£329,497
From which must be deducted depreciation at the rate of 1¾ per cent. on capital expenditure	£3,444,929	
Less two-thirds of contingency fund (arbitrarily segregated as depreciation reserve fund)	631,667	
	£2,813,262	
	i.e., 49,232	
Plus £120 million units sold, or	28,800	
		78,032
Available for share capital		251,465
Less preference dividend		46,400
Leaving for ordinary		£205,065

which is equivalent to about 12.2 per cent. (less tax) on the present ordinary capital of the company (£2,100,000).

These calculations allow for the gain of a whole year's interest on the £900,000 of new capital, which is only in the company's possession—on an average—for about half a year, but the fact that the new shares rank for dividend only in respect of the periods during which they are paid up helps to correct this anomaly, which may therefore stand.

Assuming, then, that the dividend of 8 per cent. on the much enlarged capital is continued, the dividend yield on the price of 33s. is about 4.85, and the real earnings yield is likely to be 7.35 per cent.

The Yorkshire Electric Power Co.

	£	£
The earnings after income tax for 1928 amounted to		310,070
To which the normal growth might contribute an increase for 1929 of		35,000
And extra interest on the funds from new shares issued during 1928, but not fully paid up till late in the year		30,000
Making a total of		375,070
Less preference dividend		77,658
		£297,412
Less Depreciation:		
Say, 1¾ per cent. on £4,612,796	£80,724	
Plus £120 per million on 150 million units	18,000	
		98,724
		£198,688

This is equivalent to 9.9 per cent., less tax, on the ordinary capital of £2,500,000.

At the price of 34s., if the 8 per cent. dividend is continued, dividend yield is 4.8 per cent., and the earnings yield is likely to be 5.8 per cent.

Lancashire Electric Light and Power Co., Limited.

	£	£
The net earnings for the year ending March 31, 1929, after income tax, debenture interest and dividends on the 6 per cent. first preference shares was		120,198
To which must be added back the allocation to depreciation, etc., account in the Parliamentary company of		50,000
The normal growth of earnings should contribute a further increase for the current year of		30,000
And earnings should be increased by 5 per cent. (less tax) on the further £810,000 of capital provided by the issue of further shares in April, or		32,400
Making a total of		£232,598
From which must be deducted for depreciation 1¾ per cent, on (calculated) capital expenditure of £3,234,108	£56,596	
Plus £120 per million on 200 million units	24,000	
		80,596
Leaving		£152,002
7 per cent., less tax, on the Cumulative Participating Preference shares	£1,000,000	
And ordinary shares	1,600,000	
		145,600
Leaving		£6,402

On this basis the earnings for the current year are not likely to exceed 7¼ per cent., unless there is a greater growth in the net earnings than the figure of £30,000 shown above—a not unlikely contingency.

On a continuance of the 7½ per cent. dividend the yield on the price of 29s. 6d. is 5.2 per cent., and the earnings yield on the above basis is 5.0 per cent.

There remains one factor of importance which I think should be taken into account. This is the relation between earnings and ordinary capital.

In the table below I have taken, for the sake of argument, an increase of 10 per cent. in the gross revenue (as shown in published figures or estimated), assumed that the whole 10 per cent. is retained as the net revenue, and expressed the amount as a percentage upon the ordinary capital of each company, after making allowance for the premium at which the shares stand. The *actual* figure shown is not of importance, but the relative figures are, I think, significant as a guide to the effect that an increase in earnings will have upon the sums available for dividend on ordinary capital.

	Dividend Yield. Per cent.	Earnings Yield. Per cent.	Increase Factor (as above). Per cent.
Newcastle	4·4	5·8	3·0*
Clyde Valley	4·85	7·4	2·2
Yorkshire	4·8	5·8	1·2
Lancashire	5·2	5·0	1·5

* Allowance being made for the participation of the preference shares.

—I am, Sir, yours truly,

GEORGE WANSBROUGH.

24 Old Broad Street, London, E.C. 2.
May 28th.

[We are obliged to Mr Wansbrough and other correspondents who have pointed out that the Clyde Valley Co. has recently issued to shareholders three new shares at par for every four held.—ED., *Econ.*]

Books and Publications.

Mr THEODORE DREISER ON RUSSIA.*

BOOKS about the new Russia, however impartially written, are almost inevitably labelled by readers " pro " or " anti " Bolshevik. " Dreiser Looks at Russia " will probably be put in the former class. The result of Mr Dreiser's eleven weeks' tour, made in conditions which ensured him complete freedom to observe, is a wish " to see Russia, as it is now, recognised and aided financially in order that this impetus to something better may be strengthened." Mr Dreiser started with no pro-Soviet bias; he describes himself as an individualist; his dislike of certain Soviet governmental practices is not concealed. But, independently of the Russian comparison or contrast, he is dissatisfied with western social and economic conditions, and is ready to welcome any revolutionary innovation which holds out a bare hope of improvement. Therefore Bolshevism appears to him, if not as an achievement, still as " a tremendous experiment," from which not only Russia but also the rest of the world may gain.

Mr Dreiser's account of Russia is interesting and judicial. He endorses the commonplace of anti-Bolshevik literature that the system of the Kremlin resembles the system of Tsarskoe Selo—" replacing one kind of dogmatic tyranny with another." Not very much, he makes clear, has been accomplished in eleven years of Bolshevism. He was shocked by the uncleanliness, overcrowding and discomfort; he saw, he notes, only one good bed in all his travels, and it had belonged to a foreigner. Enthusiasm, propaganda, programmes and passion for debate he found in plenty, but these had borne little fruit. He approves of the economic levelling down, as a result of which a high administrator draws about the same wage as a skilled industrial worker; of the prevention of " individual accumulation of wealth "; of the clearing away of " the trappings and vanities and gauds and follies " of Russia's Fifth Avenues. This being his attitude, he is ready to accept Bolshevism wholeheartedly if only it can fulfil its programme, but he does not seem entirely confident as to the fulfilment. About the present trend he is well informed. Communism, he says, is not being watered down, as some travellers hastily conclude on the basis of official information given with the design to attract capital. " The share of the State and co-operative organisations in the economic system of the country," he says, " is steadily increasing." But whether he is right in saying that the State's monopoly has freed citizens from " the haunting sense of poverty . . . that so distresses one in Western Europe and America " may well be doubted.

To Mr Dreiser the Soviet educational system is " the most intelligent I have ever seen." It is designed to liberate the human mind " from dogma and slavery of every kind "; and though this liberation can only be achieved, to quote Mr Dreisler, " via dogma," the end justifies the means. A less friendly critic of Bolshevism, admitting the similarity of Soviet and Tsarist means, might not so readily admit the difference between the two systems' ends. In Tsarist Russia, he would object, there was no consistent discouragement of education and other social initiatives. In themselves these were unobjectionable; they became objectionable only when they took forms antagonistic to the political structure. Soviet education, says Mr Dreiser, is " a means for ensuring the stability of the State and for creating a type of human being who will fit in with and continue the theories of Marx." If " Marx " is replaced by " Pobiedonostseff " or " Katkoff " that is just the complaint of the pre-Revolution malcontents. The dictators' ideal of a condition " in which no dictatorship is needed " also sounds familiar. Before the Revolution Russians were almost daily told that dictation would disappear as soon as revolt and conspiracy ceased. If the invisible ends of rulers are judged by promises, Mr Dreiser's new Russia seems not to differ materially from the old.

Mr Dreiser thinks that the non-Russian world may be Sovietised. But except for an ingenious comparison between American chain-stores and the Bolshevik trade mechanism he gives no reason justifying his faith. He is himself inclined to attribute peculiarities of Russian life to a specific Russian spirit or character. From this it might be concluded that Bolshevism could endure in Russia, as Mr Dreiser predicts will be the case, without having any attractions for other countries.

* " Dreiser Looks at Russia." By Theodore Dreiser. Constable & Co., Ltd. 5s. net.

THE UNEMPLOYED.

MR R. C. DAVISON'S book deals, as its title suggests,* with the treatment of the unemployed rather than with the problem of unemployment. He must not, therefore, be reproached with having failed to do what he has not set himself to do: provide a critical analysis of proposed measures for the prevention of unemployment. Nevertheless, in his chapter on relief works, he approaches very near to the frontiers of this wider zone of his subject. Here his definite conclusion is that " the policy of mixing relief and wage-earning has failed." " Nothing less than the stimulation of ordinary industry and business is any real good. If under a *non-Socialist* economy this can be done at all, it would be by the expansion of credits through the agency of the central bank." As an alternative to the various kinds of relief work in which practical experiments have at different times been conducted, " unhelpful to the State and actually lowering in their effects on the unemployed," he proposes the ideal of maintenance under training.

For the rest, Mr Davison's book provides us with a competent and well-proportioned survey of the treatment of unemployment in England, as it has developed in the hands of the national Poor Law since its inception, through the relief work experiments of the 19th century, to the institution of employment exchanges and national unemployment insurance in our own time. His story is carried down to the " Blanesburgh Act " of 1927, and closes with an analysis of the personnel of the unemployed, which is perhaps the most interesting and suggestive section of the book. Here he lays stress upon the existence of a " hard core " of unemployment, separable from the effects of acute and abnormal trade depression, and having its roots

* " The Unemployed." By R. C. Davison. Longmans, Green and Co., pp. xiii. 292. 10s. 6d.

in the nature, methods and recruitment of present-day industry. Its existence leads him, as one might expect, to some sharp criticism of the excessive exploitation of semi-skilled juveniles, especially in the " heavy industries."

His general satisfaction with the development of our present insurance scheme is tempered by criticisms which gain force from his intimate mastery of the details and actual working of the administrative machinery under discussion. For instance, in examining the contributions policy pursued after 1921, when the heavy drain on the new unemployment fund set in, he is not satisfied with the equity of imposing so large a share of the abnormal burden upon employers and employed. He considers that there is force in the contention that the State should have shouldered a larger proportion, or even have defrayed the whole cost of the extended benefit. Nor is he favourably disposed towards the change of administrative policy which, in 1925, stiffened the insistance upon personal search for jobs, by depriving claimants to benefit of the rule that registration at an exchange is sufficient evidence of genuine unemployment. This was, he considers, a repudiation of the policy of concentrating applications on the exchanges, and he challenges the assumption that jobs found under the stimulus of the new individual compulsion to tramp from gate to gate would otherwise have gone unfilled.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

International Gold Movements. By Paul Einzig. (London) Macmillan and Co., Limited, St. Martin's Street. 6s. net.

The subject is treated here entirely from the practical point of view, and makes very interesting reading for the student of monetary theory. There are several useful appendices containing a variety of relevant statistics.

The Money Illusion. By Irving Fisher. With a Foreword by Sir Josiah Stamp. (London) George Allen and Unwin, Limited, 40 Museum Street. 7s. 6d. net.

A further discussion, by one of the most distinguished exponents of monetary reform, of the extent, causes and effects of monetary fluctuations. There are three chapters on proposed remedies, and a section devoted to suggestions for further reading.

Middletown. A Study in Contemporary American Culture. By Robert S. Lynd and Helen Merrell Lynd. Foreword by Clark Wissler. (London) Constable and Co., Limited. Orange Street. 18s. 6d. net.

A remarkably interesting study, in the fullest detail, of the life of a small, and as far as such a thing exists, typical American town. As far as possible the observations are presented against the background of that same city as it was in 1890, and the authors express the modest hope " that by the presentation of these phenomena, familiar though some of them may be, in their inter-relatedness in a specific situation, fresh light may be thrown upon old problems and so give rise to further investigation."

Joy in Work. By Henri de Man. Translated from the German by Eden and Cedar Paul. (London) George Allen and Unwin, Limited, 40 Museum Street. 8s. 6d. net.

So much nonsense has been written on this subject that it is most refreshing to meet an interesting treatment of it. The book is based largely on reports (not reproduced in the English version) of their own experience from 78 workers, and its fundamental thesis is that joy in work, like health, is the natural thing, requiring no furtherance but merely the removal of those factors which tend to frustrate it.

Economic Control. By Neil Skene Smith. With an Introduction by Hugh Dalton. (London) P. S. King, 14 Great Smith Street. 15s.

The author takes as the theme of the first two parts of his book the possibility of deliberate control of the economic machinery of a country in the interests of its inhabitants (world control being temporarily left out of account as too ambitious), and examines in Part III. certain Australian experiments in this direction.

Die rechtlichen Grundlagen des Kapitalismus. By Geh. Hofrat D. Wail Diehl. (Jena) Verlag von Gustav Fischer.

This short German essay on the legal foundations of capitalism develops the thesis that the ideas on which those foundations rest have not lost their significance, and that there is therefore no need to anticipate a change in the legal basis of capitalism within measurable time.

The Mexican Agrarian Revolution. By Frank Tannenbaum. (London) George Allen and Unwin, Limited, 40 Museum Street. 12s. 6d. net.

The New York edition of this book received notice in this column two weeks ago.

Methods of Compiling Statistics of Coal Mining Accidents. (London) P. S. King and Son, Limited. 14 Great Smith Street. 2s.

This examination, by the International Labour Office, of the different practices of the various countries concerned, is the preliminary step on the way to greater uniformity of statistics. Meanwhile it is a valuable aid to the interpretation of comparative statistics.

Kelly's Directory of Merchants, Manufacturers and Shippers of the World, 1929. In two volumes. (London) Kelly's Directories, Limited, 186 Strand. 64s., post free.

This remarkable publication is indispensable to business offices in the leading commercial countries of the world. It contains a list of the names of merchants, manufacturers and shippers throughout the world, indexed both geographically and according to trades, and is fully intelligible to persons with a knowledge of any one of the English, French, Spanish or German languages.

The Directory of Directors, 1929. Compiled and published by Thomas Skinner and Co., 330 Gresham House, Old Broad Street. 25s. net.

An alphabetical list of the directors of the principal joint-stock companies known to the British Stock exchanges, with a list of the companies of which each is a director.

The Central Association of Accountants. List of Members, Articles, By-Laws, Examination Papers, &c., 1929. (London) Central Association of Accountants, 57 Salters Hall, Cannon Street. 5s.

Loi Portant Modification à la Loi des Mines du Juillet, 1924. (Bucarest) Imprimerie Socie and Co., Société Anonyme.

Text of the French Mines (Amendment) Act of 1924.

Journal of the Royal Statistical Society. Part II., 1929. (London) Royal Statistical Society, 9 Adelphi Terrace. 7s. 6d. net.

This issue contains the opening, by Professor Bowley, of a discussion on the national income. There are also articles on " Sickness in Various Industrial Occupations," by A. Beresford Hill; and " Wholesale Prices of Commodities in 1928," by the Editor of *The Statist.*

The Round Table, June, 1929. (London) Macmillan and Co., Limited, St. Martin's Street. 5s.

Articles in this number include " Naval Disarmament," " Unemployment," " East Africa," " India and Suspense " " The Australian Labour Movement."

The Stock Exchange.

AMERICAN BUYING OF BRITISH SECURITIES—I.

THE London Stock Exchange has quite rightly regarded its discovery by America as a distinct milestone in its history. Share "booms," however spectacular, are but passing phenomena, leaving few traces behind them, but the entry of the American investor into the British security markets promises to have permanent results. Whatever attitude be adopted to the new development, its occurrence, sooner or later, was inevitable. A nation of 120,000,000 people, accumulating new capital year by year at a rate reflecting its enjoyment of the highest standard of living in history, was bound eventually to turn its attention to the investment opportunities offered by other nations, and not least to those offered by Great Britain, America's nearest neighbour in point of industrial power and prestige. The rapid rise in American security values, which has reduced the average yield on common industrial stocks (according to the index figures compiled by the Standard Statistics Co., and published weekly in our columns) to less than 3½ per cent., has drawn the attention of many far-seeing United States investors to the income-yielding possibilities of the shares of sound and old-established British concerns. The implications of this movement are extensive, and it is well that all British investors should understand them. We propose, therefore, in the present article, to describe the extent and character of recent American buying of British securities, and, subsequently, to analyse its probable economic consequences.

The first conclusion suggested by the available evidence is that the movement in its contemporary form is of extremely recent origin. A handful of British securities was listed on Wall Street as far back as the war period, but the real impetus to the tendency came from the adoption, in October 1927, by the New York Stock Exchange, of listing regulations which standardised transactions in foreign shares with all the convenience and elasticity of domestic bearer issues. British interest in this development dates only from last year, when, in rapid succession, came news of the listing of Four per Cent. Funding Loan and Five per Cent. War Loan in New York, the taking of measures by certain well-known British companies to obviate the possibility of American "control," and the out-and-out acquisition by American interests of various British enterprises (mainly in the electrical and telephone industries) in South America. Subsequent progress has, however, been rapid, and of late scarcely a week has passed without the news of the listing of a new block of British securities in New York, or of some "protective" measure undertaken by a fresh British company.

The primary instinct of many British boards of directors, faced with this new and incalculable development, has been self-protective. The extent to which fears of American "domination" are justified will be discussed at a later stage. For the moment, it may be of interest to mention the chief companies which are known to have changed their articles of association in order to guard against such a contingency. Certain concerns have endeavoured to *exclude* American shareholders, either wholly, as in the case of Imperial Airways, or partially, as in those of Marconi International Marine and Cables and Wireless. Other companies have placed no theoretical limit on American share acquisitions, but have limited voting power—and, consequently, ultimate control of their affairs—to British subjects, the leading examples of this policy being the General Electric Co., Burma Corporation, Rubber Plantations Trust, and, most recently, the Buenos Ayres and Pacific Railway, which has "disfranchised" all but British and Argentine shareholders. A motion in the Ottawa House of Commons, however, to compel the Canadian Pacific Railway to ensure the maintenance of British control was recently defeated.

What are the actual dimensions of America's interest in British stocks to-day? No statistics, reliable or otherwise, are extant, but one would naturally assume that her stake must needs be very substantial, since so many companies have deemed it advisable to take special measures against its extension directly or indirectly—though in some cases, such as the Burma Corporation or the Buenos Ayres and Pacific Railway, those measures have been described as purely precautionary. The readiness of "American-favoured" British security prices, again, to take their tone from the way New York "comes over" on the London Stock Exchange, at about 3.30 every afternoon, seems to point to substantial American holdings. It is known that American citizens or corporations hold (or held three months ago) 60 per cent. of the ordinary shares of the (British) General Electric Co., and that the (American) International General Electric Co. apparently controls 1,200,000 votes of a total of 4,115,425 in Associated Electrical Industries. The (American) Utilities Power and Light Corporation has just definitely announced its ownership of the Greater London and Counties Trust (of which Lord Birkenhead is chairman), which "serves exclusively" (on the parent company's showing) 95 cities and towns in England and Scotland with electricity—controlling an area of approximately 9,300 square miles, with a population in excess of 2,000,000—and has just made an offer to buy out the "A" and "B" shareholders in the Shropshire, Worcestershire and Staffordshire Electric Power Co. America has taken a considerable interest in the future development of the copper deposits of Rhodesia, the American Smelting Co.'s offer to finance the N'Changa Co. being withdrawn only after a more favourable counter-offer by a British group, while in South America, in addition to the acquisitions already mentioned, the Guggenheim interests of the United States have obtained an influential position in the Chilean nitrate industry, and, according to a Press statement this week, have agreed on a fusion of interests with the (British) Lautaro Co.

The cumulative effect of this evidence is certainly considerable. There are, nevertheless, a number of reasons for questioning whether America's "penetration" into British industry is as extensive, or its results are regarded with as much uneasiness, as a superficial reading of the facts would imply. In the first place, only a small minority of the British companies whose shares are listed in New York has so far considered it necessary to take special precautions against American "control." In this connection it may be of interest to set out a skeleton list of companies "quoted" in America, or known to be of special interest to American investors or speculators. The list does not claim to be exhaustive:—

GRAMOPHONE COMPANIES.....	Columbia Graphophone; Gramophone Co. (H.M.V.).
TEXTILE COMPANIES	J. & P. Coats; Courtaulds; British Celanese.
TOBACCO COMPANIES.....	Imperial Tobacco; British American Tobacco; Carreras.
ELECTRICAL MANUFACTURING COMPANIES.	General Electric; Associated Electrical; Johnson & Phillips.
MOTOR COMPANIES	Rolls-Royce; Leyland Motors; Dennis; Ford Motor Co.
AVIATION COMPANIES	Imperial Airways; De Havilland.
OIL COMPANIES	Royal Dutch; Shell Transport and Trading; Anglo-American Oil; Anglo-Persian; Burmah Oil; V.O.C. Holding.
MINING COMPANIES	De Beers; Rand Mines; Bwana M'Kubwa; N'Changa; Roan Antelope; Rhodesian Anglo-American; Rhodesian Congo Border; Rhodesian Copper; Rio Tinto; International Nickel; Consolidated Goldfields; Burma Corporation; British South Africa Co.; London Tin Syndicate.
OTHER COMPANIES	Imperial Chemical Industries; Dunlop Rubber Co.; Distillers; Associated Portland Cement; British Aluminium; Triplex Safety Glass; Margarine Union; Marconi's Wireless; Marconi International Marine; Kolster—Brandes; Rubber Plantations Trust; Debenham's Securities; Selfridge Provincial Stores; Pinchin Johnson.

A more direct "check" on the extent of American holdings in British companies can, however, be obtained from the share registers kept at Somerset House, London. With this purpose in view we have examined the most recent records of some 16 of the above companies, which may be claimed to represent a fair sample of the whole. In every instance we extracted particulars of ordinary shareholdings standing in the names (*a*) of residents in America; (*b*) of residents in other countries outside Great Britain; and (*c*) of banks or other "nominees." The last-named category is important since some holders may, for reasons personal to themselves, desire that their identity remain a matter of confidence. The register of every large and "active" public company includes many thousands of names, but it was found on examination that individual holders of 1,000 shares or over represented much the largest proportion of the total capital. In the case of Columbia Graphophone, for example, the average shareholding was only £99, but "four-figure" holdings accounted for 83 per cent. of the avowedly foreign-held shares, and 99½ per cent. of the "nominee" shares. In the following table, therefore, which sets out the results of our survey, the particulars given are confined to such holdings:—

Holdings of 1,000 shares or over.

Company.	Date of Register.	Nature of Capital.	Total Issued.	Shareholders of Declared Foreign Residence.				Held by Banks and "Nominees."		Remarks.
				American.		Other Foreign Countries.				
				No. of Shares Held.	*Percentage of Total.*	No. of Shares Held.	*Percentage of Total.*	No. of Shares Held.	*Percentage of Total.*

* *All* foreign shareholdings included. † Irish Free State. ‡ Not ascertained.

It will be seen on examination that, of the 16 concerns included in the table, three made up their registers within the last three months, seven within the last six months, and nine within the last nine months. Only in one instance—the Gramophone Co., controlled, as is well known, by the Victor Talking Machine Co., of New Jersey—do "open" American shareholdings represent a controlling interest, or even an important interest. The "nominee" holdings may include the shares of British as well as foreign beneficiaries, but in no case, except Columbia Graphophone—where American voting control is suggested by this and other evidence—do the proportions of those holdings approach anything like 50 per cent. of the whole. In view of the relative smallness of the total shown under each heading, it is scarcely conceivable that the addition of individual holdings of less than 1,000 shares would affect the main conclusions suggested by our figures. From what has been already stated as to the *recency* of America's interest in British securities, there is more than a possibility, of course, that the situation as regards some of the companies shown has changed significantly since the date of the last public register. The recent announcement of a 60 per cent. American interest in the General Electric Co., for instance (apparently non-existent less than a year ago) suggests the advisability of a qualification of this kind. On the whole, however, the figures may reasonably be regarded as suggesting that, for the present at least, alarmist reports of widespread American "penetration" into or "domination" of well-known British companies should be received with a certain caution, in the absence of definite evidence.

The Somerset House registers yield yet another conclusion to reassure those who are unduly apprehensive of "insidious" American buying. Among the companies which we examined it was the exception rather than the rule to find a majority of the voting shares in few hands, much the largest part of the capital being, as a rule, in holdings of less than £10,000. Wide diffusion of ownership is not necessarily a bar to the private American investor desirous of obtaining a shareholding in a British concern, nor even to the accumulation of a reasonable block of shares as a prelude to "listing" under the rules of the New York Stock Exchange. The more numerous the army of small British holders, however, the more difficult the task of those desirous of obtaining *control* by "quiet" purchases in the market, the longer the notice of their intentions furnished to the directors concerned, and the greater the probability that the would-be controllers will be compelled to come out into the open and make a definite offer to *all* shareholders. In such an event, however, the price offered would of necessity be well above the current market value of the shares, and might appear

decidedly tempting to many existing holders. Would the latter's acceptance be an " unpatriotic " act, calculated to prejudice the best interests of British industry? The question opens up a number of wide issues, which will be reserved for discussion in a subsequent article.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
June 11.	June 13.

Last week's events confirmed the view that the reduction of commitments, which had been going on steadily for some weeks before the election, would enable markets to face any new development, favourable or otherwise, with comparative equanimity. Even in the pre-luncheon hours of Friday, May 31st, when the incomplete results suggested the return of a Labour Government with a clear majority, the Stock Exchange chose to " stand fast " rather than to sell securities, though a precautionary marking down of prices was effected, especially among gilt-edged stocks. On Monday, with the complete results available, investment demand was discovered again to be flowing in its accustomed channels, and, though Derby Day and the approaching end of the Account subsequently acted as restraining influences on the growth of business, the " House " may congratulate itself on having, so far, surmounted the difficulties of a critical period with a minimum of inconvenience.

The Gilt-edged market, as we show in a later " Investment Note," opened the week with a firmness which, judging by the scarcity of stock in the market, came as a surprise to some people. Five per Cent. War Loan gained ⅜ on Monday and ¼ on Tuesday, while Three-and-a-Half per Cent. Conversion Loan was prominent with an improvement of ⅝ and 5/16 on the two days respectively. The tone became easier as the week progressed, more purely monetary factors—such as the continuance of New York exchange fluctuations below $4.85, and the Bank of England's sale of £285,182 bar gold, announced on Wednesday—re-exerting their normal influence. India Loans shared partially in the earlier activity and the subsequent quieter tendency. Dominion issues were inactive but steady, Commonwealth Five per Cent. Scrip hardening slightly after initial dullness.

Only a small business was done in the Foreign market, and few price changes occurred. German Seven per Cents were in improved demand on the Reparations agreement, and a modest speculative inquiry showed itself for Russian bonds on the Labour Party's victory. Brazilians were quiet but firm, and Peru Corporation rallied slightly on improved May traffic figures. No interest was taken in Far Eastern descriptions.

A slight appearance of investment interest in Home Rails, on Monday, which found the market not very well provided with stock, proved of disappointingly short duration. The market was felt to be in the position of " having nothing to go for." The week's traffic figures afforded comparison with those of Whitsun Bank Holiday week last year. Apart from the Great Western, the figures were not regarded as over-encouraging, a general decline of ½ in the group ordinary stocks following their publication. Among foreign railways, dullness prevailed in Argentine stocks, despite the satisfactory traffic position, but Antofagasta continued to rise, though the directors' action in postponing the bonus announcement came in for criticism.

A confident tone obtained in the Industrial market at the opening of the week's business, but it quickly became evident that, while the stream of investment demand was unchecked, the public were not willing to be drawn into speculative operations. The market, indeed, appeared to be waiting for some major monetary or political development to give a definite lead, and none was forthcoming. Some interest was taken in Columbias and H.M.V. on both sides of the Atlantic, on reports that negotiations between the two companies had once again been taken up. The names of Courtaulds and British Celanese were also linked together in some quarters, though the rumour did not prevent both shares coming on offer after early firmness. A similar coupling of Associated Electrical and General Electric was discredited in view of the known views and personality of the latter's chairman and the doubtful manufacturing advantages of such a merger. The market continued to discount American enthusiasm for Associated Electrical stock. Tobacco shares were quiet. In the brewery group Hoare's were prominent, but Distillers did not maintain their opening activity. Match shares were firm on buying from a Continental quarter. Rolls-Royce were harder on American inquiry, but Leylands attracted less interest, and Dennis Bros. declined on the assumption that the increase in orders was not being fully maintained. The proposed Hudson's Bay capital increase was received without enthusiasm, no long period having elapsed since the last increase. Insurance share movements were of minor interest, apart from an improvement in Sun Life and a decline in Yorkshire, while bank shares showed scarcely measurable variations.

The rubber market was idle, though such changes as occurred in quotations were generally in an upward direction. The commodity itself had no distinct price trend, demand from consumers being on scanty lines. Tea shares were steady, with the exception of Nedeem, which fell sharply on disappointment with the dividend. The tea market itself was heavy, common teas again showing weakness. Oil shares opened actively on the calling of a " conservation " conference by President Hoover for June 10th, and rumours of a further increase in mid-Continent crude prices, but the movement was checked by the publication of increased American production figures. Speculative attention was paid to Eagles, on reported favourable production returns, though the forthcoming balance sheet of the Mexican company was not awaited with much enthusiasm.

The Kaffir market showed few signs of animation before mid-week, when a revival of demand from Paris, where sentiment became optimistic on the Reparations settlement, caused a making up of numerous Rand shares, especially Modder B. Rhodesians opened the week in flamboyant fashion, but business tailed off on the later days, the Congo Border and N'Changa issues making large numbers of new shares available. Tin shares were inclined to take heart of grace, partly owing to the publicity given to propaganda for increased co-operation among producers. Copper prices improved slightly on the Metal Exchange, and a moderate recovery in international counters such as Tinto and Tharsis was accentuated by the better turn of events in Paris.

FOREIGN STOCK EXCHANGES.

NEW YORK.

There is a better feeling on the share market, in the belief that the Reserve Board is ready to ease up its tight money policy; 7 per cent. is the prevalent rate for call money, time rates are lower, and there is some expectation of a reduction in bill rates if, as rumoured, the Reserve turns buyer of bankers' bills. Although the past week saw a well-sustained recovery in shares, brokers' loans are down $4 million, revealing " short " covering and much new buying of an investment nature, done without resort to borrowing. Bonds are also improving on easier money, but there is some doubt whether the usual July reinvestment demand will be as large as usual. The Reparations settlement was regarded as gratifying, and was reflected in a good market for German bonds. Bankers do not look for any immediate rush of foreign financing. The principal activity was in public utilities, rails and (later) coppers and food company shares, but the general market felt little change, and public interest was still low. Professionals are doing slightly more, but a return of the old speculation is not anticipated until the Reserve policy grows clearer and a better idea of business prospects is obtained. So far the building industry is slowing down, and the motor output was lower in May, but steel is holding up; most observers expect activity to pick up in the autumn after a moderate summer curtailment.

PARIS.

At the beginning of the week the market was once again narrow, though holding up satisfactorily. Later, business developed, and the general level of prices rose appreciably. This regaining of firmness was due partly to the good tone of the foreign markets, and notably that of the London Stock Exchange after the General Election, partly to the promise of an imminent agreement at the Committee of Experts. The view that the Banque de France would benefit by this agreement caused widespread buying of its stock. Elsewhere chemicals were most in favour, together with Citroën and Distribution d'Electricité. Oils were a firm and animated market, Royal Dutch making progress on important arbitrage demands. Rio Tinto registered some recovery.

BERLIN.

The Reparations agreement enabled the Bourse to begin the week firmly, and quotations moved upward more sharply than at any time this year. The relief promised by the settlement to the public finances resulted in a rise in valorisation securities. Foreign buying was on a considerable scale. Among industrials, steel and coal stocks, long neglected, felt the greatest benefits; electricals profited less, and A.E.G., which had risen greatly during the bear movement in the early part of May, weakened slightly in opposition to the general tendency. Next day the tone remained firm, industrial debentures being on the rise, but A.E.G. continued weak, and the Bourse closed with realisations. Led by potash and engineering stocks, the market was fairly firm on Wednesday also, and loans had a further rise. On Thursday, however, profit-taking brought about a decline, though bank stocks continued to go forward.

AMSTERDAM.

Interest continued to be directed mainly to industrials. After a period of considerable activity, business suffered a remarkable decline, prices giving way all round. On Monday attention was paid to oils, where Royal Dutch met with a good demand. Mining and sugar shares were a strong market, but rubbers and tobaccos dull. Shipping shares recovered slightly. Although prices weakened, the general tone continued unchanged and satisfactory; Philips, exceptionally, enjoyed a period of strength. The money market was a little easier, with the private discount rate 5¼ per cent. and the prolongation rate 5¾ per cent.

INVESTMENT NOTES.

Slump in New Issues.—The new issue market has struck an unmistakably bad patch. A year ago the *Economist* gave particulars of new capital emissions, in the second week of June, aggregating £4,504,075; the total announced this week amounts to a trumpery £262,500. This falling off is not to be laid entirely at the door of post-election dullness, for it follows upon a period during which the public has given clear evidence of loss of appetite for new securities, speculative or otherwise. During the month of May the results were announced of some 22 offers by way of prospectuses. Of these only five were declared to be "oversubscribed," and two "fully subscribed," while of the remainder ten failed to obtain as much as half the desired amount, and in three cases subscribers had their money returned in the absence of a response sufficient to justify allotment. Particulars of the issues which failed to obtain full subscription are given below:—

Company.	Issue. (at par unless otherwise stated).	Proportion left with Underwriters.
Lactagol	100,000 8% Cum. preference 10s., and 100,000 ordinary 1s.	Withdrawn owing to insufficient response.
Walkers (Stourbridge) Fireclay.	660,000 Ordinary 5s.	
Islas del Guadalquivir	Pts. 20,000,000 7% Convertible Notes to holders Founders' shares.	
Berkeley Property Investment.	433,485 ordinary £1 at 21s.....	90 per cent.
International Talking Screen Productions.	1,200,000 Ordinary 10s.....	90 per cent.
British Power & Light Corporation (1929).	1,600,000 Shares £1	80 per cent.
Pass & Joyce (1929) ...	100,000 7½% Cum. part. pref. £1 and 100,000 ord. 5s.	80 per cent.
Central Electricity Bd.	£3,000,000 4% Stock at 83	79½ per cent.
N.T. Artificial Wool ...	120,000 10% Cum. part. pref. £1 and 120,000 ord. 4s.	75 per cent.

Commonwealth of Australia.	£12,403,734 Queensland conversion offer.	48 per cent.
Associated Talking Pictures.	400,000 Ordinary 5s.	40 per cent.*
Darwins.....	200,000 "A" 7½% Cum. part. pref. £1.	30 per cent.
Allied Ironfounders ...	£780,000 6% Conv. deb. stock at 96	25 per cent.
Rubber Processes	1,650,000 Ordinary 1s.	20 per cent.

* Proportion left unsubscribed. Issue not underwritten.

In the case of some of the securities in the list, such as the Commonwealth and Central Electricity Loans, absorption by the permanent investor is a foregone conclusion, but, under present conditions, the underwriters of many new speculative company shares are likely to find the process of "unloading" a difficult one. Even the most venturesome of speculators is unlikely to subscribe to new and unproved concerns when each day's Supplementary List bears witness to the catastrophic drop in the price of earlier issues of the same ilk, which has occurred in recent months. The extent of this decline may be inferred from the table below, which compares the present price with the highest point touched last year as regards various new securities, all of which have been dealt with in earlier articles in the *Economist*:—

Company and Share.	Highest Price. 1928.	Latest Price.
Gramophone Companies—		
Duophone Ord. (10s.).....	89/4½	1/6
Electramonic Def. (1s.).....	8/6	1/4½
Dominion Records Def. (1s.).....	6/6	9½d.
World echo Records (2s.)	10/3	1/8
"Parent and Offspring" Companies—		
Blue Bird Petrol Def. (1s.)	3/3	9d.
Blue Bird Petrol (Foreign) Def. (1s.)	1/4½	3½d.
Photomaton Parent (5s.).....	17/9	13/3½
Far Eastern Photomaton (no par).....	7/–	1/3
Ner Sag Ord. (£1)	£9/6/3	14/4½
Photo-Matik Portraits (1s.)	2/3	2⅛d.
Film Companies—		
British Filmcraft (5s.)	7/9	1/1½
British Lion Film Corp. Def. (1s.)	2/6⅛	6d.
Whitehall Films Def. (1s.).....	3/–	1d.
Welsh Pearson-Elder (1s.)	2/10½	5½d.
Other Companies—		
Waste Food Products (1s.).....	40/7½	13/9
Greyhound Racing Association Trust Ord. (1s.).....	5/3	9d.

The list might have been lengthened many times over, but enough examples are furnished to suggest why the "shilling deferred" share has lost its former lure. It may conceivably re-emerge whenever a recrudescence of Stock Exchange activity occurs to restore new life and vigour to the speculative section of the issue market, but is more than likely to have "suffered a sea-change" in the interim.

The Gilt-Edged Position.—A certain revival of business in the gilt-edged market has been seen in the last ten days. Prices advanced on polling day itself, only to receive a setback on May 31 when the Conservative Government was known to have been defeated. The considerable advance which followed on Monday and Tuesday was doubtless attributable, principally, to the combined effect of bear covering and the disbursement of War Loan interest on a narrow and unusually sensitive market. To thoughtful observers both the fall and the rise appeared somewhat excessive. At that point the news of a shipment of gold to America damped bullish sentiment; though the amount was small, it happened to be the first loss of gold to America since the raising of our Bank rate, and so its psychological effect was disproportionate, reviving old disquietudes. Among these contrary and ephemeral forces it was hard to detect any immediate change of feeling on the definite news that the experts in Paris had arrived at an agreement on Reparations. The negotiations had lasted for so many months that excitement could scarcely be anticipated on their completion. Seeing how little is yet known about the details of the plan, it is too early to discuss what practical effects it will have on the gilt-edged market. So far, it is as the smoothing down of an obstacle to international goodwill that the fact of agreement is to be welcomed; further comment must await the publication of the full terms. The election result did not come up entirely to the market's hopes, but events may be claimed to have shown already that confidence is not shaken by the advent of a Labour Government in the existing circumstances. Genuine investment buying has been going on steadily this week. There is obviously

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

no fear of penal legislation. On the other hand, in the City the possibility is apprehended that the new Cabinet may contemplate action on the lines of extending Government credit facilities to industrial enterprises in need of new capital. These are general considerations, however. Nowadays the interpretation of the gilt-edged outlook is admittedly more complex than ever before. In the traditional old days, it was only necessary to look in two or three main directions, in order to be confident that a comprehensive view of the situation had really been obtained. But since the war, and especially since American prosperity and its monetary consequences have come right into the foreground of the financial world-picture, it is not enough to be able to assess or predict correctly the force of the known and recognised influences, for the effect of unrecognised ones is continually making itself felt. The market to-day, in fact, is compelled to take account of many more factors than in earlier times, and inferences from one set of known facts are constantly liable to be upset by new and uncertainly comprehended developments.

The Copper Outlook.—The continued activity in Rhodesian copper shares, however "professional" its character, has stood out in strong contrast to the decline in share values among companies which are actually producing copper at the present time. Shareholders in such concerns are naturally anxious to obtain some idea of the outlook for the metal in the near future. For the moment the prolonged lull in the market, following the slump early in April, shows some signs of coming to an end, for consumers have displayed more inclination this week to put metal on their books. Standard quotations are firmer, while still maintaining an abnormal "differential" below electro, but copper scrap prices remain easy owing to complete absence of demand. Latterly the amount of second-hand electrolytic offered outside the combine has lessened, but parcels are still available for prompt and forward shipment at a discount. Stocks of rough copper in Europe are very low, but the blister tonnage in America at April 30th exceeded 250,000 short tons, while the world production for that month broke all records at close on 200,000 short tons. Refined copper output in the Americas also surpassed all previous figures during April, with a record daily rate of 5,376 short tons, making 620,703 tons during four months, against 499,371 in the corresponding period of 1928. In spite of the lull in buying, activity in all trades employing copper in their manufactures is well maintained, but unless fresh orders are speedily forthcoming a quieter period must supervene. In Europe especially, ultimate users, such as the railway companies, shipbuilders, etc., are looking for a reduction in price, and are deferring purchases as long as possible. The price reaction left consumers the world over in an over-bought position, and, although their abstention from buying has acted as a corrective to some extent, this factor is still prominent and is exercising a depressing influence. For the immediate future their policy is certain to err on the side of caution, and no *prolonged* buying movement is likely. A gradual increase of refined metal stocks seems probable, which will encourage the maintenance of hand-to-mouth purchasing. Stocks at consumers' works are probably heavy. On the production side we have seen an extraordinary change of front, for famine talk has given place to an announcement of a 10 per cent. cut in output by the refiners, which, however, has not yet been generally adopted. This may be taken as a sign that a higher price level is aimed at, but recent experience has shown the danger from substitution of rival metals, and the supposition is probably erroneous. More probably it is a gesture to combat the present apathy of consumers and a weapon with which to fight the more distant menace of increased refinery production from new plants. The institution of trading in copper futures on the National Metal Exchange in New York may be taken as a step towards real price stability in America, but this innovation receives no support from the big producers, and can hardly at the moment exert much influence. The trend towards still wider co-ordination of producing and consuming interests in the States is strengthening the hands of the mine-owners, but the industry must still depend upon support from the free manufacturers of the Old World. All things considered, a drift towards a lower price level seems probable.

Royal Mail Steam Packet.—The 1928 accounts show little change in profits at £729,367, but owing to the additional debenture interest payable the 5 per cent. dividend has not been fully earned. The issue of £2,000,000 5 per cent. debenture stock at 92½, made last July and largely oversubscribed, required £35,000 in interest for the broken period of 1928, and will henceforth call for £100,000 annually. The reserve is untouched at £1,450,000, but the dividend reduces the carry-forward to £46,879.

(Years ended December 31.)	1926. £	1927. £	1928. £

The report makes repeated reference to competition, but indicates that trade in general remains satisfactory. Cruising business continues to expand, winter tours round South America are gaining favour, and the range of commodities carried under refrigeration from the River Plate and Brazil is increasing. The auditor introduces into his certificate a qualification regarding the values, under present conditions, of the investments in allied shipping companies, which, with the book value of the fleet and investments in other allied companies, stand at £16,253,755—an amount which is stated to be under cost. He remarks further that the provision for depreciation of the fleet has been calculated at a lower rate than hitherto. The balance sheet, however, thanks presumably to the proceeds of the debenture issue, shows a gratifying return to liquidity, cash, &c., having risen from £310,605 to £1,114,580, debtors from £411,033 to £493,207, while bills payable have been reduced from £658,125 to £421,471, and an inclusive "creditors" item, which last year stood at £2,257,070 (including a bank loan of £428,484), now stands at £1,404,890. The ordinary stock, priced at 83 a year ago, is down to 67½, cum final dividend of 3 per cent., and offers a yield of £7 15s. 0d. on dividends. The affairs of the R.M.S.P. Co. are of interest to holders of White Star Line preference shares, guaranteed by the Royal Mail, since these shares were covered only 1.7 times by earnings last year.

The Austin Motor Company.—The report of the Austin Motor Company for the 15 months to December 31, 1928, brings out the difficulties which British motor manufacturers had to meet last year. The Austin Motor Company budgeted for an increase in turnover of 50 per cent. for 1928. During October and November, 1927, this rate of turnover was actually accomplished in the home market, but it could not be maintained, and for the 15 months' period the actual increase in turnover was only 10 per cent. as compared with the preceding similar period. In view of the fierce competition and the fact that new motor car registrations in Great Britain declined in 1928, the directors regard this increase in 1928 turnover as gratifying, particularly as the export trade during that period was substantially increased. Profits were, of course, badly affected by the company's failure to live up to its programme and the substantial reductions in selling prices which were made in August, 1927, and August, 1928

Comparison with the two preceding years is shown in the following table:—

	Year to Sept. 30, 1926.	Year to Sept. 30, 1927.	15 months to Dec. 31, 1928.	Last Figures on 12 months' Basis.

This table brings out the big reverse in Austin Motor fortunes in comparison with the year to September, 1927. The preference dividend deductions are shown on an annual basis, but it must be remembered that from September 30, 1927, to December 31, 1928, the company paid out seven years' arrears of dividend as well as the current dividends on the 7 per cent. first preference shares, while last year it paid three years' arrears on the 6 per cent. "B" preference shares. On July 1st next a further one year's arrears on the "B" preference shares will be paid, leaving arrears as from June 30, 1924, still to be paid, amounting to £300,000. The first preference shares are quoted at 16s. 9d., to yield 8½ per cent., and the second preference at 17s. The preferred ordinary shares of 10s. have reacted to 6s. As regards the future, the directors state that in order to reduce manufacturing costs and meet the severe competition the company has expended on new plant and equipment during the period under review £576,760, and the full benefits of this expenditure will not be obtained until the end of the current year. The outlook appears only moderately encouraging, but Sir Herbert Austin will doubtless go fully into the company's prospects at the shareholders' meeting on June 11th.

Pease and Partners.—Though the coal trade as a whole has improved since Christmas, the accounts of Pease and Partners, the Yorkshire and Durham coalowners, to March 31st last, continue the dismal story of the previous year:—

(Years ended March 31.)	1927.	1928.	1929.
	£	£	£
Loss	252,807	106,345	100,286
Debenture and loan charges	66,000	83,075	86,324
Depreciation of plant	38,388	38,931	36,005
Debited to profit and loss account	375,195	228,352	222,615

Some departments of the business have made reasonable profits, but others have been worked at a loss, the result being a net trading loss of £3,785 (against £21,677 for the previous twelve months), which, with £55,136 for maintenance of idle establishments, is included in the above figures. Increasing demand in recent months, however, has caused two collieries and a battery of coke ovens to be restarted, while a new colliery, on which capital expenditure has been practically completed, has entered the profit-earning stage. The debit balance of the profit and loss account amounts to £1,060,634, and the bank overdraft has increased to £1,236,279. Apart from other more specific funds, there is a general reserve of £250,000, a depreciation reserve of £498,400, and a dividend equalisation reserve of £63,210, but on a reconstruction the fixed assets (£4,232,190) and the investments in subsidiary companies (£1,100,658) would probably call for drastic writing down. The capital reconstruction foreshadowed in last year's report is still delayed. It is, of course, overdue, and should be facilitated by the fact that the company has no preference shares. The £1 ordinary shares, on which the last dividend paid was 1½ per cent. for 1924-25, are valued by the Stock Exchange at 6s.

Associated Newspapers.—A further slight advance is recorded in the profits of the Rothermere newspaper combine, which are struck after making "ample provision" for depreciation of plant and machinery, buildings and fittings, and providing for income tax, &c. The dividend on the deferred shares (53 per cent. are held by the Daily Mail Trust), which were split into four 5s. shares in June, 1928, remains at 40 per cent., requiring £900,000 as before.

(Years ended March 31.)	1927.	1928.	1929.
	£	£	£
Profit	1,121,909	1,170,835	1,205,666

Reserve fund	*Dr. 300,000*	...	...
Capitalised share bonus	750,000	...	...
Pension fund	20,000	...	40,000
Increase or decr. in carry-forward	*– 90,091*	+ 203,835	+ 198,666

* Together with a 50 per cent. capitalised bonus.

Earnings of over 50 per cent. on the junior shares are the more impressive since these represent more than two-thirds of the issued capital. The directors report that the increased expenditure entailed by the production of larger papers and wider distribution has been fully justified, and that the income from advertisements and sales showed a very considerable increase. Certainly the balance-sheet items indicate gradual all-round growth. Detailed references to the development and present position of Associated Newspapers will be found in the articles published by the *Economist* last autumn entitled "The Contemporary British Press" (especially pages 786, 834, 1005). The deferred shares are now priced at 42s. 6d. and yield £4 14s. per cent.

Hudson's Bay.—From the final dividend statement of the Hudson's Bay Co. (the full accounts are not yet available) it is not possible to say how satisfactory a year the company has experienced. Shareholders receive the same distributions as last year, a final 7½ per cent.—making 15 per cent. for the year—in respect of trading, less income tax at 2s. 7d. in the pound, and 10 per cent. (on which income tax is not payable) from the land department. Subject to audit, the balance carried forward in the latter account is raised from £3,837 to £47,600, and in the former from £114,251 to £161,000, after transferring £75,000 to the dividend equalisation account. A year ago £225,000 was set aside for an equalisation of dividends reserve, but on that occasion an extra £200,000 was available, described as provision for contingencies no longer required. If there have been no similar windfalls this time, and the statement makes no mention of any, the figures suggest that the combined profits of the two departments may have risen by some £140,000. It is proposed to increase the ordinary share capital to £3,000,000 by the creation of 1,000,000 new ordinary £1 shares, and to offer 500,000 of these to the holders of the existing ordinary shares next month in proportion to their holdings. It is not intended to issue more than 500,000 at present. On this announcement the shares reacted from 5 11/16 to 5½; at the latter price, allowing for final dividends of 7½ per cent. gross and 10 per cent. tax free, 3s. 6d. in all, they yield £5 3s. 3d. per cent., calculated on the basis of a total distribution of 27½ per cent. gross.

International Telephone and Telegraph Corporation.—This corporation was formed in 1920 to provide telephone services in countries outside the United States. Under the direction of Colonel Sosthenes Behn its development and growth have been phenomenal. In 1927 the corporation absorbed the All America Cables, which dominates the telegraph and cable business between North America and Central and South America, and also serves the principal countries in Europe and the Far East. Last year the corporation amalgamated with the Mackay system, which included Postal Telegraph, Commercial Cables, Commercial Pacific Cables, and Mackay Radio. This gave the corporation a nation-wide telegraph service in the United States in addition to its international cable lines. In December last year the corporation acquired the United River Plate Telephone Co., which owns the largest telephone system in South America. One of the gratifying results, according to the directors, of this acquisition was an addition to the lists of British stockholders of the International Telephone and Telegraph Corporation. An interesting feature of the corporation's telephone activities is the development of the telephone in Spain through the National Telephone Co., with which it is closely affiliated. Spain has to-day one of the best telephone systems in the world, and nearly 58 per cent. of the telephones in service are of the rotary automatic system—a higher percentage of automatic telephones to total stations than exists in any other country in Europe. In addition to its communications services, the corporation also undertakes the manufacture of telephone and telegraph and electrical apparatus through its ownership of the International Standard Electric Corporation and its interest in the Compagnie-Téléphones Thomson-Houston—one of the leading manufacturers of telephone equipment in France. It appears to be desirous of bringing apparatus-manufacturing firms in this country also under its control, for in July of last year it acquired control of Creed and Co., of Croydon, which is engaged in the manufacture of automatic printer telegraph equipment and accessories. There would seem to be no limit to the expansion of the corporation's activities. The latest development is the proposal for a merger between the corporation and the Radio Corporation of America, which is the American answer to the wireless-cable merger in this country. This proposal has not yet been assented to by the Inter-State Commerce Commission. The consolidated income account shows the further growth of the corporation's 48 associated companies in 1928. Dividends of $6 per $100 share have been paid since 1921. The balance sheet shows a total of $389,914,332, capital stock consists of 1,422,785 shares of $100, and $40,580,589 preferred stock of associated companies.

	1926.	1927 (*b*)	1928 (*c*).
	$	$	$
Gross earnings	22,680,845	37,228,946	81,234,824
Operating and selling expenses, taxes and depreciation	11,615,603	20,062,577	58,180,995
Deb. interest, pref. divs. and minority interest	3,960,036	2,752,873	8,457,492
Surplus available for common stock dividends	7,105,206	14,413,496	14,596,337

Number of shares outstanding end of period	585,983	1,301,994	1,422,785

(*a*) Based on number of shares outstanding at end of period. Earnings per share, if computed on the average number of shares outstanding during each period, would make more favourable showing.

(*b*) Reflecting net income from all America Cables Inc., Montevideo Telephone Company, Limited, and the Chile Telephone Company, Limited.

(*c*) Reflecting net income from Mackay Companies and Commercial Cables, but not from United River Plate Telephones.

The loan capital consists of $35,000,000 35-year gold debenture bonds and $58,516,876 bonds of associated companies. There was a surplus of current assets over current liabilities of $60,627,000. Reserves stand at $11,991,617. The book value of the $100 common shares works out at $129.5, the market price being $250.

Antofagasta (Chile) and Bolivia Railway Co.—The accounts of the Antofagasta Railway for 1928 make a favourable showing, the operating expenses ratio for the railway and waterworks combined having fallen from 62.45 to 60.26 per cent., and earnings being equivalent to nearly 9 per cent. on the ordinary stock, as shown below:—

(Years ended December 31.)	1926.	1927.	1928.

Nitrate traffic increased but little; it is estimated, however that some 200,000 tons of the 1928 production remained for transport during the current year. Traffic in borate ceased three months ago, the establishment at Cebollar having been closed down, but a substantial increase in copper bars is reported. The market anticipated either an increase in the dividend or a capital bonus, and the report does not explain why the directors took the mystifying course of first making the bare announcement of a 7 per cent. dividend, and then waiting for some time before revealing that a bonus (£15 per £100 of stock) was to be distributed. Antofagasta stock has been prominent lately, and at 110 *cum* final dividend of 4 per cent. it offers a yield of £7 11s. 9d. per cent., taking into account the bonus.

Anglo-American Oil Co.—The accounting procedure of the Anglo-American Oil Co. is curious. Shareholders are informed of the annual dividend and, later on, at a meeting behind locked doors, through which the Press are never admitted, the chairman unfolds the year's story. The chairman's speech and the balance sheet are handed round to shareholders in place of the annual report. It is not surprising that an air of mystery should hang over the affairs of the company. It was popularly supposed that the company, being the marketing subsidiary in Great Britain of the Standard Oil Co. of New Jersey, was protected against loss by its parent company. This, if it was true once, is no longer the case. The Anglo-American Oil Co. has to buy its supplies from America at the market rates now fixed by the American

Oil Exporters' Association. It may be recalled that in 1927 the selling prices of oil products in Great Britain declined so rapidly that the company's inventory values at the end of the year showed a loss which practically wiped out the ordinary trading profits. In 1928 the company still found it impossible to make a profit on sales of motor spirit. Other branches of its business—the sale of lubricating oil in bulk and the sale of oil heaters—returned satisfactory profits. The following table shows that 1928 trading results, though unsatisfactory, were slightly better than in 1927:—

	1926.	1927.	1928.
	£	£	£
Issued capital (ordinary shares of £1)	4,007,185	4,159,245	4,192,635

Income tax	512,410	57,617	125,845
Depreciation	799,195	664,761	693,307
Net profits	1,663,265	387,223	610,834
Earned on ordinary shares	41·5%	9·31%	14·57%
Dividends, tax free	20%	12·5%	7·5%
Expense of issuing new capital, gold notes, &c.	28,029	130,092	...
Investment reserve	...	48,917	178,140
Carried forward	1,620,532	1,308,618	1,425,902

If the capital profit of £178,140 be excluded from the total profits, the earnings on the ordinary shares work out at 10.3 per cent. It is satisfactory, therefore, to find that the company earned its tax-free dividend of 7½ per cent. As regards the future, the chairman stated that the company would have to wait another year for a satisfactory financial return. It has benefited from the rise in petrol prices this year, which came about as a result of a trading and purchase agreement with the Naphtha Syndicate of Russia, but if the statement of costs and selling prices which was handed to the Government by the petrol companies this year is correct, it still cannot be making any profit on the bulk of its petrol trade. Further, the chairman's cryptic remark that the sales of ethyl petrol were now on the increase may possibly suggest that the company had made a loss on that particular experiment. As regards lubricating oil, the company now proposes to enter the retail trade, and no doubt its profits should thereby be increased. The chairman expressed himself as hopeful of the benefits to be derived from the restriction of oil output in America, but even before his speech was delivered restriction had broken down in Oklahoma. The crude oil outlook remains somewhat uncertain. The balance sheet continues to show a strong position, with a surplus of current assets over current liabilities of £2,991,517. The ordinary shares are easier at 62s. 6d.

Eagle Oil Transport.—This company is controlled by the Canadian Eagle Oil Company, which charters its fleet of some 29 oil tank steamships. Under the agreement the charter rates are based upon current market freights. This means, in fact, that dividends on the ordinary shares (£3,000,000) which are held by the Canadian Eagle, are generally limited to periods of good freight rates. A dividend reserve has been created to safeguard the payment of 8 per cent (6 per cent. being guaranteed by the Canadian Eagle and 2 per cent. being the maximum participation dividend) on the participating preference shares (£2,000,000) in which the public are interested. In 1926 and the early part of 1927 oil freights favoured the owners, and a dividend of 2 per cent. was paid in each of these two years on the ordinary share capital. The 1928 freights were low, profits were more than halved, and in order to maintain the 8 per cent. dividend on the preference capital £122,500 was transferred from the dividend reserve. The results for the past three years are shown in the following table:—

	1926.	1927.	1928.
	£	£	£
Net profits	989,642	1,131,256	519,095
Interest on notes	150,288	73,281	...
Depreciation	625,000	500,000	481,622
Balance	214,354	557,974	37,474
Preference dividends—8 per cent.	160,000	160,000	160,000
No. of times covered	*1·8*	*3·4*	...
Balance for ordinary	54,354	397,974	...
Earned on ordinary	1·81%	13·27%	...
Paid on ordinary	2%	2%	...
Carried forward	89,687	6,521	6,494

Out of the profits of the prosperous year, 1927, £400,000 was transferred to a dividend reserve, which was reduced to £277,500 by the transfer of £122,500 to the lean year, 1928. The balance shows depreciation and repair reserves at £6,092,228, as against £9,384,557 for cost of steamers and shares in subsidiary companies. A liquid position is shown—cash, Treasury bills and debtors exceeding current liabilities by £2,025,467. The book value of the assets is £15 14s. per ordinary share of £5. Each year, by writing down the Eagle Oil fleet, the Canadian Eagle is building up for itself a very valuable "hidden reserve." The 6 per cent. preference shares of £5 are quoted at 5⅛. The participation dividend of 2 per cent. on these shares, no doubt, will be continued. When the dividend reserve is exhausted the company may apparently call upon the charterers to pay rates above those ruling in the market.

Associated Tin Mines of Nigeria, Ltd.—By the absorption of what was known as the Keffi group of mines the Associated Tin Mines of Nigeria, a member of the Anglo-Oriental group, became the largest alluvial tin producers in the world, the monthly rate of output being 230 tons. When hydro-electric power is available—the Nigerian Power and Tin Fields scheme at Kurra Falls, in which the company has a half interest, will make such power available by the end of 1930—the company will be one of the cheapest producers in the Empire. For the present, costs of production (steam shovels, gravel pumps, underground and surface mining and hand labour are all employed) are high, being £94.5 per ton f.o.r. Bukuru, on an output of 3,061 tons. Comparison of the trading results is difficult, because the company's capital for the eighteen months ended December 31, 1928, was increased to £1,000,000 (in 5s. shares).

Paid	30%	20%*
Carried forward	130,115	116,097†

* Payable on £100,000.
† After payment of income tax, £58,196.

About 15 per cent. of the profits in the last period was derived from the sale of areas and investments. The ore reserves are now estimated at 19,000 tons. According to the directors' report, the full benefit of the extensive acquisitions completed during 1928 and of the economies resulting from the working of the amalgamated companies as one concern was not felt during this period. Production could be increased, but in view of the low price of tin and the coming of electric power, the policy of the directors is to go slow. To conserve cash resources no final dividend is being paid, the interim of 20 per cent. having been paid in January, 1928, on the old capital. The balance sheet discloses a liquid position, working

capital being about £100,000. The reserve fund, with an appropriation from the profit and loss account of £10,850, is brought up to £260,000. The 5s. shares are easier at 8s.

Eastern Dredging Results.—Satisfactory progress was secured by the Tanjong Tin Dredging in its first full year of operations. A marked expansion in the cubic yards dredged was accompanied by a substantial advance in average yield and reduction in costs, although owing to the decline in the price of tin the profit per ton of metal was only about £1 up at £78 17s. 6d. The total net profit of £23,600 compares with £8,500, and permits the payment of dividends totalling 25 per cent., as against 10 per cent., leaving a balance of £4,000 to go forward. In the case of the Kinta—an old-established undertaking—a decline in yardage was accompanied by a slight improvement in average yield and a fair economy in costs. At £40,400 the net profit is £6,000 down, entailing a cut of 5 per cent. to 25 per cent. in the dividend total. Kramat Public earned only £12,200 in place of £21,200, and the final dividend of 2½ per cent. makes 12½ per cent., as against 20 per cent. Although an increased quantity of ground was treated, the output showed a renewed falling off, owing to the lower values carried—a point upon which a warning was uttered at the last annual meeting.

Zinc Corporation.—It is fortunate for the shareholders, writes our mining correspondent, that the directors of this undertaking have built up a good investment business as a sideline. Last year the increased tonnage of 274,400 was treated, with a further improvement in metal recoveries and a satisfactory reduction in working costs; but owing to the decline in metal prices the operating profit came out £69,700 lower than before at £205,900. Interest and dividends, however, contributed £114,000, in place of £87,700, with the result that the net profit of £255,500 showed a reduction of only a few thousands. Accordingly, no difficulty was experienced in maintaining the 40 per cent. dividend rate in both classes of capital. The policy is continued of making a decidedly large appropriation for mine development and new plant. Of the £100,000 thus set aside in 1926, £89,900 was brought back into the 1927 accounts; similarly, of the £100,000 appropriated in 1927, only £23,700 was expended. After setting aside the same amount, the slightly enhanced balance of £45,000 remains go forward. As "mining property and investments" are lumped together in the balance sheet, it is difficult to tell whether the portfolio has been added to or reduced: the entry in the latest balance sheet—£821,200—compares with £847,800 twelve months previously. The holdings are spread over something like a hundred gilt-edged securities, industrials, &c. Fresh development opened up rather more ore than was extracted, the lead lode reserves figuring at 2,666,800 tons, no averages now being given. The zinc lode reserves are estimated at 246,000 tons. The total represents fully ten years' supply for the mill. The current quotation of Zinc Corporation participating preference shares includes 4s. 6d. dividend—2s. 6d. final for 1928, 2s. interim on account of the current year; that on the ordinary includes 2s. 6d. final. Allowing for this the yields shown are about 9 per cent. and 8 per cent. respectively, plus allowance in respect of Dominion income tax. The apparent anomaly is explained by the circumstance that the ordinary shares benefit more than the preference from any improvement in metal prices. In this connection it may be noted that during the first four months of 1929, the average for lead and zinc exceeded that of the corresponding period of 1928.

The Underwriters' Trust, Limited.—A new trust company with this name has been formed with the object of (*a*) engaging in the underwriting of all kinds of new issues; and (*b*) providing a medium whereby shareholders of the trust can obtain participation in the trust's underwriting. The company is to have a capital of £30,000 in £1 shares, of which 25,000 are now being offered at 21s. per share. Of the shares now offered, it is stated that 10,000 have been taken up by the directors and their friends, leaving available for subscription a balance of 15,000. The promotion of this company is presumably the sequel to a brochure entitled "Stock Exchange Underwriting," published last September and reviewed by us in our columns at that time, for the managing director of the trust, Mr Copley Singleton, is also the author of this brochure. Mr Copley Singleton is a partner of the firm of Copley Singleton and Co., solicitors, and a director of a publication called "Underwriting News, Limited," which is a sponsor of this venture, by virtue of an agreement to defray the preliminary expenses in consideration of a cash sum of £850 and an option for two years to subscribe for the remaining 5,000 shares at 22s. 6d. per share. The sponsors of the undertaking claim that there is room for an underwriting concern prepared to undertake the business on insurance principles, and, further, that the shareholders will thereby be in a position to participate in underwriting issues on terms more favourable than would otherwise be open to them in their individual capacities. This is a new type of finance company, but we are inclined to think that the difficulties to be encountered are much under-rated, and that for two reasons; in the first place, there is already considerable competition for the underwriting of all sound, good new issues, and issuing houses and stockbrokers who control the business have frequently great difficulty in satisfying their existing *clientèle*; in the second place, it is a common practice to require as a condition for admission to underwriting lists some undertaking, or at least a prospect, of reciprocal business in the form of Stock Exchange orders, and this, presumably, the trust will not be in a position to give. The more attractive the underwriting proposition the more difficult it is to obtain underwriting. Conversely, the more speculative the easier it is, and in practice the trust may tend to secure a larger proportion of speculative business with correspondingly greater risks. In a finance company of this specialised character the management factor is all important, and however eminent the directors may be in their own sphere one would like to have more exact knowledge of the extent of their special experience in the financial field. Thus the issue is essentially a speculation. Nevertheless, being a new experiment, its progress will be watched with interest.

The New Luxembourg Bourse.—Fears that the Luxembourg Bourse would constitute a keen competitor of the Bourses of Paris, Brussels, Antwerp, Amsterdam and Zurich have proved to be well founded since the new Stock Exchange commenced operations, writes our Paris correspondent. As one result the Belgian Government has already reduced the stamp duty on foreign stocks and bonds negotiated on the Brussels Bourse, from 3 to 1 per cent., in spite of the urgent necessity to maintain a balanced Budget. The Netherlands Bank, for similar reasons, has brought down its rate for advances on foreign securities to the same level as for those on Dutch scrip, thus abolishing an advantage which the latter has enjoyed since 1865. The Dutch Government itself, moreover, has reduced to a maximum of 0.60 per cent. the impost levied on foreign issues desiring official quotation on the Amsterdam Bourse. All this has stimulated the campaign in progress in Paris for the reduction of the present abnormally heavy fiscal charges on securities. One of the French provincial Chambers of Commerce has passed resolutions urging that the maximum taxation levied on the yield from securities should be fixed at 30 per cent., that companies that have earned no profits during the year should be exempted from transfer tax, and that dividends coming from foreign subsidiary companies should be exempt from the present 18 per cent. tax.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Brazil, Mexican Railway, Great Western of Brazil Railway, Suez Canal, Guardian Assurance, Compania Hispano Americano de Electricidad S.A. Barcelona, Investment Trust Corporation, Sialang Rubber, Telogoredjo United Plantations, City of London Real Property, Atlas Artificial Silk Processes, Boots, Callenders Cable and Construction, John Hetherington and Sons, Waring and Gillow, Geduld Proprietary Mines, Modderfontein Deep Levels, and East Geduld Mines, The report of the Bank of Brazil referred to the stability of the national currency last year, the end of budgetary deficits, the note issue, and the Bank's credit policy. The chairman of the Great Western of Brazil Railway Co. described the main features of the new arrangement with the Brazilian Government, under which the railway has been granted an improved tariff and a reduction in the scale of rental charges. The traffic through the Suez Canal in 1929 was shown by the President of the latter company to have exceeded all earlier records.

CAPITAL ISSUES.

Only one prospectus of interest to the Stock Exchange was issued during the past week, and that on behalf of a trust and finance company, *British Overseas and General Investment Company*. This is the issue which was foreshadowed at the recent meeting of the Province of Buenos Ayres Waterworks Company, and the funds are to be used in the first instance for the expansion of that business, preferential consideration being given to applications from security-holders in the parent company. To what extent the risks will be actually spread is, therefore, not clear as yet. The *Government of Newfoundland* has announced that tenders will be received up to Monday next, in sterling or dollars, for the purchase of $6,000,000 5 per cent. bonds, repayable in 1954. A prospectus has been filed, but not advertised, for *Hawnes School (Ampthill)*, an issue of a kind which, though necessarily hazardous as a commercial proposition, will attract those who are interested in and can afford to venture their resources upon a good cause—the founding of a new school.

Government of Newfoundland.—Applications will be received at the Bank of Montreal, London, New York, Montreal and St. John's, N.F., up to June 10, 1929, for the purchase of $6,000,000 (or sterling equivalent at $4.86⅔ to the £) Government of Newfoundland 5 per cent. bonds, 1954.

British Overseas and General Investment Company, Limited.—Issue of 50,000 (out of 100,000) £5 shares at £5 5s. per share, which will be converted when fully paid up into £3 of 5 per cent. preference and £2 of ordinary stock. The company will carry out the business of an investment trust company in all its branches.

Hawnes School (Ampthill), Limited.—Issue at par of 3,000 (out of 4,000) £10 shares. The company has been formed to found a public school for girls in Bedfordshire. A large house, with freehold land, has been purchased for the sum of £12,200. Not more than 6 per cent. dividend may be paid until the reserve funds are equal to the issued share capital.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introductions:—**International Pulverising and Grinding Machines (Parent) Corporation, Limited**; issued capital, £37,500 in 1s. shares; acquires certain assets, including patents, of a business of manufacturing and selling machines for milling and pulverising substances of all kinds, at a price of £5,000 in cash and £25,000 in shares. **Smithfield Animal Products Company, Limited**; issued capital, £119,594 in 5s. shares; formed in 1920 to recover, refine and deal in products and constituents from animal carcases and slaughter house and butchers' waste. **Irvin and Johnson (South Africa), Limited**; issued capital, 550,007 £1 shares, together with £269,500 7 per cent. first mortgage debentures, 1943; formed in 1922 to acquire a business of fishing and trawling in South African and Antarctic waters. **European Meat and Packing Corporation, Limited**; issued capital, 180,000 5s. ordinary and 50,000 2s. deferred shares, the former to receive a non-cumulative 10 per cent. dividend and one-half of the surplus distributed profits; a finance and investment company, devoting its activities particularly to the preserved meats and other foodstuffs packing industries on the Continent.

BANK OF BRAZIL.

REPORT SUBMITTED TO THE GENERAL MEETING OF SHAREHOLDERS ON APRIL 27th, 1929.

TO THE SHAREHOLDERS!

Gentlemen,—In accordance with the Articles of Association, it is my duty to lay before you a report dealing with the year 1928. The Exchange has continued to remain within the limits fixed by Law No. 5108 of December 18, 1926, without any sacrifice of credit or money either on the part of the Government or of the bank.

Remittances of credit and of cash have been received from abroad to be invested in private enterprises, in the purchase of land, in loans and even in banking transactions, in the hope of a remunerative return. Gold has been paid into the Stabilisation Fund, the stock of which on December 31 to the amount of £20,533,389 showed an increase of £9,826,443 over the stock at the corresponding date in 1927 equal to the difference between the total received and the total paid out which did not exceed £87,032.

This constitutes a proof of the general confidence in the stability of the exchange, in the administrative order and the satisfactory progress of the country. In order to recognise how well deserved is this confidence, it will suffice if we bear in mind some of the data and facts already quoted as a proof that the economic and financial situation of the country in 1928 has shown marked firmness and improvement.

END OF BUDGET DEFICITS.

As a fact, the old régime of budget deficits would seem to have at last come to an end and to have been replaced by one of surplus balances. The financial year of 1927 showed a surplus of Reis 30,851,360,496 and that of 1928 promises to show a still larger sum. The service of the Sinking Fund for the Foreign Debt was resumed. The notes of the Conversion Fund held by private holders were bought up by the Government. Of the Consolidated Internal Debt the sum of Reis 48,152,000,000 was redeemed, namely, Reis 35,555,000,000 in Treasury Bonds and Reis 12,597,000,000 in Railway Bonds. The paper circulation was reduced by burning of Treasury notes to the value of Reis 25,579,798,000. There were purchased for the Sinking Fund of the Public Debt 32,709 policies of Reis 1,000,000 with the interest belonging thereto, which for years had not been used to increase it.

On December 31 the Government had to its credit in the Floating Debt account, Reis 68,423,324,673, and Advance Revenue Account, Reis 27,270,036,118, this latter being the result of the rents got in by the Bank and not from any credit operations realised by same. At the same date the Stabilisation Fund which had increased by £10,000,000 deposited in the Sinking Fund, making a total of Reis 1,242,101,133,240, was equivalent to 36·76 per cent. of the then total circulation to the value of Reis 3,379,024,432,500.

On the economic side the commercial movement of the country both internal and abroad increased notably in the coasting trade and in the increase of tonnage and revenue from transports.

The chief farming products to-day fetch stable prices and enjoy a firm position in all markets. Other products such as fruit also find a good outlet in those markets. As regards the world production of cacao, Bahia continues to maintain the second place which she won from Ecuador 20 years ago.

Industries, thanks to the stability of the exchange, show a tendency to reform themselves. The electric power industry owing to foreign capital that has been invested in it, shows promise of great success to the general good in view of the express guarantees given by its purchasers to develop it by means of new installations and by the renovation of the existing plant.

Thanks to the helpful measures adopted by the Government, we hope that the textile industries will overcome the crisis against which they have been contending.

BANK RETURNS.

The banking movement of which three yearly average before 1927 amounted to 16,000,000 contos increased to 24,800,209, exceeding by 4,065,480 contos the total of 20,734,729 attained in 1927.

Finally, exports exceeded those of the financial year of 1927, both as regards tonnage as well as regards foreign money and national money. If with the increase in exports there has been a like increase in imports, this only signifies that the country had the credit and resources for greater purchases abroad, and these latter, it is quite clear, were not purchased solely for immediate consumption, but have been used in the development of the sources of production, constituting, therefore, capital which has been incorporated in the national patrimony.

The accounts submitted for your approval and the annexed tables will explain to you the position of the Bank and its operations during the past year. We would like, however, to point out or explain some of the data which they contain and add others thereto. Comparing the balances as at December 31, 1928, with those of 1927, the former show over the latter increases of Reis 725,936,775,600 in their total; of Reis 160,062,760,339 in the item referring to Discounts, Loans on current accounts and Bills receivable and Reis 236,759,117,149 in Deposit Accounts, which latter show clearly that the operations of the past year exceeded those of previous years, and that if the Bank facilitated credits and discounts, commercial and private people on the other hand, did not fail to honour it with their confidence. As a fact, if we calculate the decreases in number and value in all the various kinds of accounts opened with the Mother House, we find that there were 57 new accounts with Reis 12,018,091,033 more than in 1927 and 16,968 proposals for discounts and rediscounts of Commercial Securities were agreed to.

DIVIDEND MAINTAINED.

The net profits meanwhile which in the previous year had already gone down from Reis 126,807,783,689 to Reis 111,368,886,183 suffered a still greater decrease and only totalled Reis 82,614,822,387 namely, Reis 71,125,038,495 from the Head Office and Reis 11,489,783,892 from the Agencies. In spite of this reduction of Reis 28,754,063,796 arising chiefly from the Exchange Department having only yielded Reis 20,195,672,914 against Reis 43,511,964,950 in 1927, we were able to distribute a dividend of 20 per cent., which is what you have been receiving ever since 1922; to put to Reserve Fund Reis 8,261,482,238, thereby raising it to Reis 150,855,086,426; to increase by Reis 826,148,214 the Capital of the Bank Officials' Benevolent Fund; to endow, as was arranged, the Provident Fund of the latter with Reis 200,000,000; and to credit the Paper Money Redemption Fund with Reis 11,214,329,613.

The smaller profit earned by the Exchange Department is not to be wondered at when we compare it with the very big figure which it showed in previous years. On the contrary, its progressive decrease, which commenced in 1927, is but natural inasmuch as under the régime of stabilisation the exchange can only oscillate between the "gold points," and such oscillations, which it is the duty of the Bank to prevent, do not bring to the latter any great profits.

In order to compensate the decline in the results of the year's working and provide for those which may perchance result from the liquidation of the old accounts, there were respectively put aside the sums of Reis 5,000,000,000 and Reis 25,120,000,322.

The cash balances varied between a minimum of Reis 338,927,690,372 as at January 31, and the maximum of Reis 662,697,468,676 as at May 31, the balance corresponding to December 31 equalling more than one-third of the total deposits.

BANK OF BRAZIL—*Contd.*

NOTE ISSUE.

The Bank issue continues to be Reis 592,000,000,000, of which during the course of the year there were substituted and burnt 4,763,435 torn notes to the total amount of Reis 19,129,300,000.

Owing to the difference between the respective credits at the dates of the half-yearly balances and the value at which they appeared in the books the bonds of the Internal and of the Foreign Debt belonging to the Bank were valued at Reis 5,122,456,836 as regards the former and Reis 4,000,000,000 as regards the second.

The service of cheque compensation and the sale of gold vouchers was carried out with the usual regularity and care. The compensated cheques attained a total of Reis 18,379,216,090,936, or 3,674,775,314,879 more than in 1927. In order to redeem the gold vouchers issued, the Bank paid into the National Treasury in bills at 90 days' sight on New York and London $18,790,412·44 and £14,871,526 5s. 1d.

The revenue of the Bank Employés' Benevolent Fund amounted to Reis 513,360,000, and if we add to it the balance of Reis 129,209,910 from the respective account as at December 31, 1927, they present a total of Reis 642,569,910, which was sufficient to meet the expenses of Reis 539,363,850, including the medical fees, hospital charges, cost of surgical operations, and other assistance rendered to the sick and invalid employés.

A balance of Reis 103,206,060 has been carried forward to the current year, which perhaps will not be sufficient to cover the deficiency of revenue for the first six months if we bear in mind the total sum of the current subsidies since 1928 and those granted from January 1 up till now.

The Bank figured as creditors in 112 out of the 186 agreements with creditors, and in 133 out of 444 failures with regard to which proceedings were taken in this market, the cause of them having been due to the abuse of credit and to the undertaking, or the increasing of business without sufficient capital, either through the mixing up of firms and undertakings and having recourse to accommodation bills, or by crossed bonds for obtaining discounts or owing to guaranteed accounts current which are never settled and which prevent banks from noticing in due time the insolvency of their clients.

Up to December 31 the Bank had received from its creditors 37 per cent. from the agreements with creditors and 27 per cent. from the bankrupt estates.

These losses were compensated for by the sums which from the operations of every half-year and from the results of previous liquidations have for some years past been set aside for this purpose in the balance sheets.

The balance of the reserve set aside for liquidating previous operations enabled the Bank to carry this out and to prevent further losses. This balance as at December 31 amounted to Reis 65,632,191,386, and is included under the heading of Current Accounts without interest in the balance sheet of December 31.

DISTRIBUTION OF AGENCIES.

The work of the Bank extends through the whole of the National territory, and is carried out by means of its 73 agencies, the movements of which are shown in the respective tables attached hereto. Two of these agencies, namely, that of Rio Branco in Acre and that of Nictheroy, were opened during the first six months of this past year. The Bank's agencies are situated as follows:—One in Acre and one in each of the States of the Amazonas, Para, Maranhao, Sergipe, Espirito, Santo and Goyaz; two in each of the States of Piauhy, Ceara, Rio Grande do Norte, Parahyba, Alagoas, Parana and Santa Catharina; three in Pernambuco and in the State of Rio de Janeiro; four in Mata Grosso; seven in Rio Grande do Sul; eight in Bahia; ten in Minas Geraes; and 17 in São Paulo.

Of these agencies fifty-one work in buildings which belong to the Bank, three of them—those of Guaxupe, Ilheos and Pelotas—were built in 1928. Nine have already obtained the land intended for their respective offices. The work of construction has already been begun in the case of the following: Bage, Manaos, Parahyba and Tres-Corações, and those of S. Salvador, of Bahia and of Livramento have been sanctioned.

Twenty-two show a loss to the total amount of Reis 3,321,725,075. In the second half-year, the total limit of operations of the agencies was increased from Reis 461,450,000,000 to Reis 511,450,000,000, and to some of them authority was granted to carry out certain fixed loans beyond the respective limit.

The Board did not consider it convenient to accede to the request made to it for the establishment of a further agency, for São Paulo, and one in Itu and for another three, in Espirito Santo, in Alegre, Cachoeira, and Cachoeira de Itapermirim.

In addition to the usual services, the Government entrusted the Bank with the duty of buying the Bonds for the Sinking Fund of the Public Debt, as well as the Bonds for redeeming and promoting the placing or sale of 80,000 Road Debentures of the nominal value of Reis 1,000,000 with interest at 5 per cent. issued in accordance with Law No. 5,525 of September 5 and Decrees Nos. 18,438 of October 22 and 18,503 of November 21, 1928.

RESTRICTION OF CREDITS.

Since September the Bank has abstained from granting any loans for a longer period than six months, from accepting any securities which are difficult to realise or only slowly realisable, from the opening of fresh credits and from the extension of those already granted, from carrying out any operations the proceeds of which may be intended to be devoted to any permanent investments or to financing the beginning, increase or development of any businesses or undertakings. It has also endeavoured to get rid of any real estate acquired by way of payment the use of which could be dispensed with, to obtain the settlement of credits that were not redeemed and that could not be made redeemable and to limit the responsibilities of the clients of the Head Office in the same manner as it already has been doing with regard to the agencies.

This course has been not only in strict accordance with the explicit instructions of the Bank's Statutes and of its interior regulations, it was also dictated by the necessity of hastening and facilitating the reform of the bank. As a fact, this course was necessary in order successfully to complete the economic financial programme which we have undertaken and which is rendered all the more essential in the case of an issuing bank which deals in re-discounts, and which governs the monetary market. But it would not have been prudent to carry it out unless the Bank had been prepared properly to carry out the functions which belong to it. We are continuing the preparation of these measures, and with good reason, since the Government has not yet deemed it opportune to make use of the powers granted by Art. 11 of Law No. 5,103, of December 18, 1926.

I take exception to the plan of the present Report inasmuch as it does not bring in as one of the events of the year under review the reason why the Bank, in order to regularise the proper working of its Exchange Department, altered its selling rates of the dollar.

EXCHANGE RATES.

All currency, although it may have been stabilised at a fixed standard rate, does not cease from oscillating between two levels whose extreme points have been fixed, as is well known, under the name of the "gold points," *i.e.*, the points of influx and efflux of the gold. This means that in order to maintain stability, it is not necessary that the Bank Rate should rigorously correspond to the standard rate of conversion. Fluctuations are therefore most natural phenomenons, common to all classes of currency, and arise from the greater or lesser quantity of Export Bills or Bank Drafts on offer, but currencies are supported by the control of the circulating medium, which control is effected by means of adequate alterations in the official re-discount rate.

Nevertheless, the Bank has maintained its rate of sterling at sight on London at the rate of 5 57/64d., which is precisely the nearest rate to the standard of conversion fixed by Art. 2 and the single paragraph of the Regulation dealing with the Stabilisation Fund, and by acting in this manner it did not disturb the Exchange. But as the dollar appreciated slightly in comparison with the £ sterling, a phenomenon entirely foreign to our economic situation and to the conditions of our exchange market, the Bank could not, since it did not change the rate of the £, refrain from re-establishing the parity of those two currencies by raising the price of the dollar. And that is what it did by altering the value from Reis 8,359 to Reis 8,395.

It will be as well to add that this alteration in the selling rate of the dollar can have no influence in inciting the withdrawal of gold from the Stabilisation Fund, as some people suppose, since the obligation of the latter with regard to the holders who possess notes issued by it consists only of redeeming such notes with a quantity of gold equivalent to the respective values on the basis of two hundred milligrammes of gold per milreis consisting of nine hundred thousand parts of fine metal and one hundred thousand parts of alloy, as determined by Art. 2 and the paragraph above mentioned, and also by Art. 10 of Decree No. 17,618 of January 5, 1927.

BANK OF BRAZIL—*Contd.*

RELATIONS WITH STAFF.

At the end of 1927 the Bank had 1,911 employés, without counting the night cleaners at the head office.

In order to fill up vacancies that had occurred to the number of 57, viz., 38 through dismissal, and 19 through death, and in order to meet the constant complaints from the agencies as to the lack of staff caused through their having to comply with the Holiday Law and through prolonged leaves of absence for sick treatment, 250 employés were admitted, so that the number of employés at December 31 amounted to 2,134, of which 583 are engaged at the head office and 1,551 in the agencies. With the object of harmonising as much as possible the interests of the Bank with those of the employés, and in order to attend better to the carrying out of the various services, 564 staff changes were made, of which 456 were among the agencies, 82 being sent to the head office from the latter and 26 transferred from the head office to the agencies.

We would like to call special attention to the difficulties with which the board of directors at the head office generally has to contend in order to retain the employés in the agencies in which they are serving, especially those newly admitted who have entered the service of the Bank with the intention of working at the head office. Any pretext, even the least plausible, serves as a basis for a request to be removed somewhere else, and these requests or applications are for the most part repeated and communicated through channels which are not in harmony with the discipline which should exist in such a large body of functionaries. In order to put an end to all these requests, measures have been adopted tending to confine all such removals to the strict requirements of the various services.

In accordance with the established custom, promotions were made at the end of the year after inspection of the list of the staff of the Bank, drawn up on December 31, 1926. Having confirmed the increases that have taken place in the various categories and having duly filled the various vacancies of departmental managers, sub-managers and others at the head office, the board established general rules for the appointments to the various posts in accordance with the Decree of January 10 last.

The employés received the same half-yearly bonus which was given to them in 1927, as well as all the other advantages conferred by the interior regulations or by subsequent resolutions adopted by the board. Special mention should be made of the devotion and discipline which has been shown by the staff in general.

The general meeting held on April 28 re-elected as director Augusto Mario Caldeiro Brant, who had retired from office by rotation; and in order to fill up the vacancy caused by the voluntary retirement of Dr. Felisberto de Azevedo, which took place on May 26, 1927, Dr. Adeodato de Andrade Botelho was elected in his place and took office on April 30.

To replace Colonel Antonio Mostardeiro Filho, who had asked to be released from the office of resident, which he had held since the beginning of the present period of four years, and had filled with the greatest proficiency and devotion, I was appointed by the decree of August 23 and took over my office on the 25th of the same month.

The managers of the various departments were as follows: EXCHANGE DEPT.: Snr. Pedro Luiz Correa e Castro; COMMERCIAL: Dr. Augusto Mario Caldeiro Brant; AGENCIES: Dr. Manoel Thomaz de Carvalho Britto, Snr. Rodolpho Ambronn and Snr. Carlos Inglez de Souza.

From January 19 to February 15 the office of president was temporarily filled by Snr. Pedro Luiz Correa e Castro owing to the absence of Colonel Antonio Mostardeiro Filho.

In addition to forming your opinion as to the management of the board for the last year (during which the Bank was only under my presidency for 129 days), you have to elect the members of the Fiscal Council and their substitutes, as well as a director, because the mandate of Dr. Manoel Thomaz de Carvalho Britto has expired.

Should the attached tables and what I have just told you not be sufficient, I will give any information or explanation which you may consider necessary.

Rio de Janeiro, April 27, 1929.

REPORT OF THE FISCAL COUNCIL.

TO THE SHAREHOLDERS:

Gentlemen,—In the discharge of the duties incumbent on the Fiscal Council of the Bank of Brazil, I have the honour to lay before you our report with regard to the operations carried out during the year 1928, and I would call your attention to the very detailed report of His Excellency the President of the Bank, whose report faithfully portrays the situation of our great credit institution.

Before venturing an opinion on the business of the Bank, it is the duty of the Fiscal Council to report to you as to what has happened in the course of its important administration.

On April 28 of last year Dr. Adeodato de Andrade Botelho, who for many years past had been manager of two of the Bank's principal agencies, was appointed director of the Bank. That illustrious banker, Colonel Antonio Mostadeiro Filho, feeling tired and requiring rest, applied for and obtained release from his post as president of the Bank. He was succeeded by Dr. Henrique Carneiro Leão Teixeira, whose name represents a past full of honourable traditions—full of unforgettable services rendered to our country. The Fiscal Council congratulates itself with the honoured chief of the nation for the judicious choice in confiding the very important post of president of our great credit institution to such a worthy man, who has been guiding it with judgment, competency, and energy.

On February 6 last, Snr. Pedro Luiz Correa e Castro obtained from the Government the release, for which he asked, from his post as director of the Exchange Department—the department which he had managed for many years during which he inspected various agencies of the Bank and discharged the office of manager of the head office, and, finally, during these last four years, that of director of the Exchange Department.

Snr. Correa e Castro was succeeded by Snr. Jose da Silva Gordo, whose recent appointment caused an excellent impression in the market, and from whose technical experience the Bank of Brazil expects much.

The assets of the Bank, a resultant from its general movements, were on December 31, 1928, Reis 4,915,317,703,370, showing the considerable increase of Reis 725,936,775,600 as compared with December 31, 1927, which represented a total of Reis 4,189,380,927,770.

SERVICES OF THE BANK.

These facts prove that the operations of the Bank have had an upward rather than a downward movement, while the Bank, in the midst of the crisis through which the whole market is passing, has rendered inestimable services by assisting commerce and the productive classes of the country, and especially by the service which it has rendered to the Government in remitting large sums to all public departments of the Union, and in transferring from its agencies to the head office, from all the collecting offices, fiscal delegations and custom houses, scattered throughout the country, the various sums collected, as well as the torn paper money, to be handed over to the competent departments. This enormous movement of funds, the responsibility of which the Bank has assumed, has been carried out with all due regularity and gratuitously, and amounted last year to the sum of approximately Reis 300,000,000,000.

The net profits of the Bank were Reis 82,614,822,387. Its reserve fund was increased by Reis 8,261,482,238, and stands to-day at Reis 150,855,086,426.

The sum of Reis 30,120,000,322 was put aside in order to strengthen various items of the assets, and the Bank finds itself to-day fully equipped with ample reserves, which will enable it to face without fear any emergency.

In addition to the indirect profits which they bring to the Bank, the agencies brought in to the head office a net revenue of Reis 11,489,783,892.

In conclusion, and in offering you their recommendation, the Fiscal Council propose that the accounts and acts of the board of the Bank of Brazil referring to the past year as at January 31, 1928, be duly approved and passed.

The Board Room of the Fiscal Council of the Bank of Brazil, April 16, 1929.

(Sgd.) Raymundo Gabriel Vianna, Joao Pereira do Couto Ferraz Junior, Antonio Manoel Bueno de Andrada, Manoel Francisco de Britto, Jose Mendes de Oliveira Castro.

COMPANY MEETINGS, &c.

MEXICAN RAILWAY COMPANY, LIMITED.

RESULTS "REASONABLY GOOD."

CONDITIONS IN MEXICO.

The 128th ordinary general meeting of the Mexican Railway Co., Limited, was held at Winchester House, Old Broad Street, London, on Wednesday, June 5th, Mr Vincent W. Yorke (chairman of the company) presiding.

The secretary (Mr C. Tennant) having read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said : I am afraid that we are holding our meeting at a somewhat later date than usual. This has not been due to any delay in receiving the accounts, which came to hand in very good time, but the general manager's report was delayed by reason of the recent disturbances in Mexico, and we did not wish to issue the report until we had ascertained his views on the working of the half-year.

THE HALF YEAR'S RESULTS.

The results of the half-year which we are reviewing, though they show a falling off as compared with the preceding half-year in which we received a large influx of revenue from banana traffic, are very much better than those of the corresponding half-year of 1927, and may again be described as reasonably good. The gross receipts at the figure of about $6,000,000 are not really satisfactory, as they are about 9 per cent. lower than the average of the ten half-years 1924-28. They show a slight decrease on those of the corresponding half-year. Passenger traffic has been distinctly better. There were no interruptions in 1928, as there were in 1927, from revolutionary activities, and American tourist traffic which, as I said at our last meeting, is in my opinion capable of almost indefinite expansion, has brought in a welcome increase of revenue. As regards goods traffic, there has been a satisfactory increase of over $100,000 in foreign traffic, but this has been more than wiped out by a decrease of over $200,000 in local traffic. The tonnage of the latter shows an actual increase, and the decline in revenue is due to the competition of the National Railways. A conference with the management of the National Railways is now taking place, and I hope that some equitable arrangement may be arrived at to eliminate a competition which neither system can to-day afford.

It gives me great satisfaction to be able again to draw your attention to a substantial saving in expenses. They show a decrease of $550,000 (say £50,000) when compared with the corresponding half-year. This has been due to several causes. The completion of the electrification of the mountain section has resulted in decreased mileage, less fuel oil at a lower cost has been burned, the amount of compensation to workmen has been reduced to an insignificant figure, and last but not least, the watchful eye of the general manager has been quick to seize opportunities of economy in many directions.

NET REVENUE FIGURE.

The resulting net revenue of £69,000, though a great improvement on that of the corresponding half-year, after deduction of difference in exchange, debenture interest and that disagreeable modern innovation Mexican income tax, which amounts to over £7,000 for the year, leaves a deficit of £29,000 and nearly wipes out the credit of £31,000, which we were able to place to net revenue in the last half-year's accounts. The net revenue account, therefore, stands much where it did twelve months ago, and shows a debit balance of no less than £890,000.

This large figure leads me on to say that I fear that the figures of the balance sheet must seem most unwieldy and unintelligible to you, and yet I do not see that any real progress in simplifying it can be made until the debt of the Mexican Government to us for compensation under the Railway Law, damages to the property and arrears of freight, has been finally agreed. You will see on the left hand side of the balance sheet that we have received the substantial sum of £1,351,000 on account of Compensation, and there will probably be found due to us when all the claims have been agreed as much again or even more. We are now receiving payment of compensation, as I have previously explained, at the rate of some £2,500 per week in the form of additions to our tariffs, but for the last few months have not been allowed to retain 50 per cent. of the 10 per cent. Railway Tax which at one time brought up the weekly payments to £3,500. The Government, when they made this alteration in the method of payment, solemnly assured us that they would rectify matters in some other way, but I regret to say they have as yet given us no such consideration. When as I say a final settlement of the figure of our claims has been arrived at, it will, of course, be easy to show the amount owing, less the amount of compensation then paid, and the net figure will represent the debt of the Mexican Government to the railway.

Since our last general meeting we have been able to come to a satisfactory arrangement with the holders of registered stocks, "A" and "B," representing arrears of interest funded, and have obtained a postponement until the end of 1933, when both stocks, if not previously paid off, will fall due. The only consideration given to the holders was the increase of interest to holders of "B" stock from 3 to 3½ per cent., which entails a fresh burden on the company of less than £700 per annum. I am glad to say that we were able to redeem 10 per cent. of the "A" stock on December 31st last; and propose, as stated in the report, to redeem a further 10 per cent. on June 30th next, out of funds already in hand. When the second of these redemptions has been made, the original amount of "A" stock will have been redeemed by one half.

THE CURRENT HALF-YEAR.

As regards the results of the current half-year, I am glad to say that the net receipts for April, which have been cabled to us since the publication of the report, are very satisfactory, and give earnings of some $279,000. This sum, added to that given in the report, brings up the earnings for the four months to the end of April to $783,000, and would indicate that the net earnings for the half-year to the end of this month should be equivalent to those of the first half of 1928, and be nearly double those of the half-year under review. It should be remembered that there has been a very serious attempt at revolution during the current half-year, and although our traffic was only suspended for five days, there was naturally caused a serious dislocation of business.

I am glad to say in this connection that the outbreak in the region of Vera Cruz in March last was very quickly subdued, and that the damage to any of our property was wholly insignificant. The fighting in the northern parts of the Republic was, however, of a really serious character, though it resulted in a complete victory for the forces of the Government. Sporadic fighting appears to continue still in the State of Jalisco, but it would seem that the Government have the situation well in hand. There can be little doubt that the religious question has been responsible for the serious and widely spread military outbreaks in many parts of the country, and it is much to be hoped that the negotiations which, according to Press reports, have been opened between the Church and State, will reach a successful issue. If this question can be disposed of, there would seem to be a very fair chance of tranquillity for some time to come. The three last attempts at revolution in 1923, 1928 and this year, have all failed, and so long as the United States continues to maintain the attitude which it has taken up since 1923 with regard to the supply of arms, further serious attempts at revolution would appear to be highly improbable. I need hardly say that nothing is so desirable for our interests as tranquillity, without which it is impossible for any business in the country to recover.

LATEST INFORMATION.

I will now read a cablegram just received from our general manager :

"Crop prospects on both divisions of the line are fair, but the "banana plantations have been almost destroyed by hurricanes. "Competition with National lines still very severe. Anxiety is "expressed in business circles over the increasing tendency to "introduce very advanced legislation of social reform. Train "service is working normally, and expenses are being kept as low "as possible. Rains have started, and the drought has at last "been broken."

The news about the banana plantations is somewhat disappointing, as our traffic in this fruit had reached very large proportions a year ago, and the damage done may discourage the growers in making further outlays. I am also sorry to hear of what would appear to be socialistic tendencies in legislation which, if carried at all far, must discourage the introduction of fresh capital, of which the country is in much need.

Though I fear that I have not found much of a really encouraging nature to say to you to-day, there are certain features of a really hopeful character in our situation to which I should draw your attention, and which I hope you will bear in mind. The large sums of money which we have put into the property are now bearing good fruit, and the expenses have reached a lower level than for many years past. The property is in an excellent state, and should require little fresh expenditure on capital account for a long time to come. The ordinary revenue is now sufficient to cover our debenture and other interest; while the indemnity thus becomes available for the purpose of discharging our old liabilities. By July 1st next we shall have paid off one half of our indebtedness to the "A" stockholders, and to me to-day there seems to be a good deal of truth in the old Greek saying that "the half is greater than the whole." Of course we still have serious liabilities to discharge, but the end of them, though not near, is very much nearer than it was.

Mr Henry Goschen seconded the resolution and it was carried unanimously.

GREAT WESTERN OF BRAZIL RAILWAY COMPANY, LIMITED.

IMPROVED POSITION—GOOD PROSPECTS.

The ordinary general meeting of the Great Western of Brazil Railway Company, Limited, was held, on the 4th instant, at River Plate House, Finsbury Circus, London, Mr Follett Holt, M.Inst.C.E. (the chairman), presiding.

The secretary (Mr W. M. Codrington, M.C.) having read the notice convening the meeting and the auditors' report,

The chairman, in moving the adoption of the report and accounts, said: At one time, some years ago, our position had become so starved that, through inability to carry on with our lease, our retirement from Brazil appeared imminent, in which case our only asset would have been a lawsuit. However, always with your unfailing support, we struggled on, and now I think that we can safely say that your capital and its revenue-earning power have been preserved

To obtain amelioration of the position created by an inadequate tariff, we have been since the 1920 contract in negotiation with three successive Federal Governments, and it is very satisfactory now to report that the Government of his Excellency Dr Washington Luiz has rectified in a measure the past and given us good hopes for the future.

As you will remember, in 1920 we sold and delivered our own lines to the Brazilian Government and accepted in return a lease of the whole system on the terms that we should receive a tariff which would provide interest on our capital, and for its amortisation during the term of the lease, which expires in 1960. This tariff we did not receive, it being contended that the users of the railway could not afford to pay it; but subsequent events have proved this contention to have been entirely fallacious.

REVISED TARIFF AND NEW RENTAL CHARGES.

As stated in the report, under the new arrangement we have been granted an improved tariff and a substantial reduction in the scale of rental charges; further, the repayment of the 13,000 contos loan and the unpaid rentals have been placed definitely behind such earnings as are required to make provision for the amortisation of capital and to provide 6 per cent. on our share capital.

The new rental charges are based on a sliding scale. Under the old scale the rental for last year, with average receipts per kilometre at 20·2 contos, would have amounted to £51,000. Under the new scale the charge would have been £3,750, a sum which will not be increased until the average exceeds 29 contos per kilometre. Between 29 contos and 35 contos per kilometre we shall pay 10 per cent. of that excess, and beyond 35 contos 15 per cent. of the further excess.

I think I should refer now to a remaining dark spot in our affairs. Just before the war we obtained a concession from the Alagoas Government for the construction of the Alagoas and Northern Railway. We commenced construction, plans and surveys had been completed, and a number of banks and cuttings, since destroyed by rain, had been made, when the war broke out. It was impossible in the circumstances to obtain materials, or to carry on the work, and in the passing of time there has been little encouragement to us to proceed. We have, of course, made many representations to the Alagoas Government, and our case is now before the Courts, but I am afraid that, as time passes, we may find that it will be prudent to make further provision for loss in this undertaking.

You will have noticed with some satisfaction that the amount of interest arrears debentures outstanding has been reduced to £72,000. We are anxious to pay these off as soon as possible, because until this has been done we are, by the trust deed securing them, precluded from paying any dividends. We have, therefore, arranged that, if owners of the arrears debentures will send them to our bankers, Messrs Glyn Mills and Company, they will be purchased at par, and in any event we hope to dispose of this liability before the end of the year. With this obstacle removed, as far as we can see at present, we shall be in a position to pay an interim dividend on the preferred shares. The question of a dividend on the ordinary shares, for the current year, must remain open until the completion of the year's accounts.

CURRENT YEAR'S PROSPECTS.

The traffic receipts published during this year show an increase in the gross receipts of £99,000, brought about by the satisfactory sugar crop and, to some extent, by the better tariff. Our operating results for the first few months compare favourably with the corresponding period of 1928, and, as the general manager anticipates that the new sugar-cane crop, which commences in the autumn, will be a good one, we are hoping that next year we shall be able to show you that this old-established company has ceased to be a [illegible] and has become once again a credit to Brazil.

The resolution was carried unanimously.

SUEZ CANAL COMPANY.

EXCELLENT RESULTS.

The seventy-fifth annual meeting of the Suez Canal Company was held on Monday, June 3rd, in Paris.

The Marquis de Vogüé (the president) presented the report of the Council of Administration, which was substantially as follows:

The results of the year 1928 have been exceptionally satisfactory. The increase of traffic of nearly three million tons, compared with the preceding year, has only been exceeded on one occasion, in 1919, also, in spite of the remission of 25 centimes on the charge, which took effect from April 1, 1928, receipts increased by 7 per cent. over 1927. This allows us to increase the dividend rate, We propose to fix this at 644 fr. 57 gross, an increase of fr. 67·05.

The stability of French money, on which we congratulated our selves last year, was made legal from June 25, 1928. This measure so indispensable to the security of economy and to the development of sound financial or commercial operations, offered, besides, an interesting issue. It allowed us, in fact, to make satisfactory entries in our accounts, which the fluctuation in the franc had, up till now, prevented. As a result of this all the items in the balance sheet which we lay before you to-day represent their actual value in French francs, whilst up to the present some, and amongst these, very important ones, were shown by their nominal value in gold francs, the difference being shown as a debit or credit under the heading "Results of Conversions of French Francs." This heading will disappear in time.

As we have shown you, all the items in the balance-sheet, which is before you, are expressed in French francs; you will not be surprised, therefore, to see some considerable difference in the amounts compared with last year. As a matter of fact, expenses remain on much the same level as last year. As to receipts, these have increased, owing to the development of traffic, and show an increase of about 65 million francs over those of 1927.

We propose, owing to the exceptionally favourable results, to make a considerable allocation to development work; making 100 million francs, this allocation actually represents a somewhat larger amount than that allocated during each of the last few years to the improvement of the maritime Canal. If the difference appears great as compared with those of preceding years, this is due, as we have explained, to Conversion operations.

We ask you also to allocate 25 millions to a fund for building houses in Egypt, and, also, to write down material, as in preceding years, by 25 million francs.

After all allocations, the excess of receipts over expenses amounted to 713,146,175 frs., to which has to be added 3,152,147 frs. brought forward from 1927, making a sum of 716,298,322 frs. Of this sum it is proposed to distribute among the shareholders 712,192,676 frs., and to carry forward 4,105,646 frs. We propose a dividend of 644 frs. gross and 563 frs. net.

TRAFFIC FIGURES.

The general traffic for 1928, as compared with 1927, which itself had surpassed all previous results, showed a net increase of 2,943,854 net tons, rather more than 10 per cent. It reached 31,905,902 tons. The number of transits through the Canal was 6,084, as against 5,545 in 1927. Traffic in ballast increased to 2,956,481 tons, and represents 9·3 per cent. of the total movement, as against 8·3 per cent. in the preceding year. The average tonnage of steamers passing through the Canal has slightly increased; it reached the gross tonnage of 7,249 tons. The proportion of passages made by vessels of 10,000 tons gross and over has risen from 10·6 per cent. to 11 per cent. The average time of transit was 15 hours 9 minutes; this only exceeds by 3 minutes the time of 1927, which remains the lowest. We had one passage of an exceptional character, which was made in August, 1928—that of a floating dock destined for the naval base at Singapore. This measured 260 m. in length, 52 m. in width and 23 m. in height, and was in two parts—one part 141 m., the other 119 m.—each towed by four tugs. Thanks to the measures taken, this very delicate operation was effected without the slightest incident in four days. The number of passengers in 1928 was 317,718, 22,600 less than in the preceding year, due to events in China. British-owned steamers, as always, head the list with 56·8 per cent. of the total traffic, as against 57·1 per cent. in 1927. Then come the Netherlands, Germany (which shows a large increase of 536,235 tons); then France and Italy. Goods carried through the Canal rose to 32,622,000 tons, an increase of more than 3,000,000 tons over the maximum shown in 1927. In the north–south direction the increase is 880,000 tons; European exports of manufactured articles have been stimulated by the increased purchasing power of the countries situated beyond the Canal. In the return movement the increase of merchant traffic reached the considerable total of 2,200,000 tons.

Altogether the situation appears favourable, and there is no reason for anticipating a less favourable report for 1929 than the splendid results that we have placed before you on this occasion.

CITY OF LONDON REAL PROPERTY COMPANY, LIMITED.

MR W. E. R. INNES ON THE POSITION AND PROSPECTS.

The ordinary general meeting of the City of London Real Property Co., Limited, was held, on the 3rd instant, at the Cannon Street Hotel, London. Mr W. E. R. Innes (chairman and managing director) presided.

The Secretary (Mr L. A. Kingscote) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The net revenue, after deducting all outgoings, including debenture and mortgage interest and income tax, amounts to £516,007 18s. 10d., as against £526,151 2s. 2d., a decrease in round figures of £10,144. To the £516,007 18s. 10d. net profits must be added £145,638 3s. 3d. brought forward from last year, making a total of £661,646 2s. 1d. The Preference dividend absorbs £37,438 8s., and the directors recommend that a dividend be declared for the year on the ordinary shares at the rate of 5½ per cent., less tax—the same as last year—of which three quarterly payments, amounting together to 3¾ per cent., have already been paid. This will require £352,000 and leave a balance of £272,208, out of which it is proposed to place £50,000 to reserve, making the total £1,100,000, and £70,000 to income-tax reserve, and to carry forward £152,207 14s. 1d., an increase of £6,569 10s. 10d.

The decrease in the net revenue for the year is due in a large measure to developments which have been taking place in the company's properly. We mentioned in our last report that the new building at the corner of Mincing Lane and Fenchurch Street was approaching completion, and would be brought into the current accounts. The house has now been finished, and our thanks are due both to the architect and builders for a very attractive and well-built office building. For the last eight months we have been in receipt of the rent of the ground floor, which was let to the Westminster Bank before operations were commenced. But, in spite of excellent offices offered at moderate rents, the demand for the upper floors has up to the present been slow.

Unfortunately, Mincing Lane and Mark Lane, the home of the produce markets, where we have a large quantity of property, have suffered very severely owing to bad trade, especially in rubber and corn, and until there is a change in this direction I do not think a lively demand can be expected. The nature of the businesses carried on is such that the district has always been especially subject to fluctuations, but when trade has been good properties have been well let.

Our new building in Lime Street is very nearly completed. The main portion is already let to tenants of the highest order at satisfactory rents, and should assist our revenue during part of the current year. Nos. 51 to 54 Gracechurch Street have likewise produced practically no income, owing to a rebuilding scheme. The old buildings have now been demolished and a new one is on the point of being commenced, from which we hope for substantial rents in due course.

Another matter that to some extent affected our net revenue was that, in order to prevent some of our older houses from being unable to compete with buildings of more recent date, we spent a larger sum than usual in repairs last year.

THE OUTLOOK.

As to the future, it is difficult and rash to prophesy, but I am not at all despondent. We have had a most prosperous time in the Stock Exchange area to set off against the depression in the produce markets. Business always has, and always will have, its ups and downs, and we must hope that we do not have the "downs" in too many districts at the same time. In order to ride on an even keel we have tried to take these chances into account in deciding on the purchases we make and the dividends we declare. In the main, whether our offices are well let or not depends upon trade. If that is good, a demand springs up and our empties go down, while, if trade is slack, the number of offices to let naturally increases. Many property companies have recently been showing largely increased earnings, but for the most part these have been companies owning flat properties in the West End, while our business is confined to the City. We had a trade boom a few years ago, and have since been suffering from the natural reaction. But, when we consider we are paying something like the enormous sum of £120,000 a year more in rates and income tax than we were during our record year, and our net income is only down by about 6 per cent., I think we can claim to have done well, though this result could not, of course, have been achieved without the earnings from our annual savings, which have really gone in taxes.

We have recently purchased Asia House, in Lime Street, a leasehold with 83 years to run, a well-built and up-to-date office property. The house is fully let to excellent tenants, and though the return on the capital will not at first be large, we expect in the course of time it will prove a very satisfactory investment. We examine closely every property in the City that is offered us which we think may provide a profitable investment, but, with the exception of Asia House, we have been offered nothing for some time past at a price justifying a purchase. The figure a company can afford to pay for property to be let to various tenants is naturally different from that which a person who wants something for his own occupation can give, since the latter has not got to provide for finding tenants and making allowances for empties; and expenses of management do not arise.

INCOME-TAX CLAIMS.

You will remember that last year I explained a claim had been made against us by the Inland Revenue for income tax under Schedule D. A similar claim has been made against the Salisbury House Estate Company. Both cases have come before Mr Justice Rowlatt and been decided as to the major part in favour of the Crown. Appeals have been lodged by the Crown and the companies concerned. Though, in the event of the case being ultimately decided against us, the amount of our liability has not yet been agreed, we have set aside the round sum of £70,000 as a contingent reserve in respect of the last two years.

I noticed the other day that our very good friends, the City of London Electric Company, are, through a subsidiary company, commencing to carry on the business of building and letting offices in the City of London. We obtain our supply of electricity from this company, and have always been on the most excellent terms. But as they have been granted certain statutory powers with the definite object of supplying electricity, and are in the nature of a public utility company, I think they ought to tell their customers whether profits they may make from this business, which we believe to be outside the principal objects for which they were formed, will be used to reduce their charges for electricity, or, if perchance the venture is not successful, whether the consumers will have to pay their losses.

UNSCIENTIFIC BURNING OF FUEL.

I am very glad to see that a great deal of attention has been called during the last few weeks to the damage and discomfort caused by the unscientific burning of fuel. That London has not been as active as it might have been in finding means for dealing with this nuisance cannot be disputed. As new buildings replace older ones the trouble is reduced by central heating, but this can only be a relatively slow process owing to economic considerations. It is possible the solution will be found in the low-temperature carbonisation system. I have been using a form of this material for private consumption for some little time, and have found it very satisfactory. But as yet the supply is not sufficiently large and regular to enable its employment where it is required in bulk. But with new works in course of erection in different parts of the country I hope before long it will be produced in sufficient quantity for it to be properly tested for general use. If delivered without the addition of coke it lights easily, is very clean, appears to give more heat than coal and is quite free from unpleasant smell. But I have noticed that unless the coal merchant is careful, coke, since it is very similar in appearance, has a way of getting mixed with the other material, and when burnt in an open stove emits unpleasant fumes. To those who have not done so in winter time, it is quite a revelation to look from the roof of one of the modern high buildings and see the amount of smoke rising from chimneys in all directions. However, even this is said to be less injurious than the fumes and dust which will be emitted from the proposed new monster power stations unless their erection is delayed until a means has been discovered of rendering them innocuous. The manager of a well-known property company has told me he finds a very much less powerful plant scorches the paint on a building which he looks after. If the gases are powerful enough to scorch paint, it is reasonable to assume they are harmful to the lungs of human beings. When means have been found to dispose of these gases a great benefit will have been conferred on us all.

You will be very sorry to hear that last summer Sir William Burton expressed a desire, after 50 years of service, during which time the company prospered very greatly, to relinquish his position as managing director. The directors thought that in view of his long and arduous services it was only fair to accede to his wish, which was rendered easier by his willingness to accept the position of an ordinary director, in which capacity the company will retain the benefit of his very valuable knowledge and experience.

As I have been associated with the working of the company for a great many years, the directors paid me the compliment of inviting me to succeed Sir William, which I accepted, and it will be my endeavour to continue successfully the business which he took so prominent a part in building up.

I am sure you will all wish to join with me in thanking our staff for the work they have done and the trouble they have taken on behalf of the shareholders. I am proud to be associated with them every day, and can assure you it would be impossible to find a staff more zealous and with your interests more at heart.

The report and accounts were unanimously adopted.

GUARDIAN ASSURANCE COMPANY, LIMITED.

IMPROVED RESULTS.

NEW LIFE BUSINESS EXCEEDS £1,303,000.

The ordinary meeting of Guardian Assurance Company, Limited, was held on the 3rd instant, at the head office, 68 King William Street, London, E.C. The Hon. Evelyn Hubbard (the chairman) presiding.

The secretary (Mr A. G. Sweet) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said the net new life assurance were £1,303,188, slightly more than in 1927, and the total premiums of the department £550,777, an increase of £40,983. The net income derived from interest was £266,174, an increase of £10,285, and the net rate of interest was £4 14s. 4d., the same as in 1927.

The claims amounted to £494,556, inclusive of £259,137 for endowment assurance augmented by the fast maturing policies effected under War Bonds Purchase Schemes, which at the time they were inaugurated were of assistance to the nation, and had enabled many by methodical saving to become capitalists. The funds of the life department amounted to £5,894,861, an increase of £209,814.

The fire premiums amounted to £1,067,989, a reduction of £12,705, and the losses to £438,958 (41·1 per cent.), a reduction of £1,638. After credit was taken for interest £68,104, profit on investments realised £183, and profit on exchange £257, the total surplus on the fire account was £216,412. Of this surplus they had transferred £191,412 to profit and loss, and the balance, £25,000, to the general reserve, leaving the total fire fund at £1,459,000, against £1,440,350 as at the end of 1927. The year 1928 was the fifth in succession of prosperous fire accounts, and, although it was early yet to estimate, the present indication was less favourable than for a long time past.

In the accident account were included the figures relating to the accident, burglary, employers' liability, fidelity, motor car, and glass departments. The premiums were £709,712, an increase of £42,733, and the claims were £329,006, 46·36 per cent. of the premiums. After providing £19,250 for the premium reserve, rebates to policyholders £5,864, and for bad debts and loss in exchange £580, there was a trading profit of £45,182, which was 6·36 per cent. of the premium income.

With interest derived from the reserve funds, £32,203, there was a total surplus of £77,383. Of this they had transferred £57,383 to profit and loss account, and £20,000 to the general reserve, leaving the total accident fund at £639,400.

COMPETITION IN MARINE DEPARTMENT.

In the marine department, the claims, returns, and other payments on account of 1927, settled in 1928, amounted to £73,895, and the account was closed by tra ferring £15,500 to suspense, resulting in a profit on the 1927 account of £9,140, or 6 per cent. of the premiums received in that year. On the 1928 account the premiums amounted to £173,083, claims paid £35,008, and expenses of management £28,393. Interest revenue produced £19,200, and after providing £107 for loss in exchange, contributing £5,000 to the staff pensions fund, and transferring £17,572 to profit and loss, the amount of the marine fund at the end of the year was £374,926, against £358,118 at the end of 1927.

By the exercise of very great restraint in underwriting they had consistently so far avoided loss in the marine department. Nevertheless, they must continue to deplore the general bad state to which the marine markets had become reduced, mainly because of unreasoning competition.

Taking the departmental accounts as a whole, it would be seen that the company had done well in 1928, but he would add a few words of warning as to the trend of business generally. It was true that they had not, so far, had to contend with such fierce competition in the fire and accident departments as in the marine, but there was ample evidence that the circumstances which had contributed to the poor state of marine business were arising in other branches, which would, unless sternly checked, have baneful results.

With regard to the profit and loss account, the item interest and rents was nearly £8,000 better, which was satisfactory, but it must not necessarily be assumed that this advanced income would be wholly maintained. The sum of £120,000 had been transferred to the investment reserve and contingency fund, £20,000 to staff pensions fund, and they were carrying forward £193,561, out of which a balance dividend of 4s., less income tax (making 8s. per share for the year), on each ordinary and staff share would be paid.

The report and accounts were unanimously adopted, and resolutions were passed authorising the acquisition of the balance of the issued shares in the Guardian Eastern Insurance Company, Ltd., and also increasing the nominal capital of the Guardian Assurance Company to £2,175,000 by the creation of 50,000 new Ordinary shares of £3 each.

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LIMITED.

ANOTHER SUCCESSFUL YEAR.

The thirty-third ordinary general meeting of Callender's Cable and Construction Co., Limited, was held, on the 6th instant, at River Plate House, London, E.C., Sir J. Fortescue Flannery, Bart., D.L., M.Inst.C.E. (chairman of the company), presiding.

The secretary (Mr Howard Foulds, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: Since 1912, when I first had the pleasure of addressing the shareholders, each year has brought continued prosperity to the company, and I am fortunate once more to be able to present on behalf of my colleagues and the management a balance sheet and accounts which maintain the wonderful record which the Callender company enjoys. The successful achievement of the year's working has not been easy to attain. There come more or less quiet periods in all businesses, and the year 1928 appears to have been one of them; that is to say, so far as large contracts are concerned, and bearing in mind the size of our factories and the workpeople we employ, substantial orders must be received in order to keep them fully occupied.

During 1928 there was some restriction on the electrical cable industry, and few large contracts were placed for the heavy mains which are essential for the widespread distribution of electricity. Most of those engaged in electrical supply hold their hands pending the completion of the Government scheme, which involved the erection of an extensive system of overhead conductors generally known as "The Grid." Undertakers felt themselves bound to await complete information as to where the sections would be placed before launching on any expenditure on their own account. The details of the "Grid" are now known, and several contracts have been placed in connection therewith, one of which has been secured by your company for the southern section of England between the Thames and the sea coast as far as Worthing, and this contract represents a value of approximately half a million of money.

Owing to wayleave difficulties, which appear to have been unavoidable, those responsible for this work were not able to give us instructions to proceed until during the last few weeks, but we are now in full operation erecting the first section of the mains near the South Coast. The effect of the "Grid," when completed, will, we believe, be to increase the quantity of underground cable required for distribution and general services, especially in the towns which the "Grid" serves, and therefore the tendency will be to considerably enlarged business for the underground cables which it is your company's speciality to manufacture.

On the other hand, the orders obtained by your company for the ordinary run of underground cables, and for the wires and cables required inside premises, represent a highly satisfactory business, which continually tends to increase and helps materially to produce the profit shown in the balance sheet which we have at our disposal. Your technical staff has been fully employed during the year in research work to assist in producing cables for service at still higher pressures than those now employed. Great progress has been made which has been very helpful in assisting the company to obtain the larger order for mains of 66,000 volts recently placed with them, to be laid in London to form the interconnecting link between the various local generating stations, thus also giving to those stations supply from the Government network. One of the three such districts in London has been entrusted to this company.

The company's overseas business during the past year was satisfactory and increasing, and it still continues to progress. Our factory at Erith has been well supplied with work, but we could have done with more had heavy mains contracts been more plentiful. The Anchor works have been kept very fully supplied with orders, and have turned out an unusually large quantity of rubber work. Indeed, it has been an exceptional year for them, and, excepting for the war years, their output has proved a record one, not only in sales in this country but also in export to our Overseas Dominions and to foreign lands. There is every indication, at both Erith and Leigh, where the Anchor works are, that the production for the present year will be highly satisfactory.

After referring to the fact that they had purchased the business of W. T. Glover and Co., Limited, an old-established cable-manufacturing undertaking, he went on to refer to the accounts, stating that the profits for the year were £625,723, and it was proposed to pay a dividend of 15 per cent.

The Chairman concluded by moving the adoption of the report and accounts.

The report and accounts were unanimously adopted, and it was also resolved to capitalise £196,600, part of the amount standing to the credit of the reserve fund.

INVESTMENT TRUST CORPORATION, LIMITED.

THE BONUS ISSUES.

MR ROBERT FLEMING'S ANNUAL ADDRESS.

The forty-first annual general meeting of the Investment Trust Corporation, Limited, was held, on the 5th instant, at the offices of the company, Gresham House, Old Broad Street, London, E.C., Mr Robert Fleming (chairman of the company) presided.

The secretary (Mr Hildred Carlisle) having read the notice convening the meeting and the report of the auditors,

The chairman said: Gentlemen—Our revenue account and balance sheet are very simple and I need not detain you by going over their various items.

The amount of redemption and repayment of bonds during the year was £230,000 and the average rate of interest thereon was 6·08 per cent., this lower than usual rate arising from some of the bonds redeemed bearing only 5 per cent. During the past five years we have had no less a sum repaid than £884,000, the average rate of interest being 6·31 per cent. So that we are not losing very much through reinvestment the average rate on which is not very much less than that figure of 6·31 per cent.

INCREASE IN THE RESERVE FUND.

After providing the preferred dividend our net earnings for the year have been at the rate of 26·42 per cent. on our £1,300,000 deferred stock. We have transferred the sum of £185,000 from revenue to the reserve fund, this being the accumulation of past years' surpluses. Following our previous years' plan, we do not propose to increase the cash dividend but to make an issue of new capital on bonus terms. The amount of the issue will be £125,000—that is about 10 per cent. of the present deferred stock—and the new shares immediately after their issue will be converted into £75,000 preferred stock and £50,000 deferred stock; each existing £52 of deferred stock will thus receive, as nearly as possible, £3 of preferred stock and £2 of deferred stock at par.

When we first made this bonus issue in 1927 I used these words: "I need hardly say that this division must not be considered an annual one." Well, this is the third year in which we have made this issue, and, so far as the near future is concerned, I see no reasou to doubt its continuance.

The shareholders realise, however, that the cash dividend and the bonus market value of the new stock amount to a considerable percentage which evil times, if we should fall upon them, might make it impossible to maintain. Taking the present market values—namely, 75 per cent. for the preferred stock and 460 per cent. ex dividend for the deferred stock, the "rights" are worth 12½ per cent., so that, including the cash dividend, the total amount, if the "rights" are realised in cash, is 32½ per cent. upon the deferred stockholder's holding.

Our securities stand pretty much as they did a year ago. We have 53·2 per cent. in bonds, 23 per cent. in preferred stock, and 23·8 per cent. in ordinary stocks, and they are geographically distributed as mentioned in the report.

This is rather a ticklish time in which to predict the revenue of coming years, but, as far as we can foresee, 1929-30 will not be less than 1928-29. So much for the revenue part of our accounts.

CAPITAL APPRECIATION.

With regard to capital, while market values have fluctuated considerably during the year, our valuation has remained fairly steady, and on May 1st was about £50,000 better than last year, which I think you will agree is satisfactory.

At the conclusion of this meeting another meeting will be held, when resolutions, whose object is to make our preferred stock cumulative, will be submitted, thus bringing our stock into line with the great majority of the preferred stocks of the other trust companies. As the available income covers the dividend on the preferred stock more than five times over, this alteration may seem unnecessary; but it has been pointed out to us that some trustees are prohibited by the terms of their trust from investing in our preferred stock because it is non-cumulative, and so we have decided to recommend the alteration, which cannot conceivably harm the deferred stockholders and may perhaps slightly benefit the preferred.

With these remarks I beg to move: "That the report and accounts as presented be and they are hereby received, approved, and adopted and that dividends of £2 per cent., less income tax, on the preferred stock and £12 per cent., less income tax, on the deferred stock (making with the interim dividend 20 per cent. for the year ended May 1, 1929) be and the same are hereby declared."

Mr H. A. Vernet seconded the resolution, and it was carried unanimously.

Mr Vernet then proposed the re-election of the retiring director, Mr Robert Fleming.

Sir W. Guy Granet, G.B.E., seconded the resolution, and it was unanimously approved.

The auditors, Mr Cecil O. Webb, C.A., and Mr Lionel Badd, C.A., were reappointed on the motion of Mr Ledger.

At an extraordinary general meeting which followed resolutions were passed with the object of making the dividend on the company's preferred stock cumulative.

The proceedings closed with a vote of thanks to the chairman, moved by Sir Paul Makins and seconded by Mr Towns.

SIALANG RUBBER ESTATES, LIMITED.

SUBSTANTIAL REDUCTION IN COSTS.

The twentieth annual ordinary general meeting of the Sialang Rubber Estates, Limited, was held, on the 6th instant, in London.

Mr H. Eric Miller (the chairman) said that every possible economy consistent with the efficient working of the properties was being exercised, and the cost per pound showed a substantial reduction on the previous year. There had been no change in the planted area, viz., 6,819 acres, of which 6,645 acres were mature. They had only a comparatively small reserve area of plantable land, and it was to cover this deficiency that they acquired their holding of 50,000 £1 shares in the Namoe Tongan Rubber Estates, which was formed in 1926. To December 31st last that company had planted 4,450 acres with the finest material available on the most scientific and up-to-date lines, so that exceptionally good yields could be looked for when the rubber was mature.

As to their own estates, the lowland areas on Tebing Tinggi and Paya Pinang, which were manured with sulphate of ammonia in 1928, were similarly treated again in February of this year. The foliage and general appearance of these areas were reported to have been greatly improved as a result.

YEAR'S PROFIT.

The net profit for the year, after writing off £5,600 for depreciation of mature areas, amounted to £40,724. With the unappropriated profit from last year this gave a total to be dealt with of £105,603. The directors proposed transferring £10,000 to reserve, bringing that account up to £60,000, and to pay a dividend of 10 per cent., less tax, leaving £65,603 to be carried forward. The current year's crop on conservative tapping was estimated at 2,100,000 lbs., out of which upwards of 250,000 lbs. had been sold at a price equivalent to 1s. 2½d. per lb. London landed terms.

Rubber was being put into consumption throughout the world at a very satisfactory rate. Shareholders would have seen the references in the Press to the rapidity with which the large American automobile manufacturers were expanding their activities, and there was no doubt that the movement towards motorisation was exceedingly helpful, firstly in creating work on roads, and, secondly, in cheapening and improving transportation generally. This could not be done without rubber, and rubber growers were surely justified in taking an optimistic view of the future ahead of them.

The report and accounts were unanimously adopted.

ATLAS ARTIFICIAL SILK PROCESSES, LIMITED.
EXCELLENT PROGRESS—BOARD'S CONFIDENCE.

The statutory meeting of Atlas Artificial Silk Processes, Limited, was held, on the 31st ultimo, at Winchester House, Old Broad Street, London.

Mr. Andrew Clark, J.P. (the chairman) said: The geographical position of the works is a very fine one indeed, while the buildings—being of one storey and entirely new—are magnificent in their structure and ideal in their suitability. They are conveniently laid out and cover a floor space of 130,000 square feet, leaving ample room for extension inasmuch as the whole factory occupies a site of 42 acres. The lay-out of the works and the general equipment leave nothing to be desired, and our key-men are at their appointed posts. I am happy to give you in a few words the following progress report: We are spinning already on a commercial scale. Our silk has been found by English and foreign users, and even by producers, to be of the highest quality. Our cost of production is, we believe, considerably lower than that of other producers. Satisfactory arrangements have been made for the sale of the whole first year's output.

Doubtless some producers and perhaps users were sceptical regarding the statement that in three months we would be making artificial silk. Such a thing had never been heard of or experienced before by the usual methods. What was regarded as impossible has been accomplished: the silk has been produced within the specified period of only three months on our full-sized machines and on a commercial basis, and it is here for examination and inspection. Our product has been commended and spoken of in the highest terms by experts and by some of the largest users in the country, and, in addition to that, we are being pressed already for deliveries of the silk.

A REVOLUTIONARY PROCESS.

Your directors stated that the Brandwood processes were nothing short of a revolution in the manufacture of artificial silk, and they have found nothing to shake that statement or to minimise in any way the many and remarkable claims made for them. When the works have been fully equipped it is anticipated that the total cost of the plant and equipment will be considerably below the amount given in the prospectus, and one has only to compare that sum with the figures of any similar undertaking, to see what an extraordinarily favourable position the company is in, not only for meeting competition and supplying the various requirements of the textile industry, but also for making substantial profits.

The directors are already assured in respect of the sale of the output, one important consideration in our favour being the fact that practically the whole of the silk produced by the Brandwood processes is first or grade "A" quality. Those of you who know the technical difficulties of artificial silk production by the usual methods need no further words of mine to emphasise the importance of such a high proportion of "Grade A" quality artificial silk.

ANTICIPATED PRODUCTION.

In the autumn we anticipate that production will be at the rate of 10 tons per week and towards the end of this year we shall be producing half of our "prospectus" output, which will be gradually increased until the full thirty tons weekly are reached. Having regard to the definitely lower costs of production which are ensured by the adoption of these processes and patents we are confident that we shall be making satisfactory profits in our first year. Consequently, you may look forward to the receipt of substantial annual dividends.

I may add that from the reports received from the factory your directors are satisfied that on the basis of even lower prices than are now current the manufacturing profits will be considerable. The profits anticipated from the sale of patents and the revenue expected from royalties arising out of the exploitation of the Colonial and foreign rights should be valuable additions, for you will remember that your company are not only the owners of the Brandwood processes and patents for exploitation throughout the British Empire, but also that they own a 50 per cent. interest in them for upwards of 20 of the principal industrial countries of the world, including the United States of America, Canada and Germany.

You will no doubt be interested to hear that your directors confidently anticipate being in a position to produce in the near future special quality of artificial silk equal in appearance and strength to real silk.

It only remains for me to say that your directors are satisfied that the distinct advantages possessed by your company in lower costs of production, a higher percentage of Grade "A" quality and superior tensile strength, will place us in a good position to share profitably in the future development of the industry and with such assured prospects shareholders have every reason to be thoroughly satisfied.

BOOTS PURE DRUG COMPANY, LIMITED.
RECORD SALES AND BONUS DISTRIBUTION.
HUGE WORKS EXTENSION.

The forty-first annual general ordinary meeting of Boots Pure Drug Co., Limited, was held at Station Street, Nottingham, on June 6, 1929, the Hon J. C. Boot, J.P., chairman of directors, presiding over a large attendance of shareholders.

The Chairman (who was greeted with applause) said:—Turning to the profit and loss account, you will observe that the balance, after deducting various charges, is £750,152, which is £48,180 more than last year. The trading profit this year has been arrived at after deducting income tax, whereas last year this appeared as a charge on the other side of the account. This charge, however, was not so heavy, owing to certain adjustments, as in the previous year.

After payment of all preference and preferred share dividends, and after payment of four quarterly dividends of 6 per cent., less tax, on the ordinary shares, we have a balance from the year's profits of £293,402, which, with the balance from last year, amounts to £501,709.

Your directors recommend the payment of a bonus of 1s. per share, free of income tax, on the ordinary shares, absorbing £75,000, and a transfer to the reserve fund of £200,000, leaving £226,709 to be carried forward to next year.

You will be pleased to hear that our new unit at Beeston, Notts., will start production this month, and we are satisfied that better results will be obtained from that ideal plant than from the inadequate buildings hitherto used.

In conjunction with Professor Robinson, F.R.S., and with the biochemical departments of several universities and medical schools, our research department is working on problems in the forefront of medical science; amongst them researches on vitamins, carried out in our own laboratories, have been largely responsible for the high repute of our vitamin preparations such as "Vitamalt."

INCREASED PROFITS, SALES AND NUMBER OF CUSTOMERS.

It is pleasant to be able to inform you that the results of the year's trading have been excellent in every way, showing an increase over all previous years in profits, sales and number of customers served. During the past twelve months the rate of sickness in the country has been far above normal. That, and the extremely cold winter we had, have naturally benefited the drug business, but we cannot expect those conditions to be repeated every year.

You will be interested to hear that our recent sale of toilet preparations was a great success. Some customers have wondered how we could possibly give two articles for the price of one, and the reasons are as follows:—

Firstly, the enormous amount of goods manufactured enables us to keep an even load in the factories during what is usually a slack time of the year. This, of course, reduces our overhead very considerably, and lessens the possibility of short time.

Secondly, we are able to utilise the publicity value of the windows of our 840 shops to the maximum.

Thirdly, we deliberately spent a great deal of money on this sale as a form of advertising; our ordinary rate of profit could not stand such a sale otherwise. In fact, the net profit available for ordinary shareholders last year amounted on an average to only 1½d. per customer, which gives an idea of the very small margin of profit on which we work.

BRIGHTON AND GLASGOW PREMISES.

During the past year, amongst other new branches, we have rebuilt our main Brighton shop, and now have magnificent premises, of which the local people are very proud. We have also opened on the best corner in Glasgow, one of the busiest positions in the kingdom.

When shareholders and customers see such shops they are apt to form a mistaken idea of the nature of our business. You must remember that we are chemists, and that 80 per cent. of our entire business is identical with that carried on by any good-class pharmacy, and that two-thirds of our shops carry purely chemists' lines only. As I said earlier on, our turnover was again a record one, and I am glad to state that our comparative shops again went well ahead.

Our aim is to build a well-established, sound business and not to show figures merely to influence the market price of our shares. We have a fine staff and a business of which the shareholders may well be proud, and we look forward with confidence to the future.

The Chairman then moved that the accounts be accepted and that the appropriation out of the profits as printed in the directors' report be hereby approved.

Mr J. E. Greenwood, M.A., L.L.B., A.C.A., seconded the adoption of the report, which was carried unanimously.

COMPANIA HISPANO AMERICANA DE ELECTRICIDAD S.A. BARCELONA.
"CHADE."
LARGELY INCREASED SURPLUS.

The ordinary general meeting of the Compania Hispano Americana de Electricidad S.A. was held on Saturday, May 25, 1929, in Madrid. Mr Francisco de A. Cambo, the president of the company, was in the chair.

The chairman said: Gentlemen, before submitting the balance sheet for your approval, I think it necessary to make some remarks concerning it.

In the first place, I have to point out that the valuations of our assets in currencies on a gold basis and of our gold investments (which form nearly the total amount of our available monetary resources and investments) appear in the balance sheet calculated at the peseta rate as at December 31st last, when our currency had sustained a depreciation of only 18·06 per cent. It is scarcely necessary to state that all our fixed assets represent gold values.

In spite of this, the item "Operating surplus, dividends, interest and other revenues" has increased from Ptas.103,726,432·43 in 1927 to Ptas.114,670,760·73 in 1928, that is to say, the increase has been Ptas.10,944,328·30, or 10·55 per cent. After having duly carried Ptas.45,790,248·55 to our depreciation fund, as compared with Ptas.42,766,129·34 in the previous financial year, the balance of net profits available for distribution is Ptas.50,884,559·60, as compared with Ptas.43,196,873·52 for the year 1927, that is, an increase of 17·79 per cent.

INCREASED DIVIDEND.

This permits the board, without abandoning their traditional conservative policy, to propose the payment of a total dividend of 15 per cent. gold, as compared with 14 per cent. gold in the previous financial years, in spite of its having to pay dividends on a capital which has had a nominal increase of Ptas.60,000,000, due to the creation and issue of 600,000 shares series "E."

I also call your attention to the fact that, the approval of H.E. the Minister of Finance having been duly obtained, it is proposed to adopt a new form of payment, so that the dividend may really be collected in gold, without any detriment, rather with appreciable advantage, to the Spanish exchange. This form of payment will eliminate the difficulties which have arisen in previous financial years when applying to the payment of the dividend in gold a co-efficient of depreciation of the paper peseta which, owing to its relating to a date much earlier than that of payment of the dividend, very rarely coincided with the peseta exchange ruling at the time the dividend was paid.

The sale of 200,000 shares series "E" at a rate very much above par has provided the company with a net profit of Ptas.98,460,350, which we propose to carry in full to the reserve fund.

In spite of what I have said, the balance carried forward is Ptas.6,553,169·55.

Our balance sheet reaches the figure of Ptas.933,798,228·43, and of our liabilities the debts due to the public, including income bonds and debentures in circulation, represent only a round sum of 280,000,000 pesetas.

BUENOS AIRES SUPER-STATION.

Few companies, even among the strongest and most prosperous in the world, can show such brilliant results, due, to a great extent, to the conservative policy of dividend payments which has been adopted hitherto and which has permitted us, without making any strain on our cash resources, to carry out the construction of our super-station at Buenos Aires, which is to-day the most perfect in the world, and in the construction of which more than 50,000,000 Argentine paper pesos have been invested.

Respecting the construction of this super-station, I can tell you that the estimates of time and cost have not only been confirmed, but have been improved upon, as the super-station started working three months before the estimated date, and the cost has been lower than that of the estimate. I might add that the industrial results of the new super-station exceed by a long way what we had anticipated, and it is right that, in view of these results, we should render homage to the Société Financière de Transports et d'Entreprises Industrielles of Brussels, to whose expert technical management such results are to be attributed.

Finally, in view of the rumours circulated abroad to the effect that the "CHADE" may be affected by the fluctuations of the peseta, I declare before you that this assertion is absolutely false, as all the revenues of the "CHADE" are in gold currency, the cash surplus is kept in currencies on a gold basis or in gold values and its dividends are paid in gold.

The resolution to the effect that the report and accounts for the year ended December 31, 1928, be adopted was then submitted and carried unanimously. The proceedings closed with a vote of thanks to the chairman and directors.

JOHN HETHERINGTON AND SONS, LIMITED.
INCREASED DIVIDEND.
SATISFACTORY PROGRESS IN ALL BRANCHES.

The annual general meeting of John Hetherington and Sons, Limited, was held, on the 29th ult., Mr Martin Coles Harman, the chairman, presiding.

The Chairman said that net profits, after providing for depreciation, were £70,578 18s. 7d., or approximately £7,000 more than the previous year. It was proposed to pay a dividend of 7½ per cent. on the ordinary shares, being ½ per cent. more than last year, and to carry forward £33,393 14s. It was the fifth consecutive year showing an increase of profits. Many economies in production had been effected. The mainstay of the business was still the cotton, wool, worsted and waste machinery. The new Nasmith Comber was very popular. The Rayon Machinery had given great satisfaction to customers. The first of the Maratti Machines was operating commercially, and giving satisfaction. They believed this machine would create a revolution in knitting. The machine tool business now contributed to the profits and the outlook was good.

INCREASED WORLD CONSUMPTION OF ARTIFICIAL SILK.

Mr. Harman referred to the great increase in world consumption of artificial silk, the production of which was still only about 3 per cent. of that of cotton alone. Mr. Harman stated that if means could be devised for avoiding the loss of strength due to lack of co-operation among textile machinists, Hetheringtons would favourably consider any proposals from within that industry.

In closing, reference was made to the excellent work of Mr E. V. Haigh (managing director) and his supporters of every grade.

Mr Haigh said that the decisive factor in the company's emergence from the difficulties which followed the last boom had been the chairman's leadership. He praised the staff for their unstinted efforts throughout the period of concentration and re-organisation; shareholders could feel that the spirit of enterprise which animated the whole staff would encourage them to look forward to the company's prosperity and expansion.

WARING AND GILLOW, LIMITED.
INCREASED PROFITS AND DIVIDEND.

The annual general meeting of Waring and Gillow, Limited, was held, on the 31st ultimo, at 164–182, Oxford Street, London.

Lord Waring (the chairman) said that the profit for the past year (£282,410) showed an increase of £62,509, which was due to the satisfactory expansion of the company's business. The directors recommended a dividend of 15 per cent. on the ordinary shares, as compared with 10 per cent. in the previous year, and the transfer of a further £25,000 to general reserve, the carry-forward being increased by £27,261. All the subsidiary companies were showing very important improvements, and were materially increasing their general trading. The financial position had been considerably strengthened by the fact that the item of goodwill had now been entirely eliminated from the balance-sheet. In his opinion, the world-wide goodwill of Waring and Gillow might reasonably figure as an asset almost equivalent in value to the entire share capital.

Last year he referred to the fact that within the unprecedented period of twenty-one days their studios succeeded in producing and delivering 4,500 miles overseas a superb range of 150 designs for decorative interiors, furniture, and furnishing. In the face of powerful foreign competition the company secured the contract from the Cuban Government, one of the largest ever given for decoration and furnishing. The contract had recently been successfully completed, and within the last few days they had published some illustrations of the Palacio de Congreso of the Republic of Cuba at Havana, which gave some idea of the beauty and distinction of the work accomplished there. He believed it would convince the world that Great Britain still maintained against all comers her forefront position in enterprise, capacity, artistic skill, and reliable production.

In this connection he would draw special attention to the extraordinary manufacturing resources of the company. The resources and equipment of Waring and Gillow were equal to any call upon them, and were, indeed, unique throughout the world.

They would be pleased to hear that since the beginning of the financial year business had shown a most satisfactory expansion. They had every confidence in being able in another twelve months to make an even better report that would bear witness to further progress, even more notable than that day's satisfactory report.

The report and accounts were unanimously adopted.

GEDULD PROPRIETARY MINES, LIMITED.

IMPROVED OUTLOOK.

The twenty-eighth ordinary general meeting of shareholders in the Geduld Proprietary Mines, Limited, was held at Johannesburg, on May 14, 1929. Mr P. M. Anderson (chairman of the company), presided, and in the course of his remarks said :—

The tonnage milled during 1928 was 979,000 tons, or 4,500 tons less than the record figure of the preceding year.

The average value of the yield of gold per ton milled last year was 26s. 6d., which compares with 27s. 9d. in 1927. This reduction of 1s. 3d. per ton was due to the lower value of the ore milled—the extraction having been, if anything, improved—and must have been expected by shareholders, for in my address to you last year your attention was drawn to the lower value of the ore reserves, which I indicated would affect the profits during that year. I am pleased to be able to state that here also there is an improvement in the outlook, for you will have noticed from the report of the consulting engineer that he values the ores reserves at a slightly higher figure than in the previous year. Consequently, I think we may look for a small improvement in the grade of the ore milled during the current year.

The working profit was £485,663, or £65,714 lower than in 1927.

The net profit, together with the unappropriated balance brought forward from the previous year, made available a sum of £636,785. Of this, £3,180 was appropriated for capital expenditure on property; £448,218 for the two dividends declared, totalling 33¾ per cent. (being 3¾ per cent. less than the previous year); and £1,800 for directors' additional remuneration in terms of the Articles of Association. In addition, a further amount of £6,000 was set aside towards meeting the company's proportion of the outstanding liability to the Miners' Phthisis Compensation Fund. These amounts together total £459,198, leaving a balance carried forward in the Appropriation Account of £177,587, which is about £9,000 less than the year before.

The development footage accomplished in your mine during the year was further reduced by 1,961 feet, and amounted to 16,048 feet. But as 18,436 feet were done for your neighbour, the East Geduld Mines, Limited, the total footage of 34,484 was 4,546 feet more than that of the year before. Although the footage in your own mine was reduced, the results as to the percentage payable and the values disclosed have been most satisfactory, as may be seen by comparing the consulting engineer's estimate of the ore reserves at the end of the year with his previous calculation. The present estimate of 6,100,000 tons, averaging 6.5 dwt. over a stoping width of 60 inches, shows an improvement of 80,000 tons—in spite of a reduction of 2 inches in the width—and the value is higher by a tenth of a pennyweight. In view of our strong ore reserve position it is intended to do more exploratory work in areas that have hitherto been considered less promising.

CURRENT YEAR'S OPERATIONS.

The operations on the mine during the first four months of the current year have resulted in the milling of 333,000 tons and the earning of a profit, excluding sundry revenue, of £168,867, which is £7,246 more than for the same period of last year. Working costs have averaged 16s. 6d. per ton. 4,184 feet of development were done, of which 3,110 feet were on reef. 1,400 feet, or 45 per cent., disclosed payable values averaging 9.3 dwt. over a channel width of 37 inches, equal to 343 inch-dwt.

Since the issue of the annual report shareholders have been made fully aware by means of a circular issued on April 16th of the state of development of the East Geduld Mines, Limited, and its proposed increase of capital, as well as of the steps taken by your directors to exercise your right to participate in the provision of such capital funds for that company.

CAPITAL.

You are well aware that your company has the right to participate equally with the Union Corporation, Limited, in providing these additional funds at par. After mature consideration of various alternatives, your directors decided that the best interests of shareholders would be served if the capital of your company were increased so as to provide the necessary funds to enable it to take up not only its proportion of the 650,000 East Geduld shares now being issued, but also its share of the further 500,000 that will probably be issued as soon as a decision is made to proceed with the erection of a reduction plant. Consequently the issued capital of your company has been increased by 132,805 shares, ranking *pari passu* in all respects with existing shares of the company, and these shares have been offered *pro rata* to shareholders at a price of 62s. 6d. per share, the Union Corporation, Limited, guaranteeing to take up all shares not subscribed for by shareholders for a commission of 2½ per cent.

At previous annual meetings you were informed that your company's commitments in connection with the initial capital of East Geduld Mines, Limited, had been reduced by the introduction of that company's shares on the Stock Exchanges in London and Johannesburg. The circular of April 16th, to which I have already referred, informed you that your commitment in connection with the present issue is being reduced by an offer of shares to East Geduld shareholders at a price of 32s. 6d. per share.

THE POSITION.

The position, therefore, is that for the comparatively small increase of 10 per cent. in the issued capital of your company, which shareholders had the right to take up, you will acquire a substantial interest of probably between 35 and 40 per cent. in an adjoining mine which has a slightly larger area than your own, which even now has nearly 2,000,000 tons of ore reserves of a slightly higher value than yours, and which it is not unreasonable to expect should reach the producing stage, with a 60,000-ton per month plant, in, say, two and a half years.

The report and accounts were adopted.

EAST GEDULD MINES, LIMITED.

GRATIFYING PROGRESS.

The second ordinary general meeting of shareholders in the East Geduld Mines, Limited, was held at Johannesburg, on May 14, 1929. Mr P. M. Anderson (chairman of the company) presided, and in the course of his remarks said :—

This is the second annual meeting of shareholders of the company. When you consider that we are dealing with a deep level mine more than a mile away from the nearest shaft, the progress that has been made in exploring and developing our ore body in the short space of a little over two years is very gratifying. Development has made very satisfactory progress, 18,436 feet having been accomplished. Of this footage, 11,954 feet were on reef, and 4,940 feet, or 41 per cent., were classed as payable, having a value of 12.4 dwt. over a channel width of 37 inches, equal to 455 inch-dwt. The figures for the two years 1927 and 1928 together amount to 30,365 feet advanced, of which 20,450 feet were on reef and 8,545 feet, or 42 per cent., were considered payable, having a value of 12.9 dwt. over a channel width of 37 inches. In order to bring your information up to the latest date possible, I will now give you the particulars of development during the first four months of this year. The total footage for this period was 6,663 feet; 4,655 feet were on reef and 2,205 feet, or 47 per cent., were payable, having a value of 11.9 dwt. over a channel width of 44 inches, equal to 522 inch-dwt. These figures show a substantial improvement in the percentage payable, channel width and inch-dwt. over the average of either of the preceding years. This is, of course, very gratifying, as recent development is taking place on the lower levels. On reviewing the work done up to March 31st last, the consulting engineer in his report to the board estimated that the ore reserves sufficiently developed to value, though not quite fully blocked out for stoping, amounted to 1,900,000 tons, having a value of 6.6 dwt. over an assumed stoping width of 56.5 inches. He recommended that arrangements be made to sink a vertical shaft without delay, and that, subject to development continuing to be satisfactory, a decision with regard to a reduction plant be made in time to permit of the completion of its erection by the time the shaft is ready for use. The estimate of the funds required to cover this work was approximately £650,000 for the shaft-sinking stage, and £500,000 for the milling stage, which includes a plant capable of treating 60,000 tons per month. Your directors, having given due consideration to the matter, decided to adopt these recommendations, and immediately took steps to procure the funds required for the shaft sinking stage by the issue of 650,000 ordinary shares ranking *pari passu* with the existing shares, these new shares being subscribed by the Union Corporation, Limited, and the Geduld Proprietary Mines, Limited, at par, subject to a commission of 5 per cent. in terms of their respective agreements.

No time has been lost in getting shaft sinking under way. Immediately the question of further funds had been decided, excavations were commenced for the shaft collar and the foundations for the necessary equipment, which is being assembled as rapidly as possible. The site of the shaft is about 2,800 feet from the west boundary—that is, the common boundary with the Geduld Proprietary Mines, Limited—and about 6,500 feet from the south boundary. It is anticipated that the shaft will cut the reef at a depth of 2,850 feet, and it will be continued to a depth of 3,250 feet to allow for the ore bins. Connections will be made to the 4th and 5th level drives which are already being developed in this neighbourhood from the main incline, and there will also be a cross-cut to the 6th level. Given reasonable conditions, it is anticipated that the shaft should be in full commission for the purpose of hoisting stope ore within two and a half years.

The report and accounts were adopted.

THE MODDERFONTEIN DEEP LEVELS, LIMITED.

NEW MILLING RECORD.

The twenty-eighth ordinary general meeting of shareholders in the Modderfontein Deep Levels, Limited, was held at Johannesburg, on May 14, 1929. Mr P. M. Anderson (chairman of the company) presided, and, in the course of his remarks, said : As in the previous year, one of the most satisfactory features was the setting up of a new milling record for the mine, the total of 530,300 tons milled being 1,000 tons in advance of the record established in 1927. The yield per ton milled was 45s., compared with 45s. 1d. for the previous year, and working costs amounted to 15s. 10d. per ton, or 5d. above the 1927 average.

The net result of the year's operations was a working profit of £773,605, or £11,553 less than in 1927. Sundry revenue was, however, £2,525 in excess of the previous year, this increase resulting chiefly from a higher rate of interest having been earned on the funds placed on deposit from time to time, so that the gross profit of £791,176 showed a reduction of only £9,027 as compared with the previous year. Taxation absorbed £109,799, and donations to charities, etc., £2,684, leaving a balance of £678,693 to be added to the amount of £159,040 broughtf orward in the appropriation account and making a total of £837,733. Two dividends were declared, aggregating for the fourth successive year 135 per cent., and absorbing £675,000.

DEVELOPMENT FOOTAGE.

The total development footage accomplished during the year was 4,782 ft., of which 3,356 ft. were on the horizons of upper leaders and 1,426 ft. in Main Reef. This compares with a total of 4,084 ft. in 1927, of which 3,081 ft. were in leaders and 283 ft. in the Main Reef. It was not possible to push on the work of testing the upper leaders at a greater pace, because this work has to be carried out above stopes from which the Main Reef ore has been extracted, and it is essential to fill these stopes with sand before proceeding with blasting operations immediately above these areas.

Owing to the necessarily slow rate of progress in the development of the upper leaders, little more is known about their potentialities to-day than when I addressed you a year ago, and it remains impossible to make a more definite statement than that the work has indicated the existence of a comparatively small tonnage of ore of moderate value. As work proceeds, however, the upper leaders have been contributing a steadily increasing proportion of the ore stoped. This proportion rose from 1 per cent. at the beginning of the year to just over 6 per cent. at the end of the year, and has averaged 12 per cent. for the first quarter of this year.

No hanging wall leader tonnage has as yet been included in the ore reserves, which, at the end of last year, were calculated by the consulting engineer, to amount to 3,000,000 tons of an average value of 9 dwt. over a width of 79 in. Compared with the position at the end of the previous year, this represents a decrease of 560,000 tons in quantity and of 1 in. in width, but there is an increase of a tenth-of-a-dwt. in the average value. The development of the Main Reef areas having been virtually completed, this decrease in the ore reserves in the course of the year must be regarded as satisfactory, seeing that it represents but 85 per cent. of the ore mined during the period.

During the first four months of the current year the working results show little variation from those of the corresponding period of last year. The tonnage milled was 175,100 tons, the yield per ton was 44s. 10d., and working costs per ton 15s. 7d., so the working profit was slightly higher by £863.

The report and accounts were adopted.

TELOGOREDJO UNITED PLANTATIONS, LIMITED.

ENCOURAGING NEW USES FOR RUBBER.

The nineteenth annual general meeting of the Telogoredjo United Plantations, Limited, was held, on the 4th instant, at Winchester House, London, Major C. C. L. Fitzwilliams, M.C. (the chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said : The accounts of the combined companies show a profit of £52,363. You will have seen from the report that it is proposed to pay a dividend of 6 per cent., less tax, for the year 1928, and carry forward the balance of £18,486, subject to the payment of bonus to the Eastern staff. I think we can consider the results satisfactory.

You will see from the statement of acreage planted that we have areas of young rubber which will consecutively come into bearing from year to year. It is expected tapping will commence on part of these next year, and from thence onward each year should show an increase in the areas being tapped, and a consequent increase in crops. It can hardly be expected that the old plantings will continue to yield indefinitely at the present rate without expensive cultivation and resting, and this company will be in the position of being able, if it is necessary, to rest the older areas without materially affecting crops.

The estimated crops for 1929 are given in the report : rubber, 3,950,000 lb., and coffee, 11,900 cwts. Up to the end of May, 2,663 cwts. of coffee have been harvested. Of the estimated crop, 6,678 cwts. have been sold forward at an average price of 71s. 8d. per cwt. For the five months ending May, 1,875,686 lb. of rubber have been harvested.

A small item appearing in the English company's accounts under the heading of investments represents an interest we took, in common with other rubber companies, to endeavour to further the development of rubber roadways. We think it highly desirable that rubber companies should support in every way possible any efforts that are made to further the extension of new uses, and I would go further and suggest rubber companies should agree between themselves to supply a certain percentage of their crops at cost price, or at a reasonable price, for a period of years to any manufacturer who is prepared to risk capital in laying down plant for the purpose of making rubber roadways a commercial success.

I previously mentioned the increased production which would come from the young areas of the Tjondong estate year by year. It looks as if this regular increase of crops in the future will coincide with a healthy commodity market, and consequently a higher basis of prices than exists to-day.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 1, 1929 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	5,932	From Revenue	6,496
Interest, &c., on Debt	33,400	Increase in Balances	954
Sinking Fund	615	Increase in Debt	32,895
Sundries	398		
	40,345		40,345

The total ordinary revenue for the week amounted to £6,496,000, as compared with £6,540,000 in the corresponding week of last year. Property and income tax amounted to £513,000, and super-tax to £670,000, against £1,396,000 and £380,000 respectively a year ago. Estate duties brought in £1,550,000, as compared with £400,000 a year ago. Customs receipts at £2,226,000 showed an increase of £669,000 over last year's figure, and Excise receipts, at £827,000, an increase of £115,000.

The National Debt was increased by £32,895,000, as shown below :—

(000's omitted.)

	£		£
Treasury Bonds	– 100	Treasury Bills	+ 19,720

Imported into Great Britain and Northern Ireland.	£
From—	
France	4,053
British South Africa	1,354,765
Total declared value of imports	1,358,818

Exported from Great Britain and Northern Ireland.	£
To—	
Denmark	275
Poland (includ. Danzig)	3,100
Germany	13,600
Netherlands	10,554
France	19,721
Switzerland	6,800
Belgium	20,465
Egypt	34,204
British India	24,879
Other Countries	420
Total declared value of exports	134,018

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follow :—

1929.	Arrivals.	£	1929.	Withdrawals.	£
May 31	Bars bought	4,330	May 31	Bars sold	13,739
June 1	Nil		June 1	Nil	
" 3	Sovs. from abroad	500,000	" 3	Bars sold	3,431
" 4	Bars bought	278,800	" 4	Nil	
" 5	Nil		" 5	Bars sold	258,182
" 6	Nil		" 6	Bars sold	10,251
	Total	783,130		Total	285,603

Net arrivals, £471,409.

Messrs. Samuel Montagu and Co. write as follows on June 5, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £162,467,271 on the 29th ultimo (as compared with £161,990,492 on the previous Wednesday), and represents an increase of £8,560,956 since April 29, 1925—when an effective gold standard was resumed.

Gold from South Africa to the value of £853,000 was offered in the open market yesterday. The requirements for Home and Continental trade absorbed £45,000 and £20,000 was taken for India. The Bank of England secured £279,000, and the balance of about £500,000 was acquired for a destination not disclosed. Although both the U.S.A. and German exchanges remain favourable to the export of gold to those countries, no enquiry from either quarter was forthcoming yesterday for the gold in the open market. To-day, however, there has been a withdrawal of gold from the Bank of England for shipment to New York. This constitutes the first appreciable withdrawal of bar gold since February 6th last. There was a net influx of gold of £494,107 during the week.

SILVER.

Supplies have continued to be freely offered in the London Market, but in spite of the falling prices silver has had little attraction for buyers. Advices from Shanghai have indicated further falls in the tael exchange, and Bombay prices have moved sharply down in conformity. The Indian Bazaars have secured silver for shipment by this week's steamer, which was due to arrive in Bombay in time for the June settlement, but Bazaar operators have in some cases made forward sales against their cash purchases, a potential steadying influence being therefore to some extent discounted.

China has both bought and sold, but America has been a ready seller, and quotations moved rapidly downwards, yesterday's prices being fixed at 24d. and 24 1/16d. for cash and two months respectively; the cash price was the lowest recorded since the 27th October, 1915, and at that time forward delivery was not quoted. The quotation of 24 1/16d. for two months' delivery, however, was fixed as recently in comparison as October 19, 1926.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 27th ultimo to mid-day on the 3rd instant :—

Imports.	£	Exports.	£
U.S.A.	94,793	Egypt	18,888
Mexico	9,000	British India	31,328
Other countries	9,514	Other countries	13,880
	£113,307		£64,096

Indian Currency Returns (in lacs of rupees).

	May 31	May 22	May 15

Reports and Notices.

At a board meeting of the Royal Insurance Co., Limited, held May 27th, the following, who are directors of the Liverpool and London and Globe Insurance Co., Limited, were elected to the board :—Mr J. J. Atkinson, Sir Frederick C. Bowring, Mr J. Bruce Ismay, Mr Hugh Lewis, Mr W. F. Moore, Mr W. J. Orr, Mr R. Q. Wilson.

Mr W. R. Glazebrook has been re-elected chairman of the Royal Insurance Co., Limited. Mr A. Allan Paton, C.B., and Mr Arthur E. Pattinson were re-elected deputy-chairmen, and Mr A. Kentish Barnes was elected a deputy-chairman. Mr W. S. Crichton did not seek re-election to the office of deputy-chairman, but retains his seat on the board.

In consequence of the death of Mr T. B. Ponsonby, the late General Manager, the Directors of the Alliance Assurance Co., Limited, have made the following appointments :—Mr A. Levine, F.I.A., to be General Manager; Mr Ralph F. Barnett to be Assistant General Manager; Mr Louis D'Elboux to be Manager, Fire Department; Mr R. C. Simmonds, F.I.A., to be Actuary.

The Rt. Hon. Sir Frederick Ponsonby, G.C.B., G.C.V.O., and Mr Roger Wright have joined the Board of the London and Scottish Assurance Corporation, Limited, and also its Associate Office, the Scottish Metropolitan Assurance Co., Limited.

BANKS.

BANK OF MONTREAL.—The total assets for half-year ended April 30, 1929, have increased to $915,000,000, the largest figure in the bank's history. Liquid assets are equal to 59.24 per cent. of liabilities to the public, and cash holdings of $109,000,000 are equal to 13.24 per cent. of such liabilities. Current loans in Canada have reached $314,000,000 as compared with $297,000,000 at the same date last year, reflecting the greater business activity throughout Canada. Total deposits have increased to $771,000,000, as against $746,000,000 a year ago. Bank premises at $14,500,000 show an increase of $3,000,000 due to the inclusion of the properties of the Merchants Bank Realty Holding Co. All premises now appear in this one item. Profits for the half-year amount to $3,491,651, which compares with $2,994,901 for the corresponding period of last year.

RAILWAYS.

MEXICAN RAILWAY COMPANY, LIMITED.—The balance carried to net revenue account for the second half-year of 1928 was $692,623 as compared with $154,664 in second half-year 1927. At standard rate of 24d. to the peso this balance is equal to £69,262. Debenture interest absorbed £82,869, and, after allowing for other miscellaneous items there is a debit to net revenue of £29,394, raising the total debit to net revenue from £861,252 to £890,646. Holders of registered stock, issue "A," of Mexican Railway are informed that, in accordance with the terms of the trust deed securing the registered stock, issue "A," notice is hereby given that on July 1, 1929, ten per cent. of the original amount of the stock issued, or one-sixth of the sum outstanding, will be redeemed out of moneys which will be paid by the company to the trustees on account or in anticipation of profits of the company. Stock certificates may now be lodged at the company's offices, but in any case certificates must be left six clear days for examination, endorsement, and the issue of the respective redemption warrants. Interest on the proportion of Stock, the subject of this notice, will cease on and after June 30, 1929.

MISCELLANEOUS.

BRAZILIAN TRACTION LIGHT AND POWER.—The net earnings for 1928 amounted to $24,869,330, as compared with $22,054,624 for 1927. Out of the year's revenue the sum of $6,230,511 has been set aside for depreciation of physical properties of the subsidiary companies, and the sum of $300,000 has been transferred to this company's general amortisation reserve. The total of the balances at December 31, 1928, standing to the credit of the general amortisation reserve of this company and the depreciation and sinking fund reserves of the subsidiary companies is $54,941,632. In January, 1929, the quarterly dividend on the ordinary shares of no par value was increased from 44 cents per share to 50 cents per share, the first dividend at this rate being paid on March 1, 1929. The surplus revenue for the year after payment of dividends amounts to $6,053,459, which, added to the balance of $8,893,907 brought forward from 1927, gives a total of $14,947,366. Out of this sum the amount of $5,000,000 has been transferred to general reserve account, leaving a balance of $9,947,366 carried forward.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Cereal crops in the United Kingdom continue to make satisfactory progress, refreshing rains and an even temperature tending to stimulate growth and colour. Supplies of native wheat were on a small scale, but tone steady and sellers more reserved in face of the improvement in imported varieties. In the floating and forward cargo section a reaction occurred following recent slumping prices under a sharp rally in North American quotations. United States growers are hopeful of disposing of their old crop holdings by Government financial support. In this connection, it was reported that the Farm Relief Bill would become operative immediately instead of October next, and a portion of the huge sum allocated would be utilised to purchase the wheat. Even if this is the case, the statistical position remains the same, the only difference being that the actual marketing of grain comes under official control, and therefore in stronger hands. Elevator space is urgently needed, and with offers of the new winter crop now being made on European markets, there is a possibility of gradually working off old supplies through domestic channels. Other factors influencing the upward movement were to be found in adverse climatic conditions for seeding the new crops in the Southern hemisphere, rains being insufficient in Argentine and Australia to ensure satisfactory germination. It is also stated that the American Secretary of Agriculture has advised farmers to reduce the spring acreage of wheat to avoid over-production, so that it is quite possible that, encouraged by the increased import duty, farmers may put a larger area under linseed, of which there is a domestic shortage. Ample supplies of wheat are available; shipments are maintained, and buyers express little confidence in the upward movement. Futures were also firmer in sympathy, with dealings of fair extent, chiefly in the November position. Prices of feeding stuffs also followed the course of wheat, but trading was of a restricted character.

Wheat advanced sharply for Canadian descriptions following firmer forward quotations: No. 2 Northern Manitoba, ex ship, 45s. 9d.; No. 3, ditto, 44s. 9d.; No. 4 Manitoba, 43s. 6d.; No. 5, 39s. 3d.; No. 6, 35s. 6d.; Rosafe, 64 lbs., 39s. 6d.; Barusso, 63½ lbs., for shipment, 39s. 3d.; Australian, 43s. 9d. ex ship, per 496 lbs.; English, 9s. 4d.–9s. 8d. per 112 lbs.

Flour firmer. London straight run, 33s. per sack delivered. Of imported, Manitoba patents range from 33s.–35s. 6d.; Minneapolis, 33s. 6d.–35s. 6d.; Australian, 32s.–32s. 6d., ex store. On c.i.f. terms Manitoba top patents, June–July, 32s. 6d.–33s. 6d.; export ditto, 29s. 9d.–30s. 9d.; Australian, June–July, 30s. 6d.–31s. 6d. per 280 lbs.

Maize steadier. Plate, landed, 36s. 6d.; ex ship to arrive, 34s. 6d.; May–June, 34s. 6d.; June–July, 34s. 9d.; July–August, 35s., per 480 lbs. Yellow maize meal, £10 per ton, landed.

Barley firmer. Californian, ex ship, 43s.–48s.; Chilian, ex store 45s.–58s.; Australian, 41s.–44s. 6d.; Smyrna, 44s.–47s. per 448 lbs; Algerian–Tunisian, ex ship, 29s. 6d.; Canadian feed, 27s. 6d.; No. 3 Canadian Western, ex ship, 30s. 3d.; landed, 31s. 9d.; No. 4, ex ship, 29s.; No. 2 Federal American, landed, 29s. per 400 lbs.; English malting, 10s. 6d.–11s. 2d.; feed, 9s. 8d.–10s., per 112 lbs.

Oats firm. Plate, landed, 23s. 9d.; ex ship to arrive, 22s. 6d.; No. 1 Canadian feed, 22s. 6d.; No. 2, ditto, 21s. 6d. ex ship; mixed Canadian feed, ex ship to arrive, 18s. 3d.; landed, 20s.; Chilian white, ex ship to arrive, 28s.; landed, 30s.; German, landed, 27s. 6d.; ex ship to arrive, 26s. 6d., per 320 lbs.; English, 9s. 8d.–10s. 2d. per 112 lbs.; Scotch, landed, 29s. 6d. per 336 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.
Estimated sales of home-grown wheat—				
1 week to June 1	Qrs. 95,098	Qrs. 262,838	Qrs. 131,275	Qrs. 118,455
38 weeks to June 1	9,198,813	9,953,943	10,909,733	12,499,701
Average price of English wheat per cwt.	s. d. 9 9	s. d. 11 2	s. d. 12 6	s. d. 13 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928 :—

AMERICAN WHEAT MARKETS.

The technical position has improved, and weather reports, prospects of diminished surplus in Argentina, and bullish rumours as to possible action by the United States Government have combined to bring about a slight recovery, in spite of a strong selling movement on Wednesday. Quotations :—

Nearest Future.	Jan. 4, 1928.	Jan. 2, 1929.	June 6, 1928.	May 22, 1929.	May 29, 1929.	June 5, 1929.
Winnipeg (No. 1 Manitoba)—Cents per 60 lb.)	156⅛	122	144½	113½	109⅛	115
Chicago (No. Winter)—Cents per 60 lb.	166½	116⅛	145	103	97	107

Visible supplies of wheat in Canada at 71,044,000 show a decrease of 1,387,000 as compared with the previous week's figures. Supplies a year ago stood at 64,546,000.

THE COAL TRADE.

Our Sheffield correspondent writes :—Export trade has been resumed after the holidays and is fairly brisk with prices firm. The industrial demand has been stationary for some time and remains without change. House coal demand has dropped to a very low ebb and prices are weak. Output under the quota system is barely adequate and there is scarcity in some directions. The market for blast-furnace coke is firm, with prices on the up-grade.

Our Glasgow correspondent writes :—The position is perhaps rather more encouraging, but in the main the collieries could deal with much more business than is offering. Except in Lanarkshire, however, the collieries contrive to keep moving fairly comfortably; in Lanarkshire, where the collieries depend largely on home industrial orders, several pits have been forced to adopt short-time working, prices offered by foreign buyers being considered unremunerative when the relatively high railway rates are allowed for. A good enquiry is circulating for forward delivery, especially for washed nuts. Shipment prices (f.o.b. district ports) :—Lanarkshire.—Ell best, 14s.; splint best, 16s.; splint second, 15s. 6d.; navigation, 17s. 6d.; navigation second, 15s.; Hartley, 16s. 6d.; steam, 13s. 6d.; trebles, 14s. 3d.; doubles, 13s. 6d.; singles, 12s.; pearls, 11s.; dross, 10s. Fife.—Screened navigation, 17s. 6d.; first-class steam, 13s. 9d.–14s.; third-class steam, 12s.; trebles, 14s. 6d.; doubles, 13s. 9d.; singles, 12s.; pearls, 11s. Lothians.—Prime steam, 13s.; secondary steam, 12s. 6d.; trebles, 14s. 6d.; doubles, 13s. 6d.; singles, 12s.; pearls, 11s.

Our Cardiff correspondent writes :—Conditions on the Cardiff coal market during the past week have, on the whole, continued very stable. There has been an improvement in the supply of tonnage and collieries have consequently lost very few shifts; while prices for practically every description have been fairly well maintained. All the collieries are not, of course, equally stemmed, but some even of the large groups are as fully employed as they were during the pressure last March and are realising from 6d. to 9d. per ton above the recently increased minimum schedule of prices. The question of reorganisation is again under consideration, and at a meeting of a committee of the owners this week a further effort was made to surmount the difficulties which stand in the way of the introduction of the proposed output regulation scheme. One of the most formidable of these difficulties, it is understood, relates to the position of the single colliery companies, and so far no way has been found out of it. An interesting development has been the acceptance by the workmen's leaders of an invitation from the colliery owners to convene a meeting of the Conciliation Board to consider the advisability of opening negotiations for a new agreement in place of that now in operation, which will automatically expire at the end of the present year. The following are the current approximate quotations: Best Admiralties, 19s. 9d. to 20s. 3d.; seconds, 19s. 9d. to 20s.; best drys, 19s. to 19s. 6d.; Black Veins, 18s. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 3d. to 12s. 9d.; coking smalls, 13s. 6d. to 14s.; anthracite, best, large, 33s. to 36s. 6d.; Red Vein, large, 23s. to 27s.; machine-made cobbles, 40s. to 44s.; French nuts, 42s. to 44s.; stove nuts, 39s. to 42s. 6d.; rubbly culm, 10s. to 10s. 6d.; foundry, coke, 27s. 6d. to 36s. 6d.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 25s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange. The iron and steel markets are entering upon a period of the year when trade is generally quiet, but so far the volume of business has been fairly well maintained. The election naturally interrupted business, but already there has been some increase in inquiry, although it is only natural that until

political situation becomes more settled there will be a tendency to limit commitments. In the pig iron department there is still a scarcity of East Coast iron and although the official prices have remained unaltered for a long period good premiums are obtainable upon any parcels coming on the market. The recent advance in the prices of Midland pig irons has somewhat checked business, but the demand for that description of iron seems to be slightly improving. In the semi-finished steel department British manufacturers appear to be well off for orders, while the quotations of Continental material offering are restricted. Continental prices remain firm and it is not easy to place orders for near delivery. The demand for finished steel continues irregular. The overseas markets seem to be buying spasmodically and to be limiting their purchases as much as possible. In the home market most departments of the steel trades have covered their requirements for the time being and at the moment the demand is not lively. On the other hand, the steel works booked a considerable amount of business before the advance in prices at Whitsuntide, and most of them are not badly off for work.

Our Middlesbrough correspondent writes :—The market for Cleveland iron continues very firm, with numerous inquiries, but, unfortunately, there is not sufficient iron available and many orders have to go unfilled. Makers are entirely off the market, being sold for some months ahead, and the quantity of iron obtainable second hand is now considerably reduced. Prospects of an increase in the make to any important extent are not favourable and although a Cleveland furnace at Jarrow is going in very shortly the prospective make was all sold some time ago. Prices obtained by merchants at Tuesday's market for odd lots were: No. 1, 72s. 6d.; No. 3, 70s.; No. 4 foundry, 69s.; and No. 4 forge, 68s. 6d. Total shipments of all classes of pig iron for May were 32,718 tons, compared with 30,101 tons in April and 24,873 tons in March. Hematite is an improving market. There is not much iron available for this month and the price realised is 74s. for mixed numbers, which figure would still be accepted by makers for the third quarter, but beyond they are inclined to ask more. Inquiries are increasing and an expansion in business is in evidence. Steel works are busy on old contracts which will carry them on for some time, but so far there has not been much buying on home account at the recently advanced prices. A fair number of orders are coming to hand for export and the outlook in this department is encouraging. Prices for home are: Plates, £8 12s. 6d.; angles, joints, channels, £8 2s. 6d., subject to rebates. Heavy steel rails are quoted £8 10s.; black sheets, 21/24 gauge, £10 10s.; 24-in. gauge galvanised corrugated sheets, £13 15s.; iron crown bars, £10 15s., all for home consumption. Coke is in increased request and producers are only offering in moderate quantities. The price for good medium brands is advanced to 19s. 6d. delivered furnaces. Ores of best qualities are scarce and prices are firm on the basis of 23s. for best rubio c.i.f. Tees. There are 42 furnaces at present in blast on the North-East Coast, against 31 at the beginning of the year.

Our Sheffield correspondent writes :—Local industrial conditions remain quiet and it is evident that recent increases of iron and steel prices have checked the flow of trade to some extent. This upward movement has also enabled certain classes of foreign material to re-enter our market. Wire rod prices have been advanced owing to the rise of billet prices. The further advance of a shilling on foundry pig does not appear to have affected the market, which was already very flat. Sales and consumption are alike poor. The depression in the acid steel department grows even more acute, and is not likely to be relieved until the railway companies resume buying of material on a normal scale. Output of basic steel is large. Depression is general in plate, cutlery and hand tools. The unemployment figures do not undergo much change, and have varied little for six or nine months.

Our Glasgow co respondent writes :—Business remains quiet in the iron and steel industries in the West of Scotland, and there are no apparent signs of renewed activity. Although pig iron conditions are still unsatisfactory, increased prices are contemplated as to-day's prices are unremunerative. Steel works plants are working steadily, although possibly in many cases not to full capacity, and, as has been the case for some time, there is a better demand for structural and engineering materials than for shipbuilders' requirements. Owing to the increased price of Continental semis, British makers are able to secure a larger share of the orders for sheet bars. In the sheet trade the position is unchanged; works are well employed and prices maintained, but most of the purchases are for early delivery.

Our Cardiff correspondent writes :—On the Swansea Metal Exchange on Tuesday business in South Wales tinplates was comparatively quiet, but it was reported that order books were, on the whole, well filled. Export trade conditions are normal, but prospects are opening out of increased inland consumption as the result of the extension of canning factories. Quotations for tinplates were stationary at from 18s. 6d. to 18s. 9d. per basis boxes, and for galvanised sheets at from £13 12s. 6d. to £13 17s. 6d. per ton. Local tinplate bars are unaltered at £6 6s. 3d. per ton, but foreign bars are 6d. higher at £5 17s. 6d. than a week ago. Scrap steel prices are a shade easier. Shipments of tinplates last week totalled 129,469 boxes and stocks 218,183 boxes, compared with 238,878 boxes the previous week. The production of tin, terne and black plates in the first three months of the year totalled 192,000 tons, compared with 200,000 tons in the corresponding period last year, and of galvanised sheets 247,200 tons, compared with 225,800 tons

PLAYER'S WHITE LABEL

NAVY MIXTURE

—smoke it for a change—you won't want to change again.

2OZ. POCKET TIN 1/10

OTHER METALS.

Tin.—The market for tin exhibited firmer features, sellers being more reserved in face of improved American and Eastern advices, while influenced by a decrease in monthly visible supplies. A fair business transpired, though profit-taking accounted for some irregularity and weakness at times. Stocks in London and Liverpool warehouses for week ending June 1st were returned at 8,211 tons compared with 1,391 tons at corresponding period last year. Standard, cash, sold, £197 12s. 6d.–£199 10s. and £198; three months, £199 10s.–£201 10s. and £201 5s.. In the East sales were reported at £201 5s. to £203 15s. and £202 12s. 6d. c.i.f. terms.

Copper.—Market opened with a quiet and easier tone, but later buyers were more in evidence, particularly regarding forward positions, and a firmer market resulted. Standard cash sold £74–£73 10s. and £74 6s. 3d.; three months, £73 5s.–£72 15s. and £74. Stocks of refined up to May 31st totalled 775 tons, and rough, 5,163 tons; comparing with 927 and 3,718 tons for the previous month.

Lead.—In fair request and market firm. Good soft foreign pig, June, sold at £23 10s.–£23 16s. 3d. and £23 13s. 9d.; July, £23 11s. 3d. to £23 15s.; September, £23 10s. to £23 15s. and £23 13s. 9d. ton.

Spelter.—Quiet and easier. June, sold, £26 11s. 3d. to £26 5s.; July, £26 10s. to £26 5s.; September, £26 7s. 6d. to £26 2s. 6d. ton.

Aluminium quiet. Ingots and bars for home delivery, £95 ton.

Antimony dull. English regulus, £48 to £52; foreign spot, £34 10s. to £35 ton.

Wolfram quiet. Straits nominally 32s. to 32s. 6d. per unit c.i.f.

Quicksilver steady. Spot, £22 2s. 6d. to £22 7s. 6d. per bottle.

Tin Plates maintained. I.C. coke, prompt and forward, 18s. 6d. to 18s. 9d. per box f.o.b. Swansea.

THE COTTON TRADE.

Liverpool, June 5th.

The market continues to be ruled by weather news, but some short covering has taken place on adverse news from the west. Spot sales for the week May 30th to June 5th (inclusive) are 57,000 bales, of which 7,240 American, 200 Brazil, 1,950 Argentine, 1,600 Peru, 2,500 Egyptian, 2,000 African, 1,100 East Indian, and 410 sundries. Imports for the same period are 46,474 bales, of which 15,005 are American, 2,106 Brazil, 3,732 Argentine, 894 Peru, 9,772 Egyptian, 6,874 African, 7,433 East Indian, and 658 sundries. Quotations to-day are: American Middling, 10·26; Egyptian Sakel, 17·25; Egyptian Uppers, 11·53; Brazil Fair, 10·46; Peru G.F. Mod. Rough, 12·50; Peru G.F. Smooth, 11·21; West African Mid, 10·31; East African G.F., 11·50.

Manchester, June 5th.

A flat and featureless state of affairs has continued to prevail throughout the cloth and yarn sections. Depressing advices have been received from abroad regarding current and prospective demand for piece-goods and in the circumstances there is little probability of demand broadening sufficiently to enable producers to work a larger amount of machinery, and at the same time insist on more remunerative rates being paid. As a matter of fact there is a distinct tendency for manufacturers' order lists to run down and in order to keep machinery working some low rates have been accepted. Demand for Calcutta has been at a low ebb. There has been rather more inquiry, however, for Bombay, Karachi, Delhi and Cawnpore, and a fair miscellaneous business has been done in light cloths, prints and fancies. Demand for China has been rather larger, but transactions of weight have been few and far between. Business with the Far Eastern markets has been affected by the low price of silver. Only sorting-up lines have changed hands for the smaller markets. The turnover in American yarns leaves much to be desired. Business in Egyptian descriptions tends to broaden.

THE WOOL TRADE.

Our Bradford correspondent writes :—Apart from the fact that the possibility of a safeguarding duty on imported fabrics has become very remote, it cannot be said that the result of the General Election has had any influence upon trade. It was realised that the defeat of the Conservative Party would shatter the hopes of those who looked to Safeguarding to restore prosperity in the wool textile industry, and now everybody seems to be resigned to a policy of "wait and see." The wages position is almost Gilbertian. Reductions have been accepted by some of the operatives in the heavy woollen district; in other districts the operatives are on strike; and in the worsted section firms, who recently gave notice of a 10 per cent. reduction, have capitulated without a struggle and gone back to the old rates. The whole position is most perplexing, and it is high time the Industrial Council took the matter in hand with a view to arriving at a general agreement for the entire industry. In the matter of values, users are still without confidence. Very little business is being transacted in tops and yarns, and quotations remain more or less nominal. The only thing that is at all certain is that the market favours the buyer, and for anything like a decent order, concessions can be obtained in almost all qualities. Merinos appear to be attractive at current rates, but users are not at all inclined to speculate. The political situation has little or nothing to do with it; the trouble is that a workable basis has not yet been established, although it is quite possible that when demand does revive, prices will be on a higher level than that now ruling.

COLONIAL WOOLS.

(from a correspondent.)

This is a rather quiet period so far as the market for Colonial wool is concerned, though naturally growers, sellers and users are beginning to cast their thoughts towards the next clip. It is early to make any definite anticipations about the selling value of forthcoming supplies, though, judging from impressions gathered from various sources, there is likely to be enough wool for requirements without undue inflation. There is, of course, still a considerable quantity of wool to be consumed before the machinery in the West Riding and on the Continent is able to tackle another clip, and it is gratifying to find that each week fairly encouraging sales are being made from the stocks held in Bradford. It is an anomaly to which reference has often been made that wool is more valuable in the bale or as matchings than after being combed, but this fact has again been brought out within the past few days, merino wool having been sold at such a price as it would be absolutely impossible to realise in the top. Prices for merino tops are no firmer to-day than before the election took place, and it is rather disquieting to find that while wool values, so far as it is possible to test them at this juncture, remain steady, tops can only barely hold their own. There does not seem to be quite so much tension about the wages question. The fact that some of the mills have decided to take back their operatives at the old rate of wages will help to maintain consumption, and this is a very vital point at the present time. It is also understood that, following pressure brought to bear by the topmakers, the Commission Woolcombers' Association have withdrawn the scheme announced about a month ago. Instead of a higher rate, with a rebate of 9 per cent., payable periodically, it is expected that a definitely reduced scale of charges will come into force. This is a satisfactory conclusion to the dispute between the topmakers and the combers. It will serve as some inducement for the combers to send more wool to be combed, and will leave them at liberty to use their own discretion in giving out their combing work.

HIDE, LEATHER AND ALLIED TRADES.

Market hides remain steady, with a firm tendency, and at some of the provincial auctions best ox have advanced fractionally. Special interest will be taken at the resumed sales in Bermondsey this week, when some indication of future values will be recorded. Prospects seem bright in foreign hides, as in some cases prices are again advancing. South American fregorifics are, however, the exception, as Argentine and Montevideo ox have sold at 7⅞d. Saladeros are very slow of sale, 7¾d. being paid for Livramento ox. Dry River Plates are firm on spot, with B.A. Americanos offering at 11d., buyers ideas being 10⅝d. There is a decided scarcity in S. African hides, and dry-salted Capes are eagerly bought at 11½d.–10½d. for first and seconds. The Chicago market is cabled as steady and slow, with best heavy packer steers selling at 15½ cents. Australians are held at origin for higher prices, which is checking business. A few dry salted Queensland meatworks hides have, however, sold on a basis of 9½d. The turnover in sole leather shows some improvement. Shoe manufacturers are in receipt of fair-sized orders for footwear, and are perforce obliged to renew stocks of bends and offal. Light dry hide bends are still popular owing to their cheapness, but a fair-sized business is also passing in wet-salted bends with makers of the better class of men's goods. Prices are rather more stable, and one hears less of "slaughter" prices paid by merchants. Export trade remains fairly brisk, but has received a check owing to the suggested imposition of duties on leather sent to the United States. Tanners and merchants have of late done a better business in upper leathers. Prices, however, are still very unstable, and it is to be feared much of the business done shows no profit. Glacé kid in black and colours sells well at firm rates, whilst there has been a better demand for light-weight willow calf and side leathers. Patent remains slow at easier prices, but there is still a good demand for reptile leathers, suede coming in again for attention. The shoe section reports an all-round improvement, and some manufacturers are booked ahead for several weeks. A satisfactory feature of the trade is that the demand for artisan boots shows an improvement after a long period of stagnation.

East India Merchants,

Agents and Secretaries of Rubber,

Tea and Produce Companies,

1-4 Great Tower Street, London. E.C.3

JUTE TRADE.

Dundee, June 5.

Inactive conditions still dominate the jute trade. Business is confined to a minimum and buyers of all commodities are—purchasing only what they cannot do without. Both spinners and manufacturers are stopping machinery to curtail their production, and the number of workers receiving unemployment benefit has increased during the past month by about 600. The stagnation in trade is world-wide, and all the producing centres are complaining of a lack of demand for jute goods. The inevitable result of dull trade is a falling tendency of prices, which, however, have now come down to a very attractive level, and the day may not now be far off when a good improvement in business will be seen. The new jute crops prospect have greatly improved and sellers of the fibre have shown less reserve in offering, but the lack of demand for productions is responsible for an apathetic mood on the part of spinners, who cannot afford to pay even the lower rates now prevailing for the raw material, as these are still high in comparison with the rates ruling for jute yarns and cloth. Good First Marks could be obtained at £32 15s. to £33 for August/September shipment, and Lightnings are offered at £31 to £32, according to quality. Daisee assortment has been sold at £29 10s. for good marks, and Tossa assortment offered at £31 5s. for September/October shipment. Spinners are waiting till conditions become more settled. A good crop of jute is expected in the coming season. Sales of jute yarns are extremely few. Prices are not being really tested. Common 8 lb. crops are quoted at 3s. 3d. and 8 lb. spools at 3s. 4d., but ¼d. less in each case has been done. Buyers are not even indicating what they will pay now that further weakness has been displayed by the raw material prices. Twist is obtainable at 5¼d. for 3-ply 8 lb., and sacking yarns are at 3¾d. for 24-lb. weft and 5⅛d. to 5¼d. for 8-lb. chains. Rove rules unchanged at £17 for 200 lb. and £27 for 48-lb. Fine yarns keep steady, while carpet qualities have been sold to a fair extent for home trade consumption at 5d. for 14-lb. warp. Buyers of jute cloth are unwilling to go forward for delivery. They confine their purchases to small lots for immediate use, and prices vary according to width and weight wanted and the position of the manufacturer. Some makers are well placed for the next few weeks, but others are desperately in need of orders. The quoted rates are from 4 5/16d. for 10½-oz. 40-in. hessians and 3¼d. for 8-oz. Linoleum hessians are quiet, and heavy goods are moving slowly.

VEGETABLE OILS AND OILSEEDS.

Markets for the greater part of the week have been unsettled largely owing to American influences. With falling prices consumers have held aloof and no fresh amount of business has been possible. Linseed oil, in sympathy with seed, fell sharply to £28 per ton naked ex Hull for all positions, but crushers endeavoured to maintain the recent figure of £28 15s. for "spot" oil. With a rather better tone in the market raw oil shaded to £28 5s. for all positions to December. Cotton oils are dull and neglected, but values are nominally unchanged at £26 15s. for crude Egyptian and £30 10s. for common edible, spot, and June–August, ex Hull. Soya oil is easier but other seed oils are about unchanged. In the oilseed section linseed further declined, following the slump in wheat, and trade in Plate on spot transpired at £15, since when there has been some improvement to £15 5s., while £15 7s. 6d. is the value for afloat and early shipment. Calcutta linseed to London declined to £17 for May–June shipment. The quantity of linseed on passage to Europe, at 172,200 tons, is nearly 30,000 tons less than

a week ago and this is having a steadying influence on prices, particularly shipment. Cottonseed sharply declined upon lower cotton values in America and black Egyptian was done down to £8 15s.; but rather more is now asked for June and July loadings. The oilcake demand is very poor and prices easier.

OVERSEAS PRODUCE.

FOOD BEVERAGES, &c.

SUGAR.—Business proceeded with more freedom, both on grocery and manufacturing account at lower prices. The spasm of buying, which usually follows a price concession, was observable, otherwise there was no new feature to note in the general outlook. Depression gradually becomes more acute as producers have still to carry the weight of stock and the preponderance of raw descriptions undermines the market. Any replacing of depleted stocks on the part of the trade would materially alter the position. Acreage in Europe appears to be larger, though to a small degree, than last season, but it must be borne in mind that conditions commenced very much behindhand, and there is considerable lee-way to be made good. So much depends upon climatic conditions and so far very little mention is made of this important point. The domestic crop of beet in the U.S.A. is smaller than last year. It is thought that American houses may soon show interest in the balance of Cuban, as price now is very attractive. Messrs Tate and Lyle reduced quotations 3d. both London and Liverpool sugars. Cubes vary from 25s. to 25s. 6d. as to quality, fine granulated, 22s. 7½d.; coarse, 22s. 6d.; London, 22s. 1½d.; T.L., 21s. 10½d.; ditto month forward, 21s. 9d.; yellow crystals, spot, 20s. 7½d. Business done in T.L. granulated from second-hands ex refinery at 21s. 3d. Other granulated from home-grown factories 21s. 3d. to 21s. 6d. ex works, with parcels depot London 21s., a decline of 1½d. to 3d. White Mauritius, spot, London, 19s. 7½d. to 20s., according to sample. Czecho granulated ready for shipment to the United Kingdom, 10s.; November–December, 10s. 3d. f.o.b.; Dutch J ready, 10s. 3d. f.o.b. Rotterdam. Cuban, 96 per cent. centrifugal, August sellers, 8s.; buyers, 7s. 11½d. c.i.f. Terminal sections easy but unproved with dealings on a fair scale. Of raw, August delivery, sold 7s. 3d., 7s. 4½d.; December, 7s. 9½d. to 7s. 8½d., 7s. 10½d.; March, 8s. 0¾d. to 8s. and 8s. 1½d.; May, 8s. 3¾d. to 8s. 4½d. White, August, sold 9s. 6d. to 9s. 8½d.; December, 10s. 1½d.; March, 10s. 6¾d. to 10s. 7½d. cwt. Cuban receipts last week 54,842 tons, against 39,512 last year; exports, 103,179, against 60,948; stocks, 1,239,050, against 1,257,908; Central workings, 3, against 2. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending June 1st, totalled 120,049 tons, compared with 140,391 last year.

COFFEE.—General slackness was the salient feature in this market during the week. Home-trade buyers were decidedly reserved, while export requirements count for little at the moment. With the exception of East African, prices tended lower. A large quantity Costa Rica mainly bought in.

COCOA.—Only a small movement in spot goods on about former terms. Forward positions rather irregular. Accra, F/F, October–December, sold 41s. 9d. to 42s. 9d. f.o.b. terms. Terminal, June, sold 41s. 6d.–41s. 9d.; September, 44s. 9d. to 45s. 6d.; December, 45s. 6d. to 46s.; January, 45s. 9d. to 46s.; March, 46s. 9d. to 47s.

TEA.—Quantity of Indian offered during the week amounted to 49,329 packages. A rather quiet tone pervaded the auction room, but apart from slight irregularity, there was no marked change in prices. Finest liquoring teas met quite a firm market. Ceylon sales of 31,089 packages came to an irregular and easier market. Buyers were not inclined to operate with any freedom, except at a distinct reduction. Prices mostly from ¼d. to 1d. down, but this was largely attributable to continued falling off in quality. Java and Sumatra auctions quiet and easier.

RICE.—Market firm for all Eastern grain owing to the limited quantities on offer, but an unusual lack of interest on the part of European buyers is still marked. Finer qualities, such as Spanish and blue rose American, meet with but scanty support at the moment.

BEANS.—A firm but quiet market. Madagascar butters, spot, London, 41s. to 43s.; afloat, 40s. 6d.; Rangoon haricots, spot, London, 14s., afloat, 13s. 6d. c.i.f.

PEAS.—Market dull. Japanese, spot, 18s.; afloat, 16s. 6d. to 17s., as to position of steamer; April–May sold, 17s. 3d.; May–June sellers, 17s. 1½d.; new crop, September–October sold, 18s. 9d. to 18s. 10½d. c.i.f.

SPICE.—A good demand for pepper in forward positions and with reserve marked on the part of sellers, prices ruled firmer. Spot lots steady, moderate inquiries. Lampong, May–July sold, 1s. 3½d.; August–October, 1s. 2½d.; white Muntok, May–July, quoted, 2s. 2¾d.; June–August sold, 2s. 1¾d.; August–October, 1s. 11¾d. London stocks increased 151 tons on the week for black, but white, 16 down. Cloves dull, unaltered. Pimento very slow. August–October steamer to London quoted 113s. cwt. c.i.f. Singapore flake tapioca, June–July, to Havre, quoted, 18s. c.i.f. Sago flour, near, 11s. 1½d., distant, 11s. 3d. c.i.f. U.K. Dutch farina, 11s. 10½d. f.o.b. African ginger, spot, London, 62s.; shipment, 61s. cwt. c.i.f.

FRUIT (Dried).—Currants in quiet demand, but market firm. Pyrgos quoted, 45s.–46s.; Amalias, 46s.–47s.; Zante, 46s. 6d.–47s.; Vostizza, 52s.–56s.; Australian sold readily at 46s.–57s. Sultanas, parcels to arrive meet with fair support at about 34s. c.i.f., the small quantity available on spot ruling at 44s.–48s.; choice Cretan quoted at 55s.–59s.; Australian, new, 45s.–65s.; old, 31s.–38s.; Cape, bleached, 52s.–68s. Raisins slow; Valencia, common to good, 40s.–45s.; Lexias, new, 45s. Figs in small supply, bags genuine, common to fine, 28s.–35s. Dates in fair demand; Siar, spot, 14s.–16s.; first tide, 14s. per cwt.

EVAPORATED FRUITS.—Market firm, with a steady trade passing' plums tending dearer on reserved offerings; Californian plums, 20's–30's, quoted 66s.–68s.; 30's–40's, 58s.–60s.; 60's–70's, 44s.–46s. Pears, Lake County, 80s.–100s.; Australian, 75s.–76s. Apricots, South African Royal, 57s. 6d.–117s. 6d.; Australian, 70s.–85s. Peaches, Californian, choice, 54s.; extra choice, 56s.; fancy, 60s. Apples, Californian, spot, sliced extra choice, 77s. 6d. Almonds quiet and values easy; Magazan, 132s. 6d.; Mogador, 132s. 6d.; Majorcas, 135s.; Bitter-Jordan, 185s.–210s. cwt.

CANNED GOODS.

CANNED FRUIT.—A good demand continues for all descriptions of Californian fruits and a firm tone prevailed, packers indicating higher figures for the small remaining stocks on hand. New crop position unchanged pending the issue of opening quotations. Australian varieties sell readily at full rates. South African pines move off steadily and Hawaiian firm on scarcity, but Singapore are somewhat irregular in value, both spot and forward. Tomatoes quiet at about late rates.

CANNED FISH.—Market quiet, but best quality held for full rates. Portuguese clubs, 5s. per dozen tins. Lobsters, new pack supplies are readily absorbed, and best halves held for 145s.–155s. Salmon in good demand and market firm; Red talls, spot, 44s.–46s.; pink, ditto, 27s. 6d.–29s. 6d.; halves, 33s.–36s. 6d. Japanese crab firm, finest quality ruling at 97s. 6d.–102s. 6d., available supplies being light.

CANNED MEATS.—Corned beef and tongues tend firmer on limited offerings, but demand quite moderate. Danish boned hams realise full rates. Brawn in request at fully steady rates.

CONDENSED MILK AND MILK POWDERS.—Market generally steady. Full cream, sweetened: English, spot, 42s. 6d.; Dutch, ditto, 37s.; June–July, 37s. 6d. Machine skimmed, sweetened, English, spot, 25s.; Dutch, ditto, 22s. 9d.; June–July, 23s., all in 5-cwt. barrels. Powders, Spray process F.C., 26 per cent., 2 by 56 lb. tins, crated, 90s.; M.S. (1-cwt. cases), 41s.; Roller, ditto, F.C. 26 per cent., 73s., M.S., 31s. 6d., all nett, duty paid ex-wharf, London. On the grocery side, F.C.S., 20s.; M.S.S., 9s. 6d., basis per case, usual packing. Danish cream, evaporated, unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 48 by 14 oz., 20s. per case.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South and East African matters of Trade and Commercial Interest.

CENTRAL HANOVER
BANK AND TRUST COMPANY

Unites

Central Union Trust Company Of New York
and Hanover National Bank

With total resources of over $582,000,000 and capital funds of over $100,000,000 Central Hanover Bank and Trust Company merges two old, independent and conservative New York financial institutions with a history dating back to 1851.

Central Hanover Bank and Trust Company brings together two groups of widely experienced and carefully trained officers whose traditional policy of direct dealing with customers assures prompt decisions and quick action.

Its large banking business as well as the volume and quality of its trust business have been notable characteristics of the Central Union Trust Company. Hanover National Bank has been eminently a bankers' bank. Central Hanover Bank and Trust Company therefore has unusual facilities and organization for a completely rounded banking and trust service, domestic and foreign.

Central Hanover Bank and Trust Company will continue to maintain foreign representative offices which cooperate with local banks, rather than compete with them. This has been largely responsible for the highly satisfactory service of the foreign departments in expediting and financing foreign business, export and import.

The presidents of both institutions head the official staff of Central Hanover. George W. Davison is president and William Woodward is chairman of the board.

HONEY.—Market quiet and larger quantities of new crop Jamaican are available, general run of quality being satisfactory. Jamaican, white set, 55s.; good amber to fine pale, 48s.–53s.; dark to fair amber, 42s.–46s. New Zealand, dark amber, 50s.–55s.; medium, 55s.–65s.; light, 65s.–85s.; white and water whites, 65s.–87s. 6d. Fine white smooth San Domingo, 55s., with lower grades down to 47s. Californian, 55s.–57s. 6d. cwt.

RUBBER.

Market quite steady, but only a comparatively small business was arranged. Plantation sheet, spot, and June, sold, 10⅛d., 10 7/16d.; July–September, 10 11/16d., 10⅝d.; October–December, 11 3/16d., 10⅞d.; January–March, 11 7/16d., 11⅛d. London stocks, 646 tons higher on the week, landings being 2,175; deliveries, 1,529; stocks, 31,539, against 43,716 last year. Liverpool stocks, 23 tons lower; landings, 135; deliveries, 158; stocks, 4,642. Total Straits shipments last month, 43,960 tons, of which 15,593 were of foreign importation. To the U.K. 5,477 tons were shipped; U.S.A., 30,996; Europe, 4,257; British Possessions, 1,583; Japan, 1,525; other foreign countries, 152.

GENERAL.

JUTE.—Business again kept down and undertone of market by no means robust owing to slackness of demand for manufactured goods and excellent crop prospects but steadied later Firsts, May–June, Continent, quoted, £28 15s.; June–July, £28 15s.; July–August, £29 5s.; new crop, August–September, sold, £30 2s. 6d.; lightnings, June–July, quoted, £28 7s. 6d.; August–September, sold, £28.

HEMP.—Despite firm cable advices from Manila and sustained inquiries on Japanese account, the London market disclosed a dull state of affairs with trend of prices against sellers. J.2, June–August, quoted, £38; K, £33; L.1, £33 10s.; M.1, £31 10s. African sisal, No. 1 f.a.q., June–August, sellers, £39 10s.; No. 2, £37 10s. c.i.f. Manila receipts for past week totalled 34,000 bales, compared with 24,000 at corresponding period last year. Estimate for next week, 26,000; and following week, 29,600. Manila shipments to Europe last week, 16,000 bales; U.S.A., 6,000; Japan, 4,000; other countries, 1,000. Local stocks, 7,000 bales up at 208,000.

SHELLAC.—Market quiet. T.N., spot, 200s.; August, 199s.; October, 201s. cwt.

COPRA.—Increased depression proved the salient feature as crushers confine their purchases to wants of immediate necessity, but became steadier. Straits, sun-dried, June–July and July–August, to Rotterdam, quoted, £21; Dutch East Indies, £20 15s.; Ceylon, June–July, sellers, £22; South Sea, S.D., to Rotterdam or Hamburg, quoted, £19 17s. 6d. To Marseilles, F.M. Manila, June–July, sellers, £19 12s. 6d.; smoked South Sea ditto, £19 12s. 6d.; business negotiated in mixed, excluding Padang, June–July, at £19 10s. to £19 13s. 9d. Palm Kernels, June–July, Hamburg, quoted, £16 10s.; July–August, £16 10s.

MISCELLANEOUS.—Coconuts, quoted, 12s. to 16s. per 100. Coir yarn, Ceylon, £19 10s. to £37 10s.; Cochin, £23 to £41; Ceylon bristle, £18 15s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 1s. 10½d.; Java, 2s. 2d.

METROPOLITAN CATTLE.—June 5.

THE MONEY MARKET.

ALTHOUGH money remains easy, 4½ per cent. being the rate charged for new money in the middle of the week, there are signs that the supplies released by the payment of the War Loan dividend at the beginning of the month are slowly being absorbed. At the same time, the clearing banks are continuing to lend money until June 28th at 4½ per cent., and this suggests that there is no fear of any immediate stringency. Nor is any undue pressure

anticipated at the turn of the half-year. There will, presumably, be the usual precautionary borrowing from the Bank during the last week of June, but some banks are already offering money over the end of the month at 5 per cent., a fact which carries with it a general suggestion of relative ease.

* * * *

July bills are quoted at $5\frac{1}{16}$-$\frac{1}{8}$ per cent., August bills at $5\frac{3}{16}$ per cent., while the market rate on three months' bills is $5\frac{1}{4}$-$\frac{5}{16}$ per cent., $5\frac{9}{32}$ per cent. being the working rate. The banks are already well supplied with bills maturing at the end of June, and no change in rates or in market conditions is anticipated. In view of the low level of the New York Exchange, the gold position is satisfactory. This week, the Bank secured £307,000 of the new gold in the market, and there is no trace of any having gone to America. The " unknown buyer " was in evidence again, and obtained £500,000. There is no clue to his identity and indeed it is believed that this week there were three or four " unknown buyers " in the market who secured the gold between them.

* * * *

The weakness of sterling in New York is now viewed with greater equanimity. Debt payments by England and France are believed to be the explanation. In particular, it is thought that a few months ago, when the French authorities were buying dollars, heavy forward sales were made against sterling. These sales are now having to be covered, and it is said that one or two dealers are now finding themselves caught short. This squeeze explains the low level of the spot rate, and if this explanation is correct, an early rally can be expected, when once the squeeze is over. In any case, it is clear that the American authorities do not want to take gold.

	June 13, 1929.	June 6, 1929.	May 30, 1929.	May 23, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	5½	5½	5½	5½	4½ (Feb. 7,'29)
Banks' Deposit Rate	3½	3½	3½	3½	2½ (Feb. 7,'29)
Discount ∫ Call	3½	3½	3½	3½	2½ (Feb. 7,'29)
Houses \ Notice	3¾	3¾	3¾	3¾	2¾ (Feb. 7,'29)
Market rate (3 months' bills)	$5\frac{1}{4}-\frac{5}{16}$	$5\frac{5}{16}$	$5\frac{5}{16}-\frac{3}{8}$	$5\frac{1}{8}$	...

The monthly statement of the nine English clearing banks records a decline of £11.1 million in deposits, and one of £9.9 million in acceptances. It is difficult to resist the conclusion that these are the result of the fall of £5.7 million in the banks' cash holdings.

	Jan., 1929.	Feb., 1929.	Mar., 1929.	April, 1929.	May, 1929.
Capital and reserves	130·8	130·8	130·8	130.8	130·8

Total assets	2,172·8	2,139·0	2,092·2	2,080·5	2,059·5

Discounts have risen by £3.4 million, this increase being probably the reflection of the upward trend of Treasury Bill issues. The steady expansion in advance has at last been checked, this item having fallen by £9.4 million. In view of the general shrinkage in the bank's resources, it was inevitable that this experience should come to an end.

NEW YORK MARKETS.

Our New York correspondent cables:—After temporary firmness following preparations for tax date settlements, money has been easier, call rate having fallen to 7 per cent. The banks have been allowing their reserves to run off in anticipation of the Treasury borrowing at the end of the week. Easier money still is expected in the early part of next week, until income-tax cheques for second-quarter payments are collected. The easier tendency has been aided by the Reserve Banks, who bought $22 million of Government securities and $2 million of bills, probably with a view to helping dealers over mid-month difficulties. Meanwhile, the member banks have cut down their borrowings by $44 million, and the Reserve ratio is up to 75.2 per cent. There has been an increase in contingent liabilities, and the total of bills purchased by foreign correspondents is higher. A considerable gold movement from Canada is now expected on the removal of what has been a virtual embargo by the Dominion Government.

THE STOCK MARKETS.

After a wholly deceptive appearance of re-awakening activity on Monday, markets slipped back into their former dull condition. Investment demand was sufficient to maintain prices and to give a steady tone, but the public refused to be drawn into speculative operations. The gilt-edged market was idle and easier on the behaviour of the New York exchange, but the Foreign Market derived benefit from the signature of the Reparations report. Home Rails had a short-lived period of activity in view of possible assistance from the Labour Government; but the Industrial markets were stagnant, apart from considerable dealing in Gramophone (H.M.V.) shares on a bonus capital issue announcement. Rubber shares attracted no interest. Oils early lost the impetus given by the conservation conference in America. Activity in Rhodesians remained professional, but General Smut's success in South Africa was regarded as a bull point for Kaffirs.

THE COMMODITY MARKETS.

Trade in the principal markets continues the trend of recent weeks. The coal industry is for the most part maintaining its position, though South Wales reports easier conditions. Except for some disappointment in the finished steel section over the falling-off in new shipbuilding contracts, the iron and steel trades continue to report a fairly satisfactory state of affairs, though a shortage of Cleveland iron is causing some inconvenience. Other metals have shown some slight weakness. There has been no perceptible improvement in the Manchester cotton trade. While there has been no definite change in the Bradford position, the adoption of a firmer attitude by topmakers is a promising sign. The hide and leather trades are definitely improving. Linseed and linseed oil are in poor demand, but cottonseed and oils are steadier. Wheat has declined one point.

THE FOREIGN EXCHANGES.

Fair activity again characterised the Foreign Exchange market with steady trading. The principal features were the continued weakness of sterling against the dollar, and the recovery of the peseta, apparently under the influence once more of some official control. New York fell away from 4.84$\frac{15}{16}$ to 4.84$\frac{25}{32}$,—as a result of persistent buying of dollars especially by France. The Montreal rate rose to 4.89. Paris lost a point at 124.04 after 124.02. Madrid recovered to 33.93, after opening at 34.65 and touching 33.85. Amsterdam was better by $\frac{1}{8}$ at 12.07$\frac{1}{4}$ after 12.08, and Berlin lost $\frac{1}{2}$ on balance at 20.34 after 20.35$\frac{1}{4}$. Switzerland fell away to 25.20$\frac{1}{4}$, but Stockholm gained 1$\frac{1}{8}$ at 18.12$\frac{3}{8}$. The other Scandinavian currencies were unmoved. Constantinople recovered to 998 from 1,015. Of the South American exchanges Buenos Aires gained $\frac{1}{32}$d. at 47$\frac{5}{32}$d. Montevideo lost $\frac{1}{8}$d. at 47$\frac{3}{4}$d. and the premium on 90 days' Lima on London declined by $\frac{1}{8}$ per cent. to 19$\frac{1}{2}$ per cent. In the Far East the rupee lost $\frac{1}{32}$d. at 1.5$\frac{33}{64}$ with the lowering of the Bank rate whilst the yen fell away by $\frac{7}{32}$d. to 1s. 9$\frac{3}{4}$d. Batavia lost $\frac{1}{8}$ at 12.10$\frac{5}{8}$. In the forward market the discounts on forward New York widened from $\frac{7}{32}$ cent to $\frac{5}{16}$ cent for one month and from $\frac{1}{2}$ cent to $\frac{19}{32}$ cent for three months. The premium on forward Paris rose from 2 to 4 centimes and from 5 to 6 centimes for the two periods. The quotations for forward Milan was practically unchanged, but the premium on one month's pesetas widened a point to 5 centesimi. Discounts on forward Amsterdam were rather wider at $\frac{1}{4}$ and 1$\frac{1}{4}$ guilders, but that on one month's Berlin was a shade narrower at 4$\frac{1}{2}$ pfennigs. The silver market showed no signs of genuine demand for consumption, but prices rose $\frac{3}{8}$d. for spot and $\frac{3}{16}$d. for forward under the influence of Chinese and Indian buying for cover for speculation. The China silver exchanges improved in sympathy, Hongkong gaining $\frac{1}{8}$d. at 1s. 11$\frac{3}{4}$d. and Shanghai $\frac{1}{4}$d. at 2s. 4$\frac{7}{8}$d.

THE NEW GOVERNMENT.

The general complexion of Mr MacDonald's second Ministry is such as to encourage the country, irrespective of differences of political faith, in its determination to give the new Government a friendly welcome and a fair, unprejudiced trial. In forming his Administration the Prime Minister, whose wisdom in refraining this time from the burden of two portfolios is undoubted, has avoided alike the sensational and (with one exception) the provocative. His Cabinet, reduced on this occasion to nineteen in number by the exclusion of the Postmaster-General and the Chancellor of the Duchy of Lancaster, is composed in the main of " old hands," whose influence may be relied on to weigh heavily against the adoption of legislative short-cuts to Utopia. Certain appointments give room for slight misgiving; in the case of others judgment must be suspended until capacity has been tested by events. As a whole, however, the list of Ministers, strengthened, as it is, by the infusion of a considerable amount of new blood in the junior posts, holds the promise of a sane, well-balanced Government, not lacking either vigorous or talented elements, but likely on balance to " play for safety " in full consciousness of the fact that their tenure of office rests upon a minority in the House of Commons.

In the realm of domestic policy Mr MacDonald's selections are well advised and in appearance—one may add—ingenious. Allotting to Mr Clynes the task of assuming at the Home Office the mantle (" cut down " a trifle) of Sir William Joynson-Hicks, the Prime Minister has clearly planned how best to co-ordinate in the strongest hands available the work of the Departments upon whose aid he must call in implementing the Labour Party's " unqualified pledge " of their Election Manifesto, " to deal immediately and practically with unemployment." Mr J. H. Thomas is appointed to the sinecure office of Lord Privy Seal in order that he may devote the whole of his considerable energies to carrying out the Government's unemployment schemes, which the Prime Minister defined in his broadcast speech last Saturday as " dealing with unemployment not only by relief works but by plans directed by the idea of national reconstruction." As lieutenants in this campaign Mr Thomas will have Mr George Lansbury and Sir Oswald Mosley—" part-timers " in the not onerous posts of First Commissioner of Works and Chancellor of the Duchy of Lancaster—while the Ministry of Labour is given to Miss Margaret Bondfield, whose record and abilities have fittingly earned her the distinction of being the first woman to reach Cabinet rank. The inclusion in this quadrumvirate of Mr Lansbury—a fiery vintage mellowed somewhat by years—is an astute move, inspired, we suspect, by the hope that the Left Wing may hesitate to fire its arrows of impatient criticism at the Lord Privy Seal thus " covered " by a veteran champion of " Socialism undefiled." On the other hand, lest the eleemosynary enthusiasms of the First Commissioner prove too strong even for Mr Thomas' well-known sense of realism, assurance against fears of extravagant policy is to be found in the return of Mr Snowden to the Exchequer, and the well-merited appointment of Mr William Graham, an essentially sound and careful administrator, as President of the Board of Trade. In Mr Arthur Greenwood also the Prime Minister has found a Minister of Health whose policy is unlikely to be over-adventurous but whose criticism from the Opposition benches of the late Government's De-Rating Bill showed a rare grasp of an intricate subject, equalled only on that side of the House by Miss Susan Lawrence, who appropriately becomes Parliamentary Secretary to the Ministry. Finally, by the appointment of an energetic Minister of Transport in Mr Herbert Morrison—with Dr Addison, returned from exile at the Prime Minister's " special and urgent request " to support Mr Noel Buxton at the Ministry of Agriculture, and with Sir Charles Trevelyan back at the Board of Education—Mr MacDonald completes a " Home " team whose personnel should succeed in combining adequately the qualities of boldness and moderation.

It is in the sphere of external policy that the capacity of the new Ministry may be most severely tested. Of the two " key " positions under present circumstances—the Foreign Office and the Admiralty—the first is filled by Mr Arthur Henderson, the second by Mr A. V. Alexander. The Prime Minister has made it clear that he intends personally to take an active part in major issues of foreign policy, but Mr Henderson, whose temperament is not that of a docile " second fiddle," and who is certain to insist on a fair measure of the " rights " of his office, can hardly be described as the ideal Foreign Secretary. A shrewd party organiser, whose world at home and abroad has been limited in the main to the confines of " the Movement," Mr Henderson has a reputation less for keenness of vision or subtlety of perception than for a solid, not to say insular, integrity of purpose which is capable of blinding him to what he fails to understand. In regarding this appointment as an unfortunate, if inevitable, *pis aller*, we are glad to note that the Foreign Office will have a promising Under-Secretary in Dr Hugh Dalton, an economist of ability, who has lately made a special study of foreign affairs.

First Lord of the Admiralty at a critical juncture, Mr Alexander, who has made his name hitherto in the Co-operative movement, is a somewhat unknown quantity. He is endowed, however, with both tact and pertinacity, qualities which should stand him in good stead if hoped-for progress towards naval disarmament involves, as well it may, a sharp clash of opinion between the Board of Admiralty and the First Lord. Mr Alexander has a very great opportunity: a great chance to make a Ministerial reputation also awaits the new Secretary of State for India, Captain Wedgwood Benn. A " bonny fighter " in debate, and well liked in all parts of the House of Commons, he will in all probability have the responsibility for whatever measures fall to be taken by Parliament on the report of the Simon Commission. It is a task in which he will have valuable assistance from Dr Drummond Shiel as Under-Secretary, and in which he will be free at least from factious party criticism. We are hopeful that, although new to office, he will rise to the occasion.

For the rest—with one exception—the composition of the Government has occasioned little comment beyond expressions of good will. Mr Sidney Webb's appointment to the Dominions and Colonial Office is an interesting experiment. Never wholly effective as a House of Commons man, Mr Webb, translated to the House of Lords, will have a chance, in an atmosphere perhaps more congenial, to devote to the various problems of the constitution of the Commonwealth the great talents and industry given hitherto chiefly to questions of Local Government at home; and though the choice of Mr Ponsonby as Mr Webb's deputy in the House of Commons is possibly not the happiest, he will have a useful colleague in Mr Lunn. At the War Office, Mr Shaw should be a popular and unprovocative Minister; Lord Justice Sankey's promotion to the Lord Chancellorship gives general satisfaction; Mr Adamson at the Scottish Office resumes duties with which he was successfully entrusted in 1924. As for Mr Jowitt, his appointment as Attorney-General raises questions of the ethics of political recantation which we discuss in a later column. Here we need only observe that Mr MacDonald would, in our opinion, have done better to forgo this admittedly strong reinforcement of his legal advisers by methods of recruitment so repugnant to the traditions both of British politics and of the Bar.

Having thus manned his Ministry with a crew of safely " gradualist " persuasion, chosen from the Right and the Right Centre of his party, Mr MacDonald has elected to face one risk—the prospect of disaffection on the part of his Left Wing. He has spared Cheltenham and the City from alarm. The price is failure to evoke enthusiasm on the Clyde. Mr Wheatley, a formidable exponent of uncomfortable doctrine, is dropped; Mr Maxton—an omission calculated to cost Mr MacDonald dear—is left outside. Already the I.L.P. has conveyed to the Prime Minister blessings in a deliberately embarrassing tone of

mock enthusiasm. In short, if the new Government is shipwrecked, the omens are that disaster will come from mutiny on board. The sea, at the time of sailing, is calm and the wind favourable. The Press is cordial, the camera-men attentive, and public opinion hopefully expectant. Abroad, in naval agreement with the United States and in the ratification of the Young Plan for Reparations settlement, there are ripe plums of credit to be gathered. The rocks lie in home waters. The demands of the miners, whose district wage agreements expire in the autumn, are a problem which offers grave difficulties. It may take more than the prestige of Mr Ben Turner, the new Parliamentary Secretary of the Mines Department, and an ex-chairman of the Trades Union Congress, closely associated with the cause of industrial peace, to persuade the members for South Wales and Durham constituencies to exercise patience in this issue. And if the industrial side of the Labour Movement may be inclined to draw embarrassingly on Government support, we fear that the Left Wing politicians who have committed themselves sincerely to the pledge of "Socialism in Our Time," may in the end refuse to subscribe to the alternative policy of "Office for Ever," and insist, to Mr MacDonald's undoing, on speculative adventures which the country does not desire and which the present House of Commons will not tolerate.

THE REPARATIONS REPORT.

The report of the reparations experts, the text of which is now available, is an epoch-making document. It may not be—indeed, it certainly is not—the last word on the subject, and there will be various occasions when this inscrutable figure of ill-omen will again glide into the limelight. But its appearance will no longer throw the chancelleries of Europe into panic and confusion, for its power of creating discord has been greatly curtailed by the experts who have contrived to introduce certain elements of finality into the settlement and to set up commercial machinery for the collection of the debt. By so doing they have taken the question still further out of politics and prepared the way for the final act and symbol of the pacification of Europe—the evacuation of the Rhineland. If the report has created less stir than its predecessor, the report of the Dawes Committee, it is because the debates, the differences of opinion and the decisions of the Committee have been deliberately allowed to become known during the course of the Conference.

But this does not detract from the merit of those who have struggled to reach a settlement through the gravest difficulties. That they have reached an agreed conclusion which it is practically certain will be acceptable to the Governments concerned is evidence not merely of their technical skill and ingenuity, but also of their perseverance, their understanding of political possibilities and their personal good relations. In this connection they undoubtedly owed much to the fact that Belgium, Britain, France, Italy, and the United States each had one delegate on the Committee who had also been a member of the Dawes Committee. It was, indeed, largely the reunion of a family party whose members were determined to emulate their own previous success.

The chief features of the new scheme may be briefly summarised :—

The fantastic figure of 132 milliard marks which was fixed in 1921 as the total of Germany's obligations, and left nominally untouched by the Dawes Report, is gone for ever.

The Dawes annuities, which reached a maximum—subject to an increase in accordance with an index of prosperity—of 2½ milliard marks this year, and were to continue for an indefinite period, are to be superseded by a definite schedule of annuities which comes to an end in 1988, or earlier if there is a complete cancellation of war debts in respect of payments due after 1966. The index of prosperity, which was the subject of much criticism in Germany, entirely disappears.

The new schedule of annuities follows an ascending curve for 36½ years from September next during which period it will yield a surplus over the total payments due to America in respect of Allied debts. Thereafter, for a period of 22 years, it is fixed at a figure calculated to cover the total of the Allied debts. The following shows the annuity for selected years of the schedule (the figures have been readjusted to fit in with the German fiscal year which ends in March):—

DURING FIRST 37 YEARS.
(In million reichsmarks.)

Seven months to March, 1930 ...	742·8	1940–1	.....	2,155·5
1930–1	1,707·9	1945–6	.....	2,203·8
1931–2	1,685·0	1950–1	.....	2,359·2
1932–3	1,738·2	1955–6	.....	2,359·8
1933–4	1,804·3	1960–1	.....	2,380·5
1934–5	1,866·9	1965–6	.....	2,428·8

SUBSEQUENT 22 YEARS.

1966–7	1,607·7	1980–1	.....	1,711·3
1970–1	1,643·7	1985–6	.....	925·1
1975–6	1,675·0	1987–8	.....	897·8

It is calculated that the annuities during the first 37 years are equivalent to a constant annuity of 1,988·8 million marks plus the service of the Dawes loan.

This schedule is a substantial reduction—particularly in the early years—on the standard Dawes annuity of 2½ milliards and does not even reach it in the maximum year. While it limits the payment of a surplus for reparations to 37 years, it definitely links the payments of Germany with payment of the Allied debts thereafter. If there is any remission of Allied debts during the first 37 years, Germany is to benefit to the extent of two-thirds of the remission. The whole benefit of any remission in the subsequent 22 years will go to Germany.

The experts do not assume that it will always be possible to transfer these sums punctually; they accordingly propose that 660 million marks a year (to include the service of the Dawes loan) shall be unconditional, but that the rest shall be subject to postponement of transfer (and to a less extent of payment) at the option of the German Government. The period of postponement is carefully limited, and interest will be charged. Whenever the postponement is declared an advisory committee is to be called into being to report to the governments and to the International Bank.

Subject to this measure of elasticity, and in view of the reduction of the amount of the annuities, the experts—including, of course, those of Germany—declare that "the total amount of the annuity proposed . . . is one which they have every reason to believe can, in fact, be both paid and transferred by Germany.

Germany will therefore take full responsibility for payment and for transfer. Consequently, the assignment of particular German revenues will cease and the Agent-General and the apparatus of control will be swept away. The special reparations charge on German industries will go, as will also the bond on German railways with its accompanying foreign participation in management and control. But the railway is to pay a tax guaranteed by the German Government of 660 million marks a year for 37 years to the account of Germany's creditors. During this period the private and independent character of the railway company is to be preserved. The scheme also provides for the gradual elimination over a period of 10 years of deliveries in kind which are limited in amount to a definite schedule. In return for these concessions Germany will lose the protection of the Transfer Committee—the device under which an Allied Committee assumed the responsibility of transferring the annuities into foreign currencies or suspending payment if this proved impossible. Germany also undertakes to maintain the convertibility and gold parity of the reichsmark.

In place of the elaborate provisions of the Dawes plan in regard to revenues, mortgages, controls, &c., the new annuities are to be paid monthly into a new institution—the Bank of International Settlement—whose constitution and functions are discussed in a later column. The motive for the foundation of this institution is described as follows :—

"The organisation and machinery of the Dawes plan were based on the conviction that it must find its proper guarantee in the interest of all parties to carry it out in good faith. In aiming as it did at the transference of the Reparation payments from the political to the economic and business sphere, it presumed constant co-operation of debtor and creditor alike. The new system goes farther along the same road, replacing the collaboration of separate administrative and governmental organisation by common work in a purely financial institution, in the management of which Germany is to have an appropriate part."

There are many other important details which we cannot enumerate here. For example, it is proposed to wipe out all claims and counter-claims outstanding connected with the war, including Germany's demand for reimbursement from her former Allies.

Whatever be the final outcome, the present report clears up a tremendous number of questions and simplifies the machinery. It carries a stage further the writing down of Germany's annuity and provides for the commercialisation of all reparation transactions. The report is actuated by the doctrine which all the creditors now recognise, namely, that the only way to secure greater certainty is by moderating claims. The present report is a big step forward in this direction. Particularly significant in this connection is the fact that the Experts have fixed a very modest sum as the unconditional sum which Germany is to pay in good times as in bad—a figure, which is approximately equal to that which Britain has been paying to the United States. Indeed, the report as a whole seems actuated by a keen desire to attain certainty, and has therefore abandoned many of the economic finesses of the Dawes report. There is no economic discussion of Germany's capacity to pay, or of the ability to make transfers. With the index of prosperity has also gone apparently the suggestion in the Dawes report that the annuity should be subject to reconsideration if there were a great change in the value of gold. Nobody can say for certain that such a change will not occur before 1988, but it is possible that the Experts rely in this connection on their new baby, the Bank of International Settlement, to prevent any violent change in the value of gold. Whether Germany can in fact pay for two generations the sum which the Germans as well as the other Experts have now attributed to her, is still a matter of conjecture. Clearly 1¾ to 2 milliards is an easier proposition than 2½ milliards, but Germany has not yet paid anything from her own export surplus. For the time being the problem is out of the way. It is now definitely in hands which will treat it as a financial and not as a political problem. Europe will be content to leave it there.

It remains to observe how the scheme has overcome certain special difficulties. The fact that a part of the annuity—even though a relatively small one—is unconditional, will make it possible for this sum to be used as the basis of a loan. At long last France will thus be able to "mobilise" a portion of these long drawn out payments. To meet her special needs, the creditors have agreed that 500 millions of the 660 millions unconditional annuity should be assigned to her. This would mean that she would have a considerable advantage if difficulties arise in connection with the payment of the balance. It is therefore laid down that France will give an undertaking to the Bank to deposit in a Trust Fund a sum of 500 million marks in the event of the postponement clauses coming into effect. This fund will in any case be brought into being if France mobilises her annuity.

Finally, a word must be said as regards distribution among the creditor powers. This question inevitably starts from the Spa percentages. But Great Britain has consented to a reduction of her percentage in return for an immediate advantage. In view of the reduction in the early annuities compared with the large sums we are paying to America, a strict adherence to the Spa percentages would not, for some time, give us the full amount of our outgoings. The other creditor nations have recognised our position and agreed to give us a higher percentage in the earlier years in return for a lower percentage later on. The net effect is that the receipts which we shall obtain under the scheme from now onwards will, with the receipts from our former Allies, cover our payments to America and, in this sense, fulfil the terms of the Balfour Note. We have, however, agreed to sacrifice any claims for arrears in respect of net payments already made to the United States, and the wiping out of this claim accounts for the drop in the annuities between 1985 and 1988. We think, however, that everyone will approve the abandonment of this claim for repayment of arrears two generations hence for the sake of a settlement and all that it implies, especially seeing that from now onwards we shall cover our outgoings to America unless the whole scheme breaks down. Our delegates have in fact very sensibly adopted the policy which has actuated our debt settlements up-to-date, namely, that a bird in the hand is worth two in the bush.

THE REPARATIONS BANK.

In some ways the draft constitution of the new "Bank for International Settlement" is the most important section of the report of the Young Committee. If the powers proposed to be given to the new bank are limited to those absolutely necessary for the transfer of reparations, the bank would only have to be regarded as an unobtrusive if necessary piece of machinery in the Plan. But the bank's powers are to be far wider—so wide, in fact, that it is impossible to resist the conclusion that the experts had in mind the ideal of a world central bank performing the same functions for existing central banks as they in turn perform for commercial banks in their own countries.

To consider first the more important details of the draft constitution.

1. Purpose: To provide additional facilities for the international movement of funds, and to afford a ready instrument for promoting international financial relations; to act as trustee and administrator of the Reparations Plan, and to assist in the mobilisation of certain portions of the annuities.

2. Share Capital: $100,000,000, to be issued at once, in shares 25 per cent. paid. The shares are to be issued equally in the seven countries represented on the experts committee, but the issue of shares up to a limit of $44,000,000 may by mutual arrangement be transferred to other countries. The shares carry no direct voting rights, which are vested in the central banks of the countries concerned in the issue of shares.

3. Management: The board of directors shall consist of the governors of the central banks of the seven countries represented on the committee, together with a nominee of each governor. During the period of the annuities the Governor of the Bank of France and the President of the Reichsbank may also appoint an additional director. These directors shall in turn elect up to nine other directors from lists supplied by the governors of other central banks participating in the share issue.

So much for the aims and control of the bank. To come now to the duties it is to undertake.

1. Deposits: The bank shall classify the deposits into (*a*) deposits on annuity account; (*b*) demand and time deposits from central banks; (*c*) deposits from central banks on "clearing account" for establishing and maintaining a fund for settling accounts among them; (*d*) deposits arising from the exercise of the bank's functions in connection with the German annuities; (*e*) deposits constituting guarantee funds relative to the mobilisation of the unconditional annuities; and (*f*) the special deposit of the German Government as provided in the main scheme.

2. Reserve: (*a*) deposits on "clearing account" are to be made in gold, either delivered to the new bank or held for its account under earmark. Such gold is to be reserved exclusively for this purpose, which means that this class of deposits is fully backed by gold; (*b*) all de-

posits payable on demand or at less than fifteen days' notice are to be backed as to 40 per cent. by gold or eligible gold exchange; (*c*) time deposits are to be backed as to 25 per cent. by gold or eligible gold exchange.

3. Loan and Discount Powers: These are drawn so widely as to correspond to the usual powers and functions of a central bank. Thus the new bank may buy and sell gold coin and bullion. It may buy and sell approved bills of exchange and securities. It may open and maintain deposit accounts with central banks. It may act as their agent and correspondent, and conversely appoint them as its own agents. It may act as the agents of any creditor Government in issuing bonds against any part of the securities and in managing their service. Last, but not least, it may rediscount eligible bills for central banks, or make loans to them against gold, eligible bills or approved securities. The investment powers of the bank, however, "shall never be used in such a way as to exercise a predominant influence over business interests in any country."

4. Special Reparations Duties: These are too many to enumerate in detail, but in general it is to carry out all the duties laid down in the main scheme.

5. The Bank's Profits: (*a*) 5 per cent. of each year's profits are to be paid to the bank's "legal reserve fund," until the fund equals 10 per cent. of the paid-up capital; (*b*) a cumulative dividend of 6 per cent. on the paid-up capital shall next be paid; (*c*) 20 per cent. of the surplus shall then be paid to the shareholders until a maximum dividend of 12 per cent. is reached; (*d*) a defined proportion of outstanding profits shall then be allocated to the bank's general reserve fund, according to a sliding scale based on the relative sizes of the general reserve fund and the paid-up capital; (*e*) any surplus then remaining shall under certain defined conditions be paid as to 75 per cent. thereof to the creditor countries, and as to 25 per cent. to Germany to aid in the payment of the last 22 annuities. To obtain her full share, Germany must make a long-term deposit with the bank of at least 400,000,000 marks.

The above is a brief summary of the constitution and functions of the new bank, as proposed in the experts' report. Apart from its manifold reparations duties, the scheme suggests two main lines of thought. The first is that of the ultimate ideal of a central bank of central banks hinted at above. The second is the care taken to provide the closest liaison between the new bank and existing central banks.

It is laid down that the operations of the new bank shall not "exercise a predominant influence over business interests in any country." Clearly no Government and no central bank would tolerate large-scale operations in their own money market designed to further an international as opposed to a national policy. Quite apart from the definite provision quoted above, there are other safeguards against undue interference. To mention one point, which by itself is sufficient, the control of the new bank is vested in the central banks themselves, and in addition the Governor of a central bank has a right of veto over any credit operation affecting his own market. Sufficient safeguards, therefore, seem to have been provided, and if the new Bank ever comes to occupy the position of a world central bank, it will only be by the consent of existing central banks.

With these limitations, it is not easy to tell what will be the effect of the new bank. Up to a point, an analogy may be found in the United States to-day. There, there are twelve Reserve Banks, each master in its own area, but over them, occupying a position of a rather loose authority, comes the Federal Reserve Board at Washington. Furthermore, one important duty of the Board is the guardianship and management of the Gold Settlement Fund, which acts as a clearing reservoir between the Reserve Banks, and so is exactly parallel to the new central bank clearing fund which the Bank for International Settlement is to institute. Apart from this, the parallel is by no means complete. For one thing, the new bank is clearly not to have even the limited authority of the Federal Reserve Board. No one suggests that the Bank of England or the Reichsbank should apply to the new bank for leave to change its discount rate, and any interference in this way would not be tolerated for one moment. On the other hand, the Federal Reserve Board is not a bank, and apart from the Gold Settlement Fund, carries out no banking operations. There is no possibility of any friction arising from the Reserve Board, say, buying bills in New York and selling them in Chicago.

The new bank, however, is a bank, with all the powers of a central bank, except for the right of veto given to existing central banks as described above. Besides, even if it can be restrained from open-market operations on its own initiative, it is laying itself open to buy and sell bills on the initiative of the central banks themselves. Even this limited power raises several wide questions. If it is going to rediscount bills, it must fix a rediscount rate, and the conception of a world rediscount rate is by itself provocative of much serious thought. Again, much care will be required to avoid the risk of partiality in the new bank's dealings with existing central banks. Can it agree to rediscount for Paris, and be reluctant to rediscount for Berlin; even if the facts of the case warrant such reluctance, can the new bank put obstacles in the way without setting itself up as the arbiter of national as well as international monetary conditions? Finally, what will happen in practice is probably that some central banks will make it an unwritten rule never to resort to the new bank for assistance, while others will be only too eager to avail themselves of the new facilities. This again is likely to disturb the new bank's balance and position of independence.

All these are questions which time and experience alone can answer. For the moment, it is only necessary to recognise their existence. Meanwhile, the new bank can in two ways become a great power for good. Firstly, if central banks will consent to replace their gold reserves by deposits at the new bank, such action will do much to solve the problem of ekeing out the world's supplies of gold. Even demand deposits at the new bank only require a 40 per cent. reserve in gold or gold exchange, and this percentage is a measure of the economy possible. Next there seems no valid reason why the new bank should not handle all allied-debt transfers as well as those relating to reparations. Such a development would have the immense advantage of enabling these various payments to cancel each other out to the maximum degree. England alone would automatically be quit of all the exchange disturbances arising from these transfers, simply because under the Balfour Note and the main reparations scheme, England's receipts are equated to her payments. The series of shocks to the world's foreign exchange markets caused by these huge periodical transfers would largely be minimised, and debt and reparations payments would reduce largely to a single act of transfer from Germany to France and America. Apart from these possibilities, the full exercise of the new bank's powers is in the present stage of international co-operation largely an ideal. It is a bold and wise conception, containing enormous possibilities of good, but its full realisation will clearly need quite a generation of educative work.

ANOTHER COTTON CRISIS?

However anxious the new Government may be that the early months of their tenure of office should be a period of calm cogitation of future plans, it looks as if their attention were destined to be absorbed at no distant date by looming industrial disputes. Elsewhere in this issue we refer to the problem which the autumn will bring them in the coal-mining areas. A still briefer respite is promised in the case of the cotton industry, in which, as a result of the past week's developments, an ominous cloud has appeared over the horizon, fraught with possibilities of grave disturbance to the relations between the textile workers and their employers.

An account of how the threatened crisis has been reached is given by our Manchester correspondent, who writes as follows:—

"The cotton employers of Lancashire have decided to raise again the question of the wages of the operatives. At the end of last week the Master Spinners' Federation, which controls the spinning section, decided to recommend the local associations and the members to press for a reduction of 25 per cent. in the present piece price list rates of wages. This demand means a reduction on current earnings of about 12½ per cent. On Tuesday last the position was considered at a meeting of the Central Committee of the Cotton Spinners' and Manufacturers' Association, which controls the weaving branch of the industry, and it was resolved to join hands with the master spinners in the wages movement and press for a similar reduction. The district associations are now being consulted, and, if support is obtained from those quarters, then a definite claim to the trade unions will be sent within the next week or two. With regard to the action of the spinning employers a further meeting of the General Committee of the Masters' Federation is to be held on June 21st, when it is expected that communications will have been received from the local associations. As it will be necessary for the employers to give the trade unions one month's notice of the proposed alteration in list rates it is unlikely that any crisis can arise until towards the end of July.

"In trade circles in Lancashire there is some difference of opinion as to whether the employers are justified in raising this question again. It will be remembered that, at the beginning of last year, there was a definite movement to secure a reduction in wages and longer hours. In due course, however, the hours demand was dropped. Several joint conferences were held between the employers and the trade union officials, but no headway was made, and ultimately the Master Spinners' Federation took a ballot of their members as to whether they were prepared to close their mills to enforce the demand for a reduction in wages. This ballot showed that less than 67 per cent. of the employers in the American section and less than 29 per cent. in the Egyptian section were in favour of drastic action. As, according to the rules of the Federation, a ballot must show 80 per cent. in favour of a lock-out, it was decided to take no further action in the matter. The employers in the weaving branch consulted the district associations, and it was understood that only about 60 per cent. of the members were prepared to stop their machinery, if necessary, to enforce the demand. The whole movement, therefore, was a failure. Since then the position of the industry has undoubtedly become steadily worse. More firms have had to go into liquidation, and there has been a tendency for further trade to be lost to foreign competitors.

It is understood that, when negotiations take place with the trade union officials, the employers will justify their claim partly on the ground that the cost of living has declined. The index of the Ministry of Labour shows that, at the end of 1922, when the last wages reduction took place, the cost of living was 80 per cent. above July, 1914, while to-day the figure is 62 per cent. Another factor of importance is the increasing competition from foreign countries. Figures have recently been published which have been agreed to by the employers and several of the leaders of the operatives showing that, since 1914, this country has lost 33 per cent. of her trade in manufactured cotton goods. The world consumption has not declined, and undoubtedly a big part of the lost trade has gone to Japan. All kinds of suggestions are being made in Lancashire whereby the depression can be relieved, but most people are convinced that Lancashire prices are not competitive in the markets of the world. It is, therefore, absolutely necessary that something should be done to reduce production costs. The Lancashire Cotton Corporation, Limited, and the recent combine of Egyptian spinners will undoubtedly accomplish something towards this end, but the employers' contention is that the operatives will have to be willing to make some sacrifices if the decline of the industry in Lancashire is to be checked."

In a letter addressed last Tuesday to the *Manchester Guardian*, Mr Holroyd, the president of the Master Cotton Spinners' Association, stated in support of the employers' demands that the comparative labour costs of spinning a pound of 20's yarn in different European countries are to-day as follows:—"England, 1.5d.; Holland, 1.18d.; Czechoslovakia, 0.8d. to 1.19d.; Belgium, 0.931d.; Italy, about 1d.," Japanese costs being substantially less than the lowest of these figures. If this statement be accepted as an accurate measure of comparative average spinning wage-costs, it may justifiably be argued that a *prima facie* case for relief in the matter of labour charges has to be considered. On the other hand, different figures of production costs, also quoted by Mr Holroyd in the same letter, referring to 42's weft, show that of a total cost of 6.26d. per lb., no less than 3.89d. is accounted for by "interest, depreciation and other expenses." The textile trade unions are entitled to ask why more cannot be done to reduce these heavy "overhead" charges before wages are attacked, and to complain that since the employers last put forward demands for wage-reductions eighteen months ago. Lancashire's progress towards cotton "rationalisation" has been disappointingly slow. Nor are the employers in a position to dispute the operatives' contention that during the past year short-time working has made heavy inroads into their earnings without thereby rescuing the industry from its admitted difficulties. These difficulties, as a recently published memorandum of the International Labour Office on Unemployment points out, are essentially international, since "the situation of the cotton industry in the world may be summed up as one of over-equipment and changing geographical distribution."

In this situation it becomes a matter of no small importance that the Labour Party's election manifesto included a definite pledge to appoint an enquiry into the troubles of the cotton industry. It would seem to be highly desirable that the new Government should make a definite statement of its intentions in this respect, and should do so before the passage of time has allowed bitterness to develop in the Lancashire wage discussions. In any case, there is yet plenty of time for wise counsels to prevail in preventing a deadlock which could only add to the troubles of all parties to the industry. But the implementation of the promise to appoint an enquiry would probably assist substantially in promoting the cause of peace, or at least in delaying the advent of any critical position.

RECENT ECONOMIC CHANGES IN THE UNITED STATES.

It is characteristic of the unemployment problem that any attempt to investigate it at once leads the investigator into every highway and byway of the economic systems of the world. It is therefore hardly surprising that an aftermath of the President's Conference on Unemployment should be a report,* in two substantial volumes, which surveys in the greatest detail the whole field of economic activity in the United States. The Committee responsible for this report, under the chairmanship of Mr Hoover, was directed "to make a critical appraisal of the factors of stability and instability," and this definite focussing of purpose, while not in the least limiting the very wide range of the survey, gives it a unity of interest which greatly enhances its effectiveness.

In the main, the elaborate statistical researches embodied in the various sections bear out the impressions already more superficially formed by casual observers as to the most obvious tendencies in American economic development. The level that has been reached in productive capacity and standard of living, as evidenced by the rapid growth in *per capita* income shown in the table

* "Recent Economic Changes in the United States." McGraw-Hill Book Company, Inc., 370 Seventh Avenue (New York). (London) 6 Bouverie Street, E.C. 4.

below, is so high that clearly the greatest need is now for the evolution of a " technique of balance."

PER CAPITA INCOME IN THE UNITED STATES.

1926	659†	733

* Includes income yielded by houses occupied by their owners, farm produce consumed on the farm and similar items.
† Preliminary.

As a necessary preliminary to this, stability of prices is highly desirable, since it helps to eliminate the tendency to rely partly for profits on fortuitous fluctuations. Since 1922 such stability has been almost reached as far as the general price level is concerned; what slight movement took place was in a downward direction. Individual prices have fluctuated more than in the years immediately before the War, but they are gradually settling down again, and in so far as their steadier tendency is attributable to improved statistical services and to growing skill in management and banking, it may be expected to increase.

An examination of changes in the scale of industrial production indicates a distinct tendency towards large-scale operation, measured in terms of horse-power, though not in terms of numbers employed. The data adduced tend to bear out the theory that each branch of production has, in given circumstances, its own optimum size. The enormously increased proportion of machinery to labour tends to eliminate minor fluctuations in employment, but probably increases their severity during cyclical movements, since large concerns aim at maintaining price stability by varying output. Meanwhile the growing use of machinery is actually diminishing the numbers employed in industry, and though this is largely compensated for by increased employment in distributive and other occupations it is estimated that between 1920 and 1927 there has been a net increase of over 650,000 in the numbers unemployed.

On the financial side stabilising influences have certainly predominated. Business is financed more and more by the issue of stock instead of by bank credits, and the number of commercial banks has steadily decreased. Moreover, the rapidly increasing volume of real savings has made possible a considerable expansion of credit without inflation of prices. The Federal Reserve System has been faced during the period with difficult problems arising from abnormal gold movements and from instability in the international monetary situation, but on the whole its influence also has been on the side of diminishing unnecessary price variations.

The importance in the economic situation of the country of the part played by the constructive industries is very considerable. Increased prosperity has resulted in a growing demand for a better quality of housing, for bigger and better factories, and for all manner of public buildings. A number of factors have co-operated to prevent this giving rise to an unhealthy building boom. A much bigger proportion of the work is nowadays financed by banks, building societies and other organisations of sufficiently wide scope to ensure some pooling of the available funds; improved transport methods have prevented serious fluctuations in stocks of materials; the period required for construction has been shortened; and there has been a steady increase in deliberate planning and in co-operation among different communities to eliminate both seasonal and long-term fluctuations. Improvement in organisation and methods has been a pronounced factor in the general prosperity of the industry, and here, as in several other instances, more harmonious labour relations are spoken of as an important contributor to the improvement. Similar, though less pronounced, developments have taken place in transport, and the railways, left in a state of thorough confusion after the cessation of Government control, have made great strides in improving their equipment, service and operating efficiency, though they still yield an inadequate return on capital. The extraordinary developments in all branches of marketing are already well known, though this Report makes it clear that popular ideas of the rapid advance of instalment selling are somewhat exaggerated.

Throughout the survey of the internal economic affairs of the United States the point which stands out is that, while powerful forces in the direction of instability are at work in the shape of rapid changes in the direction of demand and in the technique of supply, still more powerful influences in the other direction are developing, of which the principal are the greater ingenuity of management and the more enlightened attitude of labour. Professor Wesley Mitchell ventures, with much qualification, on the cautious conclusion that, though business cycles have not been " ironed out," their amplitude has been reduced. The result is that there are certain sections of the community which are anything but prosperous, as, for example, some of the producers in staple industries like agriculture, coal and cotton, and certain types of skilled artisan whose craft has become obsolete, but that the losses of these have been many times outweighed by the gains of the rest of the community.

The chapter in the Report which deals with foreign markets is significantly silent as to the future. With due warning as to the questionable reliability of the data, it calls attention to a remarkably close correlation between movements in the visible balance of trade and those in net foreign loans. Without committing himself as to whether the egg or the bird came first, the author points out that the balance of exports could not have been maintained without these credits, which, by largely doing away with the necessity for imports of gold, checked the action of the normal corrective price changes. Meanwhile the interest payments are piling up, and

> "Combined with the maintenance of our high tariff policy are forcing slowly, but none the less surely, an ever wider separation in prices at home and abroad, with a resulting rapid increase in the expenditures of American tourists abroad and the migration of American industry to many foreign countries."

As long, however, as fresh loans staved off this effect, they offered a stimulus to the export trades. As exports amount to a very small proportion of the total production of the United States, and only to 10 per cent. of the exportable production, this might seem negligible, but in the case of certain industries like cotton growing, which export a far higher proportion of their output than the average, a large increase in exports may make an immense difference to the prosperity of whole districts, and so have far-reaching repercussions on other trades. It would have been interesting to have the opinion of the Hoover Committee as to what will happen when the United States ceases to cover her export balance and her growing interest dues by fresh foreign loans. But the business of the Committee was to confine itself to facts, and it has resolutely minded it.

POLITICAL CONSISTENCY.

ON May 31st Mr Jowitt, K.C., was returned as a Liberal member of Parliament by the electors of Preston. On June 5th he accepted the coveted and lucrative office of Attorney-General in a Labour Administration. The swiftness of the conversion was certainly surprising; but the extent to which it clearly shocked the public is in itself a tribute to our political life. In the mind of the country this incident was at once silhouetted against the background of a tenacity of principle which, happily, Britons are accustomed to expect in those who woo their suffrages.

The episode, we think, has a far wider and deeper importance than is represented by questions of Mr Jowitt's political and intellectual conscience or of the advantage to Mr MacDonald and the country in obtaining the services of an able legal adviser. It leads us, indeed, to consider some of the fundamental points in the working of our political system. For, clearly, if rapid conversions and headlong tergiversations were the rule rather than the exception in political life, political life, as we know it, would become impossible; trust and confidence by the people in their servants or would-be servants would vanish; smouldering distrust of the parliamentary system would be fanned to flame; and the country would soon be treading a path that leads to no man knows what political end. Happily, the whole temper of the British race is such as to preclude the frequency of lightning desertions. But, on the other hand, it must be admitted, the country has little love for intransigence. The stiffness of opinion that arises from narrowness or laziness of mind neither merits nor receives our applause; and indeed a change of opinion may often be legitimately hailed as the symbol of mental alertness and efficiency. We are led, therefore, to inquire what degree of consistency may properly be expected from our public men; what are the conditions under which recantation is regarded as tolerable; what are the lines that divide the turncoat from the honest convert, and tenacity from bigotry; what are the circumstances which invest apostasy with propriety?

Although constancy to party has been a feature, as it is a major postulate, of politics as practised in this country, history abounds with instances of changes from party to party which, while the object of *ex parte* controversy, have been accepted by public opinion, even though it be with a shrug of the shoulders in some cases, as at least defensible and not beyond the bounds of propriety. When Mr Gladstone renounced his youthful Toryism political tongues wagged, no doubt; but who, in the light of a long career of outstanding Liberal devotion, would now question that the change was broad-based upon conviction? Who to-day would point to the transition of Joseph Chamberlain from Radical to Conservative as a matter for scorn, or fail to excuse the conversion of his son to Tariff Reform on grounds of environment and filial piety? Even the double *volte face* of Mr Winston Churchill is capable of charitable regard, his first change from Tory to Liberal being explained by the impetus of youth and a devotion to Free Trade, and his return to the Tory fold by the gradual influences of contact with Coalition colleagues. If Lord Carson was once, in his youth, a Home Ruler, that cannot influence our estimate of the sincerity of his subsequent and violent opposition to that measure. Nor, of course, can the breath of scandal touch the myriad host of those who have veered to left or to right on the emergence of a great new issue of national importance, or have crossed the Rubicon at the end of a long and steady trek towards its bank.

What, then, are the conditions required to satisfy majority opinion that voluntary transfer from one political camp to another is justified by the *bona fide* conviction, which is the only justification possible? Except where a new issue emerges, conversion must observe the law of the inevitably of gradualness. The change over must be effected with dignity, must be adequately explained, and, we may add, should be coupled with an offer to the constituency in question to resign and fight an election under newly-adopted colours. It was by his neglect to satisfy this last condition that Sir Alfred Mond (now Lord Melchett) afforded a target to the critics of his recent political translation. If the public are to approve the change, it must be shown to be due to careful consideration of the national good, real or imagined; the element of personal advancement should not obtrude itself. Of sudden repentance the world is always sceptical, and many a generation has laughed at the case of the loose-living Knight who met his end with unexpected haste on the field of chase:—

> Between the saddle and the ground
> I mercy sought and mercy found.

No more easily can the present generation refrain from the cynical smile at Mr Jowitt's quick-change time-

WE afford every facility for banking business with SWEDEN

table. To be fair to Mr Jowitt, few people suspect him of any meteoric conversion of opinion. He was a left-wing man with left-wing sympathies. He stood in a constituency where the fight was not against Labour, and indeed he enjoyed a considerable degree of liaison with the Labour candidate. That one can understand. But here is the enigma. Why did he woo the suffrages and use the work and energies of Liberals when all the time his views were such as to allow him, within a few brief days, not merely to accept office with another party and be welcomed by that party's leader in a letter expressing the wish that the convert will find comfort of soul in Labour doctrines and in the realisation that his old party is done for once and for all; but even to pronounce himself a " loyal " servant of his newly-adopted masters. No; the cynic has reason for his smile. Fortunately such moonlight flittings are as rare in British public life as the cases of the implacable doctrinaire, to whom all forms of reasonable compromise are taboo. The comparative rarity of both phenomena is, perhaps, the finest attribute of the political life of this country.

Notes of the Week.

The King and the Counsellors.—The Order in Council issued this week, substituting the present Prime Minister and Lord Chancellor in place of Mr Baldwin and Lord Hailsham as two of the six Counsellors of State nominated last December by His Majesty to assume the delegated functions of the Crown, contains welcome evidence of the King's convalescence. Acting under the advice of his doctors that he should be relieved for a further period of a proportion of the Crown's very considerable burden, His Majesty signed on Monday a revised Order defining the powers and duties of his Counsellors of State, whose effect is that many of the duties delegated last winter now revert to the King himself. General satisfaction will be felt at this indication of confidence on the part of the King's medical advisers that his recovery has now reached a stage in which, within limits, active participation in public affairs should not overtax His Majesty's happily regained strength.

Whitehall and Washington.—At the end of this week General Dawes is due to arrive in London in order to take up his duties as Ambassador, and it seems probable that one of his first commissions will be to convey to Mr MacDonald a personal invitation from President Hoover to visit him in America; and it is certain that if this invitation is given it will be accepted, and that Mr MacDonald will pay his visit during the summer recess of Parliament. It is also credibly reported that if the President of the United States and the Prime Minister of Great Britain do meet this summer on American ground they will be joined by the Prime Minister of Canada, Mr Mackenzie King. This would happily complete the original plan, for Canada has, if possible, a greater interest in the maintenance of peace and amity between Great Britain and the United States than those two countries have themselves. It is equally important

that Mr Mackenzie King has the same outlook as Mr Hoover and Mr MacDonald on the future of the relations between the English-speaking peoples and also on the future of international relations in general, to which the relations between the English-speaking peoples will possibly supply the key. There is nothing that can be so fruitful in the relations between countries as the conjunction of several statesmen, all of one mind, all in office at the same moment, and each holding a commanding position in his country, so that what is agreed upon by all can be immediately put into train in all the countries concerned. In 1924, when M. Herriot came into power in France a few months after Mr MacDonald became Prime Minister of this country, it was Mr MacDonald who made the gesture inviting his colleague, and it was M. Herriot who accepted the invitation to Chequers. From that meeting great things followed: the translation of the Dawes Plan into the London Agreement, and the evacuation of the Ruhr. The forthcoming meeting between Mr MacDonald, Mr Hoover and Mr Mackenzie King may produce results of still greater value for the advancement of peace. All the necessary psychological conditions are present; the common outlook of the statesmen and the feelings of the peoples. Since the failure of the Naval Conference of 1927, the American people has shown its determination that the failure shall be retrieved by rejecting the original "Big Navy" Bill, which was brought forward at the close of that year. Meanwhile, the British people have shown the same determination by rejecting the so-called Anglo-French naval compromise. As far as the psychological atmosphere goes, this meeting of the three statesmen should run smoothly. The one thing needful is that they should follow a workmanlike procedure—in plain words, that they should do one thing at a time and do these things in the right order. The first thing to be done is to examine Mr Hoover's new "yard stick" for the comparative estimation of naval strengths, for until this is agreed upon we cannot go on to the essential step of agreed proportionate reduction of a drastic kind. The question of "sea law" is to come second. If the naval question is settled, other issues will almost certainly fall into line afterwards.

Politics and the Bench.—There could be few more unfortunate developments in the public life of this country than the growth of an impression that in appointments to the judiciary political expediency has become, to however small an extent, a contributory factor. It is in no sense derogatory to the personal merits of the new Lord Justice of Appeal that we record our regret that in selecting a new Attorney-General Mr MacDonald should have felt himself constrained to confer on Sir Henry Slesser promotion which will be widely construed as in the nature of a political consolation prize. When legal pilots are thrown overboard we should be the last to deny the right of the skipper to "have his feelings"; but Lord Justiceships were not designed for use as life-buoys.

Mr MacDonald's Broadcast.—The Prime Minister's wireless address to the country on Saturday last sounded rather like the reply of a gentleman who has had his health drunk at a solemn public banquet. The circumstances demanded that he should be as non-controversial as possible, and politics without controversy can hardly hope to be effervescent. But the palpable moderation of Mr MacDonald's words was not due merely to the censorship of the British Broadcasting Corporation, they were in tune with his professions of desire that for the next couple of years the country should be governed peaceably and in accordance with the expressed wishes of the electorate. Mr MacDonald's most tendencious remark related to his disbelief in the possibility of reducing unemployment to normal proportions within a year, but it is plain that Mr Maxton would take greater offence at the tenor of the address than would any Liberal and many Conservatives. The most important part of the Prime Minister's speech dealt with foreign affairs. In view, he said, of the overshadowing importance of the problem of disarmament and the need for friendly discussion and agreement between the United States and other Powers and ourselves, he hoped to be able to pay a short visit to Geneva at the opening of the next meeting of the Assembly of the League of Nations, and would, he added, also watch the American situation. There is little doubt that it is in the management of foreign affairs and in the tackling of the unemployment problem that the new Government means to make the change of administration most decisively felt, and Mr MacDonald has been wise thus to retain the personal initiative at the most critical points while not over-burdening himself with administrative duties.

The Eight-Hours Convention.—Last Friday an Indian workers' delegate to the International Labour Conference now sitting at Geneva warned the Conference that the superior attractiveness of Moscow's promises in the industrial sphere, compared with the paucity of practical results achieved by the methods of Geneva, might lead the awakening people of the East to disaster, which must in part be laid at the door of Western dilatoriness. As if in answer to his wishes, it was announced on Tuesday by the British official representative that the new Government would proceed at the earliest possible opportunity with the ratification of the Washington Hours Convention, and would embody in the industrial code of this country such provisions as are required to carry out both the Convention and the decisions with regard to its interpretation reached by the London Conference of March, 1926. This announcement was greeted with deserved acclamation. The "Draft Convention Limiting the Hours of Work in Industrial Undertakings to Eight in the Day and Forty-eight in the Week" was drawn up in November, 1919, and was then supported by the representatives of British employers and workers and of the Government. In July, 1921, Mr Lloyd George's Government announced that ratification was impossible in view of the conflict between the clauses of the Convention and the British practice as regards overtime, as well as existing railway agreements, neither of which the Government saw reason to alter. The policy then announced, of asking that the whole question should be reopened and a new Convention drafted, was carried on by the Governments of Mr Bonar Law and Mr Baldwin. The Labour Government apparently found no time in their short span of office for a matter so fundamentally affecting the industrial legislation of the country. Urged on by public opinion, the late Government called together in 1926 a Conference of the Ministers of Labour of the five chief European industrial countries for the purpose of surmounting difficulties which had arisen with regard to the interpretation of the Convention. That Conference, which the last Minister of Labour described as completely successful, reached an agreement covering a number of important points—the application of the Convention to the building trades, the railways and postal services, the definition of "working hours" and "intermittent work," adaptation to a five-day week, provision for time lost by holidays, and the suspension of the law in cases of national emergency. The legislation giving effect to the Convention will, it was stated on Tuesday, embody these points of interpretation. Thus in the end victory goes to public opinion, which has never acquiesced in the attitude adopted by Mr Baldwin's Government, and which has resented the international odium which that attitude brought upon us. Certain trades will be faced with difficulties as, for example, the cotton trade, which has not been able to emulate the policy of Japan, whose cotton industry has been organised on a multiple shift system. But most industries will take the view that they stand to gain if uniform conditions as to hours of labour are imposed in competing countries, several of whom have made their ratification of the Convention conditional on those of Germany and Great Britain. On Germany's action now depend the ratifications of France, Italy, Spain, Austria and Latvia.

The Treaty of the Lateran.—On Friday, June 7th, the ratifications of the Treaty of the Lateran and of the accompanying Concordat between the Holy See and the Kingdom of Italy were duly exchanged at the Vatican between Cardinal Gasparri and Signor Mussolini. There-

with, the new sovereign independent state of the Vatican City came into being, as the Italian Government would say; or, to put the same thing from the Papal point of view, the territory of the Papal States was reduced to these limits, by consent of the Holy See, from the frontiers of 1815, which had not been extinguished judicially by the brute fact of an Italian occupation through *force majeure*. In any case, whichever of the two formulae we may prefer, they both convey the new fact that there are now in the Italian peninsula two sovereign independent States, the Kingdom and the City, which have recognised one another as such and have agreed upon the frontiers that delimit their respective territories. So far, so good; and in the ceremonies that heralded and followed the diplomatic formality of June 7th, everything was done to suggest to the spectators and to the world that all was well. Meanwhile, between the signature of the Treaty and Concordat and this exchange of ratifications, it has become plain that we have not seen the end of the Roman Question, but only the end of one chapter and the beginning of another; for the Pope and the Duce have drifted into a public controversy of a serious character. Presumably, this was not the intention of either party; but Signor Mussolini was constrained to hint that the Fascist State was still keeping the whip hand over the Catholic Church; and the Pope, in reply, was constrained to make it evident that the sovereignty which he had never surrendered *de jure* had been recovered by him *de facto*. Hence this altercation—and, as it goes on, a detached observer finds his sympathies curiously divided. We are all for the Pope when His Holiness challenges Signor Mussolini's claim that the Fascist State shall educate the children of Italy into a nation of conquerors—especially when the Pope enlists the Church on the side of the Family and champions the joint claim of these two institutions to have a voice in education. It is another matter when the Pope criticises the measures which the Italian Government has taken to make it clear that the re-establishment of the Catholic Church in Italy will not deprive adherents of other religions of toleration. The fact is that both the Catholic Church and the Fascist State are in essence autocratic; and the gestures of toleration which each of them tries to make, in deference to the spirit of the times, are strictly confined to fields outside their own cherished spheres of activity. Nevertheless, the general cause of liberty may stand to gain from this contest for supremacy between two illiberal Powers; for when Great Powers grind one another down, the small fry have a chance to breathe. Thus, in the Middle Ages, the conflict between Pope and Emperor gave the Italian Communes the opportunity to assert their freedom. Dare we hope that this conflict between Pope and Duce, which is arising before our eyes, may bring a fresh harvest of liberty to Italy?

The League and Minorities.—In this fifty-fifth session of the Council of the League of Nations the principal business on the agenda is the important and urgent question of Minorities. The report of the Committee of Three, which had been appointed by the Council at its last session, has been signed and has accordingly come before the Council itself in Committee. This is quite in order; for though one of the three members of the Committee of Three, namely, Sir Austen Chamberlain, was no longer the official representative of his country, and, indeed, was not present at the meeting last week at Madrid at which the signatures were appended, the report itself had been substantially completed before the change of Government in Great Britain took place. It is quite another question, however, whether the Council would be well advised to take action on the report during a session at which the new British Government is unable, in the nature of the case, to take an effective part. For the occasion, this country is being represented on the Council by its Ambassador in Madrid; but, however ably Sir George Grahame may fulfil his mission, he is not the Secretary of State, and Mr Henderson has hardly had time to send him detailed instructions on such an intricate piece of business. This *impasse* cannot be resolved by the formula "continuity of foreign policy"; for there is every reason to believe that the new British Government will have quite a different policy from Sir Austen Chamberlain's on the question of minorities, as, indeed, on many other important matters. Fortunately, it looks as though, even if the British Government itself were to refrain from asking the Council to wait, the Council will find itself unable simply to accept the report of the Committee of Three at this session owing to opposition from certain representatives of States members of the Council who are not only present at Madrid but who are in a position to represent their respective countries with full authority. The opposition is being led by Herr Stresemann (Germany) and Senator Dandurand (Canada), who originally raised the question independently of one another; and they seem likely to have the support of the representative of Finland. Indeed, it is evident that the report of the Committee of Three, which is now before the Council, is unsatisfactory. Its scope appears to be confined to matters of procedure; and there is no indication that it has made, or could make, any proposals under this head which would offer a real solution of the problem. It comes to this: The implementation of the charter which has been given to certain European minorities in the Peace settlement cannot be secured effectively except by setting up a Permanent Minorities Commission of independent experts responsible to the Council of the League itself and not to the Governments of the States members of which these experts happen to be nationals. The need for such a Commission is demonstrated by nine years' experience of the relative success of the mandates system, in which a permanent commission of this kind has existed from the beginning, and the relative failure of the arrangements for the protection of minorities, in which this element has been lacking. The opponents of reform assert that the League has no power to set up a Permanent Minorities Commission because, unlike the Permanent Mandates Commission, it is not explicitly provided for in the Covenant; but this argument will not hold water. The League, since it came into existence, has appointed many important commissions and committees; and any institution, if it is to be a "going concern," must be presumed to possess the power to set up any machinery which experience proves to be essential to the discharge of its duties. By the terms of the Treaties, the League is trustee for the rights of minorities; and experience has amply proved that it cannot discharge this trusteeship effectively without a Permanent Minorities Commission to advise it.

Overseas Trade in May.—The May foreign trade figures confirm the view that this year the industrial set-back of previous years is being escaped. Imports of all kinds show an increase on last year of 4.1 per cent., while exports have risen by 15.2 per cent. The chief weakness is the decline in our re-export trade.

MONTH OF MAY

	1929.	Increase or Decrease compared with 1928.		1927.	
	£	£	%	£	%
Imports	103,491,587	+4,061,299	+4·1	+7,102,742	+7·4
British exports	67,436,598	+8,882,122	+15·2	+4,160,724	+6·6
Re-exports	10,471,310	−1,349,915	−11·4	−1,879,312	−15·2
Total exports	77,907,908	+7,532,207	+10·7	+2,281,412	+3·0
Excess of imports over total exports	25,583,679	−3,470,908	−12·0	+4,821,330	+23·2

FIRST FIVE MONTHS.

	1929.	Increase or Decrease compared with 1928.		1927.	
	£	£	%	£	%
Imports	513,506,394	+ 7,513,445	+1·5	− 4,413,251	− 0·9
British exports	308,848,942	+13,089,489	+4·4	+22,489,627	+ 7·6
Re-exports	50,945,799	− 5,069,379	−9·0	− 4,658,245	− 8·4
Total exports	359,794,741	+ 8,020,110	+2·3	+17,831,382	+ 5·2
Excess of imports over total exports	153,711,653	− 506,665	−0·3	−22,244,633	−12·6

An analysis of the May figures is not quite so reassuring, as it shows that imports of raw materials have fallen

since last year by £632,431. The decline is insignificant when set against the actual raw material imports of £28.2 million, but it shows that there is no definite upward trend, and the five months' figures confirm this view. Still, retained imports of iron ore have risen from 370,000 tons in May, 1928, to 489,000 tons for May this year, while those of sheep's and lamb's wool have increased from 599,000 to 635,000 centals, so that two at least of our staple trades are moving in the right direction. Details of British exports are shown below:—

SOME LEADING EXPORTS.
(Quantity.)

	First Five Months.		
	1927.	1928.	1929.
Coal ..... tons	22,005,967	20,232,049	23,210,341
Railway material ..... tons	207,608	299,097	215,772
Total of iron and steel ..... tons	1,581,081	1,761,863	1,933,982
Textile machinery ..... tons	47,820	50,564	55,867
Total machinery ..... tons	203,554	238,971	243,319
Cotton yarns ..... lbs.	89,581,500	72,708,900	73,322,600
Cotton piece-goods ..... sq. yds.	1,745,590,000	1,654,677,300	1,710,247,400
Wool tops ..... centals	183,462	159,360	145,279
Woollen tissues ..... sq. yds.	48,418,300	54,038,400	45,208,000
Worsted tissues ..... sq. yds.	16,631,200	14,215,300	20,803,900
Linen piece-goods ..... sq. yds.	32,693,500	32,274,400	31,431,500
Jute piece-goods ..... sq. yds.	65,530,100	77,693,000	73,185,000
Boots and shoes.....doz. pairs	365,096	455,218	381,397
Leather ..... cwts.	148,284	187,432	139,646
Locomotives ..... tons	8,458	19,307	15,977
Motor cars and chassis ... number	19,426	13,035	18,120

Coal exports show a satisfactory increase of 3,000,000 tons over 1928, while iron and steel exports are also 172,000 tons higher. Cotton piece-goods, too, are better, but wool is not so good. On the whole the five months' figures are encouraging, but there are still some weaknesses.

London Traffic Bills.—The return of the Labour Party to power renders it doubtful whether, after all, the two Bills for the co-ordination of London traffic, which passed through the House of Commons last session, will receive the assent of Parliament. At the Dissolution, both Bills had passed their third reading and stood committed to the Lords. The constitutional practice is that all legislation which is not ripe for the Royal assent when Parliament is dissolved must begin again in the next session at the earliest parliamentary stage. But the introductory and committee stages of private bill legislation are so costly that on this occasion, as several times in the past, a resolution was carried enabling all private bills to begin in the next session at the stage at which they stood at the Dissolution, with the important exception that, in order to retain control in the hands of the Commons, bills which had passed their third reading would nevertheless have once more to undergo that trial. The exceptional provision applies to the Co-ordination of Passenger Traffic Bills, promoted respectively by the London County Council and the London Electric Railway companies. They were strongly opposed by the Labour Party on the ground that public interest was being sacrificed for the sake of the achievement of practical monopoly by the Ashfield combine (which reminded Mr Jack Jones of "a certain kind of serpent, which slobbers all over its victim before finally swallowing it"). The Labour members received Liberal support, and there is little doubt that in the present Parliament a majority could be mustered against the Bills. As, moreover, the new Minister of Transport, Mr Herbert Morrison, was himself active in opposition, their rejection seems highly probable. Nevertheless, by a majority vote, the London County Council decided on Tuesday to go forward with the Bill for which it is responsible, though, as Mr Percy Harris pointed out, it is now without official sponsors.

The European Steel Cartel.—The representatives of the Continental International Steel Cartel (writes our Paris correspondent) are to meet here on June 18 for general business. The gathering is one at which it would be possible, under the statutes, for the question formally to be raised of whether the present working agreements shall continue, be modified, or brought to an end. It is significant that the matter has not even been placed on the agenda, from which it may be assumed that present agreements will automatically continue. Germany, in any case, has derived such constant benefit from the Cartel since its formation in 1927 that she, at least, has no interest in cancelling the existing conventions. The point in which the German steelmasters are now most keenly interested is the creation of a central selling organisation, to prevent the recurrence of irregularities in marketing which during the past two years have proved detrimental to the Cartel as such, however much they may have benefited individual concerns. French iron and steel production figures for the first four months of 1928 were better, in comparison with those of Germany, than during the corresponding period of 1928. French steel exports during the four months were 25 per cent. lower, but this was due to a substantial increase in domestic consumption. British metallurgical exports to the Continent fell off somewhat during the four months (although it is recognised this will be more than made up for in the near future). The difference was not sufficient, however, to modify the important influence which Great Britain exercises on the Continental markets, in spite of the fact that she is outside the Cartel. The systematic attack which the United States steel companies are now making on the European market was emphasised in March by shipments to Europe totalling 271,000 tons, which is the highest figure reached during any one month since the war. "In every European market," remarks *Le Capital*, "the American menace is being felt," and there is little doubt this menace will prove more and more formidable in the near future.

Agriculture in May.—Conditions have not been favourable for growth, but it has been possible to clean and prepare the land more thoroughly than usual. Rainfall was inadequate in May, and the abundant sunshine was accompanied by cold winds, so that cereals are still backward. Wheat and autumn-sown barley are healthy, though there are some thin patches, and many areas of winter oats have had to be resown. It appears that wheat acreage in England and Wales has diminished still further, oats increased slightly, and barley remained about the same. Winter beans have suffered badly from the frost, but later sowings are healthy, and peas are doing well. The early potato crop promises to be average, though it is likely to be late. Germination of mangolds and sugar beet has been delayed by lack of moisture, but where showing the plants look healthy. The sugar beet area is expected to show an appreciable increase over that of last year. Early sowings of swedes and turnips have suffered damage by fly. The hops outlook is satisfactory and the acreage probably unchanged. Prospects for hay are not at all good; growth is light and backward and a late crop, with yield well below average, is anticipated. Pasture grass has similarly suffered from weather conditions, but in spite of this cattle are doing well, milk yields are up to average, and sheep and lambs are in fairly good condition.

Canadian Shipping Losses.—Undertaken originally ten years ago, the Canadian Government's venture in merchant shipping has proved a costly experiment. The accounts of the Canadian Government Merchant Marine, Limited, for the twelve months ended December 31, 1928, show that operating expenses for the year amounted to $10,321,593, against total receipts of $9,112,510. Thus the loss on trading was $1,209,088—in comparison with $720,735 in 1927—to which have to be added allowance for depreciation, $2,431,315, and interest charges $3,905,126. The aggregate deficit for

1928 is, therefore, $7,545,525, which brings the total losses since the establishment of the service up to nearly $58 million. Competition in the North Atlantic trades has become increasingly severe, but the privately-owned lines operated between Canada and Europe have of recent years succeeded not only in covering depreciation of their fleets but in making at least small profits. The magnitude of the losses incurred by the Canadian Government in the operation of its tonnage reinforce the conclusions already suggested by the experience of Australia and the United States, that shipping is an industry ill-suited to management by the State. Canada has now no ground for supposing either that privately-owned tonnage would not suffice to deal with her exports or that competition between existing ownerships serving her ports would fail to keep rates down to the minimum economic level. The Canadian taxpayer, who pays the piper, has clearly the right to call the tune, but it would not be surprising if the Ottawa Government should decide in the near future to follow the example set by Washington and gradually withdraw from a business in which much public money has been expended to little purpose.

Shipping Freight Index Number.—As measured by our index number, the average level of whole-cargo shipping freights in May was rather less than 2 per cent. lower than in April—this downward movement being in accordance with normal seasonal trend. The current total figure of the index number, 113.2, compares with 109.1 a year ago, and 129.6 in May, 1927. The mean figure for the month of May in the years 1923-25 works out at 126.8. The recent movements of the various groups in the index are summarised below:—

(Average 1898-1913=100.)

	Average 1913.	May, 1928.	Mar., 1929.	Apr., 1929.	May, 1929.
European Waters	110·0	101·5	123·8	117·7	119·6
North America	113·1	100·7	122·7	120·5	115·6
South America	123·4	105·9	118·5	118·4	122·6
India	106·3	110·0	112·2	106·3	109·0
Far East and Pacific	117·4	111·9	118·3	114·7	112·6
Australia.....	127·9	124·6	121·1	113·9	99·7
Total	116·3	109·1	119·4	115·3	113·2

There was a good demand during the past month for tonnage to load British coal, and the supply of vessels being not too plentiful, rates both to Bay, Mediterranean and South American ports stiffened appreciably. Homeward grain business was restricted again by the downward movement of wheat prices, and the consequent hesitancy of European importers. Argentine maize continued to absorb a substantial volume of cargo space, and homeward rates from South America were well maintained. North American freights, on the other hand, had a weaker tendency, and the homeward rate from Australia slumped heavily, competition from liner services in this trade being particularly severe. Eastern business was quiet.

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913.

	Index Number	Inc. or Dec. points.		Index Number	Inc. or Dec. Points.
Home trade.....	95·2	−2·7	South America—Outwards	97·2	+ 8·6
Bay—outwards.....	141·3	+9·2	South America—homewards	148·0	− 0·2
Bay—homewards	135·5	—	India—outwards	117·9	+ 2·1
Mediterranean—outwards	145·0	+9·9	India—homewards ...	100·2	+ 3·3
Mediterranean—homewards	105·3	−2·6	Far East, etc.	112·6	− 2·1
North America	115·6	−4·9	Australia	99·7	−14·2

Expressed as a percentage of the average for 1913, the total figure of our index number for May works out at 97.3, as compared with 99.1 in April, and 93.8 a year ago.

Venezuela's Improvement.—A correspondent writes:—After close upon twenty years' tenure of office as Chief Executive, during which the economic fortunes of Venezuela have seen consistent advancement, General Juan Vincente Gómez has given place, voluntarily, to a successor. Dr Juan Baptiste Peréz, the new President elected by Congress, is an advocate of distinction, practising in the High Court of Appeal, a well-known authority upon economics and with an extensive knowledge of finance. In no sense of the word is he a politician. Dr Peréz assumes office at a time when conditions in Venezuela have been hardly ever upon a more satisfactory basis. It claims to be the only country free from debt to the United States. On January 1st last the debt was reduced to $13,512,921 (£2,702,584), while on April 13th following gold worth $18,584,852 (£3,716,976) was upon deposit in New York, thus satisfying the last—and the whole—of the outstanding payment due. In regard to Venuezuela's debt payment due on the Three per cent. Diplomatic Debt, the Government commenced in June of last year to remit double the amount required, and, assuming that these satisfactory efforts to extinguish the debt are maintained, the whole of it should be redeemed by the end of 1931. All Venezuelan business is conducted in the currency of the country, and, as the banks operate almost exclusively with New York, the rate of exchange is regulated by the value of sterling there. The exterior trade of the country attained in 1928 the record figure of $173,353,508 gold (£34,670,700), of which $71,691,862 (£14,338,372) represented imports and $101,661,640 (£20,332,328) exports. The commercial balance was, therefore, distinctly favourable. So large has been the output of petroleum, the 1928 production having amounted to 107,253,094 tons, that Venezuela occupies now the position of second largest oil-producing country of the world. The balanced 1928-29 budget estimates revenues and expenditures at 195,450,000 bolívars. The political disturbances reported appear to have no more adverse consequences than might have been foreseen with an exchange of Government personnel.

Transvaal Output of Gold.—The gold output of the mines of the Transvaal for May amounted to 897,598 ozs. of fine gold. For May, 1928, the output was 886,186 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1923.	1924.	1925.	1926.	1927.	1928.	1929.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ...	764,469	796,768	823,592	796,270	839,782	843,857	872,45
February	704,970	760,617	753,925	753,924	779,339	816,133	815,28
March ...	761,586	795,671	825,479	834,340	860,511	877,380	866,89
April	743,651	768,923	787,519	803,303	824,014	825,907	872,12
May.....	786,564	809,003	813,249	849,214	859,479	886,186	897,59
5 months	3,761,240	3,930,982	4,003,867	4,037,051	4,163,125	4,249,463	4,327,99
June	755,309	773,053	780,251	852,145	855,154	862,363	...
July	754,306	829,437	818,202	860,134	851,861	857,211	...
August ...	769,371	809,571	808,218	843,854	863,345	891,863	...
September	739,504	799,422	797,247	839,939	842,118	857,731	...
October ...	793,842	827,583	812,832	853,296	885,743	897,720	...
November	780,639	802,313	787,633	840,276	848,059	872,484	...
December	778,849	825,273	791,455	836,157	851,225	889,761	...
Total ...	9,133,060	9,597,634	9,599,702	9,962,852	10,130,630	10,356,596	4,327,99

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	Sept., 1928.	Oct., 1928.	Nov., 1928.	Dec., 1928.	Jan., 1929.	Feb., 1929.	Mar., 1929.	April, 1929.	May, 1929.
Gold mines	194,936	193,147	190,870	187,970	192,526	196,150	197,646	197,412	195,733
Coal mines	16,803	16,506	16,241	16,059	15,845	15,940	16,065	15,900	15,852
Diamond mines	4,889	4,762	4,481	4,444	5,056	5,635	5,787	5,554	5,473
	216,628	214,415	211,592	208,473	213,427	217,725	219,498	218,866	217,058

There was a further decline in the number of natives employed in all branches of mining during May.

Oversea Correspondence.

UNITED STATES.—STOCK MARKET—MONEY—TARIFF—PROFITS—RAILWAY VALUATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 5.

SETTLEMENT of the Reparations question and the purging of the stock market have cleared the atmosphere somewhat, and sentiment is somewhat better. As was to be expected, the long drawn out deflation policy of the Federal Reserve Board, after bringing drastic liquidation in securities, affected also the commodity markets. The combination of falling stock prices and a rapidly sinking wheat market caused genuine alarm throughout the country, and there is reason to believe that the Federal Reserve Board will be less insistent on further liquidation if, indeed, it does not come to the aid of the money market.

The drop in wheat cannot, of course, be blamed entirely on the decline in stocks, any more than the latter can be explained by the break in wheat; but each reacted on the other, and was caused largely by tightening credit. While it is true that the wheat carry-over was large and the prospect for a large crop was good, the fact that the Chicago market was above world prices indicated that, so long as credit was available, speculators were willing to hold wheat for higher prices. For one thing, hope of Government aid had not been abandoned, and it was noticeable that the market rallied sharply on rumours that Government money would be forthcoming to take care of the wheat surplus. Shares of companies dependent largely on farm buying for their prosperity have suffered, but pessimism over the situation, no doubt, is overdone. The new crop wheat is just beginning to come to the market, and even though the bulk of it must be disposed of at prices which will yield the average producer little, if any, profit, the total reduction in farm income will not be in all probability a large percentage of total income. Moreover, part of the loss from lower prices will be made up by larger production.

The liquidation in the share market, which wiped out virtually all the gains of the past month or so and brought many of the overbulled stocks to new lows for the year, has brought brokers' loans down about $275 million in the past two weeks, and has released credit lent on stock collateral over the country generally. The smaller demand for money in this district as a result of stock liquidation has come at a time when a considerable flow of funds has come to New York from the interior, partly in preparation for end of the month and June 15th financial transactions. In consequence call money has been superabundant at 6 per cent. officially on the Stock Exchange and as low as 5 per cent. in the open market. This week the rate has advanced to 7 per cent. on improving demand from the Stock Exchange. Time money also has weakened, and the short dates are quoted 8¼ per cent. Commercial paper rates, however, have firmed up somewhat, the banks endeavouring to charge as near the discount rate as possible owing to the fact that they are still borrowing more than 900 millions from the Reserve.

The range of money rates in New York, as compiled by the Federal Reserve Bank, is shown in the following table:—

Money Rates at New York.

	May 31, 1928.	April 30, 1929.	May 29, 1929.
Stock Exchange call loans	*5½–6½	*8–16	*6
Stock Exchange 90 days loans	5½	8½	8¾
Prime commercial paper	4½–¾	6	6
Bills—90 day unindorsed	4–4½	5⅜	5½
Customers' rates on commercial loans	†4·53	†5·73	†5·78
Treasury certificates:			
Maturing September 15	...	4·94	5·10
Maturing December 15	3·89	4·92	5·07
Federal Reserve Bank of New York rediscount rate	4½	5	5
Federal Reserve Bank of New York buying rate for 90-day bills	4	5½	5½

* Range for preceding week.
† Average rate of leading banks at middle of month.

Now that the money situation is easier there is less fear of a bear market in stocks, although some observers anticipate a moderate recession in business on account of the tightness which has prevailed for so long a period. Some signs of a check in business activity may be seen. The steel industry is maintaining its fast pace, and operations are still at or near capacity, but forward orders are beginning to decline, especially from the motor trade. The unfinished work on hand is sufficient to insure an active summer in steel, but the second three months promise to be the best quarter of the year. The motor industry is falling off, although gradually, and revival in the autumn is expected to follow introduction of new models which will be got ready during the summer lull. Meanwhile the building industry, which improved in April after two or three months of decline, has again receded in May. During the first five months building contracts awarded were lower than for any similar period since 1925.

Commodity prices, which have been declining rather steadily during the past year, were lower during May. The loss, according to Dun's index, was 1.7 per cent., due mainly to the drop in breadstuffs, but all sections declined. Declining commodity prices and the fact that money is still dear probably forecast some stoppage in business until the position is better adjusted. Whether this readjustment takes place without much disturbance will depend somewhat on the policy to be pursued by the central banks.

Just what the Federal Reserve Board has in mind is not much clearer than it was. The market for Government bonds has been improving, and dealers in bankers' acceptances look for cessation of the sales by the Reserve Banks. Should the Federal Reserve, instead of a seller, become a buyer of securities and bills, business confidence might be restored.

The attitude of Congress towards the tariff is not liked in good quarters, but it is hoped that some of the worst features of the proposed increases may not find their way into law. Most of the tirades against stock speculation may be dismissed as made for the edification of constituencies. Some progress is being made with the farm relief programme, though it is yet too early to determine just how, if at all, Congress is going to do the farmer much good. The extensive increases in protection to manufactures will, if carried, render the new tariff rather a menace than a protection to the farming community.

Great satisfaction is felt here over the success of the efforts of the experts to arrive at an agreement on Reparations. Bankers anticipate a resumption of foreign financing here, although our current high money market may be a hindrance. Numerous loans to German industrial enterprises are known to be impending. Improvement has been noted also in the market for certain commodities, notably copper, as a result of Reparations settlement.

An interesting compilation of corporation profits during the first quarter is published in the current bulletin of the New York Federal Reserve Bank. The report shows that net earnings of 235 industrial and mercantile companies were 33 per cent. larger than in the same period of last year and 42 per cent. above 1927. Such unusually large earnings go far toward explaining the upward movement in the share market, and while their very size indicates the probability of some recession, it is apparent that nothing short of genuine business depression this autumn will prevent 1929 from being the banner year for corporate earnings.

Copper and steel companies turned in the largest gains, with oils companies and motor accessory manufacturing concerns next. Oils, however, had the advantage of a poor showing for a year ago. Building supply, leather and shoe companies were the only classes to report lower earnings as compared with a year ago. The record is shown in the following table:—

Corporation Groups.	Number.	First Quarter. 1927.	1928.	1929.
Motors	16	75,121	94,736	98,948
Motor parts and accessories (excl. tyres)	16	6,580	6,775	12,816
Oil	24	21,727	12,081	23,524
Steel	15	44,911	36,276	73,835
Food and food products	31	32,338	33,662	38,075
Machine and machine mfg.	17	9,630	9,656	12,586

Class I. railroads (net operating income)	183	225,500	217,400	259,500

The decision of the Supreme Court in the St. Louis and O'Fallon Railway valuation case, which had been used by the railroads as a test case of the method used by the Interstate Commerce Commission in placing a value on railroad property for rate making purposes, as directed by the Transportation Act of 1920, has been given in favour of the railroad. The railroads claimed that reproduction cost should be given more consideration, whereas the Commission made up its valuations on the basis of 1914 reproduction costs plus subsequent investment. Since the roads have failed, with record-breaking traffic, to earn as much as 5¾ per cent. on their tentative valuation, their case for higher rates would appear to be good. However, rates are set largely in conformity with what the traffic will bear, and so far as rates are concerned, the value of the decision to the railroads lies in the stoppage it probably will put to the whittling away of rates on various commodities which has been a practice of the Commission for the past two or three years. Another, and to the holder of certain railroad shares, very important feature of the case was the removal of the danger that some of the roads which have been earning more than 6 per cent. on their individual property investment will have to turn over one-half of the excess to the Government, as provided by the Recapture Clause of the Transportation Act. Few roads on which a valuation under the O'Fallon decision will be set will be found to earn over 6 per cent. on their property value, but a number of them exceeded that percentage on the Commission's tentative valuation.

FRANCE.—REPARATIONS—LONDON AND WASHINGTON AGREEMENTS—PRICES—PRODUCTION—CAPITAL ISSUES.

(FROM OUR CORRESPONDENT.)

PARIS, June 15.

FRENCH opinion in general, now that the full text of the experts' recommendations is available, inclines to the view that the new Young Plan is worthy of acceptance. It gives the French satisfaction, to a considerable extent, in regard to what they regard as their fundamental essentials—that the reparations and the inter-allied debt problems should, and must, be regarded as forming one inseparable whole, and that the only acceptable settlement is one which will furnish them with sufficient money, not only to liquidate their debts to Great Britain and the United States, but also to recoup them for most, if not all, of their expenditure on the devastated regions. Further, it renders possible the mobilisation of sufficient of their debtor's liabilities to enable them to extinguish a substantial portion of their own public debt, and thus contribute towards a massive reduction of the burden of taxation that at present strangles both the French taxpayers and French industry. Unofficial critics place the cost of the reconstruction of the devastated departments as having been over 100,000,000,000 francs (and in present day francs very much more). The 500,000,000 marks (3,125,000,000 francs) a year which will come to France out of the "unconditional" portion of the first series of the German annuities, will furnish this country with the means to wipe out from 45,000 to 50,000 millions of the debt incurred since the war in financing reconstitution of the devastated area. The total sum that should come to France under the Young Plan is estimated at a capital value of 19,367 million marks, or 117,750,000,000 francs.

Detailed criticism of the new Plan is as yet lacking, as might be expected from the complex nature of the various provisions, which render hasty conclusions dangerous. It is possible, too, that there is a desire to suppress what might seem to be captious criticism, in view of the fact that British sacrifices under the new proposals appear to be much more serious than those that would be suffered by this country. The "Joker" in the experts' report, of which much will probably be heard in the future, is the recommendation (Part 8, Section II) that in the event of any Allied debtor Power benefiting later from any reduction accorded to it by any of its own creditors, two-thirds of such reduction shall pass to Germany, and the remaining third be paid into the International Bank. In other words, if the American Government should, at some future time, for reasons of its own, reduce the debt owing to it by France, the latter will not be able to utilise the amount so saved by applying it to the liquidation of its own unrepaid war losses, as the advantage arising from such reduction will go to benefit Germany—and American capital invested in Germany. The proviso in question, at all events, appears to render nugatory any idea of an effort to induce the United States to modify its intransigeant attitude towards its European debtors, and still further to strengthen America's financial grip on Europe.

For the moment, discussion of the experts' proposals is taking second place to the question whether France shall or shall not ratify the London and Washington agreements. The matter will come formally before the Chamber on June 25, but whether the House will be asked for direct ratification of the agreements, or whether it will avoid responsibility for so doing—which at present seems more likely—and adopt the expedient of authorising the Government to deal with the matter as it thinks fit (which would mean ratification by decree) is not yet clear. Immediately after the debate in the Chamber the Government issued for publication the text of the opinion of Me Gaston Jéze and two other eminent constitutional experts. All three agree that, in the circumstances, Parliamentary ratification is unnecessary. The Marin group of Nationalist deputies, who have hitherto been opposed to ratification of the agreements in any form, decided a few days ago, at their Party Congress at Rouen, to support ratification as the only way out of the present

NATIONAL BANK OF GREECE
Established 1841

THE BANK OFFERS EXCEPTIONAL FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

difficult situation. This seems to remove the only obstacle in the way of both agreements being formally ratified in the near future—either by direct vote of the two Houses, or by Governmental decree. The urgency of the matter lies in the fact that payment of $400,000,000 for the American war stocks falls due in August, unless meanwhile ratification is accorded to the Washington agreement, under which this commercial debt will be merged with the political debt, and payment thus be both substantially reduced and spread over a long series of annuities.

The Statistique Générale returns the index figure for wholesale prices at the end of May as 636. This represents a drop of four points on the month, of 17 since March, of 10 since May last year, and of 218 since the record figure of 854 in July, 1926, but a rise of 36 points compared with October, 1928, when the figure recorded was 600, the lowest since October, 1925. The detailed comparative figures for May are as follows (based on 100 as representing corresponding prices in July, 1914):—

	Articles.	March.	April.	May.
General index figure	(45)	653	640	636
French products	(29)	647	648	649
Imported products	(16)	665	625	614
Foodstuffs (general figure)	(20)	610	610	608
Vegetable foods	(8)	641	622	642
Meats	(8)	579	599	584
Sugar, coffee, cacao	(4)	611	606	581
Raw materials (general figure)	(25)	691	667	662
Minerals and metals	(7)	669	623	622
Textiles	(6)	765	738	722
Various	(12)	659	652	650

Purely French products, as in the two previous months, have again risen a point, the figure for May being the highest recorded since November, 1926, when it was returned as 698. The figure for imported products is the lowest recorded since June, 1926 (when this system of differentiating between French and foreign products was first applied), and no fewer than 460 points below that established in July, 1926. Reduced to gold franc value, the French wholesale figure for May works out in round figures at 123, as compared with (for April) Great Britain, 141; Germany, 137; Holland, 144; Sweden, 141; Switzerland, 140; Belgium, 123 (or 862 in new Belgian currency). Retail prices in Paris are returned at 626 for May, or 11 points higher on the month, 30 since the end of 1928, 103 since December, 1927, and 32 since January, 1927.

The general index figure for industrial production during April is returned at 139 (1913=100), or a rise of one point on the month, five since January 1, 11 since June, 1928, 30 since June, 1927. With the exception of the motor-car industry (which has shed half a dozen points, as is usual at this time of year) all the seven categories of manufacturing industries covered show fractionally increased figures. Textiles remain the weak spot, the output figure, although a point up on the month, being still five points below pre-war level. Railway receipts were a fraction lower in April, although the number of trucks loaded per day was 67,586, against 65,185 in March. Shipping tonnage remained practically at the previous month's level. The number of workers unable to secure employment through the labour bureaux during April was 9,798 (including those actually in receipt of unemployment pay), as against 10,618 in March. Employers were unable to find labour to fill 20,390 vacancies, as against 18,602 in March.

Public issues during May totalled 1,112,600,000 francs, of which 115,300,000 francs were issued by new companies and the rest increases of capital (628,900,000 shares and 368,400,000 franc bonds) by existing concerns. The average rate of interest offered was 5.95 per cent., as against 5.90 per cent. in April, 6.20 per cent. in March, 6.65 per cent. in May, 1928, 7.55 per cent. in May, 1927, and 8.85 per cent. in May, 1926. The Statistique Générale returns an index figure of 86.6 (as against 85.5 in April (1913=100) for Bourse quotations in May of 52 French descriptions with fixed yields, and 512 for 288 French issues with variable yield (against 518 in April). Banks, collieries, iron and steel concerns, chemical products, and electrical undertakings all rose while construction material, metal-working, textile, railway and insurance shares fell, the drop in the figure for the latter being from 1,096 to 977.

GERMANY.—REPARATIONS—CREDIT—FINANCES—INDUSTRY—AGRARIAN PROTECTION.

(FROM OUR CORRESPONDENT.)

BERLIN, June 11.

THE detailed provisions of the Young Committee's Report are subjected to very little criticism. In general the methods prescribed for operation of the new Plan are considered practical. Commercial circles are pleased by the proposed adoption of the reichsmark for all purposes of the plan, and consider that it will help towards the internationalisation of German bills of exchange. The " gold mark " of the Dawes Plan and of earlier Reparation arrangements cast a shadow on the reputation of the reichsmark, and its own reputation was not enhanced by the Dawes Plan prescription that it should be called and treated as a gold mark even if in the Transfer Committee's opinion it would not fetch its nominal gold value in the exchange market. In view of the fact that the Reichsbank has consistently, though voluntarily, converted its notes by selling foreign exchange at par or by exporting gold, the proposed putting into force of article 31 of the Bank Law of August, 1924, seems at first sight only to recognise an existing condition; but the putting into force will have more than mere formal importance, in that it will for the first time give holders of mark banknotes, cheques, and bills a legally enforceable claim. After the putting into force of article 31, the currency will be on a gold-exchange, not a gold, basis; redemption in gold will remain optional. It is not likely that gold will be coined.

The Paris Report is considered to express a more optimistic view of Germany's position and prospects than that held by the Dawes Committee. If the moderate average reduction of the Dawes annuities means that Germany's payment-capacity was over-estimated in 1924 —though this is not clear—the fixing of a sum transferable in all circumstances and the limitation of the right to postpone internal payments seems to mean that the Young Committee was more confident of fulfilment of its Plan than the Dawes Committee was of the Dawes Plan. The Dawes Committee did not unconditionally count upon any transfers at all or (after the accumulation in the Reichsbank reached its maximum) upon any internal payments. The Young Committee, including the German members, holds, it is noted, the view that full transfers and full payments are assured except during possible emergency periods. As the cessation of borrowing from abroad could hardly be considered an emergency, it seems that the Young Committee rejected the very common view that the Dawes Plan must have broken down the moment borrowing ceased. The Committee seems rather to have held that the balance of foreign payments will adjust itself, via the foreign trade balance, as soon as the outflow of funds for payment of Reparations ceases to be counterbalanced by an inflow of borrowed funds. There are already indications that this process has begun. It should be added that the official foreign-payments balances issued last month show that the excess of payments abroad (for imports, interest and Reparations) over receipts was much smaller in the past five years than is generally believed and that a correspondingly smaller import of capital to make good the deficit took place. The deficit, and the balancing net import of capital in form of loans, short-term credits, and receipts from sales of securities, averaged in 1924-28 some 3,500 million marks a year.

The money situation has continued to improve. Day money has been abundant. The average day loan interest rate fell last week by about 2 per cent., and was to-day 6-8½ per cent. Month rates remain relatively high at 9½-10¾ per cent. The market was not affected by payment of the first instalment of the new Federal loan, due on the 12th. Increased willingness by France to grant credits has been observed since the Paris agreement. The Reichsbank's return for the first week of June shows only a moderate improvement, but discounts and advances are considerably below the figures of the same week of May, and circulation is a little lower. The reserve ratio has risen to 47.4 per cent. of reichsmark

circulation, and to 42.9 per cent. of the combined reichsmark and rentenmark circulation. The restrictions upon new rediscounting have not been removed.

The federal loan flotation has not been a success. Of the total 500 million marks only 300 million marks were offered for immediate subscription, but subscriptions totalled only 178 million marks. Although the promised tax-exemption, in view of the progressive character of income and other direct taxes, favoured wealthy persons, the greater part of the subscriptions was in small sums and apparently by petty capitalists. Only a few weeks before the new loan was announced, the Finance Ministry declared that home capital market conditions made long-term borrowing impossible, and it seems that this first judgment was right and ought to have been acted upon. On the strength of the loan the Finance Ministry got an advance of 120 million marks from the commercial banks, and as only 40 per cent. of the subscriptions is payable this month (the remainder in July and August) some new form of short-term borrowing will be needed to cover the Republic's cash deficit.

The now complete tax revenue returns for the financial year 1928-29 show, as compared with the estimates:—

	Marks (000's omitted). Estimated.	Received.
Total	8,862,000	9,024,514
Direct taxes	6,060,000	6,146,781
Thereof:		
Income	2,900,000	3,109,749
Corporation income	550,000	608,332
Property	520,000	450,757
Inheritance	100,000	73,545
Turnover	1,050,000	1,000,134
Motor-car	160,000	181,364
Railway traffic	340,000	354,080
Indirect	2,802,000	2,877,610
Thereof controlled	2,760,000	2,827,205
The Controlled Revenue taxes yielded:		
Customs	1,200,000	1,104,598
Tobacco	780,000	870,522
Sugar	140,000	158,218
Beer	370,000	396,894
Spirits monopoly	270,000	296,971

The deficit on Customs is presumably due to the falling-off, as compared with the preceding financial year, of imports, that on the turnover tax to the slackening of home trade. The inheritance tax yielded a very small sum. The stagnation in the capital market and on the Bourse are reflected in deficits on the company, securities, and Bourse-transfers taxes. Total receipts from taxes in the financial year 1927-28 were 8,490,395,000 marks, or 534,119,000 marks less than in 1928-29.

The wholesale prices index for June 5th rose to 134.5, the first rise for some weeks, owing to the recovery of grain prices. Unemployment is still declining, being, on the basis of local Labour bureaux, about 800,000 on June 8rd. As a whole the coalmining industry is very well occupied. No shifts are now being passed, and the number of unemployed miners on the Ruhr has declined to 8,400. The position of the heavy iron and steel industry is improving. The export market for wire products has been very firm. The net exports of iron and steel in April were the largest since 1926. Machinery exports this year to the end of April totalled 200,454 metric tons, or an average of 50,100 tons a month, as against a monthly average in 1928 of 44,800 tons. Export trade in cutlery is increasing, exports in April being 738 metric tons against 586 tons in March and 571 tons in April, 1928. Exports to Great Britain increased, but the largest percentage increases were to the British and Dutch Indies, the Argentine Republic, and the Philippines. The Potash Syndicate's home and foreign sales in the first five months were 732,171 metric tons of pure potash, against 703,148 tons in the same months of 1928.

The Minister for Industry declares that food import-duties must be increased in order to cover the rise in farm production costs, and the Food Minister declares that Reparations can be paid only if part of the foodstuffs now imported is produced at home.

ITALY.—FOREIGN TRADE—EMIGRATION—UNEMPLOYMENT—SAVINGS—JOINT STOCK COMPANIES—WHEAT DUTY.

(FROM OUR CORRESPONDENT.)

TURIN, June 4.

A TURN for the better seems to have begun in foreign trade as the April figures indicate a decreased excess of imports over exports of 749.7 million lire, against 849.5 millions in the corresponding months of 1928, while in the first quarter the excess rose from 1,673.7 millions in 1928 to 2,349.5 in 1929. In the first quarter the most noteworthy increases in imports were: Corn, from 124,815 to 261,431 tons; oil seeds, from 81,097 to 112,703 tons; raw jute, from 16,539 to 18,029 tons; raw cotton, from 64,127 to 71,875 tons; broken iron and steel, from 114,460 to 227,216 tons; pig iron, from 27,025 to 43,426 tons; copper, from 16,997 to 19,637 tons; lead, from 5,104 to 8,277 tons; tin, from 1,075 to 1,475 tons; spelter, from 1,977 to 3,131 tons; machinery and parts, from 16,411 to 20,778 tons; coal, from 2,070,157 to 2,577,961 tons; mineral phosphates, from 140,138 to 181,830 tons; mineral oils, raw and lubricating, from 27,736 to 31,910 tons; mineral oil residues, from 101,281 to 130,319 tons; crude hides, from 8,267 to 11,521 tons; rubber, from 1,986 to 4,822 tons. Generally these increases can be interpreted as forerunners of future increases in exports,—but some people believe that there has been a permanent change in the demand for raw materials, as home industry must provide for an increasing population, no longer reduced by emigration. The net number of emigrants, less those returned home, was 240,000 in 1923, and decreased progressively to 177,000 in 1924, 81,000 in 1925, 72,000 in 1926, 67,000 in 1927. In 1928 the number is probably lower, and certainly no higher than 51,600. The effect of the increasing pressure of population seems, until to-day, to have verified Adam Smith's rather than Malthus' theories; each new worker coming of age creates a new demand for goods, but also an increasing supply of them. The number of unemployed has been as follows: January, 438,211 (1928) and 461,889 (1929); February, 413,383 (1928) and 489,347 (1929); March, 411,785 (1928) and 293,277 (1929); April, 356,795 (1928) and 257,603 (1929).

Warnings have been reiterated in the daily Press as to the slowness of savings, the progress of which is shown below:—

	Postal Savings Banks.	Ordinary Saving Banks.	Ordinary Banks.	People's Banks.	Regional Banks.
Dec., 1913	100	100	100	100	100
Dec., 1925	503·7	468·1	552·2	645·6	745·6
Dec., 1926	504·4	476·7	543·0	655·8	755·9
Dec., 1927	480·9	509·9	579·8	669·3	785·6
Dec., 1928	512·8	572·9	650·8	696·4	823·4
Feb., 1929	522·7	586·7	654·1	703·2	...
Mar., 1929	523·5	588·0	...	...	...

As by far the greatest proportion of sums technically known as savings are deposited in the postal and ordinary savings banks (26,435 million lire out of a total of 35,318 at the end of 1928), it will appear that the increase has not been very great since 1925. If we take into account, however, the increased value of the money, the increase in the purchasing power of these sums will loom much larger. Probably it is this same increase in the purchasing power of the saving, which is responsible for the slowing down of the pace of the nominal increases, since margins for savings during a period of reduced monetary incomes are smaller. Another reason for the slackened rate of increment of saving is probably the increasing amount of direct investment by agriculturists, of which no trace appears in statistics, as savings are invested in buildings or cultural betterments by millions of small or medium-sized agricultural proprietors, none of them having recourse to agricultural loans or mortgages. Statistics of investments are published only in the shape of figures of capital subscribed to joint-stock companies new and old. Taking into account winding up and reductions of capital of existing companies, the number of companies increased in the first four months of the year from 14,609 to 15,213, and their capital from 44,961.2 to 46,483.7 million lire.

Following reports of the slump in the prices of wheat in the United States and Canada, a Royal decree increased the duty on foreign wheat from 11 to 14 gold lire. On the present internal price of 125 paper lire, the duty works out at about 40 per cent., or 66 per cent. on the price of foreign wheat duty bound.

DENMARK.—POLITICS—CAPITAL—PRICES—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, June 10.

AFTER the election of the "Venestre" (agricultural party) Madsen-Mygdal Cabinet has been superseded by the Stauning-Munch Cabinet, composed of members of the Socialist and Radical Parties. But the Rigsdag has closed its sessions and started the summer vacation, and the new Cabinet is at present taking its bearings. One of the measures taken is the appointment of a Committee to investigate the market possibilities for Danish goods abroad. Political conflicts are likely to arise when the Rigsdag resumes its sessions, but in some quarters it is believed that the Government will not attempt to carry through too drastic measures.

In business life a steady development is still going on. Agriculture is benefiting by the good bacon prices, and up to the present nothing has happened to impair the prospects of good crops. Apparently merchants are fairly busy. With regard to the labour situation, which the Socialist papers do not appear to view with anything like the same pessimism as before the election, the number of unemployed is at present 31,441, against 39,800 at the same time last year. A special indication of increased enterprise and continued easy money is the fact that public issues of shares are taking place in Copenhagen as well as in the provinces. The latest instance is the increase of the capital of the most important of the provincial banks, the Aarhuus Privatbank, from 9,000,000 kroner to 12,000,000 kroner. With regard to the contemplated reduction of the interest rates of the finance institutions— a matter which had been postponed owing to increased bank rates abroad—it is stated by the chairman of the Association of Provincial Banks that all efforts in this direction will be supported, provided that it should be desired to take the matter up for the separate provinces. It is believed, however, that the matter is not suitable for uniform treatment all over the country.

The official wholesale price index showed a decline of two points in the course of May, the figure being now 148. In the course of the month there were particularly great declines for cattle food, i.e., from 155 to 147, and for hides, leather and footwear, which declined from 140 to 136. The total wholesale price index has declined continuously for the last three months. In January the figure was 151, but owing to the higher fuel prices during the period of ice obstructions the figure rose. As will be noted, the subsequent declining tendency has now brought it down below the figure at the beginning of the year. Last year at the same time (May) the index was 155.

The foreign trade statistics last published are those for April. While the two preceding months had shown excess of exports of 12,000,000 kroner and 10,000,000 kroner respectively, the April statistics had an excess of imports amounting to as much as 56,000,000 kroner, as a result of imports to the value of 212,000,000 kroner, against exports realising 156,000,000 kroner. This extraordinary change is explained by the weather. Considerable shipments arrived in April to cover orders given a long time before, but not carried out until the ice obstructions had ceased. Actually the total excess of imports during the current year to date has amounted to 87,000,000 kroner only, while for the first four months of 1928 the balance of trade showed a deficit of 57,000,000 kroner.

CANADA.—WEATHER—CROPS—BUSINESS—UNITED STATES TARIFF—THE C.N.R.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 29.

THE weather has materially improved throughout Canada during the past week and a spell of really warm days has been favourable to the growth of crops and pasture, which were both very backward. There have also been heavy rains of a timely character throughout the prairie provinces, and they have relieved for the time being all anxiety about moisture reserves, which in many districts were very inadequate. Indeed, crop conditions are now reported to be better in the West than in the East, where the farmers have been greatly hampered in their operations by the cold, wet weather which prevailed from the middle of April onwards. The wheat situation is still causing a good deal of anxiety, and, although there has been some outward movement of wheat in the past week, the congestion at Montreal is still very acute, and on May 17th 156 millions of bushels were still in store in the Dominion. The improved news about the prairie wheat crop had had the effect of depressing prices still lower, and the holders of Canadian wheat have already lost many millions of dollars. A lowered purchasing power, which will have an adverse effect upon business, is now seen to be inevitable for a large part of the farming community during the rest of the year, and the portents foreshadowing a curtailment of business are already visible in the carloading figures. For the week ending May 18th it was placed at 67,461 cars, which shows declines of 784 and 1,507 cars respectively as compared with the figures for the previous week and the parallel week of 1928. The cumulative total of the year's carloadings to date, which for a long time ran well ahead of last year's corresponding figure, is now only some 8,400 cars ahead, and will probably fall behind in the near future unless things improve. However, the feeling in well-informed circles is that, while some recession of business must be prepared for, there is no real ground for pessimism if long views are held. Wholesale and retail trade is about normal for this period of the year, and the advent of warm weather is now inducing the public to purchase freely its supplies of summer goods, which it had postponed owing to the inclement conditions. The new building programme is of considerable dimensions, and, with the general resumption of outdoor work, employment has increased. The lumber business is active, and, although the newsprint companies still find prices unsatisfactory, they are keeping up their production at a good level. The Canadian stock markets had begun to show distinctly bearish tendencies before the recent slump in the New York market took place, but they have been materially affected by it, and the majority of the Canadian stocks have fallen sharply during the past week. The mining market is also dull, and the general public, which has, on the whole, suffered considerable losses, has had its fill of speculation. Merchants are not displeased at this development, as they find that a waning interest in the stock market promotes a disposition to make more generous purchases of goods.

The Ministry is reported to be sharply divided on the question of the policy which should be adopted to meet the impending Conservative assault. The protectionist wing of the Cabinet, which is headed by Mr Robb, the Minister of Finance, Mr Malcolm (Trade and Commerce) and Mr Eurler (National Revenue), is credibly said to be in favour of boldly adopting a policy of retaliation, and raising the Canadian scale of duties to substantially higher levels; it would commit the Liberal party to a level of protectionism which would be singularly at variance with the tariff planks of its platform of 1919, but it would enable them to pose as the vigilant defenders of the country's interests against selfish American fiscal aggression, and would offer them a chance of holding industrial seats in the East. But hitherto the Western members of the Cabinet, headed by Mr Dunning, the Minister of Railways, and Mr Stewart (Interior) have been resolutely opposing any such adventures in retaliation. Their arguments have been that the American tariff is not nearly as bad as was forecast, that it does very little harm to the Western Provinces, and that, if the Liberal party steals the Conservative's tariff clothes and takes a protectionist path, it will forfeit what agrarian support it has in the West and lose many seats to Progressive candidates, who will accuse the Liberals of betraying their principles for the sake of office. However, during the past week the situation has been somewhat changed by the news from Washington about an amendment to the Tariff Bill, which, if put into effect, will raise the tariff on most of the Canadian cattle exported to the United States from 1½ to 2½ cents per pound. No feature of the original draft Bill caused so much relief in Canada as the apparent preservation of the cattle duties at their present level, and there is corresponding dismay at the discovery that the jubilation was premature. In the fiscal year ending March 31, 1928, Canada exported to the United States some 200,000 cattle, chiefly young store animals, which the farmers of Iowa and Nebraska bought to fatten on corn; in the last fiscal year the number was substantially increased, and the prices for cattle, which, in the case of young "stores" have recently been averaging about 9 cents per pound, were quite profitable to the Canadian farmer. As a result, many prairie farmers during the past year, disappointed with the price of grain, have been turning their energies to cattle raising. The amendment now inserted will face these young cattle exported by Canada with a levy of 2½ cents per pound, as the great majority of them weigh over 800 pounds, and it will be equivalent to an *ad valorem* rate of 25 per cent., which is a heavy impost. The impression is that the effect of the heightened duty will not be felt for some time as there is a shortage of cattle on both sides of the line, and, if the American price for cattle is raised, the Canadian will be also, and the cattle raisers of both countries will profit temporarily at the expense of the consumer. But, if the new cattle duties are to produce any satisfactory results, they must encourage the raising of more cattle in the United States, and the Canadian cattle raisers will feel the pinch two or three years hence, when the augmented number of calves in the United States has come to maturity and diminished the need of importing cattle from Canada. Other amendments adverse to Canada have also been inserted, and the potato growers of Prince Edward Island and New Brunswick, who escaped in the original draft Bill, will now be penalised unless the Senate intervenes. But the result of these developments is that it will no longer be possible for the Liberals to argue that the West has suffered no damage from the new tariff, and the Conservatives hope to find for the propagation of their retaliatory protectionist gospel the same sort of atmosphere of resentment against the United States prevailing in the West as in the East. Naturally, the hands of those Liberal Ministers who are advocating a policy of reprisals have been strengthened, and it is they who are credited with urging a general election this autumn, at which a mandate should be sought for the policy favoured by them. They believe that, in view of the sharp slump in grain prices and the threatened recession in business, things may be worse from an electioneering point of view before they are better, and that the sooner the ordeal is faced the better. Meanwhile, the present session of the Federal Parliament, which has been one of the dullest on record, is in its penultimate stages, and prorogation is expected early in June.

The Canadian National Railway, although it has failed to secure the co-operation of its rival, the Canadian Pacific, is going ahead with an ambitious scheme for new terminal facilities in Montreal, and Parliament has been induced to sanction an expenditure of 50 million dollars, which will be spread over a number of years. In many quarters, however, there is some disquietude about the finances of the C.N.R., and certain members of the Senate have been unpleasantly inquisitive about the purchase of a small railway system in Quebec by the C.N.R. from the Delaware and Hudson Railway. It was revealed that a mysterious middleman had intervened in the transaction, and the necessity for his intervention has yet to be explained.

Letters to the Editor.

THE FALL IN WHEAT PRICES.

TO THE EDITOR OF THE "ECONOMIST."

SIR,—Our attention has been drawn to the article under the title "Fall in Wheat Prices," published in your issue of June 8th. On page 1274 the following expression is used: "and it would not be surprising to find Canadian Elevator Companies in difficulties before long."

This statement was apparently made without making proper enquiries, and has caused some anxiety and concern among holders in this country of the securities of Canadian Elevator Companies.

Immediately our attention was drawn to your article we communicated with the presidents of two of the leading Elevator Companies in Canada, and their reply is to the effect that, whereas the Farmers' Wheat Pool may be embarrassed by the low price of grain, the Elevator Companies are in an excellent position.

The profits of the Elevator Companies are principally obtained from the services they render in storing, grading, cleaning and shipping grain. If grain is purchased from farmers it is the usual practice for the Line Elevator Companies to hedge the amount immediately in the market, and the action of the wheat market does not therefore affect them.

In view of the anxious enquiries we have received as a result of your article, we think you should take the opportunity of putting forward the correct position of the Canadian Elevator Companies in your next issue.—Yours faithfully,

D. C. JENNINGS.

Books and Publications.

A CENTURY OF POOR LAW.*

"NOR in nature," observed the rector of Pewsey in 1785, "can anything be more beautiful than the mild complacency of benevolence hastening to the humble cottage to relieve the wants of industry and virtue, to feed the hungry, to clothe the naked, and to soothe the sorrows of the widow with her tender orphans; nothing can be more pleasing, unless it be their sparkling eyes, their bursting tears, and their uplifted hands, the artless expression of unfeigned gratitude for unexpected favours . . . . When the poor are obliged to cultivate the friendship of the rich, the rich will never want inclination to relieve the distress of the poor." So the Reverend Joseph Townsend:—a hundred and twenty years later, the Minority of the Poor Law Commissioners, surveying the same phenomenon, remarked, perhaps with less poetry of thought, that "there is nothing more disastrous, alike to the character of the poor and to the efficiency of the services of public assistance which is at their disposal, than the alms dispensed by well-meaning persons in the mere relief of distress. The distribution of indiscriminate, unconditional, and inadequate doles is none the less harmful when it is an adjunct of quite kindly meant district visiting, the official ministrations of religion, or the treatment meted out by a 'medical mission.'"

These two statements stand almost at the two ends of the second part of Mr and Mrs Sidney Webb's great history of the Poor Law; between them lies a long and terrible tale of misery, inefficiency, and squalor, in which the most depressing fact is that no expedient of Poor Law administrators, whether "stern" or "merciful," appeared to have any lasting effect in mitigating, to any real extent, the poverty with which they had to deal. The rigid Benthamite, trying by severity to dry up the pools of inefficient, hopeless, pauper labour which the Old Poor Law kept in being to feed decaying industries which ought long ago to have died, found that it was impossible

* "English Poor Law History: Part II.; The Last Hundred Years." By Sidney and Beatrice Webb. 2 vols. Pp. 1085. Longmans, Green and Co. 36s.

in practice to reduce the condition of the pauper below that of the lowest-paid free labourer without killing him; the would-be humaniser of the New Poor Law that he was creating havens of refuge where the workshies and the weaklings of industry could hide themselves, to the great scandal of the respectable classes; and the inventors of the " Able-Bodied Test Workhouses " that they caught, not the sturdy vagabonds whom they wanted to penalise, but the poor creatures for whom the world was too much and who ought, for the most part, to have been in a home of rest, and not on the labour market at all. A " deterrent " policy could, indeed, reduce the number of paupers, but only at the price of increasing the number of beggars; and it is, to say the least of it, doubtful whether the social value of this change was worth the expenditure of some millions of national money. One can only guess at the depths of misery and degradation which underlie the simple statement that from 1870 to 1900 the " proportion in receipt of relief " scarcely varied at all, though that period includes both the booming prosperity of '74 and the black years of '79 and '80.

As the task of the Guardians was hopeless, it cannot be expected that its administration should have been pleasant, or its history cheerful reading; and the minute and valuable account which the Webbs here give of all the expedients which were from time to time adopted to abolish the pauper without abolishing poverty makes, sometimes, the most depressing reading. The only addition to theory which a century of Poor Law administration appears to have produced, as illustrated by the extracts quoted above, was that, useless as the Poor Law was for curing poverty, private charity was even worse.

The Webbs, however, as practical politicians, do not leave their readers quite in this state of despair. The moral of their book, as drawn again and again in the account of each mournful experiment, is that a Poor Law is in itself an anomaly, because of its nature it can deal only with destitution, i.e., with a sympton which belongs to many social diseases, e.g., crime, lunacy, old age, sickness, and unemployment, and not with the diseases or their causes. To set up a Poor Law in order to get rid of the symptom of destitution is as though a hospital were to employ a doctor whose speciality it was to cure spots. And the Webbs draw hope from the fact, which they point out, that the whole tendency of nineteenth and twentieth century legislation, whatever its theory, has been to tackle the diseases of which destitution is a symptom, by providing more and more, out of national resources, assistances and services which do not carry with them the stigma of pauperism. Much still remains to be done; even when all the permanent causes of destitution, such as old age, sickness, or mental deficiency, are removed from the Poor Law, destitution will still exist as long as low wages and unemployment remain; and the new Local Government Act (summarised in an epilogue), though in theory it " breaks up the Poor Law," leaves, in fact, much of it still remaining. But tendencies speak louder than theories; and on this hopeful note the book ends.

For the rest, these two volumes wind up the great *corpus* of English local government history which we owe to their authors, and which, as far as we can see, will be indispensable to the student and the statesman for generations to come. The amount of information, available from no other source, which is contained in them, is colossal, and merits the warm gratitude of every worker in the body politic. Two criticisms only can be made. The treatment of " Poplarism " in the metropolis is rather misleading, because it is considered too much as a theory of administration, which it was not, and too little as a demonstration. The whole episode of " Poplarism " was as much an experiment in practical politics as the strike of 1926, and no more. And on page 679, by an extraordinary lapse, our authors speak of the miners' strike of 1921 as " *arising out of a claim for improvement in conditions* "— a rather staggering statement to anyone who remembers the tremendous cuts made that year in miners' wages. These, however, are but minor blemishes on a really valuable piece of work.

AMERICAN POLITICS.*

A WELCOME addition to the materials for a scientific study of politics and public administration is now available in the shape of a volume of " Documents and Readings in American Government." Collected from a wide field, the documents include extracts from various official publications, legislative acts, law reports, records of Congress and the daily Press. While the work will be used chiefly to bring the raw materials of political study alongside the pages of any of the standard text-books on American political affairs, it is to a considerable extent self-contained, since the editors have skilfully classified their material and prefixed useful introductory notes to bring out the significance of the various extracts.

The book is long, but as it aims to cover the whole field of American Government, national State and local, it is difficult to see how it could be much shorter. The difficulty of making the study of political theory more concrete and hence more fruitful of practical results is well known. This volume should prove an immense help in this task in America, since many extracts dealing with recent events are included. There is room for a similar volume in other countries.

LABOUR AND INTERNATIONALISM.†

Dr Lorwin's book, " Labour and Internationalism " —the outcome of an investigation conducted under the auspices of the Institute of Economics of the Bookings Institution—professes to tell the story of international labour co-operation during the past hundred years. It does tell the story, but by the method of the annalist rather than of the historian. Masses of particulars fill over 600 pages, and the mental impression left after perusal is one of disconnectedness. This, perhaps, is due as much to the subject as the method. The reader seems to be immersed in a maze of details about policies which were always being recast, and personalities between whom there was as much friction as pulling together. Underlying all, there has been, no doubt, a growing sense of one common purpose—the purpose of working out a state of things everywhere in which individuals would have opportunity to develop and really live, instead of passing through dull, depressing existence—but the chains of events described come too near in point of time to allow readily of their being made, by means of the true historian's touch, to exhibit their significance in relation to other broad tendencies.

The development of international labour organisations, both in the old world and the new, is traced from 1830 to the outbreak of the world war. Then we are shown the drifting apart which ensued as a result of inflamed national prejudice, and the attempts at stabilisation and reorganisation which followed the war. A second part of the volume is devoted to discussing the outlook for the future, but the " horizons ahead," described in the last chapter, seem to be made up as much of the likelihood of internal struggle for control as of possibilities for co-ordinated action.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Survey of International Affairs, 1927. By Arnold J. Toynbee; assisted by V. M. Boulter. (London) Oxford University Press, Warwick Square. 24s. net.

This invaluable work is divided into four sections: Security and Disarmament; Europe; China; and The American Continent. The text of the more important treaties and notes are given in an appendix, and there are four maps.

Recent Economic Changes in the United States. The Report of the President's Conference Committee. In 2 vols. (London) McGraw-Hill Book Co., Inc., 6 Bouverie Street. 37s. 6d. net.

This report is the subject of a leading article in this issue.

* " Documents and Readings in American Government." By J. M. Mathews, Professor of Political Science in the University of Illinois, and C. A. Berdahl, Assistant Professor. Macmillan and Co., 8vo, pp. xviii. + 928. 14s. net.

† " Labour and Internationalism." By Lewis L. Lorwin (New York). The Macmillan Co., 1929. $3.

History of Manufactures in the United States. By Victor S. Clark. With an Introductory Note by Henry W. Farnam. In 2 vols. (London) McGraw-Hill Book Co., Inc., 6, Bouverie Street. 25s. net.

This monumental work has long been out of print, and a revised edition is therefore especially welcome. It is the most comprehensive history in existence of industrialism in the United States down to 1893. A third volume, at present in the press, will trace developments up to the present time.

Industrial Standardisation. (New York) National Industrial Conference Board, Inc., 247 Park Avenue. $3.50.

A non-technical discussion, of which Part I is devoted to the organisations for promoting standardisation, and Part II to a discussion of its economic advantages and disadvantages.

Russian Schools and Universities in the World War. Introduction. By Count Paul N. Ignatiev. *Primary and Secondary Schools.* By Dimitry M. Odinetz. *Universities and Higher Technical Schools.* By Paul J. Novgorotsev. (London) Oxford University Press, Warwick Square. 15s.

These volumes belong to the Carnegie Endowment Series.

Organisation und Betrieb des Brasilianischen Importhandels. By Dr Walter Schück. (Stuttgart) C. E. Poeschel Verlag.

A valuable account, in German, of the organisation of the import trade of Brazil. It includes chapters on finance, customs regulations, communications and markets.

L'Oro e l'Aratro. By Alberto de' Stefani. (Milan) Fratelli Treves Editori.

A discussion of Italian agricultural policy.

Zehn Jahre Tschechoslowakische Steuerpolitik. By Dr Armin Spitaler. (Reichenberg) Verlag von Gebrüder Stiepel G.m.b.H.

A discussion in German of Czechoslovakian financial policy.

Italy To-day. The Lateran Treaty. Edited and published by Mrs V. M. Crawford, 32 Upper Gloucester Place, London. 6d. net.

Bond Values. Edited by Einar Huss and K.-G. Hagström. (Stockholm) Skandinaviska Kreditaktiebolaget.

This volume of tables, with headings in both English and Swedish, was inspired by the defects of existing tables, and is therefore unusually complete. Values and yields in decimals are tabulated for loans at nominal interest from 3 to 8 per cent. In addition to loans redeemable by constant annuities and loans repayable at a fixed date, tables for some other varieties are included. Interest in the main tables is reckoned as payable semi-annually.

Rules and Regulations of the Stock Exchange. By F. J. Varley. Supplement to June 1929. (London) Effingham Wilson, 16 Copthall Avenue, E.C. 2. 1s. 6d. net.

Super Tax in Relation to Limited Companies. By Stanley A. Spofforth. With a Foreword by Col. Gilbert Norton. (London) Gee and Co. (Publishers), Limited, Kirby Street. 7s. 6d. net.

A useful guide with a summary of the relevant statistics and cases.

The Directory of Insurance Brokers and Claims Associations, 1929 (London) Cawley's Publicity Service, 11 Queen Victoria Street, E.C. 4. 4s.

Wheeler's Company Tables, 1929. Compiled and published by Arthur Wheeler & Co., Town Hall Square, Leicester.

A ten years' summary of the balance sheets of the leading public companies.

The Bankers' Magazine. (London) Waterlow and Sons, Limited, London Wall. 2s. 6d. net.

This number includes articles on " The Proposed New Bank," and " Recent Tendencies in International Banking."

FREE Facts About Gland Failure

and the New Drugless Treatment for Prostate trouble.

MEDICAL authorities agree that 65% of all men past middle age (many much younger) are afflicted with a disorder of the prostate gland. Aches in feet, legs, and back, sciatic pains, are some of the signs—and now a member of the Association for the Advancement of Science has written a remarkably interesting Free Book that tells of other symptoms and just what they mean. No longer should a man approaching or past the prime of life be content to regard these pains and conditions as inevitable signs of approaching age. Already more than 60,000 men have used the amazing method described in this book to restore the prostate gland to its proper functioning.

The Stock Exchange.

AMERICAN BUYING OF BRITISH SECURITIES.—II.

In an earlier article (*The Economist*, June 8, 1929, page 1292) we discussed the nature and extent of the interest shown by American investors for British securities. We suggested that although the British companies which had deemed it expedient to take steps to safeguard themselves against possible American " control " represented only a minority of those in which American investors were known to have an interest, the movement was one of which much was likely to be heard in the future. This possibility obviously raised a number of issues of first-rate importance from the investor's point of view, which we propose to discuss in the paragraphs which follow.

It will be well, at the outset, to put the matter in due perspective. We are concerned with the possibility of a large-scale transfer of capital from one country to another. While the investor will be called upon to consider every particular case on its own merits, there are certain general principles which may afford a broad background for his judgment. In the first place, the capital market is, by common admission, the most fluid in the world. To debar new capital from any country or industry where conditions favour its profitable employment is a process comparable in difficulty with that of shutting out new ideas, and far more onerous than any attempt to exclude alcoholic liquor or other forms of merchandise. In the second place, such an effort would come most inappropriately from a country such as Great Britain, which has been the world's schoolmaster in the theory and practice of foreign lending, and draws an income at the present time (according to the estimates of the Board of Trade) of something like £285,000,000 a year from its capital investments overseas. Both by conviction and interest, the London Stock Exchange has consistently upheld the ideal of " free trade in capital." So long as British investment continues to have exposed flanks in every country in the world, the Stock Exchange Committee is likely to set its face, in the future as in the past, against every attempt to impose restrictions on the negotiability of its wares.

To these contentions the reply may be made—and has, indeed, been recently made by more than one company board—that while there is no desire to restrict the flow of American capital into Great Britain, or any other country, the buying of particular securities " for investment " is one thing, and buying " for control " is another. Directors may be indifferent as regards the existence of foreign shareholders, but unable to contemplate with equanimity the prospect that the ultimate control of their companies' fortunes may be transferred to a foreign group. Putting on one side for the moment the question whether " national " considerations do, in fact, render foreign control in certain industries undesirable, or even dangerous, we may pause to consider how far the regulations recently adopted by certain British companies are likely to be effective in obviating the possibility of such control. The following is a list of the concerns known to have taken steps to that end:—

Company.	Measures adopted.
Imperial Airways.....	No shares to be held by foreigners.
Marconi International Marine	Foreign holding limited to 25 per cent.
Cables and Wireless	Foreign holding limited to 25 per cent.
General Electric Company ...	Foreign shareholders disfranchised.
Burma Corporation	Foreign shareholders disfranchised.
Rubber Plantations Investment Trust.	Voting rights limited to British shareholders.
Buenos Ayres and Pacific Railway.*	Foreign (other than Argentine) shareholders disfranchised.

* The B.A. Great Southern also proposes to take action in this connection.

Two distinct methods, it will be seen, have been followed, the first seeking to exclude non-British citizens, wholly or partially, from share ownership, the second denying them one of the prerogatives of such ownership —the exercise of voting power. The first is, of course, to the extent specified, a policy of " prohibition " pure and simple, which in theory offers a company the advantage of knowing " just where it stands " as regards its foreign shareholdings, at any given moment, but in practice is obviously calculated to provoke considerable resentment—and, possibly, agitation for measures of reprisal—in America and elsewhere, if its adoption becomes at all widespread in British company practice. It is doubtful how far the most unremitting vigilance on the part of a secretary can be relied upon to ensure that no transfer in the " British register " is made on behalf of a foreign citizen, in view of the ease with which the beneficial owner of stock can disguise his identity under that of some British institution or of a man of straw. Members of British Stock Exchanges, again, are unlikely to welcome the prospect of numerous bargains being discovered " bad " when delivery is tendered, owing to disputes as to the buyer's nationality.

The practice of allowing ownership without control, on the other hand, may be described as an attempt to make the best of both worlds—to obtain a higher share quotation (and, consequently, the ability to raise fresh capital at a premium) which American interest has been found to bring in its train, without incurring any liability to foreign interference in a company's internal affairs. The flaw in the argument has been demonstrated by the affair of the General Electric Co.—a " leading case." A body of " disfranchised " American shareholders found themselves, on that occasion, in a position to bring sufficient pressure to bear on a British company to prevent a capital issue which would have reduced their proportion in the equity of future profits from 60 per cent. to 36 per cent. The " disfranchisement " method, in fact, is not only open to all the objections of the " exclusive " system, as regards the difficulties of identifying beneficial owners of shares, but has strong *moral* forces arrayed against it. In the long run, holders of a majority interest who are determined to make their interest effective will find ways and means of doing so, whatever company articles may say, and public opinion, always unfriendly to the idea of minority rule, may be relied upon to support them in the last resort. In the meantime, however, *differentiation* in the rights of identical shares in the hands of various holders must tend to produce a dual set of quotations for one and the same stock. Against such differentiation, when proposed, say, by foreign Government borrowers, the Stock Exchange has invariably protested with might and main. Indeed, in a recent instance, it went so far as to refuse a quotation, for a period of many months, to the stock of a European country which attempted to differentiate between holders of various nationalities.

That the practical difficulties surrounding all endeavours to prevent the entry of American capital into British industry have not been more widely realised may be attributed, in the main, to the recency of the whole movement. The companies who have made the attempt can be counted on one's fingers, and the efficacy of their restrictive regulations has only in one case—so far as is known—been put to a decisive test. We hope, in a final article, to deal with the contention that American control of British companies is less desirable in some instances—in the communication and public utility industries, for example—than in others, and the possibility that American-owned " British " concerns may give out a large share of their orders for new equipment, etc., to American rather than British producers. Other questions of a more general character, such as the effect of America's purchases on the exchanges and the trade balance of this country, may profitably be considered in the same article. For the present, we may point out that it is by no means necessary to read any desire for

economic " domination " into America's interest in British securities. An explanation may rather be sought in the desire of investors, the world over, to obtain as high a yield as possible, consistent with safety, on their stockholdings. The Standard Statistics Co. of New York has calculated that the dividend yield on fifty representative American industrial stocks declined from 4.29 per cent. at the beginning of 1926 to 3.52 per cent. at the end of last month. We have ourselves made a similar calculation in respect of as many as 178 representative British ordinary stocks in the " Commercial Industrial, etc.," section of the London Official List. The average dividend yield, at the same dates, we found to be 6.86 per cent. and 6.23 per cent. respectively. The yield on 14 industrial stocks of which America has been a recent buyer, however, worked out at 5.63 per cent. at the beginning of 1926, and 4.02 per cent. on May 31st last. In other words, the difference in the average yield of securities of the same general character in the two countries would seem to have been sufficient to attract the attention of the American investor, whose purchases have reduced the percentage obtainable to-day, on the stocks he has favoured, below that of British securities as a whole. The figures suggest that a continuance of the movement is highly probable, until the average yield of the securities concerned—i.e., *the price of equity-bearing capital*, has become more nearly identical in the two countries. In the absence of an extensive decline in American security prices, it would seem that the effect may be a further enhancement in the quotations of British ordinary stocks.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket. June 25.	Account. June 27.

Only a small open account, as expected, was disclosed by the carry-over arrangements, and unless anything occurs next week to give a lead, the same story is likely to be told at the next settlement. The public is taking very little interest in the Stock Exchange at present. Activity in Rhodesians continued, but was almost entirely of a professional character. In the gilt-edged market there was " nothing to go for "; and the New York exchange was about gold point all the week. The Reparations agreement was naturally received with favour in the Foreign market, but elsewhere it had no effect, though regrets were expressed that deliveries in kind were to continue for ten years. On Monday, it is true, there was some revival in semi-speculative business, but the following days were as dull as ever. The fillip given by the Anglo-Persian dividend to the oil market did not last long, and a sudden rise in Home Rails the same day, ascribed to " inspired " buying in a market short of stock, quickly brought out sellers. Events, in short, have so far borne out the view that the markets are in a position to receive good or bad news with almost equal stoicism, and are not likely to be shaken out of their quiet condition in the very near future.

The gilt-edged market was idle, prices slowly sagging in the absence of any outstanding development. The unexpected success of the Bank of England in obtaining £307,700 of the week's gold consignment from the Cape was negatived by the continuance of the New York exchange at a low level, though various rumours of pending shipments to America were proved incorrect. Daily declines of about one-sixteenth in quotations were fairly general through the list, with Conversion Loan somewhat weaker than the rest. A meagre business in Indian Loans had little effect on prices. Dominion stocks maintained a firm appearance for the most part, the most significant exception being Commonwealth Five per Cent. Scrip, which was on offer during the week at ½ to ¾ discount.

The Foreign market shone with the reflected light of the Reparations agreement, but its illumination was steady rather than intense. German Seven per Cents. showed consistent improvement and other European

issues strengthened. Turkish Unified, on the other hand, suffered from Paris selling. Support was forthcoming for Brazilians, which turned sharply upward, but Peru Corporations were subjected to profit-taking. Continued fears of a renewed outbreak of civil war produced dullness in Chinese stocks.

Signs of an incipient revival in Home Rails were in evidence at the beginning of the week, on the belief that Mr J. H. Thomas's employment plans would include measures designed to help the railways in the widest sense. The matter is further referred to in an "Investment Note" on the Stock Exchange's attitude towards the new Government. By the middle of the week, however, the movement had quite subsided, contemporary conditions being against it, while the basis of sound fact available regarding the Government's intentions was felt to be unduly slender. The week's traffic figures were undistinguished, showing little change from last year's. An active demand for Guayaquil and Quito bonds was the chief feature in a generally uninteresting Foreign Railway market. Argentine stocks were quietly absorbed, but profit-taking was in evidence in Antofagasta.

The industrial markets belied the promise of a marked increase in activity suggested by Monday's dealings, which were, in fact, the heaviest for some weeks past. The public steadily refuses to speculate at present, and though investment demand was sufficient as a rule to maintain prices the volume of dealings fell off markedly after the opening day. America gave no bull lead as regards the shares in which she is interested, the sagging tendency of shares in motor companies and concerns such as Dunlops suggesting, indeed, that fears of a removal of the McKenna Duties by a Labour Chancellor were inclined to trouble American investors. The announcement that the Gramophone Co. was issuing 1,600,000 new £1 shares to holders at par—in the proportion of one to one—was very well received, the market deciding that the shares would "look cheap" when quoted *ex* the very substantial bonus involved. Lyons were firm on the maintenance of the dividend, and the satisfactory state of the company's finances. Marconi, together with the cable stocks, remained dull pending Friday's lawsuit over the merger proposals. In the shipping group Royal Mail continued to decline somewhat extensively. Lord Kylsant's explanation of the valuation of the company's shipping investments, given at Wednesday's meeting, was regarded as unconvincing, and failed to remove the impression that the company had been casting its net very widely, and heavily pledging its credit on contingent liabilities and guarantees. Hudson's Bays were firm, the complete accounts giving a better impression than last week's preliminary statement and announcement of a capital increase. Insurance shares remained irregular and bank shares dull, changes being of narrow dimensions in both cases.

Rubber shares continued to attract no public interest whatever, though values were steady. The price of the commodity was erratic, with a slightly downward trend. Neither the market nor the outside public has made up its mind as to the outlook for rubber. An irregular and slightly easier tendency prevailed in the tea share market, though more extensive competition was in evidence for tea at the auctions. The opening of the Oil Conservation Conference in America produced a strong tone in the share market on Monday, but subsequent communiqués suggested the wisdom of awaiting the outcome of the deliberations before definite action. Business became dull in the absence of a definite lead from Wall Street, Eagles—Mexican and Canadian—shedding much of last week's activity.

The outstanding event of the week in the South African market was General Smuts' victory at the polls, which was regarded as a bull point for Rand shares. On Monday signs were discernible of the public's being drawn into the Rhodesian market, but on the succeeding days dealings were as "professional" as ever, inside support being forthcoming on any decline, such as that of Thursday morning. Tin and copper shares were again sensitive to changes in the price of the respective metals, the former market rising on the advance and declining on the subsequent reaction in the commodity, while the poor showing of the Bangrin Co. came as an unpleasant reminder of the contemporary difficulties of some producers. Rio Tinto were sold on a fresh decline in copper quotations.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Our New York correspondent cables:—The maintenance of a high business activity and the end of the decline in wheat prices, along with easier monetary conditions, have brought a slow return of confidence to the share market. Nevertheless, public interest remains small, and the volume of trading does not exceed the usual midsummer amount. On the week, however, the trend has been upward, and strong investment buying of public utility shares has been taking place, large financial interests aiming at the rapid acquisition of control of operating units for the amalgamation of a few large concerns. The strong nature of the buying is reflected in the fact that brokers loans stand unchanged on the week at $5,284 million. There is little hope of any tangible results of the oil conference, and oils have consequently been stagnant. Rails, too, have been inclined to sag on the temporary satiation of investment trust requirements and the wearing off of the effects of the O'Fallon decision. Coppers are also dull, but food shares are buoyant on reports of mergers and on the lower prices ruling for grain and other farm products. Fixed interest-bearing securities are gradually reviving, the belief being general that bottom has been already scraped.

PARIS.

Important lines of stock have changed hands outside the Bourse between French and foreign groups, but Bourse operations properly so-called have been reduced to a minimum. The absence of the outside investor is eventually discouraging even the professional, and once again quotations are sagging as a result of relatively light selling. Bank shares lost some of the ground that they had recovered, and the Banque de France could not maintain the levels it reached the week before. French stocks suffered a setback. The oil market was firm, as were Rhodesians, though coppers barely held their own. Rubbers remained around their previous prices.

BERLIN.

ıe *Frankfurter Zeitung* stocks index for June 7th 128.26, as compared with 124.56 a month before. underlying tendency of the Bourse has continued , but reactions have occurred due to profit-taking and ıe failure of the federal loan. Reichsbank, Siemens, letfurth potash and artificial silk stocks have received f attention, Reichsbank being bought for foreign unt. On Tuesday more foreign buying went on, but e trading was dull, and with a few exceptions quota- declined. Interest was taken in Polyphon on the of rumours concerning proposed international com- tions. Wednesday again was dull, attention being ined to bank stocks, A.E.G., and Daimler, and prices tened on Thursday also, a considerable rise in Poly- providing the principle exception.

AMSTERDAM.

ıe general tendency of the Bourse last week was firm, there were signs that the volume of business was in- sing. Philips took the lead with a rapid rise. garine Unie showed only a slight improvement, but ıcial silks were in obvious favour. Oils were steady somewhat harder, Royal Dutch setting a good tone. ırs weakened on the news of sales at lower prices for ıew crop in the Dutch East Indies. Tobaccos moved ularly, and some rubber shares were easier, but in ping shares, though there was not much business, ıs were well maintained. On Wednesday, June 12, Bourse was closed. In the Money Market the private ount rate was 5 5/16 per cent., and the prolongation 5⅜ per cent.

INVESTMENT NOTES.

e City and the New Government.—No sign of ral uneasiness has been shown in the City at the ng of a Labour Government into office. On the con- , confidence rather than otherwise is expressed in quarters at the personnel of the new Cabinet, and who have been selected for the departments which ern finance, commerce, and industrial life are recog- to be for the most part men of judgment and ex- nce. Before the election there were indications if a stalemate position was avoided and the Conser- e Government returned, public interest in the Stock ange might revive and another upward swing might iven to British industrials. Though that has not ened, the behaviour of the industrial markets as a e has afforded no support whatever for the view that y is passing out of industrials into foreign stocks. nly shares that can be picked out as having suffered ıe result of the election are those of companies that l be affected by the removal of the safeguarding or enna duties. Dunlop Rubber and a number of motor s have had a setback for that reason, and the mar- n them is unsettled. Iron and steel shares have on ıce slightly weakened; the disappearance of any pro- of a safeguarding duty might have been ex- d to put prices lower than they have actually but, on the other hand, there is an indeterminate ıg abroad that the new Government's plans for pro- g employment, especially in connection with the ays, may bring indirect benefit to the heavy indus- tries. Stocks of cable companies are somewhat down on uncertainty about the policy of Labour with reference to the cable-wireless merger, especially if the dissatisfied Marconi shareholders succeed in holding up the present proposals; the opposition which that party made to the Bill in Parliament is fresh in the memory. On the other side, there is the curious spectacle of Home Railway stocks benefiting on the establishment of Labour in office. Though the sharp upward movement on Monday last was semi-professional in character, there is a justifiable feeling that no Minister could be more suited than Mr Thomas, with his special knowledge, to interest himself in the possibilities of railway improvement; moreover, if the Government does succeed in stimulating employment generally, railway traffics are likely to reap some benefit. As for the rest of British industrials, the indications are that the market will continue quietly firm. Many of them are at prices which do not render their yields conspicuously attractive by British standards and no great revival of investment buying from the British public is to be anticipated in the immediate future. Public interest, however, is capricious and unaccountable. Looking further ahead, the life of the new Government is by general consent estimated at about two years, and the next election is bound to be preceded by a period of considerable uncertainty, as it is thought possible that the Government will then choose to go to the country on an avowedly Socialist programme. Taking all in all, therefore, there is little above the horizon that would foreshadow another boom in industrials at present, unless Stock Exchange fever should take hold of the public, but it also appears likely that if prices should weaken, the movement will not be ascribable to political causes.

The Rhodesian Copper Boom.—To refer to the past is not popular during a Stock Exchange boom, yet the past is so often the mould in which the future is cast that we are glad to reproduce the remarks of a correspondent who writes to recall the record of the Rhodesian market. Boom—disappointment—slump—have been, he declares, the ever-recurring theme in Rhodesian mining finance for over 30 years. The setting is varied, the players are changed, but the underlying plot is the same. From their free seats the investing public gleefully applaud each act, in blissful ignorance of the inevitable collection after the show. The great Rhodesian copper deposits have to be exploited, and it is equitable that those who cause the preliminary work to be done and take the responsibility of forming operating companies should receive a substantial reward. But those who consider the true interests of Rhodesia, the investor, or the Stock Exchange itself, can only deplore the encouragement of public participation in Rhodesian copper shares at price levels which appear grossly inflated. As an example of present share prices, the case of Roan Antelope may be taken. At the current level of approximately 2⅝, Roan

Antelope has a market capitalisation of almost £12,000,000, based on an issued capital of 4,543,633 shares. The total amount which has been put into the coffers of the company is approximately £3,800,000, but of this sum about £2,160,000 was provided by the recent issue of 1,139,033 shares to shareholders, who now include a large number of ordinary private investors. No less than 3,404,000 shares were issued privately at an average price of just under 14s. before Stock Exchange permission to deal in the shares was granted in July, 1928. It is since then that the market has broadened—no doubt owing to the numerous favourable reports regarding developments. To show 10 per cent. earnings on the present capitalisation would, on the basis of a profit of £15 per ton, require an output of 80,000 tons per annum of metallic copper. This vast production must take some years to attain in the most favourable circumstances. Making all allowance for recent advances in technique, an example of the length of time taken to overcome initial difficulties is furnished by the experience of the Bwana M'Kubwa mine. Operations in this case commenced in 1910; the company was reconstructed and came under new management in 1922; a loss of £169,784 was sustained in 1927-28; the production figure for April last was no more than 538 tons. Looking at the Rhodesian copper market as a whole, it must seem to any observer that, during the past nine months, circumstances likely to attract public attention have dovetailed with a series of financial operations. Before ten years are past we shall see whether present share prices are really justified on a yield basis, or whether the round of unforeseen difficulties, changes of programme, and further share issues will culminate merely in a moderate return on the actual capital sunk in Rhodesian soil.

Sheffield Steel Products Reorganisation.—A post-war combine which, after paying 10 per cent. in its first two years of life and nothing afterwards, underwent a scheme of rearrangement in 1924 and obtained a moratorium, Sheffield Steel Products has now put forward a second capital reorganisation scheme in view of the expiring of the moratorium on May 21st last. If the debenture holders were to exercise their strict rights and the undertaking were sold, the assets could not, in the directors' opinion, be expected to realise enough even to repay the whole of the first debenture stock. The issued stock and share capital is as follows:—

	£
Prior lien mortgage debenture stock (all except £2,040 held as security for bank advances and Treasury loan)	79,338
6% first mortgage debenture stock	1,285,464
4½% second mortgage debenture stock	312,680
6% non-cumulative income debenture stock	211,904
727,001 10s. 5% participating non-cum. pref. shares	363,500
1730,700 1s. ordinary shares	86,535

Apart from the prior lien stock, which is unaffected, the reorganised capital will consist of £495,574 in 1s. ordinary shares and £321,366 in new 6 per cent. mortgage convertible debenture stock, the latter repayable at par in 1954 or, at the company's option, at 5 per cent. premium in or after 1939, and also convertible at par at holder's option into ordinary shares at any time up to 1939. The existing first debenture holders will receive the whole of the new debenture issue, together with an equal nominal amount in ordinary shares which will give them approximately 65 per cent. of the equity. The remainder will be apportioned as follows:—

	New amount in ordinary shares. £	Per cent. of equity.	Nominal amount (per cent.) written off present capital.
Second debentures	78,170	15½	75
Income debentures	42,381	8½	80
Preference shares	36,350	7½	90
Ordinary shares	17,307	3½	80

A circular letter to security holders explains that anything available for distribution in the above cases should be regarded as in the nature of a free gift, made by the first debenture holders to obtain the consent of the other classes to the scheme. The amount cannot be divided up amongst the other classes in accordance with their strict rights, for if it were, the second debenture holders would take the whole, and there would be nothing left for the others whose assent is necessary if the scheme is to be carried. They, in their turn, must therefore be prepared to make some concessions—and so all down the line. If any single class of shareholders were to take the attitude that they must have everything and leave nothing for those junior to them, no scheme could possibly be formulated, and the first debenture stockholders would be forced to foreclose. These are, in fact, the principles which have governed other recent iron and steel reconstruction schemes, and an explicit statement of them is welcome. No explanation is offered, unfortunately, of the reason for treating the preference shares more drastically than the ordinary. As to the future, additional working capital is to be obtained through the recognised channel of prior lien debentures, and it is proposed to raise their existing figure of £79,338 to £200,000. The directors estimate a profit for the year ended May 31st last of £40,000, and anticipate profits of £70,000 in a few years, after charging interest on the prior lien debentures. Examination of recent balance sheets suggests that the business is on the mend, but the past history of the company has been decidedly unfortunate, and if the scheme goes through, ordinary shareholders will be left with only 1 per cent. of the nominal value of their capital before the first reconstruction.

Hudson's Bay Report.—In the full report, issued this week, the directors remark that the development of mining and manufactures in Canada conduced to a general prosperity which was reflected in the expansion of the company's trading, although the purchasing power of the farming community was affected by unfavourable crop returns, while the company's operations in the Northern regions suffered through a scarcity of furs. The profit in the trading account for the period to May 31, 1929, which includes rents from lands, is slightly higher at £556,197, as compared with £544,410 in the previous year. In 1927-28 the company began to reap the benefit of its new policy of retail trading, which involved the building and equipment of large modern stores. The following table shows the net profits from trading and the distribution of profits for the last three years:—

TRADING ACCOUNT.

	(Years to May 31.) 1927. £	1928. £	1929. £
Preferred capital	2,000,000	2,000,000	2,000,000

* Including £200,000 provision for contingencies no longer required.

† Including £75,000 to insurance and provident funds.

As regards the land department, farm land sales for the 12 months ended January 31, 1929, comprised 318,360 acres sold at £765,648, an average of £2 8s. 1d. per acre, compared with 268,646 acres at £663,678, an average of £2 10s. 4d. per acre, during the preceding

twelve months. Sales of town lots amounted to £12,965, compared with £11,740. On January 31, 1929, the unsold lands in possession of the company amounted to 2,657,319 acres, as compared with 2,717,487 acres twelve months earlier. The balance to the credit of the land account was £243,763, out of which a dividend of 10 per cent. tax free was paid as in the previous year. The results on land account for the last three years are shown:—

LAND ACCOUNT.

	(Years to Jan. 31.) 1927. £	1928. £	1929. £
Cash from the sale of lands and sundries	334,645	418,640	464,675
Taxes and expenses	162,166	*171,500	165,912
Capital reserve fund	21,159	45,162	55,000
Net receipts	151,319	201,976	243,763
Dividend: Amount	150,000	200,000	200,000
Dividend: Rate % (tax free)	10%	10%	10%
Balance carried forward	1,860	3,836	47,600

* Including £12,000 to land settlement and advertising fund.

The balance sheet discloses reserves (including the capital reserve fund of £565,000) amounting to £1,600,000. The surplus of current assets (cash, debtors and merchandise on hand) over creditors, amounted to £2,686,897. At 5⅞ the ordinary shares, allowing for final dividends of 20 per cent. gross in the price (7½ per cent. gross from trading and 10 per cent. tax free from land), yield over 4.8 per cent. on the basis of a total distribution of 15 per cent. gross from trading and 10 per cent. free of tax from land. As we noted last week, it is proposed to increase the ordinary share capital to £3,000,000 by the creation of 1,000,000 new £1 shares, and to offer 500,000 next month to holders of ordinary shares.

J. Lyons and Co.—Record profits are reported by the catering firm of J. Lyons and Co., the figures for the year ended March 31, 1929, marking an advance of some 9 per cent. on the previous twelve months. Most, but not quite all, of the increase is required to pay dividends on the new 7 per cent. preference shares; the dividends on the ordinary and on the proportional profit shares, which are entitled per share to one-fifth of the dividend paid on the ordinary, remain unaltered, and the usual sum of £100,000 is put to reserve.

(Years ended March 31)	1927. £	1928. £	1929. £
Profit	757,160	832,516	908,950
5% preference dividend	32,353	32,353	32,353
7% preference dividend	140,000	190,167	259,192
8% preference dividend	80,000	80,000	80,000
6% preferred ordinary dividend	24,000	24,000	24,000
Ordinary and "A" ordinary: paid per share	4/3	4/6	4/6
Ordinary and "A" ordinary: amt. of dividend	336,021	357,474	359,161
Proportional and "B" proportional profit: paid per share	10·2d.	10·8d.	10·8d.
Proportional and "B" proportional profit: amt. of div.	40,375	42,750	42,750
To reserve	128,352	100,000	100,000
Increase or decrease in carry-forward	−23,941	+5,772	+11,494

Another £125,000 received in respect of share premiums has been added to the reserve, which now amounts to £1,175,000. The balance sheet shows evidences of increased strength, all the asset items being larger except investments in associated companies, which have dropped from £291,667 to £222,536. On the other side, creditors are down from £2,646,403 to £2,352,577. The larger class of ordinary share, the "A" ordinary, at 5⅛ cum final dividend of 2s. 10d., yield just 4½ per cent.

Wm. Cory and Son.—The profits of Wm. Cory and Son, coal contractors and exporters, which declined in 1927-8 after their abnormal rise in the coal stoppage period, rose again by 11 per cent. in the year ended March 31 last. The earnings are equivalent to over 23¾ per cent. on the ordinary and employees' shares. The directors, following a conservative policy, are maintaining the dividend at 17½ per cent., but allocating £150,000 to reserve account instead of £100,000 as in previous years.

(Years ended March 31.)	1927. £	1928. £	1929. £
Profit	1,038,727	696,047	777,289
Debenture interest	37,000	37,000	37,000
Net earnings	1,001,727	659,047	740,289
Preference dividend	42,500	42,500	42,500
Ordinary and employees' shares: earned	33·0%	21·1%	23·8%
Ordinary and employees' shares: paid	25%	17½%	17½%
Ordinary and employees' shares: amt. of div.	728,986	511,094	512,220
To reserve	100,000	100,000	150,000
Increase in carry-forward	130,241	5,452	35,569

Reserves, including premium received on shares, and the carry-forward, together aggregate now £2,367,497, which is slightly less than one-quarter of the gross assets. The investments are classified less lucidly in the new balance-sheet—a retrograde step. Otherwise the various items show little change, though the general position is stronger since debtors are down from £3,165,381 to £3,058,851, and creditors down from £2,974,152 to £2,696,780. At the market price of 3¼, cum final dividend of 12½ per cent., the £1 ordinary shares yield £5 12s. per cent., less tax.

Bleachers' Association.—The report of the Bleachers' Association for the year ending March 31 last repeats the story of the previous year in every significant respect. Profits are virtually unchanged, and though £100,000 in place of £75,000 is put to the general reserve fund (making that fund up to £975,000), the extra allocation is mainly at the expense of the carry-forward.

(Years ending March 31.)	1927. £	1928. £	1929. £
Trading profits	627,906	898,577	901,358
Depreciation fund	200,000	200,000	200,000
Debenture interest	101,250	101,250	101,250
Net earnings	326,656	597,327	600,108
Preference dividend	135,988	135,988	135,988
Number of times covered	*2·4*	*4·3*	*4·4*
Ordinary: earned	5·0%	12·1%	12·2%
Ordinary: paid	7½%	10%	10%
Ordinary: amount of dividend	284,530	379,374	379,374
Dividend equalisation reserve	*...Dr90,000*	...	...
General reserve fund	...	75,000	100,000
Increase or decr. in carry-forward	− 3,862	+ 6,965	− 15,254

The balance sheet contains no important changes, either in its items or their method of presentation. A document can scarcely be regarded as informative when a heterogeneous item which combines all sorts of fixed assets, goodwill, and shares in controlled business accounts for £10,158,178 out of a gross assets total of £12,250,093. Investors will await with interest the results of the breaking up of this item, which will be necessary next year under the new Companies Act. The £1 ordinary shares at 1⅝, cum 1s. 6d. final dividend, yield £6 9s. per cent.

Anglo-Persian Oil.—The Anglo-Persian Oil Company has announced a dividend for the nine months ending December 31, 1928, at the rate of 12½ per cent. per annum, less tax, which compares with 7½ per cent. for the twelve months ending March 31, 1928. After allocating £600,000 to the various reserve funds and £201,051 to extra depreciation, and deducting £513,434 on account of excess profits duty, there is a balance to be carried forward of £1,771,645, as compared with £2,224,267 brought in. The accounts of the company will no doubt show an improvement in trading profits in respect of the nine months ending December, 1928, seeing that the company had the benefit of higher kerosene prices in India since June, 1928, and higher petrol prices in France and Germany. The increase in petrol prices in Great Britain this year no doubt encouraged the directors to distribute a higher proportion of the company's earnings.

Lobitos Oilfields.—A further reduction in earnings is disclosed in the report of Lobitos Oilfields for the year ending December, 1928. This company's revenue is derived from the operation of its tank steamers and the sale of crude oil from its properties in Peru. It has a controlling interest in the Anglo-Ecuadorian Oilfields, but that is not yet returning dividends. As Lobitos Oilfields does not purchase oil from outside sources, or market refined products except in Peru, it has felt the full force of the fall in crude oil prices. At the same time it has had to pay heavy taxation to the Peruvian Government, which amounted in 1927 to £200,000 and in 1928 was at the rate of £180,000. The earnings for the past three years are shown in the following table, but the results for 1928 are not strictly comparable with those of earlier years, as they include only ten months trading of the Peruvian subsidiary, which has altered its financial year to end on October 31. This subsidiary reported a loss on the ten months working of £43,523 as against a loss of £1,350 in the previous twelve months.

	1926. £	1927. £	1928. £
Ordinary capital	600,000	1,000,000	1,000,000
Net revenue—			
From oil sales	266,393	56,535	50,371
From steamers	89,723	84,708	22,146
From interest, &c.	5,083	13,083	32,694
Balance	361,199	154,326	105,212
Less London expenses	14,162	14,802	15,676
Net profit	347,037	139,524	89,536
Per cent. earned	57·84%	13·95%	8·95%
Per cent. paid	35%	10%	10%
Reserve for income tax	100,000	70,000	15,000
Carried forward	249,393	318,917	313,453
Production Tons	266,918	296,248	264,956 (10 months)

As regards the future, the directors anticipate improved results in 1929 on account of the rise in crude oil prices. It is understood that the price obtained by the company for its crude oil exports to the United States is based upon American mid-continent crude oil prices, which were advanced last month to a level considerably higher than that ruling in 1928. At the meeting on June 19th, Lord Forres will also be able to announce some improvement in the tanker freight market. Lobitos shares are quoted at 2⅝. The book value of the ordinary shares, as disclosed by the balance sheet of December 31, 1928 (which shows a very liquid position), is 2$\frac{31}{32}$.

Primitiva Gas Co.—The preliminary statement states that the discussions with the Cia. Hispano-Americana de Electricidad, of which the shareholders were informed last year, have recently been renewed, with satisfactory results, an agreement for co-operation and mutual working between the two companies having been reached, details of which will be given at the annual meeting. Meanwhile the company, which reduced its share capital five years ago from £4,000,000 to £2,339,644, succeeds in paying a dividend on its ordinary shares for the first time since 1914. A year ago the board decided that though a dividend might have been recommended, a conservative policy was more likely, in view of the precarious position of the company only three years before, to put the company on a sound dividend-paying basis for the future. Its recovery has certainly been a rapid one, as the following table shows:—

(Years ended December 31.)	1926. £	1927. £	1928. £
Profit	97,947	151,055	222,000
Contingencies reserve	11,731	74,000	10,000
Depreciation and renewals account	74,608	76,000	75,000
Dividend { rate	...	...	5%
Dividend { amount	...	...	93,058*
Increase in carry-forward	11,608	1,055	43,942

* Presumed.

The sum carried forward to the current year is apparently £56,605. At December 31, 1927, the depreciation and renewals account stood at £247,100 and the contingencies reserve at £131,101. The statement was favourably received by the market; the £1 shares, which stood at 25s. at the beginning of January last (after being 20s. at one time last year) are now priced at 38s., yielding £2 13s. 4d. on the 5 per cent. dividend rate—a figure which obviously discounts a further increase in earnings.

African and European Investment.—This Kaffir finance company, writes our mining correspondent, experienced a set-back last year. Reduced sums were received in the shape of dividends, profits on sales and from the farms, the total of £181,800 comparing with £265,600 for 1927. Expenses were lower, the chief variations being that the writing off of bad debts called for only £2,100 in place of £30,000, while taxation absorbed £8,850, as against £19,750. At £89,100 the net profit shows a decline of £41,400. Accordingly, the dividend rate, which for 1927 was 7½ per cent.—comparing with the initial distribution of 5 per cent. in respect of 1926—is reduced to 6 per cent. Quoted investments standing in the books at £720,300 are stated to have a market value of £1,050,300; unquoted shares, taken at cost, represent £397,500. The company's more important holdings are the Union Steel and Vereeniging undertakings. Like others of its class, the African and European has extended its field of activity, exploiting a process for the manufacture of wool. Since the date of the accounts the Transvaal Estate and Development Co. has been absorbed, rendering the concern "the most important land-holding company in South Africa."

Bangrin Tin—Siamese Syndicate.—The results of these associated enterprises for 1928 are disappointing, the decline in the price of tin being, of course, an important factor. In the case of the Bangrin, a falling off in the average yield was accompanied by an expansion in costs, the working profit coming out at only 6¾d. per cubic yard as against 10d. After writing off £13,400 for amortisation of properties and development—somewhat less than before—the net profit figure was £28,600, in place of £55,600. As the interim dividend of 10 per cent. absorbed £30,000, there is naturally no final distribution. As regards the additional dredges, No. 2 commenced running at the end of November. Owing to various reasons, the returns so far have not come up to expectation, but the manager looks for better results in the future. No. 3 dredge is due to start very shortly. With both in full operation, the output should show a marked expansion. The experiences of the Siamese Tin Syndicate—the parent of the Bangrin—were in several respects similar to those of the subsidiary, the gross working profit coming out at barely ½d. per cubic yard as against nearly 4d. in 1927. The net profit of £27,000 compares with £60,900. The two interim dividends required £30,000, and there is no balance payment, the carry-forward of £7,500 being £5,600 less than brought in. In respect of 1927 the distributions totalled 50 per cent. Some recovery in the monthly output has lately been shown.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Antofagasta (Chili) and Bolivia Railway, Royal Mail Steam Packet, Eagle Oil Transport, Burmah Oil, Associated Newspapers, Calcutta Tramways, Madras Electric Supply, J. & P. Coats, Associated Tin Mines of Nigeria, and Zinc Corporation. The chairman of J. and P. Coats referred to the increased bonus paid this year and was at pains to contradict the general impression that future payments would necessarily be at the same level. Shareholders must expect, he declared, that the amount of the bonus would henceforth depend more than in the past on the result of each year's working, and was, therefore, "likely to fluctuate." Sir John Cargill discussed the Burmah Oil Co.'s policy of closer co-operation with the Royal Dutch-Shell group, and the world outlook for oil prices. Reference was made at the Associated Newspapers meeting to the continued increase in advertising revenue.

CAPITAL ISSUES.

Only three prospectuses were issued this week, representing an aggregate cash subscription (excluding conversions) of £722,000, and bringing the total for the year to £159,591,342, against £228,016,225 last year. Hambros Bank offered £500,000 30-year 6½ per cent. sterling bonds of the *City of Abo (Finland)* at 94½. This was a well-secured investment, returning a yield of 6⅞ per cent. flat and nearly 7 per cent. on redemption. The total service of the City of Abo debt, including the present issue, is only £76,000, whereas the revenue derived last year from properties owned by the City was £386,500. A conversion offer of *London County* 4½ per cent. Consolidated Stock, 1945-85, was made to holders of the 3½ per cent. Metropolitan Stock due on October 6, 1929, on the basis of £105½ new 4½ per cent. stock for £100 3½ per cent. Metropolitan Stock. The object of conversion, it is stated, is not to extend the period of repayment of the original debt, but to set free the money provided in the sinking fund to repay the stock, which can then be used to meet new capital expenditure. The increase in cash income should be a strong inducement to convert. The only "business" issue of the week was that of *Foreign Securities Investment Trust* in shares of £5, to be converted later into £3 of 5 per cent. preference stock and £2 of ordinary stock. The promoter of the issue appears to be Mr Emil Davies, the chairman of the First, Second, Third, and Fourth Co-operative Trusts, which have in the past followed a policy of distributing dividends in high ratio to earnings. This week's issue is not, however, a co-operative trust, but is registered under the Companies' Acts. The proceeds will be largely invested abroad.

Government of India Rupee Loan.—Issue at 96½ of a 5 per cent. loan, 1939-44. Subscriptions may be in the form of cash, including Indian Treasury Bills, or of 6 per cent. bonds, 1930, 1931 or 1932. The three sets of bonds will be accepted at Rs. 102, Rs. 103 annas 2, and Rs. 104 annas 2 respectively per Rs. 100 nominal of the bonds tendered. The loan will be closed to cash subscriptions when they have reached Rs. 12 crores (nominal). A 1½ per cent. sinking fund will be provided. This loan will be accepted at its issue price in subscription to any future Indian loan having a currency of 10 years or more and maturing after 1944.

Issue at 98 of 5 per cent. bonds, 1935. Subscriptions may be in the form of cash or (provided that at least an equal amount of such bonds is tendered as subscription to the 5 per cent. loan) of 6 per cent. bonds, 1930. The bonds will be closed to cash subscriptions when they have reached Rs. 15 crores (nominal), but either the loan or the bonds may be closed to cash subscriptions at any time after subscriptions for both together have reached a total of Rs. 18 crores (nominal).

London County Council.—Offer of conversion to holders o 3½ per cent. Metropolitan Consolidated stock, due October 6, 1929, into 4½ per cent. London County Consolidated stock, 1945-85, at the rate of £105 10s. for each £100 surrendered. The amount of 3½ per cent. stock outstanding is £5,551,396 8s. 6d. The new stock will be amalgamated with the existing 4½ per cent. London County Consolidated stock, 1945-85, on September 3, 1929. Cash in the sinking fund in respect of the cancelled stock will be treated as the proceeds of the issue of the substituted stock, and used to meet new capital expenditure on housing, main drainage, education, improvements to streets and bridges and other purposes.

City of Abo (Finland).—Offer for sale at 94½ of £500,000 30-year 6½ per cent. sterling bonds, redeemable by 1959 by an accumulative sinking fund applied in half-yearly drawings at par; the City of Abo reserves the right to repay the whole or any part at par in or after 1939. The loan will rank *pari passu* with all other existing loans of the City except to the extent of the Finnish Government guarantee given in respect of the Finnish Guaranteed Municipal Loan of 1924, in which the City participated. The total revenue for 1928 amounted to £549,000; the total funded debt, including this issue, is £1,058,000, and the total yearly service of debt, including this issue, is £76,000. The proceeds will be used for the conversion of a portion of the existing loans for harbour extension and creation of new gas works, extension of water works, electric power station, and hospitals.

Foreign Securities Investment Trust, Limited.—Issue at par of 50,000 £5 shares, to be converted, when fully paid up, into £3 of 5 per cent. preference and £2 of ordinary stock. The company will particularly but not exclusively invest in foreign securities dealt in on British and foreign stock exchanges.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction:—**J. G. Graves, Limited**; issued capital, 315,000 £1 7 per cent. cumulative preference and 420,000 £1 ordinary shares; a mail order business, incorporated in 1906, and dealing in Sheffield cutlery and plate, clothing, furnishing drapery, gramophones, floor coverings, wireless apparatus, cycles, etc.

COMPANY MEETINGS, &c.

BURMAH OIL COMPANY, LIMITED.

DIVIDEND MAINTAINED AND BALANCE SHEET STRENGTHENED.
CO-OPERATION WITH THE ROYAL DUTCH-SHELL GROUP.
STABILISATION OF PRODUCTION.
MARKETING CONDITIONS—RATE WAR SETTLEMENT.
SIR JOHN CARGILL ON THE POSITION AND OUTLOOK.

The twenty-seventh annual general meeting of the Burmah Oil Co., Limited, was held, on the 7th instant, in the Merchants' Hall, 30 George Square, Glasgow.

Sir John T. Cargill, Bart. (chairman of the company), presided, and there was a large attendance of shareholders.

The Chairman said: Ladies and Gentlemen,—I have here the certificate that the notices calling this meeting were duly posted, and I presume that I may, with your kind permission, as usual, hold the notice as read. (Agreed.) I will ask the secretary to read the auditor's report.

The auditor's report having been read by Mr F. G. Holdsworth (the secretary),

The Chairman, continuing, said: Ladies and Gentlemen,—The report and accounts having been in your hands for fully a week, may I hold them as read, as usual? (Agreed.)

While we held our meeting last year under the cloud of some nine months of rate-cutting conditions in the kerosene market of India, to which my speech fully referred, we closed it on a note of optimism and confidence from your managing director that we would win through to an even more secure position in that market than we had ever occupied in the past. Within some 48 hours of that confident prediction, the principal parties to the dispute met with Mr Watson and composed their differences, and kerosene prices were shortly thereafter re-established on the basis of world parity. Between this settlement and the arrangements secured, both with the Royal Dutch-Shell Group and with the Anglo-Persian Oil Co., Limited, through the formation of Burmah-Shell Oil Storage and Distributing Co. of India, Limited, the sequel anticipated with such assurance by your managing director has been completely realised.

It would serve no good purpose in the circumstances of this happy issue to stir up the dead ashes of the kerosene rate war by anything in the nature of a post mortem, and I do not, therefore, purpose saying more on the subject than to express our confidence that the settlement arrived at and agreed between authoritative and responsible representatives of the parties concerned will be lived up to by all in accordance with the best traditions of commercial conduct.

UNFOUNDED ACCUSATIONS.

But before leaving the subject of the rate war itself I must in a word refer—and leave it at that—to the *démenti* we found it necessary to issue on certain accusations and innuendoes—directly against the smaller units of the indigenous petroleum industry of India, but indirectly against your company—contained mainly in the finding of the Minority Report of the Tariff Board on the appeal for protection against these rate-cutting conditions. These accusations were shown to be as unfounded as the innuendo that your company's kerosene price restriction policy was "eyewash," of which no competitor who has had to sell against and under its conditions has ever required any convincing. And that in the sequel the conclusion of the Tariff Board that the appeal of these smaller companies for relief was, at the best, premature proved well founded, in no way alters the fact that, but for that settlement, these companies would undoubtedly have shortly been compelled to shut down their operations.

SATISFACTORY TRADING RESULTS.

These remarks are a necessary prelude to consideration of the trading results for 1928, which are now before you. That they should be so satisfactory in the face of the inclusion in the period of some six months of intensified rate-cutting in your largest product market against less than three months of less acute conditions in 1927 is, I think you will agree, not only subject for congratulation, but, and more important, evidence of the inherent strength and soundness of the position created for your company by the conservative allocation of your profits of the past between dividends on the one hand and depreciations and reserves—not to mention "carry forward"—on the other.

SUBSTANTIAL "CARRY FORWARD."

As you are aware, we have for some years now been building up a "carry forward" in excess of any normally anticipated requirements. But it is generally the unexpected that happens, and this wise provision has now enabled us, despite these difficult trading conditions, to maintain our policy of reserves and depreciations intact, to recommend a final dividend on the ordinary share capital of 10 per cent., less tax, making 20 per cent., less tax, for the year, and still to carry forward the substantial amount of £151,084 7s.

It is true that conservation of resources while the rate war continued has resulted in merely a deferment of expenditure which, while helping 1928 results, must sooner or later require to be incurred, but, beyond this, the spur of low values has undoubtedly quickened appreciation of the possibilities of more economical and less efficient methods of operation throughout the whole of your organisation, and the realisation of these has played an important part in the year's results.

PROFIT AND LOSS ACCOUNT.

If you will now turn to the profit and loss account you will see that the balance of profit after charging depreciation amounts to £1,558,973 10s. 6d., or some £344,339 less than in 1927. The addition of transfer fees and interest and dividends gives a figure of £2,121,320 18s. 4d., from which the normal deductions would have been the costs of income-tax, directors' etc., fees, salaries, office rents and charges, subscriptions, and employees' provident fund, but in this year are added interest on the Five-and-a-Half per Cent. Secured Debenture stock, one-third of the cost of the debenture issue, and the costs of formation of the relative company, the B.O.C. Anglo-Persian Share Trust, Limited, amounting together to some £61,000. To the balance of £1,479,626 2s. 5d. brought down there is added the "carry forward" from 1927 of £502,416 5s., giving the figure of £1,982,042 7s. 6d., out of which general reserve takes £200,000, fields expenditure equalisation reserve £150,000, and insurance reserve £20,000, leaving the £1,612,042 7s. 6d. carried to the balance sheet. The preference and interim ordinary dividends for the year absorb £861,416 10s. 3d., and of the balance of £750,625 17s. 3d. the recommendation to-day of a final dividend of 2s. per share, less tax, requires £599,541, 10s. 3d., leaving £151,084, 7s. to be carried forward.

You will have observed the considerable drop in the interest and dividend account. This is due in the main to two causes—namely, first, the gradual investment in our own business of moneys temporarily placed out on loan and deposit which I mentioned in my speech last year; and second, the reduced dividend received in the period from our holding of Anglo-Persian Oil Company, Limited, ordinary shares. While in this account we have on the one hand taken no credit for accrued and declared dividend on our purchase of ordinary shares of the Shell Transport and Trading Company, Limited, since it was not received in the period, we have, on the other hand, as already mentioned, debited interest accrued in the period on the Five-and-a-Half per Cent. Debenture stock.

BALANCE SHEET FIGURES.

Turning to the balance sheet, on the liability side we now find the £4,000,000 of Five-and-a-Half per Cent. Secured Debenture stock which was offered to you in the late autumn of last year. The offer fully explained the objects of this issue, as again briefly referred to in the report now before you, and that these objects and your board's proposals for securing them had your complete approval was emphatically shown by the somewhat embarrassing over-subscription which you tendered for the debentures. Interest accrued on these debentures to December 31st last is a consequential addition to liabilities. General reserve now stands at £1,000,000, insurance reserve at £520,000, and fields expenditure equalisation reserve at £750,000 as a result of the allocations of £370,000 again made for the year to these reserve accounts. The increase of some £74,454 on fire and marine insurance account to £1,013,899 9s. 5d. represents the difference between premia internally charged for risks and claims on this account in the period. Sundry creditors and credit balances are down by some £1,030,208.

ASSETS.

On the assets side sundry debtors and debit balances, on the other hand, are down by some £788,560; the refinery block is up by some £50,193, representing additions less £174,136 8s. provided as depreciation for the year; and the oil wells, etc., block remains at the very conservative figure of £350,000 at which we have restricted it for some years. Extended application of electrification to the Singu field is mainly responsible for the increase of some £60,739 on the fields electrification block account, which has been written down by £100,000 for the year; £20,000 has been written off the main pipe-line block account, which, including renewals for the year, now stands at some £307,704. The reduction in the tankers and tank installation block account of some £453,818 represents the depreciated book value of portion of the assets sold to Burmah-Shell Oil Storage and Distributing Co. of India, Limited, which has been moved down to and is now included in the figure of £11,622,491 of investments, the cost of the Shell Transport and Trading Co., Limited, shares accounting for the great bulk of the £4,789,907 increase in these. Then stocks of plant are down by some £527,871, and stocks of products up by some £90,614. The £65,384 of debenture stock issue expenses is the two-thirds residue of the total, and finally the reduction of some £219,039 in loans, deposits, and cash reflects the further utilisation in the business of moneys previously temporarily loaned out on the market.

These, then, are the results for the year, and I am confident you will share the view of your board that in all the circumstances of the conditions ruling in the period we have reason for considerable satisfaction and confidence in the fact that we have been able to maintain the 1927 dividend and to continue the policy of strengthening the balance sheet by the usual generous allocations to reserves and depreciations.

"SHELL" AND "ANGLO-PERSIAN" INTERESTS.

But, in the opinion of your board, supported in a most gratifying way by your response to the debenture offer—to say nothing of outside public expressions of opinion—your balance sheet has been still further strengthened by the broadening of the basis of your investments in the petroleum industry generally through the purchase, after exercising the accompanying rights, of 1,000,000 ordinary shares of the Shell Transport and Trading Co., Limited. The great position which the Royal Dutch-Shell Group occupies in the industry by reason of its interests in almost every producing and consuming country of the world is well known to you all, and we have every reason to anticipate that that position will be maintained and improved and that this new investment will steadily appreciate in value.

Our contingent financing of its cost, possibly merely temporarily met therefore by these debentures, reflects your board's view of the potential value of your holding of Anglo-Persian Oil Co., Limited, ordinary shares, and the board's scheme took the form it did for the reason, first, that the company's shareholders should have preference over the general public in the potential "plum" which a higher market value than £6 for the Anglo-Persian share might offer in the period of the exchange option, and, secondly, that there were, meantime at least, good reasons why your company should continue to retain the voting rights attached to these Anglo-Persian shares. The able chairman of that company periodically brings up to date the tale of its great achievements and makes clear how its enormous resources are being carefully and soundly extended and developed, and I do not, therefore, propose saying more here as to your investment in that company than that at no time have I or your other representatives on the Anglo-Persian board had better reason to congratulate you on it.

CLOSER CO-OPERATION WITH ROYAL DUTCH-SHELL GROUP.

The wider spreading of your investments in the industry generally, and this reason alone, determined the manner in which these transactions were put through. The direction itself presented no difficulty. Through fair and foul weather over a period of 23 years we have worked in the closest and most friendly way—and to the advantage of both—with our friends the Royal Dutch-Shell Group, and the conditions in the Indian kerosene market previously referred to had already brought this association there on to a permanent and corporate basis, so that this further, but for the first time direct, interest in the fortunes of that group was a natural step to take even apart from our opinion of the potential intrinsic value of the investment. The Royal Dutch-Shell Co. and the Shell Co. themselves welcomed this decision to strengthen our association with that group, and we are especially indebted to Sir Henri Deterding and to Sir Robert Waley Cohen for their co-operation in enabling us to secure these shares without recourse having to be made to the market.

And here I would like to take this opportunity to express our sense of loss to the petroleum industry as a whole involved in the decision of Sir Robert Cohen to take a less active part in its administration. His fertile and constructive brain is well known to those who have been brought into close relations with him, and while we have differed—and differed on occasions very strongly during an active association of almost a quarter of a century—these qualities and the quality of compromise have played a substantial part both in maintaining this long business co-operation and in at last establishing it on the more stable and fruitful foundations to which I have referred.

This investment in the Shell Co. carries no right to representation by your company on its board, and that company's invitation to your managing director to a seat must be regarded as a tribute to him personally for the active part for years played by him in the cementing together of the interests of both companies—to the considerable advantage, as you are well aware, of your company. I am sure that you will all wish me to convey to Mr Watson your heartiest congratulations on this signal mark by the directors of the "Shell" Co. of their appreciation of the extremely fair and broadminded way in which he has carried on negotiations—often of very difficult and delicate nature—between the two companies over such a long period of years, and of their recognition of the outstanding position which he has created for himself in the oil world.

STABILISATION OF PRODUCTION.

Having now covered and explained these important and far-reaching changes in your balance sheet, I would just briefly stroke the "t's" and dot the "i's" of the brief summary of the year's operations otherwise which the report gives you. There has been much talk in recent months of waste through over-production and the vital importance alike to consumers and to the industry of balancing production and consumption by stabilisation. Our production policy is to secure such volume as can be profitably marketed and to keep our tankage full. Just as with rationalisation, reflected in the arrangements we have had with the Royal Dutch-Shell and the smaller indigenous producers of India in connection with marketing, so also then with the reasonable balancing of production and offtake your company have been pioneers. It is true that we have not had the compelling forces of enormous flash production from the Burma fields which in other fields has, at least to some extent, forced the hands of our companions in the industry, but we have at any rate recognised the general economic waste that was going on and have for years stabilised our production on a basis which has clearly recognised that situation, preferring, both from your point of view and from that of India itself, the sounder and saner policy of a long, steady and regular life on our known resources to a meteoric outpouring of excessive production. And on this stabilised basis we have never had the situation in our fields so accurately gauged or equilibrium so well maintained as we have them to-day.

Electrification of the Singu field is being steadily extended, and the increasing demand for power both there and in the older Yenangyoung field will shortly involve both increased generating and transmission capacity, which are now engaging our attention.

OUTSIDE TESTING ACTIVITIES RESUMED.

The moratorium in outside testing operations was removed on the termination of the kerosene rate war and our suspended activities on these have been resumed. The drill alone can determine the justification of their expense, but they are geological possibilities which insurance considerations leave us no option but to probe.

Concentration and reconstruction of the Rangoon refineries are to all intents and purposes now completed, and are yielding the advantages and economies anticipated. But there is no finality to technical advance, and scrappings and substitutions and/or additions will be resorted to whenever they point to compensating further advantages and/or economies.

"CHAPTER OF ACCIDENTS" IN BURMA.

I regret to have to confirm the reports which have appeared in the Press of a chapter of accidents within our Burma organisation during the current year, quite unprecedented both in their number and in the deplorable loss and injury to life which they involved. In no case has the material damage or the interruption to steady operation been more than trifling, but I am sure you will wish to identify yourselves with your board in an expression of deep regret

at the loss and injury to life, and of sympathy with the relatives of the killed and with the injured. In the case of the worst disaster—the fire on the route of the pipe line—that the killed and injured were the victims of their own trespass and anxiety to make off with the leaking oil can in no way qualify this regret, of which your company promptly gave tangible expression. In the other cases, also, no blame is attachable to our arrangements or organisation, but, as is our practice, compensation for the relatives of the killed and/or the injured has been arranged. We have been remarkably free from serious accident until now, and I sincerely trust that I shall not again have to bring any to your notice.

The amalgamation of your and the Royal Dutch-Shell Group's Indian marketing organisations under the name of Burmah-Shell Oil Storage and Distributing Co. of India, Limited, has placed a great burden on those entrusted with the necessary and considerable dovetailing of the two separate units, simultaneously with their continued day-to-day conduct of a great and expanding business, and that it has advanced so smoothly and so completely in the time and in the circumstances reflects the greatest credit on our friends in India.

PETROL PRICES.

As regards the market for our products in 1928, I have already referred to kerosene. When peace came and better prices were possible world market values for the product did not, however, permit re-establishment of prices on the full pre-War level, and they were placed, and still remain, substantially below that. Petrol prices were unchanged in the period, but have since advanced this year to the extent of the addition made to the Excise duty specifically for that road development which India so badly requires. Both lubricating oil and jute batching oil values were on a lower level in the period, and, although wax values on average were not materially changed, our volumes of production and sale of this product, as of petrol, marked a considerable advance, and indigenous production of petrol still meets the steady and important increase in the demand in India and Burma for that product.

While under the existing relations of world production to world consumption I can see no prospect of improvement in product values, the maintenance at least of to-day's values should enable us to submit to you next June quite satisfactory results for 1929.

Provident fund balances, withdrawn some time ago from investment in the company and temporarily held by trustees, have now been entrusted to permanent trustees by the formation of a trust company, and new relative rules and regulations and the necessary trust deed have been respectively adopted and entered into.

ASSAM OIL COMPANY'S RESULTS.

Some of you may have seen the Press report of the annual meeting in London this week of the Assam Oil Co., Limited, copies of which will be circulated to you along with the proceedings of this meeting. That company's 1928 results are painful, if eloquent, testimony to the actual damage and potential threat of the recent rate-cutting war to the very existence of the smaller indigenous producing companies of India, and, as I have already said, are perhaps sufficient commentary on the Tariff Board's conclusion and recommendation that their appeal for relief was, at the highest, premature. But this interest of yours, thanks for your financial backing, continues to develop according to plan, and, given even merely to-day's values for products, there should be a much improved position to report next year.

The sound and efficient technical and profit-earning position so painfully reached by the Tinplate Co. of India, Limited, has for the moment been checked by the spread to it of that epidemic of labour unrest—without apparent rhyme or reason—which is playing havoc with the whole industrial development of India, and one can merely stand and wait until reason and the individual desire for steady employment are once more allowed full and free play and not subordinated to the irresponsibilities of Communistic agitation.

TRIBUTE TO STAFF AND LABOUR.

Once again it is both my duty and my privilege to bring to your attention and to express the board's and I am sure your appreciation also of the very fine work done throughout the whole of our organisation and those of our associated companies by your and their staff and labour in Burma and in India, and by your staff in the home offices. It requires no great reading between the lines of my remarks to visualise the very difficult and hard-pressure conditions which have surrounded the operations of the year, and I can assure you from intimate knowledge of the position that these men have worked as a team and with the team spirit to secure the advancement not of personal but of corporate interests.

During the year the head of the home engineering department, Mr John Gillespie, decided that the time had now arrived to take and enjoy a well-earned retirement. Directly and indirectly, Mr Gillespie had been associated with the company since its earliest days, and played an important and valuable part in its development on the engineering side. He has taken with him into his retirement the best wishes of the whole company.

And I would here take this opportunity to bid farewell and godspeed to Mr James Moore, who at his own desire, and to our great regret and loss, has decided that the time has arrived to give up his position as superintending engineer of the Rangoon refineries which he has filled with such credit to himself and advantage to the company for many years now. Mr Moore has left monuments in the form of improved technique in the industry which will long endure, but he has left even more than this in the memory of work done as president in and for the Syriam Municipality and for its inhabitants—mainly directly or indirectly your employees—which must have a deeper and more lasting value.

COMPLETE MANAGEMENT BY THE BOARD.

As mentioned in the report, the company took over on January 1st this year the complete management of its own affairs in India and Burma, which hitherto had been in the hands of its managing agents, Messrs Finlay, Fleming and Co. You are, I think, all aware that for many years your board, with only one or two exceptions, was composed of partners in that firm, who as such participated in the commissions earned by the agency. It has been for this reason that fees paid to your directors have all these years been out of line with those normally paid by companies of your standing. Now that the agency has gone the time has come to correct this position, and the necessary alterations in the articles will come up for your consideration at an extraordinary meeting which has been called to follow on the conclusion of our present proceedings.

I now beg to propose: "That the report of the directors and audited statement of accounts, including the balance sheet and profit and loss account to December 31, 1928, presented to the meeting, be received, approved, and adopted," and I shall call on Mr R. I. Watson, your managing director, to second this motion. After the motion has been seconded an opportunity will be given to shareholders to ask questions or make comments.

LOYAL CO-OPERATION.

Mr R. I. Watson: Ladies and gentlemen,—Before seconding the motion for the adoption of the accounts and the report, I would like just in a word to express my deep appreciation of the remarks made about me personally by our chairman and of the very kind way in which you have received them. Sir John's generosity in his tributes at these meetings of ours to the work done and the services rendered by the whole organisation are a constant stimulus to all of us to deserve them—(cheers)—and I would specially, therefore, like you to realise that any services that I may have rendered which appeared to be specially worthy of your approbation have been possible only because of the support and sympathy of the chairman and of the board, and of the loyal co-operation of the whole of the staff. Most especially I would like to refer to the able services which are being constantly rendered to you by Mr Whigham, your assistant managing director. (Cheers.) To him, and to all the other chief officials of the company, whether on this side or in India, I especially owe a great debt of gratitude. I have now great pleasure in seconding the motion to adopt the report and accounts. (Cheers.)

The Chairman: Are there any questions, ladies and gentlemen, that you would like to put? There being none, I now beg formally to put to the meeting the resolution which I proposed, and which Mr Watson has seconded.

The motion was then put to the meeting and declared carried unanimously.

DIVIDEND RESOLUTION.

The Chairman: I have now pleasure in moving that the dividend on the ordinary shares recommended by the directors at the rate of 10 per cent. per annum (2s. a share), less tax, making, with the interim dividend paid in November last, 20 per cent., less tax, for the year, be adopted and that the same be hereby authorised to be paid on June 14th and that the balance of £151,048 7s. be carried forward. I would be glad if Mr James Stark would kindly second that.

Mr James Stark: I have much pleasure in seconding the motion that has just been made.

The Chairman: I am quite sure, ladies and gentlemen, you are all agreeable to that motion. (Cheers.) I would now ask Mr Watson to move the next resolution.

Mr R. I. Watson: I have much pleasure in moving the re-election of Sir John Cargill as a member of the board, and I would like to take this opportunity of congratulating Sir John on the great distinction which has been conferred upon him by the University of Glasgow. (Cheers.)

Mr Alexander Morrison: I have much pleasure in seconding that motion.

The Chairman: May I take it, ladies and gentlemen, that you are agreeable? (Cheers.) Thank you very much. I now beg to propose the re-election of Mr H. S. Ashton, who has been associated with the company for so many years as a director, and I would ask Mr Paul to kindly second that.

Mr W. J. Paul: I have much pleasure, Mr Chairman, in seconding the motion.

The Chairman: Is that your pleasure, ladies and gentlemen? (Cheers.) I would also now move: "That Mr R. A. Murray be re-elected a director of the company."

Mr George Readman: I have much pleasure in seconding this motion.

The motion was also adopted.

Mr Thomas Stark: I beg to propose the reappointment of Mr James Herbert Wilson, C.A., as auditor for the current year.

Mr A. S. M. Breigan: I have much pleasure in seconding that.

The motion was adopted.

EXTRAORDINARY GENERAL MEETING.

The Chairman: That is all the business for the general meeting. We will now proceed to the extraordinary general meeting, and I shall just read the resolution of which you have had notice, and then ask Mr T. F. Donald if he would kindly propose it.

The resolution is to this effect, that the articles of association of this company be altered in the manner following:—

(1) "That Article 91 be cancelled and the following article substituted therefor and hereafter be referred to as Article 91—namely, '91. The directors (other than the managing directors and assistant managing directors) shall be paid out of the funds of the company by way of remuneration for their services a sum of £10,000 in respect of the year 1929 and in respect of each subsequent year, and such further sum, if any, as shall from time to time be determined by the company in general meeting, such sums to be divided among the directors in such proportions as they may agree among themselves, and failing such agreement in equal proportions'"; and (2) "That Article 121 be cancelled."

Mr Donald: Ladies and gentlemen,—I do not think that many words from me are required to recommend to you this proposal of the directors. Those who were present at the meeting last year will remember how fully Sir John Cargill dealt with the question of the marketing side of the business, and the consequent forming of the Burmah Shell unit, to which he has referred to-day, and which, I understand, has been of great efficiency and a great source of strength to the company, but it involved the termination of the Calcutta agency, and it also involved at the end of 1928 withdrawing or cancelling the old-standing agency of Messrs Finlay, Fleming and Co. in Burma.

That is a matter, as the report tells us, which could only be dealt with if it was forced upon the board by a resolution of the company, but our chairman and those of his colleagues who are interested have voluntarily agreed to allow the agency to be wound up, and now everything is on a different footing.

SERVICES OF THE BOARD.

In a company of this kind, with a capital of about £11,000,000, which shows, even in not a very fat year like this, a profit at the credit of profit and loss of £2,200,000, and which distributes nearly £1,500,000 in dividends, I consider that the only unsatisfactory figure in the balance sheet and accounts is "Directors' fees, £2,300." It is entirely inadequate to the services and the claims of the board upon the shareholders.

I am not in a position to give you figures, but I am credibly informed that the actual sum which has been paid to our chairman during all his tenancy of the chair out of the funds of the company is really insignificant; in fact, I think we are very lucky that our chairman, instead of sticking to the ship as he has always done, has not "cut the painter." If he had gone into the City of London he could have got no end of seats on good companies and no doubt would have enjoyed fees such as, rumour says, are now drawn by certain ex-politicians who have left that game and gone in for a business career.

I think, ladies and gentlemen, that £10,000, as mentioned, is not more than is due to our board, and I have therefore great pleasure in moving that we approve of this resolution as read. (Cheers.)

Mr David Young: I beg to second the resolution so eloquently put forward by Mr Donald.

The Chairman: Is there any amendment, ladies and gentlemen, to that? (Cheers.) There being none, I will now formally put the resolution to the meeting.

The resolution was put to the meeting and declared carried unanimously.

The Chairman: That is all the business, ladies and gentlemen and I thank you for your presence here.

VOTE OF THANKS TO THE CHAIRMAN.

Mr R. C. Greig: Ladies and gentlemen,—I have very much pleasure in asking you to accord to our chairman a very hearty vote of thanks. Owing to the very specially happy relationship which has existed now for many years between Sir John Cargill and the shareholders of the Burmah Oil Company, and owing to the very high position he now occupies in our esteem and affections, I think you will agree with me that a vote of thanks on this occasion is very far from being a mere formality. I do not think it is any exaggeration to say that the reason of the large attendances at these meetings is not because the shareholders come here hoping to hear they are going to get rich quickly. I think Sir John Cargill has removed all these hopes in past years. (Laughter.) But we come here because we are anxious to hear his speech, and we are also anxious to express our appreciation not only of his occupancy of the chair, but also of the work which he and the Board have done for us in the previous financial year.

Last year, Sir John, you told us, without minimising the position, of the serious difficulties which had occurred in connection with the kerosene war, and when you took such a serious view of the position I could not help remembering a remark made by you two or three years before. I admit it was made in one of Sir John's lighter moments. He said he had come to feel with regard to the shareholders of the Burmah Oil Company that he stood to them *in loco parentis*. I think when the kerosene war was at its height we can realise that his knowledge that the fortunes of this large family were going to be so seriously affected must have been a great strain upon him. We are very glad to hear from you, Sir John, this year that this strain has passed, due to the efforts of yourself and your Board, and we can only say that we do feel that we have every reason to be grateful to you for what you have done.

In expressing to you, and offering you, our thanks, we join to it the hope that you will be long spared to preside over these meetings.

The vote was accorded with acclamation.

THE CHAIRMAN'S REPLY.

The Chairman: Mr Greig, ladies and gentlemen,—I am really most grateful to you for the very hearty way in which you have endorsed the vote of thanks to me which has been proposed in such kindly terms by my old friend and old schoolmate Mr Greig. (Cheers.) To-day is really a red-letter day for me in my long connection with the Burmah Oil Company, because to-day I have just completed 25 years—a quarter of a century—as chairman of this great company. (Cheers.) I am sure you must all realise what a profound source of satisfaction it is to me, after having been associated with the company from its infancy, to see it to-day standing among the great oil companies of the world.

As Mr Greig has said, we have come through very trying times. You know that from my speech last year, and you know it from my speech this year. But thanks largely to your managing director for his extraordinarily able handling of a most difficult situation, and thanks to these much more complete and permanent arrangements which we have been able to make with our good friends the Royal Dutch-Shell, I unhesitatingly say to-day that we stand in a stronger position than we have ever done before. (Cheers.)

I have already referred to the great services that Mr. Watson has rendered to the company, and I do not wish to get into his bad graces by saying anything more, but I wish to endorse most heartily what he has said about your assistant managing director, Mr. Whigham. (Cheers.)

I cannot imagine any stronger combination than Mr Watson as managing director and Mr Whigham as assistant managing director. (Cheers.) I assure you from a long and intimate knowledge of the work and capabilities of these two gentlemen that the management of your great company could not possibly be in more able and better hands. (Cheers.)

I have just again to thank you most heartily for your very kind reception to-day and for the very kind things Mr Greig has said. I can only say that I share with him the hope that I will be spared for a few more years, and if I am I shall certainly promise you in the future my best, as I have tried to give you it in the past. (Cheers.)

This concluded the proceedings.

ASSOCIATED NEWSPAPERS, LIMITED.

SUCCESSFUL YEAR.

RECORD ADVERTISING REVENUE AND SALES.

The twenty-fourth annual ordinary general meeting of the Associated Newspapers, Ltd. (proprietors of *The Daily Mail*, the London *Evening News*, and the *Sunday Dispatch*), was held, on the 11th instant, in the Memorial Hall, Farringdon Street, London.

Sir George A. Sutton, Bt., managing director, presided.

The Secretary (Mr J. P. Hobbs, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the annual report and balance sheet, said :—

The directors' report and the balance sheet were sent out with the notice convening the meeting, and you will, I assume, as usual, take them as read.

The profits of the company for the year to the end of March last amounted to £1,205,666 8s. 0d. This very satisfactory figure was arrived at notwithstanding that the year was one of great developments, and, therefore, of increased expenditure. In accordance with our policy of keeping well ahead of all competitors, we have provided our readers with bigger and better newspapers. Our news services have been improved and increased, and we have introduced many new features which have met with the approval of our readers. Also, as you doubtless have noticed, we are now providing in large numbers the best pictures illustrating the news of the day.

The result of our enterprise, I think you will agree, is eminently satisfactory.

The holders of the preference and ordinary shares have received their dividends in accordance with the articles of association, and holders of the deferred shares have been paid quarterly dividends of 10 per cent., the same as last year. The sum of £695,013 4s. 11d. is carried forward, compared with £496,346 16s. 11d. last year.

The valuable goodwill does not figure among the assets. The buildings, machinery and plant have been amply depreciated and are kept in a state of the highest efficiency. The stock of paper and other materials are ample for our needs. The value of our investments as shown in the balance sheet is considerably below the present market value. The loan to the Empire Paper Mills (1922), Limited (of which we hold the whole of the capital) has been reduced by £70,000. Consequent upon the increase in the revenue from sales and advertisements, our debtors have increased somewhat.

Our cash position is very satisfactory and is more than sufficient for our present requirements.

The two staff pension funds now amount to over £150,000.

YEAR OF GREAT PROGRESS.

I should like to give you a few particulars of the year's activities and the happy position of your journals. *The Daily Mail* net sales now approach nearly two millions daily. Its daily net sales are the largest in the world and they are higher than this time last year. Its position is unrivalled.

The Evening News has the largest net sale of any evening paper in the world.

A noteworthy feature of the year's trading is what I may justly call the remarkable rise in the net sales of the *Sunday Dispatch*. During the year between 400,000 and 500,000 more people have become regular readers of the paper which is now admittedly the great Sunday national newspaper. Doubtless the remarkable free insurance scheme has had a great deal to do with this. The number of new readers increases weekly.

As an advertising medium, too, the *Sunday Dispatch* is now outstripping its rivals. Published in Manchester as well as in London, with its 24 pages of attractive reading matter, it is able speedily to cater for the great reading public in the North of England and in Scotland. Its merits have gained for it a net sale in excess of 1,200,000 copies per week.

RECORD ADVERTISING FIGURES.

The advertising departments of all your newspapers have again shown substantial development during the year. We have greatly increased the number of 24-page *Daily Mails* published. *The Evening News* is now practically standardised at 16 pages every evening. The *Sunday Dispatch* regularly publishes 24 pages on Sunday, while I am pleased to say that our overseas edition of *The Daily Mail*, which reaches out to the ends of the earth wherever a Briton is to be found, has also increased in size and revenue.

As an example of the amount of advertising handled I should like to tell you that in *The Daily Mail*, *The Evening News*, and *Sunday Dispatch* alone we often publish more than 900 columns of advertising during the course of a single week. Last year a single week's advertising revenue exceeded £100,000. This year I have to report that our record week just before the Whitsuntide holiday was nearer £120,000, and that there is every prospect of a further increase during the year we have now entered upon.

The Daily Mail still stands unchallenged as the supreme British advertising medium, and wider use than ever is being made of its advertising columns for trade and commercial undertakings, while the financial advertising revenue has increased during the year to the extent of about 50 per cent.

It is also gratifying to see the great increase of financial advertising in *The Evening News*. Financial houses have not been slow to recognise that a new class of investor has arisen, and that their announcements must reach the home circle. *The Evening News*, as the predominant home newspaper for London and the surrounding districts, and the paper having the largest evening net sale, has consequently benefited in this direction. During the year the big drapery houses and stores greatly increased their appropriations in *The Evening News*, the figures for this class of advertising alone being about 25 per cent. better than the previous year.

In regard to the *Sunday Dispatch*, advertisers have promptly taken advantage of the big increase in sales to which I have already referred, and the revenue figures again show substantial increases. This newspaper is now recognised as the most influential national Sunday medium for reaching the upper and middle classes.

STEADY INCREASE.

At the last general meeting a belief was expressed that a steady increase in the volume of advertising might be looked for. This has been fully justified, and I firmly believe the progress this department is making will be again reflected by increased revenue when we meet next year.

The congratulatory letters we receive from advertisers show that your publications are giving excellent results. I might just instance that a few weeks ago a full-page advertisement in *The Daily Mail* produced to the advertiser 86,000 replies.

Many instances of gratifying returns might be quoted, but the best proof of this is to be found in the increased and increasing demand for our advertising space.

The strict censorship of all our advertising continues, and there is ample evidence that our action in this respect is greatly appreciated by our advertisers and advertising agents alike, while the relationship existing between advertisers, advertising agents, and our advertising departments has never been more cordial.

At the same time by our censorship we have fostered the confidence of our readers in our columns—a confidence which is not to be found in any other group of papers in the United Kingdom.

Taking into consideration the few facts mentioned, it is not surprising that we are receiving the benefit of increased appropriations; indeed, when the appropriation is limited we often find that all the money is spent in our papers—sometimes even in *The Daily Mail* alone.

I therefore confidently believe that next year will show still greater progress and bigger developments.

Net sales certificates of *The Daily Mail*, *Sunday Dispatch*, and *Evening News* are available to all advertisers and advertising agents.

THE FUTURE.

In achieving the results outlined to you to-day, we have had the loyal support of an enthusiastic staff. You would, I am sure, like me on your behalf to thank the members of all departments of the business in London and Manchester, and all the workers in all departments of the Empire Paper Mills and the Anglo-Newfoundland Development Co. at Grand Falls.

These few particulars refer to our trading in the past. As to the future, it is not the habit at these meetings to prophesy, but this I will say, we started the coming year with favourable omens. Our advertising revenue is increasing, our sale revenue is increasing. Competition doubtless will be keen and expensive. This we welcome —our experience in the past has proved repeatedly that the greater the competition we have to meet the greater is our progress. The liquid resources and ramifications, however, of this company are strong enough to enable us to meet any competition, and we shall continue our policy of solidifying our newspapers and still further installing them on a rock of stability which it has hitherto been hard to shake, and which we have every intention, if possible, of strengthening still more.

The resolution for the adoption of the report and accounts was carried unanimously.

The retiring directors were re-elected and the auditors (Messrs Lever, Honeyman and Co.) were reappointed.

The proceedings closed with a cordial vote of thanks to the chairman, directors, and staff.

ROYAL MAIL STEAM PACKET COMPANY.

COMPETITION IN SOUTH AMERICAN TRADE.

LORD KYLSANT ON POSITION AND OUTLOOK.

The annual meeting of the Royal Mail Steam Packet Company was held, on the 12th instant, at Cannon Street Hotel, London, Lord Kylsant, G.C.M.G. (the chairman), presiding.

The chairman, in moving the adoption of the report and accounts, said : The results for the year 1928 reflect the difficulties with which British shipping still has to contend, including the continuance not only of high costs of operation but of intensified competition in the South American trade, particularly on the part of foreign lines.

After providing for taxation, debenture interest, and preference dividends, we recommend the payment of a dividend on the ordinary stock which, with the interim dividend already paid, will make a total distribution for the year of 5 per cent., less income tax, the same as for the previous year.

You may have noticed the auditor's comment regarding the company's investments in allied shipping companies. In most cases the allied shipping companies in which we hold ordinary shares are either entirely owned or controlled by this company. These shares are therefore not quoted on the Stock Exchange, and their value is what they are worth to this company.

You will notice from the balance sheet that these investments are under cost, and I can supplement this by saying that they also stand in the company's books at less than their full nominal value. The reserve fund remains at £1,450,000, whilst the insurance fund now stands at £1,331,713.

PASSENGER TRAFFIC.

During 1928 there was no marked variation in the volume of first and second-class passenger traffic to and from South American ports, but by our mail service from Southampton and our intermediate service from Liverpool we secured satisfactory complements of passengers. The total volume of emigrant traffic to and from South America does not show much fluctuation from year to year.

Though hampering Government restrictions are encountered in many countries, emigrants from the Peninsula and Central and Eastern Europe are conveyed to the South American republics at a low rate of passage money, and our company maintains a high reputation for the good treatment afforded to these emigrants.

We have continued to arrange a series of pleasure cruises by our specially equipped cruising vessels "Arcadian" and "Araguaya," which have been well supported, whilst early this year the "Asturias" made a six weeks' cruise to the West Indies, which was much appreciated by the touring public.

FREIGHT.

The total tonnage of general cargo carried outwards by our vessels to South America showed some improvement over the previous year. Homewards a slight decrease in volume has to be recorded, as compared with 1927, but this is largely accounted for by the company's vessels having conveyed a lesser proportion of low-rated cargo. On the other hand, our homeward carryings of the better classes of general cargo improved.

This company and its associated shipping companies continued to secure a large share of chilled and frozen meat shipments from South America. Whilst the quantity of meat shipped from South America shows no present tendency to expand, it is satisfactory to find that the range of products carried under refrigeration from Argentina and Brazil is steadily increasing in the form of both dairy produce and fruit, for the conveyance of which our vessels are particularly adapted.

We have, as you know, taken a prominent part in the development of the North Pacific Coast Service, in conjunction with our friends, the Holland-America Line. Last year's apple crop on the North Pacific seaboard was an exceptionally good one, and large quantities were available for export. In addition to our regular service, we despatched a number of fully-insulated vessels to supplement our regular service, which vessels secured full cargoes.

THE FLEET.

As in past years, particular attention has been paid to keeping the units of our fleet in first-rate condition. The steamers "Cardiganshire" and "Carmarthenshire," which were no longer suited to the company's requirements, have been sold for whaling purposes, whilst the "Teviot" was disposed of for breaking up.

The company's fleet now comprises forty-two vessels of 352,956 tons, whilst the fleets of our associated shipping companies aggregate 2,337,736 tons, making a total of 2,690,692 tons gross register, excluding ships now under construction.

During 1928 the vessels of this mercantile fleet traversed over 20,000,000 miles, made nearly 79,000 calls at various ports in the world, and carried nearly 1,500,000 passengers, and just under 15,000,000 tons of cargo. The average number of men employed daily on the ships was over 36,000, and the average daily number employed on shore was nearly 23,000.

CONDITIONS IN ARGENTINA.

This company is engaged so largely in the ocean carrying trade of Argentina that the trend of events in that great country— political economic, and commercial—is naturally of intimate concern to us, as affecting the maintenance and development of overseas communications to and from South America. It is gratifying that during the past year the general level of prosperity in Argentina was well maintained, whilst the prospects for 1929 are promising.

During the past year, production in Argentina was generally and uniformly good, and prices realised were, on the whole, satisfactory. This marked prosperity in the export trade of Argentina naturally reacted favourably not only on the national finances, but upon her purchases of manufactured goods from abroad.

The total imports into Argentina showed a substantial increase, of which Great Britain secured her proportion, our exports to Argentina being up to a figure not approached since the collapse of 1920.

To Great Britain the Argentine market for manufactured goods is of outstanding importance, in view of the dependence of this country upon the maintenance of a flourishing export trade, whilst the River Plate trade provides employment annually for several millions of tons of British shipping. For over a century, trade and commerce between Argentina and Great Britain have steadily developed, and to-day Argentina buys a larger quantity of British goods per head of population than any other foreign country.

This is largely accounted for by the fact that hundreds of millions of British capital are invested there, whilst the British reputation for integrity and reliability in commercial dealings stands high with the people of Argentina. The fact that, at the present time, the Argentine is the largest foreign market for British cotton and woollen goods, as well as railway material, is one of far-reaching significance for British industry and the unemployment problem.

Whilst one cannot fail to be impressed by the many indications in Argentina of present prosperity, as shown by the advances that have taken place within a comparatively brief period in production, commerce, industries, currency, savings, gold imports, and railway traffic, there are possibilities of greater developments in the future, which should bring increased opportunities for trade and investment, to which Great Britain would do well to pay close attention.

A British Economic Mission has been appointed to proceed to Argentina and Brazil under the presidency of Viscount D'Abernon, whilst a British Empire Trade Fair is to be held in Buenos Aires in the Argentine summer of 1930-1931, to which this company and its associated shipping companies are giving practical support.

REMUNERATION FOR CONVEYANCE OF MAILS.

Having referred to the trade outlook in Brazil, the chairman concluded : Whilst there are many indications on the part of foreign Governments of their intention to foster by every possible means their national mercantile marines, and to increase rather than to reduce the financial and other aid afforded to their nationals engaged in the shipping industry, there has, I regret to say, been a disposition on the part of our own authorities for some years to curtail as far as possible the rates of payment even for services rendered in the conveyance of mails.

As you know, this company was one of the pioneers in providing steamship services for the carriage of mails, and in the early days substantial subsidies were granted for this purpose.

On the company's main route to South America the rates received from the British Government for the conveyance of mails have been scaled down over a long period of years, and those at present in operation cannot be regarded as a satisfactory recompense for the services rendered. It is hoped that the British Government will before long agree to some readjustment in this respect.

I feel British shipowners are justified in asking that adequate payment be made to them for the valuable services they render in this connection, and that they should receive their fair share of the amount paid by the general public in the form of postage.

Although the cost of fuel during 1928 was somewhat less than for the previous year, the working expenses of high-class vessels are still very heavy. Every effort continues to be made by the management to bring about economies in all departments where this can be done without any sacrifice of efficiency.

The cost of handling goods at British ports is still very excessive, and in the interest of the development of the trade of the country it is hoped that this important matter will receive the careful consideration of the various port authorities.

The Duke of Abercorn, K.G., K.P., seconded the resolution, which was carried unanimously, and the formal business was transacted.

J. & P. COATS, LIMITED.

IMPROVED RESULTS OF PAST YEAR'S BUSINESS, CHAIRMAN ON POSITION AND PROSPECTS.

The thirty-ninth annual ordinary general meeting of J. & P. Coats, Limited, was held on the 13th instant, in the Christian Institute, Bothwell Street, Glasgow. There was a large attendance of shareholders.

Mr J. O. M. Clark (the Chairman), presided.

The Secretary (Mr M. Neilson), read the notice convening the meeting, and Sir Robert C. Mackenzie, C.A., read the auditors' certificate. The meeting agreed to hold the report and accounts as read.

The Chairman then said:—

Before proceeding further with the business of the meeting I wish to refer to the great loss which we sustained last year by the death of our chairman, Mr W. H. Coats. Mr Coats was a director of this company for 29 years, and was chairman for six years. During this long period he took a deep interest in the company's affairs, and particularly in the well-being of all those connected with the business.

I have also to record with deep regret the death of Mr J. William Clark, who was the head of our American business, and who had had a life-long connection with the thread trade.

For my colleagues, as well as for myself, I may say that we felt the deaths of these two members of our Board as a great personal loss, and we wish to take this opportunity of placing on record the affection and esteem in which we hold their memory.

The directors have elected me to fill the vacant office of chairman, and, as such, it will be my endeavour to serve the best interests of the company.

THE RESULTS.

The results for the past year are rather better than for the year 1927, and considerably better than might have been expected, taking into consideration the depressed condition of the textile trade in several of our principal markets. The increase in the profits, which is rather less than 6 per cent., has no special significance, and I attribute the improvement to certain economies which we have been able to effect, and to improved results in a number of less important markets which, though small in themselves, have in the aggregate helped appreciably to swell the total.

Before I deal with these, however, if you will turn to the balance sheet there are one or two observations which I might make.

You will observe that among the liabilities the dividend reserve fund now shows a total of £2,550,000, which is equivalent to one full year's dividend.

As regards the assets there is an increase of about £550,000 in the book debts, while stocks are slightly down as compared with last year. There is nothing special to remark upon these figures, as they vary according to conditions of trade.

The cash in hand is down by £400,000, but investments, etc., have been increased by £1,400,000, a substantial portion of which is in gilt-edged securities which could be easily realised. The The Board have always aimed at having a considerable portion of the Assets in liquid form so as to take full advantage of market conditions for the purchase of raw material.

The interest earned during the year is substantially increased because of the fact that we have been able to invest available cash on very favourable terms.

From the Profits which result we are recommending that £500,000 should be set aside in order to write down plant purchased during the inflation period, which we consider stands in our books at too high a figure. During the war years little was done in the way of capital expenditure either on buildings or on the replacement of plant. When peace came, it was found necessary to install a certain amount of additional machinery to meet our orders, as well as to make provision for the regular renewals which had been postponed for four years. The prices which we were compelled to pay were high as compared with present-day values.

THE BONUS.

After providing for the balance of the dividends, we recommend that a bonus of one shilling per share should be paid. You will doubtless look for some explanation from me to account for this change of policy. A bonus of sixpence per share in addition to the usual dividends has been paid for the last nine years, and, if we except certain abnormal years, and take into consideration the smaller capital prior to 1920, you will find that the payment of a bonus at the same rate goes back very much further. During that time we have had good years and bad years. There have been occasions when we could have safely paid a larger amount than sixpence, and there have been occasions when, taking the results of the years by themselves, we were not justified in paying any bonus at all.

When the company originally commenced paying quarterly dividends it was stated that, should the directors in future years feel justified in recommending a larger distribution on the ordinary shares, any excess over the amount payable in four quarterly instalments would take the form of a bonus to be distributed after the annual meeting. It was certainly not contemplated at that time that the amount of the bonus would be so regular that shareholders would look upon it merely as part of the dividend, and shareholders must expect that henceforth the amount of the bonus will depend more on the result of the year's working and is therefore likely to fluctuate.

Our trade on the whole has been well maintained, but expansion, where such has taken place, is more in the lengths used by manufacturers and in the fancy articles than in the domestic trade.

There is, of course, no lack of competitive sewing thread throughout the world's markets, and the low wages paid to workers in many Continental countries, coupled generally with high protective tariffs, tend to benefit local competitors.

ARTIFICIAL SILK.

As regards those articles which are manufactured from artificial silk, I am afraid I cannot add very much in the way of information to what my predecessor told you last year. Our sales have increased to some extent, and there seems to be no reason why this expansion should not continue, particularly in the finer qualities. Meantime, there is no difficulty in purchasing from outside makers all our requirements at reasonable prices.

Several of the silk companies, including one on the Continent in which we are interested, are now selling a rayon or artificial silk thread for sewing purposes as a substitute for sewing silk. This article has at least the merit of being considerably cheaper than real silk. Experiments which we started more than a year ago for the purpose of investigating the possibility of making from viscose or some similar product a thread to take the place of cotton yarn are still being continued, but so far we have not solved the problem.

TRADE PROSPECTS.

As regards trade prospects for the current year, the figures for the first few months are rather behind last year's. On the Continent there was a long spell of exceptionally severe weather; in this country the King's illness and the General Election; in Mexico revolutionary troubles—all these contributed to the setback. At the moment the outlook is brighter; and if we can at the end of the year show results that are no worse than those before us now, I do not think we shall have much cause for complaint.

You will observe in the report that we have added two additional directors to our Board—Mr Colin H. Mackenzie and the Marquis of Linlithgow. Mr Mackenzie has been in the Company's service since the war, and has visited a number of our foreign markets, and obtained a varied practical training on the selling side of the business. I am sorry to say he is not with us to-day, as he is abroad in the interests of the company. We have invited Lord Linlithgow to join the Board, in the belief that his wide experience of affairs, both at home and abroad, will be of value to the company. You will be asked at a later stage to confirm their election as directors.

It has been brought to my notice that there is a misconception about this company which is very widespread, namely, that its shares are still held by a comparatively small number of people. As a matter of fact, we have over 53,000 shareholders on the register.

I now beg to move that the report and accounts for the year ended December 31, 1928, as submitted to this meeting, be and are hereby adopted, and that the payment of dividends and of a bonus of one shilling per share, less income tax, on the ordinary shares, and the appropriation to extra depreciation, all as stated therein, be and are hereby confirmed.

Mr P. Herbert Coats seconded the resolution that the report and accounts be adopted.

No questions were asked by the shareholders, and the report was adopted with acclamation.

On the motion of Mr W. H. Sutton, and seconded by Mr T. H. Coats, the appointment of the new directors Lord Linlithgow and Mr Colin H. Mackenzie was confirmed while the retiring directors Lord Glentanar and Messrs Robert Clark, P. H. Coats, John A. Coats, and A. H. Glen-Coats were re-elected.

The auditors, Sir Robert C. Mackenzie, C.A., and Mr Wm. H. Goff, C.A., were reappointed on the motion of Col. Wm. Clark and seconded by Mr A. R. Harper.

The proceedings terminated with a cordial vote of thanks to the new chairman by Mr John A Holmes.

ASSOCIATED TIN MINES OF NIGERIA, LIMITED.

EFFECTS OF DEPRESSED TIN PRICES.

The second ordinary general meeting of the shareholders of the Associated Tin Mines of Nigeria, Limited, was held on the 10th inst. at Winchester House, Old Broad Street, London, the Hon. Lionel Holland (chairman of the company) presiding.

The representative of the Secretaries (the Anglo-Oriental and General Investment Trust, Limited) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: From a comparatively modest undertaking your company has become the largest alluvial tin-producer in the Empire.

The financial results of the year's working set out in the profit and loss account may, I am afraid, appear to some of us to be disappointing.

The depressed price of tin that prevailed during the whole period—an average price of £158 2s. 1d. a ton of tin concentrates—has been the factor that destroyed all chance of a more favourable showing under existing conditions.

We sold during the period covered by the accounts 3,061 tons of tin concentrates. They realised, as you will see in the profit and loss account, £483,953. We also derived a substantial profit from the sale of certain of the outlying areas held by the associated company, disconnected from any lands where we are at present winning production—areas that we could not ourselves exploit economically. With £694 accruing from transfer fees, the total income revenue came to £570,615.

Against this we have to set working expenses, royalty, smelting and transport charges and directors' fees—items of expenditure set out in the accounts in some detail—a total of, roughly, £396,021. We are left, then, with a net profit balance for the year of £174,594.

BOARD'S SOUND POLICY.

If you will turn from the profit and loss account to the balance-sheet you will see that the position of the company financially is a sound one, one that will enable it to take advantage of any improvement in the outlook—of any rise in the price of tin, or reduction in working costs.

But however satisfactory this may be, and however confident or hopeful we may feel about an improvement being due in the general tin position, it cannot be disputed that the conditions of the moment dictate caution, and render it imperative to pursue a conservative policy and husband the resources of the company against the possibility of a continuing spell of depression.

The realised profits now shown would, of course, admit of the payment of a final dividend for the accountancy period. But you will have learned from the directors' report the reasons that have influenced the board against recommending a distribution, and I cannot do better than read the paragraph in the report that explains their decision: "The low price of tin and the uncertain position of the tin market, besides the necessity of making full provision for the conversion of the existing steam plants to operate electrically, are considerations that dictate a conservative policy in dealing with the company's funds. By conserving the resources of the company on this occasion, the directors are convinced that more than proportionate benefits will accrue to the company in the future, and that it is inadvisable to distribute a dividend until the position is more settled."

THE FUTURE.

As to the future of our undertaking, I have entire confidence in its success. The only factor that can qualify and retard its full success until such time as the electric power scheme is completed is a continuance of the depressed price of tin.

We may, in my opinion, justly criticise the shortsighted reluctance and tardiness of a section of tin producers to arrive at some understanding that would assist in stabilising the price of tin, and prevent the violent fluctuations in price that are almost as prejudicial to the interests of consumers as they are to producers. I am hopeful that the saner counsels now in evidence will prevail, and a sound understanding not be long deferred.

Meanwhile, in gauging the promise of this company's future, the price of tin is the one uncertain factor; otherwise, it is endowed with every element of success.

The capitalisation of the business at £1,000,000—all in ordinary shares—is exceptionally moderate, having regard to the extent of its proved lands, to the wide areas in reserve, to the value of its plant, equipment and other assets, and to the magnitude of its output, which, so our engineers have estimated, can be maintained for 20 years without taking into consideration the wide areas of unexplored territory that we control.

The report and accounts were adopted.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED.

IMPROVED RESULTS—BONUS ISSUE.

The forty-first annual general meeting of the Antofagasta (Chili) and Bolivia Railway Co., Limited, was held, on the 11th instant, at Winchester House, London.

Mr A. W. Bolden (chairman and managing director) said that the directors had been able to present a report giving results of an improved character compared with 1927. The nitrate industry had not then recovered from its setback in 1926, but now they had to deal with a year which had given good results from nitrate during the whole period. The figures for the combined undertaking of the railway and waterworks showed gross receipts of £1,841,842, compared with £1,689,970 in 1927, an increase of 8.99 per cent., while the working expenses showed an increase of 5.16 per cent., so that they were able to retain a satisfactory proportion of the increase in the gross takings. The net receipts were £732,017, an increase of 15.35 per cent. They proposed to pay a final dividend of 4 per cent., less tax, on the consolidated ordinary stock, making 7 per cent. for the year.

All who were interested in Chile were much gratified by the improved position of Chilean nitrate. As the result of the formation of a Central Sales Corporation. Chilean nitrate had been competing successfully with synthetic nitrate. The Chilean Government had made it known that it would continue its scheme for assistance to the industry, and he thought they might all rest assured that the Chilean Government, as well as all those concerned, would do their best to see that the industry was assisted and that every possible measure was taken to ensure its future on sound business lines. He thought it not unreasonable to say that there easily should be sufficient room in the world's markets for Chilean nitrate of soda.

Continuing, he said that they had always been fortunate with regard to their finances as concerned the rate of interest on their prior charges, and they had also been thrifty, having conserved their finances and not having paid away all their profits in dividends. The directors now proposed to capitalise a part of the reserve account and renewals account, issuing to the consolidated ordinary stockholders 15 fully-paid ordinary shares of £1 each—to be later converted into consolidated ordinary stock—for each £100 of stock held.

The report and accounts were unanimously adopted and the proposed capitalisation of reserves was approved.

EAGLE OIL TRANSPORT COMPANY, LIMITED.

LOW LEVEL OF FREIGHTS.

The eighteenth ordinary general meeting of the Eagle Oil Transport Co., Limited, was held, on the 10th instant, at Winchester House, London, the Hon Clive Pearson (chairman of the company) presiding.

The Secretary, Mr C. H. M. C. Wilson, having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The net profit of £519,095 shows a considerable reduction as compared with last year. Freights were at a low level when we met a year ago, and they remained low during the whole of 1928; it was to provide for such periods of depressions that we conserved the large profits made in 1927 and created thereout a dividend reserve. Had this reserve not been in being we could have asked our charterers for a freight rate during 1928 sufficient to meet our depreciation and the dividend on our preference shares, but under our arrangements with our charterers we have utilised the reserve, and thus they have not been called upon to pay a rate of freight higher than that ruling on the market. As shown in the report, the profits for the year enabled us to write off our normal depreciation of 5 per cent. on first cost—an amount of £481,000—and, in order to maintain the preference dividend at the usual rate, we have, as provided in our chartering agreement, drawn upon the reserve to the extent of £122,500, leaving us with a balance of £277,500 at the credit thereof.

I am again able to report that your vessels have given satisfactory service throughout the year and have been well maintained. Repair costs have been normal, and the repair reserve now stands at £665,104, the small reduction being due to a charge against the reserve in respect of Lloyd's surveys carried out during the year.

As stated in the directors' report, three of your vessels, the "San Jeronimo," "San Lorenzo," and "San Nazario," were sold during the year, and the "San Patricio" has also recently been sold, at prices which your directors consider satisfactory. As a result the heading in the balance sheet, "Cost of Steamers, &c.," shows a reduction as compared with last year, since the first cost of the vessels sold disappears from this item. Similarly the depreciation which had already been written off the ships sold disappears from

the depreciation reserve, and consequently, although we have transferred from this year's earnings the sum of £481,000 to depreciation, the reserve does not show a corresponding increase over last year. I have already referred to the repair and dividend reserves. Sundry creditors show a reduction of some £113,000, whilst cash at £2,147,000 shows an increase of some £366,000.

Since we last met, shipping has sustained a severe loss in the death of Mr Havelock Wilson, the president of the National Sailors' and Firemen's Union. For many years his thoughts were turned towards peace in industry, and his efforts greatly helped in the maintenance of good relations between shipowners and their men, to the mutual benefit of both sides.

In reviewing the company's operations during the 17 years of its existence, we are proud of the fact that our captains, officers and engineers continue to show an increasingly long record of service and that a large proportion of the lower ratings have served continuously with the company for long periods; our thanks are due to them all for their good and loyal service. Our managers and their technical and clerical staff have also earned our thanks for their attention to your interests and the resulting efficiency and economical running of your vessels.

Mr Clive Bowring seconded the resolution.

The Chairman, in reply to a question, said that the preference shares were 6 per cent. shares, participating up to 8 per cent., but the arrangements under the chartering agreement were such that the shares would receive the full 8 per cent.

The resolution was carried unanimously.

The Chairman next proposed: "That the dividend paid in respect of the year ended December 31, 1928, on 400,000 cumulative participating preference shares of the company at the rate of 6 per cent. per annum be and is hereby confirmed and that a final dividend of 2 per cent., making 8 per cent. for the year, be declared payable on July 1, 1929."

This resolution was seconded by Sir Robert Waley Cohen, K.B.E., and unanimously approved.

ZINC CORPORATION, LIMITED.

LOW METAL PRICES.

The eighteenth ordinary general meeting of the Zinc Corporation, Limited, was held, on the 11th instant, at River Plate House, Finsbury Circus, London.

Mr Robert W. Skipwith, the vice-chairman, presided, and in moving the adoption of the report and accounts said: Our business derives its income from two sources—our mining property at Broken Hill and the return on the very considerable capital employed in investments.

Taking first the mining side, there was during the year under consideration a further substantial falling off in the value of mine production, due entirely to the continued decline in metal prices. In 1926 the value of our mine production was £1,015,000; in 1927 it fell to £765,000, and last year to just under £684,000. The total expenditure on mining, including development, treatment, and general expenses, absorbed £529,000 in 1926, £490,000 in 1927, and nearly £478,000 in 1928. The profit on our mining operations in 1926 was £486,000; in 1927 it fell to £275,614, and last year dropped to £205,867. The decline in mine profits has been very serious and may be entirely attributed to the reduction in metal prices. The effect of these reduced metal prices on our profits will clearly be illustrated to you by the statement that our net mine revenue in 1928, instead of being £205,867, would on the average prices of 1927 have been £328,700 and on the 1926 average £595,000.

On the operating side we have been able to increase our output and to effect substantial metallurgical improvements with a further reduction in costs. Our output in 1928 was greater by 11,169 tons than in 1927, and 31,230 tons in excess of 1926. Our aggregate metal recoveries of lead, zinc, and silver averaged 88.3 per cent. last year, against 86.6 per cent. in 1927, and 85.3 per cent. in 1926. Our costs, exclusive of development, fell to 32s. 9d. per ton last year, against 35s. 1d. in 1927, and 36s. 5d. in 1926. You will, I feel, agree with me when I claim that these are very substantial improvements and, but for them, our position to-day would have been much less satisfactory than we feel you will regard it to be.

Lower mining profits have carried a substantial reduction in royalties and taxation, and, in addition, we have benefited by some refunds on account of previous years. The investment side of our business yielded us a substantially larger income last year, the total being £114,276, against £87,720 in 1927, and £77,672 in 1926. After including sundry revenue and, deducting administration expenses, including the cost of the staff provident scheme, we have a profit of £225,534 for the year, against £259,278 in the previous year, and £424,048 in 1926. With the balance brought forward, and the unexpended appropriations for new plant, we have £373,926 available, from which we have paid interim dividends. These, together with what we now recommend as a final dividend, absorb £228,904. We again keep the appropriation for mine development and new plant at £100,000, and carry forward, subject to your approval, the increased balance of £45,022.

Turning to the balance sheet, the chief item on the assets side is made up of property at Broken Hill and investments at £821,221. Out of this total what we term our property stands in our books at rather less than £100,000, and our investments—less an investment reserve—account for the balance. The value placed upon our investments is considerably less than their realisable value to-day.

The balance sheet shows the position of the corporation to be a strong one. The position of your mine and metallurgical works at Broken Hill is satisfactory. Mine developments in the deeper ground have been of a very satisfactory nature. The drives, cross-cuts, and diamond-drill boreholes indicate that the ore bodies live strongly in depth, and although a larger tonnage was mined in 1928 than in 1927, the reserves show an appreciable increase. I cannot predict the course of future developments, but I know of no reason why the results of the current year should not fully maintain the present sound position.

The report was unanimously adopted.

MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED.

INCREASING DEMAND—BALANCE SHEET STRENGTHENED.

The ordinary general meeting of shareholders of the Madras Electric Supply Corporation, Limited, was held, on the 12th instant, at 1, Queen Victoria Street, London.

Mr John G. B. Stone, who presided, said that the accounts, while showing nothing phenomenal, indicated continued steady progress. The aggregate kilowatt hours sold during 1928 exceeded the previous year by 24·5 per cent. Domestic supply improved by 6·2 per cent. only, but they had now reached the stage when more strenuous efforts might be adopted to increase this demand by catering for smaller consumers. This is possible by the completion of the new plant. Supplies for power increased by 38·4 per cent. They foresaw a marked increase in this direction, although events moved slowly in Madras. The demand for current for street lighting increased by 8·4 per cent.

The average rate obtained for 1928 was As.2·44 per kilowatt hour, compared with As.2·7 for 1927. Having regard to the price of fuel, their tariff would bear favourable comparison with others in India. He would assure consumers that their interests are the company's own, and that they were most anxious to furnish a supply at the lowest possible rate consistent with a reasonable return on the capital. Good progress had been made with the erection of the new plant. The second 6,000 kw. set was now running, one of the 60,000-lb. Babcock boilers had been completed, and the erection of the second was proceeding. A large storage pond—10 acres in extent—for the circulating water for the turbines had also been practically completed.

The amount at the credit of revenue account was £210,866, or £33,102 more than last year. The sums at the debit of that account were £96,503, showing an increase of £20,029. The balance at the credit of revenue account carried to net revenue was £114,363. A balance of £65,934 11s. 8d. remained as net revenue for the year, to which had to be added £6,656 brought forward, making a total of £72,591. The directors recommended a final dividend of 5½ per cent. (actual) on the ordinary shares (making 8 per cent. for the year), free of income tax, and the transfer to general reserve fund of £9,855, leaving to be carried forward £6,906.

The general reserve fund had been considerably strengthened by the premium on 36,400 ordinary shares issued during the year, and if the recommendation to transfer £9,855 were approved, the fund would amount to £102,000. This, with the operation of the debenture sinking fund, had materially strengthened the balance-sheet.

The report and accounts were unanimously adopted.

CALCUTTA TRAMWAYS COMPANY, LIMITED.

INCREASED TRAFFIC RECEIPTS.

The ordinary general meeting of the Calcutta Tramways Company, Limited, was held on the 13th instant, at 1 Queen Victoria Street, London.

Mr John G. B. Stone (the chairman), in the course of his speech, said: Dealing with the tramways, the traffic receipts show the satisfactory increase of £37,105, due partly to the additional takings from the Ballygunge Extension, the Congress Exhibition and to the extra day in February, but mainly to the continued success of the monthly season tickets. The expenditure shows an increase

of £5,257 only, a very satisfactory result having regard to the increased mileage run. As regards the buses, whilst the receipts have increased by £8,049 the expenses have also increased by £10,078, resulting in an operation loss of £12,903.

The final result is that there remains an available balance of £124,753. This has been dealt with by the allocation of £80,000 to the depreciation fund, £4,566 to the staff provident funds, leaving £40,186 out of which it is proposed to pay a final dividend of 10d. per share, making 1s. 2½d. for the year, or a little over 6 per cent., free of income tax, against 5 per cent. for the previous year.

Nearly 90 per cent. of the total traffic receipts, amounting to £503,055, was again taken by the tramways, the actual tramways earnings for the year showing an increase of over £37,000, whilst those for the current year (1929) to date show an increase of £6,500. The monthly ticket issue continues to be very popular. It was thought, however, that there was still a considerable tramway traffic to be obtained during the slack periods of the day between the morning and evening rush hours if special facilities were afforded; accordingly a system of cheap midday fares was inaugurated on March 1 last both in Calcutta and Howrah.

Turning now to the buses, we show a working loss of nearly £13,000 for the past year. We have not yet been able to concentrate our garage accommodation at our Nonapooker Depot. This arrangement, with the reduction in mileage where possible on non-paying routes, should effect economies, in addition to the advantages which should accrue from the new bus arrangement with the East Indian Railway at Howrah. The fact remains, however, that the bus proposition in itself is not a paying one, and a similar position seems to prevail in Bombay, Rangoon and Mandalay. We feel, however, the time will come sooner or later when the system of transportation within Calcutta may be controlled by one authority, but in the meantime we feel that the company should give the additional facilities of travel which the bus service provides, even though this service in itself is unremunerative.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 8, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	7,000	From Revenue	8,748
Interest, &c., on Debt	20,030	Increase in Debt	19,213
Sinking Fund	500		
Sundries	220		
Increase in Balances	211		
	27,961		27,961

The total ordinary revenue amounted to £8,748,300 as compared with £7,699,200 in the corresponding week last year. Property and income tax was lower at £82,000 against £559,000, but super-tax at £420,000 was £120,000 higher. Customs and excise brought in £2,094,000 and £812,000, against £1,740,000 and £872,000 respectively. Ordinary receipts amounted to £359,400 against £31,800, and special receipts to £2,050,000 against £1,070,000. The National Debt was increased by £19,213,400, as shown below:—

(000's omitted.)

	£		£

„ 13	Bars sold...	10,338
Total ...		40,959

Net arrivals, £621,706.

Messrs. Samuel Montagu and Co. write as follows on June 12, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £162,968,424 on the 5th instant (as compared with £162,467,271 on the previous Wednesday), and represents an increase of £9,062,109 since April 29, 1925—when an effective gold standard was resumed.

About £924,000 bar gold from South Africa was offered in the open market yesterday. The Home and Continental trade requirements absorbed £92,000, India took £20,000, the Bank of England secured £307,000—as shown in the figures below, and £500,000 was acquired for a destination not disclosed. There was a net influx of gold of £270,967 during the week.

SILVER.

The market has developed rather a steadier tendency during the week under review. With Eastern rates reacting, there has been some revival of enquiry, selling being less insistent. China has been more a buyer than a seller, and although the Indian Bazaars have not been active, purchases for their account have been made in cover of bear sales. In addition, America was inclined to support the market at the low level obtaining at the beginning of the week. Prices have therefore recovered somewhat, and, following a rise to-day of 1s. 8d. for cash and ⅜d. for two months' delivery respectively, were fixed at 24⅜d. and 24 7/16d.

Quotations were quoted level on the 10th instant, when 24 7/16d. was recorded for both cash and two months' deliveries, but a premium of 1/16d. on the latter was re-established to-day.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 3rd instant to mid-day on the 10th instant :—

IMPORTS.	£	EXPORTS.	£

Reports and Notices.

BANKS.

BANK OF ADELAIDE.—The report for year ended March 31, 1929, showed a profit of £145,410, against £128,637 for preceding year. The ordinary dividend is again 10 per cent., absorbing £125,000, against £115,000. The sum of £15,000 is put to reserve, against £20,000, making reserve £985,000. The carry-forward is £38,875, against £33,464 brought in. Deposits amount to £6,177,592, against £6,084,129.

BANK OF NEW ZEALAND.—The profit for the year ended March 31, 1929, amounted to £934,153, as compared with £863,077 for preceding year. The dividend on the ordinary shares is 2s. 8d. per share for the year, while a bonus of 1 per cent. is paid in addition. The distributions are at the same rate as for the previous year. The sum of £275,000 is transferred to reserve fund, making total reserve fund £3,425,000. The carry-forward is increased from £582,525 to £617,592.

MISCELLANEOUS.

CARMELITE TRUST, LIMITED.—The first report and accounts are for the period from February 21, 1928, to April 30, 1929. They reveal a net profit on realisation of investments, dividends, etc., of £243,985. Salaries, rent, expenses of issue, etc., absorbed £24,877. Directors' fees absorbed £2,940. The net profit is £216,169. Out of this profit £127,500 is transferred to reserve for depreciation of investments, and the carry-forward is £88,669, subject to income tax. Preliminary expenses amounting to £22,179 have been written off from share premium account, leaving a balance of £152,803, which has been transferred to general reserve. Investments in quoted securities stand in balance sheet at £1,352,727, their market value being shown at £1,225,527. Unquoted securities stand at £379,261. Loans secured are at £128,509. Cash is at £18,160. Bankers' loans stand at £426,545. Creditors stand at £125,966. Debtors are at £42,823. Meeting, Winchester House, London, June 17th, at noon.

HOVIS, LIMITED.—The net profit on trading for year ended March 31, 1929, amounted to £108,706, as compared with £108,542 for preceding year. The ordinary dividend is 10 per cent. for year and a bonus of 5 per cent. is paid, making 15 per cent. as before. The sum of £25,000 is put to reserve, making reserve account £290,000. The staff benevolent fund receives £5,000. The carry-forward is £21,498, against £18,847 brought in. Cash has risen from £4,012 to £114,070. Investment in War Loan stock and bonds is now £151,283, against £204,300 in preceding report.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.—The report for the year ended March 31, 1929, states that the whole of the company's investments, which consisted of holdings in companies operating in Chile and Mexico, have been sold to America and Foreign Power Co., Inc., realising a profit of £2,738,793, which has been transferred to capital reserve account. Against this reserve account there has been charged:—(*a*) £625,000 contingently passed to special reserve account to meet the proposed premium of 5s. per share on the preference shares under the proposed arrangement set out in circular to shareholders in October last; (*b*) £729,313 to write off discount on debenture stock issues. The gross income for the year amounts to £517,105, against £721,951, the reduction being the results of the sale of investments having been made cum interest and cum dividend. After charging expenses and debenture interest and providing for income tax, the net income is £292,192, which with the amount brought forward amounts to £372,193. Deducting preference share dividend, the balance is £184,693. To this is added the profits previously applied in writing off discount, etc. (including income tax corresponding thereto) £915,706, making a total of £1,100,400. It is proposed to pay a dividend of 2 per cent. on the ordinary shares, with a bonus of 18 per cent., leaving £100,400 to be carried forward

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions in the United Kingdom remained favourable for cereal crops, which derived considerable benefit from recent showers and sunshine. Winter wheat is improving, and spring sowings have made a good start, while hay crops and pastures present a healthy appearance. Supplies of native wheat at the principal statute markets continue on a small scale, and business is restricted owing to the firmness of holders. Imported descriptions, after a firm interval, are now easier in sympathy with reduced forward offers, and in view of the general situation buyers adopt a reserved attitude. In the floating and forward cargo section, the tone is very unsettled, due to fluctuating prices from Chicago and Winnipeg. Liberal sales were reported, particularly on Continental account at firm rates, but news of the rejection by the United States Senate of the Farm Relief Bill imparted a weaker tone, and the uncertainty regarding the disposal of surplus old crop holdings is a disturbing factor in the general situation. Meanwhile Argentina is still the cheapest seller, and consequently attracts chief attention, cargoes of Rosafe, 63½ lbs., July, selling at 37s. 6d. per 480 lbs., c.i.f. terms. The general position remains favourable for importers, as crop reports in the chief exporting countries show improvement, and European prospects are also

favourable, the total area sown to winter and spring wheat in France being equal to last year. Reports from the United States indicate a liberal yield from the winter crop, official estimates being placed at 622 million bushels against 578 million bushels last year. Meanwhile shipments are maintained, particularly to Continental and outside destinations, though United Kingdom arrivals were on a reduced scale. Of feeders, prices of Plate maize were rather erratic following the violent fluctuations in wheat, the early improvement being lost, and shippers more inclined to press. A fair business, however, was reported for near positions, particularly on Irish account. Feeding barleys showed more activity owing to a revival in consumption demand both here and on the Continent.

Wheat.—Quiet and easier. No. 2 Northern Manitoba, ex-ship, 45s. 6d.; No. 3, ditto, 44s. 6d.; No. 4 Manitoba, 43s. 3d.; No. 5, 39s. 3d.; No. 6, 36s. 3d.; Rosafe, 64 lbs., 40s. 3d.; Barusso, 63½ lbs., for shipment, 39s. 9d.; Australian, 44s. ex-ship, per 496 lbs. English, 9s. 5d.-9s. 8d. per 112 lbs.

Flour.—Quiet. London, straight run, 34s. per sack, delivered. Of imported, Manitoba patents range from 33s. 6d. to 36s. 6d., Minneapolis, 34s. 6d.-35s. 6d.; Australian, 31s. 6d.-32s. ex-store, per 280 lbs.

Maize.—Quieter. Plato, landed, 37s., ex-ship to arrive, 35s. 6d.; May-June, 35s. 6d.; June-July, 35s. 6d.; July-August, 35s. 9d. per 480 lbs. Yellow maize meal, £10 5s. per ton f.o.r. London.

Barley.—Quiet. Californian, ex-ship, 43s.-48s.; Chilian, ex-store, 45s.-58s.; Australian, 41s.-44s. 6d.; Smyrna, 44s.-47s. per 448 lbs. Algerian Tunisian, ex-ship, 29s. 9d.; Canadian, feed, 27s. 9d.; No. 3 Canadian Western, ex-ship, 30s. 6d.; landed, 32s.; No. 4, ex-ship, 29s. 3d.; No. 2 Federal American, landed, 29s. 3d. per 400 lbs. English malting, 10s. 6d.-11s. 2d.; feed, 9s. 8d.-10s. per 112 lbs.

Oats.—Steady, quiet. Plate, landed, 24s.; ex-ship to arrive, 23s. 3d.; No. 1 Canadian, feed, 23s.; No. 2, ditto, 22s., ex-ship; mixed Canadian, feed, ex-ship to arrive, 18s. 6d.; landed, 20s. 3d.; Chilian white, ex-ship to arrive, 28s.; landed, 30s.; German, landed, 27s. 6d.; ex-ship to arrive, 26s. 6d. per 320 lbs.; English, 9s. 8d.-10s. 2d. per 112 lbs. Scotch landed, 29s. 6d. per 336 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.
Estimated sales of home-grown wheat—				
1 week to June 8	Cwts. 67,167	Cwts. 174,435	Cwts. 214,579	Cwts. 115,321
39 weeks to June 8	9,265,980	10,128,378	11,124,312	12,615,022
Average price of English wheat per cwt.	s. d. 9 7	s. d. 11 0	s. d. 12 9	s. d. 13 5

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1929.	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.

AMERICAN WHEAT MARKETS.

Wheat has fluctuated within narrow limits this week; changing weather and crop reports and conflicting rumours about farm relief were the principal influences. The failure of Congress to pass a farm relief measure brought a slight decline, but this was partly counteracted by rumours of unwanted rains. Quotations:—

NEAREST FUTURE.	Jan. 4, 1928.	Jan. 2, 1929.	June 13, 1928.	May 29, 1929.	June 5, 1929.	June 12, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.)	156½	122	138½	109⅜	115	114½
Chicago (No. Winter)— Cents per 60 lb.	166½	116⅜	137½	97	107	105⅞

Visible supplies of wheat in Canada at 66,344,000 show a decrease of 4,700,000 as compared with the previous week's figures. Supplies a year ago stood at 63,027,000.

THE COAL TRADE.

Our Sheffield correspondent writes:—The export coal market has picked up somewhat after the recent falling off, and prospects for the second half of the year are now regarded as being moderately favourable. Although the quotas under the five counties scheme have been increased, supplies of steam coals are still rather short. The house coal section is now feeling the usual summer slackness, and business is exceptionally quiet. Demand for blast-furnace coke steadily increases, whereas the home demand for foundry coke is poor. Prices all round are steady.

Our Glasgow correspondent writes:—The Fifeshire collieries are comfortably placed for the next week or two, having good orders for both large and small coal. The Lothian collieries are, however, looking for business in steams, while in Lanarkshire practically all qualities are in need of orders. The market for nuts is rather patchy in all districts, but generally the smaller sizes are moving away better than the larger grades. Shipping prices are approximately as follows (all f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s.; splint best, 16s.; splint second, 15s. 6d.; navigation, 17s. 6d.; navigation second, 15s.; Hartley, 16s. 6d.; steam, 13s.; trebles, 14s. 3d.; doubles, 13s. 6d.; singles, 12s.; pearls, 11s.; dross, 10s. FIFE.—Screen navigation, 17s. 6d.; first-class steam, 14s. to 14s. 6d.; third-class steam, 12s. to 12s. 6d.; trebles, 14s. 6d.; doubles, 14s.; singles, 12s.; pearls, 11s. LOTHIANS.—Prime steam, 13s.; secondary steam, 12s. 6d.; trebles, 14s. 3d.; doubles, 13s. 6d.; singles, 12s. 3d.; pearls, 11s. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 16s. 6d.; steam, 13s. 3d.; trebles, 13s. 9d.; doubles, 13s.; singles, 12s. 6d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Slightly easier conditions have prevailed on the Cardiff coal market this week. Current inquiries have been of a restricted character, and the supply of tonnage has been inadequate for the requirements of the collieries. Nominally, there has been little or no change in market quotations, which are still above the recently increased minimum schedule, but there are many collieries which have been in need of prompt stems, and stocks have increased substantially. The impression is growing that some of the colliery companies were too precipitate in the reopening of pits during the pressure in February and March, and that some of these will again have to close down. The firmest prices in the market are those for some of the best steam and coking smalls and for sized coals, the supply of which is hardly keeping pace with the demand. The attempt of the colliery owners to persuade the workmen's representatives to open negotiations for a new wages agreement has temporarily failed, for at the meeting of the Joint Board held on Monday last the workmen's leaders intimated that they would have to consult the Executive Committee of the Miners' Federation in regard to the question of the revival of a demand for a national agreement before committing themselves to any negotiations on a district basis. They were informed, however, by the owners' representatives that "there was no possibility of any negotiations for a national agreement, and that an agreement for the South Wales coalfield must be negotiated between the owners and the workmen's representatives in the district without the intervention of any other party." It is unlikely that any further action will be taken till after the annual conference of the M.F.G.B. at Blackpool next month. The following are the current approximate quotations:—Best Admiralties, 19s. 9d. to 20s.; seconds, 19s. 9d. to 20s.; 19s. to 20s.; best drys, 19s. to 19s. 6d.; Black Veins, 18s. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. 6d. to 14s.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 14s. to 14s. 6d.; anthracite, best large, 33s. to 36s. 6d.; Red Vein, large, 23s. to 27s.; machine-made cobbles, 40s. to 44s.; French nuts, 42s. to 44s.; stove nuts, 39s. to 42s. 6d.; rubbly culm, 10s. to 10s. 6d.; patent fuel, 20s. 6d. to 21s. 6d.; foundry coke, 27s. 6d. to 36s. 6d.; pitwood, ex ship, 26s. 3d. to 26s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The quieter conditions noticeable in the iron and steel market of late continue to rule, but the tone remains firm. The situation in the pig-iron market continues to be marked by an increasing scarcity of North-East Coast iron. Producers are practically off the market and Cleveland iron is

For Life Assurance.

AMP

The Australian Mutual Provident Society is mutual. That is to say, all divisible Surplus, without deduction, belongs to the Policy-holders themselves and is distributed yearly. Moreover, the Society, established in 1849, has been for many years the largest and most prosperous British Mutual Life Office. Why is this? Because it offers to Assurers the Acme of Security and Profit, and because its satisfied members are its best advertisement. Why are policies with the A.M.P. Society so profitable? Because while its premium rates are below the average, it possesses in a unique degree the combination of a low expense rate, a high interest return and a favourable mortality experience. The A.M.P. Society should be covering you. You will be sent full particulars on application.

EVERY YEAR A BONUS YEAR.

Assets: £70,000,000. Annual Income: £10,000,000.
New Business for 1927: £15,397,528.
Cash Surplus for One Year (1927): £2,895,454.

ROBERT THODEY, F.I.A. Manager for the United Kingdom.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY

LONDON OFFICE: 73-76, King William St., E.C. 4.

almost unobtainable excepting from merchants. The stringency in this department is undoubtedly hampering trade, but it is stated that considerable difficulties exist in the way of increasing the production. In the case of Midland irons there is no shortage of supplies, but prices are well maintained. In the semi-finished steel department British producers continue to take the greater part of the business coming into the market, and some export business has been reported of late. Most of the foreign works apparently require the greater part of their production of semis for their own use, and their terms do not appeal to British users. German manufacturers, however, have done a fair business with English buyers. Conditions are irregular in the finished steel department, and whilst some of the British works have good order books, others are rather short of orders. The falling off in new shipbuilding contracts, however, has caused some disappointment in this department.

Our Middlesbrough correspondent writes :—The position in regard to Cleveland iron shows no change. A good demand continues, both on home and export account, but this can only be satisfied to a small extent, as makers have nothing to offer for anything approaching early delivery, and merchants' holdings are now very limited. Local founders have just made purchases of important quantities of Northants foundry iron to help them out of their difficulties. During the past week small lots of No. 3 Cleveland were sold by second hands at 70s., but at Tuesday's market 70s. 6d. and up to 71s. was realised. Prices at the close were nominally : No. 1, 73s. 6d. ; No. 3, 71s. ; No. 4 foundry, 70s., and No. 4 forge, 69s. 6d., but on Wednesday 6d. to 1s. more was asked in each case. Shipments of all classes of pig iron to the 11th instant total 8,392 tons against 16,383 tons to May 11th. Business in hematite is on an improving scale, and sales have been made by makers at 74s. for mixed numbers, both for prompt and forward delivery, and they are still sellers at this figure. The present make is being absorbed on current contracts, but more iron will be available next month, when extra furnaces will be in operation. Steel works continue busy on home orders booked before the recent advance in prices, but little new buying in this department is reported, although some satisfactory business is coming forward for export. Prices for home are : Plates, £8 12s. 6d. ; angles, joists and channels, £8 2s. 6d., subject to rebates. Heavy steel rails, £8 10s. ; black sheets, 21/24 gauge, £10 10s. ; galvanised corrugated sheets, 24 gauge, £13 15s. ; iron crown bars, £10 15s. There is an increasing demand for coke and producers are not offering freely. Good furnace qualities are advanced to 20s. delivered works. The ore market is quiet, consumers being well covered for early requirements. Best rubio is firm at 23s. to 23s. 6d., c.i.f. Tees. The number of furnaces in blast in the district is so far unchanged at 42. Two at Jarrow are going in next week.

Our Sheffield correspondent writes :—In several directions orders for steel material have increased. The giving out of a number of deferred orders for railway axles, tyres and springs has relieved to some extent the depression in these departments. Several of the forges are well employed on shipbuilding, locomotive hollow boiler work and specialties. Although the orders on hand do not suffice to keep the works employed up to anything like capacity, and are small individually, the volume of trade is considerable. The depression in acid steel continues. There is a progressive demand for basic steel. Steel prices are firm, and likely to go up further. Another advance on foundry iron is also talked about, notwithstanding the extremely restricted demand and consumption. Local capacity for cold rolling steel strip has lately been increased. Makers of high-class wire report favourably of trade. There is an improved demand for mechanics' and engineers' small tools. Seasonal orders for garden and farm tools are nearly executed. The demand for scythes equals output capacity. Plate and cutlery are quiet.

Our Glasgow correspondent writes :—In the West of Scotland there is very little change this week as regards the iron and steel position. The pig iron market is quiet, but prices of foundry pig have been advanced by 2s. per ton, making to-day's prices 77s. per ton for No. 1 and 74s. 6d. for No. 3, both f.o.t. makers' works. Several contracts have been placed with Glasgow works for steel structures within the past week and a further order for locomotives with the North British Locomotive Co., Limited, of Springburn, Glasgow, but, while there have been several launches on the Clyde within the past few days there is, unfortunately, a scarcity of new work at the shipyards. Steel makers are able to keep going but are not booked far ahead. In the sheet trade, orders booked during the week are just about the weekly average for the past month or two, but inquiries for overseas trade have been more numerous. Prices generally are unaltered.

Our Cardiff correspondent writes :—Comparatively quiet conditions have ruled this week on the South Wales iron and steel market. The blast furnaces, steelworks, and tinplate factories have been working normally, but there has been no expansion of demand and prices, if anything, have been a shade easier, with tinplates quoted round about 18s. 6d. per basis box, compared with from 18s. 6d. to 18s. 9d. last week, and galvanised sheets at from £13 12s. 6d. to £13 15s. per ton, compared with £13 12s. 6d. to £13 17s. 6d. Both Welsh and foreign tinplate bars are unaltered at £6 6s. 3d. and £5 17s. 6d. per ton. Scrap prices have again slightly hardened, with bundled shearings quoted at 73s. 6d. to 75s., compared with 72s. 6d. to 75s. the previous week. Shipments were very low last week, and stocks have increased to 234,786 boxes, compared with 226,428 boxes in the corresponding week last year.

OTHER METALS.

TIN.—The market exhibited firmer features, a better demand being somewhat reservedly met in view of improved cable advices from the East and America, and prices responded rather sharply. Later realisations caused slight irregularity and weakness. Stocks in London and Liverpool warehouses for week ending June 8th totalled 8,369 tons, compared with 1,463 tons at corresponding period last year. Standard cash sold at £200 10s., £202 10s., and £198 10s. ; three months, £203 10s., £206 5s., £201 10s. In the East a good business was reported at £205 10s. to £209 and £205 10s., c.i.f. terms.

COPPER also in request, and market commenced firmer while influenced by improved Continental inquiries and American advices, though forward positions disclosed some irregularity at times. Standard cash sold, £75 12s. 6d. to £76, £74 15s. and £76 2s. 6d. ; three months, £75, £75 10s., and £74 ton.

LEAD in fair support and market barely steady, offerings being adequate for requirements. Good soft foreign pig, June, sold, £26 12s. 6d. to £23 13s. 9d. and £23 11s. 3d. ; July, £23 12s. 6d. to £23 10s. ; August, £23 11s. 3d. ; September, £23 12s. 6d. to £23 8s. 9d. and £23 10s.

SPELTER dull and tendency in buyers' favour. June, sold, £26 7s. 6d. to £26 3s. 9d. ; July, £26 6s. 3d. to £26 3s. 9d. ; September, £26 3s. 9d. to £26 1s. 3d. ; October, £26 1s. 3d., per ton.

ALUMINIUM steady. Ingots and bars for home delivery, £95 ton.

ANTIMONY dull and easier. English regulus, quoted, £48 to £52 ; foreign, spot, £34 ; June-July, £31 per ton c.i.f.

WOLFRAM quiet. Straits quality, quoted, 28s. to 30s. per unit c.i.f.

QUICKSILVER steady. Spot, quoted, £22 2s. 6d. to £22 7s. 6d. per bottle.

TIN PLATES maintained. I.C. coke, prompt and forward, 18s. 6d. to 18s. 9d. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, June 12.

Spot sales for the week 6th to 12th (inclusive) are 41,000 bales, of which 24,300 bales are American, 2,900 Brazil, 2,150 Argentine, 2,100 Peru, 4,300 Egyptian, 2,550 African, 2,230 East Indian, and 470 sundries. Imports for the same period are 39,694 bales, of which 10,185 are American, 996 Brazil, 770 Argentine, 4,384 Peru, 15,216 Egyptian, 456 African, 7,537 East Indian, and 150 sundries. Quotations to-day are : American Middling, 10·14 ; Egyptian Sakel, 16·80 ; Egyptian Uppers, 11·35 ; Brazil Fair, 10·24 ; Peru, Mod-Rough, 12·50 ; Peru, Smooth, 11·09 ; West African Mid., 10·19 ; East African G.F., 11·40.

MANCHESTER, June 12th.

The past week has not brought an expansion of trade, and spinners and manufacturers as a body have reported a disappointing demand. There does not appear to be any inducement at the moment for buyers to place orders of weight with producers. General steadiness continues in raw material rates, but there are fears in many quarters of lower values in the near future. Cloth sales for India have been of retail dimensions. Monsoon advices are generally favourable. No development has taken place in the business passing for China. A little more demand has been dealt with for Egypt, and printing cloths have attracted some attention for South America and the Continent. Mixed reports have been received from the home trade. The yarn market remains sluggish. There are indications of further ground being lost by American spinners, the offtake at the moment being discouraging. Business in Egyptian counts has been irregular and not of any weight.

THE WOOL TRADE.

Our Bradford correspondent writes : No real change can be recorded in market conditions, but it is, perhaps, rather more encouraging to note that some of the larger topmakers are adopting a firmer attitude. For several weeks there has been a persistent downward tendency in merino tops, and prices now being accepted in several quarters bear absolutely no relationship to the cost of production. Even wool bought during the latter part of the season has proved to be wrong in the matter of price, when it has come to a question of selling the tops, and weak holders have been at the mercy of the market. Now it would appear that the larger firms with good financial backing have determined to stand aside and wait for a readjustment. They argue, in effect, that if they want to sell they have to accept an unremunerative price, so they may just as well quote a price more in keeping with production costs, and wait for the market to come back. Fine crossbreds are still neglected, and are weak, but medium and low sorts are steady, and holders appear to have confidence in the maintenance of values. Business in yarns remains very "spotty" and competition is exceedingly keen in all fine counts. Crossbred yarns for the home trade are slow, but there is a moderate amount of activity on export account, though most of the orders are only for small weights. The immediate outlook is uncertain, but many traders are of the opinion that values are just about at the bottom.

COLONIAL WOOLS.

FROM A CORRESPONDENT.

This is an intermediate period so far as the wool trade is concerned, though during recent weeks decent clearances have been made from importers' stocks. The unfortunate thing in this connection is that the sale of the raw material in the bale or as matchings has proved more attractive than topmaking, and even yet it is not possible to sell the combed article at atisfactory prices. Some of the leading firms are refusing to be influenced by the present lack of demand on actual consumption account, and still believe that spinning and manufacturing requirements can develop without any further decline in values. No doubt there is a large measure of truth in this, for the atmosphere has been partially cleared by the result of the Parliamentary Election, and rather more encouraging reports are being received from the Continent. Among traders there we find evidences of reviving confidence in values, and one of the weakest spots at this juncture is the United States. Values for wool and tops there are sagging, and the domestic clip is being bought much more cautiously than a year ago. The latter also applies to the English clip, but even when all these facts have been recognised, we find no justification for anticipating a serious slump. From various parts of Australia news has been received to the effect that some excellent rains have fallen, and flocks are stated to be in better condition than at this time last year. This should tell beneficially upon the clip. The lambing season is also understood to be later in certain parts, and there should be some chance for flocks in these districts to be increased. An excess of sheep over carrying capacity is not desirable, for this can only result in loss of stamina in the flocks and poorer clips, but merino wool, in particular, is at such a price to-day that there is every probability of the next clip being picked up fairly readily.

HIDE, LEATHER AND ALLIED TRADES.

The hide market is again firming up steadily, and with moderate supplies tanners take them as offered at advances of ¼d. to ⅜d. per lb. Calfskins are also dearer, and prices at provincial auctions have advanced ¼d. to ⅜d. per lb. Tanners are showing anxiety at the advance in prices of raw material, some of them refusing to work in more hides until there is a better demand for leather. The American market is also very strong. Prices of packer hides have advanced one cent on the week, best heavy steers now being quoted at 16 cents. All classes of oversea hides are dearer, and Argentine fregorfics are now quoted at 8 7/16d. There has been more activity in saladeros, Russia taking big supplies. Casablanca ox are now quoted at 8¼d.-8⅝d. Dry River Plates are advancing and B.A. Americanos are selling on a basis of 11⅞, although operations in this direction are not very marked. Africans are also advancing, dry salted Capes, first and second selling at 11¾d. and 10¾d. respectively. Australians share the advance, Queensland meatworks hides now offering at 9¾d. The demand for sole leather continues to improve, and tanners are receiving more orders for light dry hide bends, which are now none too plentiful, owing to the decrease in the quantities worked in during the past few months. Wet salted bends are wanted by repairers, but there seems a tendency for some of them to use cheaper leather to compete with the rubber substitutes now on the market. Offal in shoulders and bellies is moving off well, the American demand for welting shoulders being rather brisk just now. Rough leathers in split and dressing hides are selling better, dressers obtaining them at lower prices. Whilst there is no rush to obtain supplies of upper stock, trade is certainly improving. Box calf has sold in fair sized blocks at firmer prices, whilst there is a much better demand for willow calf suitable for men's and women's summer shoes. Glacé kid in the cheaper grades is being cut up steadily by makers of women's shoes, and sellers report a good business in black and colours. Curriers are still rather slack, as the anticipated duty on kip leathers into the U.S.A. is holding up orders. Wax and russet kip butts are selling in small lots, and semichrome is being bought steadily by makers of the cheaper grades of women's shoes. Trade in the shoe districts is improving steadily.

VEGETABLE OIL AND OILSEEDS.

Markets are far from active. Linseed oil is neglected by consumers, who refuse to pay the higher figure for which "spot" oil is held. Current value for June delivery and forward to December is around £28 5s. per ton, naked, ex Hull. Cotton oil is somewhat steadier, with crude Egyptian quoted £27 10s. for June-August delivery, and common edible £30 15s. spot. Other seed oils show little or no movement. In the oilseed section linseed is very quiet. indeed, with crushers unable to concede the present level of values Plate is held for £15 7s. 6d., but no transactions are reported. Calcutta linseed to London is nominally £17 5s. for shipment. The quantity of linseed on passage to Europe at 183,000 tons, is 13,000 tons advance on the week, more than two-thirds being destined for the Continent. Cotton seed is somewhat steadier, and business to Hull in black Egyptian has been done at £9 2s. 6d. and £9 5s. July and August loadings. New crop is also offering for September shipment to Hull, and transactions are reported at £9 10s. and £9 11s. 3d. Rather more interest has been evinced in soya beans, for which £10 12s. 6d. has been accepted for a cargo on passage to Hull. Oil cakes are slow, and in average demand for the time of year.

OVERSEAS PRODUCE.

FOOD BEVERAGES, &c.

SUGAR.—A very poor market again prevailed and inherent weakness is observable in the general situation. Continued niggardly buying on the part of manufacturers and distributors, both in the U.K. and U.S.A., tends to intensify liberal offers from producing countries. Spot prices in most cases remained unaltered, with a slight concession made here and there. But trade fails to revive. T.L. granulated, ex refinery, sold, 21s. 1½d. Forward positions largely nominal. Czecho, granulated, ready, quoted, 9s. 11½d. ; November-December, 9s. 10½d. f.o.b. Hamburg. Dutch J and Dinteloord, ready, 10s. f.o.b. Rotterdam. Four steamers' cargoes, Cuban, and one San Domingo, 96 per cent., September loading, sold, 8s. c.i.f. terms U.K./Continent. White Java, July-December, to Calcutta, sellers, 11s. 4½d. ; January-March, 11s. 6d. ; c. and f. Java shipments for last month total over 93,000 tons. Terminal sections fairly active but easier owing to continued pressure to sell. Of raw, August sold 7s. 2½d. to 7s. 1½d. ; December, 7s. 7½d. to 7s. 6⅝d. ; March, 7s. 9⅜d. ; May, 8s. 1½d. White, August, sold, 9s. 3⅜d. to 9s. 3d. ; December, 9s. 9⅜d. ; March, 10s. 3d. cwt. Cuban receipts last week 64,273 tons, against 21,255 last year ; exports, 82,305, against 45,058 ; stocks, 1,417,449, against 1,232,348 ; Central workings, 2, against nil. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending June 8th totalled 111,520 tons, against 146,342 last year. Receipts last week at chief ports of Atlantic seaboard of the U.S.A., 66,000 tons, against 77,000 same time last year, meltings, 70,000, against 61,000, stocks, 699,000 against 703,000. United Kingdom imports during last month total 177,780 tons against 228,477 same time last year ; entered for home consumption, 192,659 against 191,216 ; and stocks, 186,050 against 306,050, with stocks of home-grown, 19,550 against 16,800 last year.

COFFEE.—The general tone of the market is very quiet. Supplies consisted largely of Costa Rica. Here, inferior kinds of foreign cleaned were very difficult of sale, but qualities possessing good cleaned and roast and liquor sold steadily. London cleaned ruled slow, but in some cases steady prices were realised. African steady. Costa

Time tests all things.

THE CHATWOOD SAFE

Offers the highest degree of security it is possible to buy.

It is built by craftsmen who have behind them the inspiring tradition of a firm with almost three-quarters of a century's experience.

It is offered to those who desire to have contented protection for their treasure.

It has stood the greatest of all tests—the test of time—and is accepted by Bankers throughout the world.

The Chatwood Safe is the cheapest Safe that can be bought having regard to the degree of security offered.

Total	58,554,476	67,436,598	295,759,453	308,848,942

Rica, fair to fine bold blue, sold, 142s. to 176s. Uganda, Robusta, 73s. 6d. to 82s. 6d.

COCOA.—Market generally quiet. Accra F/F, October-December, sold, 43s. 42s. f.o.b. Terminal, July, sold, 44s. 6d.-44s.; September, 46s. 3d.-45s. 10½d., 46s.-45s. 3d.; December, 46s. 3d., 45s. 9d.; March, 47s. 3d.-46s. 9d.

TEA.—Indian auctions amounted to 45,837 packages. There was a good general demand while parcels showing autumnal flavour were wanted. Prices in most cases manifested but little alteration. Ceylon sales of 30,683 packages received fair attention. A few finest qualities proved quite steady, also leaf teas on export account. Otherwise, irregularity ensued and prices favoured the buyer, but this was largely accounted for by falling off in quality. Java and Sumatra sales met a fair reception at easy rates. Overland samples of new season's China have arrived and show attractive quality, but comparatively high prices are required in the Hankow market. On spot, London, Keemums at 2s. 4d. were sought after, also common teas round about 8d. and siftings at 6½d. The latter are now very scarce.

RICE.—Market nominally unaltered as far as the European side of the commodity is concerned, requirements being quite retail. New crop, two stars, Rangoon, spot, London, held for 14s., with buyers at 13s. 9d.; Spanish, spot, 18s. 3d., and forward 17s.-17s. 6d. c.i.f.

BEANS.—Market quite steady, but business confined to moderate limits. Shippers of Rangoon haricots are difficult to deal with and require prices much above buyers' views. Doubtless they are encouraged in taking such a firm stand, pending developments of Danubian crop and which is likely to be on a smaller scale than usual owing to paucity and high rates current there for the bean at time of seeding. Madagascar butters, spot, London, 41s.-43s.; parcels afloat steamer "Malgache" sold to Liverpool at 39s. 6d. June-July, London, changed hands at 39s. 6d. c.i.f. Rangoon haricots, spot, London, 13s. 6d. paid; afloat quoted 13s. 6d.; and for June shippers ask 15s. 6d.; July, 16s., c.i.f.

PEAS remain dull. Japanese, spot, London, 17s.; afloat, 15s. 6d.-15s. 9d.; May-June, 16s. 6d.; new crop, September-October, 18s. 3d. cwt. c.i.f. Dutch marrowfats, 21s. 6d. f.o.b.

SPICE.—Pepper market shows general stability, reserve being marked on the part of sellers, and trade in these circumstances is somewhat curtailed. Black descriptions, spot, quoted 1s. 4¼d., white Muntok, 2s. 3⅝d. Lampong, May-July sellers, 1s. 3⅝d.; August-October buyers, 1s. 2½d.; Muntok white, May-July, quoted 2s. 3½d.; August-October, 1s. 11⅞d. lb. London stocks 19 tons higher on the week for black, but white reduced 36. Cloves steady. Zanzibar, spot, 1s. 5d.; July-August, 1s. 1½d.; August-October, 11⅛d.; October-December, 10⅜d. African ginger, spot, held for 62s. 6d. Sago flour, also tapioca, idle at the moment. Desiccated coconut, spot, halves, 30s. 9d.; forward, 28s. 9d. cwt. c.i.f.

FRUIT (Dried).—Currants. A generally quiet tone prevailed. Pyrgos quoted 44s. 6d.-45s.; Amalias, 45s. 6d.-46s.; Zante, 46s.; Vostizza, 52s.-56s. Australian sold readily at 45s.-52s. Sultanas, Smyrnas, cleared on spot, but a small quantity shortly due is offering at 44s. 6d.-45s.; Australian, new, 40s.-65s.; old, 31s.-34s.; Cape, bleached, 52s.-68s. Raisins slow. Valencia, common to good, 42s.-45s.; Lexias, new, 45s. Figs in small supply. Bags genuine, 14s.-16s.; first tide, 13s. 6d. per cwt.

EVAPORATED FRUITS.—Market generally firm and plums reservedly offered, but other descriptions move off quietly. Californian plums, 20's-30's, quoted 65s.-67s.; 30's-40's, 57s.-59s.; 60's-70's, 44s.-46s. Pears, Lake County, 80s.-100s.; Australian, 75s.-76s. Apricots: South African Royal, 57s. 6d.-117s. 6d.; Australian, 70s.-100s. Peaches, Californian, choice, 53s.; extra choice, 55s.; fancy, 60s. Apples, Californian, spot, slice, extra choice, 77s. 6d. Almonds quiet and easier. Mazagan, 127s. 6d.; Mogador, 127s. 6d.; Majorcas, 130s.; Bitter-Jordan, 180s.-210s. cwt.

CANNED GOODS.

CANNED FRUITS.—Firm conditions continue to prevail, with a good demand for most descriptions of Californian. New pack quotations, so far, appear fairly satisfactory, though offers are by no means freely made, and general position still rather obscure. Australian descriptions are disposed of without difficulty at steady rates. Singapore pines in moderate request on spot, while forward business is restricted by firmness of packers. A ready clearance was effected in South African, with Hawaiian held for full rates. Tomatoes dull of sale, both spot and forward.

CANNED FISH.—Sardines quietly steady. Portuguese clubs, *5s. per dozen tins. Lobsters firm, with moderate inquiries, and* best halves held for 145s.-155s. Salmon in fair demand and prices maintained. Red talls, spot, 44s. 6d.-46s. 6d.; pink ditto, 27s. 6d.-29s. 6d.; halves, 33s.-33s. 6d. Japanese crab firm on limited offerings, finest quality ruling at 97s. 6d.-102s. 6d.

CANNED MEAT.—Corned beef and tongues firm on light supplies. Danish boned hams sell readily at full rates, and brawn also in request.

CONDENSED MILK AND MILK POWDERS.—Market steady. Full cream, sweetened, English, spot, 42s.; Dutch, ditto, 37s.; June-July, 37s. 6d.; machine-skimmed, sweetened, English, spot, 24s. 6d.; Dutch ditto, 22s. 9d.; June-July, 23s., all in 5-cwt. barrels. Powders, Spray process, F.C., 26 per cent., 2 by 56-lb. tins, crated, 90s.; M.S. (1-cwt. cases), 41s.; roller ditto, F.C., 26 per cent., 73s.; M.S., 31s. 6d., all nett, duty paid, ex-wharf London. On the grocery side, F.C.S., 19s. 6d.; M.S.S., 9s. 3d., basis per case, usual packing. Danish cream, evaporated, unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 48 by 14 oz., 20s. per case.

HONEY.—Market generally quiet, with larger supplies available. Jamaican, white set, 55s.; good amber to fine pale, 48s.-53s.; dark to fair amber, 42s.-46s. New Zealand, dark amber, 50s.-55s.; medium, 55s.-65s.; light, 65s.-85s.; white and water whites, 65s.-87s. 6d. Fine smooth San Domingo, 55s., with lower grades down to 47s. Californian, 55s.-57s. 6d. cwt.

RUBBER.

Market steadier, fair demand. Spot and June, sold, 10⅝d.-10 11/16d.; July–September, 10 13/16d.–10⅞d.; October–December, 11⅛d.-11 1/16d.-11⅛d.; January–March, 11⅜d. London stocks increased 96 tons on the week, landings being 1,804; deliveries, 1,708; stocks, 31,635, against 42,683 at same time last year. Liverpool stocks increased 108 tons; landings, 315; deliveries, 207; stocks, 4,750.

GENERAL.

Prosperity without Socialization

Is what I sought when, three years ago, I commenced an inquiry into the Economic Problem. My investigations, which extended to **all the industrial countries of Europe,** cost me

£5,000

and the whole of my time during the past three years. The results are embodied in my book,

THE MYSTERY OF THE TRADE DEPRESSION

In that book I show that the Economic Programme of every political party in this country is upon a fundamentally false basis. The Socialists will fail to solve the Economic Problem as completely as the Conservatives, and the Liberal Programme, *if carried out*, will bring disaster upon this country.

Unemployment does not arise from a decline in foreign trade. The tariffs in oversea lands are an inevitable reaction to the fatuous policy of trying to maintain employment in this country by means of an export surplus or the export of capital. Great Britain, as the world's largest exporter of capital, is the chief architect of the tariff walls of the world. The income that this country is supposed to receive from exports of capital is a financial fiction. The Free Trade issue is a false economic issue.

Those are only a few of the propositions proved in clear and precise language in my book, which can be understood in its entirety by any intelligent reader of a daily newspaper. There is not an issue of importance that is not dealt with with clearness, precision and completeness—whether it be the export trade, the inrush of cheap foreign goods, the development of the Dominions, Reparations, Industrial Unrest or the Coal industry. It is impossible to condense the subject matter of a book of 400 pages into a few sentences. I earnestly appeal to all men and women who seek **Prosperity without Socialization** to read my book, the price of which is only 7s. 6d. That is the only way by which they can discover whether I am right or wrong.

I base my claim to a hearing on this subject of vital importance to this country and to the whole Empire upon the fact that my inquiry into the Economic Problem is the only scientific inquiry that has been made. The economists have done nothing to find a solution of the Economic Problem without Socialization. During the past eight years they have betrayed their trust.

I am prepared to meet any Socialist, Liberal or Conservative politician, economist or financier in a public debate on the issues raised in my book.

"The Mystery of the Trade Depression" can be obtained direct from me at 7s. 6d. net, postage eightpence extra.

FREDERIC E. HOLSINGER,

40-43, Fleet Street, London, E.C. 4.
Telephone: Central 7769.

THE MONEY MARKET.

ON Tuesday the market received a rude though not unexpected shock from the news that the United States had taken all the new gold available in the market, and also £1,117,633 of gold from the Bank. The significance of these withdrawals is discussed elsewhere in this week's

issue, but they naturally created a considerable feeling of nervousness in the market, which already was beginning to find itself short of money. July Bills were consequently marked up from 5 1/16-1/8 to 5 1/4 per cent., while the market rate of discount on three months' bills rose from a weak 5 5/16 per cent. to 5 3/8 per cent. On Thursday rates were a little lower.

* * * *

The gold withdrawals were, of course, a straight exchange operation, for early in the week the dollar rate was for a very short time as low as $4.84 23/32, whereas the gold point was given in one quarter as being $4.8495. As we point out elsewhere, it is just as well that the market should realise that no obstacles have been placed in the way of gold shipments, and to this extent the week's losses have cleared the air. The unfortunate thing is that the exchange rate responded very little to the shipment. On Tuesday dollars were quoted at $4.84 13/16, while on Thursday the rate was only $4.84 7/8, or still below the gold point. It is not impossible that a further sum in gold will be shipped on Saturday in the *Mauretania*.

* * * *

The gold position, together with the approaching end of the half-year is naturally restricting the demand for bills, and at the moment dealers are reluctant to buy. It now seems possible that the turn of the half-year will be the occasion for greater strain than had been anticipated, and already a certain quantity of bills have been discounted at the Bank, this week's return showing an expansion of £1,921,000 in Discounts and Advances. Bills too are now being offered in larger quantities, while on the other hand the loans pressed on the market by the clearing banks during the early part of this month, expire on June 28th, and are certain to be called in. Hence the rise in market rate has more than a psychological basis.

* * * *

The Bank return reveals a net gold loss of £711,000 on the week, the withdrawals on Tuesday being partially off-set by gold acquisitions at the end of last week. Fortunately for the Bank's technical position, this loss has been more than balanced by the return of £1,755,000 of notes from circulation, so that the reserve has risen by £1,044,000. The Proportion, however, has fallen from 57 3/8 to 55 5/8 per cent., the decline being mainly due to an increase of £10,682,000 in public deposits. It is not easy to interpret this last movement, but it must be remembered that money is coming in and out of the Treasury every day in a fortuitous manner, and the exact size of public deposits at the moment when the Bank makes up its weekly return is to some extent a matter of chance.

Amid the monetary events of the past twelve months, there is one fact that has largely escaped notice. This is the fall in the note circulation of £14,927,000. This contraction is partly accounted for by the return of notes formerly circulating in Southern Ireland, but this by no means explains the whole shrinkage. Whatever the cause, the development is a fortunate one for the country and also for the Bank, as it has enabled the Bank to increase its reserve, which is at the basis of the credit supply of the country. The contraction in the note circulation has in fact acted as a useful cushion to take the shock of the net gold losses of £8,190,000 incurred during the past year.

NEW YORK MARKETS.

Our New York correspondent cables: The money market has been considerably affected by the influx of gold, which amounted to $5 1/2 million net on the week, double that total being due next week. It is not now expected that the middle of the year will see any big rise in money rates. The Federal Reserve Board appears to be taking advantage of the present seasonal decline in demands for credit to take in the slack of the market, and after the Reserve holdings of bills and government securities had expanded in the middle of the month, the former this week show a decline of $27 million and the latter a decline of $30 million. Meanwhile the member banks increased their borrowings by $26 million. Total Reserve credit fell by $29 million, but the acquisition of gold brought the Reserve ratio up to 75.8 per cent., and the New York ratio to 81.1 per cent.

THE STOCK MARKETS.

Business in the Stock Markets was again restricted by the monetary situation and the absence of favourable outside news. Gilt-edged securities reacted unfavourably to the news of a large gold shipment, but a number of European bonds continued to benefit from the Reparations settlement. Liquidation of Home Railway stocks was partially checked by the publication of fairly satisfactory traffic figures. Dullness reigned in industrial shares, the public continuing to hold off the market, while professional activity was damped by a series of unfavourable rumours. Rubber shares were slightly lower on provincial selling, tea shares irregular, and oil shares quieter than for some time past. The final results of the South African elections, showing a victory for the Nationalist Party, were regarded as a bear point for Kaffirs, and Rhodesians experienced an appreciable falling-off in activity.

THE COMMODITY MARKETS.

The demand for industrial coal is increasing in some districts; conditions in South Wales have not yet improved, however, and the demand for price and output control is growing more insistent. The position of the iron and steel trades continues to be on the whole satisfactory, though the finished steel section is affected by the lack of railway and shipyard orders. Manchester trade is not yet affected by the impending labour difficulties, and is meanwhile benefiting by improved Chinese demand and fairly steady buying of fabrics for the home market. There is no change in the wool textile industries. The jute trade is quiet and prices of yarn and cloth are lower, but the level of the raw material is maintained. Hides incline to firmness, and the leather trade, though unsettled, continues its increased activity. The vegetable oil and oilseeds markets are a little more active. Wheat is firmer.

THE FOREIGN EXCHANGES.

The market opened the week quietly but livened up towards the close, when sterling, after continued weakness, revived slightly against the dollar as a result of the gold shipments to New York. The dollar rate opened at 4.84 13/16 and gradually fell away to 4.84 23/32, the lowest level reached for a very long time; but by Thursday there had been a recovery to 4.84 7/8, a large shipment of gold to New York having occurred on Tuesday. Montreal gained 1/2 at 4.88 1/2, and Paris, after going as low as 123.90, closed at 123.96, against 124.04 last week. Madrid was again irregular, and went from 33.93 to 34.35 after touching 34.80. Amsterdam moved for unknown reasons against the general tendency, as did Switzerland, the rate rising when the current was against this country and vice versa. The former lost 1/8 at 12.07 3/8, whilst the latter gained 1/4 on balance. Berlin improved steadily from 20.34 to 20.32 1/4, as did Stockholm from 18.12 3/8 to 18.09 1/4. Oslo gained 1/4 at 18.19 1/4, Copenhagen, after irregularity, losing to the same extent at 18.20 1/4. Buenos Aires, after early weakness, when 46 31/32d. was recorded, lost 1/16d. on balance at 47 3/32d. In the Far East the rupee was firm at 1s. 5 5/8d., but the yen was again weak at 1s. 9 13/16d. Batavia lost 3/4d. at 12.11 1/2. In the forward market the discounts quoted for New York narrowed to 3/16 and 15/32 cent, whilst Paris went from a premium to 1/2 discount for both periods. Brussels, from par, went to one centime premium, for both periods also. Discounts for forward Milan were rather wider at 8 and 25 centesimi, but pesetas were at enhanced premium of 6 1/2 centimos for one month and 22 centimos for three. Amsterdam was at rather narrow discounts of 1/4 and one cent, but forward Berlin was virtually unchanged. Prices in the silver market advanced 1/8d. for spot at 24 7/16d. and 1/16d. for forward at the same figure, as a result of further Chinese speculative bear covering and Indian buying at the lower levels obtainable on Saturday. The Chinese exchanges were unaffected, Hongkong remaining at 1s. 11 1/4d. and Shanghai at 24 7/8d.

A NEW MOVE TOWARDS DISARMAMENT.

On Tuesday, June 18th, the two promised speeches were duly delivered by the Prime Minister at Lossiemouth and by the United States Ambassador in London; and we now know a good deal more about the plan of operations. It is evident that the statesmen concerned in setting in motion this new move towards disarmament have been thinking a great deal about the tactics of procedure; and this is a very good sign, since the inadequacy of this kind of preparation was the direct cause of the failure of the Three-Power Naval Conference at Geneva in 1927. We should guess that, up to this point, most of the thinking has been done on the American side; and this would be natural, since Mr Hoover and his Cabinet have been in office for seven months, whereas the political leaders in this country have only just emerged from a general election, in which they had neither the time to think out plans of international action nor the foreknowledge whether they themselves would be returned to power. We may presume, however, that the definite plan of action which General Dawes unfolded in his speech on Tuesday night had been talked over between him and Mr MacDonald during their meeting on Sunday; and that it was made public, with Mr MacDonald's approbation, as a line of policy which the British Government as well as the American Government regards with favour.

Meanwhile, Mr MacDonald has made one very statesmanlike and very important contribution, on which he evidently intends to lay stress, since he referred to it in the *communiqué* regarding his talk with General Dawes, in his speech at Lossiemouth on Tuesday and in his message to the Pilgrims which was read out before General Dawes delivered his speech in London that same evening. On each occasion, he took pains to declare that the conversations now beginning are not to be exclusive, but inclusive; that there is no question of the United States and Great Britain coming to an agreement *à deux* and then confronting the other countries of the world with a *fait accompli* and expecting combined pressure to impose their will. Mr MacDonald has intimated that he intends, in the course of the summer, to pay a personal visit to President Hoover; and this is good hearing; but in this connexion he added that his conception of the negotiations that have now been opened was that "of a big world movement," and in his message to the Pilgrims he added: "It is a great world impulse to get side by side which both America and ourselves are feeling."

This is true fact and sound statesmanship; and it is also an aspect of the disarmament problem which is perhaps especially prominent from the British point of view. For the United States, the practical issue is simpler than it is for us. If the United States can arrive at an agreement for a reduction of naval armaments with Great Britain, she has a fair assurance that Japan will come into line, seeing that in 1927, and ever since, Japan has shown a sincere and steady desire to secure a reduction in naval armaments all round, if only Great Britain and the United States would fall into line. When once an Anglo-American naval agreement had been translated into an agreement between all the three principal naval powers of the world, the disarmament problem would be as good as solved as far as the United States was concerned; for the United States has to consider no foreign navies except the British and the Japanese, and no foreign air forces or land armies at all. For Great Britain the problem is not so simple; for if we sought a tripartite British-American-Japanese naval agreement and actually secured one that was satisfactory to all three Powers, we should still have to reckon with the French and Italian navies in the Mediterranean and with the air forces and the land armies of all the European Continental Powers. We are therefore bound to envisage the problem of naval disarmament as a problem which involves all navies and which opens up the further problems of disarmament in the air and on land. It is satisfactory that the former of these two propositions, at any rate, is accepted by General Dawes; for on Tuesday night he prefaced his suggestions regarding procedure by remarking that "agreement upon a method of negotiation must concern, from the very beginning, all interested naval Powers and should have not a partial but a world sanction."

General Dawes's suggestions for procedure were an example of that use of the empirical method which always appeals to the English-speaking peoples and which has repeatedly shown them the way to great practical achievements. The theme which ran like a thread through this part of his speech was given in a quotation from Burke. "Politics ought to be adjusted not to human reasonings but to human nature, of which the reason is but a part, and by no means the greatest part." He illustrated this thesis from the history of the Reparations question. Reason suggested that it should be handled by experts and statesmen working together. Painful experience of the impracticability of this method led to the accidental discovery that the proper method for solving an international problem that involved a separate technical and political problem in each country was to set independent experts to work upon it first, and then to submit the formula at which the experts had arrived to a conference of statesmen. This endeavour revealed that this was the way to get on the right side of human nature, or, in other words, the way to get things done. Thereupon, General Dawes applied this experience to the Naval Disarmament question, and drew the inference that the naval experts must get to work first upon the technical task of devising a "yard-stick" for the quantitative comparison of naval strengths; and that the statesmen should afterwards meet separately to consider the results and to translate them into political terms. So far, he followed the analogy of the procedure which had proved successful when applied to the Reparations problem in 1924; but at this point he proposed a vital difference in procedure on the pertinent ground that human nature would react differently in the different circumstances of the case. "Should a commission composed of the representatives of each navy concerned meet to reach agreement upon this 'yard-stick,' they would be asked to agree upon something the use of which will reduce in number the idols of their hearts—the ships of their navies. . . . I will say frankly," he declared, "that from a commission of naval experts of the respective nations meeting together and called to evolve a final definition of the naval 'yard-stick,' I personally should expect a failure to agree." General Dawes made his point in a manner at which no naval officer could take offence; for he made it clear that he was offering no special criticism of the naval profession but was proceeding on a general view of human nature which might be expected in any similar circumstaces to react in a similar way. Yet the courtesy and good feeling with which he made his point do not detract from the importance of it. It amounts to this. The American Ambassador proposes—and we may take this to mean that the American President proposes and the British Prime Minister approves—a procedure in which the naval experts are to play a closely circumscribed part. They are not to participate in the final political conference, which is to be attended by statesmen alone. They are not to have a preliminary technical conference of their own, corresponding to the work done by the two commissions of financial and economic experts before the London Reparations Conference of 1924. Their functions are to be limited to providing their respective Governments with suggestions for a "yard-stick" formula, which the statesmen, meeting alone in an international conference, are then to compare and adjust as the first step towards working out a solution of the naval disarmament problem in political terms.

What are these political terms to be? Some people feel that it is a mistake to make a frontal attack on the problem of naval disarmament without first having arrived at an agreement, or at least explored the ground for an agreement, on the question of maritime law in wartime. Other people point out that, in any future war, one of the combatants will have violated the Kellogg Pact *ex hypothesi;* and that since all the fully self-governing States in the world have become parties to the Pact, there can never again be the old division between "belligerents" and "neutrals" in the old meaning of those terms. Therefore, it is argued, the right starting point, from now onwards, for all discussion of disarmament is the [redacted]

Pact itself; and it is significant that General Dawes did start from the Pact in his speech on Tuesday. He declared that the achievement of the Pact "has one of its first effects in a pronounced change in the form of the international discussion of the world's peace. The closing of the discussion upon the form of the expression of the principle and the inception of the discussion of the practical methods by which to make it effective, prove the existence of a general determination to make the treaty not a mere gesture but the foundation of an era of international harmony." That is to say that the Kellogg Pact was not America's last word but her first.

GOLD AND THE DOLLAR.

On May 25th the dollar exchange fell to $4.84\frac{7}{8}$, and since that date has, with one or two exceptions, remained below $4.85, the point at which it pays America to draw gold from the Bank of England. On June 5th, £258,000 was bought from the Bank on American account, but except for this isolated movement nothing untoward occurred until Tuesday, June 18th. On that day, American interests bought £500,000 of new gold in the market, this being the whole of the balance available after satisfying the needs of India and the trade, and in addition took £1,117,633 from the Bank. The money market promptly responded by raising the discount rate on three months' bills from $5\frac{5}{32}$ to $5\frac{3}{8}$ per cent.

This is the bald monetary history of the past three weeks, and there is no doubt that it has given the City a rude shock. If, so the market argues, America takes gold from us at a time when there is no seasonal strain upon the exchanges, when our export trade is relatively good and, above all, when call rate in New York is at the unattractive level of 7 per cent., what are we to expect next autumn when conditions cease to be in our favour, and instead will have turned against us? This is the feeling abroad in the City to-day, and it is one that is hard to contradict. The market, too, recalls that between February 7th and June 5th, the Bank only gained £14,000,000 in gold, and concludes that once the Bank has lost those fourteen millions, its gold stocks will be down to what the market considers to be a minimum level of £150,000,000.

Now what are the facts of the case? To take the good items first, it cannot be emphasised too strongly that the Bank is in no way bound to keep its gold stocks above £150,000,000. It is true that this figure is the one suggested in the Cunliffe Report of eleven years ago, but the whole monetary position has radically changed since then, and we are certain that the Bank attaches no importance at all to that figure to-day. It is true that last February the Bank rate was raised just at the moment when the Bank's gold stocks happened to fall below £150,000,000, but we are satisfied that this is to be regarded as a pure coincidence, for since the amalgamation of the note issues there is no special significance attaching to that figure. Naturally, the Bank cannot afford to lose gold indefinitely; but the market should realise that, under present conditions, the Bank has a greater margin in hand and more freedom of action than the theory of a minimum limit of £150,000,000 implies.

If between now and October America took from London all the new gold in the market, and an additional £10,000,000 besides, a serious situation would arise, and it cannot be gainsaid that such a development is at least not impossible. Still, the low lever of current cotton and grain prices is a point in our favour, and so, too, is the more restrained tone now apparent on Wall Street. On the other hand, to come to the crux of the whole position, Europe is having to pay her debts and is looking to London to arrange the necessary exchange.

The primary cause of the low level of sterling in New York appears to be the need some dealers have of covering forward sales of dollars made some time ago to those responsible for preparing for French debt payments. The actual sum at stake is thought to be only some two or three million pounds, and if this estimate is correct, another £500,000 out of the Bank will probably settle the matter. Unfortunately, this incident must properly be regarded as a symptom of the general *malaise* created by the transfer of debt money from Europe to America. Last year, between January 1st and April 30th, European capital issues on the American markets totalled $561 million, but this year the corresponding figure was only $217 million, while this year, in addition to the normal debt transfers, $400 million have had to be found in preparation for the repayment of the French commercial debt due next August. In other words, this year America is relending less and Europe is having to repay more, and if this year's American re-sales of European securities are also given their proper weight, the balance is heavily against sterling.

There is no need for undue anxiety as to the immediate outlook, nor is any change in Bank rate likely, before the holidays. In fact, this week's gold losses have in one respect been productive of good. Until last Tuesday it was common talk in the City that an unofficial embargo was in existence to prevent undesired gold imports into America, and this talk found expression in one or two unsubstantiated rumours, which have since been reduced to their true bearings. An atmosphere of this kind was thoroughly unwholesome. Either England and America are on the gold standard or they are not, but in either case the public of both countries have a right to know where they stand. A situation in which an official adherence to the gold standard is combined with its unofficial abandonment would mean that we have the disadvantages of both alternatives with the added troubles arising from an atmosphere of mystery. That atmosphere has now been dispelled, and it has been made clear to the world that the gold standard and nothing else is in force. From this standpoint, the recent gold shipments should create rather than destroy confidence.

To come to the more distant outlook, much depends upon the terms upon which France has to repay her $400,000,000 commercial debt to America. Strictly speaking, the whole sum is due next August, but if the French debt agreements are ratified, repayment will be spread over a term of years. Now there is good ground for believing that France to-day holds the whole of the exchange required for repayment, and indeed the purchase of this exchange may well have contributed to the present weakness of the pound. Thus if immediate repayment is not required, France will be in possession next autumn of a big reserve of dollars, part of which she can, if she so wishes, turn into sterling, and so ease the autumnal strain upon the pound.

For the rest, the market would be well advised not to try to look ahead further than it can. The autumn is likely to be a difficult time, and the possibility of a higher Bank rate must not be ruled out of account. Still, much can happen, for good as well as for evil, between now and next September, and the old adage of not trying to cross your fences before you reach them is one that the market might well bear in mind to-day.

OUR PROTECTIVE DUTIES.

Speculation is rife as to the fate of the various Customs Tariffs which were imposed by the late Government. As to their merits, of course, opinions differ. Our own have already, in former articles, been made quite clear. But (such questions apart) there is general agreement that some early pronouncement is desirable, if trade is not to be injured by prolonged uncertainty. Mr Snowden's precise intentions are his own secret. He may decide to take an early opportunity to foreshadow them, *e.g.*, on the occasion of his introducing the outstanding 1929 Finance legislation, which is apparently to come next month. But in any case it may be convenient now to survey the various duties from the point of view of their constitutional position, with regard to which they do not all stand on an equal footing.

The McKenna Duties formerly were imposed from year to year; but in the 1925 Finance Act they were placed on a permanent footing, and they were extended in 1926 (for the sake of "simplicity") to commercial vehicles; in 1927 (for the sake of "symmetry") to motor tyres. They do not, however, affect merely the motor trade. They include clocks, watches, musical instruments and cinematograph films. There can be no question of letting these duties "lapse." They will continue unless and until they are definitely repealed by Act of Parliament. Mr Snowden's hostility to them is well known.

Next, there are the Safeguarding Duties, which fall into two main classes: (*a*) The Key Industry Duties, formerly imposed under Part 1 of the Safeguarding of Industries Act, 1921, which, in respect of these duties, was re-enacted in the Finance Act, 1926, to run for a further period of ten years from that date. (Certain increases were then made in some of these duties and further items added.) These Key Industry Duties, therefore, will continue in force until 1936, unless, meanwhile, they are repealed or modified by Act of Parliament. (*b*) A series of Safeguarding Duties imposed after special Committee Enquiries, beginning with the lace duty and ending with the duty on enamelled hollow-ware, which was tacked on to the Finance Bill of last year. Each of these duties was imposed under statute to run for a period of five years from the date of imposition. The following is the complete list, with respective dates of expiry, viz.:—

Lace and certain embroidery—to June 30, 1930.
Cutlery, fabric and leather gloves, gas mantles—to December 22, 1930.
Packing and wrapping paper—to April, 1931.
Translucent and vitrified pottery (tableware)—to April, 1932.
Buttons—to April, 1933.
Enamelled hollow-ware—to June, 1933.

Thirdly, there are the Silk Duties. These are somewhat different from the rest, in that they were introduced by Mr Churchill ostensibly for revenue purposes only, and they include a countervailing excise on artificial silk as well as Customs duties extending, in the case of silk, to the basic imported raw material. But before these "Churchill" duties emerged on the Statute Book they had acquired a definitely protective element; so much so that the political "safeguarders" in their propaganda have persistently included the silk and artificial silk figures in their tables for purposes of showing the effects of "safeguarding." These duties occupy at present the same statutory position as the McKenna Duties, and will continued indefinitely until they are repealed (or modified) by Act of Parliament.

Finally, reference should be made to the Dyestuffs Act, which, though it does not involve Customs "duties," is to a great extent involved with the same controversy. This Act is a Prohibition Act, making it illegal to import dyestuffs (of a very wide range) except under licence obtained from the Board of Trade Committee. The Dyestuffs (Regulation) Act, 1920, is due to expire on January 15, 1931, and it contains the following remarkable clause: "The provisions of this Act to continue in force for a period of ten years from the commencement thereof *and no longer*." The unusual addition of these last three words emphasises the original intention of the legislators, that the protection should not extend beyond the appointed term, and it is doubtful whether its re-enactment would be practicable without the concurrence of the colour users, who have indicated very clearly their unwillingness to acquiesce in its extension on the present basis.

Mr Snowden's intentions towards these tariffs are a subject of general speculation. He might, of course, interfere with the duties before next April; but this is not thought likely. At the time of next year's Budget he might elect, say, to repeal the McKenna Duties, and, at the same time, to announce that the Lace Duty would be allowed to lapse at the end of its term (in June, 1930), and likewise the Cutlery, Gas Mantle and Glove Duties (in December, 1930). In that event, will the later Safeguarding Duties also be allowed to run their course, or will they be repealed in advance? On this point some interest attaches to the Balfour Committee's Report, which was issued last February. After surveying the Safeguarding Duties, that Committee suggested that the data available so far were quite inconclusive as to "results." Some members of the Committee (how many we are not told) recommended that, "in the national interests, both the Safeguarding Duties and the McKenna Duties should be repealed." The rest of the Committee, however, suggested that "the principle of stability" seemed to require that the duties "should not be disturbed" until (under the new machinery which this Committee proposed) there should have been gathered more complete data as to the general effect on prices, production, export, etc. They also suggested that at least a year before any safeguarding duty was due to expire it should automatically be referred to a Board of Trade Committee for careful review. Such suggestions open up a wide field for discussion which cannot be traversed here. It remains to comment that the Key Industry Duties in the main have not met with the same violent antagonism as the other duties. They rest at any rate on a more clearly defined basis of objective, and may possibly be tolerated longer.

Lastly, when Mr Snowden in November definitely recommitted himself in the House of Commons to the statement that "at the first possible practical opportunity" the "protective" duties proposed by the late Government would be "repealed," is it safe (some are asking) to assume that he meant to include the Silk Duties? In any case, when considering the question of the possible repeal of the Silk Duties we come up against the question of revenue. It was an objection raised specifically by Mr Snowden, in criticism of the protectionist adventures of the late Government, that in a space of three or four years they might create vested interests which it would take a new Government some time to dislodge. It was evident that he had in mind not least the vested interest of the Treasury. The problem he thus envisaged Mr Snowden now has to face. The net receipts from the silk and artificial silk duties are no less than £5 million per annum; indeed, they constitute nearly half of the net receipts of the whole range of these protective

duties. A possible solution of this difficulty would be to increase the internal Excise to an equality with the import duty. The Key Industry Duties yield approximately £650,000 per annum; the other Safeguarding Duties about £1½ million; while the McKenna Duties bring to the Treasury approximately £3½ million. This is a summary of the principal factors in the case, and the next move is with Mr Snowden.

UNEMPLOYMENT AS AN INTERNATIONAL PROBLEM.

It has become increasingly clear of late years that in addition to the numerous and important local causes of unemployment within each country, there are many phases of the problem which have their origin in the close economic interdependence of nations, and can only be dealt with internationally. The purpose of the Report* just published by the International Labour Office is to examine certain of these international aspects of the problem and to suggest appropriate international action.

The first section of the Report is devoted to an examination of the relation between unemployment and price fluctuations. An imposing collection of graphs for seventeen countries is marshalled in illustration of this connection, but the issue was apparently prejudged, for the Report says: "If the observed facts did not reveal a broad correspondence between the changes in the price level and the movements of unemployment, the inference would be, not that the movement of prices does not react on the labour market in the directions indicated, but simply that other and stronger forces have acted in a contrary direction. Where, however, the expected correspondence is found to exist in the majority of cases, this will be evidence that the monetary factor really does influence the labour market." Heads we win, tails you lose. The correlation was found to exist, and the authors of the Report conclude that the level of unemployment is affected by changes in the price level. It would be as logical to infer from appropriate statistics that shipping in the Baltic is held up by exceptional prosperity among British plumbers; a correlation of this kind may imply a causal relation, but far more frequently is the result of a cause common to both sets of variations. However, the desirability of measures to prevent fluctuations in the value of gold is generally accepted, and the question has been brought before successive international conferences, until in December last the Council of the League, on the recommendation of the Financial Committee, approved the proposal to constitute a special committee to examine and report on the causes of fluctuations in the purchasing power of gold and their effect on the economic life of nations.

The Report then turns to a detailed examination of unemployment in coalmining and in the textile industries. In coalmining it finds that variations in output during the last eight years have been the resultant of opposite fluctuations in the production of Europe and the United States. Within Europe there has been a similar tendency to inverse variation of the British and German figures. This suggests that there is considerable scope here for the introduction of greater stability by the conclusion of agreements between the principal producing countries. Any such international action would have thus as its nucleus an agreement between Great Britain and Germany.

As might be expected from these variations in output, employment also varies inversely in the different producing countries, an increase in the figure of two or three countries being invariably accompanied by a fall in those of some others. This, again, points to the necessity of international action, though it also appears clear that there is a surplus of miners in each of the principal countries which must be reduced by local action in the direction of pensioning, and of transference to other occupations.

The problem in the textile industries is somewhat different and arises, broadly, from fashion changes and reduced purchasing power on the one hand and from growing industrialisation of oriental countries on the other. Within each branch of the industries there are wide fluctuations, due partly to their competition with each other, partly to changes in fashion and to fluctuations in general prosperity, partly to unavoidable variations in raw material prices. In cotton the total volume of international trade has diminished owing to an increasing tendency on the part of a large number of countries to produce for themselves what they used to import. This is most marked in the case of China and India, but Canada, Brazil, Italy and the United States are also developing their own production, and Japan is not only satisfying more of her home demand but is also competing with increasing vigour in the international market. How far these developments apply to the coarse trade only is not clearly brought out, but the point is made that those countries which at present only compete in the coarser branches of the trade are not likely to remain limited in that way for ever. Similar conditions are observed in the wool textile trades, and have severely increased unemployment in those countries which produce largely for export. Where production is for the home market it has been badly hit by the diminution in purchasing power consequent upon general trade depression. The changed international situation is the predominant influence, and it is therefore the opinion of the framers of this Report that even if the most optimistic view of trade recovery be taken, it will remain necessary to transfer a certain number of surplus textile workers to other industries. Their proposals for international remedies scarcely go beyond improved organisation for the collection and dissemination of knowledge, with a view to more accurate business forecasting.

Lastly, the International Labour Office addresses itself to the question of international migration as a contributary solution of the unemployment problem. There appears to be little to be hoped for in this direction, since not only are emigrants actuated more by conditions in the country to which they are going than by those in the country they leave, but also, since they are usually men of the more successful and prosperous type, the effect of their departure on the labour market of their own country is highly intricate and problematical. Any *a priori* conclusions on this subject which might be formed are apt to be upset by the complicated regulations governing both immigration and emigration which are at present in force in most countries. The most hopeful sign lies in the development of the practice of concluding bilateral agreements which have as their object the regulation of migration in such a way as to secure the maximum of benefit alike to the country of immigration and to that of emigration.

AMERICAN CAPITAL IN BRITAIN.

In our last two issues we have discussed in our Stock Exchange section the much-debated question of American buying of British securities and the attempts which have been made by certain companies to prevent, or to limit, the holding of shares by American investors. The debate raises issues of wide national importance, and we, therefore, propose briefly to summarise some of the conclusions reached and to make some general comments from the point of view of national interest.

At the outset it is important to distinguish arguments which relate to any influx of American capital into British industry from those relating to buying for control. As regards the former, there can on consideration be no room for serious difference of opinion. It is a cardinal point of British commercial policy to encourage the greatest possible freedom in the international movement of capital, and to support without reservation the resolution on this subject passed by the Stockholm Conference of the International Chamber of Commerce in 1927, which runs as follows:—

FREE MOVEMENT OF CAPITAL.

The Congress,

Considering that after the great dislocation of the world economic conditions which have been a consequence of the war, a readjustment to the new conditions can only be attained within reasonable time if the most complete freedom is given to all factors of production and among them particularly to capital,

Considering that the relative freedom of movement which has been allowed to capital has been one of the most powerful agents in the work of reconstruction which has already been completed.

Considering that it is of primary interest to commerce as well as to industry and agriculture that it shall be possible to have free capital transferred with the least friction and delay to such occupations for which it is most urgently needed, and without such restrictions as only tend to render the condition for the borrower more burdensome,

Considering, finally, the great advantage that lending countries generally will derive from the development of the productive powers and of the buying capacity of the borrowing countries,

Recommends that all prohibitions and all other artificial hindrances laid in the way of the free international movement of capital should be removed.

Those who drafted this resolution were clearly thinking primarily of attempts by nations to prevent their capital going abroad. But its underlying principle applies equally to measures designed to limit the importation of capital. The Bill for the reservation of coastwise shipping, recently before the Indian Legislative Assembly, and similar suggestions for obstructing the investment of external in favour of national capital, are examples of a tendency which exists in many countries. It would be suicidal for the country which is still the largest lender in the world to foster these tendencies by similar action.

Attempts have been made to support the case by the argument that American investment on a large scale in England would imperil the balance of our international payments. Two ideas are current in this connection. One is that, by importing capital, we shall incur an obligation for interest which will neutralise our interest receipts from abroad. The other is that the stability of our international position may be imperilled because of the possibility that foreign holders may at any moment convert their claims in this country into cash and withdraw them. The first point ignores the fact that our exports of capital at the present moment very greatly exceed our imports of capital, the balance added last year, for example, to our net foreign holdings being about 150 millions sterling. While we have to pay increasing sums to foreign investors in England, our receipts of interest from abroad are rising still faster. Indeed, this whole question of our balance of international payments can only be brought into focus if we remember that in recent years there has been growing up in the case both of America and ourselves, and, indeed, to a lesser extent with all other lenders, a simultaneous process of borrowing and lending. Three years ago those who were worried about our balance of trade position were constantly urging that we were in danger because Britain was "borrowing short and lending long." The present complaint is that we are borrowing long, *i.e.*, that foreigners are putting their money into so-called permanent investments. The fact is, of course, that this distinction is largely illusory. If foreigners wish to withdraw their capital from Britain they will sell out their investments almost as readily as they will withdraw their bank balances. It must be frankly recognised that, to the extent that the market for capital is international, inevitably it means that great financial centres are liable to feel not merely the ripples, but also great waves of capital movement. This international situation, however, has its compensations, for if foreigners can withdraw their resources from Britain, we have much larger resources which, in an emergency, we can withdraw from other countries. If the situation makes us susceptible to other people's troubles and risks, it equally enables us to spread our own.

Again, the existence of an international market has an important influence on the rate of interest. While we were relatively the largest producer of capital in the world and had the lowest rate of interest, the internationalisation of the capital market tended to raise our own rate and lower that charged to foreign borrowers. But in present conditions the rate of interest, as measured by the yield on industrial investments, is lower in America than here, and the influx of American capital is tending to lower the return required from industrial investments in Britain. This is an advantage to an increasing number of British industrialists. Before the war it was frequently said, and with some justification, that British savings invested on the London market went predominantly abroad, whereas the industrialist borrowed from his banker or on the local Stock Exchange. To-day the situation is very different; for the industrial borrower has begun to tap the capital resources of London on a very large scale. The fact that the pool from which he draws to-day is fed not merely from British but also from foreign sources is unquestionably to his advantage. On balance, then, we may take it that the utmost freedom of investment in all countries of the world is to the advantage not only of British lenders and of those who benefit from the trade, transport and business of all kinds which follows this stream of capital, but also of home producers in their capacity as borrowers.

But are these considerations, powerful though they may be, more than offset if the investment from abroad is made with a view to securing control? Again, let us remember at the outset that a vast volume of British business all over the world has been built up on the assumption that, in general, foreign enterprise in a country is not only innocent, but is in the economic interests of the country concerned. In view of the railways, banks and other numberless enterprises overseas which have been organised and run by boards of directors in London, it is very late in the day and would be flying in the face of the experience of the nineteenth century for Britain, of all nations, to suggest that there is anything either derogatory to national pride or damaging to national economic interests in such a system.

So far as the recent discussion in regard to American buying is concerned, there are, broadly, three reasons which have been suggested for Americans desiring to obtain control of British firms. The first and least important is to permit them to exploit the British market. In this respect a foreign controlled firm is certainly in no better position, and is probably in a worse position than a British controlled firm attempting to do this. As far as public utilities are concerned, the public depends in both cases on State regulation of fares, charges for gas, electricity, etc. In more competitive commodities our chief protection is our Free Trade system. The second alleged reason is that control is a step towards the organisation of international combinations. We cannot go fully into this question here, but shortly it may be said that a certain degree of organisation involving standardisation of methods or even attempts to stabilise production and markets, may be to the advantage of the consuming public; but, of course, such organisations also may involve the danger of monopoly. We do not believe that tinkering by individual companies with their articles of association is at all a satisfactory way of dealing with this problem. If international combinations become a danger these defects must be met by State or even international action. The suggestion that such organisations might bring British enterprise under the domination of foreign ideas and foreign methods leaves us entirely calm. If the nationals of other countries can manage our enterprises better than our own people, it is high time that they took on the job. Experience, however, does not suggest that this is a very probable result. The story of the White Star Line, which passed under American financial control a quarter of a century ago, but remained under British management, and has now returned to British ownership, is a case in point which should do something to persuade the fainthearted that British business men, though no doubt they have much to learn from other countries, know how to run their business under British conditions better than anyone else.

Finally, there remains the argument special to certain recent incidents, that Americans may sometimes wish to

buy public utilities or sales undertakings in Britain in order to ensure that orders may be placed with American factories. In reply to this, we can only say that recent experience has shown that it is worth while for American capitalists to start the manufacture in this country of goods which are also manufactured in the United States —and, of course, in a field far wider than that which is covered by Safeguarding or McKenna Duties. The reasons for this are low costs of production under our Free Trade system, our geographical position, and our facilities for distribution. This question of cost is, in fact, the crux of the whole matter. It might, under very exceptional circumstances, be worth while to buy an enterprise in order to place certain orders in the United States, but it could not pay as a regular policy to equip a British works with American plant at higher prices than could be obtained here unless the enterprise in question had a monopoly, and this, as we have said, is a matter for the State.

To sum up, our previous articles have shown that the extent of the "invasion" has been greatly over-estimated, in any case the obtaining of control is no easy matter owing to the wide diffusion of ownership, while the measures adopted to check it have produced many unexpected reactions and revealed unsuspected difficulties. But, even if the movement had gone much further than is actually the case, the idea of restriction would be a most dangerous idea for us to entertain, and would encourage reprisals which, if successful, would deal a most damaging blow at our whole economic situation.

THE HUDSON BAY ROUTE.—I.

(BY OUR OTTAWA CORRESPONDENT.)

SINCE the war there has been no more notable development in Canada than the changes which have been accomplished or are afoot in her transportation arrangements. Before the war practically all Canada's export and import trade with other countries than the United States was conducted in summer through the St. Lawrence route and in winter via the Atlantic ports of Halifax, St. John, and Portland, Maine.

But the opening of the Panama Canal for commercial traffic in July, 1920, which shortened the water route between Vancouver and Europe by 5,600 miles, between Montreal and Yokohama by 3,000 miles, between Montreal and Sydney by 3,500, and created a water route of 7,260 miles between Vancouver and Montreal, has already effected a serious diversion in the currents of Canadian trade. Canadian traffic immediately began to use the canal, and, in the year ending June 30, 1921, it moved through it in both directions and to and from both coasts of Canada to the extent of 308,171 tons. By 1924 this Canadian traffic had mounted to 1,672,069 tons, and the succeeding years have seen steady gains, until, in the year ending June 30, 1928, it amounted to 3,677,095 tons. However, the traffic is somewhat one-sided, for out of these 3,677,171 tons no less than 2,845,675 tons consist of export shipments from the western ports of Canada, chiefly grain to Europe and lumber to the east coast of North America. Ten years ago only a meagre quantity of prairie grain was shipped out each year from Vancouver, but this port has been attracting more and more grain to itself each year, and, during the present crop year, between August 1, 1928, and May 10, 1929, there were exported from it 87 million bushels of grain, as compared with 308 million bushels via the head of the Great Lakes; last year Vancouver's proportion was even higher, because the early harvest of 1928 favoured the Lakes' route. Again, Vancouver is every year becoming in an increasing degree the import entrepôt for the western half of the prairie province, and has been diverting to itself a large volume of imports which used to reach the consumer via Winnipeg. In some classes of goods, indeed, the water route from Montreal to Vancouver is now an effective competitor to the 2,905-mile rail route between these points, and Eastern manufacturers are using it.

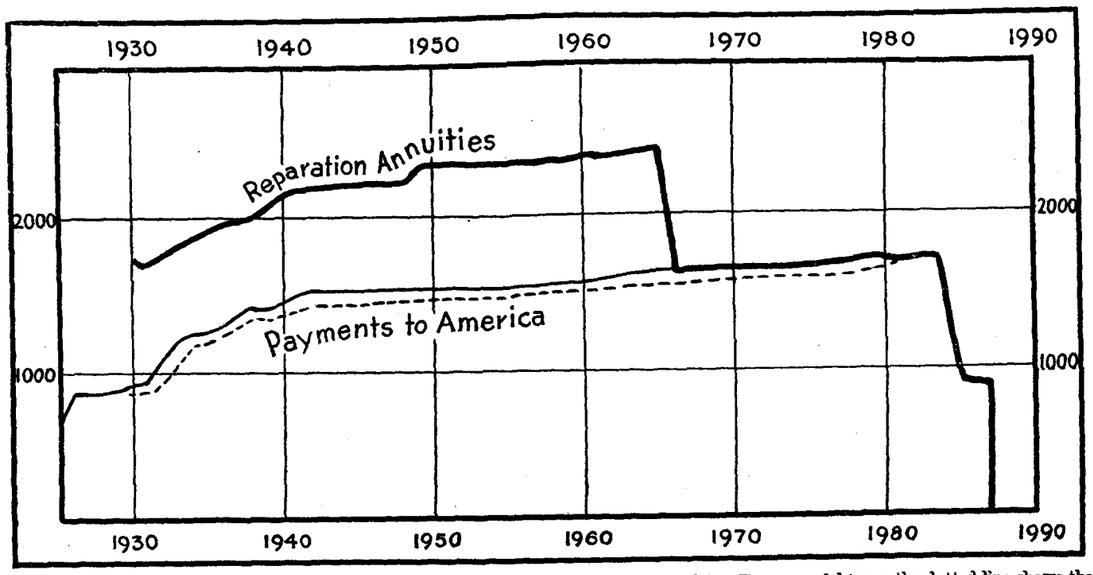
Naturally, places like Winnipeg and a variety of interests which were established on the Great Lakes-St. Lawrence water-way do not relish this change in traffic current, and now they are confronted with a fresh menace to their fortunes in the New Hudson Bay route, now within measurable distance of availability for traffic, which will offer a new channel of communication between the western prairies and Europe. The Hudson Bay is a great salt-water basin which cuts deep into the heart of the Dominion, measuring 1,000 miles at its greatest length from north to south and 600 miles from east to west at its greatest breadth. Its gateway into the Atlantic Ocean is known as the Hudson Strait, which is 500 miles long and has an average breadth of 100 miles. These waters have been frequented by navigators for centuries, and have been the trading route utilised by the vessels of the Hudson Bay Co. which brought supplies from England and took back furs; it was by this route, too, that the first agricultural settlers of Western Canada, a group of Highland Scots, brought out by Lord Selkirk more than a century ago, reached Manitoba.

The pioneers of Manitoba, groaning under the heavy freight rates imposed by the Canadian Pacific Railway in its days of monopoly, always harboured the notion that a cheaper alternative route was available through the Hudson Bay, and when the prairies became settled and began to export their grain and other produce there were recurring agitations for the development of the West's original outlet for its commerce. The prairies became increasingly conscious of their transportation handicaps; they found themselves producing 60 per cent. of the commodities which sustained the export trade of the Dominion, but, on the other hand, the manufacturing industries of the country were located chiefly in Ontario and Quebec, within reasonable distance of tidewater, from which the prairie farmers were far removed. They found themselves under a triple handicap, selling in the world market at world prices and buying in a protected market at artificially enhanced prices, and incurring the additional penalty of heavy transportation charges on sales and purchases alike. Such circumstances have made it almost inevitable that most of the two million denizens of the prairies should be resolute anti-protectionists and persistent advocates of new routes which would reduce the cost of transporting their grain, livestock and dairy products to the seaboard. Ottawa, however, dominated by Eastern interests, which wanted all trade to flow by the St. Lawrence route, resisted the Western pressure for many years, but in 1910, when the Canadian Northern Railway, now absorbed in the Canadian National system, had completed a branch line from Hudson Bay Junction on its main line to the Pas on the Saskatchewan River, the Laurier Government had to bow to it, and secured authorisation from Parliament for the building of a State-owned railway from the Pas to the Hudson Bay. Churchill, which had, under the name of Fort Churchill, been a Hudson Bay post for generations, was selected as a tideway terminus of the railway, a town-site was mapped out and the construction of the road, whose route of 474½ miles lay entirely to the north of the Nelson River, was begun. But before any serious progress had been made the Government suddenly decided to move the terminus 50 miles south to Port Nelson, and the route of the railroad had to be changed. The work of construction went steadily ahead, and, when the Great War broke out, the right of way had been cleared and graded to Port Nelson and some 332 miles of steel out of 426 had actually been laid. But the exigencies of the war, with its heavy demand for man-power and steel, caused a suspension of operations, and the line lay derelict for a dozen years, only a part of it being kept in repair.

When peace arrived, the West at once insisted on the resumption of the enterprise, but the Federal Governments at Ottawa had too heavy financial commitments to undertake additional burdens for some years. However, during the election campaign of 1925 definite pledges were exacted from both the Liberal and Conservative leaders that the railway would be completed, and, when the Liberal Ministry of Mr Mackenzie King was returned to power, it proceeded to fulfil its pledges. But in the intervening years the discovery had been made that Port Nelson had too many drawbacks to be a satisfactory port, and, after Mr Frederick Palmer, a well-known British engineer, had made a careful inspection of both harbours and reported in favour of Churchill, the Government reverted to the original plan, and the location of the railway was once more changed. The necessary money votes were passed through Parliament amid some grumbling from the papers of Eastern centres like Montreal, which apprehended a diversion of business enjoyed now by themselves, and the task of completing the railway and equipping the port at Churchill with modern facilities has been pushed rapidly ahead in the last three years.

Since steel reached the Bay in April a few light trains have been running to the Fort, but as a substantial part of the track had been laid in temporary fashion over morasses which had been frozen solid in winter and has now subsided under the spring thaw, the line is now closed for traffic until the road bed is thoroughly ballasted and in permanent form. This work will take some time, and, although a limited amount of traffic may be handled this autumn, the new route will not undergo a serious test until the latter half of 1930. Meanwhile, Churchill is a very busy place; Government dredges are clearing the channel, wharves and sheds are being built, and equipment is being provided for the simultaneous loading of ten vessels.

REPARATIONS & DEBTS DUE TO AMERICA
(Figures in Million Marks)



The continuous "payments" line represent payments due to America from all her European debtors; the dotted line shows the total payments to America by Germany's creditors. The narrow margin between the dotted line and the thin continuous line represents the direct payments which the United States will receive from Germany.
The margin between the two continuous lines represents the surplus which European Powers will receive towards their war costs.

THE diagram on this page gives a graphical representation of the annuities to be paid by Germany and of the annuities due to be paid by the creditor Powers in respect of war debts and by Germany in respect of reparations to the United States. The graph brings out clearly the conception of the settlement which provides that Germany shall pay sufficient to enable the creditor Powers to meet their obligations to America for the whole period during which these payments must be made, but limits to 37 years the period during which Germany is to pay something in excess of these payments as a net contribution towards the cost of reconstruction and reparation of war damage. It is to be noted that Great Britain has abandoned her claim to any share in this surplus, having agreed, in accordance with the doctrine of the Balfour Note, to accept a figure which will suffice—together with our receipts from our European debtors—to meet our payments to America. It is possible that these intermediate transfers may be eliminated altogether by the Bank of International Settlements—in which case we may wipe off our international debts and claims from both sides of our budget, so long as the Young Schedule is duly and punctually paid by Germany. Of the surplus shown during the first 37 years, much the largest share is, of course, due to France.

Notes of the Week.

The Miners and the Government.—With forty-three representatives in Parliament and seven in posts of Government, the Miners' Federation has lost no time in reminding the Prime Minister that the happy day for the implementing of pledges has arrived. Mr MacDonald has been asked by the Federation's executive committee for an interview "to discuss mining problems." The nature of these "problems" from the miners' point of view is not disguised. The ultimate objective of the Federation is the so-called "Miners' Charter," defined by Mr A. J. Cook in last week's issue of the *New Leader* as Nationalisation, a Seven Hours' Act, Pensions at 60, a new Compensation Act, and a Minimum Wage Act giving 12s. per shift for piece-workers. Mr Cook admits, however, that "the granting of the whole charter will take time," and it is clear that, in their interview with Mr MacDonald, the miners' leaders will be concerned with two immediate claims—(*a*) that Government should support them in an attempt to replace the present district agreements, expiring next winter, by a national agreement for the whole country; (*b*) that the Eight Hours' Act—passed in 1926 to make permissive the addition of one hour to the working day—should be repealed. On the second claim, Mr MacDonald is heavily committed. Not only did th Labour Party election manifesto (in which actual nati alisation of the mines was made conditional upon " Labour majority " being obtained) promise short for miners, but less than three months ago the

committee of the Parliamentary Labour Party assured the miners' officials that a Bill re-enacting a Seven Hours' Day would be introduced in a Labour Government's first session. The extent to which this commitment is destined to embarrass the Government cannot yet be foreseen. In the last quarter of 1928, when an average loss of 3d. per ton was disclosed by the working of the industry as a whole, output was 21.80 cwts., and earnings 9s. 4d. per man-shift, and wage costs 9s. 2d. per ton, whereas the corresponding figures for the December quarter of 1925 were 18.31 cwts., 10s. 5d., and nearly 12s. 6d. On a conservative estimate, sudden reversion to a seven hours' day would raise wage costs to 11s. 3d. per ton, and, since the increase could not be passed on to consumers abroad, the result would be either the closing down of many more mines or the enforcement of still lower piece-rates for the miners. The Government cannot contemplate either alternative with equanimity. On the other hand, though Mr Herbert Smith has explained that he realises that the Government "has its own difficulties and must move with the times," a frank refusal to make good the promise of shorter hours would be certain to provoke strong protests from the Government's own supporters. In the matter of the wage-agreements, also, the Government will be pressed to follow the precedent of 1912, and to make the refusal of the owners to establish national negotiations on wages the ground for introducing a new Minimum Wage Bill. In short, the prospects are that the coal industry is once more to be embroiled in political crises. The Government will no doubt endeavour to walk warily, but there are many uncomfortable possibilities of false steps, and, until the outlook has been clarified, uncertainty—damaging to the interests both of the mines and of all large consumers of coal—must exist.

Paris Conversations.—Two important and welcome items of news come from Paris. The first is that the French Government has accepted the Young Plan for Reparations settlement. The second is that in conversations between M Briand and Dr Stresemann, begun at Madrid and continued in Paris, an early date is contemplated for the assembly of the international conference of statesmen necessary to implement and set in motion the machinery which the experts have devised. The news that this conference is likely to take place as early as next month is good; for there are many reasons why delay is undesirable. For one thing, the date suggested for the inauguration of the Young Plan, September 1st, is near; while urgency also attaches to the big questions of policy arising out of the Reparations agreement, principally, of course, Rhineland evacuation and inter-Allied debts. The urgency of the former is enhanced by the fact that under the Young Plan no expenses are allowed for armies of occupation after September 1st. Apart from these special reasons for haste, it is all to the good that the period of uncertainty should be curtailed by the assembly of the statesmen's conference as soon as ever the Governments concerned have had reasonable time to study the experts' report itself, and the questions immediately arising from it. Incidentally, the early holding of this conference will clear the way for Mr MacDonald's visit to Mr Hoover later in the year.

The South African Elections.—The result of the South African elections has been to give the Nationalists a clear absolute majority. The actual figures are: Nationalists 76, South African Party 61, Colonel Cresswell's wing of the Labour Party 5, the Labour National Council 3, and one Independent. The Nationalists can count on the support of Colonel Creswell and his followers, and they have again decided to include Colonel Creswell in the Cabinet, although his support is no longer the condition of their remaining in power. The most conspicuous feature in the readjustment of party strengths is the discomfiture of Labour, which may be ascribed partly to the dissensions within the Labour Party, but partly, no doubt, to the unfortunate fact that, in South Africa, social and economic issues are tending to become identified with the racial issue between White and Black, in which the Nationalist Party stands for inequality of civil rights in the White Race's favour. This racial issue overshadowed the elections, as indeed it is coming to overshadow the whole life of South Africa. In the Union the immediate questions are whether the local franchise in the Cape, which has been enjoyed since before the Union was made by natives who satisfy a certain property and educational qualification, is to be withdrawn, and whether, throughout the Union, there is to be a segregation of the areas in which natives and whites are to be entitled respectively to own land. There is no question in South Africa of a geographical segregation of the two racial elements in the population; for there is no intention of assigning to the native reserves an aggregate area large enough to support the whole native population; nor is there any intention of attempting to work the white man's farms, factories and mines without native labour. Thus the effect of the contemplated legislation would be, not to preclude racial conflict by literally segregating the two races, but rather to accentuate and precipitate it by forcing the native to work for the white man, in the white man's areas, as a kind of helot without rights of his own. This is a very grave issue; and its gravity is increased by the fact that the outcome in the Union of South Africa, whatever it may be, will affect not only South Africa itself but all those territories, stretching away beyond the Limpopo, north-eastwards right up to Kenya, in which white settlers have planted themselves among native African populations. It is therefore all the more unfortunate that the South African Party has not made headway in these elections; for, in South African politics, General Smuts and his followers stand for the moderate and statesmanlike policy on the racial question. More serious even than the non-success of the South African Party in this particular trial of strength is the tendency for it to lose its character of a party transcending nationality, which was the essence of its original spirit, and to shrink into becoming the national party of the English-speaking element in the white population of the Union, over against the Nationalist Party, which already explicitly represents the Dutch-speaking element. It is ominous that the national cleavage within the white population of the Union and the racial cleavage between the white and the native population should be increasing simultaneously. It is still more ominous that, in the politics of the country, these two lines of cleavage should be tending to coincide.

The French Reverse in Morocco.—The reverse suffered on June 8th by a French force in the Great Atlas is nothing unusual in the history of frontier warfare between modern empires and untamed tribes. It could be paralleled by dozens of similar incidents from the history of the North-West Frontier of British India or from the history of the Russians in the Caucasus, not to speak of earlier chapters in the history of the French conquest of North-West Africa. In Morocco, the French policy has been to establish order rapidly throughout the lowlands by working as far as possible through the pre-existing Moroccan institutions and authorities; and then to draw a military cordon round the highlands, where the Sherifs of Fez and Marrakish have never exercised more than a nominal authority over the Berber tribes. This much had been accomplished already before the outbreak of the Great War; and even during the war General Lyautey succeeded not only in avoiding any setback, but in actually drawing his cordon tighter. The tightening of the cordon has gone on slowly but remorselessly. First, the highlands of the Rif were cut off from those of the Atlas by the opening up of the Taza corridor, which established a direct connection overland between the French domain in the Moroccan lowlands and the three French Departments in Algeria. After that the great unsubdued area in the Atlas was broken up in turn into several isolated enclaves; and, one after another, these enclaves have been wiped off the map. The French are now attacking the largest and remotest remaining enclave in the Atlas from the south-east; and it was in these operations that the disaster of June 8th occurred.

The story, as it emerges from the official statement issued on the 14th, is familiar. In this sector the French line was advanced, on April 29th, by the establishment of two new posts in the villages of Al-Borj and Ait-Yakub, in order to forestall an expected attack from the unsubdued tribes. The French force which suffered the disaster was ambushed while operating in order to keep the two new posts in touch with one another. The French disaster was followed by a general gathering of the tribes to attack the more exposed of the two posts, Ait-Yakub; and, in delivering this attack, the Berber tribesmen of the Atlas have apparently displayed the same power of sustained *élan* that their Rifi cousins displayed in similar circumstances in 1925. Ait-Yakub has now been relieved, and the besiegers have been induced to disperse by intensive and widespread bombing from the air—a feature of modern frontier warfare which is open to criticism from the standpoint of both morality and policy, though it is doubtless difficult for any belligerent to refrain from employing, in emergency, the most effective weapons at its disposal. The whole incident is unpleasantly reminiscent of the war of 1925-26 between France and Abdulkarim; and the French are taking it seriously. However, there is no question now, as there was then, of the French dominion in Morocco being endangered. Abdulkarim's advance-guards penetrated to within a few miles of Fez; whereas the "dissidents" who have been besieging Ait-Yakub could not threaten any vital point in the French position in Morocco, even if they were to achieve much greater local successes than they have achieved so far.

League Council and Minorities.—A League correspondent writes:—The main question considered by the League of Nations Council at its Madrid session was that of its general minorities obligations and of its procedure in fulfilling them. The absence of a direct representative of the new British Government was a bitter disappointment to the Germans in connection with the minorities discussions. The new British Government will, however, have ample opportunity of asserting its views at the September Assembly, when the problem will undoubtedly be a subject of long discussion, but it is to be hoped that they will take pains to make themselves thoroughly aware of the extremely difficult and delicate considerations involved. They might well take a lesson from the moderation and perspicacity of Dr Stresemann in the gradual progress of achievement, for the experience of the last ten years has shown that the best policies and intentions may go awry if too forcibly pressed on unwilling parties. As matters now stand on this vexed question, the principles underlying the League's guarantee of protection are left open, and the Council has confined itself to the safer ground of improvements in procedure which have been unanimously adopted. Germany agreed on the definite understanding that she was opposed to the report of the committee of three which met in London, and Poland and Roumania (speaking also for other Powers with minority obligations) reluctantly agreed on the definite understanding that they considered the procedure proposals as indissolubly linked with the report as a whole. The main bone of contention is the extent of the League's duty in the matter of improving procedure, the German thesis being that the mere handling of petitions is not enough; there should be a permanent commission of some sort to keep the Council regularly informed of the situation of the minorities in general, apart from its dealing with specific protests. This is considered by the minority treaty Powers as outside the scope of the treaties, and is so defined by the London report. In these circumstances, Germany suggests that the permanent Court of International Justice should be asked to define the matter, and it seems beside the point for M Briand to argue in reply, as he did, that it would put the Council in a humiliating position to ask some other authority whether it had properly fulfilled its duties during the past eight or nine years. Such appeal may have to come some day, for the underlying controversy centres on how far minority rights are lasting and how far they are merely applicable as measures of transition until the minorities are absorbed. Dr Stresemann admitted, for the first time in clear terms, that minorities owe allegiance to the States to which they belong, and that the essential thing is to maintain for them their cultural identity. This should be common ground, but the minority Powers are not too eager to admit even so much; they obviously want absorption and assimilation. On the other hand, it would be childish to blink the fact that there are strong elements in Germany, among the minority Germans, and still more in Hungary and among the minority Hungarians, which deliberately make it a political issue and a means of changing the peace treaties. It is legitimate, of course, to work by peaceful means for the revision of peace treaties, but it is doubtful whether it is legitimate or wise to do so through maintenance of strife between minority populations and the States to which they belong. The best preparation for ultimate treaty changes is the development of good relations and confidence. Meanwhile, so long as minorities are used on both sides as pawns in big politics, legitimate minority grievances will receive less than justice. This is a fact which must be recognised in any dispassionate consideration of the question; and British policy should take it into account first of all. It is no use approaching it on simple humanitarian grounds, and it is no use imagining that there are dramatic short cuts. The effective results of the discussion are a somewhat more reasonable manner of dealing with petitioners, a recognition of the Council's right to ask for information from any source which appears desirable, and a considerable improvement in making known the results of the deliberations of the Council committee of three which considers and deals with petitions before it is decided whether or not to bring them definitely on to the Council agenda. Germany wanted more procedure improvements, but accepted what she could get for the time.

Safety in Aviation.—The regrettable disaster of last Monday, in which the breakdown of a cross-Channel plane over the sea resulted in the loss of seven lives, should not lead the public to take alarmist views with regard to the danger of flying. No form of transport can hope to escape occasional accident, and the record of Imperial Airways, which had 3,800,000 air miles to their credit since the beginning of 1925 without one fatal accident, compares very favourably with the showing made by road vehicles. At the same time, we consider that passengers by air are entitled to seek reassurance that considerations of expense are not allowed to interfere with the essential principle of endeavouring to reduce to a minimum the risks (more considerable in the case of large machines) entailed by engine-failures in the air. Apparently, in the case of the "City of Ottawa," the shortest (but less direct) sea crossing was not being followed; further, given the load on board, the duplicate engine was not by itself adequate to secure level flight except for a distance too short to avoid disaster. There should be no desire to impose unreasonable conditions on our commercial flying services, but we hope that the official inquiry into this accident will lead to universal adoption of the policy of restricting loads to a limit under which the failure of one engine (whether the machine be dual- or triple-engined) should not involve the risk of forced landings in situations of peril.

Iron and Steel Production in May.—The improvement in the position of the iron and steel industry, as reflected in the production figures issued by the National Federation of Iron and Steel Manufacturers, was continued in May. The number of blast furnaces in operation increased by seven during the month to 159, and the production of pig iron increased to 654,800 tons from 611,300 tons in the previous month. The number of furnaces now blowing is 27 higher than at the beginning of the year and is higher than at any time since October, 1927, while the production of pig iron in May was higher than in any month since May, 1927. Except for March,

when steel production amounted 859,900 tons, the production of steel ingots and castings in May (840,400 tons) was also the highest for two years, and for the past few months the British production of steel has been definitely higher than the French. Imports of iron and steel continued high after the abnormally low imports of February and March and amounted to 257,300 tons compared with 261,900 tons in April and 236,900 tons in May, 1928; imports of pig iron amounted only to 5,500 tons. Exports of iron and steel amounted to 442,800 tons and were thus over 100,000 tons more than in April, and higher than in any month since before the war, the previous highest having been 424,500 tons in May, 1923. Of this total 58,500 tons consisted of pig iron, which is also a record post-war figure, 71,700 tons were galvanised sheets and 57,700 tons tinplates and sheets. Owing to the increased cost of raw materials prices of various iron and steel products rose during the month and the Board of Trade's price index number for May rose to 114.5 (1913=100) from 113.9 in April. The following table compares production, imports and exports in each of the first five months of 1928 and 1929:—

PRODUCTION, IMPORTS, EXPORTS AND PRICES OF IRON AND STEEL. FIRST 5 MONTHS, 1928 AND 1929.

	Furnaces in Blast.	Production. Pig Iron.	Production. Steel Ingots and Castings.	Imports.	Exports.	Board of Trade Price Index No. (1913 = 100).
1928—						
January	148	560·5	626·2	283·9	332·2	112·9
February.....	148	550·8	764·4	286·9	317·0	112·9
March	150	592·6	793·3	271·5	409·3	113·0
April	149	563·1	644·1	252·7	344·3	112·7
May	148	591·5	752·7	236·9	359·0	112·3
	...	2,858·5	3,580·7	1,331·9	1,761·8	...
1929—						
January	139	563·9	764·6	244·3	421·2	112·5
February.....	140	519·6	774·9	160·0	380·1	112·6
March	145	590·5	859·9	182·1	350·1	113·0
April	152	611·3	808·6	261·9	339·8	113·9
May	159	654·8	840·4	257·3	442·8	114·5
	...	2,940·1	4,048·4	1,105·6	1,934·0	...

It will be seen that pig iron production so far this year is 3 per cent. higher than in the corresponding period last year, steel production is 13 per cent. higher and exports 10 per cent. higher while imports are 17 per cent. lower.

Cost of Living.—There was a further fall in the cost of living during May. At June 1st the index number of the Ministry of Labour stood at 60 per cent. above the level of July, 1914. This compares with 61 per cent. a month ago and 65 per cent. at June 1, 1928. For food alone the index stood at 47 per cent. at June 1st, as compared with 49 per cent. a month ago and 56 per cent. a year ago. The following table shows the monthly movements of the index figures over a number of years:—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All Items. (Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1921.	1924.	1925.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%	%

September..	110	120	72	74	72	65	65	...
October.....	115–120	110	76	76	74	67	66	...
November ..	120–125	103	80	76	79	69	67	...
December ..	120	99	81	77	79	69	68	...

The decline in the cost of living during May is mainly due to reductions in the prices of certain articles of food, including potatoes, butter and bacon.

Employment in May.—The recent improvement in employment was maintained during May. According to the *Ministry of Labour Gazette*, among the 11.9 million workpeople insured under the Unemployment Insurance Acts of Great Britain and Northern Ireland, the percentage unemployed (wholly and partially) at May 27th was 9.9. This compares with 9.9 per cent. at April 22nd and 9.8 per cent. at May 21, 1928. The total number of registered unemployed at May 27th was approximately 1,177,484, as compared with 1,181,375 at April 22nd, and 1,168,009 at May 21, 1928. The following table gives the monthly movements of the unemployed percentage for some years past:—

PERCENTAGE UNEMPLOYED AMONG INSURED WORKPEOPLE IN GREAT BRITAIN AND NORTHERN IRELAND.

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

There was a further improvement during May in the building trade, public works contracting and brick, tile and cement manufacture. Employment in constructional engineering, the fishing industry, glass-bottle manufacture, the linen industry, road transport, river, dock and harbour service, hotel and boarding-house service, also showed an improvement. There was, however, some decline in general engineering and in pottery manufacture, while the holiday stoppages were extended in some of the textile industries and in the boot and shoe trade. There was a further decrease in the numbers wholly unemployed in the coal mines, but this was more than offset by an increase in the numbers of those temporarily without employment.

Costly British Ports.—A correspondent writes:—The decision of the Tyne Commissioners to make a further reduction in the dues payable by vessels entering the River Tyne has been warmly welcomed in shipping circles as evidence of recognition by this port authority at least that the present level of British port costs imposes a serious disability on British trade. It is hoped that the example set by the Tyne in thus passing on to traders the benefit of relief enjoyed by the harbour under the De-Rating Act will be followed promptly by other port authorities. At the same time, there is a growing feeling among shipowners that a determined effort must be made without further delay to tackle the whole issue of British stevedoring charges, with all its complications and anomalies. In the course of the proceedings of the Baltic and International Maritime Conference at Newcastle last Friday, a representative of the Danish Steamship Owners' Association drew attention to the fact that, in the case of timber cargoes, British loading and unloading charges were not only much higher on the average than those of Continental ports, but varied surprisingly as between one British port and another. Thus, whereas the cost to the shipowner of discharging a standard of Baltic timber at German, Dutch or Belgian ports ranged from 3s. to 4s., in this country corresponding charges were 4s. 6d. at Hull, 5s. 5d. at London, 7s. at West Hartlepool, and 11s. at Garston. Similar discrepancies exist in the case of other cargoes, and not only in the stevedoring charges payable by the ship, but in the costs borne by the receiver or shipper on shore. The root of the trouble appears to be the complex and, in many ways, unsatisfactory system whereby the remuneration of British dock labour is at present regulated. Having regard to the extent to which such labour is still "casually" employed, there is no great disposition in shipping circles to quarrel with the standard national time-rate (at large ports) of 12s. per day, though it is felt that an increase of 129 per cent. on pre-war rates can be supported only on the basis of increased efficiency in the employment of such comparatively expensive labour. But it has to be borne in mind that stevedoring charges are largely made up of locally determined piece-rate schedules, whose simplification and revision is becoming a matter of urgency. Moreover, rigidity in the definition of "working hours" has been allowed to result in overtime payments being raised in many instances to a level which is an excessive burden on trade. Emphasis on the costliness of British dock labour was laid by shipowners in their evidence before the Balfour Committee on Industry, and even more strongly by the Report issued in 1926 on behalf of the Traders' Co-ordinating Committee on Dock Charges, but there the matter has remained. In view of the considerable importance of port costs as a factor in the general cost of British production, the necessity of further investigation into possibilities of effecting economies in stevedoring charges is clearly indicated.

American Protection and European Defence.—No more glaring exposé of the tyranny of "Protection and its secret arms," to borrow an expression used by the Paris *Temps* has perhaps ever been afforded than that which is now alarming every European country owing to the rates of the proposed new American tariff. The French (writes our Paris Correspondent) have submitted in silence, for reasons of *politesse* and diplomacy, to many American demands, since the beginning of the Peace Conference, that would have met with strong protests had they come from any other nation. The exaggerated rates of the new tariff and the American refusal, while demanding most-favoured-nation treatment for American exports to France, to reciprocate with the slightest concession have at last, however, proved too much for French patience. Most of the great industrial and commercial associations in France are now voicing indignant protests. In a joint letter the presidents of the Confédération Générale de la Production Française and the Association Nationale de l'Expansion Economique insist that "the increase of the proposed new tariff rates is in many cases so great that it must render imports impossible . . . It is proposed, for instance, to increase to 90 per cent. the duty on French dresses (which at 75 per cent., as fixed by the Fordney Tariff, was already prohibitive) . . . Will such methods, which will inevitably call for reprisals, help to consolidate peace?" A resolution adopted by the 500 presidents of the French Chambers of Commerce at their meeting in Paris this week, covers the French point of view so completely that it merits quotation in full:—

> Considering that the United States of America seem to wish to reject all economic solidarity with other nations and to pursue a more and more protectionist tariff policy, without paying any attention to the more just claims of their foreign purveyors or taking into account the advantages which certain countries according to them without reciprocity obligations;
>
> Considering that, owing to the war and to the consequent impoverishment of the belligerent countries, the United States have become both the creditors of Europe and the holders of the greater part of the world's gold, there can be no question that debtor countries can only settle their debts in merchandise; that consequently the United States, by closing their market to foreign imports while maintaining their exactions in regard to debtor countries, are forcing Europe into an impasse in which it cannot allow itself to be imprisoned;
>
> Considering that, in spite of what it may cost French industry and commerce to speak to the United States in a manner to which we are not accustomed, it is necessary in the interest even of the economic future of the world to raise a cry of alarm and to demand that the French Government shall emerge from its neutrality and enter into such negotiations with other European nations as may be necessary to defend Europe from the economic point of view and thus form the indispensable barrier against the imminent danger that threatens it;
>
> It is resolved (1) that the French Government be urged to take without delay against the United States all tariff measures which the present circumstances call for; (2) that the various European Governments seriously menaced in their economic future by the tariff policy of the United States, whose recently voted rates will constitute an impassable barrier for most classes of goods, shall forthwith come to an agreement to take the necessary defensive measures in common.

The next step will be awaited with interest.

Cotton Trade Wages.—Our Manchester correspondent writes:—It is fully expected in Lancashire that at the end of this week the Master Cotton Spinners' Federation, representing the spinning employers and the Cotton Spinners' and Manufacturers' Association, which controls the weaving section, will be able to report that owing to the support given by the local associations it has been decided to give the trade unions one month's notice of a reduction in wages of 25 per cent. off piece price list rates, which is equal to about 12½ per cent. off current earnings. So far as can be gathered the private meetings held this week of the local employers' associations have supported the wages demand to a greater extent than was expected in some quarters. No doubt the attitude of many employers is being affected by the distinct falling off in the demand for manufactured goods during the last few weeks. Many leading traders on the Manchester Royal Exchange have made the statement this week that they have never before experienced such a slack state of affairs as during the past month. The sales of yarn and piece-goods have been less than the production, and order lists are lighter than at the end of May. It is contended by the employers that in view of the fall in the cost of living sice 1922 (when the last reduction in wages took place), from 80 to 60 per cent. above July, 1914, and the marked trade depression, the operatives should be willing to make some sacrifices in order to assist the industry to relieve the situation. Lancashire cotton employees have this week met the President of the Board of Trade in London at his request to discuss the general position of the industry. The conferences have no connection with the proposed reduction of wages. It is understood that Mr William Graham has decided to interview leading employers in all the big industries.

Lancashire Cotton Corporation.—During the last few weeks, writes our Manchester correspondent, very little has been heard as to the progress being made by the Lancashire Cotton Corporation, Limited, in absorbing mills, and in Lancashire trade circles there has been a certain amount of apprehension as to the success of the Corporation. An official announcement, however, just made public, shows very clearly that the directors and the officials are hard at work and that substantial headway is being made in reorganising the American spinning section. It is pointed out that up to date 80 mills have been visited and firm offers have been made for 71 companies, comprising 10,194,347 spindles and 5,719 looms. Five of the mills offered to the Corporation have been refused as non-economic units, which are impossible to reorganise on efficient lines. The Corporation has completed the details of 12 companies, controlling 980,000 spindles and the arrangements will shortly be submitted to the Courts for approval. Informal meetings of creditors and shareholders have already been arranged with regard to a further 14 companies controlling 1,300,000 spindles. Arrangements which will not require preliminary meetings are being made in connection with four other companies. With regard to 26 other companies preliminary negotiations with large creditors and shareholders are in process of completion. The valuation of fixed assets is now proceeding at the rate of 10 mills per week. The mills still to be valued include a large number of combined spinning and weaving concerns, the valuation of which was postponed until a considerable proportion of the spinning mills have been dealt with. Some 30,000 looms are concerned in all, which will place the Corporation in the position of being by far the largest manufacturing unit in Lancashire.

Copper Producers' Position.—It was recently announced in the United States, a trade correspondent writes, that the great and powerful Kennecott Copper Corporation was to acquire the entire stock of the Chase Companies (Incorporated), Waterbury, Conn. Kennecott's production, together with that of its subsidiary and affiliated concerns, exceeds 400,000 tons per annum, an output unsurpassed by any other group, while the capacity of the Chase plants will shortly exceed 60,000 tons. The merger will thus be one of immense importance, and its policy on questions of output and price level calculated to have a marked bearing on the copper situation in America, and indeed in the whole world. Since the foundation of Copper Exporters Incorporated it has repeatedly been pointed out that European consumers are defenceless against price manipulations in the States, except in periods of slack trade when opportunity may arise to purchase second-hand metal. Latterly very little advantage has been taken of this in Europe, but American manufacturers have availed themselves of these offers of cheap copper and have thus kept down any accumulation. The other defensive weapon in the armoury of consumers on this side of the Atlantic is the London standard market, which has been responsible for the pricking of many American inflation bubbles, and the fact that the grip of United States interests on standard warrants has lately assumed big proportions is undoubtedly a menace to all whose progress is identified with untrammelled trading conditions in the red metal. The Kennecott-Chase merger, however, leads to the consideration of even more dangerous possibilities, for it brings to mind again a menace which has always overhung the European market for semi-finished brass and copper products, and perhaps British interests in particular. This may be summed up in the one word "dumping." Obviously, a powerful group controlling production both of raw copper and of semi-finished articles in brass and copper would present a grave menace to manufacturers on this side, who, while paying the fixed association price, c.i.f. English port, for their material, would be faced with the sinister possibility of internal sales within such a group which would enable its products to be dumped in Europe at prices calculated to undercut very severely the home quotation. The bogey of such competition showed itself during the ramp in copper a couple of months ago, for at that time rolled wire rods were sold to consumers in this country at a price below the wirebar quotation, and it is, of course, a fact that there has always been a steady trade done in this product at very cut prices. If English wiredrawers are buying their raw material in such a form it means that the mills possessing plant for breaking down wirebars are going short of work. In the United States there are large manufacturing plants where the wire-bars are cast, broken down and worked up into wire, and it must be presumed that costs are considerably lower than in this country. Old metals, both brass and copper cross the Atlantic and are sold on this market in competition with the surplus disposals of British manufacturers, shipbreakers and Government departments, and if American scrap can hold its own here, why not the finished product? It must be borne in mind that every unit of brass and copper production in this country now possesses a larger potential output than in pre-war days, and that the whole basis of selling values rests upon the achievement and maintenance, if at all possible, of a hundred per cent. production programme. In world competition to-day the British producers are definitely placed at a disadvantage with their American rivals owing to the fact that they must pay more for their copper. Germany, foreseeing perhaps the day when European manufacturers of non-ferrous metals will stand with their backs to the wall against an influx of American material, is making every effort to increase her production of the red metal, but in this country we are dependent for at least 70 per cent. of our needs upon the Incorporated Exporters of the United States. The break up of this association and a return to a free and open market would appear to be the first step towards providing a safeguard for our manufacturers in the difficult years that lie ahead of them.

Coal Trade Reorganisation.—There has been an important development in the South Wales coalfield in connection with the efforts that have been made during the past 18 months to improve the organisation of the industry. It has not yet been found possible, writes our Cardiff correspondent, to obtain sufficient support for the full and effective adoption of any of the schemes which have been suggested with a view to the restoration of the industry to a sound economic basis, and last autumn the voluntary arrangements under which minimum prices had been charged proved so unequal in their effects on the different collieries that one of the most important groups of collieries threatened to withdraw from the scheme at the end of the year. This group favoured output regulation in preference to price control, and a scheme was drafted providing exclusively for the regulation of production on a quota basis. It failed, however, to obtain the requisite support of owners producing 85 per cent. of the bituminous output in the three months ended September, 1928. The advance of prices, under the improved demand conditions during the early part of the present year, to figures substantially in excess of the old minimum schedule temporarily scotched interest in schemes of control, and for several months no meetings of the executive committee of the Marketing Association, formed early last year, were held. Since May, however, there has been a reaction in the condition of the trade. Collieries have found it difficult to find outlets for their increased outputs and prices are from 1s. 6d. to 2s. 6d. per ton less than they were in March. In these altered circumstances there has been a revival of interest in measures of rationalisation, and a strong effort is now being made to bring together the rival advocates of exclusive output regulation and of exclusive price regulation on the basis of an amended and enlarged scheme embodying the principles of both output and price control. It has been officially announced this week that considerable progress has already been made along this new avenue of co-operation, and that a further meeting of the executive committee of the Marketing Association is to be held shortly.

Advertisers in Conference.—The growth of advertising from the position of a humble Cinderella, casually patronised by the superior sisterhood of industry and commerce, to a recognised status as an economic equal in the world of trade, is an arresting phenomenon of our times. The attention given by the Press to the proceedings of the fifth annual convention of the Advertising Association, held this week at Newcastle-upon-Tyne, is significant not only of the fact that without the advertiser the modern daily newspaper could not exist, but of growing realisation on the part of all manufacturers and traders that the problems of optimum production—the best goods at the lowest price—cannot be solved without simultaneous solution of the problems of marketing. Lord Riddell, in his presidential address to the Convention, did well to emphasise the advisability of strengthening British sales-organisation abroad by judicious expenditure on advertising campaigns, carefully planned, based on thorough study of the market concerned, and followed up by the establishment of close personal contact between the manufacturer and his overseas customers. Other speakers at the conference had much of interest to say on the specialised technique of advertising. Mr. L. C. Blennerhasset pleaded cogently for greater attention to "market research" as a factor of prime importance in scientific selling; Mr Cecil Taylor, from the advertiser's standpoint, emphasised equally the need for fuller knowledge and closer control on the part of those who spend the money. Broadly, with certain qualifications, we endorse the argument that well-regulated advertising benefits the consumer by leading to larger turnover and lower prices; but this is emphatically untrue of advertising outlay misdirected through ignorance either of material facts or of the psychology of consumers. The art of advertising has made great progress in this country of recent years, but the quality of its productions is somewhat uneven. The present convention will succeed, we hope, in influencing more producers and merchants to take a keener interest in its methods, weaknesses, and possibilities.

London Life and Labour.—At last Tuesday's meeting of the Royal Statistical Society, Sir Hubert Llewellyn Smith, G.C.B., read a paper on the New Survey of London Life and Labour, which is being prepared under his direction. The intention of this new inquiry, which is being undertaken on the initiative of the London School of Economics, is to bring up to date the Poverty Map of London which Charles Booth drew forty years ago, on the line of a survey lasting seventeen years. The new survey is based on a combination of Mr Booth's method of indirect investigation through tapping the knowledge of persons who in the ordinary course of their duties come into intimate contact with the population surveyed, with the more intensive direct method of sample inquiry pursued by Mr Rowntree and Professor Rowley in their provincial investigation of 1914 and 1924. The former method produces the ampler picture, while the latter draws the lines more firmly and is obviously more useful in making comparison between two periods of time. For the purpose of the new work the poverty line is being taken at 40s. per week for a typical family, which at present prices corresponds to Mr Booth's standard of 21s. per week. Sir Hubert Llewellyn Smith pointed out that in the meantime the rate of money wages in London has advanced more rapidly than the cost of living, so that the "poverty" line is now a good deal further below the average earnings of unskilled labour than in Booth's time. Concurrently with the Survey proper an introductory volume is being prepared, linking up the Survey with the period of Charles Booth's inquiry by a series of long-period data showing the movements of population, industry, and the economic, social and health conditions of the people of London during the last thirty or forty years. At the same time, a re-survey is taking place of the principal groups of London industries, especially those which in Booth's time were most definitely associated with poverty, together with a number of special subjects, including the use of leisure. All social and economic students will look forward to the publication of the preliminary volume and of the results of the survey itself.

Automobile Statistics.—The current edition of "Facts and Figures," a year book issued by the National Automobile Chamber of Commerce of the United States, contains a wealth of interesting data relating to the motor industry of all countries. World production of motor vehicles in 1928 is put at 5,198,167, of which 83.5 per cent. were built in the United States, 4.7 per cent. in Canada, 4.2 per cent. in France, and 4 per cent. in Great Britain. The United States exported 515,744 cars (excluding units shipped as "parts for assembly"), as compared with a Canadian export of 79,388, French 44,106, and British 19,743. In considering these figures it is significant that producing concerns in the country number 98, against 152 (for an output 25 times as large) in the United States. Some light on the vexed question of "saturation point" in automobile markets is thrown by the following summary of comparative data:—

YEAR 1928.

	United States.	United Kingdom.	France.	Canada.
Vehicles registered ...	24,493,124	1,318,169	1,098,000	1,061,830
Road mileage	3,005,614	178,737	440,085	424,014
Sq. miles of area per road mile	1·01	0·49	0·48	9·00
Vehicles per road mile	7·8	10·4	2·5	2·3
Persons in population per vehicle	4·9	35·8	37·0	9·0

The high level of vehicles per road mile in this country, when related to the comparatively low proportion of car owners to total population, suggests that, from the automobile manufacturers' point of view, further road construction is a matter of some urgency. On the other hand, with the exception of France, we have already a greater mileage of road per square mile of area than any country in the world. The conclusion is irresistible that, in the absence of substantial relief from road congestion, expansion of our automobile industry depends preponderantly on our success in cultivating markets overseas.

The Chilled and Frozen Meat Trade.—The year 1928 was satisfactory for beef producers in most parts of the world, according to the annual review of Messrs W. Weddel and Co. In the United States prices were high, as a result of the shortage induced by the unprofitable prices of 1927; in Great Britain also prices were affected by reduced supplies of home-grown meat, resulting from a scarcity of feeding stuffs and the stoppage of imports of Canadian store cattle. Supplies of beef from the Argentine were very heavily reduced. As prices of beef had previously been low with reference both to cost of production and to the prices of other foodstuffs, this rise was not sufficient materially to affect consumption. There was a very great increase in the consumption of lamb, at prices more favourable than those of the previous year. The total consumption of beef, mutton and lamb in the United Kingdom during 1928 is estimated at 1,987,525 tons, of which 1,107,800 tons were home-grown and 879,725 tons imported. On the Continent the demand for imported meat diminished further and overseas imports fell to 203,284 tons from 296,567 tons in 1927. This is attributed by the trade to action on the part of the various Governments, and little hope is held out of any change in the position. Nor is there any evidence of a substantial improvement in home demand as compared with recent years. Home supplies in 1929 are expected to be about normal; oversea supplies of beef may, if anything, be slightly reduced, while the shipments of lamb are expected to be ample.

"Continuous Production" in Russia.—On June 14th appeared a decree of the U.S.S.R. Supreme Council of Economy requiring all interested industrial authorities to report on the proposal to introduce "a continuous industrial production week." The reports are to be submitted within three weeks. The proposal is to keep all factories working on Sundays and on the present legal holidays (of which there are thirteen), with exception of five holidays which commemorate the revolution events. This measure was advocated by M Larin in a recent speech to the All-Union Congress of Soviets, and it has since been daily debated in the Press and at meetings of industrial employees. Among the advantages promised are an increase in production, fuller utilisation of plant, more rapid turnover of working capital, and, not least it seems, "emancipation from the bourgeois-traditional division up of the workers' time." That the plan involves many practical difficulties is indicated by the Council of Economy's decree, which enumerates no less than eleven questions needing elucidation—questions of the sufficiency of fuel and materials supplies, the effect of continuous operation on a plant, the carrying out of current repairs, the supplementary supply of labour, the necessary additional housing, the extra capital investment, and the moral effect on labour. It is not proposed to reduce the number of rest days. The problem is in what manner workers' groups should be organised so as to give all employees at least the present number of holidays. It is admitted that the groups must be so organised that "the more backward workmen," i.e., those religiously inclined, should never have to work on Sunday. One suggestion is that the seven hours' day, which, according to present plan will be universal within five years, should be abandoned, and be replaced by an eight hours' day with, however, only five working days, followed by two successive rest days, in the week. Certain branches of production, among them smelting and steel (not the rolling mills) have already a "continuous working week," and a large glassworks and the Leningrad engineering works "Co-operator" have gone over to the system. The Press publishes many workmen's resolutions in favour of the "360 days working year."

Prosperity in Belgium.—In the report* by the Commercial Secretary to the British Embassy on conditions in Belgium during 1928, it is predicted that lasting recovery should be attained by the end of 1929. Public finance has been conspicuously satisfactory: internal debt was reduced during the year ending September 30, 1928, by 803

* Department of Overseas Trade. H.M. Stationery Office. 4s. 6d. net.

million francs; external floating debt was extinguished; revenue from taxation exceeded the estimate of 8,671 million francs by a probable 1,179 million, so that substantial reduction in taxation is promised for 1929. The National Bank of Belgium continued the reduction in its rate of discount which is now 4 per cent. The least satisfactory development during the year was a certain weakness in the Stock Exchange, which was sharply accentuated by the death of Mr Loewenstein. Although the position is now sound, there is still very little general activity. The returns of foreign trade are highly satisfactory, showing a rise in imports from 29,138,507 francs in 1927 to 31,564,240 francs in 1928, and in exports from 26,696,614 francs to 30,145,421 francs. Except for a diminution in the imports of food, the increase both in imports and in exports is spread fairly evenly over the various classes. Great Britain has increased her share in Belgian import trade from 11.4 to 11.9 per cent. and diminished the proportion of Belgian goods she takes from 18.2 to 17.1. She is still Belgium's principal customer, and as a source of Belgian imports ranks third, after France and Germany. Industrial progress during 1928 has been most marked in the coal, iron and steel, chemical, electric light and power industries, in all of which a process of concentration is under way. The special committee of inquiry has not yet issued its final report on the coal industry, but meanwhile there have been five important mergers, a sales organisation has been formed, a bill for the abolition of royalties has passed the Chamber of Representatives, and certain tax reductions are expected further to strengthen the position of the industry. Coal consumption increased during 1928 owing to the improved position of the iron and steel trades, in which also amalgamations and the establishment of sales organisations have been prominent. British competition, however, especially in pig iron, has been felt keenly in the export business. Belgian motor-car production by no means keeps pace with the expansion in home demand, but home manufacturers are just beginning to turn attention to the production of cheap 8/25 h.p. cars with a light petrol consumption. This is a type of model in which one would suppose British manufacturers to be in a strong position to compete, but at present, owing to lack of advertising, British cars are rarely seen in Belgium, whereas expensive French and American models are very successful there, aided by strong publicity campaigns. One of the most progressive branches of industry in Belgium is that of chemical manufacture. New processes are being steadily developed and an increase in the capitalisation of the industry has been reflected in the installation of much new plant. Co-operation between the chemical industry and the coal and non-ferrous metal industries is growing, and promises to become an important factor in the prosperity of the industries involved. The prosperity of agriculture was the main theme of our Belgian correspondent's letter in a recent issue. On the other hand the textiles, leather, boot and shoe, lace and ceramic industries are not yet out of their difficulties.

The Trade of British Malaya.—The British Trade Commissioner in Malaya has presented to the Department of Overseas Trade a Report* which is of great interest to British manufacturers. Malaya is in a very favourable geographical position for commerce, and offers considerable scope for increased production, so that there is every reason to suppose that her part in world trade will grow substantially in the near future. Meanwhile, Great Britain's share in Malayan trade is failing to keep pace with that of other countries, and the percentage of imports which came from Great Britain declined from 19 in 1921 to 13.5 in 1927. The two principal reasons suggested are, first, the intensification of European and Asiatic competition in goods of cheap and medium quality, and, second, the comparative slackness of the distribution methods adopted by the United Kingdom, many of whose manufacturers fail to establish an intimate contact with the requirements of the local markets. Chinese merchant firms play a growing part in Malayan trade, and it would pay British exporters to establish closer relations with them. The greatest need in meeting the extraordinarily competitive conditions of this trade is for the appointment of resident investigators, who would thoroughly explore even the smallest and remotest markets. The market as a whole is promising, since, in spite of some disorganisation caused by the restriction in rubber exports and its subsequent removal, economic conditions in Malay are very sound. Exports are dominated by rubber (50 per cent. of the total in 1927), tin (19.5 per cent.), and motor spirit, but about half of each of the first two of these items and the whole of the last consists of re-exports, and it is a weak point in the position of the country that she should depend so largely upon commodities not wholly of her own producing, especially as Asiatic trade is tending to become more direct. An improvement in this respect is, however, predicted. In the import trade the decline in the British share is more serious than might appear from the total percentages, since it has been most marked in the case of manufactured goods. In the metal and machinery groups Great Britain is holding her trade fairly well, partly because some of the firms with the most efficient trading methods are to be found in those lines, but partly, it is to be feared, because of Government purchases. The most serious decline is in the textiles group. In 1923, 66 per cent. of Malayan imports of cotton piece-goods came from the United Kingdom and 9.5 per cent. from Japan. After an unbroken movement in each case the respective percentages in the first four months of 1928 were 50 and 24. A similar growth in Continental-European competition in general imports has taken place; Belgium, France, Germany, Italy and the Netherlands increased their sales of total merchandise to British Malaya by percentages varying from 160 to 417 between 1922 and 1927, against an increase in the British total of only 74 per cent. The British Trade Commissioner, however, estimates that the United Kingdom could increase her share of the import trade of British Malaya from 27 to 40 per cent. in two or three years, thereby adding an annual value of some £4 million to our exports. The groups which could, in his opinion, contribute to such an increase are: Earthenware and glass, iron and steel, machinery, chemicals, dyes and paints, motor vehicles, rubber manufactures, cutlery, hardware, etc., leather manufactures, and paper. All but the last three of these are already showing some improvement. The point is stressed that, in order to achieve this objective, more aggressive and efficient methods of sale and distribution are essential.

UNITED STATES.—STOCK EXCHANGE—MONEY—PRODUCTION—REPARATIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 12.

MIDSUMMER dulness has settled over the financial district. While there is a good deal of gratification in conservative quarters over the apparent culmination of what many felt was excessive speculative activity, some adverse effects of the methods used in bringing it about are beginning to be felt. Business on the Stock Exchange has fallen to midsummer proportions and except for some sections of stocks, such as the public utilities and shares with special attractions, price movements are narrow. Professionals are largely in control of the market. The public is indisposed to come in, but at the same time it has apparently sold all the stock it intends to sell unless something unforeseen occurs to shake its confidence in the future. Current money rates are scarcely a factor in the share market, but Reserve Board policy toward the money market during the remainder of the year is. The uncertainty over what to expect from the Washington authorities is holding back market operations, but, anyhow, the share market is unlikely to make any impressive demonstrations on the bull side until after further rest.

The markets have been well supplied with money this week, and the trend of time rates has been downward. Call money, after remaining at 6 per cent. for some days has risen to 7 and finally to 8 per cent. In a measure the higher rates were a corrective, perhaps, of the low rates prevailing over the end of May and early in June, since bankers feel that 6 per cent. or lower is not justified by conditions. Moreover, the banks are now making their preparations for the June 15 tax payments and corporation interest and dividend payments. Rights to subscribe to new stock issues between now and the end of the month will require, it is estimated, about $800,000,000 of investors' money. Subscriptions to stock offerings in such large amounts will, of course, put some strain on the individual shareholder, and the increase in stock outstanding will tend to hold down prices until the period of digestion is over. However, the money market is unlikely to feel more than passing effects, if, indeed, New York may not be easier as a consequence of the massing here and into corporation treasuries of money drawn from savings banks and small deposit accounts throughout the country.

Toward the end of next week the usual tax date ease in money should be felt. The Treasury has closed its books on an offering of approximately $400,000,000 of short-term notes on which it will have to pay 5⅛ per cent., the highest rate paid by the Government since the depression year of 1921. The issue was over-subscribed two and a half times, a testimonial to the generous terms. Payment for the new issue will not be made immediately, whereas the Treasury will borrow from the Federal Reserve Banks on special certificate and with the funds grant the banks immediate credit on maturing notes and certificates. In addition, the Treasury will pay interest on its obligations. Tax collections will necessarily be slow, and pending cashing of tax checks the overdraft at the Treasury will put funds into the money market. The high coupon rate on the Treasury issue fairly meets the current market for Government obligations. It is believed that the Treasury might have done better, but a year ago it had an unpleasant experience in cutting the corner too sharply, causing losses to subscribing banks in the subsequent decline of the bond market. The high rate does not, of course, forecast the money market for the remainder of the year. On the other hand, the over-subscription would indicate expectation by bankers of easier conditions. At any rate, the market for good bonds has been improving moderately for the past two or three weeks.

Such recession as the summer may bring in business will at least have the virtue of coming later than ever before. For the first time in history the steel industry has made its record output in May. Operations are declining somewhat this month, but the first half-year is bound to set up a new peace-time record for the industry. Motor car sales are falling off moderately, but are still running much above the same period of last year, and some manufacturers are talking of higher prices in order to show a satisfactory profit. The situation this year is that while the leading makers are selling more cars than ever, the margin of profit per car is smaller than ever. Building activity in May was below that of last year, as indicated by the record of permits for new construction, which were about 20 per cent. under last year. A better indication of construction activity may be had from the record of contracts let. Contracts let in the territory east of the Rocky Mountains in May, according to the F. W. Dodge Corporation, were 9 per cent. below April and 12 per cent. under the same month of last year. For the five months contracts were 11 per cent. under a year ago.

Quiet satisfaction is apparent in all circles over the settlement of the Reparations question. In some international banking quarters it is thought that interest in foreign financing will shortly revive as a result. However, there is no expectation in good quarters of any considerable German Government loan in the near future. The proposed international bank meets with general approval among bankers, but the attitude of Washington toward Federal Reserve participation is an uncertain factor, and it is realised that the country as a whole is still far from being internationally minded in financial affairs.

FRANCE.—REPARATIONS—LONDON AND WASHINGTON AGREEMENTS—BUDGET.

(FROM OUR CORRESPONDENT.)

PARIS, June 19.

AT yesterday's sitting of the Ministerial Council, the Government formally decided unanimously to approve of the new German reparations plan. So far as can be seen, this decision reflects public opinion in general, which recognises that France, although she will not receive anything like as much as she might rightly claim, will gain many solid advantages in other directions than from direct cash payments. Chief of these is the fact that under the new plan the French are given a right to the mobilisation of the "unconditional" portion of the annuities due to them. In a formal letter to M Poincaré, reporting the results of the work of the experts' committee, MM Moreau and Parmentier, the French delegates thereon, state that "all the effort of the French experts was focused on this point. Thanks to the solution arrived at, the amortisation of the debt contracted by France, in the room and place of Germany, may be accelerated, and France will have the benefit of a veritable priority in favour of her material reparations."

In the same report the French delegates state that the present value of the amount that France should receive under the new plan will be (at 5½ per cent.) 18,739,000,000 marks (plus about 4,000,000,000 marks which she has already received). The French share of Germany's first 37 years of reparation payments should, therefore, total, in round figures, close upon 23,000,000,000 marks, or over 138,000,000,000 francs. Of this total 102,000,000,000 francs will represent the cost of reconstructing the devastated regions. The balance of 36,000,000,000 francs over and above the actual cost of reconstitution, the French experts explain, "will attenuate the consequences of the fact that our reparation expenditure will be reimbursed at different dates from those when the money was actually expended; but the cost of the war pensions left to Germany's charge by the peace treaty will continue to encumber the French Budget."

The French experts recognise definitely that, although the new plan foreshadows a moratorium in favour of Germany, the conditions of it are such, "combined with those of the London and Washington agreements, that France can never be exposed to having to pay to her old allies and associates more than she will receive from Germany." They also assert that "the *de facto* liaison established for the first time between German reparation payments and French foreign debt payments will be in practice all the closer from the fact that the proposed International Bank will have the duty of making the payments." Of the constant annuity of 1,046,500,000 marks due to France, only 626,500,000 marks will be required to meet her foreign debt instalments. The balance of 420,000,000 marks, which will constitute a net revenue for France, payable for 37 years, will be equivalent (at 5½ per cent., plus amortissement) to an actual present value of 6,945,000,000 marks, or about 42,000,000,000 francs.

Controversy is already rife as to the method to be adopted for the mobilisation of the German payments. One suggestion is that the French Government should deliver scrip issued by the German Government in ex-

change for scrip of French Government loans issued since the reconstruction period. It is scarcely likely, however, that French holders would agree to exchange Rente scrip or Government Bonds against German scrip, even if this form of conversion were made compulsory, which it is unlikely any French Government would venture to propose. A forced conversion proposal of this kind was tentatively put forward during the critical days of the franc and met with such opposition that no more was heard of it. A more practical suggestion is that the available portion of the French annuities (which would amount to 420 million marks a year) should be entrusted to the Caisse d'Amortissement, to be utilised to buy in French public debt issues on the Bourse, for extinction purposes. This, however, would be to rob the new Young plan of one of its most notable advantages, as it would prevent the German scrip from coming into general circulation, and consequently render impossible the transformation of the German political debt to France into a commercial one.

It is now clear that the Government will have no easy task to secure ratification, during the coming week, of the London and Washington debt agreements, whether it asks for their approval by direct Parliamentary vote or for ratification to be left to the Government, with power to act by decree. The various groups in the Chamber have all held long sittings on the question, but none has so far pronounced in favour of ratification pure and simple. The two outstanding factors to-day are (1) that payment of $407,000,000 for the American war stocks falls due on August 1st, and that it is impossible to know before that date whether (2) the various governments concerned will approve of the new reparations plan. M. Stern, the rapporteur of the Foreign Affairs Commission of the Chamber states that the Treasury is certainly in a position to pay the $407,000,000 on August 1st, if the Washington Government demands it, but in that case the New York and London money markets would undoubtedly be seriously affected, and probably Paris as well. France would also lose the benefit of having this payment absorbed in the scheme of annuities provided under the Washington agreement, in addition to suffering a drain on her sound money reserves. Whether, in the circumstances, Washington will refrain from insisting on immediate payment, as a penalty for French failure to ratify the agreement as to the larger debt, is uncertain. French hesitation to ratify is due to nervousness owing to the absence of any safeguard clause in the agreement, and also to uncertainty as to whether the other governments will approve the Young plan as it stands. The situation has not been improved by the news from Washington that the United States Government does not regard it as necessary to express approval of the new reparations plan.

The gravity of the situation is shown by the fact that the Foreign Affairs and Finance Commissions of the Chamber have taken the unusual step, after discussing the problem separately during several sittings, of holding to-day a joint session for the purpose of hearing important statements not only from M. Poincaré but also M. Briand and M. Chéron. It is expected that these conferences will occupy the next three or four days, in view of the importance of definite decisions being come to prior to next Tuesday's pre-ratification debate in the Chamber. There is undoubtedly a large body of opinion in the Chamber which is strongly in favour of immediate ratification of both agreements. At the same time most of the parties are divided among themselves as to the best course to take. Further evidence of this was afforded yesterday, when the Radical Left, which usually strongly supports the Ministry, passed a resolution calling on the Government to adjourn ratification of "all the agreements" until Germany and all the Allied Powers have pronounced on them. Meanwhile, MM. Bérenger and Caillaux, who negotiated the Washington agreement, are loudly insisting that ratification is imperative, as this country is offered remarkable advantages which are never likely to be accorded in future, if the question is re-opened either in Washington or London.

The revenue returns for May show a yield from all budgetary sources (exclusive of the postal department, the revenue devoted to the Caisse d'Amortissement and local taxation) of 3,268,948,600 francs (as compared with 5,105 millions and 3,147 millions during the corresponding months in 1928 and 1927). Of this sum only 398,652,000 francs consisted of direct taxation proper (almost entirely income tax yield) levied under the State Budget. In addition 227,714,000 francs were recovered in the way of local taxation, while the Caisse d'Amortissement received the yield from the tobacco monopoly, the succession duties and other taxation now devoted to debt extinction purposes and dealt with outside the Budget. With the exception of the yields from sugar, salt, benzols and heavy mineral oils, which are always the least important items in the list, and from the tax on Bourse operations, all categories of taxes again showed appreciable advances over the yield in the corresponding month of last year. The turnover tax produced 849 millions, or 62½ millions more than in May, 1928. Registrations were 96 million up, Customs 88 millions (partly due to rising price in *ad valorem* categories), taxes on securities 38 millions, stamp duties 18 millions, and the supertaxes on motor spirit and petroleum 20 millions. The total yield for the first five months of the year, exclusive of that from income tax, has been 14,903,000,000 francs, or 2,481,000,000 francs above Budget estimates. It is announced that the total yield under the General Budget for 1928 now amounts (down to December 31st last) to 47,293,990,000 francs. The balanced Budget, when passed, provided for a total revenue of 42,496,616,176 francs, so that the year appears to have resulted in a surplus of 4,800,000,000 francs. How much of this will be left after the usual long list of Supplementary Expenditure has been provided for (in July) remains to be seen.

GERMANY.—TARIFF QUESTIONS—CREDIT—INDUSTRY—"CONSUMPTION FINANCING."

(FROM OUR CORRESPONDENT.)

BERLIN, June 18.

THE Cabinet has postponed the amendment of the Unemployment Insurance Law of July, 1927, until the late summer Reichstag session, in view of the rapid decline of unemployment, as a result of which revenue is now about covering expenditure. The Committee which is investigating the question will render its report at the end of next month, so that it will be possible to submit the amendment Bill during the August session.

The tariff question threatens to become acute, partly in connection with the Cabinet's decision to increase the food import duties, partly in connection with the American Tariff Revision Bill, which is strongly objected to by industrial exporters. The trade Press demands not only that the commercial treaty with America shall be denounced as soon as possible (which, however, cannot be until 1933), but that in future no commercial agreements on the basis of most-favoured-nation treatment shall be concluded. The Minister of Industry, Dr Curtius, some months ago, proclaimed that the commercial treaty with Great Britain should be denounced, this on the ground that the safeguarding duties injured Germany in particular. The proposed increases in the American duty, it is declared, will affect every branch of German industrial export that at present sells more than 10 million marks a year worth of goods to the United States. The increased "flexibility" of the new American Tariff, as compared with the Tariff of 1922, in the matter of anti-export bounty measures and of measures based on the vague and incalculable "competition" factor will create constant uncertainty as to the duties which will have to be faced by German exporters. The food duties position is pointed to as an instance of the inconvenience of most-favoured-nation treatment. The Government has definitely decided to increase these duties. The aim is not to keep out American foodstuffs—this could be attained only gradually—but to put up home prices. The interim grain duties at present in force are at reduced rates, 50 marks per metric ton on rye, 55 marks on wheat. The autonomous rates fixed by the Minor Tariff of August, 1925, are, on rye 70 marks, on wheat 75 marks. These cannot be put into force against countries like the United States, which enjoy most-favoured-nation treatment, because the rates in the German-Swedish commercial treaty are only 60 and 65 marks respectively. The Government is negotiating in Stockholm "for removal of the difficulties which arise out of the German-Swedish commercial treaty," that is, apparently, negotiating for a release from this provision of the treaty. This indicates a design to increase the duties to at least the Minor Tariff autonomous rates. The official attitude towards the food duties increases seems to be apologetic. The Food Minister declares that "the misfortune does not lie in our having low food duties, but in our having low food duties and at the same time high industrial duties." It is reported that the "Valorisation Commission" has prepared a grain monopoly plan.

The money market improvement has continued. Day loans last week were plentiful, with, however, little change in the interest rate; but month loans rates declined. Early this week day and month rates slightly advanced in connection with impending settlements in Western industry. Offers of foreign funds are coming increasingly in, but their acceptance is checked somewhat by the continuing high reichsmark exchange. The Reichsbank's restriction of the volume of rediscounting has practically ceased. The Reichsbank's return for June 15th shows only a small increase in the exchange reserve, but as a result of a decline of 181 million marks in circulation, the ratio of combined gold and exchange reserve to reichsmark circulation rose further to 49.7 per cent., the ratio to total circulation to 44.8 per cent. Discounts declined by 824 million marks, advances increased by 12 million marks. Anxiety about the money market during the June half-yearly settlements has been allayed by the report, not yet confirmed, that a 200 million marks credit for the Republic, whose cash position is still unsatisfactory, has been arranged with native banks, while the banks will in turn get a $50 million American credit.

The wholesale prices index for June 12 is 134.9 as against 134.5 on the 5th. The rise again falls to the agricultural products group. The number of unemployed declined between May 15th and 31st from 927,000 to 807,570. Lost through strikes and lockouts in the first quarter of this year were 1,046,000 working days as against 10,167,700 days in the last quarter of 1928, in which fell the Western steel lockout. Railway freight traffic is increasing, and in the latest weeks for which returns are issued has considerably exceeded that of the corresponding period of 1928. The industrial consumption of coal is also larger than a year ago. These facts, and the high iron and steel production figures, seem to point to general industrial improvement, but complaints that shortage of capital hampers the revival continue to come in. Pig iron production in May was 1,133,134 metric tons as against 1,044,046 tons in May, 1928; in the first five months 5,386,594 tons against 5,565,030 tons. The trade balance in pig iron is strongly active, export in the first four months being 98,708 tons against 57,627 tons imports, whereas in these months last year import exceeded export. Negotiations are reported to be under way for modification of the agreement under which the Ingot Steel Syndicate (Rohstahlgemeinschaft) grants price rebates to native manufacturers on material bought for conversion into export goods. The manufacturers' association "Avi" considers that the price rebates should be equal to the full difference between the higher German and lower work market prices. At present something less than the difference is allowed. The machine manufacturers' association reports increasing activity, which is due entirely to the great rise in the volume of foreign orders. The Ruhrgas A.G., which was founded in 1926 for long-distance supply of gas, reports that it has concluded a large number of contracts with industrial concerns, gas companies, and municipalities, including a contract to supply the whole consumption of Hanover city. In April, 1928, the company took over all the gas delivery plant of the Rhenish-Westphalian Electricity Co., which supplies 41 municipalities. The paper industry is very active. Export of print paper in the first four months was 72,664 tons against 62,816 tons in the same months of 1928. The increase falls almost entirely to reparation deliveries in kind, to France. The porcelain industry complains of bad business. The degree of employment is at present below that of industry as a whole, whereas a year ago it was higher. Import this year so far has been much larger than a year ago whereas export has slightly declined.

The system of "consumption-financing," which was started 3½ years ago, partly under American influence and partly as a consequence of capital shortage and of trade depression, is being subjected to some severe criticism. Two "consumption-financing" institutions, whose turnover and profits at first grew rapidly, are reported to be in difficulties. "Consumption-financing" took the forms of granting credits to retailers to enable them to conduct a payment-by-instalment system, and of granting would-be buyers "credit-cheques" against a definite commission and security, the cheques being taken in payment only by a retailer who sold for cash. It is reported that present sales under these systems total over 1 milliard marks a year, that 65 per cent. of all motor cars sold, and practically all complete house furnishings, are financed in this way. In most cases the original credit-givers, who are Swiss or American, are secured against loss by a chain of guarantees and ultimately by insurance. The proportion of defaults on instalment payment has been very considerable. A report of the chief Credit-Insurance Co. complains of the methods practised. As the business is very profitable to the original credit-givers, credit is obtainable in abundance; and in the competition to obtain instalment-buyers very little regard is paid to business methods. The buyers are well protected against exploitation by a law dating from 1894, but it is complained that national savings in the hands of insurance institutions are devoted to the encouragement of various forms of waste.

NORTHERN IRELAND.—BUDGET—SUSPENSE ACCOUNT—RESERVED REVENUES.

(FROM OUR CORRESPONDENT.)

BELFAST, June 19.

THE Northern Ireland budget for the year 1929-30 was passed by the House of Commons last week. The total estimated expenditure for the current year is £10,694,000. Consolidated Fund services are estimated to cost £726,000, including a payment of £440,000 to the Road Fund. Under this heading provision is also made for payments of £83,000 to the Sinking Fund in connection with the issue of Ulster Savings Certificates and of £93,000 to the Sinking Fund which is being built up in connection with land purchase annuities. These annuities were made over to the Northern Ireland Government as a free gift to defray the expenses involved in setting up the new state. The receipts from this source are estimated to amount to £665,000 in 1929-30, but as the process of land purchase is completed this sum will steadily decrease, and by the end of sixty-three years it will have disappeared. It is therefore the intention of the Government to build up a sinking fund which will eventually provide an investment income in lieu of the revenue at present obtained from these terminable annuities. The total cost of supply services is estimated at £7,580,000. Estimates in respect of £7,245,000 have already been passed. A comparison with the estimates and supplementary estimates for 1928-29 is given below.

	Estimates and Supplementary Estimates, 1928–29.	Estimates, 1929–30.
	£	£
Total—All transferred services	7,150,931	7,245,015
Deduct—		
Section 34 (Government of Ireland Act) Works Charges Treasury Contribution towards Generalisation Payment (Unemployment Insurance Agreement)	214,137	244,167
	550,000	473,000
Adjusted net total	6,386,794	6,527,848

It is stated that in framing the 1929-30 estimates it was not possible to anticipate the passing of legislation to give effect to the Government's proposals in connection with de-rating, and a supplementary estimate amounting to about £335,000 will be necessary to meet the additional cost of giving relief of rates to agricultural land and partial relief to industrial hereditaments during the half-year October 1, 1929-March 31, 1930. The cost of anticipating the de-rating of agricultural land during the six months April 1st-September 30th this year will be defrayed out of a special suspense account to which will be allocated the entire revenue surplus of the three years 1927-30. The cost of reserved services is estimated at £1,788,000, while the contribution to Imperial services has been provisionally fixed at £600,000. The latter contribution was originally fixed at £7,920,000—a figure, however, which was based upon a reserved revenue of over fourteen million pounds. Through changes in taxation the reserved revenue raised in Northern Ireland has declined very greatly, and last year, when the provisional amount contributed to the British Treasury was £1,100,000, the amount raised in the six counties by reserved revenue was just over seven and a half million pounds. The surplus available for contribution to Imperial services, after maintaining the same level of local services in Northern Ireland as in Great Britain, has thus been necessarily reduced.

On the revenue side of the accounts, transferred taxes are estimated at £1,445,000, as compared with actual receipts amounting to £1,508,000 in 1928-29. Reserved taxes are expected to yield £6,741,000, bringing the total tax revenue up to £8,186,000. Other sources of revenue (including land purchase annuities, Post Office receipts, and payments from the Imperial Treasury in respect of works charges under the Government of Ireland Act, 1920, and under the Unemployed Insurance Agreement) are expected to bring in £2,526,000, giving a total estimated revenue of £10,712,000, as compared with an estimated expenditure of £10,694,000.

SWEDEN.—DISCOUNT RATE—PRODUCTION—FOREIGN TRADE—MONEY—STOCK MARKET.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, June 15.

THE discount question has continued to occupy the same central position, but as the general trend has proved even more favourable than was expected, the threat to the discount rate has not been due to internal conditions, but to international factors, with the consequent tendency of dearer money and the uncertainty regarding the result of the Reparations negotiations in Paris. The latter question has now happily been settled, but the situation in the United States is still such that Stockholm may have to raise its discount rate in consonance with New York and London, although, normally, the critical season should be past.

While the Reparations question and the American situation have patently been ruling factors abroad, very few traces indeed of their influence can be found in Sweden. They have been a constant source of danger to the discount rate and have, of course, influenced the Stock Exchange, but the general economic life of the nation has proceeded as if these complications had not existed. Production in the principal industries has so far been on a remarkably high level and the chief export markets have been favourable. The "Svensk Finanstidning" production index, which comprises all the heavy export industries, registered the following changes in the early part of the year:—January, 148; February, 134; March, 135; April, 146 (1923-1924=100). These are post-war records and reflect good orders all along the line, although pulp and ore are well ahead of the other industries.

In the pulp industry only 5 per cent. of the estimated production for the year of strong sulphite remains unsold, and 7 per cent. of easy bleaching, whilst large quantities have already been sold for 1930 and later, and it has been possible to reach this favourable position with prices almost continuously showing a firm tendency—in the case of sulphite and mechanical pulp slowly rising, and of sulphate, at a less satisfactory level. This development is the more notable as the volume of production in the pulp industry has continued to increase at a rapid rate. Thus the production index for the first quarter of this year was 177; in April it had risen to 196. Both figures are records. The situation in the timber industry is, of course, not nearly as good, yet the progress made has materially exceeded expectations. At the end of last month, sales since the beginning of the year had reached 700,000 stds., and there is little doubt that the whole of this year's production will be sold. In spite of irritating Russian competition, it has been possible to effect these sales without a material lowering of prices. Of the remaining important export products, paper has shown a trend somewhat similar to that of pulp; the engineering industry has continued its recovery in the iron and steel industry is becoming more pronounced and ore mining has been proceeding at a record rate, except for a temporary setback in February and March.

Owing to special circumstances this progress has not, however, been reflected to its full extent in foreign trade. The main factor here was the exceptional ice conditions in February and March, which almost entirely cut off Sweden from other countries. The mild weather in January prolonged the shipping season and the month ended with an import surplus of only 13 million kronor. Then in February and March there came an almost unexampled drop in the volume of trade. Contrary to previous experience, the ice blockade affected imports more than exports, hence the excess of imports fell to 10 million kronor in February, and actually gave place to an export surplus of 6 million kronor in March—an abnormality for that time of year. It was only to be expected that as soon as the ice barrier was removed in April, the pendulum would swing over violently in the opposite direction. The foreign trade in April did, in fact, reach unprecedented dimensions, and although exports were unexpectedly large, imports were more so, with the result that the import surplus at the end of the month stood at the enormous amount of 56 million kronor.

On account of the unusually favourable trade balance early in the year the excess of imports over exports, nevertheless, stopped at the comparatively low figure of 73 million kronor for the first four months. For the corresponding period of last year, the passive balance was 183 millions. This figure was unduly high by reason of the labour disputes at the time, but the average in former years has been in the neighbourhood of 135 millions, if the exceptionally favourable year 1927, when the import surplus was 72 millions only, is left out of account. The ice blockade, through its influence on the Swedish trade balance, has affected the discount problem, for it was mainly in the event of pressure on the Swedish exchange that a heavy demand for foreign currencies, caused by a pronounced passive trade balance, could be expected to force a rise in the discount rate. It may be doubted, however, whether a less substantial passive balance alone would have prevented the raising of the discount. The deterioration of the trade balance in April was counter-balanced by a gigantic—for Swedish conditions—financial transaction in so far as the Kreuger group during the month called in a large part of the outstanding payments on the latest debenture issue. This perverted the normal development of the trade balance to such an extent that instead of a backward trend in April, there was an improvement of 32 million kronor, thus the result of the first four months of the year was a reduction of the net claims abroad by only 53 million kronor—an astonishingly favourable figure. The exchange market has on this account in April and May been characterised by offers instead of demands, to which the early appearance of bills in connection with Gulf shipments has also contributed. It is not altogether surprising, therefore, that the Riksbank at the end of last month had a currency reserve of 183 millions, and this

only a fortnight before the time of year when the lowest point is usually reached. Since the beginning of the year, the fall has been only 32 million kronor, as against 156 millions last year (owing to labour conflicts) and 46 millions in 1927.

This trend was bound to react to some extent on the home money market. In April, especially, credits were noticeably restricted—for the first time since the labour troubles of last year—and were then below last year's level. The contrast is well illustrated by the fact that the credit volume in the period January-April this year dropped to 97 million kronor, whereas in the corresponding period last year it rose by 79 million kronor. But if the year has so far been mainly satisfactory, there is one field of financial activity that has suffered through the dominance of the international situation. It has already been mentioned that the Stock Exchange reacted decisively to the uncertainty regarding the reparations settlement and the outcome of the violent speculation in New York. The Stockholm Stock Exchange is normally firm and active in the Spring, when the bulk of the industrial concerns make up their accounts. But this year the tone has been halting, and sharp movements have taken place in shares quoted abroad. In the first five months of the year, the shares on the A list dropped 116 million kronor, whereas last year, in spite of the labour situation, they rose 145 million kronor, and 282 millions in 1927. It is true that these variations are almost wholly due to the movements in Kreuger shares, as these lost 167 millions this year, as against a gain of 212 millions last year. But this means that the remaining shares have risen by only 51 million kronor this year, in spite of favourable conditions, while during last year's industrial difficulties they rose by 273 millions.

CANADA.—CROPS—GRAIN ACT—LIBERAL LOSSES—BUSINESS—STOCKS.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 12.

THE weather has been reasonably good in Eastern Canada during the past fortnight and crops have been regaining some of the leeway which they lost through their belated start. But on the prairies conditions are less satisfactory and the second crop survey of the *Manitoba Free Press*, published on June 8th, cannot be described as an enthusiastically optimistic document. It reports that the wheat averages five or six inches high and is well rooted, but that it and other grains are in many districts suffering seriously from a lack of moisture. Abnormally abundant rains were required this summer to compensate for the inadequacy of the moisture reserves left by a light snowfall, and they have not so far been vouchsafed. Indeed, out of 335 districts reporting to the *Free Press* not less than 158 or almost half stressed the more or less urgent need of rain. There was also complaints of soil-drifting which is an inevitable result of the lack of moisture to bind the soil. Accordingly, at the moment the auguries do not point to another bumper crop on the prairies, but a spell of copious rains accompanied by warm growing weather could soon retrieve a situation which is by no means beyond remedy.

The battle which was expected to develop over the proposed amendments to the Canada Grain Act did not materialise, for the agricultural committee of the House of Commons after some heated discussions evolved a unanimous compromise report which was adopted without much demur by the House of Commons, and the Bill giving legislative effect to its recommendations was put through in a few hours. The most important change is the complete prohibition of "Mixing" of the so-called guiding grades Nos. 1, 2 and 3 red spring wheat. This regulation will entail the segregation of these grades in the terminal elevators and will involve some changes in the system of handling wheat, especially for companies which have only one terminal elevator. Mixing will still be permitted in No. 4 and lower grades, but an important provision has been introduced for the preservation of uniformity in the out-turn standards of grain from the terminal elevators. The recommendations of the co-operative pool officials were embodied in the Bill which fixes the out-turn standards at 75 per cent. of the average of the grain and 25 per cent. of the minimum. The prohibition of mixing will not become effective until August 1, 1930. Another provision confirms the right of the grain grower to designate the terminal elevator to which his grain will be shipped and thereby settles an ancient controversy in favour of the farmer. The Board of Grain Commissioners is to be strengthened by the appointment of four assistant commissioners to be stationed one in each of three prairie provinces and one at Fort William. The grain trade does not exactly relish some of the amendments, but they represent a reasonable compromise and the Government has pledged itself to introduce next year a measure consolidating all the legislation in regard to grain marketing.

The Liberal Party has just suffered a serious setback in the provincial election which was held in Saskatchewan on June 6th. This prairie province since its organisation in 1903 has been one of the great strongholds of Liberalism; the party has controlled the provincial administration without interruption for 25 years and, while the Progressive Party has carried a number of Federal seats on different occasions, its Federal representation has been predominantly Liberal, and not since 1917 has a Conservative member been sent to Ottawa from Saskatchewan. In the last legislature the Liberals held 55 seats out of 63 and, while some erosion of their huge majority was predicted, nobody was prepared for the overturn of votes which has deprived them of more than half their seats. Two deferred elections have still to be held, but at present the Liberals and Conservatives each hold 26 seats and the remaining nine are divided between Progressives and Independents, practically all of whom ran as anti-Government candidates. The result is admitted defeat for the Liberal administration of Premier Gardiner, and he has the alternative of submitting his resignation immediately or of hanging on to meet the legislature in the hope that he may be able to bargain for Progressive or Independent support. But the *Manitoba Free Press*, which supported Premier Gardiner during the campaign thinks that at no distant date a Conservative administration will govern Saskatchewan for the first time in its history. Undoubtedly the religious issue and disquietude about the influence of Quebec on the councils of the Liberal Party cut some figure in the election, and the slump in wheat prices had produced a widespread feeling of rural discontent, which operated against the Government. But another important factor was the growing feeling of resentment over the tariff measure now under consideration at Washington. The Conservatives meanwhile have been making the welkin ring with their denunciations of the new tariff and the timidity of a Liberal Government which was afraid or unwilling to take retaliatory measures for the chastisement of the United States. If provincial control of Saskatchewan is lost, the Liberals will only retain control of one solitary province, Quebec, and in Federal elections the help of provincial administrations means a great deal. The Conservative experts who insist upon interpreting the Saskatchewan result as the premonitory signs of a political upheaval which will sweep the Liberals out of power at Ottawa next year may be too optimistic, but the setback will undoubtedly strengthen the hands of the group of Liberal Protectionist Ministers who have been urging that the Government should lose no time in re-imposing the special tariff duties on fruit and vegetables.

Business conditions remain more or less stationary, but there is some hesitation about commitments until the fortunes of the western crop are more assured. Industrial activity, however, is still being maintained at a satisfactory level, and the employment index of the Bureau of Statistics on May 1st stood at 116.2, as compared with 110.4 on April 1st and 106.8, 101.8 and 95.4 on May 1st, 1928, 1927, and 1926 respectively. Building construction is still running ahead of last year's figure and firms dealing in lumber, building supplies and electrical equipment are all busy. The locomotive and railway equipment plants are also running full time, and both

the cotton textile and the knitting mills have adequate orders. The American tourist trade which every year brings an increasing sum of money to the country is also making its influence felt in many directions. New hotels designed to cater for it are being erected at different places and the Canadian Pacific Railway is now ready to open its gigantic new modern hotel, the Royal York, in Toronto.

There has been a somewhat better export movement of grain in the past fortnight, but the domestic stocks are still heavy, although it transpires that comparatively little remains in the farmer's hands. The carloading figure for the week ending May 25th placed at 64,318 cars showed recessions of 484 and 1,113 cars respectively, compared with the parallel figures for the previous week, and the corresponding week of 1928. The stock markets are still very dull and bearish and the Bureau of Statistics "Investors'" index of industrial common stocks for the week ending May 30th was 248.1 as compared with 263.1 for the previous week. The mining market is also very listless and even the western oil stocks have lost their popularity. But production in the Turner Valley oilfield is steadily increasing and its May output of 88,302 barrels set a new high record exceeding that of April and March by 19 and 20 thousand barrels respectively.

Letters to the Editor.

GROUP PENSION SCHEMES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I had intended to send you a comprehensive reply to the statements made in the article on "Group Pension Schemes" in your issue of May 18th, most of which were very much in opposition to statements I made in the original article, published March 16th, which I wrote. I am greatly pleased to see that the second article has been so completely answered by another correspondent, and am especially glad that it came from British sources.

There are one or two charges in the May 18th article that deserve a little further clearing up. The statement that my article was "simply an *ex-parte* advocacy of the establishment of a scheme on the methods adopted by American life offices" is ridiculous. I know of at least one important case in England where five companies submitted proposals on this so-called American basis. This group comprised three British, one Canadian and one American company. To label a plan "American" when it has been in use here by British companies for many years is ingenious, to say the least.

So far as group assurance is concerned, it is, of course, common knowledge that more than 50 British companies have adopted group principles and have a tariff known as the British Life Offices Group Tariff.

The statement that "There can be no question that where numbers are large enough for the law of averages to operate a private scheme is more advantageous, &c.," is the crux of your correspondent's entire argument. He says: "In general, all the advantage lies on the side of the private trust."

The fact is, as all informed persons know, that all the advantage, whether for employer or employees, lies on the side of the scheme administered and guaranteed by a life assurance company, whose business it is to make such contracts as these.

The best unprejudiced light on this question is found in the report of the committee on pensions of the New York Stock Exchange, which studied this question for more than three years before deciding on a pension scheme. On this point the report said:—

"We have found that many plans originally well conceived have come to grief because of changes in rates of mortality and seemingly minor alterations of benefits in later years without coincident financial provision. We have further found that the experience in England, where pension plans have been long in existence, is that those administered by assurance companies are not only guaranteed as to their benefits, but have actually in experience given greater money return for the investment than the privately administered funds."

There is a phase of this controversy which has not so far been mentioned in print. The reason why there are so many private pension schemes in existence in Britain is due to the fact that employers, when considering such schemes, ask the opinion of actuaries. The actuaries receive good fees for the work incidental to the establishment of private schemes, and a further fee every five years for the legally required quinquennial examination. Perhaps it is expecting too much of human nature that these experts, despite the fact that most of them have assurance company connections, could advise the use of a life assurance company as administrator and trustee of the pension funds, where no payment of fees would be involved.—Faithfully yours,

WRITER OF THE FIRST ARTICLE.

London, June 13th.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As the writer of the second article on the subject of "Group Pension Schemes" which appears in your issue of May 18th, and one who has had many years of experience in establishing such schemes by means of private trusts, I have read with interest and some surprise the last article on the subject, which appeared in your issue of June 8th.

This article, apart from repeating to a large extent the arguments on the subject contained in your issue of March 16th setting out the merits of schemes of the American life office pattern, devotes a good deal of space to:—

(1) A very unconvincing argument as to the flexibility of assurance company schemes;
(2) Unworthy insinuations as to security of private schemes; and
(3) An arrogant statement that persons responsible for private funds are mere "amateurs" in the matter of investment of funds and in administration.
