ployment. Within the limits thus defined, the American national income in "current" dollars increased 150 per cent. between 1913 and 1928 and the "real" incomes in terms of "1913 dollars" by over 50 per cent. in the same period. Between 1921 and 1927 the increase in purchasing power amounted approximately to 44 per cent.; and Dr. King is amply justified in commenting that "It is probable that no other nation at any time in history has ever enjoyed such a marked advance in income in anything like the same space of time. In most of the older sections of the world, indeed, the attainment, even in a century, of such a proportionate increase of income would be regarded as remarkable."

From what industries is this immense income mainly derived, and what have been the fluctuating fortunes of the various industries? The latest year for which complete figures are available is 1925. In that year the largest item was manufacturing, which accounted for 20.59 per cent. of the total income. The unclassified group of trades—which includes road transport and most of what Americans term "servicing" industries—contributed 20.08 per cent., or nearly as large an amount. Mercantile operations—*i.e.*, wholesale and retail dealing and the like—accounted for 14.64 per cent.; agriculture occupied fourth place with 11.09 per cent.; and the transportation group (comprising railroads, pullman services, express services, water transport, street railways, private electric light and power, and telephones and telegraphs) accounted for 8.22 per cent. Of the remaining quarter, mines, quarries and oil wells accounted for 2.65 per cent.; construction and building for 4.22 per cent.; banking for 1.34 per cent.; local and national government for 7.48 per cent.; and miscellaneous—including a large proportion of "imputed income"—for the remainder.

These proportions have not, however, all been maintained throughout the entire period covered by Dr. King's estimates. Thus, agriculture, which declined in relative importance between 1909 and 1914, increased vigorously during the war period, and then declined abruptly between 1919 and 1921, has since barely maintained itself on the 1921 level. Thus in 1928 the share of agriculture was only 9.27 per cent., against 11.09 per cent. in 1925, nearly 18½ per cent. in 1919, and, roughly, 15 or 16 per cent. in the pre-war quinquennium.

While agriculture is the only industry which registers a serious decline, changes have taken place in the other industries as well. The share of merchandising and distribution has risen from, roughly, 12½ per cent. before the war to, roughly, 14½ per cent. at the present time; the share of government has increased from about 5½ per cent. to about 7½ per cent.; manufacturing and the unclassified group—together accounting for over 40 per cent. of the national American income—have maintained their proportions of one-fifth each. Banking shows a small increase; transportation (other than road transport) a small decrease; and the remaining groups are fairly constant.

How do these figures compare with the distribution of the occupied population between various industries? Whilst an exact computation cannot be made because of the inclusion of "imputed income," the following table shows the broad movement for 1913 and 1925:—

OCCUPIED POPULATION AND INCOME—BY INDUSTRIAL GROUPS.

	1913. Proportion of Occupied Population. %	1913. Proportion of National Income. %	1925. Proportion of Occupied Population. %	1925. Proportion of National Income. %
Agriculture	23·79	14·37	19·72	11·09
Manufacture	23·74	20·52	24·28	20·59
Mines, quarries and oil-wells	3·31	3·23	2·73	2·65
Construction	4·85	4·27	4·10	4·22
Banking.....	0·48	1·27	0·63	1·34
Mercantile	11·00	12·56	13·19	14·64
Government.....	5·08	5·55	6·24	7·48
Transport*.....	7·74	8·99	7·56	8·22
Unclassified	20·02	19·95	21·54	20·08
Miscellaneous	...	9·28	...	9·69
	100	100	100	100

* Railways, pullman, express, water-transport, street railways, private electric light and power, telephones and telegraph.

The gainfully occupied population numbered 37,028,000 in 1913, as compared with 43,844,000 in 1927. The most significant disparity between the distribution of the gainfully occupied population and the share contributed to the national income occurs in the case of agriculture. The figures in the foregoing table amply reflect the depressed state of this industry during the post-war years.

Dr. King's estimate of total "realised income" is made up of two parts: first, the share of *entrepreneurs* and other property owners; and, secondly, the share of employees, including wages, salaries, pensions and compensation for injuries, etc.—the last item being a very small one and totalling little more than one per cent. of the whole. "The classification here adopted," to use his own words, "classifies the income and not the recipients"; in other words, wage-earners' and salary-earners' receipts from property of one kind or another are included with the *entrepreneurs'* share and not with the employees' share. Within these limits an important and significant change has taken place during the last twenty years. In 1909 *entrepreneurs* and employees shared the national income almost equally, *entrepreneurs* and property owners taking 49.03 per cent. and employees taking 50.97 per cent. By 1913 the employees' share had increased slightly to 52.69 per cent., with a corresponding decline in the share of *entrepreneurs* and property owners. Since the war, however, the share of employees has substantially increased, and now ranges between 57 and 58 per cent., with a corresponding reduction in the share of *entrepreneurs* and other property owners. This development is primarily due to a large increase in the share of the national income going to salaried workers; for, whereas wage-earners received between 35½ and 37½ per cent. both before and since the war, the share of salaried workers has increased from, roughly, 14½ per cent. in 1909 to nearly 20 per cent. in 1928. This tendency, associated with the growth of the mercantile and servicing industries, also reflects the expansion of the American home market.

The effects of the growth in the American income on the prosperity of various classes depends naturally on the distribution of wealth. Considering, first, certain averages, the following table shows the "realised income," (*a*) *per capita* and (*b*) per person gainfully employed, in "current" dollars for 1913 and 1927 and for 1927 in "1913 dollars" also. It also shows the average annual earnings per salaried employee and per wage-worker, while the average percentage increases have likewise been added:—

	Actual Values in "current" dollars. 1913.	1927.	Increase.	1927, in terms of "1913 dollars."	Increase.
Realised income:	$	$	%	$	%
Per capita (*a*).....	368	748*	*103*	448*	*22*
Per person gainfully occupied	965	1,928*	*100*	1,156*	*20*
Average annual earnings:					
Per salaried employee (*b*)	1,066	2,084*	*96*	1,220*	*14*
Per wage-worker (*b*)	594	1,205*	*103*	705*	*19*

* Preliminary estimate.
(*a*) Total population of continental United States.
(*b*) Based upon the numbers *attached to* industries, and not upon the numbers actually employed.

The table shows that between 1913 and 1927 nominal income practically doubled and real income increased by, roughly, one-fifth, except for salaried employees, where the increase was only one-seventh. The table likewise brings out the fact that, in spite of the large increase in the number of salaried workers, and in their proportion of the gainfully occupied population, their relative position has somewhat worsened. But these average figures do not tell the whole story; indeed, they conceal the most important part of it. Between 1914 and 1926 there was a slight decrease in the proportion of the population having incomes of 5,000 "1913 dollars" or less, and also a slight, though somewhat larger, decrease in the proportion of the national income going to this class. In 1914, persons in this lowest income class comprised 99.333 per cent. of all income recipients, whereas in 1926 they

comprised 98.928. Their share of the national income amounted to 89.782 per cent. in 1914, and to 87.277 per cent. in 1926. Individuals with incomes (all in terms of "1913 dollars") of from 5,000 dollars to 25,000 dollars; from 25,000 dollars to 150,000 dollars; and from 150,000 dollars upwards, all increased in number, in their proportion of all income recipients, and in the proportion of national income which they received. Thus, on the whole, there has been a tendency during the post-war period for the inequality of income distribution to increase.

The existing position is best shown in terms of "current" dollars by the following table:—

DISTRIBUTION OF U.S.A. INCOME, 1926.

(Current dollars).

Incomes.*	Number.	Aggregate Income. $ millions.	Average Income. $	Average Income. £
Below $8,309	44,194,550	73,125	1,655	331
$8,309–$41,543	429,300	6,095	14,198	2,840
$41,543–$249,255	47,250	3,177	67,238	13,448
Over $249,255	2,450	1,388	566,531	113,006
Total over $8,309	479,000	10,660	22,255	4,451
Total	44,673,550	83,785	1,875	375

* Incomes of $8,309, $41,543, and $249,255 in "1926 dollars" are equivalent, in "1913 dollars," to incomes of $5,000, $25,000, and $150,000 respectively.

This table, to which have been added figures showing the sterling equivalent of the dollar figures, shows the extreme opulence of the wealthier classes of Americans. Roughly speaking, there are well over five or six times as many persons in the super-tax class in the United States as in Great Britain, whereas the American population is less than three times as large as the British population. Alongside of this great wealth there exists in America very great poverty also—as is well known to all close students of American conditions, and particularly to readers of Mr and Mrs Lynd's "Middletown," that striking study of Middle Western conditions. Nevertheless the figures show that even if it were practicable to equate all incomes at a common level, the resultant increase accruing to those in the lowest class would be considerably less than the increase that, actually occurred between 1922 and 1926 as a result of the general progress of American industry.

FINANCE OF THE FIVE-YEAR PLAN.

(BY A CORRESPONDENT.)

THE problem of providing the capital required for industry is a fundamental one in the socialised, as in the capitalistic, community. In a country where there are no large individual fortunes it is not sufficient to rely on the accumulation of individual savings; the State must frame machinery of its own whereby the necessary capital is made available by the various wealth-getting institutions which have taken the place of the great capitalists. In Soviet Russia the problem presented itself as a very urgent one at an early stage. The difficulties were aggravated partly on account of the great need of capital for reconstruction purposes after the losses due to war and revolution, and partly because, owing to the Soviet Government's attitude with regard to past debts, it was not possible to borrow substantially from abroad. In consequence, almost from the commencement of Lenin's New Economic Policy, attempts were made to organise the provision of capital. These attempts formed part of the economic plans that were adopted each year by the Government, and in course of time a more or less regular system was developed.

The Five-Year Plan is a further stage which grew out of the former annual plans. In essence it is a plan for providing the capital for the economic reconstruction and development of the country. To this end it seeks to mobilise and draw upon all possible sources of fresh capital—the proceeds of taxation; the profits of the State trusts, syndicates and other bodies operating the industries and trade of the country; the creation of new bank credit; the savings of individuals; and insurance and other investible funds in the hands of the Government. It even takes account of the betterment of equipment, plant and tools which may be effected in the different branches of economic life during the year whether by the peasant, on the one hand, or by the great industrial trust, on the other hand. On the opposite side of the account, the Plan apportions the available capital resources among the different spheres of economic activity of the community according to their needs—industry, electrification, trade, agriculture, house-building, other social services, and the rest. The grand total sum envisaged by the Plan may be taken as 86,000 million roubles (about £9,000 million if converted at par). It seems at first sight an improbably large sum until it is realised how many items it includes, and that it does not represent liquid funds only. Even so, it is clear that a very great effort will have to be made if the capital side of the Plan is to be carried out.

In order to compare the Plan with realities and understand its application in detail, it is best to test the figures for a selected branch of economic life. For this purpose we may take industry and electrification, which together form one of the most interesting and important parts of the whole, and are also most easily compared with data from other sources. The term "industry" covers all the manufacturing industries of the country usually, or to a large extent, conducted in large-scale factories. It excludes, for the present purpose, agriculture, forestry and non-manufacturing economic activities, such as trade and banking, and also house-building and other social services. Electrification also is dealt with separately, presumably on account of its special importance in the Soviet scheme of things. Out of the total capital sum of 86,000 million roubles to be accumulated and applied in the five years under the Plan, 13,500 millions are to be devoted to industry and 3,200 millions to electrification. Together, they are equivalent to an average annual sum of 3,340 millions; but the amounts to be provided increase during the five years, and were to be lowest in the first year, that ending September 30, 1929. The first year's provision was planned to be 2,100 million roubles for industry and 370 millions for electrification.

These sums, considerable as they seem, were based largely on the actual results obtained in the previous year. The Five-Year Plan continued the same machinery for the collection and distribution of capital as had been worked out in the years preceding. It had for some time been established that one of the principal agencies for collecting and distributing the capital resources of the community was the State Treasury or Budget. The Budget, on the receipts side, draws in the proceeds of taxation and of loans; to these both private persons and the industrial, commercial and other organs contribute. But there are also direct transfers of profits from the latter wherever profits have been earned. One of the largest items on the expenditure side of the Budget is the payments made to industry, electrification, agriculture, and other branches of economic life. For the most part these payments are of a capital nature. The share of industry and electrification in this large source of available capital is very large. In 1927-28, the year preceding the commencement of the Five-Year Plan, it was about 900 million roubles, rising to 1,200 millions in the first year of the Plan, and to about 2,000 millions in the year now in progress. The local budgets must be considered in the same way, though they amount to much smaller sums, both in total and in the proportion devoted to economic life. In 1927-28 a sum of about 150 millions was paid out of the local budgets as capital to industry and electrification, and this sum has grown in subsequent years.

Next in order of importance, as a source of industrial capital, is the banking system. The amounts made available by the banks to industry and electrification by way of increased loans and advances has each year been very large. Of these sums a part may be regarded as the increased working capital needed as industry develops;

the total sums provided for under the Plan include a part for working capital. The remainder, representing new long-term loans by the banks, is to a small extent provided out of special funds contributed out of industrial profits and paid over to the banks, and for the rest is credit specially created by the banks.

The third large source of capital is the profits of the industrial enterprises themselves. The net profits of industrial and commercial undertakings are divided up—after a first deduction has been made for taxation—in accordance with a prescribed scale. The four most important shares in this division are that of the State Budget, that of the undertaking itself that has made the profit, that paid over to various central capital funds for the assistance, through the banks, of other concerns, and that set apart for improving the conditions of the workers. The percentages have varied in different years, but the Budget's share has usually been rather less than half, the share of the undertaking itself about a third, and the other two about ten per cent. each.

What profits, it may be asked, have been made by industry in recent years, and how much has been retained in this way by the trusts that have earned them? The writer of this article has made a careful calculation of the net profits earned by State industrial and electrical undertakings from the various sources available—tax returns, Budget figures, balance sheets, etc. The figures are as follows:—

Financial year ended—	Roubles (millions).
September 30, 1923	100
„ 1925	270
„ 1926	400
„ 1927	650–700
„ 1928	700–750
„ 1929	1,058

The last of these figures, that for the year 1928-29, is an official Soviet estimate, which has just recently appeared, and largely confirms the estimates calculated from independent sources. The share which was appropriated out of the net profits for 1927-28, the year prior to the commencement of the Five-Year Plan, was rather over 200 million roubles. It follows that the total received from the three principal sources of capital enumerated above and applied to industry and electrification was in that year not less than 2,250 million roubles. When it is remembered that the amount provided for the first year of the Plan, 2,470 millions, includes the value of current improvements to plant and equipment and other items not financed from the three main sources, it will be seen that the provision for the first year of the Plan was in reality a moderate one, and there is no reason to doubt the Soviet Government's claim that it has more than been fulfilled on the investment side. In fact, the figures suggest that over 2,700 million roubles was provided for capital investments in industry and electrification during the year in question. In much the same way the programme of output was fully realised in the first year. If the net profits figure for 1928-29 above quoted is correct, a very considerable advance in output must have been made on the year preceding. It is more difficult to estimate whether the annual increases in investment and output, anticipated in the Plan for the four later years, will be achieved. On the basis of the actual profits in 1928-29, and the Budget estimates already announced for 1929-30, there seems every probability that the increased sums for capital investments in industry and electrification will be forthcoming in the future.

Enough has been said—although only two sections of economic life have been examined—to show the scale on which the Five-Year Plan is conceived, and its relation, on the side of the provision of capital, to ascertainable data. In this respect, at least, it is not the wildly optimistic phantasy that it has sometimes been represented. The anticipated rate of progress is, of course, still in doubt; but as a programme of economic reconstruction, on a scale vast beyond all precedent, yet still based on realities, the Five-Year Plan merits more serious consideration than it has yet received in this country.

PAN-EUROPA.

WE discussed last week the terms of M. Briand's proposals for European union, and considered them in the light of the present facts of Europe's and Britain's position. The importance of these proposals is so great that we make no apology for returning to the subject and examining it from a broader aspect and against the background of political experience. The main question suggested by M. Briand's Memorandum is this: Is Europe—the Europe of our times—in any sense an entity? And, supposing that it is, is it the sort of entity which is susceptible of organisation on the political plane by some kind of union between the European States?

Evidently a case could be made out for answering these questions in the negative. On the cultural plane, for instance, it might be pointed out that while Western Europe is the mother of a civilisation that has spread beyond the boundaries of the Continent until it has embraced the whole world, Eastern Europe has had no part or lot in creating this civilisation, and is indeed a passive recipient of it, on the same footing as the Islamic World or India or the Far East. Culturally, the gulf between Western and Eastern Europe is comparable with the gulf between Western Europe and Egypt or Persia or China, and is far greater than the spiritual distance between Western Europe and the Americas. On the economic plane, moreover, Europe—a tiny patch of the habitable surface of the earth which lies wholly within a single climatic area—is hardly nearer to being self-sufficing than the European countries taken separately (taking those of the largest calibre, like Great Britain, France, Germany and Italy). It is certainly much less capable of being self-sufficing than some of the single countries of the great outer world (*e.g.*, the United States or China). In the modern world, the scale of operation of all major economic activities is becoming world-wide; and any territorial unit of economic activity, short of the maximum unit embracing all the habitable lands and navigable seas on the surface of the planet, has become a dwarf and an anachronism. It does not much matter whether we try to operate with San Marino or with Italy or with Europe or with the British Empire. All these fractions of the modern economic integer suffer from the same fatal defect of being merely parts instead of the whole. As an economic universe-in-itself, a Pan-Europa would be still-born. It ceased to be capable of independent life from the moment when tropical sources of supply and tropical markets became essential elements in the European economy.

There remains the political plane; and it is significant that Monsieur Briand, who is one of the ablest and most experienced practical statesmen alive in Europe to-day, propounds, in his Memorandum, the thesis that the European problem is primarily a political problem which has to be grappled with, in the first instance, in political terms. Let us try to approach it in these terms ourselves.

When we examine the present political map of the Western World and look for some feature which distinguishes Europe, on this political map, from the rest of the picture, we observe at once that an extraordinarily large proportion of the existing states that are "fully self-governing" (*i.e.*, that are enrolled, or eligible for enrolment, in the League of Nations) are concentrated on European soil. Out of about 65 existing states that come within this category, no fewer than 27 lie in Europe, even taking the term Europe in the narrowest possible sense, to the exclusion of both Turkey and the U.S.S.R. Thus, more than one-third of the "fully-self-governing" states of to-day are crowded together on this small patch of land; and even when we allow for the fact that a considerable portion of the non-European area (*e.g.*, almost the whole of Africa) is taken up by the non-self-governing dependencies of European states, it is evident that the amount of territory now distributed among the non-European states—which are less than two-thirds of the total muster—is still so great that the average territorial magnitude of states in Europe must be markedly lower than the world average. And so, indeed, it proves to be. With the sole exception of

Central America and the Antilles, no region in the contemporary world can compare with Europe in the degree to which it is sub-divided politically.

What does this fact mean? In terms of the past it means that Europe was till recently the focus of political power in the world—the region in which political pressure was greatest, and in which the mechanism of the Balance of Power consequently operated most effectively to keep the average size of states small. The norm was set by Great Britain, which served as the regulator; and for four centuries Great Britain has successfully defeated all attempts to construct an empire in Europe that would outclass Great Britain herself—the attempts made in succession by Philip the Second of Spain and by Louis the Fourteenth of France and by Napoleon and by Imperial Germany. It is only on the periphery, where the political pressure has been either much lighter or even absent altogether, that self-governing states of a vastly larger calibre have been able either to come into existence or to enter the system intact from outside—states of the calibre of the United States and Canada and Brazil, and the Argentine and Australia and India and China and the U.S.S.R. This vast political growth in the non-European fringes of the Western World went on unchecked and almost unnoticed by the European Great Powers—and this at a time when the European Powers in concert could have imposed their fiat upon the rest of the world—because in the early stages these embryo states of supra-European calibre were either too distant or too backward in culture or too little developed economically or too much handicapped economically by under- or over-population to exercise any appreciable political influence upon the European Balance of Power. And so, unnoticed and unhindered, they grew in stature until, in this post-war world, in which they are successfully coming to maturity, they have rather suddenly begun to dwarf the states of Europe and overshadow them—primarily in economic power, and ultimately in the political power which economic power sustains.

And what does this mean in terms of the future? The best way of reading the answer to that riddle is to glance at similar situations in the past, in which we happen to know the end of the story. Turn back the pages of the historical Atlas till you come to the sixteenth-century map, in which the states of Italy lie huddled together and dwarfed and overshadowed by the trans-Alpine states of vastly greater calibre—Spain and Portugal, France and England, Austria and Sweden—in that new world which the culture of the Italian Renaissance had called into being. Turn back further still, till you come to the political map of the third-century B.C., and mark there the states of Greece surrounded, in just the same way, by the vast and menacing shapes of the Roman and Carthaginian powers in the West and of the Macedonian "successor-states" in the former domain of the Persian Empire—all of them new political growths in the great Hellenistic world which had been called into existence by Greek culture to upset the balance of the little Hellenic world of Pericles and Plato.

What was the end of the story in these two earlier instances? In both Hellenistic Greece and Renaissance Italy the vision of a Pan-Helles or a Pan-Italia was cherished by great practical statesmen—an Aratus, an Antigonus, a Machiavelli, a Julius II. In both, the tradition of political disunity and dissension proved too strong. And in both the penalty was political eclipse—a political eclipse of Ancient Greece which inaugurated the decline and fall of Ancient Civilisation and a political eclipse of Renaissance Italy which gravely retarded the modern Western World's advance. Is Monsieur Briand's project for a Pan-Europa to have the same fate, with the same consequences for the general fortunes of the world, as those historic projects of his Italian and Hellenic congeners? Or is Modern Europe, which is still the soul of the Modern World, to have a happier destiny than Mediæval Italy or Ancient Greece? That question is proof in itself that the political problem of European union is one of immense importance in our generation; and we ought to be profoundly grateful that it has now been placed before us in a concrete form by a practical statesman speaking authoritatively for the Government of a Great European Power.

Moreover, when we look into the Briand Memorandum, we find, as we should expect, that its distinguished author hits all the nails on the head. "Begin on the political plane." Obviously right; for are not armament and tariffs the outstanding subjects of Europe's present disunion? "Construct your European political organisation within the framework of the League of Nations." Right again, for in any event Europe is, and will remain, an inseparable part of a greater social entity—that Western society that has become co-extensive with the world. "The objective of the proposed federal organisation of Europe should be union, not unity." Right likewise, for no plan would stand a chance if it ignored that political idol of the Modern West—the sovereign independent national state. "Now is the moment" when we have just finished clearing up the aftermath in Europe of the world war. "Start with' a general pact, however elementary, proclaiming the principle of European moral unity and solemnly consecrating the solidarity established between European states.'" Monsieur Briand is a good political psychologist. He knows that political affirmations create—or, rather, are—political facts.

Notes of the Week.

The Indian Situation.—The week's news from India has been mixed. On the debit side of the account must be set the signs of increasingly violent agitation by the undisguisedly revolutionary elements in the Congress Party, the serious mob disorders in Bombay, Lucknow and Rangoon, and the brutal murder of Mr D. B. Murphy, Assistant Commissioner of Police, at Mardan. The situation in the North-West Frontier Province, where the "Red Shirt" movement is apparently making some headway in the villages, clearly requires firm handling; and the punitive action carried out by Air Force units on Wednesday against the followers of Badshah Gul, the Haji of Turangsai's son, shows that the authorities do not shrink from strong action. On the other hand, outside Gujarat, the countryside is little disturbed; evidence of revulsion on the part of responsible Indian circles from the anarchic results of the Congress campaign is to be found in the assurances of support sent to the Viceroy by such bodies as the central organisation of land-holding classes in the Bombay Presidency and the association of Calcutta Marwari merchants; and Moslem opinion has been rallied strongly in favour of the Government by a declaration from the Nizam of Hyderabad appealing to his co-religionists "to realise that their common welfare lies in orderly progress," and to join with him in contributing to the success of the Round-Table Conference, which is to follow in due course the publication of the Report of the Statutory Commission. That Report has this week been signed, and will be issued simultaneously in India and Great Britain in two parts—the first on June 10th, the second on June 24th. The month of July will clearly be a critical period in India, since extreme agitators may be relied upon to do their utmost at that juncture to inflame opinion by exploiting disappointment of exaggerated expectations. Perhaps the best augury for the future is to be found in the fact that the House of Commons this week, in a debate maintained for the most part on a high level, showed a general disposition to endorse both Mr Wedgwood Benn's recapitulation of the declared aims of British policy in India, as announced by Lord Irwin last November, and his recognition of the duty of Government to maintain at all costs peace and order as an essential part of its functions.

British Policy in Palestine.—At the request of the Permanent Mandate Commission, a statement of British policy in Palestine has been submitted to them by His Majesty's Government in Great Britain a fortnight in advance of their forthcoming session, in which the situation in this mandated territory will come up before the Commission for review. Meanwhile, the statement has been published here as a White Paper (Cmd. 3582 of 1930). The statement is clear-headed and courageous. It disposes of the minor points, focusses attention on the central issue, and looks this issue in the face. The British Government subscribe to the opinion, put on record by the Permanent Mandates Commission in 1924, that the mandate for Palestine has imposed on the Mandatory Power a twofold duty, viz., that of promoting the establishment of a national home for the Jewish people in addition to that of administering the country in conformity with the interests of the population as a whole. They further agree that the result has been to create a conflict of interests between which a balance has to be held. In probing the Palestinian problem to find the crucial point, they lay their finger upon the question of immigration. (It may be noted in passing that the question of immigration has also proved to be the crucial point in the problem of the Sudan.) "The policy which they have adopted, and which they have endeavoured to follow, is based on the principle that immigration shall 'not exceed the economic capacity of the country at the time to absorb new arrivals.'" They submit that "everything turns upon" the absorptive capacity of the country being correctly gauged. And for this reason they rightly attach the utmost importance to the mission of investigation into this matter, on which Sir John Hope Simpson has lately proceeded to Palestine on their behalf. In the meantime they announce that the question of a temporary suspension of immigration is under examination, and that legislation is to be introduced with the object of controlling the disposition of agricultural lands in such a manner as to prevent the dispossession of the indigenous agricultural population. They propose to refrain from making a further and more explicit statement of policy until Sir John Hope Simpson's report has been received. All this is good as far as it goes; but the statement contains certain ominous passages:

> The conditions under which remedial measures can be applied are strictly limited; they are governed by the terms of the mandate and by the dual obligation which it imposes. . . . It must be a primary condition of any constitutional change in Palestine that the Mandatory Government should reserve to itself the power of carrying out the obligations imposed upon it by the mandate. . . . It has been made clear to the Delegation [of Palestinian Arabs which lately came to England] that no measure of self-government could be considered which was not compatible with the requirements of the mandate.

And in paragraph 9 it is virtually admitted that the Jewish colonies in Palestine will have to stand in a permanent posture of self-defence, supported by armed force. This picture cannot fail to rouse deep misgivings. What are the prospects of colonisation that has to be carried on behind a permanent screen of armed force? And what will happen when the Arab majority in the population of Palestine sees itself surrounded on every side by independent Arab states: Syria, Iraq, Najd-Hijaz and Egypt? More and more nakedly the spectre of a Palestine held by armed force emerges.

The Nottingham Election.—The salient features of the Central Nottingham by-election are that, compared with the General Election a year ago, the Conservative poll rose from 14,571 to 14,946, the Labour poll fell from 11,573 to 7,923, and the Liberal poll fell from 8,738 to 4,648. Thus the Conservative majority has been increased from 2,998 to 7,023, and the Conservative vote is now in an absolute majority over that of both the other parties. In interpreting this result it must be remembered that the by-election was fought on the same register as was in force a year ago, and intervening deaths and removals account to a limited extent for the shrinkage of 7,365 in the total poll. Still this by no means accounts for the whole of the shrinkage, and it is clear that there was a certain turnover of votes to the Conservative candidate, and a larger number of abstentions on the part of Liberal and Labour voters. The reason for this is not far to seek. One of Nottingham's staple industries is the lace trade, and the main issue at the by-election was the imminent lapse of the safeguarding duty upon imported lace, and as the campaign proceeded it was clear that the Conservatives were leaving no stone unturned to appeal to the narrow sectional interests of those in receipt of the supposed benefit of a particular duty, which, if it accrues, is gained at the expense of the nation at large. The Labour candidate made little attempt to combat this attack, and the Liberal candidate's able defence against the onslaught proved of little avail. The result is claimed as a triumph for the cause of safeguarding. In reality it merely shows how irresistible is the narrow, selfish appeal of Protection when that appeal is made sectionally with every circumstance favourable to it—especially bad trade and disillusionment over the Government's unemployment policy. For Labour to have won Central Nottingham would have been, in all the circumstances, nothing short of a portent, and the result offers little guide to the trend of the political thought of the country.

Late Hours in the Commons.—The Finance Bill debate, which began in the House of Commons on Tuesday afternoon, was prolonged until 8.15 on Wednesday morning. Most readers of the discussions, which were often irritable and petulant and often trivial, will derive two main impressions: The first that too much of the time of the House of Commons is completely wasted, and, secondly, that M.P.s, like most other mortals, are not at their intellectual best in the early hours of the morning. On the same day a *White Paper was issued containing the Report of a Select Committee on "The Hours of Meeting and Rising of the House." This Committee was concerned with two main questions:—(1) Whether the House could advantageously meet earlier and rise proportionately earlier; (2) whether there was any simple means of avoiding very late sittings. Party leaders and Whips were cross-examined, but the Committee, over which a former Speaker, Lord Ullswater, presided, was not able to produce any very helpful conclusions. They ruled out morning sittings because of the Committee work already done in the morning hours, of the obstruction of the Ministers' departmental work, and of the fact that such an arrangement would practically debar business men from membership. A two o'clock start, with stumps drawn at 10 or 10.15, might be possible, but they found a consensus of expert opinion to the effect that this would defeat its own ends by making all-night sittings more frequent—presumably because members would be readier to support the suspension of a 10 o'clock than of the present 11 o'clock rule. The Committee therefore content themselves with recommending "that Governments should be strongly discouraged as much as possible from suspending the 11 o'clock rule," and that the Friday hours of session should be changed (from the present 12 to 5) to 10 to 8. The most important paragraph in the Report is the statement that "the time is rapidly approaching when an exhaustive review of the whole of parliamentary procedure will have to be made" by a committee with wide terms of reference. We agree; and among the questions to be discussed will clearly be mainly those of devolution and of the checking of human loquacity by time limit or by increased powers of closure for Speaker or Chairman.

The Syrian Constitution.—On Thursday, May 22nd, the French High Commissioner for Mandated Territories in the Levant promulgated the long-delayed Organic Statute of the Republic of Syria. The delay has been due first to the circumstances—amounting to military conquest—in which the French originally asserted their mandatory authority over the territories of the Syrian Republic in 1920; then to the Syrian insurrection of 1925-26; and finally to the political deadlock which has existed since the summer of 1928, when a Syrian Constituent Assembly refused to withdraw certain clauses in the draft constitution which were regarded by the French as being incompatible with the exercise of their mandate. The contentious points were the control of foreign policy and of armed forces and the prerogatives of pardon and amnesty. The Syrian Constituent Assembly insisted that

these powers should be vested in the organs of the Syrian State; the Mandatory Power insisted on retaining them in its own hands. At last the deadlock seems to have been overcome by a formula that writes into the treaty a sufficient instalment of the Syrian desiderata to satisfy the Syrian sense of *amour propre*, subject to an overriding clause which reserves to France the powers necessary for exercising her mandate, unless and until these powers are transferred to the Syrian Republic by agreement between the two parties. British experience in Egypt shows the drawbacks, as well as the advantages, of this method of reserving contentious questions in order to get to work at once in non-contentious fields. Nevertheless, it is a great step forward to have set up a genuine Syrian Government with a very wide sphere of authority in which it will be master in its own house. The constitutions of the other component parts of the French Mandated Territory—the Republic of the Greater Lebanon, the Autonomous Sanjaq of Alexandretta, and the two districts of the 'Alawiyah and the Jabel Druz—are working already. The Syrian Republic now comes into line with the rest; and the next step will be to establish effective co-operation between the five States under the auspices of the mandatory authorities. The most urgent problems of co-operation are economic; and, now that the Syrian desert has been conquered, we may expect to see a growing movement towards economic solidarity between all the Asiatic Arab countries that were formerly provinces of the Ottoman Empire. Thus the progress of Syria affects the position of Great Britain in relation to 'Iraq and Palestine. We have no need to worry about 'Iraq. Owing to a wise policy on both sides she is already well on the way towards admission to membership in the League of Nations. It is in Palestine that our shoe is likely to pinch. And for Palestine the moral of what is happening in Syria is clear: It means that the time at our disposal for educating Palestine up to being a fully-self-governing State is short. For when once all the Arab countries around her—including not only Egypt and 'Iraq and the Najd-Hijaz, but Syria too—have become self-governing, it is inconceivable that Palestine can survive as an exception to the general rule.

Independence for the Philippines? — On Friday, May 23rd, the Committee of the United States Senate on Territories and Insular Affairs reported favourably, by eight votes to four, on a Bill providing for the relinquishment of American sovereignty over the Philippines by stages. The Administration is opposed to the Bill, and that is almost a sufficient reason in itself for expecting the Senate to pass it. It is possible, however, that it may be rejected by the House. Nevertheless, there is one substantial motive for passing it which is likely to have a wide appeal. So long as the Philippines are a territory of the United States they are inside the United States tariff-wall, and in certain lines of agricultural production the American farmer is exposed to Filipino competition—a competition which can make itself felt severely in the case of products that grow best in a tropical climate and require abundance of labour (since Filipino labour is cheap beyond comparison with labour in the continental United States). On this point, the provisions of the Bill are significant. The period of transition from political dependence to independence is fixed at five years; and during this same quinquennium the Philippines are to have fiscal independence thrust upon them too. In fact, at the end of the five years they will find themselves simultaneously admitted to the goodly company of sovereign independent States, and marooned on the wrong side of the American tariff-wall. Thus, at the moment when our British Empire Crusaders are shouting to us that we might as well dissolve our Empire if we cannot get Imperial Free Trade, their brother-protectionists in the United States are proposing to dissolve their Empire if they cannot get rid of Imperial Free Trade by any less drastic remedy. The two schools would do well to study one another's doctrines, for, whichever may be right, it is certain that one of the two must be wrong. It is also interesting to see the Americans embracing the method of " gradualness " in liquidating an Oriental dependency at a moment when, in British India, " Eric or Little by Little " is in such hot water. For learning to stand by oneself " under the strenuous conditions of the modern world," five years seem a fully short period of probation. Of course, there is a vast difference in scale between the Philippines, with their twelve millions of souls, and British India, with more than three hundred millions. Yet, in miniature, the problems of British India reappear in American Indonesia. The Philippines, too, have their babel of tongues, their backward tribes, and even their communal feud—in this case between a slower-witted minority of Muslims and a quick-witted majority of Catholics, who play the part of the Hindus. Moreover, the Philippines—an island community at the very jaws of Japan—will be faced with a far more serious problem of defence than India has to contemplate. If the Bill goes through, it may well affect the equilibrium of the Pacific.

Free Trade and Labour.—The General Council of the Trade Union Congress have rapidly and completely disposed of a suggestion that a report upon Empire economic and trade relations, prepared for the Council by its Economic Committee, pledged the Congress to the support of the Empire Free Trade movements. After passing a resolution condemning the publication of the report, which was described as a private and confidential document, and repudiating the interpretation placed upon it by a section of the Protectionist Press, the Council proceeded on Wednesday to discuss the report itself. It is understood that some difference of opinion arose during the discussion, and ultimately it was decided to refer the report back to the drafting committee. Nevertheless, it is clear that the Empire Crusaders had no justification for their attempt to use this incident as evidence that the Trade Union Congress was swallowing these nostrums. Meanwhile, the Free Trade Convention, organised jointly by members of the Liberal and Labour Parties, was held on Wednesday and Thursday of this week. The case for Free Trade, as opposed to Protection, under its various aliases of Safeguarding and Empire Free Trade was ably stated in general terms by Mr Snowden, Lord Arnold, Sir Herbert Samuel, Sir George Paish, Mr Henry Bell, Mr George Hicks, and other speakers. It is too early to judge of the eventual outcome of the Convention, especially as Mrs Snowden stated in her inaugural address that a subsequent Convention would be held at a later date. There is no doubt, however, that this week's meeting has given a good send-off to the Free Trade campaign. Doubtless those responsible for its inauguration will now consider the need of marshalling the facts and figures needed to refute the Empire Crusaders' extravagant claims, and their appeal to sectional rather than to national interests. While it is essential to re-state the general Free Trade case to a generation that has grown up since the Tariff Reform campaign of nearly thirty years ago, it is still more necessary to provide its exponents with ammunition of the kind used so effectively by Mr Asquith in his succession of hammer-strokes against Mr Joseph Chamberlain in days which now seem so long ago. This is the real task that lies before the Convention, which by itself can only inaugurate the campaign.

Shipowners and Trade Barriers.—For his Presidential address to the twenty-fifth annual meeting of the Baltic Conference, held this week at Copenhagen, Mr W. A. Souter found an only too painfully obvious topic in the present acute depression of the cargo shipping trades and of " tramp " freights. With 4½ million deadweight tons by shipowners of long experience as worse than at any time since 1882-83. The immediate causes were the world-wide reaction in trade which followed the financial crises of last autumn and the fact that international shipments of wheat had been reduced abnormally as the result partly of the trade reaction itself and partly of the high yield of 1929 crops in the chief importing countries. At the same time, wider and more permanent influences were at work. Although the increase of tonnage in 1914-29 had been much less than that recorded in the fifteen years before

the war, cargo-carrying capacity exceeded the world's requirements largely because the war had resulted in an increased sense of nationalism throughout the world, which unfortunately had taken the false direction of each country attempting to make itself self-contained. " Agricultural countries now wish to produce their own manufactures, and, on the other hand, many great industrial countries, particularly in view of the fact that they have to make huge external debt payments, are doing their utmost to restrict their imports of food. Both agricultural and industrial countries are producing articles at greater cost to themselves than they could buy at elsewhere, with consequent loss, not only to their own communities, but to the whole world. To-day we see the spectacle of a huge over-production . . . on the one side—it would almost seem as if nature's bountiful increase is going to waste—and, on the other, amongst the industrial nations, millions of unemployed. It would be idle to pretend that the peoples of the world are all adequately fed, clothed and housed. There is a need for these excess quantities of goods. Trade, however, can only be carried on by the exchange of goods, and it would seem that the processes of exchange have to some extent broken down." This verdict by a shipowner on the reactions caused by nationalistic tariff policies on the world's flow of commerce may be commended particularly to protectionists in this country, whose shipping forms such a vital element of the whole economic structure.

The Reparations Loan.—Negotiations between the Treasury experts and bankers of the various countries directly interested in the reparations loan were continued in Paris during the past week, but it is not clear how much real progress has been made. One question that is believed to have come to the front during the past few days is that of the legal guarantee behind the loan. Inasmuch as Germany has to furnish to the Bank for International Settlements a general bond in respect of her total reparations liability, she has been unwilling to provide another bond to cover the reparations loan on the ground that this would mean a duplication of her liabilities. Some form of bond, of course, has to be behind the loan before it can be issued at all, and the solution of this problem has apparently been one of the chief causes of delay. Another cause seems to be whether, in the case of a partial default by Germany, in respect of the unconditional annuities, holders of the reparations loan will enjoy any priority over other claimants. Our Paris correspondent, writing on Wednesday last, calls attention to the question of German guarantees, and adds that no news is yet forthcoming as to the issue price of the loan or the quota to be allotted to each market. Apparently as recently as that date Paris was hoping that the issue could be made next week, though doubts had then arisen as to whether the issue might not have to be postponed until after Whitsun. There seems, according to him, to be no doubt that the French quota will be over-subscribed; and he states that it is understood that the Banque de France and the Caisse d'Amortissement are between them prepared to take up at least £4,800,000 of the presumed total of £16,000,000, and that the Paris banks will absorb the balance, if necessary. The fact that the French exchange has not moved much in favour of sterling since the closing of the B.I.S. share lists and the return of their money to unsuccessful applicants suggests that some of this money may have been retained in preparation for the reparations loan, though naturally its owners will not reach any decision until the terms of issue are known. The arrangement of the loan has proved a far more intricate matter than originally seemed likely, but in view of the general uncertainty caused by the delay in the appearance of the loan, it is to be hoped that all difficulties will be solved before long.

British Production.—The volume of production of British industry in the first quarter of 1930, as estimated by the Board of Trade, was 2.6 per cent. below that of the fourth quarter of 1929, but 0.4 per cent. above that of the corresponding quarter a year ago. The following figures (those of the London and Cambridge Economic Service have been added for comparison) confirm the impression conveyed by the *Economist* indices of business activity, that up to the end of March the full effects of the trade recession had not been reflected in the rate of industrial output:—

	1924 = 100. March Quarter.	June Quarter.	September Quarter.	December Quarter.
Board of Trade:				
1929	110·4	111·9	110·6	113·9
1930	110·9	...	...	...
London and Cambridge:				
1929	108·3	111·0	108·2	114·8
1930	110·1	...	...	...

It will be seen from the table below that, as compared with the last quarter, the large decline in the non-ferrous metals, textile and food groups was partly offset by an increase in the mining, engineering and shipbuilding and leather groups:—

Group.	March Quarter, 1929.	June Quarter, 1929.	Sept. Quarter, 1929.	Dec. Quarter, 1929.	March Quarter, 1930.
1. Mines and quarries	98·9	92·6	94·4	100·3	102·0
2. Iron and steel and manufactures thereof	112·4	117·8	113·7	112·2	112·8
3. Non-ferrous metals	115·7	128·7	114·6	123·0	105·7
4. Engineering and shipbuilding	120·0	124·7	119·3	120·0	125·7
5. Textiles	102·0	99·8	91·4	100·7	92·4
6. Chemical and allied trades	108·3	112·9	118·5	119·8	107·5
7. Leather and boots and shoes.....	100·3	100·7	95·2	97·9	108·5
8. Food, drink, and tobacco	97·5	109·0	111·8	105·7	96·9
Total of manufacturing industries, 2–8	113·4	116·8	114·7	117·4	113·2
Total of all groups, 1–8.....	110·5	111·9	110·6	113·9	110·9

The output of coal was about 4 per cent. greater than last quarter, and nearly 3 per cent. greater than in the corresponding period last year. Shipbuilding and electrical engineering are mainly responsible for the improvement in Group 4. The drop of over 10 per cent. in the chemical group over the last quarter is noteworthy, and the trend of textiles is definitely downwards, especially in the cotton and wool industries. The advance in the mining, engineering and shipbuilding industries showed signs of weakening in March, and there is little doubt that the index for the second quarter of the year will reflect the general depression to a much more marked extent.

World's Cotton Yarn Production.—The Cotton Trade Statistical Bureau has published an interesting survey of the cotton industry of the United Kingdom and the world in 1929. The following table of the estimated world production of yarn shows the extent to which the British cotton industry has lost ground, both absolutely and relatively, during the past five years:—

ESTIMATED PRODUCTION OF YARN.

(Expressed as percentages of 1924.)

	Europe.				
Period.	U.K.	(excl. U.K.).	Asia.	America.	World.
1924	100	100	100	100	100
1925	112	123	107	118	116
1926	96	132	118	123	120
1927	106	139	117	132	127
1928	96	142	112	120	121
1929	94	141	122	125	125

Whereas total production abroad has increased by about 30 per cent. since 1924, British production actually declined by 6 per cent. The advance in foreign production was due to the rapid expansion of the cotton industry in Central Europe—particularly in Germany—in Japan, and in the United States of America. Compared with 1928, foreign production increased last year by 5 per cent. It will be seen, however, that this increase was by no means general, but was confined to Asia and America. Continental production suffered a slight setback towards the end of 1928, which was felt throughout 1929. It is significant that the world export trade did not expand during 1929, and that the increased output was mainly absorbed by the home markets. The outlook for the current year is not very bright, and it is doubtful whether world production will be maintained at last year's level. The industry in Europe is still suffering from the depression which has deepened since the end of last year, and American output in the first quarter was about 20 per cent. lower than that of the corresponding period last year.

Lancashire and Arbitration.—No time has been lost, writes our Manchester correspondent, in publishing the result of the arbitration proceedings relating to the labour dispute at the Broadstone Mills, Reddish. The trouble began owing to a spinner being discharged for neglect of work. This man was found sitting behind one of the machines eating food and reading a newspaper a little before 9 o'clock in the morning, and the management dismissed him. The matter was taken up by the trade union, who said that it had always been the custom for the men to have their meals behind the machines, and with the object of securing his reinstatement the workpeople at the mills (about 700) came out on strike on April 22nd. The company was financially supported by the Master Spinners' Federation. The Ministry of Labour ultimately took action, and representatives of the Master Spinners' Federation and the Operative Spinners' Amalgamation met on May 9th and adjourned until May 13th, when it was agreed that the dispute should be settled by arbitration. The workpeople returned to work on May 15th, the mill having been stopped for over three weeks. Sir Felix Pole was appointed arbitrator, and he heard the evidence of the two sides on May 21st. He has now given his award, his finding being that in the circumstances prevailing the discharge of the spinner was justified on the grounds of indiscipline and neglect of work. The employers, therefore, have won the case. Recently, in Lancashire cotton trade circles, there has been a greater tendency to favour arbitration as a means of settling disputes at individual mills, and an attempt is now being made to draw up a scheme whereby differences can be settled without strikes or lockouts.

The Wool Textile Dispute.—The stoppage of work, incomplete but sufficiently widespread to be a real disaster, in the wool textile industry has now lasted for seven weeks. The sums already lost by the operatives in wages and by the employers in missed seasonal orders are very serious for Yorkshire, and for the whole country, which has looked impatiently for signs of the termination of a dispute which has been kept in being by an obstinate refusal on the workers' part to acknowledge defeat. The necessity for lower labour costs in the industry was never open to doubt; Lord Macmillan's recommended figure, 9.25 per cent., represented a reduction which can scarcely be described as exceeding the requirements of the case; and the present costly and embittered struggle has really been waged in the hope that the trade unions concerned, by securing a compromise fractionally more favourable than the arbitrator's award, may be able to "save face" and claim credit for a "draw," in circumstances in which there is no prospect of victory. The employers' conduct of the early negotiations was signally lacking in tact, as we pointed out at the time; and to this extent they share some part of the blame for the present *impasse*. But they, at any rate, have been on solid ground in standing by the Court's award. It is satisfactory, therefore, that several of the unions should now at last have decided to take another ballot of their members on the question whether that award should not now be accepted. If additional arguments for its acceptance need be sought, they are to be found in the appreciable decline in the cost of living which has taken place since Lord Macmillan held his inquiry.

Peruvian Exchange Position.—Within recent years, writes a correspondent, it had been the declared intention of the Peruvian Government to provide for definitive stabilisation of the Peruvian pound on a basis of equality with four U.S. dollars, which would have given an equivalent value to the £ sterling of approximately 21½ per cent. premium over the Peruvian pound. In fact, the exchange on London was steadily maintained over a long period, namely, from May, 1928, to November, 1929, at between 19 and 21½ per cent. premium. Owing, however, to the depression in the Peruvian commercial markets, and especially in those for the chief export products, cotton and sugar, in addition to other factors, a difficult situation arose towards the later part of November, 1929, and sharp depreciation threatened. In consequence of these circumstances, during the closing weeks of 1929 the exchange position became abnormal and quotations nominal. Thereupon, the Government contemplated negotiations for a foreign loan and the deposit abroad of the surplus gold reserve held against the note circulation by the Banco de Reserva del Peru, the purpose being to secure interest on the gold and to bring about legal currency stabilisation. Ultimately, on February 10th last, a new Monetary Law was promulgated in Peru establishing the gold sol as the monetary unit of the Republic in place of the former Peruvian pound. The Banco de Reserva del Peru will convert into drafts on New York or London circular cheques and notes intended for international use. The notes issued by the Banco de Reserva will henceforth be representative of gold soles, the present notes being re-stamped until the new minting is effected. The law also stipulates that 10 gold soles are exchangeable for one Peruvian pound of the new currency. The coin of 10 soles will weigh 6.6872 grammes, nine-tenths fine, and will, therefore, contain 6.0185 grammes of fine gold. The gold parity of the new sol is 40 United States cents, or 12.166 soles to the £ sterling, and the exchange on London is now quoted on the latter basis. The secondary currency is designated centavos, of which 100 are equivalent to one gold sol. The quotations for exchange on London, New York, Holland, Japan, Argentina, Chile, Bolivia, and Hong Kong are now given in soles per unit of the foreign currency, and those on Paris, Rome, Madrid, Switzerland, Brussels, and Berlin per 100 units. A decision was taken by the local Bankers' Association in Lima that, with effect from February 28th last, bank balance sheets will be published in gold soles, while, with effect from April 1st last, all accounting systems of the banks are being carried out in the new currency. It is of interest to note that, on the basis of the new parity of the gold sol, the old Peruvian pound would have stood at 21.65 per cent. premium on the £ sterling. At the current rate, *i.e.*, 12.81¼ gold soles to the pound sterling, the old Peruvian pound would have been at approximately 22¾ per cent. premium. Towards the end of March last, and under the operation of the Monetary Law, a decision was taken for the Reserve Bank to export the gold represented by the profit arising from the revaluation of the currency, amounting to about £1,100,000, and in fact the necessary shipments have taken place. It is understood that these gold deposits have not yet been drawn upon. In current circumstances, however, it appears not improbable that such drawings will have to be made in order to maintain exchange, especially having regard to the outlook for the Peruvian economic situation as a whole. Credit conditions are still somewhat difficult, while the markets for cotton, sugar, wool, and copper continue to be dull in tone. This, however, must be attributed largely to the generally difficult market conditions for staple commodities abroad due to over-production. A satisfactory feature is that prospects for the coming Peruvian cotton crop are reported to be good. Undoubtedly the introduction of the new currency unit provides a basis for stability, and, given freedom from political disturbances and a wise use of the gold deposits abroad, an improvement in the general situation may reasonably be anticipated.

Hambros Bank and Foreign Loans.—The friendly attitude of the London issuing houses to the Bankers' Industrial Development Company was expressed by Sir Eric Hambro at the general meeting of Hambros Bank on Thursday of this week. The connection between British industry and London issuing houses, he said, had never hitherto been close. British industry had been built up largely with its own capital and with bankers' short loans; but Sir Eric Hambro believes that to-day the issuing houses can help British industry, and for that reason he welcomed the advent of the Bankers' Industrial Development Company. Sir Eric went on to protest against the fallacy of the argument that issuing houses are guilty of an unpatriotic action when they issue a foreign loan, *i.e.*, that they are supplying the foreigner with capital which would otherwise be available for British industry. He contended that it is just as important to finance the buyer of British goods as it is to finance the seller, and that foreign loans have been the necessary concomitant of the development of British industry. It is not, however, true to say that foreign loans must inevitably react favourably on our trade balance. Foreign lending arises out of the fact that our international balance of trade, visible and invisible, is favourable (although smaller to-day than it was before the war), and that we must lend abroad to the extent that the goods and services we buy from foreigners fall short in value of the goods and services which we supply to them. Our actual loans abroad can be in excess of this favourable balance of trade by the amount which foreigners are investing in England or are repaying to this country in respect of former debts. If they are even more than this we must export gold. Issuing houses, Sir Eric Hambro contends, know well enough when the margin of safety is likely to be reached, and for that reason he regards as unnecessary any official restriction of loans to foreign countries. On practical considerations we would agree with him, for even if a foreign loan is prohibited, nothing can stop the private export of capital for investment on some foreign Bourse if a particular loan appeals to British investors. In fact, the practical effect of an embargo on foreign loans is to deprive London issuing houses of the issuing profits without stopping the export of British capital or gold. No doubt, however, something could be done by issuing houses themselves in the way of giving priority to and facilitating loans which have incidental advantages to this country, and, in particular, are likely to be spent directly on British goods. Although it may not be practicable or desirable to control or direct the stream of British investment without involving a degree of interference that might have extremely harmful reactions, it is very desirable that both issuing houses and investors should be alive to the reactions of what they are doing on the whole economy of the country, and should recognise that, if they can contribute to the general prosperity, they are contributing to their own.

Canada's Political Outlook.—The die has been cast for a general election, writes our Ottawa correspondent. On May 6th Premier Mackenzie King announced that the Government had decided that the sooner the verdict of the electorate was taken the better. It was desirable to end an uncertainty which was bad for business, and, moreover, it was equally desirable, in view of the great importance of the forthcoming Imperial Conference in September, that the Ministers who would be Canada's delegates should have a clear mandate. Mr King's announcement followed a vigorous arraignment of the Budget by the Conservative leader, who reviewed at length the financial operations of the King Government during the last few years, and contended that it had been guilty of gross mismanagement. Turning to the tariff aspects of the Budget, he argued that, while the increases in the British preference looked fine for the stimulation of inter-Imperial trade, many of them were merely an empty gesture because they affected commodities which either Canada did not import at all or Britain had no chance of selling successfully in Canada. Furthermore, he contended that even these preferences, illusory as many of them were, should not have been given away for nothing, but should have been the subject of bargaining for reciprocal concessions from the British. He declared that, while he believed in the British Empire and the development of inter-Imperial trade, his primary concern was for Canada, and he would not sacrifice her interests even for the Empire. His general line was that the Liberal Party, having revealed itself as completely devoid of principle in tariff matters, could not safely be entrusted with the administration of the country's fiscal policy. The election will, therefore, be fought mainly on the Budget, with the Liberals parading it as a measure of wonderful economic statesmanship and the Conservatives branding it as a fraud which was concocted to save the Liberal Party from annihilation. Great interest attaches to the attitude of the Independent Progressive group, which still retains a good deal of strength in the prairie country. They are far from enthusiastic about the Budget, and one of them, Mr Irvine, who intervened in debate, advised the Premier to get his election over as soon as possible because the more the Budget was examined the less satisfactory would its contents appear to the people of the prairies. The United Farmers of Saskatchewan have already passed a resolution describing it as disappointing on the ground that it leans as much to the side of higher protectionism as to freer trade, and does not give any real help to the farmer. Moreover, the *Manitoba Free Press*, the leading Liberal paper in western Canada, is unexpectedly cold in its editorial comment; it thinks the Budget is an ingenious and successful performance politically, but is doubtful whether the tariff changes will be efficacious in diverting trade to Britain. It even suggests that one of the foremost fruits of the Budget may be increased protectionism for the iron and steel interests, which will in due course raise the cost of farm implements and other instruments of production needed in the primary industries. It holds that this is the very thing that Canada cannot afford to do at present in view of the competition with which she is faced in world markets.

Insurance in Germany.—Our Berlin correspondent writes:—The yearly report of the Allianz und Stuttgarter Verein, Germany's largest insurance concern, was awaited with great interest this year, since the year 1929 brought unusual difficulties for the German insurance companies and, as a result of the collapse of the Frankfurter Allgemeine concern, appeared to cause a loss of confidence. As will be recalled, immediately after the collapse of the Frankfurter became known the Allianz announced its readiness to take over all the regular insurance policies of that company, and since the directors of the Frankfurter accepted the offer, all the policyholders of the Frankfurter were saved from any loss and even from any delay in paying out insurance for losses incurred. In contrast to numerous small insurance companies, the Allianz's own business for 1929 shows an upward development. Premiums on property insurance amounted to 187.5 million marks, against 178 millions in the preceding year, and, despite unusually heavy payments for damage by frost and fire, there remained, after writing off large sums, net profits of 4,350,000 marks, as against 4,160,000 in 1928. The dividend remains unchanged at 12 per cent., and the large subsidiary concern, the "Allianz Leben," which handles the life insurance business, was even able to raise its dividend from 15 to 16 per cent. This concern now has 2,800 million marks of insurance in operation. The effect of the taking over of the Frankfurter's business is shown in the Allianz's yearly balance sheet. It paid roundly 10 million marks for the Frankfurter's business, and, after writing off 1 million, enters at 9 million marks the shares of the newly organised "Neue Frankfurter Versicherungsgesellschaft." The participations of the Allianz Leben have in like manner increased by 6 million marks. Developments since the taking over of the Frankfurter have been satisfactory in all branches of business. It is again demonstrated that the collapse of the Frankfurter was caused by business transactions which had nothing to do with insurance.

Reliance Marine Insurance Company.—This company is a subsidiary of the Guardian and its operations are incorporated in the accounts of the parent company. The Reliance Marine transacts the larger part of the marine insurance in the group, and had a premium income in this account last year of £139,565. The 1928 marine account was closed, leaving a profit of £9,767, equal to 7.2 per cent. of the premiums to be transferred to profit and loss account. First-year claims in the 1929 account have been relatively heavy, as have also been expenses, with the result that there remains at the end of the first year's operations a sum equal to 58.5 per cent. of the premiums, compared with 64.4 per cent. of the 1928 premiums at the same stage a year previously. In each of the two preceding years, 1927 and 1928, the fire account was closed with a substantial profit, amounting to 16.8 per cent. of the premiums in 1927 and 11.2 per cent. in 19

Last year, however, as a result of a heavy increase in the claims ratio from 52.4 per cent. to 74.3 per cent. there was a loss of £5,170, equal to 7.5 per cent. of the premium income of £69,228. After making allowance for various items appearing in profit and loss account, there was a net trading loss in 1929 of £5,845, compared with a profit in 1928 of £10,361. The dividend has again been maintained at 25 per cent. and is covered by interest earnings with a small margin.

Trade Outlook — Reparations Loan — Foreign Trade — Prices — Employment — Money.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 20.

UNCERTAINTY over the trade outlook is as pronounced as ever, and in consequence the principal financial markets have lapsed into a state of apathy which increasingly cheap money has failed to affect. Hopes of an early passage of the Tariff Bill have been roused by the defeat in the Senate this week of the farm export debenture scheme and the withdrawal of opposition to the "flexible" provision of the measure, which gives the President power to change rates on recommendation of a special commission. The administration had insisted on this latter clause, and it was opposed to the debenture plan. These were the principal obstacles in the way of White House signature. Some of Mr Hoover's friends assert that he will veto the Bill anyhow, on the ground that, in making an all-round upward revision of duties, Congress has gone much beyond the purposes of the session. Henry Ford, for instance, is quoted in the Press as predicting a veto. Most influential men in Wall Street, while personally regarding the new Bill as highly objectionable, expect President Hoover to sign it. A veto, they feel, would bring on a break with Republican Party leaders which Mr Hoover is particularly anxious to avoid. If the Bill is enacted the new law is bound to become unpopular. It will bring no real relief to agriculturists, and the number of manufacturers who may appear to be aided will be exceeded by those who will find—and, in fact, are already finding—that tariff reprisals elsewhere are hurting their trade.

Interest in the forthcoming Reparations issue is fairly keen. It is expected that it will be offered the first week in June, and this country's allotment will probably be sufficient to bring in $80,000,000 actual payment. Bankers predict that the issue will be successful. If it is, it is certain that it will be followed by a strong bond market and a considerable increase in new capital issues. Much business is being held up on account of the German loan, while the market for old bonds is quiet, awaiting a clue from the outcome of Reparations. J. P. Morgan and Company have made allotment of the 16,000 shares of stock in the Bank for International Settlements which came to this country. The shares were distributed among about 100 banks, the amounts which each received varying with the size and importance of the bank. The stock was eagerly applied for. No public offering will, of course, be made.

Optimistic statements on business continue to issue from President Hoover's Cabinet. The Secretary of Commerce, Mr Lamont, said this week that he expected a definite upturn in the next two or three months. Few people in the financial community here see much sign of improvement. Railroad traffic is still lagging, and the steel industry has dropped to not much above 70 per cent. of capacity, against about 85 per cent. in 1928 and 95 per cent. a year ago. Prices for steel are the lowest since 1922. The motor trade also is faring poorly, apart from Ford and General Motors. Makers of medium to high-priced cars are probably selling not more than half as many as last year. However, the second-hand situation is improving, and actual sales of cars to new buyers are not much, if any, under normal. Production figures for April were 442,630, compared with 401,382 in March and 621,910 in April of last year. In the first four months' production of 1,466,590 units was nearly 30 per cent. under 1929, but was greater than for the corresponding period of any preceding year.

Foreign trade figures for April were poor, as foreshadowed by the cotton consumption and export report. While more cotton was used by spinners in April than in March, there was a sharp drop below the level of a year ago, and exports were the lowest for the month in recent years. All merchandise exports fell to $334,000,000, compared with $425,000,000 last year and $370,000,000 in March. Imports were $308,000,000, against $410,000,000 last year and $300,000,000 in the previous month. April shipments were the smallest for that month since 1923, and the lowest for any month since June, 1925.

The fall in wholesale prices is showing some signs of halting, but retail prices, which so far have fallen very little, are beginning to decline. The Bureau of Labour Statistics index of wholesale prices for April stands at 90.7; a drop of only one-tenth of 1 per cent. from March, but about 6⅓ per cent. below that of a year ago. Farm products were on the whole higher, while metals weakened. Raw materials were higher, against declines in semi-manufactured articles and finished products. Of the 550 commodities measured, 103 were higher, 171 were lower and the remainder were unchanged. Indices for some of the principal groups were as follows:—

	April, 1929.	March, 1930.	April, 1930.
Farm products	104·9	94·7	95·8
Foods	97·7	93·9	94·6
Hides and leather products	107·9	103·2	102·7
Textile products	95·5	86·5	85·5
Fuel and lighting materials	80·6	77·4	77·9
Metals and metal products	106·4	100·6	98·8

Employment during April was little changed from March. The Department of Labour notes more work in six industrial groups out of thirteen surveyed, exclusive of construction. As a whole the various groups showed a loss of two-tenths per cent., and pay-rolls were seven-tenths per cent. smaller. There was, however, a marked increase in the building trades, particularly in Federal, State and municipal construction work, which is being forced in order to relieve unemployment.

Interest rates continue to sag with the rising surplus of credit seeking employment. Open market rates have been cut another one-eighth per cent., bringing the 90-day asking rate for bankers' bills to 2⅜ per cent. Federal Reserve Bank buying rates have been adjusted to changes in the bill market. Time money and commercial paper rates also have fallen. Sixty-day money is offered at 3¼ per cent., with little demand, and commercial paper is 3½ per cent. for best names. Call rate on the Stock Exchange is pegged at 3 per cent., but banks are finding it impossible to place all their surplus at 2½ per cent. in the outside market. While the open market leaves the 3 per cent. Federal Reserve Bank discount rate rather useless, no early change is expected. Member bank borrowings in this district are only 30 millions, against 254 millions a year ago, and the reserve ratio of the local bank is 86.8 per cent. For the system discounts are 210 millions, and total credit outstanding, at 920 millions, is the lowest in five years. Obviously there is no lack of credit, and rates are low enough to give all the stimulation which can come from them. Slack trade is the principal cause of easier money here, and until business improves decisively, or a new boom in the stock market takes place, it will continue.

FRANCE.

Politics — Revenue — Tariff Changes — Industry — Bourse.

(FROM OUR CORRESPONDENT.)

PARIS, May 28.

THE Chambers are to reassemble on Tuesday for a brief session that will last until the middle of July, when the long summer recess will begin. Exactly what developments may be expected it is difficult to forecast. There are renewed vague reports that M. Tardieu, as soon as he has secured the passage of his plans for strengthening the national economic and social equipment—which is the only unaccomplished portion of the programme laid down by the Government when it took office—will formally present the collective resignation of his Cabinet to the President of the Republic. This is generally regarded as both unlikely and uncalled for. It must not be overlooked, however, that M. Tardieu, as the offers he made to M. Chautemps during the last Ministerial crisis showed, is anxious to have the support of the Radical Socialist Party, and to extend his majority further to the Left, thus following the policy adopted by M. Poincaré, until the historic snatch vote at the tail end of the Angers Radical Congress rendered its continuance impossible.

At the time of the recent crisis the Radical section flatly refused to take office under M. Tardieu, who thereupon demonstrated that he could dispense with them. Since then many things have happened. The Socialists, in spite of their apparent working arrangement with M. Herriot and his colleagues, have won several by-election victories at the cost of the Radical Socialists; and, when reproached with these tactics, have crudely given their victims to understand that they have no need of their friendship. Last Sunday, in speeches made in the provinces, two of the Radical leaders showed more or less clearly that the party's recent experiences have convinced them of the hopelessness of being able to bring about any real alliance with the Socialists, and that they are likely in future to be much less hostile to M. Tardieu than in the past. All this is the subject of much newspaper comment, and there are indications that M. Tardieu's desire for a real Ministry of Republican Concentration is now appreciably nearer realisation than it was a few weeks ago.

The revenue returns for April indicate a total yield from all "normal and permanent sources" of 3,493,800,000 francs, as against 3,962,000,000 francs in April, 1929, and 3,549,000,000 francs in 1928. The falling off, as compared with the receipts in April, 1929, however, as the Finance Ministry points out, is much more apparent than real. Owing to the extension of the old financial year, for instance, demands notes for direct taxation have not yet been served, whereas the revenue for April last year included an appreciable sum from this source. There are also several other reasons which render impossible all real comparison between the past month's revenue and that of April, 1929. One of the most important of these is the fact that since April last year a large proportion of the recent reductions of taxation (amounting to about £44,000,000) have come into operation. In view of the large mass of tax reductions, either already accorded or contemplated, the Finance Minister budgeted for a total revenue for April (exclusive of direct taxes and certain similar imposts) of 3,202,626,000 francs, whereas the actual yield was 3,659,710,000 francs, or a surplus of 457,000,000 francs for the month. So far, notwithstanding heavy reductions of taxation, and the latent economic crisis which is believed in many quarters to exist, the national revenue shows no serious falling off. The total yield from the various forms of turnover tax, although 22,000,000 francs lower than in April, 1929, was actually 847,000,000 francs, or over 44,500,000 francs above Budget estimate. Customs showed a falling off of 123½ millions, as against April, 1929, but 80,000,000 francs of this was due to reimbursements arising in connection with wheat exports, under laws passed since the Budget was drafted.

A decree of May 20th brought into operation what is known as "the padlock law" in regard to cereal imports, which increased the duties on foreign wheat from 50 francs to 80 francs per quintal. The Customs duty on crushed grain for bread-making purposes, containing more than 10 per cent. of flour, is raised to 128 francs per quintal, and that on flour to 128 francs, 160 francs and 185 francs, according to quality. The price of bread in Paris (where, as in all other parts of France, the selling price of this commodity is fixed every fortnight by prefectorial degree) remains at the equivalent of between 6½d. and 6¾d. per four-pound loaf, as compared with 8d. in London.

Iron and steel production figures for April show a sharp falling off under both headings, due partly to the general slowing down of export trade throughout Europe and the efforts of the European Steel Cartel to keep up prices by limiting output. Pig-iron production during the month was 859,000 tons, as against 899,000 tons in March and monthly averages of 871,000 tons in 1929 and 841,000 tons in 1928. The output of crude steel was 791,000 tons, against 849,000 tons in March and monthly averages of 805,000 tons in 1929 and 783,000 tons in 1928. The fear is expressed here that the American Steel Trust, in view of reduced consumption in the United States, may start keen competition in the European markets through its subsidiary at the Hague. Reports that the British steelmasters may possibly enter the European Cartel in the near future are again current here. It is considered in Paris that the British concerns have been delaying a decision on this point for some time, in the hope that improvement in their own market would enable them to enter the Cartel on better terms than have latterly been likely to be granted. The opinion is expressed that the keen competition now offered by French and Belgian steels in the export market may induce the British firms to accept an agreement which, although it might involve concessions on their part, would yet improve their situation in their home market.

The situation of the Bourse may be gauged by the fact that, according to the revenue returns, the yield from the tax on Bourse operations in April was only 27,161,000 francs, or 16,732,000 francs less than in April, 1929, which was in its turn substantially below the yield in April, 1928. The Budget estimate of the yield from this tax last month was 60,000,000 francs, whereas actual recoveries were 32,839,000 francs below that figure, or less than half. All kinds of reasons are being put forward to explain why the ordinary investing public has for many months past left the Bourse severely alone, but none commend themselves as adequate. The recent reductions of taxation appear quite unlikely to restore prosperity to the Bourse, as they still leave the burden on securities and dealings in them much heavier than in London and other centres, and thus render largely nugatory the present efforts to develop Paris into a great international market. Similarly, the new scale of Coulisse brokers' commission rates, which is to come into operation on June 2nd, and which provides for a reduction in rate from 4 francs to 3.50 francs per cent. per unit (in the case of scrip ranging from 650 francs to 1,000 francs), is regarded in many quarters as still too

onerous, except for large professional operators. The secret of the present trouble appears to lie in the fact that the Paris market, unlike many others, is essentially more an investment market than a speculative one, and that any efforts to transform it into a miniature copy of Wall Street is foredoomed to failure.

GERMANY.

Threatened Deficit — Unemployment Insurance — Business Men in Politics — Business Forecast — Prices — Insurance Results.

(FROM OUR CORRESPONDENT.)

BERLIN, May 27.

THE steady deterioration of the economic situation in Germany confronts the financial policy of the Reich with the task of finding new sources of income. Despite the great increases of taxation in December and March a deficit is threatened if the programme at present before the Reichstag be followed in the fiscal year 1930. Unemployment insurance is responsible for the greater part of the deficit. A contribution of 230 million marks for this insurance is provided for from the Reich for this year—to be partly covered in a dubious manner by extraordinary receipts—but the heads of this department have already discovered that this sum will be far from sufficient. Even if the payments to the unemployed be materially reduced and the contributions from employers and employees be raised from 3½ to 4 per cent. of wages, there will still be a deficit according to present estimates of from 75 to 100 millions. These estimates were based on an average number of 1,500,000 unemployed in receipt of benefit, and meanwhile the Government has realised that it must count on 1,800,000 as a conservative estimate. This alone means an increased expenditure of perhaps 350 millions.

To this must be added the serious increase in the number of recipients of emergency relief—that is, relief to certain classes of unemployed who are ineligible for further benefit because they have been out of work more than 26 weeks. Further, the Reich will ultimately be obliged to come to the aid of the municipalities, which threaten to break down under the burden of their payments for welfare purposes. Finally, there are heavy declines in receipts from taxes, although the estimates in the budget made only a few weeks ago were regarded as conservative. On the assumption that the economic situation in the fiscal year will remain the same as it is to-day, the Government counts on increased needs far exceeding 700 million marks, which must be met either by increases of taxes or by economies.

The contributions to unemployment insurance will probably be raised one per cent., instead of a half per cent., and perhaps there will also be a further increase in the tax on beer, as part of the proposed increase in March was foregone, in response to the demand of the Bavarian People's Party. However, the sum involved is so large that it means serious political embarrassment and even a grave danger for the Government, for it was generally hoped in economic circles that the Bruening Government would give the taxpayers the benefit of the savings under the Young Plan, and these circles have been most deeply disappointed in their expectations. The Government has not yet abandoned the plan of lowering at least a few of the most burdensome taxes at first by 1931. But in view of the heavy expenditures involved by the programme for the relief of the eastern districts and by the apparently permanent contributions required by unemployment insurance, the present profoundly unfavourable economic situation will have to be followed by an unexpectedly speedy improvement if it is to be possible to carry out the plan. But the Government does not seem to feel itself politically strong enough for a great financial reform through which the heavy taxation burdens could be so dealt with as no longer to hamper the recovery of economic life.

At the meeting of the National Association of German Industry, Dr. Duisberg, president of the association and chairman of the supervisory council of the I-G Farbenindustrie, directed an appeal to the heads of German undertakings " to participate politically as much as their time and energy would permit in the legislatures of the Reich, the States and municipalities." The German industrialist has heretofore made little direct use of the possibilities granted him by democracy of employing his political influence. It is true that the associations of employers exercise an influence on the political parties, but there are in the Reichstag and also in the State Parliaments, as representatives of industrialists, many more officials of associations than actual undertakers. Immediately following the war such leading industrialists as Stinnes, Siemens and Vögler had themselves elected to the Reichstag and took part in its work. But this attempt was speedily abandoned, and the few employers of labour who still belong to the parliaments are not leading personalities, and they take little part in the proceedings unless special questions affecting their own interests arise.

It has frequently been complained in Germany that the English example of the politically active business head is so little followed. Though the " Syndicus," the official representative of business and industry, may be able to acquire special legislative knowledge because he has more time and energy to devote to political matters, though he may cut a better figure as a specialist in parliamentary committees than the man whose time is taken up by his economic undertakings, he can nevertheless not establish that close touch between State and economic life that would be so infinitely valuable for both. To-day a very large section of the German industrialists and big business men cherish bitter feelings toward the State, because they regard it solely as a relentless extractor of taxes and as the creator of burdensome and inquisitorial social and economic legislation. They have no first-hand appreciation of the difficulties of government in a country in which the intellectual, social and economic influences of America and Western Europe mingle with those of Bolshevist Russia—a country that has furthermore suffered a complete collapse of all authority and, in addition, all the political and economic consequences of a defeat. In like manner the psychology of their own workmen is generally alien to them, because, while they regard themselves as the technical and economic leaders of their employees, they are never in the position of having to sue for their support as citizens of the State. And hence the counsel given the economic leaders by Dr. Duisberg is assuredly good both for themselves and for the State. Even the Socialist *Vorwärts* says:—

" Both the general public and the working class would rejoice if German employers would appear in the Parliaments in greater numbers. If they assume responsibility there they will come to realise at first hand the difference between criticism and responsible action."

The " Deutsches Institut für Konjunkturforschung " issues the following forecast of economic developments in Germany in the near future:—

"Economy exhibits the symptoms of a depression that is approaching its lowest point. The falling off in economic activity will probably come to a standstill in the next few months and be followed by a period of stagnation. Subsequent development will be favourably affected by the improving supplies of capital and to a certain degree also by price developments." The Institute regards as an especially depressing factor at present the decline in world economic activity, which has brought to a standstill the steady increase of the last few years in German exports. But the Institute regards as unavoidable an improvement in the capital market, since the gap between the low money rates and the high interest rates for capital has become impossibly wide. Hence " increasingly more favourable conditions of issue can be counted on for the rest of the year 1930."

The ability of economy to adjust itself to the situation is to-day undoubtedly being strongly handicapped by the price policies of the cartels. The lowering of prices is a remedy by means of which economic depression tends to bring about its own cure, but in Germany a section of the price level, especially the price of iron and coal, remains inflexible, because it is maintained by the activity of the combinations, so that the whole weight of the depression has to be borne by the prices of the products of those industries in which no effective cartels exist. The index of the uncontrolled prices of industrial raw products and half-finished wares amounted, according to the statistics of the Konjunkturforschungsinstitut, in January to 90.4 per cent. of the figure for 1926, and dropped to 85.3 per cent. in April. The controlled prices, however, still stand, as then, at 105 per cent.

DENMARK.

Discount Rates — Prices — Foreign Trade.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, May 16.

IMMEDIATELY after the recent reductions of the discount rates in London and New York the official Danish discount rate was reduced from 4½ per cent. to 4 per cent., which is the lowest rate on record since September, 1911. It is maintained, however, that the money market is not very easy. Mr Axel Nielsen, Professor of Political Economy at Copenhagen University, made the following statement in a newspaper article appearing shortly after the reduction of the Nationalbank rate: " This is evidently caused by the reductions abroad, and, as the foreign exchange holding of the Bank was practically unchanged from last month, the Nationalbank reduced its rate to 4 per cent. Nevertheless, a rather pronounced tightening of the money market is noticeable in this country and this would undoubtedly have been felt by the Nationalbank if it had carried on any business of importance. Naturally, the first and foremost cause of this is the heavy decline of the prices of agricultural produce, which results in reduced income, and, consequently, in reduced savings or even the consumption of savings." In most localities the strange condition prevails that the interest on deposits is above the rate at which the Nationalbank will lend money (according to the article it should be remembered in this connection that the Nationalbank is not prepared to lend money at the official rate to the public or to banks to the extent which the market may require). The Professor further points out that evidently the Nationalbank does not desire to take the lead. " It even hardly desires to do anything to make the new discount rate effective in the market, as nothing appears to indicate any endeavour on the part of the Nationalbank to influence the prices of bonds, so as to make the 4 per cent. basis effective." In other words the position is that the official interest policy of the Nationalbank has not become effective, whether this be due to the wish of the Bank itself, or to lack of co-operation on the part of the other financial institutions.

Mr John Maynard Keynes recently stated in an article, which was also published in this country, that it is still necessary to endeavour to make the lower discount rates in Europe and the United States fully effective, and this problem likewise plays a big part in the discussion of interest rates in Denmark. On the other hand, it is pointed out that surprise, created by the difference between the interest of 5 per cent. obtainable by the investment in safe bonds, and the official discount of 4 per cent., is not justified. Actually it is an old, well-known phenomenon that sudden and pronounced changes in the discount rates are only faintly reflected by the prices of bonds. Nor is this peculiar to Denmark. To quote an article in the *Berlingske Tidende:* " In this connection reference may be made to conditions in England, where the official discount rate was 3½ per cent., while 4½ per cent. Government bonds were quoted 97 to 98 per cent., which means a yield of just over 4½ per cent. History tells us that in periods of rising interest and of declining interest alike there has, as a rule, been a considerable difference between the two categories. The discount rate has moved first and appears to have been the motive power, which has slowly and with difficulty dragged the interest for long-period loans in the same direction."

Economic development in this country is still under the influence of the declining level of prices. For April the official wholesale price index (1913=100) was 135, against 136 in March, 140 in February, 143 in January, and 150 a year ago (April, 1929). The index for import goods and export goods was as follows—

	April, 1929.	Nov., 1929.	Dec., 1929.	Jan., 1930.	Feb., 1930.	Mar., 1930.	April, 1930.
Import goods	150	143	142	139	135	132	133
Export goods	145	159	156	146	146	137	128

From this it appears that lately the proportion between the prices of import goods and export goods has changed unfavourably. This is principally due to the decline in prices of agricultural produce; the index for animal products was 159 in November, 1929, while in April, 1930, it had declined to 127 (against 144 in April, 1929). The cost of living index in this country is published every quarter and it also shows a continued decline. Recent figures have been:—July, 1914=100; April, 1929, 174; July, 1929, 173; October, 1929, 172; January, 1930, 170; April, 1930, 167. As will be noted, this index changes rather slowly, the decline from January to April, 1930, being only 1.8 per cent. Foreign trade returns for the first three months of 1930 are as follows:—

	Imports. Kr.	Exports. Kr.	Excess of Imports. Kr.
January	148,000,000	146,000,000	2,000,000
February	139,000,000	122,000,000	17,000,000
March	149,000,000	134,000,000	15,000,000
Total	436,000,000	402,000,000	34,000,000

For the corresponding period of 1929 there was an excess of exports amounting to Kr. 20,000,000.

Trade Treaties — Industry and Trade — Bank Balance Sheets.

(FROM OUR CORRESPONDENT.)

VIENNA, May 17.

THE economic difficulties have not become less acute recently; indeed, in some directions they have been accentuated. In view of this fact, the endeavours of industry and agriculture to improve the position through tariff protection have intensified. The result of the negotiations, which concerned trade-treaty amendments, is at the moment unsatisfactory. For instance, the new treaty with Germany is very disappointing, as the concessions which Germany has made are quite inadequate. The increased protection of cotton yarn, which was looked forward to by the Austrian textile industry as a result of the alteration of the trade treaty with Germany, has not been gained. On the other hand, a number of German machines have had to be admitted to the list of free imports. Slight concessions which Germany made on the import of sawn timber were bought with the abolition of the Austrian tax on logs. Agrarian interests expected facilities in the export of cattle, but none were achieved, and the Vienna market is at present swamped with German pigs, which enter Austria on account of the premiums and railway-tariff cuts granted on this export trade in Germany.

Notice of cancellation of the trade treaty with Hungary was given at the request of the industrialists and agriculturalists. If an understanding is not arrived at in the meantime, there will be no trade treaty at all between Austria and Hungary in July. In return for their agreeing to increases of the Austrian duty on individual farm products. Hungary claims the right still further to protect its own industries. The Austrian paper industry complains of the new mills in Hungary and of the danger of a rise in the Hungarian duty on paper. At the request of farming interests, negotiations with Yugoslavia have been started, but up to the present little progress has been made.

For some time now the situation has not been very favourable for the heavy industries. For instance, the output of the Alpine Montangesellschaft (iron trust) is considerably behind that of last year. Orders on hand are estimated at 50 per cent. lower than this time last

year. In consequence, the intention of declaring an increase of dividend on Alpine shares has been abandoned.

In consequence of the transfer of a number of industrial concerns from the former Bodencredit-Anstalt, amalgamations must be effected. This can be done only at the cost of sacrifices on the part of the shareholders and on the part of the bank, combined with the discharge of many workers. In many cases the Bodencredit-Anstalt kept enterprises going for reasons of prestige only, although they were no longer profitable.

Though general unemployment has receded somewhat and the number of unemployed in receipt of benefit has sunk to 81,620 in Vienna, it is still 13,700 higher than last year. The serious crisis in the metal industry accounts for 5,000 to 6,000 more unemployed in Vienna this year than last. The great expectations entertained in regard to activity in building have only been partially fulfilled. In this connection, the political conflicts between the Government and the Social Democrats play a part. For the buildings which the Social Democrats erect with municipal rates they also want a subsidy from the State. Furthermore, they wish to keep the rents of houses erected with public funds so low that there is no profit on them, but this prevents any private activity in building with State assistance since, in the case of larger buildings, such activity must count upon a profit. In addition, the housing loan has not yet been concluded. The banks have repeatedly declared themselves prepared to advance a sum of 20 million schillings, but the housing loan will probably not be considered before autumn.

Since the return of the Federal Chancellor, Dr. Schober, greater hopes have been entertained that it will be possible to launch the investment loan before long. In this case, there would be prospects of the execution of various investments by the Federal Railways and the State enterprises. On the strength of this prospective loan, the Federal Railways have received from the banks advances which they have used for investment purposes. Shopkeepers complain that very few foreign visitors have arrived in Austria up to the present. Furthermore, several rather big stoppages of payment have occurred, which were hardly surprising, as they were attributable to causes of rather long standing. They go to prove the severity of the crisis existing in all luxury trades. For example, one of the largest hotels on Semmering, a mountain two hours' run from Vienna, namely, Hotel Panhans, in which German capital was interested, is in difficulties. The stoppage of payments at the big drapers, Ludwig Zwieback, Kärntnerstrasse, is still more significant; the creditors are offered 35 per cent. in settlement of their claims. This big shop, in the best part of Vienna, had long exhausted its own capital, and for a number of years had been working with bank credits only. The conversion from luxury trade to goods suited to the demands of wider classes took place too late. Both these collapses are in a large measure due to the burden of taxation. It is true that the Government recently issued instructions that the tax authorities should be more lenient, but a direct reduction of taxes has not been granted. It is characteristic of the overtaxation that the estimated expenditure of the Federal States was 781 million schillings in 1928, 800 millions in 1929, and 855 millions in 1930. The actual revenues were, however, much higher and often brought in an excess of 20 to 30 per cent. The taxable capacity of the population is truly astounding in view of the crisis. Several of the monopolies, such as the tobacco monopoly, show increases.

Though the balance of trade for the first quarter of the current year shows a surplus of 216.1 million schillings in favour of imports, which is 51.9 millions less than in the same period of last year, this is partly due to the fall in prices as well as to the general weakness in industry and the consequent diminished demand for raw materials and semi-manufactured goods. As no improvement may be expected for the time being in this direction, fresh efforts have been made for the promotion of emigration, and an agreement has been concluded with the French Government for the employment of 15,000 workers in France.

Recently a number of bank balance sheets have been published. The three big banks, namely, Credit-Anstalt, Bankverein and Escomptegesellschaft have all decided to distribute lower dividends. The Bankverein dividend has been dropped from 1.50 schillings to 1 schilling, that of the Escomptegesellschaft from 12½ schillings to 10½ schillings, that of the Credit-Anstalt from 4 schillings to 3.40 schillings. The Bankverein, which in previous years engaged less in industrial business than in normal commercial business and had for the most part commercial customers, displayed a reserved attitude last year, in order to protect itself against losses. The most important question for the Bankverein is, however, whether it will be possible to reduce overhead expenses. The Escomptegesellschaft caused some surprise with its balance sheet, which included the fusion with the Vereinigte Elektrizitäts-A.G. The bank, which for some time now has been greatly interested in the development of hydraulic power and the promotion of electricity generation and distribution, desires to open a special department for this purpose and to attach the electricity enterprises to it. The bank leaves no doubt as to its opinion that for the immediate future no increase in revenue is to be expected from normal bank business, while something may be hoped for from its participation in industry.

The Credit-Anstalt has presented in its balance sheet the results of its own business only. The resources of the Bodencredit-Anstalt are still administered separately. Like the other Vienna banks, the Credit-Anstalt suffered from the decline in security and consortium business. Current bank business did not develop unfavourably, but large revenues still accrue from the foreign business of the Credit-Anstalt. The bank has already started the reorganisation of various industries associated with the Bodencredit-Anstalt, and the next balance sheet will be greatly influenced by the success in this direction. In regard to the future, the Credit-Anstalt takes a much more optimistic view than the Escomptegesellschaft, and is very much more optimistic than the Bankverein.

HUNGARY.

Ratification of the Hague Agreement — Foreign Loan Projects — Trade Returns — Economic Conditions.

(FROM OUR CORRESPONDENT.)

BUDAPEST, May 17.

THE second reading of the Budget was interrupted by the urgent Bill for the ratification of the Hague and Paris Agreements relating to the obligations resulting from the Treaty of Trianon, commonly known as the Eastern Reparations. It will be remembered that in January, at the Hague, Hungary agreed to pay on accounts other than reparations a constant annuity of 13,500,000 gold crowns (£560,000), as from January 1, 1944, and during the years 1944 to 1966 inclusive. It should be remembered that the reparation payments of Hungary were fixed at the outset of the League's Reconstruction Plan in 1924, for twenty years from 1924 to 1944 at 200 million gold crowns. During the ratification debate Prime Minister Count Bethlen explained that the Government, though reluctantly, has accepted the Hague Agreement to liquidate all claims and counterclaims, reparation or others, resulting from the war and the Trianon Treaty, because a refusal to comply with the determined wish of the Powers might have placed Hungary in an undesirable and isolated position. The advantages of the Hague settlement for Hungary are, that the country recovers her financial sovereignty and that the *impasse* in the Optants case will be settled by the constitution of an agrarian fund which is to satisfy the claimants in 4 per cent. bonds issued on January 1, 1933, in the nominal value of 219,500,000 gold crowns. Considering that 68.8 per cent. of the payments into the agrarian fund are supplied from the contribution of France, Italy, Great Britain, Czechoslovakia, Jugoslavia, Rumania and Bulgaria, and only 31.2 per cent. are supplied from the Hungarian annuities, the settlement—from the point of view of the Hungarian balance of payments—is undoubtedly satisfactory.

The Finance Minister has introduced a Bill to authorise Parliament to contract a foreign loan up to the amount of 500,000,000 million pengös (£18,000,000). There is little doubt that the Bill, which will be discussed before the end of May, will become law, as the Parliamentary parties are unanimously in favour of contracting a State loan for investments and credit schemes for agricultural purposes. It seems, however, that no long-term loan will be concluded before the autumn, as conditions on the international markets, where the flotation of the loan is projected, are not at present favourable. The projected loan will be secured on the surplus of the Customs, sugar duty, tobacco and salt receipts, which are at present earmarked for the service of the League's Hungarian Loan issued in 1924. The proposed loan will rank immediately after that loan and after the American relief credits. Pending the issue of the long-term loan there is good reason to believe that the Finance Minister will conclude an immediate short-term loan of $20,000,000 with an American banking group in order to secure the funds necessary to the financing of the harvest. The short-term loan will be repaid from the proceeds of the projected long-term State loan.

That Hungary needs long-term loans from abroad in order to develop the economic resources of the country cannot be questioned. But it is of paramount importance that such loans should be used only for purposes sufficiently productive to cover the comparatively high service of the loan. It should also be remembered that the League and Reconstruction Loan issued in 1927, amounting to 250 million gold crowns, has been used in several portions in three successive budget years, together with the internal resources of the country, for capital expenditure and altruistic credit schemes. Therefore, it is highly desirable, if a big State loan is concluded, that its proceeds should be called in several portions extending over more than one year. The last annual report of the National Bank, which deals exhaustively with the problem of borrowing abroad, calls attention to the fact that the huge foreign trade deficits experienced in 1927 and in 1928 were principally due to foreign borrowing, and adds that the pace must be slowed down. The great improvement of the foreign trade balance in 1929 is explained mainly by the cessation of foreign borrowing in the second half of that year. The reduction of the adverse balance of trade from 370 million pengös (£13,500,000) in 1928 to 22.6 million pengös (£800,000) in 1929 affords ample evidence that Hungary could pay for her merchandise imports with her exports without recourse to foreign loans.

The improvement of foreign trade continues. Trade returns for the first quarter of 1930 show an active balance of 21.5 million pengös, against an adverse balance of 63.9 million pengös in the corresponding quarter of 1929. Exports have risen in January-March, 1930, to 219.6 million pengös, as against 183.4 millions in the same quarter of 1929. The improvement of the export trade is the more remarkable because the prices received for agricultural commodities were considerably lower than a year ago. Imports have decreased from 247.2 million pengös in the first quarter of 1929 to 198.1 millions in 1930. The falling off is due to the diminished purchasing power of the population, caused partly by the cessation of foreign borrowing and to the discrepancy between the low prices of agricultural products and the high prices of the industrial commodities. In the twelve months from April 1, 1929, to March 31, 1930, the value of exports amounted to 1,076.4 million pengös, thus exceeding by 62.7 million pengös the imports, which aggregated 1,013.7 million pengös.

It is highly desirable that the satisfactory development of exports should be maintained, and even increased, because Hungary as a borrowing nation cannot pay the interest and the amortisation of her foreign indebtedness by any other means, as her international balance of payments contains no other active item of importance. The future trend of the Hungarian balance of trade depends mainly on the crops and the amount borrowed from abroad. Crop reports are very satisfactory so far, and, in spite of the very low export prices, it seems that the favourable balance of trade will be maintained provided the harvests are good, and the spending power of the country is successfully stimulated by foreign funds.

The economic outlook is somewhat better. It is hoped that the ratification of the Hague Agreement, which has settled many thorny points between Hungary and her neighbours, will contribute to the betterment of trade relations in the future. The immediate prospects, however, are not very encouraging, because Austria and Czechoslovakia have denounced their tariff treaties and desire to increase the wheat and flour duties, by which, of course, Hungarian exports are hard hit. The money market is easy. Short-term loans are abundantly offered at 5-5½ per cent., but in view of the slackness of business there is very little demand for them as the banks can hardly lend their own deposits for three months' notice. The Stock Exchange is dull, and quotations in many cases have reached their lowest level.

NATIONAL BANK OF GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

ROUMANIA.

Export Taxes — Methane Monopoly — Control of Insurance Companies — Telephone Concessions — Commercial Treaties — Economic Situation — Politics.

(FROM OUR CORRESPONDENT.)

BUCHAREST, May 22.

THE Economic Delegation of the Government has advised the suppression of taxes on wheat, flour and raw wool, and the release of crude oil for export. It is well known that the export taxes have long interfered with the foreign trade of Roumania, and the internal market for crude oil is glutted in consequence of the constantly increasing production of the petroleum companies. The decision of the Economic Delegation is therefore important, as it shows that the authorities are aware of the situation, but unhappily it does not go far enough. Exports, especially of agricultural produce, should be encouraged as much as possible, and business circles think the Government would be well advised to abandon all agricultural export taxes. They form an unfair charge on the home producer, especially in these times of world-wide depression.

A Bill is now before Parliament by which the exploitation of methane from the gas deposits is constituted a State monopoly. It has raised considerable discussion, as the exploitation of these deposits has been in the hands of certain companies who have regarded it as their vested right. The law affects principally Transylvania, where there are important deposits which are exploited for the purpose of lighting and motive power. It is argued that the project of the Government creates a very important precedent in so far as it interferes with the vested rights of the present companies, and that it opens disturbing possibilities of similar interference in other branches of the exploitation of the subsoil. On the other hand, it is

asserted by the Government that by means of the monopoly a more equitable, cheap and remunerative exploitation and distribution of the gas is secured, and that, in addition, the Bill provides a just plan for the indemnification of the companies.

The Government intends to bring in a Bill for the organisation of a Control Office for insurance companies. This is done partly at the instigation of the chief companies themselves. The Bill has special provisions with regard to the establishment of foreign insurance companies. Whereas the minimum capital of a Roumanian company for each of its principal branches of activity is fixed at two million lei, the capital for foreign companies must be double that amount. It is left entirely to the discretion of the Cabinet whether to grant or refuse an application for the establishment of a foreign company; but it is intended to make it easier to establish in Roumania branches of companies belonging to countries with which reciprocity agreements exist. The Bill has special provisions with regard to investments, reserves, guarantees and cash deposits in banks. It gives the Control Office fairly wide powers of supervision, and even of active intervention in the conduct of the companies, and constitutes a very important addition to the legislation governing the insurance companies of the country.

There are reports that it is intended to grant the concessions of the telephones to a group of foreign firms. The groups of Tel and Tel, Ericson, and the German firm of Siemens and Halske—with the assistance of Blairs—are supposed to have made offers. It is said that these firms may probably work the concessions together, as the financial arrangements are too complicated for a single firm to take the responsibility.

Negotiations for commercial treaties with various countries, including England, are proceeding. As has been pointed out before, those with Germany present the greatest difficulties. It is reported that Germany now proposes to reduce her duties on barley with a view to taking a substantial quantity from this country. This would be a welcome concession to Roumania, whose stocks of unsold barley are still very great in consequence of the closing of the German frontiers. Naturally, compensations for these concessions are expected. As far as maize is concerned, an arrangement is supposed to be reached on the basis of the monopoly of the maize import. A German delegation is on its way to Bucharest, accompanied by representatives of cereal firms who are to conclude purchase contracts, to be executed when an accord has been made.

The economic situation does not show any sign of improvement. The banks are accumulating funds, and money is being invested in State bonds, but facilities for trade and commerce are lacking. The note circulation of the National Bank has decreased and, on the other hand, exports have not yet brought any addition to the stock of gold and foreign exchange. The banks prefer to place some of their funds in the short-term cash bonds of the National Bank, which have reached the total of 923 million lei, *rather than grant commercial* loans, while interest on such loans has decreased to an average of 14 per cent. This unwillingness to lend is due to the insecurity of conditions, and is not surprising in view of the number of failures which occur daily and the increasing tendency of merchants to force their creditors to come to an arrangement by the *concordat preventif*. It may he said that the law of the *concordat* had contributed a great deal to accentuating the present crisis. Protests against it, and petitions for its modification or entire repeal are multiplying. It is hoped now that when the project of the new commercial code, of which it is ultimately to form part, is published, as it is expected to be after the first of July, certain changes will be made. The international congress for safeguarding the interests of creditors will shortly be held in Vienna, and the discussions there may be of assistance to the Roumanian legislators.

The struggle between the two principal parties—the National Peasant Party, which is at present in power, and the Liberals under Vintila Bratianu—continues with increased bitterness. The latter allege that the Government is in favour of recalling Prince Carol, the father of the present King, to the throne. The dynastic issue is unhappily made an object of party politics, and it is regrettable that the Government has not yet taken an unequivocal stand on a quèstion which is of such far-reaching importance for the country. Instead of meeting the accusations with frank denials, the Government confiscates the Liberal newspapers, and we are confronted with the unedifying spectacle of the police parading the principal streets in force, endeavouring to prevent the sale of these papers. This proceeding is entirely contrary to the general principles which the National Peasant Party has always defended in its programme, and does considerable harm to the reputation of the Government. The whole Press is united in blaming it in the most severe terms.

It will be remembered that the Liberal Party was chiefly instrumental in causing Prince Carol to resign the throne in favour of his son, during the last year of King Ferdinand's reign. Its antagonism to a return of the Prince can therefore be understood. On the other hand, there is no doubt that in certain circles his return would be viewed favourably. But it is a pity that the question has been raised at all. With the passage of time it would gradually fall into oblivion, and at the present juncture of reorganisation and reconstruction the effect of this campaign, combined with the violent fight for political supremacy between the two parties, is very upsetting.

CANADA.

Crop Conditions — Business — Maritime Provinces — St. Lawrence Waterway — Prices.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 7.

CANADA has experienced her first spell of really warm weather this year, so that the farmers have been able to make rapid progress with the cultivation of their land. While seeding is well advanced in the Eastern provinces, it is virtually completed as far as wheat is concerned on the prairies; it is finished in Manitoba, and 5 per cent. which remains to be sown in Alberta and Saskatchewan will be completed this week, which will mean that the seeding season is a week earlier than in 1929. Moreover, anxiety about the abnormal dryness of the soil on the prairies, particularly in Saskatchewan, has been greatly relieved during the past week by copious rains, which descended over a large part of the prairies and have given the new wheat crop a moist seed-bed which is badly needed for a good start. Not even rough estimates of the Western wheat acreage are yet possible, but the indications point to a slight decrease which is far from being deplored; indeed, there is a general feeling abroad in the West that, in view of the over-production of wheat which now exists, it would pay the prairie farmers to raise less grain and devote more attention to mixed farming.

Business continues very variable and decidedly sluggish in many lines, and is not expected to show any real improvement until there is a definite prospect of a good crop. However, the last business survey of the Dominion Bureau of Statistics for April shows that Canadian business entered the second quarter of the year on a basis well above the average for the last five years and not seriously below the level of a year ago. For its monthly index, in which the average index during the past five years, 1925-29, is taken as 100, the results are:—Pig iron, 101; bank clearings, 107; steel, 111; car loadings, 90; building permits, 96; imports, 102; exports, 84; coal, 94; coke, 129. The car-loading figure covers the third week of April, and the others reflect conditions during the month of March.

The present index would look much worse, as the comparisons were made with the parallel index for 1929. The movement of merchandise continues to be on a much slower scale, and the car loadings for the week ending April 19th, at 52,009 cars, showed a decline of 5,071 cars compared with the previous week, and of 13,634 cars compared with the parallel week of 1929. For the year to date the shrinkage in Canada's railway traffic has been, roughly, 9 per cent., and during the first quarter of the year the net earnings of the C.P.R., at 7½ million dollars, were actually less than half the figure for the first quarter of 1929. On the other hand, the April figures of new construction, estimated at a value of $48,778,600, showed an increase of 12.7 per cent. over the figure recorded for April, 1929, due largely to business buildings and engineering enterprises in Ontario and Quebec. The iron and steel foundries, too, have been rather busier, and the equipment plants have a fair amount of work on hand, but the output of motors is only running at half the level of a year ago, and the coal mined during March, estimated at 1,129,571 tons, showed a decline of 7.6 per cent.; the flour mills are also very slack, owing to the weakness of foreign demand, and the sugar refineries have been affected by the collapse in the market for raw sugar. It is expected that the export movement of grain will be quickened by the reopening of navigation on the St. Lawrence, but so far there has been no marked acceleration, and grain prices have fallen back under the influence of the reports of rains, which have improved crop conditions in the winter-wheat producing areas of the United States. Wholesale trade is reported to be fairly satisfactory, but retail trade has been quiet and needs the stimulus of the present spell of warmer weather, which will induce the public to purchase summer clothing and other seasonable goods.

Perhaps the part of Canada which is at present faring best economically is the Maritime provinces. For half a dozen years they have been suffering from a severe depression, but the clouds now seem to be lifting. For one thing the long-delayed reorganisation of the financial structure and management of the British Empire Steel Corporation, which dominates the whole industrial life of Nova Scotia, is in process of being carried out and high hopes are cherished that it, coupled with the additional protection supplied by the Budget, will lead to a revival of the fortunes of the coal-mining industry and the iron and steel plants of the Province. The local factories are all reasonably busy, and not only is the pulp and paper mill of the Mersey Paper Company in operation, but a high-grade bleaching sulphite pulp mill at Campbellton, in New Brunswick, has commenced production. The fishing fleets on the "Banks" have been handicapped by stormy weather, but the inshore fishing boats are doing well and the lobster season has so far been successful. The farmers are getting good prices for their potatoes, and the apple trees have wintered well, so altogether the economic outlook for the Maritime provinces is more roseate than it has been for some years.

There have been no further developments in connection with the St. Lawrence deep waterway at Ottawa, and progress is being held up pending the settlement of the controversy between the Federal Government and the provinces of Ontario and Quebec about power rights, but meanwhile there are some interesting developments about the St. Lawrence channel in other directions. The Federal Government is carrying out this year an extensive scheme of dredging and deepening the channel between Quebec and Montreal in order to permit vessels of larger draft to reach the latter port. Again, the improved Welland Canal, which connects Lakes Erie and Ontario through the Niagara Peninsula, was opened for a part of its length, and part of the old canal will be used until the remaining new sections are ready for the formal opening to take place on July 1st. But the larger make vessels cannot benefit much by the new canal until the channel between the other end of Lake Ontario and the port of Prescott, which has been fixed by the Government as the trans-shipment point for the lower canals, has been deepened to 27 feet. The government is spending a good deal of money on docks and other facilities at Prescott, but in some places the selection of this harbour is regarded as wrong, and its rival, the ancient city of Kingston, is being assisted to challenge its supremacy by two groups of capitalists who are arranging for the erection of grain elevators at the older lake port. If Kingston, therefore, becomes the trans-shipment point, a great deal of expenditure on Prescott will be wasted.

The financial world of Canada and the Bank of Montreal in particular suffered a great loss on April 25th through the sudden death at the early age of 62 of Mr Hugh B. Mackenzie, the general manager of the bank. It occurred from a sudden attack of cerebral hæmorrhage which befell him as he was in his office preparing for the directors' weekly meeting. Mr Mackenzie was trained in the Bank of British North America and rose with great rapidity to be its general manager. When the Bank of Montreal absorbed the smaller bank, it gladly enlisted his services and he was attached to the head office. Later he was for a period manager of the Royal Trust Company, but he returned to banking in 1925, and last autumn was appointed the general manager in succession to Sir Frederick Williams Taylor. He was regarded as one of the ablest bankers in Canada, and in addition held very enlightened views on economic and other questions; he was popular with all classes of the community and will be greatly missed in Montreal. Following his demise the directors decided to embark upon what is a common practice in British banks, but is an experiment in Canada, and assigned the duties of general manager to be shared by two individuals. Their choice has fallen upon Mr Jackson Dodds and Mr W. A. Bog, both of whom have had extensive experience of all phases of banking.

Commodity prices were virtually stationary last month and the wholesale index of the Dominion Bureau of Statistics for April 1st at 91.9 showed a trivial change. Among the various items, 67 quotations were higher, 120 were lower, and 315 remained unchanged. The most notable change was in "non-ferrous metals and their products," which dropped sharply from 93.1 to 86.8.

Letters to the Editor.

THE TIN OUTLOOK.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In reference to your very interesting article, "The Tin Outlook," in your issue of May 17th, may I enumerate a few points with which I do not agree.

(a) You state that the T.P.A. scheme has already resulted in considerable curtailment of output and you quote as proof the statistics of Metallgesellschaft, which go only up to March and which show reduction particularly in two directions, namely:—

(1) Dutch East Indies, February 2,312 tons and March 2,056 tons, compared with 1929 monthly average of 2,959

THE OLD-WORLD CHARM OF SOUTHWOLD.

THIS PICTURESQUE SMALL TOWN on the Suffolk Coast is an ideal place for those who desire a few days' complete change and rest. The Town itself, with its wonderful Church and quaint "greens" and great, high Common commanding extensive views over sea and land, is different from the usual seaside resorts.

Across the river is WALBERSWICK, the haunt of nearly all artists and of many famous authors for some fifty years past, and from here are many beautiful walks or rides, either along the beach or across the silent marshes, to the lost city of DUNWICH, or over hilly gorse and heather commons flanked by woods to BLYTHBURGH, with its noble church, or WENHASTON, with the large mediæval picture of "The Doom."

From Southwold delightful short motor excursions may be made to FRAMLINGHAM (20 miles), with its vast castle and church, with splendid monuments of the tragic Howards, or to WINGFIELD CASTLE (21 miles), the great Manor House of the ill-fated Dukes of Suffolk, with the beautiful effigy of Elizabeth Plantagenet in the church adjoining, or to ALDEBURGH THORPENESS (18 miles) and ORFORD, remote from modern life, with the great Norman keep still dominating town and coast.

Southwold provides excellent sea angling, and there is an attractive 18-hole golf course. By train from London it is about two hours to SAXMUNDHAM (14 miles) and a little more to DARSHAM (7 miles), HALESWORTH (9 miles), where motors from hotels meet visitors by appointment.

There is THE SWAN HOTEL (h. & c. water in every bedroom) in the Market Place, a well-known and most comfortable hotel with a century's reputation (Tel. 5), and also a smaller, THE CROWN HOTEL, an old Georgian Inn recently reconstructed (Tel. 53), both well known for the excellence of their catering.

tons. Since the Dutch authorities have declared that, in fact, they will decrease merely to the extent of a few hundred tons during 1930, the decrease in February and March can be safely considered due to a seasonal decrease in smelting which will be made up again during the year.

(2) Bolivia, viz.:—March 2,500 tons, compared with the 1929 average of 3,922 tons, equal to a decrease of 36 per cent., which cannot be considered as permanent. It is true that some of the smaller mines will very likely have to close down altogether unless the price improves, but the largest producers have, so far, not indicated any intention of decreasing more than 16-20 per cent.

(3) Imports to the Straits Settlement from F.M.S. and other sources. Last year's monthly average was 8,707 tons; January, 1930, was 9,712 tons, February 7,984 tons, March 8,496 tons, April 8,473 tons. Certainly these figures do not denote considerable curtailment.

(*b*) On the score of American consumption you quote the increase in the Ford Motor output; but evidently this increase is balanced by a decrease in the production of other automobile manufacturers. Also you ignore the chief consuming industry, *i.e.*, tin plates, which manufacturers produced during the first four months of 1930 at the same rate as 1929; unfortunately, however, they were over-optimistic, and appear to be working now 30-40 per cent. less.

The T.P.A. scheme is undoubtedly sound, but all along the originators have been too sanguine in regard to consumption, thus the restriction figure had to be extended from 15,000 to 30,000 tons, and may have to grow further.

Apparently most producers are over-gallant in standing back in the hope that the other fellow will enter first into the reduction chamber. If they pursue these tactics for another month they will have to reduce 40 per cent. during July-December in order to obtain 20 per cent. reduction for the year. In the meantime excessive supplies, over-doctoring and general industrial *malaise* are weighing down the price which has reached an uneconomic level for many producers; until an industrial improvement sets in, which cannot be looked for yet, the only remedy seems to be in whole-hearted, immediate restriction of output, *acta non verba*.—Yours, etc.

London. X.

May 23, 1930.

Books and Publications.

GENEROUS HANDFULS.

Messrs Moody's Investors Service have now produced the first two* of their five "manuals," covering "Government and Municipal" and "Bank and Finance" securities respectively. Each of these immense volumes is tightly packed with invaluable information and kept up to date by the issue of weekly supplements. The volume on Governments includes detailed descriptions of the securities of almost every country, and nearly all of them are rated according to Messrs Moody's very useful system. A very wide range of statistical data bearing directly or indirectly on the investment value of these stocks is provided—so much so that the volume has become a valuable work of reference on international statistics even for people who are not interested in investment questions. The "Bank and Finance" volume includes no ratings, but is a mine of information about the classes of activity covered, and contains a useful account of the Bank for International Settlements and the Young Plan. The unique value of this series lies in the imagination with which it is compiled. Its editors seem to have anticipated with extraordinary skill almost every possible question which might be referred to one or other of these volumes, and to have spared no pains in supplying as accurate and up-to-date an answer as it lay in their power to provide.

* "Moody's Manual of Investments." American and Foreign, 1930. Governments and Municipals; Banks.—Insurance Companies.—Investment Trusts.—Real Estate.—Finance and Credit Companies. (London) Moody's Investors Service, Ltd., King William Street House, E.C. 4. £6 6s. each volume.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Story of Money. By Norman Angell. (London) Cassell and Company, Ltd., La Belle Sauvage Yard. 21s. net.

A beautifully printed and illustrated history of money throughout the ages, written for the purpose of making the ordinary reader more intimate with the nature and functions of currency. The last three chapters are concerned with the money problem in the modern world, and the final chapter summarises some of the current suggestions for monetary reform.

Lay-off and its Prevention. (New York) National Industrial Conference Board Inc., 247, Park Avenue. $1.50.

A discussion of possible methods of preventing or moderating the fluctuations in business activity which necessitate variations in the numbers employed. The technique of mitigating the hardships involved by these temporary dismissals is also considered.

Prosperity Reserves of Public Works. By Vernon Arthur Mund. (London) P. S. King and Son, Ltd., 2, Great Smith Street, for the American Academy of Political and Social Science.

A well-documented discussion of the possibility of so timing the placing of public works contracts as to mitigate trade depression.

Review of the Legal Aspects of Industrial Agreements. (Geneva) League of Nations.

One of a series of studies which are needed to pave the way for a general application of the recommendations of the Geneva Economic Conference of 1927. This document will be a useful work of reference on the subject of anti-trust legislation in various countries.

The Retreat from Parenthood. By Jean Ayling. (London) Kegan Paul, Trench, Trübner and Company, Ltd., 68-74, Carter Lane. 10s. 6d. net.

The theme of this book is the problem of mitigating the at present—in the authoress' view—intolerable burdens imposed by family life on the professional classes. Miss Ayling is full of ingenious suggestions for preventing parenthood from interfering with the normal social and professional activities of the parents.

Kelly's Directory of Merchants, Manufacturers and Shippers of the World. In two volumes. (London) Kelly's Directories, Ltd., 186, Strand. 64s.

Contains the usual comprehensive information, for each country, of its imports and exports, its ports and principal towns, with classified lists of consuls, bankers, merchants, brokers, shipping agents, buyers of British goods and manufacturers of goods exported. Volume I embraces foreign countries and Volume II British countries.

Europa-Wirtschaft. (Berlin-Grunewald) Verlag Dr. Walther Rothschild. 1 mk.

Among a number of articles of European interest is one on "Russia and the Idea of a European Economic Union."

Austria To-day. (Vienna) Vienna Chamber of Commerce.

A pamphlet of diagrams illustrating Austria's economic progress.

The Stock Exchange.

AMERICAN "AMUSEMENT" SHARES.

The British investors' present attitude towards the film industry is, to say the least, conservative, and certain melancholy experiments have recently tended to emphasise this feature. The position affords a significant contrast with conditions in America, where leading "amusement" stocks are among the most active on the New York Stock Exchange. The big American combines, engaged in every branch of the film industry from production to distribution (renting) and exhibition, and possessed as theatre-owners of a vast amount of real estate, have received the backing of some of the leading Wall Street banks. Although the first cinema theatre was opened in the United States only twenty-five years ago, the American film industry is now the fourth largest in the country.

The basis of the film industry's prosperity is the ingrained habit of the American public of "going to the movies," which is not relinquished even in hard times, as was demonstrated in the serious depression of 1922. To-day there has been some talk of bad trade having affected the attendances at American cinema theatres, but it is difficult to say, as yet, whether the decline in attendance is more than the seasonal trend that accompanies summer weather. The advent of the "talkies," in spite of the crudities of the early sound pictures, has undoubtedly increased the popularity of the cinema-going habit. The average American theatre, converted to talking pictures, did 30 per cent. more business last year than in 1928. But many expert observers believe that it does not really matter whether "talkies" stay or go, so long as the public demand for novelty is satisfied. The use of sound and talk in motion pictures is still at an early stage of development, but there are other developments—such as colour, the wide screen, and the stereoscopic film—which are following in its train.

The statistics relating to the American film industry are certainly impressive. There are 22,600 cinema theatres in the United States, and the total box-office receipts of these theatres have been put at over $800,000,000 a year. About 80 per cent. of this total, however, is ascribed to the first-class theatres with large seating capacity, which number about 4,000. The total capital invested in the American film industry is estimated at $2,600,000,000, production and renting accounting for one-third, and the theatres for two-thirds of this total. The four large groups in the industry—Paramount Publix, Warner Brothers, Fox Film and Loew's Incorporated disclosed net earnings last year available for their common stockholders of no less than $51,285,178.

In parenthesis, it may be pointed out that the "talkie" revolution has played into the hands of the big combines. The change-over involved a new capital investment estimated at $50,000,000 for the producing units, and at least $100,000,000 for the theatres. Moreover, the "sound" manufacturers are now powerful allies of the film industry. The American Telephone and Telegraph controls the Western Electric which owns the Vitaphone (sound-on-disc) and Movietone (sound-on-film) systems; while the Radio Corporation of America owns the Photophone (sound-on-film) system which was developed by General Electric Company engineers. Radio Corporation now control Radio-Keith-Orpheum Corporation, a large producer of films with a circuit of 200 vaudeville houses. Western Electric and Warner Brothers jointly control the Vitaphone Corporation, while Mr William Fox and Mr William Randolph Hearst are interested in Movietone jointly with the Electrical Research Products of the American Telephone and Telegraph. In one sense, the great electrical manufacturers, who control the sound patents, have become the trustees of the stability of the film industry, and, if popular rumour is correct, are actually aiming at its control.

The following table shows the growth in the earnings of the four yarge groups over the past three years:—

	Net earnings (after interest and tax, but before pref. dividends, if any).		
	1927.	1928.	1929.
	$	$	$
Paramount	8,057,998	8,713,063	15,544,544
Warner Bros.	30,427*	2,044,841	14,514,628
Loew's, Inc.	6,737,205	8,568,162	11,756,956
Fox Film Corp.	3,120,557	5,957,218	9,469,050

* Before Stanley Company and First National were acquired.

Paramount Famous Lasky, now known as Paramount Publix, is the biggest producer, distributor and exhibitor of moving pictures in the world. It has a loan capital of $14,323,000 and 2,685,313 common shares at December 31st last, standing in the balance sheet at $98,979,175. It operates about 975 theatres in the United States and many theatres abroad, including the Plaza and the Carlton theatres in London. It has also a 50 per cent. interest in the Columbia Broadcasting system. It is ably managed by its two chief executives, Mr Adolph Zukor and Mr Jesse Lasky. Warner Brothers is the next most important group, with a loan capital of $19,205,000 (apart from mortgages of $50,818,622) and a capital stock at August 31st, 1909, of 288,056 preferred shares, and 2,627,405 common shares of no par value, standing in the balance sheet at $61,176,112. Through control of the Stanley Company of America (which it acquired at the end of 1928) it operates 350 cinema theatres. It also acquired, in 1928, the well-known producing company called First National Pictures. Warner Brothers were the pioneers of the "talkies." When everyone had rejected the Vitaphone system of the Western Electric, Warner Brothers staked their whole resources on the future of talking films, and took a 50 per cent. interest in the Vitaphone Corporation. They are now reaping the benefit of this investment, for the film producer pays the sound patentees a royalty of no less than $500 on every reel (1,000ft.) using the sound process.

The rise of Fox Film Corporation and Fox Theatres, under the Napoleonic management of Mr William Fox, is one of the romances of the cinema industry. For many years Mr Fox had been building up a strong producing unit, and was only twelve months behind Warner Brothers in taking up the talking film. At the end of 1928, Fox Theatres, by buying the Roxy and other large circuits, had obtained control of 600 theatres, while the Fox Film Corporation, through subsidiary companies, owned about 450. Unfortunately, Mr Fox was not content to rest with these theatre acquisitions. In the course of last year he acquired nearly a one-third interest (433,000 shares) in Loew's Incorporated. This company has a loan capital of $38,411,475, and a share capital of 146,763 preferred shares and 1,372,108 common shares of no par value, with a balance-sheet value of over $46,000,000, and owns a circuit of 200 vaudeville and cinema theatres, and a first-class production company, Metro-Goldwyn-Mayer. In order to obtain a controlling interest in Loew's, Mr Fox formed a syndicate of friends and bought in the open market an additional block of 227,000 shares. The two blocks gave him approximately a 60 per cent. interest, and made Loew's Incorporated to all practical purposes a Fox subsidiary. These purchases cost approximately $70,000,000. Next Mr Fox sent an emissary over to Great Britain, and bought for $20,000,000 a majority interest in a syndicate controlling Gaumont British. At this time the Fox Film Corporation had a loan capital of $13,142,980 and a capital stock of 820,660 class "A" and 100,000 class "B" common shares of no par value, with a balance

sheet, as at December 31st, of $42,605,000. To finance the Loew and Gaumont British purchases, Mr Fox resorted to short-term notes. As a result of the Wall Street slump, Mr Fox got into difficulties and signed over control of his companies to three trustees: Mr Stuart, of Halsey Stuart, Mr Otterson, of Electrical Research Products and himself. This was the beginning of a great legal fight. Mr Fox accused his friends of tricking him into a sale of control, and having obtained fresh banking support from Banc-America-Blair and Dillon Read, endeavoured to get back control from his co-trustees. He was defeated, and in the end the rival banking interests came together. Mr Fox sold out his interest in Fox Film and Fox Theatres to General Theatres Equipment. Halsey Stuart and Dillon Read have joined forces with other finance houses in making an issue of General Theatres Equipment convertible debentures and common shares to finance the purchase. Mr Fox has the consolation of receiving a salary of $100,000 a year as chairman of an advisory committee.

The next table shows the earnings, dividends and yields of the four leading stocks:

	High, 1929.	Present Price.	1929. Earned.	Paid.	Yield on Earnings.	Yield on Divs.
			$	$	%	%
Paramount ...	74⅞	68	6·34*	4·0	9·35	5·88
Loew†	84½	91½	7·91	3·75§	8·64	4·10§
Warner Bros.†	64½	57⅛	6·34	4·0	11·03	6·96
Fox Film "A"	105⅝	50½	10·29	4·0‡	20·38	7·92

* On 2,444,794, average number of shares outstanding.
† Financial year ends August 31st.
‡ Paid in scrip.
§ Includes extras of 75 cents. Div. yield on $3·0 would be 3·28 per cent.

It is generally agreed that Paramount Publix and Loew's Incorporated are the most "seasoned" of these investments. Paramount's earnings for the March quarter this year showed an advance of 86 per cent. over those of the corresponding period of last year, and it is expected that net income this year will amount to about $7 per share on the equity stock, which has been increased from 2,685,313 to 3,256,479 shares, mainly by the purchase of the outside stock in Famous Players Canadian Corporation. Loew's Incorporated earnings for the twenty-eight weeks ended March 14th this year (the fiscal year ends in August), were 59 per cent. above those of the previous year. It is estimated that by August 31st the company will have earned $11 per share on 1,372,108 shares, against $7.91 on 1,363,993 shares in 1928-29. Warner Brothers is regarded as a more speculative stock because the recent growth in earnings has been based on a successful "gamble" on the talking pictures. The company earned $3.67 per share on 2,606,211 shares in the six months to March 31, 1930, and is expected to earn $7.12 per share for the year to August 31st, against $6.34 in the previous year. As for Fox Film, until this company settles down to business under its new management, its shares must be regarded as having possibilities which are considerable but difficult of assessment.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
June 3.	June 5.

The Stock Exchange experienced another uneventful week, with all indications pointing to the markets' having reached a period of "dead centre." Liquidation came to an end some time ago, and its recrudescence is no longer treated as a factor in market calculations. On the other hand, the public steadily refuses to act on the assumption that prices have reached rock-bottom, and to initiate even the most discriminating of buying movements. The prominence given to the hard facts of industrial depression by unemployment figures and recent House of Commons debates is, possibly, the largest single force making for quiet markets. Until investors know how far trade recession has gone, and is going, it is obviously impossible to say whether present Stock Exchange prices have or have not fully discounted the potential falling off in industrial earnings. On this hypothesis, the present period of quietness on the Stock Exchange is capable of enduring for some little time to come.

The Gilt-edged markets alone experienced an accession of business, Four and-a-Half per Cent. Conversion being particularly prominent on Wednesday, when influential buying found the market short of stock. Reports of an impending Five per cent. War Loan conversion operation were persistent, the date generally suggested being early next month. India loans were steady despite the news of further rioting in Bombay and elsewhere. The new India Sixes advanced to 1⅛ premium. Dominion and Colonial stocks were featureless, apart from a steady absorption of the last New Zealand Loan. Home Corporation stocks, new and old, remained in fair demand. Interest in the Foreign market was chiefly centred on European stocks, particularly those of France.

Though Home Railway quotations, on the whole, were maintained, the market remained apathetic. The traffic figures afforded comparison with those of Whitweek in 1929, but only two groups, the L.M.S. and the Great Western, showed an ostensible gain in gross receipts. The favourable decision of the House of Lords Committee on the preamble to the Underground Bill for an extension in the outer suburbs of North London obtained despite the strong opposition of the London and North Eastern, encouraged buying of Undergrounds in mid-week. The Foreign Railway market remained depressed, a fresh slump in Cordoba Central ensuing upon the publication of a circular asking for a year's grace for the payment of Second Debenture arrears. Other Argentine issues had a heavy appearance, and Leopoldinas fell as a result of selling by nervous holders despite the good report, which is dealt with on page 1231.

The Industrial markets had a fairly satisfactory undertone, but suffered from a general paucity of business. Similar conditions obtained in New York, and international stocks had an undistinguished week, losing ground slightly on balance. The maintenance of the interim distribution of Carreras brought a modest accession of business in tobacco shares, but breweries were subjected to scattered sales. Courtaulds showed a slight improvement, but other rayon shares remained undecided. The Cook (St. Paul's) reconstruction scheme (discussed on page 1229), was regarded as improving the immediate dividend prospects of the preference and ordinary shares. Apart from Rolls Royce (which, with its narrow market, is always a law to itself), motor shares were heavy. In the coal and steel share market William Cory were again harder on anticipations of an increased dividend, but the news that the new £6,000,000 Cunard liner was to be built by John Brown caused some slight selling of Swan Hunter. Electrical shares held their ground in a quiet market. British Can encountered sharp profit-taking. Bank shares had a firmer tendency, and insurance descriptions attracted increased investment attention as the week progressed.

Rubber shares were steady for the most part, despite a fresh setback in the price of the commodity. A larger turnover left Rubber Trusts lower on the week. The tea share market had an easy tendency, the week's commodity auctions being characterised by larger supplies and a more irregular tendency. Oils failed to benefit from a decrease in Californian crude production, the market being in a mood to listen rather to the warning note sounded in the Burmah report (dealt with on page 1231).

Mining shares lost the sparkle which characterised some of last week's operations. Brakpan, in the Far Eastern list, were again in demand, and Modder Deep also finished a trifle better, but several other descriptions receded fractionally. Rhodesian copper shares were dull, but fairly steady, apart from Congo Borders and N'Changa, which were again easier. The Rhodesian Anglo-American report is dealt with on page 1232. Ashanti Goldfields were somewhat freely offered on disappointment over recent development results. Lake View and Star was a strong feature in the Australian market, but profit-taking led to a decline at the close. The price of tin showed further recession, but the share market maintained a lethargic appearance, Southern Malayan alone gaining ground.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Business in all markets continued dull and was cut into by the three days' holiday. The tone of the share market is improving slightly, and prices are supported by a large short interest together with moderate investment trust buying. Bears have been able to crush prices in volatile specialties, but the effect on the market is offset by a strong forward movement in public utilities. Railroad shares are only moderately depressed, and April earnings statements show a decline of 33 per cent. in net income compared with a year ago, which is a slightly lower drop than that of the previous month. Car loadings are still at the 1924 level, and there have been declines in three successive weeks. Merchandising shares are up on reports of better retail trade, but wholesale trade is lower, and commodity prices are still falling. Food company shares are reaching high levels owing to the growing spread between raw material costs and retail prices. Further dividend reductions have been made and more are expected next week, including Kennecott Copper, but in most cases they have been anticipated by the market. Bonds are sluggish in spite of easy money, but new capital issues are being absorbed at the rate of $200,000,000 weekly. The reparations issue is expected to go quickly, and an increase in other offerings, especially foreign, will probably follow.

CANADA.

The Canadian stock markets have recently pursued an erratic course. Trading is still limited in volume and speculative operations are mainly confined to professional traders. During the latter half of April the general tendency was in an upward direction, but in the opening days of May the violent break in New York found immediate reflection in the Canadian markets, though the losses of the leading issues did not approach those experienced in New York. For some days the markets remained in confusion, but about May 8th began to respond to a brisk buying movement and became gradually steadier, though many former favourites were completely neglected. Brazilian Traction is still the most popular trading counter. Rumours are current crediting American interests (represented by the American and Foreign Power Corporation) with a desire for control, and a willingness to pay $60 per share for the common stock. A merger of three of the smaller pulp and paper companies has had no noticeable effect on pulp and paper stocks. Despite rumours of an impending merger between Distillers-Seagram and Hiram-Walker, distillery and brewing stocks still lack effective market sponsorship. Uncertainty regarding the immediate business outlook is a depressing factor, but hopes have been raised by good reports of the Western wheat crop. No considerable revival, however, is looked for until the autumn. Bonds continue to be popular.

INVESTMENT NOTES.

The Stock Exchange and the Investor.—The internal organisation and policy of the Stock Exchange have been in the limelight this week. In the first place, the Stock Exchange Committee has successfully checked an attempt by an outside concern to manipulate the market in Edison Bell shares. The Committee imposed a temporary ban on the marking of these shares, which was removed on a public announcement by the company disclaiming any knowledge of the operation. In the second place, a writer in the *Financial News* has stoutly arraigned the present organisation of the Stock Exchange, declaring that the latter's personnel is unduly numerous, its financial basis unduly narrow, and its charges unduly high. Many of the points made have frequently been the subject of discussion within the Stock Exchange itself, and call for detailed treatment. Meanwhile, the following remarks on the alleged shortcomings of the Stock Exchange have been forwarded by a member of the "House." "At a representative Stock Exchange function this week, where views were expressed on a variety of 'House' matters, speaker after speaker agreed that the duties of the Chairman of the Stock Exchange involved whole-time attention, and that members of the Committee were required to spend an increasing number of hours in carrying out their task—on a purely honorary basis. It was pointed out that many men who would be excellent candidates for election are unable to spare the time from their own businesses. The result is, naturally, that some members are drawn from the ranks of those who have practically retired from active business. There is a real need for younger and more energetic members, on the Committee, but, so long as the present system of voting remains in force, no change is likely to be made. This voting is in accordance with a principle laid down more than a century back, and reaffirmed in 1876. What was good enough for fifty or a hundred years ago is totally unsuited for present-day conditions, and the very first thing the would-be reformer must undertake, if he sets his hand to Stock Exchange reform, is the recasting of the manner in which the Stock Exchange Committee is elected. Members of the 'House' again, are not afraid to confess that a great deal more could have been accomplished in the past to safeguard the interests of the investor and the speculator. It is felt now that too lax a method was adopted in the procedure regarding 'permission to deal.' Much more might have been done to prevent the negotiation of shares in companies which, from their outset, had little chance of making good. The Stock Exchange Committee cannot be expected to exercise powers of discrimination as regards the probable future earning power of the shares of new companies, which have been formed under *bona fide* auspices. It is felt, however, that there may have been too ready a willingness to let through stocks and shares, dealings in which appeared tolerably certain to involve the 'House' in discredit and the public in pecuniary loss. Within the last few months more discrimination has been applied to new issues. In some cases, for instance, their sponsors have been requested to postpone application for leave to deal until some indication of earnings possibilities was available. This is a wholly healthy sign. The 'House' has come through the Hatry Settlement, the American crashes, and a number of minor difficulties in a matter which has evoked public appreciation. It is not too much to say that the Stock Exchange, realising the confidence which clients repose in its integrity, is eager to do whatever is possible to ensure the financial protection of the community."

Base Metals—A European Alliance.—Alliances inevitably breed counter-alliances, whether their avowed purpose be defence or defiance. That the American Copper Exporters', Incorporated, have bowed to the storm and cut copper prices has not relieved the discontent evoked among European industrialists by their policy of holding the market up for many months in opposition to clear economic tendencies. For some time, accordingly, there have been reports of a new grouping in the European base metal industry. These are now confirmed by the announcement that the Amalgamated Metal Corporation, Ltd., is about to effect a substantial exchange of shares with the Metallgesellschaft of Frankfurt, while negotiations are in an advanced state for a similar arrangement with the Société Générale des Minerais, of Brussels. The declared object of these transactions is "to secure co-operation in certain directions" (which are not specified), and to facilitate the provision of raw materials needed by the smelters and refineries. Each of the groups concerned will be represented on the board of the other. The Amalgamated Metal Corporation is a fusion of the British Metal Corporation and Henry Gardner and Company, carried out last December, whose influence extends throughout the non-ferrous metal industry of the British Empire. The Metallgesellschaft has been, since October, 1927, the paramount power in the base metal industry of Germany and Central Europe, while the Société Générale des Minerais fills the same rôle in Belgium. It is understood that the way has been left open for subsequent French adherence, if desired. The formation of a strong European base metal *bloc* is symptomatic of the tendency of contemporary industrial organisation to override international boundaries, though its more immediate object is the alignment of the European side of the industry against American encroachment—a process which the unfortunate policy of the American Copper Exporters has appreciably hastened. It remains to be seen whether the immediate outcome will be an intensification of hostility between the American and European interests, or an ultimate "deal" between the two, aiming at some sort of co-operation. In the meantime, the Amalgamated Metal Corporation may find it necessary to ask its shareholders to authorise an increase of its capital, though there is no question of control remaining in other than British hands, the suggested exchange of shares with the Metallgesellschaft being, it is understood, on a 15 per cent. basis.

Cook (St. Paul's) Capital Scheme.—In consultation with Sir William Plender, the directors of the wholesale drapery and warehousing business of Cook, Son and Company (St. Paul's) propose to reorganise the company's capital. The concern became a public one during the 1920 boom, and suffered appreciably during the depression of 1921, its losses being subsequently written off by the chairman's taking 1s. deferred shares in place of 289,820 ordinary shares. Under the present scheme the 7 per cent. cumulative participating preference shareholders will be repaid, in cash, 10s. in the £ of their capital, out of gilt-edged securities which the directors believe "cannot usefully be employed in the company's business." They will also be given one deferred share of 1s. for every 20 preference now held, as compensation for yielding up their rights to 25 per cent. of available profits after the existing ordinary and deferred shares have received non-cumulative dividends of 7 per cent. and 1s. per share respectively. The ordinary shares will have 5s. in the £ written off, in order to extinguish the goodwill item (which stands in the balance sheet at cost, £325,000), but will be entitled to a non-cumulative dividend of 9½ per cent., instead of 7 per cent., before anything is paid on the deferred shares. The attitude of shareholders towards these proposals will be governed by their views as to the probable course of the company's future earnings. If it be assumed that profits will not rise much above the 1927 level, both preference and ordinary shareholders stand to gain under the new terms. The former will receive 10s. in cash for half their holdings of a share, valued on the Stock Exchange, before the announcement, at only 16s. 6d. On the remaining half of their capital they will receive the same rate of payment as at present (7 per cent.), plus (possibly) a further ½ per cent. under the guise of deferred dividend. The ordinary shareholders will, in effect, receive dividends equal to 7⅛ per cent. on their present holding, instead of 7 per cent. If profits were significantly enhanced, however, the scheme would appear much less attractive from the points of view of both classes of holders. What, in fact, are the prospects in this direction? Profits since 1924 have shown, generally, a declining tendency:—

Year.	Profit. £	Year.	Profit. £
1924	322,101	1927.....	216,099
1925	266,446	1928.....	195,663
1926	179,672	1929.....	166,183

The company has naturally suffered by reason of the depression which has settled on all branches of the textile trades, accentuated by the tendency of the big stores to go to the manufacturer direct. The board has, in fact, closed some of the company's smaller premises recently, and the return of capital to the preference shareholders can be interpreted only in one way—as a gesture that the company is not likely to require new working capital for its business for some time to come. The present scheme, indeed, represents a *volte face* of directorial opinion, since as recently as February 18th last the chairman announced that (1) the company would be "weakened by any reduction of capital which involved a distribution of part of its surplus funds," and (2) that goodwill would be dealt with *by way of the general reserve*, when the latter stood at £325,000. On the evidence, shareholders may elect to support the board's proposals, without taking an exaggerated view of the "savings resulting from the proposed reorganisation of the company's capital," to which the circular makes more than one reference.

John Brown Proposals.—The accounts of John Brown are an eloquent commentary on the state of the heavy industries. Profits, which have been declining since 1922-23, have shrunk to negligible proportions, only £24,184 being available after providing for debenture interest. No distribution has been made on the ordinary shares since 1924-25, and the preference dividend, which, although paid, had not been fully earned in the last two years, is now passed. The balance sheet shows that the excess of current liabilities over liquid assets is no less than £1,013,433, as compared with £540,728 two years ago. It is clear that the company has reached a serious position, and no surprise will be felt that the capital reconstruction foreshadowed by the chairman last year is now brought forward. The effects of the reconstruction on the various securities are as follow:—The first and second short-term debentures, having currencies of 3, 5, 7 or 10 years, are to have their dates of maturity extended to December 31, 1965, and the rates of interest (which have been variable up to 6½ per cent.) fixed at 6 per cent. and 6½ per cent. respectively as from June 30, 1930. A sinking fund is to be established for the purpose of redemption by purchase in the market at or below par or by drawings at par, commencing in 1935. The company may also redeem the whole or part of the debentures on six months' notice on any half-yearly interest date, and, providing such redemption takes place before

HARRIS, FORBES & COMPANY LTD
77 CORNHILL, LONDON, E.C. 3
INVESTMENT SECURITIES
GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

January 1, 1934, premiums varying from 3 per cent. to 1 per cent. are provided for. It is further proposed to take power to charge assets (other than specifically mortgaged properties) in priority to the existing debentures for the purpose of securing bank loans, etc. Authority is to be given permitting the transfer of the Atlas Works, Sheffield, and Scunthorpe Works to "any other company or amalgamation of companies," on the condition that shares or other consideration received for such transfer are charged for the debenture holders. The preference shares, of a present denomination of £10, are to be split into ten shares of £1 each, and holders are asked to sanction a writing-off of 8s. per £1 share. The resulting 12s. shares are then to be subdivided into "A" and "B" shares of 6s. each, following which each two "A" shares will be consolidated into one "A" share of 12s. The "B" shares will remain of a denomination of 6s., holders being given the right of conversion into ordinary shares of the same nominal value up to June 30, 1935. Arrears of dividend from June 30, 1929, are to be cancelled and the fixed dividend to be made 7 per cent. non-cumulative from July 1, 1930, in place of 5 per cent. cumulative as heretofore. Provision is made that in the event of a winding-up holders shall be entitled to 1s. 8d. for every 1s. of capital paid up. A sum of 14s. per share is to be written off the ordinary capital, reducing the nominal value to 6s. per share. Some 1,250,000 shares are at present 15s. paid, and will become only 1s. paid following the writing down. The balance of 5s. per share is to be called up in two instalments of 2s. 6d. each, payable November 29 next and May 30, 1931, respectively. The result of these proposals will be to reduce the paid-up share capital by £2,625,000. In addition to this, it would appear from the *pro forma* balance sheet that the contingency account of £325,000 will be absorbed, together with £100,000 from the general reserve and the carry-forward of £115,109, making a total of £3,165,109. The writing down of assets will reduce the total to £4,693,964, as compared with £7,859,073 as shown in the balance sheet now presented. In a circular letter to the proprietors the chairman, Lord Aberconway, refers to the enormous shrinkage in the demand for the company's heavy products since the war. Immediately after the scheme has been carried out it is proposed that the position in regard to the Atlas and Scunthorpe Works shall be dealt with in a rationalisation scheme. Negotiations were, in fact, in progress some little time ago with the English Steel Corporation, but were apparently abandoned in the latter part of last year. The company's tender for the new express Atlantic liner for the Cunard Company has been accepted. The least satisfactory feature of the scheme is that the company is not replenishing its working capital, despite the big deficit of liquid resources. Apart from the £312,500 which the calling up of the unpaid capital will produce, no new money is being introduced, and a large amount of liabilities will remain unliquidated. As regards the sacrifices asked of proprietors, the proposals would appear to favour the ordinary as compared with the preference holders. The latter might reasonably contend that their non-cumulative dividend, if paid, should produce not less than the cumulative dividend they are asked to give up.

New Cammell Laird Scheme.—Following the refusal of the Cammell Laird 4½ per cent. debenture stockholders to consent to variations in the conditions governing the redemption of their holdings, the proposed terms have now been revised. With regard to the 5 per cent. first mortgage stock, it is proposed that the repayment date be extended for five years from July 1, 1930, and interest be increased from 5 to 5½ per cent. The company, on giving three months' notice, is to have the right of redemption at any time at £110, instead of at £103 as at present provided. The restrictions on the payment of dividends on other shares prior to redemption remain unchanged. As regards the 4½ per cent. debentures, the repayment date is to be extended to July 1, 1935, in respect of only half the stock, the balance to be repaid *in cash* on July 1 next at the present redemption rate of £102½. On the unredeemed portion the rate of interest is to be increased from 4½ per cent. to 5½ per cent., while redemption is ultimately to take place at £110. The company is to be at liberty, however, to redeem the whole of the balance up to July 1, 1931, at £104, to 1932 at £105½, 1933 at £107, and 1934 at £108½. With regard to the 5 per cent. debenture stock, such modifications are to be made in security as may be involved in giving effect to the above variations. The final redemption date remains unchanged at April 1, 1947, but the rate of repayments is altered from £103½ to £105 up to April 1, 1935, £107½ to April 1, 1940, and £110 up to April 1, 1947. The suggested modifications, it will be seen, are all favourable to the debenture-holders, and the approval of the revised scheme, at the forthcoming meeting, would appear to be in the interests of all concerned.

James Finlay.—The results of James Finlay have been awaited with more than normal interest, in view of the reduction in earnings and dividends shown this month by four of the company's tea subsidiaries, particularly Consolidated Tea and Lands. The report for the year ended December 31st last, however, throws no light on this matter, the year's receipts including dividends received by the parent company only up to the end of last year. The company's Imperial interests are extensive, embracing large holdings in jute, tea, cotton and other produce business, merchant banking and shipping, and, at home, cotton manufacture and bleaching. The results of the past three years are shown:—

* Including railway and bank shares.

† Profit of £52,980 on sales of investments credited to general reserve.

The company draws its revenue from three sources. Of these, receipts from trading operations have been steadily falling, and last year were less than half of those of 1927. Dividends from Gilt-edged and other "outside" securities are stable, while the decline in receipts from ordinary shareholdings last year brought these back approximately to the level of 1927. The market, which feared a cut in the ordinary dividend, has tended to regard the maintenance of the latter at 25 per cent., at the expense of the customary allocation to reserves, as a token of the directors' confidence in the outlook. In view of the known conservatism of the board, this interpretation may be correct, though some observers point out that the decline in receipts from subsidiaries this year will be substantial. Of the four tea subsidiaries, Consolidated Tea has just reduced its ordinary dividend from 22½ per cent. to 5 per cent., Amalgamated Tea from 17½ per cent. to 7½ per cent., Kanan Devan from 35 per cent. to 20 per cent., and Anglo-American Tea from 17½ per cent. to 10 per cent. The directors may probably have been influenced in their present policy by the fact that general reserve obtained nearly £53,000 in the past year as a result of a "windfall"—the selling of certain investments at a profit. At 4 3/16, the shares, cum a final dividend of 3s., yield £6 4s. 4d.

John Lewis and Company.—The accounts of this company of Oxford Street drapers for the financial year ended January 31st last are again accompanied by a report of an exhaustive character. Trading profit for the year reveals a decline of some £35,000 from last year's total of £167,549, while net profit (after an amount of £5,753 has been written off improvements and alterations), comes out at £66,753, against a net return for the previous twelve months of 95,542. Preference dividend takes £40,849, and a final dividend of 1 per cent., making 3 per cent. for the year, is to be paid on the ordinary capital, which is vested in trustees for the benefit of the staff, and forms the basis of the company's co-partnership scheme. The balance sheet reveals several movements. Creditors now stand at £132,074, compared with £77,892 a year earlier, while investments are up by £91,092 to £313,856 and debtors by £26,636 to £108,091. In the old "John Lewis" business, considerable improvement in trading was recorded, the total sales of the piece-goods departments being greater by nine per cent. than those of the previous year, and of the furnishing departments by 51 per cent. The decline in profits is largely (if not entirely) attributable to the "difficult year" which the company has experienced on the Harries premises, where structural metamorphoses in mid-season have had their inevitable consequences. In the circumstances, it is gratifying that for the first thirteen weeks of this year the sales in the Harries block exceed those of the same period last year by 35 per cent. In view of the fact that the equity of the company is vested in the staff, the statement in the report that "the results of the present year seem certain to approach and likely to exceed the 'record' figure (of £175,000) earned in 1927," will be of interest to the firm's employers, as well as to the general public.

Leopoldina Results.—The report of this Brazilian railway for the twelve months to December 31st last reveals a satisfactory state of affairs. Gross receipts for the year totalled £2,480,551, against £2,366,008, an increase of £114,543, while working expenses rose only by £28,565 to £1,606,397. Net receipts thus stand at £874,154, compared with £788,176, and, after deduction of all fixed charges, there remains a net profit of £639,934, which represents an increase of £89,028 over the result for the previous twelve months. The amount available for ordinary dividend represents 7.0 per cent. earned, against 5.8 per cent. for the previous year, and a distribution of 5 per cent. is made:—

Year ends December 31.	1927. £	1928. £	1929. £
Gross receipts	2,347.902	2,366,008	2,480,551
Working expenses	1,577,548	1,577,832	1,606,397
Net receipts	770,354	788.176	874,154
Fixed charges	235,433	237,270	234,220
Net profit	534,921	550,906	639,934
Brought forward	94,334	100,580	103,457
Preference dividend.....	156,494	156,494	156,494
Rate %	5½	5½	5½
No. of times covered	*3·4*	*3·5*	*4·1*
Ordinary capital:—			
Earned £	*378,427*	*394,411*	*483,439*
Paid £.....	309,181	343,535	343,535
Earned %.....	*5·5*	*5·8*	*7·0*
Paid %	4½	5	5
To reserves	63.000	48.000	113,000
Other allocations	...	...	14,930
Carried forward	100,580	103,457	115,432

The sum of £14,930 is being utilised to write off the balance of expenses on the issue of terminable debentures. The passenger traffic for the year shows an increase in numbers of 3,083,202, and an increase in sterling receipts of £9,437 or 1.78 per cent. From goods traffic there is an increase of £112,804, or 6.99 per cent. The directors report that the construction of the Caratinga Extension in the State of Minas Geraes is actively proceeding, and it is expected that the whole line, consisting of 98 kilometres, will be completed during the current year.

Forestal Land.—The Forestal Land, Timber and Railways Company announces the broad lines of an important scheme under which shareholders will be relieved, as far as possible, from the effects of double taxation, when the Argentine Government introduces an income tax for the first time. Under this plan the company will receive bonds, notes and shares in an Argentine company which is to be formed to acquire its Argentine assets. Unless the present shareholders agree, none of the existing securities will be disposed of by the new company. Forestal Land will act as the distributing agent, in this country, of the products of the Argentine company. It is pointed out that, owing to its predominant position, Forestal Land must necessarily be the prime mover in any effort to nationalise the quebracho industry by means of amalgamations, etc., but that no Argentine or Paraguayan concern would be likely to come in if it became thereby subject to heavy English taxation on dividends, depreciation and reserve allocations, and its shareholders were exposed to the costs and formalities of English probate. Under the scheme, the Forestal company will pay taxation only on its earnings as English distributing agent, and on dividends and interest received from subsidiaries, while the Argentine company will be free from the attentions of the English tax collector.

Totalisators and Others.—It will always stand to the credit of the London Stock Exchange Committee that it refused "leave to deal," in the height of the 1928 new issue boom, to Totalisators, Ltd. The Stock Exchange Committee was in a position to make this decision because no totalisator machine can be used in this country unless it has been "adopted" by the Betting Control Board, and the "Premier" or "Julius" machine sponsored by Totalisator, Ltd., had not even been submitted, at the time, to the Board for consideration. The first report of the company has now been issued. The prices of the machine have been submitted to the Betting Control Board, whose verdict the directors are awaiting. The balance sheet shows that cash has sunk as low as £1,020, but there are calls in arrear of £10,595 on the issued capital of £182,047. Apparently £100,000 was paid in cash to Automatic Totalisators of Sydney, Australia, for the patent rights, £30,115 to the Inventions Exploitations Trust of London, and nearly £25,000 for preliminary expenses. The French, British and Foreign Trust was the issuing house. Other recent reports have thrown fresh light upon certain "boom" promotions. The directors of Direct Produce (London), Ltd., which issued 1,050,000 shares of 2s. to the public in February, 1929, have had to confess that a number of the shops acquired were quite unsuitable for a multiple-shop business, and now propose the formation of a new company, shareholders being given the right to take up one new share of 1s. credited with 8d. paid in respect of each share held. Shareholders may ponder before accepting the scheme. A similar reconstruction plan has been proposed by a committee of shareholders in the case of Electramonic, a company floated in 1928 in the gramophone boom. For every 10s. preferred ordinary share the shareholders are offered a similar 10s. share in a new company, 6s. 8d. paid-up, and for every 1s. deferred share a similar 1s. share, 8d. paid-up. In the cases of Direct Produce and Electramonic, the Stock Exchange Committee had no grounds for refusing "leave to deal." Both were "legitimate" commercial gambles. One may be permitted to hope, however, that some of the lessons of the 1928-29 boom in new issues have now been learned, both by the investor and the Stock Exchange.

Further Oil Reports.—The report of the Burmah Oil Company for 1929 shows an increase of 96 per cent. in total income, and of 149.5 per cent. in net income, after allowing for overhead expenditure, debenture interest and

insurance and field reserves. The results for the past three years are shown in the following table:—

	1927. £	1928. £	1929. £
Trading profit	1,903,312	1,558,974	2,956,548
Interest and dividends on investments	804,360	562,347	1,214,240
Total income	2,707,672	2,121,321	4,170,788
Net income after overheads & tax	1,744,772	1,309,626	3,267,472
Preference dividends	268,125	261,875	260,937
Available for ordinary	1,476,647	1,047,751	3,006,535
% *Earned*	*23·8*	*17·4*	*47·5*
% Paid	20·0	20·0	30·0
Reserves	200,000	200,000	500,000
Carry forward	502,417	151,085	399,775

The balance sheet gives an analysis of investments as required by the Companies Act, which suggests incidentally that the low valuation of the company's Anglo-Persian Oil holdings involves a large hidden reserve. On the increased dividend distribution of 30 per cent. for the year, as against 20 per cent. for the previous year, the ordinary shares at the present price of 4 9/16 return a yield of 6.7 per cent. In contrast with Burmah Oil, a very moderate recovery was made by Lobitos Oilfields last year. The recovery was due to Mid-Continent crude oil prices in the United States, on which the company's selling prices are based, being advanced in May, 1929, from $1.20 to $1.45 per barrels, or from $1.44 to $1.85 per barrels, according to grade. The financial results for the past three years compare as follows:—

	1927. £	1928. £	1929. £
Net profit before depreciation	89,944	100,599	151,068
Net profit after depreciation	69,524	74,536	125,005
Earned	8·7%	9·3%	16·1%
Paid	10·0%	10·0%	12·5%

The dividend was increased from 10 per cent. to 12½ per cent., which allows a yield on the ordinary shares of £5 8s. 8d. per cent. at the present market price of 2⅛. Although the net profit before depreciation last year was 50 per cent. greater than in the previous year, the results fall far short of the average profits of 1924-26, which were about £555,000 per annum before depreciation. As regards the current year, the price of Mid-Continent crude oil in January lost practically the whole of its May, 1929, advance and recovered only half this loss in April. The unsatisfactory level of crude oil prices is no doubt responsible for the reduction from 22½ per cent. to 20 per cent. in the dividends paid to shareholders of the Venezuelan Oil Concessions, Ltd.

Salzdetfurth.—Twenty-five per cent. of Germany's total production of potash is obtained by the Salzdetfurth group, which embraces three nominally independent companies—Salzdetfurth, Aschersleben and Westeregeln. Salzdetfurth possesses half the stock capital of the other two companies, which, in turn, hold half the Salzdetfurth capital. On the concern's total capital of 72 million marks, therefore, dividends are paid to outsiders on only 36 millions, and the companies together hold bank deposits of precisely this sum. For the last three years Salzdetfurth has paid very conservative dividends of 15 per cent. and Aschersleben and Westeregeln of 10 per cent. At the beginning of 1929 the companies gave their stockholders valuable bonus rights in lieu of an increased dividend. Salzdetfurth offering 12 million marks of common stock and each of the other companies 6 millions to stockholders at par. The new shares were not entitled to dividends till 1930. Reserves have again been greatly strengthened, while the dividend rate remains unchanged. A further increase of capital on attractive terms is looked for, but at the moment the matter is in abeyance pending the completion of plans for building new fertiliser-mixer and other chemical factories.

Rhodesian Anglo-American.—Our mining correspondent writes:—For a week or so before the issue of the annual report, active speculation took place in the shares of this company to the accompaniment of rumours that the document would make an extremely good showing. From one point of view the anticipation has been fully justified. During the period from registration in December, 1928, to March 31st last, a gross profit of no less than £746,400 was made from "dividends, interest, share-dealings and other sources." Doubtless, share-dealings provided the bulk of the amount, as in the spring and summer of 1929 the Rhodesian copper boom, and subsequently the general slump occurred, during which shares sold at high prices could have been cheaply replaced. Of the sum above named, general expenses absorbed 33,700; income tax, £144,200, and preliminary outlay, £27,100. Some £217,800 is transferred to reserve, leaving a balance of £323,600, which is carried forward. The original capital of £2,500,000 was subscribed for at premiums of 2s. 6d. and 3s. 6d. per share, the proceeds being invested in Bwana M'Kubwa, Rhodesian Congo Border, Loangwa, Rhodesia Broken Hill and British South Africa shares. A further issue of 1,871,600 shares was made at 30s. premium at a time when the market price of the shares was about 10s. less. The funds thus provided were principally employed in adding to the holdings of Congo Border, Bwana, and B.S.A. shares. The £3,367,200 premium provided by these various issues (less £85,000 expenses) has been placed to reserve, plus the appropriation from earnings above mentioned. The total of £3,500,000 is equivalent to the present nominal capital of the company. In the balance sheet shareholdings at cost figure at £5,662,400; loans at call, £1,663,700; cash and debtors, £29,300, and creditors and tax, £150,200. In view of the strength of the financial position the proposal to increase the capital by 3,000,000 shares came as a disagreeable surprise to the market. Apparently no immediate offer of further shares is contemplated, the creation of the additional capital being recommended "so that in the event of further issues of shares being necessary in order to provide additional finance for the development of the assets in which the company is interested, such issues could be dealt with promptly." Nevertheless, the proposal, following on the heels of the debenture issue of the Roan Antelope, emphasises the amount of capital requiring to be sunk in the Northern Rhodesian copper industry before the profit-earning stage can be reached. Stock Exchange estimates place the market value of "Rho-Anglo" holdings at the equivalent of 35s. to 45s. per share. As no schedule is given, this computation cannot be accepted without reserve, although it may be based upon data not generally available.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Hambros Bank, Royal Insurance, India General Navigation and Railway, Nitrate Producers' Steamship, Fine Cotton Spinners' and Doublers' Association, Central Mining and Investment Corporation, Gresham Trust, British Overseas and General Investment, Shanghai Electric Construction, and Forestal Land, Timber and Trading Presiding at the annual meeting of the Royal Insurance Company, Mr W. R. Glazebrook declared that the recent decline in the value of Stock Exchange securities, in which many people had invested their savings as a provision for the future, emphasised the value of a life policy as a stable security. At the Fine Cotton Spinners' meeting the chairman said that on the land under cotton they had produced during the last season 476.8 lbs. of lint to the acre, a record for the property and an amount far beyond the average weight produced even by land in the Delta. At the Central Mining and Investment Corporation meeting, the chairman stated that the supply of native labour decreased from 197,646 at the end of March to 184,280 in December, 1929, and, though there had since been some improvement, the available supply was still considerably below the 206,000 required for the full operating capacity of the mines' existing plant.

CAPITAL ISSUES.

With the three issues this week—Port of London Authority, St. Helens Corporation and the Niger Company—out of the way, the capital market is hoping for some respite before the issue of the Reparations Loan. The *Port of London Authority* issue of £2,000,000 5 per cent. stock was a conversion operation to provide for the maturity of a like amount of 6 per cent. stock which had been issued in 1921 when interest rates were high. As the Authority had power to redeem this stock over the period 1930-40 it has called the bonds for redemption on July 1st next. Holders are offered the right to exchange into the new 5 per cents., which are redeemable at par on June 1st, 1970. Cash subscriptions were received at 99½. Why the Port of London Authority loans are not given trustee status may well be asked, seeing that they provide excellent security. The Corporation issues was that of *St. Helens*, which took the form of 5 per cent. stock at 99½, redeemable 1950-70. A guaranteed debenture issue was made by the *Niger Company*, secured as a floating charge, as well as being unconditionally guaranteed as to both principal and interest by Lever Brothers. This issue took the form of £1,500,000 5 per cent. stock at 94 and was for the purpose of refunding a like amount of 7 per cent. second debenture stock which will be repaid next October. The security is good, but the yield offered to the investor is not over generous.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to May 24, 1930, £148,993,687.
Total, including conversion recorded, January 1 to May 24, 1930, £221,845,961.

Port of London Authority.—Offer to holders of £2,000,000 Port of London 6 per cent. inscribed stock, 1930-40, of conversion into Port of London 5 per cent. inscribed stock, 1950-70. At £99½ per cent. Principal will be repaid at par on June 1, 1970, the Port of London Authority having the option of redemption, in whole or in part, at par, on or after June 1, 1950, on six months' notice.

St. Helens Corporation.—Issue of £800,000 5 per cent. redeemable stock, 1950-1970, at £99½ per cent. Trustees are authorised to invest in this stock. The principal will be repaid at par on April 1, 1970, unless previously cancelled by purchase or agreement, but the Corporation has the option of redemption, in whole or part, at par, on or after April 1, 1950, on three months' notice. The rateable value of the County Borough of St. Helens is £394,641, and a rate of one penny in the pound produces £1,539.

The Niger Company.—Offer of £1,500,000 5 per cent. consolidated guaranteed debenture stock at £94 per cent. The stock will be unconditionally guaranteed as to both principal and interest by Lever Bros., Ltd. The proceeds of this issue will be applied towards redemption of the 7 per cent. second debenture stock. The present issue will be redeemable by means of a cumulative sinking fund, which will provide for repayment of the whole issue not later than June, 1970. The company reserve the right to redeem, in whole or part, at par on or after June 15, 1940, on three months' notice. Average profit for past three years, after charging interest on the 5½ per cent. debenture stock, was £291,219, covering the interest on the present issue more than three times.

Rugby Gas Company.—Issue by tender of £15,000 6 per cent. redeemable preference stock, minimum price par, to be redeemed at par on July 1, 1950. The net profit of the company for the year ended December 31st last was £8,482, covering dividend on the preference stock and including the present issue 3.5 times.

Particulars of the following have been issued for information only with a view to Stock Exchange Introduction:—
Cable Telephone and General Trust. Issued capital £698,737, in 288,737 7 per cent. cumulative preference shares of £1, 295,000 7 per cent. non-cumulative preferred ordinary shares of £1, and 115,000 ordinary shares of £1. The company was registered in June, 1926, to carry on the business of an investment trust company. **Spanish Government Six per Cent. Internal Loan.** Authorised amount of the loan is 350,000,000 pesetas, of which amount outstanding on May 1, 1930, was 305,142,000 pesetas. **Banco Nacional Ultramarino.** Notice to shareholders of a new issue of 564,811 ⅛ shares of the nominal value of Escudos 90$00. List for subscription to 370,370 shares will be opened on May 31, 1930, and the remaining 194,441 shares have been subscribed by the Governments of the Portuguese Colonies.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices, summary of balance sheets and dividend announcements will be found on page 1252 under the heading "Company News."]

EUROPEAN AND NORTH AFRICAN.—Production for April: Iron ore, 3,254 tons; lead concentrates, 86 tons.

WEST END DIAMONDS.—Quarter ended March 31st: Loads washed (consisting of blue ground), 114,000 loads; total yield, 8,200 metric carats; yield per 100 loads, 7·19 metric carats; estimated value, £14,957; working expenses, £14,170; estimated profit, £787.

BROKEN HILL SOUTH.—For the four weeks ended May 3rd, 24,220 tons of crude ore were treated and produced 5,058 tons of leady concentrates assaying 69 per cent. lead and 22 ozs. silver per ton; also 4,318 tons of zinc concentrates assaying 49 per cent. zinc.

ELECTROLYTIC ZINC.—Production during four-weekly period ended April 30th, 4,279 tons zinc, of which 75 tons used at the works. Silver-lead product for shipment to Port Pirie for realisation containing 376 tons lead, 42,000 ozs. silver.

MAZAPIL.—Production for April: Copper matte, 889 metric tons; lead concentrates, 481 metric tons; zinc concentrates, 782 metric tons.

SANTA GERTRUDIS.—April: Dry short tons milled, 44,257; total revenue, after allowing for development and participation of owners, but before deducting reserves for depletion, depreciation, &c., $112,775. (March, $109,134.)

NORTH BROKEN HILL.—April production: 34,995 tons of crude ore were treated, assaying 14·4 per cent. lead, 8·7 ozs. silver per ton and 10·4 per cent. zinc, producing 7,030 tons lead concentrates, assaying 67·5 per cent. lead, 37·2 ozs. silver per ton, and 6·6 per cent. zinc; also 5,950 tons zinc concentrates, assaying 49·1 per cent. zinc, 2·2 per cent. lead and 3·3 ozs. silver per ton.

LYDENBURG PLATINUM AREAS.—Quarter ended March 31st: Ore treated 10,360 tons; estimated recovery of platinum group metals, 2,315 fine ounces; estimated recovery of platinum group metals per ton treated, 4,469 dwts.

SAN FINX.—April: Extracted, 3,734 tons. Mill crushed, 3,284 tons; yields 15·25 tons tin concentrates, 15·5 tons wolfram; estimated value, £3,050; working costs, £2,450; development, £80; construction and equipment, £275. (All returns are based on metric tons—say, 2,200 lbs.)

COMPANY MEETINGS, &c.

ROYAL INSURANCE COMPANY, LIMITED.

FUNDS EXCEED 41 MILLIONS.

STRIKING LIFE RESULTS—RECORD QUINQUENNIAL SURPLUS.

WORLD-WIDE ACTIVITIES AND DEVELOPMENTS.

The eighty-fifth annual general meeting of shareholders of the Royal Insurance Company, Ltd., was held on Monday, the 26th inst., at Liverpool.

Mr W. R. Glazebrook, chairman of the company, presided over a good attendance.

Mr Robert M'Connell, general manager, having read the notice convening the meeting,

The chairman said: Ladies and gentlemen, before proceeding to a review of the operations of the year, I would wish to refer to the loss we have sustained through the death of Mr. Thomas H. Jackson. Mr. Jackson's directorial associations with the company, and with the Queen Insurance Company, of which he was chairman on its amalgamation with the "Royal" in 1891, existed continuously for more than half a century. During that long period, Mr Jackson rendered signal services to the "Queen" and the "Royal," and he retained to the very end of his association the keenest interest in our affairs. We shall miss his presence and familiar figure.

Following upon the decision I had the pleasure of communicating to you at the last annual general meeting, to the effect that closer co-ordination would be developed between the "Royal" and the "Liverpool and London and Globe," the aftermentioned directors of the latter company joined the board: Sir Frederick C. Bowring, Messrs J. Bruce Ismay, Hugh Lewis, W. F. Moore, W. J. Orr and R. Q. Wilson. Unfortunately Mr. Bruce Ismay, who had for many years been a valued member of the board of the "Liverpool and London and Globe," found that he was unable to attend the meetings of the board, and tendered his resignation, which we accepted with great regret. A resolution proposing the re-election of the other directors referred to will be submitted to you at a later stage.

I turn now to the report and accounts for the past year, which are already in your hands and which I presume it will be your wish to take as read.

FIRE DEPARTMENT.

I am glad to be able to report an increase of £112,000 in the premiums as compared with last year, an achievement brought about without in any way departing from the strict standards of underwriting which we endeavour to maintain. Fire losses, including contributions to fire brigades, were higher by approximately £200,000, representing 47.89 per cent. of the premiums as compared with 45.82 per cent. for 1928. This expansion in the loss ratio was not due to any major catastrophe, or series of fires of exceptional importance, but rather to a general widespread increase in the number of outbreaks. Particularly was this noticeable in this country, where the experience was much more severe than we have been accustomed to for a number of years past. To a certain extent this more adverse loss experience also characterised the general foreign field, but I am glad to report that in North America, where, as you are aware, the company transacts a very extensive business, the results, though not quite on the high level of 1928, were very satisfactory, and reflect great credit on our management, both in the United States and in Canada. The expenses continue to be high and, including commissions, amount to 43.39 per cent.

FIRE COSTS AND PROBLEMS.

The increase in the ratio as compared with 1928 is consequent on a world-wide tendency for the commission costs of our business to advance, a factor which, stimulated as it is by the pressure of competition, is largely outside our control. This question of expenses is one of the most important problems we have to face in the conduct of our business, and constant effort is directed to secure the fullest measure of economy, consistent with the maintenance of a high level of efficiency. The result of the year's working in this department is a profit of £562,000, representing 8.07 per cent. of the premiums, and under all the circumstances I think this can be regarded as very favourable. After the transfer of £100,000 to the additional fire reserve, the percentage of the fire funds to premiums is slightly higher than in the preceding year, and now amounts to 104.18. Our operations in the fire department are world-wide, our results consequently reflecting world conditions, and while the year has possibly been uneventful so far as occurrences of outstanding importance are concerned, the developing competitive elements to which I have referred, and the necessity of meeting the requirements of the public in ever widening forms of insurance protection, have provided problems of their own in maintaining the position and prestige of the company in the forefront of insurance enterprise.

LIFE DEPARTMENT.

The new policies issued during the past year were 6,123 for a net sum assured of £3,699,593, an amount slightly in excess of the previous year. In the annuity branch the operations are on a more modest scale than last year, the purchase money amounting to £92,563.

On this occasion the life department calls for more extended reference than usual, seeing that at the close of the year the company's actuary made the customary quinquennial investigation into the position of the life and annuity business of the company. His report has been circulated along with our other reports, and I feel sure that the results will be read with satisfaction by you and by our policyholders.

The liability for the large new business written during the past five years, as well as for the old business, including all special reserves, has been provided for up to the full level of the stringent standard adopted five years ago. The surplus disclosed reaches the record total of £2,966,407, which is sufficient to provide a bonus to policyholders at the increased rate of 42s. per cent. on the sum assured for each full year's premium paid during the quinquennium on participating policies. This will absorb £1,854,879, and, after the allocation of £200,000 to the shareholders as their share of the profits of the quinquennium, a balance of £911,528 will remain to be carried forward unappropriated. The result of the valuation of the annuity fund enables the sum of £65,000 to be transferred to the assurance fund, thus bringing the amount carried forward in each section of the life fund more nearly to the same proportion to liabilities.

INCREASED BONUS.

The directors have very carefully considered the question of our rate of bonus. We have maintained an unbroken series of "Royal" bonuses for sixty-five years, without any reduction in the rate, even during the difficulties of the war period, a record attained by few companies. The position now disclosed is so strong, and our valuation basis so stringent, that, notwithstanding that the bonus rate for the past quinquennium is raised to 42s. per cent., the amount carried forward as an additional safeguard against the unknown contingencies of the future is, in the opinion of the actuary, sufficient to cover all fluctuations which can be foreseen, and permit of the payment, during the coming quinquennium, of an increased interim bonus. These striking results have been achieved without in any way impairing the profit-earning capacity of the future. We have, therefore, been able to announce that the interim bonus for "Royal" participating policies terminated during the year 1930 shall be at the rate of 45s. per cent. The subsequent rate of interim bonus will be determined from year to year in continuation of the present practice.

We are satisfied that the company's record in the past, when considered along with the present strong position of the life fund, will enhance the confidence of the public in the safety, and security, of the life assurance contracts of the company. Recent experience of declining markets for Stock Exchange securities, in which many people have put their savings as provision for the future, emphasises the value for such purposes of a life policy as a stable security. The popularity of endowment assurances for a long time past has been very marked, but there can be no doubt that, from the point of view of investment, coupled with the protection and security which the policyholder obtains immediately upon payment of his first premium, a whole life, with-profits policy in the "Royal" is peculiarly attractive.

SINGLE-PREMIUM POLICIES.

During the last few years a considerable increase has taken place in the demand for single-premium policies. Our prospectus has always provided for assurances of this description, but a tendency has developed for policies to be taken out in order to secure loans, the interest on which can be applied for the purpose of ameliorating the incidence of taxation, particularly on large incomes. In the Finance Bill now before Parliament the Chancellor of the Exchequer proposes by legislation to disallow the deduction of such interest from the policyholder's income, in calculating sur-tax. No doubt this course has been influenced by the fact that certain forms of policy, issued for a term often as short as five years, and which contain little or no element of life assurance, have been designed to assist in the avoidance of sur-tax payment. We, in common with most of the leading companies, have not issued short-term policies of this type, and our single-premium policies, which represent a comparatively small proportion of our business, all provide the normal life assurance cover. In the interests of our policyholders we would have hoped that the Chancellor's object could have been effectively achieved without interference with their rights, hitherto available, in connection with loan interest under genuine life assurance policies effected by single premiums. There is nothing to prevent the free issue of policies of the kind and, apart altogether from the question of taxation, they should become increasingly popular for the investor who has a fixed sum of money to dispose of, and who in this form secures, without risk of market fluctuations, a permanent and increasing investment in addition to the financial protection provided in the event of early death.

INSURANCE AND INCOME TAX.

The Finance Bill also detrimentally affects the interests of all life policyholders in connection with the rebate of income tax allowable on premiums. The extent to which the payment of life assurance premiums should entitle the policyholder to rebate of income tax was exhaustively considered by a Royal Commission as recently as 1920. The Commission recommended that the relief should bear a definite relation to the standard rate of the tax and that, in the case of policies effected after June 22, 1916, this should be one-half the standard rate. This was adopted in the Finance Act, 1920, and has since been continuously followed. The Chancellor's proposal prejudices our policyholders, in that it alters an arrangement which was based on the findings of a Royal Commission, to whom the subject was specifically referred, and to which we feel the Government should adhere.

MARINE DEPARTMENT.

We are again able to show a satisfactory profit in this department, the amount transferred to profit and loss account in respect of the year 1928 being £104,489.

To have attained such a substantial measure of success in this class of business which, as in generally known, has presented particular difficulties in recent years, is very gratifying, and I find much pleasure in again extending congratulations to our underwriters for their careful selection of business.

I do not think there are any points of importance relative to the marine market which call for special comment on this occasion. The joint hull committee has done, and continues to do, good work in gradually improving the hull business, but the competition for cargo business continues to be extremely keen, and it is only by careful underwriting that this business can be successfully written.

The year 1929 has not been a good one as regards the general experience, due rather to the number of claims than to the importance of individual items. The results were very considerably affected by the violence and long continuance of the stormy weather, and recurrent gales, experienced during the later months of the year. Our own first year settlements on the 1929 account are appreciably heavier than in the previous year, the percentage being 29.44 per cent., as compared with 25.15 per cent. I would not like to prophesy in regard to our 1929 account, at the present time, but it is at least clear that we must be satisfied with a considerably smaller return on that year, than we have fortunately secured on the one now closed.

ACCIDENT DEPARTMENT.

In the personal accident section our premiums at £220,000 are approximately the same as last year, and a small profit of £4,800 is produced. The employers' liability account, which represents the operations in this class in the United Kingdom, shows a decrease of some £20,000 in premiums, which is not surprising in view of the continued stagnation in so many of the principal industries in this country. The profit of £58,800 is, under all the circumstances, a matter for congratulation.

The general insurances account includes, as you are aware, a large number of miscellaneous classes of insurance and, while the majority show a normal expansion, there is in the aggregate a decrease of some £65,000, due to a reduction in the United States in the premiums of the Royal Indemnity Company. This follows a period of considerable development, and is a normal reflex of the efforts of the management of that company, under the able direction of their president, Mr F. J. O'Neill, to secure and develop a business of high quality in the difficult casualty field in the United States, rather than merely to aim at volume of premium. The resulting profit of £293,000, representing 5.84 per cent. of the premiums, is very gratifying, and I may say here that the aggregate profit produced by the accident department as a whole of £356,461, has only once been exceeded in the history of the company.

MOTOR INSURANCE.

Our motor business both at home and abroad, which is now an important section of our operations, has continued to expand with the growth of vehicles on the road, but the resultant profit is meagre. The outlook for this class of business is not encouraging, as, despite all efforts, the dangers inherent in the constant increase in the number of vehicles on the road are inevitably reflected in the claims, while competition keeps the premiums down to a very moderate level. This competition may be a healthy feature of the business, and be welcomed from the point of view of the public, but it necessitates the exercise of a rigorous selection, if we are to maintain our present modest ratio of profit.

The Road Traffic Bill at present before a Committee in the House of Commons will, we fear, not lighten our burdens, nor add to our business. As you will be aware, one of its provisions is that motorists must be able to prove their ability, financially, to meet any legal liability for injuries they may cause to third parties, and an insurance policy will be accepted as proof of financial responsibility. We do not contemplate any appreciable increase in our premium income if this Bill becomes law, because, from all the information in our possession, it is not thought that any considerable number of motorists are uninsured, but if the experience of other countries where similar legislation has been introduced may be taken as a guide, claims on companies, both as regards number and amount, will certainly not be reduced.

With the object of strengthening still further the reserves allocated to the general insurances account, we have transferred the sum of £300,000 from profit and loss account, bringing the reserve fund in this account up to 92.37 per cent. of the premium.

PROFIT AND LOSS ACCOUNT.

The interest and dividends show an increase of over £44,000, as compared with last year, and while the transfers from the individual departments have already been touched upon in my remarks, I would like to direct your attention to the total underwriting profit of £1,063,000. This figure, notwithstanding the less favourable results of insurance business generally as compared with the previous year, falls short of our total profits in 1928 by only £68,000, and the only other occasion, previous to 1928, in the history of the company when a larger underwriting profit was recorded was in the year 1919. Taking into consideration the circumstances of the year under review, I think we are justly entitled to regard this as highly satisfactory.

DIVIDEND INCREASE.

The recommendation with regard to the dividend has already been made known to you and it is a matter of gratification to the directors that they have felt justified in proposing an increase in the final dividend from 3s. to 3s. 3d. per share. This increase would have represented an increase of 1s. 3d. per share on the basis prior to the division of the shares two years ago. Under the provisions of the law the dividend will be paid after deduction of income tax at 4s. 6d., that is to say the rate in force at the time of payment, less the customary small relief in regard to Dominion taxation. Unfortunately, however, payment of income tax is not restricted to that part of the company's total earnings which are distributed in dividend, but is charged also upon portions retained to augment capital and funds required for the carrying on, and development of, our business. The higher rate of tax now imposed will therefore have an influence on our net interest earnings during the coming year, as well as on the amount of tax appearing in profit and loss account in respect of trading profits.

The other items do not call for particular comment, beyond saying that the loss realised on the sale of investments is merely a normal outcome of the continuous process of revising the investments of the company, a task which is one of the constant and paramount preoccupations of your board.

BALANCE SHEET.

You will have noticed this year a change in the form in which our accounts are presented. In addition to the consolidated balance sheet, in which it has been our custom to include the figures of our associated companies whose results are incorporated in the revenue accounts, we are publishing a balance sheet of the Royal

Insurance Company in accordance with the provisions of the Companies' Act, 1929. We have felt, however, that it was advisable to continue to submit to you the consolidated balance sheet with which you are more familiar and which, I think, you will agree, gives a truer and more informing picture of the position of the company. I think the only feature to which I need draw your attention is the further growth in the funds of the company by over a million and a half to not far short of forty-one and a half million pounds. The past year has been a very eventful one in the financial world. On several occasions I have touched upon the market value of our investments, and at the end of 1928 these showed a substantial appreciation over the figures at which they appeared in the balance sheet. During 1929 the gilt-edged market experienced a steady decline, influenced among other factors, by the development of speculative activities in New York, and the attraction of investors to other classes of stocks. In view of our extensive interests in America we were of course largely affected, though as a matter of fact this decline in gilt-edged securities, in which the vast bulk of our investments is engaged, was more marked in this country, and it is satisfactory to record that the percentage of depreciation over all our investments was less than that shown by representative British Government securities. Following the sensational break in the New York stock markets in October and November last year, a recovery took place in gilt-edged securities, which has been further assisted by the fall in money rates both here and in America.

While touching on the investments of the company, it might be appropriate to refer to a new position—that of financial secretary—that has been created during the past year. We have been fortunate in securing in Mr P. M. Spence a gentleman of wide experience in financial and investment matters, and we have no doubt that his collaboration will prove of great assistance to the board, and of benefit to the company.

U.S.A. DEVELOPMENTS.

When speaking to you three years ago I referred to the new building the company had erected in New York. You will be interested to know that an opportunity has presented itself of acquiring the remainder of the block in which the building is situated, and it is our intention to erect an extension, which will cover the entire block. Not only will this satisfactorily round off our property, and provide adequate and dignified accommodation for the concentration of all our varied and important interests in that great city, but will, I am satisfied, prove a thoroughly remunerative investment for the funds of the company.

Following the retirement of our general attorney in the United States, Mr F. B. Kellam, to whose valuable services I pay a warm tribute, Messrs H. A. Fortington, F. J. O'Neill, A. Duncan Reid and Harold Warner were appointed general attorneys of the company, the latter gentleman at the same time assuming the duties of United States fire manager. Mr Fortington, as our financial adviser, and Mr O'Neill, as President of the Royal Indemnity Company, are already known to you. We welcome in the capacities referred to Mr A. Duncan Reid, the President of the Globe Indemnity Company, and Mr Harold Warner, now the United States fire manager, both of our own company and of the "Liverpool and London and Globe," and are confident that the association together of these gentlemen will be a factor of the greatest benefit in developing the varied interests of the United States.

Since our last meeting we have suffered a loss through the retirement from our local board of management in New York of Mr Gates W. McGarrah and Mr Francis D. Bartow. Mr McGarrah has assumed the heavy responsibilities of president of the Bank for International Settlements, and I am sure it will be your wish to be associated with our congratulations to him on his selection to that distinguished position; while in the case of Mr Bartow, his withdrawal is solely on account of other imperious demands on his time. Nevertheless, it is gratifying to know that our associations with Mr Bartow will be maintained, as he has found it possible to retain his membership of the boards of some of our associated companies. I would like to take this opportunity of voicing our sincere thanks to both these gentlemen for the valuable services they have rendered to the company.

"ROYAL" AND "GLOBE."

I referred in my speech last year to the closer co-ordination between the "Royal" and "Globe" which it was our object to achieve, and I am glad to be able to report that progress has already been made both at home and abroad to secure the greatest possible advantages from our association, and extend the scope of useful co-operation to its widest limits. Shortly after the annual general meeting, the general manager, in company with some of your directors, paid a visit to the United States, in connection with our plans regarding the organisation in that country. We are satisfied that this visit was very helpful, and we are already seeing signs of the benefits we have every confidence will ultimately accrue from the steps that are being taken to bring the organisation of the two companies into a closer working harmony.

THE OUTLOOK.

In concluding my remarks it is customary to touch on the outlook for the present year. It is satisfactory to be able to report that, so far, there is no marked deviation from the results achieved in the same period last year. The depression that unfortunately exists in our dominant home industries, and which is not lightened by increased taxation, has its inevitable effect on our business. These conditions are not confined to our own country, however, as business in the United States has also slowed up. Temporary though no doubt it is, this check to the extraordinary growth of prosperity which has been enjoyed by that great country, together with the world-wide fall in commodity prices and the difficult times through which such producing countries as Australia are consequently passing, all touch us closely. There is also the recrudescence of unrest in India, where we have important interests, and the continued turmoil to which China is unhappily subjected. Widespread as our activities are throughout the world, catering for the public needs in the varied forms of insurance protection that is necessary to-day to offer, we are acutely conscious of these disturbances both political and commercial, but, while we cannot anticipate how our future profits may compare with the high level of the past few years, we are satisfied that the "Royal" organisation maintains a standard of efficiency that enables us to look forward to the future with reasonable optimism. (Applause.)

I beg to propose the following resolution :—"That the report, accounts and balance sheets be adopted, and that a dividend of 3s. 3d. per share, less income tax, be payable on and after Tuesday, the 27th instant, making, with the interim dividend paid in November last, 6s. 3d. per share, less income tax, for the year 1929."

Mr A. Allan Paton, C.B., one of the deputy chairmen, in seconding, emphasised the pleasure the directors felt in being able to increase the dividend. (Applause.)

The motion was carried unanimously.

DIRECTORS RE-ELECTED.

Mr A. E. Pattinson proposed the re-election of the following directors :—Mr W. S. Crichton, Mr F. H. Fox, Mr M. H. Maxwell, C.B.E., Mr W. R. Glazebrook, Mr A Allan Paton, C.B., Colonel Sir James P. Reynolds, Bart., D.S.O., M.P., Mr J. J. Atkinson, Sir Frederick C. Bowring, Mr Hugh Lewis, Mr W. F. Moore, Mr W. J. Orr, C.B.E., and Mr R. Q. Wilson.

Sir Edmund F. Bushby seconded, and the motion was agreed to.

On the proposition of Mr W. G. Sutcliffe Rhodes, seconded by Mr F. E. Townley, Messrs. Harmood Banner and Son were re-appointed auditors.

TRIBUTE TO MANAGEMENT.

Colonel J. G. B. Beazley proposed :

"That the thanks of this meeting be presented to the directors of the company, and to the London board, also to the members of the company's local boards and to its officials and agents at home and abroad, and to the boards of directors and officials of allied companies for their valuable services during the past year."

In view of the very difficult times which were being experienced, he said, the hearty thanks of shareholders were extended not only for the services of directors and officials, but for the most admirable results that had been achieved. (Hear, hear.) The fact that, in spite of the circumstances, it had been found possible to increase the dividend, was the surest testimony to the sound policy of the board in the past in husbanding and reserving its resources against any possible rainy day. The history of the Royal since it was founded in 1845 had been remarkable. There was keen competition in the insurance world, but under the present direction shareholders were convinced that the company, together with its associated companies, would go from strength to strength. This meeting marked the termination of the first year of the general managership of Mr Robert M'Connell, and they were glad to express to him their sincere gratitude for his contribution towards the results of the past year. (Applause.)

Mr W. E. Mounsey having seconded, the motion was carried with acclamation.

The chairman, in acknowledgment, expressed the hope that the results of the present year would be as satisfactory as those under review.

GENERAL MANAGER'S REPLY.

Mr Robert M'Connell (general manager), who met with a cordial reception, also responded. He said it was a matter of great satisfaction to the underwriters and managers that in a year of difficulty it had been possible finally to produce an account so very favourable. Those results, of course, were the outcome of the inherent value of the business which had been built up through generations of good management and of the team work which the company obtained all over the world from its staff and officers. He had been greatly helped and encouraged by the directors, and also particularly by his colleagues, Mr Williams and Mr Simpson, the assistant managers, who discharged their duties with great efficiency, ability and loyalty. To Mr Carter, the London manager, to Mr Graves and Mr Briscoe, the sub-managers at Liverpool, and other officials, Mr M'Connell also paid a tribute for their valued co-operation.

The meeting then concluded.

NITRATE PRODUCERS' STEAMSHIP COMPANY, LIMITED.

CHAIRMAN'S CRITICISMS OF BUDGET.

The annual general meeting of the Nitrate Producers' Steamship Company, Ltd., was held, on the 29th instant, at 20, Billiter Buildings, London, E.C.

Sir John Latta, Bt. (the chairman), said that, taking into consideration the abnormal depression in world markets, their profits must be regarded as satisfactory. Those were partly due to advance contracts made at rates very much higher than now obtained. He had never known shipping prospects look blacker; they must be prepared for very lean times. There was just one ray of hope; the depression was world-wide, and its severity complete. Traders, perforce, had had to operate within the narrowest limits to escape being left with commodities at constantly falling prices. The inevitable reaction was likely to synchronise in all countries.

He had been asked in several quarters whether they still found the Diesel more profitable than the steamer. For the capital involved, the margin, although slight, in their experience favoured the steamer. The Diesel, however, possessed a wider refuelling radius, and was independent of Welsh coal—factors of great value, but hard to assess. To escape from British coal troubles had undoubtedly had an impelling influence with foreign ship-owners in the rapid strides they had made in developing Diesel vessels. The loss which workers in all industries had suffered through bad leadership in the manipulation of the coal problem was beyond computation. It was the more regrettable as none had suffered more than the miner himself. Just as coal exports had been rapidly recovering lost ground, the horizon had again been darkened by the deplorable Government Coal Bill. Foreign customers might be excused in hesitating to make forward contracts, as they could not but regard the uncertainties surrounding deliveries as interminable. It was the rationalisation of labour that was essential, namely, elimination of inane restriction, demarcations, shop-steward dictation, and an equitable adjustment of wages in sheltered, contrasted with unsheltered, trades. That would allow the ambitious artisan to develop the work that most readily came to his hand, and encompass jobs which demarcation unnecessarily and at greatly increased cost of production assigned to several artisans of different trades.

As to a revival, he feared it would not be stimulated by the Budget. Mr. Snowden had told them that he did not wish to destroy capital. Why make that assertion? It savoured of *qui s'excuse s'accuse*. Legislative power, arising from votes without representation, should be limited in its scope; otherwise, under socialistic theories, the danger of legalised confiscation became immediately apparent. Let them imagine for a moment that they, the proprietors of the company, were compelled to issue free shares—ranking *pari passu* with their own—to the general public, flappers included, and they had a rough parallel of how to-day's Budget would affect the lifelong savings which conscientious people had accumulated to provide for business and family exigencies arising at death. The shortsighted, spiteful confiscatory scale of surtaxes —inordinately vicious on death duties—could not long be sustained, and, as the proceeds were assigned to automatically expanding social services, those who escaped to-day would become the persecuted of to-morrow, and so on down the scale, till "Socialism in our time" had reduced living to the lowest standard.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

GRESHAM TRUST, LIMITED.

A SATISFACTORY YEAR.

SCRIP BONUS FOR SHAREHOLDERS.

The fifth annual general meeting of the Gresham Trust, Ltd., was held, on the 27th instant, at Cannon Street Hotel, London, E.C.

Sir Arthur Wheeler, Bt., D.L., J.P., the chairman, said that the net profit, after charging all expenses, was £59,161, which, with the amount brought in, made £86,936 available. The 6 per cent. cumulative preference dividend for the year absorbed £24,000, leaving a balance of £62,936. From this sum it was proposed to transfer to general reserve account £20,000, which account would then amount to £72,111. The board's next proposal was to capitalise £16,000 of the remaining profits in the form of fully-paid ordinary shares of 1s. each, and to distribute these as a scrip bonus equally between the two classes of shares. The preference shareholders would therefore receive four fully-paid ordinary shares, free of cost, for every 10 preference shares held, and the ordinary shareholders would receive four new shares free for every 25 existing shares they held. In these times of high taxation, it was felt that a scrip bonus of this description was more acceptable than a distribution in hard cash. There would thus remain to be carried forward £26,936.

In the first place, I cannot emphasise too strongly the difficulties we have experienced during the greater part of the period covered by the accounts before us. It so happens that our financial year, which commenced, as you know, on May 1, 1929, coincided with a twelve months' period of widespread unrest brought about by a number of causes.

I, and my co-directors, are fully aware that we cannot always expect to be sailing in smooth waters, and are prepared to face bad weather as and when it arrives, but we certainly never anticipated having to encounter the tornados that have swept around us, and I feel you will agree that we have weathered the storms satisfactorily, and may be depended upon to achieve increasing success when fairer conditions prevail.

The results achieved prove that profitable business can be done under the most adverse conditions, and if times had been good or even normal during only a part of our year, I have no hesitation in saying that our profits would have been proportionately larger.

The balance sheet I consider to be satisfactory. In it is reflected an increased business, and an indication that more capital can be employed in your company than at present is in issue. Our turnover during the year—if you will permit me to use this word in the sense of the business we have handled—shows a large increase on any previous year, and in handling this turnover, to continue the analogy, we are carrying heavier stocks. Our stocks are represented by investments, by business in course of completion, and in some measure by loans against security. The investments are producing income, and so, of course, is the money we lend from time to time.

In referring to the investments, I would like to draw attention to the depreciation which is shown on the face of the balance sheet. You will perhaps have noticed from the managing director's report that your board does not consider it necessary to write off this depreciation, as we are satisfied that the prices of the securities in question were unduly depressed at the date of the balance sheet.

I am satisfied that there is considerable potential profit in the business we have on hand which more than outweighs the depreciation on our investments.

I recall very distinctly, when I met you this time last year, telling you of the caution which we had had to exercise in the selection of good propositions. We may have missed business, but I am pleased to tell you to-day that every company with which we associated our name is in a better position now than it was at the time we assisted it to find fresh capital. Our interest in a company does not cease when we have succeeded in finding fresh capital for it. We appreciate our responsibilities to those investors who support the issues we sponsor.

Whilst conserving the cash resources of your company to-day, I am aware that in the future a larger allocation of profits will be necessary to maintain previous years' dividends. I look forward to that accomplishment with every confidence. Your board has a great responsibility as a guardian of your money; it is also experienced in employing that money, and when we suggest that it is a time for the employment of further capital, you may rest assured that we have our plans prepared.

The report and accounts were unanimously adopted.

At an extraordinary general meeting of the company, and at class meetings of the 6 per cent. cumulative participating preference shareholders and of the ordinary shareholders, subsequently held, resolutions were passed approving the increase of the authorised capital to £750,000, and the issue of 320,000 ordinary shares as a capital bonus as proposed.

THE FINE COTTON SPINNERS' AND DOUBLERS' ASSOCIATION, LIMITED.

THIRTY-THIRD ANNUAL MEETING IN MANCHESTER.
A DISAPPOINTING YEAR—WORLD-WIDE DEPRESSION.
GOOD HOPE FOR THE FUTURE.
MR H. W. LEE'S CAREFUL REVIEW OF THE TRADE SITUATION.

The thirty-third ordinary general meeting of the shareholders in this association was held on Tuesday, the 27th instant, in the Memorial Hall, Albert Square, Manchester. Mr Herbert W. Lee (chairman of the company) presided. There were also present the following directors, namely :—R. W. D. Phillips Brocklehurst and John Graham Peel (vice-chairmen), William Howarth (managing director), Vernon Bellhouse, Alan Murray Gordon Debenham, John Wallace Adam, Percy Ashworth, George Alfred Barnes, Robert Leslie Bellhouse, Robert W. Bennett, Arthur Lyons Carroll, Archibald E. Dixon, Esmond Mills Dixon, Francis Iredale Dixon, Harold Marsh Harwood, John I. Higson, F. Watkin Hiller, Ernest Mather, E. Lomas Oliver, Edwin Oliver, Ian Maurice Lomas Oliver, Wm. Alfred Perry, John Baird Walker, John A. Wanklyn, Philip Bruce Whitehead and Herbert Stowell (director and secretary).

The secretary, after reading the notice convening the meeting, said he had received apologies for absence from two directors—one from Mr Percy Musgrave, who was abroad, and one—a telegram—from Mr Alfred E. Rahr, who was in Liverpool, held up by fog, showing, Mr. Howell added, "We, in Manchester, have some advantages over the rival city." (Laughter.)

THE CHAIRMAN'S SPEECH.

DEPRESSION: CAUSES AND THEIR REMEDIES.
FUTURE PROSPECTS HOPEFUL.

The Chairman, who was received with cheers from a large assemblage, said: Ladies and gentlemen, I have now to move the adoption of the report and balance sheet, and I expect you will give me permission to take them as read. You will have noticed that we have been obliged to make a change in the form of the report, and some alteration in the grouping of the figures in the balance sheet. This has been occasioned by the necessity of conforming to the provisions of the new Companies Act of 1929.

On the whole, I think the new arrangement is at any rate quite as good, if not better, than the old. It gives, for this year, a little more difficulty to shareholders who desire to compare the year's figures with those of former balance sheets, but as I run through the various items, I can easily make the comparison between the present figures and those of last year quite clear; and in future balance sheets we shall hope to keep to the same lines as those of the present one, so that no further difficulty on that score will arise. I do not know if you will expect me to make any apology for the result of the year's trading. It is certainly one showing a profit that cannot be satisfactory to you, and to those of us who are not only shareholders, but are also responsible for the working of the association, you may easily imagine it is profoundly disappointing.

The angle of view from which I regard it gives me some comfort, because I ask myself whether, under the circumstances that obtained during the year, we could have expected to do much better. The more I consider the question from this point of view, the more carefully I run over in my mind the difficulties and drawbacks we have suffered in the course of our operations, the less keenly I feel the want of success, from a profit-making point of view, that we have experienced, the more hopeful I am for the future.

DIFFICULTIES OF PAST YEAR.

You will remember that at our last meeting I had to tell you we were then experiencing exceptionally bad trade, and there were a number of events looming on the horizon that I regarded with misgiving, but the most pessimistic chairman—and I am not of that persuasion—could hardly have anticipated the full extent of the obstacles to a revival of trade, and to the making of profits that the course of events brought into operation as the year rolled on.

For my own satisfaction, and for that of my colleagues, I should like to spend a few minutes in reminding you of some of the checks to business we have encountered since we last met, which increased the depression which we, in common with all countries, were labouring under at that time. Some of these events were of world-wide influence, many of them applied only to trade in this country. You will remember that this time last year we were just on the threshold of a general election. The result of the election—I am not going into politics—but I think I am justified in saying that the result did not give confidence to the business world, and the months that have since gone by have not brought that confidence into being. (Hear, hear.) Now, confidence is a very elusive and vague term, and one which I have not time to explain or elaborate, but we all know that it is one of the conditions of absolute necessity if we are to have good trade in this country.

EFFECTS OF NEW BUDGET BURDENS.

This want of confidence was increased by the uncertainty which existed throughout the year as to whether the Government intended to repeal the Safeguarding and McKenna Duties. Acting, no doubt, on reasons that were good to his own mind, the Chancellor refused to give any indication of this, and the uncertainty undoubtedly gravely affected our particular trade as well as the general trade of the country. In addition, the commercial community had the fear that the necessity of economy in national affairs, without which we cannot hope to see a permanent revival in trade, was not realised by the Government. These fears have been justified by Mr Snowden's Budget, and while the taxation in the countries of our competitors, U.S.A., France, Germany, and Italy, which was already lighter than ours, has, this year, been reduced, ours has been heavily and seriously increased. In general finance, the influence of heavy taxation and the hurried return to the gold standard of ten years ago are still having their effect on our trade.

OTHER ADVERSE FACTORS.

To add to these drawbacks, this year we had the great financial collapse in the United States, which, for a time, paralysed trade all over the world, and the effect was increased by the Hatry scandal in this country. Added to all this, and no doubt partly occasioned by it, was the successive advance in the Bank Rate until we arrived at 6½ per cent., a figure under which full trading is impossible. The result of these, and many other factors I have no time to enumerate, forced the whole of the fine spinning section of the trade to follow the example of that of the heavy section, and to resort to short-time running. We ran short time for nearly three months at the beginning of the financial year, and we had no sooner begun to recover from that and to get our spindles fully employed than the dispute over wages arose, which resulted, last August, in a total stoppage of three weeks. Even after this upset we could not for long find full employment, and we have had a certain amount of short-time working from that time to the present day.

ABSURD PRICE CUTTING.

Another factor that has contributed to wreck the profits of the year is the absurd cutting of prices that has taken place during the greater part of it; cutting that was not necessary to retain trade in this country, that did not bring more work for the spindles, and whose only effect was to reduce the margin between the raw material and the finished thread; and when I tell you that the reduction of 1d. per lb. on the production of our Associated mills means a loss of £250,000 sterling per year, you will realise how serious that is. I look upon this as a temporary evil. I put it down as one of the difficulties of the re-construction of the industry. You are all aware that the cotton trade of Lancashire has come to the decision that if it is to regain its position in the markets of the world, it must alter its methods of working, and to that end it must combine in larger units. The 100,000 spindle unit is uneconomical, and units numbering millions of spindles must take its place. We, ladies and gentlemen, ought to be flattered. It is the principle on which we have been working for over thirty years, and which has been largely responsible for the success of this Association. It must, however, be remembered that we started in a comparatively small way. The steady and large growth of the Association has been built up over many years. The growth and education of the management has gone on side by side with the growth of the Association. In the big new combinations, in both the coarse and fine trade, during the past year the promoters have not had that advantage. They have had to jump into being fully grown at a period when business was more difficult than it has ever before been in the history of the trade. My feeling is that in this process the responsibility has been taken

off the individual mills before the central directing body has had time to properly organise the commercial control that is necessary if good working and reasonable profits are to result. (Hear, hear.) I have every confidence, and there are now signs that an improvement in this respect is taking place, and I am hopeful that, when these combinations get fairly into swing, they will be an advantage and not a detriment to our trade.

HEAVY FALL IN VALUE OF ALL MATERIAL.

I will only mention one further factor that has contributed to our unsatisfactory trading. This is a big one, and it is one I have had to comment on at our meetings here before—the heavy fall in the value of all material. Cotton fell heavily during the financial year. I need not go into details on this particular point. Those of you who know anything of the trade will be fully aware of the loss we must inevitably sustain when such a fall takes place. I mention the difficulties we have encountered, not with the intention of depressing you, rather with the hope that you will feel that it is unlikely we should be handicapped to such a great extent in future years.

BALANCE SHEET ITEMS—ASSETS.

Turning to the balance sheet, and taking first the assets side, the first item, that of addition to property, is misleading, because, of the £76,481 shown on the balance sheet, £54,223 is not really an addition but is a transfer from the value of our subsidiary investments. For the purpose of management and economy we have linked up one of our subsidiary doubling mills with one of our associated spinning and doubling mills, and have found it desirable to incorporate it among our associated mills for purposes of book-keeping. Deducting this amount, leaves the actual expansion of our associated mills at £22,258, a sum which is spread over a good many mills. It is a small amount for so big an Association, but you will agree with me that the past year has not been one to justify any large extensions.

DEPRECIATION.

You will notice at once that we have this year taken £180,000 for depreciation instead of the £200,000 we have written off profits for a good many years past. As a matter of fact, an exact figure has never been fixed for this purpose: it forms a subject for discussion by the Board every year. For many years we took £140,000. As the price of machinery increased we put up the figure until at the top of the market it stood at £220,000, and of late years we have put on one side £200,000 for this purpose. This year, not only is the cost of renewals less, but in addition we have worked much shorter time, and the Board considered that the sum of £180,000 was a very ample one to set aside for the purpose. Although we have during the year kept our machinery up to perfect condition, you will notice we have only required to expend £134,871. This has resulted in an increase of the amount in the balance sheet at our disposal for the purpose of renewals in the future from £369,378 to a balance of £414,507. In addition, we have spent £96,428 in repairs, which has been written off profit and loss account in the usual way. The final result is a total value of our Associated property of £6,130,280, which is £31,353 more than it stood a year ago.

INVESTMENTS IN SUBSIDIARY COMPANIES.

The next item, that of investments in subsidiary companies, is one in which the form has been changed in the balance sheet by the necessity of following the provisions of the Companies Act of 1929. Up to this year we have always given one figure in our balance sheet which has included our total interest in whatever manner it was held in any concern outside the associated properties of the company. You will see that in this balance sheet we split this figure up into four sections. First, value held in actual shares and debentures, then value held other than by shares, a third item under the title of investments, which represents investments in companies in which we have no controlling influence, and an amount of £100, which represents the value to which our various patents and trade marks have been written down.

The second item of loans, &c., amounting to £1,344,746, may seem to you a large one, but I must remind you that in practically every case where we have bought a concern we have proceeded to enlarge and improve it, and we have in most cases carried this out by means of loans, thus obviating the trouble and expense of turning these sums into shares. In all these cases we own practically the whole of the properties, and it is obviously immaterial whether the value is shown in our books as share or as loan capital.

To give you this year a comparison with last year's balance sheet, I take the figure that appeared in last year's return under that heading of £4,713,732. I must deduct from this £54,224, the value of the mill that I have already informed you has been transferred to the category of associated properties, leaving £4,659,508. Now, if you will add up the four items in this balance sheet, you will find they come to £4,616,391. This is £43,117 less than a year ago, a difference that is easily explained by the smaller profits they have made this year than they did a year ago.

STOCK-IN-TRADE.

The stock-in-trade, at £3,423,820, only shows an increase of £10,172 in value, but it is interesting as illustrating the fall in value during the year to notice that the weight we have in stock this year is actually 4,547,000 lbs. more than it was a year ago. I am satisfied that the stock has been most conservatively taken, and we ought to have little to fear from any future movement in the market, but it is undoubtedly bigger than we like, or ought to hold, and we shall certainly reduce it without undue delay.

Trade and other debtors is £291,528 less than a year ago, a clear proof of the restricted trade from which we have been suffering.

LIABILITIES.

On the other side of the balance sheet the first alteration that appears is the reduction of the reserve for equalisation of dividends from £200,000 to £150,000, which will come into effect if you accept the recommendations of our report.

The insurance fund has increased by £8,338, the difference between the premiums and the claims on the share of insurance we ourselves take.

On the subject of the welfare fund I owe you an explanation. I told you last year that for the time being I thought we should not need to ask you for any further sums on this account. I miscalculated. We have overspent the sum you then provided. We are asking you to-day to pass a further £10,000, and I really think that this amount will cover requirements for some time to come. It is, I know, a source of satisfaction for you to feel that you have led the trade in the care and consideration you have shown for the people who work for you, and I believe that, when the next Factory Act is passed, you will find that you have anticipated the provisions for the well-being of the workpeople that will undoubtedly be incorporated in that measure.

The deposits of the employees and the trustees of the superannuation and pension fund show practically no change in the year. The first, which, as you know, is a contributory fund, is carrying out well the purpose for which it was founded. The pension fund is running a satisfactory course. It will interest you to know that 76 pensions have been granted during the past year. Since its inception 668 pensions have been granted, 219 of our pensioners have died, leaving us with 449 on the books at the present time. By the provision of the trust deed, a report from the actuary falls due this year, and we shall be able to pass on to you at our next meeting any remarks he may make on the progress and position of the scheme.

I should like to take the opportunity, while I am mentioning schemes for the benefit of our employees, to tell you that this year 79 completed forty years of continuous service in the mills of the association. Framed illuminated certificates were handed to each, and they passed very hearty votes of thanks to the shareholders, which I promised to convey to you to-day. We have now in all presented 1,019 of these certificates, of which 7 have been earned by members of the board of directors.

The amounts owing to subsidiary companies are normal, £15,373 more than last year, and the trade creditors are lower than last year by £110,820, the result of the restricted trading of the year.

RESULTS OF SUBSIDIARY COMPANIES.

Before we pass from the balance sheet I must say a word about the results of our subsidiary companies during the year.

We have, as you know, a number that are practically in the same line of business as our associated firms—mills such as Richard Harwood and Son, Ltd., the Great Lever Spinning Company, Ltd., Robert Platt, Ltd., and other smaller ones that we own. Their experience during the past year was in every way the same as that of our associated mills; they all suffered from the same difficulties and drawbacks, and their returns were not of the character which we are accustomed to receive from them.

BRADFORD COLLIERY.

The Bradford Colliery, thanks to the policy of the board in adopting every improvement that is brought out for the better and more economical working of the colliery, and also to the excellent work of our managing director, Mr F. L. Ward, has made a profit that, under the general conditions of the coal trade, is not unsatisfactory. (Hear, hear.)

COTTON ESTATES

The cotton estates are, I feel convinced, now well on the way to prosperity. On the land under cotton we have produced this last season 476·8 lbs. of lint to the acre, a record for the property and an amount far beyond the average weight produced by land even in the Delta. The extent of land under cotton will this year be increased. We have naturally received the interest on our gold bonds, but the profits considerably exceed the sum necessary for this purpose, and I am confident that, with reasonable good fortune in weather and in prices, we ought to be able, in future years, to draw from these plantations considerable sums in addition to those due on the gold bond issue.

MILLS IN FRANCE.

The mills in France have again had a successful run, during the past financial year—not quite as good as the year before, but still showing a very good dividend on the money we have invested in them. The trade in that country is showing some signs of lessening in activity, and is perhaps hardly likely to keep up to the high standard of the past few years. It may be we can hardly expect to maintain the full dividend we have recently enjoyed, but I see no reason to doubt that we shall have a successful run during the present year and a very good return on the capital invested in these properties.

CLAIMS TO REPARATIONS.

I am glad to be able to report that our claim to Reparations is now at last recognised, and that in the course of the next six months we have every hope of the matter being completely settled. I do not propose to-day to go into details. Our claim is now before the final Court in Paris, and until it emerges from there we shall not know the final sum that we shall receive. But I must warn you that the amount we can receive will not to-day coincide with the damage that was done. The claim was made out after the war in francs. At the time the exchange was round about 40 francs to the pound sterling. The payment will be in francs based on this claim, and as the exchange is now standing at 124 the actual sterling received will only be one-third of the amount it would have arrived at had the payment been made when the claim was presented. In addition to this, we shall have to make considerable repayment to the Inland Revenue under the head of excess profits duty. Then, our accountant and our auditors have yet to make a careful calculation to ascertain what part of the money received can be placed to the credit of profit and loss account, and what part must be considered capital replacement. The certainty, however, that the claim will be met, although only to what we consider an inadequate amount, has enabled us to release a sum that we were holding in suspense, and to credit our profit and loss account with £100,000. It is, you will agree, a happy event that this windfall comes in at a time when a little help towards the payment of a dividend to our shareholders is most welcome.

Other investments connected with our trade, but not involved in actual spinning, have, on balance, made a contribution to the profits of the year, but they have also been affected adversely by the disturbed condition of trade and finance. I think you will agree with me that it is a good thing to have investments varied as to their nature and also varied in the country in which they are domiciled, and that, under present conditions, it may be well to keep in mind that there may be wisdom in encouraging the growth of the association in that direction.

PROFIT AND DIVIDEND.

Returning to the balance sheet, and looking at the profit and loss account, you will see that we brought into the account a carry-forward of £214,166. We are proposing to transfer from the reserve, put on one side for equalisation of dividends, £20,000; and in view of the fact that the next financial year has opened without any very brilliant immediate prospects, I am sure you will consider the board are wise in not transferring a larger sum from this source. We have then a profit of £517,518, in which is included the sum of £100,000, about which I have already spoken in respect of reparations. This gives us a total sum to deal with of £781,684. From this must be deducted the interest on the debentures, the directors' fees—which, in order to comply with the provisions of the Companies' Act, have to be shown as a separate item—and the £10,000 we are asking you to place to the welfare fund. This leaves a balance of £644,735, which you will pick up again on the front sheet. You will see from there that we have already paid out £230,800 in interim dividends, so that to-day we have a sum of £413,935 to deal with. We must, of course, pay the dividends on our preference and preferred ordinary shares, which absorbs £98,500, and we suggest to you to-day the payment of 3 per cent. on our ordinary shares which brings our dividend for the year to 6 per cent. and leaves the sum of £183 134 19s. 1d. to carry forward.

CURRENT YEAR'S PROSPECTS.

In proposing to pay 3 per cent. I am sure you will agree that the board has suggested the highest rate of interest which could be reasonably distributed, taking into account the figures of the balance sheet and also the present condition of our trade. It would be absurd for me to tell you that at the present time our trade was good or that prospects were greatly improving. You know as well as I do that the great world-wide depression in finance and trade cannot right itself in a few weeks; and it is to my mind one of the most reassuring factors in the case that the extraordinary lack of demand from which we are suffering is not simply in evidence in our own market, but is equally operative in every country in the world making our class of goods. The fact that the situation is so bad all round is, in my opinion, reassuring because it simply cannot continue and it must only be a question of time before we see more normal trading resumed. The spinning trade in this country is going through what may without exaggeration be called a revolution in its methods; the weaving and merchanting sections of the industry have, in my opinion, also to reorganise their methods, and we have yet to receive, as I feel sure we shall do in the long run, the help and co-operation of the trades' unions in getting over the many vexatious rules and policies that so greatly hamper our attempts at re-organisation. (Cheers.) I do not believe that the day of Lancashire is over. I believe that in the end we shall surmount our difficulties, but, undoubtedly, time and patience will be required, and when you estimate the future prospects of the trade you must take a long view, rather than one which comprehends only the immediate future. If you do that you will be able to take an optimistic rather than a pessimistic view of the situation. The revolution in the spinning trade should have the effect of making co-operation possible in a way that it has not been up to now. We shall have, before long, a few big combinations which can command a general policy, instead of a great number of scattered units impossible to bring to one mind on the—if I may call it so—general politics of the trade. I believe this will make very greatly for the general good of the industry. We want the whole trade to be making a profit and doing well, and in the same way that we ourselves always feel that trade is unsatisfactory unless our customers are making good profits, so we feel that it is also most desirable that our competitors should be doing well. Our association may be in a position and may have advantages which will enable it to more than hold its own in the markets of the world, but you can never expect our results to be really solid unless the rest of the trade, and especially our competitors, are also prospering.

FAVOURABLE FACTORS.

We have gained in the past year some little advantages which will help our future working. The De-rating Act, which is a very valuable help to our overhead charges, only benefits us to the full during the present year's working. Then, we do get a little relief in our wages through the reduction of 6½ per cent. in August last. This is welcome, although it does not bring us to the level of cost that is enjoyed by our competitors abroad, and is not, perhaps, as much as we might have expected if the reduction in the cost of living had been fully taken into account. It is well to remember also that our cost of social services, which must really be added to wages, is very high, much greater than obtains among foreign competitors, and than it used to be ten years ago. Taking account only of National Health Insurance and Unemployment Insurance, where ten years ago we paid 0·54 of 1 per cent. of our wages bill, we now pay 3·44 per cent., and when wages are considered this should be taken into account. Another point in our favour is that there are already reports of considerable trading losses having been made by some of our competitors abroad, who have been largely responsible for cut prices and our loss of business. We have also to-day the advantage of a low bank rate and reasonably low prices for our raw material.

CO-OPERATION AND CONFIDENCE ESSENTIAL.

In contending with our difficulties there is only one course we can take—co-operate with the trade in helping to forward any general re-organisation and re-arrangement that will work for economy in production and distribution. Endeavour to induce the trades unions to join the campaign and work to the same end. Find new uses and new markets for our yarns and regain any loss in old ones. Produce our yarns—and I assure you this is having all our care—in the most economical manner, and, above all, to believe in attaining, if we work in the right way, a prosperous future. There has been too great a tendency in the trade, because of a very difficult period, and so many perplexing and new problems, to give way to inaction and despair. Believe me—and this applies to you shareholders also—it would be fatal to drift into any inferiority complex. It is necessary to feel sure that, though trade is black to-day and we may have still a stormy period to face, in the end we shall come again into the sunshine.

CAPITAL and INTEREST

are both lost if your investments fail.

This loss may be avoided by investing in "Globe" Life Assurance, a gilt-edged security not liable to depreciation.

A copy of our new comprehensive prospectus, featuring many attractive schemes, will be sent post free on your request.

THE
LIVERPOOL & LONDON & GLOBE
INSURANCE COMPANY, LTD.

Head Office: 1, Dale Street, Liverpool. | London: Chief Office: 1, Cornhill, E.C.3.

TRIBUTE TO STAFF.

Now, ladies and gentlemen, there is only one other point I want to say a word on: I should like to assure you that the work of the whole of your staff during this difficult time has been most excellent. As chairman of the company, I am proud of the way they are facing their difficulties and of the cheerful and determined manner in which they are meeting all the problems that press upon them. You are, I can assure you, fortunate in the way you are served. (Loud applause.)

The resolution adopting the report and balance-sheet was seconded by Col. R. W. D. Phillips Brocklehurst, and was passed unanimously.

For a time it seemed as if no questions would be asked. Then there came a question from a shareholder, who suggested that the "goodwill" of the concern should be more clearly stated. The chairman replied, pointing out that the shareholder's request, if carried out, would entail a revaluation of all the property of the association, and that would almost certainly result in a figure larger than that shown on the present balance-sheet.

DECLARATION OF DIVIDENDS.

The chairman moved and Mr John G. Peel seconded, and it was resolved, "That the following dividends be now declared out of the profits of the undertaking, viz.:—A dividend for the half-year ended March 31, 1930, at the rate of 5 per cent. per annum on the £3,000,000 preference shares, numbered 1 to 3,000,000 inclusive; a dividend for the half-year ended March 31, 1930, at the rate of 5 per cent. per annum on the £940,000 preferred ordinary shares, numbered 1 to 940,000 inclusive; a dividend for the half-year ended March 31, 1930, at the rate of 6 per cent. per annum on the £4,410,000 ordinary shares, numbered 1 to 4,410,000 inclusive."

RE-ELECTION OF RETIRING DIRECTORS.

On the motion of Mr William Howarth, seconded by Mr Vernon Bellhouse, it was resolved, "That Messrs Percy Ashworth and G. A. Barnes, Lieut.-Col. A. L. Carroll, and Messrs A. E. Dixon, E. M. Dixon, I. M. L. Oliver, H. Stowell, and J. B. Walker, be and they are hereby re-elected directors of the association."

ELECTION OF AUDITORS.

Mr D. Q. Henriques moved and Mr Joseph Harrison seconded, and it was resolved, "That Messrs Edwin Guthrie and Company, chartered accountants, of 71 King Street, Manchester, be and they are hereby appointed auditors of the association until the next ordinary general meeting of the association, and that they be paid the sum of £1,500 as remuneration for their services, inclusive of out-of-pocket, travelling and hotel expenses."

VOTE OF THANKS TO THE CHAIRMAN, DIRECTORS AND STAFF.

It was moved by Sir William H. Himbury, seconded by Mr G. St. Clair Robertson, and resolved, with acclamation, "That the thanks of this meeting are due and are hereby tendered to Mr H. W. Lee for the ability and courtesy with which he has presided over this meeting, and to the directors and staff for their work in the past year."

INDIA GENERAL NAVIGATION AND RAILWAY COMPANY, LIMITED.

EFFECTS OF THE TRADE DEPRESSION.

The annual ordinary general meeting of the India General Navigation and Railway Company, Ltd., was held, on the 28th instant, at Winchester House, London, Mr S. G. L. Eustace (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that it was a matter of great regret that, owing to the general trade depression, their earnings, in spite of the extra facilities they had provided in the shape of additions to their fleet, had decreased, as compared with the previous year, to the extent of £35,000. The profit for the year amounted to £123,207, as against £179,725 for the previous year, representing a decrease of £56,518, which was due to the falling off in the demand for carrying space by shippers. There had been a considerable expansion in passenger traffic, as they had carried over 800,000 passengers more than in 1928, 93 per cent. of which had been third class. Two steamers had been lost and one barge sunk, which had affected the earning power of the company. As a set-off to these losses, they had added five steamers, six motor launches, six flats and two barges to the fleet. With regard to capital expenditure, they had a programme which was designed to meet the, up till now, increasing trade demands, but, in view of the fact that last year they had not only been able to meet the peak of, but had been faced with a considerable falling off in, the demand for space, it was felt that they should call a halt in their programme, and for the current year, therefore, only one new mail boat had been ordered. The motor-boat services which they had instituted during the year, while not coming up to expectations, had proved useful.

THE DIVIDEND.

They recommended a final dividend of 5 per cent. on the ordinary shares, making a total distribution of 7½ per cent. for the year. As to the current year, up to the present, earnings showed some decrease as compared with last year, which indicated a continuation of the depression in trade. It was with great regret that they had received the news of the loss of their steamer "Condor." That vessel, with a large number of passengers, had been caught in a severe cyclonic storm, which had caused her to founder with a loss, according to telegraphic news just received, of some 86 to 98 lives, including the first and second serangs and the driver. That was the first accident of that nature experienced by the company, and from reports received the storm must have been of very exceptional violence to cause so fine a vessel to founder with such deplorable loss of life.

During the year a Bill, the underlying principle of which was that the Government of India had, for the first time in the history of its legislation, the power and authority to control and interfere with private enterprise, and in this particular instance aimed largely against their company and other inland steamer companies in India, had passed the Legislative Assembly. It would appear that the Bill was framed mainly on racial lines, but its originator appeared to have overlooked the fact that, not only in this company but in many others, much of the capital was held in rupees and by Indians themselves. It was not possible as yet to give shareholders any indication of the possible effects of that legislation, but there were certain clauses which would, it was hoped, safeguard the shareholders' interests.

COMPETITION.

Competition from the railways remained in much the same position, and, in connection with what was known as the Dacca-Aricha Railway, he would like to quote an instance of the hostile attitude taken up by certain Indian members of the Legislative Assembly. A speech in the Assembly on that project stated that the company's steamers had probably been purchased from some Rhine company long ago second-hand at very cheap prices, and that certainly they would not have been allowed to be used in any river in a European country. It was very desirable, therefore, that that monopoly should be ended as early as possible. In reply to that, he (the chairman) would take the opportunity of informing shareholders that not a single steamer, either first- or second-hand, had ever been purchased from a Rhine company, and that all vessels belonging to the company had been built either on the Clyde or the Hoogly, with the exception that they had purchased the steamers belonging to the Eastern Bengal Railway and many years ago a fine steamer from the Indus Flotilla Company, long since removed from their passenger services. In addition, the company had no monopoly for passenger or goods services in the rivers on which it plied, as the rivers were highways and open to all.

The report and accounts were unanimously adopted.

CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED.

DIVIDEND AND BONUS MAINTAINED.
FEATURES OF A DIFFICULT YEAR.
SOUTH AFRICAN MINING INDUSTRY.
LIFE OF SOUTH AFRICAN GOLD MINES.
IMPORTANCE TO FUTURE OF THE UNION.
SIR R. SOTHERN HOLLAND'S IMPORTANT REVIEW.

The twenty-fifth ordinary general meeting of the Central Mining and Investment Corporation, Ltd., was held, on the 28th instant, at No. 1 London Wall Buildings, London, E.C.2, Sir R. Sothern Holland, Bt. (the chairman of the corporation), presiding.

The Secretary (Mr R. A. Macqueen) read the notice convening the meeting and also the auditors' report.

The Chairman said: Gentlemen,—Before proceeding with the business before us this morning I should like, with your permission, just to say how very much I regret—a regret which, I am sure, will be shared by all of you—that our friend and colleague, Sir Evelyn Wallers, is not in his usual place this morning. Sir Evelyn was seized by an acute attack of appendicitis yesterday and was operated on last night. I am glad to say that the operation was wholly successful and that he is going on very well. (Hear, hear.) I am sure it will be a great disappointment to Sir Evelyn not to have been here. We all wish him a speedy and complete recovery to health. (Hear, hear.)

I should also like to make a sympathetic reference to our old friend, Sir Frederick Eckstein. As you know, Sir Frederick at one time occupied the chair of this corporation, but I suppose he is better known, shall I say, as the father of that successful undertaking, Sudan Plantations. Sir Frederick has lain in a serious condition for some weeks, and underwent a further operation this week, which I am told was satisfactory. I am sure that in his case, too, we all wish him a complete recovery to health, and that he may have many years to enjoy a comfortable retirement. (Hear, hear.)

Gentlemen, I presume that it is your wish to follow the usual course of taking the report and accounts as read. (Agreed.) The accounts for the year 1929 have been made up in accordance with the provisions of the new Companies Act, and the balance sheet differs from previous ones in setting out separately your interests in companies which, in the definition of the new law, fall under the category of subsidiary companies. It may be convenient to refer to them first, although our major interests are in what I might describe as associated companies.

SUBSIDIARY COMPANIES.

In South Africa two of our companies are subsidiary companies—namely, the Transvaal Lands and Mines Proprietary Syndicate, Ltd., and Town Properties, Ltd. The assets of the former are about £68,000 in cash, and only some £300 represent certain mineral rights. The assets of Town Properties consist of about £29,000 in cash and £14,000 in house property and real estate conservatively valued. The loss of £702 5s. 2d. by a subsidiary company disclosed in the balance sheet refers to this company. Some of the houses owned by it are let to members of our staff at nominal rents, and the depreciation and maintenance expenses exceeded the income. On the other hand, as the corporation holds the entire share capital in both companies, no purpose would be served by allowing interest on the cash on deposit with the corporation. The total of £96,000 due under this head to the two companies rightly appears in the balance sheet as a liability, but is, in effect, money belonging to the corporation.

The head office accounts deal with three more subsidiaries: London Wall Estate, Ltd., Messrs Bernhard Scholle and Co., Ltd., and the Anglo-Spanish Construction Company, Ltd. The London Wall Estate owns this building, in which, together with a considerable number of other tenants, we are suitably housed on satisfactory terms of lease. We hold debentures and the majority of the ordinary shares, both of which are sound and valuable securities. The shares yield a good return, which, moreover, is expected to rise considerably in a few years' time after complete redemption of the second debentures.

We do not own a majority in the share capital of Bernhard Scholle and Co., but our voting rights bring that firm within the definition of a subsidiary company under the Act. In the Anglo-Spanish Construction Company we hold debentures and shares, and, in addition, have made the advance of £1,445,000 referred to in the balance sheet repayable from the company's assets in Spain. I shall refer to both companies when dealing in detail with our various interests.

BALANCE SHEET CHANGES.

The transfer of our holdings in subsidiary companies to separate headings naturally affects the comparison with previous years. The change to be noted on the debit side of the balance sheet is the reduction of our liabilities by £982,000. On the assets side, fixed-interest-bearing securities show a decrease of £1,234,000 and an increase in other investments of £794,000. This increase is spread over a very large number of items. In gold mines we have added, among others, to our holding in Rand Mines, Crown Mines and New Modders. In oil shares we have considerably increased our investments in all the companies under our administration, while the interest taken in Bolivia, referred to in the report, and minor acquisitions in Northern Rhodesia account for the heading "Base metals." The total of debtors loans and cash is down by about £542,000.

To recapitulate shortly :—	
Decrease of liabilities	£982,000
Plus increase of investments	794,000
together	£1,776,000
accounted for by :—	
Decrease of fixed-interest-bearing securities	£1,234,000
and reduction of cash assets	542,000
making	£1,776,000

The addition to what may be called our permanent investments has been on a larger scale than for some years, and, while reducing to some extent our liquid resources, a sound position is maintained.

DIVIDEND AND BONUS.

The profit and loss account shows a credit balance of £668,000. A slight and, I fear, only temporary reduction in general expenses is offset by increased Dominion taxation, leaving the net profit at £563,000, compared with £725,000 in the previous year. The reduction is severe, but fluctuations in the rate of profit are unavoidable, especially in these times. The result enables us to maintain the rate of dividend and bonus to which you have become accustomed for some years past. We recommend a final distribution of 8s. dividend and 4s. bonus, making a total of 20s. for the year, free of income tax. For the first time for a number of years, we are unable to recommend an allocation to the reserve fund, which, however, remains at the substantial figure of £1,900,000.

The period covered by the accounts has been a difficult one. Months of great activity, particularly in America, resulted in excessive speculation, over-production and exaggerated prices for securities and commodities. A reaction was bound to occur, and, long before the autumn, when the American boom collapsed in a spectacular fashion, our view of the situation led us to adopt a cautious attitude. As a consequence, we were fortunate in avoiding serious losses. It was, however, a matter for regret that, while gold and oil shares—in which we are more particularly interested—were not favoured by the public during the active period, in the subsequent general decline their prices also gave way. The fall afforded us, as already stated, the opportunity of adding to some of our holdings at attractive prices, but considerable depreciation—affecting not only our holdings in mining and oil shares but also gilt-edged securities; in fact, the whole of our large portfolio—had to be met at the end of the year. After a careful revaluation of our holdings, I am glad to be able to say that the value of our investments at market prices on December 31st last was considerably in excess of book prices. Since the beginning of the year there has been a satisfactory appreciation in a great many stocks.

It is gratifying to record that our income from the regular sources of revenue of our business was highly satisfactory. The result shown on balance has not benefited to any extent from casual profits. Taking all the circumstances into consideration, I feel that you will not be dissatisfied with the results achieved during a difficult period.

OUTPUT AND SALES OF GOLD.

During 1929 the South African producers forwarded their gold for treatment to the Rand refinery as in previous years, and the realisation was effected on similar lines to those in 1928.

The details of disposal are as follows :—	
10,227,037 fine ozs. valued at	£43,377,745
were sold to the Reserve Bank locally under the agreement.	
585,445 fine ozs. valued at	2,484,482
were sold in London to India, of which 517,419 ozs. were shipped from Durban to Bombay, and 68,026 ozs. from Durban to Madras, making a total of :—	
10,812,482 fine ozs., valued at	£45,862,227

The average selling price obtained for the total production was, therefore, 84s. 9·984d., from which have to be deducted the expenses of bullion railed to Durban. The average price for 1928 was 84s. 9·828d.

The sterling-dollar exchange during 1929 did not favour exports of gold from America to India, and hence there was no necessity to adjust the f.o.b. Durban price, which remained at 84s. 10½d. per fine ounce throughout the year.

In addition to the producers' bullion shipments to India, about 3½ million sovereigns were imported into that country by the South African commercial banks; furthermore, consignments of over 1½ million sovereigns were made on competitive terms during 1929 from Australia to India.

The output of silver in the Transvaal Province during 1929 amounted to 1,031,779 fine ozs., of which 694,091 ozs. were shipped to India by the Rand refinery, and the balance was sold to the Royal Mint, Pretoria.

THE GROUP'S GOLD MINES.

The South African gold mines under the administration of the Central Mining-Rand Mines group again experienced a satisfactory year, the results for the period under review being very similar to those of 1928, though there was a slight decrease in average working revenue. There were several noticeable features in the year's operations. An average reduction of a little over 6d. per ton milled was effected in working costs, due in a considerable measure to a reduction in the cost of stores consumed; a further marked improvement was recorded in machine efficiency for development work, the average advance per machine shift being increased from 1·98 ft. in 1928 to 2·12 ft. during 1929, while the cost per foot advanced was reduced by 2s. 2d.; a record fathomage was again broken in stopes and the jackhammer efficiency was more than maintained; shovelling and tramming efficiency increased during the year from 1·72 tons per native to 1·85 tons. On the metallurgical side, the average reduction costs were reduced by 1·4d. per ton milled, while the average residue was practically the same as during 1928. But for the considerable increase in the residue at the Modderfontein East mine, due to the plant being taxed beyond its capacity, there would have been an appreciable improvement in the latter figure. In this connection the additions being made to the reduction plant are nearing completion.

NATIVE LABOUR.

I mention the above facts to show that the work carried on by the investigations committee is being actively pursued and is being attended by valuable results. It is interesting to record that the use of mechanical appliances in handling broken ore is proving very effective on the flat dip mines of the Far East Rand, and they are being installed as rapidly as conditions permit. They have not been found, however, to be economical on the steep dip of the Central Rand. I might also mention that during the year an investigation was made within the group into the methods of control, training and payment of natives, and, subsequently, a report was issued to all the mines under our administration with the object of initiating a vigorous campaign to increase native efficiency and improve the existing methods of training "boss boys." This has already proved of definite value, especially in extending the application of piece work to lashing and tramming boys, which has proved very popular with them.

The question of an adequate supply of native labour for the mines has continued to engage the attention of the industry. During the first three months of 1929 the supply increased from 187,970 at the end of 1928 to 197,646 at the end of March. From this date the supply declined month by month, until at the end of December, 1929, there were only 184,280 natives in employment. In the current year there has been some improvement in the figures, though they are still below the figure of 206,000 estimated to be the number required for the full operating capacity of the mines' existing plant.

FUTURE OF THE SOUTH AFRICAN MINING INDUSTRY.

I should like to digress here for one moment to refer to the impression I gathered on my recent visit to South Africa. I was greatly disturbed to find, in spite of so many warnings from those responsible for the management of the mining industry, what little thought or concern was being given to the problem which South Africa will have to face of the steady contraction and final disappearance of the great gold-mining industry, on which the prosperity of the country has rested for so long a period of time.

Let us glance at conditions in the world at large to-day. It is suffering from an actual glut of commodities—wool, grain, cotton, artificial silk, diamonds, copper, platinum, tin, rubber, nitrates, oil—in fact, almost the whole range of minerals, agricultural and other products—while gold, on the other hand, is wanted in greater and greater quantities. There is no limit to its market; it is not subject to economic depression, to fashion, or to a surfeit of production, and always commands a standard price. In the period of depression through which the Union of South Africa, in common with other countries, is now passing, the gold-mining industry is the one stable factor. The prosperity of the Union is founded on its gold mines (though this fact has tended to become obscured by the development of manufacturing and other activities which have grown up in order to satisfy demands created largely by the mines themselves), and South Africa will continue to be dependent on the steady flow of wealth which the mines contribute. The future of the mining industry is, therefore, of the greatest importance to the country, and any contraction in its operations must react on the economic welfare of the Union as a whole.

PLATINUM MINING—A FALLACY.

I even found that the belief was held that the mining of platinum ore will in the near future expand so rapidly that it will largely take the place of a diminishing gold industry. This is a fallacy, which can be clearly seen by a glance at the statistics in regard to platinum.

I think it may be accepted that a figure of about 200,000 ozs. represents the annual world consumption of new platinum, and that the average price during 1929 was between £13 and £14 per ounce, and is now much lower. It has been suggested that at a price of, say, £9 an ounce, consumption might expand to some 300,000 ozs. annually.

To take the best case for the platinum producers of the Union, if one assumed that new uses could be found for the metal at this lower price, and that consumption could be stimulated to, say, 400,000 ozs. per annum, and if South Africa supplied the whole of this amount it would derive a revenue of some £3,600,000 only, which is actually slightly less than the value of the output of the Crown Mines. To produce such an amount of platinum from the Rustenburg district, provided the average contents of the ore so far developed persist, would require the crushing and treatment of less than 2,000,000 tons per annum. This tonnage would be considerably less than that of the Crown Mines, and would probably serve to employ some 1,000 white men and 10,000 natives, while the costs of the plant employed and stores used would certainly be less than half those necessary for the equipment and running of a gold mine, such as the one mentioned.

While I would urge that every encouragement should be given to increase the scale of platinum production, in the development of which industry, I may say, we ourselves are interested, I think it is as well that the position should be clearly understood in order that lack of knowledge and appreciation of facts may not give rise to false hopes.

AN URGENT MATTER.

Now, as regards the gold mines of the Witwatersrand, there are immense tonnages of low-grade ore, and such tonnages are to be found not only in the so-called low-grade mines, which are responsible for 60 per cent. of the total ore mined, but also in the richer mines of the far East Rand. A reduction of costs would have the effect of lengthening the lives of all the mines, rich or poor. A mine, which has once been closed down, whose workings have been abandoned and whose plant and machinery have been dispersed, can

rarely be profitably re-opened. Certain mines to-day are on the border-line of payability, and under existing conditions must cease operations in the comparatively near future. The problem is thus one of immediate importance, one for consideration and settlement to-day and one which cannot safely be deferred.

Gentlemen, I feel it should surely not be beyond the bounds of human ingenuity to devise the necessary means. By the sacrifice on the part of the Government of some revenue to-day, by a modification of the colour bar restrictions, and by other measures to be sought for by those in authority in collaboration with the responsible leaders of the industry, it undoubtedly should be possible to bring about a reduction of working costs to an extent that will ensure the incorporation of the large bodies of low-grade ore into the region of payability, and thus ensure a continuance of the prosperity of the Union for a considerable time to come. Failure to take timely measures to this end will result in a collapse which the country will find it difficult to face.

DANGERS OF LAISSEZ-FAIRE POLICY.

I speak as a South African deeply concerned in the future welfare of the Union, and as one having a full consciousness of the dangers that must inevitably befall the country if supineness, or present political considerations, result in a policy of laissez-faire and the inevitable closing down of mine after mine as their present payable ore reserves become worked out. It is a question on which all parties might agree to co-operate in order to work out a national policy to prolong the life of this great source of wealth so important to the Government and to every individual living within the Union. (Hear, hear.)

I will now refer briefly to a few individual mines :—

VILLAGE DEEP, LTD.

During December, 1929, negotiations between this company and the Robinson Deep, Limited, which had been proceeding for some time, had advanced sufficiently far for a provisional agreement to be entered into for the sale of the company's undermining rights and certain plant and equipment. Since the close of the year this agreement had been ratified by the shareholders of both companies and approved by the Union Government.

As you are aware, this mine has reached a very great depth; it is the deepest working mine in the world. With its single main hoisting shaft, the difficulties of ventilation and efficient working at great depth, and with its inadequate ore reserves, the margin of working profit was necessarily small. The directors of the company, therefore, had little hesitation in recommending agreement to the proposed sale to its neighbouring company, by which mining operations could be carried on with greater facility, and the acceptance of a cash offer which was based on past working results and was calculated to amount to a present value of fourteen half-yearly dividends of 2½ per cent. each.

DURBAN DEEP, LTD.

The capital of this company was recently reconstructed. After cancelling 10,000 unissued shares and 15,912 ex-enemy shares, the nominal value of 424,358 £1 shares was reduced to 10s. per share. 325,642 new shares of 10s. each were created and offered to shareholders. This issue was underwritten jointly by the corporation and the Rand Mines, and received a gratifying response from shareholders, considering the unfavourable market conditions.

The total capital of the company will therefore now be £375,000, in 750,000 shares of 10s. each. The additional funds have been provided for the purpose of enlarging the reduction plant and of liquidating the outstanding debentures and loan indebtedness.

The future prospects of the company appear favourable, and, barring unforeseen circumstances, it is hoped that dividend payments will be resumed in the current year.

CROWN MINES, LTD.

A record tonnage of 2,643,000 was milled, in spite of native labour shortage during the greater part of the year. The profit, at £947,000, was slightly less than that of the previous year on account of a fractional decline in the yield. The available ore reserves were increased by nearly 100,000 tons, and the value was maintained at 6·4 dwts.

Certain additions to the reduction plant were recently completed, and the capacity of the three mills is now 245,000 tons a month. During one month a record tonnage of 240,000 was milled.

Since the close of the year the company had acquired 2,084 morgen of the farm Diepkloof, together with a mynpacht thereon, situated on its south-western boundary. The Consolidated Main Reef Mines have purchased from the company that portion of the mynpacht which adjoins the southern boundary of their property. The company's No. 17 vertical shaft is located about 500 ft. north of the Diepkloof mynpacht, and from this shaft the new area will be developed. The consideration given for the farm is 40,000 shares of the company, and to meet this payment it is proposed to issue the whole of the ex-enemy shares, totalling 34,087, held by the company, and the balance out of shares in reserve. The acquisition of this additional ground will naturally give increased length to the life of the mine, whose general lay-out places it in as favourable a position as possible to work at great depth.

NEW RECORDS.

NEW MODDERFONTEIN GOLD MINING.

New records were established by the mine during the year ended June 30, 1929. The tonnage crushed, at £1,713,000 tons, exceeded that of the previous year by 87,000 tons. The working profit, at £2,252,000, was greater by over £10,000.

Development footage was increased from 58,565 ft. to 74,982 ft., with gratifying results. The ore reserves, at 7,857,600 tons of 8·9 dwts., show a slight decline in tonnage and value.

The prospects for the current year are favourable, and our confidence in the future prosperity of the mine remains unabated.

CITY DEEP, LTD.

As I pointed out to you last year and the year before, this mine has been going through a lengthy period of drastic underground reorganisation, rendered necessary by the serious and steady decline of the grade of ore developed and percentage of payability. During the year ended December 31, 1929, an increased operating loss was shown in spite of an increased tonnage milled and a reduction in working costs of 1s. 11d. per ton.

I am glad to say that the strenuous efforts of the management at last appear to be reaping their reward, and in this connection I cannot speak too highly of the work performed by those responsible for the management of this mine. During the quarter ended March 31st of this year working costs were reduced to an average of 22s. 9d. per ton milled, as compared with 25s. 10d. for 1929 and 27s. 9d. for 1928. The working loss for the quarter was greatly reduced.

I cannot do better than quote the opinion of the consulting engineer as to the present position and prospects of the mine: "The outlook at the mine to-day is better than it has been during the past two years. More stable working conditions have been established and costs satisfactorily reduced. The prospects are favourable, with adequate labour, for the maintenance of a mill tonnage approximating plant capacity, and some improvement in the results of future development may be reasonably anticipated. At the same time, in view of the difficulties and heavy fixed charges inevitable with mining at great depth, only small profits can be expected without considerable improvement in the grade of ore available for stoping."

Before passing from our South African interests I wish to pay a tribute to the splendid work of our colleague, Mr John Martin, who represents us with such distinction and ability in that country. In addition to his other important duties he has just concluded a most successful term of office as President of the Chamber of Mines. (Hear, hear.)

TRINIDAD LEASEHOLDS.

Turning to our oil interests, the results of Trinidad Leaseholds, Ltd., for the year ended June 30th last were very satisfactory, and a dividend of 30 per cent. was distributed. For ten months of the current financial year production and purchases of that company amount to 793,100 tons, being an increase of 63,450 tons compared with the same period last year. The extensive capital programme on which the company embarked some years ago for the modernisation of refineries and field equipment is now almost completed, and the company will in the near future derive the full benefit of these important improvements. Despite the increased tonnage handled, the revenue for the current financial year shows a considerable falling-off, due to the unsatisfactory prices which have prevailed since August last, and as a result the interim dividend has been reduced from 12½ per cent. to 7½ per cent. World over-production of crude oil, which is entirely responsible for the low prices of products, has for a considerable time past received the close attention of all important oil interests, and the success of their concerted action is reflected in the substantial reduction of approximately 400,000 barrels per day in the United States production from the peak figure reached at the end of August, 1929. Recently oil prices have shown a tendency to harden, which is a further hopeful sign of success in the efforts which have been made to reduce production to a figure more nearly approximating consumption.

OTHER OIL INTERESTS.

A new company, called Siparia Trinidad Oilfields, Ltd., with an authorised capital of £500,000, is about to be formed to acquire the freehold land and oil rights of the Venezuelan Consolidated Oilfields, Ltd., in the Palo Seco district in Trinidad, together with Government oil rights to be granted over 4,000 acres in the Siparia district. Development results in the Palo Seco area are distinctly promising, and since January last an average production of approximately 4,000 tons per month of high-grade oil has been secured. The Siparia area is considered to possess good prospects. Trinidad Leaseholds, Ltd., has secured a controlling interest in the new company and has in turn ceded participations to our corporation and to Rand Mines, Ltd.

Our corporation and the other interested parties have continued to finance the operations of the North Venezuelan Petroleum Company, Ltd., the issued capital of which to-day stands at £740,000. Unfortunately, drilling operations at Aguide have not, so far, been successful, but in the light of the experience gained from the two wells already drilled, further test drilling is about to be undertaken. Geological operations throughout the concession are being vigorously pursued, and are now augmented by very active geophysical investigations which we believe may lead to important results.

I am pleased to tell you that the progress made by the Tocuyo Oilfields of Venezuela, Ltd., has been very satisfactory. When the company was floated in October, 1928, it was not anticipated that the revenue-earning stage would be reached for about two years. It is therefore, all the more gratifying, and a testimony to the energy and efficiency with which operations have been carried on by the general manager and all members of the staff, that the company will be shipping its first consignment of oil within the next few weeks. A pipeline approximately 20 miles in length from the field to the shipping port was recently completed, together with the necessary tankage, and loading facilities. The programme of test drilling has been continued with satisfactory results.

SPANISH RAILWAY INTERESTS.

As I indicated would be the case, when referring last year to our railway interests in Spain, the whole of the line from Calatayud to Cidad, a distance of approximately 366 kilometres, is now very near completion.

Towards the end of last year the two sections—namely, Soria to Calatayud southwards and Peñahorada to Trespaderne northwards totalling 144 kilometres—were put into exploitation. The remaining portion from Trespaderne to Cidad should be finished next month or the month following, when the work of construction and equipment of this railway as at present defined by the Spanish Government will have been completed by the Santander-Mediterraneo Railway Company.

As regards the section which in the future may be built from Cidad northwards, the Government last August intimated their decision of a change of route, and gave instructions to the proper authorities for the preparation of a survey to Renedo, where the line would link up with the Norte Railway to Santander. This survey, we understand, has not yet been completed, but you will remember that in the terms of the Royal Decree of 1927, under which the Santander-Mediterraneo Railway Company has carried out its work, it was provided that, should the Government wish to vary the route the Santander-Mediterraneo Railway Company would not be called upon to construct that portion of the line if the distance or cost of the proposed new route were greater than the original plan. The position, therefore, in this connection is uncertain, as, in addition to this fact, the Government now in power has stated in its policy of economic reform that it is unlikely that any new works of this nature will be undertaken at present. Thus it seems clear to us, as regards this particular section of line, that the route to be taken, the time when the work is to be carried out and the conditions and terms on which it will be carried out are deferred indefinitely and will call for consideration anew.

The construction work and general operations under the general manager and those associated with him have been pushed throughout the year with great ability and judgment, and our regular visits to the line have confirmed our confidence in this aspect of the enterprise.

First-class work has been done expeditiously and efficiently, and at a cost in accord with the estimate framed for the construction and equipment of the line Calatayud-Cidad.

METHOD OF FINANCING THE ENTERPRISE.

For the two completed sections put into exploitation towards the end of last year, the payment due from the Government to the Santander-Mediterraneo Railway Company was approximately 95,000,000 pesetas. This amount has been confirmed by the Government, and payment of 25,000,000 pesetas has been received on that account. The balance remaining of 70,000,000 pesetas should be settled in the course of the next few months, and in the meantime interest accrues at the rate of 5 per cent. per annum.

The method of financing this enterprise has been referred to before by me, but it may be well just to repeat that we have made advances to the Anglo-Spanish Construction Company, Ltd., who, in turn, have financed the Santander-Mediterraneo Railway Company with such sums as have been necessary to complete the work.

A portion of the last payment received in Madrid by the Anglo-Spanish Construction Company from the Santander-Mediterraneo Company on account of partial refund of loan has remained on deposit in Madrid, it being, in our opinion, undesirable at the present time to incur the loss that would be sustained by transferring funds to London at the depreciated rate of exchange as ruling to-day. And while those conditions prevail, I fear it will be necessary to carry out the same procedure in regard to the balance of 70,000,000 pesetas that should be paid by the Government in the course of the next few months.

RECENT POLITICAL EVENTS.

Recent political events in Spain, coincident with a heavy depreciation in the country's exchange, have naturally caused us considerable anxiety.

As you know, the dictatorship which had prevailed for the last six years was abolished last January, and a provisional Government was appointed with the intention of bridging over the period until Constitutional Government is resumed. The present Government commands respect and is pursuing steadily a policy of economy and the restoration of confidence, but the political situation of necessity appears at present somewhat confused and uncertain. I have referred to the political situation because it will be clearly realised that the governing factor in this important industrial interest of ours at this juncture is the matter of the country's rate of exchange.

The position is naturally not free from anxiety, and we have endeavoured to obtain from those qualified to express an opinion the probable reason for the present depreciation in Spanish currency, and the course the exchange is likely to follow. We are unable to find in the existing Spanish financial and industrial conditions any justification for the depreciation. Trade, broadly speaking, has remained on fairly steady lines; the adverse visible balance of trade has, similarly, remained steady, and there has been no appreciable currency inflation. In seeking a reason, therefore, one can find it only in the fact that a period of political uncertainty has prevailed in Spain for some time past, and that operations in pesetas, both on capital account and for speculation, may have been coincident with that uncertainty.

I feel that there is reasonable ground for believing in an appreciation of the peseta if the present Government is able to develop a steadiness in the general political situation, pursue its policy of national economy, and thus enable the great financial strength possessed by the country and the Bank of Spain to function effectively.

BERNHARD SCHOLLE AND COMPANY.

Both the profits and the balance sheet totals of Bernhard Scholle and Company, Ltd., were smaller than those of the previous year. This was the natural outcome of the reaction in trade; the world-wide contraction of business and the heavy decline in security prices which were the outstanding features of 1929. Dividends were paid at the same rate which has obtained in the past, and a small addition was made to the carry-forward.

AMALGAMATED METAL CORPORATION.

As regards the British Metal Corporation, Ltd., it was decided early this year to amalgamate the interests of that corporation with those of Messrs Henry Gardner and Company, which has in the past carried on business of a similar nature in many parts of the world. The advantages of such a fusion of interests under present-day conditions will be apparent. Our holding in shares of the British Metal Corporation has been exchanged for shares in the new company, the Amalgamated Metal Corporation, Ltd., and, representing as it does an amalgamation of two of the most important and successful metal enterprises in this country, the future of that corporation can be regarded with confidence.

BOLIVIAN TIN ACQUISITIONS.

You will have been interested to see from the directors' and the consulting engineer's reports that we have acquired an interest in two tin companies in Bolivia, following a favourable report made to us by Dr. Malcolm Maclaren. Associated with us in the business are French friends, the Société Alsacienne and Lorraine

de Recherches Minières and Messrs Mauricio Hochschild and Cia., Ltda., of Valparaiso, an important firm operating in South America which has a large experience of metal business. I am glad to be able to inform you that one of our mining engineers from the Rand has been appointed general manager of the companies. He arrived on the properties last month, and is now engaged in preparing a comprehensive development and mining programme. With the modernisation of mining and metallurgical methods, and the benefit of experienced management, the prospects of satisfactory returns on our investment appear promising.

BANKERS' INDUSTRIAL DEVELOPMENT COMPANY.

Lastly, you will have seen recently that the corporation have become shareholders in the Bankers' Industrial Development Company, a company formed under the ægis of the Bank of England to assist and finance the reorganisation of groups of British companies engaged in important industries.

THE OUTLOOK.

WORLD'S SUPPLY BELOW DEMAND.

Now, gentlemen, that completes my review of our affairs. Our annual meetings afford the opportunity of giving you a general survey of the enterprises and operations in which we are engaged in many parts of the world, and in covering this wide field I consider it my duty neither to stress nor to minimise the difficulties which we encounter. We have had a difficult year, and, looking ahead, conditions are not encouraging.

The world is at present passing through a phase in which supply exceeds demand, and the effects are felt the more acutely because this condition extends to almost every country and covers almost every commodity. Neither capital nor labour has escaped the consequences. I can only express the hope that before we meet again an improvement will have been effected in the general condition of affairs and that we may share in the benefits of such improvement.

TRIBUTE TO OFFICIALS AND STAFF.

In conclusion, it is my privilege to testify to the loyalty and efficiency with which all officials and members of the staff, not only of this corporation, but also of the various enterprises in which we are interested, have discharged the duties assigned to them. As I have said, during the early part of this year I paid a visit to South Africa, with the object of making an inspection of all our mining and other industrial undertakings, and I made a special point of getting into close touch with the personnel of our organisation. I cannot speak in terms of too high praise of the splendid body of workers that serve our interests in that country, and of the great efficiency which characterises their work. I firmly believe that it would be impossible to find a more expert, competent and loyal body of mining and industrial managers and men in any part of the world. (Hear, hear.) Your interests are in good and capable hands. I am sure that shareholders will wish to be associated with the board in assuring all those directly or indirectly in the service of the corporation of our appreciation of their continued efforts to promote its success and welfare. (Applause.)

I now beg to move: "That the report and accounts for the year ended December 31, 1929, as printed and circulated among the shareholders, be and they hereby are received, approved and adopted; and that the payment of a final dividend of 8s. per share and a bonus of 4s. per share, both free of income-tax, to shareholders registered on the books of the company at the close of business on May 20, 1930, and to holders of coupon No. 36 attached to share warrants, in respect of the year ended December 31, 1929, be and the same is hereby sanctioned."

Mr F. Heim seconded the resolution.

The Chairman: Gentlemen, before submitting the resolution I shall be glad to answer any questions which shareholders may care to ask.

No questions being asked, the resolution was put to the meeting and carried unanimously.

The Chairman: I beg to announce that the dividend warrants will be posted this evening and will be payable to-morrow, the 29th May.

Mr F. R. Phillips, M.C., proposed the re-election of Sir R. Sothern Holland and Mr F. Heim, the retiring directors.

Lieut.-Col. S. H. Pollen, C.M.G., seconded the motion, which was unanimously adopted.

On the proposition of Mr Tweedy, seconded by Mr T. E. Paddon, Messrs Cooper Brothers and Company were reappointed auditors of the corporation until the next ordinary general meeting.

The proceedings then terminated.

FORESTAL LAND, TIMBER AND RAILWAYS COMPANY, LIMITED.

DOUBLE TAXATION—PROPOSED ARGENTINE COMPANY.

The twenty-fourth ordinary general meeting of the Forestal Land, Timber and Railways Company, Ltd., was held on the 26th instant, at River Plate House, London.

Baron Emile B. d'Erlanger, the chairman, in the course of his address, said: Our trading profits have been very poor, only amounting to £684,000, as against £837,000, being £153,000 less than last year. We have been able to add to this figure some £17,000 from the release of reserves and £488 for transfer fees, etc. The net profit is £303,000, as against £442,000, or £139,000 less than in 1928.

As mentioned in the report, we have been taking energetic steps to expand the sales of tanning extracts, both in this country and in markets as far distant as China.

When we met here last year I did not disguise from you my anxiety as to the immediate prospects. Our first duty was to make ourselves financially strong, and £1,000,000 of six per cent. ten-year notes were placed successfully before the stringency of the money market became acute.

The board immediately set to work to overhaul the whole administration and to enforce the most rigid economy compatible with efficient administration, though the benefits of this economy will only fully reflect themselves in the accounts of future years.

For a long time past I have had in contemplation a step which would greatly benefit the Forestal Company and its shareholders, but which I hesitated for various reasons to submit to your board for its approval and your subsequent sanction. Yet we have been forced to the conclusion that, unless this step is taken, this important company (which, when its career of over 24 years is reviewed, can boast of a proud past, and has, I believe, a successful future ahead of it) might have to pass into foreign hands.

The step which we intend to take is to sell to an Argentine company, to be incorporated for the purpose, all our Argentine assets.

If this plan is carried into execution, the Forestal Company here will act as distributors of the Argentine company's production on approved and commercial terms, and will become a holding company for its Argentine interests.

It is the part of prudence to minimise the effects of double taxation such as it may now exist, or will exist when the Argentine Government adopts the now almost universal system of direct taxation by income tax.

The rationalisation of the quebracho industry by amalgamation certainly will remain beyond the realms of practical politics if our Argentine company is not formed, for the Forestal must be the keystone of any such scheme; but what company engaged in the quebracho industry in Argentina or Paraguay would accept incorporation into an English company at the cost of having to pay heavy British income tax on dividends, depreciation and reserves, and of exposing the Argentine or Paraguayan shareholders in the English company to the costs and formalities of probate?

The result of the year ending 1930 is naturally very difficult to forecast. At the reduced prices now ruling we shall have to sell during the year a larger tonnage than in 1929 to realise the same profit. Whether we shall succeed in doing so depends upon world conditions, and more especially upon the leather trade. We are ahead of our programme of sales, and if the sales for the last seven months of the year equal on average those of the first five months our expectations will have been fulfilled.

Your assets appear to us to have lost none of their value. A complete revision has been made of your timber reserves by our best experts, and on the strength of these it is estimated that the reserves are sufficient to provide the factories working at normal rates, which they are not doing at present, for the next fifteen to twenty years. At the normal rate of production the Forestal is by far the cheapest produced in Argentina and Paraguay.

In South Africa we believe that you have a valuable asset well written down in the books of this company. It appears to have reached the point of being self-supporting.

Given that vegetable tannins retain their popularity and that there is a revival in the leather industry, we should in a few years derive a substantial revenue from our South African company.

You will understand that if the immediate future does not appear to us under a roseate hue and that while we are at present holding our own, we may still have to face a period of great anxieties and strife. Yet the strength of your company remains unimpaired and its potentialities for profit and accretion of value full of promise in a general revival of world conditions and of the leather trade in particular.

The report and accounts were adopted, and a final dividend of 4 per cent. on the ordinary shares was declared, making 6½ per cent., less tax, for the year.

HAMBROS BANK, LIMITED.

SIR ERIC HAMBRO ON FOREIGN LOANS.

The eighteenth annual meeting of Hambros Bank, Ltd., was held, on the 29th instant, at 41 Bishopsgate, London.

Sir Eric Hambro, K.B.E., the chairman, who presided and moved the adoption of the report and accounts, said that at their last meeting he had commented on the rise in money rates throughout the world, due to the wave of speculation which had been sweeping over the New York Stock Exchange. The subsequent history of that speculation was known to all of them. It had led to economic depression throughout the world, the most serious feature of which was certainly the fall in the price of commodities. That had destroyed confidence and had impoverished those countries which produced the raw materials of industry, thus diminishing their power of purchasing manufactured goods and directly increasing the problems of unemployment in England and elsewhere.

They had taken a participation in the Bankers' Industrial Development Co., formed under the chairmanship of the Governor of the Bank of England, to examine, assist and finance the amalgamation, reconstruction and reorganisation on an economic and rationalised basis of groups of British companies engaged in important industries. He thought it was clear that to-day the issuing houses could help British industry, and he welcomed the advent of the Bankers' Industrial Development Co. On the other hand, he would protest against the fallacy which had once again appeared, that issuing houses such as theirs were guilty of an unpatriotic action when they issued a foreign loan, in that they were supplying the foreigner with capital which would otherwise be available for British industry. When a foreign loan was issued, the proceeds of that loan could only be made available to the borrower in sterling. The sterling could only be transferred into foreign currency by a purchase of British goods and services, a repayment of debts owing to England, or an export of gold from England, which only became operative as a last extreme. He therefore regarded as unnecessary any official restriction of loans to foreign countries. Funds for foreign investment were derived from the country's active trade balance, and that was not unlimited. Issuing houses knew well enough when the margin of safety was likely to be reached. Funds for domestic investments were of a different order; they were derived from the savings of the country irrespective of its trade balance. It was just as important to finance the buyer of British goods as it was important to finance the seller, and that form of banking which they practised normally had been the necessary concomitant of the development of British industry.

The report and accounts were unanimously adopted, and at a meeting held subsequently new articles of association were unanimously approved.

SHANGHAI ELECTRIC CONSTRUCTION COMPANY, LIMITED.

ADDITIONS TO RESERVES.

The twenty-fourth annual meeting of the Shanghai Electric Construction Company, Ltd., was held, on the 28th instant, at Basildon House, Moorgate, London, E.C.

Mr J. S. Haskell (the chairman), in the course of his speech, said:—The accounts which we submit to you to-day show a satisfactory financial position, inasmuch as we have been able to increase the reserve for renewals to £96,000 and the general reserve to £62,000. During recent years additions to renewals account have been very substantially in excess of expenditure under that head, and we hope that this will continue to be the case for several years to come, so that provision is accumulated for the large outlay which will become necessary when the second general renewal of the rails falls due.

Since the date of the accounts the rate of interest which the company was receiving from its bankers on deposit account has fallen with successive reductions of the Bank Rate, and at the present time we hold £75,000 5 per cent. War Loan. We have also a reserve of £7,000 made up of guarantee premiums received from the Singapore Traction Company, which constitutes a surplus except in the improbable event of a liability arising under the guarantee. The Singapore Company is making steady progress and redeeming its debentures out of profits by the operation of a sinking fund, but, for the time being, we regard the guarantee reserve as an item which should stand by itself in our balance sheet.

The true test of the vitality of our business is the number of passengers carried, which has risen from 123,000,000 to 137,000,000, although our total fleet of cars was only increased during the year from 285 to 289. The effective receipts, expressed in Mexican dollars, showed an increase of almost exactly 10 per cent. as compared with the preceding year.

The fall in the value of silver, which appears now to be established at an unsatisfactorily low level, rendered it necessary for us to apply to the municipal council for permission to revise our scale of fares, and a new scale was put into operation on April 20, with results which promised to be satisfactory; but the fulfilment of that promise was cut short by a strike which broke out five days later and resulted in the immediate total cessation of traffic on our system. The strike, which was due, not to dissatisfaction of our employees with their conditions of service, but to Communist machinations accompanied by threats of violence, gradually broke down and normal services were resumed on May 17.

The report and accounts were unanimously adopted, and a final dividend of 7½ per cent., making 12½ per cent. for the year, was declared.

BRITISH OVERSEAS AND GENERAL INVESTMENT COMPANY, LIMITED.

SUCCESSFUL FIRST YEAR.

The first annual ordinary general meeting of the British Overseas and General Investment Company, Ltd., was held, on the 28th instant, at Cannon Street Hotel, Cannon Street, London, E.C.

Mr P. Ashley Cooper (chairman of the company) presided.

The Secretary (Mr H. G. Mardell) having read the notice convening the meeting and the report of the auditors,

The Chairman moved the adoption of the report and accounts and the declaration of a dividend at the rate of 9 per cent., less income tax, for the period ended May 10, 1930, on the issued ordinary stock of the company.

Sir Charles J. Stewart, K.B.E., seconded the motion.

The Chairman: It is said that a company chairman should give his shareholders either a good dividend or a good speech. I believe you will consider that you are receiving a good dividend, and therefore I hope you will not expect me to say much. The fact is, there is not much to tell you yet. As I explained to the shareholders of the Province of Buenos Ayres Waterworks, this company was formed to co-operate with the waterworks company. Our shares were offered in the first place to the waterworks shareholders, the majority of whom readily availed themselves of the offer.

Our principal investment is in the waterworks company. We are gradually maturing our plans, but as we are anxious to build on sure foundations we are proceeding slowly. Shareholders will, I hope, consider this to be a wise policy.

The accounts are in a simple form. You will notice we have started a general reserve. There is little else of note except to point out that our investments, which stand at £240,000 in our books, are worth considerably more than that figure. You will see that, after providing for the dividend of 9 per cent., we carry forward a sum which, as it has paid tax, is equal to rather more than 3½ per cent. on our ordinary stock.

This is our first year, and we have made a start. When we meet you next year I hope we may be able to record further sound progress.

The resolution was carried unanimously.

The retiring director (Mr P. Ashley Cooper) was unanimously re-elected, the auditors (Messrs Fookes, Hickman and Company) were reappointed, and the proceedings terminated with a vote of thanks to the chairman and directors.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 24, 1930:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	5,000	From Revenue	8,649
Interest, &c., on Debt	481		
Sinking Fund	1,215		
Sundries	19		
Decrease in Debt	1,864		
Increase in Balances	70		
	8,649		8,649

The ordinary revenue for the week amounted to £8,649,000, as compared with £6,981,300 in the corresponding week last year. Income tax and Sur-tax were higher at £334,000, and £640,000, against £54,000, and £360,000 respectively. Estate Duties brought in £1,990,000, as compared with £2,720,000, while Customs amounted to £3,104,000, against £3,036,000, and Excise to £2,716,000 against

£476,000. The National Debt was reduced by £1,864,000, as shown below :—

(000's omitted.)

	£		£
Public Department Advances	+ 5,600	Treasury Bills	— 7,914
National Savings Certificates	+ 200		
4½% Conversion Loan	+ 250		
	+ 6,050		— 7,914

The Floating Debt was reduced by £2,315,000 to £624,870,000.

FINANCIAL YEAR, 1930-31, APRIL 1 TO MAY 24.

	£		£

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bills were opened on May 23, 1930, and the total amount applied for was £48,275,000. Tenders were accepted for bills at three months, dated Monday to Friday, at £99 9s. 0d., about 99 per cent., and Saturday at £99 9s. 2d., and above in full. The amounts allotted were in bills at three months, £35,000,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.

				Sovs. for export	2,000
				Sovs. set aside	100,000
			,, 29	Bars sold	153
	Total	1,530		Total	315,167

Net withdrawals, £313,637.

Messrs Samuel Montagu and Co. write on May 28, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £157,498,068 on the 21st instant (as compared with £162,383,588 on the previous Wednesday), and represents an increase of £11,537,984 since January 1st last. Gold from South Africa to the value of £441,000 was offered in the open market yesterday and realised 84s. 11¼d. per fine ounce. Germany secured £263,000 and an undisclosed buyer (probably Belgium), £100,000. Of the remainder, India took £35,000 and the Home and Continental trade £43,000. The French exchange having remained above the point at which gold exports are practicable, there have been no further withdrawals from the Bank of England for Paris during the past week. Receipts amounted to £1,530 and withdrawals £318,209, of which £300,000 was in sovereigns "set aside," a net efflux of £316,679 during the week under review.

SILVER.

The week under review has seen a further sharp decline in prices. Except for a slight reaction to 18⅞d. and 18 11/16d. on the 23rd instant, movements have been sharply downward and the quotations fixed to-day, 18d. for cash and 17 15/16d. for two months' delivery, constitute a fresh low record for silver. Following the weak advices from China, selling has been general and offerings have met with little resistance, buyers, chiefly bears, being inclined to limit their orders in anticipation of even lower prices.

Selling by China and the Indian bazaars has continued, and America has also been a seller; the latter, however, showing some restraint at the low level. The Continent has not, of late, shown much activity.

Although the outlook must be considered as somewhat uncertain, there seems little indication of sufficient support to withstand any sustained pressure of selling.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 19th instant, to mid-day on the 26th instant :—

Imports.	£	Exports.	£
Germany	6,900	China (including Hong Kong)	36,980
France	64,192	British India	160,992
U.S.A.	96,829	Other countries	4,504
Canada	17,284		
Other countries	2,754		
	£187,959		£202,476

NOTICES.

Lloyds Bank, Ltd., announce that a branch of the bank is now open at 527 Norwood Road, S.E.27, to be known as the West Norwood Branch.

At the annual general meeting of the British Bankers' Association, held on May 14th, Mr. F. C. Goodenough, chairman of Barclays Bank, Ltd., was elected president for the ensuing year, and Mr J. W. Beaumont Pease, Mr Edmund Godward and Mr Alexander Robb were elected vice-presidents.

The Midland Bank announces the opening of new branches at 147 Rushey Green, Catford, London, S.E.6, and at 1 Market Street, Hailsham, Sussex.

Barclays Bank, Limited, announce the opening of a new sub-branch at the Post Office, Pentrevoelas.

The Midland Bank announces the opening of a new branch at 217 North Street, Ashton Gate, Bristol.

The sub-branches of Barclays Bank (Dominion, Colonial and Overseas) at Kalkfontein (South West Africa) and Jamestown (Cape Province) have been converted into full branches.

Facilities for day and night banking are now available at 375 of the 2,070 offices of the Midland Bank, the service being in operation at 80 branches situated within the London postal area and at 295 branches in various important provincial centres.

It is announced that Mr C. Noel Hume, London representative of Central Hanover Bank and Trust Company of New York, is extending his organisation by establishing a new West End Representative Office at 27 Regent Street, Piccadilly Circus, S.W.1. This office, which will be opened on June 2nd next, and which will be under the management of Mr W. A. Nichols, will be devoted to the accommodation and convenience of the resident and travelling clientele of the bank.

Company News.

REPORTS AND NOTICES.

Colonel Wyndham R. Portal, D.S.O., M.V.O., has been appointed chairman and Mr L. W. Farrow deputy chairman of Wiggins, Teape and Company (1919), Ltd.

Mr L. F. Hovil, actuary and secretary of the National Provident Institution, has been elected a director of the Institution to fill the vacancy caused by the death of Sir Lewis Coward, K.C. Mr Hovil will continue the duties of his present executive positions until January next, when he will be succeeded by Mr H. E. Melville, at present life manager of the Eagle Star and British Dominions Insurance Company, and a vice-president of the Institute of Actuaries.

The National Provincial Insurance Company, Ltd., announces that Mr Percy F. H. Hodge has been elected to a seat on its board of directors.

It is announced that Mr E. W. Beatty, chairman and president of the Canadian Pacific Railway Company, has joined the board of the Sun Life Assurance Company of Canada.

Mr W. R. MacInnes, vice-president of the Canadian Pacific Railway Company, will retire shortly. Mr MacInnes has had 45 years' service with the Canadian Pacific Railway. He will be succeeded by Mr George Stephen, who is at present the company's freight manager.

The Royal Exchange Assurance announces that Mr. H. D. Street, the accountant, will retire on pension on May 31, 1930, and that the directors have appointed Mr B. D. Cumming, the assistant accountant, to fill the vacancy from that date.

Mr William MacColin Kirkpatrick has been appointed deputy chairman of Allied Cement Manufacturers, Ltd., and has joined the board of the following companies :—Holborough Cement Company, Ltd., Greaves, Bull and Lakin (Harbury Works), Ltd., The Dunstable Portland Cement Company, Ltd., Smeed, Dean and Company, Ltd., British Standard Cement Company, Ltd.

The head office of the Trust and Loan Company of Canada has been removed to No. 1 Great Winchester Street, London, E.C. 2.

Mr C. F. Trustam, M.A., F.I.A., has been appointed an assistant secretary at the London office of the Royal Insurance Company, Ltd. Mr H. G. Barraud has been appointed fire superintendent at the London office of the Royal Insurance Company, Ltd.

Sir Allan Horne, and Mr S. B. Skevington, director and general manager of Perrier, Ltd., have joined the board of Kia-Ora, Ltd.

The directors of the Phœnix Assurance Company, Ltd., have re-elected Sir Gerald Hemmington Ryan, Bt., chairman, and Mr Arthur M. Walters and Mr P. J. Pybus, C.B.E., M.P., deputy-chairmen.

We are officially informed that the directors of the Commercial Union Assurance Company, Ltd., have appointed Mr H. M. Gates, at present manager of the accident department, an assistant general manager of the company as from June 1, 1930.

BANKS.

BANK OF MONTREAL.—The Bank's report for the half-year ended April 30, 1930, shows that the paid-up capital at $36,000,000 is up from $34,548,760 a year ago, while the rest at $38,000,000 as compared with $35,548,760 is now $2,000,000 above the paid-up capital. The total assets are $822,000,000 as compared with $915,000,000 a year ago, and liquid assets are equal to 51·03 per cent. of liabilities to the public. Current loans and discounts in Canada show an increase from $314,000,000 to $335,000,000. The most important variations are in call loans, which show sharp reductions, while total deposits are now $688,000,000. Profits for the past six months have slightly increased from $3,491,651 to $3,543,017.

INSURANCE.

ROYAL INSURANCE COMPANY, LTD.—At a meeting of the board of directors held on May 26th, Mr W. R. Glazebrook, who has filled the office of chairman of the company since 1924, intimated his desire to relinquish that position, and Mr A. Allan Paton, C.B., who has been a member of the board since 1910 and a deputy-chairman since 1924, was elected chairman. Mr Arthur E. Pattinson and Mr A. Kentish Barnes were re-elected deputy-chairmen, and Mr P. R. England was elected a deputy-chairman.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY, LTD.—At a meeting of the board of directors held on May 26th, Mr W. R. Glazebrook, chairman of the company, intimated his desire to relinquish that position and Mr A. Allan Paton, C.B., a deputy-chairman, was elected chairman. Mr Arthur E. Pattinson and Mr A. Kentish Barnes were re-elected deputy-chairmen and Mr P. R. England was elected a deputy-chairman.

RAILWAYS.

CORDOBA CENTRAL RAILWAY COMPANY, LIMITED.—Owing to the almost complete loss through drought of the wheat and linseed crops in the company's zone and the subsequent commercial depression, followed recently by strike trouble, the earnings of the railway for the current financial year have suffered severely. The net revenue for 10 months shows a decrease of approximately £608,000. In these circumstances the directors greatly regret that the company will not be in a position to meet at its due date the half-year's instalment of interest payable July 1st next on its 5 per cent. second debenture stock. The board, holding the view that the conditions which have obtained recently are exceptional, has decided to ask the holders of that stock to allow the company, as a temporary measure, 12 months within which to pay the interest falling due thereon from time to time on the understanding that no interest will be paid on the income stocks, while any interest on the 5 per cent. debenture stock is in arrear.

MISCELLANEOUS.

ASHBY'S STAINES BREWERY, LIMITED.—Messrs H. & G. Simonds, Ltd., announce that over 95 per cent. of the holders of ordinary shares in Ashby's Staines Brewery, Ltd., have accepted the offer made under date of May 5, 1930, to purchase their ordinary shares. Arrangements are accordingly being made to complete the sale and purchase of such shares on June 10th next in accordance with the terms of the offer.

BOOTS PURE DRUG COMPANY.—The directors of Boots Pure Drug Company, Ltd., announce that subject to completion of audit that profits for year ending March 31, 1930, amounted to £724,868 (£750,152) and that a bonus will be paid to ordinary shareholders on register May 24th of 1s. per share free of tax (same). Accounts will be posted June 2nd.

INDEPENDENT INVESTMENT COMPANY.—The net revenue for the year ended March 31, 1930, amounted to £20,245 against £22,992 for preceding year. The ordinary shareholders receive 7½ per cent. for the year, the same as for the preceding year. The carry-forward is increased from £19,488 to £19,804. The market value of the company's securities is shown in the balance sheet, and on this basis the value of each £100 on the ordinary stock of the company is £134 12s. 8d. after payment of the dividend now recommended. This calculation is made on the basis of liquidation in which the preference stock would be repaid at par.

ROSARIO NITRATE COMPANY, LTD.—The Board have been for some weeks in negotiation with the new nitrate merger, the Compania Salitrera Nacional, from whom they have now received an offer for the purchase of the undertaking on terms which, subject to satisfactory arrangement of details, they will at the appropriate time unanimously recommend shareholders to accept.

SPILLERS LIMITED.—The directors have interviewed a number of the larger shareholders of the company and other gentlemen qualified to advise them in connection with the question of the constitution and personnel of the Board. Interviews with shareholders are still proceeding, but meanwhile the Board have taken the step of requesting three gentlemen to act in consultation and to advise the Board in the matter. These are Sir Wm. Edgar Nicholls, Sir Gilbert Garnsey, and Mr Harold Brown.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions were more favourable over the United Kingdom during the past week, spells of sunshine and a higher temperature greatly benefiting cereal crops. In some districts, the wheat plant was losing colour owing to excessive moisture during the past few weeks, and a continuance of warm weather is necessary if full yields are to be secured. The condition of pastures, however, leaves little to be desired. Native wheat continues in light supply at the principal statute markets, and, with a slow demand, prices showed no improvement, while still adversely affected by cheap offers of French grades. On the import market, dull conditions prevailed, but prices were rather dearer on the week in sympathy with improved overseas cables and lack of selling pressure. The market becomes more sensitive to weather and crop reports, and the favourable progress of new crop sowings in most countries tends to check any material upward movement. A moderate business resulted in Canadian and Argentine grades, and more attention is directed to Indian varieties, which is reflected by increased bookings of shipping space from Karachi. It is estimated that upwards of three million quarters will be available for export, some 30,000 tons being already chartered, chiefly for June loading. Southern Hemisphere shipments continue on a light scale, but larger quantities are coming forward from North America, where visible supplies are steadily being reduced. Present conditions do not indicate any great expansion in European requirements necessary to materially lessen stocks in the United States and Canada, and a large carry-over is practically assured at the end of the current cereal year. Flour prices were advanced in sympathy with wheat, but bakers are reluctant to book beyond immediate needs, while higher prices for shipment are not followed by importers. Of feeding stuffs, prices tend easier for maize owing to better climatic conditions in Argentina, together with low prices ruling for milling offals. A few cargoes of Danubian were placed to the U.K. at 23s., and offers of new crop South African are circulating freely. Oats dull of sale, but tone steady, in view of reports that the German bounty on exports will be discontinued at an early date.

WHEAT.—Firm to dearer. No. 1 Northern Manitoba (Atlantic shipment), ex ship, 45s.; No. 2, ditto, 44s. 3d.; No. 3, 44s.; No. 4 Manitoba, 42s. 9d.; No. 5, ditto, 39s. 9d.; No. 6, 33s. 9d.; No. 2, hard winter, 41s. 9d.; No. 2, mixed Durum, 38s. 6d.; Rosafe, 62½ lbs., 40s. 6d.; Barusso, new crop, 62½ lbs., ex ship to arrive, 39s. 9d.; Australian, 43s. 3d.; choice white Karachi, 41s. 9d. per 496 lbs. English, 8s. 4d.-8s. 6d. per 112 lbs.

FLOUR.—Firm. London, straight run, 37s. per sack for country deliveries, and 36s. London area. Of imported, Manitoba patents, 33s.-36s.; Buffalo, 33s.-36s.; Australian, 30s. 6d.-31s., ex store. On c.i.f. terms, Manitoba top patents, May-June, 33s.; export, ditto, 30s. 6d.; Australian, 28s.; French, prompt, 23s. 9d.-26s. 3d. per 280 lbs. Argentine, low grade, May, £5 15s. per ton.

MAIZE.—Easier. Plate, landed, 28s. 3d.; new, ex ship to arrive, 26s. 3d.; April-May, 25s. 9d.; May-June, 25s.; June-July and July-August, 24s. 6d.; No. 2 white flat African, 28s. landed, per 480 lbs. Yellow maize meal, £7 15s. per ton f.o.r. London. Yellow African, £5 17s. 6d. per ton, ex ship.

BARLEY.—Dull. Californian, old, landed, 34s.-40s.; new, ex ship, 34s.-40s., as to sample; Chilian brewing, 33s.-37s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 34s.-36s. per 448 lbs. Black Sea, ex ship to arrive, f.a.q., 17s. 3d.; landed, on sample, 18s.-19s. Persian, landed, 17s. per 400 lbs. English malting, 7s. 3d.-8s. 9d.; feed, 7s.-7s. 2d., per 112 lbs.

OATS.—Firmer for German, owing to reports that the bounty will be discontinued at an early date. Others steady. Plate, landed, 13s. 9d.; ex ship to arrive, 12s. 9d. Chilian white, landed, 20s.; ditto, tawny, 15s. German, landed, 19s.; ex ship to arrive, 17s. 3d. Mixed Canadian feed, 12s. 6d. per 320 lbs. English, 6s. 4d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929–30, 1928–29, 1927–28, 1926–27:—

Average price of English wheat per cwt.	s. d. 8 7	s. d. 9 10	s. d 11 2	s. d. 12 5

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Cwts.	Cwts	Cwts.	s. d.	s. d.	s. d.
May 17	130,531	46,234	20,428	8 9	7 9	6 8
May 24	138,801	21,393	19,652	8 7	7 4	6 7
May 22, 1926	137,437	15,659	19,211	13 7	9 4	9 11
May 21, 1927	170,754	27,011	66,210	12 4	11 4	9 9
May 26, 1928	174,515	12,846	14,868	11 2	10 8	13 1
May 25, 1929	141,532	28,274	27,349	9 10	10 7	9 8

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	May 29, 1929.	Jan. 2, 1930.	May 14, 1930.	May 21, 1930.	May 28, 1930.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	122	109⅞	148⅜	105⅛	107⅞	111
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	97	130⅞	102⅜	103⅜	107⅛

The visible supply of wheat in Canada at 62,528,000 bushels shows a decrease on the week of 3,778,000 bushels. Supplies a year ago stood at 72,431,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—The export market for South Yorkshire coal is less favourable than before, as forward bookings are on a comparatively meagre scale and prices weak. The demand for industrial coal is adversely affected by the disorganisation of the textile industries, and sales of house coal have declined. The market for blast furnace coke is weak and unsatisfactory. The price is about 14s. at ovens.

Our Glasgow correspondent writes:—There has been a moderate improvement in the shipping branch of the coal trade recently, and generally the market has firmed up a little, one or two qualities of nuts being as much as a shilling dearer than a week or so ago. Large coal is, however, still very plentiful, and for good-sized orders the collieries are willing to shade prices. Current quotations for shipment business are round the following (f.o.b. district ports): LANARKSHIRE:—Ell best, 14s.; splint best, 15s. 6d.-16s.; splint second, 14s. 6d.-15s.; navigation, 16s.; navigation second, 14s. 6d.; steam, 12s. 6d.; Hartley, 16s.; trebles, 12s.-12s. 6d.; doubles, 11s. 6d.; singles, 10s. 6d.; pearls, 10s.; dross, 9s. 6d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 3d.; trebles, 13s.-14s.; doubles, 11s. 6d.-11s. 9d.; singles, 10s. 9d.; pearls, 10s. 6d. LOTHIANS.—Prime steam, 12s.; secondary steam, 11s. 6d.; trebles, 13s.; doubles, 11s. 6d.; singles, 10s. 6d.; pearls, 10s. 6d. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s. 3d.; trebles, 12s. 6d.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—On the Cardiff coal market new business continues very scarce, and reports of irregular working have been received during the week from practically every district of the coalfield. Moreover, with no inducement to enter into speculative contracts owing to the reluctance of foreign buyers to extend their commitments, exporters are buying from hand to mouth, while the house coal trade is beginning to feel the effects of the seasonal decline in consumption. Prices, however, are stationary at the minimum schedule, and owners are more united than they have been for some time past in their determination to resist any attempt to reduce the minimum figures. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 3d. to 12s. 9d.; coking smalls, 13s. 3d. to 13s. 6d.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s.; pitwood, ex ship, 26s. to 26s. 3d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Although the depression in the iron and steel markets remains serious, the slight movement in business noticed last week has continued. There has been rather more export buying; but, generally speaking, the overseas markets are in a lethargic condition. All the business transacted appears to have been for small parcels for early delivery, and orders have been subject to keen bargaining. Slight as the improvement has been, however, it has been sufficient to give a more hopeful tone to the market for finished steel, particularly as there has been a certain amount of buying in the home market for stock replenishment. Business in pig iron remains dull, and consumers, who are finding a poor demand for their products, are taking only small quantities to cover their immediate requirements. The producers state that stocks have not yet reached an unwieldy tonnage, and argue that no reduction in prices would stimulate the demand. They are also disinclined to make any alteration in their quotations until increases in cost which may arise from the Government's coal legislation are more evident. The semi-finished steel department has been quiet, and transactions have been for a limited tonnage. Consumers appear to be buying on hand-to-mouth lines and to be placing the greater part of their business with the British works Some transactions in Continental material are reported, but the volume of this class of business has declined considerably of late.

Our Middlesbrough correspondent writes:—Extreme dullness still pervades the market for Cleveland iron. A very small business was reported at the weekly market on Tuesday, and this was confined to odd parcels on home account. Makers were firm at recent prices, viz.:—No. 1, 70s.; No. 3, 67s. 6d.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s., f.o.b. or f.o.t. There is practically nothing doing with Scotch consumers on account of the severe competition of Continental and other irons, but a few shipments are going forward against current contracts. In hematite there is a slightly better demand, but the quantities booked are not yet of very large volume. Consumers, however, are rather more inclined to buy in view of the reduced output and the prospect of producers making a firmer stand in regard to prices. For odd lots of mixed numbers works are securing 74s., but for larger quantities for fairly early delivery would accept 73s. 6d. in order to get stocks reduced. Shipments of pig iron do not show any improvement, the clearances to 27th instant being 13,833 tons, against 12,996 tons to April 27th. In the steel trade the Union of South Africa are understood to have placed orders for 47,000 tons heavy steel rails and necessary fishplates with British makers. It was reported last week that Dorman, Long and Company had secured 13,500 tons and the Cargo Fleet Iron Company, Ltd., here are now stated to have booked 10,000 tons. Prices for the different manufactured materials are unchanged from last week. In the ore market new business is at a standstill. Sellers now offer best Bilbao rubio for prompt shipment at 20s. c.i.f., but there are no buyers. On account of the difficulty in getting ore taken out under contracts several of the smaller mines in the North of Spain are reported to have closed down and others are likely to follow unless a change takes place very quickly. The rate of freight Bilbao/Middlesbrough for early tonnage is about 5s. 6d. Coke continues much in excess of demand, and the price of good furnace qualities is weaker again at 17s. per ton delivered consumers' works.

Our Sheffield correspondent writes:—There are as yet no definite signs of a recovery from the depression which pervades nearly all branches of the iron and steel industry. All the reports refer to the smallness of orders and the absence of forward contracts. Consumers have not sufficient confidence to buy normally. Competition becomes keener and much of the business being transacted has been accepted at unremunerative prices. More than half of the open-hearth furnaces in this district are standing, while short time is the rule at the rolling mills. The pig-iron market continues lifeless, with prices unchanged. Moderate business is being done in alloy and other special steels. The export markets continue to be the weak spot in the situation. The prevailing trade depression is being felt more or less in the tool, cutlery and electro-plate ections, with the exception of engineers' small tools.

Our Workington correspondent writes:—The steady decline in business in the Cumberland and North Lancashire hematite pig-iron trade during the last few months has compelled makers this week to bring down prices by 2s. to 3s. per ton. East Coast competition is keen, and smelters anxious to maintain production at its present level, the number of furnaces in blast being twelve, have thrown out a bait to tempt users to cover their needs for two or three months ahead. Whether or not there will be a satisfactory response remains, of course, to be seen, but the amount of business done during the two days following the cut in prices was exceedingly small. It is in the smelters' favour that they hold little stock, and that it will be the end of the half-year before orders on their books are completed. Bessemer mixed numbers are now quoted at 72s. 6d. per ton at works, and semi-special and special qualities 2s. 6d. to 5s. per ton higher, while malleable iron is £6 per ton delivered and ferro-manganese £13 per ton home. Continental and American demand is poor, and Midland, Scottish and South Wales requirements are lower. The steel trade is quiet, and no new orders of importance have been booked this month. A period of intermittent working during the summer is now inevitable. The mills at Workington are at present rolling rails for South Africa and sleepers for the Southern Railway. Native ore is in steady request by Cumberland and North Lancashire smelters at 17s. 6d. to 19s., but hardly any metal is being sent to the East Coast or to Scotland. The coal trade has slumped. Scottish owners with lower prices have invaded Cumberland preserves in the Irish market, with the result that shipments are lighter and that short time is being worked at several of the collieries. Best round is 21s. 6d.; washed doubles, 20s.; washed singles, 19s.; small, 17s. 6d., all f.o.b. Best house is 30s.; gas coal, 28s.; local coke, 17s. 9d. to 18s. 3d.

Our Glasgow correspondent writes:—It is being found increasingly difficult to keep plants in operation as, while demand has shown no further shrinkage during the past week, there has been no expansion of business and stocks are accumulating in spite of the fact that for some little time, in almost every branch of the iron and steel industry, only part of the available plant has been in operation. Some branches of the tube trade and sheetmakers are more favourably placed than other sections, but even here the demand is not equal to works' capacity. The small tonnage of new work placed with Clyde yards is partially responsible for the state of affairs at the steel plants, but there has also been a considerable reduction in the volume of export orders.

Our Cardiff correspondent writes:—There has been no material change this week in the condition on the South Wales metal trades. In the tinplate industry inquiries have been comparatively inactive, with prices ruling between 18s. and 18s. 3d. per basis box, but the current output is in excess of the effective demand, and it is suggested that allocations under the regulation scheme may have to be further reduced. Quotations for galvanised sheets are unaltered at £11 17s. 6d. to £12 per ton, while native and foreign tinplate bars are also unaltered at last week's quotations. Shipments last week were a little heavier than in the previous week, but deliveries from the factories were a little heavier and stocks are higher at 206,657 boxes. In the corresponding period last year, however, stocks totalled nearly 239,000 boxes.

OTHER METALS.

TIN.—The standard market displayed firmer features, sellers showing more reserve in face of higher Eastern cables and a fair consumptive demand, but later values reacted on freer offerings. Standard cash changed hands at £142–£143 7s. 6d. and £141 5s.; three months, £143 10s.-£146 to £143 2s. 6d. In the East, sales were reported at £145 2s. 6d. to £147 and £145 12s. 6d ton c.i.f.

COPPER opened a shade firmer, but with buyers reluctant to follow, a quieter tone ensued. Demand was chiefly for forward dates, early June sold £54 2s. 6d. to £54; and three months, £54-£54 2s. 6d. to £53 17s. 6d., and £54 1s. 3d. Cash sold £54.

LEAD dull of sale. Good soft foreign pig, May, sold £18 to £18 2s. 6d.; July, £18 1s. 3d. per ton.

SPELTER easier, with sellers more in evidence and a lack of demand. June sold £16 18s. 9d. to £17 2s. 6d. and £16 17s. 6d.; August, £17 10s.–£17 12s. 6d. to £17 8s. 9d.; September, £17 16s. 3d. to £17 12s. 6d. per ton.

ANTIMONY quietly steady. English regulus quoted £40 to £45; Chinese ditto, spot, £27 10s. to £28; May-June, £24 10s.; crude, May-June, £16 per ton c.i.f.

ANTIMONY OXIDE, May-June, £26 10s. ton c.i.f.

ANTIMONY ORE, 50 per cent., May-June, 3s. 6d.; 60 per cent. ditto, 4s. per unit c.i.f.

WOLFRAM dull. Chinese, May-June, 22s. 3d.; Burmese ditto, £21 per unit c.i.f.

ALUMINIUM steady. Home trade, £95; export, £100 ton.

QUICKSILVER firmer. Spot, £22 2s. 6d. net, per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 18s. 1½d. to 18s. 4½d. per bottle, f.o.b. Swansea.

ZINC OXIDE dull, at £27 to £33 per ton as to quality, delivered U.K.

THE COTTON TRADE.

LIVERPOOL, May 28th.

Prices are a few points lower owing to continued favourable crop conditions and poor trade. Demand seems non-existent, and there are reports of further curtailment in the mills. The New York Cotton Exchange Service estimates world consumption of American cotton during April at 1,056,000 bales against 1,063,000 for March, 1,288,000 for April last season, and 1,161,000 bales for April two seasons ago. Total consumption from August to the end of April this season was 10,286,000 bales against 11,435,000 same time last season and 11,966,000 bales two seasons ago. Spot sales for the week 22nd to 28th (inclusive) are 13,000 bales, of which 4,760 America, 1,800 Brazil, 350 Argentine, 1,600 Peru, 1,050 Egyptian, 2,600 African, 710 East Indian, and 130 sundries. Imports for the same period are 35,070 bales, of which 9,067 are American, 2,282 Brazil, 133 Peru, 11,953 Egyptian, 3,695 African, 7,208 East Indian, and 732 sundries. Quotations to-day are: American Middling, 8·57; Egyptian Sakel, 13·85, Uppers, 10·16; Brazil Fair, 7·87; Peru G.F. Smooth, 8·97; West African Middling, 8·47; East African G.F., 9·12.

MANCHESTER: May 28th.

The tone of the market has continued very slow and spinners and manufacturers have not been able to report any improvement in demand. A miscellaneous business is done from day to day, but there is a general absence of enterprise and the turnover is much less than the requirements of producers. Operations in piece-goods for India remain very limited. Although the cancellation of contracts is being strongly resisted, some mutual arrangements are being made whereby deliveries can be postponed. The further fall in the price of silver has made the outlook for China trade worse than ever, and replacement buying is impossible at the moment. Some isolated sales, however, have been mentioned for Hong Kong. Printing and bleaching styles have attracted some attention for the West Coast of Africa. Home-trade buyers have operated sparingly. More looms are being brought to a standstill in weaving districts. The yarn market remains depressed. Only small quantities of American and Egyptian counts for home use and export have been sold.

THE WOOL TRADE.

Our Bradford correspondent writes:—Taking into account the peculiar situation brought about by the partial stoppage of production in the West Riding mills, it can be said that the outlook is fairly promising. At the moment, of course, there is more or less dislocation and it is difficult for owners of machinery to see far ahead but a broad survey of conditions in the raw wool markets and in the chief Continental consuming centres certainly suggests that the wool textile industry as a whole can look forward to better trade. The outstanding feature is that confidence in wool seems to have been re-established, and the brisk demand in London and in the overseas markets indicates that users everywhere are in need of supplies. There is, of course, a danger that the advance in raw material prices may be carried too far, but at present there does not appear to be much prospect of this; users are exercising restraint so far as speculative purchases are concerned, but they are operating much more freely in regard to their probable requirements. In all Continental markets the tone is good and prices are firm, and it is encouraging to note the steady reduction in stocks

of tops. In Bradford the position shows little change on the week. There is still a fair demand for spot lots of tops, and where prompt delivery can be given full quoted rates are obtainable. The turnover however, is naturally restricted for although the majority of spinners are working, several manufacturers are not in a position to take delivery of yarn. In all sections there is a steady drift of workers back to the mills but until the opposition from the operative combers and weaving overlookers is overcome, it will be impossible to make progress consistent with the general improvement foreshadowed by the recovery in the raw material position.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The auctions are fast coming to a finish, and the series has certainly been very good. Not only has the attendance remained satisfactory, but competition during the past week has been on a par with the two previous weeks. The selection throughout the series has been exceedingly good, both in merinos and crossbreds, and the large operations of both the Home and Continental trades has left nothing to be desired. Supplies of greasy New Zealand wools have been on the meagre side, so that there has been no difficulty in maintaining a good 10 to 15 per cent. advance over March rates. Slipes have been in very large supply, and although half-bred lambs have not advanced a great deal, 50's and below have met with a very ready sale at about 1d. more than last series. Considering the big quantities of crossbreds which have been available, the sales have gone remarkably well. Large offerings of Puntas have been absorbed by the Continent in a manner which has been remarkable. Throughout the series there have been some very good offerings of merinos, the wools catalogued being better quality than we have seen for a long time. Supplies from Tasmania have been larger, for, in addition to some familiar clips, a good many withdrawn lots out of the Tasmanian sales last January have been offered. These have met with a very hearty reception. Some very good wools from the New England district of New South Wales have also sold exceedingly well, and altogether the bulk of the merinos have maintained the full opening advance. The auctions have established confidence in to-day's values, and done much to remove any lingering pessimism that existed. In view of the labour situation in the West Riding, the majority think that for the time being advances have gone far enough.

HIDE, LEATHER AND ALLIED TRADES.

For the time being, at any rate, prices for market hides appear to have touched top, values at the auctions held so far this week showing no alteration. There still appears to be a shortage of supplies in certain weights and classes, but in spite of this an easier tone is being looked forward to. Foreign hides, on the other hand, show a firmer tendency, and with an improvement in the demand for certain descriptions fractional advances have been recorded. In the South African market a fair amount of business has been put through for tanners in the U.S.A. and Europe in connection with frigorific hides, and Argentine ox are now quoted at 7 5/16d., light ox at 7d., and Montevideo cows at 6 9/16d. The market for saladero hides has also been rather more active, a fair number of sales having been effected for Russia. Dry River Plates have followed the upward trend, B.A. Americanos having changed hands at from 8 3/16d. to 8 7/16d., with Sierra Cordobas quoted at 8 5/8d. A fairly active market has been experienced for Africans of most descriptions, sales of Capes having been made at 8 1/2d. and 7 1/2d. for drys, with dry-salted realising 7 7/8d. and 6 5/8d. Satisfactory business has also been put through in connection with unbathed Adis Abebas, which have sold at 6 7/8d. to 7d. for heavies and 6 3/4d. for mediums, while Mombasas 30/40/30 have sold at 6 7/8d. Although the bulk of the business passing in connection with sole leather is confined to small quantities, a rather better inquiry has been experienced and it is hoped that this will eventually lead to a larger turnover. Disappointment continues to be expressed at the way in which the manufacturing end of the trade is taking up supplies, orders being restricted to the smallest possible wants. Bends for the repairing trade are a steady sale, and fair quantities of English and wet-salted in 10 to 12-lb. weights have changed hands for this purpose. Light-weight bends for the production of footwear are taken up in small quantities, while a regular steady trade is done all the time in both shoulders and bellies. Prices are maintained in most directions, and it is seldom one hears of anything in the way of a concession being obtained. A regular trade is passing in connection with upper leathers and the inquiry covers most classes. Glacé kid, willow calf and suede leather are the lines most asked for, while a moderate inquiry is experienced all the time for reptile skins and imitation grains for shoe purposes. Box calf is receiving a little more attention, while there is a limited inquiry for patent in the medium and cheaper grades. Semi-chrome leathers remain quiet, as is also the case with curried upper leathers, the only inquiry in connection with the latter being for a few odd lines in waxed splits and kip butts.

THE JUTE TRADE.

DUNDEE, May 28th.

The Indian Jute Mills' Association are understood to have had a meeting on Monday last to discuss the question of short-time working, but no official intimation of the result has yet come to hand. One or two private messages say that an agreement has been practically fixed up to the effect that the mills, with exception of one small native-owned establishment, which refused to join the Association, will work 54 hours per week from July 1st next instead of 60 hours as at present. Owing to a poor demand for jute goods, prices of all commodities in the jute trade have declined to a very low level, and producers have been running for months at a loss. Outside India spinners and manufacturers have had to curtail their output to a very considerable extent and unemployment has steadily increased to a marked degree. The latest dividends of the Indian mills disclose decided reductions on past results. During the past week, the raw jute market has shown signs of weakness and values are reduced by about 20s. per ton. Five marks of best Lightnings have been sold at £26 15s. for August shipment and good marks are obtainable at £26 10s. for September, while First Marks are named at £29, same shipment. Both new and old crop Daisee assortment are offered at the same price of £24 5s., with threes at £23 15s. and fours at £22 5s., shipment May to October. New crop Motilal Tossa twos are quoted at £26 10s., assortment at £26 5s., and threes at £26, September-October, and old crop full group Tossa assortment could be bought at £25 10s., May-June. Sales have been very few indeed. Encouragement is lacking to spinners in the way of business in jute yarns. The market is very quiet, but no one will break 2s. 8d. for common 8-lb. cops and 2s. 9d. for 8-lb. spools for quick delivery and 1d. more for forward. Even though raw jute has been reduced in value, spinners are still suffering a loss of about £3 per ton. Twist is firm at 5d. for 3-ply 8 lb., and sacking yarns are unchanged at 3 1/2d. for 24-lb. weft and 4 1/2d. for 8-lb. chains. An interesting situation has arisen in rove. Owing to the small turnover in raw jute through the short time and stopping of machinery, jute waste is scarce, and common cuttings cannot be bought at any price, so that spinners are unable to deliver contracts on hand and are unwilling to enter further orders. £18 10s. is the lowest price for 200 lb. rove and £28 10s. for 48 lb. Fine yarns are very steadily held. Only mere trifles of jute cloth are being purchased for quick despatch. Buyers appear to have no use for material for forward delivery, and this branch of the trade is depressed. Manufacturers, however, are not indicating lower prices to induce business, and 3 3/16d. is still the lowest quoted for 10 1/2-oz. 40-in. hessians and 2 15/16d. for 8 oz. Linoleum hessians are dull and nominal, and apart from a large quantity of 10 por. 29-in. tarpaulin placed in Dundee, heavy goods are slow. The Calcutta goods market has shown little change, but prices are firm.

VEGETABLE OILS AND OILSEEDS.

There is a rather better tone in the markets though the volume of business is small and leaves much to be desired. Linseed oil is in fair demand from consumers, and on scarcity new positions are firmer and forward delivery steady. Current value of raw oil on spot ex Hull is £42 10s., and for May £42 per ton, naked, white. June-August has advanced to £40. Cotton oil is in some demand and is steadier, crude Egyptian now being held for £28 10s., and common edible for £31 10s. prompt, ex Hull. Soya palm kernel and castor oils are easier. In the oilseed section linseed is firmer on a good demand from the Continent. Plate on passag to Hull has been done at £17 7s. 6d., and June-July shipment at £17 10s., since when values are around £17 10s. (sellers) in all positions. Very little Indian linseed is offering, and business in small Bombay, May-June, is reported at £18 17s. 6d. to £19 1s. 3d. The quantity of linseed on passage to Europe has now shrunk to 111,200 tons, or 10,000 tons less than last week. Cottonseed is neglected, and black Egyptian easy at £7 afloat and June loading. Soya beans are quiet around £8 12s. 6d. paid for June to the Continent. Oilcakes and meals are in quiet demand, and prices are lower.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Consumers' demand was confined to immediate wants, and late rates were repeated for spot goods. Raw refining kinds the turn in buyers' favour, with moderate interest shown. Java markets quiet but generally steady. T.L. granulated ex refinery, quoted, 20s. 4½d. Crystallised, West India, spot, 20s. to 22s. 6d. as to quality. British West Indies, 96 per cent. preferential, June, 10s. 6d.; Cuban, cargo, July, sold, 6s. 10½d.; Peruvian, 96 per cent., June parcels, quoted, 6s. 10½d. c.i.f. Foreign granulated; Dutch J, prompt, 8s. 9d.; Dinteloord, ditto, 8s. 9d. f.o.b. Amsterdam Polish crystals, ready, 7s. 6d. f.o.b. Danzig. To India, Java, July-September, 9s.; October-December, 9s. 0¾d. c. and f. Calcutta. Hungarian crystals, October-December, 9s. 9d.; German crystals, June, 8s. 7¾d. c. and f. terms. Terminals quiet and tendency easier. Raw, August, sold, 6s. 3¾d. to 6s. 0¼d.; December, 6s. 8¼d. to 6s. 6¾d.; March, 7s. 8¼d. to 7s. 7¼d.; May, 7s. 10¼d. to 7s. 9¾d.; cwt. Cuban receipts for past week totalled 67,424 tons, against 74,564 tons at corresponding period last year; exports, 73,026, against 110,729; and stocks, 1,698,582, against 1,487,652 tons. Centrals, working, 30, against 8. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending May 24th totalled 153,607 tons, against 122,083 last year. Later British refined reduced 3d. and home grown 1½ cwt.

COFFEE.—Spot market firm, with a good demand for all attractive liquoring grades, fine Costa Rica realising dearer prices. Jamaica blue mountain, sold, 236s. 6d. to 234s.; Kenya, bold, 90s. to 131s.; peaberry, 86s. to 115s. 6d.; Costa Rica, common to fine bold, 100s. 6d. to 180s.; medium, 76s. to 121s.; peaberry, 105s. to 173s. 6d. cwt.

COCOA.—Spot market steady, with fair sales passing, including Trinidad, at 61s. to 63s.; and Granada, 51s. to 52s. Forward firm. Accra, F.F., May-July, quoted 35s.; mid-crop, London contract, 31s.; October-December, 36s. Terminal firm, with business of moderate extent. May, sold, 36s.; June, 36s. 3d.; July, 36s. 6d.; December, 36s. 6d. to 37s. 3d. per cwt.

TEA.—Larger supplies of Indian, totalling 56,946 packages, came to a quieter market, and prices displayed a good deal of irregularity. All clean common descriptions ruled fairly steady, but medium and fine sorts frequently marked a sharp decline. Some high-grown Travancore of good quality sold steadily, but otherwise the inquiry for Southern Indian invoices was restricted, and prices moved against sellers. Ceylon offerings of 32,081 packages met a fairly good demand, with some irregularity in attendance, though allowing for a further deterioration in quality, values showed no material change, except for plain medium leaf teas, which tended in buyers' favour. Java and Sumatra sales passed off with a generally steady tone, and fair competition prevailed.

RICE.—Market rather featureless in absence of European demand. Rangoon, two stars, spot, sellers, 13s.; May-June, 12s.; July, 12s. 3d. Saigon, No. 1, round grain, May-June, 12s. 4½d.; Siam, super, 17s. 4½d. c.i.f. American blue rose and Spanish oiled steady. Brokens quiet. Bran steady. Burma, May-June, £4; July-December, £4 5s. Saigon, May-June, £5 ton c.i.f. Beans quietly steady. Madagascar butters, spot, 31s. 6d. to 33s. 6d., according to sample; April-May, 32s. 6d. Rangoon haricots, spot, 10s. 9d. Peas dull. Japanese, spot, 13s. 6d. to 13s. 9d.; new, 14s. 6d.; May-June, also June-July, 13s. 3d. Dutch marrowfats, prompt, 15s.; small H.P. blues, 11s. to 13s. cwt.

SPICE.—Pepper remains firm and reservedly offered, closing quieter. Black Lampong, April-June, steamer, 11d.; May-July, sold, 10¾d. to 10½d.; August-October, 9¾d. to 9⅝d.; white Muntok, April-June, 1s. 1½d.; May-July, sold, 1s. 1d. to 1s. 0½d.; August-October, 1s. 0⅜d. t0 1s. 0⅛d. London stocks of black show a decrease of 30 tons on the week, at 1,115 tons, against 1,524 tons at corresponding period last year; white, 42 tons increase at 735, against 645 tons at same time in 1929. Zanzibar cloves quiet. Spot, 11¾d. to 1s.; May-June, 11⅞d. per lb. Pimento dearer. May-June, also July-August, quoted, 67s. 6d. Tapioca dull. Singapore flake, to Havre, May-June, sellers, 12s. 6d.; Penang to Hamburg, 14s. Sago flour, to London, 10s. 10½d. Desiccated coconut, fine cut, spot, 31s. 3d.; medium, 30s. 9d.; halves, afloat, 29s. 6d.; May-June, 28s. 9d. cwt. c.i.f. Ginger quiet.

FRUIT (Dried).—Currants: Market remains firm with a fair trade passing. Pyrgos, quoted, 36s. 6d.; Amalias, 38s.-39s.; Patras, 39s.-43s.; Gulf, 42s.-45s.; Vostizza, 47s.-58s.; Australian, new crop, 40s.-62s. Sultanas: Smyrna quiet but Australians sell freely. Smyrna, medium to fine, 44s.-45s.; Cretan, 42s.-60s.; Greek, 42s.-65s.; Australian, 33s.-45s. Dates slow of sale. Hallowie, spot, 17s.-19s.; Khadrowie, 14s. 6d.; Siar, 12s.-13s. 6d. Raisins move off slowly. Valencias, quarter-boxes at 36s.-38s. Figs quiet. Genuine, 19s.-30s.; good average, 16s.

EVAPORATED FRUITS.—Market steady and peaches continue to sell freely, while apricots tend dearer. Plums quiet on spot, but a fair business transpired for parcels to arrive. Plums: Californian, new crop, 30's-40's, 60s.; 40's-50's, 55s.; Oregon, 30's-40's, 50s.; 40's-50's, 48s. Apricots: South African Royal, 50s.-112s. 6d.; Australian, 56s.-72s. 6d. Pears: Californian Lake County, fancy, 84s.; extra, 95s. Peaches: Californian, choice, 50s.-55s.; fancy, 57s. 6d.-62s.; Australian, 50s.-60s.; South African, 1929 crop, 42s. 6d.-52s. 6d.; 1930 crop, 45s.-60s. Apples: Californian, spot, sliced, extra choice, 35s.-65s.; Canadian, 52s. Almonds firm. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 112s.; Majorcas, 105s.-115s. Bitter-Jordan, new crop, 182s. 6d.-195s. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 35s. c.i.f.; sweet, spot, 70s. Hazel kernels: Kerasunde, 149s.; Barcelona, 149s. French (shelled) walnuts, 135s.-137s. 6d. ex wharf London; for shipment, 130s. cwt. f.o.b. Bordeaux.

CANNED GOODS.

CANNED FRUITS.—Trade has been checked by adverse climatic conditions and prices exhibit some irregularity in view of larger prospective new pack supplies. Australian varieties met a moderate demand at late rates. Singapore pines dull of sale despite attractive prices current and shipment quotations tend easier, but South African sell steadily. Italian tomatoes dull of sale both spot and forward.

CANNED FISH.—Market steady with moderate inquiries. Salmon: Alaska red talls, quoted, 48s. 6d.-49s. 6d.; pink talls, 24s.-26s.; and halves, 34s. 6d.-36s. Japanese crab, best quality, 87s. 6d.-90s. Lobsters: Only small supplies available and halves range from 130s.-135s. Sardines: Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Corned beef, ox and lunch tongues, also tinned hams steady and in fair supply, but warmer weather is needed to stimulate consumption.

CONDENSED MILK AND MILK POWDERS.—Market uninteresting and featureless. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 30s. 6d.; machine-skimmed ditto, 19s.; full cream, sweetened, 56-lb. drums, 50s. English condensed milk, full cream, sweetened, 5-cwt. casks, 40s.; machine-skimmed ditto, 22s. Dutch full cream milk powders, 26 per cent. butterfat, roller process, 1-cwt. cases, 58s. 6d.; spray ditto, 2 by 56 lb. tins, crated, 78s. 6d. Dutch machine-skimmed milk powders, roller process, 1-cwt. cases, 26s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 37s. 3d.; ditto, 1-cwt. kegs, 36s.; ditto, 1-cwt. cases, 35s. 9d., all per cwt. English prices basis carriage paid nearest station. Dutch prices are net, ex store London/Hull or Goole, and cover prompt or

THE FUTURE OF RUBBER.

By LIEUT.-COL. J. C. G. KUNHARDT.

"Lt.-Col. J. C. G. Kunhardt surveys the various aspects of the situation at some length . . . . . The conclusions arrived at after an examination of many factors are that from now onward the depreciation or decline in output from old areas should become a far more important factor in the statistical position than it has been; that new areas coming into bearing during the next few years will barely compensate for the wastage in older areas."

Extract from "The Financial News."

"Lt.-Col. Kunhardt's name is familiar to all who are interested in the rubber plantation industry. He published a similar book to the above some years ago. In the present book the situation is tackled from a rather novel angle . . . . . Lt.-Col. Kunhardt's contention is that large tracts of rubber will go out of existence from now on, and, without desiring to be dogmatic on the point, he submits estimates which indicate that consumption before long will overtake production."

RUBBER.

Fractionally easier and dealings restricted. Plantation standard sheet, spot, also June sold, 6 $\frac{13}{16}$d., 6¾d.; July-September, 6 $\frac{15}{16}$d., 6 $\frac{7}{8}$d.; October-December, 7 $\frac{1}{16}$d. to 7¼d.; January-March, 7 $\frac{1}{16}$d. to 7 $\frac{3}{8}$d.; April-June, quoted, 7 $\frac{3}{8}$d. lb. London landings amounted to 1,580 tons, deliveries, 1,559; stocks, 76,953, compared with 30,893 tons at same time last year, being an increase of 21 tons on the week. Liverpool landings, 478 tons; deliveries, 204; stocks, 24,722, against 4,665 at same time in 1929, showing an increase of 274 tons on the week.

GENERAL.

JUTE.—*With sellers rather prominent, a quiet and easier market resulted. Firsts, to Continent, April-May sellers, £23 10s.; May-June, also June-July, £23 12s. 6d.; new, August-September, £24 10s.; September-October, £24 10s. Lightnings, May-June, £22 10s. August-September, £23; Hearts, June-July, £21; Daisee assortment, May-June, £23 c.i.f.*

HEMP.—*Manila weak. J, No. 2, May-July, sellers £24; K, ditto, £23; August-October, £23; L, No. 1, May-July, £22 15s.; No. 2, £21 7s. 6d.; M, No. 1, £22; No. 2, £21. African sisal dull. No. 1, May-July, sellers, £29; No. 2, £28 c.i.f. Receipts for past week totalled 31,000 bales, against 32,000 at corresponding period last year and 25,000 in 1928. Estimate for this week 26,000 and the following week 32,000 bales.*

SHELLAC.—*Spot, steady. Fair, T.N., 127s. 6d. Futures quiet; August, quoted, 118s.; October, sold, 122s. To arrive, April-May, also May-June, 112s. 6d. c.i.f.*

COPRA.—*Market weak on lack of buying interest. Straits S.D., to Rotterdam, May sellers, £20 17s. 6d.; June, £20 16s. 3d. Dutch E.I., May, £20 17s. 6d. Ceylon, £21 15s. South Sea, sun-dried, £20; Plantation, £20 5s. To Marseilles: Mixed Dutch E.I., May-June, £19 15s.; smoked, South Sea, £19 15s.; Manila, in bulk, £19 15s. Palm kernels, to Hamburg, June-July, £14 10s.; July-August, £14 12s. 6d.; August-September, £14 15s., c.i.f.*

MISCELLANEOUS.—*Coconuts, quoted, 16s. to 25s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43 10s.; Ceylon, bristle, £18 10s. to £25 5s.; cinnamon leaf oil, 5s. 6d.; for shipment, May-June, 4s. 6d.; citronelle, Ceylon, 2s. 4d.; Java, 2s. 4d.*

METROPOLITAN CATTLE.—May 28.

THE MONEY MARKET.

THE payment of the 5 per cent. War Loan dividend at the beginning of the month made money extremely plentiful, and despite the fact that some of these funds were immobilised on Monday by the payment of calls on new issues, money was obtainable at 1½ per cent. R

rates, too, were extremely low over the week-end, $2\frac{1}{16}$ per cent. being quoted for three months' bills at the end of last week. The probable explanation is the continued buying of bills by the clearing banks.

* * * *

The last few days, however, have witnessed a definite change in the tone of the discount market. On Monday, £151,546 in gold was bought from the Bank on German account, while the following day Germany not only bought £537,000 of the £640,000 of market gold available, but also bought a further £684,630 from the Bank. In addition to these losses, the Bank during the week ended Wednesday last had to "earmark" £450,000 in sovereigns, it is believed for Argentine account. Finally, the French exchange fell on Tuesday to below the export gold point, and although gold was actually withdrawn and the pound recovered slightly the following day, it is not impossible that more gold will go to France before long.

* * * *

These actual and potential gold movements were the cause of a complete reversal of opinion in both the discount and the Consol market. Whereas last week rumour favoured an early reduction in Bank rate to $2\frac{1}{2}$ per cent., by Wednesday of this week the three months' discount rate had risen from $2\frac{1}{16}$ to $2\frac{3}{16}$ per cent., and gilt-edged stock quotations had weakened appreciably. On Thursday the three months' discount rate was a shade easier. There is no need to fear an early increase in Bank rate. The German gold withdrawals are mainly the consequence of transfers of French balances from London to Berlin, and while it is true that these are dictated by the higher rates obtainable in Berlin, the fact that Berlin rates are still above the world level means that no special action is called for in London. Again, even if France takes some more gold, it will probably be due to preparation for the reparations loan, and the Bank will be justified in adopting the same attitude as it did towards the circumstances of the B.I.S. share issue a few weeks ago.

* * * *

It is quite likely that matters may so be arranged that Bank rate will remain at 3 per cent. and market rate round $2\frac{9}{16}$ per cent. for some time, and that, if more gold losses occur, the Bank may neutralise them by purchases of bills. The end of the half-year will have its usual passing effect upon the supply of money, though the banks are already well provided with funds, and two of the clearing banks are reported to have bought bills maturing after the turn of the half-year at $2\frac{1}{4}$ per cent. for Julys and $2\frac{1}{16}$ per cent. for Augusts. Money has been lent into July at $2\frac{1}{2}$-$\frac{3}{4}$ per cent. All this suggests that the half-year squeeze may not be so severe as usual, and also gives some indication as to what is believed to be the future course of discount rates.

	May 15, 1930.	May 22, 1930.	May 29, 1930.	June 5, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	3	3	3	3	$3\frac{1}{2}$ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Discount Call	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Houses Notice	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{3}{4}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{1}{8}$	$2\frac{1}{8}$–$\frac{5}{16}$	$2\frac{1}{8}$–$\frac{5}{32}$	$2\frac{1}{8}$–$\frac{5}{32}$	...

The Bank return shows that the net gold losses of the week amounted to £1,237,614. The note circulation has expanded by £3,667,054, this possibly being due to the approach of the holidays. The War Loan dividend payment probably explains the fall of £4,363,508 in Public Deposits, and the increases of £12,118,123 in Bankers' Deposits and of £12,800,289 in Government Securities. These movements have reduced the Proportion from $57\frac{1}{4}$ to $48\frac{3}{4}$ per cent., and the reserve ratio of gold to all outside liabilities from $34\frac{1}{8}$ to $32\frac{3}{4}$ per cent. Thus, at the moment, the Bank's position is weaker, but it will probably improve after the abnormal factors just described have ceased to operate.

NEW YORK.

Our New York correspondent cables:—Speaking at the New York Bond Club, Sir Josiah Stamp said he saw no need for a further reduction in the Bank of England rate, which, he considered, would, if left alone, do its work toward stabilising conditions in Great Britain. There was no change in the rate this week, as was generally expected, although two successive cuts in the open-market bill rate brought the quotation for 90-day bills down to $2\frac{1}{8}$ per cent., the lowest since 1924. Both reductions followed the movement of the Federal Reserve buying rate, apparently a gesture toward easier money. The week's statement shows lower discounts, as the banks were quick to wipe out the month-end borrowings, while the Federal Reserve Bank added $14,000,000 to both the bill holdings and Government securities, outstanding credit being up by $20,000,000, and the ratio being 82.2 per cent.

THE STOCK MARKETS.

Industrial depression, a three-weeks' account and the approaching Whitsuntide holidays combined to restrict business in the Stock Markets. Gilt-edged securities suffered a minor setback on Tuesday's gold withdrawal for Germany. The Home Railway traffic figures continued to cause some little uneasiness, and Foreign Rails were depressed by the announcement that United of the Havana could not meet its debenture interest. Industrial shares attracted only a modicum of interest, the forthcoming reports of certain large companies being awaited without enthusiasm. The weakness of such commodities as tin, silver and rubber had a discouraging effect on the "speculative" share markets, accentuated by end-account selling from Paris. Kaffirs held their ground, but Rhodesians continued an orderly retirement.

THE COMMODITY MARKETS.

There is no increase in business in the coal industry, and some pits are contemplating an extended holiday. The iron and steel industries are still extremely quiet. Falling cotton prices on favourable crop reports have intensified the difficulty of obtaining orders in Manchester. The raw wool situation is maintaining its improvement, but inquiries for Bradford products have been slightly fewer. Business in hides, leather and footwear is fairly satisfactory. The vegetable oils and oilseeds market is only moderately active. Wheat is a shade less firm.

THE FOREIGN EXCHANGES.

Conditions in the Exchange market continued quiet. After the turn of the month there was a general movement in the exchanges against sterling, but this proved to be only temporary and was attributed by some to the transference abroad of part of the War Loan interest distributed on June 1st. After falling away to $4.85\frac{11}{16}$ on Tuesday, sterling on New York improved to $4.85\frac{27}{32}$ at the close. Montreal closed $\frac{1}{4}$ cent below last week's level at 4.86. Paris, after touching 123.89, closed at 123.92, but Brussels continued steady throughout at $34.81\frac{1}{2}$. Milan improved from 92.77 to 92.73. Spain was erratic between 39.80 and 40.20, and finished at 40.07. Amsterdam lost a trifle at $12.08\frac{3}{8}$, while Berlin, after falling below gold export point, rose to 20.36. Switzerland continued to improve at 25.10, and the Scandinavian exchanges all showed minor gains, Stockholm being $18.10\frac{1}{4}$, Oslo $18.15\frac{1}{2}$, and Copenhagen 18.16. In the Eastern exchanges the rupee and the yen were unchanged, as was Montevideo among the South American exchanges. Buenos Aires, however, fell away to $42\frac{5}{8}$d. and Rio was lower at $5\frac{13}{16}$. In the forward market dollars were $\frac{3}{32}$ cent and $\frac{9}{32}$ cent discount for one and three months respectively. Paris was at premiums of 3 and 5 centimes. The Milan, Belgian and Spanish forward rates showed no appreciable change, but with the higher spot rate the Dutch forward rate moved to par for both periods. Berlin was quoted at discounts of $1\frac{1}{4}$ and $3\frac{1}{4}$ pfennigs. Silver continued to be offered from China and the East, and closed at $15\frac{13}{16}$d. for spot and $15\frac{11}{16}$d. for forward delivery. Hong Kong was lower at 1s. $3\frac{1}{2}$d. and Shanghai at 1s. $5\frac{1}{4}$d.

EDUCATION AND THE TAXPAYER.

It is unfortunate that in every issue affecting the upbringing of children there is apt to arise an instinctive antagonism between the "educationist" and the "plain average man," who is by no means hostile to the educationists' ideals, but whose questionings and reservations are assailed by the professional enthusiast as evidence of a reactionary desire to cramp and stifle the cause of enlightenment and educational progress. Yet, as the proceedings of the Commons last Thursday and Friday clearly showed, the general desire of that assembly of "average" men, irrespective of party, is to promote, within the limits of what is practicable, the best possible education for the maximum possible numbers. That, indeed, is the earnest desire of the country, and if we share, to some extent, the doubts widely felt as to the wisdom of the measure now before the House, it is both because of its haste and because it introduces into the educational sphere economic principles of a highly debatable nature.

The present Bill, superseding that introduced last December, incorporates the concordat, whose terms have already been noted with approval in these columns, dealing with the future development of non-provided schools—a fair compromise on the vexed "denominational" issue which should be acceptable, if not completely satisfying, to all shades of opinion. But the crucial questions in the Bill are the raising of the school age for compulsory attendance to fifteen, and the provision for granting, on a scale to be determined by Departmental Order, maintenance allowances to parents of children over fourteen whose attendance at school is to be compulsorily extended.

The desirability of extending education widely beyond the age of fourteen is not open to question. The conception of a servile state is repugnant to the social conscience of our times, and it is idle to pretend that schooling which terminates at fourteen is ideally fitted to produce either the responsible citizen on whom the continuance of democracy depends or even the intelligent worker whom modern industry requires. Though the relative merits of different kinds of training are debatable, and though the adequate mental equipment of an adult of 21 depends on far other considerations than the question whether forcible feeding on "elementary" lines has ceased at fourteen or fifteen, little objection can be raised to the proposition that expenditure on extended free education is in a real sense reproductive expenditure; and there is no doubt that the reorganisation of the primary schools on the lines of the curriculum recommended in the Hadow Report will be facilitated if the "advanced" course from the age of eleven onwards can be spread over four years instead of being crammed into three.

The date, April 1, 1931, on which the school age is to be raised, is open to criticism on the ground that local educational authorities will be unable to provide within that limit of time either adequate buildings to house or competent teachers to instruct the consequent accretion of children in the senior classes. In defending his precipitancy, whose connection with a desire to relieve, to some extent, the employment problem he scarcely troubled to disguise, Sir Charles Trevelyan admitted that in a number of areas—at least until the "bulge period" of classes resulting from the high birth-rate of 1920-21 is passed—there may be imperfections in the machinery. The "very formidable increase" of 13,000 new teachers will be required in 1932-33 if classes are to be kept within a manageable size, and the task of securing these numbers, apart from other questions of accommodation and management, will not be light, for all the Minister of Education's somewhat facile optimism. There was no reason to delay the introduction of the Bill, but it would have been wiser to postpone the date of operation of this reform until, say, 1935, when the "bulge" in numbers would have passed and preparatory arrangements could have been completed.

Moreover, there are other considerations. In the first place, given the existing conditions of national income and weight of taxation, we take it as axiomatic that the limits of aggregate State expenditure cannot be much further stretched. Allowing for other commitments, whose repudiation is not within the sphere of practical politics, the amount of money available for education purposes is therefore limited; and it would be a grave disservice to the cause of better schooling were the system of continuation classes to be starved, as we fear it may be, as a consequence of the cost of the present reform. That cost is not estimated with any precision in the financial memorandum accompanying the Bill, which suggests somewhat vaguely that from 1938 onwards the extra accommodation and staff charges will be £2,500,000 per annum, while by 1935-36 the cost of maintenance grants will have risen to £4,400,000 per annum, subject to "revision after five years." There is little doubt, however, that this is an optimistic under-estimate, and we are inclined to assess the total probable cost of this Bill at a figure nearer £10 million than £7 million per annum.

The costliness of the measure, however, is less important in itself, though the sum is large enough, than the essential principle involved in the grant of compensation to parents whose children are compelled by law to attend school. It is an issue in which goodwill towards the less fortunately placed of the nation's children must be combined with clear thinking and full appreciation of the logical consequences of political action. The *Times* has stated as its unqualified opinion:—"It is wholly against public policy that citizens should be subsidised by the State to enable them to obey its laws." Put thus, the plea is cogent; but we should prefer to argue the matter on a rather different basis. If the State decides, and we approve the decision, that in the collective interest it is desirable that school attendance should generally continue beyond the present age limit of fourteen, then it may do one of three things. It may draw more heavily upon its available resources for the extension to very wide limits of the ladder of scholarship open to ability. Alternatively, it may make attendance at free schools to the age of 15 or over compulsory, with powers to local educational authorities to grant exemptions—if discretionary maintenance grants are not acceptable—in cases where the parents satisfy them either that the child's potential earnings are essential for the family's maintenance, or that the child is not likely to benefit (on the ground either of innate ability or prospective occupation) from additional schooling. Or, finally, the State may do as the Government have done, and decide that since, in the opinion of the community, it is in the general interest that children should be compulsorily educated up to the age of fifteen, the community must shoulder the burden of contributing to the support of families who had relied on contributions from their children as soon as they reached the age—*i.e.*, fourteen—which society had agreed to regard conventionally as the minimum age of "earning capacity."

The Government have chosen this course, and if we were satisfied that this dividing line of age would always be maintained, we should not cavil greatly at the principle of granting, on the basis of a means test, maintenance allowances for children compelled to attend school between 14 and 15, though the proposal of the present Bill, that the scale of maintenance and its conditions should be left to the discretion of the Minister of Education, seems to us to be yet another unwarrantable delegation of powers by Parliament to a Department. But will not the recognition by the State of the right of parents to claim compensation if their children are not allowed by law to earn money after the age of fourteen lead to the acceptance by

the State of the obligation to provide for, or contribute to, the maintenance of children at a still earlier age? Several of the supporters of the Bill in Parliament justified its maintenance clauses not only on the ground that the poorest and least intelligent children most deserved State assistance, but because its cost would involve a redistribution of income, through higher direct taxation, desirable in itself on socialistic grounds.

This argument opens up a controversy whose emergence reinforces the conclusion to which many liberal-minded observers of the Government's financial policy are being driven. If the State desires to remove from parents the financial responsibility for the maintenance (to say nothing of free schooling) of children over a certain age, then the liability should be borne by the community on as broad a basis as possible. If the " social services " are to be further extended on the terms of the existing incidence of taxation, there is a real danger of creating a class enjoying the benefits without sharing the responsibilities of citizenship. On the other hand, to concentrate a steadily increasing burden on a limited class may well prejudice saving and so affect production and employment. Every increase of expenditure of the type now contemplated is a strong reason for broadening the basis of taxation.

THE TREATY AND ITS OPPONENTS.

We have never felt much anxiety over the prospects of the Naval Treaty. We have believed, ever since it was signed, that in due course it would secure ratification by each of the three Governments concerned, and that the usual exchange of ratifications would eventually bring the Treaty into force. We feel less anxiety than ever to-day, when the question of ratification has been disposed of in this country (if anyone ever seriously meant to raise it here); and we look forward with equanimity to the outcome of the discussion in the United States. As for Japan, her people do not indulge in those " Anglo-Saxon attitudes " which are part of the common form of parliamentary politics in the British Isles and North America. So we may expect the Japanese Government to ratify, just like the British and American Governments, but to do it without the accompaniment of a parliamentary flutter. In short, we believe that the London Three-Power Naval Treaty of 1930 will in due course take its place among the agreements whereby the world is gradually consolidating the structure of international peace.

What, then, of the opposition which has declared itself in various quarters during this interval between the signature of the treaty and its coming into force? That which came to a head and evaporated in the debate in the House of Commons last Monday is not difficult to analyse. It was really a domestic affair of the Conservative Party; and it represented what must seem to most outsiders a rather inept compromise between a " die-hard " minority who could not carry their party with them and a party-leader who was not strong-minded enough to insist upon this minority falling into line with the policy approved by himself and by the majority of his followers. Mr Baldwin was undisguisedly apologetic for even introducing his motion for a Select Committee; and he sought to ride away from his embarrassment by representing the issue as being the general question of democratic control over foreign policy. He thus saved his face by placing his head between the lion's jaws, and it was the easiest thing in the world for Mr MacDonald to bite it off by showing that Mr Baldwin's gesture must have one or other of two meanings: it must either be a camouflage for a factious attack on the treaty which the Conservative leader had no desire to press home (and this was, as everybody knew, the true explanation); or else it was a motion to introduce a far-reaching change in the British constitution *à propos* the treaty-making power—a motion which came most strangely from the Conservative benches.

After the Prime Minister had dealt with the leader of the Opposition on this pseudo-constitutional issue, Mr Alexander dealt as effectively with Mr Churchill on the actual merits of the Naval Treaty. The defeat of the motion was a foregone conclusion; and the only result of the debate was to expose the lack of cohesion of the Conservative Party on yet another big issue. Their attitude was so naïve and transparent that we do not believe that capital can be made out of it, to an appreciable extent, by the opponents of the Treaty in America, where the examination of the Treaty in the Senate Committee and in the Senate itself is plodding along on its weary way—to the same goal of ratification, we believe, as has been reached at the cost of one day's debate in the House of Commons at Westminster.

Constitutionally, this discussion in the Senate at Washington is a different matter from the debate in the House of Commons, since, by a combination of written law with tradition, not only a voice, but the last word, in the making of treaties by the United States rests with the Senate after the executive has done its work and said its say. Thus the present discussion in the Senate is part of the ordinary American constitutional routine. Unfortunately, the essence of the routine is that the Senate asserts its powers over against the powers of the President as a matter of principle, without letting the principle go by default on any occasion that arises; and the result is that treaties are hardly ever considered by the Senate on their merits alone.

This did not much matter either to the American people or to the rest of the world so long as the United States was working out its own " manifest destiny " in " splendid isolation." But it has become one of the gravest problems of international affairs now that the United States—whether the American people will it or no—has grown to be the strongest single power in the world and therefore, whether passively or actively, a determining influence in all great international transactions. There was a stage in ancient history when the affairs of the world were caught up and mangled in the wheels of the procedure of the Senate at Rome. There is a real danger to-day that history may repeat itself, and that the tremendous issue of future peace or war may be torn and mis-shaped in the machinery of the Senate at Washington. We do not believe that on the present occasion the Senate is going to throw out the Treaty that is being squeezed through its rollers. We believe that the Treaty will get through. Still, the process is disquieting on account of its general bearing on the problem of international organisation for peace.

Admittedly, the opposition to the Treaty in the Senate is not wholly inspired by the Senate's standing jealousy on behalf of its prerogatives. The jealousy is so widely diffused that probably no single Senator is wholly free from it—so contagious is the spirit of a parliamentary body. At the same time, its effect is not so much to generate opposition to the Treaty directly as to create an atmosphere favourable to the airing of another kind of opposition which is less widespread, and which is specifically directed against the Treaty on its merits. Inside the Senate and outside it the United States has her Churchills too. There is the voice of Mr William Randolph Hearst, who hints, though he refuses to say, " that the unfortunate character of the proposed Naval Treaty is due entirely to the manœuvres of English statesmen to gain some trivial advantage." And there is the voice of Mr William Howard Gardiner, the President of the American Navy League, protesting that " when we realise that, without a disproportionate burden, we could spend on the American Navy over three times what the British spend on theirs, and over ten times what the Japanese could afford, we see what it means when it is said that from their point of view one of their purposes in naval reduction is to reduce the American Navy to a level on which they can afford to compete with us."

Yet the remarkable thing in the United States is not that these Churchillian attitudes are struck, but that they make so little impression upon the opinion of the American

people as they apparently do. For here is a young nation nurtured in isolation and suddenly brought into contact with its kind; a nation recently grown to full stature and suddenly finding that it has overtopped its fellows. This is an experience which usually goes like strong wine to a people's head; and to a people in this condition " Navalism " is usually the most alluring choice of folly. Consider the history of young Germany from 1871 to 1914, and the history of all the other young nations that trod the same road before her, and one has the measure of young America's originality. Once again, Jeshurun has waxed fat; but this time Jeshurun shows little or no inclination to play his traditional *rôle*. The sober, pacific temper of the great mass of ordinary American people in these circumstances is one of the great hopes for the future of the world; and, in the Three-Power Naval Treaty, this American instinctive good sense has co-operated with Japanese self-control and British experience to make a real practical contribution to the enterprise of organising international peace. And so we return to the conviction from which we started. We are convinced that, when the opponents of the Treaty have shot their bolts in each country, the Treaty will still stand.

WHEAT PROSPECTS.

Already, when statistics for only eight months of the current cereal year are available, it is safe to predict that the season 1929-30 will go on record as one of the most remarkable in the history of the wheat trade. Poor harvests in the principal exporting countries combined with heavy crops in Europe, abnormally large visible supplies combined with the smallest international trade since 1921, and strong measures for export restriction combined with a continued fall in prices, have all co-operated to subvert conventional ideas, based on statistical trends, of the course of the wheat market through its annual cycle.

The first factor in the situation was the very heavy carry-over of wheat from the preceding season, shown in the following table, taken from Vol. VI, No. 2, of the Wheat Studies of the Food Research Institute of Stanford University:—

Approximate Carry-overs in Principal Exporting Countries, Afloat for Europe, and in Ports of the United Kingdom.
(Million Bushels.)

August 1.	1924.	1925.	1926.	1927.	1928.	1929.

* July 1st. Includes flour stocks in city mills.
† Canadian wheat in store in Lake and Atlantic ports of the U.S.A. Dates nearest to August 1st.

The carry-over in each of the principal producing countries has risen uninterruptedly since 1926, and though the total world crop (Russia excluded) was the lowest since 1924, aggregate supplies were higher than in any of these years except 1928. The next table shows the production of wheat during the same years:—

World Wheat Production.*
(Million Bushels.)

	1924.	1925.	1926.	1927.	1928.	1929.

Total	3,080	3,314	3,353	3,525	3,847	3,305

* Excluding Russia.

A comparison of the two foregoing tables will show that production plus carry-overs in the principal exporting countries amounted in 1929 to 3,903 million bushels, a decline of 356 million bushels, as compared with 1928, but exceeding the total for any of the four previous years. This unusually heavy supply of wheat, and wheat of high quality at that, was accompanied by abnormally small international trade during the months August, 1929, to March, 1930. Total shipments amounted to 407.6 million bushels, against 631.2 million in the corresponding period of 1928-29, and an average for the period of 531.4 million in the years 1924 to 1929. Moreover, shipments in December-March were 14 per cent. below those of August-November, whereas in the preceding seven years December-March shipments were on the average 15 per cent. above the August-November level.

The cause of both these variations from the usual trend is to be found in conditions in the importing countries. On the supply side, the carry-over in European countries was exceptionally high, and the harvest was both abundant and of very good milling quality. Concurrently with this abundance of home supplies, importing countries in Europe experienced a contraction in their demand for wheat both for human and for animal food. The principal fodder crops were everywhere abundant, and the mild winter permitted a longer period of pasturage than usual, so that the spread between prices of wheat and fodder was sufficiently wide to discourage the feeding of wheat to livestock. Those crops which rival wheat as human food, especially rye, were also abundant, and the general business depression in Europe helped to divert consumption to these cheaper substitutes. Thus natural market developments alone would have tended to diminish greatly the European demand for overseas wheat and to depress prices; and in addition

to these natural forces many European Governments attempted to safeguard agriculture in their own countries by restricting imports. France, Germany and Italy in particular have made determined efforts to close their markets to imported grain.

Many of these influences making for a diminished European demand for wheat gathered force as the winter went on. The trade depression grew more profound, tariff measures increased in strictness, and as old contracts ran off importers grew more and more reluctant to buy on a market which showed no signs of touching bottom. This probably explains the unusual fact that shipments were less in December-March than in August-November.

In order to attempt any forecast of developments during the remainder of the cereal year, it is necessary to sum up the position at the end of March. According to the Food Research Institute, the combined stocks at that date of the four major exporting countries were almost certainly larger than in any previous March except that of 1929, while stocks elsewhere, except in Russia, were probably about average. World stocks, therefore, must have been well above the average. Crop prospects so early in the year are necessarily obscure, but on the available evidence it seems improbable that harvests in the Southern Hemisphere will again be as small as last year, while harvests elsewhere, given normal weather, promise to be fully up to average, so that an approximately normal world production seems at present to be a reasonable expectation. Prices continued to decline until late in March, but the relationship between prices in importing and exporting countries has been growing more favourable to export. In view of this last consideration, together with the improbability that European countries will continue to keep out of the market to the same extent as in the period December-March, it seems probable that the usual trend will be reversed and that exports of wheat in April-July may exceed those of December-March. The estimate of the Food Research Institute as to the probable disposal of this year's and last year's wheat supplies, in the four principal countries, is summed up in the following table:—

APPROXIMATE DISPOSAL OF WHEAT SUPPLIES.

(Million Bushels.)

	United States. (July–June).		Canada. (August–July).		Argentina. (August–July).		Australia. (August–July).	
	1928–29.	1929–30.	1928–29.	1929–30.	1928–29.	1929–30.	1928–29.	1929–30.
Initial stocks	142	262	78	104	90	130	43	45
New crop	915	807	567	300	307	175*	160	125
Total supplies	1,057	1,069	645	404	397	305	203	170
Net exports	147	155	406	205	224	150	109	70
Seed requirements	88	90	45	45	23	24	14	14
Consumed for food	511	515	44	44	61	63	31	31
Feed and waste	49	29	44	15	4	3	4	4
Apparent error in crop estimate			+2	...	−45	...	45	51
Stocks at end	262	280	104	95	130	65		

* Unofficial.

On this showing a net reduction in stocks of some fifty million bushels is likely on the year. Read in conjunction with the forecast of an average crop, as compared with last year's unusually low yields outside Europe, this suggests that the world's wheat supplies are to continue their steady growth, while there seems no particular reason to anticipate any commensurate increase in consumption. The policy, alike of the trade and of the public authorities in many countries, is calculated to foster this consistent over-production, for the Canadian Wheat Pools and the American Farm Board are merely postponing the effect on prices of the maladjustment of supply and demand, while the Governments of a number of importing European countries have given their own wheat producers such convincing proof of determination to shelter them from the impact of world market influences that these growers are under a great temptation to increase their acreage. The wheat situation is becoming a more and more striking instance of the absurdity of an exaggerated striving for self-sufficiency, and of the impotence of Government action to produce stability in a system of forces which are not in equilibrium.

PROHIBITION AND ITS POLITICS.

(BY A CORRESPONDENT.)

IT is now more than ten years since the United States embarked upon what President Hoover calls "the noble experiment" of Prohibition, and to-day the 18th Amendment is becoming the most fiercely controversial issue in American politics. The reality of the situation is that in many States, particularly in the South and West, where there is a firm popular sentiment in favour of Prohibition, the system enjoys a substantial measure of success, thanks to the active co-operation of the public and the officials engaged in enforcing it. But in other States, and especially in the great congeries of urban population, Prohibition is simply inoperative for all practical purposes, because the people and the State officials refuse to co-operate with the Federal prohibition agents, and the latter, working alone, are powerless to exercise any control over the illicit liquor traffic. What Prohibition has done in the great urban areas is to give an economic basis to those denizens of the underworld who have always been a troublesome element in the United States. They now derive enormous revenues from their bootlegging operations, and in places like Chicago are able to reduce civic government to chaos. But an equally important development in the "wet" States has been the growth of a widespread sense of resentment against the Federal Government as a hostile power which is attempting to impose a control completely antagonistic to the prevailing conscience of the people. Hence it comes that to-day there is abundance of evidence from almost every quarter of the United States of what appears to be the first genuine popular revolt against Prohibition which has materialised since the system came into force.

The "wets" are now definitely on the offensive and are disseminating a vast volume of propaganda. They are reinforcing the Association Against Prohibition with other organisations; a body called the "Crusaders" has been gaining recruits to the tune of hundreds per day in all the Eastern cities; a powerful women's anti-prohibition association has come into existence under Mrs. Charles H. Sabin, a well-known society leader of New York and an active Republic politician; and most of the leading writers and artists of the country have banded themselves together to employ their talents for the extinction of prohibition. At Washington a committee of Congress has been holding an exhaustive inquiry into the workings of the "dry" *régime*, and the "wets" have bombarded it with evidence of the demoralising and farcical conditions which have developed. While Mr Hoover's Commission on Law Enforcement continues its investigations without showing any signs of reaching a satisfactory verdict, the *Literary Digest*, one of the leading weeklies of the United States, recently tested national sentiment upon the Prohibition question by a popular poll such as it has organised before recent Presidential elections. It distributed in all some twenty million ballot papers, and the interest aroused by the poll is proven by the fact that 4,806,466 papers were returned, or almost double the number secured on the eve of the Smith-Hoover contest. In the ballot the voters were asked to give their verdict for one of three alternatives, and the result was as follows:—

For strict enforcement of the Volstead Law, 1,464,098.

For modification to permit light wines and beers, 1,399,314.

For complete repeal of the Volstead Law, 1,943,052.

The "wets" contend from these figures that if repeal were made a straight issue the great majority of the "modificationists" would vote for it, and that even if only half of them did, the majority for it would be overwhelming. The "drys," on the other hand, argue that if the "modificationists" had wanted repeal they would have voted for it and that the "wets" are not entitled to count upon their support. In industrial States like New York, Illinois, Massachusetts, Connecticut and Rhode Island, the "repealers" either had a clear majority over the other two groups' combined vote or were within approachable distance of it, but in rural States like Iowa, Oklahoma and Arkansas the majority for enforcement was just as marked, and the "drys" feel comforted about the impregnability of their legislative position from the fact that 23 States out of 48 gave a majority for the continuance of Prohibition, and under the American constitution the 18th Amendment can only be repealed if two-thirds of the States, or 32 in all, give their assent.

Politically, a situation which has developed in the State of New Jersey is attracting widespread attention. One of its two Senatorial seats is vacant, and Mr Dwight Morrow has entered the race for the Republican nomination. Mr Morrow is one of the most distinguished citizens of the United States, who has done remarkable service for his country in the field of diplomacy at Mexico City and in London, and from the moment of his decision to take an active part in political life it was generally recognised that his election to the Senate would automatically make him a Presidential possibility as a successor to Mr Hoover. Accordingly, particular interest attached to his pronouncement of faith upon the Prohibition question. As New Jersey is a notoriously "wet" State, where the Volstead Act has been openly flouted, it was impossible to evade the issue; and in the opening speech of his campaign, on May 15th, Mr Morrow, who had never been ranked as "dry," took an even more emphatic line against Prohibition.

He declared that the real issue about liquor had become not the merits or demerits of Prohibition as a principle, but whether it was practicable and in the public interest to apply that policy to the United States as a whole through the agency of the Federal Government. It was therefore a problem in government; and he took the view that the way out of the present deplorable situation lay in a repeal of the Eighteenth Amendment, which imposes upon the Federal authority the duty of enforcing Prohibition, and the substitution therefor of an Amendment which would restore to the States the power to determine their policy towards the liquor traffic and vest in the Federal Government power to give all possible protection to such States as desire complete Prohibition against an invasion of liquor from States which do not.

The Morrow plan is virtually identical with that which Governor Ritchie, of Maryland, a leading Democratic "wet," has been advocating, and the Press of the United States has agreed in describing it as profoundly significant. The *New York Times* went so far as to declare that Mr. Morrow's speech on Prohibition would live to rank in importance with Lincoln's Gettysburg address. But Mr Morrow's courageous declaration does not necessarily mean his election. He has to reckon with the wrath of the "dry" elements, who have been roused to furious indignation by his condemnation of the present *régime*. The Anti-Saloon League has long regarded the Republican Party as the special instrument for the furtherance of its politics, and that one of the most powerful and engaging figures in that Party should pronounce the present liquor laws unworkable is an unforgiveable offence. So the "drys" have decided that Mr Morrow's political career must be extinguished before it really begins, and for this purpose they have nominated Mr Franklin Fort, a "dry" Congressman, as his opponent in the Republican "primaries." Even if Mr Morrow wins the Republican nomination and enters upon the real contest for the seat with the Democratic "wet" who has already been nominated, the cohorts of the Anti-Saloon League threaten to run an independent "dry" candidate whose intervention would make Mr Morrow's chances of election slim in a State where the margin between the Parties is never large. But Mr Morrow's election to the Senate would constitute a grave embarrassment for the Hoover administration, as his candidature does even now, for it would provide the Republican "wets," a by no means negligible body, with first-rate leadership at Washington, and might lead to an open split in the Party.

The Democrats, for Party purposes, would welcome Mr Morrow's defeat, as it would be interpreted as evidence that the Republican Party was irretrievably committed to the maintenance of Prohibition, and they cherish the belief, not without some justification, that thousands of "wet" Republicans, despairing of their own Party's attitude upon the liquor question, have now reached the point where they are ready to forswear party ties and vote for some reputable Democratic "wet" candidate for the Presidency, like Governor Roosevelt of New York or Governor Ritchie of Maryland. Hence, Mr Morrow, whether he is elected or not, promises to exercise a decisive influence upon the course of American politics.

PRICES—PRIMARY AND FINISHED.

THE recent fall in wholesale prices has accentuated a problem which has for many years now been of considerable importance, namely, that of the discrepancy between wholesale and retail prices. The actual data can be summarised very briefly in the following table relating to the sirtuation at the end of April, this being the latest date for which the Ministry of Labour's cost-of-living index number is available:—

Date.	Wholesale Prices. *Economist* Index Number (1913 = 100).	Retail Prices. Min. of Lab. Index (July, 1914 = 100).
End April, 1925	161·9	173
End April, 1929	135·0	161
End April, 1930	117·2	155
Percentage fall—		
(*a*) Since April, 1925	27·6	10·4
(*b*) Since April, 1929	13·2	3·7

This table shows that while wholesale prices are only 17.2 per cent. above 1913, retail prices are 55 per cent. above the pre-war level. Further, in the past five years, wholesale prices have fallen far more rapidly than retail prices, as measured by the official cost-of-living index number. It may be added that the *Economist* wholesale price index number for the end of May (details of which will be found among Notes of the Week) was only 15.8 per cent. above 1913, which means that the discrepancy has in all probability become still wider.

Producers of commodities, whether foodstuffs or primary materials, which are sold at wholesale prices, are naturally exercised by this problem. Their receipts can be measured approximately by reference to the movements in the wholesale price index. On the other hand, their costs consist of wages and other expenses which, broadly speaking, are governed by retail prices and the cost of living, and so the discrepancy operates gravely to their disadvantage. It is important, therefore, to ascertain how far this discrepancy is a real one, how far it is inevitable, and how far it is curable by governmental or other concerted action. Some light is thrown on this question by an article by Professor Bowley in the current issue of *Lloyds Bank Monthly Review*. After a

statistical analysis, based mainly upon fluctuations in wholesale and retail food prices, the writer reaches conclusions which can be summarised as follows:—

While wholesale prices relate as a rule to primary foodstuffs and materials or to articles in the earlier stages of manufacture, retail prices relate to finished goods at the time they reach the consumer. Thus the latter must include all the cost of manufacture, transport, commissions and final distribution, beside the cost of the primary product as measured by its wholesale price. The additional costs do not as a rule move at the same time and in the same degree as wholesale prices, and the result is that not only is there a time-lag (calculated by Professor Bowley for food as being two months) between wholesale and retail prices, but retail prices do not fluctuate as much as wholesale prices. Moreover, a substantial reduction in retail prices is dependent in part upon a fall in wages, which is difficult to secure without a preceding fall in the cost of living. This mutual interdependence of wages and retail prices means that even if wages are governed by a cost-of-living scale, a reduction is a very slow process, demanding considerable patience from producers. Professor Bowley finally points out that in converse circumstances, when prices are rising, the time-lag and the relative stability of wages and other costs operate in favour of producers.

It will be seen that the main burden of Professor Bowley's argument is that owing to the relative stability of wages and other costs, finished goods move less in price than primary materials. The theoretical figures which he quotes in support of this view are confirmed in practice from another source. On April 8th last the *Financial Times* published the results of analysing the data from which their wholesale price index number is calculated. Excluding foodstuffs, it was shown that, out of 51 wholesale price quotations for materials, those relating to raw materials had fallen during the fifteen months ending March last by 16.1 per cent.; those relating to semi-manufactured goods by 10.4 per cent., and those relating to finished goods by only 4.2 per cent. It may be added that during the same period the cost-of-living index number fell by 4.2 per cent., or by exactly the same amount as the fall in finished goods.

Professor Bowley's analysis, on the whole, refutes the popular belief that the discrepancy between wholesale and retail prices is the result of " profiteering " by transport and merchanting agencies, retailers and other intermediaries separating producer from consumer. A table included in his article shows very clearly that, if the wholesale price of the raw material falls by 20 per cent. and all other costs remain unchanged, the final retail price will only fall by 9.25 per cent. This calculation, though theoretical, fits in reasonably well with the divergencies cited above.

There are, however, certain other considerations suggested by the nature of the statistical data on which Professor Bowley's conclusions are based. In the first place, since comparison is made between wholesale and retail index numbers, the objection may be made that a price index number based, as is the official cost-of-living index, upon a pre-war period possesses very little meaning. The whole style of living has changed completely during the past twenty years. The introduction of new materials such as rayon, the increased use of tinned foods, the growth of the restaurant habit and other changes are illustrations of this. Hence there is grave doubt whether the official cost-of-living figure is an adequate instrument of measurement, and if this doubt is justified, the whole foundation of the argument has to be laid anew. In any case, wholesale and retail price index numbers do not take account of the same things to the same extent. Thus in the *Economist* wholesale price index number, foodstuffs have a weight of 38 per cent. In the Ministry of Labour's cost-of-living figure they have a weight of 60. Wholesale price index numbers include such commodities as pig iron, copper, cement and linseed oil, which find no place in the family budget. Conversely, the cost-of-living index number includes rent.

Another complication which is not always remembered in discussions of this question is that while wholesale price index numbers, even when based on a post-war year, usually relate their current figures to the year 1913 for purposes of comparison, the cost-of-living index number is based upon July, 1914. The Samuel Commission, in their Report on the coal industry, estimated that to allow for this discrepancy between dates, the cost-of-living index number should be reduced in the ratio of 100 : 98. This would mean that the latest figure should be 151.9 instead of 155, so that the margin between wholesale and retail prices is narrowed by 3.1 points.

On general grounds we would suggest to the responsible authorities that the time is ripe for the recalculation of the cost-of-living index number upon a post-war base (preferably a year subsequent to the restoration of the gold standard) and for the revision of its constituents so as to bring it into harmony with present-day modes of life. There is equally a case to be made out for the compilation of additional price index numbers of raw materials, semi-manufactured goods, and finished goods, including in the latter category goods that have reached a further stage of manufacture than, say, cotton cloth. This would permit of a more accurate measurement of the discrepancy between wholesale and retail prices than is practicable to-day, and might dispose of a certain amount of exaggerated comment on the degree of actual divergence. Professor Bowley's conclusions, together with his rejection of the suggestion that inordinate profits are being earned by intermediaries, are interesting. In the public interest, and to prevent hasty and ill-conceived legislation, it is desirable that they should be supplemented by more definite evidence.

HUNGARY, REPARATIONS, AND THE OPTANTS.

A WHITE PAPER published this week sets forth the agreements reached after protracted negotiations in Paris for the liquidation of Hungary's financial obligations arising out of the war. A basis for these agreements was worked out, and initialled at the Hague Conference in January last, but not only was time insufficient then for the conclusion of a final agreement, but certain of the facts upon which that agreement had to be based had not then been ascertained. It is odd, perhaps, that so much deliberation was necessary in order merely to fill in the details of an already outlined agreement (a summary of which was published in the *Economist* of February 22nd), but the problem is not only complicated in itself, but inextricably entangled with irrelevant political problems and prejudices. This, in fact, is not merely a reparations agreement, but also a settlement of the Optants' Question, raised by the agrarian legislation of Roumania, Czecho-Slovakia and Jugo-Slavia, and by the subsequent withdrawal of the Roumanian member of the Mixed Arbitral Tribunal which was dealing with claims from expropriated Hungarians. No attempt is now made to decide the principle of the matter; on the contrary, both parties expressly reserve their previous legal attitudes, and the agreement is not intended to justify or to deal with any claims which may be made in the future.

The basis of the agreement is the appropriation of Hungary's reparation payments, along with certain gratuitous contributions from the chief Creditor Powers, for two autonomous Funds, designed to provide compensation respectively for agrarian claimants and for other special claims, arising out of the Peace settlement, put forward by nationals of Hungary against her neighbours. Hungary's present schedule of reparations payments is maintained until 1944, when it terminates; thereafter, until 1966, she agrees to pay in complete and final settlement of all Treaty obligation a constant annuity of 13,500,000 gold crowns. Up to 1944, the annuities are to be paid on the same conditions as are at present in force, save that they will be paid to the Bank for International Settlements for the account of the Creditor Powers; the post-1944 annuities are payable, also through the B.I.S., without any right of suspension whatever. From 1930 to 1943 inclusive, Belgium, France, Great Britain, Italy, Japan and Portugal will hand over their share of the Hungarian annuities to the Agrarian Fund, while of the 13,500,000 gold crowns payable annually after 1943, the Agrarian Fund is to take 6,100,000 gold crowns, and the " B " Fund 7,400,000.

These payments are not, however, sufficient to make up the Funds to the required totals. In consequence, Belgium, the British Empire, France and Italy agree to hand over to the Agrarian Fund their actual receipts in respect of Bulgarian Reparations up to 1966; the British Empire, France and Italy will also contribute to that Fund the following maximum annuities, namely, in 1931 and 1932, 400,000 gold crowns each by France and Italy; from 1933 to 1943, 827,528 gold crowns by the British Empire, 1,680,000 by France and 1,630,112 by Italy; from 1944 to 1966, 579,269 gold crowns by the British Empire, 1,340,000 by France and 1,260,027 by Italy. These payments are appreciably in excess of those tentatively agreed upon at The Hague. Italy and France also assume the obligation, which was not imposed upon them in the earlier plan, of contributing annuities averaging nearly half a million gold crowns from 1933 to 1943 to a reserve fund available for certain special contingencies arising out of Czecho-Slovak claims; any savings on this fund are to be re-credited to the two Powers.

Agrarian legislation in Czecho-Slovakia is responsible for most of the complications of the agreement; details had also to be worked out for the diminution of the Fund in accordance with compensation paid or to be paid directly by the expropriating countries. The Special Claims agreement is comparatively simple, and it makes no alteration of the sources of the Fund as proposed at The Hague, namely, 3 million gold crowns a year from 1931 to 1943, of which Great Britain pays 20 per cent., France 40 per cent., and Italy 40 per cent., and 7,400,000 from each Hungarian annuity after 1944. The " B " Fund is also entitled to any surplus available from the Agrarian Fund; any saving realised on the " B " Fund is to be distributed between France, Great Britain and Italy in proportion to their contributions.

The Fund, though nominally divisible among the Little Entente Powers, is available only for paying compensation to Hungarian nationals in accordance with judgments pronounced upon their claims by the Mixed Arbitral Tribunals. Payment will be made in bonds, the service of which will correspond to the annuities available for the Fund. The Agrarian Fund is also to issue bonds, at 4 per cent., equal in nominal value to the capital of the Fund, and redeemable by 1966. By these devices the Hungarian claimants will be enabled to obtain cash by realisation of the bonds, although the sums available for the satisfaction of their claims will not be contributed for a number of years. Moreover, the " mobilisation " of these obligations should do for the notorious " Optants' " claims what the issue of reparations bonds is designed to do for Germany's Treaty debt.

Each of the Mixed Arbitral Tribunals, whose competence in these matters was the technical stumbling block in the Optants' dispute, is to be reconstituted by the addition of two nationals of neutral countries, appointed by the Permanent Court; this provision is to apply to all the business of the Tribunals, not, as in The Hague agreement, to agrarian claims only. One Hungarian and three members appointed by the Finance Committee of the League of Nations are to administer the Agrarian Fund, but the Managing Committee of Fund " B " will consist of representatives of France, Great Britain, Italy, Czecho-Slovakia, Yugo-Slavia and Roumania. This cannot be described as excessive interference on the part of the three countries whose magnanimous financial aid has alone made possible the settlement of a dispute not their own save in the menace which it held for the peace of Europe.

Notes of the Week.

Cabinet Changes.—The debate on the Naval Treaty, as we record in a leading article, revealed a crucial difference of opinion in the Conservative ranks. On the fiscal issue, also, the rift would appear to be widening, for, in an outspoken article in the *Daily Mail*, Lord Birkenhead has denounced the Referendum, which figures in Mr Baldwin's official policy. Evidence of a more general discontent in the official Opposition party is provided by the resignation of Mr. J. C. C. Davidson from the party's chairmanship. At the same time recent troubles within the Labour Party have resulted in a Cabinet reshuffling, and Mr J. H. Thomas's retreat from the post of Minister for Unemployment follows with almost undignified swiftness upon the protest raised by Sir Oswald Moseley against the inadequacy of the Government's unemployment policy. As generally anticipated, Mr Thomas will be succeeded in his unenviable post by Mr Vernon Hartshorn, who is now free from his labours on the Indian Statutory Commission. But Mr Hartshorn luckily for him, will not have to shoulder the full load of responsibility which rested on his predecessor, for the whole unemployment problem has been referred to a Cabinet Sub-Committee, over which, it is understood, the Prime Minister himself will preside. Mr Thomas as Minister for the Dominions will be charged with the preparations for the Imperial Conference to be held in London in the autumn; while Lord Passfield, gratifying a long-known wish for a lightening of his burden, will retain charge of the Crown Colonies and Protectorates. Mr Thomas takes to his new post the dual advantage of experience gained as Colonial Secretary in the former Labour Cabinet and of personal contact with the Dominions. Another Cabinet change, this time without any apparent connection with party dissensions, is the retirement from the Ministry of Agriculture of Mr Noel Buxton, who is elevated to the House of Lords. Dr Addison is his successor, and in the lower ranks of the Government hierarchy, Mr Ben Turner, the Minister of Mines, is succeeded, on resignation, by Mr Shinwell, Mr W. S. Sanders becoming Financial Secretary to the War Office.

Coal—the Lords Amendments. — The amendments which the Upper House had made to the Coal Mines Bill received short shrift in the Commons on Wednesday. Mr Graham was not prepared to make concessions on any of the substantial alterations which the Lords had made, and the amendments excluding mixed mines from the operation of the standard tonnage and quota clauses, transferring to the Board of Trade the functions of the proposed Coal Mines Reorganisation Commission, and providing for a permissive spread-over of hours were negatived by large majorities. On the question of the district levy, which the Upper House had very properly deleted from the Bill, and in whose case the Liberal Party were definitely in favour of the Lords' amendment, the Government majority fell to thirty. Indeed, the reinstatement of the clause was achieved only as a result of considerable " Derby Day absenteeism " on the part of the Conservative Opposition. The attitude of the Lords when the Bill comes up to them again remains to be seen, but we are inclined to doubt whether by insisting on its amendments the Upper House would care, in such an issue as this, to provoke a situation which would contain the makings of an undesirable constitutional crisis. The most serious result to be apprehended from the decisions of the Commons this week is that, in the absence of elasticity in the matter of working hours, the conclusion of wage agreements acceptable to the miners in the districts now working an 8-hour day may be a matter of great difficulty when the Bill becomes law. The opposition of the Miners' Federation to the 90-hour fortnight appears to be inflexible, but it is not certain that if they had been willing to negotiate on the basis of regulating hours by the week or fortnight rather than rigidly by the

day, they could not have secured from the owners a figure lower than the 90 hours suggested. Once again, the Miners' Federation appear to us to have shown themselves singularly lacking in the capacity to make the best available bargain for their members.

Indian Developments.—On the eve of the publication of the first volume of the Simon Commission's Report, which is to be issued next Tuesday, India, so far as actual physical conflict is concerned, appears to be a little quieter. Rioting accompanied a big salt raid over the week-end in Bombay; the Madras police were obliged to open fire on a mob last Monday; and there has been more tribal activity on the North-West Frontier. But the principal developments have been in the political sphere and are mainly indicative of the determination of the Viceroy to govern and of the dissociation of responsible Moslems from the campaign of violence. At the week-end the Viceroy promulgated two Ordinances. The first extends penalties already attaching to non-payment of taxes to all who incite such non-payment; the second prescribes penalties for picketing. The areas to which these ordinances are applicable have been extended during the week. On Wednesday the Viceroy received a very important and significant deputation of Moslem *zemindars* (land-holders). This deputation presented an address in which, to quote the Simla correspondent of the *Times* " expressions of steadfast loyalty and co-operation were combined with frank comments on various questions of public policy." The *zemindars'* uncompromising denunciation of the campaign against law and order, following on the appeal of the Nizam of Hyderabad, is a welcome indication of the attitude of the Moslem community to the present troubles. Having sympathetically answered the deputation's claim for greater Moslem representation in the civil services and the commissioned ranks of the Army, the Viceroy seized the opportunity to re-affirm both the aims of Government policy in the evolution of Indian self-administration and the determination of the Government to maintain law and order. He paid rather striking tribute to the " wise and statesmanlike " attitude of responsible Moslem leaders, " with a few exceptions," and emphasised the fact that progress towards the goal at which British and Indians alike aimed was only possible through a continuance of established Government exercising authority and receiving trust. An incidental point concerning the immediate future of the violence campaign is that a stop must shortly be put to the salt raids by the breaking of the monsoon.

The Civil War in China.—For several weeks, the only news that we have had of the Chinese Civil War is a rival series of *communiqués* from Nanking and from the Shansi-Shensi coalition, each claiming decisive military successes. If we are to interpret these phenomena in terms of the recent Chinese past, we shall conclude that on this front, during these weeks, there has been no fighting at all. It is usually rash to interpret any Chinese phenomenon by anything else that has happened anywhere—including China itself—at any time. Nevertheless, it does look, in this case, as if our shot hits the mark; for there are now faint indications that the decisive action is taking place not on the official military front in Honan and Shantung, but south of the Yangtse in the Nanking Government's rear. While Chiang Kai-shek's army is sitting opposite Fêng Yü-hsiang's and Yen Hsi-shan's armies in the north, making war in that bloodless and comparatively harmless fashion that really civilised people prefer, the south is the scene of events which are neither innocuous nor unaccompanied by bloodshed. With the Kuomintang army immobilised at the front, the forces of disorder—Communists, brigands, " Iron-sides " and the rest—are raising their heads between Canton and Hankow; and the Northern Militarists are pursuing their tactics of masterly inactivity in the expectation that the Kuomintang military front, like the rind of a cheese when the mice have got into it, will be nibbled away from within. But this is not the whole story, for no doubt the magnificent impassivity of the Kuomintang army, *vis-à-vis* their Northern opponents, is inspired by corresponding hopes. The fact is, there are mice in the other cheese too—" Red Spears," for example, in Honan, and a very large specimen of the breed in the shape of the " Young Marshal " Chang Hsüeh-liang in Manchuria. Which cheese will be nibbled away first? That is the question on which the rival war-lords and rival governments are staking their fortunes. But there is one party that is bound to lose, whichever answer the question receives; and that party is the unfortunate Chinese people itself. From 1911 to 1926 the Chinese people lived in darkness and the shadow of death. From 1926 to 1928 they saw a glimmer of light when it seemed as though a stable central government—organised on modern lines and informed by an enlightened spirit—might be established by the victory of the Kuomintang. The gleam was short. It became dim last year, and the present campaigning season has quite put it out. When will the worm turn? When will the Chinese people rouse themselves to take effective steps for bringing their mis-rulers to heel? That is the supreme question in China; but it is also the most difficult Chinese riddle of them all.

The Honours List.—In many respects the list of Honours conferred on the occasion of the King's birthday is out of the common. Leaders of finance and commerce are conspicuous by their absence, Mr F. W. Goodenough, of the Gas Light and Coke Company, who receives a baronetcy, being a notable exception. Pure politicians, too, are few and far between. In fact the only big political honour is the barony conferred on the Minister of Agriculture, Mr Noel Buxton, whose elevation to the peerage causes a by-election in North Norfolk. In other ways, however, the list is of unusual interest. The claims of high scholarship are well satisfied by the conferment of the Order of Merit upon Professor G. M. Trevelyan and Dr. M. R. James, while science is conspicuously represented in the knighthoods awarded to Professor Leonard Hill, Professor J. A. Thomson and Professor A. S. Eddington. Two knighthood grants which strike the popular imagination are those to Mr Henry Lytton, the famous interpreter of Gilbert and Sullivan's operas, and Mr Edward Brown of the National Poultry Council. In view of his tremendous and self-sacrificing labours on the Indian Statutory Commission Sir John Simon, who adds the G.C.S.I. to his other titles, figures most deservedly in the list. The Viceroy's list also includes the Chairman of the Education Committee, the Financial Assessor, and various members of the staff of the Commission.

Another Newspaper Fusion.—An event of real importance in the journalistic world occurred this week in the fusion of the *Daily News* and the *Daily Chronicle*. Every newspaper has characteristics and personality which, in the case of a daily journal, influence in a hundred subtle ways the minds of its readers. It is also a thing which is to be prized in national life that there should be variety and a platform for all sorts of views in the Press which appeals to the great masses of the nation. No one can, therefore, witness the passing, as separate entities, of these two journals of long standing and tradition without regret. A fusion, moreover, of this kind cannot, unfortunately, be carried through without a displacement of staff, unemployment and hardship. On the other hand, the cost of producing a daily newspaper with a national circulation and the increasing amount of news and features of all kinds which it must give to its readers, has produced in all countries a tendency to eliminate all but a few great dailies each having an increasing circulation. Moreover, it cannot be said that the present fusion is entirely unexpected. Our readers are familiar with the story of the *Daily Chronicle's* association with the Inveresk group, but, apart altogether from the financial aspect of this case, it has been evident for a long time past that the *Daily Chronicle* and the *Daily News* were catering for very much the same public, and that they would be very much stronger and effective in association. It is, we believe, some twenty years ago since an agreement for the fusion of the two papers was practically reached between the late Mr George Cadbury and Mr Lloyd, but broke down at the last moment on the question of control; and the project has many times been under discussion since then. The official announcement states that the terms of fusion provide for equal holdings by News and Westminster, Ltd., and United Newspapers, Ltd., respectively, in the company which is to own the copyright, and that the control will be in the hands of five trustees, of whom three represent the *Daily News* side and two represent United Newspapers. The present fusion reduces the number of national dailies with a large popular circulation in Great Britain to four.

Charing Cross Bridge.—The London County Council adopted on Tuesday recommendations from its Parliamentary and Improvement Committees which afford a fair chance of reaching a solution of the Charing Cross Bridge problem. The proposals were that no application should be made for a recommittal of the rejected Bill, and that an advisory committee representing all the interested bodies should be set up for the purpose of preparing, within nine months and at a maximum cost of £12,500,000, an agreed scheme for a road bridge and approaches at Charing Cross. The following are to be represented on the committee:—The Minister of Transport, the L.C.C., Westminster City Council, Lambeth Metropolitan Borough Council, the Southern Railway, the Underground Railway Company, the Port of London Authority, the Royal Fine Art Commission, the Royal Academy, the Royal Institute of British Architects, the Institution of Civil Engineers, the Surveyors' Institute, the Town Planning Institute, and an independent chairman is to be appointed by the Council. In the discussion of these resolutions references were made to the possibility of a new Waterloo Bridge as an alternative to a road bridge at Charing Cross, but it was evidently, and quite rightly, the general view that a determined effort must be made to secure a new Charing Cross Bridge. The Improvements Committee held the view that the amount of evidence awaiting the new committee was such that it ought to be able to formulate a scheme within nine months, and the fact is that with Waterloo Bridge costing £10,000 a year, and enjoying an expectation of life that is almost nil, the Advisory Committee will have no time to lose. Meanwhile they have the opportunity of performing a national service that will win unusually prompt and widespread appreciation.

The Wool Dispute.—Notwithstanding the fact that the ballot of the wool textile operatives was stated by the six unions taking part in it to show a majority of 67 per cent. of those voting in favour of a continuance of the stoppage, it is clear that this deplorable dispute is now entering on its last phase, the gradual disintegration of the unions' powers of resistance. It was perhaps significant that in the result of the ballot the total numbers voting were not disclosed. Certainly the drift back to work has been greatly accelerated during this week, and the decision of the unions on Wednesday that each should endeavour separately to make the best terms it can secure, short of accepting without qualification the Macmillan reduction, suggests that in practice, if not in form, the general resumption of work will not be long delayed, even though the collective resolution of the unions, that no section is to make a preferential settlement while other bodies of operatives are unable to secure any abatement of the full rigour of the employers' terms, may cause delays and difficulties in some districts. We suggest, however, that at this stage the employers would do well to consider the advisability of trying even now to make a collective agreement on the terms of the Macmillan award. They are now fairly on the way to getting the relief in labour costs for which they asked, but it will be unsatisfactory for all concerned in the industry if no effort is made to re-establish the broken machinery of collective bargaining and to restore common standards throughout the Yorkshire mills.

Our Index Number.—The pronounced decline in wholesale prices which has proceeded steadily, apart from a brief upward fluctuation last July, since March, 1929, and has been accentuated during the past five months, made further progress in May. At 80.6 our index number on May 31st showed a fall of 1.6 per cent. on the month, and 12.2 per cent. in comparison with a year ago. Recent movements of the group figures are summarised below:—

AVERAGE, 1927 = 100.

End of—	May, 1929.	Feb., 1930.	Mar., 1930.	Apr., 1930.	May, 1930.
Cereals and meat	92·6	85·4	84·7	84·9	82·0
Other foods	84·3	83·0	82·7	80·8	79·0
Textiles	94·9	74·7	73·0	72·9	71·1
Minerals	95·7	90·5	89·8	85·6	84·3
Miscellaneous	89·5	87·0	85·5	83·2	84·4
Complete Index	91·5	84·2	83·1	81·6	80·6

After a short phase of relative stability in April, wholesale food values last month showed renewed weakness. Imported wheat, flour, and mutton were dearer, but there were substantial falls in the prices of maize and barley, English beef, potatoes, and tea. In the textiles group, wool prices were firmer, but cotton quotations were slightly lower and there were marked declines in the case of silk, hemp and jute. Renewed weakness in tin and, to a less extent, copper, combined with a seasonal reduction in the price of household coal, lowered the index for the minerals group. Among the commodities in the " miscellaneous " section, a decline in the price of rubber was more than offset by higher values of hides, linseed oil and creosote. Changes in the price of each article included in our index number, as compared with a month ago and with May, 1929, are show below:—

	Inc. (+) or Dec. (−) per cent. compared with Month Ago.	Year Ago.		Inc. (+) or Dec. (−) per cent. compared with Month Ago.	Year Ago.
Wheat, Foreign	+ 2·3	+ 2·9	Flax	− 3·3	−26·6

Silk	− 8·5	−20·7	Miscellaneous	+ 1·4	− 5·7

The next table shows the past three months' movement of our index number, converted to a percentage of 1913, averages for 1924, 1928 and 1929 being added for purposes of comparison:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168·5	215·8	214·7	149·3	122·6	166·2
,, 1928	152·9	189·7	165·0	115·2	111·2	140·9
,, 1929	143·0	173·5	144·7	119·6	105·0	132·8
End May, 1929	136·6	170·5	149·0	119·7	103·9	131·5
,, Mar., 1930	125·0	167·2	114·6	112·3	99·2	119·4
,, Apr., 1930	125·3	163·4	114·4	107·1	96·6	117·2
,, May, 1930	121·0	159·7	111·6	105·4	98·0	115·8

In comparison with May, 1929, the most notable differences are shown by the textiles and the " cereals and

meat " groups, with declines of 25 per cent. and 11.4 per cent. respectively. If 1924 be taken as 100, the current figure of our index number works out at 69.4, as compared with 70.5 at the end of April, and 79.1 a year ago.

Manchester's Fiscal Policy.—The result of the referendum on British fiscal policy carried out by the Manchester Chamber of Commerce was announced at the beginning of the week. The members were asked to vote for only one of six questions, and the following is a list of the questions with the number of votes recorded:—

(1) In favour of the policy generally known as Free Trade, 607.
(2) In favour of a settled policy of imposing protective duties in the manner generally known as Safeguarding, 986.
(3) In favour of a general protective tariff on imports, including raw materials and foodstuffs, 232.
(4) In favour of a general protective tariff on imports, excepting raw materials, 196.
(5) In favour of a general protective tariff on imports, excepting foodstuffs, 27.
(6) In favour of a general protective tariff on imports, excepting raw materials and foodstuffs, 296.

The number of voting papers issued was 3,941, and 2,343 votes were recorded as above, and 38 votes were invalid. The result shows that a total of 1,736 votes were given in favour of some form of Protection or Safeguarding, and 607 votes in favour of Free Trade. On a superficial reading, this result would appear to indicate a big swing of opinion in the citadel of Free Trade; but there are a number of reasons why the *Protectionists' claim that* Manchester has turned in favour of their nostrum is, to say the least of it, premature. In the first place, nearly 1,600 members abstained from voting. Why so? One probable explanation lies in the unfortunate phrasing of the first question: " the policy generally known as Free Trade." Many an anti-Protectionist might well hesitate to endorse a phrase which might be interpreted by many as supporting the extreme of *laisser faire* in all directions and denoting a *non-possumus* attitude towards all remedies for pressing troubles. Nor is the big vote under *question* 2 altogether convincing. Safeguarding for what? For the cotton industry? Who are these 986? Admittedly, the Manchester Chamber of Commerce members are drawn very largely from the various branches of the cotton trade, but they include also representatives of a large number of other industries, especially iron and steel and chemicals. Until we are told the industrial groupings of the voters in the various categories, it is *not possible to assess the meaning of Manchester's little* referendum. It may be that a patient in the throes of grievous pangs of industrial sickness has been goaded into sending to the chemist for a variety of quack medicines to sample. But those who so jubilantly claim the Manchester cotton trade as a convert to Protection in any of its various shapes would be well advised to " wait and see."

Rationalisation in Lancashire.—Our Manchester correspondent writes:—The capital of the Lancashire Cotton Corporation, Ltd., was increased this week by £479,000, for the purpose of absorbing a further seven spinning mills. The total capital stands at £3,437,941, represented by 190,619 preference shares, 2,727,400 ordinary shares, and 10,398,440 deferred shares. The Corporation now has in its possession 5,001,060 spindles. Conditional agreements have been signed regarding a further 1,214,930 spindles, schemes of arrangement being prepared involve 1,750,093 spindles, and there are 815,609 spindles in mills with which the Corporation has been " asked to proceed." In addition, it is in various states of negotiations with a further 1,861,537 spindles, making a grand total of over 10 million spindles. Sir Kenneth Stewart, the chairman, in an official statement, said that when complete specifications had been worked out and the necessary reconditioning of mills had been carried out, very marked reductions in cost and improved orders had been the result. The reconditioning of mills was being proceeded with. In the meantime the policy of refusing to sell yarn except at reasonable prices had resulted in improved results in the mills which were running under old conditions. Owing to this policy and to the world-wide conditions of trade, however, only about one-third of the spindles were running, causing the Corporation some loss, but on no serious scale. The many complications involved on the legal side and additional difficulties created by the Companies Act of November last, caused delay in the issue of income debentures and shares, but they will be issued with no unnecessary lapse of time. Further delay had also been caused by a want of co-operation and assistance from certain of the mill companies themselves. Sir Kenneth referred to the rumours of discords and differences, which he said could only be malicious in origin, and the statement that a member of the board of directors had given an adverse report to the Bank of England he dismissed as a deliberate falsehood.

South Wales Coal Audit.—Our Cardiff correspondent writes:—Notwithstanding the recent depressed condition in the coal trade, the joint audit of the South Wales coal-mining industry for the three months ended last April showed a profit of £314,324, or 6.71d. per ton, compared with a profit of £484,454, or 9.94d. per ton, in the three months ended last January. Current market prices fell considerably during the period covered by the audit, but on the strength of the higher-priced contracts placed towards the close of 1929 for delivery over the present year, and of the operation of the minimum price schedule of the marketing scheme, the average proceeds were slightly higher than in the preceding three months. The total proceeds at £8,029,023 were slightly lower, owing to a reduced output, than those of £8,259,528 realised under the previous audit, but the average price per ton was 14s. 3.51d., as compared with 14s. 1.47d. The economic wage certified by the auditors under the terms of the wages agreement was only 15.05 per cent. on the 1915 base rates, but under that agreement the workmen are entitled to a minimum wage rate 28 per cent. above the base rates, and the deficiency arising through the payment of this minimum was £576,452, which increases the total deficiency carried forward to the huge total of £14,779,321. Nominally this liability on the net proceeds of the industry is recoverable, but actually it will probably be wiped out on the expiration of the present agreement and the arrangement of a new agreement. An interesting feature of the audit is the light it shows on the operation of the Derating Act. In the three months ended April, 1929, local rates represented an average charge of 5.98d. per ton, while in the three months ended October, 1928, it was 7.17d. per ton. In the three months ended last January, however, the cost to the industry of local rates was only 1.06d. per ton, and in the three months ended last April 1.14d. per ton. The colliery owners have also profited from the decrease in shipment charges which took place last year, partly as the result of a decision of the Railway Rates Tribunal and partly in consequence of the remission by the Great Western Railway Company of a part of the benefit accruing from the relief of the railway companies of 75 per cent. of the burden of local rates under the Derating Act. These two factors account entirely for the credit balances shown by the last two audits, for the higher average proceeds per ton have been counterbalanced by the increased cost of production which has accompanied the decrease in the output.

The End of a Chapter.—The report which Professor G. W. J. Bruins has just issued as Commissioner of the Reichsbank is his last, for one of the effects of the inauguration of the Young Plan is to terminate the participation of the foreign members of the Reichsbank General Council, and also Professor Bruins' functions as Commissioner. The report deals primarily with the past eight months, but it concludes with a general review of the six years during which the Dawes Plan was in operation. In this survey the author traces very clearly the extent of the German recovery from the dark days of the inflation period, but he is equally insistent that the

recovery is only partial. Thus he says that " unemployment is at the present time one of the gravest economic problems with which Germany is confronted . . . the dominant feature of the situation is still the inability of the German formation of capital to satisfy the capital requirements of the country . . . it is not possible to foretell when the balance of payments can attain equilibrium without further import of capital . . . it is this circumstance of foreign indebtedness which has lent its character to the policy of the Reichsbank during this period." Elsewhere the report recalls the sudden exchange crisis of April, 1929, when the Reichsbank lost 500,000,000 marks of its gold and devisen holdings in a few weeks; and this illustrates the dangers arising from Germany's foreign indebtedness. Professor Bruins, however, rightly claims that, as a rule, the mark has lately been one of the strongest currencies, and he notes that recently Germany's economic and commercial troubles have been less a result of her own special difficulties than a reflection of the general world depression. Thus the set-back this year in German prices is " in the main due to developments on foreign markets," and the same doubtless applies to the shrinkage in her exports from the peak figure of 1,247.3 million marks, touched in October, 1929, to the figure of 976.7 million marks for April last. Movements in foreign financial centres, especially in New York, explain the contraction in long-term German loans raised abroad from an annual average of 1,340.5 million marks for 1924-28 to 348.6 million marks in 1929. The world-wide fall in money rates during the past seven months, and the general release of funds following the Wall Street break have made short money more plentiful, but, to judge from the cautious tone of the report, long-term capital, though now coming slowly to Germany, is, in the main, awaiting the issue of the reparations loan. As regards the credit policy of the Reichsbank itself, it has been steadily working towards two allied objectives, these being a lower rate of interest and the restoration of normal money market conditions. The first has now been practically attained. Six years ago, according to Professor Bruins, the Reichsbank discount rate of 10 per cent. had no relation to the far higher level of interest that actually prevailed and was maintained artificially by the rigorous restriction of credits. To-day, the discount rate is down to 4½ per cent., and money and discount rates are many of them as low. The development of the private discount market is proving a slower matter, and here, as in several other respects, recovery is still incomplete. Still, the true measure of comparison is with the dark days when the Dawes Plan came into being, and in the recovery from that time the Reichsbank, in the incarnation which the Dawes Plan gave it, has played a worthy part. Professor Bruins and the retiring members of the General Council can rightly feel proud of their contribution to its work.

The World Depression.—Further light on the prevailing world-wide depression which we analysed in our issue of last week is thrown by the heavy decline in the physical volume of production in nearly all industrialised countries. The extent of this decline is shown in the table below, in which we have converted various indices of the volume of production since October last to a percentage of that of the September quarter, 1929:—

PRODUCTION INDICES AS A PERCENTAGE OF JULY-SEPTEMBER, 1929.

Country.	United States. (Federal Reserve Board.) (b)	Canada. (Monthly Review of Business Statistics.) (b)	France. (Statistique Générale.) (c)	Germany. (Institut für Koujunctorforschung.)	United Kingdom. (Board of Trade.)
1929—July-Sept.	100	100	100	100	100
October...	95·1	105·7	*101·6*	98·2	
November	86·2	104·8	103·1	98·2	103·0
December	80·5	86·3	103·8	92·9	
1930—January...	83·7	100·6	103·8	91·6(a)	
February	67·0	*88·0*	103·1	90·7(a)	100·3
March ...	84·6(a)	89·4	103·8	89·5(a)	

(a) Provisional.
(b) Adjusted for seasonal variations.
(c) Partly adjusted for seasonal variations.

It will be seen from these indices that the decline started in the United States, where, up to March last, it had proceeded furthest. The setback in the United States did not spread immediately to other countries, and this time-lag gave rise to the hope that the repercussions elsewhere might not be so far-reaching. However, during the first quarter of this year the depression spread to Canada and Europe. The full effects have probably not yet made themselves felt in the United Kingdom index, and have not yet become manifest in the index of France. It is noteworthy that, whereas the production of raw materials has generally been maintained, that of the manufacturing industries has been curtailed to a large extent. This has resulted in the piling up of stocks and a heavy fall in the prices of all raw materials. The heaviest decline in North America occurred in the textile, iron and steel, and automobile industries. The depression in the textile industry has already become universal, but production in the heavy industries in Europe was well maintained until March. The latest information suggests that, whereas the trade recession has slowed down in North America, the depression is still deepening in Europe.

The Reparations Loan. — Our Paris correspondent writes:—The final settlement of the conditions of the pending international German reparations loan seemed, on Wednesday, to be almost as far off as ever. Last week the banking representatives of the nine countries in which the loan is to be issued appointed Mr Montagu Norman, Mr Masson (Crédit Lyonnais), Mr Anderson (Morgan and Company), and Dr. Luther as a sub-committee to thrash out what apparently amounts to the entire conditions of the issue, notwithstanding that several weeks have already been occupied, either in Paris or at Basle, in this particular task. The sub-committee has been *sitting twice every day* (including Sunday), yet it was unofficially announced on Wednesday evening that difficulties still remain to be got over concerning both the distribution of the various national portions of the loan and the terms of issue, the guarantees to be given by Germany as to the service of the issue, the manner in which these guarantees shall be inscribed on the bonds, and the conditions of transfer of the amounts subscribed in certain countries and destined for other countries. The German Government has offered a guarantee in the form of a general engagement on the German Budget, but this the Treasury experts of the Allied Powers—and also, it is believed, the chief officials of the Bank for International Settlements—do not regard as acceptable. One of the latest difficulties to be raised, it is asserted in well-informed quarters here, is a totally unexpected one that has come from the American representatives at the conference, who have raised the point that, under American legislation, all loan contracts for issues in the American market must establish a direct liaison between the debtor (which in this case is the German State) and the American subscribers. In the case of the present loan the B.I.S. must necessarily serve as the intermediary for the whole loan, which, it is feared, renders strict compliance with American law impossible. Last week it was semi-officially announced that matters were so far advanced that signature of the contracts would probably take place on June 7th, and the actual issue on June 10th. The date of issue now considered probable is June 15th or 16th, which would, in any case, appear to be a more *suitable date than the day after* Whit-Monday. It was unofficially announced here to-day that the bonds belonging to the French portion of the issue will be handed to the various Paris banks interested at 88, and that the bankers' commission allowed will be four per cent.; that the bonds will be issued to the public at 98; and that the difference of 6 per cent. is to be assigned to the Government for the capitalisation of the loan. In usually reliable quarters it is asserted that the issue prices to the public will range from 87, in the case of Italy to 98 in France (in New York, 91); but all these figures are given here under all reserve. No official information of any kind has been furnished concerning the loan, with the exception of almost daily *communiqués*, during the past three weeks, to the effect that agreement in principle has

been arrived at " on practically all the points at issue." French opinion is beginning to chafe under the continually renewed delay in settling the details of the issue, and at least one journal has pointedly suggested that if the bankers cannot come to agreement the issue had better be postponed definitely until they are prepared to agree.

Australian Banking Position.—Our Melbourne correspondent writes:—The principal feature of the banking position in Australia and New Zealand, as shown by the quarterly average returns of the ordinary banks (exclusive of the Commonwealth Bank of Australia) to March 31st, is the increase of £32 million in advances and securities, as compared with a year ago, accompanied by a decrease of over £15¼ million in deposits. The decrease in deposits is almost wholly in Australia, where the low prices ruling for wool, the prolongation of the wool selling season and the reduced wheat harvest, have combined to curtail exports and to limit the amount of new money available for enlargement of deposits and reduction of country advances usually witnessed between September and March. The increase in advances during the last year has been largely due to country requirements, especially in districts where the season was not favourable, and although the rainfall so far this year has improved the outlook, there are still considerable parts of the country, including Riverine, where rain is badly wanted. The demands upon banking resources represented by the decline in deposits and the increase in advances have been balanced partly by a reduction in local cash holdings and partly by drawing upon London funds, which do not enter into the returns. The following is a comparison of the principal totals of the quarterly average returns (exclusive of the Commonwealth Bank of Australia) with those for the previous quarter and a year ago, the figures relating to local liabilities and assets:—

	Mar. 31, 1929.	Dec. 31, 1929.	Mar. 31, 1930.
Deposits:—	£	£	£
Australia	289,010,198	277,245,549	274,415,881
New Zealand	58,209,834	55,015,135	57,469,326
	347,220,032	332,260,684	331,885,207
Advances and securities:—			
Australia	263,493,202	292,017,154	287,724,823
New Zealand	52,226,395	60,061,739	59,997,095
	315,719,597	352,078,893	347,721,918
Cash items (Australia and New Zealand):—			
Coin and bullion	33,037,436	27,916,205	21,231,604
Australian notes and cash with Commonwealth Bank	29,630,252	21,396,987	27,867,125
Legal tender notes of other banks (New Zealand only)	78,186	75,388	80,156
Total cash items	62,745,874	49,388,580	49,178,885

Of the £21,231,604 coin and bullion, £14,582,765 is in Australia, the decrease as compared with earlier dates being due to the transfer of gold to the Commonwealth Bank for export. The effect of this transfer is not fully shown in the averages for the last quarter.

Guardian Assurance Company, Ltd.—The bulk of the 1929 report is devoted to the life department, in which there was a quinquennial valuation for the five years ended December 31, 1929, but apart from the actual results of this there is much of more general interest. The total new business during the period was not much greater than the corresponding figure for the preceding quinquennium, the 1925-29 total being £6,260,505, nor do the annual returns show much evidence of expansion. A very large proportion of new business is evidently required each year to replace wastage, since sums assured in force increased by no more than £2½ million, *i.e.*, from £13½ million to £16 million. A summary of the constitution of the existing business is worth reproducing, because the changes during the five-year period are, apart from their inherent interest, characteristic of the course of life assurance in many life offices.

SUMS ASSURED AND BONUSES IN FORCE.

	December 31, 1924. Amounts.	Percentages of Totals.	December 31, 1929. Amounts.	Percentages of Totals.
With Profits.	£		£	
Whole life	4,639,423	30	5,215,399	28
Endowment assurances	4,699,569	31	6,593,697	37
Special classes	57,519	0	82,650	0
	9,396,511	61	11,891,746	65
Without Profits.				
Whole life	1,590,065	11	1,595,538	9
Endowment assurances	1,292,712	8	815,958	4
Children's deferred assurances	2,316,985	15	3,123,903	17
Special classes	762,698	5	940,565	5
	5,962,460	39	6,475,964	35
Total	15,358,971	100	18,367,710	100

The increasing preference for " with profits " contracts is a natural reflection of the prosperous state of life offices, while the changes in the proportions of whole life and of endowment assurance policies are symptomatic of the popularity of investment as a preponderating element in the contract. Turning now to the results of the valuation, the figures relating to this and to the preceding valuation are set out below:—

	1920-24.	1925-29.
	£	£
Surplus earned during the quinquennium	655,667	909,273
Investment profits taken credit for	12,223	8,075
Brought forward from previous quinquennium	18,974	39,864
	686,864	957,212
Allocations:—		
To Bonuses to policyholders	500,000	720,000
,, Shareholders	125,000	180,000
,, Investment reserve fund	22,000	...
,, Carried forward to next quinquennium	39,864	57,212
	686,864	957,212

Only 80 per cent. of the divisible surplus belongs to the policyholders, though in spite of this the bonuses allotted on the company's distinctive system are not inconsiderable for policies of long duration. Exact comparison with the more usual simple or compound bonus is difficult, and it will suffice to say that, for whole life policies, the rates now declared for the five years just ended differ according to age at entry and range from about 33s. per cent. for five years in force to about 67s. per cent. for 30 years in force. With regard to the fire and general business the premium income has been increased in all departments and now amounts to £2,106,059. Whereas in former years the Guardian's abstention from the American field of fire insurance has stood it in good stead, last year home business was subject to exceptional losses, and so the company, through its preponderance of home business, finished with an underwriting loss. The details of the operations of the past two years are as follows:—

	1928. Amount of Profit.	Percentage of Premiums.	1929. Amount of Profit.	Percentage of Premiums.
	£	%	£	%
Fire	146,600	13·7	— 1,134	— ·1
Accident	47,920	6·7	39,828	5·0
Marine	3,372	2·1	650	·5
Life	25,000		36,000	
	222,892		75,344	
Less:—				
Items debited to profit and loss account	56,759		167,920	
Transferred to investment reserve and contingency fund	120,000		...	
	46,133		— 92,576	

After paying a dividend of 80 per cent. for five years the rate has been raised to 100 per cent. and the payment necessitates an inroad on the profit and loss account to the extent of £14,812.

Pioneer Life Assurance Company.—The thirty-eighth annual report of this company indicates a setback in the trading results, both in the ordinary branch and in the industrial branch. The company, whose headquarters are in Liverpool, is a small one, the combined funds amounting only to £683,000, and this circumstance must inevitably give rise to a certain amount of year-to-year fluctuations. Since the rate of interest earned was slightly higher than in the preceding year and amounted to £4 18s. 4d. per cent. net, and since the expense ratios show little change when compared with the 15 per cent. experienced in the ordinary branch and 39.9 per cent. in the industrial branch a year ago, the results must presumably be attributed to an unfavourable incidence of death claims. The figures relating to the annual valuation in each branch for each of the last two years are set out below:—

	1928-29.	1929-30.
Ordinary Branch.	£	£
Trading surplus earned during the year	8,593	— 544
Investment profits	3,851	1,564
Brought forward from previous year	1,818	2,262
	14,262	3,282
Allocations:—		
To Shareholders	9,000	...
,, Investment reserve fund	3,000	...
,, Carried forward to next year	2,262	3,282
	14,262	3,282
Industrial Branch.		
Trading surplus earned during the year	19,948	5,094
Investment profits	3,965	1,628
Brought forward from previous year	9,818	9,731
	33,731	16,453
Allocations:—		
To Shareholders	12,000	6,000
,, Investment reserve fund	7,000	...
,, Strengthening of actuarial reserve	5,000	...
,, Carried forward to next year	9,731	10,453
	33,731	16,453

Since the whole of the company's business is transacted on a non-profits basis, no question of distribution of bonus arises, and, as regards the shareholders, the dividend has been maintained at the same rate as before, namely, 9⅜ per cent. The new business secured in the ordinary branch in the year ended March 31, 1930, totalled £102,500, and in the industrial branch £319,717, compared with which the corresponding totals in the preceding year were £89,388 and £321,196 respectively. A note at the foot of the balance sheet states that the investment reserve fund is more than sufficient to meet the depreciation in the book values of the Stock Exchange securities. In the previous year's balance sheet the investment reserve fund stood at £40,000, but £20,000 of this has since been utilised for the purpose of reducing the asset value of establishment expenses from £44,420 to £24,420.

Gresham Life Assurance Society, Ltd.—Although closely allied with the Gresham Fire, the life company pursues a separate legal existence and specialises particularly in foreign and colonial business, from which sources indeed nearly three-quarters of the total is derived. Since the total new business is in the region of £2¼ million per annum, this means that the office is not very much in evidence in this country, where its comparatively low bonus rate has been a handicap. The year 1929 was the closing year of another quinquennium, during which the total new business transacted amounted to £10½ million, compared with £12⅝ million in the quinquennium 1920-24. The net rate of interest earned is a comparatively high one, last year's figure being £4 19s. 9d. per cent., but some portion of the advantage of this is counterbalanced by an expense ratio which, on account of the foreign business, is at the high rate of 24½ per cent. The results of the quinquennial valuation are not comparable with those of the preceding valuation, since the rate of interest assumed has been reduced from 3½ per cent. to 3 per cent., and to this extent, therefore, the reserves are increased. The actual figures relating to the last two valuations are as follows:—

	1920-24.	1925-29.
	£	£
Trading surplus earned during quinquennium	480,082	702,125
Investment profits realised during quinquennium	36,515	56,946
Brought forward from preceding quinquennium	546	11,549
	517,143	770,620
Allocations:—		
To bonuses to policyholders	405,000	630,000
To shareholders	50,594	75,594
To staff pension fund	50,000	50,000
To carried forward to next quinquennium	11,549	15,026
	517,143	770,620

Ninety per cent. of the divisible surplus belongs to the policyholders and 10 per cent. to the shareholders, and the policyholders' proportion is on this occasion sufficient to permit of the declaration of an increased reversionary bonus at the rate of 35s. per cent. per annum, compared with 25s. per cent. five years previously.

Overseas Correspondence.

UNITED STATES.

Trade Outlook — Railroads — Industry — Congress — Credit — Bond and Share Market.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 27.

THE times are proving to be rather a severe test on the patience of the more optimistic, and in spite of further reassuring predictions from members of President Hoover's cabinet, the consensus among bankers and corporation executives is that few, if any, signs of genuine business improvement have yet appeared. Still, the recession does not appear to be deepening, and it is realised that time is working on the side of trade recovery. Predictions of improvement are for the most part based on hope pure and simple, but grounds for that hope are not lacking. Commodity prices are becoming a trifle more stable, harvest will soon begin on good wheat and corn crops, money is abundant and cheap, building contract awards are rising and employment is at least holding its own. Against these factors must be set a further small decline in the rate of steel operations, continued low volume of railroad car loadings, failure of marked recovery in actual building construction to develop, and a record of sharply rising volume of business failures. It is generally admitted that the first signs of improvement will find a ready response, and that industrial expansion might go on rapidly once it starts.

Railroads are reporting their earnings for April. About half the statements have been published. A few show increases over the same month of last year, but the large majority report declines both in gross revenues and in net operating income. Freight traffic last month was nearly 10 per cent. below that of last year, and the smaller volume gave little opportunity for keeping down operating expenses. Still, net income is running at about 31 per cent. below the level of a year ago, which represents some improvement over March, when it was 37 per cent. below. The record for this month ought to be about the same as that for April.

In his summary of trade, the Secretary of Commerce a few days ago estimated that business is about 6 per cent. below normal, as compared with 21 per cent. in 1921. He found encouragement in the fact that retail trade last month was 8 per cent. higher than in 1929,

although this year had the advantage of Easter in April; and he felt that strengthening prices for some commodities, as metals and wool, and the large volume of public construction contracts would help to promote recovery.

The monthly review of the Federal Reserve Board notes that production in basic industries was 2 per cent. larger in April than in March, and that in many important lines output was higher than in 1928. Following President Hoover's suggestions, public works contracts let by municipalities, States and the Federal government have been higher in the first four months than for any corresponding period in the past nine or ten years, amounting, according to the Department of Commerce, to $452,910,000. In the current month these contracts have been running at the rate of about $20,000,000 per business day. Residential construction, however, has not been stimulated as yet by easier credit. The motor industry, outside Ford and Chevrolet, is faring rather poorly, and there is talk of further price cuts. Three-fourths of the total automobile registration in the first three months were for Ford and Chevrolet machines.

Congress muddles along without much prospect of finishing the tariff Bill this month. A special session is probable for consideration of the Naval Treaty. The Senate has voted the Couzens resolution calling for a year's "holiday" on railroad mergers. If the measure passes the House of Representatives, the Inter-State Commerce Commission would be prevented from approving any merger applications until that time. As a practical matter, the Bill strikes only at the Northern Pacific Great Northern application, already partially approved. It is expected that this merger plan will now be abandoned. No other important application is before the commission.

Credit conditions are changing but little, and beyond some firming up at the month-end there is no prospect of higher rates for some time. Dividend and interest disbursements by corporations on or about June 1st will set a new high record, in spite of numerous recent reductions. The total of payments is estimated at $750,000,000. On June 15th the Treasury will have to meet the maturity of approximately $500,000,000 in certificates. The maturing issue carries an interest rate of 4⅞ per cent., and it can be replaced at a 2¾ per cent. rate or lower. Later in the month it may be necessary to sell another bill issue, but much depends on Farm Board operations. June income-tax collections are estimated at $550,000,000, of which half will come from this district.

Not much is being done by the Federal Reserve Banks to promote easier money, but that is not because of any change in policy. With the banks finding difficulty in placing available credit, lower rates would do no particular good. Discounts for the Reserve system for the week of May 21st were stationary, as were Government security holdings. The banks bought about $15,000,000 in bills, mostly under the fifteen-day re-purchase agreement with dealers and, as a result, total credit outstanding rose slightly. It stands at $931,000,000, and from an operating standpoint it is not considered desirable for earning assets to fall much below $1,000,000,000. Federal Reserve notes in circulation continue to decrease, but the gold certificate circulation is rising, there having been little recent net change in volume of currency used. The contingent liability of the system on bills purchased for foreign correspondents dropped $10,000,000, the same decline as in the preceding week.

Everything is ready for floating the first Reparations Bond issue. Response from banks and dealers, which will belong to the selling syndicate, indicates that the issue will go over with a rush, and that it will sell at a premium over the offering price. Here and there a politician has attempted to make political capital out of the affair by denouncing flotation of the bonds in this country, on the ground that it will be saddling European debts on American investors; but the character of the persons advancing such arguments ensures their cold reception generally. Investment houses are growing somewhat impatient of the delay in settling price and other details of the issue, inasmuch as they think the bond market is being retarded for the German offering. Success for the issue will itself stimulate old bonds, and make it easier to sell new issues, many of which are being held up. In spite of the plethora of money, prices for old bonds have moved forward rather slowly. One reason for this is the steady stream of new issues which has been flowing for some time. Last week's total topped $200,000,000, and this has been about the average weekly total for the past two months. Those offerings which have been attractively priced have gone quickly, indicating no lack of investment money, but others have required hard plugging.

Bonds continue to make up the major portion of the new offerings, in sharp contrast to the record of a year ago, when new stock flotations were more numerous than bonds. Many investors, nevertheless, have become "stock-minded" as a result of the remarkable rise in common stock prices from 1924 to 1929, and the popular movement into junior issues during that period. Faith in the common share received a severe test last autumn, but if it has been shaken it has not been broken, and even the current uncertainty in the stock market alongside a highly favourable bond prospect is not having much effect on the small investor.

FRANCE.

M. Tardieu's Speech — Economic Development — Pre-War Loan Repayment Decisions.

(FROM OUR CORRESPONDENT.)

PARIS, June 6.

M. TARDIEU'S speech at Dijon, on Sunday, was divided into two quite distinct and only remotely connected sections. The one was devoted to setting forth the trained thinker's conception of the modern State, and the other to a declaration of the Tardieu Government's settled attitude towards the Radical-Socialist Party. The Premier, with characteristic logic, dealt with the purely party political subject first, and thus cleared the ground for what was by far the more important half of his discourse. Unfortunately, the French mind is so constituted that practically the whole of the newspaper comment during the past three days has been devoted to that part of the speech that scornfully dealt with sterile political warfare. M. Tardieu, in his declaration to the Radical-Socialists, made it quite clear that he is ready and even anxious to have the support of the party led by MM. Herriot, Sarraut and their colleagues, but that their association with him must really mean co-operation and certainly not domination, and that, if they are not prepared to accept this basis, the Government's situation in the Chamber and the country is so strong as to enable him quite safely to do without them. All the factors appear to confirm the solid good sense of the Premier's attitude, which makes further comment unnecessary.

M. Tardieu's practical vision of the modern *rôle* of the State is one that might well be pondered by leaders of many other countries than his own. The problem of the modern State, M. Tardieu declared, is to harmonise the two rival forces of the contemporary world, the political and the economic. In France, in regard to national production, the State has latterly had to take initiatives that were unprecedented, except during the war. The policy of systematically aiding the country's vital forces has often found opposed to it "the union of the doctrinaires—from which I conclude that the doctrines of yesterday have been surpassed by the facts, and that, to obtain mastery of the facts, the time has come to define the doctrine of to-morrow." What is to be the doctrine of to-morrow? "Neither laissez-faire nor State Socialism—that is the lesson of experience." The democratic State must be a strong State. Unfortunately, the more the State increases its legal function, the more its authority diminishes. "Never was this authority more necessary than to-day. The war has created or revived an infinite number of conflicts in every country: conflicts between regions, between classes, between professions, between the members of the same profession, between the various categories of public servants, between these public servants and the State itself. The State alone is in a position to arbitrate in these conflicts, and we have the firm will that it shall succeed in putting an end to disorder by solutions of justice and reason that will re-establish loyal, confident and cordial co-operation."

At present, M. Tardieu declared, the State is faced with a system of oligarchies, of various origins, ceaselessly attempting to divert the State from its proper object, to the profit of a conglomeration of private interests, assailing alike the legislature and the executive. The objective to be attained is a precise definition of the rights of the State in regard to groups of every kind—labour, employers, public servants and all others—that all may co-operate in the national interest. "This is not the programme of a Government, you may say," M. Tardieu added, "but the dream of a generation. That may be so; but somebody must begin the work; and if we would act to-morrow, we must know how to think to-day."

The Government's plan for the development of the national economic equipment is now under consideration by the grand commission of the Chamber, and is expected to come up for discussion in the Lower House about June 20th. The necessary funds will be drawn as to 5,000,000,000 francs from the surpluses in the hands of the Treasury, 5,940,000,000 francs from ordinary Budget sources, and the balance of 6,000,000,000 francs from development organisations interested. Several alternative schemes, all involving much heavier expenditure, have been suggested by various members.

Following the decisions given by the Hague International Court, some months ago, in regard to actions brought for interest and redemption payments on Brazilian and Serbian issues to be made to French holders in gold, the Cour de Cassation yesterday handed down judgment in a final appeal concerning similar payments by the Crédit Foncier Canadien, in respect of its European 3 per cent. and 3.40 per cent. issues of 1890, 1896 and 1908. These issues were made in several different markets, and the text of the bonds gave holders the choice of place of payment. The company contended that it could make payment to French holders in present-day paper francs of one-fifth the former value of the franc. Actions were brought in the French Courts by bondholders as long ago as 1922, and in 1923 and 1925 judgments were given in their favour. The company appealed to the Cour de Cassation, which has now, adopting the doctrine of the Procureur-Général, ruled that holders have the right to choose payment either in Paris or in Geneva, in the local currency, as set forth in the conditions of issue. The decision covers payments to a total of 110,000,000 gold francs, and should therefore benefit small French capitalists to the extent of about 440,000,000 paper francs. Other similar instances in which decisions are expected shortly concern loans by the City of Tokio (100,000,000 gold francs), the Port of Rosario (89,000,000 francs), Sosnowic Collieries (20,000,000 francs), and the Heraclea Collieries (15,00,000 francs). Decisions are also wanted in regard to Bulgarian, Mexican, Hungarian and Brazilian issues, as well as one of the Moorish loans. In the latter case both the French and the Moorish Governments, in successive independent actions, have repudiated liability, on juridical grounds. The amount lost by French holders through having been required to accept depreciated francs instead of gold may be gathered when it is stated that it is estimated the loss to the Government in income tax alone amounts to a total of between £1,500,000 and £2,000,000. British holders of scrip in the French loans issued in London during the war are practically in the same position as French holders of the issues mentioned above. In that case, however, payment in paper francs is juridically supported by the text of the conditions, and it is unlikely that holders will receive relief. Both the 5 per cent. and 4 per cent. bonds are quoted in London at a shade over 20.

Deficit — Stock Exchange Reform Proposals — Wage and Price Reduction.

(FROM OUR CORRESPONDENT.)

BERLIN, June 3.

DR MOLDENHAUER has now given the budget committee of the Reichstag more detailed information on the new deficit in the Budget for 1930-31. Unemployment requires altogether 600 millions more than had been calculated in the first draft of the Budget, and tax receipts must be estimated at 137 millions less. The Minister plans to secure a round 300 million marks by economies in unemployment insurance and by a rise of 1 per cent. in the contributions. A way of meeting the rest remains to be found, and the Government is now discussing the matter. Since the people can hardly be expected to pay further taxes, as the receipts from those in force are diminishing, the Government intends to try to cancel appropriations. It is not likely that it will be very successful in that. The Government wishes to curtail the salaries of civil servants, reduce leave, and do away with a number of official bodies. In addition, new regulations are to be made governing salaries in the States and municipalities. Some of these proposals amount to a change in the constitution, and hence require a two-thirds majority in the Reichstag, and it is safe to say that such a majority cannot be had. Moreover, considerable savings can be achieved in this manner only over a long period, not for the current year. In any circumstances, therefore, there remains an uncovered balance of several hundred millions.

To meet this deficit the Government is considering a so-called "Notopfer," or "emergency offering," of salaried persons, but this is merely a somewhat pathetic euphemism for a supplementary tax on the income of all persons with fixed incomes above the unemployment insurance level. The political effect of such a "Notopfer" will probably be only a radicalising of those sections of the the people who were not socialistically inclined before. The Socialists, who are now in opposition, will not fail to make use of the argument that the "bourgeois" Government is imposing a special tax on earners of salaries, whereas it has just made the capitalists a present through the announced repeal of the "Kapitalertragsteuer" and of certain Bourse taxes.

The board of the Berlin Stock Exchange has now published proposals for a reform in order to overcome the lethargy on the Bourse. The aim is to increase the turnover and divide it among a smaller number of brokers. It is relatively easy to attain the latter aim. An age limit is to be fixed for brokers—70 years is the limit contemplated—and retiring members of the Bourse are to receive payments from a newly created fund in order to induce those of them who are not well off to take up some other occupation. As a means of increasing the turnover the governors have under consideration, first of all, a law forbidding the banks to carry out buying and selling orders outside the Bourse. The big German banks to-day make their own adjustments of buying and selling orders of the same stock, and thus save the expenses of the Bourse stamp tax and the brokerage. The board feels that this system is prejudicial to the genuine development of quotations, but there is very little prospect that the banks can

be compelled to abandon their system. The largest German bank has already announced that it will not voluntarily make the change.

The Bourse governors are further considering the creating of a new group of Bourse members, the coulissiers. In addition to admission to the Bourse, this group of financially strong private dealers is to receive a rebate on the stamp taxes. These, and numerous other plans of less importance, even if they should be realised, could increase the Bourse turnover only in small degree; a greater abundance of capital in Germany or increased foreign interest in German shares alone can bring about a genuine improvement of the Bourse.

The Rhenish-Westphalian iron industry has made an interesting attempt to give a new impetus to business by lowering prices and wages. The big wage dispute of 1928 was ended by an arbitration award of Dr. Severing, then a member of the Cabinet, which granted certain increases of wages to the workers. Whereas up to that time the wage agreements for every group of workers merely established a minimum wage, which was exceeded in about half the cases by the wages actually paid, Dr. Severing added to his decision a clause providing that wages in excess of the established minimum could not be lowered from the figure in effect at the beginning of the dispute except where working methods had changed. This provision was necessary at that time, since otherwise the mutual antagonisms following the struggle would have resulted in continuing dissensions regarding these wages, as no opportunity remained for dissension regarding the fixed rates. But this clause deprived the wage level of the West German iron industry of the elasticity that is afforded in most other industries by the difference between the established minimum wage and the wage actually paid. The wages were kept at the level of the profitable economic year 1927-28, whereas in many other branches of German production wages exceeding the minimum established by agreements were reduced. In order now to free itself from this rigid obligation, the western iron industry, when the trade unions recently desired certain changes in respect of holidays, etc., and, therefore, denounced their wage agreements, demanded the rescission of the Severing clause. It proved impossible to reach an agreement, and the matter came before the arbitrator, when the employers declared their readiness to employ any sums received from a lowering of wages in lowering prices. The wage reduction is not to exceed 10 per cent., and the employers believe that the workers' earnings will not be reduced, since the lowering of prices will increase the turnover and thus do away with lost time, which had become frequent. The arbitrator has accepted the employers' proposal and—while otherwise granting most of the workers' demands—has rescinded the Severing clause. The syndicates of the German iron industry will now shortly decide to reduce the price of iron, unless unexpected difficulties prevent the carrying out of the arbitrator's decision. The workers have rejected the decision, but the Minister of Labour can decree that it shall be legally binding, and it is believed that he will do so.

This step, however, can improve the economic situation and increase the turnover of the iron industry only if other industries follow its example and thus bring about a general fall in prices. But, despite the somewhat lower cost of living, a general lowering of wages would encounter bitter opposition from the trade unions. Here and there, it is true, the workmen of individual undertakings have declared their willingness to accept a reduction of wages if there be no other way of keeping the undertaking going. But these were all scattered instances under particular conditions. If the State leaves it to the parties concerned to adjust wages, that is, if the Minister of Labour makes little or no use of his right to declare arbitration awards binding, then a reduction of wages of even moderate extent can be achieved only after conflicts whose cost to German economy would not be compensated for by their result. But if the State should interpose and itself compel a lowering of wages, it would assume a task to which it is hardly equal, especially as the political foundation of the Government is at present very narrow and the Cabinet is unable to acquire prestige by achievements in the field of financial policy, precisely the field in which the public is particularly eager for something to be accomplished. Hence great difficulties would be encountered if the action of the iron industry should be regarded as more than a warning to the unions to exercise great moderation in their wage demands this summer, in order to facilitate the carrying out of a rational economic policy.

SWEDEN.

Industrial Activity — Signs of Depression — Prices — Foreign Trade — Riksbank.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, May 17.

EACH time new economic and statistical data are published the question is asked, in Sweden and elsewhere, to what extent do they reflect the international depression? And each time the answer as regards Sweden has been that as yet the indications are surprisingly few. The March figures of production indicate surprisingly active employment. It is true that in certain industries signs of the depression are visible, but, on the other hand, there is a decided increase of production in other markets, and Sweden up to the present appears to have shown an unexpected power of resistance and still holds an exceptional position.

This circumstance is the more remarkable in that the figures for production in February clearly indicated a relative slackening, apart from the timber trade, in which activity was surprisingly great. In the March figures also the index of production is unexpectedly high, but even compared with last year the volume of production shows an increase. " Svensk Finanstidningen's " index number rose from 144 in February to 149 in March. As usual, it is the activity in the pulp industry which mainly explains the high index number, but at the same time the general level has been maintained at a very high point. Only iron and steel continue to show a falling curve. Among the industries represented in the index that is the only one in which employment is less than a year ago.

The favourable elements in the situation are still more emphasised if we compare the average index of production for the first quarter with the corresponding figure of last year. The general index for the first quarter of the year was 149, compared with 140 for the same period in 1929. This is, in fact, a new record, to which the large output of the paper mills contributed in no small measure, though this output was possibly in anticipation of the expected labour dispute, which broke out at the end of April. The iron and steel industry is again an exception for the first quarter, but otherwise there is marked improvement all along the line.

It is evident that this development is the consequence of the peculiar industrial position of the country, in which production relates primarily to high quality necessities and only to a very small extent to luxury articles. In addition, the chief industries work on long forward contracts, for which reason Sweden is able to resist longer the effects of a period of depression. The effect of the international depression on Sweden therefore depends upon its duration, and now that the depression has lasted so long one would expect to see signs of it. And, indeed, such signs are very marked in agriculture and shipping. " Svensk Finanstidningen's " index of wholesale prices fell from 136 in April, 1929, to 126 at the turn of the year. Between December and April this fall continued rapidly to 118, and at the same time the index for vegetable foodstuffs sank to 98, and even 95, in March, compared with 124 a year ago. As such important commodities as butter and eggs are no higher than in 1913, it is clear what difficulties agriculture has to contend with. In shipping the position is the same. The Swedish freight index published by Svenska Handelsbanken had sunk in March to 103, as compared with 138 a year ago and 124 in December.

The effects of the fall in prices have, however, by no means been entirely disadvantageous in Sweden, because they have been confined mainly to imported goods, while export goods have shown greater resistance. This favourable relation has been characteristic of price changes in Sweden during the years since the war. It has been especially accentuated this year. Whereas Svenska Handelsbanken's wholesale price index number for imports and exports was 132 and 145 in March, 1929, the relation in the corresponding period this year was 106 : 139. This to some extent explains the export surplus of recent years, but the longer the depression lasts the more we must expect the fall of prices to affect prices of export goods also.

Foreign trade has run its normal seasonal course. A comparison with previous years is not possible, because last year both imports and exports were completely disorganised by an exceptional ice blockade in February and March, while the first quarter of 1928 was characterised by the great labour disputes. The value of imports in the first quarter of 1930 was Kr. 394 million, against Kr. 299 million in 1929 and Kr. 390 million in 1928. At the same time, the value of exports was Kr. 320 million, Kr. 282 million and Kr. 256 million respectively. Generally speaking, the exports of the staple articles have been very satisfactory, and imports of industrial raw material and semi-manufactured goods have been so considerable that they indicate continued industrial employment, though this is not quite so true of March. Short time also occurred sporadically in April, but it is noteworthy that no curtailment is reported from such a sensitive industry as mechanical engineering.

The labour market has been very satisfactory, and there is a decrease of unemployment as compared with a year ago. There was the usual seasonal increase at the end of last year and in January, but the general level of unemployment was considerably lower than in 1929. The number of unemployed registered in the State Unemployment Commission as seeking relief amounted to 16,600 in January, as against 18,600 in 1929. The number of applications for work at the unemployment exchanges was a maximum of 241 for 100 vacancies, the same as in the preceding year. There was a continuous improvement in February and March.

The money market has been well supplied, and demands for credit have been remarkably small. Whereas normally there is a decided increase of the volume of credit in March, this year the volume sank. The same tendency was visible in April. The abundant supply of money is primarily a reflection of the influence of the depression on interest rates abroad. Of recent years Sweden has exported capital on a considerable scale, and the Swedish commercial banks have year by year increased their deposits abroad. It is evident that the pronounced fall of interest rates abroad must tend to reduce exports of Swedish capital and must stimulate the banks to call in their foreign holdings. Exports of capital have fallen since the beginning of the year. In March the net amount was Kr. 5 million. Last year the tendency was the reverse, and exports in the same month amounted to Kr. 22 million. This in itself must create a larger supply of foreign exchange than is normal for the time of year. The withdrawal by the commercial banks of their foreign holdings tended in the same direction. Whereas usually there is a seasonal demand for exchange and rising rates, this year the opposite has occurred. The market has been dominated by sellers and rates have fallen sharply. The pound especially has been quoted so low for some time past that the Riksbank has been compelled to take up all offers in order to avoid importing gold. For this reason its reserves rose by Kr. 28 million in March and by no less than Kr. 94 million in April, so that they amounted to Kr. 355 million, against Kr. 266 million at the turn of the year.

At the same time, rediscounting claims on the bank have continuously fallen, until at the end of the first week in May they amounted to Kr. 151 million, as compared with Kr. 310 million at the same time last year. Clearly such a development will require a lowering of interest rates corresponding to those abroad.

JUGOSLAVIA.

Budget — Business Improvement — Foreign Trade — Economic Experiments — Money.

(FROM OUR CORRESPONDENT.)

BELGRADE, May 18.

THE Budget for 1930-31, published by Royal Decree on March 27th, shows that Jugoslavia is still in a period of budgetary expansion. The figure of 13,348,000,000 dinars (£50,000,000) is 883,500,000 dinars (£3,200,000) larger than that for 1929-30, the previous record figure since the creation of the Kingdom. This increase, the Minister of Finance in his explanation avers, is not due to any extravagance, but to the natural expansion of national economy, greater requirements during a period of administrative reorganisation, and to the final settlement of all public debts. Of these, there were settled in the course of last year the war debt to France, the pre-war Serbian debts, and, at the Hague, all outstanding accounts between Jugoslavia on the one hand and Austria, Hungary and Bulgaria on the other. The increase in the debt service is 121,500,000 dinars, the total service amounting to 1,016,000,000 dinars (£3,700,000). Important additions to the Budget have been investments by the Ministry of Communications (141 million dinars), the Ministry of Forests and Mines (55 million dinars), and that of Agriculture (42,700,000 dinars). Of increases for administrative purposes the most important are those of the Ministry of War, 94 million dinars (total 2,523 million dinars); of Interior, 86 million dinars (total 672 million dinars); of Construction, 72 million dinars; and Education, 45 million dinars (total 872 million dinars), largely due to the new scales of payments.

In estimating receipts the Minister emphasises the fact that no new taxes or duties have been introduced, but that a greater income is expected as a logical consequence of expanding economic life. This hope he bases on the fact that last year's Budget receipts practically reached the very high sum required of 12,464,000,000 dinars, partly in consequence of the excellent harvest and partly because of more rigorous collection of direct taxation. The chief increase is under the heading of reparations (263,700,000 dinars more), followed by Customs (90 million dinars more), and direct taxes (87 million dinars more). In conclusion, the Minister declares that circumstances are ripe for the legal stabilisation of the dinar, and that the Government is watching for a favourable opportunity to conclude a foreign loan, although it is not prepared to do so under disadvantageous conditions.

Foreign trade continues to improve. Exports for the first quarter were 1,175,285 tons, worth 1,695,985,000 dinars, or 385,790,000 dinars more than in 1929. Imports amounted to 1,740,400,000 dinars, as against 1,649,200,000 dinars last year, or 91,200,000 dinars more. Of export prospects for the latter part of the year it is still too early to speak until the harvest can be estimated. There has been plenty of warmth in the spring, and corn is fairly advanced. On the other hand, rainfall by the end of April only reached 138 mm., as compared with 215 mm. in 1929 or 167 mm. in 1928. Recent rains have much improved this relation. Much ought to be done for export, however, by the newly formed Privileged Export Company (capital 50,000,000 dinars), set up by Royal Decree, and in which the State is the chief shareholder. It will be the business of this company to protect the producer, stabilise prices during fluctuations, store grain, and act as exporting agent to countries which are not contiguous.

The formation of this company, as well as that of the Privileged Agrarian Mortgage Bank, ushers in a most interesting period of economic experiments. The State has taken the initiative for the foundation of both, has itself subscribed a large sum of money, and insisted on its right of supervision. On the other hand, it has admitted private shareholders, guaranteed them a fixed minimum dividend of 6 per cent., and handed over the management to a body of private persons and appointed

officials, setting the institutions on an independent footing, free from State administration. Thus, since stress is laid on public usefulness and minimum profit, but private shareholders are guaranteed against loss, and since further the State in each case takes the initiative but leaves the management in private hands, an interesting form intermediate between private enterprise and State Socialism is achieved, the progress and success of which will be most instructive to watch.

On the financial market the abundance of liquid but uninvested capital still continues, while money for business purposes is still stringent. That adaptation is progressing is obvious from the decreasing number of bankruptcies, which for the first four months amounted to 303 as against 407 during the same period in 1929. This abundance of money on one side and tightness on the other is probably the reason why the privileged Agrarian Mortgage Bank has decided to postpone calling for the payment of the third and fourth instalment of subscription until the autumn, while it has obtained at the same time credits of 200,000,000 dinars with both the State Mortgage Bank and the National Bank, and a similar amount from the Postal Savings Bank.

TURKEY.

Bondholders and the Treasury — Foreign Exchanges — Industrial Developments.

(FROM OUR CORRESPONDENT.)

STAMBOUL, May 14.

IF market rumours and Press commentaries were to be believed the financial outlook for Turkey would be indeed bright and rosy. She would receive a loan of 40 millions sterling from the London money market through the British Treasury, on condition that she agreed to accept simultaneously the services of a British Financial Adviser; another 20 millions sterling would be forthcoming from the Swedish Match Company in exchange for the cession to that group of the Match Monopoly; lastly, a famous finance house would put up six millions against a contract for the extension of the Smyrna harbour works. All this and much more is being repeated *ad nauseam* in the " coulisses " of the Bourse. The matter of collateral for the 40 millions is not even mentioned.

In the meanwhile Mr Wyatt and M. de Closières have left Angora for Paris without registering any marked success in their efforts to induce the Turkish Treasury to abide by the terms of the contract which was signed by them and ratified by the National Assembly so short a time ago. The only concessions made by the Turks during this, the delegate's latest visit, was to agree to their suggestion that a specialist should examine the financial situation of Turkey as a whole and suggest remedies for the ailment from which she is suffering. This task is to be entrusted to M. Rist, the well-known French financial expert.

M. Rist should have no great difficulty in locating the source of all the trouble. The ordinary observer arrived long ago at the conclusion that a situation akin to the present one was bound to arise sooner or later unless the fiscal and financial policy of the Government was subjected to appreciable modification. A glance at any one of Turkey's Budgets for the past few years should suffice to show that, if she has not been spending more than she has been earning, too large a proportion of her outgoings, at all events, has gone into economically unproductive investments. In this year's Budget, for instance, the vote for national defence and subsidiary armed forces absorbs about 36 per cent. of the aggregate expenditure, whereas the amount set aside for interest and sinking fund of the external debt—the payment of which now forms the subject of a threatened default—does not exceed 6 per cent. Moreover, allowance must further be made for an unknown percentage of the 33 million lire to be expended on public works, a proportion of which is to go towards the building costs of certain railway lines, the construction of which it is difficult for the ordinary observer, with first-hand knowledge of the physical configuration of Anatolia, to explain on economic grounds.

That the leaders of post-war Turkey are wide awake to the tangible benefits and advantages which would accrue to the State by the intensive and sustained economic development of the Fatherland is patent from the reports of proceedings in the House of Assembly. But this goal can be reached only by the expenditure of large sums of money. Those large sums of money Turkey does not possess. They must come from the foreign money markets. It is surely in the highest interests of state for Turkish Ministers to consider whether they are going the right or the wrong way about encouraging the foreign capitalist to look upon Turkey as a reliable prospective borrower with whom he may safely and profitably invest his money. The Turkish Press reports that, times being bad, a strong current of opinion has manifested itself in the Chamber in favour of applying the £2 million odd, which should go to the bondholders, to the economic development of the country. The deputies who are of this mind—and, apparently, the Cabinet share their views, as the threat of default has come from the Council of Ministers—appear blind to the fact that the Turkish Government themselves hold the key to the world's money markets upon which the economic regeneration and ultimate salvation of Republican Turkey depend.

That stability of the national currency has been attained in this country there is no gainsaying. The fluctuations of the official rates of sterling during the past three months have barely varied by a piastre or two a day above or below 1,030. It is interesting, however, to weigh up the cost at which this very desirable state of affairs has been brought about. Whereas currency stability is usually secured by means of either gold reserves, gilt-edged Government stock, foreign credits in sound and stable currencies, or by all three, here we have stability brought about by legislative measures exclusively, and legislative measures, moreover, conceived and framed mainly in the spirit which inspires part of the Decalogue, " Thou shalt not. . . ."

The needs of the mercantile community in the matter of foreign exchange for overseas trade settlements have been neither ignored nor disregarded, it is perfectly true, but the satisfaction of those requirements has been hedged in by so many bewildering restrictive measures that, in practice, the *bona fide* purchaser of foreign exchange finds himself in a very difficult and unenviable position. Exchange operations for legitimate mercantile requirements have diminished considerably in volume — imports and exports have fallen off in bulk, and, as a consequence, the Customs revenues have contracted seriously. The severe penalties attaching to a disregard of the decrees, moreover, have had the undesirable effect of rendering even *bona fide* exchange operators nervous and apprehensive. Rather than run the risk of suspicion and consequent exposure to the rigours of the law, timorous prospective purchasers of exchange prefer to abstain and let business go by.

The rates have been so even and stable since the drastic legislative measures were enforced that the Consortium of Constantinople banks has had to sell but little exchange in order to maintain the value of the Turkish lira. This group, which was formed at the instigation of the Treasury some few weeks ago, does not comprise all the local financial establishments, the Ottoman Bank and Crédit Lyonnais being notable absentees. The Turkish banks, with the " Ish Bankassi," or Trade Bank, at their head, participate to the extent of 50 per cent. in the pooled exchange reserve fund of £1 million sterling, within the limits of which the Consortium is prepared to operate by sales in the event of a bad break in the rate of the Turkish pound. The duration of the present restrictions and regulations has been fixed by the National Assembly at three years. It is hoped in Treasury circles that before that period has run its course the value of the national currency will have been stabilised by the creation of the State Bank, or " National Bank of the Turkish Republic," to give that projected institution its full title. Whether the mere foundation of that establishment will prove the panacea so earnestly sought for, time alone will show.

Indications are accumulating that if, in the matter of State loans, the foreign capitalist is not attracted to Turkey as things now are, industrial developments in this country, on the other hand, are having the attention of a steadily widening circle of foreign industrial magnates and manufacturers. Two British gramophone companies, His Master's Voice and Columbia, have erected factories in the neighbourhood of this city, Nestlé's Swiss Milk Company have captured the local market by producing their chocolate in Constantinople, the Ford Motor Car Company have fitted out large erecting shops on the shores of the Bosphorus, whilst three factories, one German, one French and the other Japanese, are engaged in turning out pharmaceutical products in bulk for local consumption and overseas markets.

SOUTH AFRICA.

Parliament — Women's Enfranchisement — Portuguese Labour Question — Motor Transport Bill — Business Conditions — Reserve Bank Report.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, May 14.

THE Riotous Assembly Bill has passed the third reading. There was a certain amount of cross-voting, as several Labour members of the Pact side voted against the Bill, while four South African Party members from Natal voted for the Bill. Except to critics possessing orthodox South African views of the colour question, the Bill is a curious measure for ordinary application in a democratic state.

The Select Committee on the Representation of Natives in Parliament Bill has been granted powers to call for papers and to hear evidence. The Prime Minister also moved that the Coloured Persons' Rights Bill and the Native Lands Act (Amendment) Bill be referred to the same committee. The calling of witnesses presumably amounts to co-operation with natives and with Europeans who endeavour to advise them—a principle for which the South African Party have contended since the proposed native legislation was first mentioned. The Bills cannot now come before Parliament this session.

There were serious disturbances recently at a native meeting at Worcester (Cape Province), in which five natives were killed and several police injured. A somewhat similar incident occurred at Carnarvon in January, and the natives in several parts of the Western Province have lately been in a rather sullen frame of mind. The inquiries which follow these " incidents " seem always to attribute them to a public and private habit of drift and neglect and " sitting on the safety valve " in native questions. The result—the natural result—of such procedure is the occasional development of circumstances in which the essential immediate tool is the rifle.

The back-bench Nationalists have pursued a curious course in regard to the Women's Enfranchisement Bill. Briefly, it consisted in casting ridicule on a Bill which they could not defeat. At the same time, unless there is trouble with the Senate, the Nationalists are likely to profit substantially by the Bill, if it is passed in its present form. Every woman of European race in the Union will be able to vote, not even receipt of poor relief constituting a bar. Thus the European vote will be more than doubled, and the result will presumably be a permanent alteration in the political complexion of some of the Cape constituencies.

At the annual meeting of the Witwatersrand Native Labour Association, the chairman, Mr P. M. Anderson, referred to a new difficulty which has arisen in regard to Portuguese labour in the mines. Although the Convention and its supplementary agreements provide that Portuguese native subjects immigrant to the Union shall be offered the choice of repatriation or work on the mines, there are some thousands at work on the Natal sugar estates. They are clandestine emigrants from Portuguese territory, and are, consequently, free from the various regulations and fees which afflict their brethren on the Reef. They come and go as they please, and, of course, they suit the sugar planters. The mining interests naturally hope that the Union Government will take effective steps to divert this labour, but, in view of the care with which the sugar industry is always nursed, perhaps the hope is not very well based.

A further example of the Government's fondness for taking things entirely into its own hands is provided by the Motor Carrier Transportation Bill. In the not very distant past most South African Governments were wont to build railways to please political supporters. The Railway Administration is thus saddled with many a mile of track which never has paid and never can pay. Moreover, the rating system is open to criticism; most of all, it is arguable that, under South African conditions, road transport is bound to be a formidable competitor of the railways. The Railway Administration themselves run road motor services over mileages comparable with their track mileage. For some time past, private competition on the roads has been hitting them very severely, both in their own road services and on the rail. The remedy proposed is the setting up of a Road Transportation Board responsible to the Minister of Railways. The function of this board will be to grant licences to persons wishing to operate transport services: if the board considers existing facilities adequate they are not to grant licences to intending competitors. Public opinion of adequacy will not always coincide with the opinion of an official board responsible to the Minister of Railways. Well as successive occupants of that Cabinet seat have entrenched themselves, the public is not yet willing to see land transport in all its forms become a State monopoly. In the debates in the House the Minister has referred to the enormous amount of capital sunk in the railways—ignoring the fact that South African business men and economists do not always agree with the accounting methods, and that if the system is obsolete or inefficient its entrenchment would be an ill-service to the country.

Not quite so much has been heard lately of " the slump," and, consequently, it is possible to form a more correct picture of such change of circumstances as has really taken place. Bank reports indicate a continuance of quiet trade at the moment, but a growth of optimism for the future. The current estimate of the value of the principal farming exports for the year to end in June next is about £20 million. In 1927-28 it was £29 million. At its highest, the figure for agricultural produce is only about 30 per cent. of the total, so that the loss of a third of this means a loss on the whole which may be important, but is hardly disastrous.

The Report of the South African Reserve Bank will be presented to the stockholders on June 11, 1930. The profit, after allowing for depreciation of fixed property and furniture, and appropriation to pension and guarantee funds, was £299,731. Of this, dividends of 10 per cent.—£100,000—were paid to stockholders, £119,865 was allotted to reserve, and the Government received £79,866 in terms of the Currency and Banking Act. The reserve fund now stands at practically £600,000, while the property account stands at £81,000 for property which cost more than twice as much.

The Minister of Finance has introduced a Bill to amend the Act under which the bank operates—the general effect of the proposals being to enable the bank to engage in most classes of ordinary business. In particular, the bank will be authorised to make advances on unsold crops. This proposal has a good many implications. The farmers may regard the bank as a sort of Government department and put pressure on it to lend in cases refused by the commercial banks, who were compelled to subscribe part of the Reserve Bank capital.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The World's Population Problems and a White Australia. By H. L. Wilkinson. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 18s.

An interesting discussion, lavishly illustrated with statistical tables, diagrams and maps, of the problem presented by the existence of the sparsely populated Australian continent on the one hand and the increasingly overpopulated continent of Asia on the other. The author's conclusion is that Australia must hasten to populate herself with members of the white race before a coloured population is forced upon her.

The English Investment Trust Companies. By George Glasgow. With a Foreword by Dr. Gerald T. Moody. (London) Eyre and Spottiswoode (Publishers), Ltd., 6, Great New Street. 50s. net.

This publication fills a want that has for some time been acutely felt. Part I. is devoted to the principles of investment trust finance; Part II. consists of tabulated summaries of the results of a very large number of individual companies.

History of Chinese Political Thought. By Liang Chi-Chao. (London) Kegan Paul, Trench, Trubner and Company, Ltd., 68-74, Carter Lane. 10s. 6d. net.

An extremely able translation of a most fascinating book. The occidental reader will be surprised to find in how familiar a world of thought he is moving.

Gabriel Bonnot de Mably. By Ernest A. Whitfield. With an Introduction by Professor Harold J. Laski. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 12s. 6d. net.

An account of the life, and an analysis of the theories of a pre-Revolutionary French philosopher.

The Country Banker. By George Rae. (London) John Murray, Albemarle Street, 7s. 6d. net.

A posthumous, revised edition of a text book which has retained its popularity for fifty-five years. This longevity is largely attributable to the fact that the author's intimate familiarity with his subject enabled him to write in a way that makes the reader feel the subject to be real, and of personal interest to himself.

The Past and Present of Unemployment Insurance. By Sir William Beveridge. (London) Oxford University Press, Warwick Square. 2s.

This reprint of the last Sidney Ball lecture makes accessible to readers a most interesting review of unemployment insurance in this country.

An Economic History of Europe, 1760-1930. By Arthur Birnie. (London) Methuen and Company, Ltd., 36, Essex Street. 10s. 6d.

A short history of the rise and development of industrialism in modern Europe.

Economics of Modern Industry. By Percy Ford. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 4s. 6d.

A small text book for business students which approaches economic theory from the standpoint of its relation to the individual business.

The Cost of Living in the United States, 1914-29. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. $2.50.

Equally valuable as a study of method and as an investigation of the facts.

La Double Imposition et l'Allègement de sa Charge dans les Travaux de la Société des Nations. By A. N. Sack. (Paris) A. Pedone, 13, Rue Soufflot.

An interesting discussion, in French, of the possibility of reducing the burden of double taxation and of the work attempted in this connection by the League of Nations.

Geschiedens van de Nederlandsche Bank, 1814-1864. With a Foreword by Mr G. Visserling. In two volumes. (Amsterdam) The Netherlands Bank.

This is the handsomest of the numerous beautifully-printed and illustrated histories of great financial institutions that have reached us lately. Readers who know Dutch will find in it much that is of interest for the history of finance.

El Precio del Aceite de Oliva. By Antonio Bermúdez Cañete. (Madrid) Industrial Gráfica, Palma, 44, 7. Norte, 21.

A short discussion, in Spanish, of the crisis in the Spanish olive oil industry.

Syllabus on Extra-territoriality in China. By the Citizens' League (Nanking) Committee on the Abolition of Extra-territoriality in China. (Nanking) 3, Tou Tiao Hsiang, Drum Tower.

A pamphlet whose purpose is to show why extra-territoriality in China should be abolished.

The New Way in Industry. (London) The *Times*, Printing House Square. 6d.

A reprint of the articles on rationalisation which recently appeared in the *Times*.

Memorandum on International Trade and Balance of Payments, 1926-28. Vol. III. (Geneva) League of Nations. 10s. net.

Contains detailed foreign trade statistics for 1926-28 of 64 countries. The merchandise figures are analysed both by commodities and by countries.

Journal of the Royal Statistical Society. Part II, 1930. (London) Royal Statistical Society, 9, Adelphi Terrace. 7s. 6d.

Includes an article by the Editor of the *Statist* on "Wholesale Prices in 1929," and the text of Mr Ellinger's paper on "Japanese Competition in the Cotton Trade," with the discussion which followed.

Journal of the Parliaments of the Empire, April, 1930. (London) Empire Parliamentary Association, Westminster Hall, Houses of Parliament. 10s. net.

Extracts from the most important debates in the Spring sessions of Parliament in England, Canada, South Africa, the Irish Free State and India, and in the November sessions in Australia and New Zealand.

The Round Table, June, 1930. (London) Macmillan and Company, Ltd., St. Martin's Street. 5s. net.

Includes, *inter alia*, articles on "The Gandhi Movement," "Puritans and Profligates in Finance," and "The Problem of Japan."

The Railway Year Book for 1930. (London) The Railway Publishing Company, Ltd., 33, Tothill Street. 5s. net.

Contains a very comprehensive collection of miscellaneous railway statistics, with maps of the principal railways of the world. Particulars are given of many of the principal foreign companies, and for Great Britain there is also a Who's Who of important persons in the railway world. There is a very good bibliography.

Rotterdam Statistics of Trade, Industry and Traffic. January-April, 1929. (Rotterdam) Chamber of Commerce and Industry.

The beginning of a new series of extremely full and detailed statistics, to be issued every three months, covering the industry, trade and traffic of Rotterdam.

The Oil and Petroleum Year Book, 1930. Edited and published by Walter E. Skinner, 15, Dowgate Hill, Cannon Street. 7s. 6d. net.

A very useful book of reference containing production statistics, particulars of several hundred companies, and lists of directors, secretaries and consulting engineers. There are also a directory, a glossary, and various other convenient reference sections.

Annuaire Statistique de la Belgique et du Congo Belge. (Brussels) Imprimerie Lesigne, Rue de la Charité, 27. 15 francs.

An invaluable compilation of official statistics of Belgium and the Belgian Congo. It includes very full extracts from the census figures, excellent tables on public finance, and sections covering the usual social and economic matters.

The Stock Exchange.

THE LONDON STOCK EXCHANGE.

THE London Stock Exchange is one of the most typically "British" of the great institutions in the London capital market. Like the Bank of England, it has had a long and honourable history, going back many years beyond the laying of the foundation stone of its present building in 1801. Like the Bank, it aimed, even in the days of its small beginnings, at becoming a national rather than a localised metropolitan institution, and when success in the carrying out of this object involved it in a choice between trusteeship for the narrow, if legitimate interests of its proprietors, and trusteeship for the wider prosperity of the public it served, it chose, wisely, the latter *rôle*. To its historical readiness to overhaul its methods it has owed the maintenance of its position as the leading Stock Exchange of the Western World. When the London capital market acquired a markedly international perspective, the Stock Exchange offered ready "hospitality" to new overseas securities, and can justly claim to have played a major part in the economic development of many nations.

The far-reaching changes of the post-war decade, however, have not left the Stock Exchange unaffected. In particular the rapid growth of the New World (particularly of the United States of America), in wealth and importance, has deprived London of any "monopoly" powers it may ever have possessed. Business has become "international" in a new sense. The British investor is no longer merely a pioneer in the development of virgin territories, but a critical buyer of the securities of established profit-earning concerns in America, Europe and elsewhere. The overseas capitalist is, simultaneously, acquiring a larger interest in British domestic securities. Investors are no longer exclusively dependent on London as a buyer or seller of stock, and the London Stock Exchange is being compelled to face the competition of the bourses of New York, Paris, Berlin, etc., at a time when the rationalisation of many depressed basic British industries has emphasised the need for adequate supplies of new capital *at the lowest possible cost*.

To these conditions, rather than to any desire to "attack" the Stock Exchange, may doubtless be attributed the suggestion, recently made in the financial Press, that the *modus operandi* of the Stock Exchange should be extensively overhauled. It is no exaggeration to say that, in the last few years, the "House," while undeniably progressive in its outlook, has tended to concentrate its attention on a special part of the investment field—the prevention of abuses of its facilities. It has tightened its regulations in the matter of publicity. Its influence was decisive in the discussions of the Committee whose recommendations preceded the passing of the last Companies Act. Within the next few months new rules of the "House" will almost certainly be adopted, to prevent the manipulation of markets by unscrupulous outsiders. In the meantime, the Committee has intervened to check abuses on its own responsibility, and has taken the initiative in arousing the Board of Trade to a more active interpretation of its powers.

These efforts to uphold the "House's" deservedly high reputation for "clean" dealing are assured of support from all investors, but a feeling, nevertheless, exists that constitutional questions have been somewhat overshadowed by them. The dual control of internal affairs by the Trustees and Managers and by the Committee for General Purposes respectively, is an old subject of controversy. The general public is chiefly concerned with the position of the latter body, and the conviction is growing that the position of the Committee could be greatly strengthened. The whole of its thirty members serve in an honorary capacity and are expected, in addition, to carry on their own business. The cares of office have steadily increased, so that to-day the chairmanship, at least, involves whole-time duties, and many of the young and active members of the "House" are unwilling to serve by reason of a natural reluctance to burn the candle at both ends.

The Stock Exchange, in fact, alone among great City institutions, maintains the ideals of a pure Hellenic democracy. All other "business" organisations (including the Bank of England itself), have been compelled to place considerable executive power in the hands of full-time and more or less permanent "managing directors," or "governors," and the Stock Exchange can scarcely hope permanently to resist this tendency.

Another crucial issue is the serious "leakage" of receipts which results from the splitting of commissions. It is recognised that the agent who obtains new orders performs a valuable function in every trade, but to give him a remuneration comparable with that of the broker who carries out the order, not merely on the first but on all subsequent transactions, is certainly quixotic. The Stock Exchange, of course, cannot well afford to dispense with the services of such outside bodies as the joint-stock banks, particularly in the provinces, where the local bank manager has intimate personal contact with his clients and enjoys the opportunity (if nothing more) of affording them sound investment advice. The banks, indeed, strenuously opposed the tentative suggestion, made some time ago, that the modification of the present arrangements might be considered. If the Stock Exchange were eventually to determine to develop its own contacts with the public, and to provide facilities for investors to get into touch with it direct, the question of the adoption of a policy of judicious and carefully restricted advertising would immediately arise. Whether the future may compel a partial raising of the ban on advertising is an open question. In the meantime, however, the ban is absolute, and the Committee has no option but to enforce it.

The problem of reducing the cost of dealing must necessarily be viewed in the light of the progressive "internationalisation" of business to which reference has already been made. At present, the machinery of the Stock Exchange is well adapted to facilitate the "placing" of foreign securities in London, but once these are placed, dealings in them are undoubtedly more expensive than in New York or Paris. Stamp Duties are, admittedly, many times heavier than in New York, and the interests of London would be furthered by their relaxation. As regards commissions, which are within the discretion of the "House" itself, an exact arithmetical comparison of rates per cent. may be misleading. By general admission, it is almost always possible to obtain closer and "better" prices in London than elsewhere. The segregation of the functions of broker and jobber does not always work as advantageously for the client in practice as in theory where other than *active* stocks are concerned, but there is some ground for the claim that "air pockets" (resulting from a complete absence of buyers of a given stock) which proved so costly a phenomenon in last year's New York slump are practically unknown under the British *régime*.

The broker and jobber system is too firmly rooted to be abolished at the present time. It inevitably tends, however, to make the membership of the "House" more numerous than that of representative foreign Stock Exchanges. Whether the comparatively large personnel carried by the "House" is a factor in the high apparent rate of commission charged to clients, has often been debated. For good or ill, membership of the London Stock Exchange has always been an individual rather than an institutional prerogative. It involves no severe

financial test, the immediate "out-of-pocket" expenses of a new member (apart from the acquisition of certain assets which can be sold when membership is relinquished) being only £735, with three sureties of £500 each.

The "House" is famous for the number of its members who have risen to high standing from obscure beginnings. Its rules also permit large firms to have numerous partners on the floor of the "House," while a number of members are virtually clerks in their employ. On the other hand, there are definite objections to the presence in any market of men of straw. The complaint, sometimes made by trust companies and other large investors, that the jobbing system fails to provide a free market in stocks which are not particularly active, may hinge largely on the weak financial backing of many jobbers. Any movement for a reduction in the personnel of the "House" would undoubtedly run counter to present feeling, but whether the Stock Exchange can maintain its present membership conditions without setting up special machinery to consolidate its underlying financial position is doubtful. In the long run, in may be found advisable to provide a permanent arrangement for mobilising its collective "credit," similar to the system of corporate financial responsibility successfully employed at Lloyd's. The "Hatry" crisis, indeed, produced an *ad hoc* development which came close to this idea.

The next few years may be momentous in the evolution of the London Stock Exchange. Rationalisation is in the air, and not even the oldest of established British institutions can resent being called to the bar of efficiency. The Stock Exchange Committee has already done much to ensure *bona-fide* dealing, and from it, in the first place, must come the initiative in the further task of reducing the *cost* of dealing. While any committee which set its hand to this task would have the support of much progressive opinion, the accomplishment of reform would be a matter of years rather than months. In the meantime, some provision for continuity of office might be in the interests of all concerned.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
June 24.	June 26.

A three-weeks' account, including Derby Day, and occurring in the middle of a world-wide industrial depression, can scarcely be an exciting affair. From this point of view the past week's business came fully up to expectations. Even gilt-edged stocks, the sheet-anchor of the markets, were affected, Tuesday's withdrawal of gold for Germany—the effect, not of special coincidences such as applied to the earlier French withdrawals, but of "normal" monetary forces—banishing early hopes of a 2½ per cent. Bank rate. Industrial news remained unfavourable, and the pending reports of large concerns like Royal Mail were awaited with some anxiety. The further weakness of primary commodities, like rubber, tin and silver, simultaneously restricted business in the more speculative markets. Altogether, the week's events suggested in unmistakable fashion that the Stock Exchange had still some distance to go before sighting the turning point.

Gilt-edged stocks opened firm on the reinvestment of War Loan interest, but Tuesday's withdrawal of gold for Germany abruptly checked the movement, though a harder tendency supervened when numerous stocks had been marked down. The setback was particularly in evidence in Conversion issues and the Four per Cent. "Consols." Unconfirmed reports of further new borrowing depressed Australian stocks, but the New Zealand Five per Cents. again showed strength. Recent new issues met a firm market, Port of London stock opening at ⅝ premium and Johannesburg Five per Cents. at ⅜ premium.

The outstanding feature in the foreign bond market was the weakness of Chinese issues on the further fall in silver, the 1912 Loan being the chief sufferer. Japanese stocks were dull in sympathy. Nearer home, European descriptions held their ground in a narrow market, German Seven per Cents. being in steady demand.

The week's Home Railway traffic figures suggested an accentuation of the unsatisfactory revenue position, especially on the London, Midland and Scottish, whose ordinary stock was sold down to 48¼ — the lowest level of the year. The position is discussed on page 1286. Undergrounds ruled steady on a further small increase in revenue. Following last week's Cordoba announcement, the Foreign Railway market was further depressed by an intimation that United of Havana could not meet its debenture requirements, for reasons which are set out on page 1288. Antofagastas and Nitrate Railways held their ground, and Leopoldinas were steady on the general manager's favourable prognostications. The outlook for the Argentine lines, however, was not favourably regarded, the market being flat on the further traffic losses shown by the week's figures.

Trading for the new account in the Industrial markets opened in spiritless fashion. Scattered liquidation made an unwelcome reappearance in the middle of the week. A fair business was done in Columbia and H.M.V., but finished in a lowering of prices. The near approach of the Royal Mail report caused a recrudescence of rumours of financial rearrangement, the ordinary stock being marked down as low as 17½. Nitrate shares were the turn harder, despite market fears of over-capitalisation of the merger company, "Cosana" (discussed on page 1287). Provincial buying on a moderate scale gave a firmer appearance to Courtaulds, Bleachers and other textile leaders, but rayon shares remained out of favour. Cables and Wireless were again the sport of nebulous but pessimistic rumours, but a firmer tendency marked the later days of the week. Scattered selling of brewery and tobacco shares was in progress. Unilever were a weak spot, and the Swedish Match group declined on unfavourable Continental reports. Forced liquidation of Harrods was in progress. Bank shares were irregular, with no change on balance, but insurance shares held their ground with a little to spare.

Rubber shares continued to sag, a limited business leaving Trusts a few pence lower each day. The commodity again declined, reaching the lowest level on record. Dealings in tea shares were scanty, but the reduced dividends announced by Assam and Jokai caused a fresh marking down of prices. Paris was a seller of oil shares in mid-week, and American market advices were mildly discouraging. Anglo-Persians, however, showed strength on an eminently satisfactory preliminary statement (analysed on page 1289).

The mining markets were dominated by events on the Metal Exchange, where tin and silver were conspicuously weak. The significance of the week's price movements is discussed on page 1289. Tin shares as a whole were marked lower, especially in the Anglo-Oriental group. Kaffirs showed slight change, but Paris selling depressed De Beers. Central Mining continued to sag. Northern Rhodesian issues obtained no inside support, Congo Borders receding further from their recent "peak." Rio Tinto had a partial rally after being offered from Paris. Westralians again obtained fair attention, Wiluna being firm on the latest progress report.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Brokers' loans have risen $79,000,000, which was unexpected in view of the dull markets. The explanation seems to be not only that recently some stocks have been passing from strong to weak hands, but, in addition, the extremely low call rates, at 2½ per cent., probably caused some shifting in commercial borrowing to brokers for account business. Bond prices are improving moderately, with some sagging in stocks due to selling on further dividend reductions. All classes of shares were weakish, particularly motors, on price-cutting, tyres weakening for the same reason. Steels weakened on a further recession in operating rates, and also public utilities, which were overbought. Oils were fairly firm, due to better gasoline prices and merger rumours; food stocks declined on falling prices of grains and other farm products. The fresh decline in silver had an unfavourable effect on sentiment and it was generally realised that trade lost ground in May, and will probably have a further recession during this and other summer months, hopes for a recovery being centred on the autumn. President Hoover declares he has an open mind as regards signing the tariff, but this is not interpreted as meaning veto.

* 2 hour session. † Holiday.

PARIS.

Throughout the past month, the tendency of the Paris stock markets was unfavourable, despite the lowering of discount rates in Belgium, Great Britain, France and the United States, values continued to fall, and the most tentative of buying movements proved costly to those undertaking them. After the heavy liquidation of the middle of the month, however, a slightly harder tone was temporarily in evidence, assisted by a reduction in market rates for money. Apart from this, neither the belief that ready subscription would be forthcoming of the French *tranche* of $80,000,000 of the Young Loan, nor the spectacular success of the capital issue of the Bank for International Settlements was able to shake the bourse out of its lethargy. Among the few groups in which a relatively firm tone prevailed may be mentioned gold mining and copper shares (especially Rio Tinto), oils and electrical stocks.

INVESTMENT NOTES.

Home Railway Prospects.—Home railway stockholders have viewed the recent falling off in railway gross traffic figures with some disquietude. By general admission, railway revenues are suffering mainly from trade depression, but partly from continued road competition. The following table shows the receipts of each group for the first twenty-two weeks of this year, as compared with the corresponding period (*a*) of 1929 and (*b*) of 1928:—

(000's omitted).

	London Midland and Scottish Railway.	London and North Eastern Railway.	Great Western Railway.	Southern Railway.
(*A*) *1930 compared with 1929.*	£	£	£	£
Passengers, &c. ..... —	603	—251	—183	— 87
Merchandise, &c. ..... —	252	—211	—159	+ 1
Coal and coke..... —	325	— 38	— 11	— 65
Total goods..... —	577	—249	—170	— 64
Total Goods and Passengers.. —	**1,180**	**—500**	**—353**	**—151**
(*B*) 1930 *compared with* 1928.				
Passengers, &c. ..... —	957	— 486	—321	—211
Merchandise, &c. ..... —	816	—525	—156	— 74
Coal and coke..... +	17	+540	+199	+ 14
Total goods..... —	799	+ 15	+ 43	— 60
Total Goods and Passengers.. —	**1,756**	**—471**	**—278**	**—271**

Some interesting conclusions are suggested. The railways are still losing passenger revenue, but not to the extent of earlier years, except on the L.M.S. (The 1930 figures do not include the Whitsun holiday traffic.) Merchandise receipts are already showing the effect of the contraction in British trade, but coal traffic is holding last year's recovery comparatively well. The L.M.S. is again a significant exception. Some reduction in expenditure may have followed upon the decline in goods traffic. The railways in recent years have made large economies as a result of "rationalisation" under the grouping scheme, but these have long passed their zenith. The 2½ per cent. "cut" in wages has disappeared as from the beginning of May last, and, on the basis of last year's figures, the addition to the wages' bill for May to December of this year will be approximately £725,000 on the L.M.S., £550,000 on the L.N.E.R., £315,000 on the G.W.R., and £200,000 on the Southern Railway. The interests taken by the railways in the shares of road transport concerns may produce slightly higher receipts from sources other than railway working, but clearly these cannot offset more than a part of the reduction. Some stockholders may take a conservative view, and assume, on the one hand, that reductions in expenditure will not offset more than a small part of the decline in revenue, and, on the other, that the decline in traffic as a result of trade depression may become rather more pronounced in the next few weeks. The maximum reduction in revenue for the first half of the year may then be as follows (expressed in terms of amounts required for dividend): 1½ per cent. on L.M.S. ordinary, ¾ per cent. on G.W. ordinary, under ½ per cent. on Southern deferred, and 1¼ to 1½ per cent. on L.N.E.R. preferred. Last year, however, the last company earned about 2½ per cent. on the preferred stock over and above the amount distributed. On the whole, the L.M.S. may conceivably reduce its interim dividend next month to something like the level of 1928 (1¼ per cent.), while the Southern may pay the usual 2½ per cent. on its preferred ordinary, and the Great Western 2 per cent. (against 2¾ per cent.) on its ordinary stock. The second preference dividend on the L.N.E.R. should certainly be more than covered by earnings, but it would not be surprising if the directors followed the cautious policy of recent years and postponed any distribution till the full year's results were available.

Cables and Wireless.—The fresh decline in the prices of Cables and Wireless stocks must be alarming to those holders who had expected that a merger of the prosperous Eastern Cable and Marconi groups, authorised and blessed by the State, would at least earn its "standard" revenue. It is unfortunate that the recommendations of the official committee which investigated this merger contained provisions whereby the charges of the combine were to be reduced if more than the "standard" revenue was *earned*—which was *£1,865,000*, or roughly 6 per cent. on the capital employed in the Communications Company—but did not provide for an increase in charges in the event of the "standard" revenue not being realised. This created the impression that the "standard" revenue would be earned in the first year. To-day, however, it appears that the "standard" revenue is not likely to be earned for two or three years. Moreover, the expectation that there has been a considerable falling off in cable traffics as a result of the world depression in trade has been responsible for fresh liquidation in the market. The following table compares the market valuation of Cables and Wireless at this week's prices with that at the highest prices recorded in 1929:

	Par. £	High. 1929.	Market Capitalisation. £	Present Price.	Market Capitalisation. £
5½% Pref.	23,500,000	99	23,265,000	91⅛	21,502,500
7½% A Ord.	21,200,000	90½	19,186,000	41	8,692,000
B Ord. ...	9,000,000	104	9,360,000	18	1,620,000

The Government cannot altogether escape responsibility for part of the "paper" loss suffered by the shareholders of this combine. The charges against the Post Office of unwillingness to co-operate with Cables and Wireless in wireless telephony, and to make use of the company's beam services for telephonic communications with the Dominions have been thrashed out at length in Parliament and the Press. The revenue which would accrue from this source, if the Post Office had contracted with the company for wireless telephony, is not important, but the Post Office attitude has undoubtedly had a psychological effect on the market. The latter does not now look for earnings of more than 3 per cent. on the 7½ per cent. "A" ordinary stock, after payment of the 5½ per cent. preference dividends.

Chilean Nitrate Finance.—Further particulars have been published this week regarding the new company, "Cosana," which is to take over the whole of the Chilean nitrate industry. The company will create a first charge of at least £30 millions in order to take over the debt obligations, debentures and preference shares of existing producers. This will be raised to £47 millions by the provision of a further £17 millions for new plant and working capital. In addition, it will have a share capital of £75 millions, half of which will go to the Chilean Government, and the other half to the companies taken over, which will have the option of accepting either 7 per cent. Cumulative Redeemable Preference shares or Ordinary shares. Estimated figures of available profits are given, based on a potential reduction of £1 in the selling price of nitrate, to be covered by economies in its handling, transport and finance. These estimates, after deduction of prior charges, rise from £4 millions in the twelve months ending June 30, 1931, to £9 millions four years later. Such figures are necessarily hypothetical, the selling price of nitrate, the output of the industry and the expenses of the new company being all matters which experience must obviously decide. It would seem, however, that "Cosana" will be no exception to the rule that in industrial mergers on the grand scale a certain "watering" of capital is inevitable. The Guggenheim interests (who, it is expected, will effectively control the policy of the company), are desirous of concentrating production on their Maria Elena plant, which has been in operation for the last few years, and on its counterpart, which will come into operation on the Lautaro grounds next year. The older "Shanks" maquinas will be kept open only to the extent that it is found necessary to supplement the two great mass production plants. It may be expedient to buy out the "Shanks" producers in order to shut them down, but clearly a significant part of the prior charges and the Preference and Ordinary capital of "Cosana" must be represented at the outset by non-earning assets. The £37,500,000 of capital allotted to the Chilean Government, again, will not be directly productive until the reserves which the Government is to make over to the company have come into production.

Newspaper Profits.—Thanks to a slight delay in publication, as compared with last year, the accounts of Allied Newspapers (the "Berry" group) to December 29th last have appeared simultaneously with those of Associated Newspapers (the "Rothermere" group) to March 31st. The latter show a rise of £40,000 in profits, which, in the circumstances, is highly creditable:—

(Years ended March 31.)	1928. £	1929. £	1930. £
Profit	1,170,835	1,205,666	1,245,323

Pension fund	...	40,000	...
Increase or decr. in carry-forward	+203,835	+198,666	+78,323

* Reserve for special publicity.

Whether the allocation of £200,000 to "Reserve for Special Publicity" has any association with the company's "offensive" in the newspaper war in the Provinces, is a point on which shareholders may be enlightened at the meeting. The splitting of the investment item reveals that investments other than in subsidiary companies account for £1,297,279 of a total of £2,867,005. Altogether the company holds cash and liquid securities (including British Government, American and Canadian holdings) to a total of £1,500,000. Its shares in subsidiaries stand below present market prices at £1,569,725. Goodwill and copyrights disappeared from the balance sheet two years ago. Allied Newspapers makes a less favourable showing. Profits are down by £44,000, despite the fact that a 5 per cent. tax-free dividend of £50,000 was received for the first time from Allied Northern Newspapers. The reserve allocation is maintained, but the dividend is cut to 10 per cent.:—

	1927. £	1928. £	1929. £
Profits after taxation	686,144	694,517	650,378
Debenture interest	41,740	40,372	39,172
Net earnings.....	644,404	654,145	611,206
Preference dividend.....	304,000	304,000	304,000
Number of times covered	*2·1*	*2·1*	*2·0*
Ordinary { *Earned*	*21·2%*	*21·8%*	*15·3%*
paid, less tax	14%	14%	10%
Amt. of dividend	224,000	224,000	158,000
To general reserve	110,000	110,000	110,000
Increase in carry-forward.....	6,404	16,145	39,206

The company's advertising revenues have been affected by the falling off in the number of new prospectuses, and the newspaper war has left its mark on the earnings both of Allied Newspapers and Allied Northern. The accounts suggest, indeed, that in this ding-dong affray the verdict for the first round must go to Associated Newspapers on points. At their present price of £1 3/16, including final dividend, Associated Newspapers ordinary yield about 6 per cent., less tax, and the deferred 5s. shares at £1⅜ (cum final dividend) yield about £7 8s. per cent., less income tax. At £1⅜ (cum 4 per cent. final dividend) Allied Newspapers ordinary return about £7 9s. per cent., less income tax. We refer on page 1270 to the latest development in the newspaper world—the merging of the *Daily Chronicle* with the *Daily News*.

Armstrong, Whitworth.—Since the drastic writing-down of capital fifteen months ago, Armstrong, Whitworth (under its new name of Armstrong, Whitworth Securities Company) has become, like Vickers, entirely a holding company. Two new subsidiary operating companies, one for general engineering and one for shipbuilding, came into existence in July, 1929, and a third ("Ironfounders"), was formed to operate as from the beginning

OTIS & CO.

Chicago Philadelphia

of 1930. Consequently the report and accounts for the year to December 31, 1929, cover a period when the concern was functioning first as an operating, and later as a holding, company, with substantial reorganisation of works going on all the while. The net income amounted to £108,984, which is reduced by debenture interest (£41,441), directors' fees (£1,403), and provision for losses of subsidiary companies (£54,426), to £11,715, which is carried forward. For 1928 the net income was £137,219, but, owing to the changes of structure, this cannot be regarded as a comparable figure. Moreover, depreciation was not then allowed for, whereas in 1929 it appears that depreciation has been charged against profits by all the subsidiaries except one. The reduction of the burden of interest on loans and prior charges from £689,189 in 1928 to £41,441 in 1929 shows up the sternness of the capital reconstruction, but strikingly vindicates the principle of making it a cardinal point in such a scheme that the company shall start as free from fixed charges as possible. The financial position is liquid. In the consolidated balance sheet floating assets total £3,752,685, against only £530,676 of obligations to creditors. Like the new Vickers concern, Armstrong, Whitworth Securities has become a species of industrial bank, financing a group of specialised companies. Besides the three new subsidiaries, its interests extend to Craven Brothers (Manchester), producing machine tools and cranes, which is reported to be nearing the profit-earning stage, and also, through Pearson and Knowles, to the two new Lancashire amalgamations whose creation under the auspices of the Bank of England was dealt with in the *Economist* of May 26th last (page 1126). As a profit of only £145,441 would cover all the debenture and preference charges, even a moderate future improvement may bring the day of ordinary dividends in sight. Nine-tenths of any ordinary distribution would accrue to the Bank of England, as holder of the " B " shares, one-tenth only going to the publicly-held " A " shares. Significant changes are recorded in the composition of the Board.

Cordoba and Havana Railway Debenture Postponements.—The effects of declining trade and falling commodity prices on the economic prosperity of " primary " producing countries have been brought sharply to the notice of railway stockholders in the last few days. Both the Cordoba Central and the United Railways of the Havana have found it necessary to ask for postponement of the payment of debenture interest. In the first case the market had a certain presentiment, but the second came as a shock, which was all the greater by reason of the relatively high investment status of the company's prior charges. For the twelve months ended June 30, 1929, the Cordoba Central Railway covered its debenture interest (requiring, in all, £624,421) with over £300,000 to spare, but its net revenue for the present year to date has declined by approximately £608,000. The directors, however, take the view that the conditions are exceptional, and, while proposing to pay interest on the 4 per cent. debenture stock, are asking for a year's grace as regards payment on the 5 per cent. debenture stock. The matter is to come up for discussion at a meeting on June 24th. The total debenture service of the United Railways of the Havana called last year for £667,056 (including sinking funds), and was covered with £369,821 to spare, before allowing for taxation and special allocations. For the current year the gross traffic figures have declined by £471,000, and as recently as February it was announced that receipts would not cover the final dividend on the 5 per cent. cumulative preference. The 4 per cent. debentures and debenture stock will be paid the half-year's interest due next month, but as regards the remaining debentures, a scheme of arrangement is being prepared. The company's troubles have been due to ruinous conditions in the Cuban sugar industry, intensified by road competition. The announcements have resulted in an extensive marking down of all the stocks of both groups, and can scarcely be regarded as an encouraging portent of forthcoming dividend announcements on South American railway stocks, particularly those of the larger Argentine systems.

Boots Pure Drug.—Last year's results continue the satisfactory story of this enterprising concern, though the net profit has fallen by £25,283.

	Year ended March 31, 1928. £	Year ended March 31, 1929. £	Year ended March 31, 1930. £
Net profit	701,973	750,152	724,869

Increase in carry-forward	+38,973	+18,402	+3,119

* Of which £8,200 represents dividends on preference shares and £88,550 dividends on preferred ordinary shares.

During the year properties were increased by £264,006 to £2,156,391, while stocks and plant rose respectively by £88,538 and £40,802. The subsidiaries paid off their indebtedness to the parent company to the extent of £196,020, the outstanding amount now being £627,983. Creditors decreased by £78,343 to £519,495, but there was a slight increase in the amount due to subsidiaries. The surplus of liquid assets over current liabilities at March 31st last was £453,642, compared with £584,878 a year earlier. At £6, the deferred shares yield £4 16s. 8d. per cent.

Brazil Traction.—A further expansion of earnings is revealed in the 1929 report of this important South American utility company. Its subsidiaries include the San Paulo Tramways Light and Power, San Paulo Electric, and Brazilian Hydro-Electric, and in January last year it acquired nearly all the ordinary shares of City of Santos Improvements. The combined gross earnings of the subsidiary companies increased by 15.4 per cent. and net earnings by 12.8 per cent., as compared with those of the previous year. This was very satisfactory in view of the depression in Brazilian trade as the result of the coffee crisis. The distribution of profits for the past three years are given in the following table:—

	1927. $	1928. $	1929. $
Gross operating revenue	38,319,989	42,774,813	49,351,215

INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

Before striking the net revenue figure, $6,763,328 has been set aside for depreciation of the physical properties of the subsidiary companies, against $6,230,511 in the previous year. The issued ordinary capital at December 31, 1929, consisted of 6,295,385 common shares of no par value. In February this year a stock dividend of 1 per cent. (1/100) on the common shares was given, the new shares ranking for dividend from March 1, 1930. The balance sheet showed a very strong liquid position. Floating assets exceeded floating liabilities by $14,113,132. The acquisition of three electrical and five telephone companies brought the capital account up to $332,160,875 from $293,373,448. The balance standing to the credit of general amortisation reserve and depreciation and sinking fund reserves of subsidiary companies was $61,815,928. The book value of the no par value common shares amounted to $46.8. At the price of $51 the shares allow a yield of £3 18s. 6d. per cent. on the basis of $2 dividends. There is a persistent rumour on the Stock Exchange that American interests are negotiating for the purchase of control of the Brazilian Traction company, but the president's report is silent upon that all-important subject. His speech at the general meeting to be held in Toronto on June 19th will be the more eagerly awaited.

Oil Profits.—The preliminary statement of the Anglo-Persian Oil directors, announcing a final dividend of 15 per cent., making 20 per cent. for the year, against 12½ per cent. p.a. in the previous period, discloses net profits of £5,206,761, out of which £352,465 is applied to extra depreciation, £11,250 to discount on debentures and £1,800,000 to several reserve funds (against £400,000 in the previous period of nine months). After payment of the ordinary share dividends, £687,064 is carried forward, against £1,204,017 a year ago. It is not clear from this statement how the net profit figure is arrived at, but it would appear that the net income of the company has increased by nearly 40 per cent. This may be attributed to the higher prices for petrol realised in Great Britain last year, and to the new partnership with the Royal Dutch-Shell group in the Eastern markets outside India and China. That the producing oil companies did not fare so well last year as the producing, refining and marketing combines appears from the slight reduction in profits disclosed by the Venezuelan Oil Concessions, Ltd. These amounted to £1,085,666 for 1929 on a production of 6,469,206 metric tons, as compared with 5,084,580 metric tons in 1928. It may be recalled that the 999,553 shares of this company held by the V.O.C. Holding Company, together with certain new shares issued, were distributed this year among the V.O.C. Holding shareholders share for share to enable the V.O.C. Holding Company to be wound up. In 1928 the V.O.C. Holding shareholders received a dividend of 22½ per cent., and for 1929 they are now, as shareholders of Venezuelan Oil Concessions, to receive a dividend of 20 per cent. This distribution calls for a payment of £1,067,759 gross, against £1,114,877 gross paid by the Concessions Company for 1928. The new 1,800,000 shares issued by the Concessions Company for cash in March last do not, of course, rank for the 1929 dividend.

Tin Mining Results.—Of the septette of annual statements of tin companies to hand this week, writes our mining correspondent, all but one show profits permitting satisfactory distributions. The Siamese Syndicate, indeed, earned £51,800, as against £27,000. Dividends of 10 per cent. each were paid in May, October and December, but owing to the drop in the metal there is no final distribution. After writing off £6,850 from investments, the reduced balance of £5,370 goes forward. In respect of 1928, a total of 20 per cent. was disbursed; this somewhat exceeded the profits. Last year's output of 970 tons showed an increase of 462 tons: hence the expansion in profits. The net results of the subsidiary Bangrin undertaking were of a very different character. At £39,300 the operating surplus indicated only a moderate falling off, but, mainly because the depreciation allowance was raised from £13,400 to £24,200—the net profit came out at only £11,450, against £28,600. The sum of £5,000 is now placed to reserve, leaving £16,900 to go forward—substantially more than was brought in. Presumably the heavy writing off above referred to was made in view of the financial position, the surplus liquid assets on December 31st amounting to barely £15,000. On account of 1928 an interim distribution of 10 per cent. was made. In respect of 1929, the effects of the increase of 200 tons, to 700 tons, in output was largely offset by additional expenditure. From the dividend standpoint the experiences of the associated Kinta and Tanjong undertakings were identical. Both distributed an aggregate of 20 per cent. in place of 25 per cent. previously. The details of operations relative to the first-named company reveal a noteworthy reduction in costs. With the Idris a distinct falling-off took place in the value of the ground treated, the output being 450 tons, in place of 553 tons. The net profit declined from £46,000 to £30,300, and a more than corresponding cut was made in the dividend rate, 20 per cent. being paid in place of 40 per cent. These five are Eastern enterprises. The Kaduna Syndicate and Kaduna Prospectors operate chiefly in Northern Nigeria. The former company made a gross profit of £23,500, against £17,200 in the year ended October, 1928, and again paid 20 per cent. This called for only £8,000, the balance being applied to depreciation, reserve and the like. The Kaduna Prospectors had available the slightly increased balance of £13,100, but paid only 10 per cent. in place of 20 per cent., the surplus being devoted to special appropriations. All these companies are now faced with a much reduced price for their produce. During the past week tin has fallen below £134 per ton—the lowest for 20 years, irrespective of the drop to £120 which occurred in 1914, owing to the outbreak of war. Instead of show-

ing the hoped-for contraction, the visible supplies at the end of May—40,060 tons—were actually 3,800 tons more than a month earlier, and 15,260 tons in excess of the supplies of a year ago. So far, restriction of output has failed to counterbalance decline in consumption.

The Slump in Silver.—Following a succession of declines with small intermittent rallies, silver has this week fallen substantially below the lowest price ever previously recorded, 1s. 3 13/16d. being touched on Wednesday. In the main the present position as regards this metal arises from the growing demonetisation of silver, and the debasement of silver "token" coinage where this is still current—in Great Britain, for example. Other factors are the state of affairs in China; persistent "bear" speculation; and restriction of purchases by consumers, who are looking for still lower values. A special point in connection with silver is that a large proportion of the output is in the nature of a by-product. For example, in its last financial year Broken Hill South turned over 1¾ million ounces of silver, which was incidental to the production of 45,450 tons of lead and 36,500 tons of zinc. In such a case the price of silver is of no great consequence, provided the quotations for the other metals are satisfactory. With the Burma Corporation, silver, although only one of several products, is an important one; with companies such as the Santa Gertrudis it is of primary importance. As it is difficult to see grounds for any sustained recovery in silver, the outlook for such undertakings as the last-named appears discouraging.

New Capital Issues in May.—In the following table we show the new capital raised in London by issue to the public and to shareholders in May, and in recent periods:

(000's omitted.)

Monthly Average.	United Kingdom.	British Possessions.	Foreign Countries.	Total.
	£	£	£	£
1924	7,051	6,023	4,370	17,444
1925	12,918	5,077	1,356	19,351
1926	10,765	4,431	4,036	19,232
1927	17,240	8,318	4,039	29,597

May, 1930 ...	500	15,821	16,438	893	33,652

Flotations during May were in excess, both of those of the previous month and of May, 1929. While nearly £10,000,000 less than in April was taken for "foreign" employment, over £15,000,000 more was raised for use in British possessions. The Japanese Government's issue of £12,500,000, being a conversion operation, is not included in the above figures. Sales of National Savings Certificates exceeded encashments by £500,000. The overseas members of the British Commonwealth, who figured as borrowers during May, were the Indian Government—which raised £7,000,000 in 6 per cent. bonds at 99—and New Zealand—which borrowed £5,500,000 in 5 per cent. Inscribed Stock at the same price. British public bodies were again in evidence, the largest flotations being those of the "Farmers'" Corporation (with £3,500,000 in 5 per cent. Debenture Stock at par), and the London County Council, which offered £3,000,000 in 4½ per cent. Conversion Stock at 95. Among the remaining borrowers, the most influential were the Rhodesian Railways, Mount Isa Mines (of Queensland), the Unilever Company and Niger Company. Apart from three small capital increases by existing companies the issues were offered directly to the public.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Leopoldina Railway, Guardian Assurance, Suez Canal, Argentine Navigation, City of London Real Property, Investment Trust Corporation, General Mining and Finance, John Lewis and Company, Ever Ready (Great Britain), Associated Tin Mines of Nigeria, "Chade," Rhodesian Anglo-American, W. J. Bush, Lobitos Oilfields, Geduld Proprietary Mines, East Geduld Mines, and Modderfontein Deep Levels. The chairman of John Lewis and Company described the objects of the company's employee share-partnership scheme, and appeal to shareholders in the business, and their friends, to help to create a market in the preferred ordinary shares of the John Lewis Partnership, Ltd. At the City of London Real Property meeting Mr W. E. R. Innes dealt with the effect of the heavyfi burden of current taxation, and dismissed as unfounded the suggestion that business was leaving the City and moving westwards. The President of the Suez Canal Company announced important reductions in charges, to take effect from September 1st next.

CAPITAL ISSUES.

The new issue market was not ungrateful for the breathing space vouchsafed to it in Derby week. The *City of Johannesburg* loan was well-timed and well-priced (giving a running yield of £5 2s. 6d. per cent. and a redemption yield of £5 3s. 1d. per cent.), and the lists closed "with a snap." The 6½ per cent. cumulative "A" preference shares of *Ilford, Ltd.*, are a reasonable fixed interest security in a concern which has played a leading part in the "rationalisation" of the British photographic trade. On a conservative computation the dividend was covered four times last year. Holders will have the right to veto the creation of any debentures ranking in front of their shares. The company has an assured status in its trade, but competition with the Kodak interests is severe. The *Southern Stockholders' Investment Trust*, which offered £250,000 terminable debentures, was registered in June, 1928, under good auspices. The debentures are repayable either on a fixed date, or the death of the holder.

City of Johannesburg.—Offer of £1,000,000 5 per cent. *inscribed stock*, 1950–1960, at 97½. A cumulative sinking fund will be provided sufficient to redeem the stock at maturity. The population is estimated at 343,000; the total debt is £11,495,000; the accumulated redemption fund, £6,019,011. The rate imposed during the last financial year was 6¼d. per £1, the rating power being 7d. per £1. The loan is a first charge on revenue and all assets of the city. The loan will be used for Electricity Extension, Gas Extension, Tramways, Sewerage and other general purposes.

Ilford, Limited.—Issue of £500,000 6½ per cent. Cumulative "A" preference shares at par. This company manufacture and distribute photographic materials. The issued capital is £764,200 in 190,000 £1 6 per cent. cumulative preference shares and 5,742,000 £1 ordinary shares. Net profits have risen steadily from £56,746 for 1924 to £121,512 for 1929. On October 31st last the assets of the company were £489,925, composed of land and buildings, £75,251; plant and machinery, £40,544; and cash, debtors and investments, £374,130, against which were liabilities of £112,083. These figures are reached after making allowance for bank loans and £376,692, the purchase price of share capital in a subsidiary company, and are exclusive of goodwill, £70,000.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices, summary of balance sheets and dividend announcements will be found on page 1305 under the heading "Company News."]

COMPANY MEETINGS, &c.

JOHN LEWIS AND COMPANY, LIMITED.

SPECIAL CHARACTER OF THE ORGANISATION.
STAFF AND PARTNERSHIP SHARES.
REPLY TO COMMENTS AND QUESTIONS.
MR J. SPEDAN LEWIS'S STATEMENT.

The second annual general meeting of John Lewis and Company, Ltd., was held on the 30th ultimo, at the company's premises in Oxford Street, London.

Mr J. Spedan Lewis (chairman of the company) presided, and, before inviting questions upon the accounts and report of the directors, remarked that, as on the previous occasion, the report had given all the information usually given only in the speech of the chairman. This new departure had been strongly commended by leading organs of the Press both in this country and abroad, and the board proposed to adhere to it. On the previous occasion he had offered no observations at all before inviting questions, but there were a few remarks that he felt he ought to make in view of the special circumstances of the present meeting.

REMUNERATION OF THE STAFF.

In the first place, he mentioned that, as recently as last Sunday, a newspaper had endeavoured to produce upon the minds of its readers an impression that payments mentioned in the report of the auditors as having been charged to associated companies or to himself should really have been charged to the profit and loss account. The directors had endeavoured to make clear in their report that this was not the case, but, in view of the importance of the point, he thought that he should repeat that the amount charged to the profit and loss account in respect of remuneration of the staff had been the full normal percentage of turnover. That was to say, that an ordinary management seeking to make in the ordinary way profit for themselves would not have needed to spend upon obtaining the services of employees any more than the total sum that had been charged to the profit and loss account.

In the second place, he thought that the shareholders would agree that it would have been better if there had been time for what would have been the rather difficult task of deciding how to shorten the report without making any regrettable omission. He thought that in future the report should be two-thirds, or at most three-quarters, of the present length. (Several shareholders expressed agreement, although after the meeting one intimated that any shortening whatever would have been regrettable.)

STRENGTH OF THE PREFERENCE POSITION.

In the third place, more emphasis should, perhaps, have been laid in the report upon the fact that no Preference shareholder could lose one penny until he (the chairman) had lost the whole of his estate. The shareholders might trust him to part with the control of the company long before that point was reached. The shareholders had really nothing whatever to worry about. The truth was that an operation so big as the taking over of the Harries business could not be judged properly upon a twelve month view. No doubt yearly publication of accounts, as required by law, worked well normally, but it did not work well in a special case of this kind, which was rather of the nature of a three-year operation. In the same way, if in ordinary circumstances companies had to publish their accounts weekly, or even monthly, the figures would be often alarming, although by the end of the year no cause for alarm would appear.

He was glad to be able to tell them that the recent attacks did not appear to have increased the normal volume of share transfers, but it was, of course, very regrettable that the price obtained by those who had occasion to sell at this particular time should have been affected either by natural misapprehension of the true significance of the accounts of the last year, or by such grossly incompetent or deliberately misleading comments and suggestions as had appeared in a few newspapers of minor standing.

REPLY TO QUESTIONS.

The chairman then invited questions, and a shareholder inquired whether the board had any means of knowing how a certain newspaper had obtained what appeared to be advance information of a confidential character.

The chairman answered that the directors had no reason to doubt the trustworthiness of any of the employees of the company, and the auditors, who, as he thought all the shareholders were probably aware, were one of the most eminent firms in the world—(hear, hear)—were, of course, extremely careful in the same direction, and had likewise no reason for doubt. He was inclined to think that it might have been a case of the putting forward of a mere guess as a piece of definite advance information, but the shareholders were aware that in the present state of the law that sort of thing could be done to a considerable extent with impunity, and that a certain type of journalist was not above doing it.

At this point the chairman quoted a letter from a shareholder who had written that, in his opinion, the recent attacks in a certain section of the Press would have been very unlikely if the company had been large advertisers. (Laughter.) The chairman observed that this opinion was natural and, indeed, obvious common sense, but that he felt at the same time that he ought to take that occasion to say quite definitely that he had been deeply impressed by the entire fairness with which the Press as a whole had always treated another drapery company with which he was connected, and which was likewise one of the few drapery companies that were conspicuously not advertisers.

There were no other questions, and the accounts and report were thereupon approved unanimously, as were the other motions upon the paper.

TRADE CUSTOMERS.

In seconding a vote of thanks to the chairman, which was likewise carried unanimously, a shareholder drew attention to the fact that most, if not all, of the large West End drapery companies gave trade customers a specially favourable price, whereas John Lewis and Company, Ltd., made no such distinction between trade customers and the ordinary public.

The Chairman, in acknowledging the vote of thanks, observed upon the latter point that he was fully persuaded that a genuine wholesale trade in uncut pieces could be undertaken advantageously only upon a quite separate stock, and that trade customers, in the common West End draper's sense of the words, could not be served more cheaply than the ordinary public. It followed, therefore, that, unless they were going to be served really at a loss, the giving of a special trade price must necessarily mean that the ordinary public were charged an unnecessarily high rate of profit. This was, in fact, what happened, and the fact went far to explain the very conspicuous success of that part of their business.

In addition to the foregoing summary of the proceedings of the meeting, it is thought desirable to reproduce here the two following sections of the report that was issued with the accounts.

SPECIAL CHARACTERISTICS OF THE COMPANY.

If this report were not so long already, we should have included a note upon the main differences of character between the former Harries trade and our own, but, though we think that this might be of interest to a good many of our readers, we feel that it is better not to trouble them upon this occasion with anything of that kind. For the same reason we are deferring to another occasion the detailed description of our partnership system to which we referred in the forty-sixth paragraph of our last report.

But we ought, perhaps, upon this occasion to recall to your minds the following facts: When the chairman had become the sole and exclusive owner of the business of John Lewis and Company, he was advised that, if he were willing to "sell out," he could realise his business interests for about £1,000,000, which he could then have invested in securities of the highest class in this country or elsewhere.

Instead of doing this, he put the whole of his fortune at the "tail end" of the capital of your own company and of its associates, and he did this in such a way that all of the profit will go to the staff while he lives upon his capital, of which he reckons that there will be enough for his lifetime and for such bequests as he will wish to make. Under this arrangement he will never receive at any time from first to last a penny more than the original capital sum for which he was advised that he could sell out then completely for immediate cash. Had he chosen to realise his interests and to invest the proceeds, he would have had thenceforward from securities of the highest class a yearly income of about £50,000, whereas, under the arrangement that he actually made, he will receive from all this property no income or profit whatever, either now or at any future time.

Moreover, the "tail-end" charge in the safest of businesses obviously cannot be nearly so safe as a set of investments judiciously distributed among the choicest securities of the most stable countries of the world.

At best the chairman was incurring years of somewhat anxious and somewhat arduous work, and, of course, he was taking a real risk that unforeseeable developments of politics or other irresistible causes might lose him quite a large part of his capital.

He took this course because he has always felt that it is highly desirable that those who have the luck to be the heirs of successful business men and who do not desire to make for themselves fresh business profits and who are inclined to a life of public service should not withdraw their capital from business and, having invested it securely, devote themselves to a Parliamentary or similar career, but should "stick to the shop" and work patiently and carefully at the task of reforming industry from within, and so make some return to that particular field from which their own fortunes came.

The ordinary course means freedom from all private business and financial cares, and the great interest and pleasure and social attractions of a career in public life. But, in the chairman's opinion, there are too many public-spirited men in Parliament and elsewhere outside the world of business, and too few in positions of actual expert control of large industrial organisations.

When the first Factory Acts were got through Parliament, and hideous abuses, in the way of child labour and so on, were thereby brought to an end, the career of the Yorkshire manufacturer, Mr. Fielden, was of immense use to those who were in charge of the Bills.

They had to meet the obviously sincere and highly influential opposition of such men as John Bright, who constantly assured the House that the proposed reforms would be disastrous to British industry.

The supporters of the Bill were able to keep on answering: "Look at Fielden. He has actually done all these things that you say are crazy. And for a time he himself was called crazy for doing them. But he has made himself a millionaire"—(and in those days millionaires were rarities)—"and now people are saying that he has shovelled his money out to his workpeople and God has shovelled it back again."

In the chairman's opinion the magnificent labour force in this country has been brought into such a deep-seated chronic condition of irritation at the idea that it is exploited grossly by profiteering captains of industry, who charge far too much for their admittedly indispensable services, and by profiteering dealers in money, who likewise charge far too much for their admittedly indispensable capital, that, sooner than continue to make such profits for those parties, it will prefer, and is preferring, to half-starve itself and all our country along with itself. To-day, May 20th, *The Times* tells us that the number of days lost in 1929 in industrial disputes was 8,287,000.

Far-reaching sincere experiments to discover reforms that will distribute industrial income less unequally and that will increase rather than diminish industrial discipline are, in the chairman's opinion, the supreme need of our times and he is taking, accordingly, the steps that have just been mentioned to do in that regard his own duty as he sees it.

Among other reasons for which it has been thought desirable that these matters shall be mentioned again upon this occasion is the fact that certain newspapers made recently upon your company attacks that they could not have made if they had exercised ordinary care in the way of making previous inquiries. It is thought that, if they had realised the special character of the business, they might have been more careful to conform to the usually very high standards of the British Press.

POSSIBILITY OF CO-OPERATION BY SHAREHOLDERS AND THEIR FRIENDS.

As in the case of any similar company, shareholders and their friends can materially increase our business by their own patronage and recommendation, and in the case of this particular company they can also materially stimulate the zeal and so increase the efficiency of the staff by investing in preferred ordinary shares of the John Lewis Partnership, Limited.

Any such help in the creation of a "market" in these shares will hasten the development of the full advantages of our system, because the shares are the form in which the staff get their "partnership benefit," and it is extremely desirable that they shall be able, if they choose, to sell their shares readily and for a fairly satisfactory price, say, at present, twenty shillings, or even a little less, though in a few years the shares should stand higher. The mere regular payment of the dividend (7½ per cent. yearly, cumulative, and payable on December 1st and June 1st) will remove eventually every difficulty, but the company was formed only last year, and in the meantime, while the quantity of shares issued so far (150,000) is still comparatively small and the company under the disadvantage of being new both in itself and in its character, buyers of even a few of these shares will be rendering valuable help as well as getting a share entitled to a cumulative dividend of 7½ per cent. and having, in our judgment, a good prospect of not inconsiderable capital profit.

It is hoped that some of those who read this notice may feel inclined to do what is in their own power to hasten the development of the new idea that lies behind our own system.

It has been very warmly praised by experts of the highest eminence, and its details have been settled upon the very best professional advice.

It is already succeeding, but it is very desirable from every point of view that its success shall be as rapid as possible. Anyone who at this stage provides members of the staff with an opportunity of selling some of their shares will be giving really valuable help in that direction, and the chairman will be very grateful for it.

It may be thought that the staff ought to retain the shares themselves, but people whose incomes are quite small and who have homes to buy or children to educate or other important needs of ready-money, are bound to be much more delighted and encouraged at finding themselves receiving a share that they can turn into ready-money, than at finding themselves receiving a share that they are not allowed to sell and that merely produces them an income of ninepence at the end of each six months.

As a matter of fact, there is already appearing among the staff a very definite tendency to be reluctant to part with shares. In this, of course, they are well advised, for there is every likelihood that the shares will receive, in fact, an absolutely punctual dividend and will be saleable in a few years time for a price substantially better than they will fetch at present. But it would not have been surprising if people who are for the most part quite unused to the idea of being shareholders at all should have been unable to feel the reality of these and of other motives for holding.

This is the only reason for which we have felt some regret at what we consider to be the necessity of the new practice of requiring the staff actually to sell shares in order to get income during absence from duty. Obviously, there is a risk that, if people once begin to sell, they will not stop until they have killed and eaten the whole of their little goose that would lay for them golden eggs of dividend.

Inquiries regarding the shares should be addressed to the secretary, the John Lewis Partnership, Limited, 21, Holles Street, Cavendish Square, London, W.1.

ARGENTINE NAVIGATION COMPANY (NICOLÁS MIHANOVICH), LIMITED.

SATISFACTORY RESULTS.

The annual general meeting of The Argentine Navigation Company (Nicolás Mihanovich, Ltd.) was held, on the 3rd instant, at Winchester House, London, the Right Hon. Lord Kylsant, G.C.M.G. (chairman), presiding.

The Chairman, in the course of his address, said: The results for 1929, although not quite up to the level of the previous year, are satisfactory. The company's operations were comparatively free during the year under review from labour troubles affecting its own personnel, but this favourable factor was counterbalanced to some extent by the effect upon our business of the general depression in trade which prevailed in the latter months of 1929. We have again added to the reserve account, increasing it by £90,000 to the substantial sum of £290,000. It now stands at a higher figure than it did prior to the prolonged and disastrous labour troubles which occurred a few years ago, as the result of which the whole of our previous reserve was used up. The insurance fund now amounts to £246,128, which is slightly less than the previous year. This reduction was caused through the sinking of the s.s. "Triton," which I am pleased to say involved no loss of life, whilst the vessel was subsequently salved. After making ample allowance for depreciation and providing for income tax, insurance, etc., and making the transfer to reserve to which I have already referred, the divisible profits amount to £197,584, out of which we recommend the payment of the further dividends, making 12 per cent. for the year on the preference shares and 10 per cent. for the year on the ordinary shares, less income tax. The rate of exchange with Argentina was lower last year and involved this company in a loss on exchange of over £11,000, compared with under £600 for 1928.

Whilst, owing to the universally prevalent depression, the current year may not prove a satisfactory one for general trade, countries so richly endowed by nature as those which we serve should continue to prosper.

So far as this company is concerned, the steady and continuous replacement of obsolescent or uneconomical units of the fleet by the most efficient and up-to-date vessels, combined with rigid economy in every direction and careful management, as well as the consolidation of existing services and the development of any new business that springs up, should secure the continuance of satisfactory results.

The report and accounts were unanimously adopted.

SUEZ CANAL COMPANY.

EXCELLENT RESULTS FOR THE YEAR.

The seventy-sixth annual meeting of the Suez Canal Company was held on Monday, June 2nd, in Paris.

The Marquis de Vogüé (the President) presented the report of the Council of Administration, which was substantially as follows :—

The results of the year 1929, which we have to submit to you, have shown further marked progress in the development of your business, in addition to the remarkable progresses realised in preceding years. Transit receipts, at 1,116,000,000 French francs, exceeded by 4 per cent. those of the preceding year, which till then were the record. This allows us, in spite of increased expenses, to increase the gross dividend from 644 fr. 57 to 667 fr. 01, an increase of 3½ per cent.

In accordance with the traditional policy of your company, we have considered it our duty to make this prosperity benefit the shipping clients of the Canal. We have, therefore, decided to make, from September 1st, a remission of 25 centimes. In addition, from the same date, the charge for vessels in ballast which up to the present was always 2 fr. 50 less than the normal, will be fixed at one-half of that rate. In taking this decision we have not lost sight of the falling off of traffic which has been evidenced during the last three months, and which makes one anticipate that the brilliant results of 1929 will not be maintained in the current year. But we have thought that this consideration ought not to prevent us from a gesture of co-operation particularly opportune and relied upon. The eventual loss of receipts caused by this remission, moreover, will be, during the current year, much lessened since the new charge will only be in operation during the last four months. Next year we hope that the economic crisis will be, if not ended, at least much improved.

The total receipts for the year, at 1,189,958,441 fr. 03, show an increase of 22,846,353 francs over those of the preceding year.

Expenses amounted to 311,243,234 fr. 56. The increase of 17,357,621 fr. 70 over 1928 is due to important work on the Canal banks and repairs necessitated by the condition of certain of our gear. It was caused also in part by the increase in traffic, which naturally caused an increase in certain working expenses.

We propose allocating, as last year, 25 million francs to the writing down and renewal of material, and the same sum to the special fund for the construction of houses in Egypt.

On the other hand, the provision for improvement works on the Canal, to which we allotted 100 million francs last year, can, without any disadvantage, be lowered to 80 million francs this year.

After all allocations, the excess of receipts over expenses amounted to 738,634,581 frs., to which has to be added 4,105,646 frs. brought forward from 1928, making a total of 742,740,227 frs. Of this sum, it is proposed to distribute among the shareholders 737,478,309 frs., and to carry forward 5,261,918 frs. We propose a dividend of 667 frs. gross and 589 frs. net.

The general traffic for 1929, as compared with 1928, which itself had surpassed all previous results, showed an increase of 1,560,112 tons net, or 4·9 per cent. It thus amounted to 33,466,014 tons. The number of transits through the Canal was 6,274 as against 6,084 in 1928.

The average time of transit through the Canal was 14 hours 57 minutes, which is the lowest recorded. The number of passengers in 1929 was 325,855, an increase of 8,137 on the preceding year.

Dividing the shipping into nationalities, British-owned ships, as always, are first with 57.1 per cent. of the total traffic, as against 56.8 per cent. in 1928. It reaches again the same percentage as in 1927. Second comes the Netherlands, followed closely by Germany. Germany's tonnage, at 3,455,402 tons, passed all her previous results, even counting the period before the war. Then comes France and Italy.

The total weight of merchandise through the Canal rose to 34,516,000 tons, exceeding by 1,894,000 tons the maximum realised in 1928. This increase is shown in both directions of the transit. The outward movement showed a marked activity in metals and machinery, which passed 3½ million tons, an increase of 20 per cent. on the preceding year; their principal destinations being British India, China, Japan and the Netherland Indies. Equal progress is shown in refined sugar, manures, cement and coal; the last, at 771,000 tons, passed all results obtained since 1923.

With regard to the return movement, this has increased by 961,000 tons in spite of an important fall in the sending of cereals.

The progress shown in 1929 has not been maintained during the current year.

Happily, there is a hope that the economic crisis will be of short duration, a great monetary ease in the greater number of European countries being an efficacious stimulant to industrial activity. If the Canal traffic appears to be at a lower level this year than last, we can think that a recovery will not be long in showing itself.

GUARDIAN ASSURANCE COMPANY, LIMITED.

RECORD LIFE PROFITS—GRATIFYING QUINQUENNIAL RESULTS

The ordinary meeting of the Guardian Assurance Company, Ltd., was held, on the 2nd instant, at 68 King William Street, London.

The Hon. Evelyn Hubbard (the chairman), in the course of his speech, said :—I may curtail my remarks as to the life business in 1929, because it is reflected in the transactions of the quinquennium which terminated at the end of the year. Perhaps, so far as 1929 is concerned, it is sufficient to point out that there was a slight increase in the new business ; that the net amount of the claims by death was £248,124 arising under 272 policies; and that the net sums paid under matured endowment and endowment assurances amounted to £237,289.

Several factors have contributed to what we shall all, I think, consider a very gratifying result. I will mention some salient points, such as the relatively high interest obtainable during the quinquennium, increased in effect by the writing down of securities between 1914 and 1919; the profit from mortality, due primarily to the care in selection of lives; and to a strict hold on the expenses of the department. However it may be viewed, whether actually or relatively, we have total life profits to deal with larger than ever before in the history of the company. Of the total surplus for the five years, £957,211—this includes the balance brought forward—it is proposed to divide £900,000, and of this sum the proprietors take £180,000—that is, £36,000 in this and four succeeding years.

VESTING OF BONUSES.

We have modernised our practice with regard to the payment of bonuses by removing a long-standing restriction on the payment of a bonus on a policy on which less than five years' premiums have been paid. The result is that the holder of a policy effected on the with-profit plan from the very beginning of his contract can rely on an increase in the amount for which he is assured in respect of each premium paid, no matter whether the policy is effected just before or just after a division of profit or at any time during the bonus period.

It has also been decided to allow the surrender of a reversionary bonus for its declared cash equivalent so soon as the policy to which it is attached has acquired a surrender value.

To show you that we have good grounds for our belief that the distribution of the unprecedently large sums proposed should not prove a strain on the resources of the company, I may mention that, notwithstanding the somewhat difficult conditions which prevailed at December 31st last, the market values of the Stock Exchange securities included in the life fund of the "Guardian" exceeded the book values in the aggregate by a very large figure, constituting a hidden reserve of an extremely solid and substantial nature. The fact that 20 per cent. of the life profits goes to the proprietors tells against us in the competition for new business. The trend of our connections is more and more to "with-profit" assurances, and the directors feel that 90 per cent. of the declared profits of the life department should henceforth belong to the participating policyholders. We propose very soon to call a special meeting that we may obtain your assent to this course, which cannot, however, affect the proprietors until the end of 1934. We anticipate that this concession to the policyholders should stimulate our life business, and we must hope that new assurances thus attracted will compensate the proprietors for the 10 per cent. that they will be handing over to the policyholders.

The Chairman then dealt with the trading accounts, fire, accident and marine.

DIVIDEND RAISED.

Continuing, he said :—We consider that, although we must expect some fluctuations in the sources from which the dividend is drawn—and particularly that we must expect after the end of 1934 a much smaller contribution from the life department—we hope we shall not unduly strain our resources in recommending that the annual dividend be raised from 8s. to 10s., less tax, on the ordinary and staff shares. You will, no doubt, have observed that the enhanced dividend will be paid on 414,157 ordinary shares, as compared with 400,000 last year, and approximately on 35,000 staff shares out of the 50,000 staff shares authorised. While we certainly hope that the condition of business will permit the continuance of the dividend of 10s. per ordinary share, it is not at all likely that it will be further raised yet awhile, and that the only change which is likely to happen (assuming that business remains good) is that the payments could be equalised—that is to say, we may propose in December next to pay 5s. interim, leaving 5s. for the final dividend in June next.

The report and accounts were unanimously adopted, and a resolution was passed expressing regret at Mr Hubbard's approaching retirement from the chair, and voting him an honorarium as a mark of appreciation of his invaluable work during the thirty-eight years he had been associated with the company.

CITY OF LONDON REAL PROPERTY COMPANY, LIMITED.

REVIEW OF YEAR'S RESULTS.

MR W. E. R. INNES ON GOVERNMENT'S TAXATION POLICY.

The ordinary general meeting of the City of London Real Property Company, Ltd., was held, on the 2nd instant, at Cannon Street Hotel, Cannon Street, London, Mr W. E. R. Innes (chairman of the company) presiding.

The Secretary (Mr L. A. Kingscote) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said : The net revenue after all charges, including rates (which were more by 2d. in the £), amounted to £494,954, as compared with £516,008 last year, a reduction of £21,000. To the £494,954 has to be added £152,208 brought forward, making a total of £647,162. The preference dividend absorbs £37,438, and the directors recommend that a dividend be declared for the year on the ordinary shares at the rate of 5½ per cent., less tax—the same as last year—of which three quarterly payments, amounting together to 3¾ per cent., have already been made. This will require £348,500 and leave a balance of £261,224, out of which it is proposed to place £100,000 to reserve, making the total £1,200,000, and to carry forward £161,224, an increase of £9,015 18s. 4d. I am afraid the net dividend when received will be smaller because income tax must be deducted at 4s. 6d. in the £.

BALANCE SHEET ITEMS.

The most important alteration in the balance sheet is the transfer of the income tax reserve of £70,000, which is no longer required owing to the success of the company in resisting the claim made against it, and the rebuilding reserve of £150,000 to a sinking fund for replacement of freehold buildings, the interest on which will require a sum commencing at £8,000 a year. In about 40 years, at 4 per cent., this fund should amount to a million, which will still be greatly below the value of the houses.

To maintain our buildings up to the standard of modern requirements, it is necessary to set aside a large sum every year for rebuilding, even though it may not be possible owing to existing tenancies to have always a new building in course of construction. Tenants are no longer content with the class of house with which they were satisfied a few years ago, and if the company is to maintain its position, and the buildings be kept up to date, they must be replaced largely out of income in the same way that depreciation of machinery is provided for, and not by raising new capital, as it is necessary not only to write off the cost of the old buildings but also part of that of the new, since, after replacing the former, the new rents received are not sufficiently above the old to provide reasonable interest on the whole of the fresh outlay, except in very favourable positions. The problem that faces owners of small sites, where the percentage of space to be given up for lifts and services is out of proportion to the area, is a very difficult one. Money saved and spent on new work provides employment, which can only be paid for out of savings after deducting outgoings of which the cost of rates and taxes already exceeds three times the pre-war figure, and that of repairs more than double.

NEW CITY BUILDINGS.

Our new buildings, 37 Lime Street, and 37-38 Fenchurch Street, are now each about three-quarters occupied, and we are at present replacing the old buildings of 51-54 Gracechurch Street, with a very handsome and well-lit office building, which we hope will be completed about the end of September.

Considering the general condition of trade, I think we may congratulate ourselves that we have maintained our income as well as we have. Like other businesses, we depend on the prosperity of our customers, and people with long experience tell me they can never remember a time when the depression was so general. The want of confidence results in new buildings letting slowly, and to some extent it is a case of tenants leaving old buildings to move into new ones. Of the houses built recently in the City for letting, I have been struck with the very large amount of floor space which has been taken by the Government Departments, mostly in connection with income tax.

BURDEN OF TAXATION.

As to the future, it is impossible to prophesy. If additional burdens are not placed on us, I have no doubt trade will recover, but we have something quite fresh in the very severe depression, with taxes at an abnormal figure and increasing rapidly, while politicians clamour for more. In this connection I hope you will bear with me while I make a few remarks pointing out how the company is affected, though these are not addressed to those of you who are City men, as you are only too familiar with the subject. But there are others, very clever people, and more capable than most of us in other respects, who, having been engaged in other ploys, do not appear to believe that, like the rules of health, the guiding principles of finance are immutable and cannot permanently be avoided by manipulation, and when broken have to be paid for. Taxes and new legislation are altogether overdone, and are becoming a nightmare to those having to conduct businesses. Fresh measures are passed every year so involved that no one can understand them, and the Inland Revenue is no longer content to construe the law in the way it has been accepted and acted on for numbers of years past. If there seems a chance of obtaining a new decision which will produce more revenue they attempt to get it, and in this way the burden of taxation is added to. In the present Finance Bill there are new clauses relating to the valuation of property under which we are advised we may lose the allowance that has always been made for empty offices, and we are to have two different valuations in respect of the same property by different taxing authorities with all the attendant expense.

MR SNOWDEN'S UNSOUND TAXATION POLICY.

The Government has given figures showing that half the income of a moderately rich man is taken in income tax and providing by insurance for death duties, without allowing for local and indirect taxation, and more than the whole of the income of a very rich man; and yet the Chancellor of the Exchequer has stated in the House of Commons that in his opinion the limit of taxation that is desirable has not yet been reached. At the same time he emphasises the need of capital saving and complains that not enough is put by.

It is obviously impossible to have it both ways. If wealth were entirely in the form of gold which could all be kept in the country, it might be argued this could be done; but since it is largely in the form of credit and quickly vanishes, it is a different matter. To tax the country to the very limit with no reserve for an emergency is doing the very thing the Chancellor complains of business men doing, and there can be no doubt of the eventual result. Unless there is a change, sooner or later the standard of living for every one will fall, as we live in a competitive world and must produce at a figure at which it is worth while other people buying from us, or we cannot survive.

LIMITS OF SUCCESSFUL TAXATION.

Surely every one ought to be thankful for the success of very capable men, because the trade of the country is so largely helped by their genius and energy, and the more successful they are the more employment is produced. I should have thought what is really wanted is that every one should do well; if the leaders do well it must help in providing work for others.

Beyond a certain measure human beings cannot be treated like bees, as there is a limit, after which they refuse to produce, and what the State is doing is very like putting a weight on a drowning man and telling him to give another kick and he will be all right, and that the trouble is his own fault because he does not kick hard enough. If too much is to be taken from shareholders they may soon demand that, instead of money being put by to conserve businesses, it shall be distributed so they can have it while it is still there, and it may be a very difficult claim to resist. I have been wondering whether it is possible, following the principle of the Income Tax Acts, to devise a system of graduated unemployment payments to give more encouragement to those who might get employment or part-time employment to take it.

Some people have suggested that business is leaving the City and moving westwards, but a view of the new buildings in course of erection by great firms for their own occupation shows this fear is not well founded. The City is extending both northwards and eastwards.

FORMATION OF A TRUST COMPANY.

As you all know from the receipt of prospectuses, we have just recently formed a trust company, which was very well received and substantially over-subscribed, and in which we have invested part of our surplus funds. We have no intention of changing the nature of the company's business, and are prepared at any time to purchase property we believe to be a good investment in the City, but have considered it to our advantage to have another outlet for some of our funds, as by judicious spreading of risks we believe we can obtain a good return. We were also aware that some large shareholders were becoming nervous of having too many eggs in one basket, and therefore considered it desirable to provide some other form of investment. In regard to this we have to thank Lord St. Davids for his invaluable help. As he has been so successful in the management of his companies, we were especially grateful when he offered to provide us with one of his most able assistants to join in the direction of the company.

Sir Edgar Horne, Bart. (vice-chairman), seconded the resolution, and it was carried unanimously.

INVESTMENT TRUST CORPORATION, LIMITED.

THE BONUS ISSUES.

MR ROBERT FLEMING'S ANNUAL ADDRESS.

The forty-second annual general meeting of the Investment Trust Corporation, Ltd., was held, on the 4th instant, at the offices of the company, Gresham House, Old Broad Street, London, E.C.

Mr H. A. Vernet presided.

The secretary (Mr Hildred Carlisle) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—I have to express regret at the absence of our chairman, Mr Robert Fleming. He has not been very well of late, but I am glad to say that he is very much better than he was. He was in this office yesterday and had hoped to preside at this meeting, but I had a talk with him in the afternoon and he explained that his voice was rather weak. After all, even Mr Fleming is not entirely immune from the effects of advancing years: I hope that those years of his will continue to advance for a considerable time yet. (Hear, hear.) I will now read the speech which Mr Fleming had prepared; it is, as usual, brief and to the point:—

"We will, I suppose, take the report as read. As far as figures go, it is very simple in character.

"The past year has not been such a forward going year in the matter of the price of securities as some of those we have experienced since the close of the Great War. Our great staple trades—iron, steel, cotton, woollen, agriculture—have suffered much; and, doubtful political prospects with dear money for the greater part of the year accompanying that depression, prices in many quarters have crumbled, and values generally have fallen.

SLIGHTLY DECREASED APPRECIATION.

"The Stock Exchange valuation of our 696 securities has fallen a little, the fall, however, being less than 2 per cent. upon last year's figure, which is by no means as great as the depreciation of many other companies. With a return to cheaper money and lower prices for commodities, it is to be hoped that some part at least of that depreciation will disappear. I do not, of course, mean that there is a depreciation of 2 per cent. below the cost. On the contrary, our valuation shows an appreciation of 18½ per cent. over the book cost. By 'book cost' I mean the original purchase price, less amounts written down from year to year.

INCREASED REVENUE.

"We have seen eight years of rising values. Now we have reached a time of wide depression in business, and it will not be a matter of surprise if, when we meet a year hence, the fall in values should have gone further. But, after all, the Stock Exchange valuation of our holdings is of small importance compared to steadiness in the return which they yield. In this respect we have nothing to complain of, for our revenue exceeds that of last year, which was itself the highest recorded by us up to that time.

"Our earnings for the past year over expenses, interest on debentures and dividend on preferred stock (which has now been made cumulative) come to 27·15 per cent. on the amount of our deferred stock, and we propose the same cash dividend as last year—namely, the round 20 per cent.—and we also propose, as in recent years, to issue at par to the deferred stockholders £125,000 of new shares, which will afterwards be converted into preferred and deferred stocks in the same proportions as hitherto. The market price of those stocks is together about 230 per cent., so that the issue at par implies a substantial bonus to the stockholders. Stockholders will realise, however, that this is not quite the same as a normal annual dividend, though during the last four years it has been continued. Times are changed, and we cannot tell what eventualities may arise; but, so far as concerns the near future, I see no reason to question our ability to continue it.

THE INVESTMENTS.

"There is no notable change in the character of the investments. We have 52·1 per cent. in bonds, 24·8 per cent. in preferred stocks and 23·1 per cent. in ordinary stocks. The investments are 696 in number—a large number, implying continuous examination of their security by the directors. As you know, a considerable part of our investments has consisted of short-term bonds, bearing a high rate of interest. This year £179,618 of such bonds have matured and been paid off, and during the past six years £1,064,000 have been so got quit of, strengthening the position of the company, as the securities bought in exchange are of a longer term.

"We have made our usual estimate of the probable revenue for the coming year, and it amounts to quite as great a sum as for the year just ended, and I hope nothing will eventuate to diminish this sum."

I now beg to move: "That the report and accounts as presented be and they are hereby received, approved and adopted, and that dividends of £2 per cent., less income tax, on the preferred stock and £12 per cent., less income tax, on the deferred stock—making, with the interim dividend, 20 per cent. for the year ended May 1, 1930—be and the same are hereby declared."

Sir W. Guy Granet, G.B.E., seconded the resolution, and it was carried unanimously.

The retiring director, Sir W. Guy Granet, was re-elected; the auditors, Mr C. O. Webb, C.A., and Mr Lionel Baddeley, C.A., were reappointed, and the proceedings terminated with a cordial vote of thanks to the Chairman, directors and staff.

"CHADE."

(COMPANIA HISPANO AMERICANA DE ELECTRICIDAD S. A. BARCELONA.)

FURTHER PROGRESS OF THE COMPANY.

INCREASED DIVIDEND DISTRIBUTED.

The ordinary general meeting of the Compania Hispano Americana de Electricidad S.A. was held on Wednesday, May 28th, in Madrid.

Excmo. Sr. Don Juan Ventesa (Vice President of the company) presided, and, speaking of the progress of the company, said:—The increase in consumption of electricity in the City of Buenos Aires and the favourable development of the Province of the same name, induced us some time ago to endeavour to concentrate in this zone the activities of the various undertakings controlled by us. In 1923 and 1924 we purchased the businesses of the concerns supplying electricity to the districts of General Sarmiento, Moreno and La Plata. Later we took over the business of the Magdalena district and, finally, in 1929 we attained direct control of the production and supply of power in Buenos Aires and in a zone of one hundred kilometres around the Federal Capital.

With this object in view, besides acquiring the Electric Power companies of General Rodriguez, Las Heras, Pilar, Coronel Brandzen, San Vicente, Canuelas, Echeverria, Marcos Paz and Escobar, we have obtained control of the Compania de Electricidad de la Provincia de Buenos Aires, which supplies electrical energy throughout the important districts of Almirante Brown, Lomas de Zamora, Quilmes, San Martin, Mantanzas and Florencio Varela. As a result, the zone served by Chade and other directly controlled undertakings in the Province of Buenos Aires, *i.e.*, apart from the Federal Capital, has increased from 1,577 square kilometres in 1920 to 12,497 square kilometres in 1929. The population of the zone served by the Chade group of companies in the Province of Buenos Aires has increased from 269,190 in 1920 to 1,305,100 in 1929. During the past year we also acquired an interest in the Primitiva Gas Company of Buenos Aires, with which we have made an agreement for the co-ordination of the services of both companies.

In accordance with the policy expressed above of endeavouring to concentrate the direct business of the company in Buenos Aires, and in a zone around the Federal Capital, the board decided to take a favourable opportunity to dispose of the interests which our company held in the Empersa de Luz y Fuerza of Mendoza, situated over 1,000 kilometres from the City of Buenos Aires.

SATISFACTORY PROGRESS OF THE BUSINESS.

The business of the company in 1929 has been carried on satisfactorily. The increase in the consumption of power produced by the electrical power stations of Buenos Aires has been 15·2 per cent., which is—with the sole exception of the year 1924—considerably better than for any other year during the period 1920 to 1929. The total current consumed has reached the figure of Kw. 625,559,198. During the months of 1930 that have already passed, the increase in consumption has been maintained at a higher level (17 per cent.) than the average for 1929.

As announced in October, the directors decided to purchase immediately a new turbine of Kw. 52,500, which will be installed in the super-power station of Buenos Aires. In spite of the financial difficulties of the world during 1929, the businesses in which our company participates have continued their normal progress. The concerns in which we participate have not only been able to maintain the dividends of former years, but in some cases have been able to increase them considerably.

The item in the balance sheet of "operating surplus, dividends, interest and other revenues" has increased from 114,670,760·73 pesetas in 1928 to 120,756,628·35 gold pesetas in 1929. The balance of net profits available for distribution is 52,718,513·50 gold pesetas against 50,884,559·60 pesetas, equivalent to 42,993,751·69 gold pesetas, for last year.

This enables the board, without departing from their traditional conservative policy, to propose the payment of a total dividend of 17 per cent. gold, free of Spanish taxes, against 15 per cent. gold last year, in spite of this dividend having to be paid on a fully paid-up capital of 260,000,000 pesetas.

EVER READY COMPANY (GREAT BRITAIN), LIMITED.

POSITION FURTHER CONSOLIDATED.

INCREASED SALES AND PROFIT.

The annual general meeting of the Ever Ready Company (Great Britain), Ltd., manufacturers of batteries and electrical sundries, was held on June 2nd at Holloway, London, N.

Mr Magnus Goodfellow (chairman and managing director), who presided, said: In concluding my speech to you at the general meeting a year ago I said: "I feel justified in telling you that we look forward not only to the consolidation of the position that we have succeeded in attaining, but to the further development of our business." The results before you have been obtained in a difficult year and in the face of most severe competition—greater competition than I ever before remember.

The sales for the year show an increase of 22½ per cent. over the sales of the previous year, and the increase in profit, amounting to £34,388, would have been at least proportionate to the increase in sales but for the fall in the values of materials and commodities during February and March, which necessitated our writing down stocks to the lower market values on March 31st. Our low stock values and the lower prices at which we have been able to purchase our materials for the coming year have enabled us to effect reductions in price to the consumer of a number of our productions, which will, I think, still further stimulate the popularity and sale of our products.

IMPROVED EFFICIENCY.

During the past year we have not only maintained our technical and chemical efficiency, but we have improved both, and the expenditure on the expansion of the factories and equipment, amounting to £35,571, referred to in our report to you, together with the expenditure on extensions already in hand, amounting to £30,000, should result in a considerable increase in our powers of production and a considerable advance in our technical efficiency during the coming year.

The public use of portable dry batteries in every walk of life has grown continuously during the past twenty years, and it is my belief that new uses will be discovered as time goes on.

FOREIGN COMPETITION.

The consumer and the trade as a whole continue to extend to us their good will, and appreciate the benefits of using and handling stable articles such as ours in preference to the goods imported into this country by our foreign competitors. We intend to continue to give the trade all the service we are capable of, and we believe they will not only continue to support us as heretofore, but strengthen their support against this foreign competition, which in the long run can benefit neither the consumer, the trader, the workpeople, nor the community as a whole.

After dealing with the accounts in detail, he concluded by saying: During the past few months I have read a number of speeches delivered by the chairmen of large and important manufacturing businesses in this country, and I have just recently returned from a visit to our connections on the Continent of Europe, where full details of the position have been placed before me. It appears to me to be generally accepted that the present world-wide trade depression may continue during the coming year, and may even grow worse than it is at present. The cause of the depression appears to be excessive production and lower consumption, due to the fall in spending power in a number of countries.

CONTINUED EXPANSION.

During the four months ended on March 31st last the general trade position did not prevent our own expansion, and for the two months ended May 31st to date our sales are greater than they were for the two months ended May 31st a year ago. We have grounds for the belief, therefore, that the preparations we have made for an increased production will result in our doing an increased business during the coming year.

The report and accounts were unanimously adopted, and final dividends of 5 per cent. on the preference shares (making the maximum of 10 per cent. for the year) and of 25 per cent. on the ordinary shares (making 35 per cent. for the year) were declared.

The retiring director (Mr L. P. Lightstone) and the auditors (Messrs Josolyne, Miles, Page and Co.) were re-elected.

At a subsequent extraordinary general meeting the authorised capital of the company was increased to £1,000,000. The chairman intimated that there was no intention to make any immediate issue.

ASSOCIATED TIN MINES OF NIGERIA, LIMITED.

LARGE REDUCTION IN WORKING COSTS.

The third ordinary general meeting was held, on the 30th ultimo, at the Fur Trade Sale Room, Garlick Hill, London, the Hon. Lionel Holland (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The directors' report and the accounts that I have now the privilege to submit for your acceptance make, I think, a not unfavourable showing when we take into consideration the adverse conditions that have prevailed during the period that the accounts cover. The price of standard tin never rose above £229 a ton, and the average for the twelve months was no more than £204. We received then an average price during the financial year for our 70 per cent. tin concentrates of £142 9s. 11d. a ton—an appreciable reduction even compared with the low record, £158 2s. 1d., of the preceding eighteen months that were included in our last accounts.

Our financial year ended on December 31st last; and the results of the year's operations have served to establish the all-important fact that, even with the commodity at a price abnormally depressed, this undertaking, as now organised, can work at a profit.

To this knowledge is added the certain assurance that, with any appreciable recovery in price, this modest rate of profit will be substantially and progressively enlarged until shareholders are rewarded with an adequate return on the capital that they have embarked in the business.

When we met on the occasion of the annual meeting last June I stated in my speech that the working costs for the accounting period of eighteen months with which we were then concerned had averaged £94 5s. a ton. The advantage and economies of the consolidated programme of operations, rendered possible by an amalgamation of mining properties, had only started to make headway, although before the close of the period working costs had been reduced to something under £90 a ton.

WORKING COSTS.

The all-in working costs have realised a very substantial reduction to an average for the twelve months of £82 8s. 3d. a ton free on rail at Bukuru. And this reduction has been and continues to be progressive. The assurance given by the managers in their report that a further reduction in working costs would be effected during the current year has already been confirmed. During the more recent months the working costs have fallen to £74 and less a ton of tin concentrate—over £20 a ton below the average for 1928—and it is our confident understanding that they will be further appreciably reduced.

For the purpose of calculation, however, I will take the higher figure of £74 as the costs in Nigeria up to the delivery of the concentrates at the railhead. To this we must add the subsequent charges before the concentrates are realised, including railway and ocean freight, royalty, insurance, handling and returning charges, and also the secretarial and general expenses. These together amount to approximately £22 13s. 3d. a ton.

We come, then, to an all-in figure of some £96 13s. 3d. to set against the value we receive for our product, which is £105 a ton on our grade of concentrates with the price of standard tin at £150 a ton, and even taking standard tin at the unreasonable price of £140 it would still be £98 per ton.

As the present price of the metal is very substantially below the average world cost of production, it is obvious that such a level cannot endure, while each advance in price represents practically an equivalent net gain, since, except for an increase in royalty and a small addition to insurance and returning charges, these all-in cost figures do not vary with the varying price of the metal.

Continuing, the chairman said that the production for the year was 3,062 tons of concentrates, or just about equal to that of the preceding eighteen months. Since January last they had reduced the rate of production from an approximate monthly return of 250 tons to a maximum of 200 tons a month. They had cordially accepted and would loyally observe the policy recommended by the Tin Producers' Association to reduce output to 80 per cent. of the 1929 figure. The financial position of the company was a reasonably strong one, and until quite recently he had hoped that the directors would have been able to submit a resolution to pay a dividend on the past year's working; but the further heavy fall in the price of the metal that had lately occurred, and the unsettled outlook, both in the metal market and the general trade position, had compelled them to revise their programme. If the price of tin revived the directors would gladly embrace the opportunity of paying an interim dividend when it could be distributed without endangering the prospects of the business. Since January 1st last no less than 9,000 additional tons of payable ore had been located, bringing up the actual reserves to the handsome figure of over 31,000 tons.

The report was adopted.

W. J. BUSH AND COMPANY, LIMITED.

FACTORS AFFECTING PROFITS.

The thirty-third annual general meeting of W. J. Bush and Company, Ltd., was held, on the 2nd instant, at the Abercorn Rooms, Great Eastern Hotel, Bishopsgate, E.C., Mr J. M. Bush (chairman of the company) presiding.

The Secretary (Mr J. H. King) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: Comparison with the figures of the previous year shows a big fall in both gross and net profits. Apart from the widespread trade depression throughout the world, which I regret has become accentuated since the accounts were made up, there are some special causes for the decline in our profits. You will recall that at our meeting last year I mentioned that we had disposed of the Potter and Moore branch of our business to a separate company. This has eliminated both the gross and net profits from this source formerly incorporated in our figures. The decline in the value of commodities following the financial crisis in New York in October last has caused us to suffer heavily through the depreciation of our large stock. Another cause of the fall in our profits to quite an appreciable extent was the practical failure of the clove crop. Essential oil of cloves is one of our most important raw materials, and is used in the manufacture of vanillin. The high price of the spice made it difficult for us to meet the competition of vanillin made from other raw material and maintain a normal amount of business and profit.

The accounts show exceptionally heavy expenditure in buildings and plant. I explained at our last meeting that we have made great efforts and devoted a lot of money to building up a fine chemical industry in this country under the encouragement of the Safeguarding of Industries Act. A development of this kind must of necessity be spread over a series of years. The continuance of the Act is obviously of the utmost importance, and we hold the view that it would be a national disaster if the expenditure of time and money spent by the manufacturers of fine chemicals in the establishment of complicated processes were prematurely exposed to the attacks of foreign dumping, of which there is abundant evidence.

We make the following recommendations: The payment of a final dividend of 4 per cent. on the ordinary shares, making with the interim dividend already paid 8 per cent. for the year, and to carry forward the balance of £69,192 9s. 8d.

The report and accounts were adopted.

LOBITOS OILFIELDS, LIMITED.

FINANCIAL POSITION STRENGTHENED.

Presiding at the meeting of Lobitos Oilfields, held, on the 3rd instant, the Right Hon. Lord Forres, P.C. (chairman), in moving the adoption of the report, said: For the past three or four years test wells have been sunk in various outlying districts which our friends in Peru had taken up for exploration purposes. These tests have not given satisfactory results, and the districts have, therefore, been abandoned. On the other hand, the lands comprised in the development concession of about 205 square miles continue to open up satisfactorily and beyond our expectations. You are aware that the policy we have followed, in view of unremunerative prices, has, for the past two or three years, been to maintain production, but not to make special efforts to increase it. There were 28 wells drilling or unfinished at the end of the financial year, as compared with 46 two years ago. As I pointed out last year, this restrictive policy has enabled us to dispense with a number of employees and to restrict expenditure upon drilling plant, &c. One effect has been to increase cash capital in our hands. This capital will, I hope, some day be required for an extension of the drilling programme, or in other developments for the benefit of the company. Meantime we believe we are right in following a conservative policy. We have now £700,000 in British Government securities, and will be able to take advantage of more favourable conditions as and when they present themselves. Meantime the Peruvian Company has not been idle in increasing its efficiency.

Reference has been made to an improved price ruling during part of 1929. As the price of our sales is based upon a sliding scale, benefit was derived from that advance. Unfortunately, the price has not been maintained, and since the close of the financial year a decrease has taken place. It is now at a level where the Peruvian Company is making nothing, but I need hardly say that to close down would be disastrous. The immediate prospect for producers can only be described as uncertain. The production of crude, despite efforts to restrict, has only been reduced to a small extent. The shut in potential production is large. Stock of oil above ground in the United States was 48,250,000 barrels on March 31, 1929, and grew to 55,239,000 barrels on March 31, 1930. It is for that and other reasons that we think it desirable to place £50,000 this year to the credit of reserve account, thus further strengthening the company's financial position.

The report was unanimously adopted.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

SOUND FINANCIAL POSITION MAINTAINED.

Presiding at the annual general meeting of the General Mining and Finance Corporation, Ltd., held in Johannesburg on June 3, 1930, the chairman, Sir George Albu, Bart., stated that stocks and shares would have shown a greater increase but for the considerable fall in the market price of certain holdings necessitating writing them down by £169,119. A very large proportion of this depreciation was due to Phœnix Oil and Transport Company, Ltd., shares which, owing to unfavourable conditions in world oil markets, had declined considerably during the year, but have since recovered substantially owing to improved prospects. Although at one time the corporation's interests were mainly centred in South Africa, these have gradually been extended to other parts of the world. It had never been their policy nor had it been thought desirable to give full details of investments, but approximately two-thirds were represented by stocks and shares in South African concerns, and the remaining third elsewhere. There is, more especially in the latter, a large percentage of sound, readily realisable securities such as railway and municipal stocks, which naturally greatly strengthens the more liquid resources.

To summarise the position, apart from shares in mining and other companies which in themselves are an extremely valuable asset, the more realisable and what may be described as gilt-edged assets —in which category there was no hesitation in including the debt of the West Rand Consolidated—show a surplus of about three-quarters of a million pounds over current liabilities, which is indeed most satisfactory.

The directors could not recommend the payment of a dividend, especially as it is very necessary in a business such as the Corporation's to maintain the strongest possible financial position, not only to meet ordinary obligations but for undertaking remunerative business when offering and financing associated companies when necessary. A good example of the latter is the large advances made to the West Rand Consolidated, with the result that the mine is now established on a firm basis with the practical certainty of a long and successful life, which otherwise would have been unattainable.

In concluding, he stated that the Corporation has maintained an extremely sound financial position, which was bound to be of immense benefit when the existing depression ended and it gave place, by the usual swing of the pendulum, to more normal times.

RHODESIAN ANGLO AMERICAN, LIMITED.

EMPIRE COPPER DEVELOPMENT.

The first annual general meeting of this company was held, on the 3rd instant, at Winchester House, London.

Sir Edmund Davis (deputy chairman) said that the balance of profit for the period under review was £712,713, which he was sure would be regarded as very satisfactory. They had had to provide for income tax, £144,204, had written off the whole of the preliminary expenses, £27,141, and had transferred to reserve £217,763, leaving £323,603 to be carried to the balance sheet. The reserve account had been brought up to £3,500,000, being the same as the capital. The underlying idea in the minds of those responsible for the formation of the company was that it should have a large and permanent interest in the copper mining business of Northern Rhodesia. The large amount of work which had

164 Branches in Finland

CAPITAL AND RESERVES: Fmk.426,000,000.
TOTAL ASSETS (31/12/29): Fmk.2,941,645,000.

KANSALLIS-OSAKE-PANKKI
(National Joint Stock Bank)

HEAD OFFICE: HELSINKI (HELSINGFORS), FINLAND
Established 1889.

been done on these fields since the company was formed amply confirmed the view that the business offered a most attractive avenue for profitable investment. It should be realised what the development of these copper fields meant. The question of available resources of supplies of copper within the Empire had been solved, and attention would have to be given in the early stages to the question of the yearly tonnage of Northern Rhodesian copper which the world, with its steadily growing requirements, might be able to consume. All those interested should have but one object in view, that within the field there should be maintained the same spirit of mutual help and co-operation which had attended its opening out and development to date, and if they all worked to attain this end, they would, in the course of time, prove to everyone's satisfaction that they had managed to create a huge and profitable and lasting industry in Northern Rhodesia which would be a credit to this country and to all those who had been concerned in its achievement.

The chairman then dealt in detail with the individual enterprises in which the company was interested, and said that the various mines were likely to reach the production stage in the following order: Roan Antelope, 50,000 tons of copper per annum; N'Kana, 70,000 tons; and Mufulira, 70,000 tons: making a total of 190,000 tons as the estimated output from these properties on the basis of their initial scale of equipment. Taking the copper position in Northern Rhodesia as a whole, they estimated that by the end of the current year drilling would have established the existence of a total of 585,000,000 tons of 4¼ per cent. ore. It was estimated that the total operating costs would be about £37 10s. c.i.f. European ports per long ton of copper of best selected grade.

The report was unanimously adopted, and a resolution was passed increasing the capital to £5,000,000.

GEDULD PROPRIETARY MINES, LIMITED.

IMPROVED RESULTS.

The twenty-ninth ordinary general meeting of shareholders in the Geduld Proprietary Mines, Ltd., was held at Johannesburg on May 13th.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks said :—

The ore mined reached 1,211,768 tons, exceeding the previous record by 34,869 tons; the quantity milled totalling 1,008,100 tons, an advance on the previous record of 24,600 tons; while the average working costs per ton milled were a shade under 16s. 6d., or about a penny below the previous lowest average. The average yield of gold per ton of ore milled was 4d. above that of the previous year.

The working profit was £522,188, equivalent to 10s. 4d. per ton milled, or 5.26d. above the previous year's average. Sundry revenue amounted to £26,588, making the total profit £548,776, which was £36,520 more than the 1928 total. Taxation absorbed £69,100 and charities £2,673, leaving £477,003 to be carried to the appropriation account. Out of this a further £6,000 was set aside towards the company's liability to the Miners' Phthisis Compensation Fund; £456,518 was distributed in dividends, and the additional remuneration to the directors absorbed £1,800. This left a surplus of £12,685, which increased the carry-forward in the apropriation account to £190,272. In regard to the two dividends distributed for the year, I would point out that, although the total rate for the year was 2½ per cent. less than that for he previous year, the amount involved was £8,300 more, due, of course, to the increase of the capital by £132,805 in April of last year.

SATISFACTORY DEVELOPMENT WORK.

Development work proceeded on virtually the same scale as in the previous year, the total footage accomplished being 16,078. The results obtained in the course of this work have been communicated to you in the quarterly reports, from which you will have noted wide fluctuations in the values and the percentage payable. These fluctuations were foreshadowed in my address at the last annual meeting, when I intimated that a high proportion of the work would be devoted to the exploration of areas hitherto considered to be less promising. In the circumstances the results have been quite satisfactory. For the last quarter the values exposed were above the average, and this state of affairs has continued into the current year. During the first four months of this year the payable portion of the development on reef has averaged 602 inch-dwt., the footages being 5.487 feet developed, 4,430 feet on reef and sampled, 1,400 feet payable.

ORE RESERVES.

The ore reserves at December last amounted to 5,900,000 tons, valued at 6.7 dwt. over an estimated stoping width of 58 inches, which virtually maintains the position of the year before. Owing to the lighter type of machine drills now in general use, a stoping width of 2 inches less has been adopted by the consulting engineer for the purpose of his estimate and this change has had the effect of diminishing the quantity of ore by 200,000 tons but increases the average value by a fifth of a pennyweight.

Last year's record milling rate has been fully maintained during the current year. The yield per ton milled has exceeded last year's average by about 2d. per ton, and the working costs show a further reduction of 2d. per ton milled to an average of 16s. 4d., so that the working profit per ton milled is about 4d. better. The total for the four months is approximately £8,845 more than was earned in the corresponding period of last year.

EAST GEDULD MINES—INCREASED CAPITAL.

In regard to the interest held by your company in the capital of the East Geduld Mines, Ltd., the circular issued to you on the 7th of last month informed you of the further increase of that company's capital to £1,500,000 for the purpose of providing the necessary funds for the erection of a reduction plant of the most modern type, with a capacity of 60,000 tons per month, and of your directors' decision to exercise your company's option to participate equally with the Union Corporation, Ltd., in the subscription of the £500,000 additional capital at par in terms of the agreements between your company and the Corporation. Ample funds were available for the purpose out of the proceeds of the share issue made by your company last year. You were informed at the same time that your directors had consented to your company joining the Union Corporation in an offer of a parcel of these new shares to the other East Geduld shareholders at the price of 32s. 6d. per share. The confidence in the prospects of the East Geduld Mines and the popularity of this offer is evidenced by the fact that 96 per cent. of the shares offered has been taken up. After providing our proportion of the shares accepted we have the very substantial interest of approximately 35½ per cent. in the whole issued capital of the company, and, in addition, we hold the right to participate equally with the Union Corporation in the provision at par of any further capital which the East Geduld Mines may need up to a total of £300,000.

The position of the East Geduld Mines at the end of last year was that it had completed 33,005 feet of development on reef, which indicated ore reserves of 2,400,000 tons, having a value of 6.75 dwt. over a stoping width of 57 inches. Development during the first four months of this year has shown values appreciably above the reserve, namely, 13.2 dwt. over 48 inches, or 636 inch-dwt., for the 46 per cent. payable out of 1,710 feet sampled. The sinking of the shaft, together with the preparations for the erection of the reduction plant are well under way, and, provided that no serious interruption occurs in the progress of the work, it is anticipated that everything will be in readiness for the commencement of production late in the third quarter of next year.

The report and accounts were adopted.

EAST GEDULD MINES, LIMITED.

ORE RESERVES—GRATIFYING FEATURES.

The third ordinary general meeting of shareholders in the East Geduld Mines, Ltd., was held at Johannesburg on May 13th.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks said :—

During the last financial year the registered capital was increased from £350,000 to £1,000,000 and the paid-up capital from £235,700 to £521,510 10s.

CAPITAL.

Since the turn of the year the registered capital has been further increased to £1,500,000 by the issue of an additional 500,000 ordinary shares. This issue has been subscribed at par by the Union Corporation, Ltd., and the Geduld Proprietary Mines, Ltd., in terms of the agreements referred to on previous occasions, 2s. per share having been paid up on subscription, the balance of 18s. to be called up as required by the company. The funds thus made available are estimated to suffice for the completion of the No. 1 Vertical Shaft, for the further development work necessary prior to milling, for incidental expenses and for the erection of the reduction plant. By arrangement with the subscribers, some of these new shares were offered to the other shareholders in the company at the price of 32s. 6d. per share. The acceptance of 96 per cent. of the shares so offered has been gratifying to your directors, affording as it does striking evidence of the confidence of shareholders in the prospects of the mine and in the administration of the company's affairs.

MINING OPERATIONS.

With regard to the mining operations carried out on our behalf by the Geduld Proprietary Mines, in all 17,305 feet of development

were accomplished and, in addition, 1,053 feet of driving in connection with stations and 460 feet of vertical shaft sinking. Of the development footage, 12,555 feet were on reef and the sampling of this disclosed 42 per cent. to be payable, the average assay value of this portion being 12.7 dwt. over a channel width of 42 inches, equivalent to 534 inch-dwt. This average value was more than 10 per cent. better than that of the previous two years, while the percentage of payability was maintained. The year's work brought the total development since operations were commenced in January, 1927, to 47,670 feet, of which 33,005 feet were on reef and sampled and 42 per cent. have been found to be payable, the average value of this portion being 12.8 dwt. over a channel width of 39 inches, equivalent to 500 inch-dwt. While comparatively little ore has been completely blocked out for stoping in the progress of this work, a considerable quantity of payable ore has been indicated, and your consulting engineer has estimated that at the end of last year the partially developed ore amounted to 2,400,000 tons of an average value of 6.75 dwt. calculated over an assumed stoping width of 57 inches.

CURRENT YEAR.

During the first four months of the current year a further 4,458 ft. of development have been completed, of which 3,685 ft. have been on reef. These operations have disclosed ore of the highest average value so far exposed, the sampling results indicating a payability of 46 per cent. and an average value of 13.2 dwt. over a channel width of 48 in., or 636 in.-dwt. This development will tend to increase both the quantity and the average value of the indicated ore reserves. It is a most gratifying feature of the development work that the richest ore has been opened up by the most recent and deepest workings, and that these improved values are continuing.

As you have been kept regularly informed regarding the progress of development work and its results, the decision of the directors to proceed with the installation of a reduction plant, conveyed to you in the Circular issued on the 7th of last month, will have occasioned no surprise, for it was, of course, a natural corollary. Orders for this plant, which will have a nominal capacity of 60,000 tons per month, are being placed with all possible despatch, and, provided that there is no delay in delivery of any section, it is anticipated that the installation will be completed in the third quarter of next year. The completion of this work is, as you know, scheduled to synchronise with the completion of the sinking and equipment of the No. 1 Vertical Shaft. The sinking of this shaft has proceeded normally, and at the end of last month the depth was 794 ft. The rate of progress thus far has necessarily been slow for the reason that the sinking operations from a depth of 54 ft. have been in water-bearing dolomite formation, which has involved delays arising from the need to deal effectively with the water encountered. When addressing you a year ago I indicated that this dolomite formation was expected to continue to a depth of about 850 ft. Information recently obtained by means of a borehole put down from a pump chamber shows that the dolomite extends to a depth of a little over 1,000 ft. It is not anticipated that this greater thickness will involve any modification of the forecast I then gave you that the shaft would be in full commission for the purpose of hoisting stope ore within 2½ years from that date or 1½ years from now.

The report and accounts were adopted.

THE MODDERFONTEIN DEEP LEVELS, LIMITED.

ANOTHER MILLING RECORD.

The twenty-ninth ordinary general meeting of shareholders in the Modderfontein Deep Levels, Ltd., was held at Johannesburg on May 13th.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks said :—A new milling record was set up for the fourth successive year by the crushing of a total of 531,500 tons of ore, this being 1,200 tons in excess of the previous year's record.

The yield per ton was 44s. 11d., and the working costs, after including development, were 15s. 8.4d.

PROFITS AND DIVIDEND.

The profit on working was £777,402, or 29s. 3d. per ton milled, and exceeded the corresponding figure for the previous year by £3,796. Sundry revenue was £17,517, increasing the working profit to £794,918. Taxation absorbed £110,337 and charities £2,041, leaving a net profit of £682,540, or £3,846 more than in 1928, to be carried to the appropriation account.

After making the provision for the year towards the company's liability to the Miners' Phthisis Compensation Fund, the balance of the net profit was insufficient by £7,460 to maintain dividends at the same rate as those declared for the previous four years, namely, 135 per cent., or 6s. 9d. per share. In view of your company's sound financial position this shortfall was provided out of the balance carried forward in the appropriation account, thus reducing that balance to £143,273.

There was an expansion in the scale of development work undertaken, the respective footages being 6,600 in 1929 and 4,782 in 1928. 5,319 feet of this work was on Hanging Wall Leaders, the footage accomplished in these horizons being nearly 60 per cent. greater than in 1928. Attention is now also being directed to the Leader 200 feet above the Main Reef, the horizon of which is being developed from four cross-cuts recently completed. It is intended to continue prospecting all areas of the mine in which there is a possibility of the exposure of payable ore in these Upper Leaders.

The recalculation of the developed ore reserves at the end of the year disclosed that those on the Main Reef amounted to 2,550,000 tons of an average value of 8.8 dwt. over a width of 79 in., the quantity being 450,000 tons less and the value a fifth of a pennyweight less than a year previously, the width remaining unchanged. In addition to these Main Reef ore reserves, there were calculated to be developed 110,000 tons of an average value of 4.7 dwt. over a width of 60 in. in Hanging Wall Leader Blocks, bringing the total reserves to 2,660,000 tons, or 340,000 tons less than at the end of the preceding year. This decrease must be regarded as satisfactory, seeing that nearly double that tonnage was mined during the year. Of the ore stoped last year 8 per cent. was derived from Upper Leaders.

THE CURRENT YEAR.

For the first four months of the current year last year's milling rate has been maintained, a total of 174,300 tons having been dealt with, as compared with 175,100 for the corresponding period of 1929. The revenue per ton milled has been about 1s. below last year's average, due in a great measure to the decrease in the value of the ore reserves. Working costs at 15s. 9d. have remained at approximately the same level, so that the working profit is about £10,000 less than was earned for the first four months of last year. Development operations have proceeded on a similar scale to last year and continue to be confined mainly to the Upper Leaders, which show little variation either in percentage of payability or in average value, namely, 16 per cent. payable, having a value of 331 in.-dwt.

The report and accounts were adopted.

LEOPOLDINA RAILWAY COMPANY, LIMITED.

RECORD YEAR.

Presiding, on the 3rd instant, at the general meeting of this company, Mr Oliver R. H. Bury said that the passenger traffic continued to develop year by year, 26,580,000 passengers, or rather over 3,000,000 more than in the preceding year, having been carried in 1929. Unfortunately, a large number, travelling at absurdly low rates from Rio to the suburbs and *vice versa*, had been carried at a loss, and so far they had not been able to increase the fares. As to goods traffic, £743,575 had been received from coffee and £147,371 from sugar—those together forming slightly more than half of the total receipts from goods. With regard to the Leopoldina Terminal Company, just as the shareholders of the railway company had had to wait patiently for authority to increase their fares, so the Terminal Company was now waiting and expecting the authority to increase its tram fares. As to prospects, it was estimated that the total tonnage of coffee to be carried would be equal to that of last year. The latest telegram indicated that traffic prospects were now somewhat brighter. Generally they had had a good year, and presented the best results since the formation of the company. The aim and hope of the board was that, having earned and paid a 5 per cent. dividend for two years in succession, they might be able to maintain it.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 31, 1930 :—

(000's omitted.)

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	6,296	From Revenue	7,154
Interest, &c., on Debt	1,542	Increase in Debt	1,591
Sinking Fund	495		
Sundries	395		
Increase in Balances	17		
	8,745		8,745

The ordinary revenue for the week amounted to £7,153,600, as compared with £6,496,100 in the corresponding week last year. Income tax and surtax were lower at £440,000 and £610,000, against £513,000 and £670,000 respectively. Estate duties brought in £3,220,000, against £1,550,000, while Customs amounted to £2,253,000, against £2,226,000, and Excise to £720,000, against £827,000. The National Debt was increased by £1,591,000, as shown below :—

(000's omitted.)

	£		£

,, 4	Sovs.	Nil			
,, 5					
	Total	81,360		Total	1,290,133

Net withdrawals, £1,208,773

Messrs Samuel Montagu and Co. write on June 4, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £157,185,525 on the 28th ultimo (as compared with £157,498,068 on the previous Wednesday), and represents an increase of £11,225,441 since January 1st last.

In the open market yesterday £641,000 of bar gold from South Africa was available. There was a keen demand from Germany, and at the fixed price of 84s. 11½d. £524,000 was taken for that country. India took £50,000, the Continental trade £37,000, and the Home trade £30,000.

In addition to the gold purchased in the open market there have been withdrawals on German account from the Bank of England. Receipts amounted to £81,360, including £70,000 in sovereigns received from abroad, and withdrawals totalled £1,290,135, of which about £830,000 was in bar gold for Germany and £450,000 in sovereigns "set aside." The net efflux during the week under review is £1,208,775.

SILVER.

The weakness of the market developed rapidly during the past week. Advices from Shanghai indicate that the market there has become demoralised and the swift decline in the tael exchange resulted in heavy sales of silver on an unwilling market. The offerings from China have been augmented by selling from other quarters, particularly America, and save for some inquiry from the Indian bazaars at strictly limited prices, the market has received little or no support.

The week under review opened with a fall of 3/16d. for cash and 11/16d. for two months' delivery, and except for a comparatively slight rally on the following day, the decline has been heavy and continuous, prices being quoted 16 5/16d. and 16 3/16d. yesterday, a fall of ⅞d. for both deliveries. With further heavy selling to-day and the market showing no resistance, prices were fixed ½d. lower at 15 13/16d. and 15 11/16d., establishing yet another low record.

There are, at the moment, no signs of encouragement, but the presence of a large speculative element must necessarily afford to the market a great measure of uncertainty.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 26th ultimo to mid-day on the 2nd instant:—

IMPORTS.	£	EXPORTS.	£
France	10,005	China (including Hong Kong)	15,234
Switzerland	81,539	British India	175,160
Mexico	84,259	Other countries	7,683
Canada	25,483		
British West Africa	22,360		
Other countries	7,801		
	231,447		198,077

No fresh Indian Currency Returns have come to hand.

The stocks in Shanghai on the 31st ultimo consisted of about 100,700,000 ounces in sycee, 144,000,000 dollars, 14,500,000 Saigon dollars and 10,560 silver bars, as compared with about 99,200,000 ounces in sycee, 142,000,000 dollars, 15,700,000 Saigon dollars and 10,920 silver bars on the 24th ultimo.

Statistics for the month of May last are appended:—

	Bar Silver per oz. std. Cash delivery.	Bar Silver per oz. std. Two mos. delivery.	Bar Gold per oz. fine.
Highest price	19 3/16d.	19½d.	84s. 11½d.
Lowest price	17 7/16d.	17¼d.	84s. 11.
Average price	18·849d.	18·782d.	84s. 11·39d.

Company News.

REPORTS AND NOTICES.

Williams Deacon's Bank, Ltd., give notice that in order to prepare the interest warrants due June 24, 1930, on Eastbourne Corporation 3 per cent. redeemable stock 1920/40, the books will be closed from June 11, 1930, to June 24, 1930, inclusive.

RUBBER, &c.

CENTRAL PERAK RUBBER COMPANY.—The fourth annual report and accounts for year 1929 shows the crop was 1,192,334 lbs., which realised an average price of 8.87d. per lb. (last year 816,975 lbs. realised an average price of 9.77d. per lb.). The output for the current year is estimated at 1,223,500 lbs., subject to cessation of tapping during May, 1930 (last year 1,085,600 lbs.). The profit for the year was £13,774 (last year £10,557). Adding balance brought forward £6,621 (last year £11,844), less building and machinery reserve £2,000 (last year the same), there is an available balance of £18,395. The directors recommend the payment of a dividend of 2½ per cent., which will absorb £10,000 (last year the same), leaving a balance to be carried forward of £8,395 (last year, subject to estate staff commission, £6,901). Meeting: June 11, 1930, at 2.30 p.m., at King William Street House, E.C.4.

LINGGI PLANTATIONS LIMITED.—Profit for 1929 amounted to £36,085, against £50,578 for 1928. The ordinary dividend is reduced from 7½ per cent. to 5 per cent. for the year. The carry-forward is £22,121 (subject to commission to Eastern staff). Since the close of 1929 there has been created convertible and redeemable 7 per cent. debenture stock. £270,000 was issued on January 1, 1930, at par. The stock is convertible at holder's option on or before December 31, 1935, into ordinary shares of £1 for each £1 10s. of stock. Meeting June 10th at 12.30 p.m. at 2–4 Idol Lane, E.C.3.

MALACCA RUBBER PLANTATIONS.—The following table shows financial results for the past three years:—

Meeting, 2–4 Idol Lane, June 11th, at 2.30 p.m.

THE BANK OF TAIWAN, LIMITED.

(*Registered in Japan*, 1899.)

Capital Subscribed - - - Y15,000,000
Capital Paid Up - - - - Y13,125,000

Head Office - - TAIPEH, FORMOSA.
London Office 40/41, OLD BROAD STREET, E.C.2

BRANCHES:
Amoy, Batavia, Bombay, Calcutta, Canton, Foochow, Hankow, Hongkong, Keelung, Kobe, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town of the world.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

MISCELLANEOUS.

BRITISH ELECTRIC TRACTION COMPANY.—The following table shows the salient figures in comparison with the previous three years :—

Year.	Gross Profit.	Net Profit.	Pref. Stock.	Pref. Ord. Stock.	Def. Ord. Stock.	Undivided Profits Account.
	£	£	%	%	%	£
1926/27 ...	301,044	252,487	8·00	8A	15B	304,378A
1927/28 ...	311,908	259,404	7·50	8	15B	172,226
1928/29 ...	330,822	276,474	7·67	8	15B	186,251
1929/30 ...	396,261	332,560	7·89	8	15B	251,798

With regard to (A) in above table, £132,626 (part of the sum of £304,378 standing to the credit of undivided profits account), equal to 10 per cent. on the ordinary stock was capitalised and distributed to the ordinary stockholders in fully-paid £1 deferred ordinary shares. At the same time the ordinary stock was converted into an equal amount of 8 per cent. non-cumulative preferred ordinary stock. With regard to (B), payable as to 5 per cent. in cash and 10 per cent. in £1 deferred ordinary shares. The annual general meeting will be held on June 16, 1930.

LEVER BROTHERS, LIMITED.—Holders of the 8 per cent. cumulative preferred ordinary shares of 5s. each in Lever Brothers, Ltd., have been asked to exchange their holdings for 20 per cent. cumulative preferred ordinary shares in the proportion of two 20 per cent. for every five 8 per cent. held, with payment for fractions in cash. There is at present in issue £952,462 of the shares affected, while the present issued 20 per cent. shares amount to £3,787,312.

FINANCIAL TIMES, LIMITED.—The second annual report reveals a profit of £131,337 after payment of directors' fees, depreciation and making provision for income tax. For 1928 the profit was £191,179. The sum of £10,000 is transferred to capital reserve account and £10,000 to general reserve. For 1928 £81,964 was put to general reserve. The ordinary shareholders receive 10 per cent. for 1929, against 7½ per cent. for 1928. The carry-forward is £38,465, against £22,816 brought in. The allocation of £10,000 to reserve makes general reserve £91,964. It is recommended that £31,964 be written off preliminary expenses, reducing that item to £50,000 and leaving general reserve at £60,000. Cash is at £87,033, against £80,159.

SENA SUGAR ESTATES.—In view of the uncertainty of the outlook in the sugar market, the directors have come to the conclusion that no interim dividend on the 7½ per cent. cumulative participating preference shares for 1930 should be declared until the trading results for 1930 have been ascertained with some degree of certainty, and accordingly they do not propose to pay an interim dividend on July 1 next.

ALLIED IRONFOUNDERS, LTD.—The directors of Allied Ironfounders, Ltd., officially announce that the report and accounts will be forwarded to shareholders in about three weeks' time, and that they will recommend the payment of the dividend on the 7 per cent. cumulative preference shares for the year ending March 31, 1930, but no distribution will be made on the ordinary shares.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of May are as follows :—Production of oil, 33,400 tons; deliveries, 32,740 tons.

STEAUA ROMANA (BRITISH), LTD.—The production of the Steaua Romana Company, Bucharest, for the month of May was 82,410 tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during May, 31,550 tons; oil purchased during May from other companies, 44,750 tons.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended May 28, 1930 : Venezuela, 36,775 barrels; Trinidad, 13,549 barrels; total, 50,324 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the week ended May 24, 1930, was 236,300 barrels.

SERVICE PETROLEUM COMPANY, LTD.—Production from the company's oil wells at Gura-Ocnitzei, Ceptura and Moreni for week ended June 1st was 5,149 tons (36,043 barrels).

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

A spell of fine weather over the United Kingdom during the past week has greatly enhanced agricultural prospects, all cereal crops responding to warmth and sunshine, so that arrears of growth are speedily overtaken. Winter wheat now presents a healthy appearance, as colour is fast becoming restored, while spring sowings are also in good condition. Trade in native wheat continues on a small scale, but sellers show more reserve and prices maintained a firm level. Very little business was reported on the import market, Canadian and Indian descriptions being chiefly favoured. The general tone, however, keeps very steady, as holders refrain from pressing, while influenced by stimulating Argentine and North American cables. Shipments were of fair extent from the Northern Hemisphere, though the total quantity is still quite moderate, with passage supplies to Europe gradually increasing. Weather and crop news are the governing factors in the international situation, and indifferent reports from the United States, also some Continental countries, imparted a firming influence, but favourable climatic conditions during the present month will considerably improve harvest prospects. Primary receipts in Canada and the United States are increasing and, despite the continued policy of withholding supplies, selling may become more assertive later in the year when the new harvests are pressing. Larger Indian offerings and a good demand for shipping space confirm expectations of liberal exports, and latest estimates show an increase of nearly 7,000,000 quarters on the previous yield. Plate shipments are running light, and in view of the small chartering movement no appreciable increase from this contributor is likely for some while ahead, consequently the wants of deficiency countries must be made good in North America. Flour ruled firmer in sympathy with wheat, but bakers show no disposition to enter into forward commitments at this juncture, while higher offers on c.i.f. terms also fail to interest importers. Feeding stuffs proved quiet of sale, but values steady for maize on unfavourable Argentine climatic conditions interrupting transport of new crop supplies. Barley and oats are difficult to sell and rates a shade easier.

WHEAT.—Quiet. No. 1, Northern Manitoba (Atlantic shipment), ex ship, 45s. 9d.; No. 2, ditto, 45s. 3d.; No. 3. 44s. 6d.; No. 4 Manitoba, 43s. 3d.; No. 5, ditto, 40s. 3d.; No. 6, 34s. 3d.; No. 2, hard winter, 42s.; No. 2, mixed Durum, 38s. 9d.; Rosafe, 62½ lbs., 41s. 3d.; Barusso, new crop, 62½ lbs., ex ship to arrive, 40s. 3d.; Australian, 43s. 3d.; choice white Karachi, 41s. 6d. per 496 lbs.; English, 8s. 4d.-8s. 6d. per 112 lbs.

FLOUR.—Firm. London straight run, 37s. 6d. per sack for country deliveries, and 36s. 6d. London area. Of imported: Manitoba patents, 33s.-36s.; Buffalo, 33s.-36s.; Australian, 30s. 6d.-31s. ex store. On c.i.f. terms: Manitoba top patents, May-June, 33s.; export, ditto, 30s. 6d.; Australian, 28s.-28s. 6d.; French, prompt, 24s.-25s. per 280 lbs. Argentine low grade, May, £5 15s. per ton.

MAIZE.—Firmer forward in sympathy with advanced c.i.f. offers. Plate, landed, 28s.; new, ex ship to arrive, 26s. 6d.; April-May, 26s. 6d.; May-June, 25s. 9d.; June-July and July-August, 25s. 3d. per 480 lbs. Yellow maize meal, £7 10s. per ton f.o.r. London. Yellow African, £5 15s. per ton ex ship.

BARLEY.—Quiet. Californian, old, landed, 34s.-40s.; new, ex ship, 34s.-40s. as to sample; Chilian, brewing, 33s.-37s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 34s.-36s. per 448 lbs. Black Sea, ex ship to arrive, f.a.q., 16s. 9d.; landed on sample, 18s.-19s.; Persian, landed, 16s. 9d. per 400 lbs.; English malting, 7s. 3d.-8s. 9d.; feed, 7s.-7s. 2d. per 112 lbs.

OATS.—Slow for Plate descriptions. Plate, landed, 14s. 6d.; ex ship to arrive, 13s. 6d.; Chilian, white, landed, 20s.; ditto, tawny, 15s. 6d.; German, landed, 18s. 6d.; ex ship to arrive, 17s. 6d.; mixed Canadian feed, 12s. 9d. per 320 lbs. English, 6s. 4d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27:—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to May 31	Cwts. 134,308	Cwts. 95,098	Cwts. 262,838	Cwts. 131,275
39 weeks to May 31	8,721,225	9,198,813	9,953,943	10,909,733
Average price of English wheat per cwt.	s. d. 8 7	s. d. 9 9	s. d 11 2	s. d. 12 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.

Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	107	130⅞	103⅛	107⅛	105⅛

THE COAL TRADE.

Our Sheffield correspondent writes:—The export market and prices of South Yorkshire coal have weakened further, quotations having declined by 6d. to 1s. per ton. Few contracts are being placed. Small fuel is accumulating at the pits, owing to the limited consumption at the textile factories and other industrial concerns. Prices tend downward. Demand for house coal is below the average of June. Coke has slumped further. Supplies are superfluous and holders of stocks have reduced their prices one or two shillings per ton. For inland trade blast-furnace coke can be bought at 12s. at ovens. For export, the price is even lower.

Our Glasgow correspondent writes:—Washed nuts continue to be the only firm spot in the coal market, and this is due rather to the collieries' enforced short-time working and consequent restricted supplies than to improved business. Enquiries generally are still running on quiet lines, and with land-sale business slack, as is usual at this time of the year, extra supplies of coal are being thrown on to shipping market. Current prices for shipping business are approximately as follows:—LANARKSHIRE: Ell best, 13s. 3d.; splint best, 15s. 6d.; splint second, 14s. 3d.; navigation, 16s.; navigation second, 14s. 6d.; Hartley, 16s.; steam, 12s. 6d.; trebles, 12s.-12s. 6d.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 6d.; dross, 9s. 6d. FIFE: Screened navigation, 16s. 6d.- 17s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 3d.; trebles, 13s.-14s.; doubles, 11s. 9d.-12s.; singles, 11s.; pearls, 10s. 9d. LOTHIANS: Prime steam, 12s.; secondary steam, 11s. 6d.; trebles, 13s.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 10s. 6d. AYRSHIRE: Unscreened navigation, 16s.; jewel, 16s.; steam, 13s. 3d.; trebles, 12s. 6d.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Notwithstanding the approach of the holidays, there has been no appreciable improvement this week in the shipping position of the South Wales ports, and on Tuesday 37 tips were officially reported idle. There is an almost

Increasing Interest in South American Markets

Estd. *1862*

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of America. With Branches ... Sub-Branches in South ... in London, Bradford ... anchester; in France ... Portugal and U.S.A. ... he concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description. Status reports are supplied on request, and a Monthly Review of Market information in English or French is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

... 36 Charlotte Street. BRADFORD: 33 Hustlergate.

... ffiliated to Lloyds Bank Limited

entire absence of new business, and collieries have been working irregularly in all parts of the coalfield. So heavy are the stocks that one or two companies are contemplating the stoppage of some of their pits for the whole of next week. Prices are nominally unchanged, and for practically every description they are ruling at the minimum schedule figures. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; black veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 3d. to 12s. 9d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite best, large, 36s. to 37s. 6d.; Red Vein, large, 22s. to 27s.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; rubbly culm, 11s. to 12s. 3d.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s.; pitwood, ex ship, 25s. 9d. to 26s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Conditions in the iron and steel markets show few signs of improvement. The difficulties between the merchants and the Continental Steel Cartel are reported to be nearing a settlement, but the uncertainty regarding the position has had the effect of checking business. These difficulties have to some extent operated in favour of the British steelworks, which of late have taken a certain amount of orders which in the ordinary way would have gone to the Continent. Nevertheless, the total volume of business has been very unsatisfactory. The position has been made worse by the gradual falling-off of orders from the shipyards, owing to the completion of work which has not been made up by new orders. Conditions in the pig iron market remain moderately steady, but the demand is restricted principally to small parcels, although one large order for delivery over a long period is reported to have been placed. The position in the semi-finished steel market is irregular, but in general the British works are competing keenly for any business about, and securing a good share of the orders going. Export business continues on a disappointing scale; but there is perhaps rather more life in some of the overseas markets than has been apparent for some time.

Our Middlesbrough correspondent writes:—The market for Cleveland iron does not improve and business is on the same restricted lines. It is expected that consumers will have to come on the market to make further purchases before long, as many contracts will be running out; but their attitude at present is to delay this as long as possible. The weekly market on Tuesday was again very quiet and the amount of business transacted on a small scale. Makers adhered to recent prices, viz.: No. 1, 70s.; No. 3, 67s. 6d.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s. f.o.b. or f.o.t. In the hematite trade business is slightly better and the sale just made by Pease and Partners, Ltd., to one of the large Sheffield combines of 175,000 tons special analysis hematite for delivery over five years is having a good effect and may induce further orders of a similar nature. The contract is made on a sliding scale arrangement in regard to price, but details are not available. For early deliveries of mixed numbers some makers are obtaining 74s. for small lots, but for quantities of a few hundred tons would accept 73s. 6d. and even 73s. for still larger lots, as they are anxious to get stocks on hand reduced. The total shipments of pig iron and manufactured materials for May are just slightly ahead of those of April, the details being as follows:—

	April.	May.
Pig iron	14,345	17,878
Manufactured iron	1,589	1,678
Manufactured steel	44,379	43,277
	60,313	62,833

In the steel trade, work is becoming irregular in some departments, but the recent orders for rails for the Union of South Africa have come in very opportunely. Local works are in the running for one or two large bridge contracts for abroad and there are other important jobs pending. Prices for steel for home consumption under the rebate scheme are unchanged, viz.: Plates, ⅜-in. up, £8 15s.; joists, £8 10s.; sections, £8 7s. 6d. Other lines are also unaltered at £10 15s. for iron crown bars; £8 10s. for heavy steel rails; £9 12s. 6d. for 21/24 gauge black sheets; and £11 15s. for 24-gauge galvanised corrugated sheets, all for home use. The ore market is stagnant as regards new business and dealers are experiencing great difficulty in getting consumers to take out their period contract quantities. Best Bilbao rubio is freely offering for prompt delivery at 20s. per ton c.i.f., but it is impossible to say what price would have to be accepted if a forced sale became necessary. The rate of freight Bilbao/Middlesbrough for early loading remains about 5s. 6d. Coke is very difficult to dispose of. With consumption reduced there is a considerable surplus on the market and prices are weak. Good furnace qualities are offering may 17s. delivered works and less would be accepted. The number at furnaces in blast in the district is reduced to 33 by the blowing out of a basic furnace at Dorman, Long and Company's Newport works.

Our Sheffield correspondent writes:—Holiday preparations have disorganised the iron and steel markets and buying of materials, as regards bulk quantities, is practically at a standstill. The large steel works are suspending operations for seven and ten days. The situation at the blast furnaces tends to grow worse, and if consumption does not improve soon, several will have to be damped down. Steel makers are struggling against a crop of adverse influences—the slump in cotton and wool, the depression of nearly all the foreign markets, and the quietude in shipbuilding, shipping and coal. All these industries are customers of steel in some form or another, and their buying is far short of normal. All authorities for the trade state May was the worst month experienced for a long period. There is no sign of the resumption of the many suspended deliveries of raw materials. A general revival is not anticipated until after the stocktaking at the end of the month. In the alloy steel section and engineers' tools a moderate amount of business is passing, and the motor industry is consuming a considerable weight of steel castings and forgings, tool steel and tools. The cutlery and electro-plate branches report that business is extremely poor in London and the provinces.

Our Glasgow correspondent writes:—Business in the West of Scotland iron and steel markets remains unsatisfactory. At the steel works a short week is becoming the normal week, and notwithstanding the curtailment of output, there is no shortage of supplies. Users of manufactured sections for structural work, &c., are certainly giving a greater preference than hitherto to the home product, and there is a fair amount of business passing for their requirements. The market for shipbuilding material is poor. In the sheet trade the position is very much as indicated a week ago, plants being fairly well, though not fully employed. Prices are unchanged at the low levels which have been current for some little time.

Our Cardiff correspondent writes:—The most serious development in the South Wales iron and steel industry this week has been the decision of Richard Thomas and Company, Ltd., to close their rolling mills department at the Cwmfelin tinplate works on June 28th next, and the finishing departments as soon as the works' stocks of bars have been exhausted. The steel furnaces at these works ceased operations last year, and the total number of workmen affected is over 1,000. Slightly easier conditions prevailed on the tinplate market during the week, and prices ruled between 18s. and 8s. 3d. per basis box compared with 18s. to 18s. 6d. the previous week. Tinplate bars were stationary at last week's prices, but tin and spelter were quoted a shade lower. Shipments last week were substantial, and stocks have been reduced to 189,196 boxes.

OTHER METALS.

TIN.—Market depressed and values gave way sharply following the publication of the monthly statistics for May, which show a further increase in the total visible supply. This induced a good deal of selling pressure, and liberal offerings were moderately absorbed. Market closed firmer on lighter offers and higher Eastern advices. Stock and landing in the United Kingdom on May 31 amounted to 19,791 tons, against 18,275 tons in April. Total visible supplies 40,055, against 36,251 tons. Shipments from the East during May were 10,054 tons, embracing 4,900 tons to the United States; 2,238, United Kingdom; 1,988, Continent; and 838 tons other countries. Standard cash sold £139 10s. to £134, £137 12s. 6d.; three months, £142 to £135 15s. to £137 to £139 12s. 6d. In the East, sales were recorded at £143 12s. 6d. to £144 and £139 5s. per ton c.i.f.

COPPER in slow support, and with sellers more in evidence a weaker market resulted, with slight irregularity in attendance. Standard cash changed hands at £53 10s. to £53 and £52 17s. 6d.; three months, £53 15s. to £53 17s. 6d. and £53 2s. 6d. per ton.

LEAD proved a generally dull market, though later assumed a steadier tone on improved buying orders. Good soft foreign pig, June, sold, £17 16s. 3d. to £17 18s. 9d.; July, £18 to £18 1s. 3d.; August, £18 2s. 6d.; September, £18 to £18 3s. 9d. and £18 1s. 3d. to £18 2s. 6d. There was a fair amount of carrying from June to September at 5s. contango.

SPELTER was in fair support, but with sellers to the fore, values took a downward course, but later developed firmer features.

TIN PLATES quiet. I.C. coke, prompt and forward, 18s. 1½d. to 18s. 4½d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, June 4th.

Values have fallen during the week some 25 points on favourable weather reports and lack of business. The weather during May was favourable on the whole, rains in the West doing good, and in the East were very beneficial. Spot sales for the week May 29th to June 4th (inclusive) are: 13,000 bales, of which 3,720 bales are American, 3,900 Brazilian, 480 Argentine, 1,500 Peru, 950 Egyptian, 2,130 African, 170 East Indian and 130 sundries. Imports for the same period are: 34,184 bales, of which 12,408 are American, 1,774 Argentine, 2,417 Peruvian, 11,542 Egyptian, 3,631 African, 2,168 East Indian, and 244 sundries. Quotations to-day are: American Middling, 8·43; Egyptian sakel, 13·50; uppers, 9·93; Brazil fair, 7·65; Peru G.F. smooth, 8·68; West African Middling, 8·28; and East African G.F., 8·93.

MANCHESTER, June 4th.

Cloth manufacturers have reported a slack demand, and it is only in isolated instances that sales have been arranged. There has been an almost complete absence of inquiry for India, but news from Calcutta has been rather more reassuring. Some merchant houses have received instructions to restart shipments. News from China remains discouraging, and it is impossible to expect trade developments with silver at its present record low price. Buyers for the remaining minor outlets both East and West have adopted a policy of looking on, owing to the possibility of lower prices. Taking the market as a whole, there are too many adverse factors present for buyers to operate on a freer scale. A larger number of spinning firms in the American section shut down last week-end for an indefinite period, and extended holiday stoppages are likely next week. The turnover remains small and prices poor. Only retail sales have taken place in Egyptian numbers. The aggregate amount of business done in yarn and cloth is not equal to the limited production, and the opinion is still held that the position might easily get worse before an improvement sets in.

THE WOOL TRADE.

Our Bradford correspondent, writes:—In all sections of the industry the employees are steadily drifting back to the mills. Even in the wool combing establishments many operatives have resumed, and there is a growing belief that the strike will completely collapse after the holidays. Actual business in all departments is uneven, and inquiry for tops has fallen off somewhat this week. Merino tops are possibly a shade cheaper, though it is difficult to obtain any concession on prices quoted for small lots of good standard types for immediate delivery. Crossbreds appear to be steady, but neither for merinos nor for crossbreds is there any demand on forward account. Spinners, of course, are confronted with difficulties owing to the inability of manufacturers to take delivery of yarns, and in most cases standard counts are being put into stock in preparation for the re-opening of the weaving mills. Repeat orders for piece goods have been disappointing, mainly because manufacturers have been unable to guarantee delivery in time for the seasonal trade, but stocks of cloth have been considerably reduced during the last few weeks. Wholesale fabric buyers appear to have more confidence in values, and it is thought that with continued firmness in the raw wool markets, business in piece goods will show an expanding tendency once the wages dispute is out of the way. Reports from the Continent, particularly from Germany and France, indicate steady recovery and increasing machinery consumption, this being reflected in a marked reduction in the stocks of tops.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

There have been excellent rainfalls in practically every State in Australia. Mid-winter is now approaching, and the rains will do an immense amount of good for both pastoralists and agriculturalists. They will help to put wool into good condition by improving the pastures and washing out much of the dust. The forthcoming clip may be expected to be a very good one in every respect. It should be particularly well grown, and in light condition. There is reason to expect stability in prices, particularly with the improvement which has come about in Continental manufacturing conditions. The balance of the current clip is being marketed quickly, and apparently there is sufficient buying power to lift it. Another 43,000 bales will find their way into the hands of the trade this week, and it is not expected that there will be any big weight to carry forward into next year. General satisfaction has been expressed with the London sales which finished last week. The Continent did well to absorb 69,000 bales, mostly merinos, the home trade taking 41,000 bales, and America 2,000 bales, whilst the carry over is 48,500 bales. Altogether the series was the best held this year, and prices may be expected to remain firm.

HIDE, LEATHER AND ALLIED TRADES.

Although prices for cattle hides were steady at the auctions held at Manchester on Tuesday there is a feeling that values for tanners' raw material from domestic cattle must yet come a trifle lower before business can be considered on a satisfactory basis. Calfskins are inclined to be easier, while sheepskins generally sell at last prices. Business in connection with foreign hides has not been quite so easy to transact as compared with the past fortnight on account of certain origins forcing the advances recently registered at what many consider a too rapid rate. In the South American market fair sales of frigorifics have been made on the basis of 7 5/16d. for Argentine ox, with light ox selling at 7d. and Montevideo ox at 7⅞d. Business in Saladero hides has been less, and apart from sales of Bovril ox at 6⅞d., and light ox at 5 5/16d., there is little of interest to report. Dry River Plates in certain kinds have changed hands, but business has been restricted on account of the prices asked by shippers. The same remark applies to African hides, where the advancing tendency of values is also marked. Capes are now being quoted at 8⅜d. and 7⅜d. for first and second drys, with dry salted on offer at 8d. and 7d., for 20/30 lbs., and 7⅜d. and 6⅜d. for 30/40 lbs. The near approach of the holiday has to some extent interfered with the sale of sole leather, but in spite of this the turnover has been maintained fairly well and all things considered the position is satisfactory. Light bends of the better description English and wetsalted are being taken up well, while there is a steady call all the time for 10/20 lb. weights. For averages above the latter the call is not good, and little improvement is looked for until shoe manufacturers turn their attention to the heavy grades of footwear. Light dry hide bends for manufacturing purposes are also accounting for a satisfactory inquiry, but only in the better descriptions, common and heavy weights being a slow sale. Home-produced offal is not in such good request. Fair stocks of Continental bellies and shoulders are on the market at prices at which it is impossible for English tanners to compete, and these are largely responsible for the restricted business passing at the present time. Regular day-to-day trade is the general experience of most producers and distributors of upper leathers, with no large business passing in any particular line. Glace in brown, together with willow calf are as good selling lines as any, while the call for both black and brown suede leather shows signs of further expansion. Reptiles are a dropping sale all the time; best part of the business being in connection with python and certain lines of lizard. Imitation reptile grains are a regular inquiry with a satisfactory turnover all things considered, while the call for patent leather is usually concentrated on the cheaper grades. Semi-chrome leathers are quiet, as is also the case with most descriptions of curried leathers.

VEGETABLE OILS AND OILSEEDS.

Only moderately active conditions prevail. Linseed oil continues somewhat scarce for prompt and early delivery and is firm around £42 10s. for spot and £41 10s. for June delivery ex Hull. More interest has been taken in the forward positions, especially July-August. Cotton oil is in slow demand and not so firm. Crude Egyptian offers at £28 10s. and common edible at £31 5s. ex Hull, prompt. Other seed oils are inclined easier. In the oil-seed section linseed is in only small demand, but is steady, Plate on spot being held for £17 15s. and June shipment, £17 10s. Calcutta linseed has been in better request at somewhat lower figures. The quantity of linseed on passage to Europe has increased to 123,000 tons, which is 11,800 tons more than a week ago. Cottonseed is easy owing to lack of support, black Egyptian on spot and for June and July loadings having declined to £6 13s. 9d., while for August £7 has been accepted. Oilcakes and meals have been further reduced in price, but the demand continues poor.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market remained without change for all spot goods and consumers' demands disclosed some revival. There are signs of a gradual further extension of trade interest, especially on manufacturing account and this, in conjunction with the fact that offers from the leading producing countries are now being made with more reserve, imparts an improved tone to the commodity in general. Several factories, now that their supplies of home-grown roots have been worked up, will apparently have a complete overhaul of machinery and await next crop, instead of continuing in operation on imported raw sugar. A glimpse into the state of the market a year ago reveals the August position in the raw Terminal section standing at 7s. 1½d., compared with 6s. 3d. at present. And certainly the statistical situation is no worse now; on the contrary, invisible supplies are at vanishing point. Just recently, the market felt the effects of Natal and Mauritius sellers coming to the fore, but such offers were readily absorbed. Terminal sections manifested more steadiness and business in raw proved of fair dimensions. Sales include August delivery at 6s. 3d. to 6s. 3¾d.; December, 6s. 6¾d. and 6s. 7½d., combined to 6s. 7¼d.; March, 7s. 8¼d. to 7s. 9¾d.; May, 7s. 11¼d. to 8s. Cuban, 96 per cent., July, to the United Kingdom, held for 6s. 1½d.; and August, 7s. c.i.f. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending May 31st amounted to 131,240 tons, against 120,049 last year. Cuban receipts last week cabled 27,837 tons, against 54,842 same time last year; exports, 34,269, against 103,179; and stocks, 1,701,274, against 1,439,050. Centrals at work, 18, against 3.

COFFEE.—There was an increased movement on the spot, in which medium and even common qualities joined. These went off at steady prices. All really attractive grades in the cup sold readily at firm to dearer rates.

COCOA.—Only a moderate demand ensued for spot lots, but rates remain steady. Some fine Granada, sold, 52s. 6d.; Trinidad, 64s.-65s. Forward positions easier. Accra, F.F., May-July, 34s. 6d.; mid crop, 30s.; and October-December, 35s. 6d. f.o.b. Terminal: September delivery, sold, 37s. 6d. to 36s. 6d.

TEA.—Indian auctions during the week totalled 47,617 packages. There was a much quieter market for all common and plain liquoring medium qualities and these ruled ¼d. to 3d. down. Better medium and really fine teas about steady. Ceylon sales of 28,431 packages came to a comparatively quiet market, and with the exception of a few coloury fannings and flavoury leaf teas, prices declined ¼d. to 1d. per lb. Quality from many gardens continues to fall off. Withdrawals from auction a more frequent occurrence both regarding Indian and Ceylon. There is quite a good demand for China tea, spot, London, and Keemuns sold freely at 1s. 9d. to 2s. New season's much smaller production and quality poor in many instances owing to rain-damage.

RICE.—With marked reserve on the part of Burma shippers owing to difficulty attaching to shipment, these qualities held for higher rates. Spanish, also Italian, steady, though quiet. Two Stars Rangoon, spot, London, sellers, 13s.; June, sellers, 12s. 4½d.; July, 12s. 5½d. Spanish oiled, May shipment to London, 14s. to 14s. 3d.; Italian, 14s. 6d. c.i.f. No. 3, Burma to Levant, quoted, 12s. 2½d. c.i.f., double bags. American blue rose from 24s. to 25s. c.i.f. S.Q., to Cuba, 12s. 4½d. Saigon No. 1, round grain, June-July, to Europe, 12s. 4½d. Siam, Super, June-July, 17s. 3d. Californian nominal. Landed last week, 443 tons. Delivered, exclusive of the quantity ex ship, 163 tons. Stock, 1,212 tons, against 4,582 tons at this time last year.

BEANS.—The market remains quiet. Madagascar spot 32s. to 34s. as to sample; afloat 32s. to 32s. 6d. as to position; April-May, 32s. 6d. Ohtenashi, spot, 19s. 6d.; May-June, 18s. 6d. Rangoon haricots, spot, London, 11s. 3d.; June-July, 10s. 9d. c.i.f. Danubian H.P., spot, London, 18s. 6d. to 19s. To Glasgow, North African, new, July-August, 7s. 9d. c.i.f. Chinese ditto, 7s. 7½d.

PEAS.—A dull market was experienced, and prices favour buyers. Japanese, new crop, spot, London, 14s.; old, 13s.; afloat, 13s. 6d.; May-June, also June-July, 12s. 9d.; and new crop, September-October, held for 14s. 3d. c.i.f. Dutch marrowfats, prompt, 15s.; small hand-picked blues, 10s. 6d. f.o.b. terms. Calcutta (per 504 lb.), May-June, 43s. Karachi ditto, 41s. 6d. c.i.f. Maples: No. 1, New Zealand, new crop, June-July, 61s.; f.a.q., May-June, 56s. 6d. Tasmanian, "A" grade, new, afloat, 66s.; June-July, 63s. c.i.f.

SPICE.—Pepper received moderate support and firmness characterised the market. Lampong, April-June, quoted, 11⅛d.; May-July, 10⅞d.; August-October, 9¾d. Muntok, white, April-June, quoted, 1s. 1¼d.; May-July, 1s. 1d.; August-October, 1s. 0¼d. Cloves: market nominal, trade at a standstill. Tapioca unaltered. Sago flour easier, and May-June to Liverpool, quoted, 10s. 4½d. c.i.f. Ginger shows no improvement.

FRUIT (Dried).—Currants: Market steady, with a better demand. Patras quoted 39s.-43s.; Zante, 38s.; Gulf, 40s.-42s.; Vostizza, 44s.-58s.; Australian new crop, 40s.-62s. Sultanas: Smyrna quiet, but Australians in fair request; Smyrna, medium to fine, 44s.-55s.; Cretan, 42s.-60s.; Greek, 42s.-65s.; Australian, 34s.-35s. Dates quiet of sale. Hallowie, spot, 17s.-19s.; Khadrowie, 14s.; Siar, 12s.-14s. 6d. Raisins dull. Valencias, quarter boxes at 36s.-38s. Figs quiet. Genuine, 18s.-30s.; good average, 16s.

EVAPORATED FRUITS.—Market generally steady. Apricots were less in demand, and pears mostly cleared, while peaches experience a moderate movement. Plums quiet of sale, and the turn easier. Plums, Californian new crop, 30's-40's, 57s. 6d.; 40's-50's, 52s.; Oregon, 30's-40's, 50s.; 40's-50's, 48s. Apricots, South African Royal, 50s.-112s. 6d.; Australian, 50s.-67s. 6d. Pears: Californian Lake County, fancy, 84s.; extra, 95s. Peaches: Californian choice, 50s.-55s.; fancy, 57s. 6d.-62s.; South African 1929 crop, 42s. 6d.-50s.; 1930 crop, 42s.-58s. Apples: Californian spot, sliced, extra choice, 35s.-65s.; Canadian, 52s. Almonds firm. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 112s.; Majorcas, 105s.-115s. Bitter-Jordan, new crop, 185s.-192s. 6d. Apricot kernels: Indian sweet, spot, 72s. 6d.; China, bitter, for shipment, 35s. c.i.f.; sweet, spot, 70s. Hazel kernels: Kerasunde, 149s.; Barcelona, 150s. French (shelled) walnuts, 135s.-140s., ex-wharf London; for shipment, 130s. cwt. f.o.b. Bordeaux.

CANNED GOODS.

CANNED FRUITS.—Trade is slow to expand, in view of increasing supplies of fresh fruits, also unsettled climatic conditions, buyers restricting purchases to immediate wants. Prices disclosed some irregularity regarding Californian varieties, but Australian move off steadily. Singapore pines experienced a quiet sale, with ample supplies available, and forward position still weak. Italian tomatoes dull of sale both for spot and shipment parcels.

CANNED FISH.—Market generally quiet. Salmon: Alaska red talls, quoted 48s. 6d.-49s. 6d.; pink talls, 24s.-26s.; and halves, 34s. 6d.-36s. Japanese crab, best quality, 87s. 6d.-90s. Lobsters: halves range from 130s.-135s. Sardines: Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—Corned beef, ox and lunch tongues, also tinned hams steady, but trade restricted owing to unseasonable weather.

CONDENSED MILK AND MILK POWDERS.—Market continues in a dull state. Dutch condensed milk, full cream, sweetened, 5 cwt. casks, 30s.; machine skimmed ditto, 19s.; full cream, sweetened, 56 lb. drums, 50s. English condensed milk, full cream, sweetened, 5 cwt. casks, 40s.; machine skimmed ditto, 22s. Dutch full cream milk powders, 26 per cent. butterfat, roller process, 1 cwt. cases, 58s.; spray ditto, 2 by 56 lb. tins, crated, 78s. Dutch machine skimmed milk powders, roller process, 1 cwt. cases, 26s. 6d.; spray ditto, 2 by 56 lb. tins, crated, 37s. 3d.; ditto, 1 cwt. kegs, 36s.; ditto, 1 cwt. cases, 35s. 9d.; all per cwt. English prices basis, carriage paid nearest station. Dutch prices are nett, ex-store London/Hull or Goole, and cover prompt or gradual delivery to the end of July, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s.; minimum, 1 ton lots; smaller quantity, 6d. per cwt. extra. On the grocery side: Full cream, sweetened, 17s. 6d.; machine skimmed, sweetened, 8s. 3d. basis per case usual packing.

HONEY.—Market dull and rather featureless. Jamaica, white, 48s.-50s.; good amber to fine pale, 40s.-47s. 6d.; dark to fine amber, 30s.-40s.; Cuban pale, 40s.; light amber, 36s.; San Domingo, good to fine, 37s.-40s.; manufacturing, 35s.-36s.; Mexican, 35s.; Californian 50s.; light amber, 45s.; New Zealand, 65s.-95s. cwt.

RUBBER.

A very quiet tone pervaded this market, but prices held together fairly well. Standard sheet spot and June sold, 6 11/16d.; July-September, 6 13/16d.; October-December, 7 1/16d.; January-March, 7 5/16d. and April-June, 7 3/16d. London stocks increased 245 tons on the week, landings being 1,893; deliveries, 1,648; stocks, 77,198, against 31,539 last year. Liverpool stocks 804 tons up, landings, 1,048; deliveries, 244; stocks, 25,526, against 4,642 same time last year.

GENERAL.

JUTE.—A dull and weaker market was evidenced, as spinning demand on European accounts fails to extend and offers made with fair freedom by holders. Firsts May-June and June-July quoted, £22 17s. 6d.; new crop, August-September sold £23 15s.; September-October, quoted, £23 15s. Lightnings, June-July, £22 7s. 6d.; August-September, £23. Hearts, June-July, £20 10s. c.i.f.

HEMP.—General demand for Manila qualities quiet, but sellers asked steady prices, while receiving some encouragement from light weekly receipts. J, No. 2, May-July, quoted at £24; K, August-October, £23; L, No. 1, May-July, £22 10s.; L, No. 2, July-September, £21 5s.; M, No. 1, August-October, £22; M, No. 2, September-October, £21 5s.; C, No. 3, May-July, £17 10s.; G, June-July, £24 15s.; and H grade, £24 c.i.f. Africal sisal dull, and No. 1, May-July, including Portuguese, sellers, £28 10s.; No. 2, £27 15s. c.i.f. Receipts last week cabled 24,000 bales against 34,000 last year and 24,000 in 1928. Estimate for next week 31,000, and week after 29,000. Manila shipments last week: U.K., 6,000; Continent, 4,000; U.S.A., 18,000; Japan, 4,000; others, 1,000; local consumption, 1,000, making stocks 153,000 bales.

SHELLAC.—Spot market steadier. T.N., 125s.; Fine Orange, 150s. to 250s.; A.C. Garnet, 145s.; R.L.J. Button Lac, quoted 170s. Futures steady. August, sold, 114s.; October, 118s. To arrive, April-May, sellers, 112s.; May-June, 112s.

COPRA.—Market without new feature and prices easier. Only retail sales resulted on former terms. Straits, F.M.S., June, to Rotterdam, sellers, £20 6s. 3d.; Dutch East Indies, £20 5s.; June sold, £20 11s. 3d. Ceylon, £21 7s. 6d. Sun-dried, South Sea, £19 7s. 6d. Plantation, £19 17s. 6d. H.A.D., £19 15s. To Marseilles: Mixed D.E.I., Padang excluded, June, £19 7s. 6d. Smoked, South Sea, sellers, £19 3s. 9d.; and Manila in bulk, sellers, £19 c.i.f.

PALM KERNELS, to Hamburg, May-June, £14; June-July, £14; July-August, £14 2s. 6d., c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 15s. to 25s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43 10s.; Ceylon, bristle, £18 10s. to £25 5s.; cinnamon leaf oil, 5s. 6d.; for shipment, June-July, 4s. 3d.; citronelle, Ceylon, 2s. 4d.; Java, 2s. 4d.

Bankers' Gazette and Railway Monitor

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. CX. SATURDAY, JUNE 14, 1930. No. 4,529.

ALLIANCE
ASSURANCE COMPANY, LIMITED.
(*Established in* 1824.)
HEAD OFFICE: BARTHOLOMEW LANE, LONDON, E.C.2.
Marine Department: 2-6, Billiter Square, London, E.C.3.
ASSETS EXCEED £30,000,000.
INSURANCES OF EVERY KIND.
LIFE DEPARTMENT.
INCREASED COMPOUND BONUSES on Participating Policies.
Assurances with DISABILITY BENEFITS (including Income Benefit).
Comprehensive Deferred Assurances for Children.
For full information apply to the Head Office or to any of the Offices or Agents of the Company.
A. LEVINE, General Manager.

CHRISTIANIA BANK OG KREDITKASSE
OSLO
Established 1848.
Paid-up Capital and Reserve Funds,
Kr. 40.000.000.—.
Oldest Norwegian Joint Stock Bank. Direct correspondents throughout the country. Offering complete services to banks and firms doing business on Norway.
Correspondence invited

CREDITO ITALIANO
Limited Company Incorporated in Italy.

Capital Subscribed	Lire 500,000,000
Capital Paid-up	Lire 500,000,000
Reserve	Lire 300,000,000

Head Office of the Bank: MILAN.
THE BANK HAS BRANCHES AND CORRESPONDENTS THROUGHOUT ITALY.
London Branch: 2 ROYAL EXCHANGE AVENUE, E.C. 3.
Transacts a general Foreign Banking Business.
STERLING DRAFTS AND DOCUMENTS ON ITALY COLLECTED ON SPECIALLY FAVOURABLE TERMS.
CORRESPONDENT OF THE ROYAL ITALIAN TREASURY.
Telegrams: "*Italocredi, London.*"

THE MONEY MARKET.

MONEY, which last week had been made artificially easy by the distribution of the War Loan dividend financed in part by temporary Government borrowings from the Bank, has this week been much more stringent. The fact that Monday was a holiday meant that calling by

the banks for making-up purposes had to be concentrated into three days instead of the normal four, and on Wednesday new money commanded 3 per cent., while the market narrowly escaped resort to the Bank. Discount rates are also stiffer. On Wednesday a firm 2¼ per cent. was quoted for three months' bills, and the following day the absence of Continental buying helped to drive the rate up to 2 5/16 per cent.

* * * *

The main development of the week was the decision of the Bank of England to deliver for the time being standard gold against its sales in place of fine gold, as had been its practice during recent years. The implications of this change in procedure are dealt with on another page. So far the net result has been to move the gold export point of the Paris exchange from 123.89 francs, first to 123.64 francs, and later, after one of the London refiners had reduced his charges, to 123.78 francs. The establishment of this new gold export point also made it possible for buyers on French account to bid up to 85s. 0⅜d. per oz. for this week's Cape fine gold, and on Wednesday £444,000 of the £476,000 available in the market was taken at this price. France also took £230,739 of gold from the Bank, this presumably being standard gold sold at the Bank's statutory selling price.

* * * *

Market opinion seems divided on the question as to whether the Bank was justified in changing its procedure. As pointed out elsewhere, the Bank is only bound to deliver standard gold, and the holidays afforded a good opportunity for it to revert to the strict letter of the law with the least possible dislocation to all concerned. On the other hand, the opinion has been expressed that the appearance of the reparation loan and the release of the funds mobilised in Paris in preparation for it may mean that the drain of gold to France has nearly ended. If so, it is argued that the Bank might well have waited to make the change until such time as Paris, the only centre affected, was no longer drawing gold from London. It is also said that any suspicion that obstacles are being placed in the way of foreign centres withdrawing gold may promote rather than check the outflow. This makes it all the more important to make it clear beyond question that the Bank is simply reverting to its legal obligations of delivering standard gold, that it is doing so not as a matter of policy but because its stocks of fine gold are running low, that the change may not be a permanent one, and finally that, as pointed out elsewhere, the existing apparent premium upon fine gold in the market finds its counterpart in pre-war experience.

	May 22, 1930.	May 29, 1930.	June 5, 1930.	June 12, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	3	3	3	3	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount ∫ Call	1	1	1	1	1½ (May 1, '30)
Houses \ Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2 3/16–3/16	2 3/16–5/32	2 3/16–5/32	2 5/16	...

The Bank return reflects mainly the Whitsun holidays and the return to normal after the distribution of the War Loan dividend. The former factor accounts for the increase of £4,203,665 in the note circulation and for the decrease of £3,902,343 in the reserve, while the latter explains the contractions of just over twelve millions in Government Securities and bankers' deposits, these last being now back at the low level of £58,822,000. The reduction in the banking department's outside liabilities has outweighed the fall in the reserve, so that the proportion has improved from 48¾ per cent. to 51⅛ per cent.

NEW YORK.

Our New York correspondent cables :—Money is a drug on the market, and promises to be still easier early next week in connection with Treasury tax date financing. The Treasury $400 million issue has been six times oversubscribed. Call funds are unlendable at 2 per cent., and brokers' loans for the week are down $103 million, more than cancelling the increase of the past three weeks. The Federal Reserve System has again added largely to its Government bond holdings, but has reduced its bills, and member banks have paid off $29 million of discounts, bringing down the total of reserve credit by $35 million. The New York banks are entirely out of debt to the Reserve. The ratio of the system is up to 83 per cent.

THE STOCK MARKETS.

Though the direct effect of Wall Street liquidation was confined mainly to international counters, the Stock Markets remained dull and apathetic after the Whitsun holiday. Gilt-edged stocks were easier on the unfavourable trend of the foreign exchanges, but European bonds were steady as a whole, on the eve of the Reparation Loan issue. Home Rails were marked down on disappointing receipts from holiday traffic. Industrial stocks suffered a further slight recession, but for the most part withstood the cold wind from Wall Street more successfully than might have been expected. Royal Mail stock became a nominal market on the appointment of a special committee to overhaul the group's organisation and finance. Rubber shares remained idle, with the commodity at a " record " low level. The effect of satisfactory oil company dividends was largely negatived by unfavourable developments in other centres, and the weakness of base metal prices tended stringently to limit business in many shares, with the exception of Kaffirs.

THE COMMODITY MARKETS.

The Whitsuntide holidays have accentuated the stagnation which already prevailed in most markets. Coal stocks are heavy, demand poor, and prices consequently easy. There is not much new business in iron and steel, and no sign of activity in cotton. The raw wool situation remains favourable and with the termination of the wages dispute Bradford is hopeful of regaining some of the lost ground. Conditions in the jute industry remain idle. The hide and leather markets have been fair, when account is taken of the holidays. Vegetable oils and oilseeds, especially cotton seed, are very inactive.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was only fairly active, the main feature being the sharp fall in the Paris rate discussed in another column. New York went rather against us from 4.85 27/32 to 4.85¾. Montreal gained ¼ at 4.85¾. Paris moved sharply from 123.92 to 123.78 after 123.67. Brussels was better by ⅛ at 34.81⅜. Milan was unchanged on balance, after hesitation, at 92.73. Madrid was again erratic, and fell away from 40.07 to 41.00 offered. Amsterdam gained 1/16 at 12.08 5/16. Berlin was unchanged after some fluctuation at 20.36. Switzerland moved sharply against us from 25.10 to 25.06½, and was at one time below that level. The Scandinavian exchanges all moved against us, Stockholm falling from 18.10¼ to 18.09¼, whilst Oslo gained ¼ at 18.15½, and Copenhagen ½ at 18.15½. Of the South American exchanges, Rio lost ⅛d. at 5 11/16d., and Buenos Aires ⅜d. at 42¼d. Montevideo was weaker again at 44½d. In the Far East the rupee was firmer and gained 1/16d. at 1s. 5 13/16d., as was the yen at 2s. 0 13/32d., which advanced also by the same amount. Batavia was firmer at 12.07. In the forward market, New York was unchanged at 3/32 cent and 2/32 discount. Paris went from 3 and 5 centimes premium to either side of par for both periods. Brussels was steady at one and 2½ centimes discount. Milan was at 10 and 27 centesimi discount, and Madrid at one and 4½ centimos premium for the two periods respectively. Amsterdam moved from par to discounts of ¼ cent and 5/16 cent, while Berlin remained unmoved at 1¼ and 3½ pfennigs discount. Silver recovered to 16⅞d. for spot, and 16 11/16d. for forward. The China silver exchanges rallied in sympathy, Hongkong gaining ⅛d. at 1s. 3⅝d., whilst Shanghai rose by 1⅛d. to 1s. 6¾d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moodys-Economist Services, 6, Bonverie Street, London, E.C.4.

THE INDIAN COMMISSION—SURVEY.

THE first volume of the long-awaited Report of the Indian Statutory Commission has been issued this week, and has had the immediate effect of focussing attention on the essentials of the Indian problem. This volume is confined to a description of the situation and of the progress made under the Reforms, leaving to the second volume, which is to follow a fortnight later, the Commission's recommendations and proposals. Some have doubted the wisdom of this division, particularly as it prolongs for a little while a condition of uncertainty. But the care with which the Report has been studied, and the attention paid to it in the Press, have amply justified Sir John Simon's experiment, for it is quite certain that, if the whole Report had appeared simultaneously, attention would have been given merely to the specific proposals, whereas under the present scheme the public have a little time to ponder on the striking picture that the Commission have painted. This period for consideration is invaluable, for though the British public through Parliament are responsible for India, it cannot be said that the conditions described are known to more than a tiny handful.

The chief impression made by the Report, salient features of which are summarised on later pages, is that of the complexity and many-sidedness of the problem. The vastness of the country, the tiny proportion of literates, the multitude of races, religions, castes and languages, the acute problem of communal differences and the difficulty of electing a representative parliament from constituencies some of which are as large as England and Wales, are set out with striking illustrations, but at the same time with obvious sympathy and understanding. Clearly, the Commission are inviting Great Britain, on the one hand, and India, on the other, to face up to perhaps the most difficult constitutional problem in history. But it is obvious that they do not set out these difficulties as an indication that the task set them is impossible, for after referring to the historic declaration of 1917, the Commission declare that " the only proposals worthy to be considered are proposals . . . inspired with the honest purpose of giving " to that declaration " its due effect." Again, almost at the end of this volume, reverting to the state of opinion in India, they make the significant observation :—" While the experienced Indian member of the Services will admit the benefits of the British Raj and realise the difficulties in the way of complete self-government; while the member of a minority community, putting the safety of his community first, will stipulate for safeguards; and while the moderate may look askance at extremist methods which he will not openly denounce; all alike are in sympathy with the demand for equal status with the European and proclaim their belief in self-determination for India." In other words, they recognise that in spite of all differences and difficulties India, like other eastern countries, has found a bond in the universal desire for nationhood and equality of status.

While, therefore, this Report does not present a case for doing nothing, it does suggest that the solution is not one that can be attained merely by adopting some existing constitution, whether from Europe or from some country overseas, seeing that there is no case which is in the least comparable. That of the United States is perhaps the most analogous in point of size of territory and population, but the American constitution was created by a small and comparatively homogeneous population; the vast influx of people of many races and tongues came later and adapted themselves to the structure already existing. In India the problem is to create a constitutional structure for a vast population—nearly three times as big as that of the United States—and to accommodate it to their history, their traditions and the passive state of the mass of the people.

The constitution of 1919 was the first serious attempt to develop self-government. At the Centre it created a Parliament consisting of a Legislative Assembly and a Council of State, but it did not give this body control of government, for though it votes the budget and legislates, it can be over-ruled by ordinances of the Viceroy or by the certifying of financial measures. In the Provinces the experiment was carried further by the device of dyarchy, in the hope that by placing such services as education, health, etc., under Ministers selected from the Council, while retaining law and order and finance in the hands of members of the bureaucracy, an opportunity would be given for gaining experience in parliamentary government, training a number of Indian politicians in leadership and administration, and developing a sense of responsibility with regard to a group of Government activities vitally concerned with the life of the people.

It would be a profound mistake to regard this constitution as having been a failure. At the Centre, although the Government has had reserve powers, it has rarely used them, and has been able commonly to command a majority with the aid of official and nominated members, it has been subject to public questionings, and has had to defend itself in open debate. Members of the Civil Service, trained to administer rather than to talk, have had to play the politician, and in many cases have done it with remarkable success. The Report fairly describes the growing influence which Indian opinion, acting through the Assembly, has been able to exercise and the tendency of the Government to defer to it. One of the most striking illustrations of this deference to India's wishes is the Fiscal Convention which was recently described in the *Economist*. In the Provinces great efforts have been made to develop the social services and any impartial observer would admit that for this, among other reasons, a great change is coming over the conditions of life and the social customs of the country.

At the same time, the account given by the Commission indicates the very definite limits of the progress which can be made under the present *régime*. In the Legislative Assembly opposition has often tended to be factious, and criticism has been made not with a sense of responsibility, but—as Mr Patel recently admitted—for the purpose of embarrassing the Government. In the Provinces, the Ministers have tended to become part of the governmental machine, and, except in certain cases, there has been little sign of the creation of parties in their support. They have also had entirely inadequate resources to develop the great services entrusted to them. The system has, of course, worked very differently in the various Provinces. In the densely peopled but poor province of Bihar and Orissa, the Council, meeting for only two or three weeks in the year, has on the whole very little influenced the course of government. In Bengal, with a population larger than that of Great Britain, but with a very straitened budget and with Moslem and Hindu communities almost equally divided, Ministers have constantly been the object of bitter attack, accentuated by communal feeling; and for a period their functions were taken over by the Government. In Madras, something much more like parliamentary government has evolved, and it is not surprising that the Government of Madras as a whole recommended to the Commission that a unitary cabinet should be set up in that Province, responsible to the Council. This varied development is complicated by the existence of the Indian States, many of them enjoying treaty relations with the Crown and with varied rights and privileges, but none of them subject to the Government of British India. Nevertheless Sir John Simon's letter of October 16th to the Prime Minister made it clear that, in the Commission's opinion, the problems of British India could not be entirely separated from those of the Indian States, and the scheme of the Round-Table Conference was designed to secure " the full co-operation of all

parties and interests in the solution of the Indian problem as a whole."

It is not surprising, then, that the first impression of the Report should be unsatisfying to those in India who are disposed to think that a short cut is possible to responsible government by means of the importation into India of some ready-made constitution, and that they should have jumped to the conclusion that the Commission will turn down India's demands; or that it should have been received by those in this country who hold that autocracy is the appropriate method of government for India and that we should revert to the method of a firm hand, as lending support to their view. Both of these opinions, however, miss the true moral of this Report, which is that, while India has begun to take a hand in shaping her own destiny, the constitutional problem which she presents is unlike any other in history and calls for a solution adapted to her own special circumstances. If this preliminary Report succeeds in bringing home this idea to the public opinion of Britain and of India, it will have achieved its purpose.

MR BALDWIN AND THE FARMER.

In his recent trek round the country on his "Home and Empire" campaign Mr Baldwin has been addressing industrial audiences, and to them he has been expounding the blessings of "Safeguarding." On Whit Monday, for a change, he faced a purely agricultural audience in the purely agricultural area of Suffolk, and was naturally constrained to produce the Conservative remedy for the agricultural *malaise*. The result is most uninspiring, for the remedy is the old, old remedy trotted out in 1923—a guaranteed wheat price to be financed out of the revenue on industrial tariffs, with the added bait of restrictions on imports of barley and oats. So, after seven years, Mr Baldwin has re-committed himself to precisely the same policy, of safeguarding for industry and wheat subsidy for the farmer, which led himself and his party to destruction seven years ago. Nobody is satisfied, except, apparently, the National Farmers' Union, and even to them we shall venture to suggest some second thoughts. Lord Beaverbrook is positively angry, if we may judge by the contumely hurled at Mr Baldwin in the *Evening Standard*, and the split in the Conservative party has been widened and deepened.

The gist of Mr Baldwin's speech is this:—Industrial troubles we can deal with by safeguarding, but agricultural troubles cannot be dealt with that way, because the towns are too dog-in-the-manger to allow the country to share in the supposed benefits of tariffs. Therefore, says Mr Baldwin in effect, we must look for another way. We will *promise* the farmer a remunerative price for his wheat, and the money necessary for this will be derived from the revenue we shall obtain from protective duties on industrial imports. Mr Baldwin naïvely supposes that he has devised a scheme for extracting the farmer's subsidy from the townsman's pocket without the latter noticing it. For ourselves we rate the intelligence of the townsman rather higher; and as for the farmer himself, although this old promise re-dressed may look at first sight like "ninepence for fourpence," we would counsel him to look again. As we shall show in a minute, if adequate revenue is to be provided to subsidise a wheat price such as the farmer desires, a very wide measure of industrial protection will have to be introduced, and the farmer will find his costs rising on all hands. Mr Baldwin, when speaking to Paul the farmer, says: "I will rob Peter to pay you." But is the farmer certain, when he reviews the whole of Mr Baldwin's policy, that he will not in the end find himself playing the rôle of Peter? In many countries and at many times farmers have had that sad disillusionment over a protectionist policy which looked alluring at first sight.

Now let us look a little closer at Mr Baldwin's pledge to the farmer. He ventures on no figure for the guaranteed wheat price. He will "arrange" one in close consultation with the farmer—a rather ominous prospect for the consumer or taxpayer. But the farmer, through the Union, has already told him the price—55s. per quarter. This means that on the basis of recent prices the cost might reach nearly £1 per quarter as the subsidy from the public funds. On the basis of current wheat production that means an annual bill of some £5 million. But we presume that Mr Baldwin's aim is to encourage and increase wheat production at least to the pre-war average, and if he succeeds up goes the bill to some £7 million. That sum would have to be found out of "Safeguarding" revenue, and since in the full year 1928-29 the total revenue received from all existing safeguarding duties was only £2¼ million, the extension of duties on industrial goods which Mr Baldwin contemplates must be very formidable indeed. Incidentally, since memories are short, we may remind the heavily-burdened taxpayer that the operations of the Wheat Commission in its brief span of life cost the Exchequer no less than £104 million. Once bitten, twice shy.

So much for Mr Baldwin's promise. But what about the possibility of his fulfilling it if the country allowed him to try? If the subsidy is to be of any use to the farmer, says Mr Baldwin, "it is of the utmost importance to make this firm for a period of years, and to make it so firm that it will be almost impossible for any Government to interfere with it, after we have done." How this permanence is to be achieved is not explained, nor can it be explained. No Government can bind its successors in the matter of expenditure of public money, and least of all in this case, where the money is to be derived from protectionist duties which are only too likely to be swept away by an alternative Government. To put it bluntly, Mr Baldwin's promise to the farmer regarding the permanence of a subsidy is not worth the paper on which it is written.

The essence of what has happened is that Mr Baldwin has once again stumbled up against one of the supreme difficulties which always beset the Protectionist. If you set up tariffs on industrial imports you raise agricultural costs and the farmer has to be compensated somehow, although, as the tariff history of the United States and Canada shows, the farmer seldom finds that the compensation proves adequate. So you promise public support to the farmer. The picture is idyllic—the towns saving themselves by taxing the wicked foreigner, and the duties paid by the foreigner used to save the farmer. The foreigner is the *deus ex machina*. Really this is *vieux jeu*, and if the country would not believe it from the lips of a fervent Joseph Chamberlain, they are hardly likely to accept it from a timid Baldwin after a quarter of a century of fiscal education and discussion.

Mr Baldwin's attitude to the economic troubles of this country (both industrial and economic) is as much out of touch with realities as is his *bizarre* description of the agricultural labourer as "about the last surviving specimen of the skilled craftsman in this country." The supreme need of agriculture, as of industry, is reorganisation for the achievement of more economic and more efficient production and marketing. What Mr Baldwin offers is an artificial jerry-built shelter behind which all present inefficiencies may be sustained and perpetuated. All may have their reasons for deploring the decline of British agriculture, and may resent the fact (which is none the less a fact) that, as a nation, we have found it desirable, in this age of intense international specialisation, to concentrate more upon industrial production and to buy more of our food from abroad. Nor do such facts as these absolve us from the need to study the means by which the efficiency of what is still our greatest industry may be increased. Every avenue of science and research, of practical co-operation, of security of tenure, of joint marketing, of selective production (and under this head Mr Baldwin's insistence on wheat must be critically examined) should be explored, and explored as a non-party question by the best experts wherever they are to be found. Agriculture and industry have their separate problems. But they have this in common, that they cannot hope to achieve salvation through a policy which throws their burdens on the taxpayer and absolves them from the urgency of setting their own houses in effective good order.

A RESTORATION À LA ROUMAINE.

If one is born Prince Charles one seems to be marked down by destiny for exile and restoration, but apparently the restoration is apt to miss fire unless one has the luck to be born Charles II. Certainly, on the morrow of the successful restoration of Charles II Hohenzollern to the throne of Roumania, the most friendly wish that any Englishman can offer up for him is that he may reign as long and as comfortably as his namesake Charles II. Stewart, and may escape the meteoric career of poor Prince Charlie. By every rule of superstition, King Carol's chances are good, for it is obviously the magic number that does the trick. At any rate, the luck does not depend on the kind of vehicle in which the aspiring *deus ex machinâ* descends upon his ancestral soil. The vehicle, after all, is a mere creature of the day. It did not avail Prince Charlie that he descended on British shores, as did Charles II, in a wooden sailing-ship; and, contrariwise, Prince Carol has not been wrecked by descending on Roumania, as Charles Hapsburg descended on Hungary nine years ago, in an aeroplane. With that, we leave the occult side of our subject to the consideration of astrologers, psycho-analysts and historians, and proceed to the order of the day.

The order of the day in this case seems to be "business as usual," for, happily, this Roumanian restoration is not an earth-shaking affair. The peace of Europe is not threatened; and even the domestic life of Roumania herself does not seem likely to be seriously ruffled. The Roumanian regents have proved as accommodating as our own Protector Richard Cromwell. (May they die in their beds, as he did!) Without bloodshed, the exile is on the throne; and the incident boils down to a personal question. King Charles II is presumably pleased; Mr. Vintila Bratianu is undisguisedly disgruntled; and as for little ex-and-future King Michael, who knows what he is feeling? After all, he has tried the job, while his father has not. Perhaps the newly-created Grand Voivode of Alba Julia knows already that it is not all beer and skittles being "a crowned head."

When one turns from the personal to the political side, the key to the situation is to be found in the fact that Prince Carol fell out with the Liberal Party, which, being interpreted, is the Brothers Bratianu. It was the Bratianu *régime* that caused his departure from the country and his legal exclusion from the succession to the throne—an act accomplished on the 4th January, 1926. This key-fact was sufficient to throw Prince Carol into the arms of the Bratianus' opponents; and from this point of view King Carol's return is a natural sequel to the downfall of the Liberal Party and the accession of the Peasant-Transylvanian coalition to power last year.

Now the fortunate fact is that the side on which King Carol finds himself in Roumanian politics (whether by statesmanlike choice or by lucky chance, we need not inquire) happens to be the side of the angels. The present Government is the first reasonably democratic and disinterested Government that Roumania has enjoyed since—we might almost say, since the creation of the Roumanian State. And it is of immense importance that this Government, long overdue, should endure. With her territory doubled since the War and her social and economic life turned upside down, Roumania is perhaps more desperately in need of reconstruction than any other country in Europe at this moment. And this is a matter of European interest; for if Greater Roumania were to collapse, half the peoples of the Continent would be by the ears. Except on her Polish and Czechoslovak frontiers, Greater Roumania is surrounded by enemies. She is also—or, rather, therefore—a member of the Little Entente and of the French system of military alliances, a factor whose implications are obvious.

We have said enough to show that the restoration of King Carol is interesting politically in so far as it bears on this question: Is the Liberal Party going to remain out of power? Is the Transylvanian-Peasant Coalition going to remain in office? For a moment, Monsieur Maniu's resignation made it seem as though the whole political situation in Roumania were going into the melting pot; but later news indicates that he resigned, not because the restoration was a blow to his *régime*, but partly on a question of etiquette and partly because he was taken by surprise. Under whatever leadership, the Coalition looks like holding together, whereas the Bratianu family has already split—and if the family splits to-day, the Roumanian Liberal Party will split to-morrow. On the whole, then, it appears that the restoration of Charles II will have a stabilising effect on Roumanian political life—the beneficiaries being just those elements which ought to be stabilised in the best interests of Roumania herself and of her neighbours. So we may set out minds at rest, ignoring the slight shiver of apprehension which runs through the shell-shocked nerves of our post-war generation whenever these Balkanic alarums and excursions occur.

One general reflection suggests itself: South-Eastern Europe is a kind of "birds' sanctuary" for the restitution of the Monarchy, which is almost everywhere else extinct outright, or worn to a shadow, in the modern world. This is partly just because the Balkans are backward; but the prestige of Monarchy there is perhaps also partly explained by the fact that it still has a positive function to perform. For all these Balkan States, the supreme task, since they came into existence, has been to naturalise themselves as members of the western family of nations; and one of the practical ways in which they have set about doing this has been to take dynasties for themselves from among the lesser branches of the international royal family of Western Europe. When the modern history of Roumania and her Balkan neighbours and contemporaries comes to be written in perspective, this function of their adopted royal families will probably stand out as a factor of considerable social and cultural importance; and the undoubted political importance of these dynasties probably flows from this. Their political importance certainly surprised us during the War; and the latest news from Roumania shows that it has not diminished since then.

THE REPARATIONS LOAN.

At midnight on Tuesday the negotiations over the Reparations Loan were completed, and on Thursday morning the prospectus of the London quota was advertised. The lists opened on Friday and were due to close on or before the following day. Thus the Reparations Loan, or, to give it its official title the "German Government International 5½ per cent Loan, 1930," has now at last made its appearance.

The Loan is to be issued in Belgium, France, Germany, Great Britain, Holland, Italy, Sweden, Switzerland and the United States of America. The allocation is apparently as shown in the following table:—

		National Currency (000's omitted)	Dollars
Belgium	belgas	35,000	4,870
France	frs.	2,515,000	97,900
Germany	mks.	36,000	8,390
Great Britain	£	12,000	58,390
Holland	fl.	73,000	29,400
Italy	lire	110,000	5,800
Sweden	kr.	110,000	29,500
Switzerland	frs.	92,000	17,750
U.S.A.	$	98,250	98,250

If these amounts are reduced to a common currency, the fact emerges that France and the United States have each make themselves responsible for 28 per cent. of the total, Great Britain for 17 per cent., and Holland and Sweden for 8½ per cent. each. The remaining 10 per cent. is shared among the other participants, Germany herself taking only 2.4 per cent. The total amount of the Loan is somewhat in excess of $300,000,000, but when the issuing bankers' commissions have been deducted, it is estimated that the effective yield will be approximately $300,000,000.

The details given in the British prospectus clear away many doubts that had arisen in the minds of the public during the course of the negotiations. The British bonds are to be to bearer, in denominations of £100, £500 and £1,000. Principal and interest will be payable in sterling at the Bank of England, London, but " payment, at the option of the holder, may also be obtained on any foreign market where the Loan is quoted, in the currency of that market at the current rate of exchange." The German Finance Minister's statement amplifies this clause in the prospectus by saying " payment may be obtained in any foreign market where any issue of the Loan is quoted. . . ." In other words, the bond is a " national " bond with a " national " coupon. The fact that payment can only be obtained in other centres at the rate of the day proves this, and even including the German amplification the clause grants no further concession than is usually to be found in loans appearing simultaneously in several centres.

The nominal rate of interest is 5½ per cent., and the price of issue is 90 per cent. in all centres except Paris, where the fact that the French quota is free of French taxation has enabled it to be offered at 98¼ per cent. It is believed that the price as between the borrower and the issuing banker is in many centres 86 per cent., the latter taking 4 per cent. as their commission. The margin of 8¼ per cent. by which the French issue price exceeds the foreign issue price will be paid over to the French Government through the Caisse d'Amortissement. The whole Loan will be redeemed by a cumulative sinking fund, calculated to extinguish the Loan by June 1, 1965. It will be applied by purchase in the open market at a price which is at or under par, and by drawings to be made each April, when necessary to supplement purchases. The German Government also has the option to redeem the whole Loan on July 1 of 1935, or any subsequent year. Interest is payable on June 1st and December 1st, and a first payment of £1 17s. per cent. will be made on December 1, 1930. The flat yield is £6 2s. 2¾d. per cent., and the yield, allowing for redemption on the terms specified above, is £6 13s. 8d.

The Loan is the direct and unconditional obligation of the German Government, and if, in return for this special guarantee over and above the general obligations of the Young Plan, the German Government has obtained any subsidiary assurances from the creditor Powers, it but serves to strengthen the bondholder's security. The sums required for the service of the Loan will be paid over monthly to the Bank for International Settlements, who are the Trustees for the bondholders. With the exception of bonds issued for the capitalisation of part of the unconditional annuities for the purpose of the internal conversion of the National Debt of a creditor Power, all further issue of bonds must be made through the B.I.S. and will rank *pari passu* with the present Loan. The German Government has created a fixed direct annual tax of 660,000,000 marks on the German Railway Company for 37 years, to act as a guarantee for the service of the Young Plan annuities.

The German Finance Minister also recalls that the unconditional annuities amount to 612,000,000 marks, excluding the service of the Dawes Loan, whereas the service of the present Loan only requires 95,700,000 marks. Moreover, only two-thirds of the proceeds of the present Loan represent the capitalisation of a portion of the unconditional annuities. The remaining one-third is retained by the German Government and will be used to provide for German railway, post office, and telegraph requirements. The service of this last portion will naturally come not out of the unconditional annuities but out of the general revenue of the Reich.

The net result is that a small proportion of the unconditional annuities has been mobilised, and the German Government is also raising a loan of approximately $100,000,000 for its own purposes. The flat yield of about 6⅛ per cent. compares very favourably with that of 7⅝ per cent. represented by the issue price of the Dawes Loan, and is also the same as that of the Japanese Loan issued a few weeks ago. The cost to Germany, however, is high, judged by the rate at which British Government loans can be raised, and it is conceivably higher than it would have been had the Loan been postponed until the Young Plan had had a fair chance to prove itself. Precipitancy is the main criticism that might be made of the decision to issue the Loan this summer, and had those concerned seen fit to wait for a year or two, mobilisation might have been possible on less onerous terms. Inasmuch as the total amount of the annuities is fixed and the service of the Loan is a direct charge upon them, the burden falls in reality not upon Germany, but upon the recipient powers. Had they waited they might well have found that they could have bartered a smaller proportion of the annuities and still received the same amount of ready cash.

THE CO-OPERATIVE CONGRESS.

(BY A CORRESPONDENT.)

THE fact that a Government which, in the words of Mr H. J. May, the retiring President of the Co-operative Congress, " is nominally the most favourable to co-operation," is now in office, has sobered the political enthusiasts who have dominated of recent years the annual assembly of the co-operative movement; and that which opened on Whit Monday at York has steadily applied itself to matters of internal organisation, and has discussed co-operative rationalisation and the dubious entry of credit trading in a cool and calculating mood.

On the first day a cold douche was unexpectedly administered by Mr May, whose position as secretary of the International Co-operative Alliance gives him an authoritative place in the movement. Last year at the Torquay Congress he questioned the wisdom of the introduction of the mutuality clubs into the movement, and on Monday he referred to the system as the abrogation of the co-operative position. The sales of the retail societies last year rose 7 per cent.; but there was an increase of 18 per cent. in the debts of members and of 20 per cent. in the accounts owing by members in connection with credit clubs. Having thus startled the delegates on the economic side, he went deeply into the political policy that has latterly thrown the co-operators into the Labour arena, and criticised the attitude of the Co-operative M.P.s with regard to the Coal Mines Bill, the Local Authorities Enabling Bill, and the Industrial and Provident Societies Act. Such an introduction was well calculated to send the annual assembly along the consideration of its own internal matters.

The past year was a period of progressive advance, and the sales and capital of the retail distributive societies rose surely and steadily. The sales of the wholesale and the retail societies totalled well over £335,000,000, and 240,000 workers were employed in co-operative factories, mills, and shops. It is, however, the figures with regard to the retail societies which present the really accurate view of the position of the movement. There are now 6,378,000 members of distributive societies with a share capital of £110,353,000 and a loan capital of £14,051,000 —increases of 11 and 15 per cent. respectively in the past year. More than £61,000,000 has been invested in the co-operative federations and in Government and municipal stocks. Rather less than £40,000,000 is represented in land, buildings, and fixtures used in trade, and just over £20,000,000 in stock-in-trade. The sales were £224,465,000 and there was a profit of £27,000,000, which, after paying £4,685,000 as interest on share capital, was available for distribution as dividend on purchases.

Such were the main developments upon which the President of the Congress based his address. As one of the business directors of the movement, he naturally also dwelt upon internal policy and advocated that the local retail societies should be less concerned with the return of high dividends on purchases than with the lowering of the retail prices to a national fixed level. Those responsible for the policy of the Co-operative Wholesale Society have often challenged the practice that now exists of different prices being enacted for co-operative productions in various parts of the country. Delegates to the Congress endorsed his view that the time has come for national fixed prices for co-operative productions being established by the central body in collaboration with the local units.

But wider issues have also come before the Congress and in its Report the Central Board of the Co-operative Union pointed to the modern " Empire Free Trade " campaign as being " disguised Protection," and declared that " an Empire is not enough for the Co-operative Commonwealth and while the British co-operative movement has done more for the establishment of effective trade relations in staple commodities between the Dominions and Great Britain than the loudest of Empire orators, co-operators recognise that no ties of blood, race or sentimental kinship can claim prior consideration to the common ties of universal human co-operation." Attention was drawn to the view that " international cartels must be counterbalanced by international co-operative commerce, and the sooner the movement realises the desperate urgency of the pooling of co-operative productive resources and sources of raw materials the more hopeful will be the prospect." Some of the leaders of the C.W.S. have endorsed this view, Mr J. T. Davis, one of the directors, voicing the Free Trade position, and another, Mr W. R. Blair, describing " Empire Free Trade " as a wayward child of Protection. The necessity of developing inter-co-operative trade was urged by the delegates from the co-operative movements of France, Germany, Sweden, Russia and Switzerland, and the way to overcome trading barriers between the co-operative movements of the various countries will be more fully considered at the forthcoming International Co-operative Congress at Vienna. The efforts made to impose a merely Empire bond of Free Trade had evidently aroused the co-operators to a keener interest in the international movement. It will stimulate the demand for the removal of tariff barriers between the nations where co-operative business is widening beyond their own boundaries. The co-operative productive enterprises of the Continent are studying the free imports of raw materials which are helping British producers, and the possibility of a changed economic outlook is indicated.

Immediately Congress resumed on the second day, the Rt. Hon. A. V. Alexander rose to tell the co-operators that they could do better inside the Government than out, and that they could not do more till they obtained a majority Government. But the speech did not remove from the minds of delegates the disturbing impression made by Mr H. J. May on the previous day. Leaders like Mr W. Gallacher, of Glasgow, made further protests against the neglect of the co-operative viewpoint by the Government, and the administration of the Ministry of Health under Mr Arthur Greenwood was instanced as an example of the influence of permanent officials on Cabinet Ministers. Altogether, it was clear that the incursion into the political arena has aroused antipathies not easily overcome.

Getting again to business matters, Congress grew steadier when the organisation of a national co-operative milk supply was considered, and it was resolved to set up Trade Advisory Boards to co-ordinate the work of the wholesale and retail societies along departmental lines. Milk, meat, coal, and other commodities, the control of which has been threatened by the advocates of municipalisation in the Labour Party, are to be separately organised.

This was the most important decision of the Congress, which regarded the setting up of these National Co-operative Trade Boards as a means of competing with the Proprietary Articles Traders' Association and of counterbalancing the schemes of rationalisation in progress in several of the distributive trades and the productive businesses that supply many of the co-operative societies with their stocks. Thus the Congress came back to concern itself with the consumer *per se*—the original purpose of the movement.

INDIAN STATUTORY COMMISSION REPORT.—VOL. I.

In view of the great importance of the Report of the Indian Statutory Commission we give below a summary of the salient features of the First Volume, issued last Tuesday. Reference to the sections of the Report dealing with the Army in India and Indian Education will be found in Notes of the Week. In our next issue we propose to summarise the Commission's survey of the System of Public Finance.

IN presenting their Report on the momentous issue of the future government of India, the Statutory Commission have clearly been impressed both by the magnitude of the question which they were called upon to solve and by the consideration that its solution must ultimately depend not only on the nature of their recommendations but on public opinion. The education of such opinion to appreciate the essential factors in the situation was, indeed, an important part of the Commission's task, and the statement of the reasons for issuing the first volume* of their Report, entitled " Survey," a fortnight in advance of Volume II., merits quotation.

" The problems connected with the future constitutional development of India are of such complexity and importance that we are unwilling to see our proposals for their treatment thrown into the arena of discussion and controversy before there has been time to examine and digest the survey of the present position on which our recommendations are based. . . . In handling matters so various and so vital, it appears to us to be absolutely necessary first to establish the greatest possible measure of agreement as to the fundamentals of the Indian problem, before hastening to consider the method, the pace and the direction of the advance that can now be made along the road to its ultimate solution."

As to the eventual goal, the Report from the outset leaves little room for doubt. Under the terms of the Royal Warrant the Commission was " appointed for the purpose of inquiring into the working of the system of government, the growth of education, and the development of representative institutions in British India . . . and [to] report as to whether and to what extent it is desirable to establish the principle of representative government, or to extend, modify, or restrict the degree of responsible government existing therein." The opening pages of the Introduction, however, recall the nature of the historic announcement made by Mr Montagu to the House of Commons on August 20, 1917:—

" The policy of His Majesty's Government . . . is that of the increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire. . . . Progress in this policy can only be achieved by successive stages. The British Government and the Government of India . . . must be judges of the time and measure of each advance, and they must be guided by the co-operation received from those upon whom new opportunities of service will thus be conferred and by the extent to which it is found that confidence can be reposed in their sense of responsibility."

This declaration was recapitulated in the Government of India Act, 1919, from Section 84A of which the Commission's appointment derives, and has recently been reaffirmed and emphasised. The Report, accordingly, states unequivocally:—

" We enter upon our task, therefore, upon the basis and assumption that the goal defined by Mr Montagu represented the accepted policy to be pursued, and that the only proposals worthy to be considered are proposals . . . inspired with the honest purpose of giving to it its due effect. . . . On the one hand . . . whatever the obstacles, the object stands as the declared goal of British-Indian policy. On the other hand . . . . the decision as to the immediate future must largely depend upon a just estimate of the results and consequences of the steps already taken."

To the framing of such an estimate the Commission have addressed themselves in the present volume. But

* Cmd. 3568. H.M. Stationery Office. 3s. net.

before doing so they have presented, first, " in a compendious form, a statement, as accurate and impartial as we can make it, of what India is," and, secondly, a concise objective picture of the existing constitutional structure, administrative and judicial systems, and the system of public finance, with whose working since 1919 they were primarily concerned.

Background of the Problem.

The description of the " Conditions of the Problem " begins by emphasising the fact that India, with an area twenty times that of Great Britain, and a population nearly two and a half times that of the United States, is not a country but a sub-continent, holding a " variegated assemblage of races and creeds," though " a sense of unity is growing." Agriculture and pasture occupy 71 per cent. of the population, only 10 per cent. of which live in urban areas, and " the main characteristics of village life are still those of the centuries anterior to British rule." On the other hand, apart from the great Indian landlords and the " capitalists," in whose hands " large-scale manufacture is being superimposed on the ancient fabric of an elaborately subdivided and predominantly rural society," there is emerging an educated class prominent in the leadership of Indian political opinion, who have imbibed the traditions and thought of the West, and yet are " keenly conscious of unity with the mass of the Indian people whose minds are set in the immemorial traditions of the East."

Such a contrast illustrates the complexity of the background of the Indian problem, which is, in fact, not that of an entity but of a conglomeration of diversities. The Commissioners point out that the existence of 70 million Mahommedans, dispersed among 216 million Hindus representing a widely different type of culture, gives rise to a basic antagonism expressed both in economic competition and in violent communal feuds. The social structure is further complicated by the caste system among Hindus and the position of the " depressed classes," who constitute 30 per cent. of the Hindu population. Moreover, apart from the separate existence of the Indian States, of which the Report remarks with reference to the Butler Committee† : " The future development of India cannot be envisaged without bearing fully in mind . . the Crown's obligations to them," the Commission was evidently struck by the diversity of the features, racial and economic, of the Provinces of British India proper, and significant emphasis is laid on the distinctive character of Burma.

In this great sub-continent, lacking even the unity which Western Europe may be said to possess, government before the reforms of 1919 had three cardinal features :—

(1) The concentration of authority at the centre;
(2) The control over legislative functions exercised by the Executive;
(3) The ultimate responsibility of the Imperial Parliament for the whole of Indian government.

The " over-riding unity " of the Centre, and the subordination of the provinces to it, may be traced back to the Charter Act of 1833, by which the Governor-General of Bengal became the Governor-General of India; the Indian Councils Act of 1861 and 1892 set up bodies that were essentially deliberative in character, so that even after the Morley-Minto Reforms of 1909 the Executive's control of legislation was fully preserved; and, down to the introductions of the Montagu Reforms, " behind the Governor-General in Council, and co-extensive with all executive action, lay the theoretical responsibility of the Secretary of State " in Whitehall.

The Act of 1919.

The Montagu-Chelmsford Report laid down four governing principles to be embodied in the new constitutional structure :—

(i) There should be, as far as possible, complete popular control in local bodies and the largest possible independence for them of outside control.
(ii) The Provinces are the domain in which the earlier steps towards the progressive realisation of responsible government should be taken. Some measure of responsibility should be given at once, and our aim is to give complete responsibility as soon as conditions permit. This involves at once giving the Provinces the largest measure of independence, legislative, administrative, and financial, of the Government of India which is compatible with the due discharge by the latter of its own responsibilities.
(iii) The Government of India must remain wholly responsible to Parliament, and saving such responsibility, its authority in essential matters must remain indisputable, pending experience of the effect of the changes now to be introduced in the Provinces. In the meantime, the Indian Legislative Council should be enlarged and made more representative, and its opportunities of influencing Government increased.
(iv) In proportion as the foregoing changes take effect, the control of Parliament and the Secretary of State over the Government of India and provincial Governments must be relaxed.

† Report of the Indian States Committee. Cmd. 3302 of 1929.

The Act of 1919 accordingly set up in each of the eight major " Governors' " provinces (a ninth, Burma, was added in 1923) a " unicameral and triennial legislature called a Legislative Council." At least 70 per cent. (in Burma 60 per cent.) of the members were to be elected, and it was intended that the franchise should be " broad." It was found possible, however, only to confer the franchise on about one-tenth of the adult male population, the normal qualification being residence in the constituency, plus the payment of a small amount in land revenue, rent or rates; and even so " a large proportion of the voters are illiterate." The distribution of seats has also been complicated by the concession to Mahommedans and Punjab Sikhs of communal electorates, so that they may vote for candidates of their own faith, and the system of " reserved " seats for minorities also exists in Madras, Bombay, and elsewhere.

Bills passed by a provincial legislature require the assent both of the Governor and of the Governor-General, and the Governor may overcome unwillingness of the legislature to pass proposals put before it by certifying that the passage of a Bill (or a " grant," *i.e.*, a Vote in Supply) is " essential for the discharge of his responsibility for the subject." This power of " certification," however, relates only to " reserved," as opposed to " transferred," subjects—a distinction fundamental in the system of provincial " dyarchy " to which the Act of 1919 led.

The System of Dyarchy.

Since that Act, and the Rules made under it devolving certain subjects to the provinces, the Government of a province has been committed in relation to " reserved " provincial subjects (notably Irrigation, Land Revenue, Famine Relief, Justice, and Provincial Borrowing) to the Governor-General in Council—members, not exceeding four, appointed by the Crown—and in relation to " transferred " provincial subjects (notably Local Government, Health, Education, and Public Works) to the Governor acting with Ministers. These Ministers are appointed by the Governor and theoretically hold office at his pleasure, but the power of the Legislative Council to refuse supply makes " the continuance of the confidence of the Council essential to their retention of office." In the dyarchical distribution of functions, the Commissioners observe, the extension of responsibility to others has not " lightened the burden which rests on the Governor's own shoulders."

Passing from the provinces to the Centre, the Report proceeds to describe the structure of the post-1919 Indian Legislature, consisting of the Governor-General and two Chambers—the Council of State, or Upper House, and the Legislative Assembly. The former, whose membership is limited to 60 (of which 34 are elected members) has " a character distinct from that of the Legislative Assembly " as a result of the extremely restricted franchise of its electorate. The Legislative Assembly consists of 145 members (105 elected), and the franchise for its electorate follows the provincial model, including the system of " communal electorates," but with somewhat higher electoral qualifications.

Theoretically the Central Legislature is entitled to legislate for the whole field of government, but for practical purposes a real distribution of legislative power exists, following the distinction between central and provincial subjects in the Devolution Rules already mentioned. In the financial sphere expenditure on certain lines is authorised by the Governor-General in Council without being voted, and the Governor-General, as well as vetoing any Bill, may secure the enactment of any " essential " Bill by certification—a power used on four occasions since the Reforms. In the event of a difference of opinion between the two Chambers, the Governor-General may convene a Joint Sitting, whose decision is deemed to be the decision of both Chambers, either of which he can dissolve at his discretion, though this power has never yet been exercised.

Thus, in all essential matters the authority of the Government of India—*i.e.*, the Governor-General and seven Members of the Executive Council—remains indisputable save for its accountability to the Imperial Parliament.

" None of its Members are constitutionally ' responsible ' to the Central Legislature. . . . In constitutional theory, therefore, the Government of India is a subordinate official government under His Majesty's Government, though in actual practice this relation of agency is qualified by the extent to which (1) authority is left in the hands of the Government of India to be exercised without reference to . . . the Secretary of State, and (2) influence is exerted by the Indian Legislature upon the acts and policies of the Central Executive."

The Government of India not only administers the " Central " subjects (notably Defence, Relations with the States, Customs and other sources of all-India revenues), but has the power of superintendence, direction and control over provincial Governments in respect of all " reserved " provincial subjects, and it is responsible for the administration of all subjects in areas of British India not included within the boundaries of the nine Governors' Provinces. The Governor-General himself—or Viceroy, as he is alternatively called—occupies the " most responsible, as it is the most picturesque and distinguished, office in the overseas service of the British Crown." Upon him rests a direct personal share in the main burden of government such as pertains to no other representative of the Sovereign within the Empire.

The Working of the Reforms.

Having thus described the nature of the statutory structure of the Government of India, the Report goes on to give the Commission's views as to the success with which the machinery of Government, including the administrative and judicial system, has worked since the Reforms. The Commission's judgment on the working of the provincial franchise is that

" The adoption of property qualifications . . . . gave a predominance and sometimes a monopoly in the vote to certain classes of the population . . . . (with) the anomalous result that a large proportion of the electors are illiterate, although the total number of registered electors is less than the total of adult male literates recorded in the Census."

The unwieldy size of constituencies is also criticised as militating against personal contact between member and voter, and the formation of intelligent opinion among the electorate, while the complex character of the Councils has largely precluded the formation of political parties, so that the minds of an untrained mass of voters have been further confused by elections fought mostly on personal or communal issues.

" The only really well-organised and disciplined party with a definite programme (though, it is true, a negative one) is that of the Swarajists. Only in Bengal and the Central Provinces did they, even temporarily, achieve their initial object of making dyarchy unworkable, and . . . . with the detachment of most of their original Moslem members, they have grown more definitely into a communal party."

On the other hand, the rise in the percentage of votes polled, from 29 in 1920 to 42.6 in 1926, is regarded by the Commission as indicating that, though the elections are " very largely a contest of persons," real interest on the part of the voters is being awakened.

The absence of organised parties is found to have had adverse effects also on the working of the provincial legislatures, and of the dyarchic provincial constitution. In theory, Ministers are jointly responsible to the legislature for the " transferred " half of government. In practice, lacking a majority of supporters' votes and forced to rely largely on the nominated official *bloc*, they have had their influence over the legislature weakened through accusations of becoming " Government men."

" In the light of experience, it may be doubted whether the object aimed at could be attained as long as both halves of Government have to present themselves before the same Legislature. The practical difficulty in the way of achieving the objective of dyarchy and of obtaining a clear demarcation of responsibility arises not so much in the inner counsels of Government as in the eyes of the Legislature, the electorate, and the public.

Provincial Legislatures were by the nature of the constitution set the difficult task of discharging two different functions at the same time. In one sphere, they were to exercise control over policy; in the other, while free to criticise and vote or withhold supply, they were to have no responsibility. The inherent difficulty of keeping this distinction in mind has been intensified by the circumstances under which the Councils have worked to such an extent that perhaps the most important feature of the working of dyarchy in the provincial Councils, when looked at from the constitutional aspect, is the marked tendency of the Councils to regard the Government as a whole, to think of Ministers as on a footing not very different from that of Executive Councillors, to forget the extent of opportunities of the Legislatures on the transferred side and to magnify their functions in the reserved field. . . . The resulting almost irresistible impulse towards a unification of Government has probably been all to the good from the point of view of the efficient conduct of business; but the underlying and fundamental conception of the dyarchic system—complete responsibility of Ministers in a certain defined field, and in that field only—has become almost hopelessly obscured."

At the same time, the Commission place on record their view that though the provincial legislatures cannot altogether be acquitted of occasional irresponsibility, most of them have attained a " very general measure of success " and " have also in many instances exerted a useful influence, and thrown an informing light upon the proceedings of Government."

Government, Legislature, and Administration.

Passing to the working of the Centre, the Report emphasises the inevitability, in consequence of vast constituencies separated by great distances from Delhi, of the divorce of the representative from the life of his constituency. In the Indian Legislature, as in the Provincial Councils, parties are predominantly communal groups, with the official *bloc* solidly backing a Government which, in contrast to the position at Westminster, no Opposition can hope to turn out or be required to undertake the responsibility of succeeding. None the less—

" On the one hand, while the attitude of the Assembly has often been strongly influenced by its constitutional irresponsibility, it has co-operated with the Government in a good deal of constructive work. On the other hand, the Executive has been far from unresponsive to the criticism and to the suggestions of the Legislature."

Up to 1928, no less than 199 Government Bills were passed by the Assembly, and only four had to be certified; and in the Council of State the Government has been able to rely on support in all crucial questions. On the other side, the direct and indirect influence of the Legislature, through putting questions and moving resolutions, through its financial power over votable items in

the Budget, and through its standing committees on Finance and Public Accounts, is pronounced to be greater than is realised by its members.

Having commented briefly on the practical relation between the Government of India and the provincial governments—a relation in which co-ordinating powers take the form of advice and suggestion, rather than of command—and on the extent to which Parliament has delegated (though it has not by statute devolved) responsibility to the Governor-General in Council, the Report examines at some length the working of the administrative services, "all-India" and provincial, since 1919. Having noted the rapid progress of Indianisation in the "transferred" fields, and the relatively small total number of Europeans in Government employ (3,500 out of 5,250 in the "all-India" and equivalent central services) the Commission remark:—

"The anticipation that officials would under the Reforms rapidly pass from being administrators into the position of advisers has only been very partially fulfilled. . . . The circumstances of the last ten years have called forth all their energies in the discharge of the primary duties of government. A constant watch has had to be maintained for extremist movements. . . . It is . . . action and decision that have been demanded."

One result of the Reforms, however, has been to increase the call for officials to serve at headquarters, with a resulting diminution of contact with village life, noted by the Commissioners with evident regret. Having emphasised the potency of the "personal touch" in India, and the fact that "the great mass of the people desire personal rule, and we believe that for many years to come there can be no adequate substitute for it," the Report adds:—

"No changes or adjustments are likely to alter the central fact that the District Officer must remain a very important person, the embodiment of effective authority, and the resource to whom the countryside turns in time of difficulty or crisis. The respect in which he is held, and the influence which he wields, reflect the preference for personal and visible authority, which will endure though that authority is the spokesman and instrument of responsible government. In no future that we can foresee will the post of a District Officer cease to be one which calls for those qualities of integrity and decision which so many of the best kind of public servants have exhibited in the service of India."

This fitting tribute to a service unique in the history of civilisation deserves to be remembered.

Politics and Public Opinion.

There remain finally to be considered the two important sections of the Report in which the Commission trace the course of Indian politics since 1919 and try to estimate how far any political consciousness exists among the peoples of India.

The first section is largely the history of "Non-Co-operation," a movement born originally from Moslem agitation against the Turkish peace terms, but given new shape, and different racial bias, by the intervention in politics of Gandhi and his adherents, and the formulation of the somewhat nebulous principles of Swaraj. Having recounted the later development of the nationalist movement, no longer resting on a Hindu-Moslem alliance, but begetter of "a Hindu-Moslem antagonism which has ever since been a dominating factor in Indian politics," the Report emphasises the unfortunate influence on opinion exercised by an Indian-owned Press which exhibits, in attacking the Government and in "the undermining of respect for authority and good order in general," with few exceptions, "a licence to which it would be difficult to find a parallel." At the same time, interest in politics is still necessarily confined to a small minority, and in a country where the number of literates is very small, rumour and the spoken word count far more than reading in the formation of public opinion, whose development is "one of the prime factors to be considered in estimating . . . the possibilities of future action." On the one hand, the Report concludes:—

"All the world over the peasant, except in a few small countries, is not continuously interested in politics. . . . But the small extent to which political consciousness has developed among the inhabitants of the 500,000 villages of British India is not caused solely by conditions which exist in rural communities all over the world. It is very largely due to special circumstances. The idea that the course of government should be affected or controlled by the opinion on political matters of himself and his fellows is wholly foreign to the traditions of the Indian "ryot." . . . . Communal and sectional feelings are nearest to the surface, and it is inevitable that they should take precedence over more general political conceptions. When the last Census was taken 90 per cent. of the 320,000,000 who were then counted were found to be living in the same district in which they had been born, and of the balance, two out of three were found in a contiguous district. The growth of political consciousness is, therefore, hindered, not only by the tradition which so widely prevails that policy is a matter for Government, and not for citizens, to decide, but by the practical obstacles of distance and ignorance to be overcome, even after that tradition has been broken down."

On the other hand, the Commissioners consider, though the politically-minded in India are only a tiny minority, they may be able to sway masses in the countryside responsive to personal appeals or religious and communal emotions. And against this background stands out the remarkable absorption by educated India, fraction though it be, of Western thought.

"Down to 30 or 40 years ago India stood entirely outside the influence of the course of political ideas which at length produced democratic self-government in some other parts of the world. But in the last generation she has been swayed, at once and the same time, by the force of several conceptions which in Europe had followed a certain sequence. Thus, the struggle for power between rival religious communities, the rise of an intense national spirit, the spread of toleration, the growth of democracy, and the controversies of socialism, mark fairly well-defined epochs in European history. But in India these various influences are contending side by side for the allegiance of the politically minded. The growth of national self-consciousness is retarded by communal separatism. The movement towards Western industrialism is countered by the return to the spinning wheel. The equality of Asiatic and European is claimed, while the clash of Brahmin and non-Brahmin, or caste and outcast, is intensified. Ultra-democratic constitutions are propounded, although the long process which was a necessary antecedent to democracy in Europe—namely, the breaking down of class and communal and occupational barriers, has only just begun. Indian political thought finds it tempting to foreshorten history, and is unwilling to wait for the final stage of a prolonged evolution. It is impatient of the doctrine of gradualness."

Having remarked once more that Indian politicians are apt to under-estimate the existing effect of public opinion on the Government and, mistakenly, to regard political power as non-existent unless given explicit statutory form, the Report emphasises the force and unanimity of educated Indians' demand for equal status with the European and belief in self-determination for India.

"The British people, so long accustomed to self-government, are bound to sympathise with this movement, even though they may deplore some of its manifestations. We are pledged to help India along her way, and constructive effort is needed. . . . We desire to see the forces of public opinion which exist in India concentrated and strengthened for the practical work of reform. It is only when the difficulties of constructive policy are really faced that the inadequacy of general phrases begins to be realised."

On this note of tempered encouragement the Commission's survey ends.

Notes of the Week.

The Government and Unemployment.—On Tuesday next, June 17th, at the Guildhall, the Prime Minister will preside at a conference of local authorities, specially summoned for the purpose of discussing ways and means of expediting work on existing schemes and possibilities of enlarging present work programmes. Of considerable significance is the evidence which the summoning of this conference provides that Mr Ramsay MacDonald, freed from exacting labours in the international sphere, is now concentrating his energy and authority upon the unemployment problem. This is welcome, for there is truth in the remark of Mr Lloyd George in the House of Commons debate on May 28th that "no one can put this thing through, however able he may be, except the head of the Government." The driving force must come from the top, and in the debate referred to the Prime Minister's speech showed that other preoccupations had up to then precluded him from grasping the essential details of the situation. Six points for discussion have been circulated for the consideration of the local authorities who will be represented at the conference. These questions seem to have been suggested by the resignation speech of Sir Oswald Mosley, who trenchantly described the departmental and other obstacles which were holding up the actual launching of schemes. So far as departmental obstacles are concerned, they can only be swept away by forceful action by the Prime Minister. In the case of external obstacles, such as delaying tactics by landowners and other interests, it is possible that emergency powers may be required; and Mr Lloyd George has promised to support the Premier in requesting the House of Commons to give him any emergency powers that may be necessary and proper. We may therefore hope that Tuesday's conference may result in at least some acceleration of the cumbersome machinery of providing productive work for the unemployed, and that the whole problem will henceforth be regarded a little more in the light of a national emergency.

The Imperial Press Conference.—Most important, perhaps, of all the conferences being held in London this month is that to which the centre of the Empire welcomes representatives of the Press from every quarter of its far-flung territories; and perhaps the direct technical business of the conference is its least important side. Discussions on communications, the provision of news services, advertising and so on will doubtless prove useful to many editors and proprietors, but it is the less tangible results of personal contacts and of atmosphere from which most good may be expected. Anyone who has travelled in the distant parts of the Empire must have been acutely aware of a feeling that not only the Mother Country but also other component parts of the British Commonwealth of Nations were far-off misty unrealities, and that their affairs were only seen through a glass darkly. In London this month those who are responsible for guiding public opinion in widely separated British territories are meeting each other and learning anew of the similarities and differences of their several outlooks and problems. At the same time, they are all meeting and hearing the views on broad Imperial affairs of many of those leaders of British public life who have played big parts in guiding the Empire through critical stages of evolution. The delegates cannot fail to return to their posts with a clearer vision of Britain's own peculiar problems, and with a riper experience of Imperial problems, responsibilities and potentialities. Moreover, the conference is felicitously timed, for the delegates will have all these contacts and impressions fresh in mind as a valuable help towards judging the proceedings of this autumn's Imperial Conference and of helping to form in all parts of the Empire sound opinions upon the work which the statesmen will then attempt.

India's Military Problems.—There are few of the final recommendations of the Statutory Commission which will be awaited with keener interest than those relating to the future of the Army in India, whose present position and problems are described in a most important section of the first volume of their Report. Having regard to the fact that the solution of "the tremendous question" involved in this connection by the constitutional future envisaged for British India in the Declaration of 1919 was not then really faced, the report summarises "the special features of India's military problem which must be provided for before Army administration can be a function of a self-governing India." As regards external defence, the strategic requirements of the North-West Frontier are noted as constituting a problem "without parallel elsewhere in the Empire," and as involving "a difficulty in developing self-government which never arose in any comparable degree in the case of the self-governing Dominions." But a second consideration also makes the case of India unique. Not only is the Army normally employed to an extent not paralleled elsewhere for the purpose of maintaining or restoring internal peace—and in disturbances of a communal complexion reliance tends to be placed predominantly on the British soldier as a "neutral"—but a further complication is entailed through the unequal distribution between the martial and non-martial races of the sources of recruitment for Indian regiments. Thus, excluding 19,000 Gurkhas recruited from Nepal, the Punjab contingent amounts to 62 per cent. of the whole Indian Army.

"The plain fact is that the formation of an Indian national Army drawn from India as a whole, in which every member will recognise the rest as his comrades, in which Indian officers will lead men who may be of different races, and in which public opinion will have general confidence, is a task of the greatest possible difficulty. . . . As things are, the presence of British troops and the leadership of British officers secure that the fighting regiments shall not be a menace to the millions who are conducting their civil occupations without any thought of the consequences which might ensue if British troops were withdrawn and the Indian Army consisted of nothing but representatives of the Indian fighting races."

"Indian statesmen," the Commissioners remark, "in developing their ideas of self-government for India as a whole will, as it seems to us, have to face these questions in a practical spirit," and with less facile assumptions than those made in the so-called Nehru Report of 1928. On the other hand, the Report emphasises the importance of recognising that these difficulties must not be treated as insurmountable. Having described briefly the progress of Indianisation of commissioned ranks under the Eight Units Scheme started in 1923, and the arrangements made for providing vacancies for Indians at Sandhurst, Woolwich and Cranwell, following the Skeen Report in 1926, the Commission state frankly:—

"It is not to be supposed that units recruited in Britain and officered by British officers are going to be mercenaries in some future India where the ultimate military authority rests with an Indian Minister of War, or with an Indian Cabinet, responsible to an Indian elected Assembly."

Discussing possible directions of advance, the Report concludes by remarking that "the objective which many Indian politicians naturally and properly put before themselves is to develop Indian Army organisation upon a purely Indian basis and officered by Indians." The pace at which this can be done depends upon the practical efficiency of the new instrument for its essential purpose. Internal order is manifestly a primary task of the forces of a self-governing area; external defence, on the other hand, may be viewed as the concern not only of India, but of the whole Empire.

"We are only concerned here to convey a double warning—a warning, on the one hand, that Britain cannot indefinitely treat the present military organisation of India as sacrosanct and unalterable, but must make an active endeavour to search for such adjustments as might be possible; and a warning, on the other hand, that Indian statesmen can help to modify the existing arrangement in the direction of self-government only if they too will co-operate by facing the hard facts and by remembering that those who set them out for further consideration are not gloating over obstacles, but are offering the help of friends of Indian aspirations."

It is evident from this section of the Report that the Commission's recommendations on the problem of India's defence will be of crucial importance.

Indian Education.—The problem of education in India, whose growth the Statutory Commission was required by the terms of its Royal Warrant of appointment to survey, had already been the subject of an interim report* giving the findings of an Auxiliary Committee, under the chairmanship of Sir Philip Hartog, which the Commission set up. Those findings, which were discussed in the *Economist* of October 26, 1926, page 761, are generally endorsed in the present Report of the Commission. The magnitude of the task of spreading education among the masses of India is frankly recognised, and the Commission are satisfied that, as the Auxiliary Committee found, though "so far as mere quantitative increase in the numbers under instruction is concerned, there has been a phenomenal advance since the inception of the Reforms," the advance towards effective literacy has been somewhat illusory. The encouraging growth of public interest in education is noted, but so also are the "futility and waste of time, effort and money which have resulted through excessive haste to achieve quantitative expansion without an adequate supply of teachers or proper organisation of inspection." The need for good and independent inspection of schools is particularly emphasised, and the view is strongly expressed

* Cmd. 3407. H.M. Stationery Office, 4s. net.

that Governments will have to devote themselves for a long period to reforming the organisation and administration of this vital service " to prevent expansion being unfruitful and the ground still uncultivated remaining sterile." As the Commission remark, " literacy alone affords no guarantee of the attainment of real political capacity, but the ability to read at least increases the probability that statements and discussions of political issues and political programmes will reach the elector." As male literates in British India were found by the census of 1921 to amount to only 14.4 per cent., the importance of the educational issue can hardly be exaggerated.

The Crisis in Malta.—The trouble in Malta grows. On Whit Sunday Archbishop Caruana, who has been conducting a violent political campaign against the Prime Minister, Lord Strickland, and against the party which Lord Strickland represents, was the object of hostile demonstrations which made it necessary for the police to intervene. This was only to be expected sooner or later; for the Maltese prelates themselves have temporarily paralysed the normal, constitutional politics of Malta by threatening to excommunicate anybody who voted for Lord Strickland and his colleagues, with the result that the elections had to be suspended at the last moment. Nor can the crisis be resolved by local action. The local situation depends on relations between the Imperial Government and the Holy See; and here there is a deadlock. Peace can only be restored by the negotiation of a concordat, and the British Government is unwilling to negotiate unless the Holy See first takes steps to restrain the two Maltese prelates from their present political course, while the Holy See refuses to enter into negotiations on these conditions. This is strangely inconsistent with a provision—forbidding ecclesiastics to take part in politics—which appears in the concordat concluded between the Holy See and Italy last year. If the Holy See thinks that right in one Catholic country, why is it unwilling to agree to it in another? Is it a question of " face "—an unwillingness to have a preliminary condition for negotiation laid down by the other side? But if " face " is to be saved, it must be saved all round; and the Holy See did not consider British or Maltese " face " when it allowed the prelates in Malta to put a spoke in the wheel of constitutional government. Moreover, the Holy See's part in the prelates' political campaign has been one not of merely supine tolerance but of active incitement. Strange light is thrown on this point by the correspondence with the Holy See relative to Maltese affairs which has just been published as a Parliamentary Paper* in this country. The crucial document is a note of July 2, 1929, from the Cardinal Secretary of State to the British diplomatic representative at the Vatican, enclosing two documents which he had already despatched to the Bishops of Malta and Gozo—a *résumé* of an *aide-mémoire* addressed by eye-witnesses (unnamed in the document) to the Holy See on activities of Lord Strickland in Malta and a letter addressed to the two prelates by Cardinal Gasparri himself. The *résumé* is a vituperative denunciation of the present political situation in Malta; the letter is virtually an exhortation to the two prelates to persist in a political campaign against the Maltese Ministry. The inexplicable fact is that this unheralded declaration of war was launched within less than a month of the return to the Vatican of a Delegate Apostolic, Monsignore Pascal Robinson, who had just been investigating the whole Maltese situation on the spot. The Holy See says that it was partly on Monsignore Robinson's advice, and on the strength of his report, that it acted thus. The British Government says that the Monsignore, after a full and friendly discussion with the Maltese Ministry and with the Governor, was able to collaborate with them in drafting the heads of a concordat. Presumably the Monsignore's lips are sealed by authority; but his missing evidence is indispensable for judgment on the case. Meanwhile, we can only assume that the Holy See has shown less than its usual judgment in the affairs of this world.

* Holy See No. 1 (1930). Cmd. 3588.

The Situation in China.—The development which we foreshadowed when last we referred to China seems, unfortunately, to be maturing. The two allied Northern war lords, Fêng and Yen, are gaining ground on the main front in Honan and Shantung because the Nanking Government's forces are paralysed by a threat from the rear, *i.e.*, from the South. It is now reported that they have lost Changsha—the capital of Hunan—to the combined forces of " the Kwangsi group " and Chang Fat-kwei, the commander of " the Ironsides "; and Changsha is connected by railway with Yochow on the Yangtse and with Hankow. Thus the southern insurgents are within measurable distance of reaching the line of the Middle Yangtse and joining hands with the Northern war lords somewhere in Hupeh. If that were to happen, it would look to outsiders as though the days of the Nanking Government were numbered; but, according to all Chinese precedents, that would be just the moment for them to make a brilliant recovery—profiting strategically by their interior lines or diplomatically by the extremely probable contingency that their southern and northern adversaries would only join hands in order to fall out with one another. But this stage may never be reached, for the Nanking strategists have not played their last card. Finding how uncomfortable it is for themselves to be attacked from the rear, they have taken steps to make the southern insurgents suffer the same discomfort; and already the anti-Nanking forces from Kwangsi who have triumphantly entered Changsha are being hotly pursued by pro-Nanking forces from Kwantung, who may succeed in triumphantly occupying Changsha in their turn, while " the Ironsides " are spreading on towards Hankow. All this would be amusing if it were not so tragic for the unfortunate civil population of China and so detrimental to the interests of the world at large.

The Channel Tunnel—An Obituary.—The White Paper in which the Government explain their reasons for refusing to sanction the Channel Tunnel project is a remarkable document, in which the effect of three reasonable contentions, which not even those who dissent from them can despise, is entirely wrecked by the introduction, as a clinching argument, of a museum piece. They say that the economic success of the Tunnel must remain uncertain until £5½ million have been sunk in the pilot tunnel, and that there is very little support for the scheme among representatives of trade and industry; they say that the employment afforded for the first five years would only be equivalent to that which could be provided by the expenditure of about £250,000 per annum on road construction, and would be partly counterbalanced by the effects of reduced expenditure by railway and shipping companies; and they make the very important point that, however firmly they disclaim any intention of providing public money for the furtherance of the scheme, they would, in fact, be unable to avoid some moral responsibility for seeing it completed, should the supply of private capital prove inadequate. These, especially the last, are arguments of some substance; but the Government, having fired these telling volleys into the heart of the scheme, make assurance doubly sure by bringing out a crossbow from the ancestral armoury and letting fly an arrow in the direction of the corpse. We are told that the provision of adequate defence for the Tunnel would be both costly and unsatisfactory, and that " no attempt can be made to describe the multiplicity of the forms of attack to which the Tunnel would be exposed under modern conditions, nor the ingenious means proposed for its protection." These ingenuities were devised by the General Staff, who apparently reconnoitred the whole area on the spot; but to the mere civilian, contemplating the rapid development of aerial warfare, invasion by Tunnel seems about as likely as an attack by an owl on a fieldmouse's nest *via* the neighbouring rabbit warren. Indeed, if we are to be invaded at all, an invading army which has only one dimension in which to move seems considerably less formidable than an aerial force with three dimensions at its disposal. However, the Tunnel is not to be, and as the day of its maximum potential usefulness is probably already past, it seems unlikely that the project will again be raised unless and until some as yet undreamed of means of transport on *terra firma* displaces the aeroplane and airship.

May Overseas Trade.—The preliminary figures of overseas trade in May, published in the *Board of Trade Journal*, show, as was to be expected, a decline in both imports and exports as compared with May, 1928, and a still heavier decline as compared with May last year:—

MONTH OF MAY.
(000's omitted.)

	1930.	Inc. or Dec. on April, 1929.		Inc. or Dec. on April 1928.	
	£	£	%	£	%
Imports	91,037	−12,455	12·0	− 8,393	− 8·4
British exports	51,012	−16,425	24·4	− 7,542	−12·9
Re-exports	9,075	− 1,396	13·3	− 2,746	−23·2
Total exports	60,087	−17,821	22·9	−10,288	−14·6
Excess of imports over total exports	30,950	+ 5,366	21·0	+ 1,895	+ 6·5

This further decline in May means that the figures for the year to date are heavily below those for the first five months of either of the last two years, as the following table shows:—

FIRST FIVE MONTHS.
(000's omitted.)

	1930.	Increase or Decrease as compared with			
		1929.		1928.	
	£	£	%	£	%
Imports	458,328	−55,178	−10·7	−47,665	− 9·4
British exports	262,006	−46,843	−15·3	−33,753	−11·4
Re-exports	41,401	− 9,545	−18·8	−14,514	−26·0
Total exports	303,407	−56,388	−15·7	−48,367	−13·8
Excess of imports over total exports	154,921	+ 1,210	+ 0·8	+ 702	+ 0·5

Unfortunately, the decline in imports is very much more marked in the raw materials class than among manufactured goods, imports of which are only £1¼ million lower than in the first five months of last year, whereas exports of British manufactures have declined from £246 million to £205 million. The exact significance of this cannot, however, be gauged until the Trade Returns are published and we are therefore obliged to postpone comment until next week.

Shipping Freight Index Number.—Renewed weakness of rates for most homeward voyages, offset in consequence by slightly firmer outward quotations, characterised the " tramp " shipping freight market last month. On balance, our index number, calculated on the basis of monthly averages, recorded in May, as compared with April, a decline of 1.3 per cent. The latest figure, which represents 88.5 per cent. of the average for 1898-1913, is nearly 22 per cent. lower than at this time last year. The following table summarises recent movements of the index number:—

AVERAGE 1898–1913=100.

	Average, 1913.	May, 1929.	Mar., 1930.	April, 1930.	May, 1930.
European Waters	110·0	119·6	96·3	94·4	95·1
North America	113·1	115·6	87·7	91·2	88·5
South America	123·4	122·6	91·9	95·9	91·6
India	106·3	109·0	94·2	94·8	94·2
Far East and Pacific	117·4	112·6	77·8	76·3	74·6
Australia	127·9	99·7	79·2	85·5	87·2
Total	116·3	113·2	87·9	89·7	88·5

There was still no recovery in the volume of sea-borne grain moving last month. The homeward Plate market was particularly depressed, partly through the general apathy of charterers, and partly on account of delays in maize shipments caused by bad weather. The North American group of routes was equally dull; rates in Europe were affected by restricted business in ore; and the volume of whole-cargo business east of the Suez Canal was exceptionally small. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade	76·3	− 0·4	South America—outwards	116·9	+ 7·1
Bay—outwards	113·8	+11·1	South America—homewards	66·3	−15·8
Bay—homewards	111·3	− 9·7	India—outwards	115·8	+ 6·3
Mediterranean—outwards	98·1	+ 3·8	India—homewards	72·6	− 7·6
Mediterranean—homewards	94·9	...	Far East, &c.	74·6	− 1·7
North America	88·5	− 2·7	Australia	87·2	+ 1·7

Expressed as a percentage of the average for 1913, the total figure of our index number for May works out at 76.1, as compared with 77.1 in April, and 97.3 a year ago. With the dull season of mid-summer approaching, the prospects for " tramp " shipowners are far from propitious; and even when allowance is made for the fact that 4½ million tons are laid up, it may be difficult, in the absence of concerted action, to prevent a further decline in many rates.

The Bank and Gold Shipments.—On Friday afternoon of last week the Bank of England let it be known that for the time being it was only going to sell standard gold of eleven-twelfths, or 0.916⅔, fineness. This presumably means that at present it proposes to adhere to the strict terms of the Gold Standard Act of 1925, under which it is only bound to sell 400 ounce bars of standard gold. There is reason to believe that it deliberately made that announcement immediately before the holidays so as to give all concerned ample time to adjust themselves to the new conditions that the Bank's decision brought into existence. As regards foreign exchange dealings with most centres, the Bank's decision to deliver standard gold instead of fine gold possesses little significance, for most central banks are prepared to buy standard gold, and in fact the American authorities specially encourage the delivery of gold nine-tenths fine, this being the fineness required by the American mint. The Banque de France, however, is bound by the French Stabilisation Law not to accept gold of a less fineness than 0.995, and so henceforward purchasers of gold from the Bank of England for transmission to the Banque de France will have to bear the cost of bringing it up to the required fineness, and also the loss of interest on the time occupied in the process. Originally the cost of refining in London amounted to 2d. per ounce gross, but last Wednesday, stimulated perhaps by the prospect of a large accretion of business as a result of this change in the Bank's procedure, a London refiner reduced his charges to ½d. Adopting this last figure, and taking interest at 3 per cent., the net result is that the export gold point of the London-Paris exchange is reduced from Frs. 123.89 to just under Frs. 123.80, and one authority expects Frs. 123.78 to be the practical working rate. A consequence of this is that so long as Paris is the effective buyer of the fine gold offered in the London market each week, the price of gold will rise above the price of 84s. 11½d. per ounce, which is the fine gold equivalent of the Bank's statutory selling price of 77s. 10½d. per ounce for standard gold, eleven-twelfths fine, and the amount of the increase will clearly

THE DIFFICULTY
of finding a large initial premium for a Life Assurance Policy is overcome by the new Scheme whereby Life Assurance can be purchased by Monthly Premiums. No extra charge for this convenience. Full benefits from payment of first instalment. Ask for Monthly Premium Booklet.

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED
Head Office: 10 Fleet Street, London, E.C.4 Estd. 1836

equal the extent to which the gold export point of the French exchange has been lowered, *i.e.*, the cost of bringing standard gold up to the fineness required by the Banque de France. This is why the Cape gold in the market on Wednesday was sold at 85s. 0⅝d. It is possible that those unacquainted with the technicalities of the bullion market may deduce from these changes that Great Britain is departing from the gold standard, or at any rate that obstacles are being placed in the way of its normal operation. In reality nothing of the kind has happened. During the past few years the Bank has only delivered fine bars as an act of grace, and its decision to adhere for the time being to the letter of the law is based solely on the fact that it only has a limited quantity of fine bars left in its vaults. Nor is there anything unprecedented in the fact that fine gold in the market now commands a slight premium over the Bank's selling price, for in the last quarter of 1907—when the full gold standard was unquestionably in operation—fine bars were selling at a premium of 2⅛d. over the Bank's statutory selling price. It is true that the Bank's action has lowered the export gold point of the Paris exchange, and inasmuch as London refiners can only deal with approximately £200,000 worth of gold in a day, the daily outflow of gold to France may be restricted. Still, the Bank is not bound to exhaust its stocks of fine bars in order to facilitate shipments to France, and the outside observer will be disposed to argue that the fault lies in the French law which imposes on the Banque de France a restriction on its power to buy gold which does not generally exist. In other words, the Bank of England is playing according to the strict rules of the gold standard game, and others who make their own rules have no ground of complaint.

The Public Trustee.—The annual reports of the Public Trustee are interesting in that they direct attention to the steady growth of an institution, the magnitude of whose operations is not always fully appreciated. The twenty-second general report, covering the twelve months ended March 31, 1930, shows that up to that date the total number of trusts which the office had accepted was 27,073, with an aggregate value of £300,272,159. Of these, 9,634 had been completely distributed, leaving 17,439 under administration, with a capital value of £220 million. During the year, new trusts accepted numbered 1,004, with a total value (including some accretions to old trusts) of £13,883,458. The use made of the Office by testators of small means is illustrated, however, by the fact that 560 of last year's new trusts had a value of less than £5,000. The Office, which earned from fees a net surplus last year of £26,498, is assisted by an honorary Investment Advisory Committee, and it is of interest to note that on March 31st the investments held in trust, totalling £200,770,648, were distributed over a fairly wide range of securities, the principal holdings being British Funds, £59 million; Colonial Government and Colonial and Foreign Corporation Stocks, £30 million; and British railways, £27 million. Financial trusts, insurance and banks accounted for £16 million, and commercial and industrial securities for nearly £14 million. In its twenty-two years of sound and economical administration the Office of the Public Trustee has amply justified its existence.

The Empire Marketing Board.—The Empire Marketing Board, whose fourth Annual Report* has just been issued, is a non-political body containing representatives of all three parties, and was established in 1926 in order to "improve the quality and increase the quantity of Empire products marketed in the United Kingdom and to make Empire buying a national habit." The Board conceives its functions in a large-minded way. It recognises the immense complexity and widespread ramifications of the modern marketing processes, and it aims at contributing to the growth of Empire trade by increasing knowledge at every stage on the long road from the producer to the consumer. The Board's work falls essentially into three main parts, viz., research and development; economic investigation and marketing inquiries; and publicity. The importance of the Board's work in research and development may be seen from the fact that expenditure of £482,000 was included in the 1929-30 estimates in consequence of their work. The schemes approved range from banana research in the West Indies and copra research in Malaya and Fiji, through low-temperature research and animal husbandry and breeding, to entomological work both at home and abroad; mycology and plant pathology; economic botany and dietetic studies. Under the heading of economic investigation and marketing inquiries, the Board are assisting the work undertaken by the Ministry of Agriculture; they are extending statistics and marketing intelligence; making researches into wastage in imported fruit; and carrying out a series of retail market services. The publicity work (for which £360,000 was provided in the estimates for 1929-30) includes newspaper advertisements, posters, leaflets, lectures, broadcasting and co-operation in exhibitions and shopping weeks, trade meetings and cinema publicity. The current report shows that the Board is making an important contribution to the development of Empire trade and that it is giving valuable encouragement to the extension of the scientific knowledge which is vital to the well-being and future development of the Empire.

Tourist Traffic in Canada.—Our Ottawa correspondent writes:—The tourist traffic from the United States has for some years been recognised as a growing factor in Canada's national economy, and a bulletin recently published by the Bureau of Statistics reveals it as so important that it ranks next to agriculture and manufacturing as a major industry of the Dominion. The Bureau estimates the value of the tourist trade to Canada in 1929 at $299,188,000, which is claimed to be an increase of 30 and 69 million dollars respectively over its estimated values in 1928 and 1927. On the other hand, it is estimated that Canadian tourists spent in foreign countries about 111 million dollars, but Canada's favourable balance from tourist traffic is, therefore, no less than 188 million dollars. The bulletin further points out that so far comparatively little advantage has been taken by Canadians of the sales opportunities presented by this annual influx of thousands of prosperous visitors, for the money expended on purchases in Canada amounts only to a fraction of the hundred dollars' worth of goods which American visitors are permitted to take back home without payment of duty at the frontier. Suggestions have been made from various quarters that British exporters should take advantage of the new preferences of the latest Canadian Budget to place upon the Canadian market a number of lines of luxury goods like chinaware and leather articles which would have an alluring appeal to American visitors.

Hungarian Borrowing.—With reference to the projected loan operations of the Hungarian Government, described in our issue of May 31st (page 1221), our Budapest correspondent writes:—There is no connection between the $20,000,000 short-term agricultural credits for the financing of the harvest and the projected Hungarian State Loan which will be issued in London and on other principal money markets when international monetary conditions will permit it. It is rumoured in Budapest that the London portion of the Loan will amount to £3,000,000, out of a total of £10,000,000. The like sum will be issued in New York and the rest will be offered in Holland, Switzerland and in Italy at the same time.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during May amounted to 916,213 ozs. of fine gold, as compared with 868,606 ozs. produced during April. In May, 1929, the output amounted to 897,598 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.

Trade — Wheat Prospects — Money Market — Capital Issues.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 3.

The trade position in this country is, to say the least of it, growing no stronger, and well-informed persons expect little, if any, improvement before autumn. Security markets are in the doldrums and commodity price weakness throughout the world is a disturbing factor. Further delay over the tariff is not helping matters much, though it now looks as though the bill will be passed and signed within the next two or three weeks. A good deal of pressure is being brought to bear on President Hoover to veto the bill, but opposition is coming mainly from economists and business men who perhaps are less influential at Washington than are the Republican politicians close to the President. As a matter of party regularity, President Hoover will doubtless feel obliged to sign the measure, however much he may disagree with many of the increased duties which it contains. At all events, business men prefer an unsatisfactory tariff bill to continued uncertainty, and settlement of the matter will bring great relief.

Recent changes in the business situation are of no great significance. Steel production has dropped another point or so, and railroad traffic is slightly lower. Ford and a maker of high-priced motor-cars have cut prices, a rather unusual step for this season. Commodity prices continue to decline, Dun's index for May showing a drop of eight-tenths per cent., compared with declines of nine-tenths per cent. in the two preceding months. All groups except breadstuffs declined.

Mr Julius H. Barnes, the chairman of President Hoover's business survey conference, has issued another report in which he attempts to look on the bright side of things. Mr Barnes reports a considerable increase in public building, but a drop in residential construction. He also finds that the railroads in the first four months spent $97,000,000 more than in that period last year. Delinquencies and repossessions in instalment purchases decreased in April, he reports, and retail store sales rose. However, the all-round recovery in business which the conference reports of earlier months seemed to indicate has obviously not taken place. As the matter is summed up by the National City Bank in its monthly review: "The condition of general business has continued unsatisfactory during May, and business men who have been hoping for signs of a definite turn in the situation have had to reconcile themselves to further waiting. Business, indeed, has shown a progressive increase in activity as compared with the early months of the year, but this has to be viewed in the light of the normal seasonal tendency, which is always upward during the spring." The bank, in analyzing the first quarter's earning statements of 273 dividend-paying industrial corporations, finds that current dividend requirements were earned with a margin of 28 per cent.

The wheat harvest is about to begin in the south-west, and the crop will be only moderate. In many sections the yield per acre promises to be so small that, with current prices, the farmers scarcely will come out even. On the whole, farm income probably will not be much below that of a year ago, and the influx of "new money" into the farming country shortly is calculated to stimulate trade later in the summer. The Farm Board is making strenuous efforts throughout the west to induce farmers to organize co-operative societies, and much more attention is paid to that than to promises of better prices through direct market support.

There is every indication of a long period of low money rates. The holiday demands for currency and end-of-the-month dividend and interest disbursements made scarcely a ripple on the market, which is under the influence of two main factors making for easier credit. Since the middle of April a decline of $60,000,000 in currency in circulation has taken place, and in the past four months gold imports have been a little more than that. Currency circulation is down $200,000,000 on the year, and there has been a net gain of about the same amount in the gold stock since the beginning of 1930. The reduction in member bank reserve requirements, on the one hand, and the increase in available reserves, on the other, has brought a considerable rise in unemployed credit, with a consequent weakening of rates. Gold has come largely from Japan and South America, and while it is not expected that the inflow will amount to a great deal during the summer, none is likely to be lost, nor is circulation threatening to rise. Slack business, accompanied by reduced payrolls and falling commodity prices, precludes any important demand on bank reserves for several weeks at least. A possible pull on credit is from the share market, but in the past fortnight brokers' loans have risen only $15,000,000, following a drop in the preceding two weeks of $267,000,000 on the early May break in prices, and the present stagnation in stock market trading virtually removes that as a firmer money danger.

Improving bond prices are in prospect. Recently member banks of the Federal Reserve system have reported increasing purchases of bonds. Most of the banks are out of debt at the Federal Reserve Banks, and the demand for loans on securities and for commercial purposes is too small to absorb the supply of credit. Member bank bond holdings in the past three months have risen about 6 per cent. Bank investments have gone into new security offerings rather than into old bonds, the market for which has been about as sluggish as that for shares.

New issues in April, as computed by the Federal Reserve Bank, amounted to $950,000,000, about $150,000,000 more than in the same month of last year and the largest in any month this year to date, but the May volume probably was not far from that of April. Refunding loans took up only $50,000,000 of the total and about 70 per cent. consisted of bonds. Last month public utility financing came to the fore, displacing largely the railroad capital flotations, which were especially prominent in the earlier months. Summarising the capital issues of the first four months, the Reserve Bank finds domestic corporate issues were $2,000,000,000. While bond offerings rose about 65

per cent. this year over the same period of 1929, the sale of shares fell off sharply, principally on account of the drying up of investment trust and financing company offerings. Share flotations were about $800,000,000 smaller. State and municipal financing rose about 40 per cent., and foreign borrowing rose markedly, the gain being 70 per cent.

Treasury financing at the mid-month tax date probably will consist of $500,000,000 of short-term notes or certificates, bearing not more than 2¾ per cent., and will be used for refunding a like amount of maturing certificates. Around the tax date the banks here are expected to have approximately $200,000,000 of temporary surplus credit, which will make extremely easy money until tax checks can be collected and the usual Treasury overdraft at the reserve banks paid off.

FRANCE.

Politics — Coal Trade — Silk Industry Depression — Crop Prospects.

(FROM OUR CORRESPONDENT.)

PARIS, June 11.

WHILE the chief interest this week has been the bankers' negotiations with regard to the Reparations Loan, the principal political event was the annual French International Socialist Party Congress at Bordeaux, which has been marked by a renewed definite repudiation, by M. Léon Blum and his followers, of all question of any working agreement with the Radical Party. M. Blum accepted as a matter of fact the disappearance in the near future of the Radical Socialists as a party, and devoted himself solely to the question of the necessity for his own army to take the opportunity of benefiting as largely as possible from the Radical disintegration. " I am not one of those who wish for the rapid—or rather, too rapid—disappearance of the Radicals," he remarked. " We have already won a good many seats from them, and we shall take still more, but the death struggles of the Radicals must be made to last as long as possible, which will be all to our benefit." The Socialist leader's cold-blooded declarations have left M. Herriot and his supporters in a quandary. The Socialists will have nothing to do with them, and M. Tardieu has made it clear that, if they are prepared to co-operate with him, they can only do so on his and not their own terms. Meanwhile, the Socialists have during recent months increased their strength as a Parliamentary group from 100 to 107, while the Radicals are now only 114, and are practically certain, between now and the next General Elections, to lose seats both to the present majority parties and to the Socialists. All this confirms the belief that M. Herriot and his friends are now faced with the alternative of combining with the present majority (and thus assuring the adoption of a stable national policy of economic development and progress) or suffering little short of extinction as an effective political fighting force.

The strenuous effort which British coal exporters are making in their fight for supremacy in the European markets, in spite of their failure, so far, to secure the proposed export bounties, is strikingly shown by the French coal import returns for April, which are published this week. British coal exports to this country during April totalled 1,358,000 tons, as against 947,580 tons in March, or an increase of over 30 per cent. German coal entries in April (reparations coal included) were 533,675 tons, or slightly over 25 per cent. more than the March tonnage. Belgian, Dutch, Polish and Russian exports to France all showed a substantial decrease. The French output in April (25 working days) was 4,580,000 tons, against 4,800,000 tons in the previous month (26 working days). British, Belgian and German exporters have all brought their selling prices down, but French coalowners have not yet done so. The French decline of nearly 5 per cent. in output was due to the slight slowing down of industry in general. The slowing down in steel production is confirmed by the drop in the output of metallurgical coke by the colliery plants, whose production tonnage in April is returned as 419,848 tons, as against 443,909 in March. The April tonnage, nevertheless, was still 25,000 more than in April, 1929. French coal consumption in 1929 reached the new high record figure of over 90,000,000 tons, of which the country's own mines, although they produced 10,000,000 tons (or 13 per cent.) more than in 1928, were able to furnish only 60 per cent., against over 65 per cent. in 1928. Two-thirds of the increased requirements (which have grown still larger this year) had, therefore, to be covered by imported coal.

The annual report of the French Association of Tissue Manufacturers attributes the crisis which marked the industry in 1929 to, first, the smaller quantity of textiles used by women, owing to the recent change in fashions; secondly, to competition by artificial silk and the greater cost of present-day stockings; and in the third place to the drop in the price of raw wool. Further, owing to constantly changing present-day taste, manufacturers of piece-goods are now compelled to make in smaller quantities and to produce a far larger number of new designs. Other causes for the depressed condition of the French textile industry have been intense foreign competition, " new menaces of British protectionism," prohibitive American tariffs, and " the deliberate and systematic pillage of high-class dress designs by certain American firms." French exports of dresses and piece-goods in 1929 represented 198,000 metric quintals, with a value of 1,698,000,000 francs, against 215,514 quintals (1,802,000,000 francs) in 1928. Imports were 12,788 quintals (152,682,000 francs) in 1929, against 9,941 quintals (117,568,000 francs) in 1928, or an increase in value of 22 per cent.

The Minister of Agriculture's report on the crop situation (May 1) forecasts another excellent harvest this year, both better in quality and larger in volume than in 1929. French wheat production has not decreased in volume, in spite of the diminution of culture area. The " flight to the towns " and the enormous proportional loss of manpower by the peasant class during the war have been more than compensated for by the adoption of modern intensive methods of agriculture and the systematic fostering by the Government of the use of better (and cheaper) chemical fertilisers.

GERMANY.

Price-wage Negotiations — Budget Deficit — Relations between Reich and Thuringia — Reichsbank.

(FROM OUR CORRESPONDENT.)

BERLIN, June 10.

THE attempt of the West German iron industry to give a new impetus to business by a simultaneous lowering of prices and wages has developed into action on a broader basis. The leading employers' associations—Reichsverband der Deutschen Industrie and the Vereinigung Deutscher Arbeitgeberverbände—have during the last few days been negotiating with the trade unions for the working out of a common plan for reducing industrial production costs. Details have not yet been made public, but it is said that a reform of the social insurance system and of taxation policy is also being considered. That trade unions and employers' associations are discussing these matters is certainly welcome news, especially since it implies that the employers intend to lower wages only in agreement with the unions. Whether these discussions will have any direct success is the question. As to the attitude of the " free " unions, the Socialist press, which is in close touch with them, declares, as was to be expected, that in no circumstances will they consent to a reduction in real wages. The Christian trade unions will, if only for competitive reasons, be unable to take a different attitude. Hence lowering of wages will at best be possible only in direct proportion as the cost of living falls, but how much and how rapidly the cost of living can be influenced by reductions in the prices of industrial products, when at the same time the newly operative increases in import duties on food are making themselves felt, and gas and electrical companies and street railways are being obliged to make further increases in their prices in order to balance municipal budgets, is more than doubtful.

Such action would, of course, be very valuable if it succeeded. It would make German industry better able to compete with foreign productions and would, by increasing confidence. It would also diminish the tension in the political situation if workers and employers could come to a direct understanding. The attempt to bring about negotiations between employers and employees would, indeed, hardly have been made but for a general feeling that the authority of the present Government is already so seriously impaired that it could not by its own action decisively effect an improvement in the situation by economic and financial measures. But can the lack of energetic leadership on the part of the State—and especially in Germany, where the people are accustomed to depend on the State for help—be compensated for by a pact among economic organisations? There have been plenty of attempts along this line, especially in the inflation period: there was once a " Zentralarbeitsgemeinschaft " of the trade unions and employers, and also the idea which underlay the organisation of the Reichswirtschaftsrat was that the State could leave great developments of economic policies to be dealt with through an understanding among the economic groups. But all these expectations failed to materialise in practice.

The Minister of Finance now calculates at 850 millions the deficit that has arisen in the new 1930-31 Budget. To the deficit in the unemployment insurance and to the reduction in receipts from taxes, for which compensation must be found, there have been added a hundred millions needed for a programme for creating employment—chiefly the building of houses and increased orders from the post and railways. This creating by the State of opportunities for employment will probably arouse anew in Germany the dispute well known in England. Does the State aid the labour market when it, on the one hand, withdraws capital either through taxes or loans—that is, when it reduces the possibility of employment—in order, on the other hand, to furnish employment? In view of the present economic situation in Germany this question cannot so confidently be answered in the negative as the purely theoretical economist might otherwise answer it, for in Germany to-day it is extraordinarily important to revive the courage to make investments, and in practice it is a great help if the State sets the example.

The Minister of Finance proposes to cover the deficit as follows: Increase of contributions to unemployment insurance, Rm. 220 million; savings in unemployment insurance, Rm. 115 million; supplement to income-tax of salaried persons (Civil Servants and private employees and unmarried persons), Rm. 350 million; sale of Reichsbahn preferred shares, Rm. 100 million; earlier payment dates for cigarettes taxes, Rm. 50 million. The " Notopfer " (emergency offering) by salaried persons, which was held to be justified by the fact that these people are not exposed to the risks of unemployment, has meanwhile been almost unanimously rejected by public opinion. There are also some misgivings over the fact that another 100 millions of preferred shares of the Reichsbahn are to be sold, after 150 million marks' worth have already been included in the current budget in order to meet the extra requirements of unemployment insurance foreseen at that time. The worst error of the financial programme, however, is that it utterly fails to take into account the urgent financial requirements of the states and municipalities, and thus compels these to adopt measures especially undesirable from an economic standpoint.

The statement of the Reichsbank on June 6th shows, as against the preceding week, receipts of 27.6 millions in gold, bringing the total up to 2,619 million marks. Holding of foreign exchange bills eligible as legal reserve rose by 28.9 millions to 380 millions. The gold comes mainly from the Bank of England. Some German banks did not miss the opportunity afforded by the favourable position for this purpose of the sterling exchange, although gold arbitrage is not desired by the Reichsbank. Gold and exchange available as reserve against notes have now risen to exactly three thousand millions. On June 7th last year they amounted to only 2,072 millions. On the other hand, holdings of negotiable paper dropped 81.2 millions, Reich Treasury certificates 73.6 and advances 120.6 millions in the first week of June. Parallel with this went a reduction of the note circulation by 240 millions. The new bank report again raises for the Reichsbank the very pressing question whether it will not again have to lower its discount rate. The last reduction to 4½ per cent. was from the beginning a tentative step. The Reichsbank did not dare to reduce to 4 per cent. immediately, and so it has lost touch still more with the market. The demand for negotiable paper is very large, although both the Reich and the postal department have recently issued considerable amounts of Treasury certificates, which are finding a good market.

BELGIUM.

Depression — Wages — Sugar Consumption — Public Finance.

(FROM OUR CORRESPONDENT.)

LOUVAIN, June 9.

THE trend of business is still slackening and most of the usual economic indices are unfavourable. The report of the " Institute for Economic Sciences " of Louvain University, which has undertaken scientific research on trade cycles and economic forecasting, has just been issued. According to this report a downward movement developed in Belgium in the course of last summer and has since been growing more pronounced. This movement is now well advanced, though it is not yet quite completed. Hence the anticipation is that this unfavourable general trend will continue a little longer, without becoming really acute.

The crisis has been reflected by serious difficulties in the iron and steel industries, which, despite the measures taken by the Continental Steel Cartel and the establishment of special " Comptoirs," are able to make sales only with difficulty and at very unfavourable prices. One blast furnace has been blown out in consequence of the present difficult situation, and it is anticipated that four others will soon follow.

Unsold stocks of industrial coal at the pithead have been increasing. The house-coal market has been a little less bad than it was, but selling prices are in general on the decline, and the intervention of the " Comptoir des Charbons," which ought surely to be able to control the coal market, is proving ineffective. A fortunate development is the good understanding between the pit-owners and the workers on the question of miners' wages, which are to undergo a cut of 5 per cent. from the beginning of July onwards. Thus the threatened conflict will be avoided unless the pitmen refuse to accept the terms agreed to by their representatives.

Very valuable information on the wage trend in Belgium has been published by the Bulletin of the National Bank of Belgium; which shows that there has been a rapid advance in wages since the first months following stabilisation.

MEAN WAGE INDEX.
(Dec., 1925 = 100.)

	Brussels.	Belgium.
December, 1925	100	100
December, 1926	119	127
December, 1927	132	141
August, 1929	184	180
November, 1929	196	196

The increase in wages has thus manifestly exceeded the advance required in respect of monetary devaluation and has even further exceeded the increase in the cost of living, so that real wages are now substantially higher than they were a few years ago. Wages have been reported as stationary since the beginning of 1930. In recent weeks the cost of living has been falling slightly, but this movement is partly seasonal. Retail prices have fallen very little, to the disappointment of the public, which expected a substantial decline. Unemployment, without being really threatening, has been increasing. The latest available statistics of employment, which relate to the end of April, show that out of 1,500,000 workmen there were 30,000 partially (against 12,000 in April, 1929) and 13,000 totally unemployed (against 2,500).

A symptom of uneasiness is to be found in the general attitude of the real estate market. Conveyance prices of land show that its purchase value has fallen on the average by 10 per cent. in the last year. In the big towns, especially in Brussels and Antwerp, there are many flats and offices to let and for sale. The progressive restrictions of the operation of the Rent Act, added to the supply of numerous new buildings and the decline in demand, is responsible for the plight of this market. There is, nevertheless, still a shortage of working-class dwellings.

The sugar-consumption problem is at present engrossing the agricultural and political associations. The output of Belgian sugar has reached about 260,000 tons per annum, while domestic consumption has attained only 225,000 tons. The part which is allotted to the home market has been sold at profitable prices, since imported sugar is subject to a duty of 60 centimes per kilo., but for the remainder, which is exported, only very unfavourable prices are obtained. Efforts are now to be made to stimulate home consumption in order to sell off here the part of the output which is at present exported. So far, yearly consumption is only 27 kilos. per inhabitant, against 46 kilos. in Great Britain; but on account of its low price (2½d. per lb. avoirdupois) sugar has become one of the cheapest foodstuffs in Belgium.

The position of public finance remains good, but the Minister of Finance has issued a warning against the excessive expense which would certainly be incurred if a private members' Bill for the augmentation of war pensions and other allocations to old soldiers of the war were passed. The burden of the social services is becoming more and more heavy, while the present depression has reduced public receipts. The Budget estimates have been attained, but the substantial surplus of last year will certainly not be repeated.

ITALY.

The Corporative State and its Cost — Labour Agreements — Tax Changes — Sinking Fund — International Trade — Industrial Dividends.

(FROM OUR CORRESPONDENT.)

TURIN, May 19.

EVEN apart from international events, the last few weeks have been full of important political and economic developments. The inauguration of the National Council of Corporations is the crowning of the new corporative State. Signor Mussolini rightly stated that schedule 12 of the law creating the Council meant nothing short of an economic revolution; because the new body is empowered, if such questions are referred to it by agreement of the associations concerned, to legislate on prices, on quantity to be produced and all other possible points concerning industry. The network of syndicalism appears to be now complete. On March 1, 1930, there were in existence six employers' confederations (industry, agriculture, commerce, land transport, sea and air transport, banking) with 661 subordinate associations; 6 corresponding employees' confederations with 3,549 subordinate associations. The cost of this extensive structure is estimated in the report for 1930-31 of the Budget Committee of the Chamber, as follows: 25.5 million lire paid to the Corporations Department for general purposes; 24.1 million lire to be paid into a fund guaranteeing the observance of collective contracts entered into by syndicates; 20.5 millions to be paid to the after-work, Balilla, care of mothers and infants, anti-tuberculosis and other social funds; 67.3 millions to the central confederations; 118.1 millions to the regional, provincial and local syndicates and federations. This sum of 255.6 million lire includes only compulsory contributions paid by employers and employees whether they are or are not members of the associations, and consists therefore of true public taxes, of which account is taken in a sort of appendix to the State budget. To this sum there must be added the voluntary contributions paid by members of associations. As these are deemed to be a private matter, no account of them is published.

The Budget Committee report observes that, as a set-off, Italy has saved the cost of strikes and lock-outs, which in the last four years of the old *régime* caused the loss of 53 million days' work in the two years 1919 and 1920, and 15 millions in 1921 and 1922. The strike epidemic was subsiding; but the new legislation put a stop to it altogether. Between January 1, 1929, and January 31, 1930, there were concluded 1,238 local and single shop labour agreements; and between April 3, 1926, and March 10, 1930, there were registered 199 inter-provincial and national labour agreements. As syndicates and associations are public bodies, it can be said that to-day conditions of labour are almost completely regulated by public authorities.

A succession of changes in taxation has kept the public keenly interested. The octroi or internal customs barriers which encircled almost all medium and great Italian cities have been abolished. The reform was welcomed because internal barriers obstructed commerce, and sometimes created protected territories of grotesque smallness. As, however, somebody must pay the piper, wine and meat were subjected to a general consumption tax. Wine, for instance, previously paid little in the country and small towns, and was substantially hit only in octroi cities. Now all consumers must pay, whether they reside in the country or the cities. Unfortunately, the wine industry is suffering at present from low prices and sales difficulties.

In consequence of this programme for the reform of local taxation and the redemption of land and other public works, stamp duties have been increased and succession duty reintroduced. Succession duty was abolished in 1923 in the family group, between parents and sons, ascendants and descendants in general, husband and wife, brothers and sisters, uncles and nephews, descendants of brothers and sisters if they succeed by right of representation. The tax is now re-established in full, at rates intermediate between those of 1914 and 1923, but estates passing between parents and sons, or husband and wife, in families where there are or have been at least two sons, are exempt.

The most recent decree concerning taxation enforced an all-round increase of about 20 per cent. in the price of tobacco sold by the State monopoly. The increase is estimated to yield 500 million lire yearly, which will be paid into the Debt Sinking Fund. This fund was created by a decree of August 5, 1927; and was made to rely mainly on budget surpluses. But, as budget surpluses, in our system of accounting, are not synonymous with hard cash, the old fund made little headway. The new Sinking Fund will be presided over by the Governor of the Bank of Italy, and will have a special administration. The yield of the increase in the price of tobacco will be paid at once into a current account at the Bank of Italy, so as to insure the prompt purchase in the market and cancellation of public debt certificates. Only Consols can be purchased and cancelled.

The practical working of this excellent plan is conditional on prevention of any increase in the total State debt. According to the last published Treasury account, the total of internal public debt increased from 87,124 million lire at June 30, 1929, to 88,026 million at March 31, 1930. If the new sinking fund is to be effective, the grand total of public debt must be lowered.

Statistics of international trade show a big decrease in the passive balance. In 1929 imports were only 21,300 million lire, against 21,920 in 1928. As exports increased from 14,559 to 14,889 million, the excess of imports over exports decreased from 7,361 to 6,411 million. The change has been accentuated in the first four months of 1930, when imports totalled 6,078 million, against 7,723 million in the corresponding period of 1929; and exports 4,139 million, against 4,665 million; so that the excess diminished from 3,058 to 1,939 million lire. It is doubtful, however, if the decrease in imports is wholly to the advantage of the country. It may, indeed, readily be granted that a decrease of 1,237 million lire in the wheat imports in 1929, against 1928, and of 389 million lire in the first three months of 1930, against the corresponding period of 1929, is a net gain; but what of the decrease in the imports of raw materials of industry?

Complaints of bad trade are the loudest in the textile industry. The silk industry carries large stocks, which it has not been possible to sell, as usual, in the United States. The cotton and wool trades complain of sales difficulties in the Levant, the Far East and South America. Directors of joint stock companies, who, in fixing dividends, are more under the influence of prospects for the current year than of results achieved in the past year, to which dividends refer, are in a prudent mood. Out of 130 companies, dividends for 1928 (fixed in 1929) were unchanged as against the preceding year in 64 cases, increased in 55 and decreased in 11 cases only. Out of 135 companies, dividends for 1929 are now unchanged in 79 cases, increased in 31 and decreased in 25 cases. This prudent dividend policy checked the tendency toward better quotation of securities in Stock Exchange. Perhaps the announcement to-day of a new lowering of the official rate of discount from 6 to 5.50 per cent. can be viewed as a consequence of abundance of money. Discounts at the Bank of Italy were low, because ordinary banks did not need to rediscount, and first-rate customers obtained accommodation at less than the official rate.

BULGARIA.

Cabinet Changes — Foreign Trade — General Business Conditions.

(FROM OUR CORRESPONDENT.)

SOFIA, May 25.

THE apathetic and unconvinced behaviour of M. Liaptcheff's majority in Parliament during the Budget and other recent debates, made it definitely clear that some parts of the mechanism were beginning to wear out and that repairs and replacements were growing more and more urgent. On the close of the Budget voting the negotiations between the constituent groups of the Sgovor (the party in power) took a more realistic shape. The outcome of long and arduous combinations was the replacement of the Ministers for Education, Commerce, Public Works, Agriculture, Justice and Railways by new elements, admittedly representing more adequately the different subdivisions of the party. A noteworthy fact is that four of the new Ministers, MM. Al. Tzankoff, D. Mishaïcoff, G. Danaïloff and P. Staïnoff are university professors well acquainted with economic and administrative matters. This is generally interpreted as evidence of the serious intentions of M. Liaptcheff's Government to grapple at last with the financial and economic difficulties of the country. Expectations in business circles are perhaps not as sanguine as that, but there are reasonable grounds for hoping that much more attention will be paid in future to economic and financial matters and that the problems will possibly be dealt with in a more systematic, if not a more business-like, manner.

The formation, within the Government itself, of a group of specialists able to face things in a disinterested way, unbiassed by party politics, is one of the urgent needs of the day. Important and extensive tasks are awaiting the new Cabinet. It is no longer a secret that the proceeds of the Stabilisation Loan have proved completely inadequate for the most essential requirements of the financial reconstruction of the country. In consequence of the heavy fall of prices of agricultural products in all markets abroad, the question of agricultural reorganisation aiming at better yields, cheaper production of standard grades of goods, and quicker and better means of transport can no longer be postponed. The practical solution of issues connected with irrigation and afforestation, live stock breeding and marketing, and long-term credits to peasant farmers and producers also requires prompt attention. An efficient and properly-managed utilisation of the Compulsory Labour System very probably contains extensive potentialities in this connection, as is shown by the conclusive experiences of the Refugees Settlement Office. Before the resources needed for all these reforms are found abroad in the form of new loans, there is a large amount of preparatory work, both legislative and administrative, to be carried out. It would appear that M. Liaptcheff's present team may succeed in dealing with all these tasks, in spite of the unavoidable difficulties which party politics and local parliamentary habits will place in its way.

The state of trade, although still unsatisfactory, appears to be showing the first symptoms of a change for the better. Protested bills and suspensions of payments are still in the neighbourhood of record heights. Credit continues to be scarce and difficult to obtain, and dear money prevails almost everywhere in the country. The changes in monetary conditions abroad do not yet appear to have had any substantial effect on the local money market, owing probably to the fact that there is no active offering of foreign credits, and such credits as are offered to banks here are not willingly placed at the disposal of trade and industry until the position of the market becomes sufficiently clear. However, imports remain within reduced limits and exports are steadily growing. Foreign trade for the first three months of 1930 shows an active balance of 370 million leva, as against a passive balance of 297 million leva in 1929 and of 274 million leva in 1928. In April last there was again a credit balance of 134 million leva. Exports of eggs have shown a remarkable activity in March and April; there is an excess of round 1,000 carloads exported as compared with the same four months' period last year. Tobacco exports are also at satisfactory high levels. Tobacco of the 1929 crop is being bought from the peasant producers and brought into the depôts for treatment. Although prices are unprofitable, maize is being brought to the market and sold for export.

As a consequence of this gradual disposal of agricultural produce held in reserve during the autumn and winter months, there is a slow but steady revival in demand for manufactured goods, and there is much probability of the heavy stocks of merchandise held by local wholesale and retail traders being gradually depleted up to the end of next autumn. If this depletion actually takes place, and if the crops turn out as good as the present forecasts appear to promise, imports of foreign goods may be safely resumed on a moderate scale, but only after a thorough study of the position of purchasing firms. Many changes have occurred in the standing of local trading and industrial firms, and these changes have not always been for the better. The Bulgarian market will no doubt become sounder and regain a great part of its credit abroad, but over-optimistic statements appear to be out of place, for the present at least.

ARGENTINA.

Trade — Lord Beaverbrook's Speech — Money Markets.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, May 6.

ARGENTINA is slowly recovering from the pessimism which was so pronounced during the first quarter of 1930. Yet this better feeling is due to the reasonable hope that things will improve on the production side rather than to any present increase of business, either inwards or outwards. Never, as far as can be ascertained, were ocean freights lower than they are to-day, open charter fixtures to Europe having been booked at 10s. per ton, a figure manifestly unprofitable to shipowners, and lower, having regard to changes in values, than the 7s. which was quoted in the season of 1906-07. Cereal shipments during April were only 281,000 tons of wheat, 287,000 tons of maize, 119,000 tons of linseed, and 47,000 tons of oats; and although wool is going forward a little more freely the export movement is much below that of the corresponding period last year. Prices for all cereals have fluctuated but little during the month, latest spot quotations being $9.85 paper per hundred kilos. for wheat, $6 for maize, $19.80 for linseed, and $4.60 for oats.

This reduced export movement is largely responsible for the present depreciation of the Argentine peso. Exporters have few bills to offer, and, although it was assumed that the Banco de la Nacion would be drawing against the short-dated loan of $50,000,000 (U.S. currency) negotiated in New York early in April, down to the time of writing those funds do not appear to have been brought into the Argentine market. Meanwhile the decline in imports has not been sufficient to counterbalance the lack of offers of export paper. In all likelihood the comparatively heavy permanent charges which Argentina must always settle abroad are playing an unusually important part at the present time.

A most unfortunate effect has been produced here by the remarks attributed to Lord Beaverbrook, who is reported to have described the Argentine farmer and his family as dancing the tango while they collect £70,000,000 from the British consumer. This speech was cabled out *in extenso* and published in practically every Argentine newspaper, the more serious journals taking the trouble to point out a fact that had evidently escaped the noble lord's memory, namely, that Argentina is to-day one of Great Britain's largest markets for manufactures and for coal; adding that the reason why the Argentine farmer buys his agricultural machinery from the United States is merely that none of the mechanical implements he uses to-day are manufactured by England to meet his oft-expressed requirements. Such a speech, made at a time when every effort is being made both here and at home to cut down the American lead in Argentine imports, is the greatest disservice to British manufacturers that could be imagined.

In the Argentine money market conditions are unaffected by the pronounced fall in the Bank rate, accommodation remaining at 6 to 7 per cent., with a growing stringency due to the fact that gold deposited in the Argentine Legations abroad is being rapidly released by payments of the equivalent in paper currency to the Conversion Office here—a course which, *ipso facto*, removes that amount of currency from circulation. There is now small likelihood of the Conversion Office being reopened for some time to come, and it is significant that Señor Carlos Alfredo Tornquist, the well-known Argentine banker, recently interviewed in New York, gave it as his considered opinion that such reopening would be inadvisable unless it were combined with the establishment of a central bank enjoying the privileges of rediscount and control of the issue of currency. A financial writer in *El Diario*, the leading Buenos Aires evening daily, goes a step further, and frankly asks whether any good object would be served by reopening the Conversion Office at the present time. He suggests that before such a step is taken modifications must be made in the present Conversion Law—a dangerous suggestion, unless indeed these modifications were confined to the establishment of a central bank taking over the existing stock of specie. Indeed, one of the worst risks inherent upon the continued closure of the Conversion Office is the temptation that such a condition presents to would-be monetary reformers, whose panacea is invariably based on some system whereby the present percentage of gold to paper might be altered. And one of the greatest advantages which would accrue upon the establishment of a wisely constituted central bank would be the abolition of Argentina's dual currency, which at present serves no useful purpose but leaves the door open to manipulations that might easily, and almost insensibly, pave the way to inflation, with all the evils that this must infallibly bring in its train.

Letters to the Editor.

TIN RESTRICTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Referring to the letter from "X" in the *Economist* of May 31st, the following facts may b eof interest to your readers:—

First, in connection with Bolivia, where it says: "It is true that some of the smaler mines will very likely have to close down altogether." The American Vice-Consul, Edward F. Trueblood, cabling from La Pas on April 24th, said: "It has been officially reported that over 100 of the smaller tin mines have abandoned operations altogether." He pointed out the larger mines are continuing operations, but scores of the less important companies have shut down and many more are considering such action.

With reference to American consumption, "X" says with regard to the increase in Ford motor output: "Evidently this increase is balanced by a decrease in production of other automobile manufacturers." This is not the case, because considerbly more than half of all the automobile business of America is in the field of low-priced automobiles, and the sharp upward trend in the sales of low-priced cars has far more than compensated for the downward trend in the high-priced vehicles. Out of a total of 235,266 United States registrations in February, the low-priced group represented 144,006, and the general prognostication in the American papers is that between 4,500,000 and 4,750,000 passenger cars and trucks may be produced in 1930. Although this will be below last year, it will probably equal the 1928 production of 4,601,000. The motor vehicle production in April, 1930, in the United States, at 442,630, is the greatest for any April except 1929.

With regard to the tinplate industry, which "X" states appears to be working at 30 per cent. or 40 per cent. less than last year, the latest figures show that this is incorrect. The figures for American production are just under 20 per cent. lower for the first four months, but, on the other hand, the world demand for tinplates has increased, the British export trade for tinplate being 19 per cent. up on their monthly average, while the American export monthly average is also up by 10.5 per cent. As regards the world demand for tinplate, the fact is that the combined export this year, at 73,110 tons a month, is *the largest total on record*, being an increase of 4½ per cent. on the monthly rate in 1929.

With regard to the canning industry as the biggest consumer of tin, Mr C. C. Conway, chairman of the Continental Can Company, states that: "Fruit crops are apparently much larger than in 1929, and 1930 is a promising year."—Yours, etc.,

AN OBSERVER.

Books and Publications.

POST-WAR FRENCH FINANCE.

THE present work* is the first in a series of social and economic studies of post-war France which a group of American scholars has prepared. Their work has been sponsored by the Columbia University Council for Research in the Social Sciences; the editor of the whole series is Professor Carlton J. H. Hayes; the other volumes include a study of inflation in France; surveys of the economic and industrial development of post-war France, and of the French labour movement; and three volumes dealing more particularly with political questions, viz., one (by Professor Hayes himself) on "France, a Nation of Patriots"; one on French domestic politics; and one on French foreign policy. Much of the work has been done in Paris with the assistance of the best French authorities; and the series makes a notable and valuable contribution to the English-speaking world's knowledge of post-war France.

Professor Haig's book on French finance is an especially valuable study, the full merits of which will perhaps be appreciated only by those who have themselves already studied the complexities of post-war French finance. It covers the whole ground of French post-war finance down to M. Poincaré's successful efforts at stabilisation in 1926-27. It contains a most useful explanation of the French system of taxation and of its post-war reform, and makes clear—so far as clarity is possible—the incredible intricacy and elaboration of the French fiscal machine. Anglo-Saxon readers never fail to be baffled by French financial methods, which appear always to choose the labyrinthine path rather than the straight one; but Professor Haig shows that the choice rests upon, and is the fruit of, a long historical development.

By no means the least useful part of his book is a catalogue of some of the errors he has found in French financial statistics, and a code of caveats which his own experiences enable him to offer other workers in this field. To quote only one of the errors. The official statement of the Ministry of finance showed the amount of the French internal debt (other than floating debt) to be 97,779 million francs in 1918. The Budget *projet* for 1920 and the *Annuaire de Statistique*—both likewise official statements—gave a figure of 67,779 million francs—a discrepancy of exactly 30 milliards or, say, £1,000 *millions*. "When the discrepancy was called to the attention of the officials," writes Professor Haig, "they at first stated that the stenographer had probably made an error in copying the data. But upon investigation they reported that the figure in their table was correct and that the published figure was really 30 (milliard francs) too low!" By clearing a pathway through this jungle of mistakes and complexities, by pointing out the chief configurations of the terrain, and by giving in a compact historical and analytical form the fruits of his long and arduous researches, Professor Haig has made an important contribution to the study of French finances since the war. Alike to contemporary students and future enquirers his book is as indispensable as it is noteworthy.

* "The Public Finances of Post-War France." By Professor Robert Murray Haig. London: Humphrey Milford. Price 27s. 6d. net.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Bankers' Credits. By William F. Spalding. Third edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 10s. 6d. net.

A new edition of a well-known textbook in which almost every kind of bankers' credit receives a chapter to itself, and there is a special chapter on legal cases. Special attention is given to the practice of the United States and of the British Dominions.

Porto Rico and its Problems. By Victor S. Clark and Associates. (Washington, D.C.) The Brookings Institution. $5.00.

An extremely full and detailed economic and social survey which is likely to become the standard work of reference on Porto Rico. It is pleasantly illustrated and contains a number of valuable statistical tables.

Commercial Policy of the Moguls. By D. Pant. Foreword by the Right Hon. Lord Meston. (London) Kegan Paul, Trench, Trubner and Company, Ltd., 38, Great Russell Street. Rs. 6.

An economic survey of India up to the beginning of the eighteenth century which contains a wealth of new and valuable material.

Rusticus Loquitur. By Malcolm Lyall Darling. (London) Oxford University Press, Warwick Square. 15s. net.

This is a diary of a journey made by the author through the Punjab for the purpose of observing the activities and as far as possible discovering the views of the peasants. The results are very interesting, but suffer somewhat in readability from the lack of arrangement and co-ordination imposed by the diary form.

Die Meistbegünstigung im modernen Völkerrecht. By Dr. Klaus Bonhoeffer. (Berlin) Verlag von Julius Springer. Linkstrasse 23-24. Rm. 4.80.

A monograph, in German, on the most-favoured-nation clause. The treatment is that of an international lawyer rather than of an economist.

Business Conditions at the Present Time. International Chamber of Commerce. (Paris) Secretariat Général, 38, Cours Albert 1er, VIIIe.

Twenty reports, from national committees, on business conditions in their respective countries. The reports were collected for the purpose of throwing light on the present world depression.

The Future of Rubber. By Lieut.-Colonel J. C. G. Kunhardt. (London) Institution of the Rubber Industry, 10, Charing Cross Road. 2s. 6d. post free.

A most interesting economic and statistical study of the position as at the end of March, 1930.

New York Stock Exchange. Report of the President, May 1, 1929-30. (New York) The Stock Exchange, 11, Wall Street.

The report is of more than usual interest this year, and the appendices are, as always, a most valuable source of Stock Exchange statistics.

Annual Report of the Chamber of Shipping of the United Kingdom, 1929-30. (London) Chamber of Shipping, 28, St. Mary Axe.

Contains a most valuable collection of shipping statistics, and discussions of relevant matters.

The 100 Best Investments, May, 1930. (London) The British, Foreign and Colonial Corporation, B.F.C. House, Gresham Street. 1s. net.

A supplement to the annual volume, preceded by two articles, one of which discusses the outlook in the United States.

A Short Dictionary of Legal, Commercial and Economic Terms. (London) Gee and Company (Publishers), Ltd., 6, Kirby Street. 6s. net.

A conveniently slender dictionary, whose slimness has been purchased at the cost of a sometimes excessive brevity in its definitions, but which is nevertheless useful.

is not seriously entertained, and the cause of efficiency may, possibly, be best served by the entire relinquishment of certain subsidiary concerns. The drawing together of other shipping interests, on scientifically "selective" lines, would, however, tend largely to reduce their capitalisation, by eliminating extensive cross-holdings. According to *Fairplay*, the group embraces thirty-three companies, with a total paid-up ordinary and preference capital of £70,138,250. The following table shows the extent to which the capital of nineteen of these companies (accounting for 68 per cent. of the total capitalisation), is held by the Royal Mail, its directors and its subsidiaries:—

ROYAL MAIL HOLDINGS.

Subsidiary.	Capital.				
	Amount Issued.	Held or controlled by R.M.S.P.			
		By Parent Co.	By Directors.	By Subsidiaries.	Total.
	£	£	£	£	£
African Steamship	2,500,000	...	1,200	1,994,735	1,995,935
Argentine Navigation	2,000,000	375,500	...	754,000	1,129,500
Belfast Steamship	500,000	...	10,000	475,000	485,000
British and African S.N.	2,350,000	...	102,500	2,339,920	2,442,420
British and Irish Steam P.	3,000,000	...	942,500	1,320,000	2,262,500
Burns and Laird Lines	500,000	...	...	499,491	499,491
Coast Lines	4,625,000	1,226,350	...	2,884,205	4,110,555
Elder, Dempster	8,485,000	433,444	596,040	...	1,029,484
Elder Line	1,000,000	...	2,500	989,960	992,460
Imperial Direct Line	500,000	...	...	495,960	495,960
Lamport and Holt	4,240,000	900,000	50,000	1,994,997	2,944,997
MacAndrews	1,000,000	890,500	4,000	100,000	994,500
David MacIver	700,000	284,000	186,000	...	470,000
James Moss	1,000,000	348,000	...	649,400	997,400
Nelson S.N.	1,550,000	1,997,497	...	...	1,997,497
Pacific S.N.	1,500,000	1,492,900	...	...	1,492,900
R.M.S.P. Meat Transports	1,000,000	987,993	12,002	...	999,995
Union Castle	5,480,000	1,365,990	6,020	1,364,990	2,737,000
White Star Line	6,000,000	1,496,100	4,000	2,498,900	3,999,000
Total, 19 Subsidiary Co.'s.	47,930,000	11,798,274	1,916,762	18,361,558	32,076,594

It will be seen that over one-fourth of the issued capital of these nineteen concerns is held by the Royal Mail Company or its directors, while another one-third represents "cross-holdings."

It is believed that the announcement of a preliminary scheme of financial reconstruction will not be long delayed, though reorganisation on the administrative side will call for prolonged consideration. The constitution of the new committee is, however, such as to command general confidence, and the co-operation of stockholders should readily be forthcoming for concrete measures of reform which they may suggest.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 24.	June 26.

The "House" resumed business after the holiday in circumstances calculated to intensify rather than relieve the pre-Whitsun dullness. The fresh onset of heavy selling in New York markedly affected international stocks, but was otherwise received with apathy, British security-holders being pre-occupied with a series of sufficiently formidable domestic problems. Gilt-edged suffered by reason of the weakness of the exchanges, the firmer tendency of bill rates, and preliminary sales to finance Reparation Loan applications. Industrials were affected by scattered but persistent liquidation, though their loss of ground was not considerable, while the more speculative markets were again overshadowed by the fall in commodity prices, accentuated by rumoured divergencies of view among the leading interests in more than one branch of activity. Opinion is crystallising on the possibility of a continuance of quiet conditions till the summer is over, though the experience of more than one large Stock Exchange firm shows that business is obtainable on broader lines than might be expected, provided special efforts are made to obtain it.

Last week's easier tone in gilt-edged was continued this week, the market being distinctly "professional." The chief exception to the prevailing tendency was the Five per Cent. War Loan, while Victory Bonds were steady in view of the pending annual drawings. India loans were well maintained, the first volume of the Simon Commission's Report being regarded as a sound "common-sense" document, though its contents gave a less obvious clue than had been expected to the nature of the Commission's final recommendations. Business in Dominion and Colonial stocks was meagre. Recent new trustee issues were easier on the placing of the underwriting for the Reparations Loan on terms which were regarded as not unattractive.

In the Foreign Market, Chinese bonds again came on offer, on the weakness of silver, and on fears that the Chinese "war" would develop into a struggle *à outrance*. Apart from some slight selling of German Sevens, European bonds remained steady on the eve of the new loan. A moderate inquiry for Brazilians caused a disproportionate appreciation of values in a narrow market.

Bad trade more than offset good Whitsuntide weather on the railways, gross receipts last week being below the level of Whitsuntide, 1929. The showing made by the London, Midland and Scottish and the North-Eastern was particularly disappointing, and though little selling occurred, stocks were appreciably marked down. Undergrounds were again a conspicuous exception to the general tendency, both as regards traffic and prices. Among foreign rails, a better feeling was in evidence as regards Havana debentures, and a modest recovery occurred in Cordoba issues. The "heavy" Argentine stocks were, however, further depressed by unsatisfactory traffic returns—particularly those of the Central Argentine—which more than offset the improvement in the peso exchange. Canadian Pacifics suffered in the Wall Street liquidation. A further £500,000 of Four per Cent. Non-Cumulative Preference stock has been privately placed in London, and is being marketed at 80.

Industrial shares made a better showing than might have been expected in view of the setback in Wall Street. Internationals were marked down, but London prices were generally slightly above New York parity. The junior Royal Mail issues became a better market after the announcement referred to on an earlier page, in spite of the prospect of a scheme involving a heavy writing-off of ordinary capital. Cables and Wireless were sold on Sir Basil Blackett's speech (summarised on page 1338), but showed a moderate improvement in mid-week. The Callender's Cable report, however, surpassed expectations and had a steadying influence on electrical manufacturing shares. The Hudson's Bay figures, on the other hand, were frankly disappointing. After a dull opening, motor shares showed slight improvement on the decision of Leylands to pay off preference dividend arrears. Weakness in the gramophone group was accentuated by developments in Wall Street. Occasional inquiries from Northern England gave textile shares a better appearance, but iron and steel issues were neglected. Brewery and tobacco shares showed a further disposition to sag, British-American Tobacco prices reflecting the fear that the company's Far Eastern trade would be prejudiced by the fall in silver. A limited business left bank shares slightly lower on balance, and insurance shares were easier where changed.

The decline in rubber to the "record" low level of 6d. a pound caused further small share losses, but surprisingly little stock came out, and Rubber Trusts, among others, quickly responded to the better tone of the commodity market on Thursday. Tea shares remained idle, with prices lower when tested. The favourable figures of the Royal Dutch, Shell and Anglo-Persian companies (dealt with on pages 1340 and 1341) did not affect sentiment in the oil share market, which was oppressed by the weakness of New York and further sales from Paris. Mexican and Canadian Eagles, however, were better before and after the announcement of participating preference and ordinary dividends.

The mining markets opened under depressed conditions. The Cape, however, came in to support Kaffirs, on a record May output. Rhodesians had a crowded hour of strength on Tuesday, but, generally speaking, no great effort was made to support the market before the Roan Antelope debenture issue. Comparatively little selling of tin shares occurred, despite the weakness of the metal and the unfavourable construction put upon the outlook (which is discussed in a "Note" on page 1339).

Rio Tintos made a partial recovery, but a mild rally in Burmas was checked by the reduced dividend announcement.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The German Loan is meeting with great success and selling at a premium of 1¼ points with a large demand all over the country. The banking syndicate made firm offers to dealers, and hence actual subscriptions could total only the amount offered. While markets are relieved at the flotation of the issue, pessimism and nervousness are so great as a result of several days' succession of sharply declining prices on the share market that the operation failed to help much, and the market is now concentrating on the outcome of the tariff, with the chances favouring its passage by Congress and signature by President Hoover. The measure is heartily opposed by the principal banking and industrial interests and by economists, but political jockeying has made its enactment possible. Wall Street feels, however, that even a bad Bill would be better than uncertainty. All the market gains of the earlier part of the year have now been wiped out, and share prices are at the lowest levels since the end of last year, with the best quality stocks showing the most pronounced weakness. Prices are still above the lowest levels of last November. The volume of transactions has doubled on the decline, and much stock has been sold for weakened margin accounts, but, at the same time, the short interest has been unusually large, and investment trusts and others are buying moderately. Copper has dropped to 12½ cents per pound, and the gain of 7,000 tons in stocks of refined may be due mainly to slack domestic buying. There have been a few bank failures, but they are mostly unimportant. Dividend reductions by corporations continue, but they are chiefly made by minor companies. The steel industry and the motor trade are still losing ground, but both these movements are seasonal.

* 2-hour session.

BERLIN.

In the first half of May a better tendency set in on the Berlin Bourse. Gains of a few points were mainly due to the activity of professional speculators and purchases by banks, impelled by the favourable development of the money markets. After May 23rd, however, the tendency was again downward. The effect of the delay in issuing the Reparation Loan was accentuated by the unfavourable development of the German economic situation. More industries have been discharging men. Published profit figures are unsatisfactory, and numerous dividends have been passed. The sharpest decline in May was suffered by rayon shares, but electricity, coal and iron also declined. The index of 70 leading shares has dropped in the last two weeks from 141.5 to 137. The yields on first-class securities are still out of proportion to interest rates in the open market.

Official " Cash " Quotations in all cases.

INVESTMENT NOTES.

Another Wall Street Setback.—Reviewing the Wall Street outlook a month ago we suggested that the recovery in American share prices, in some groups at least, had been based on a premature assumption of industrial revival, and that a period of irregularity and hesitation might be expected during succeeding weeks. This view has been borne out by events, particularly during the last few days, when large-scale selling has reappeared, accentuated by professional bear speculation. The movement can best be viewed by reference to the following table, which is based on figures supplied by the Standard Statistics Company :—

(1926 average = 100.)

	Highest, 1929.	Lowest, 1929.	Feb. 13, 1930.	Apr. 17, 1930.	May 7, 1920.	June 4, 1930.	June 11, 1930.
Group indices :							
335 Industrials	218·9	134·5	157·6	172·7	157·0	161·4	147·6
33 Rails	173·5	127·8	144·6	142·1	134·6	132·6	127·2
34 Utilities ..	330·4	177·6	233·3	266·0	243·2	253·9	231·7
Total, 402 stocks	228·1	140·3	167·5	182·7	167·1	171·5	157·6

Broadly speaking, the recovery from the bottom, initiated before the end of last year, was in part a reaction due to the elimination of unhealthy " technical " market influences during the slump, and in part the result of a nation-wide belief in an early recovery in industrial activity. The former influence had largely exhausted itself by mid-February, when prices suffered a minor setback, but the upward movement of values was nevertheless resumed in March. The comparatively severe reaction, which began in mid-April, was directly attributable to the publication of industrial earnings figures for the March quarter showing that trade depression was far more severe than had been anticipated. This movement carried prices back again to the mid-February level. It was succeeded by four weeks of irregular fluctuations above and below this level, with a very slight upward trend. The latest period of selling is generally associated, firstly, with the tendency among industrial observers to put forward the beginning of industrial recovery beyond the autumn of this year—a date generally forecast a few weeks ago; secondly, with the further weakness of commodity prices, particularly those of base metals; and, thirdly, with the preliminary indications that this year's crops are likely to be sufficiently plentiful to prevent any early firming of agricultural prices. This week's decline has noticeably affected amusement shares, and other stocks whose recent activity has stood out in sharp contrast to the prevailing trend. The American investor, like his British colleague, finds himself unable as yet to see the bottom of the slump in trade, and the course of security prices in both markets may continue for the time being to reflect, not necessarily the growing intensity of depression, but the increasing availability of statistical evidence of its extent and character.

Cables and Wireless.—Sir Basil Blackett's Speech.—In an Investment Note in the *Economist* of June 7th we referred to the heavy depreciation in the stocks of Cables and Wireless. The speech which Sir Basil Blackett, chairman of the Communications Company, delivered to the Imperial Press Conference last week enlightened, but unfortunately *did not* reassure, the market. Sir Basil frankly confessed that the directors were concerned about the falling-off in their cable and wireless traffics, 85 per cent. of which were commercial. Trade depression reflected itself more sharply in telegraph receipts, he said, than in almost anything else, and in spite of reduced rates traffics were still declining. Foreign wireless competition had become more intense, and was giving the company serious trouble. The big American combines, Sir Basil remarked, were making a determined bid to establish a dominating position in world communications, and their competition was likely to increase. If Cables and Wireless, *Ltd.*, were to prosper, increased facilities would have to be provided and rates reduced. They were at present negotiating with the Governments in India, Australia and South Africa for an amalgamation of cables and wireless services in those countries, and as soon as an agreement was reached they intended to reduce the cable rates to the level of the wireless rates. Reductions in rates, he added, could justify themselves only if they led to a substantial increase in the volume of traffic carried. With regard to wireless telephony, Sir Basil declared that it was a great disappointment to them when the Post Office refused the company's offer to co-operate with them in providing the wireless link for the overseas telephone services in this country. He regarded it as against the true interests of the country that there should be competition between the Government and the Communications Company. Outside this country, however, he acknowledged that the company was receiving valuable support from the British Post Office in the field of wireless telephony, and that it hoped shortly to be able to announce the conclusion of agreements for establishing wireless telephony services in a number of places within and outside the Empire. But the burden of Sir Basil's text was that Imperial communications had to be worked as a whole if uneconomic competition between cables and wireless was to be eliminated and if the company was to maintain its position in the face of foreign competition. The company, he said, was an experiment in a new synthesis of private enterprise and public control. We gather that this experimental synthesis has still to prove its practical possibilities in an industry dominated by international competition.

Tin Restriction.—Since we last discussed the prospects of the tin-producing industry (vide *Economist* of May 17th), it has become evident that the restriction programme of the Tin Producers' Association may call for revision—a fact which has been emphasised in our correspondence columns. Consumption had apparently been estimated at too high a figure—American deliveries for the first five months having been only 31,920 tons as compared with 40,635 tons in the corresponding period of last year—and new production this year at too low a figure. As a result of the heavy addition to visible supplies disclosed by the returns for April and May the Tin Producers' Association have decided to accelerate the restriction programme. An international committee of producers has been appointed, representing a majority of the production in Malaya, Nigeria, the Dutch East Indies and Bolivia, and it is believed that the committee favour the shutting down of mines immediately for a period of two months. It is certain that with tin selling at under £140 per ton, some drastic action will have to be taken. The average minimum costs are almost certainly well in excess of the present spot price. The costs of production in Malaya—the cheapest area outside the Dutch East Indies—are estimated at £65 per ton of concentrates, or £90 per ton for metal for the *cheapest* producers, to which must be added overhead charges, transport, smelting costs and export tax, amounting to about £38 per ton, and an amortisation rate of, say, £18 per ton, based on a fifteen years life—making a total cost of £146 per ton without allowing for profit. The *average* costs of mining would be much higher. Producers can, of course, by ignoring amortisation and profits, continue to produce at a loss for an indefinite period, but the Tin Producers' Association have in the abnormally low market prices a powerful weapon to wield in forcing the adoption of a more drastic policy.

J. Lyons and Company.—The " forward " policy of the directors of this company in recent years continues to bring its reward, the latest profit figure establishing a new " record." The amount earned on the ordinaries and " A " ordinaries was 129.38 per cent. and 35.6 per cent. respectively. The same dividends rates were paid as in 1929, and £100,000 was added to reserves, which now total £1,300,000 :—

	(Years ended March 31) 1928. £	1929. £	1930 £
Profit	832,516	908,950	935,870

Though eight new branches were opened during the year, the valuation of buildings, etc., is £54,804 lower at £9,927,678. Shares in subsidiaries and associated companies have risen by £411,074 to £645,970. The ordinary shares, at their present price of £4 15s., yield £4 14s. 9d. per cent.

J. and P. Coats.—In view of the depression in the textile industry, shareholders in this company have more reason for satisfaction with the result of the past year's operations than appears at first sight. The greater part of the revenue is received from dividends from subsidiaries, which were £799,743 lower at £2,971,272, but interest received increased by £55,669 to £295,186. The net profit was £749,483 lower at £3,179,575.

	Year ended Dec. 31, 1927. £	Year ended Dec. 31, 1928. £	Year ended Dec. 31, 1929. £

Increase in carry-forward	568,392	149,059	268,325

The balance sheet has been drawn up on somewhat different lines to that presented a year ago. Investments, which were shown as £2,175,801 in 1928, are valued at £15,022,141, while goodwill, buildings, machinery, patents, etc., appear at £2,067,008, against last year's items of " capital expenditure " £16,750,785. Bracketing these two items, their total, at £17,089,149, shows a fall

HARRIS, FORBES & COMPANY LTD
77 CORNHILL, LONDON, E.C. 3
INVESTMENT SECURITIES
GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

of £1,837,437. Advances and dividends due were £5,124,057 greater at £8,474,538, and debtors were £523,714 down. On the liabilities side creditors increased by £2,348,578. The ordinary shares at their present price of £3 ex div. yield £5 16s. 8d. per cent.

Bleachers' Association.—In common with the majority of concerns, large and small, dependent upon the textile industry, this company has suffered in the prevailing depression. Profits, after rising in 1928-29, fell off by 22.3 per cent. last year:—

(Years ending March 31.)	1928.	1929.	1930.
	£	£	£
Trading profits	898,577	901,358	767,642

General reserve fund	75,000	100,000	59,187
Increase or decr. in carry-forward	+ 6,965	— 15,254	— 3,403

The most striking items in the balance sheet are stocks and debtors. The former, which includes carts, lorries, etc., is £776,413 lower at £42,877, and the latter £869,237 lower at £96,504. A new item—advances to subsidiaries—of £1,303,854 has been brought into the balance sheet, after being, probably, bracketed with sundry debtors a year ago. On the liabilities side creditors are down by £415,462 at £822,889. Liquid assets are thus £786,096 greater than current liabilities. A year ago the latter showed an excess of £248,926. The yield on the ordinary shares, at 18s. 9d. is £7 2s. 2d. per cent.

Crosse and Blackwell.—Following the post-war reconstruction, this company's profits have shown a steady increase. Last year the gross figure rose by £14,898 to £287,510, while the net profit was £9,123 greater at £211,204. As the state of the trade is held to necessitate "conservation of the company's resources," the directors, after paying the preference dividend of £168,750, have transferred £50,000, but pay no dividend on the ordinary capital, on which 16.1 per cent. was earned.

(Year ending December 31.)	1927.	1928.	1929.
	£	£	£

To reserve account	...	25,000	50,000
Increase or decrease in carry-forward	+ 1,622	+ 9,331	— 7546

The balance sheet has been overhauled, under the Companies' Acts, and now includes the item "goodwill and patents," £1,372,772. To provide funds to redeem the 6½ per cent. notes, to repay the bankers' loans and generally provide funds for expansion, £1,500,000 was raised in November last in the form of 6½ per cent. debentures. The acquisition of interests in certain companies last year is reflected in a rise of the total investments in subsidiaries and associated companies by £173,537 to £1,705,322, while advances to these companies, at £737,092, are down by £632,058. Creditors and amounts due to subsidiaries have risen respectively by £73,566 and £96,230. At their present price of 2s. 6d. the 1s. ordinary shares show an "earning value" of £6 8s. 10d. per cent.

John Brown Meeting.—The annual meeting of this company, held on Friday of last week, was of special importance in view of the reconstruction proposals of which notice had already been given. At the meeting the chairman, Lord Aberconway, referred to the effects of the Washington Agreement of 1922 on the company's shipbuilding activities. Following the virtual suspension of capital shipbuilding for nine years there had only been two large warships, the "Australia" and "Canberra," and four destroyers to occupy the "Admiralty" section of the yard, which formerly accounted for nearly 50 per cent. of the shipbuilding orders. This situation had been accentuated by the London Naval Conference, which further postponed prospective orders for capital ships. Reference was made to the placing of orders by the smaller foreign States with Italian yards, owing to the subsidy provided by that Government, and to losses in contracts for passenger vessels, which are being built in Continental yards for similar reasons. As a result, not only have operations at the company's yards been on a smaller scale, but the repercussions have extended to the steelworks, which are laid out for supplying the necessary machinery and equipment. At the separate meetings which followed the general meeting the capital reorganisation schemes (a summary of which was given in the *Economist* of May 31 last, page 1229) were passed by the ordinary and preference shareholders. As regards the two classes of debentures, it was agreed, after discussion, to adjourn the meetings until June 20th to enable the company's advisers to confer with the representatives of the debenture-holders.

Royal Dutch Shell.—The shareholders of the Royal Dutch Petroleum and Shell Transport and Trading companies have good reason to be gratified by the excellent trading results which their directors present to them each year. They must, however, be somewhat mystified by the comments which the directors of the Royal Dutch make upon the world oil situation in their report for 1929. "Generally speaking," to quote from their report, "it may be said that 1929 was a year of excessive competition, and that in consequence some petroleum companies saw their profits diminish. . . . A striking feature has been the fact that the over-production of crude oil and its derivatives caused the selling prices in various importing countries to drop to a level below the figure representing the export prices in the countries of origin plus freight to ports of importation and all other charges." If conditions were so adverse, how did it come about that the Royal Dutch were able to increase their profits by 22.35 per cent. and the Shell by 23.37 per cent.? Being holding companies, their profits are derived from dividends distributed by their subsidiaries, and it can only be assumed that as the parent companies desired to distribute a larger sum in dividends this year on account of the increase in their ordinary share capital, they merely caused the subsidiary companies to distribute a larger proportion of their earnings, which they could well afford. The crude oil production of the Royal Dutch-Shell group increased last year from 22,063,411 to 25,184,387 metric tons, which represented nearly 12 per cent. of the world's total output. A feature of the Royal Dutch report which deserves more attention than it has received is the reference to the manufacture of synthetic petrol from coal or crude oil, in regard to which they have decided to pool their interests with those of the Standard Oil and Farben Industrie in order to exchange experience and patents and to develop the hydrogenation process jointly. In a few years' time this development may prove to be of great importance. The following table shows the net income and distribution of profits of the Royal Dutch and Shell companies over the past three years:—

ROYAL DUTCH.

	1927.	1928.	1929.
	Fl.	Fl.	Fl.
Ordinary capital	412,103,000	414,703,000	503,624,000
Net income	101,978,637	103,367,780	126,471,391
Preference dividend	1,342,500	1,342,500	1,342,500
No. of times covered	*75·96*	*77·0*	*94·2*
Balance for ordinary	100,636,137	102,025,280	125,128,891
Earned %	*24·4*	*24·6*	*24·88*
Paid %	24	24	24
Carried forward	423,438	1,015,025	2,219,313

SHELL TRANSPORT.

	1927.	1928.	1929.
	£	£	£
Ordinary capital	19,654,274	19,987,607	24,121,361
Net income	5,569,694	5,447,893	6,483,386
Preference dividend	450,000	450,000	450,000
No. of times covered	*12·38*	*12·11*	*14·4*
Balance for ordinary	4,919,694	4,997,893	6,270,991
Earned %	*25·03*	*25·00*	*26·00*
Paid %	25 tax free	25 tax free	25 tax free
Carried forward	236,612	237,604	240,650

The balance sheets continue to show extraordinary financial strength. Shell Transport has no less than £1,158,483 in cash and over £10,000,000 in gilt-edged securities, while Royal Dutch has 82,512,355 florins in cash and a surplus of debtors over creditors of 345,000,000 florins. The present prices of the shares and the yields obtainable compare as follows:—

	High, 1929.	Present.	Yield. £ s. d.
Royal Dutch	38¼	32¾	6 2 0
Shell Transport	5 1/16	4 25/32	5 4 6 (tax free)

The comparatively high yields shown are, of course, no reflection on the admitted efficiency and prosperity of the Royal Dutch-Shell group.

Anglo-Persian Oil.—The directors' report of the Anglo-Persian Oil Company adds nothing to the explanations given in an Investment Note in the *Economist* of June 7th of the remarkable increase in this company's profits last year. The production of crude oil was well maintained—the Royal Dutch directors estimate the Persian output at 6,022,092 metric tons, against 5,600,138 metric tons in the previous year—and was supplemented in the last month of the year by the first delivery of oil from the new oilfield at Haft Kel, which is destined, according to the directors, to play a very important part in the future production programme. The company's distributing organisation was further extended and sales continued to expand. Further extensions of the refining plant in Abadan are now in course of construction. This is all the information which the report contains. The following table shows the results for the past three years:—

	12 months to Mar. 31, 1928.	9 months to Dec. 31, 1928.	*Equivalent for 12 months.*	12 months to Dec. 31, 1929.
	£	£	£	£
Ordinary capital	13,425,000	13,425,000	*13,425,000*	13,425,000
Net profits	4,300,803	3,738,239	*4,984,319*	7,500,579
Debs. and note interest	254,397	216,206	*288,275*	279,717
Directors' fees	21,294	22,326	*29,768*	15,017
Persian Gov. royalty (est.)	250,806	305,816	*407,755*	1,161,589
Income tax	661,776	360,933	*481,244*	832,514
Balance	3,112,529	2,832,958	*3,777,277*	5,206,762
Preference dividends	875,000	656,250	*875,000*	875,000
Balance for ordinary	2,237,529	2,176,708	*2,902,277*	4,331,762
Earned % (after tax)	*16·67*	*21·62*	*21·62*	*32·3*
Paid % (subj. to tax)	7·5	12·5 p.a.	*12·5*	20·0
To deb. stock redn. reserve, etc.	200,000	206,250	*275,000*	211,250
Extra deprec. & res.	1,053,267	651,052	*868,068*	1,952,465
Carry-forward	2,224,246	1,771,645*	...	687,064

* Less £567,627 payment for excess profits duties, etc.

It will be observed that the 1929 net profits showed an increase at the rate of 49 per cent., and that, although the distribution was put up from 12½ per cent. per annum to 20 per cent., a very conservative dividend policy is still being pursued. Liberal appropriations have been made to reserves—the preference share reserve taking £500,000, amortisation reserve £100,000, general reserve £1,000,000 and extra depreciation £352,465. Incidentally, the estimated royalty payable to the Persian Government, which would appear to have a political rather than an economic significance, shows a very large increase, but it is impossible to say on what basis this royalty is calculated. The balance sheet continues to show a strong liquid position, cash amounting to £2,120,118 and British Government securities to £3,279,503. The surplus of current assets over current liabilities amounted to £7,650,124. The ordinary share capital remains at £13,425,000, of which the British Government own £7,500,000 and the Burmah Oil Company £3,561,990. The £1 ordinary shares are quoted at £4 9/32 to yield £4 16s. per cent. on the basis of 20 per cent. dividends.

Glanzstoff Results.—The report of the artificial silk trust, Aku-Glanzstoff, for 1929, has been awaited with unusual interest. The trust controls the plants of the quondam Enka Company in Holland and the entire capital (75 million marks) of the Vereinigte Glanzstoff-Fabriken, in Elberfeld. In 1928 both companies paid 18 per cent., their turnover as independent concerns being 115 million marks. In 1929 the total turnover was 120 million marks, about two-thirds of the production falling to the German Glanzstoff factories. The profits of the Vereinigte Glanzstoff-Fabriken dropped from 14 million marks to 6 millions, but it was found necessary to write off no less than 66 million marks, the resulting loss being offset by a reduction in reserves from 78 to 28 millions. The loss was due only in part to bad trade in Europe, much the larger share resulting from an unsuccessful venture in the United States. In the last four years

Glanzstoff has established three undertakings in America —two production companies (American Bemberg and American Glanzstoff), and one financing and holding company (Associated Rayon Corporation), about 50 per cent. of the shares, in every case, being held by Glanzstoff. The market value of these shares has recently fallen, on the average, from 100 to 20, and the adjustment in values has involved the parent company in an adjustment of values of approximately 50 million marks. The Aku-Glanzstoff concern can, therefore, be now regarded as clear of dead wood, but its earning capacity is not yet assured, and stockholders cannot confidently expect a dividend for 1930 unless costs can be reduced or an agreement be brought about between international groups of producers. Aku-Glanzstoff, as well Courtaulds (which holds more than 10 per cent. of the former's capital) and Snia Viscosa (which is controlled by Courtaulds and Aku together), have for months been vainly trying to reach such an agreement.

Zellstoff-Fabrik Waldhof, Mannheim.—This, the largest wood-pulp and paper concern in Germany, has declared a dividend of 12 per cent. for 1929, against 13½ per cent. for 1928. The reduction came as a surprise, since no reduction in profits was shown. At the beginning of 1929 the company increased its capital by 10 million marks, a part of the new shares being taken over by the English firm of Helbert, Wagg and Company, which has also taken over the 8 per cent. preferred shares of a newly-organised subsidiary in Finland, whose dividend is guaranteed by the parent company. The year 1929 was a year of "spade work" in Finland, but the new Finnish factory will eventually work more cheaply than the German factories. The company complains of depressed prices in the world market, but, in view of its favourable operating conditions and good connections, its prospects are deemed entirely satisfactory.

African and European Investment.—As during the past year this concern absorbed the Transvaal Estates and Development Co., no effective comparison of results can be made. The broad fact, however, is that it is able once again to pay 6 per cent. Thus, the former shareholders in the Investment Co. are no worse off than before, while on their new scrip the former shareholders in the "Devels" Co. will receive an increased dividend total. The issued capital now stands at £2,045,560; the debentures outstanding remain at £368,950. Following the absorption above-mentioned, farms and outlay figure at £1,102,000, against £813,800; investments at £1,398,400, against £1,117,900; and advances at £407,900, against £292,500. A satisfactory point is that the market value of the quoted holdings—£1,076,650—somewhat exceeds the amount at which they stand in the books. The company publishes a schedule of its holdings. Of these the most important is the block of nearly 270,000 shares in the Vereeniging Estates. The Grootvlei and sundry other Eastern Rand enterprises are still waiting upon events, but encouragement is derived from the latest developments on the East Geduld property. The African and European is now the largest land-holding company in the Transvaal. The £1 shares are quoted at about 15s. 6d.

of Fine Chocolates.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Antofagasta (Chili) and Bolivia Railway, Farmers National Mortgage Institution, Alexanders Discount, Armstrong Whitworth Securities, Burmah Oil, John Brown and Company, Trowbridge Tyre and Rubber, Associated Newspapers, J. and P. Coats, Electric Supply Corporation, Calcutta Tramways, Venezuelan Oil Concessions, Sialang Rubber Estates, Malacca Rubber Plantations, Nirmala (Java) Plantations and Lands, Siamese Tin Syndicate, and Bangrin Tin Dredging. The chairman of Associated Newspapers declared that the successful inauguration by Northcliffe Newspapers, Ltd., of new evening papers in Newcastle and Bristol would be followed by the launching of a similar journal at Cardiff on October 1, and on later dates at Hull, Birmingham, Preston, Sheffield, Edinburgh, Middlesbrough and Leeds, but this programme will, presumably, be modified in the light of the agreement with the Berry group, announced some days after the meeting. In the course of a most informative survey of the activities of the Armstrong Whitworth companies, and of the outlook for world trade and finance, Major-General G. P. Dawnay emphasised the vital importance of export trade. He revealed that out of a total value of orders booked last year by the engineers' and shipbuilders' companies of the group—in the aggregate over £3,000,000—in the case of the former company over 84 per cent. in value, and in the case of the latter nearly 98 per cent. in value were for the external trade. At the Burmah Oil meeting, Sir John T. Cargill, Bt., declared that the improvement of the last three years was due to immunity from price-cutting conditions, economies in working costs, and increased income from interest and dividends on investments.

CAPITAL ISSUES.

The week was notable for the appearance, after some weeks of official discussion and unofficial rumours, of the *German Government International Loan*, otherwise known as the "Reparations Loan." This issue is a landmark in European post-war history, and from London's special point of view its flotation is likely to have far-reaching consequences. The Loan is dealt with at length in a leading article on page 1317 of this week's *Economist*. *The Roan Antelope Copper Mines* debenture issue, with its conversion rights into ordinary shares, has a necessarily speculative flavour, and will appeal to those who are impressed by the possibilities of the rich mineral area of Northern Rhodesia, and to the company's powerful backers, who have guaranteed £1,000,000 of the total subscription.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to June 7, 1930, £152,214,687.
Total, including conversion recorded, January 1 to June 7, 1930, £228,466,961.

National Savings Certificates.
Net sales week ended June 7, 1930, £200,000.
Total receipts, April 1, 1930, to June 7, 1930, £1,350,000.

German Government.—Offer of £12,000,000 5½ per cent. German Government International Sterling Bonds at 90, payable £5 on application, £25 on July 3rd, £30 on July 31st, and £30 on September 1st. The loan is redeemable on June 30, 1975, by means of a cumulative sinking fund, but the German Government reserves the right to redeem, on or after June 1, 1953, the whole of the outstanding bonds, at par, in multiples of $30,000,000 (U.S.A. dollars). The bonds will be redeemable, in their country of issue, at the equivalent of the present gold value. The issue is made under the Hague Agreement of January 20, 1930. All interest is payable by the Bank for International Settlements. To guarantee the service of the annuities, the German Government has created a fixed annual direct tax of 660,000,000 Reichsmarks on the German Railway Company for 37 years. The payment of principal and interest is a direct and unconditional obligation of the German Government.

Roan Antelope Copper Mines, Limited.—Offer of £1,500,000 7 per cent. 15-year debenture stock at 99. Every holder of this stock will, till June 30, 1935, have the right to convert his holding into 50 5s. shares in the company at a price of £2 per share for every £100 of debenture stock held. This company has mining rights under special grants from the British South Africa Company over approximately 10,788 acres in Northern Rhodesia. A sinking fund will be provided to redeem the issue on or before June 30, 1945, at 105, or at any previous date at 105 after three months' notice, or by purchase in the open market at a lower price. One-tenth of the issue will be redeemable on June 30, 1936. The company's authorised capital is £1,500,000 in 6,000,000 5s. shares, of which 4,795,741 are issued and fuly paid, the paid-up capital being £1,198,935. Expenditure to April 30, 1930, on development is £2,925,471. Operating costs are estimated at £37 10s. c.i.f. European ports per long ton of copper, which on May 31, 1930, was selling at £60 per ton. The annual output is estimated at 50,000 tons, as the company now has plant for dealing with 2,000,000 short tons of ore per annum, which is estimated to yield 50,000 tons of copper. The estimated ore in the property is 100,000,000 tons. Interest will be payable on June 30th and December 31st, first payment December 31, 1930.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices, summary of balance sheets and dividend announcements will be found on page 1362 under the heading "Company News."]

OIL OUTPUTS.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—Production of crude oil by this company for the month of May, 1930, was 36,877 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended June 4th:—Venezuela, 37,572 barrels; Trinidad, 15,362 barrels; Total, 52,934 barrels. Production for May: Venezuela, 183,363 barrels; Trinidad, 65,955 barrels; Total, 249,318 barrels. Deliveries for May: Venezuela, 182,723 barrels; Trinidad, 27,515 barrels; Total, 210,238 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of May amounted to 130,872 barrels, or approximately 18,696 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended May 31, 1930, was 236,000 barrels.

TAMPICO OIL, LTD.—The total production on the Company's properties in Mexico during May was 21,921 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,644 barrels.

COMPANY MEETINGS, &c.

ARMSTRONG WHITWORTH SECURITIES COMPANY, LIMITED.

FIRST ACCOUNTS OF THE NEW RÉGIME.
PROGRESS OF SHIPBUILDING AND ENGINEERING BRANCHES.
SOME VITAL PROBLEMS OF OUR OVERSEAS TRADE.
MAJOR-GEN. GUY DAWNAY'S SURVEY.

The thirty-sixth ordinary general meeting of Armstrong Whitworth Securities Company, Ltd., was held, on the 11th instant, at Winchester House, Old Broad Street, London, E.C.

Major-General G. P. Dawnay, C.B. (chairman of the company), presided.

The Secretary (Mr W. T. C. Cochrane) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen, The figures cover a period during half of which your company was still an operating company, and during the other half of which it had become a holding company, the subsidiary operating companies having only then begun their separate existence. This somewhat complicates consideration of the figures.

On the liabilities side of the balance sheet you will notice that out of the profit for the year of £66,140 we have reserved provision for the losses of subsidiary companies incurred during the period in which they were operating as separate entities, thus reducing the carry-forward to £11,714. During the first half of the year under review the company was an operating company carrying on all current contracts in hand at the end of December, 1928, for its own account, and had to bear not inconsiderable losses. During the second half of the year, however, the position showed a very marked improvement.

Of the losses in respect of the first half of the year, for which provision has been made, considerably more than one-half represents your share of the loss made by Craven Brothers, in which you have a considerable interest. This company shows a very decided improvement as a result of its reorganisation, but it had not had time to reap the benefits of that reorganisation in the period under review. Colonel Ionides, your vice-chairman, became chairman of the company, and under his leadership a drastic reorganisation of the staff and personnel was put in hand, with very satisfactory results. The working of the first quarter of the current year shows that the period of loss has been put an end to, and I feel entitled to say that the company may reasonably be expected to enter the profit-earning stage in the near future.

SUBSTANTIAL SHIPBUILDING ORDERS.

Turning to the two Armstrong operating companies, their difficulties have been mentioned in our report. In so far as rationalisation means economic regrouping, elimination of redundant capacity and reduction of overlapping and unnecessary overhead charges, schemes put forward in its name will be assured of our co-operation wherever possible. We have become members of the National Shipbuilders' Security, Ltd., and in the exploration of the position in the locomotive industry our co-operation is already promised. The yards of the Shipbuilders' Company have been fairly well employed during the year, having completed in 1929 ten vessels of various types. During the same period orders were booked for 13 new vessels, three of which have been launched since the end of the year, leaving ten still under construction. The great majority of these orders are for oil-carrying vessels, for which the company has a reputation unsurpassed by any other shipbuilding firm. The present-day tanker is the direct development of the pioneer work of our company 44 years ago. During 1929 our shipyards also executed extensive repairs to several vessels. Our shipbuilding facilities have been considerably improved by the provision of the most efficient machinery, the extension of fitting-out wharves and improved cranage, and, generally speaking, the shipyards are well equipped to meet the severe competition that prevails in the industry to-day.

ENGINEERING WORKS ACTIVELY EMPLOYED.

With regard to the engineers' company, the year was a difficult one for the heavy engineering industry. In spite of this, however, the total sales of the company show a very considerable improvement on those for 1928, and we were able to keep our works fairly actively employed. The works have been well maintained, both as regards the shops and their equipment. Obsolete plant has been scrapped, up-to-date machinery installed to meet modern conditions, and I believe that our works are in the forefront of the engineering establishments in this country.

The installation of the marine engine department was completed early in the year. Since then, owing to the activity in our shipyards, it has been working at full capacity. We are now in the satisfactory position of being able to manufacture all the marine engines and boilers—steam and Diesel—required for the shipyards. The volume of general engineering work has shown a gratifying increase at satisfactory prices, on the whole, and the results of active development of existing, as well as certain promising new, lines are encouragingly favourable. After a very careful survey of modern transport conditions as affecting railways, we have embarked on the design and production of Diesel electric rail units, working in collaboration with Messrs Sulzer Brothers, of Winterthur, Switzerland. We believe that in this direction is to be sought the solution of many of the problems which confront the railway companies at the present day, both at home and abroad.

THE LOCOMOTIVE BRANCH.

In the locomotive business, prices obtainable during the year were generally unremunerative, owing mainly to foreign competition. The British railways came into the market for very few locomotives, but we secured our share of the orders placed for South America—the Argentine in particular. The prospects for the present year are somewhat brighter. We have obtained our share of the orders already placed. There were numerous inquiries from India, but the bulk of the orders—to a value of over £1,000,000—were placed on the Continent, principally in Germany, at prices averaging 15 per cent. to 20 per cent. below the lowest British tender.

INDIAN ORDERS FOR THE CONTINENT.

In connection with this I would draw attention to the following facts. During the period January to October of last year very large orders for locomotives and locomotive boilers for the Indian railways were placed on the Continent. Complete records of spare-part orders, wheels and axles, &c., are not available; but such orders, placed abroad, were very considerable. In any case, the full value of the orders lost to the British locomotive firms amounted to about £1,000,000, and of this amount contracts placed in Germany reached the figure of almost £898,000. Now, translating that great figure into terms of output, the securing of all the Indian orders would have increased the British locomotive builders' total locomotive output during the period by over 36 per cent., and their total boiler output by over 53 per cent., with so great an advantage in respect of absorption of overhead charges alone, even at the cut prices quoted, as would have made a vast difference to their successful operation.

The difference in the aggregate amount of the tenders, taking our own figures as representative of the British tenders, was about £179,500 in favour of the Germans—equal to 16⅔ per cent. lower than the total of our tenders. This seems to be more than accounted for by the fact that German labour in the trades concerned is paid about 20 per cent. less than the British. Actually, of course, we were not by any means always the lowest British tenderer. If I had the figures of the lowest British tender in every case, the total saving made by India in purchasing from Germany would have been still smaller, and the percentage difference would have been less than 16⅔ per cent.

EFFECT ON THE HOME UNEMPLOYMENT.

Now, I had worked out for me what would have been the additional numbers of workmen employed in this country if the British manufacturers had obtained the Indian orders. This was worked out by categories in detail—fitters and turners, boilermakers, platers, machinemen, unskilled men, etc. The Indian orders having gone to Germany, these British workmen were unemployed—some thousands of them; and it is estimated that they drew during the period nearly £184,000 in unemployment benefit, or a sum quite considerably in excess of the difference between the German tenders and our own. On the one hand, therefore, German firms obtained the orders at £179,500 below the Armstrong prices—probably no more than £170,000 below the prices of the lowest British tenderer in each case; and, on the other, the loss of these orders cost the unemployment funds nearly £184,000—an appreciably greater amount.

But, and here is a fact to be emphasised, if the British firms had obtained the orders, the British workmen would not have been required to subsist on the pittance of the unemployment benefit. Instead of the £184,000 which they drew from that source, the same persons would have drawn, in greater or lesser degree and to their immense advantage, over £348,000 in wages.

Nor is this the whole story. Of the value of the materials used in the manufacture of the locomotives and boilers for India nearly £431,000 represents direct labour costs. In other words, the loss to British labour of the Indian orders represented, during the period, £348,000 plus £431,000, or the sum of £779,000; a very great sum surely, in relation to the total value of orders of just over or just under £1,000,000.

UNECONOMIC STATE OF AFFAIRS.

These calculations take no account of indirect advantages to labour by increase of employment in ancillary trades, or of generally increased circulation of spending power. They merely demonstrate that if a less sum than that unremuneratively expended in unemployment benefit could, by some means—I am not suggesting by what means—have been made available for enabling India to pay for the product of British instead of German labour, the effect would have been to put into the pockets of British labour considerably more than three-quarters of a million pounds sterling, which in the actual circumstances were lost to our people. I need only add that, in addition, the more assured and less unprofitable trade done by the British locomotive firms, if they had obtained the Indian orders, would have constituted an important additional security for the maintenance of continuous employment in this branch of British industry.

These facts, I think, provide a pertinent instance of some of the difficulties under which our business is carried on. They indicate why it seems to me that the existing circumstances disclose a state of affairs in this particular branch of our industry which is definitely uneconomic—uneconomic particularly from the point of view of British labour, uneconomic also from your point of view as shareholders, and uneconomic apparently from the point of view of the national balance sheet.

REPARATIONS AND INTERNATIONAL TRADE.

While I do not propose here even to attempt to elaborate suggestions as to how these evils should be remedied, I may say that there are those who believe, and not without some appearance of justification, that the difficulties, of which our locomotive business with India provides a particular instance, are not unrelated to the fact that a questionable economic policy after the war imposed upon the Central European Powers the necessity of paying great sums in respect of reparations. The obligation to make those payments, which must mainly be made in the form of goods or services, by making the finding of a market for such goods and services an absolute unescapable necessity, may indeed be a contributory factor in forcing down the price of their labour, in stimulating subsidisation and so forth, and so enabling the Germans to accept lower prices than we can and to obtain orders which we lose.

WAGES FACTOR IN PRODUCTION COSTS.

But that is certainly not the whole story. Let me turn for a moment to the question of wages. I wish immediately to remark that I do not believe that the wages paid to our people are too high. As the managing director of one of your subsidiary companies said to me in Newcastle only a few days ago: "The only thing which keeps us going is that the British workman, man for man, does more and better work than his Continental competitor." That is a tribute which I very gladly pay to British labour. Moreover, it is a mere platitude to observe that the products of labour in the United States of America, paid much higher rates than are paid in this country, are not, in fact, as a result of those high rates of wages, debarred from the world's markets.

The wages question itself, in fact, is a highly complex one, affected by a large number of factors. The United States of America, with the highest wages in the world, has an enormous and, subject to inevitable fluctuations, continually expanding and expansible home market. Manufacturers in that country are able, therefore, in general, to find a market in their own country for the great bulk of a standardised production; to them the export trade is secondary—a means of paying for a limited number of essential imports and of disposing of surplus products.

Germany, on the other hand, with low wage rates—much lower than those in this country—has passed through a period of devaluation of currency, with the corollaries of that process—namely, reduced internal indebtedness and fixed charges, and an incentive to turn melting cash balances into new plant and equipment with the greatest possible speed, so stimulating the creation of a highly efficient and modernised industrial equipment. Our difficulty, as I see it, is that we have, in general, neither the vast and increasing home market of the Americans, which would enable us to rely less than at present we have to rely on our export trade, nor the low wages, combined with up-to-date plant and reduced industrial indebtedness, of Germany.

I have mentioned wages because the costs of labour in this country are so frequently spoken of as being the chief cause of our difficulties. I believe it to be more true, however, that wage costs in businesses like ours, which are largely dependent on the export trade, are actually low in proportion to wages costs in the sheltered trades on the whole. It is true to some extent that the high wages costs in the latter are an indirect burden on the exporting trades.

BURDEN OF TAXATION.

So, moreover, are the great and ever-increasing costs of what are known as the "social services." And with the vast expenditure in these directions, involving an ever-increasing burden of taxation, is closely connected the present-day course and direction of that taxation. If it be true, as it appears to me that it most certainly is, that this country with its comparatively huge population in proportion to its area is obliged to rely for the maintenance of its population largely upon its export trade, then I think that a case may easily be made out for considering that too heavy a burden of overhead charges, direct and indirect, is being placed upon the export trade—partly, *inter alia*, because of the wages costs of the sheltered trades, partly because of the taxation levied in respect of social services, which economically it is more than doubtful if we can afford, and partly, again, owing to the direction, or the particular application, of the taxation so levied.

CHANGED CHANNELS OF TRADE.

There is one other factor to which I feel inclined to make a brief reference, always on the assumption that the export trade is the life-blood of this country. Our economic policy has been based, and soundly based, in the past on a general theory aiming at facilitating so far as possible the natural channels of trade. Since the Great War the natural beds of those rivers have been dammed up here, have silted up there, and have been violently deflected elsewhere, till the old map, as a result of that great cataclysm, is hardly recognisable.

On the other hand, the post-war settlements have, so to speak, resulted in the artificial construction of new canals of trade, representing the flow of reparations payments from Central Europe to the allied and associated Powers, and representing the flow of war debts payments between those Powers themselves and to the United States of America. In such a complete alteration of the map as that, what country would be likely to suffer the most? Surely the country whose economic policy has been built on freeing the old rivers of trade as far as possible, owing to its dependence on external trade, would be the one naturally to suffer most from these violent alterations. Is not that country our own?

EXPORTS VITAL TO THE COUNTRY.

I have tried very briefly and obviously by no means exhaustively to touch upon some of the salient factors which press upon our export trade. Our export trade is vital to us. We cannot pay for our vast volume of essential imports without it. We cannot find the means sufficiently to expand the purchasing power of the home market without it. It is of primary importance to you. Out of a total volume of orders booked last year by your engineers' and shipbuilders' companies—in the aggregate over £3,000,000—in the case of the engineers' company over 84 per cent. in value, and in the case of the shipbuilders' company nearly 98 per cent. in value, were for the external trade.

There is another school which, in effect, says: "Do not consider our export trade as an external trade. Deflect the channels so that they begin and end within the Empire. Look upon the whole Empire as your home market." This may or may not be an ideal, the avenues towards which may be worth exploring. But on any analogy that we know, it must predicate eventual freedom of trade between the various parts of the Empire, and protective tariffs between the Empire and the outside world, a goal which, whether or not desirable, is certainly not within immediate reach.

SOME REMEDY POSSIBLE.

I do not say that there may not be some value in the most diverse suggestions. But it appears to me that the root factor is to use every immediate means in our power to bring health and activity into our external trade as it is to-day. We have recently heard proposals for the establishment of Import Boards. Might there not, perhaps, be a scarcely less plausible case for the establishment of some form of Export Board, with more extended powers than any existing organisation possesses; powers to promote measures to assist the export trade, taking any case of difficulty in any branch of industry concerned in that trade as an individual case on its own merits, and hearing and dealing with it accordingly?

I know that, in bringing into relation on the one hand the difference in prices which causes a loss of orders to British manufacturers, and on the other the unremunerative expenditure on unemployment benefit which is necessitated by that loss of orders, I shall be told that I suggest subsidising wages. I am fully aware of the difficulties underlying that suggestion in a general way. But I do say that, if one remedy is undesirable, for whatever reason, it is not, and cannot be, beyond the wit of man to devise some remedy which is at least better and more economically sound than certain of the evils under which we at present suffer.

A TRIBUTE TO MR FRATER TAYLOR.

I have only this further to add. I know you will associate yourselves with us in recording, as we do in our report, our high appreciation of Mr Frater Taylor's services to the company, and our very great regret that he is no longer able to take part in the direction of your affairs. I wish to express my gratitude to my colleagues for their invaluable help and support. I have also to thank our staff and employees for a year of loyal co-operation and excellent work.

Finally, I am happy to say that our relations with labour have been good during the year. The spirit of our personnel has been, and is, excellent; and it is largely due to the good feeling which prevails that the difficulties of existing conditions in the industry have not been greater.

The report and accounts were unanimously adopted.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED.

IMPROVED TRAFFIC RECEIPTS.

The forty-second annual general meeting of the Antofagasta (Chili) and Bolivia Railway Company, Ltd., was held, on the 10th instant, at Winchester House, London.

Mr A. W. Bolden (chairman and managing director), who presided, said that the gross receipts of £1,997,328 exceeded those of the previous year by £155,486, and it was interesting to record that that year, in turn, had showed an increase of £151,872 over 1927. Nitrate, copper and tin, the items which constituted the chief down traffics, had all contributed to the improved receipts. Nitrate gave 638,101 tons, as compared with 614,085 tons in 1928. In the early part of the year they were hopeful of even a better tonnage than actually resulted, but later sales of nitrate fell off, and in the second half of the year there was a tendency towards decreasing production. The tonnage of copper was 137,596, compared with 119,510 in 1928. During the major portion of the year traffic in the ore was good, but conditions changed, and towards the end they found themselves facing a decreasing tonnage. Mainly as the result of the increased output of the mines of the Patino Mines and Enterprises Consolidated Incorporated, the traffic in tin from Bolivia for 1929 constituted a record in the company's history.

Everything possible had been done to meet road competition. The speeding up of the parcels service and rearrangement of tariff bases had had good effect, and shareholders could rest assured that the board would continue to take whatever steps were necessary to secure to the railway such traffic as there was offering.

Working expenses exceeded those of 1928 by £139,342, the percentage of operation costs to gross receipts for the railway and waterworks combined being 62.54 per cent., as compared with 60.26 per cent. for the preceding year. The net receipts were £748,161; £194,349 was brought into the accounts as a result of 2½ years' interest on the 5 per cent. first mortgage bonds in the Bolivia Railway Company, and income from other investments and certain discounts realised £25,560; £241,616 was brought forward, giving a total credit of £1,210,121. The directors had decided to continue the conservative financial policy hitherto followed, and had appropriated £100,000 to reserve; to the staff benevolent fund was allocated £15,000, and it was proposed to pay a final dividend of 4 per cent. on the consolidated ordinary stock, making 7 per cent. for the year.

The report and accounts were unanimously adopted.

FARMERS' NATIONAL MORTGAGE INSTITUTION. BUDAPEST, HUNGARY.

SUCCESSFUL RESULTS OF THE YEAR.

PRESIDENT COUNT HADIK'S SURVEY AT THE FIFTIETH JUBILEE MEETING.

The fiftieth annual general meeting of the Farmers' National Mortgage Institution, Budapest, Hungary, was held on May 27, 1930. Count John de Hadik presided at the jubilee meeting at which the Government and the foremost financial and political personalities were represented.

TRIBUTE TO COUNT BETHLEN AND DR. BUD.

The President stated with satisfaction that the institution which has done so much in the past for the agricultural community has been reorganised with the help of the Government after the disastrous period of inflation which has completely paralysed the agricultural credit provision. Count Hadik therefore thanked, in the name of the farmers, Prime Minister Count Bethlen, and the then Finance Minister, Dr. Bud, who, recognising the urgent need for the reorganisation of the institute, placed the necessary funds at the disposition of the institute by subscribing nine million pengös founders' share for the Treasury.

GOVERNMENT AID FOR FARMERS.

The president recalled the fact that the precarious state of agriculture throughout the world prompted Governments to come to the aid of the farmers, and it is only natural that the Hungarian Government is resolved to do its best for them. The Farmers' National Mortgage Institution works on altruistic lines. Its object is not profit-making, but the cheap credit provision of the small holders. Considering that in the pre-war days the institution granted mortgage loans up to the amount of 700 million gold crowns (£16,600,000), and that it has the efficient organisation throughout the country, there is good reason to believe that with the improvement of the monetary conditions, the institution will be able to help the small holders to convert their onerous short term debts into long term loans.

Count Hadik pointed out that at the present time about 90 per cent. of the debt of the farmers consist of short term loans which are expensive and uncertain. Therefore it is of paramount importance for the economic welfare of the country that the farmers in need should be helped at the earliest date with cheap long term loans.

CO-OPERATION WITH PROVINCIAL INSTITUTIONS.

The President emphasised the fact that the institution in order to widen the field of co-operation entered into agreement with 134 provincial financial institutions which are bound to grant credits on the altruistic lines prescribed by the statutes of the institution. Count Hadik finished his exposé in the hope that the institution will be able to perform its manifold duties toward the agricultural community in the following years as it did in the past to the general satisfaction of everybody.

The following data shows the results achieved during the past year. The total amount of loans granted by the institution on mortgages increased by 9·6 million pengös in 1929 and stood at 26 million pengös at the end of the year. The value of the bills discounted during 1929 amounted to 112·7 million pengös, and the bill portfolio at the end of 1929 was 22·8 million pengös.

The institute participated in the formation of the co-operative Association for the carrying out of the financial part of the Land Reform.

The allotment activities of the institution are responsible for the parcelling of 5,995 cadastral yokes (1 cadastral yoke = 1·4 acres) among 637 small holders, and 13 allotments are now in progress.

SAVINGS DEPOSITS AND DEPOSITS ON CURRENT ACCOUNTS.

The savings deposits and deposits on current accounts increased from 22,161,615 pengös at the end of 1928 to 34,551,688 pengös on December 31, 1929.

The mobility of the institution corresponds to 96 per cent., and the careful credit policy is demonstrated by the fact that from 4,085 mortgage loans granted during the last three years there are only 7 defaulters.

The institute is the trustee of the American Loan of the Protestant Churches Credit Union, and the proceeds of the Protestant loans has been paid into the institution. Up to the end of 1929 the Institute paid out approved loans up to the amount of 7 million pengös to the Protestant Churches.

ASSOCIATED NEWSPAPERS, LIMITED.

RECORD PROFITS.

NORTHCLIFFE NEWSPAPERS SUCCESSES.

SIR GEORGE SUTTON ON NET SALES.

The twenty-fifth annual ordinary general meeting of the Associated Newspapers, Ltd. (proprietors of *The Daily Mail*, the London *Evening News*, and the *Sunday Dispatch*), was held, on the 11th instant, in the Memorial Hall, Farringdon Street, London.

Sir George A. Sutton, Bt., managing director, presided.

The secretary (Mr J. P. Hobbs, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the annual report and balance sheet, said:—

With your consent I will follow the usual practice and take the balance sheet and report as read.

The total profits of the company for the year to March last, after making ample provision for depreciation of plant and machinery, buildings, etc., amounted to £1,245,322 17s. 2d., approximately £40,000 in excess of the year 1929. Having regard to the adverse trading conditions which have existed during this year, the increasing unemployment, and the general trade depression, the directors consider the result of the year's trading extremely gratifying.

Dividends on all classes of the company's shares have been paid at the same rates as the previous year, namely, 5 per cent. on the preference, 7 per cent. on the ordinary, and 10 per cent. per quarter on the deferred shares. It has been thought advisable this year to set aside the sum of £200,000 for the purpose of special items of publicity expenditure.

The sum of £773,336 2s. 1d. is carried forward, compared with £695,013 4s. 11d. last year.

The new Companies Act requires that any amount for goodwill in the books of the company shall be given under a separate heading in the balance sheet, but, as you are aware, there is nothing in the accounts to show this very valuable asset. The value of the buildings, machinery and plant has been considerably increased, due to extensions in both London and Manchester offices. Stocks of paper, etc., are larger than last year and fully safeguard the requirements of our newspapers.

The investments amount to £2,867,004 and consist, apart from the very valuable holdings in the Anglo-Newfoundland Development Company and other allied companies, of British Government and American and Canadian securities of a high-class nature.

Very considerable extensions have been made to the paper-making plant of the Anglo-Newfoundland Development Company, Ltd., in which your company has such a valuable holding. Our paper requirements being fully provided for, your directors, after careful consideration, decided that the mill at Greenhithe was no longer necessary to the company. A very good offer in cash having been received for the shares held by your company in the Empire Paper Mills (1922), Ltd., it was accepted by your directors and they agreed to accept a debenture on the assets of that company in security of the balance of the loan due.

Cash at banks on deposit and current accounts amounting to £703,595 is more than ample for the requirements of our business.

You will gather from these figures that your publications have done exceedingly well.

HIGHEST NET SALES IN THE WORLD.

The Daily Mail stands unrivalled with the highest net sale of any daily newspaper in the world. *The Evening News* has the highest net sale of any evening newspaper in the world. The *Sunday Dispatch* has maintained the progress in sales and advertising revenue on which I commented last year. The *Over-Seas Daily Mail* has also made further strides in its policy of linking up readers in all parts of the world with the Old Country

The *Atlantic Daily Mail* is still proving a boon to Atlantic passengers, and is now published in no fewer than 22 liners. It is a constant source of wonder to travellers in these vessels to find available every morning in mid-ocean an attractively printed journal containing a reliable wireless summary of world events.

During the year *The Daily Mail* has again accomplished many journalistic feats. It is still far ahead of all other British morning journals in the amount of exclusive news it contains. I will mention a very recent one—in connection with aviation. In this field *The Daily Mail* has always led. The huge prizes given in the past, beginning with the prize paid to M. Bleriot in 1909, the £10,000 prize flight to Manchester in 1910, and the non-stop Atlantic flight in 1919, for which the paper awarded the same amount, are well known. Now we are proud to be associated with the remarkable feat of Miss Amy Johnson in flying alone to Australia. *The Daily Mail* not only secured the exclusive rights in her complete narrative, but, for the benefit of its readers, it has also retained Miss Johnson's services on her return to England in a few weeks at a cost of £10,000. *Daily Mail* readers all over the country will then be able to see and hear this remarkable young woman, and she is assured of the magnificent reception which she deserves.

NORTHCLIFFE NEWSPAPERS, LIMITED.

As most of you are aware, your company has a very large interest in Northcliffe Newspapers, Ltd., a company which was formed to create a chain of provincial newspapers in various important centres. During the last year, two of these evening papers have been produced and have met with truly remarkable success.

The Newcastle *Evening World*, within a few weeks of its inception, achieved the largest net sale of any evening paper published in the North-East, and to-day it still retains that proud position of supremacy. Its last certified net sales figures were 172,349 copies per day.

The Bristol *Evening World* has been just as great a success, and, allowing for the less densely populated area in which it circulates, its latest certified net sales figure of 110,605 copies per day is just as remarkable as that of the Newcastle *Evening World*.

The success of these first two ventures is proof of the need of better evening papers in the provinces, and is an incentive to push ahead with the extended programme which has been announced in the columns of *The Daily Mail*. Ample financial resources are at the disposal of Northcliffe Newspapers, Ltd., and, in this respect, the new company enjoys an overwhelming advantage. The normal experience in the past has been that it takes four or five years before a new paper can be placed upon a profit-earning basis; but the rapid success of the *Evening Worlds* in Newcastle and Bristol seems to indicate that we shall not have so long to wait before your company derives substantial financial benefits from its interest in Northcliffe Newspapers, Ltd. Meanwhile, the new papers are proving invaluable as advertising media for your publications, and we feel that, as they increase in number and strength, they will form an unrivalled asset to this business.

ADVERTISERS AND NET SALES.

While on the question of advertising, I would emphasise that advertisers and advertising agents should exercise the greatest care in the placing of announcements in the provincial press. This is particularly important during the present difficult time in industry and finance. Many provincial newspapers have, in the past, obtained quite a considerable advertising revenue owing to misconceptions as to their sales and their influence. From investigations recently made, it is perfectly clear that there are only two or three morning papers in the provinces with any considerable sales left. The sales of the remainder are, for the most part, microscopic, and do not justify anything like the advertising rates which are asked. The same is true of quite a number of evening papers. Advertisers would be well advised to confine their announcements only to newspapers which publish at regular intervals their certified net sales. The morning newspaper field is most efficiently covered by the great national morning papers like *The Daily Mail* and *Daily Mirror*, the supreme picture paper, which give much better results for each pound spent than any of these rapidly declining provincial morning papers. Provincial evening papers which give certified net sales—like the Newcastle and Bristol *Evening Worlds*—offer another excellent field for the national advertiser who wants full value for his money.

It is important to note that these new evening papers have not only the largest, but also the best quality sale in Newcastle and Bristol. Amongst the best class houses in these areas, there is hardly one in which the *Evening World* is not the favourite paper. The reason is obvious, for these new Northcliffe newspapers are first-rate productions, comparable to the best evening papers in London, and far ahead of anything hitherto available in the provinces. A glance at the Bristol *Evening World* or the Newcastle *Evening World* will convince any unbiassed person in a moment of the "quality appeal" of these new papers. Certified net sales figures are published at frequent intervals, so that the advertiser

is in possession of complete information. As a final point, I would emphasise that the only figures of this kind to which any importance can be attached, are net sales figures certified by a first-class firm of chartered accountants and published in the columns of the paper, so that they may be subjected to careful scrutiny. Unless these conditions are fulfilled, any so-called net sales certificates which may be quoted will be found to be misleading and valueless.

IDEAL HOME EXHIBITION RECORD.

Further success has attended the activities of the exhibition department.

The *Daily Mail* Schoolboys' Exhibition, held at the Horticultural Halls in January last, broke fresh ground and attracted an attendance of over 80,000 visitors. This exhibition will be considerably developed when held at Olympia in January of next year.

The *Daily Mail* Ideal Home Exhibition broke all previous records for attendance. During the 22 days' run of the exhibition no fewer than 617,038 visitors paid for admission.

For both the Schoolboys' Exhibition and the Ideal Home Exhibition of next year many applications for exhibition space have already been received, and plans and features are now in preparation which are calculated to make them even more attractive than their highly successful predecessors.

GREATEST ADVERTISING MEDIA.

Let me now refer to the advertisement side of the business. It is a remarkable reflection of the increasing strength of your newspapers that revenue from trade publicity constitutes a record figure. The reason is plain. It must surely be that enterprising manufacturers find through their advertisements in *The Daily Mail*, *The Evening News*, and the *Sunday Dispatch* that they can to a great extent counteract the effects of the general depression in trade.

The year under review has been an abnormal one in the City, involving a serious curtailment of prospectus advertising. Consequently a similar increase in financial advertising cannot this year be reported.

Nevertheless, it is gratifying to note that your newspapers carried a very large share of financial publicity in comparison with similar journals.

It is hardly necessary for me to remark that *The Daily Mail* maintains its position as the greatest national advertising medium in Great Britain.

In advertising circles its pulling power is regarded as the vital factor in business development, not only in selling to the public but also in building up distribution among retailers. In all parts of the country advertisers continue to report excellent results obtained through *The Daily Mail*.

Here I have in mind not only the manufacturers, commercial institutions, and the big stores, but, in addition, traders' organisations. I may instance the "Eat More Fish" campaign which in one year developed £1,000,000 of new business, due in no small measure to advertising in your newspapers.

THE FAMOUS FRONT PAGE.

More than 90 per cent. of those advertisers who last year used that greatest marketing space in British advertising, *The Daily Mail* front page, have already renewed their bookings for 1930. That speaks for itself.

It says much for the popularity of this page with advertisers and the public, especially women, that *The Daily Mail* is now the only national daily newspaper with simultaneous printing in London and the North of England with its whole front page devoted to advertisers' announcements.

The demand for front page spaces, from the West End stores in particular, is such that a continuation of the front page to page 3 is now a welcome feature of every Monday's issue.

Another important pioneer development is that for months now experts have been preparing an exhaustive survey of the British Isles as a market for all classes of goods. This is the first time that such a survey has been undertaken in this country by a great newspaper and it will undoubtedly prove a service of incalculable value to advertisers, present and prospective. The completed volume of nearly 300 pages of facts and figures is now ready for publication.

DOMINANT "EVENING NEWS."

In evening journalism *The Evening News* becomes increasingly important as a great publicity medium. Advertisers are realising that by reason of present economic conditions London and the Home Counties represent a vast, densely populated territory of comparative prosperity.

The Evening News, with its world's record evening net sale and great influence in home circles, is the dominant evening medium in the south, and as such carries a greater amount of national advertising, leading stores publicity, house property and entertainment announcements than any other evening newspaper in the country.

In Sunday journalism the *Sunday Dispatch* maintains its high position and huge net sale and retains the confidence of advertisers as the great national Sunday medium.

Increasing use of the paper is shown in higher advertisement revenue from trade publicity which more than balances the general decrease in financial advertising.

During the past year we have had more than ever the co-operation of the advertising agents throughout the country. Our relations with them have been extremely cordial. It is believed that the success of the whole advertising business will be more directly due to them in the future than it has ever been.

In achieving the excellent results I have had the pleasure of placing before you to-day, we have again had the loyal support of an enthusiastic staff. I would like, therefore, on your behalf, to thank very heartily the members of all departments of the business in London and Manchester, and all the workers at Grand Falls in the employ of the Anglo-Newfoundland Development Co.

In regard to the present year, I may say that newspaper competition is keener than ever, but this company, as you have seen, has large liquid resources, and it is equipped in a thoroughly efficient way, mechanically and otherwise.

The capital of the company is not overborne by debentures. The sum required to pay prior charges amounts to only £67,000, so the directors look forward to the future with complete confidence, even though next year the affairs of the country may give cause for anxiety.

The resolution for the adoption of the report and accounts was carried unanimously.

The retiring directors were re-elected.

The meeting then terminated.

SIALANG RUBBER ESTATES, LIMITED.

STRONG FINANCIAL POSITION.

The twenty-first annual ordinary general meeting of the Sialang Rubber Estates, Ltd., was held on the 6th instant, at 2, 3 and 4 Idol Lane, London, E.C.

Mr H. Eric Miller, the chairman, in moving the adoption of the report and accounts, said that the crop was almost identical with the crop harvested in the previous year, in spite of a change in their tapping system which materially reduced the rate of bark consumption. Expenditure had been very strictly controlled, and kept down to the minimum compatible with proper husbandry. The sale price obtained for the crop reflected credit on all concerned. By payment of reasonable compensation for fruit trees, etc., they had secured for their own use an area of 287 acres on Tebing Tinggi Estate, formerly regarded as Kampong reserve land, of which 250 acres was considered to be good plantable land.

A further 2s. 6d. per share was paid in June last on their holding of 50,000 £1 shares in the Namoe Tongan Rubber Estates, Ltd., which now stood in the balance sheet at £31,250. In a report recently issued by that company it was stated that they now had nearly 5,000 acres planted with highly selected planting material. The directors had no doubt that the company's investment, which represented the equivalent of about 550 acres of budgrafted rubber, would prove a valuable asset.

The estates were reported to be in a good state of upkeep, and had been kept free from weeds and lalang. Tapping work had been carried out efficiently with a moderate consumption of bark on all estates. The usual high standard of manufacture had been maintained.

The net profit for the year, after writing off £5,600 for depreciation of mature areas, amounted to £27,407. Adding thereto the unappropriated profit from last year, the total amount to be dealt with was £93,010. The directors proposed that £2,000 be transferred to taxation reserve, £10,000 to special cultivation reserve, and that a dividend of 5 per cent. be paid (less income tax), leaving £66,010 to be carried forward. Their balance sheet showed a strong financial position, which was a matter for congratulation at a time like the present, when the industry was faced with difficulties and depression. They were suffering still from over-production, but in common with other commodities they were also having to stand up to a spell of under-consumption, which was world-wide in character. But demand would in due course inevitably overtake supply, and holders of shares in sound rubber-producing companies like Sialang would be well advised to see things through to ensure participation in the better times which lay ahead.

The report and accounts were unanimously adopted.

BURMAH OIL COMPANY, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.
DIVIDEND INCREASED TO 30 PER CENT.
CAUSES OF THE IMPROVED RESULTS.
ANGLO-PERSIAN AND "SHELL" INTERESTS.
SIR JOHN CARGILL ON THE POSITION AND PROSPECTS.

The twenty-eighth annual general meeting of the Burmah Oil Company, Ltd., was held, on the 6th instant, in the Merchants' Hall, 30 George Square, Glasgow.

Sir John T. Cargill, Bt. (chairman of the company), presided, and there was a large attendance of shareholders.

The Chairman said: Ladies and gentlemen,—Having here the certificate of the due posting of the notice calling this meeting, I propose, with your permission, to hold it as well as the report and accounts as read, and to ask the secretary to read the auditor's report.

The Secretary (Mr F. G. Holdsworth) having read the auditor's report,

The Chairman, continuing said: Ladies and gentlemen,—I propose at once turning to the accounts. Broadly stated, the improvement on the results of the last two years is due to three main causes, namely:—

1. Immunity in the period from price-cutting conditions in the kerosene market of India which ruled between September, 1927, and June, 1928;
2. Economies in working costs and benefits resulting from the changes in your marketing arrangements in India; and
3. A considerable increase in income from interest on loans on the market and from dividends from investments.

PROFIT AND ALLOCATIONS.

Reference to the profit and loss account will show you that, after charging £528,455 18s. 4d. for depreciation, or £146,720 16s. 4d. more than in 1928, the balance of profit of £2,956,548 9s. is greater than that of that year by £1,397,574 18s. 6d. Transfer fees and interest and dividends, yielding together £1,214,239 14s. 6d., or £651,892 6s. 8d. more than in the preceding year, increase the balance of profit to £4,170,788 3s. 6d., and, deducting from that figure the cost of directors' and the auditor's fees, income tax, subscriptions, employees' provident fund, interest on the five-and-a-half per cent. debenture stock, and the outstanding balance of issue expenses of that stock amounting in all to £733,315 18s. 2d., the balance of profit carried down is up by £1,957,846 2s. 10d. at £3,437,472 5s. 4d. Adding the 1928 "carry forward" of £151,084 7s. the disposable amount becomes £3,588,556 12s. 4d., from which your board has made the following allocations, namely:—

To general reserve £500,000, bringing it up to £1,500,000;
To insurance reserve £20,000, bringing it up to £540,000;
To fields expenditure equalisation reserve £150,000, bringing it up to £900,000;

and has applied to the writing down of shares in subsidiary companies £500,000.

These allocations absorb £1,170,000, as compared with the £370,000 utilised in 1928 for the three normal reserve accounts, and the amount left to be carried to the balance sheet is thus some £800,000 in excess of the 1928 figure at £2,418,556 12s. 4d., of which the preference dividends and the interim ordinary dividend for the year took £858,332 13s. 8d., and of the balance of £1,560,223 18s. 8d. your directors recommend that £1,160,449 1s. 9d. be utilised in payment of a final dividend on the ordinary shares of 4s. per share, less tax at 3s. 1¾d. per £, or the United Kingdom rate of 4s. 6d. less Dominion income tax relief, making, with the interim dividend, 30 per cent. for the year, as compared with the 20 per cent. of the two preceding years. There is left a balance of £399,774 16s. 11d., which it is recommended should be carried forward.

COMPARISON OF BALANCE-SHEET FIGURES.

If you will now turn with me to the balance sheet I shall endeavour to show you how in its new form, required by the provisions of the new Act, the figures compare with those of last year.

On the liabilities sides you will find the capital position unchanged.

The amount appearing under the new heading of "Debts due to subsidiary companies" is mainly on account of the company's employees' provident trust fund. The amounts of "Sundry creditors and credit balances" are up £337,336 14s. 4d. on 1928, whereas, on the other side of the balance sheet, you will find that "Sundry debtors and debit balances" of £418,155 7s. 9d. are ostensibly down on 1928 by £1,843,208 2s. 11d. Actually, however, they are £590,796 19s. higher since the comparable figure is the aggregate of the amounts now shown separately under the headings respectively of "Loans to employees" and "Indebtedness." The real comparison between those two headings of the old balance sheet therefore shows a net increase on the assets side of £55,413 13s. 3d.

I have already referred to the increase in general, insurance, and fields expenditure equalisation reserve accounts. The fire and marine insurance account of £1,099,001 12s. compares with £1,013,899 9s. 5d. in the preceding year's balance sheet; the increase representing premia charged internally on risks covered less claims during the year.

On the assets side the first item, refineries (including land and buildings), stands in the books at £1,507,402, which is an increase as compared with the previous year of £43,000. The second item, oil wells, boring plant, &c., remains at the very low figure at which it has stood for many years. "Fields electrification" and "Pipe lines" are each down by some £19,000 odd; "Tanker and tank installations" by almost £100,000; and "Stocks of plant and stores" by nearly a quarter of a million, whereas "Stocks of products" are up by over £90,000. Our financing of the Assam Oil Company, Ltd., represents the indebtedness of the subsidiary companies, and the balance sheet itself explains the indebtedness by associated companies.

INVESTMENTS.

You will see that our investments are split up under four headings. British and Indian Government securities at £2,676,945 7s. 8d., have increased by some £1,288,000, and since the date of the balance sheet have been still further added to. The "Miscellaneous" investments include our direct holding in the Anglo-Persian Oil Company, Ltd. The ordinary shares of that company held meantime by us through the B.O.C. Anglo-Persian Share Trust, Ltd., are included in "Investments in subsidiary companies," where they stand at par. Under the "Miscellaneous" heading the holding of these ordinary shares is, as the balance sheet states, valued at 11s. 8½d. per share. We have had to give this figure since it represents neither cost nor under, for you will remember that on the occasion of our last share bonus issue in June, 1926, we wrote our holding up from its cost to us to par, but the subsequent share bonus issue by the Anglo-Persian again brought it back to the original cost figure, and the sale by us of the 700,000 of these shares to the B.O.C. Anglo-Persian Share Trust, Ltd., at par resulted in a profit which was applied to writing down the book value of the shares we directly retained.

Under this "Miscellaneous" heading is also included the company's holding of ordinary shares in the Shell Transport and Trading Company, Ltd., increased since the 1928 balance sheet by the 166,667 shares taken up out of the new issue at par which that company made in January, 1929. The £7,380,488 4s. 6d. book value of these "Miscellaneous" investments represents a net increase on their corresponding value in 1928 of over £100,000.

SUBSIDIARY AND ASSOCIATED COMPANIES.

The next division of the investments—subsidiary companies—includes the holding of ordinary and preference shares in the Assam Oil Company, Ltd., at cost, less the £500,000 written off out of the year's profit, to which I will refer later, as also the shares of the B.O.C. Anglo-Persian Share Trust, Limited, which holds the 700,000 shares of the Anglo-Persian Oil Company, Ltd., at par, to which I have just referred. There is also included the debenture and share interest in the Tinplate Company of India, Limited.

Lastly, the investments in associated companies comprise your interest in Burmah-Shell Oil Storage and Distributing Company of India, Limited, and in Candles, Limited, at, in aggregate, some £46,000 less than the figure at which they appeared in 1928. Together these four divisions show a net increase in your total investments of over £800,000.

There remains only the item of loans, deposits, and cash, which at £1,458,296 18s. 3d. shows an increase on 1928 of over £1,000,000.

I am sure you will all agree that the results for the year are most satisfactory, and that they have been secured in the present not too

satisfactory state of the petroleum industry as a whole complete justification of the conservative policy which, with your steady approval, has characterised the treatment by your board of the profits and finance generally of your company since its inception, and which it is continuing in the accounts now before you. For while your board has the confidence that this policy has placed you in a position from which you can regard with comparative composure the normal ups and downs to which the industry is peculiarly subject, it is alive now, as always, to the unusual hazards which attach to its raw material, and there are to-day special reasons both political and economic why your directors have considered it prudent and advisable to deal with profits on such a conservative basis and add so materially to reserves.

CONDITIONS IN INDIA.

India, because of its preponderatingly agricultural habits, is possibly feeling more than most countries the effects of the present world-wide economic depression, and while this, and the added cloud of the political unrest there, continue, prudence demands the qualification of our broad confidence in the future both of India and of your company with continued caution. Happily neither condition has so far prejudicially affected the outlet there for your products or your operations generally, and your properties and operations were equally fortunate in escaping damage from the earthquake which recently played so much havoc in Burma and from the unfortunate communal riots which resulted in such loss of and injury to life in Rangoon.

These political and economic uncertainties, and the still imperfectly balanced relation between supply and demand for the products of the industry, cannot, and should not, be ignored in any forecast of the future and themselves sufficiently warrant a continuance of that conservative policy to which I have just referred.

Those best placed to attempt the correlation of potential resources of natural petroleum with the increasing demand for it may, and indeed, in the very nature of the hypothetical data which must to a great extent be involved, do in fact, arrive at varying conclusions. All at least agree, however, that not the most optimistic of their conclusions can justify, whether in the interest of the industry or of the pocket ultimately of the consumer, the over-production which has been so much the characteristic of recent years. These efforts then should, and do, have the best wishes of all of us, but we have so often seen failure come of similar efforts in the case of raw materials in smaller volumes and in closer and fewer and therefore fundamentally more manageable hands than is the case with petroleum that one cannot rely too completely on the success of the efforts here. As it is, coming nearer home, new outside importations, forced by these conditions to try to find an outlet somewhere, have this year been appearing on the Indian market, where they are already a disturbing factor.

THE DUTIES ON KEROSENE.

It is in these conditions, which may mean so much for the smaller indigenous producing companies of India, that the Government of India have in this year's Budget reduced the difference between the import duty and the excise duty on kerosene from 1a. 6p. to 9p. per gallon. As chairman of the Assam Oil Company, Ltd., at its annual meeting on the 26th ultimo in London, I criticised this step in its relation to that struggling company and others similarly placed in India and Burma, and I do not propose saying more here that that so far as your company is concerned this potential change was to some extent discounted by us as far back as 1905, when we initiated our kerosene price limitation policy. For the operation of that policy has during many of these years meant giving away more than the ostensible protection represented by the excess of the import over the Excise duty, and during the remainder of the period a considerable portion of it.

Our price limitation policy was intended, and has served, as some recognition that we neither asked for nor required the advantage of these fiscal conditions. The protection was there and automatically it came our way. But we largely gave it back by this price limitation policy, which has on average all these years of its existence given India a much cheaper kerosene bill than but for it she would have had to foot. It is for these reasons then that, just as we made no claim for protection during the recent war of rates in India, so now we have made no representation against this fiscal change. For we are securely established and prosperous enough to meet fair competition successfully, and are quite competent and prepared to rely on ourselves.

THE "ASSAM OIL" COMPANY.

In such conditions as those through which the Indian industry passed in 1927 and 1928, and in conditions of world-wide over-production forcing petroleum products on to the market at uneconomic levels, one can, however, only view with anxiety the effect which this reduction may have on the smaller indigenous companies, and it is for this reason that your board has thought it well to utilise some portion of your past year's results to write down the cost of your holding in the Assam Oil Company, Ltd., by £500,000.

These friends, under our management and with our financial assistance, have increased their production sixfold since we acquired our interest in the company in 1920; but added to the natural handicap of their geographical position which involves increased production moving at greater transport cost towards the seaboard, where lower values are increasingly met—since selling prices in India are determined by seaboard prices plus charges to the up-country markets—there was the setback of the nine months' rate-cutting in India during 1927-28; and now there is the damage, actual and potential, of this worsening of their fiscal position. These happenings, entirely beyond our friends' control, have unhappily largely reduced, if they have not already cancelled, the real advances they have made, so that while they have reason to expect very shortly now to reach the increased crude oil production for which they have already completed their refinery, it is going to take much more time, and further careful nursing because of these conditions, before they can expect to clear off the loss at the debit of their profit and loss account and begin to repay to you the loans you have made.

There is really nothing to add to the report and what I have already said as to your own producing, refining, and marketing operations or as to the prospects for the current year. These up to date have been quite favourable, and, subject to the adverse conditions referred to, we anticipate being able again to submit to you in due course a favourable report.

ANGLO-PERSIAN AND SHELL RESULTS.

In these days of world-wide industrial depression we are glad in these accounts to have been able to submit such an excellent report, and we can further congratulate ourselves as well as our friends on the excellent results which the Anglo-Persian Oil Company, Ltd., and the Shell Transport and Trading Company, Ltd., have recently made known. We are reasonably confident that we can look forward with assurance to the steady and continued progress of both these companies, and to the enhancement of the value of our investments in them. The dividends from these and from our other investments and our interest account contribute very substantially to the company's profits. Almost 40 per cent. of the £4,170,788 of your profit and loss account came from such sources and from operations outside of India, while the actual trading of your products in the United Kingdom itself was responsible for an infinitesmal fraction of this 40 per cent.

That the 60 per cent. or so of your profits which has come out of India has been secured at selling prices which have given the smaller indigenous companies quite inadequate returns for a business of this nature, and that if anything they have been under world parity, is all that needs stating as to their reasonableness from the consumer's point of view. But unfortunately for these smaller companies, your results as a whole, and not their results secured merely from trading in India, are taken as the criterion of their ability, unprotected, to continue their contribution to the nationally very valuable and important indigenous industry, no regard being apparently paid to the fact that some 40 per cent. of these results of yours has nothing whatever to do with the company's trading operations in India, and that the same sources of revenue are not available to them.

TINPLATE COMPANY OF INDIA.

A word as to the Tinplate Company of India, Ltd. The strike engineered at its works by outside political agitators for purely political purposes which was in force when I addressed you last year ended with the realisation that there were only these reasons, and no economic justification for it ever having started. Since then operations have been maintained steadily and satisfactorily up to capacity, and I refer to it here now merely to mention that the political agitators responsible for it and for sympathetic trouble at the time of the Tinplate Company's strike with labour at the Calcutta installation of Burmah-Shell Oil Storage and Distributing Company and at other companies' installations there, accompanied their campaign with the most scurrilous libels on your company in that type of the Indian Press to which the Government of India had recently to direct its attention and suppress. This curtailment of this sort of licence by people against whom one can have no satisfactory remedy through the Courts was long overdue.

From the special notice accompanying that of this meeting you will have seen that an extraordinary general meeting has been summoned at the registered office for Friday, June 20th, to adopt new articles, in the main to bring them into conformity with the requirements of the new Act. Prints can be seen at the registered office here or at the London office or at the office in Glasgow of Messrs. Miller, Thompson, Henderson and Company, Solicitors, 190 St. Vincent Street.

TRIBUTE TO THE STAFF.

And once again it is my privilege, as I am sure it is also your pleasure, that I should take this opportunity to express the keen appreciation all of us have of the efficient, loyal, and fruitful efforts of your administrative and executive staff here at home and in the East of which the results I have put before you are the reflection. I can assure you that there is a spirit of co-operation and of keen interest and pride in your company actuating these men which forms not the least of your "hidden reserves."

I have now to propose "That the report of the directors and audited statement of accounts, including the balance sheet and profit and loss account to December 31, 1929, now presented to this meeting, be received, approved, and adopted," and I shall call on Mr R. I. Watson, your managing director, to second the motion. After it has been seconded, but before putting it to the meeting, I shall be pleased to reply to any questions which shareholders may care to put.

Mr Watson: I have much pleasure in seconding the motion.

The Chairman: Any questions, ladies and gentlemen? There being none, I have now much pleasure in putting formally to the meeting the motion which I have just proposed, and which Mr Watson has seconded.

The motion was then put to the meeting by the Chairman, who declared it carried unanimously.

DIVIDEND RESOLUTION.

The Chairman: I have now pleasure in moving: "That the dividend on the ordinary shares recommended by the directors at the rate of 20 per cent. (4s. per share), less tax, making, with the interim dividend paid in November last, 30 per cent., less tax, for the year, be adopted, and that same be hereby authorised to be paid on June 13th, and that the balance of £399,774 16s. 11d. be carried forward."

Mr James S. Harvey: I have much pleasure in seconding the motion.

The Chairman: I am quite sure you are all agreeable to that, ladies and gentlemen. (Cheers.) I have now much pleasure in moving: "That Sir Campbell K. Finlay be re-elected a director of the company."

Mr William J. M'Conie: I have much pleasure in seconding.

The Chairman: Are you all agreeable?

The motion was approved.

The Chairman: I have also pleasure in moving: "That Mr D. W. T. Cargill be re-elected a director of the company."

Mr S. Excell: I have much pleasure in seconding that, Mr Chairman.

The resolution was unanimously carried.

The Chairman: Finally, I have to move that Sir David M'Cowan be re-elected a director of the company.

Mr K. J. Brown: I have very much pleasure in seconding the re-election of Sir David M'Cowan.

The Chairman: Are you agreeable, ladies and gentlemen? (Cheers.) I will ask Mr Couper to move the next resolution—the reappointment of the auditor.

Mr J. B. Couper: I beg to propose the reappointment of Mr James Herbert Wilson, C.A., as auditor for the current year.

Mr Forrester Carlow seconded, and the motion was adopted.

The Chairman: That is all the business.

VOTE OF THANKS TO THE CHAIRMAN.

Mr Robert F. Barclay: Mr Chairman, I am sure is the wish of everyone in this room not to go from this meeting without according a very cordial vote of thanks to Sir John Cargill not only for his conduct in the chair to-day but for his never-tiring exertions in the interests of the great company over which he presides. (Hear, hear, and cheers.) Since we last met together a tragic personal sorrow has come to Sir John, and I am sure that I speak the truth when I say that the heartfelt sympathy of every shareholder of the company and of the whole community went forth to Sir John on that occasion. (Hear, hear.)

Notwithstanding the difficulties and anxieties during the year industrial, political, and financial—to which Sir John has referred, he and his co-directors have presented us with a truly magnificent report. I am sure it transcends even the most sanguine expectations of the most sanguine shareholder (hear, hear), and I am sure that his speech to-day has once again convinced us, if we required any convincing, of his wonderful grasp and knowledge of the affairs of the company. (Hear, hear.) We are convinced that under the chairmanship of Sir John Cargill the affairs of the company will be managed, in the future as they have been in the past, with courage, with caution, and with the greatest business sagacity. I ask you to accord Sir John a very hearty vote of thanks. (Cheers.)

CHAIRMAN'S ACKNOWLEDGMENT.

The Chairman: Ladies and gentlemen,—While I greatly appreciate the vote of thanks which has been proposed in such kind and sympathetic terms by Mr Barclay, and so cordially endorsed by you all, I have felt for some time, and as the years go on, that this vote of thanks ought to take a more comprehensive basis and that it should certainly include Mr Watson and Mr Whigham, who, as I said last year, are a combination for managing director and assistant managing director which, I personally think, it would be impossible to beat (cheers), and should also include your staffs, both at home and in the East, for it is to the untiring efforts and the outstanding ability of these two gentlemen and to the loyalty, enthusiasm, and efficiency of your whole staff that the wonderful progress of this company, and the splendid position it stands in to-day, are so largely due. While personally I naturally feel very great pride in the record and the position of this company, what I feel a much greater pride and satisfaction in is the loyalty—I think I might even go a step further and say the affection—in which I have been held by practically everyone with whom I have worked and who have worked under me during the twenty-six years I have been chairman of this great company. (Hear, hear, and cheers.)

STRONGEST BALANCE SHEET IN COMPANY'S HISTORY.

I do not think it is necessary for me to say to you that of all the very fine balance sheets I have put before you at these meetings the one I have put before you to-day is by a long way the strongest. I think that must be patent to all of you and to all of those who have followed the course of the operations and the accounts of this company. (Cheers.) In anything approaching normal times I would have spoken to you to-day of the future of your company with the greatest of confidence; in fact, for once in a way I think I might even have gone the length of being optimistic. (Laughter and hear, hear.) But in these trying and uncertain times, which are world-wide, he would be a very bold man who would prophesy what the position of almost anything will be twelve months hence, and I will just content myself with saying that never in the history of your company has it been in a stronger position than it is to-day to face up to trying times if by any possibility these should come along. And, as I have already said, short of something in the nature of a world-wide upheaval of trade and of the petroleum industry, I feel confident that a year hence we will be able to lay before you another satisfactory report and a very satisfactory statement of accounts. (Cheers.) I thank you again for the very kind vote of thanks you have given me, for your sympathetic reception, for your attentive hearing, and I hope sincerely that we will meet again under equally auspicious circumstances. (Loud cheers.)

The meeting then terminated.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address .....

.....

ALEXANDERS DISCOUNT COMPANY, LIMITED.

INCREASE OF CAPITAL APPROVED.

MR C. F. CAMPBELL ON THE REQUIREMENTS.

An extraordinary general meeting of shareholders of Alexanders Discount Company, Ltd., was held, on the 11th instant, at the offices of the company, 24 Lombard Street, London, E.C., Mr Colin Frederick Campbell (the chairman of the company) presiding.

The Secretary (Mr A. K. Bruce) read the notice convening the meeting.

The Chairman said: I do not propose to take up your time to-day discussing the ordinary business of the company or the general financial situation, beyond saying that we have done reasonably well since we met you five months ago, and we have, therefore, no reason to be in any way discouraged with this year, as far as it has gone.

OBJECT OF THE MEETING.

The object of the meeting to-day is to obtain your approval to an increase in the authorised capital of the company from £1,500,000, to £1,800,000, and also to calling up 225,000 ordinary shares of £2 each, on which £1 will be paid.

The effect of this will be that the authorised and subscribed capital will both be £1,800,000, composed of £200,000 in 100,000, preference shares of £2 each, fully paid, and £1,600,000 in 800,000 ordinary shares of £2 each paid up as to £1, thus making the paid-up capital altogether £1,000,000.

I would also point out here that the reserved liability of £1 per share on the ordinary shares can only be called up in the event of the company being wound up.

The price fixed by the directors is £2 15s. per share, or, in other words, a premium of 35s. per share. It would have been possible in our opinion, to have made the price higher without much difficulty but we came to the conclusion that this issue afforded an opportunity of allowing the ordinary shareholders to participate in the prosperity of the company, and so we propose this bonus to you, which is no doubt acceptable.

The premium of 35s. a share is a substantial one in itself, and when the amount is added to the existing published reserve we arrive at a total of £968,750, or only £31,250 less than the paid-up capital. I need hardly say that it will be the object of the directors and the management to raise the reserve fund to a million as soon as possible.

REASONS FOR THE ISSUE.

The question may arise in the minds of some of the shareholders why we require this large increase in capital and reserve, as it is not so very many years since we worked with about a quarter of this sum. There are several answers that I can give you.

The first is that we have to look on this company to-day from a totally different point of view to that of even ten or twelve years ago. In those days it was, to a great extent, a family business, whereas now it is a great public company, with nearly 500 shareholders. As such, we have to look to a steady development of the business, requiring increased resources from time to time, so that it is the duty of your directors to look well ahead and to provide the funds required for such natural development.

Then, secondly, I would ask you to bear in mind, without wishing to speak in any boastful spirit, that the company has won its way into the front rank of those operating in the discount market. From this point of view, therefore, it behoves us not only to maintain, but to increase our strength as opportunity offers, and we think the present time to be one of those opportunities.

The last reason, which is, perhaps, the simplest and most practical, is that we think we can turn the further capital to good account. (Hear, hear.)

An increase of capital is, of course, an additional responsibility thrown both on the management and on the board, but, nevertheless, we bring these proposals to you with all confidence that they are in the best interests of the shareholders.

The resolutions were carried unanimously.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, *6 Bouverie Street, Fleet Street, London, E.C.4.*

JOHN BROWN AND COMPANY, LIMITED.

THE CAPITAL REORGANISATION SCHEME.

The ordinary general meeting of John Brown and Company, Ltd., was held, on the 6th instant, at the Central Hall, Westminster, London, S.W.

The Rt. Hon. Lord Aberconway (chairman of the company) said that the changes which had come over the three great trades in which they were interested, viz., shipbuilding, heavy steel and engineering, and coal, had made it necessary in the interests of the holders of the various classes of the company's stock to revise the financial position of the company. All the other great armament firms had already done that on a most drastic scale, and several of the largest steel and colliery concerns had followed a similar course.

Great sums had been spent by the armament firms during the war on plant for Government requirements which was now not likely to be of use, and, owing to the incidence of Excess Profits Duty, most of those firms, including this company, had been unable adequately to write down their capital expenditure out of the revenue then earned.

EARNING CAPACITY.

With regard to the earning capacity of the company, the Washington Agreement of 1922 had suspended all capital shipbuilding for nine years with three exceptions, and the situation had been accentuated by the London Naval Conference just concluded. Again, there had been a great reduction in the number of passenger vessels ordered in this country by foreign owners, and the number of high-class passenger vessels built for British owners had also decreased. The consequences of all that had been felt at their steel works in Sheffield. They had succeeded in the competition for the construction of an express steamer for the Atlantic service of the Cunard Line, which would ensure continuity of work at Clydebank for some years. This work is following upon the "Empress of Britain" for the Canadian Pacific Steamships, which is the biggest vessel now building in the country. His Royal Highness the Prince of Wales will honour Clydebank by another visit on Wednesday next to launch this great ship, and we can be proud of the fact that Clydebank still retains its position in the forefront of the British shipbuilding industry.

We are the owners of 850,000 shares out of the 1,000,000 issued ordinary shares of Thos. Firth and Sons, Ltd., that highly successful, well-managed and profitable company, engaged largely in the lighter steel trades of Sheffield, and negotiations are now proceeding for a merger or closer co-operation of part of the plants and businesses of these two companies, which is intended to have the effect of large savings in cost and of adding greatly to the value of the shares of John Brown and Company, Ltd., and also to the security of the debenture-holders.

The report and accounts were unanimously adopted.

DEBENTURE-HOLDERS' MEETINGS.

Separate meetings of the holders and first and second mortgage debentures and of preference and ordinary shares followed to consider the proposed scheme for the reorganisation of the capital.

Addressing the debenture-holders, the Rt. Hon. Sir Edwin Cornwall, Bart., the chairman appointed by the Court, after explaining the scheme as it affected the debenture-holders, said that the principal bankers of the company were willing, if the scheme of arrangements became effective, to continue and extend financial facilities to the company on terms which the directors considered reasonable.

The company had a fine record to look back upon. It had never made a loss. It had one of the best-equipped and finest shipyards in the country at Clydebank and very large interests in collieries, which were improving. It had also a large majority of ordinary shares of Thos. Firth and Sons, Ltd., the highly successful company engaged largely in the lighter steel trades of Sheffield.

SHAREHOLDERS' APPROVAL.

After discussion it was agreed at each meeting that it should be adjourned until June 20th to enable the company's advisers to confer with representatives of the debenture-holders.

Lord Aberconway, presiding at the meetings of the preference and ordinary shareholders called to consider the scheme, said that the causes which had led up to the present proposals were set out in his circular. The company was one of the last of the great armament and shipbuilding companies to reorganise its capital structure with a view to the rationalisation of its business. They regretted that it had been found necessary to call up the 5s. per share on their partly-paid ordinary capital. The working capital thus obtained would not only benefit the company, but would, they believed, make the shares, when fully paid, more marketable than they were with the uncalled liability.

At each meeting of shareholders a card vote was taken, and in each case the chairman announced that the resolution had been carried by an overwhelming majority, and that the result would be reported to the Court in due course.

J. AND P. COATS, LIMITED.

CHAIRMAN'S REVIEW OF A DIFFICULT YEAR.

The fortieth annual ordinary general meeting of J. and P. Coats, Limited, was held, on the 12th instant, in Glasgow.

There was a large attendance of shareholders.

Mr. J. O. M. Clark (the Chairman), presided.

The Chairman then said:—

Before I deal with the general situation of the company I would like to make a few observations about the balance sheet, which is drawn up this year in a slightly different form from what has hitherto been customary to comply with the requirements of the Companies Act.

THE BALANCE SHEET.

The total of the balance sheet is 34½ million as against 32½ million last year. You will see on the assets side a figure of £23,496,678 and on the liabilities side £2,223,839. In former balance sheets this has been shown as a net figure and, of course, the new way of expressing it causes the total figure to be increased.

The £23,496,678 is made up, as you will see, of shares in subsidiary companies, loans, current accounts, and general investments. Formerly we split this differently, showing the amounts invested in holdings of subsidiary companies separately from the amounts advanced for stock and working expenses.

Turning again to the assets side, the first item represents buildings and machinery at our Ferguslie Works, Paisley, less depreciation, and the second goodwill, less amounts written off in the books of J. and P. Coats, Ltd.

ADVERSE FACTORS DURING PAST YEAR.

I cannot pretend that the results for the past year are anything but disappointing. This is particularly the case when I recall the fact that at our annual meeting this time last year I informed you that there were signs of improved trade in many directions.

I will endeavour to outline the principal causes which have contributed to this unsatisfactory result.

Within two months of our annual meeting an almost complete stoppage of the textile trade took place in Lancashire, whence we draw a large proportion of our supplies of yarn. The dispute lasted for about three weeks, leaving behind it effects which must still be felt in that area.

Following a period of unsettled financial conditions in this country brought about by the Hatry disclosures, there occurred in October the slump on the New York Stock Exchange, the story of which is pretty generally known, and so far as our American Companies' business was concerned, it had the effect of causing a sharp decline in our sales during the concluding months of the year.

Led by the President, the leaders of American finance and business made a strong effort to persuade the public that the losses arising from the Stock Market crash were not such as to affect the basis of the prosperity of the country, that the position of business was fundamentally good and that all that was necessary was to be optimistic and "keep it good." This experiment in mass psychology was undoubtedly successful to a considerable extent, but whether it was advantageous in the long run appears doubtful, as it tended to blind a large part of the people of the United States to the realities of the situation.

Among other set-backs which occurred during the later months of the year, but which were of a more restricted nature, I might mention the weakness in the Brazilian exchange and the disturbed conditions in China.

PROBLEM OF STIMULATING DEMAND.

Sewing cotton is one of the articles of general use in which it is perhaps most difficult to stimulate an increased demand when the normal requirements of a market have been satisfied. In making this remark I leave out of account, of course, the simple expedient of reducing prices and so taking away trade from your competitors. This is an expedient which can only be profitably used within certain well-defined limits. This difficulty of stimulating the demand for thread is probably due to the fact that it can only be used in conjunction with other materials which cost very much more than the thread itself. It has been calculated that to make up £100 worth of goods about £1 of sewing cotton is required. The figures will naturally vary very much with the value of the material used, but this ratio 100 to 1 is approximately how it works out on an average. In a suit of men's clothes costing £2 10s. the value of the thread required to make it up varies from 1¾d. to 2½d., according to the quality used. Assuming that the thread was given to the tailor for nothing, the actual saving to him would be unlikely to result in his selling a larger number of suits of clothes.

RUSSIA.

With regard to Russia there has been no change in the situation so far as we are concerned, since I addressed you last year. Diplomatic relations have been resumed; a temporary commercial agreement has been signed and the export credit scheme is being made applicable to exports intended for Russia.

Our connections with that country date back over half a century, while our thread was to be found in practically all households in European and Asiatic Russia. The interests of this company in pre-war days were twofold. We were large shareholders, as you know, in several mills in St. Petersburg, or, as it is now called, Leningrad, from which approximately three-fourths of the Russian market's thread requirements were supplied. We had, in addition to this, a considerable export trade from this country, employing about 800 workers in our Paisley mills.

The present position is that the mills in Russia have been confiscated, or perhaps I should say nationalised, and are being worked by the Soviet. In addition to supplying the Russian market they are being used to export thread to various foreign countries. The methods of sale and the prices asked indicate that in certain cases these exports are being deliberately made at a loss in order to obtain supplies of foreign currencies. You will thus see that we have meantime lost not only all our interest in the mills in Russia, but the trade which we formerly did from this country and which, under present circumstances, it is impossible to resume. On the other hand, there is nothing to prevent the Russians from exporting their thread to any other country.

You will appreciate that as actual manufacturers in Russia our interests in a settlement differ from the interests of those firms who come into the category of traders, many of whom had no pre-war connection with Russia but hope by means of a general settlement to open up new business there.

FIRM ATTITUDE NEEDED IN REGARD TO CLAIMS.

It has been stated in the press recently that negotiations with the Soviet representatives in regard to the matter of claims and counter-claims are to be opened up. I would like to take this opportunity of expressing the hope that not only we but other British claimants will receive fair treatment, and that the firm attitude in financial dealings with foreign powers hitherto adopted by our present Government may be maintained; an attitude which is most welcome in comparison with that of previous Governments since the war, whose standpoint so frequently seems to have been that it is the duty of Great Britain always to give and never to receive.

THE OUTLOOK.

To sum up the position as it is to-day, I must frankly tell you that the general trade outlook for the near future is not promising. The principal reason for this unsatisfactory outlook is, of course, the substantial fall in the prices of almost every raw material throughout the world and the many repercussions arising from this downward movement in values. The processes of adjustment and stabilisation will, even under favourable conditions, take some years to complete themselves, and during this period we cannot expect any startling improvements in the general trade outlook.

Nothing is to be gained by refusing to face the facts, and it has to be admitted that so far as our own mills in this country are concerned we are not in as good a position to-day to face foreign competition as we used to be owing to high costs from one cause and another. On the other hand, our position abroad is stronger than it has ever been. As more than 80 per cent. of our trade is a foreign trade, the position of the company as a whole is undoubtedly strong, and however depressed things may be at the moment we can look forward with confidence to being able when the tide turns, as undoubtedly it some day will, to take full advantage of the opportunities that will be offered.

COST OF PRODUCTION AT HOME AND ON CONTINENT.

I have had a comparison made of the costs, exclusive of raw material, at which we are able to produce at the mills of one of our associated companies on the Continent where the same or similar machinery to that used here is installed, running that machinery at approximately the same speeds, and producing a quality well up to our home standard, and it shows that what costs us 100 pence to manufacture in Paisley can be produced at 53 pence at the foreign mill in question.

I now beg to move that the report and accounts for the year ended December 31, 1929, as submitted to this meeting, be and are hereby adopted, and that the payment of dividends and of a bonus of sixpence per share, less income tax, on the ordinary shares, all as stated therein, be and are hereby confirmed.

The Marquis of Linlithgow seconded the adoption of the report and accounts, which was carried unanimously, and a vote of thanks to the Chairman for presiding terminated the proceedings.

VENEZUELAN OIL CONCESSIONS, LIMITED.

THE PROBLEM OF OVER-PRODUCTION.

The annual general meeting of the Venezuelan Oil Concessions, Ltd., was held, on the 12th instant, at Winchester House, Old Board Street, London.

Mr Andrew Agnew, C.B.E., who presided, said that the proceeds of oil and value of oil stocks was £4,885,597. That was an increase of £443,246 over the corresponding figure for 1928. While the net production had increased from 5,084,580 tons in 1928 to 6,469,206 tons in 1929, the average price per ton received for their production had been 15s. 1d. per ton, as against 17s. 6d. per ton in 1928. The balance of profit brought forward from 1928 was £190,005, to which the profit for the year 1929 had been added, £1,085,665, making a balance at the credit of profit and loss account of £1,275,671. They recommended payment of a dividend of 20 per cent. less income tax at 4s. 6d. in the £ on both classes of shares.

Their profits for 1929 were less than those for 1928, despite the fact that in 1929 they had produced and delivered about 30 per cent. more oil than in 1928. That was almost entirely due to the bad prices which maintained throughout last year for oil of the grade which they produced. As shareholders knew, a very large percentage of the content of their oil was fuel, and the average price which maintained in the important markets of the world was lower in 1929 than in any year since 1922.

There had been a small reduction in the cost per barrel of oil produced and delivered as against 1928 costs, and the improvement in production cost would have been somewhat greater but for the fact that drilling was being diverted gradually from the shore towards the interior, which was necessarily attended by increased expenditure upon items such as construction of additional roads, longer pipe-lines, &c.

THE PRESENT YEAR.

As regarded the present year, the crude oil production up to May 31st was approximately 2,515,900 metric tons. That was equivalent to a rate of a little over 6,000,000 metric tons per annum. He anticipated that the total production for the year would amount to somewhat less than that figure. The lesser production was in line with what the chairman had told them the last time they met that in consequence of their belief in the need for the restriction of production all over the world, and their determination to do their share in bringing about the desired results, the drilling programme was being considerably reduced. At the present time their drilling programme consisted of only 9 strings.

The restriction of drilling activity had been accompanied by very considerable reduction of expenditure in all directions, the benefits of which were already being realised. It had further been found possible to postpone a large part of the reclamation scheme at Lagunillas which had been described in their report last year. In the La Rosa-Cabimas-Ambrosio area recent drilling results had been disappointing. At Lagunillas, on the other hand, more encouraging results had been obtained by the stepping-out wells which had been drilled towards the interior.

LA PAZ AND CONCEPCION.

He felt sure it had been a source of satisfaction to the shareholders that altered conditions had enabled them to reopen the La Paz and Concepcion fields in the Maracaibo district at the end of last year, as had been mentioned in the report. While those fields were closed in they had valuable assets lying idle, and depreciation of the buildings and equipment was continuing at very much the same rate as if they had been in active use. With the exception of the older La Paz wells, which were only capable of producing by pumping, all the productive wells in the La Paz and Concepcion fields were now in regular operation. Their production since reopening had been fully up to expectations. Drilling had been resumed with one string in each field at the beginning of the present year, and the programme had recently been increased by the addition of a second rotary string at Concepcion. A further satisfactory feature of the Maracaibo district development was that the oil now being obtained commanded substantially higher prices than any crude obtainable from the Bolivar district.

In connection with the probable trend of development towards the interior of the Bolivar district, they had commenced the drilling of a well on a structure known as the Curaçao anticline situated about 15 kms. due east of La Rosa.

POSSIBILITIES FOR 1930.

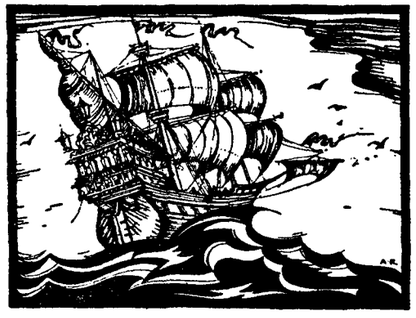
He was sure the shareholders would want some indication from him as to the possibilities of the year 1930, but he was equally sure that they all knew that it was not their policy to prophesy without having very reliable information upon which to base any prophecy Their prospects were so closely bound up with the future trend of world prices of oil products that it was quite impossible for him to make anything other than a very general estimate. All he could say was that a measure of co-operation which did not formerly exist between the large companies had attended the more recent efforts to place the petroleum industry as a whole on a sounder footing.

The problem of over-production augmented by the enormous accumulated stocks had been carefully studied during the last few months with full recognition that the position was injurious to the entire industry—to both large and small companies—and prejudicial to the future supplies of the world. Definite progress had been made towards solution of the problem, and he had some hope that ultimately the many and difficult features facing curtailment of wasteful production throughout the world might be solved.

As regarded their own particular problems, he had already referred to increased expenditure which was being necessitated by their new wells being situated further from the shore, and they had deemed it necessary to increase their rates of amortisation, particularly on casing. A careful study of the decline curves of the production from the wells in the Bolivar district of Venezuela had made it apparent that their method of amortising the casing in those wells at the rate of 10 per cent. was inadequate. In the 1929 accounts they had corrected that, and they were hoping that the new rate of 15 per cent. would prove to be sufficient. They would realise that that meant a further addition to their production expenses. It also meant that they must maintain an adequate drilling programme to provide against the regular decline of producing wells. Happily the geological indications on their territory led them to expect that they had sufficient drilling ground for a good many years, and whilst he considered that that information should be placed before the shareholders, he did so with the assurance that, so far as one could humanly see, they could maintain their production, and that, by careful management and strict economy, they hoped to keep the cost of production within reasonable bounds.

Sir John N. Barran, Bt., referring to the visit he paid to the company's oilfields last autumn, said that he found in Venezuela a highly organised machine for the handling of their important interests in all their varied aspects—political, financial and technical; a fine *esprit de corps* pervading the company's staff and workers; and a property, so far as one might presume to judge on a first visit, whose limits of profitable development were not yet in sight and might well not be for many years to come.

The report was unanimously adopted.



ENTERPRISE!

¶ The intrepid enterprise of Columbus over four centuries ago opened up all the possibilities of an undeveloped Continent.

¶ Since then, the enterprise of succeeding generations has resulted in phenomenal development of the vast resources of the New World.

¶ To-day a great and growing volume of overseas trade is transacted annually by the Latin American Republics, and complete facilities for every description of modern banking business are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST. LONDON, EC2

CALCUTTA TRAMWAYS COMPANY, LIMITED.

EFFECTS OF EXCESSIVE MOTOR BUS COMPETITION.

The ordinary general meeting of the Calcutta Tramways Company, Ltd., was held, on the 11th instant, at 1, Queen Victoria Street, London, E.C. Mr John G. B. Stone, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the tramway receipts showed a reduction of £5,030, due to general trade depression, intensified omnibus competition, the non-recurrence of exceptional Congress traffic in the latter part of 1928, coupled with the loss of one extra day's receipts due to Leap Year, and continual labour troubles in the jute mills. The expenditure decreased by £1,845. Their omnibus receipts showed a decrease of £3,404, due generally to the same causes, the expenditure was less by £4,137, and, after charging depreciation, the loss was £28,171, compared with £28,904.

The final result was that, after providing the first and second debenture interest, second debenture sinking fund, preference dividend, and ordinary interim dividend, £49,834 was available. It was proposed to contribute £7,383 to the staff provident fund, to pay a final dividend of 10d. per share, tax free (making 1s. 2½d. tax free, for the year), and to carry forward £13,284.

Speaking of the omnibus position, the Chairman said that in 1926 there were some 400 motor omnibuses owned by nearly as many individuals on the streets of Calcutta. The intense competition had rendered most concerns unremunerative. This company had made tentative proposals to the corporation which would have meant some move towards co-ordination, but they had met with no response. The suggestion that tramway systems were obsolete and should be replaced by omnibuses had been assiduously fostered, but it seemed evident that if such substitution was made the poorer classes would have to pay more for their travel, and ratepayers generally would have to bear increased charges for the maintenance of their roads.

In Calcutta only a small proportion of the people could afford to ride at all, and for them the cheapest form of transport was essential. They endeavoured in their tramway system to provide that, and they carried about one quarter of a million passengers daily.

For fifty years the company had not failed, nor would they fail, to meet the requirements of the public.

The report and accounts were unanimously adopted.

SIAMESE TIN SYNDICATE, LIMITED.

LARGER OUTPUT AND PROFIT.

The twenty-third ordinary general meeting of the Siamese Tin Syndicate, Ltd., was held, on the 11th instant, at Winchester House, London.

Mr William H. P. Stevens (the chairman) said that the past year's mining operations resulted in a total revenue from ore sales amounting to £235,729, an increase of £55,327 compared with the previous year, the total output, 1,661.44 tons, having shown an increase of some 511 tons. The net average price per ton received, before deduction of Government duty, was £141 17s. 8d., against £156 17s. in 1928. The net profit amounted to £51,812, compared with £27,013 in the previous year. Three interim dividends of 10 per cent. each were paid during 1929, and £5,367 was being carried forward.

They had been offered an option covering some 9,000,000 cubic yards of tin-bearing ground in close proximity to that part of their Ngow Estate, which was being worked by their No. 1 dredge. If, on check boring the area in question, satisfactory results were obtained and the option was exercised, this would mean a very substantial extension to the life of the Ngow Estate, as there would probably be an additional ten years' work for No. 1 dredge.

The production from the five dredges of the company of a total of 1,661 tons in 1929 was a very good indication of the value of the company's properties; and, if the average price of tin had been anywhere near that obtained over the previous five years, the profit on the company's small capital would have been very large indeed. The price of tin at the moment was, from the point of view of the producer, anything but satisfactory.

The directors had thought it undesirable for the company to become a member of the Tin Producers' Association, considering it preferable in all the circumstances to maintain an entirely independent position.

Although the clouds looked dark at the present time, in the long run the silver lining was pretty sure to be revealed, and, even in the conditions which had so far prevailed this year, the profit earned was sufficient to justify the directors in determining, as they had done that morning, to declare an interim dividend of 10 per cent. in respect of the current year's working.

The report was unanimously adopted.

BANGRIN TIN DREDGING COMPANY, LIMITED.

INCREASED REVENUE—IMPROVEMENT OF PLANT.

The tenth ordinary general meeting of the Bangrin Tin Dredging Company, Ltd., was held, on the 11th instant, at Winchester House, London.

Mr William H. P. Stevens (the chairman) said that the total revenue from mining operations during the past year amounted to £98,154, compared with £77,596 in the previous year. The output of 698.93 tons of ore—compared with 498.36 tons in 1928—was obtained from the operation of their three dredges, but No. 3 dredge on the Bangrin Extended property only commenced operations during July. The average price obtained for ore sold in the East had been £140 8s. 9d. per ton, compared with £155 14s. 1d. in the previous year. The balance of profit, including the amount brought forward, was £21,920, and the directors recommended that £5,000 be added to the reserve, increasing it to £10,000, and that £16,920 be carried forward. He regretted that they were unable to recommend a dividend, but shareholders would appreciate that, in the difficult times through which the industry was passing, it was undesirable that the cash resources of the company should be dissipated.

In viewing the operations of the year, it should be borne in mind that they had been working with a plant which was mainly new and incomplete, and that one unit was not even brought into operation till more than half the year had gone. The conversion of No. 1 dredge from steam to electric power was satisfactorily completed early in the present year, and they heard by cable last week that the elimination of the jigs, and the installation, in their place, of tables on No. 2 dredge, had also been completed.

In the opinion of the board, the present condition of the plant left nothing to be desired. They knew the tin contents of the ground to be satisfactory, and the only "fly in the ointment" was the present price of tin, which was, from the point of view of the producer, anything but satisfactory. The steps which had up to the present been taken to restrict output did not appear to have had the desired effect; but when general trade conditions throughout the world revived, there was bound to come an increasing demand for tin, and an enhancement of prices was bound to follow.

The report was unanimously adopted.

NIRMALA (JAVA) PLANTATIONS AND LANDS COMPANY, LIMITED.

LARGER GROSS PROFIT.

The annual ordinary general meeting of the Nirmala (Java) Plantations and Lands Company, Ltd., was held, on the 12th instant, at 5, Fenchurch Street, London.

Mr Walter Hilliers, the chairman, said the gross profit was £5,700 higher than in the previous year, and after payment of debenture interest and preference dividend it was proposed to pay 2½ per cent. on the ordinary shares, to transfer £250 to staff furlough fund, and to carry forward £1,806.

The tea crop was not satisfactory, owing to the effects of blight on the Nirmala Division. It was the more regrettable, as this division produced really high quality tea, for which they had the benefit of a satisfactory forward contract for both the current year and next year. A large part of the division had responded well to intensive cultivation, and there was reason to hope that the effects of any future attacks would be largely minimised, though the full benefit of what was being done was likely to take some little longer time to materialise. The Nirmala Division consisted mainly of very fine gardens and under normal conditions should be a valuable tea estate.

One of the important matters to which he had to give thought when in Java last year was the building of the road connecting Nirmala with the main road. The division had been greatly hampered through its isolation, and various solutions of the matter were considered, but owing to the line the road would have to take there were difficulties which only recently could be settled. The work had made a good start, but would have to proceed gradually.

Turning to rubber, they owned the rubber area on Nanggoeng as well as the estates of Kahoeripan in Java and Tebat, Goenoeng in Sumatra. The two first were in full tapping and were in first-rate condition in regard to upkeep. Costs of production were most reasonable.

Tebat Goenoeng estate would not be ready for full tapping until towards the middle of next year, but it already produced a fair quantity of rubber and the results promised well. It would, no doubt, be a cheap producer.

The negotiations in connection with expropriation had been terminated, and they could do no more now than wait until the Government survey was finished, doing whatever was in their power to accelerate its progress.

The report and accounts were unanimously adopted.

THE TROWBRIDGE TYRE AND RUBBER COMPANY (1929), LIMITED.

COMPLETION OF THE NEW FACTORY.

INCREASED EFFICIENCY AND OUTPUT.

The first annual general meeting of the shareholders of the Trowbridge Tyre and Rubber Company (1929), Ltd., was held, on the 12th instant, at the offices of the Rubber Growers' Association, 2 Idol Lane, London, E.C.

Mr Lionel Caswell (the chairman and managing director) said :—Gentlemen,—In some quarters I have no doubt that disappointment has been felt with the result as shown in the accounts, but I shall be able to prove that the result obtained, having regard to the many difficulties with which your directors have been faced, is not nearly so disparaging as would appear.

In the first place, it was anticipated that we should have our works at Trowbridge in full working order by the end of June last year, but as the work proceeded it was found that the contractors we had engaged to install the necessary new plant and machinery had been too optimistic in their forecast.

Each piece of machinery took longer to get into position than the experts had estimated; consequently a delay of approximately seven months took place before the factory was fully equipped and ready to manufacture the whole of our output. It was imperative that the manufacture of solid tyres should be continued; the dual working had interfered to some small degree with the manufacture of solid tyres, which had naturally reflected in the manufactured article, thus causing some loss to your company.

LOSS THROUGH FACTORY DELAY.

The delay referred to has naturally had a curtailing effect on the profit for the year we are reviewing, as for practically the whole of this time we were compelled to have our Giant and Car pneumatic tyres manufactured in another factory—which was much more costly than if we were manufacturing them in our own works. I estimate that this delay showed a loss of at least £10,000 to your company—to say nothing of being in the regrettable position of being unable to quote for several large contracts for which we were invited to tender.

Another matter to which I would call your attention is the condition of the rubber market, and in this respect would draw attention to the qualifications which our auditors saw fit to include in their report. You are all aware raw rubber has steadily declined in price since March of last year, when it stood at approximately 1s. per lb. In this business, where we hold various contracts covering a period of from one to two years, you will realise that it is vital we buy our rubber requirements well ahead, especially when the price of the commodity is abnormally low—being as it has for the last year round about the cost of production.

In this respect the market has been against us, and we have a stock of raw rubber which is in excess of market price. This is not a serious position, in so far that we are covered with our tyre contracts at rates which will show us a good profit—taking our rubber on the basis of cost.

With the present abnormally low price of rubber, it is just possible that 12 months hence we might be in the position of being able to congratulate ourselves on our rubber commitments.

THE FORWARD COMMITMENTS.

Our "forward" rubber commitments are well covered for our mileage contracts, which are protected as regards cost of manufacture during the current year. Contracts for raw rubber entered into this year are more advantageous than those of the past year, and, with the benefit of reduced costs, brought about through the whole of our manufacture being now under one roof, places us in a better position for the present year.

The smaller profits are mainly due to the fact that we were forced to have our pneumatic tyres made for us for a much longer period than we had budgeted for. To an extent the collapse of the rubber market, together with the reduced selling prices have also been contributory causes.

Continuing, the chairman said that all the contracts held at the incorporation of the company had been retained, and other very important accounts opened. In addition to being sole contractors to Thomas Tilling, Ltd., Eastbourne Corporation, Hants and Dorset Motor Services, Bournemouth, and United Dairies, they were also large suppliers to such concerns as Pickfords, L.M.S. Railway, Watney, Combe and Reid, G.W.R., Eastern Counties Road Car Company, and the Anglo-American Oil Company. They also held a contract for twelve months to supply the L.G.O.C. with "Rubber Buffers," or assistant bearing springs, as standard equipment.

The report was adopted.

ELECTRIC SUPPLY CORPORATION, LIMITED.

EXPANSION OF BUSINESS.

The twenty-eighth annual general meeting of the Electric Supply Corporation, Ltd., was held, on the 12th instant, at Winchester House, London, E.C.

Mr John G. B. Stone (the chairman) said that in the report was set forth the various undertakings in which the company held the electricity orders or in other companies in which they were shareholders. The number of the undertakings in their own hands was reduced this year by the exclusion of Jedburgh, Dollar and Exmouth. The list of company undertakings was the same as last year, with the exception of Wellington, with which they had parted. The lamp connections of their own undertakings showed an increase of 28,504, which was a normal figure.

As to the other company undertakings, Hendon showed a steady increase; Steyning figures for 1928 had been omitted, as before their acquisition of the company the records had been kept differently; Haywards Heath could not extend rapidly until they had the bulk supply from the Central Electricity Board; Petersfield, which had changed over to bulk supply in the latter part of the year, showed a gratifying increase; Alton was also progressing with an increase of nearly 50 per cent.; Newhaven and Seaford was developing rapidly; and Peterhead, which operated only during the latter part of the year, had made a good beginning.

Comparing the results with those of 1928, in 1928 on their own undertakings revenue had exceeded working costs by £40,316. For 1929 the figure was £35,119. In 1928 the interest on investments had amounted to £15,151, whereas in 1929 it was £21,028. Finally they carried to the balance sheet £43,289, against £38,902 in 1928. He thought they might congratulate themselves on those figures. They recommended a transfer of £5,373 to the repairs, renewals and depreciation fund, bringing it up to £75,000. They recommended also the distribution of a final dividend of 7 per cent. on the ordinary shares, which was the same as last year, and they proposed to carry forward £20,415, compared with £17,012 brought in in 1928.

They endeavoured to let their consumers benefit by the expansion of the company's business by reducing their prices wherever practicable. They could not exactly forecast the immedate effect of such reductions; consequently it was necessary to carry forward a substantial amount.

The report and accounts were unanimously adopted.

MALACCA RUBBER PLANTATIONS, LIMITED.

FAVOURABLE FORWARD SALES.

The twenty-fourth annual general meeting of the Malacca Rubber Plantations, Ltd., was held, on the 11th instant, at the offices of the Rubber Growers' Association, 2-4 Idol Lane, London, E.C.

Mr Charles Emerson (chairman of the company), in the course of his speech, said: The conditions under which we meet are depressing. The only consolatory observation I can offer is that it appears to me that rubber is more likely to come into its own again at a comparatively early date than many other commodities.

Our crop for the year amounted to 6,419,547 lb. of rubber, as against 4,988,910 lb. for 1928, and it is pleasant to be able to state that the cost at which it was produced is once again the lowest we have ever been able to record. For the current year our estimated outturn was 6,484,000 lb., but this must now be taken as subject to the May abstention from tapping. Our profit works out at £54,018 3s. 8d., as contrasted with the £53,766 9s. 1d. which we recorded for the previous year, which is, in itself, looking at the conditions which have been prevailing, eminently satisfactory.

I now come to the question of the oil palms. We have now concluded negotiations having for their object the unification of the interests of the three companies concerned, namely, Linggi Plantations, Ltd., United Sua Betong Rubber Estates, Ltd., and this company. The arrangement which has been come to is, shortly, as follows: We transfer our lands and the palms which we have planted on them to a new company registered with an authorised capital of £600,000, and in exchange we receive fully-paid shares of the value of £1 each for all the expenditure we have incurred up to December 31, 1929, with a cash payment for the comparatively small sum which we have expended since that date. It is the intention to extend the present area of 5,967 acres, 4,988 acres of which have been planted up by Linggi Plantations, and approximately 979 acres by your company, to 8,300 acres during the next few years, and further extensions will very possibly be put in hand thereafter.

Once again I am in a position to give you favourable information with regard to the important matter of forward sales, and you will see from the report that of our 1930 crop 800,800 lb. have been sold forward at 11·21d. per pound landed London terms.

The report and accounts were unanimously adopted, and a resolution was passed approving the agreement come to with reference to the unification of the oil palm interests.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 7, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	8,250	From Revenue	9,991
Interest, &c., on Debt	47,785	Increase in Debt	46,457
Sinking Fund	620	Decrease in Balances	400
Sundries	193		
	56,848		56,848

The ordinary revenue for the week amounted to £9,991,000, as compared with £8,748,300 in the corresponding week last year. Income tax and surtax were higher at £992,000 and £440,000, against £82,000 and £420,000 respectively. Estate duties were lower at £780,000, against £1,220,000 last year. Customs brought in £2,154,000, against £2,094,000, and Excise £904,000 against £812,000. *The National Debt was increased by £46,250,000,* as shown below :—

(000's omitted.)

	Total	1,000,014		Total	332,156

Net arrivals, £667,858

Messrs Samuel Montagu and Co. write on June 11, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £155,988,589 on the 4th instant (as compared with £157,185,525 on the previous Wednesday), and represents an increase of £10,028,505 since January 1st last. An interesting position has arisen in the London gold market owing to the fact that the Bank of England is now giving out bars of standard fineness (about 9166/10000) instead of fine bars (ranging from 9950/10000 upwards) which buyers had been accustomed to receive from that institution. Under the Gold Standard Act of 1925 the Bank of England is entitled to sell bars of any fineness provided not lower than the standard of sovereigns (916⅔-1000). For many months past the Bank's stock of fine gold bars has been heavily depleted by withdrawals for the Continent, whilst the bulk of its receipts has been in the form of sovereigns, as will be seen by the following figures:—

From June 1, 1929, to May 31, 1930.

Bar Gold. Received.	Withdrawn.	Sovereigns. Received from abroad.	Withdrawn for export.
£18,334,000	£63,615,000	£39,651,000	£452,000

It is therefore only natural that the Bank should decide to exercise its legal right of selling bar gold of standard fineness only. As the Bank of France does not accept bars of a lower fineness than 9950, a consequence of this change of practice is to lower the Gold Export point to France by the cost of refining the standard gold, and accordingly the rate fell rapidly yesterday from about 123·88 to 123·70 when the Bank's decision became known. It will be readily understood that there was unusually keen demand for the £476,000 of bar gold from South Africa in the open market to-day, as this was the only fine gold available for France. All but £30,000, which was required for India and the trade, was bought by France at the fixed price of 85s. 0⅜d. per fine ounce, a premium of ⅞d. for delivery of fine gold being established over 84s. 11½d., which has been the maximum price for dealings in the open market since the restoration of the Gold Standard in 1925. Movements of gold at the Bank of England during the week resulted in a net influx of £269,124. Receipts included £500,000 in sovereigns from South Africa. The withdrawals amounted to about £230,000, all in the form of bar gold—taken from the Bank to-day for despatch to France after refining.

SILVER.

The market continues in a very sensitive state, and during the week under review there have been violent fluctuations in the prices, resulting in a net gain of ⅜d. for cash and 5/16d. for forward delivery over the record low level reached last Wednesday. A fair amount of support has been received from both China and India to cover bear positions, but at the higher level China is inclined to make fresh forward sales. America on the whole, has not been very active. The outlook is still very uncertain, and is likely to continue so whilst the situation in China remains unaltered.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 2nd instant to mid-day on the 7th instant:—

IMPORTS.	£	EXPORTS.	£
Mexico	189,792	China (including Hong Kong)	83,583
Germany	6,340	British India	156,274
Greece	13,850	Other countries	3,364
Canada	8,213

REPORTS AND NOTICES.

MISCELLANEOUS.

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LTD.—Total profit for 1929 was £684,369, against £625,723 for 1928. General expenses amounted to £207,142, against £197,869. The sum of £50,000 is again set aside for depreciation. Provision for income tax again absorbs £10,000, while pension fund also has £10,000 allocated to it as before. The ordinary dividend is again 15 per cent., but absorbs £167,400, against £120,000 for 1928. Last year's carry-forward was £570,246, but of this £238,730 has been transferred to reserve, making the amount brought in £331,516, which has been increased to £428,528, the amount carried forward to 1930. The meeting will be held on June 19th, in the Great Hall, River Plate House, London, at noon.

HUDSON'S BAY COMPANY.—The net profit for year ended May 31, 1930, was £218,469, as compared with £475,083 for preceding year. Including the amount brought in and £150,000 transferred from the land account, there is available £529,469, as against £789,334, which figure included £200,000 from land account. The ordinary dividend is reduced from 25 per cent. to 17½ per cent. The former figure included a dividend of 10 per cent., tax free, in respect of sales of land, while this year's dividend from the same source is only 7½ per cent., tax free. Interest on new issue absorbed £58,000, and the carry-forward is reduced from £161,000 to £1,469. Meeting, Beaver House, E.C.4, June 27th, at 11.30 a.m.

THE ENGLISH ELECTRIC COMPANY, LTD.—Mr. F. Massingberd Rogers, of Greater London and Counties Trust, Ltd., the Rt. Hon. Sir Edward Hilton Young, P.C., G.B.E., D.S.O., D.S.C., M.P., Mr Percy Horsfall, of Messrs Lazard Brothers and Company, Ltd., and Colonel Wade Hampton Hayes, of Chase Securities Corporation, have joined the board of the company, and, in accordance with the scheme for reorganisation of the capital of the company, the following directors have resigned, viz. : Sir Charles E. Ellis, G.B.E., K.C.B., Sir John A. F. Aspinall, D.Eng., M.Inst.C.E., and Lt.-Col. Sir John H. Mansell, K.B.E., D.L.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Winter crops in the United Kingdom continue to progress satisfactorily under favourable climatic conditions, colour being restored to the wheat plant, which now appears strong and healthy. Spring cereals have also benefited by warmth and sunshine, and give every prospect of full yields. Trading in native wheat continues restricted, and prices are without material change, with offerings on a light scale. Quiet conditions also prevailed on the import market under holiday influences, trading being confined to Indian descriptions, which offer freely, with occasional sales of Canadian and Argentine grades. Prices, however, displayed some irregularity, early advances occasioned by firm overseas advices being subsequently lost owing to increased selling pressure, and improved crop conditions both in Europe and the principal exporting countries. The market just now is particularly sensitive to weather and crop reports, so that prices fluctuate almost daily, and will continue to do so until harvest. Meanwhile, a large carry-over is assured, as the restricted requirements of European importers can account for only a small portion of the North American surplus during the remaining seven weeks of the cereal year. There is a fair demand for home milled flour, and the general tone is firm, while little pressure arises to sell North American makes for shipment. Imported fully steady on spot, with moderate inquiries, best Canadian makes being rather scarce. A rather better movement resulted in feeding stuffs, and in view of the interruption to Argentine maize shipments by adverse climatic conditions, more attention is given to afloat and early loadings. Danubian and South African exporters offer with reserve in face of improved inquiries for both afloat and shipment supplies. Barley ruled easier on liberal offerings, and a good line of Russian was sold to U.K. outports for shipment from July to September at 15s. 9d., also Danubian at the same price. Oats neglected, and tendency of values in buyer's favour.

WHEAT.—Slightly irregular. No. 1 Northern Manitoba (Atlantic shipment), ex ship, 45s. 3d.; No. 2 ditto, 44s. 9d.; No. 3, 44s.; No. 4 Manitoba, 42s. 9d.; No. 5 ditto, 39s. 9d.; No. 6, 33s. 9d.; No. 2 hard Winter, 41s. 3d.; No. 2 mixed Durum, 37s. 6d.; Rosafe, 62½ lbs., 40s. 9d.; Barusso, new crop, 62½ lbs., ex ship to arrive, 40s.; Australian, 43s.; choice white Karachi, 41s. per 496 lbs. English, 8s. 2d.-8s. 6d. per 112 lbs.

FLOUR.—Quiet. London, straight run, 37s. 6d. per sack for country deliveries, and 36s. 6d. London area. Of imported, Manitoba patents, 33s.-36s.; Buffalo, 33s.-36s.; Australian, 30s. 6d.-31s., ex store. On c.i.f. terms, Manitoba top patents, May-June, 33s.; export ditto, 30s. 6d.; Australian, 28s.-28s. 6d.; French, prompt, 24s.-25s. per 280 lbs. Argentine, low grade, May, £5 15s. per ton.

MAIZE.—Quiet and easier. Plate, landed, 26s. 9d.; new, ex ship to arrive, 25s. 6d.; May-June, 25s. 6d.; June-July and July-August, 24s. 9d., per 480 lbs. Yellow maize meal, £7 15s. per ton, f.o.r. London. Yellow African, £5 15s. per ton, ex ship.

BARLEY.—Dull. Californian, old, landed, 34s.-40s.; new, ex ship, 34s.-40s., as to sample; Chilian, brewing, 33s.-37s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 34s.-36s. per 448 lbs. Black Sea, ex ship to arrive, f.a.q., 16s. 9d.; landed on sample, 18s.-19s. Persian, landed, 16s. 9d. per 400 lbs. English, malting, 7s. 3d.-8s. 9d.; feed, 7s.-7s. 2d. per 112 lbs.

OATS.—Dull and rather easier for Plate descriptions. Plate, landed, 14s.; ex ship to arrive, 12s. 9d. Chilian, white, landed, 20s.; ditto, tawny, 15s. 6d. German, landed, 18s. 6d.; ex ship to arrive, 17s. 6d. Mixed Canadian feed, 12s. 9d. per 320 lbs. English, 6s. 4d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27 :—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to June 7	Qrts. 84,388	Qrts. 67,167	Qrts. 174,435	Qrts. 214,579
40 weeks to June 7	8,805,613	9,265,980	10,128,378	11,124,312
Average price of English wheat per cwt.	s. d. 8 7	s. d. 9 7	s. d. 11 0	s. d. 12 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929 :—

Weeks ended.	Quantities Sold.			Average Price per Qrt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Qrts.	Qrts	Qrts.	s. d.	s. d.	s. d.
May 31	134,308	36,554	17,479	8 7	7 3	6 6

June 9, 1928	174,435	18,566	13,576	11 0	10 11	13 0
June 8, 1929	67,167	9,771	11,888	9 7	10 0	9 6

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929 :—

Nearest Future.	Jan. 2, 1929.	June 12, 1929.	Jan. 2, 1930.	May 28, 1930.	June 4, 1930.	June 11, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	114⅛	148⅜	111	111⅛	114⅛
Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	105⅛	130⅛	107⅛	105⅛	104⅛

The visible supply of wheat in Canada shows an increase of 540,000 bushels on the week, at 57,970,000 bushels, which compares with 66,344,000 bushels last year.

THE COAL TRADE.

Our Sheffield correspondent writes :—The tendency of the conditions of the South Yorkshire coal market continues to favour buyers, prices having again eased since our last report. The Whitsun stoppage was rather longer than usual, but in spite of curtailed working, supplies are ample. Overseas contracting is far from active. Some collieries have reduced the price of house coal one or two shillings per ton. Blast-furnace coke is a drug on the market, and prices are lower than for several years past.

Our Glasgow correspondent writes :—Conditions in the coal trade show little change this week. Among round coals, Fifeshire first steams are fairly well placed, but the collieries are in need of orders for other qualities, which are therefore easing in price. Singles and pearls are making steady prices in the market for washed nuts, but trebles and doubles are still offered freely and for good-sized orders. the market quotations would doubtless be discounted. Prices for shipment are approximately as follows : LANARKSHIRE.—Ell best, 13s. 3d.; splint best, 15s. 6d.; splint second, 14s. 3d.; navigation, 16s.; navigation second, 14s. 6d.; Hartley, 16s.; steam, 12s. 6d.; trebles, 12s.-12s. 6d.; doubles, 11s. 6d.; singles, 11s.; pearls, 11s.; dross, 9s. 6d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 3d.; trebles, 13s.-14s.; doubles, 11s. 9d.-12s.; singles, 11s.; pearls, 10s. 9d. LOTHIANS.—Prime steam, 12s.; secondary steam, 11s. 6d.; trebles, 13s.; doubles, 11s. 6d.; singles, 11s. 3d.; pearls, 10s. 9d. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s. 3d.; trebles, 12s. 6d.; doubles, 11s. 6d.; singles, 11s.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes :—It is not expected that the output of coal in the South Wales coalfield this week will represent more than about 25 per cent. of the normal weekly average. The pits were officially closed for the first three days, but owing to the heavy accumulations on the sidings and the general slackness of demand, some companies kept their pits idle for the whole week. During the holidays there was a slight increase in the volume of tonnage in dock, but the dock authorities reported 29 idle tips on Wednesday morning. The Coal Exchange was closed on Monday and Tuesday, but there was a general dearth of inquiry when it was reopened on Wednesday morning. Prices are nominally unchanged at the minimum schedule figures. The following are the current approximate quotations :—Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. to 18s. 6d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 3d. to 12s. 9d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 40s. to 45s.; rubbly culm, 11s. to 12s. 3d.; foundry coke, 32s. 6d. to 37s. 6d.; patent fuel, 20s. to 22s.; pitwood, ex ship, 25s. 9d. to 26s.

IRON AND STEEL.

Our Middlesbrough correspondent writes :—The usual weekly market was not held on Tuesday on account of the holidays. The position in regard to Cleveland iron is unchanged. The large consuming works closed down until Wednesday morning and this has caused some increase in stocks at the furnaces, but deliveries are now generally resumed. There is very little fresh buying in evidence in any direction and makers' prices remain unchanged, viz. : No. 1, 70s.; No. 3, 67s. 6d.; No. 4, foundry, 66s. 6d.; and No. 4 forge, 66s. f.o.b. or f.o.t. In hematite there is only a moderate business passing, but prospects seem more encouraging. Moderate-sized lots of mixed numbers are being booked by makers at 73s. 6d. per ton, but for larger quantities 73s. would still be accepted, and even 72s. 6d. for very big lines for early delivery. Shipments of pig iron are disappointing, the total cleared to 10th inst. being only 3,226 tons against 6,358 tons to May 10th. In the manufacturing trades most of the large plants were closed down until Wednesday morning and there are no fresh orders of importance reported. Prices are unchanged from last week. The ore market is idle. Dealers are offering best rubio at 20s. c.i.f., but there are no buyers. The rate of freight Bilbao/Middlesbrough for early loading remains about 5s. 6d. The production of coke is being considerably reduced, but there is still a surplus on the market. Ordinary furnace qualities are freely offering at 17s. delivered works and less would be accepted. The number of furnaces in blast in the district is 33.

Our Sheffield correspondent writes :—Work is still scarce, short time is fairly general and there is no present sign of a coming buying movement. The prospect of stocktaking at the end of the month militates against a revival, as in such circumstances consumers keep down as far as possible deliveries of raw materials. Not more than a third of the open-hearth furnaces are operating. The depression is less acute in the lighter and finished branches, but here there has been a loss of trade with a number of overseas markets. Several orders for files and tools are on hand from Russia, but the quantities are not comparatively large. To a large extent trade with Australia is suspended. The engineering industry ensures a regular supply of orders for tool steel, alloy steel, and shop tools. The season for farm and garden tools is scarcely equal to last year's standard. Prices of iron and steel materials are weak but unchanged. In the finished departments price-cutting is rife.

Our Glasgow correspondent writes :—Business is still dull in the iron and steel industries in the West of Scotland. While some of the steel plants are relatively better employed than others, none are at the moment overwhelmed with work and very little new business is being placed. The demand for small diameter tubes, which of late has been poor, shows some improvement this week. In the sheet trade there has been no alteration as regards prices and the export business, both for black and galvanised sheets, remains only moderate. Purchasers of pig iron are continuing to buy only in small lots, and there seems to be no better demand for bar iron or for re-rolled steel bars than for some months past.

Our Cardiff correspondent writes :—The position in the South Wales iron and steel trades is unaltered. The Swansea Metal Exchange was closed on Tuesday, but current prices of tinplates are steady at from 18s. to 18s. 3d. per basis box f.o.b. Galvanised sheets continue a somewhat depressed market. Steel-bar prices are unaltered.

OTHER METALS.

TIN.—The standard market displayed dull features, and prices gave way under selling pressure and lack of support, with slight irregularity in attendance. Standard cash changed hands at £137 12s. 6d., £137 15s. and £134 15s.; three months, £139 12s. 6d.-£139 15s. and £136 15s. In the East, sales were reported at £144 to £138 15s. per ton, c.i.f. terms.

COPPER.—In fair support, but values took a downward turn on realisations. Business was largely confined to forward dates, comprising three months at £52-£51 to £50 13s.; cash at £50 10s. to £49 16s. 3d.

LEAD met a fairly brisk demand, but market barely steady. Good soft foreign pig, June, sold £17 18s. 9d. to £18; July, £18 3s. 9d. to £17 18s. 9d.; September, £18 2s. 6d. to £18 per ton.

SPELTER.—Quiet, and values tended in buyers' favour under liberal offerings. June, sold £16 11s. 3d. to £16 10s.; July, £16 15s. to £16 13s. 9d.; September, £17 5s. to £17 2s. 6d. per ton.

ANTIMONY.—Quietly steady. English regulus, £40 to £45; Chinese ditto, spot, £28; June-July, £23; ditto, crude, £15 10s. per ton c.i.f.

ANTIMONY OXIDE.—June-July, £25 15s. ton c.i.f.

ANTIMONY ORE.—50 per cent., June-July, 3s. 6d.; 60 per cent., ditto, 4s. per unit c.i.f.

JACK SHEPPARD
the
Notorious Robber.

THE CHATWOOD SAFE

The value of a safe is the degree of service rendered when attacked by the burglar or tested by the ordeal of fire.

To appreciate this important fact it is only necessary just for once to see a safe lying amongst the burning debris after the collapse of a building following a fire.

Then to visualise what your own safe contains and ask yourself what your position would be and how you would feel in similar circumstances.

The Chatwood Safe will give you contented confidence. It has stood the greatest of all tests—the test of time, and is the cheapest Safe that can be bought having regard to the degree of security offered.

J. E. S.

THE CHATWOOD SECURITY

THE CHATWOOD SAFE CO., Limited,
Bankers' Engineers,
SHREWSBURY, ENGLAND.

WOLFRAM.—Quiet. Chinese, June-July, 21s.; Burmese, ditto, 20s. per unit c.i.f.

ALUMINIUM.—Dull. Home trade, £95; export, £100 per ton.

QUICKSILVER.—Steady. Spot, £22 2s. 6d. per bottle.

TIN PLATES.—Generally steady, with moderate sales passing. I.C. coke, prompt and forward, 18s. 1½d. to 18s. 4½d. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL: June 11th.

Spot sales for the days 5th, 6th, 10th and 11th (inclusive) are 9,000 bales, of which 3,010 bales are American, 1,200 Brazil, 300 Argentine, 1,700 Peru, 1,800 Egyptian, 490 African, 200 East Indian and 300 sundries. Imports for the week 5th to 11th (inclusive) are 17,821 bales, of which 5,645 bales are American, 1,362 Argentine, 2,477 Peru, 7,671 Egyptian, 341 African, 134 East Indian and 191 sundries. Quotations to-day are: American Middling, 8·04; Egyptian Sakel, 12·75; Uppers, 9·50; Brazil Fair, 7·34; Peru G.F. Smooth, 8·34; West African Middling, 7·94; and East African G.F., 8·59.

MANCHESTER: June 11th.

The Whitsuntide holidays have disorganised the market, and very little business has been attempted. Cloth merchants have again reported a dearth of offers from abroad, and the general situation shows very little change. Now and again there are rumours of the boycott in India not being quite so pronounced, but fresh buying is still in abeyance. There are no indications of any improvement in the offtake for China just at present. Shippers to most of the minor outlets have shown very little interest and, apart from holiday influences, the decline in raw material rates has made buyers hold aloof. There has been no activity whatever in American and Egyptian yarns. In all spinning and weaving districts the usual holiday stoppages have been extended and production throughout the week has been decidedly small.

THE WOOL TRADE.

Our Bradford correspondent writes:—Though it is recognised that big losses have been incurred during the nine weeks' strike, and there has been far too great an accumulation of stocks of yarns, general satisfaction is expressed that the operatives are returning to work. If orders for tops, yarns and piece goods during the remainder of the summer season are anything like normal some of the lost ground will be recovered, but it will be two or three weeks before it is known how the weaving overlookers and "twisters in" are settling down. If looms cannot be got going, it will not be long before there is a bigger accumulation of yarn than will allow spindles to keep on running. During the past fortnight the price of tops has shown a slight easing tendency, and it will now be possible to buy a good warp 64's at 29d., though some firms are quoting 29½d. Even crossbreds are slightly easier, and it would have to be a very superior 46's combing to realise more than 16d. Nevertheless, there is general confidence in the future of wool values, and this will be strengthened if the looms can be kept running. Manufacturers say that the summor trade in dress goods is over, and preparations will now have to be made for getting out new fabrics for next winter. Preparations are also being made for next spring.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

Within the past fortnight 80,000 bales of wool have been catalogued at Brisbane. This must be a record offering for that centre, and the absorption of such a big weight of wool will have reduced stocks very considerably. Next month shearing will become general in Australia, particularly in Queensland and the northern areas of New South Wales, and, as feed and water have been plentiful, the sheep should turn off heavy fleeces of good quality. Cables received this week from Australia indicate a more satisfactory market, although the news from Melbourne is to the effect that prices are slightly in buyers' favour. No one need attach any importance to that, for wool is costing quite as much as can be made for tops in either Bradford or Roubaix. So long as there is a steady absorption of offerings, ½d. decline need not be regarded as a sign of weakness. Further business can be done around the current level of values, and there is no reason why there should not be a steady expansion of consumption in all manufacturing countries. It is generally agreed in Bradford that French and German manufacturers have benefited substantially from the nine weeks' strike in the West Riding of Yorkshire. It was quite evident from the very commencement of the dispute that the lower rate of wages recommended by the Macmillan Report would have to become general. Even now the difference between wages paid to Yorkshire and Continental operatives is such as to give a decided advantage to those who employ the latter. Unfortunately, it will probably be difficult for operatives and their extremist leaders to realise that a considerable amount of business has been driven from this district by the mere fact of ceasing work. Meanwhile, the return of the sorters, and the resumption of work in the combing mills, will enable an increased quantity of wool to be absorbed.

HIDE, LEATHER AND ALLIED TRADES.

Hides from home-slaughtered cattle were generally unchanged at the auctions held during the week-end, when supplies were sold for two weeks. Calfskins were slightly easier, as was also the case with certain classes of woolled skins. Business in connection with imported hides has been rather limited, but at the same time a feeling of confidence is more or less apparent in view of the fact that shippers at origin are beginning to realise that any effort on their part to force the market for tanners' raw material is doomed to failure. In the South American market business in connection with frigorifics has been mainly on account of the United States, to which country Argentine ox have changed hands at the equivalent of 7 $\frac{7}{16}$d., second ox at 6d., and ticky at 5 $\frac{11}{16}$d. Prices for dry River Plates are generally steady, although a few sales have been made in B.A. Americanos at down to 8d., with M.V. Americanos sold at 8$\frac{3}{8}$d. Business has been done in Capes at 8$\frac{3}{4}$d. and 7$\frac{3}{8}$d. for first and second drys, with dry salted sold at 8d. and 7d., while unbathed Adis Abebas have changed hands at up to 7d. The market for sole leather has not been very active this week on account of the Whitsun holiday, which in some shoe centres was extended to Wednesday and even Thursday. However, all things considered, turnover was fairly well maintained up to the closing down and there is every hope that as soon as the factories resume something like normal operations a better flow of business will result. In bends, inquiry for the most part has been in connection with light dry hide stock, while there has also been a fair inquiry for medium to heavy weights in some of the better descriptions. The offal market still remains very difficult, and it is only in connection with certain lines, such as pinned bellies, that any activity is apparent. Upper leather manufacturers are also short of orders this week, but as the majority of shoe manufacturers have for some time past adopted a hand-to-mouth policy of buying, better business is expected as soon as work is resumed in earnest. Dropping sales have been made of box and willow calf, together with glacé kid in the various brown shades. Reptile and imitation grains, together with suède leather are expected to be in request again shortly, but the outlook for patent does not appear to be any too bright. Curried leathers are quiet, and even where inquiries are received prices generally show little in the way of profit.

THE JUTE TRADE.

DUNDEE: June 11th.

Idle conditions prevail throughout the jute trade. The quietness is accentuated by the holidays, and all sections are suffering from a lack of demand. Prices of most commodities are steadily declining, very favourable prospects for the next crop of jute being mainly responsible for the fall in raw material values. The Calcutta mills have failed so far to come to an agreement respecting the new conditions under which they are to work from July 1st next. It is practically assured that they will revert to working 54 hours per week, instead of 60 as at present, but there are several other minor clauses which remain to be settled before official intimation of their policy can be published. There is also the possibility that the mills may close down for one or perhaps two weeks before the end of the year. This would go a long way to reduce the existing stocks of hessians and heavy goods, which have accumulated to an enormous extent during the past year. The low prices now ruling for raw jute are very reasonable, but consumers lack incentive to purchase. Business has been done in several small parcels of Daisee assortment at £23 for September-October shipment and Tossa assortment rules at £25 for new crop. Old crop jute is of very little interest now, as spinners have all good stocks owing to the manner in which production has been curtailed for many months past. New crop First Marks are quoted from £28, and best Lightnings are obtainable at £26, August-September, while Heart Ram tops have been sold at £23 10s., same shipment, and at £22 10s. for June-July. The working costs of spinning have been increased by the lessened turnover, so that spinners are making a determined stand against reducing their prices for yarns. Buyers are showing no interest in hessian descriptions, so that the rates of 2s. 8d. for common 8 lb. cops and 2s. 9d. for 8 lb. spools remain unchanged, but nominal. Twist is from 4 $\frac{15}{16}$d. to 5d. for 3-ply 8 lb., and sacking yarns are selling in small lots at from 3$\frac{3}{8}$d. for 24 lb. weft and 4$\frac{3}{8}$d. for 8 lb. chains. Rove is scarce, owing to lack of waste caused through the use of less raw material, and prices are firm at from £28 for 48 lb. and £18 10s. for 200 lb. Fine yarns and carpet qualities are quiet, unchanged. Cloth business is confined to the merest trifles, and prices are not being seriously tested. The value of 10$\frac{1}{2}$ oz. 40 in. hessians is from 3$\frac{1}{2}$d. and 8 oz. from 2$\frac{1}{2}$d. Linoleum hessians are dull and nominal, while sacking, bagging and tarpaulin are slow. Calcutta goods have shown distinct weakness during the past few days owing to absence of demand, especially in the near positions.

VEGETABLE OILS AND OILSEEDS.

Rather easier conditions rule in the markets for oilseeds and their products. Plate linseed is inactive but steady, with no pressure to sell at current values, which are for seed on spot at Hull £17 10s. and for shipment to August £17 5s. A fair trade, however, is reported in Indian descriptions, Calcutta for June shipment to Hull being done at £18 5s. and £18 7s. 6d., and bold Bombay to London at £19 2s. 6d., which figure has also been paid for July-August to the Continent. The quantity of linseed on passage to Europe is now 113,000 tons, or 10,000 tons less than last week, comparing with 185,000 tons a year ago. Cotton seed has displayed further weak symptoms and very low figures have been accepted for black Egyptian, which has declined to £6 12s. 6d. May and June loadings, and £6 13s. 9d. July. Little or nothing is doing in Bombay cotton seed, which is quoted nominally £6, May-June. Linseed oil, after a period of quietness, is steady, raw oil on spot ex Hull being quoted £42 15s., and for June delivery, £42. Cotton oil is easier, crude Egyptian offering at £27 10s. and common edible at £30 15s. ex Hull, prompt.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Market remained without new feature, trade demand being restricted to immediate wants, but late rates were repeated for British standards. Home-grown maintained. Anglo-Scottish group, ready quoted, 20s. 7½d. to 20s. 10½d.; July-August, 20s. 10½d. to 21s. 1½d.; September, 21s. to 21s. 3d. ex factory. T.L. granulated, 20s. 1½d. ex refinery. Raw refining kinds barely steady. Cuban, 96 per cent., July, quoted, 6s. 7½d.; August, 6s. 9d. c.i.f. U.K. Continental granulated inactive. Terminals quiet and tendency easier. Raws: August, sold, 6s. 2½d. to 6s.; December, 6s. 6¾d. to 6s. 4½d.; March, 7s. 7½d. to 7s. 5½d. White: August, sellers, 8s. 3¾d.; December, 8s. 11½d. cwt. Cuban receipts for past week totalled 55,534 tons, against 64,273 tons at corresponding period last year; exports, 72,702, against 82,305; stocks, 1,683,033, against 1,417,449 tons. Centrals working, 10, against 2 at same time in 1929. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending June 7th totalled 140,480 tons, compared with 111,520 last year.

COFFEE.—Spot market steady with fair inquiries for all the finer liquoring grades.

COCOA.—Spot market steady. Forward dull. Accra, F.F., mid-crop, London contract, quoted, 29s. 6d.; October-December, 34s. f.o.b. Terminal quiet and the turn in buyers' favour. July, sold, 35s. 6d.; September, 36s.; December, 36s. 6d. cwt.

TEA.—Market quiet, unaltered, pending the resumption of public sales next week.

RICE.—Market about unchanged, with a lack of European demand. Two Stars Rangoon, spot, London, sellers, 13s.; June, sellers, 12s. 1½d.; July, 12s. 3d. Spanish oiled, May shipment to London, 14s. to 14s. 3d.; Italian, 14s. 6d. c.i.f.; No. 3 Burma, to Levant, quoted, 12s. 3d. c.i.f. double bags. American blue rose from 24s. to 25s. c.i.f. S.Q., to Cuba, 12s. 4½d. Saigon, No. 1, round grain, June-July, to Europe, 12s. 4½d. Siam Super, June-July, 17s. 1½d.

BEANS.—Quiet. Madagascar, spot, London, 32s. to 33s. 6d.; May-June, 32s. Ohtenashi, spot, 20s. Rangoon haricots, spot, London, 11s. to 11s. 6d. Danubian H.P., spot, London, 18s. 6d. To Glasgow, North African, new, July-August, 7s. 10½d. c.i.f. Chinese ditto, 7s. 1½d.

PEAS.—Dull, but fully steady. Japanese, new crop, spot, London, 15s.; old, 14s.; afloat, 13s. 3d. to 13s. 6d.; June-July, 12s. 9d.; and new crop, September-October held for 14s. 3d. c.i.f. Dutch marrowfats, prompt, 15s.; small hand-picked blues, 10s. to 12s. 6d. f.o.b. terms. Calcutta (per 504 lb.), June-July, 43s.; Karachi, ditto, 41s. 6d. c.i.f. Maples: No. 1 New Zealand, new crop, June-July, 61s.; f.a.q., May-June, 56s. 6d. Tasmanian A grade, new, afloat, 65s.; June-July, 62s. 6d. c.i.f.

SPICE.—Pepper quiet and trend of prices in buyers' favour. Lampong black, April-June, sellers, 10$\frac{3}{8}$d.; May-July, 9$\frac{5}{8}$d.; August-October, 8½d.; white Muntok, April-June, 1s. 0$\frac{3}{8}$d.; May-July, 1s.; August-October, 11½d. Cloves steady. Zanzibar, spot, 11$\frac{3}{8}$d.; May-July, 11½d.; August-October, 11½d. c.i.f. Pimento, spot, 8d. per lb.; ditto, May-June, sellers, 7¾s.; July-August, 72s. c.i.f. Tapioca dull. Singapore flake, to Havre, June-July, 12s. 3d.; Penang, seed, to Hamburg, 13s. 9d. Sago flour, to London, June-July, 9s. 9d. Desiccated cocoanut easier. Fine cut, spot, 30s.; medium, 29s. 6d.; halves, afloat, 28s. 6d.; May-June, 27s. 6d. c.i.f. Ginger quiet, unaltered. London stocks of black show a decrease of 95 tons on the week at 951 tons, against 1,682 at same time last year; white, 34 tons lower at 655, against 593.

FRUIT (Dried).—Currants: Market firm. Patras, quoted, 39s.-43s.; Zante, 38s.; Gulf, 40s.-42s.; Vostizza, 44s.-58s.; Australian, new crop, 40s.-62s. Sultanas: Smyrna's in better demand, but Australian quieter. Smyrna, medium to fine, 44s.-55s.; Cretan, 42s.-60s.; Greek, 42s.-65s.; Australian, 34s.-35s. Dates quietly steady. Hallowie, spot, 17s.-19s.; Khadrowie, 14s.; Siar, 12s.-15s. Raisins steady, with limited supplies available. Valencias, quarter-boxes, at 36s.-38s. Figs quiet. Genuine, 18s.-30s.; good average, 16s.

EVAPORATED FRUITS.—Market generally steady, with a slight improvement in demand. Californian plums, to arrive, attract more attention, particularly large sizes, while Australian apricots, also pears, move off with fair freedom. Other descriptions unaltered. Plums: Californian, new crop, 30's-40's, 57s. 6d.; 40's-50's, 52s.; Oregon, 30's-40's, 50s.; 40's-50's, 48s. Apricots: South African Royal, 50s.-112s. 6d.; Australian, 50s.-67s. 6d. Pears: Californian Lake County, fancy, 84s.; extra, 92s. 6d. Peaches: Californian, choice, 50s.-55s.; fancy, 57s. 6d.-62s.; South African, 1929 crop, 42s. 6d.-50s.; 1930 crop, 42s.-58s. Apples: Californian, spot, sliced, extra choice, 35s.-65s.; Canadian, 52s. Almonds firm. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 112s.; Majorcas, 105s.-122s. 6d. Bitter-Jordan, new crop, 185s.-192s. 6d. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 35s. c.i.f.; sweet, spot, 70s. Hazel kernels: Kerasunde, 149s.; Barcelona, 150s.; French (shelled) walnuts, 135s.-140s. ex wharf London. For shipment, 130s. cwt. f.o.b. Bordeaux.

CANNED GOODS.

CANNED FRUITS.—The demand for Californian varieties is slow to expand, despite somewhat attractive prices current. Australian and English also in slow request, while influenced by large prospective supplies of fresh fruit. Singapore pines dull of sale both for spot and shipment parcels, the latter denoting weakness, but South African and Hawaiian steadily held. Italian tomatoes sell slowly on spot, while shipment offers fail to attract.

CANNED FISH.—Market steady, with a moderate trade passing. Salmon: Alaska red talls, quoted, 48s. 6d.-49s. 6d.; pink talls, 24s.-26s.; and halves, 34s. 6d.-36s. Japanese crab, best quality, 87s. 6d.-90s. Lobsters: Halves range from 130s.-135s. Sardines: Portuguese clubs, quarters, 4s.; 1-lb., 12s. per dozen tins.

CANNED MEATS.—There was an improved demand for all descriptions, larger deliveries being made ex contracts, and prices were well maintained for tongues and hams.

CONDENSED MILK AND MILK POWDERS.—Market remains quiet and without material change. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 30s.; machine skimmed ditto, 19s.; full cream, sweetened, 56-lb. drums, 50s. English condensed milk, full cream, sweetened, 5-cwt. casks, 40s.; machine skimmed ditto, 22s. Dutch full cream milk powders, 26 per cent. butterfat, roller process, 1-cwt. cases, 58s.; spray ditto, 2 by 56-lb. tins, crated, 78s. Dutch machine skimmed milk powders, roller process, 1-cwt. cases, 26s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 37s. 3d.; ditto, 1-cwt. kegs, 36s.; ditto, 1-cwt. cases, 35s. 9d.; all per cwt. English prices basis carriage paid nearest station. Dutch prices are net, ex store London/Hull or Goole, and cover prompt or gradual delivery to the end of July, 1930. Stocks available in Newcastle.

3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. Minimum 1-ton lots. *Smaller* quantity, 6d. per cwt. extra. On the grocery side: Full cream, sweetened, 18s. 6d.; machine skimmed, sweetened, 8s. 3d. basis per case, usual packing.

HONEY.—Market *remains dull.* Jamaica, white, 48s.-50s.; good amber to fine pale, 40s.-47s. 6d.; dark to fine amber, 36s.-40s.; Cuban, pale, 40s.; light amber, 36s.; San Domingo, good to fine, 37s.-40s.; manufacturing, 35s.-36s.; Mexican, 35s.; Californian, 50s.; light amber, *45s.*; *New Zealand*, 65s.-95s. cwt.

RUBBER.

Market continued dull and *prices irregular. Plantation* standard sheet, spot, sold 6 1/16d. to 6d. and 6⅛d.; June, 6d.-6 1/16d. to 5 15/16d., and 6⅛d.; July, 6 1/16d. to 6d. and 6⅛d.; July-September, 6⅛d. to 6 1/16d. to 6⅛d.; October-December, 6⅛d. to 6 1/16d. and 6⅛d.; January-March, 6⅛d. to 6 1/16d. per lb. London landings for past week were returned at 1,765 tons, deliveries 1,347, and stocks 77,616, against 31,635 tons at corresponding period last year, being an increase of 418 tons on the week. *Liverpool landings:* 76 tons; deliveries, 282; stocks, 25,320, against 4,750, making a decrease of 206 tons on the week.

GENERAL.

JUTE.—Market remained quiet and without new feature. *Firsts*, to Continent, May-June, also June-July, sellers, £22 12s. 6d.; new, August-September and September-October, sold, £23 10s.; lightnings, old, quoted £21 15s.; new, August-September, £22 10s.; September-October, £22 7s. 6d.; Hearts, June-July, £20 5s.; Daisee assortment, £22; and Tossa ditto, £23 5s. c.i.f.

HEMP.—Manila opened steadier, but later assumed a quieter tone, with sellers more in evidence. J, No. 2, July-September, sellers, £24 5s.; K, June-August, £23; L, No. 1, £22 15s.; No. 2, £21 10s.; M, No. 1, sellers, £21 15s.; No. 2, £21 5s.; G, £25 15s.; H, £24 5s. per ton c.i.f. Receipts for past week totalled 24,000 bales, against 25,000 at same time last year and 28,000 in 1928. Estimates for this week 32,000 and the following week 30,000 bales. African *sisal dull*, and No. 1, June-August, including Portuguese, sellers, £26 15s.; No. 2, £26 c.i.f.

SHELLAC.—Spot market dull, T.N. 120s. Fine orange, 130s. to 230s. A.C. Garnet, 130s. R.L.I. Button Lac quoted 155s. Futures easier. August sold 111s. to 105s.; October, 114s. to 108s. To arrive, June-July, 100s. to 97s. 6d.

COPRA.—Market dull and weak. Straits S.D., June, quoted £19 7s. 6d.; July-August, £19 10s., to Rotterdam. D.E.I., £19 12s. 6d. Ceylon, July, £20 12s. 6d. Sun-dried, South Sea, £18 10s. To Marseilles, mixed Dutch Indies, June, quoted £18 5s. Smoked, South Sea, £18 12s. 6d.; Manila, £18 10s. Palm kernels, to Hamburg, June-July, £13 2s. 6d.; July-August, £13 5s.; August-September, £13 7s. 6d., c.i.f.

MISCELLANEOUS.—Coconuts, *quoted, 16s.* to 24s. per 100. Coir yarn, Ceylon, £23 to £36 10s.; Cochin, £24 to £43 10s.; Ceylon, bristle, £18 10s. to £25 5s.; cinnamon leaf oil, 5s. 6d.; for shipment, June-July, 4s. 1d.; citronelle, Ceylon, 2s. 4d.; Java, *2s. 4d.*

THE MONEY MARKET.

MONEY was stringent early in the week, but became easier on Wednesday, when 1½-2 per cent. was charged for new money. The market has been *paying* 2¾ per cent. for money into July, but the clearing banks are not lending over the half-year and have ceased buying

bills. The general expectation is that money will continue to be wanted up to the end of the month, and while some hope that the half-year squeeze will be less severe than usual, the market is prepared to find that when the time comes, the usual half-year stringency will prevail.

* * * *

Three months' bills are now quoted at $2\frac{7}{16}$-$\frac{1}{2}$ per cent., or only $\frac{1}{2}$-$\frac{9}{16}$ per cent. below Bank rate. This is the first time this year that an abnormally large margin has not existed between Bank rate and market rate, and on the basis of present rates, brokers are now at last able to earn a profit. Unfortunately brokers are still holding bills acquired a few weeks ago at lower rates, such as $2\frac{1}{8}$ and $2\frac{3}{16}$ per cent., so that they are still some way from obtaining the full benefit of the margin between the present rate for three months' bills and the rate of 2 per cent. at which they borrow their weekly money.

* * * *

The cause of the rise in bill rates is simply the lack of demand for bills. There is no Continental buying in evidence, while at home there is no doubt that the supplies of short money are dwindling. Again, the Government is now having to issue Treasury bills each week in excess of maturities in order to finance its current needs, and thus the supply of bills is increasing. Last week the rate at which the new Treasuries were issued was £2 8s. 10d., as against £2 3s. 6d. per cent. the week before, and some expect it to rise to a level $2\frac{1}{2}$ per cent. this week. In short, the supply of money is decreasing, and the number of bills on offer is growing, and this explains the recent rise in discount rates.

	May 29, 1930.	June 5, 1930.	June 12, 1930.	June 19, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	3	3	3	3	$3\frac{1}{2}$ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Discount \ Call	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Houses / Notice	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{3}{4}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{1}{8}$-$\frac{5}{32}$	$2\frac{1}{8}$-$\frac{5}{32}$	$2\frac{5}{16}$	$2\frac{7}{16}$-$\frac{1}{2}$	...

The May statement of the nine English clearing banks reveals an increase of £20.2 millions in deposits, but a decrease of £5.4 millions in cash:—

	May, 1929.	Feb., 1930.	Mar., 1930.	Apr., 1930.	May, 1930.
Capital and reserves.....	130·8	130·5	130·5	130·5	131·4

Deposits (including undivided profits, &c.).....	1,732·3	1,714·2	1,682·0	1,712·2	1,742·4
Total liabilities	2,059·5	2,004·5	1,972·0	2,001·7	2,017·9
Coin, notes, balance at bank, and cheques in course of collection	245·3	234·6	235·3	244·7	239·3
Money at call.....	141·0	125·7	130·6	131·7	135·3
Investments	269·3	255·3	251·8	251·7	257·9
Discounts	194·9	218·3	181·5	207·5	246·1
Loans and advances	976·4	972·2	974·7	968·0	955·8
Cover for accept., premises, &c.	232·6	196·4	198·1	198·1	183·5
Total assets	2,059·5	2,004·5	1,971·9	2,001·7	2,017·9

As had been foreshadowed by the trend of events in the discount market, the banks' bill portfolios have registered in the aggregate the substantial increase of £38.6 millions, and the banks now hold £51.2 millions in bills more than they did a year ago. Advances were lower in May than in the previous month, and also than in May of last year, but their ratio to deposits is still 35 per cent.

NEW YORK.

Our New York correspondent cables:—The money market has recovered from the effects of tax date financing, which involved a Treasury overdraft of $100 millions. The positive action taken, however, in the past few days by the Reserve Bank in cutting the bill rate, followed on Thursday by the reduction of the discount rate to $2\frac{1}{2}$ per cent. (the lowest figure in the annals of the Federal Reserve system), indicates the concern which is felt at the extent of trade recession, and the earnest desire of the authorities to stimulate recovery, which it is still hoped may take place in the autumn or at least before the end of the year. The drop in the discount rate somewhat surprised the market, in spite of the fact that open rates had dropped a full 1 per cent. below the discount rate and money was a drug on the market. Call funds are hard to place at $2\frac{1}{2}$ per cent. and time money at $2\frac{1}{2}$ to $2\frac{3}{4}$ per cent. for all dates. The effect of the drop in the discount rate will be largely sentimental, as at present the New York banks are entirely out of debt at the Reserve Bank, and the total borrowings for the whole district are only $24 millions. Only negligible changes are shown in the leading items of the weekly statement of the Federal Reserve System.

THE STOCK MARKETS.

The week opened under depressing conditions in the stock markets, forced liquidations being in evidence in some quarters, while Wall Street continued to exert an unfavourable influence on market sentiment. Gilt-edged were steadier, after losing ground at the outset. The Reparation Loan fell to a discount on "stag" selling. Home Rails were marked down after the publication of unexpectedly bad traffic returns. Industrial share values touched the lowest point this year, though a steadier tone obtained in the latter part of the week. The rubber and tea share markets were featureless. Oils were heavily sold at the beginning of the week. Apart from Kaffirs, the mining markets continued to reflect the instability of metal prices, but showed evidence of latent recuperative powers on a slight recovery in tin and copper prices towards the end of the week.

THE COMMODITY MARKETS.

The quietness of most markets is still more pronounced. Dealings in coal become fewer and fewer, and authorised production in South Wales for the September quarter is to be on a reduced scale. The iron and steel trades continue quiet and the small size of orders is tending to increase costs of production. The decline in cotton prices has further unsettled trade in Manchester, but there have been rather more inquiries this week than of late. The West Riding woollen industry remains inactive in spite of the firmer position abroad, but raw wool values are maintained. The vegetable oils and oilseeds markets are depressed. Wheat has fallen sharply.

THE FOREIGN EXCHANGES.

No great activity prevailed on the Foreign Exchange market this week, but several currencies were irregular, notably the franc and the peseta. New York, after being rather steadily against us, closed unchanged on balance at 4.85¾. Montreal remained at 4.85¾ as well. Paris gained two points at 123.76 after being just under 123.83. Brussels was worse at 34.83, a loss of $1\frac{5}{8}$. Milan lost three points at 92.76. Madrid was again very erratic and closed at 41.00, against 41.00 last week, after touching 42.70. Amsterdam moved slightly in our favour at 12.08½, as did Berlin at 20.36½, against 20.36 last week. Switzerland fluctuated a good deal and closed three points worse at 25.09½. Of the Scandinavian exchanges, Stockholm gained $\frac{1}{4}$ at 18.09 and Oslo $\frac{1}{8}$ at 18.15¼, but Copenhagen was $\frac{1}{4}$ worse at 18.15¾. The South American exchanges were all rather weak and irregular, Rio losing $\frac{5}{32}$d. at 5 17/32d., Buenos Aires $\frac{11}{16}$d. at 41 9/16d., and Montevideo a penny at 43½d. In the Far East, the rupee was firm at 1s. 5 13/16d., and the yen gained $\frac{1}{32}$d. at 2s. 0 7/16d. Batavia lost a point at 12.07⅝. In the forward market dollars were better at $\frac{1}{16}$ cent and $\frac{3}{16}$ cent discount. Paris went from either side of par for both quotations at 2 centimes and 4 centimes premium for one and three months respectively. Brussels was steadier at reduced discounts of $\frac{1}{2}$ centime and one centime respectively. Milan lost two points for three months' delivery at 29 centesimi discount, but the discount for one month remained unchanged at 10 centesimi. Madrid was very firm at 2 and 5 centimos premium. Amsterdam was at rather wider premiums of $\frac{3}{8}$ cent and $\frac{3}{4}$ cent, while Berlin lost a little at discounts of $1\frac{1}{2}$ and 3 pfennigs. The silver market saw renewed falls in prices, with continued sales by China and the bazaars and little support. Spot declined by $\frac{5}{8}$d. to 15 13/16d., and forward by $\frac{7}{8}$d. to 15 3/8d. The China silver exchanges fell away in sympathy, Hong Kong losing $\frac{3}{8}$d. at 1s. 3½d., and Shanghai ½d. at 1s. 6½d.

PARLIAMENT AND THE ECONOMIC PROBLEM.

PARLIAMENT adjourned for the Whitsuntide recess under the shadow of the crisis caused by the resignation of Sir Oswald Mosley as a protest against the ineffectiveness of the Government's unemployment policy. On its reassembly this week the House of Commons was inevitably plunged—after an all-night sitting on the Finance Bill—straight into this perennial issue, which was the subject of a full-dress debate on Wednesday. On the previous day the Prime Minister and other members of his Cabinet had met and conferred with delegates representing local authorities, the purpose of the conference being to explore the possibility of extending or speeding-up the provision of work on roads and other development schemes. But both conference and debate, while revealing a widespread anxiety as to the unemployment situation in the next six months, afforded little evidence that existing procedure was adapted to meeting a serious emergency. On the contrary, they supplied an apt illustration of the thesis of Mr Winston Churchill, who delivered the Romanes lecture at Oxford last Thursday. In the course of this address Mr Churchill, though paying glowing tribute to the success of our parliamentary system in meeting the political needs of Great Britain, dilated upon the unsuitability of Parliament as a body to deal with economic problems, which, in contrast with pre-war times, far transcend in importance the purely political issues of the day.

What emerges from this week of concentrated thinking and talking about unemployment and its economic causes, its remedies and its possible palliatives? On the theoretical side the most reassuring point is the clear recognition, especially in the speeches of the Prime Minister and Mr Lloyd George, that the whole problem has substantially changed in nature as well as in scope. Two years, even one year, ago it was possible to take a far narrower and more domestic view of British unemployment than it is to-day. It was then permissible to regard British industry as stagnating or marking time in the midst of a world which was enjoying, if not general, at least sectional prosperity, and consequently to think of the unemployment problem in terms of the provision, at such cost as the nation could afford, of an artificial stimulus to set the clogged wheels of industry in motion which, it was hoped, would be naturally sustained or accelerated by early world economic improvement. Since then the whole aspect of the problem has changed. Instead of recovery, acute economic depression has spread around the world, and the spectre of large-scale unemployment has stalked through the chief countries of the earth. The idea of stimulating British industry into a peculiar activity amid the universal *malaise* of to-day is no more practical than the idea that the British Government can cure the world slump by an attempt to control the sweet influences of the Pleiades or loose the bands of Orion. The immediate problem rather is how far, on balance of economic and social advantage, it is desirable and proper to devise work schemes and to antedate productive activities in order that a grave period may be tided over, the State receive some compensation for its relief expenditure, and some at least of the army of the workless be rescued from the demoralisation of prolonged idleness.

This realisation that the nature of the problem has changed is the chief thing that emerges on the theoretical side. On the practical side the Guildhall conference with local authorities produced little that was new or helpful; but the Prime Minister's speech in the House of Commons contained two items of real importance. The first was an invitation to the leaders of the Opposition parties to participate in a non-party conference, and the second the announcement of the creation of a special Civil Service body, consisting of permanent advisers from the appropriate departments with Sir John Anderson at its head, to become a focus and a liaison for action in connection with unemployment measures. The invitation to a conference was accepted during the debate by Mr Lloyd George. But it has been, we understand, refused by Mr Baldwin, who did not take part in the discussion. Mr Lloyd George's acceptance was wholehearted, and although he confessed himself not very hopeful about agreement on certain points, the purport of his answer was that, in this grave emergency, he would rule no suggested remedy out of examination and discussion. The reasons given by Mr Baldwin for his refusal have not been published, but we can only imagine that his *apologia* for refusing to contribute anything to the common pool was on these lines: "We Conservatives say that there is one remedy and one only—namely Protection. The Government rule out Protection. Therefore it is useless for us to join in a conference." If that is so, the episode provides a sharp and convincing confirmation of Mr Churchill's assessment of Parliament's inefficacy in facing economic problems.

In this assessment Mr Churchill is indisputably right. The two facts that in these days economic problems dominate political, and that democratic Parliaments are not suited for their handling, have long ago received recognition in many countries, of which Germany with her Economic Parliament provides the most conspicuous example. Even here in Britain Mr MacDonald has recognised the truth of Mr Churchill's thesis, by the appointment last year of the Economic Advisory Council and now again by the creation of a new Civil Service *ad hoc* body. Mr MacDonald and Mr Churchill are pursuing the same object. The important difference between them is that they are approaching it from different angles, the Prime Minister confining his new machinery within the machinery of Government, and the ex-Chancellor contemplating an independent consultative body. Attractive in some ways though Mr Churchill's idea may be, and convincing as he was over the need for new machinery to supply the defects of the legislature, there is room for doubt whether his rather vague suggestions as to the composition of his "economic sub-Parliament" contain the clue to the appropriate alternative. It is difficult to believe that a body one-fifth the size of the political Parliament and chosen by it in proportion to the present strength of parties would shed its partisan affiliations and discuss and vote upon the economic problems of the day "with fearless detachment from public opinion." In order to create this non-partisan atmosphere it would seem essential to substitute for, or to combine with the plan of Mr Churchill some non-party method of selection. The suggestion raises constitutional issues of far-reaching importance.

Meanwhile the upshot of the week is the spectacle of the Government determined on a new "drive," still groping, as it and its predecessors have groped for years, in search of appropriate policies, yet armed with the assurance of a firm majority for any emergency measures which may pass the test of Liberal conscience and judgment. There are those who will scent danger in this new prospect, and will dream nightmares of reckless finance and wild-cat schemes. Such fears, we think, may be set at rest by the evidence, to which we have alluded, of a new orientation to a changed problem. We do not see any reason for thinking that a sudden unbalanced audacity will replace the timidity which has hitherto marked the Government's policy. What we expect and hope to see is a new stimulus applied to those who are in charge of work schemes; quick measures to disable all interests which are improperly obstructing their initiation; and a careful balancing of the profit and loss account of national advantage—as, for instance, the balancing of the merits of marginally unproductive work against the deadweight of eleemosynary State payments and the social cancer of idleness. We hope, too, that an impetus may be given to the study by the Economic Advisory Council and the new Civil Service body of such germane problems as the

discrepancy and time-lag between the fall of wholesale prices on the one hand and retail prices and wages on the other, of the effect of " sheltered " wages and of high taxation, and of the other influences so capably analysed by Professor Clay in his recent address to the Royal Institute. It would be folly to suppose that we are about to cure, though we may curtail the evil effects of unemployment. But we welcome this week's events as holding out some promise that prompter and more effective action will be taken to put into effect such measures as are just and proper for the State to employ in a real emergency which shows little sign of early passing.

THE WORLD POWER CONFERENCE.

THE Second World Power Conference, which opened at Berlin this week, takes place exactly six years after the First, which was held at Wembley, and it will serve to consolidate a work of international co-operation which originally could only be regarded as tentative and experimental. Important developments have undoubtedly thrown the whole question of power into a new and, in some ways, disturbing perspective. In 1924, attention was concentrated above all on purely technical problems arising from the large scale production, distribution and consumption of electricity; and discussion at Wembley centred on the possibilities of harnessing more effectively water-power resources, of co-ordinating effectively all power potentialities in the principal markets of the world, and of using such co-ordination for extensive industrialisation. The super-power zone was conceived as the new method of stimulating and guiding economic expansion and, somewhat uncertainly, limits of achievement and of technique were described. At that time, when the political, financial and industrial situation in Europe had not been stabilised, and the Dawes' Plan had only been formulated, but not introduced, some hesitancy might be expected.

Now, however, reality has far outstripped prophecy. The main problem is no longer to create large units, evolve immense power zones, accelerate the reorganisation and re-equipment of industry, but to control what has already been elaborated. When generating units of 208,000 kilowatts are being installed in place of a maximum of 30,000 kilowatts described in 1924, when main transmission lines at 380,000 volts are linking up Holland with the Black Forest and Switzerland, when it is seriously proposed, as in one of the Berlin papers, to carry power across the Baltic from Scandinavia to Germany, when Chicago exchanges electrical energy with New York and foreign trade in electricity has become important in Central Europe and Canada, when steam pressures of 1,200 lbs. per square inch and temperatures of 600° Cent. are employed in steam-raising plants—the difficulties are no longer technical, but economic and administrative.

In a sense, too, the Berlin Conference comes at the end of a chapter in the recovery of Germany: it displays what exactly has been achieved in the immense work of rationalising and reorganising the German industrial machine, and may indicate the most urgent dangers inherent in the process now virtually concluded. Electrification, even in 1924 a matter of some doubt, has been universally adopted, with the result that more than 70 per cent. of the motive power plant of the world is engaged in generating electricity, and almost 90 per cent. of all new plant added to the world's manufacturing capacity each year since 1924 is driven by electrical power. The electricity output of the world has risen from about 150,000 million units in 1924 to more than 300,000 million units in 1929.

Those statistics are necessary to comprehension of the real significance of the Berlin Conference, and appreciation of the immense mass of material prepared for it. Rather more than 400 papers from 37 countries have been submitted by principal authorities and experts engaged in the study and control of power under all its aspects; the transactions will be published in twenty volumes covering thirty-four main sections, while about 3,000 members and delegates will participate in the discussions. The greatest contribution comes from the United States in the form of 69 papers and surveys; the British Empire follows with 54; Germany with 39 and France with 27; while Japan and Argentina are distinguished by the strength of their representation. The procedure to be adopted at the Conference itself is quite simple and, on the whole, effective. The original documents, ranged in thirty-four sections corresponding to various aspects of power, are summarised in general reports of about 2,000 words, each prepared by international authorities on the subject in question. Those reports propose main lines of discussion and set up a number of problems of outstanding interest. The general reports combined with the discussions should give, therefore, a very full survey of the state of international opinion and knowledge regarding power development. A preliminary examination of the main papers submitted, and the general reports, shows certain broad tendencies which may be summarised:

(1) Economic motives and principles are at last being studied with care as essential to the elaboration of a national and international power policy. When countries like Great Britain, France, Russia, Germany, Sweden, Belgium, Holland, Italy, Austria, Poland, New Zealand, Tasmania, British South Africa, Federated Malay States and the Dutch East Indies have either initiated national power schemes or, as in the case of Canada and Australia, carried out co-ordination schemes over wide territories, the real economic significance of electrical development comes into prominence in discussion and examination.

(2) With such movements must be grouped administrative and political problems. The legal definition of the functions performed by the State, the relation between industrial production and power supply, the conclusion of commercial, military and financial agreements to cover the transmission of power from one country to another—all enter tentatively into the power situation and are discussed from many points.

(3) A further problem has been explored in connection with the methods by which the policy of rationalisation in industry may be fitted into a policy of scientifically co-ordinated power expansion, and in the examination of electric power consumption itself as a reliable index of industrial activity. A number of American, German and Russian papers and one lengthy British study deal with these matters on broad lines without evolving, however, concrete proposals or principles.

(4) Instead of revelling in description of technical achievements in the elaboration of large units, engineers and scientists are now more concerned to justify achievement in the light of experience, and by the test of economic results. The Berlin Conference covers a much wider field than the Wembley Conference, so much so that it can combine addresses by Sir A. S. Eddington and Professor Einstein on pure science with addresses on the political and economic importance of a European super-power zone (Dr. Oskar Oliven) and the tariff complications arising from international power exchanges (Prof. Serruys), while its political significance inside Germany itself may be deduced from the fact that President Hindenburg is the President of the Conference.

The ideal of international co-operation in power has undoubtedly gathered in strength through the series of sectional conferences which have been held at Basel, Barcelona, London and Tokyo since 1924, and it will probably be seen at its highest in the Berlin deliberations. It is significant, perhaps, that the Conference should open simultaneously with the flotation of the new Reparation loan. Both events are symbolical of the new spirit in Europe which has allowed the war period to be finally liquidated, brought to prominence again the interests of peace, and with it peaceful collaboration in economic and scientific development.

GENERAL ELECTION IN CANADA.

(BY OUR OTTAWA CORRESPONDENT.)

THE General Election campaign in Canada is now in full swing, and the country is being inundated with political oratory and propaganda. At the Dissolution the King Government had 132 supporters in a House of 245 members. Of these 123 were " Simon Pure " Liberals and nine counted as Liberal-Progressives, who did not attend the Liberal caucus but were unswerving in their devotion to the Government. The Conservatives numbered 90, and the Farmer Progressive group 18, while there were three Labourites and two Independents. Therefore, with the Speaker eliminated, the Government had a majority of 18 over any possible combination of the opposing parties, and they can afford to lose eight seats on the balance and still retain a narrow majority. On the other hand, the Conservatives, before they can gain a clear majority, must win 33 seats on balance.

The Liberals are claiming a renewal of their mandate on the general ground that for the last nine years they have given the country sane and progressive Government, and that, under their *régime*, Canada has, on the whole, enjoyed prosperity. They will also claim credit for such measures as the old age pension scheme, in which the co-operation of Provincial Governments has been secured, and for advancing the political status of Canada by the establishment of direct diplomatic relations with foreign countries. Finally, they will point to the Budget as a master-stroke of statesmanship which, without penalising the Canadian consumer, will afford a proper chastisement to American fiscal selfishness and at the same time stimulate inter-Imperial trade. In the prairie provinces, particularly, they are claiming the gratitude of the western farmers on the plea that by their tariff concessions they have already created in Great Britain a fund of fresh goodwill towards Canada which should result in a better market for Canadian wheat and other exports. Indeed, Mr Lapointe, the Minister of Justice, in a recent speech declared that the higher interests of the country and the Empire urgently demanded that the King Government be given a mandate to represent Canada at the approaching Imperial Conferences because the Conservative leaders stop short at oratory about Imperial co-operation and even show a disposition to oppose practical measures for the stimulation of inter-Imperial trade.

In this charge there is a certain degree of truth, for Conservative politicians and newspapers have criticised the increases in the British preference, partly on the ground that they exposed Canadian industry to unfair competition from their British rivals, and partly on the ground that further preferences to Britain should have been withheld until reciprocal advantages had been secured by bargaining at the Imperial Conference. Mr Bennett, the Conservative leader, both in his speech on the Budget and in the opening address of his campaign which he delivered in Winnipeg, took a strong nationalist-protectionist line and declared that, while he yielded to nobody in his affections to the British Empire, his first love was for Canada. His argument and that of other Conservative leaders is apparently that, since the North American continent has now become the chief centre of economic momentum and power in the world, it is immensely important for the future of the whole British Commonwealth that the British nation situated on North American territory should be economically strong and self-sufficient and able to hold its own against the puissant United States. Therefore, they contend, a policy of stiff domestic protectionism, which will build up Canadian industries and give the country a well-rounded national life, will in the long run be of more benefit to the general Imperial fabric than a policy which aims to assist a few British industries now struggling with grave embarrassments.

The Conservatives are also warning the western farmers that, in view of the world wide surplus of wheat and the pending threat of Russian competition, they must reconcile themselves to much keener competition in international markets, and that, in the light of this prospect, they would do well to support fiscal policies which, by promoting the growth of domestic industries and permitting an expansion of population, should tend to enlarge the domestic market for foodstuffs. They are also pledging themselves that, if they are returned to power and permitted to represent Canada at the Imperial Conferences, they will exert all their influence to gain for Canadian foodstuffs valuable preferences in the British market.

The Labour Party will only contest a limited number of urban constituencies and will do well if it returns its three former members, but the Independent Progressive group threatens to cause the Government considerable trouble in the three prairie provinces. Apart from the anti-Catholic sentiment which is rampant in the prairies and must operate powerfully against a Ministry dominated by Quebec influences, the western farmers are dissatisfied with Mr King on other grounds. They are suspicious that the Budget contained as large a dose of increased protectionism as of freer trade, and they are disposed to think that the Liberal Party is too much under the thumb of eastern capitalist influences. They are not ready to vote for the Conservative policy of higher protectionism, but they are almost in the same mood as in 1921 when the Progressive Party, then newly founded, carried three-fourths of the seats in the prairies. At present it holds 16 rural constituencies, and its leaders declare that the election will double its parliamentary strength.

A further factor in the situation is that the Roman Catholic hierarchy, which exercises a great deal of influence in the politics of Quebec, especially since women have been given the vote, has become very much exercised over the anti-Catholic agitation which has developed in the prairie provinces. They have seen with dismay the people of Saskatchewan turn out a Liberal

administration—largely on the ground that it was too subservient to the wishes of the Roman Catholic Church—and instal a Ministry which has passed very drastic legislation planned to diminish clerical influence in educational matters. They know that the dominant influence which the Quebec bloc exercises in the councils of the Liberal Party is greatly disliked in the west and is a theme of constant denunciation both by Conservatives and Progressives. Consequently they are afraid that anti-Catholic sentiment may permeate all the English-speaking provinces and result in a situation which will be very embarrassing to the interests of the Roman Catholic Church. Obviously the best course would be to secure some influence with the Conservative Party, to whose banner the anti-Catholic elements even of Liberal political faith are being attracted, and it is an open secret that some of the most influential figures in the Roman Catholic Church in Quebec are now saying publicly that it is time for the Province of Quebec to send a larger contingent of Conservative members to Ottawa.

It is significant that, in accepting renomination for his old constituency, Mr Henri Bourassa, the old Nationalist leader, who is credited with being one of the chief political counsellors of the hierarchy of Quebec, told his supporters that while in most matters he took the Liberal view, he intended henceforth to give the Conservatives his support on tariff questions on account of his dislike for the British preferential provisions of the Budget. He argued that although England, like other European countries, might be passing through a severe economic crisis, there was no reason why Canadian interests should be sacrificed to help the British unemployment problem. He declared that as long as the British preference was maintained on a sentimental basis he would oppose it and complained that Britain was not meeting Canada half way, at any rate in the matter of her purchases of wheat and butter.

With the campaign only just begun, prophecies about the result are perilous, especially in a country like Canada, where local and sectional issues bulk so largely in Federal politics. But it is quite plain that the King Government is definitely on the defensive and its fortunes are not being helped by the comparative stagnation of business which persists, nor by the slump in the stock markets which the last few days have witnessed. On the other hand it is difficult to visualise the Conservatives getting a clear majority which would open to them the gates of office, and at the time of writing the judgment of well-informed political experts is that polling day on July 28th will produce a stalemate between the two old parties and that a strengthened Independent Progressive Party will hold the balance of power. Such an outcome would involve a very complicated and puzzling situation and Parliament, as Premier King foreboded in his speech in Parliament before the session ended, would have to be summoned at once to decide what sort of Ministry should hold office and represent Canada at the Imperial Conferences.

THE WORLD'S TIMBER TRADE.

(BY A CORRESPONDENT.)

In spite of all the alarms of an approaching world timber famine, the anxieties of timber traders within recent years have been more in connection with a glut than a shortage of wood supplies, and their concern has been chiefly how to stimulate consumption. Fortunately, the world is consuming more sawn deals, battens, boards and planed woods than ever before, although since the end of the War the increase in the usage of "wood-like" substitutes—plywood and various composition boards—has been amazing.

European supplies of "softwoods"—*i.e.*, building and joinery woods—are used almost exclusively, as might be expected, on this side of the world, and an analysis compiled by the Timber Department of Messrs William Brandt's Sons and Co., of London, shows that the average annual export by European timber shipping countries during the past five years was 4,295,200 Petrograd standards (of 165 cubic feet), as against 3,970,500 standards exported in 1912—a fair average pre-War year. The total export figures for 1912 and 1927-1929 are as follows:—

Year.	Total Exports. Standards.	Exports to U.K. Standards.
1912	3,970,500	1,742,000
1927	4,690,500	2,114,000
1928	4,406,000	1,610,000
1929	4,617,000	1,915,000

Since 1912, the distribution of exports between the wood manufacturing countries of Europe has undergone great changes as the result of the Russian revolution, which transferred to Finland and the new Baltic States a large part of Russia's pre-War production. But the progress of wood manufacture by the Soviet Government during the past five years has been remarkable, and shows the determination of the authorities in that country to extend their timber trade as speedily as possible. Exports from Russia during the past three years have risen from 446,000 to 829,000 standards; and owing to the proposed "invasion" of Russian timber into the United Kingdom in 1929, and the possibility of the British market being thereby "unstabilised," a syndicate of British importers bought the whole of the Russian shipments intended for this country. Attempts were made to come to a similar agreement for this year's shipments—which are expected to be on a much larger scale—but without effect, although negotiations for a concordat on similar lines are pending.

The uncertainty arising from these protracted negotiations and the absence, in the meanwhile, of buying orders from the consortium of British importers are the reasons why Russian shippers have recently been making concessions in prices, and offering certain guarantees to stimulate sales. The main problem that confronts importers and merchants is how to get the larger shipments of Russian wood into consumers' hands at a profit. That problem is also creating anxiety in timber shipping circles, especially in Finland and Sweden. The latter countries, faced by the "ruinous" competition of Soviet wood, may reduce their United Kingdom trade this year; on the other hand, given cheap timber, demand from the building trade in the United Kingdom may develop; but neither of these eventualities is certain. Whatever the outcome may be, all European shippers will have to recognise the fact that, unless something unforeseen happens, the timber production of Russia will extend largely year by year, not only in European Russia but also in the Russian Far East, where the Siberian virgin forests will compete with western American and Canadian output in the Japan, China and other Eastern markets.

The position of supplies in the other large timber-producing continent, America, is somewhat similar to that in Europe, and lumber manufacturers are complaining of unremunerative prices. In the United States of America there are schemes in operation for the curtailment of "hardwood" output; but, judging by the large quantities of American "hardwoods" shipped to the United Kingdom in the last eighteen months, and the disparity of shippers' prices, restriction of output does not seem to have had much effect, thanks largely to the business depression in the States. American "softwoods" for export consist principally of the pitchpine varieties from the Southern States and Douglas fir from the Pacific Slope. The latter wood is increasingly popular in the United Kingdom, not only on account of its intrinsic qualities, but also for the cheap price at which it is being offered on this side. The Pacific Slope export trade, however, is suffering from the effects of the wars in China and the depression in Japan.

With regard to the future of timber supplies, it is of interest—particularly in view of recent campaigns for greater inter-Imperial trade, to consider the Empire timber position. Large corporations in this country are using Empire woods for reasons both sentimental and practical, but apart from Canada the various Empire countries are not sufficiently advanced in lumber production methods to supply woods either in the enormous quantities required in the United Kingdom to-day, or at

competitive prices. Nevertheless, the fact remains that we cannot depend upon the United States to send us 58 per cent. of our sawn "hardwoods" for very many more years, and in time the forests of India, Australasia and Africa will be called upon for the bulk of our "hardwood" requirements. It will be principally to the British Empire and the undeveloped forest areas of South America that we shall have to look in the long run for the very large supplies of furniture and cabinet woods that we require.

In the case of "softwoods," there are still enormous resources available in Europe, and supplies are being eked out by the ever-increasing manufacture and usage of plywood, for which the scope of demand and supply is almost illimitable. In the United Kingdom alone no less than 417,170,500 square feet of plywood were imported last year, a figure which will give an idea of the future prospects of this material in timber importing and manufacturing countries.

Although the alarmist reports of approaching timber famines during the past thirty years have been, to say the least, wide of the mark, they have served a useful purpose in reminding governments and private owners of the intrinsic value of their forests. The wanton destruction of clearing areas by burning has now given place to more practical care, prevention of fire outbreaks, and the general protection of trees. Moreover, it is realised to-day that the profits of sawmills rest largely on the proper utilisation of sawmill waste. An account of a practical and shining example of economy in converting timber is to be found in the current issue of the *Bank of Finland Monthly Bulletin*. In that we are told that wood waste in the Finnish sawmills comprises as much as 43.2 per cent. of the total raw material used, a proportion large but quite reasonable when the manufacture of "ends" and woods of even smaller dimensions is considered. Of this sawmill waste, 8.3 per cent. is used in the manufacture of sulphate cellulose; 78.4 per cent. is consumed as fuel; and charcoal is derived from 2.4 per cent. The rest, 10.9 per cent., still remains waste, but some of that may become a paying proposition before long.

When we think of the past, when forest lands were wilfully burned for clearing purposes (the United States sacrificed untold wealth in this way), when waterways were blocked up with sawdust, impeding navigation at great loss, it is surprising, not that we have comparatively so few forests left, but that we have so many. It is a matter for real satisfaction that first-class brains are now being utilised in virgin forest work, in which the world's concern must be not only the timber requirements of a generation or two, but the continuity of supplies for the distant future. Given adequate planning and forethought, economies in methods of manufacture, and the use of the substitute to which reference has been made, it should not be impossible to make our timber resources last indefinitely.

WHEN WILL AMERICA RECOVER?

Heavy liquidation in Wall Street has been a feature of this week's American news. The extent of the downward movement in security values may be gathered from the indices (1926 = 100) *of the Standard Statistics Company, which show that the average value of* 402 *representative stocks, standing on June 4th at* 171.5 *(as compared with* 228.1 *at the crest of last year's boom, and* 140.3 *at the nadir of the autumn slump), had fallen by June* 11*th to* 157.6, *and suffered a further decline by the middle of this week to* 142.0. *Thus in the last few weeks American stocks have lost practically all the ground recovered during the winter and spring. In his weekly cable on p.* 1393 *our New York correspondent deals with the outstanding features in the recent wave of selling, the chief cause of which appears to have been the growing public realisation that the depression in industry has deeper roots than the authorities have hitherto been prepared to admit. The following article, written before the latest "break," gives the impressions of the underlying situation reached by a well-informed observer during a recent visit to the United States.*

Throughout the first quarter of 1930 one side of Times Square, in New York City, carried an immense hoarding which bore the legend, amusingly ingenuous to the eyes of the stranger unversed in American methods, "Forward America! They can't beat US! Business is Good. Keep it Good!" Smaller copies of this poster were to be found on other hoardings and occupying spaces in the daily Press. Its anxious reiteration was typical of the methods in use for exorcising the evil spirits loosed by the Stock Market crash. Even earlier evil influences had been abroad; but the disastrous miracle (for New York will accept no responsibility for it) of the crash transferred them violently from the few to the many. The herd rushed towards the cliff, and Mr Hoover and his associates stood across their path, a thin but determined White House line. In the circumstances, they were not too careful in their choice of methods, and their speeches were often misleading.

They met with some, possibly too much, success. The optimism they inculcated enabled the Stock Exchange to lever prices up to a level from which they are still falling, and almost completely obscured the real business situation. Thus, after a mass of "cheer-giving" statements from Mr. Hoover and Secretary Lamont, interspersed between conferences with business leaders, one found Mr Mellon, the cautious and usually silent Treasurer, stating with obvious sincerity last December: "Forecasting the future of business can never be done with certainty. . . . I see nothing, however, in the present situation that is either menacing or warrants pessimism. During the winter months there may be some slackness or unemployment, but hardly more than at this season of each year. I have every confidence that there will be a revival of activity in the spring."

Looking back, one is astonished that it should have been possible to hold this opinion. Between September and December the Federal Reserve Board's index of factory employment (1923-25=100) had fallen from 103.4 to 94.8, while during that period its index (same base) of industrial production had dropped precipitously from 123 to 95. The decline in employment has continued, the last figure published, for March, 1930, being 92.7. Yet on January 21st Mr Hoover announced: "The tide of unemployment has turned in the right direction." He was immediately challenged by Miss Frances Perkins, the Industrial Commissioner for the State of New York, who pointed out that in New York State unemployment in January was proving worse than in December, which in its turn showed the ugliest record of any similar month since 1914. Again, in March, Miss Perkins had to challenge the accuracy of White House employment figures put out on the basis of estimates supplied to Mr Hoover by Secretaries Lamont and Davis. In each case the facts have been on Miss Perkins' side.

It is impossible to form any exact estimate of the numbers of unemployed in the United States. The index of employment quoted above covers only some 3,500,000 workers engaged in manufacturing industries. It takes no account of mining, agriculture, finance, or of the very important distributive trades. But undoubtedly unemployment, at any rate during the first quarter of 1930, was very severe, and may easily have exceeded 4,500,000. The much advertised and brutally dispersed Communist meetings in New York were really gatherings of the unemployed, leavened by a few Communist speakers and agitators. Destitution was great and begging general.

Industrial production, it is true, picked up slightly during January and February to 103 and 109, but slipped back to 106 in March, when an increase is normal. Indeed, the Stock Market crash merely precipitated a business readjustment that was already due. The industrial production index of the Reserve Board had, by May, 1929, increased by 25 per cent. over the average for 1923-25. In July, 1929, a hesitation in the trend was noticeable, and if it had not been for the Hatry incident, the situation would have developed along well-established lines, a market break coming as a consequence of prior industrial

difficulties. The collapse on the Stock Exchange in October upset the sequence of events, and raised so great a dust that it is only now that the real outlines of the industrial landscape can be seen. Moreover, apart from the dust raised by the falling in of Stock Exchange prices, the real situation had been obscured by the failure of wholesale prices to rise in conformity with normal "boom" practice. The wholesale commodity price index of the U.S. Bureau of Labour Statistics recorded average prices throughout 1928 that were 2.3 per cent. lower than in 1926. In July, 1929, at the peak of the production boom, prices were still 2 per cent. below the 1926 level, and showed singularly small variation from those ruling annually since 1920.

This stability of wholesale prices has been continuously called in evidence to support the view that trade activity in recent years was not more than normal. Thus, after the great Stock Market break of October 24th, when 12,894,000 shares changed hands, Mr Hoover stated: "The fundamental business of the country, that is production and distribution of commodities, is on a prosperous and sound basis. The best evidence is that, although production and consumption are at a high level, the average price of commodities as a whole has not increased. . . ." The facts were true, the deduction false. Actually, costs of production had been falling so sharply since 1923 that ruling prices were a sufficient incentive to induce manufacturers to double and treble their plants until they reached the position of being able to pour new goods into the market before a demand for them had been more than half-created. The difficulty of the manufacturers was not to produce enough goods to take advantage of rising prices—the usual phenomenon in trade booms—but to prevent their huge productive capacity from washing away existing and highly profitable prices.

Armed with such a wealth of productive weapons, manufacturers endeavoured to avoid defeat by falling prices by various strategies. They not only formed numerous price-fixing organisations; they bullied or cajoled the public into purchasing more and ever more goods on credit, by use of the instalment system. As a consequence, prices remained reasonably stable, and stocks did not accumulate—at least statistically, although they undoubtedly piled themselves up in the houses and garages of the consumers. Now that the consumer has lost confidence, the best weapon of the manufacturers has failed them; prices—in spite of conferences and agreements—have commenced to fall; and it is improbable that they have reached their nadir. Second quarter industrial reports are not expected to be better than the first quarter's, and the realisation of this was chiefly responsible for the success of the Whitsun raid of the bears on Wall Street. It is, however, still doubtful if many people understand in the United States the full significance of what the country is going through. Mr Hoover and the Federal Reserve authorities are discredited; certain Wall Street figures have lost their haloes; but, outside very narrow circles, it would not be admitted that the country is passing through the regular downswing of a trade cycle.

How far America will be forced to this conclusion will depend very largely on the results of the 1930 world harvests. Large crops this summer will entail a further fall in cotton and grain prices, and will place the farmer in a very serious situation. His difficulties may well precipitate banking troubles in the Middle West, where the tendency throughout the boom—when regular commercial and industrial customers found they could satisfy their requirements more economically by the sale of common stock—has been for the banks to involve themselves more and more in long-term advances to agriculture and in loans against Stock Exchange collateral. With the simultaneous collapse in commodity and security prices, many of these banks find themselves "frozen." The Stock Market collapse has forced back to them increasing numbers of their old customers, but they have been unable adequately to meet their needs. The result has been a sudden renewal of activity in the commercial bill market. The volume of commercial paper afloat, as reported by the 25 leading dealers, has increased from $285,000,000 in October, 1929, to $529,000,000 in March, 1930, and the main growth has occurred, as might have been expected, since December, 1929, when the outstanding amount of paper was $334,000,000. The appearance of a number of new but first-class names is reported, and the volume of bills outstanding in March was higher than in any month since May, 1928.

There need, however, be little anxiety about the banking situation as a whole. It is true that there is no sign of any appreciable reduction in Member Bank loans against Stock Exchange collateral. During 1929 these touched a peak of $8,746,000,000 (in November), but throughout the year as a whole they averaged $7,716,000,000. As against this they stood at May, 1930, at $8,259,000,000. This compares with loans of $5,943,000,000 in May, 1927, $6,968,000,000 in May, 1928, and $7,371,000,000 in May, 1929, and shows an increase of 12 per cent. over May, 1929, and of 39 per cent. over May, 1927. These figures are often used—and by very reputable, if slightly disgruntled authorities—to show that the banks are still excessively financing stock operations. But not all the money borrowed on Stock Exchange collateral goes into the market. Even if it did, the increase since 1927 in loans on such collateral is not necessarily excessive, since the total market value of stocks and bonds officially quoted on the New York Stock Exchange was still 60 per cent. higher in May, 1930, than in May, 1927.

But if the banking situation is generally sound, cheap credit and liquidity do not in themselves put an end to trade depressions. They are ladders up from the pit, but cripples do not climb easily. America must make up her mind to a longer period of convalescence than it anticipated in March and April. If cotton and grain crops are only moderate, her recovery may be easier. But should 1930 prove a first-class harvest year (as at present seems quite probable) the worst of her troubles may yet be ahead.

THE INDIAN FINANCIAL SYSTEM.

In addition to the more specifically political sections, which we summarised last week, Vol. I. of the Indian Commission's Report contains a survey of the public finances of India. This section begins by setting forth the salient features of the Indian situation, whose character at once influences and explains the general financial system which has developed. In the first place, India is predominantly a rural country, almost the whole of whose exports, except manufactured jute, consists of agricultural produce, whereas manufactured articles form the bulk of its imports. The villages, whose isolation is only now beginning to be modified by motor transport, are still largely self-sufficient economically, consuming what is grown in the vicinity; and "more than four-fifths" of the cultivated area of the country is dependent upon a precarious rainfall, whose uncertainty is "a serious and disturbing factor in all budgetary calculations." The standard of living attained by the mass of the population is extremely low; even taking the most optimistic of recent estimates, "the average income of India per head in 1922 was . . . less than £8, while the corresponding figure for Great Britain was £95"; and the use of averages serves to conceal "the great disparity in the incomes of different classes."

These factors "explain why Indian revenues are so largely derived from land and from taxes on consumption." Income tax, first introduced in 1860, but not now charged on agricultural income, has never been as important a source of revenue in India as in industrialised Western countries; the self-sufficiency of the villages has limited the scope of internal excises to a few articles, *e.g.*, salt, not locally available; and land revenue has consequently been by far the most important item in Indian finance until quite recent years, when it has been surpassed by the rapid growth of customs revenue.

Inherited from the Mogul Empire by the East India Company, the land revenue system, so far as Bengal, Bihar and Orissa are concerned, was the subject, in 1793, of a "permanent settlement," whereby the assessment of rental values and the proportion to be paid by the *zemindars*, whose original function was merely to collect the land revenue for the Government, were fixed in perpetuity. This "permanent settlement" had two consequences—(1) an "amazing growth of sub-infeudation," with sometimes "as many as 50 or more intermediate interests . . . between the *zemindars* at the top and the actual cultivator at the bottom"; and (2) the virtual immunity from direct taxation of present-day holders of urban site values. In the rest of India, however, the "settlements" of land revenue are subject to periodic revision, and except in a large part of the United Provinces, in the Punjab, and in the Central Provinces, where a *zemindar* class similarly "intervenes between the Government and the cultivating tenants," the Government "deals direct with the cultivators and discharges some of the functions of a landlord."

Against the background of these fundamental factors, the history of Indian public finance from 1858 onwards is largely a history of the gradual devolution to provincial Governments of power at first concentrated exclusively in the hands of the Governor-General in Council. In the last half of the nineteenth century, fresh functions were devolved on the provincial Governments, and grants were made to finance them; but gradually this system gave place to that of "divided heads of revenues," which means that a proportion of certain taxes was assigned to the provinces in which they were collected. But, "since no theoretical or objective standard of needs had ever been worked out, the allocations to the provinces were largely the result of history and tradition," and had no scientific fiscal basis.

The authors of the Montagu-Chelmsford Reforms considered that this system of "divided heads" involved an interference in provincial matters by the Centre; and, as they desired to give the provinces the greatest possible degree of fiscal autonomy, they proposed to sweep it away and substitute a complete allocation of sources of revenue to the provinces and the Centre respectively. Their suggestions were examined in detail by a Financial Relations Committee, under the chairmanship of Lord Meston, whose report was issued in 1920. The recommendations of this Committee, modified by a Joint Select Committee of Parliament, resulted in a set of financial Devolution Rules which govern the present distribution of the sources of revenue. The more important sources of provincial revenue are as follows:—

(1) Receipts accruing in respect of provincial subjects (which include irrigation, land revenue, forests, excise on alcoholic liquors and narcotics, stamps, and minerals).

(2) A share in the growth of revenue derived from income tax collected in the provinces, so far as that growth is attributable to an increase in the amount of income assessed.

(3) The proceeds of any taxes which may be lawfully imposed for provincial purposes.

The new taxes which the provinces may levy require sanction by the Governor-General in Council, except in the case of succession duties and taxes on betting, advertisements, amusements and specified luxuries. The sources of revenue of the Central Government are those appertaining to the Central services, including customs, income tax, salt, post and telegraphs, railways and the cultivation of opium. It was, however, recognised that this allocation would leave the Central Budget with a deficit. The scheme, therefore, provided for temporary contributions from the provinces to the Centre, based upon the increase in revenue which, it was anticipated, this new allocation of sources would yield to the various provinces.

The question also arose whether, under the dyarchical system introduced in the provinces, the provincial budget was to be framed as a whole or in separate portions relating to "reserved" and "transferred" subjects. The system ultimately embodied in the Act of 1919 provided that, failing agreement between the two sides of a provincial administration, a decision as to the allocation of revenue should rest with the Governor. In practice, the Commission note with satisfaction, agreement has invariably been reached without the necessity of the employment of the Governor's arbitrary powers.

Having thus described the evolution of India's existing fiscal system, the Report proceeds to examine its working since the Reforms of 1919. The keynote of their conclusions is the emphasis laid on financial stringency in the provinces:—

"It had been hoped that the substantial initial surpluses which the provinces were expected to get (according to the calculations on which the Meston scheme was based) would enable Ministers, when they took charge of transferred departments in 1920, to develop the 'nation-building' services entrusted to them without the imposition of additional taxation, at any rate in the earlier years. . . . Circumstances over which neither the Government of India nor the provincial Governments had any control rendered the realisation of these hopes impossible. India, like every other country that had taken part in the war, was at the time of the introduction of the Reforms passing through an acute financial crisis."

Consequently, during the first three years after the Reforms, both the Central and provincial Governments were compelled to struggle to achieve financial equilibrium by drastic economy as well as additional taxation, and the "Meston Settlement" became the subject of bitter criticism in the provinces. In 1924 the majority of the Muddiman Committee reported that "difficulties arising from finance have formed one of the main obstacles to the success of the Reforms." Fortunately, following the curtailment of Central expenditure (particularly retrenchment on the army) from 1922-23 onwards, and a substantial increase in the yields of customs, the financial position at the Centre improved; and under Sir Basil Blackett's *régime* the "provincial contributions" were gradually reduced, and in 1927-28 finally extinguished. This remission benefited certain provinces much more than others; indeed, some had been placed in so straitened a financial situation by the allocation of 1920 combined with the higher cost of government, that they had paid no contribution at all. The abolition of the contributions, in fact, revealed what the Committee describe as the defects of the Montagu-Chelmsford scheme of allocated revenues.

After a brief survey of the chief items of the Central and provincial budgets, the Report concludes with a brief survey of the control of Indian finance, first, by the legislatures of India, and, secondly, by the Secretary of State in Council.

"The system of control by Indian legislatures over finance, established by the Government of India Act, 1919, is, in its essential features, very similar to that of the British system on which it is so largely modelled."

The demands of the Government for supply in respect of certain services are presented annually to the legislatures, but such items as debt charges, army expenditure and certain other services are not subject to vote. There are attached to the Central and provincial legislatures Standing Financial Committees whose function is to scrutinise proposals for fresh expenditure, and whose influence is noted by the Commission as having been considerable. Moreover, the Commission observe, the legislatures can exercise indirectly some influence even over the non-votable expenditure through moving resolutions in connection with expenditure ancillary to it. On the other hand, the refusal of the Assembly to vote demands is not necessarily effective, as the Governor-General in Council has the right to certify expenditure as essential. In connection with the annual Finance Bill, the Commission remark that such an annual Act is not "constitutionally necessary."

Although control over expenditure on the transferred services definitely passed to the provincial legislatures in the Act of 1919 and the budgets of the provincial governments are not now submitted either to the Government of India or to the Secretary of State for approval before they are presented to the provincial legislatures, the regulation of provincial borrowing "provides the Secretary of State and the Central Government with an effective instrument of control by which the financial stability of the provinces is secured." Interest charges have priority over all other charges on provincial revenues save only the statutory contributions to the Central Government; and as regards provincial "reserved" subjects, although there has been a considerable relaxation of control in practice, the Secretary of State in Council still retains fairly wide statutory powers of interference.

Finally, the Secretary of State still maintains over the financial administration of the Central Government

" a control more rigid than over any other sphere of administration, except, perhaps, defence and foreign relations."

" Indeed, although there has been a general tendency for his control to be relaxed, the Government of India would, we think, contend that on some occasions in the past the directions of the Secretary of State on some financial questions have reduced the Government of India to the position of a subordinate agency. . . . The budget proposals, particularly those affecting taxation, are invariably submitted to him and his orders obtained before the Budget is presented to the Central Legislature."

In order that the Secretary of State's control may be effective, the Auditor General is logically appointed directly by the Secretary of State and is at once the official audit authority in India and an important part of the machinery through which the legislatures enforce regularity and economy in the administration of finance. He has thus a dual responsibility to the Secretary of State on the one hand, and to the Indian legislatures on the other, and is, in addition, responsible for the compilation of the accounts which the Secretary of State is required to lay before Parliament every year. This combination of duties, a relic of the centralised pre-1919 system, is described by the Commission as " anomalous."

Notes of the Week.

The Conservative Party Crisis.—Events this week have moved swiftly to a crisis within the Conservative Party. On Tuesday Lord Rothermere's paper, the *Daily Mail*, published, with strong editorial endorsement, a letter from Lord Beaverbrook appealing for subscriptions from Conservatives to raise a sum " sufficient to enable us to place a candidate in the field in every constituency where there is no one who supports Empire Free Trade." The explanation given for this *démarche* was that Mr Baldwin in his Whit Monday speech had himself supplied the arguments which would be employed during the taking of a Referendum to oppose taxation of food imports, and that it had " now become abundantly obvious to Empire Crusaders that they have little assistance to expect from members of the Conservative Front Bench." The consequences of this open denunciation by Lord Beaverbrook of the concordat, based on the promise of the Referendum, which had been reached between him and the Conservative leader, were twofold. On the one hand, the Executive Committee of the National Union of Conservative Associations met on Wednesday and passed a resolution recording its " astonishment and regret " at reading a letter " which seems to repudiate the agreement reached with Mr Baldwin and is calculated to injure that unity of action which alone can carry the policy of Empire economic unity." On the other hand, in North Norfolk, where a by-election is pending, the local Conservative Association promptly announced that its adopted candidate, while fighting on the official policy of the party and " loyally supporting " Mr Baldwin, will give " wholehearted support " to the Empire Crusade and will "accept it and all it implies." Lord Beaverbrook, however, was not disposed to be content with North Norfolk's " implied," though amusingly two-faced, message of revolt against Conservative headquarters and on Thursday the *Daily Mail* contained a further letter from his lordship frankly challenging the leadership of the Conservative front bench, whose " one desire is to return to office . . . not through any merits of their own policy but through the sins of the Socialists." The letter concluded by appealing for a special meeting of the National Union of Conservative Associations " in order to decide on the policy of the Conservative Party. Let that meeting . . . give Mr Baldwin the opportunity of putting to the test the grave issues which now confront his Party." Here, clearly, is war *à outrance*. The challenge can hardly be ignored, and the rank and file of the Party will presumably have to decide in the not distant future whether it is to be led by Mr Baldwin or by Lord Beaverbrook, with Lord Rothermere, we suppose, as *amicus curiæ*. For our part, we hold as little brief for Mr Baldwin's Safeguarding plus agricultural subsidies as we do for his rival's programme of food import taxes, and if the Conservative Party decides that Lord Beaverbrook's career and character (the *Daily Mail* emphasises notably his " proved gifts of energy, initiative, and intuition ") fit him better for leadership than Mr Baldwin's less " uncloistered " virtues, that is its own affair. But it is to be regretted that in a time of great moment and difficulty the official Opposition Party should be reduced by dissension to a condition of ineffectiveness, instead of performing its proper function of constructive criticism.

The New American Tariff.—The signature by President Hoover of the Hawley-Smoot Tariff Bill at Washington is the tragi-comic finale to one of the most amazing chapters in world tariff history, and it is one that Protectionist enthusiasts the world over would do well to study. The reason for tariff revision was a desire to restore a balance of protection which had been tilted to the disadvantage of the agriculturalist. But so soon as ever the tariff schedules were cast into the melting-pot of revision, log-rollers and politicians set to work stirring with all their might, and a measure which started with the single object of giving satisfaction to the farmer emerges as a full-fledged high tariff Act in which nearly 900 duties have been raised, some extravagantly. Such is the inevitable result of vested interests working through political influence, ending in signature by a President, antagonistic to the Bill, under compulsion of political necessities. No one, except the interests who fancy their own pockets may benefit, wanted the tariff; big business in the East is against it, the economists of America have condemned it in unison; the motor manufacturers have implored Mr Hoover to use his veto; and the fear of its economic consequences at home and abroad was mainly responsible for the heaviest slump of the year in Wall Street. Yet it is now the law of that land, and we have the spectacle of a great country, at a moment of severe trade depression, and faced with a growing necessity to export her manufactures, deliberately erecting barriers against trade with the rest of the world. Here, indeed, is a classic example of what happens to a country which once starts on the slope of protection. Protection, meant to be a good servant, becomes a dominant and costly master. President Hoover, we see, endeavours to coat the pill by suggesting that the " flexible " provisions will be used to mitigate the effects of the tariff, where it may be found to be irksome. This hope is surely illusory, as similar hopes held out in the past have proved to be. In the first two years of President Coolidge's administration a number of duties were raised, but only two reduced—namely, on the vital items of bran and live bobwhite quail. We are compelled to accept the view expressed some years ago by Dr Taussig that " the interests involved in tariff-making are so powerful, and can exert such influence on the party in power, that disinterested and non-partisan administration of the flexible provisions is a vain dream." If there is any comfort to be derived from this latest chapter in tariff folly, it is the belief that American eyes will be forcibly opened to the fact that they are faced by a *reductio ad absurdum*. Incidentally, every week brings new evidence of the realisation by American business leaders of the dangers of the fiscal path which America is treading. In a contribution to the Annals of the American Academy of Political and Social Science Mr Edward A. Filene, while disavowing Free Trade convictions, argues powerfully that a lowering of American tariffs is essential for the stimulation both of world trade in general and American exports in particular. *Magna est veritas et prevalebit.*

The Crisis in Egypt.—On Tuesday, June 17th, the Egyptian Prime Minister, Nahas Pasha, tendered his resignation to the King on the ground that he has been obstructed in his purpose of carrying legislation for safeguarding the maintenance of Constitutional Government. The news caused great excitement in the Chamber, which passed a unanimous vote of confidence in Nahas Pasha's Ministry. It was natural that the Leader of the Wafd should have introduced such legislation upon returning to office last year, since he was succeeding to a *régime* under which the Constitution had been arbitrarily suspended by Royal Decree. Indeed, there is no knowing how long this unconstitutional *régime* might have continued but for Mr Henderson's insistence, last year, that an Anglo-Egyptian agreement, if reached, must be ratified by Parliament in both countries. The Wafd may be grateful to the British Government for having given the unconstitutional *régime* in Egypt the push that sent it staggering to the ground; but it is obvious that a Constitution is neither stable nor healthy until it is secured by sanctions independent of any external influence or action. For this reason it was not only natural, but inevitable that Nahas Pasha should have taken measures for safeguarding the Constitution as soon as he returned to power; and it is interesting that King Fu'ad should now venture upon a course of obstruction. Does he reckon that the failure of the recent Anglo-Egyptian negotiations has weakened the Wafd's prestige? It will be remembered that he carried out his anti-constitutional *coup d'état* of 1928 after Nahas Pasha and his followers had rejected the draft treaty that had been negotiated by Sarawat Pasha with Sir Austen Chamberlain. Does King Fu'ad contemplate attempting the same manœuvre again? If he imagines that, because Nahas Pasha has failed to agree with Mr Henderson, British public opinion would look on complacently at the overthrow of Nahas and of Constitutional Government with him, we suggest that he is mistaken.

France and the Optional Clause.—On June 12 the Chamber of Deputies in Paris, by an overwhelming majority, voted two Bills: one for ratifying the General Act of Arbitration which was approved by the Assembly of the League of Nations during its Ninth Session in 1928, the other for ratifying the declaration of adherence to " the Optional Clause " of the Statute of the Permanent Court of International Justice—a declaration that was made on September 19 last by the French delegation to the Tenth Assembly at Geneva. This is a notable contribution to the organisation of peace, and a contribution which is all in line with French policy since the Armistice. Indeed, the French delegation to the Fifth Assembly in 1924 had already made a declaration of adherence to " the Optional Clause " after that Assembly had approved the Geneva Protocol; and this earlier declaration would assuredly have been ratified five years ago if the Geneva Protocol had not fallen through. We must admit that French policy is consistent, and that it aims, no less than British policy, at the organisation of peace—without prejudice to the question which line of policy is the more likely to realise the common object. In introducing the two Bills in the Chamber last week, Monsieur Briand made the inevitable declaration that the Peace Treaties were sacrosanct, and that arbitration was not to be made a pretext for reopening questions which these treaties purport to have settled once and for all. He also made the more interesting declaration that he intended to pursue his project for the federation of Europe. We believe that he will do so; and, what is more, we believe that—assuming the permanence of the post-war policy of France—any other French statesman who becomes responsible for the conduct of French foreign relations will sooner or later tread the same road. We believe this because, given the territorial terms of the Peace Treaties, there would appear to be only two possible alternatives in the long run. Either the post-war frontiers in Europe will have to be revised, or frontiers in general will have to be rendered so unimportant a factor in the life of Europe that it really ceases to matter very profoundly how or where they are drawn. Since France will never willingly consent to the former alternative, the logic of events should drive her more and more into becoming the advocate of the only other way out.

The Greco-Turkish Settlement.—Last week a Greco-Turkish agreement was signed at Angora in settlement of all the outstanding controversies over the execution of the Exchange of Populations Convention which was annexed to the Peace Treaty of Lausanne. Financially, it is Greece who pays—to the tune of £450,000, which is to be apportioned among Greeks of Turkish nationality domiciled in Constantinople, former Greek inhabitants of Turkey who have been forbidden to return, and Turks of Greek nationality in the Greek province of Western Thrace. But beyond doubt Greece can afford to pay, and politically the settlement is cheap at the price. Indeed, it may rank as one of the notable achievements of Monsieur Venizelos' statesmanship if it is followed up, as the Greek Prime Minister evidently intends, by a really good understanding between the two countries concerned. Monsieur Venizelos began his political career at Athens as a great peace minister; and though, from 1912 until his final return to power a few years ago, his energies were diverted and his activities interrupted by the *force majeure* of international events, it looks as though the last chapter of his extraordinary history will signalise him as a great peace minister once again. In the relations between Greece and Turkey the present agreement, completing the peace settlement of Lausanne, marks the end of an epoch in Near Eastern history which has lasted for about a century and a half. A hundred and fifty years ago the Greek and Turkish peoples were living geographically intermingled with one another and with half a dozen other nationalities throughout the then enormous extent of the Ottoman Empire. To-day the remnants of these two peoples are completely disentangled from one another and from their neighbours, and are each concentrated in a compact national state of their own. The process has demanded an appalling sacrifice of life, wealth and happiness; and he would be a bold Turk and a bold Greek who would venture, in retrospect, to contend that it has been worth the price. The best that can be said is that the long agony has at last been brought to an end, leaving on the map a Greek and a Turkish " successor state " of the Ottoman Empire which both fit into the international pattern of the modern world. The economic recovery of Greece from the wars of 1912-22—wars which culminated in a disaster that brought more than a million and a quarter refugees into a defeated and prostrated country—has been one of the remarkable events of the post-war period. Turkey, emerging victorious from the same ordeal, is to-day showing signs of economic distress. But at least this statesmanlike agreement between the two countries will promote political stability in a region where the tension between Italy and France makes such stability eminently desirable in the general interests of peace.

Results of the Belgrade Trial.—On Saturday, June 14th, the treason trial at Belgrade ended in the acquittal of Dr. Metchek, Colonel Begitch and six of their fellow-prisoners, and in the condemnation to various terms of imprisonment of the fifteen others, including Professor Jellashitch, who bears a name that is famous in the history of Croatian nationalism. Except for the professor, most of those condemned are young and obscure, and they appear on the whole to have been guilty of the offences with which they were charged, however excessive the penalties with which these offences are visited under the present *régime* may appear to be in the sight of foreign observers. The most striking point about the trial, however, is not the sentences passed, but the clear establishment, in the course of the proceedings, of the fact that the police at Zagreb had extracted false statements from a number of the prisoners under torture. There is no doubt about the torture. It was the kind of thing that was done, for the same purpose, in Western Europe in the 17th century; and the fact that at Zagreb, last year, it was done without the elaborate apparatus of racks and thumb-screws does not make it a bit less ugly. If the new map of Europe means retrogression from the twentieth to the seventeenth century, the unhappy peoples of the Continent may come to look back with regret to the Hapsburg, Hohenzollern and Romanov Empires. Bad as they were, they were not so bad as the conditions which the Belgrade treason trial has just revealed as part of the dispensation by which the pre-war empires have been replaced. It is true that there is another side to the

picture. These damning facts could not have come to light at the trial if the presiding judge had not been independent and courageous; and these are remarkable virtues in a special court working under a dictatorship. It is evident that the spirit of truth and justice and humanity, which is the spirit of civilization, is not altogether extinct in Jugoslavia. Unfortunately, it is a rare spark which only illuminates the darkness here and there. Until this spirit informs the life of the country, it will avail Jugoslavia nothing that, by right of conquest, she has become one of the " successor states " of the Hapsburg monarchy, for she will not have become a member of the comity of civilised nations. Within her expanded frontiers she will remain morally the self-same Balkan State that she was before.

The Tientsin Customs.—Nothing could demonstrate more clearly the miserable fact that China has relapsed into the old condition of civil war than the recrudescence of the problem of the Maritime Customs. The Maritime Customs are an All-China service, built up and still partly controlled by foreign officials in the Chinese Government's employment. And even when the service of the various foreign loans that are secured upon the Customs Revenue has been met, the surplus is the most substantial and certain source of income at a Chinese Government's disposal. When China is under the effective rule of one central Government no problem arises; and that was the situation during the latter part of the nineteenth century when the Maritime Customs Administration was being built up, and again—after the interregnum of 1911-1928—when the Kuomintang armies entered Peking and brought the whole of China inside the Great Wall under the authority of a new central Government at Nanking. On the other hand, during the foregoing period of civil war, the problem of allocating the Customs surplus was acute, as it threatens to become again to-day. There was a time, for instance, when the Kuomintang Government, then established at Canton, was in the same position towards the now defunct central Government at Peking as Yen Hsi-shen and Fêng Yü-hsiang are in to-day towards the Kuomintang Government—now become the All-China Central Government at Nanking. A local *de facto* Government which has revolted against the central Government of the moment in the hope of bringing it to the ground and eventually reigning over all China in its stead, finds the local representatives of the Maritime Customs Service not only still collecting the Customs Revenues in the local ports, but transmitting the surplus to the local *de facto* Government's enemies at the centre. Thus, in 1926, the Ankuochün Central Government at Peking was fighting the Kuomintang Government at Canton with sinews of war that were partly remitted from the Customs duties collected in Canton harbour and transmitted to Peking. And thus, again, to-day the Kuomintang Central Government at Nanking has been fighting Yen Hsi-shen with revenues partly drawn from the Customs receipts of Tientsin, within Yen's *de facto* domain, and transmitted to Shanghai. Yen seems to have made the reasonable proposal that the local representatives of the Maritime Customs at Tientsin should continue to do their work, but that the revenues which they collected should be deposited in some neutral safe custody pending the outcome of the present conflict between Yen and Nanking. Nanking, however, has rejected this proposal, whereupon Yen has appointed at Tientsin a local Customs Commissioner of his own. Thus the Chinese Civil War again threatens to break up the most valuable and efficient administrative service of the Chinese State.

The Completion of the Dawes Plan.—The final report of the Agent-General for Reparation Payments contains a summary of the history of the Dawes Plan from its inception, and a wealth of information about economic conditions in Germany at the moment of entering upon the execution of the Young Plan. The transfers made under the Dawes Plan and their distribution among the creditor Powers are shown below:—

TRANSFERS UNDER THE DAWES PLAN, SEPTEMBER 1, 1924—MAY 17, 1930.

(In thousands of gold marks).

Transfers to Creditor Powers:—	
France	3,939,183
Great Britain	1,654,410
Italy	555,130
Belgium	527,499
Jugoslavia	275,160
U.S.A.	300,431
Roumania	67,244
Japan	45,078
Portugal	44,895
Greece	23,734
Poland	1,417
Total	7,434,181
Service of German External Loan, 1924	439,831
Other prior charges, principally costs of Inter Allied Commissions	74,977
Total transfers	7,948,989

As for the economic conditions in which Germany enters upon the Young Plan, Mr Parker Gilbert observes that the mark, during the last twelve months, has been one of the strongest currencies in the world; that the Reichsbank is in a very strong position; that Germany has succeeded in restoring equilibrium in her foreign trade, and, what is more important, has done so almost entirely by increasing exports rather than by diminishing imports; and that the physical volume of production in 1929 exceeded that even of the two preceding years, though, as the working population is at the moment increasing at the rate of 1½ per cent. per annum, a more rapid increase will be necessary if the unemployment problem is to be solved. Unfortunately, however, in addition to the disturbing forces which exist in the present depressed state of business throughout the world, Germany's economy has been subject to increasing pressure from the growing difficulties of public finance. The revenue, Mr Gilbert repeatedly insists, is adequate to cover all legitimate expenditure and to leave a margin for contingencies, but public expenditure has tended more and more to exceed, not only revenue, but even the possibilities of borrowing. The root causes of the trouble are: failure to reform the financial arrangements between the Reich, the States, and the communes, and to rationalise public administration; the practice of adopting new measures without previous examination of their financial consequences; and, lastly, the remarkable obscurity in which the Budget is wrapped and which effectively protects it from intelligent public scrutiny. That Germany has now both the means and the incentive to put her house thoroughly in order is repeatedly emphasised. She has achieved this in her foreign trade, in her currency, and to a large extent in her principal industries; and in this fact lies the best hope that reform in her public finance will not be too long delayed.

Our Investments Overseas.—Economists and others have reason to be grateful to Sir Robert Kindersley for his enquiries into British capital overseas, the latest results of which are published in the *Economic Journal* for June. Sir Robert covers a more limited field than in his previous investigation, one of his reasons being the difficulty of estimating that section of British capital abroad which takes the form of holdings in foreign and colonial companies. In the present paper Sir Robert deals only with the bonds of foreign and colonial Governments and local authorities; as regards British companies operating abroad, he has utilised the results published in the *Economist* of March 1st and March 22nd; and he has left foreign and colonial companies entirely on one side for the time being. It may be noted here that the *Economist* has itself been pursuing enquiries into the latter group of overseas investments, and when the results are published shortly it is believed that, though far from being as complete as one would have wished, they will go far to remedy the deficiency which Sir Robert Kindersley notes. The article under review shows about £1,400 million of British capital invested in the stocks of foreign and imperial governments and corporations at the end of 1928, the interest paid thereon in 1928 totalling £61.9 million. This gives an average rate of interest of 4.4 per cent., which illustrates the importance of distinguishing nominal and market valuations of capital, since the yield obtainable on first-class Dominion or Foreign Government bonds is over 5 per cent. The market value of the nominal £1,400 million can scarcely be more than £1,200 million, and is probably less. As in his previous enquiry, Sir Robert has been chiefly concerned with current repayments of capital, which, in respect of the £1,400 million, he computes at £15.6 million in 1928, raised to £22 million by the addition of capital redemptions in the field covered by the published *Economist* investigation. At least, this amount must be deducted from the total of new investments in overseas securities if we are to arrive at a figure of national savings destined for abroad, but the gross figure of new issues for the Empire and foreign countries, which Sir Robert uses, is itself too large by the discounts and costs of issue which remain in the country and by foreign participation in new issues, and too small by the net increase of British investments in existing securities, an item of considerable and growing importance. There are thus a number of points on which further knowledge is needed before we can get a complete picture of our foreign investments, or an accurate analysis of their ebb and flow. Sir Robert has, however, done great service in making this study of some of the most important items.

The Foreign Trade Decline.—Last week's *Economist* contained the preliminary figures of Overseas Trade in May, as published in the *Board of Trade Journal*. The detailed returns, which are now available, confirm the broad impression given by the preliminary figures that overseas trade was still on the down-grade. The most that can be said is that the May figures are better than those for April, which were affected by the Easter holidays, and that they are up to the average for 1930, which is hardly an encouraging standard by which to judge them. Details of our export trade, which are given in the following table, indicate plainly the ground that has been lost in comparison with preceding years.

SOME LEADING EXPORTS.

(Quantity.)

		First Five Months.		
		1928.	1929.	1930.
Coal	tons	20,232,049	23,210,341	24,491,358
Railway material	"	299,097	215,772	193,380
Total of iron and steel	"	1,761,863	1,933,982	1,546,571
Textile machinery	"	50,564	55,867	42,175
Total machinery	"	238,971	243,319	216,918
Cotton yarns	lbs.	72,708,900	73,322,600	62,038,600
Cotton piece-goods	sq. yds.	1,654,677,300	1,710,247,400	1,329,184,500
Wool tops	centals	159,360	145,279	114,470
Woollen tissues	sq. yds.	54,038,400	45,208,000	35,875,700
Worsted tissues	"	14,215,300	20,803,900	16,021,700
Linen piece-goods	"	32,274,400	31,431,500	30,753,800
Jute piece-goods	"	77,693,000	73,185,000	52,397,700
Boots and shoes	doz. prs.	455,218	381,397	401,230
Leather	cwts.	187,432	139,646	125,697
Locomotives	tons	19,307	15,977	20,383
Motor-cars and chassis	number	13,034	18,120	14,356

Among the chief export industries, coal alone shows improvement, and even this fact must be qualified by the knowledge that if May be considered alone, the 1930 figures were 272,000 tons below those of the preceding year. The textile trades and heavy industries continue to show up very badly, and the small improvement in locomotives and boots and shoes are far from being an adequate compensation for those retrograde movements. It is clear that the corner has yet to be turned.

Iron and Steel Production in May.—Production of iron and steel continues to decline. In the case of pig iron the number of blast furnaces in operation at the end of May was ten less than at the beginning and numbered only 141, which is less than at any time since February, 1929. Production of pig iron fell from 619,600 tons in April to 614,500 tons in May, a reduction of 4 per cent. when allowance is made for the smaller number of days. April production had also been 4 per cent. less than the previous month. Steel production declined from 696,100 tons in April to 692,800 tons in May, but this is not the true measure of the decline, since April was affected by the Easter holidays. The output of 692,800 tons in May compares with 826,100 tons in March and 843,800 tons in May of last year. Imports of iron and steel amounted to 233,700 tons, a slight decline compared with April, and exports rose from 268,000 tons in April to 294,700 tons in May. In May, 1929, exports totalled 442,800 tons. In spite of the declining demand, prices have been fairly well held and the Board of Trade price index number for May was 114.0 (1913=100), compared with 114.3 in April and 114.5 in May, 1929. The stability of the iron and steel price index is in contrast with the " all commodities " index which declined from 123.7 in April to 122.0 in May, compared with 135.8 in May, 1929. The decline in iron and steel production is general among all iron and steel-producing countries, as will be seen from the following table:—

(In thousand tons).

	Pig Iron.		Steel.	
	April, 1929.	April, 1930.	April, 1929.	April, 1930.
U.K.	611·3	619·6	808·6	696·1
Germany	1,094·7	887·3	1,394·2	1,017·2
France	857·4	845·6	797·3	778·6
Belgium	330·9	308·4	336·6	307·7
Luxemburg	231·4	217·8	222·6	195·2
U.S.A.	3,662·6	3,181·9	4,938·0	4,143·2
	6,788·3	6,060·6	8,497·3	7,138·0

Production figures are not yet available in all cases for May, but it will be seen from the above table that, compared with April, 1929, production of pig iron and steel in April, 1930, showed falls of 10 per cent. and 16 per cent. respectively.

Cotton Looms per Weaver.—Our Manchester correspondent writes:—Lancashire cotton manufacturers are making a determined effort to remove the restrictions which now exist with regard to the number of looms worked by individual weavers. It is significant that the trade unions do not place any limitation on the number of automatic looms worked by a single weaver, but at present there is a recognised custom that one weaver shall not work more than four ordinary looms. For the purpose of considering the situation, a joint conference was held in Manchester on Tuesday last between representatives of the Cotton Spinners' and Manufacturers' Association and the Operative Weavers' Amalgamation. On behalf of the employers an application was made that the system of running more looms to a weaver should be extended to all districts in the county. After a discussion, the representatives of the workpeople said that they would place the matter before the monthly meeting of their General Council at the end of this week, and their considered reply would be given in writing. Mr Thomas Ashurst, the Secretary of the Cotton Spinners' and Manufacturers' Association, has stated that the employers are asking for freedom in this matter because they regard it as necessary for the continuance of the industry. The cost of production must be lowered if employers are to compete successfully in the markets of the world. It has been officially stated that the substitution of the eight-loom for the four-loom system would result in a saving of about 18½ per cent. in the wages bill of the employers. It is recognised that this change would entail some displacement of labour, but the alteration would be gradual, and quite a number of firms might not find it advantageous to make any change whatever. Unemployment, of course, in the weaving section of the Lancashire cotton industry is on a large scale, and it is estimated that out of 700,000 looms in Lancashire there are fewer than 400,000 running to-day.

Employment and the Cost of Living in May.—According to *The Ministry of Labour Gazette*, there was a further increase in unemployment during May. Among the workpeople insured against unemployment in Great Britain and Northern Ireland the percentage unemployed in all indus-

tries at May 26th was 15.3. This compares with 14.6 per cent. at April 28th and 9.7 per cent. at May 27, 1929. The estimated numbers of insured persons in work at these dates were approximately 9,724,000, 9,799,000 and 10,260,000 respectively. The number of those registered as wholly unemployed (with the exception of those normally in casual employment) at the end of May was 1,164,468. This was 6,359 more than a month ago, and 384,783 more than at the end of May last year. Those temporarily without employment amounted to 589,621 at May 26th, as compared with 447,244 at the end of April, and 273,469 a year ago. With regard to those in casual employment, 95,962 were unemployed at the end of May, showing an increase of 2,929 over the corresponding figure for last month, and of 16,835 over that recorded at the end of May, 1929. The cost of living at the end of May, as recorded by the Ministry of Labour's index number, was 54 per cent. above that of July, 1914, and compares with 55 per cent. at the end of April and 60 per cent. a year ago. For food alone the corresponding figures were 38 per cent., 40 per cent. and 47 per cent. respectively.

Test Work for the Able-Bodied.—The Ministry of Health recently set its inspectorate to make a special inquiry into the various forms of test work in application in different unions, with special reference to the effect of test work on employability, the opportunities afforded for finding independent work, and the question of hardship or degradation. The result is a White Paper* which makes interesting and, on the whole, encouraging reading. Out of 631 unions, 277 had no able-bodied men in receipt of outdoor relief, 146 had able-bodied men in receipt of outdoor relief but did not apply test work, and 208 had some form of test work. In 13 of these latter the men relieved were employed for wages by the local authority, and the amount of their relief was paid to the authority by the Guardians. Of a round total of 70,000 able-bodied men receiving out-relief, about 41 per cent. were in unions in which test work was in operation and about 12 per cent. were employed on test work. This work was of a very varied nature, ranging from boot-making and mat-making to wood-chopping, gardening, road-making and scavenging. There is a general consensus of opinion that unskilled work is preferable, as every man has a fair chance of performing it satisfactorily, and most of the men like it best. The inspectors almost all found that the work was having a good effect in maintaining the morale, physical fitness and general employability of the recipients of relief, and, on the whole, the men engaged on it seemed to share that view, many of them expressing a preference for test work to idleness. The reports were unanimous in declaring that test work involved neither hardship nor degradation, but they suggested that in some instances the arrangements for allowing time off for the quest of permanent work might be improved. Training classes were found to vary greatly in popularity, and a comparison of the reports from different districts suggests that everything depends upon their administration; the principle appears to be thoroughly sound. In Sheffield, for example, nearly 80 per cent. of the men sent to the centres were restored to ordinary employment in ten months, and in the opinion of the inspectors, very few of them would have been so restored without the training scheme. The impression left by the Report is that it is to be regretted that not more than 12 per cent. of the able-bodied recipients of out-relief are subjected to a system which seems to redound greatly to the advantage of those who come under it. No doubt one obstacle to its extension is the great difficulty, referred to in the Report, of finding enough suitable work, but the ingenuity in overcoming this which has been displayed in some districts might with advantage be more widely extended.

* "Poor Law: Report of a Special Inquiry into various forms of Test work." Cmd. 3585. H.M. Stationery Office. 9d. net.

Agriculture in 1929.—The statistics recently published by the Ministry of Agriculture* show that the decline in the acreage under crops was less in 1929 than in 1928, and was partly offset by the exceptionally favourable harvest. The total acreage under crops and grass in England and Wales was 25,437,679 acres in 1929, compared with 25,505,252 acres in 1928. Of this, 9,947,758 acres were arable; 4,695,863 acres permanent grass for hay, and 10,794,058 acres permanent grass not for hay. Rough grazings increased from 5,177,958 acres in 1928 to 5,282,884 acres in 1929. Details of the principal crops are given below:—

ACREAGE, YIELD AND TOTAL PRODUCTION OF PRINCIPAL CROPS IN ENGLAND AND WALES, 1929.

	Area.	Yield per Acre.	Total Produce.	Average Yield, 1919–28.
	Thousand Acres.	Bushels.	Thousand Quarters.	Bushels.
Wheat	1,330	34·0	5,650	31·4
Barley	1,120	36·0	5,047	31·5
Oats	1,854	45·3	10,499	39·9
Beans	144	26·1	472	28·2
Peas	79	28·5	281	25·0
Potatoes	519	6·9†	3,588†	6·1†
Turnips and swedes	698	11·9†	8,303†	12·5†
Mangold	299	19·0†	5,687†	18·8†
Hay (from clover, etc.)	1,524	22·9§	1,748†	27·8§
Hay (from permanent grass)	4,696	15·3§	3,588†	20·3§

† Thousand tons. ‡ Tons. § Cwt.

This shows a remarkable increase over the ten years' average in the yield of all crops except beans, turnips and hay. On the other hand, the arable area diminished throughout England, and as in the two preceding years the decline was most marked in the South Eastern and the two Midland divisions. In Wales there was a net increase in the arable area. The decline in the principal classes of livestock continued, but fowls and turkeys increased by 7 and 17 per cent. respectively. The output of meat in England and Wales for the year ending May, 1929, at 17,804,000 cwt., was 403,000 cwt. more than in the preceding year, while the output of milk, at 1,131 million gallons was 16 million gallons less. There was a further reduction in the number of male agricultural workers, and whereas in 1928 the reduction was in respect of casual workers, in 1929 it was in respect of regular employers. The estimated value of the produce sold off farms in recent years is shown in the table below:—

ESTIMATED VALUE OF PRODUCE SOLD OFF FARMS IN ENGLAND AND WALES.

(000's omitted.)

	1924–25.	1925–26.	1926–27.	1927–28.	1928–29.
	£	£	£	£	£
Livestock and livestock products	154,140	153,430	143,990	149,000	154,320
Farm crops	56,650	46,080	47,840	47,720	43,120
Fruit, vegetables, flowers, etc.	24,270	24,630	20,860	23,860	23,930
Total	235,060	224,140	212,690	220,580	221,370

Unfortunately the data do not exist for estimating the annual changes in farmers' costs, without which the above figures do not necessarily provide any indication of the variations in net receipts. It is noteworthy that sales of farm crops only contributed 19 per cent. of the total last year, against 24 per cent. in 1924-25. The only farm crop whose value shows an increase during the period is that of sugar beet, sales of which amounted to £3,560,000, against £480,000 in the earlier year.

The Slump in Japan.—According to Mitsui Gomei Kaisha's half-yearly analysis of profits of Japanese joint-stock banks and industrial joint-stock undertakings, both banking and industrial earnings are falling sharply, writes our Tokyo correspondent. The aggregate net profit of 250 banks for the second half-year of 1929 shows a substantial decline of 7.8 million yen at 80,982,000 yen, as against 88,787,000 yen for the first half of that year. The decreased banking earnings are mainly ascribable to the heavy fall in the demand for credit during the period due to the anticipation of a return to gold. On the other hand, net profits of 1,000 industrial companies totalled 261,502,000 yen, representing a marked decline of 41.8 million yen against those earned by the same concerns in the first half of 1929. The most noteworthy decrease is that of the textile group, which is principally accounted for by the heavy losses of a few large woollen mills, although the net earnings of cotton mills in general were lower. A further shrinkage in the value of the foreign trade took place in April. The April returns show that, as compared with the corresponding month of last year, imports fell in value by 64.9 million yen, or 30.4 per cent., and exports by 59.2 millions, or 33.5 per cent., both being the lowest April figures since 1921. Such a sharp contraction is obviously more than a mere matter of prices. Though there are almost general contractions throughout the whole list, the most noteworthy declines on the import side are those of raw cotton (−31 millions), raw wool (−5.5 millions), and iron and steel (−4.8 millions), while on the export side notable declines are recorded by raw silk (−39.1 millions), cotton goods, (−13.5 millions), and silk manufactures (−2.7 millions). The adverse balance of trade, excluding the gold movement, totalled 31.2 millions, or 5.6 millions lower than in April, 1929. Gold efflux has slowed down. Net gold exports during April amounted to 22.5 millions, bringing up the total withdrawal since the removal of the embargo to 199 millions. Wholesale prices continue to fall with not much diminished severity. The Bank of Japan's index number for April registered a further drop of 1.6 per cent. on the month, and of 14.3 per cent. in comparison with April, 1929. Out of 56 products, thirty declined, ten advanced, and sixteen remained unchanged. The heavy declines occurred in copper, coal, raw silk and wheat, while notable rises are recorded by sugar and cotton yarn after their consecutive falls of many months. A severer depression prevailed in the stock market throughout last month. The aggregate value of shares listed on the Tokyo Stock Exchange was down by 9.6 per cent. on the month, and by 34.6 per cent. as compared with a year ago.

* "Agricultural Statistics, 1929." Vol. LXIV. Part I. H.M. Stationery Office. 1s. 3d.

Guardian Assurance—A Correction.—We regret that an injustice was inadvertently done to this company in our recent review of the accounts for 1929 (*Economist*, June 7, 1930, p. 1274). Although the report did not specifically mention this important fact, it appears that for the first time the figures relating to a former subsidiary, the "Guardian Eastern," have been incorporated in the accounts of the "Guardian." Accordingly, instead of a loss of £1,134 in the Fire Department there was, in fact, a profit of £23,677, and the true profit in the Accident and General Department works out at £46,819 instead of £39,828. The net trading result of the year, allowing for items debited to profit and loss account, is thus a loss of £60,774 instead of £92,576 as previously stated.

Share Market — Dividends — Industry — Railroad Traffic — Money Market — Tariff.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 11.

AFTER a month of dullness and a downward drift in share prices, the market this week again broke badly. At the moment the downward movement appears temporarily to be checked, and an extensive short interest is covering; but the fresh break in shares was a reflection of increasing pessimism over the business prospect. Hopes of any real improvement this summer have been definitely abandoned, and have been supplanted by fears that even the autumn will turn out a disappointment.

So far, no signs of an upward turn are visible, and the usual summer recession promises to make itself felt more than ever. Retail price cutting is becoming more pronounced, but it is doubtful whether any real increase has recently occurred in public purchasing power. Moreover, the urge to spend money freely has subsided greatly, and the weakness of stocks, though it affects the public directly much less than at any previous time in recent years, is, nevertheless, upsetting because of the implications of a prolonged business depression. So much of the blame for slack trade since last autumn has been placed, by high Government officials and others, on the market crash of the autumn that the prestige of the share market as a barometer has risen sharply.

It is argued, on the other side, that Stock Exchange prices are still too high with regard to actual corporation earnings; that the early May decline and the recent break have done little more than wipe out the February-March rise, which itself was unjustified by business conditions; and that if the market has done any forecasting, it has been of a bullish nature.

Dividend reductions continue. Since the beginning of the year, 257 corporations have eliminated or reduced payments on 264 separate issues of preferred or common shares. Payment of extras, increases in regular rates and dividend inaugurations have exceeded in number the reductions, but in nearly all cases the higher disbursements reflected the prosperity of 1929 or previous years Reductions have been widespread among copper companies, but that group has not taken the lead. By far the largest proportion of cuts has come among the investment trust and financing companies. This is not surprising, since dividend payments by these companies last year obviously were not based on assured earning power, but rather indicated the hope of managements that it would always be possible to make large profits in speculation.

One of the chief disappointments of the business year is the failure of the building industry to improve. Expenditure for public works and certain other large construction projects have risen, but residential and general building is still dormant. Awards for new building and engineering projects in the 37 States east of the Rocky Mountains, according to the F. W. Dodge Corporation, were 5 per cent. lower in May, and the decline from a year ago amounted to 22 per cent. For the five months there has been a falling off of 18 per cent. Permits to build, as compiled by Bradstreet's, issued in all cities of the country last month, were 2.1 per cent. under April and 33 per cent. less than a year ago. The decline in permits for the five months is 53 per cent. The poor showing of permits as against contracts let is due largely to the fact that the former do not include large engineering projects outside the cities and much of the public building construction.

Railroad traffic also is still slack. Holidays reduced car loadings sharply for the last week in May, but for the past several months the freight carried has been the smallest since 1924. The record of earnings for April and the first four months of the year is now complete. The net income of the first-class roads fell 33.8 per cent. in April, the loss for the four months was 32.5 per cent., and earnings were at the rate of only 3.56 per cent. on property investment, compared with 5.39 per cent. last year. The motor industry is entering a season of declining sales, but much has been done to clear away the excessive stocks of used cars in the past few months. Sporadic price cutting is noted, but no general declines have yet taken place. Production in May is estimated by the National Automobile Chamber of Commerce to have been 7 per cent. under that of April and 32 per cent. below that of May last year, while the decline for the first five months was 31 per cent.

Seasonal recession is lowering the operating rate of the steel mills, but the industry continues to be the most encouraging of the basic lines. Orders for structural projects are now growing, and the pipe mills are active, thanks to the expansion of natural gas distribution. The average operating rate for the trade is about 69 per cent., as against 72 per cent. last week. At the end of May the unfilled orders of the United States Steel Corporation had fallen 294,993 tons, which reflects weakness in price

rather than a drop in actual consumption. The average decline for the month in the past several years has been around 400,000 tons. Steel ingot output for all companies was at the daily rate of 149,066 tons in May, compared with 159,764 in April and 195,790 last year. Operations were 74.4 per cent. of capacity, against 78 per cent. in April and 99.8 per cent. last year. Pig iron output fell 1.7 per cent. from April and 14.5 per cent. from a year ago.

Principally on account of the state of trade, money is becoming easier than ever. At the end of this week and early next week the market will have the additional credit to be pumped in by Treasury financing. Approximately $550,000,000 maturing certificates will be paid off, and income tax collections for the second quarter will be made. The bulk of the maturing issue will be provided for by a $400,000,000 note offer, to which subscriptions of $2,397,000,000 have been announced by the Secretary of the Treasury. The coupon rate of 2⅞ per cent. compares with 4⅞ per cent. on the maturing certificates. The new issue is a one-year maturity, and the heavy over-subscription is due to the liberality of the rate in view of the present credit market and the tax-free features of the issue.

The new tariff pleases nobody. Farm rates are exceptionally high, but the farming regions realise that any advantages which might come to them will be offset by the steep rise in duties on manufactured products. The Eastern manufacturing interests, on the other hand, are divided on the wisdom of increased duties, fearing reprisals abroad. Motor manufacturers have been especially antagonistic to the Bill.

FRANCE.

Treasury Surplus — Bourse Stagnation — Production Indices — Proposed Protection for Investors — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, June 18.

THE incomprehensible lack of system which still characterises French public accounts has again been demonstrated this week in the course of the examination, by the Finance Commission of the Chamber, of the Government's proposals for developing the economic equipment of the nation. It is proposed to meet part of the cost of the plan by drawing to the extent of 5,000,000,000 francs on the surplus balances in the hands of the Treasury. These surpluses were declared a few months ago by M. Chéron, then Finance Minister, to total between 19,000,000,000 francs and 20,000,000,000 francs. The revelation of the figure proved in every way regrettable, for since then "every demagogic appetite in the Chamber," as one critic has expressed it, has been sharpened to an extent that has resulted in a large proportion of the money having been voted, largely in spite of the protests of the Government, to meet all kinds of expenditure not provided for under the Budget.

When the question of allocating the proposed 5,000 millions to economic development came up in the Finance Commission, however, the statement of M. de Chappedelaine, the Commission's *rapporteur*, to the effect that it would not now be possible to take such a large sum from the Treasury's balances, and that it would be necessary to have recourse to an issue of Treasury Bonds, was received with a gasp of surprise. The *Rapporteur's* figures had been drawn from official sources; nevertheless, the unbelieving members of the Commission decided to hear the Finance Minister himself on the subject. There was renewed surprise when M. Reynaud, figures in hand, declared that the Treasury's available resources actually amounted to 12,948,000,000 francs, of which 7,075,000,000 francs must be regarded as earmarked for expenditure that is certain to arise, and should therefore be excluded from the total actually available. This consequently left 5,873,000,000 francs available to meet the 5,000 million required; or, if the "permanent deposit" of 408,000,000 francs required in respect of the International Settlements Bank were deducted, 5,465,000,000 francs. Subsequent discussion elicited that this sum included the credit balance of the Treasury's *current account* at the bank, which amounted on June 6 to 3,180,000,000 francs (or slightly less than the 3,200,000,000 francs which the bank was required to advance to the Treasury as a "loan without interest," under the Stabilisation Act, to furnish it with a fresh start). Eventually, after five successive votes, the Commission decided, by majorities due to the abstention of the Socialist members, that the available balance was "over 5,000,000,000 francs." The Socialists, in a *communiqué* issued to explain their reasons for abstention, insisted that, owing to the serious divergences between the Finance Minister's verbal statements and those contained in his Note of May 27th, "it is impossible, at the present moment, to know the amounts of the Treasury's available balances and of its needs."

The present deplorably incoherent and even critical situation of the Bourse is the outstanding subject of attention in the political and business world. With the exception of Rentes, which, for various reasons—of which the chief is their freedom from taxation—have remained firm throughout, every department of the Bourse has been almost stagnant, with steadily falling quotations, and an almost total abstention by the ordinary investing public, for many weeks past. Many reasons are advanced in explanation, but none appears to the impartial observer to be adequate. The Wall Street crash last October, which is largely blamed, would perhaps appear to be a plausible explanation but for the fact that there has never been any real liaison between this market and New York. The number of American stocks quoted here is microscopically small, and the vast majority of transactions between Paris and New York consists of dealings carried through by Americans resident or visiting here, rather than by native French operators. Paris is essentially an investment market, rather than a speculative one, and there is every indication that it will be many years before the French will emerge sufficiently from their existing provincialism to constitute a factor that will be anything more than negligible, from the Wall Street point of view. Neither can the drop in raw material prices be held to have had any serious influence on the Paris Bourse. Industrial stocks have certainly been depleted, in view of the uncertain outlook, but the general slump which has occurred in the United States and most other countries has had only a negligible repercussion here.

Production figures for April, which have just been announced, disclose higher output in several cases, and no serious decline. The general index figure (1913=100) for production in April is 144, or the same as in March and in December, against a monthly average of 139 in 1929 and 127 in 1928. The leather, paper and textile index figures are all slightly higher. Metallurgy has dropped three points on the month to 129, which was the average figure in 1929. Motor-car construction stands at 685 (against 686 in March, an average of 657 in 1929 and of 610 in 1928), the rubber industry at 908 (against 913 in March, 861 throughout 1929 and 587 in 1928), and engineering at 161 (unchanged; against 157 in 1929 and 138 in 1928). Indirect taxation is coming in more than satisfactorily, according to a statement made this week by the Minister of Commerce, to the effect that the recoveries in May were 300,000,000 francs more than Budget estimates for the month. The index figure representing Bourse quotations of 300 French issues of variable yield in May is returned as 462 (base: 100 in 1913), against 486 in April, 496 in January, and an average of 507 throughout 1929 and of 415 in 1928. The average interest offered on bond issues in May was 4.70 per cent., against 4.85 per cent. in March and April, 5.36 per cent. throughout 1929 and 6.3 per cent. in 1928. The average return from issues with variable yield in May was 3.11 per cent., against 2.96 per cent. in April, 2.70 per cent. in 1929 and 2.72 per cent. in 1928. Money rates remain incredibly low. The rate paid for carrying over money at last Monday's settlement in the Parquet was ⅜ per cent. per annum. (a low level never previously known here), against ¾ per cent. a fortnight before. The amount available which was unable

to find employment, even at this rate, was reported to be "several millions."

It seems, evident, therefore, from the above figures, that the curious doctrine which is being so zealously propagated here to the effect that trade has slowed down because Bourse quotations have fallen off, has no foundation in fact. The real key to the present exceptional stagnation of the Paris Bourse is to be found in the long list of "measures for the better protection of the investor" which, so the Finance Minister announced a day or two ago, are to be pushed forward in the near future, although he was careful not to emphasise the evils which these measures will be designed to remedy. The mere recital of this list suggests plainly where the French investor's shoe is pinching him to the extent of causing him to keep away from the Bourse.

Among the measures contemplated is one for dealing with the manipulation by directors of plural voting shares (the abuse of which has, in hundreds of cases during the past few years, taken all control over his money entirely out of the hands of the ordinary shareholder); the reform of the system of *démarchage* (or what is known in England as "share-pushing"); the reform of the law concerning financial publicity (to render it illegal, for instance, for company notices of vital importance to the shareholder to be limited to obscure journals which he will certainly never see); for strengthening control over auditors and directors; for fostering the development of holding companies (ostensibly "to enable capitalists to distribute their risks," but really to furnish the ignorant investor with skilled advice and greater protection); and for assuring proper security behind mortgage bond issues. As a first step, the Government's Bill for purging the banking profession of persons who have undergone condemnation by the Courts has this week been approved by the Senate, and is to come into effect forthwith.

The wholesale index price for the end of May, as published by the Statistique Générale, is 553, or eight points lower than that for April, 12 below that for March, 35 below December, and 81 below the mean for 1928. The May figure works out in gold as 112 (on the basis of 100 in 1914), as compared with April figures of 124 for Great Britain, 141 for the United States, 127 for Germany, 117 for Italy, and 112 for Belgium. The detailed figures are as follows:—

	Dec., 1929.	End of April.	May.
General index figure	588	560	533
French products.....	620	595	590
Imported products.....	530	495	485
Foodstuffs	546	523	523
Raw materials	625	592	579

The most striking figures, perhaps, are those which indicate that, whereas in 1928 wholesale prices of imported commodities averaged 41 points higher than those of products of French origin, French commodities at the end of May were 105 points higher than imported goods. The index of retail prices in Paris is 590 for May.

GERMANY.

Opposition to Proposed Taxation — Foreign Trade — Reparations Loan.

BERLIN, June 17.

THE storm of protests against Herr Moldenhauer's plan to collect an "emergency offering" from all civil servants and salaried private employees with long-term contracts is increasing from day to day, and something approaching a Cabinet crisis is in the air. Of the parties belonging to the Government coalition, only the Centre, the Chancellor's Party, is supporting the Cabinet's taxation policy. The German People's Party, to which the Minister of Finance himself belongs, has rejected the "emergency offering" in a statement adopted by an almost unanimous vote, and the Democrats have reached a similar decision.

The Government plan can, in fact, hardly be defended. For years economists have agreed that the German income hits the recipients of medium-sized incomes especially hard. Now an extraordinarily high supplementary tax—4 per cent. of the income—is to be imposed on precisely these classes. In addition to this, only salaried income is affected, that is, a sort of tax-privilege is to be introduced for incomes consisting of profits and other returns from property. The only explanation the Government can give for this is that otherwise the danger of an exodus of capital from the country would be too great. Now, since there is no prospect that Parliament will approve the "emergency offering," the Government has already begun negotiations for a compromise. The "emergency offering" is to be reduced to 2 per cent. of income, and compensation is to be sought in an increase of the taxes on beer and tobacco. But here, too, great difficulties present themselves. Determined opposition to the beer tax is to be expected from the Bavarian People's Party, and it is very doubtful whether the Government, with its prestige undermined as it is, can overcome this. The Prussian Government also rejects Herr Moldenhauer's plan in its original form, and is apparently making its assent to a modified form of the plan dependent on conditions which cannot be fulfilled. The Reich Government can hardly carry through a financial reform without the support of the Prussian Government, for the Reichsrat, the conference of the representatives of the different states, possesses under the constitution a sort of suspensory veto, and Prussia naturally has an important influence in this body.

It was from the beginning one of the worst features of the "emergency offering" that it did not even provide any guarantee that this tax, so dubious both on social and economic grounds, would soon be repealed. The only provision was that the Cabinet was to be "empowered to modify or repeal" the measure after April 1, 1931. The Minister of Finance might perhaps induce the State Governments, which are suffering from the greatest financial stringency, to consent to a modified "emergency offering" if he would promise to hand over to them after April 1, 1931, the proceeds of this tax, but this concession, by implying that the "emergency offering" was to be *permanent*, would bring upon the Government the keenest opposition from all thinking persons in and outside the Reichstag.

The strongest and almost the only support which the Bruening-Moldenhauer Cabinet still finds consists in the scant inclination of other personages and political groups to assume at this moment responsibility for financial policy. The counter-proposals which Herr Moldenhauer, for instance, has received from his own party are no better than his original plans. Here the idea of a poll tax, to be collected by the municipalities, again crops up, though it has long been clear that such a tax, which is perhaps even more unjust socially than the Moldenhauer "emergency sacrifice," would also bring in only a negligible sum. The perplexity is great and general, and in itself constitutes a dangerous situation, since it is probably all but impossible to overcome the serious economic depression without first strengthening confidence in the economic and financial policies of the State.

The German balance of trade for May, 1930, shows an excess of exports over imports of 265 millions. Imports fell by 57 million marks, exports increased by 119 millions. Every month since the beginning of the year, with the single exception of January, has shown an active balance of trade. The international lowering of the prices

of raw materials contributed greatly to this result, for since Germany, with the exception of coal, exports virtually no raw materials, but only imports them, her balance of trade was greatly relieved through the fall in the prices of these materials in the world market. It is even probable that the effects of this lowering of prices, and hence the surplus of exports in the first five months of 1930, were in reality greater than the statistics show, for experience has taught that in times of large price changes in the world market statistical records in Germany do not keep pace with the developments sufficiently to prevent substantial differences from arising. According to the statistics, the first five months brought an export surplus of 415 million marks. A second cause of this is the economic depression in Germany, for on the one hand it reduced industrial requirements of raw materials, and, on the other hand, by reducing the domestic purchasing power, it compelled industry to force its export trade.

The Reparation loan scored a decided success in Germany also. For the 36 millions to be placed here, subscriptions for about 98 millions were received. This is at first sight somewhat astonishing, for the loan gives an interest return to the subscriber of only 6.4 per cent., whereas other loans of the Reich—for instance, the Rheinhold loan of 1927—yield almost 7 per cent., and municipal loans bringing in over 8 per cent. can be had in Germany. That the loan was nevertheless oversubscribed almost three times is due in the main to two reasons. In the first place, the sum placed here is very small. To the gigantic consortium formed under the leadership of the Reichsbank, and to which all the larger banks and bankers belong, the 36 millions naturally is an inconsiderable sum even in these hard times. Secondly, it may be assumed that a very large part of the subscriptions to the German share of the mobilisation loan came from abroad, for the conditions of the loan are much more attractive to foreign investors than to German capitalists, and many subscriptions appear to have come from abroad in the assumption that they would be more likely to secure a part of the loan than they would have been in the subscribers' own countries.

One must not be deceived by the success of the loan into overlooking the fact that its conditions have met with very sceptical criticism in Germany. A much higher price of issue had been counted on here, and assent was only given at The Hague to the combining of the mobilisation loan and the Reich loan in the hope that thus more favourable conditions could be secured than would be possible if the German Reich should put an independent loan on the market. This was an error, for the Reparation loan not only represents much dearer borrowing than the Kreuger loan, but is also less favourable than terms proposed in the loans, firm offers of which were made months ago by leading American groups at a time when the international level of interest rates was considerably higher than to-day. The main thing, however, is that the obstacle that has interfered with the mobility of the international capital markets for months has now been removed and hence it is believed that Germany can again hope for an ampler influx of foreign loans.

AUSTRIA.

Commercial Policy — Tariff —Federal Railways — Alpine Montangesellschaft — Capital — Money Market.

(FROM OUR CORRESPONDENT.)

VIENNA, June 5.

COMMERCIAL treaty policy is playing an important rôle in Austria at the moment. The Minister of Commerce, Dr Hainisch, is contemplating a State grain and flour monopoly, to be used for the purpose of forcing those States who wish to export grain and flour to Austria to take a certain quota of Austrian industrial products. In a lesser degree the Austrian tobacco monopoly is observing a policy of this kind, for, as a buyer in Bulgaria and Greece, it sees to it that certain industrial orders are placed in Austria as a consideration for the tobacco purchased in those two countries. Other members of the Cabinet are not in entire agreement with this project of the Minister for Commerce; nevertheless, he recently declared that he would stand or fall by his proposal.

For the time being a new Customs tariff is being set up by the Government, which desires to meet the demands of the farmers and of industry and, in part, of commercial interests, and is, therefore, distinctly in favour of protection. Up to the present the duty on wheat amounts to two gold crowns, and is to be raised to six gold crowns. Furthermore, the Government is to have the right to supplement this duty sufficiently to make cultivation of grain a paying proposition. Similar Customs arrangements are also planned for other kinds of grain. After difficult negotiations, Hungary has agreed to the principle; in regard to Yugoslavia, the understanding is far advanced, but the Government declares that, if Yugoslavia does not give its consent, there is nothing to do but to create a State monopoly to cover the matter. The farmers are the strongest party in Austria for the time being, and it was also under their influence that, by means of various measures, the dumping policy of the German pig breeders was curbed in Austria, while in regard to Poland, too, more stringent limits will shortly be imposed on importation.

The Customs tariff provides for important increases in the duties on textiles, underwear, furniture and machines; and German interests, therefore, feel that they, too, are placed at a disadvantage, after forcing through the recently concluded commercial treaty between Austria and Germany, which undoubtedly implied a sacrifice on the part of Austria. Certain Customs duties, such as the new duties on aluminium, artificial silk, jute, sheet metal, fuses and explosive charges, are to come into force later, while others are to apply as soon as possible in order to alleviate the present difficult position of Austrian industry. The tariff may, however, be modified in various respects before it finally passes through Parliament.

A second question which is engaging the attention not only of economic circles, but also of the political parties, is the reform of the law governing the Federal Railways. The commercialisation of the railways has not fulfilled its promise, and the men in office until recently were unable to make headway against the political activities of the railway employees. They were obliged to make concessions to both the left wing and the right, which was bad for discipline and weakened the influence of the more educated employees. In addition, it appears that the commercialised Federal Railways had at their disposal funds which were not always well managed. For the future the State influence upon the railways is to be considerably increased. A chain of authorities is to be created and the freedom of action of the chairman and of the general manager of the railways is to be greatly curtailed.

There was another sensation on the occasion of the publication of the balance sheet of the Alpine Montangesellschaft (iron trust). The general manager of the company pointed out that the policy of investment, which, it should be said, had for many years been followed by him personally, had not proved to be satisfactory. He asserted that, on account of advances in wages and of levies for social purposes, the measures of rationalisation had not been efficacious. He took the opportunity of complaining bitterly of the economic policy of the Government and demanded in regard to the approaching loan better utilisation than would be possible under the present *régime*. The Government has sharply refuted these reproaches. The Association of Banks took a similar, though somewhat milder attitude towards the general manager of the Alpine, while the industrialists supported him. In any case, the big German stockholders of the Alpine Montangesellschaft have had much to do with the expression of opinion, and the demand has been put forward that the general manager, Dr Apold, should resign or a change should take place in the board of directors. The State Commissioner attached to the Alpine Montangesellschaft may also give up his position. It is possible, however, that, as has happened before, the whole affair may be settled by compromise.

In spite of a slight fall in the unemployment figures, economic conditions are still very unfavourable. Only four share companies have been founded so far this year and 25 have increased their capital. The banks are still feeling the effect of the absence of business on the Stock Exchange. The general aversion to speculation in shares still obtains, and domestic capital has suffered too serious losses to avail itself of the very low quotations, which in regard to some shares mean a yield of 8 to 9 per cent. Consideration is therefore being given to the formation of share trusts abroad. The level of prices on the Vienna Exchange has declined. The exchange index in May for Austrian shares was 1,585, against 1,608 in April and 1,632 in March. The Czechoslovakian and Hungarian shares negotiated in Vienna have also fallen.

In spite of the last reduction of the Bank rate of the Austrian National Bank to 5½ per cent., the reluctance of lenders to accord any credits which do not afford absolute security still continues. The consequence is that firms, who through their bank connections are able to contract credits in foreign currencies, pay 5 per cent. to 5½ per cent., inclusive of all expenses, while big concerns requiring schilling credits can hardly procure them below 11 per cent. For some time now the banks have been trying to call in the credits they have accorded. This means that many notices of withdrawal of credit have been given, and the process of liquidation of weaker concerns is progressing, which is not unhealthy. The discounts of the National Bank are lower, and, though at the end of May there was a great increase, this was largely due to the discounting of short-term commitments. On the other hand, the influx of foreign means of payment into the National Bank continues. Bank deposits are increasing, but this is attributable to the continued reluctance to invest in stocks, even those bearing fixed rates of interest. The banks and savings banks which desire to maintain these deposits have been obliged, in spite of the reduction in the discount rate of the National Bank, to refrain from lowering the rates they pay on time money.

GREECE.

British Capital — New Mortgage Bank — Foreign Loans — Tobacco Production — Foreign Trade — Public Finances — Bank of Issue's Reserve.

(FROM OUR CORRESPONDENT.)

ATHENS, May 30.

IT was announced the other day that the Société Générale Hellénique having failed to raise in London the funds required for completing the electric and transport works of Athens and the Piræus, an arrangement had been made with the Whitehall Securities, Ltd., of London, in virtue of which the latter acquired a controlling interest in the enterprise and undertook to provide the necessary capital. Mr Pierson, chairman of the Whitehall Securities, Ltd., had an interview with the Minister of Communication in the course of which, it is reported, the lines were laid down along which all matters concerning the production and distribution of electric light and power, and the communication by electric cars and buses of the two cities, will hereafter be arranged by a sincere and friendly co-operation. It will be remembered that in the Société Générale Hellénique British interests have been represented hitherto by the Power and Traction Company, Ltd., of London.

French interests, in co-operation with the Bank of Athens, will establish, in the course of this year, a new mortgage bank in Greece, under the title Greco-French Mortgage Bank. This will be the second bank of this kind in Greece, the first one—the National Mortgage Bank of Greece—having been founded in 1927 by the National Bank, and having taken over from the latter its mortgage credit branch. The National Mortgage Bank, with the security of the properties hypothecated to it and the guarantee of the National Bank, has already issued on the London market loans of a nominal capital of £4,000,000, while another £1,100,000 will be raised later this year. With the impending establishment of the new mortgage bank, French capital is making the first step towards occupying again its former position in Greek financing, which the war had obliged it to abandon. Considering the insatiable demand for capital for building purposes in Greece, there is ample room for the existence in this country of two banks of this kind.

NATIONAL BANK OF GREECE
Established 1841

Head Office: Athens.
Branches throughout Greece.
New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

Following the agreement recently concluded with the London issuing houses for an advance to the Greek Government against the second portion of the Productive Works Loan, to be floated towards the end of this year or early in 1931—the first part of which was issued in London in December, 1928—negotiations are now taking place in Athens with representatives of American banks for a similar advance against the American portion of the loan in question. This time the three banks concerned—the National City Company, Messrs Speyer and Company and Messrs Seligman and Company—are co-operating, and though progress in the negotiations is, as usual here, rather slow, no difficulty is anticipated in reaching a final agreement. On the other hand, the Swedish financial group of Kreuger and Toll has submitted offers for a loan of £1,000,000, the proceeds of which will be utilised for building public schools. This offer has been accepted by the Government. The loan will be undertaken by the bankers at 85, bearing interest at 6 per cent., and repayable within 24 years. The service of the loan is to be covered by the rents paid now for the houses used as public schools. Furthermore, the National Bank of Greece, as bankers to a syndicate of Greek building and contracting companies, has offered to advance the funds required for carrying out various municipal works in the cities of Athens, the Piræus and Salonica, pending the conclusion for this purpose, in two or three years' time, of a big external loan of the three cities, with the guarantee of the State.

The cultivation and production of tobacco—the principal article of export—shows the following development during the last two years:—

	Area Cultivated. Acres.	Quantity Produced. Kg.
1928.....	228,072	52,725,584
1929.....	306,974	79,263,718

According to provisional returns of foreign trade, imports from abroad for the first four months of the current year amounted to 803,221 tons, valued at Drs. 3,678 millions, against 901,448 tons of a value of Drs. 3,381 millions for the corresponding period of last year; while exports totalled 303,273 tons, with a value of Drs. 1,775 millions, as compared with 220,842 tons and Drs. 2,931 millions for the period January-April, 1929. With a view to protecting agriculture in consequence of the fall in prices abroad, the Government has recently increased the import duty on wheat from 4.30, and on flour from 8.82, gold drachmas per 100 kilogs., to 6 and 10.70 gold drachmas respectively.

Gross revenue receipts assigned for the service of the national debt amounted for the first three months of 1930

to Drs. 877 millions, as against Drs. 978 millions for the corresponding period of last year. Revenue receipts subject to the distribution of surpluses show, for the same period, a small increase over the past year. The Budget for the financial year ended March 31, 1930 is now expected by the authorities to close with a final surplus of not less than Drs. 300 millions. In consequence of sales of exportable articles, principally tobacco, and of transfers of funds, the reserve of the bank of issue has increased from Drs. 3,116 millions on December 31st last to Drs. 3,222 millions on May 15th, its sight liabilities having decreased from Drs. 6,723 millions to Drs. 6,409 millions. Accordingly, the proportion of the reserve to the note circulation and sight liabilities of the bank has correspondingly increased from 46.35 to 50.28 per cent.

CANADA.

Tariff — Dissolution of Parliament — Negotiations with Newfoundland — Agriculture — Business.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 3.

THE Budget passed the Canadian House of Commons on May 15th by 114 to 86. The majority was slightly above the normal figure, owing to the reinforcement of the normal strength of the Liberal and Liberal-Progressive parties by two bolting Conservatives, while the Conservative member for another Nova Scotia seat paired in favour of the Budget. The shrewder Liberals realise that this defection may in the end do their party more harm than good, as the fact that the Budget is acceptable to three notorious apostles of high protection will accentuate the suspicions of the western farmers that the iron and steel industries are receiving a great deal of additional protection smuggled through in the Budget. The Progressives, who, along with the Labourites, joined the Conservatives in voting against the Budget, will certainly make effective use of the support given to the Budget by these Tory members for the iron and steel ridings to demonstrate in the campaign that the Liberal party is hopelessly subservient to protectionist influences.

The new fruit and vegetable duties are proving very unpopular in the country, as they have already caused a sharp rise in prices, and prominent dealers have been attacking them as wholly indefensible. They point out that in many cases the duties will be double the former level, and that the Canadian consumer is being asked to pay increased prices all the year round for the benefit of the Canadian growers, who are only able to supply the local market for a very limited period—rarely over ninety days. Mr Glen, a Liberal-Progressive, bluntly informed the Government that he and his friends would not tolerate this extravagant protectionism, and, as a result of this and other protests, the Finance Minister intimated that there would be a readjustment of these duties, which, among other things, would put a seasonal limit to their application, covering the period when the Canadian growers could supply the local market. During the discussion Mr Dunning was strongly pressed to offer some estimate of the amount of trade which would be diverted to Great Britain by the tariff changes of the Budget, but he declined to hazard even a rough guess, asserting that everything depended upon the initiative and industry which British manufacturers would apply to using the trade opportunities opened up to them by the Budget, and upon the sacrifices which American manufacturers would be prepared to make to retain their Canadian business.

By working overtime during last week, Parliament managed to get through all the indispensable business before it in time for prorogation, to take place on May 30th. It has thereby become possible to hold the General Election on July 28th, and, immediately after prorogation, dissolution was announced. For all practical purposes the campaign has already begun, but the party leaders will probably not take the field for at least another week.

For some time past negotiations have been in progress between the Governments of Canada and Newfoundland about a new commercial treaty to replace the pact concluded a few years ago which never really became operative owing to a difference of opinion about the interpretation of some of its terms. Newfoundland, which offers a good market for a variety of Canadian exports like flour, meat, agricultural machinery, fishing equipment, etc., can give preferences which would probably divert to Canadian hands a substantial amount of trade now going to the United States, but, unfortunately, Canada has very little to offer in return. Of Newfoundland's chief exports, fish, paper and iron ores, she has no need to import the first two, and the iron and steel plants which use Newfoundland ores object to the imposition of any duty on them. What Canada has offered is a subsidy of $35,000 per annum on the steamship service between Nova Scotian ports and Newfoundland, and she would add a lump sum of $160,000 to cover arrears of subsidies which would have been paid if the old treaty had come into operation. But the Newfoundland Ministry is not satisfied with this offer and has made a counter-proposal that St. John's, Newfoundland, should be made a port of call for the Canadian Government Merchant Marine service of steamers which runs between Halifax and Bermuda and the British West Indies. This proposal was given consideration at Ottawa and it was discovered that it would seriously upset the time tables of the West Indian Service; at least one additional steamer would have to be put on the service and the deficit which is already piling up would be increased. So the negotiations are at a standstill and will not be resumed until the Canadian election is over. Newfoundland is anxious for direct steamship connection with the West Indies, where she hopes to expand the market for her fish and other products, and at the same time to secure cheaper and fresher fruit and vegetables.

Weather conditions in Canada have been satisfactory during the past fortnight. On the prairies the weather has been cool, with intermittent showers, and the young wheat crop, if its growth has been slow owing to the absence of heat, is said to be in excellent condition. It is now in most places from 4 to 6 inches above ground, and the plants are well rooted and in a healthy condition. In some districts severe night frosts have been responsible for considerable damage, and elsewhere high winds have caused some soil drifting, but the aggregate loss up to date is not large, and the experts are predicting a crop of between 300 and 400 million bushels. At present there is enough moisture to go along with, but the reserves are not great, and much will depend upon what amount of rainfall is vouchsafed the crop throughout June—the really critical month. The prairie farmers have been busy planting oats and other coarse grains, and about 85 per cent. of these are now seeded. They have been greatly encouraged by the recent upward movement in grain prices and by reports that a large number of vessels have been chartered to take grain out of Montreal during June and July.

The flour-milling industry is suffering from the weakness of overseas buying demand, and the sugar refineries have been hard hit by the abnormal decline in the price of sugar. There have been heavy importations of refined sugar from Cuba, and the price is lower than it has been for years. The trade figures continue to be very unsatisfactory; exports for April were valued at $50,744,139, as compared with $65,727,599 in April, 1929, and there was an even sharper fall in imports, which were only valued at $71,401,839, as compared with $97,517,207. This decline in trade is now finding reflection in the customs and excise returns, whose yield for April, given at $17,059,567, shows a fall of $5,617,129. In industry there is considerable variation of fortune; the boot and shoe factories and the furniture plants are pretty busy, and the motor firms have been increasing their output, but the textile mills all complain of a shortage of orders and absence of profits. Many manufacturing and distributing businesses are now engaged in adjusting their trade arrangements in accordance with the tariff changes decreed by the Budget, and the preoccupation of many people with the General Election contest will be a disturbing factor during the next two months. Great hopes are once

more being pinned upon the western grain crop, for until it is safely reaped and sold at a decent price, the western farmers, whose purchasing power has been very light during the last six months, will have nothing to spend except on bare necessities. In most of the western cities there is, even near midsummer, a great deal of unemployment, and it is a good thing that comparatively few immigrants are entering the country. For one thing, the farmers now need fewer extra hands in summer, and, for another, the mining industry, which every year absorbed a large number of workers during the summer, is in a decidedly unhappy condition. The fall in the price of copper has caused several low-grade copper mines to shut down, and it is now extremely difficult to get the public to give financial support to new mining enterprises, however promising they may look.

NORTHERN IRELAND.

Budget — Transferred Taxes — Road Fund — Imperial Services.

(FROM OUR CORRESPONDENT.)

BELFAST, June 17.

THE Northern Ireland Budget for 1930-31 shows an estimated total expenditure of £11,603,000, made up of £761,000 for Consolidated Fund Services, £8,881,000 for Supply Services, £1,811,000 for Reserved Services, and £150,000 (provisional) as contribution to Imperial Services. On the revenue side, the yield of "reserved" taxes is placed at £7,013,000, while non-tax revenue is expected to amount to £1,795,000—the principal items being £663,000 from Land Purchase Annuities, and £900,000 from Post Office receipts. Other receipts, consisting of payments under Section 34 (i) of the Government of Ireland Act, and under the Re-Insurance Agreement with Great Britain amount in all to £866,000. The sources of revenue already referred to aggregate £9,764,000, leaving a sum of £1,929,000 to be found from sources directly under the control of the Northern Ireland Government. A sum not exceeding £420,000 is being taken from the Rating Relief Suspense account, so that the sum to be raised by "transferred" taxes is £1,509,000.

Mr Pollock is adopting the increased rates of Estate Duties made in the British Budget, and anticipates an additional £25,000 from this source in the present year and £60,000 in a full year. The estimated yield of Estate Duties in 1930-31 is £650,000. Stamp duties are expected to bring in £237,000, and "transferred" excise licence duties and entertainment tax £130,000.

The most noteworthy change in "transferred" taxation is in connection with motor vehicle duties. A year ago the state of the Northern Ireland Road Fund led Mr Pollock to appoint a Departmental Committee to examine its position and to make recommendations in regard to motor vehicle taxation, so as to place the Fund on a self-supporting basis. During the course of its investigations this Committee obtained from local authorities an estimate of the future expenditure likely to be required on roads during the next five years. Apparently, annual charges on the Road Fund are likely to amount to about £507,000 during this period. On the present basis of taxation, however, receipts are only expected to average £440,000 per annum, leaving a deficit of something over £60,000 per annum. Accordingly, from January 1st next, a number of increases in the rates of taxation on commercial goods vehicles will come into force. No changes are made in taxation on private cars, but the fee for a driving licence will be increased from 5s. to 10s. The total effect of these changes will be to augment the Road Fund by £43,000 in a full year and by £25,000 this year. The estimated yield from motor vehicle taxation in the present year is £495,000, giving an aggregate figure of £1,512,000 in respect of "transferred" taxes; and Mr Pollock is thus able to balance his Budget with a margin of £3,000.

A significant feature of the Budget is the provision of only £150,000 in respect of contribution to Imperial Services. This figure contrasts with £874,000 in 1929-30 and £8,000,000 in 1920. The increasing cost of social services has reached a point when Northern Ireland local expenditure is almost equal to the total revenue of the area, and Mr Pollock found himself impelled in his Budget speech to "warn the local authorities and the ratepayers of the Province that, in respect of State assistance, the limit has been reached, and that they must rely on their own resources for any further expenditure they contemplate." In this connection, it is significant that an Inter-Departmental Committee is being appointed to inquire into the position which has arisen as a result of derating. The curtailment in the rateable basis as a result of derating means that any reduction in State grants to local authorities will produce startling results to the remaining ratepayers. Yet, in Mr Pollock's words, "educational expenditure can hardly continue to be borne as fully by the State in future as at present."

Letters to the Editor.

ANOTHER NEWSPAPER FUSION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your note on the amalgamation of the *Daily Chronicle* with the *Daily News*, you say that some twenty years ago "the fusion of the two papers was practically reached between the late Mr George Cadbury and Mr Lloyd, but broke down at the last moment on the question of control."

Allow me to inform you that the discussions which took place twenty years ago had reference to the *Daily Chronicle* and the *Morning Leader*, and negotiations were carried on between the late Professor James Stuart, chairman of the *Star* and *Morning Leader* company, Mr Frank Lloyd, Mr Ernest Parke, and myself. An agreement was practically reached, but Mr. Harry Lloyd had some qualms about the Lloyds owning the *Star*, which, quite wrongly, he thought was mainly a racing paper. Then, at the last moment, Mr Frank Lloyd raised a new point as he did not wish Mr Parke to take a responsible position in the management of the combined paper. This may have been an afterthought, or it may have been a strategic form of retreat. In any case, it was not treating Mr Parke fairly, and it was not in the interest of the property, as Mr Parke was then in his prime and was one of the ablest newspaper men in London.

The question of bringing the *Daily News* into the fusion was mooted. It was Mr Lloyd's idea, and Mr Parke, I think, favoured it. I opposed the scheme as I objected to the fusion of the three Liberal morning papers in one. I was against it for political as well as journalistic reasons. I fear I was short-sighted, but think that at the time, and as things were, I was right.—Yours truly,

41 Rutland Gate, S.W.7. ROBERT DONALD.
June 11, 1930.

[There is documentary evidence that, apart from the negotiation to which Sir Robert Donald refers, the amalgamation of the *Daily News* and the *Daily Chronicle* was discussed at least on one other occasion before the war, and that the stumbling-block was the question of control.—*Ed.* ECON.]

SWEDISH "INTERNATIONAL" SHARES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—We have read with much interest the article in your current issue on Swedish "Internationals" and while we agree that "S.K.F., Separator and Electrolux are more vulnerable to trade depression than are Swedish Match and Kreuger and Toll," we venture to take you to task for not giving more importance to the fact that "the margin between earnings and dividends shown . . . is sufficient to allow of at least a moderate recession of profits without undue prejudice to the position of shareholders," in the case, particularly, of S.K.F.

We would draw your attention to the following points:—

(*a*) The *Consolidated Earnings* of S.K.F. (about 21 per cent.) exceed the dividend (12 per cent.) by 75 per cent., and it seems to us a depression has got to be very severe, and last for a very long time, before this safety margin is depleted, and a possible decrease in earnings makes an inroad into the funds required for the maintenance of the current dividend.

(*b*) The undistributed profits (or surplus) are sufficient for the payment of nearly two years' dividend at the current rate.

(*c*) The financial policy of the company has always been very conservative, and actual earnings are believed to be considerably in excess of the disclosed consolidated earnings.

(*d*) The outstanding feature of all the principal Swedish industrial concerns has always been the stability of the dividend distribution, which has been ensured by the maintenance of a large margin between earnings and distribution at all times. We think it very improbable that any temporary decline in earnings, however severe it may be, will be sufficient to induce the directors to lower the current rate of distribution.—Yours faithfully,

THE ANGLO-NORDIC FINANCE CORPORATION, LTD.

24, Lombard Street, London, E.C. 3.

A HISTORY OF MONEY.

MR NORMAN ANGELL has done his very best to achieve the object aimed at by his new book,* namely a more intelligent knowledge of money matters diffused among the general public. Profuse illustrations, chiefly of different forms of currency, diligent research in the by-ways of his subject, copious anecdote, a temperate judgment and an earnest desire to make mankind in its relations with money master of a good servant rather than the puzzled slave of a capricious tyrant—all these qualities distinguish his work. Students will find plenty of matter in its pages that will edify and instruct, but whether the layman, for whom Mr Angell is writing, will lay it down with a much clearer view as to what ought to be done about money, is doubtful. In the first place, Mr Angell does not tell him definitely what money is, and secondly, with a modesty that is rare and admirable, but confusing in its results, he ends his survey of his subject with what he calls an " anthology " of the great monetary controversy of the day—in other words, with a very ample set of quotations showing what the various schools of experts think about the gold standard, managed currencies, stabilisation, and other matters on which expert opinion is very much at variance. Out of this well-appointed gramophone, records by all the leading performers charm the ear of the listener, but Mr Angell is too modest to give that guidance that the patient and puzzled public needs and wants.

By money, Mr Angell seems to mean economics in general. He says, for example:—

> " The public has to pass its opinion upon the question as to whether the tariff shall be raised or lowered; whether this or that trade shall be allowed to die in the pursuit of newer methods; whether prices shall be higher or lower; what shall be done about the bank rate; whether there shall be more or less money; restricted or expanded credit; whether taxation shall be direct or indirect. And because the public is, speaking broadly, possessed by certain dominant fallacies of the mercantilist order, it has strong opinions which in practical policy it imposes again and again as against the specialist knowledge of the economist. Thus it happens that while 99 per cent. of the trained economists are broadly Free Trade, 99 per cent. of the governments of the world responsible for actual policy, and dependent upon the general feeling of their publics, are incurably and increasingly Protectionist in tendency. Where the trained economist distinguishes clearly between the individual and the general interest, the voter is hopelessly confused."

This discrepancy between expert opinion, much as it varies, and the public prejudices which have so much influence on governmental action seems a reason, not for increasing the influence of the public on money matters, but rather for restricting their conduct to the hands of the bankers who have at least succeeded in providing the world with a workable currency, and leaving the experts to educate the bankers. Mr Angell lays great stress on the extent of the recent breakdown of what he calls the money device, and with good reason; but he is surely wrong in saying that " in the countries most affected, governments of law and order were in power, expert bankers were controlling the monetary machine." In Germany and Austria the new and timid governments that perpetrated the great inflation may have certainly wished for law and order, but their financial policy consisted in compelling the " expert bankers " to print paper, and the control of the latter was in abeyance.

On the historical side Mr Angell's book tells the familiar tale with many pleasant embellishments and some new additions—for instance, the interesting example of a perfectly successful currency, with no value behind it, which for generations formed at times the chief money of Canada. It was made of playing cards and lasted in one form or another from 1685, the date of the first issue, until well past the middle of the eighteenth century. It happened because the Intendant of Canada, at the date named, lacked funds; the colony and the troops—especially the troops—wanted money; there was no printing press; but the troops had cards. The Intendant requisitioned all the packs of cards, Mr Angell tells us, and having the amount each represented written on its face and signed by himself, he produced a form of paper money difficult to forge, resistant, well adapted to the needs of the occasion. It became exceedingly popular and remained current during the whole of the remainder of that century and the first half of the next.

The Stock Exchange.

THE RUBBER SHARE OUTLOOK.

LAST week, for the first time on record, the London spot price of rubber fell below 6d. a pound. In its comparatively short history of twenty-odd years, the Eastern rubber plantation industry has seen its product selling in the market at 12s. a pound in the pre-War boom, 6¾d. in the post-War slump, 4s. 8d. in the 1925 " squeeze," and one-ninth of that price in 1930. Such extreme instability is, happily, characteristic of few markets for essential primary commodities. Rubber company shareholders, who bear the brunt of these movements, have at least the consoling philosophy that the present depression, if experience is any guide, is likely to be no more permanent than past periods of prosperity. So long, however, as selling prices remain about their present level, only the best producers can hope to make a modest profit, while a large section of the industry can barely cover its prime costs. The extent and the " time-table " of prospective future revival are thus matters of the closest concern to rubber shareholders.

At no time in the annals of the industry have supply and demand remained in equilibrium for any appreciable time. The invention of the motor car created a new demand for rubber, which the inflow of capital into the Eastern plantations, before the War, more than satisfied. The War itself postponed the inevitable day of reckoning after the " rubber boom," but the adoption, about 1920, of the cord tyre, with its economy in rubber and its longer life, placed supply definitely ahead of demand. The phenomenal advance in popularity of the low-priced car, however, in the years from 1923 onwards, completely reversed the situation, and the inopportune restriction of British supplies, under the Stevenson Scheme, ushered in the minor boom of 1925-26. This, in its turn, stimulated the use by manufacturers of reclaimed rubber, at a time when large " native " rubber areas were coming increasingly into production. The abandonment of British restriction showed that the productivity of well-managed European estates had been seriously underestimated, and the super-imposition of a world-wide industrial depression on an already delicate situation precipitated the slump in prices from which the industry is now suffering.

So much for past fluctuations of prosperity in a most " unquiet " industry. The effect of recent vicissitudes on the production and earnings of representative British companies may be inferred from the following table:—

	Rubber Production Thous. Lbs.	All-in Costs per Lb.	Selling Price per Lb.	Profits.	Ordinary Dividend.
		d.	d.	£	%
Average London Selling Price 1925	...	...	*35·06*	...	...

† Company's first year. ‡ Not stated.

The contrast between 1925, when restriction was at its maximum, and 1929, when British estates obtained their record " output " is striking. An increase of nearly 50 per cent. in the total output of these six companies has been accompanied by a decrease in average costs from 9d.-11d. to, possibly, 5d.-8d. per pound, though nearly all the companies, on a short-sighted policy, have suppressed their returns of cost and selling prices in the most recent period. Ordinary dividends have fallen to a level decidedly low for a speculative industry, and their payment at all, for 1929, was due as a rule to the companies having secured average selling prices appreciably above the London " spot " quotations, as a result of favourable forward contracts. Few companies, however, have made advantageous forward contracts for 1930 or 1931.

Looking back, there is general agreement that the termination of the Stevenson Scheme left the industry with much more " slack " to take up than was realised two years ago. Subsequent reductions in cost have been due not merely to the economies of increased output, but also to a decided increase in efficiency, under the spur of difficult conditions. Even the most ardent advocates of a new policy of restriction have admitted that, with costs at their present level, the industry cannot hope to maintain future selling prices at anything like 1s. 9d., the " pivotal " figure of the Stevenson Scheme in its later days. Mr H. J. Welch, the chairman of the Rubber Plantations Investment Trust (a Harrison and Crosfield spokesman), while fathering a scheme for the cessation of production on a number of days each month, declared that such a plan must attempt only to cover bare costs of production (including selling charges and overhead expenses but not, apparently, depreciation), and suggested 9d. as a reasonable pivotal figure. Other important interests have proposed a flat curtailment of production by 25 per cent., but the disappointing result of the much-advertised " tapping holiday " on British and Dutch estates last month is doubtless responsible for the lukewarm reception of these proposals.

There are many reasons why rubber shareholders should hesitate to give their approval to any shackling of the industry with a new scheme of restriction. Out of six million acres under rubber in the East, nearly three million are owned by Asiatic planters, who cannot and will not come into any such scheme on a considerable scale. Restriction by only 50 per cent. of the industry has little chance of success, seeing that the control by British estates, in 1922, of 65 per cent. of the world's output did not save the Stevenson Scheme from eventual failure. In Ceylon the most active hostility to restriction prevails, and even in Malaya support of the May " holiday " was forthcoming only because many growers regarded Dutch co-operation as a precedent worth an immediate sacrifice. The crucial argument, however, is that rubber is sharing its present depression with a multitude of other primary industries—tea, wheat, coffee, sugar, tin, copper, silver, diamonds, to name only a few—a fact which suggests, *prima facie*, that its present troubles are the result of imponderable world movements beyond the control of any one industry. The decisive factor in the present situation, in short, is generally believed to be the probable trend of world consumption. The world's absorption of rubber has more than doubled in the short space of seven years, despite a rapid increase in the production of reclaimed rubber. The following table merits careful study:—

RUBBER PRODUCTION AND CONSUMPTION, ETC.
(Monthly Averages—Thousand Tons).

	Production.*		Consumption.			Reclaimed Rubber Production in U.S.A.
	British Areas.	Total World.	U.S.A.	Great Britain.	Total World.	
1922	21·8	33·3	21·2	0·8	32·9	4·5
1923	19·8	33·9	22·9	2·4	36·6	5·9
1924	18·4	35·6	25·1	1·8	38·8	6·3
1925	21·3	43·1	29·5	2·5	46·4	10·3
1926	28·7	51·2	27·5	3·4	45·6	14·0
1927	24·8	50·4	28·5	3·7	49·2	14·4
1928	29·6	54·1	33·9	4·0	56·2	17·3
1929	44·5	71·9	36·3	6·0	66·0	17·5
1930†	46·7	74·7	36·4	5·6	51·6	16·1

* Shipments from producing areas. † To date.

Taking a long view, the above evidence strongly suggests that the upward trend of rubber consumption will be resumed as soon as the contemporary world-wide cyclical depression in trade has passed away. The motor vehicle, which " consumes " some 80 per cent. of the world's rubber, has established itself as an indispensable instrument of modern transport. The fact that 76 per cent. of the world's motor vehicles are to be found in the United States gives an idea of the scope for the expansion of motor transport in the rest of the world. While we do not necessarily accept the forecast of the chairman of the Rubber Plantations Investment Trust that consumption will show a further 100 per cent. increase in the next decade, it is clear that the most efficient British estates have more to gain by tightening their belts for the moment, and continuing to meet the market with a view to making the most of recovery when it comes, than by fettering themselves with any new scheme of restriction. This attitude has additional relevance in view of the largely unknown but certainly impressive possibilities of increased output and lower costs under a *régime* of scientific bud-grafting.

Meanwhile, though " sixpenny rubber," has produced surprisingly little selling of rubber shares, the latter have fallen significantly during recent months :—

	Highest, 1925–26.	Highest, 1929.	Highest this Year.	Present Price.	Yield at Present Price.
					£ s. d.
Allied Sumatra (£1)	1¼	1 1/16	11/16	13/16	4 5 0
Batang Consol (2/-)	4/1½	2/-	1/4½	1/-	12 0 0
Grand Central Rubber (£1)	2 13/16	1⅝	15/16	¾	6 13 3
Linggi (£1)	3 13/16	1 13/16	1 5/16	1 1/16	4 17 0
Malacca (£1)	6 1/16	2 13/16	1 13/16	1 1/16	Nil
Rembau Jelei	3 7/16	1 13/16	1 1/16	13/16	8 0 0

The yield figures given in the last column should be cautiously interpreted, as the earnings of the great majority of companies may be appreciably lower this year than last, failing an early improvement in the commodity market. If the long-term view suggested in this survey is correct, however, the restoration of earnings to a reasonable (though not a spectacular) level, is likely to follow the emergence of world trade and industry from the present trough of depression. Holders of rubber shares may therefore be advised not to confine their attention too narrowly to the affairs of their own industry, but to sweep the international horizon for the first signs of a major trade revival. As the United States still accounts for anything up to two-thirds of the world's rubber consumption, the course of American events should be followed with particularly close scrutiny.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 24.	June 26.

THE week opened dismally, forced liquidation giving unexpected and unwelcome evidence of " weak spots." The downward movement of prices in all markets, from gilt-edged to mining counters, persisted for some days, though sentiment tended to become brighter on Thursday, following a recovery in some sections of the commodity markets. The week's trend was associated partly with the further hammering of prices in Wall Street, partly with selling from Paris, and partly with difficulties in at least one outside financial quarter. Recent new issues had a somewhat depressing experience, the German Government Loan relapsing at the first tentative withdrawal of " inside " support, while the San Paulo Bonds—large blocks of which came on offer—suffered a further relapse.

Gilt-edged stocks lost ground, partly on selling to meet commitments elsewhere. A better tone obtained, however, in the latter part of the week. War Loan, exceptionally, was supported and Five per Cent. Conversion Loan was harder. The rise in India loans was checked, the market deciding to await the Simon Commission's recommendations, next Tuesday, before increasing its commitments. A meagre business was done in Dominion and Colonial loans, at fractionally lower prices.

In the Foreign market, the dullness of Brazilian stocks was noteworthy, the new San Paulo Seven per Cents. falling to 4¼ discount. The seizure of the Tientsin Customs was a bear point for Chinese loans, despite assurances as to the inviolability of the Customs revenue. The Reparations Loan opened at par, but fell at one time to 2 discount, with a subsequent recovery to 1¼ discount. German Seven per Cents. were easier in sympathy, and other European loans lost ground.

The week's batch of Home Railway traffic returns was much worse than expected, after all allowance for the normal reduction of goods traffic in Bank Holiday week. Though little stock came out, prices were marked down as a precautionary measure, London, Midland and Scottish being the chief sufferer. Southerns, exceptionally, were steady, the company alone showing a rise in earnings. Undergrounds again made a favourable traffic showing, and obtained fair support. Argentine rails were heavy on bad trade and the falling peso exchange, B.A. Great Southerns being offered on a considerable scale. Among Brazilians, San Paulos were particularly weak. Canadian Pacifics were sold in Montreal and New York, the traffic figures continuing to show a falling off.

The industrial markets had a more forlorn appearance than for some weeks past. Internationals were marked down to New York levels, while a number of leading domestic issues were affected by forced liquidation. Imperial Chemical Industries were fairly steady, but Cables and Wireless remained depressed, though the market refused to believe that the preference dividend would not be fully covered by earnings. Columbia and H.M.V. came within the orbit of American selling, but subsequently showed firmer symptoms. Among motor shares, Leylands were sold despite the company's decision to pay off the remaining preference arrears. Courtaulds were comparatively steady on the company's decision to take on more men, the significance of which is discussed in a note on page 1395. General Electrics were easier, despite the excellent accounts (analysed on page 1396). Coal and steel shares remained quiet, and only a modicum of business was done in general textiles. Breweries were undecided, and tobacco shares irregular, British American Tobacco suffering from further selling on the Chinese situation. The trend of gilt-edged stocks, as always, was paralleled by bank and insurance share movements, early recession being succeeded by slightly firmer conditions.

The slight hardening in the price of rubber, after a temporary decline below 6d., had no effect on the share market, which was listless and idle, with quotations fractionally lower where changed. The outlook for rubber shares is discussed in a leading article on the previous page. The tea share market was as dull as ever, with no change in the slow downward trend of values. The week-end burst of selling in the oil market was continued on Monday, but steadier conditions supervened. Sentiment, however remained, to say the least, highly conservative, developments on the Pacific Coast causing some uneasiness.

The mining market rallied partially after a very depressing start. Paris at first came in as a seller in the Kaffir section, but reversed her rôle on Thursday. Gold Fields receded on disappointment with regard to the amalgamation terms. Northern Rhodesian descriptions made a poor showing, Congo Borders continuing to recede. An improvement set in later, however, and N'Changas marked a sharp advance. Tin dropped at one time as low as £133 3s. 9d., and share movements were downwards without exception, while the recovery in the metal to over £138 on Thursday brought but slight relief. Tintos were depressed following a mid-week slump in copper, but recovered on subsequent Paris buying. The main features of the copper position are described on page 1398. A feature of the week was the fall in 'Friscos, following the passing of the interim dividend.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market is steadier, with evidence of at least a temporary halt to liquidation. The worst of the forced selling is finished, and prices are at levels calculated to tempt investment buying. This is inducing a moderate amount of short covering by the bear interest, which is now believed to be quite large. The best classes of shares have suffered most, selling being heaviest in railroads, public utilities, chemicals, motors and steel shares. The decline was mainly the result of growing pessimism over falling commodity prices, the non-arrival of business recovery, dividend reductions, and, to some extent, to tariff legislation, although the effect of the last-named has doubtless been exaggerated in the Press. Bonds have been slack on selling to support stocks, and, more recently, to secure funds for placing in the higher-yielding shares. Several failures have occurred this week, including a brokerage house, a cotton brokerage firm, and a Chicago grain firm. These, however, are unimportant, Financial houses generally are in a sound position, but many baseless rumours are, naturally, in circulation. The victory of Mr Dwight W. Morrow in securing the nomination for the Senate in the New Jersey primary elections is highly gratifying to Wall Street, being held to insure the sound leadership which is badly needed at Washington. The coming conference of the International Committee of Bankers on the Mexican debt is regarded with only mild optimism in view of the increasing difficulties of Mexico, resulting from the fall in silver prices and the poor oil situation. The reduction in the discount rate indicates the concern felt by the authorities at the extent of trade recession, and the earnest desire to stimulate trade recovery, which it is still hoped may take place before the end of the year.

AMSTERDAM.

AN extremely dull tendency characterised the Stock Exchange during the past month. At first there was hardly any trading worth mentioning, and even in the leading favourites the turnover only amounted to a few shares. Not until after the Whitsun holidays did some movement in quotations become noticeable, and then prices showed a gradual decline, in sympathy with the tendency in New York. As a result, the market became more sensitive, and bull sales and forced liquidation caused many shares to suffer decided losses. Philips and Margarine Unies, in particular, were freely on offer, and both issues registered new low levels. In sugar shares, H.V.A. (Trading Company, Amsterdam) were very weak, on the report that about 90 per cent. of the Java sugar crop for 1930 was still unsold. Oil shares also joined in the general decline, and Royal Dutch were decidedly lower. The satisfactory annual report failed to bring the decline to a standstill. The low price of rubber contributed to a further decline in rubber shares, while shipping shares also receded. The annual report of the A.K.U. did not meet with a favourable reception on 'Change, and quotations dropped to below par. On Friday, June 13th, however, the general decline of quotations was arrested, and a better tendency was noticeable all round.

INVESTMENT NOTES.

Stock Exchange Dual Control.—In a leading article a fortnight ago (see the *Economist*, June 7, 1930, page 1,283) we discussed the possibility of a modification of Stock Exchange procedure along the lines of maximum efficiency. The discussion arising out of this article has prompted the suggestion that the emphasis laid, in our article, on the position of the Stock Exchange Committee may cause a certain confusion in the minds of some readers as to the precise powers possessed by that body. The Committee, broadly speaking, are responsible for all matters connected with actual dealings within the "House," but their power does not extend to matters of internal finance, which are the concern of a separate body of some nine trustees and managers. The Stock Exchange is, constitutionally, a private concern registered under a Deed of Settlement, with a present paid-up capital of £720,000 in 20,000 shares with £36 paid. The liability of these shares is unlimited, but no call may exceed £2 a share, nor can more than one call be made during any period of twelve months. For some time past every new member of the Stock Exchange has been required to be a shareholder, while every trustee and manager must have been a member for the five years preceding his election, and must hold not less than ten shares. All matters appertaining to the finances of the Stock Exchange which affect the shareholders, *qua* shareholders, are absolutely at the discretion of the managers. The latters' responsibilities range from crucial issues such as the possible extension of the Stock Exchange building, to the menu for Stock Exchange Committee lunches and the number of matches available per member at those functions. Every decision taken by the Committee for General Purposes involving, directly or indirectly, a question of internal finance, or affecting in any way the conditions of the Stock Exchange Deed of Settlement (which has been altered on eight occasions since it was first made in 1875) must go to the trustees. The latter have the right to veto it, without giving their reasons, and have in the past exercised their right on more than one occasion. The personal relationship between the two bodies is, of course, marked by mutual respect and sympathy. Inevitably, however, the viewpoint of the managers, as trustees for the interests of shareholders in a private institution, tends to be narrower than that of the Committee, who are particularly concerned, to-day, with the implications of trusteeship for the broader interests of the investing public. Many of the Committee's decisions must necessarily impinge upon questions of internal "House" finance. Conversely, such matters as the advisability of extending the accommodation of the Stock Exchange or accumulating a larger reserve out of "profits," may be intimately connected with the quality of the services the "House" renders to its clients. The possible modification of the present system of dual control is a matter the "House" itself must decide, but its policy will be followed with much interest by a large section of the investing public.

Royal Mail—Lord Kylsant's Speech.—Lord Kylsant's speech at Wednesday's Royal Mail meeting may not unfairly be said to have emphasised the difficulties of the group's position rather than contributed to their solution. Contrary to the interpretation put by some observers on last week's announcement, the position as regards the short-term engagements of the parent company has not been settled, since the Treasury has not yet seen its way to grant the request for a five years' extension of the £2,550,000 of Trade Facilities Loans falling due in the autumn. Presumably, however, the members of the committee of investigation would not have agreed to take office without some understanding as to possibilities in this direction, and a definite official statement will doubtless be forthcoming in due course. Lord Kylsant also revealed, at the meeting, that Messrs Price, Waterhouse & Co. had, at the request of the court of directors, worked out a comprehensive scheme of "rationalisation" some months ago. As, however, at least six to twelve months would have been required in order to give effect to the scheme, the directors deferred its consideration until more pressing problems had been resolved. In reply to a stockholder, indeed, Lord Kylsant declared that, in view of the committee's appointment, it was unlikely that any definite reconstruction scheme would be put forward for some months. As regards the financial structure of the Royal Mail group, Lord Kylsant pointed out that of a total capital of £70 millions as much as £49 millions was represented by inter-group shareholdings. From the figures given, it would appear that a combined fleet of some 2,600,000 gross registered tons is carried in the books at approximately £20 per ton, its average are being about 11½ years. The deduction of reserves totalling £11,600,000 (apart from insurance funds) would bring the value per ton down to about £15 10s., but it is not certain to what extent these reserves, which are invested entirely in the business, can be regarded as available solely for the purpose. These, and kindred matters, will doubtless be fully gone into by the new director, Mr Walter Runciman (who has now been made deputy chairman), in conjunction with the committee. It may be taken for granted that any recommendations put forward will have due regard to the past history and traditions of the Royal Mail group, to which, as the tenour of Lord Kylsant's speech clearly showed, the chairman personally attaches great importance. In the meantime, the Stock Exchange would welcome a policy of keeping stockholders as completely and promptly posted with future developments as is consonant with the intricacy and delicacy of the matters at stake.

Courtaulds and the Rayon Position.—The news that Courtaulds are taking on large numbers of employees who have been "standing off" during recent months has come as a pleasant surprise to shareholders. The step is a sequel to the slow but healthy recovery which the home section of the industry has been making in the last two months. Progress, however, has been poor in the export markets for cotton and rayon piece-goods. The fall in commodity prices has restricted business in many markets, writes a technical correspondent, while the financial crisis in Australia and political disturbances in India have tended to restrict business in two most important overseas outlets. During the next two or three months, consumption of rayon yarns for the production of autumn fabrics should reach a higher level, reasonably good weather having enabled consumers to clear off stocks of summer fabrics. In April, Courtaulds brought out a new price list, which not only brought the prices for their higher quality yarns more into keeping with those of their special cheap grades, but also reduced the number of deniers marketed, thus furthering the possibilities of mass production. Though there has not been a really large demand for the lower quality yarns, price-cutting has fortunately not been as acute as in the early part of the year, the improvement being partly due to the closing down of several factories, and partly to the policy of some of the smaller concerns which were unable to compete in the bulk lines and turned their attention towards special qualities. Altogether, Courtaulds is now in a stronger position in relation to the industry as a whole than a year ago. The weeding-out process among the producing companies may have to go still further, but in the meantime the industry's position is steadily becoming more "rational." Progress is being made with technical developments which promise an expansion in rayon consumption for some time to come. Yarn production is being consolidated in fewer hands, and a large number of firms on the weaving and knitting side, who entered the rayon trade for quick returns, are now leaving the field to the more experienced firms. As a result, the policy of sacrificing quality for price is much less in evidence.

Some Investment Trust Reports.—The recently-published reports of investment trust companies show the effects of a valuation of investments at March 31st or later when the New York markets had temporarily recovered some of their lost ground. The valuation of the holdings of the old-established Investment Trust Corporation at May 1st showed an appreciation of about £1,575,000 over the book cost of £8,480,739. From the previous report it would appear that these holdings declined only 1.7 per cent. in market value in the year to May 1, 1930, a surprisingly good result in view of the 14.6 per cent. decline in the *Investors' Chronicle* index of "all securities" over this period. British Electric Traction, on the other hand, do not give the market value of its investments of £4,142,276 at March 31st. The Nineteen Twenty-Eight Trust, after two years' operation, showed a depreciation at March 31st on the £1,377,280 book cost of its holdings of £28,000, or 1.3 per cent. before crediting reserves and carry-forward of £19,498. The Nineteen Twenty-Nine, which was formed in the month of January, 1929, when security values in London began their historical decline, is able to state that the market values of its holdings at March 31, 1930, show the aggregate amount at which they stand in the balance sheet—£1,008,960—to be fully represented. As far as we know such a result for a new company is unique. An examination of the investment policy followed by these three trusts is, therefore, of special interest. The distribution of holdings is as follows :—

	Investment Trust Corporation. Per cent.	Nineteen Twenty-Eight. Per cent.	Nineteen Twenty-Nine. Per cent.
Bonds, debentures, etc.	52·1	35·3	30·7
Preference stocks.....	24·8	28·5	26·1
Ordinary and deferred stocks...	23·1	36·2	43·2

Both Nineteen Twenty-Eight and Nineteen Twenty-Nine have broken away from the orthodox distribution of holdings—the latter to the extent of having 43.2 per cent. of its holdings in ordinary and deferred shares. The geographical distribution of holdings also reveals some striking contrasts :—

	Investment Trust Corporation. Per cent.	Nineteen Twenty-Eight. Per cent.	Nineteen Twenty-Nine. Per cent.
Great Britain	37·2	37·5	23·9
U.S.A.	15·2	13·5	29·3
Continental Europe.....	18·2	19·3	26·1

The Nineteen Twenty-Nine has invested its reserves in the United States of America and countries outside Great Britain to a much greater extent than is customary. How the recent slump in the New York market has caught the Nineteen Twenty-Eight and the Nineteen Twenty-Nine can only be guessed. The earnings and distribution of profits of the companies for the last fiscal year are shown in the next table :—

	Investment Trust Corporation. May 1, 1930.	Nineteen Twenty-Eight. Mar. 31, 1930.	Nineteen Twenty-Nine. Mar. 31, 1930.	British Electric Traction
	£	£	£	£

* After tax. † After debenture interest. ‡ Gross.
§ Includes pref. ord. and part div. on pref. ‖ On deferred shares.

The Investment Trust Corporation has allotted 75,000 preferred and 50,000 deferred shares of £1 to the deferred stockholders at par in the proportion of three preferred and two deferred shares for each £54 of deferred stock. The market price of the deferred stock at the present time is 463 xd to yield 4.32 per cent. on dividends.

Nineteen Twenty-Eight and Nineteen Twenty-Nine are quoted at 116xd and 103½, to yield 4.31 per cent. and 4.83 per cent. respectively. The British Electric Traction deferred stock is quoted in the market at 1500 per cent.

General Electric Company.—The results of the General Electric Company to March 31st last have been received with considerable satisfaction. The upward trend of earnings still continues, profits, before debenture interest, showing an increase of £90,355, at £1,174,432. Debenture interest takes £14,328 less than in 1929, but £18,639 more is set aside for depreciation, the net profit, after the addition of £27,182 to the pension fund, being £83,624 higher at £714,604. After paying the "A" and "B" preference dividends, covered 6.1 times and 2.8 times respectively, a dividend of 14 per cent. is paid on the ordinary capital, on which 20.4 per cent. was earned.

(Years ending March 31).	1928. £	1929. £	1930. £
Profits	1,057,867	1,084,077	1,174,432
Debenture interest	229,190	222,380	207,952
Depreciation	195,433	206,055	224,694
Pension fund	21,405	24,662	27,182
Net earnings	611,839	630,980	714,604
"A" preference dividend	117,000	117,000	117,000
Number of times covered	*5·2*	*5·3*	*6·1*
"B" preference dividend	135,000	135,000	135,000
Number of times covered	*2·4*	*2·5*	*2·8*
Ordinary *earned*	*15·9%*	*16·7%*	*20·4%*
Ordinary paid	10%	10%	14%
Ordinary amount of dividend	225,365	225,365	315,510
To reserve	130,000	130,000	130,000
Increase in carry-forward	4,474	23,615	27,094

The most outstanding alterations in the balance sheet include the rise of £67,670 in plant to £866,361, while debtors have dropped by £130,764 to £3,336,207, and stocks show an increase of £122,486. Creditors and amounts due to subsidiaries have this year been shown separately, and show an aggregate decline of £144,836 at £2,086,163. Cash being down by £122,519, liquid assets exceed the current liabilities by £2,643,343—a decrease of £211,733 as compared with last year. In their report the directors state that the company's overseas trade has shown a considerable increase. New high-tension switch gear and transformer and cable-manufacturing works have been constructed. The ordinary shares at £2 8s. 9d. yield £6 1s. 10d. per cent.

Guest, Keen and Nettlefolds.—Despite long drawn-out depression in the iron and steel trades, Guest Keen's profits have been well maintained in recent years. Two-thirds of the assets are now represented by shares in subsidiary companies. After a slight decrease in 1929, the net profit has risen by £12,627 to £968,698. After paying preference dividends the ordinary shares receive their customary 10 per cent.:—

(Years ended March 31.)	1928. £	1929. £	1930. £
Profit	966,244	956,071	968,698
First preference dividend	86,000	86,000	87,250
Second preference dividend	225,759	229,259	229,857
Ordinary *earned*	*10·3%*	*10·1%*	*10·3%*
Ordinary paid, tax free	10%	10%	10%
Ordinary amt. of dividend	630,447	630,447	630,447
Increase in carry-forward	+24,038	+11,365	+21,144

During the year the Abercynon Colliery and other colliery interests were sold to a new company—Welsh Associated Collieries, Ltd.—and the British (Guest, Keen, Baldwins) Iron and Steel Company, Ltd., took over the Dawlais and Cardiff Steel Works. In 1929 "investments in subsidiaries" would appear to have been included in the conglomerate item "investments." On this assumption the items "shares in subsidiaries" (£14,610,511), "due by subsidiaries" (£1,604,060), and "investments" (£1,988,520) show a combined increase this year of £5,162,478 at £18,153,091. Owing to the disposal of the assets, properties are down by £1,436,498, at £2,036,782. A new liability appears this year, under the heading "due to subsidiary companies," £1,546,083. If this item may be assumed to have been included with "creditors" in 1929, their combined total of £2,167,102 represents an increase of £1,165,049. The ordinary shares at 33s. 1½d. yield £6 4s. 6d. per cent.

William Cory.—This company's record of persistent prosperity was scarcely interrupted last year, its profits, though showing a decline of £43,602 at £696,687, covering the preference dividend 16.4 times. After paying 17½ per cent. on the ordinary capital (on which 22.2 per cent. was earned), adding £50,000 to reserve, and writing £54,993 off goodwill, the carry-forward is increased by £39,856 to £701,854:—

(Years ended March 31.)	1928. £	1929. £	1930. £
Profit	696,047	777,289	733,687
Debenture interest	37,000	37,000	37,000
Net earnings	659,047	740,289	696,687
Preference dividend	42,500	42,500	42,500
No of times covered	*15·5*	*17·4*	*16·4*
Ordinary and employees' shares *earned*	*21·1%*	*23·8%*	*22·2%*
Ordinary and employees' shares paid	17½%	17½%	17½%
Ordinary and employees' shares amt. of div.	511,094	512,220	513,338
To reserve	100,000	150,000	100,993
Increase in carry-forward	5,452	35,569	39,859

In the latest balance sheet land, buildings, goodwill and shares in subsidiaries are shown separately, their total, at £3,731,157, being £808,911 less than a year ago. Debtors have decreased by £381,204 to £2,677,647, while creditors and reserves for contingencies are down by £777,127 to £1,919,653. Premiums on shares totalling £440,000 have been utilised to write down goodwill to £54,994—the item disappearing altogether as a result of the appropriation from revenue, mentioned above. Owing to the grouping of debtors and contingency reserve, the amount by which liquid assets exceed current liabilities cannot be precisely stated. At their present price of £3 0s. 7½d. the ordinary shares yield £6 0s. 5d. per cent.

John Brown Debentures.—As a result of the conference between the debenture-holders and the company's advisers (referred to in the *Economist* of June 14th last, page 1340), an agreement regarding details of the proposed scheme has now been reached. Originally it was proposed that the date of maturity of the debentures should be postponed until December 31, 1965. This scheme is now to be modified, and holders are to have the right to repayment on December 31, 1937, at 103 per cent. on six months' notice being given. The company may redeem all or part of the debentures on six months' notice, on any interest date, at prices ranging from par on January 1, 1932, to 103 after December 31, 1933. The cumulative yearly sinking fund will be applied by purchase in the market at or below 103 per cent. or by drawings at 103 per cent. commencing in 1938. The proposal that the directors should be empowered to dispose of the Atlas Works, Sheffield, or the Scunthorpe Works is to be modified so that the sanction of the debenture-holders will first have to be obtained. Also the power to mortgage or charge assets (other than specifically mortgaged properties) will be limited to guarantees or undertakings given by, or on behalf of, the company for the due performance of Government and other contracts. The amended scheme would appear largely to meet the objections previously raised, which chiefly centred round the extended date of maturity.

Colliery Amalgamation Results.—The measures of rationalisation recently effected by several of the leading northern colliery companies would appear now to be bearing fruit. In the report of the Yorkshire Amalgamated Collieries, Ltd., for the financial year ended March 31st last, the directors state that "the working results of all the companies show a substantial improvement as compared with the preceding year." Net profit for the year amounts to £85,672, including £20,000 set aside last year for a suspense reserve which was not required. This result compares favourably with the meagre profit of £1,530 for the previous twelve months. An amount of £5,000 is set aside as the basis of an Investment Reserve, leaving, with £5,448 brought forward, the sum of £86,120 available for dividend. As the "B" shares are not entitled to participate in dividends declared in respect of any financial period before January 1st, 1930, the profits have been divided between the period ended December 31st, 1929, and the period from that date to March 31st, 1930. The profits for the former period, including the amount brought forward, amount to £76,324, out of which the directors recommend a dividend of 6d. per share on each ordinary share in groups "A," "D" and "E," which absorbs £44,018, leaving a balance of £32,306. The profits of the second period, amounting to £9,796, bring this surplus to £42,102, out of which a dividend of 3d. per share is to be paid on each ordinary share of the "A," "B," "D" and "E" groups, absorbing £26,000, leaving a balance of £16,102 to be carried forward to the next account. Meanwhile, the Court has confirmed the resolutions to reduce the capital of the Rossington and Maltby companies, though the writing down of their capital does not affect the balance sheet of the Yorkshire Amalgamated. Another company which has recently taken over control of several concerns, the Manchester Collieries, Ltd., also records a considerable advance since March, 1929, when the scheme of amalgamation came into effect. The accounts for the period show a disposable profit of £108,215 after providing for directors' fees, amortisation and depreciation of rolling stock. Dividend for the period from March 12th, 1929, to March 31st, 1930, is to be paid on the 7 per cent. cumulative preference shares, absorbing £90,647, while the balance of £17,569 is to be carried forward to the next account. In both cases, the figures relate to a period of considerably improved conditions in the industry as a whole. The next few months may provide a more trying test of the increased efficiency of "rationalised" production, but the results already achieved, so far as they go, provide a fairly hopeful augury for the future success of that policy.

International Telephone and Telegraph.—The history of this vast organisation for the year 1929, in the words of the report, has been "notable for its achievements in the continued progress and expansion of the corporation's world-wide activities in the field of communications, as well as in the acquisition of new and important manufacturing interests in foreign territories." The network of telephones for which the Corporation and its subsidiaries are now responsible has increased by no less than 220,000 instruments during the year, compared with a mere 30,000 in 1928, while it appears that the International System can communicate with approximately 86 per cent. of the world's telephones. The consolidated earnings of the company stand in the accounts at $89,291,335, or $17,846,571 more than the $71,444,764 earned during 1928. Total income amounts to $100,340,590, compared with $81,234,824, while total expenses have increased only by $14,728,556, bringing the net earnings figure to $27,431,038, against $23,053,829 for 1928. After deduction of debenture interest and other charges, there remains a net income of $17,732,159, against $14,596,337. With the addition of $21,471,677, being surplus on January 1, 1929, and $133,053 for sundry surplus credits, the sum of $39,336,890 is available for dividends, which absorb $10,853,419. Interest on debenture bonds converted into stock during the year takes $428,763, leaving a surplus of $28,054,707, increased to $76,465,576 by the addition of a capital surplus of $48,410,869, or more than twice the carry-forward of the previous year. The items in the balance sheet emphasise the progressive tendency in the activities of the company, the total this year being no less than $145,289,256 up at $535,203,589. A separate item of $3,995,073 appears under deferred charges for research and development expenses, instead of being incorporated as before with prepaid accounts. The present report merits unusually close perusal, since it contains an informative resumé of the development of the company since its incorporation in 1920.

Standard Oil of New Jersey.—Despite its nominal dissolution into thirty-three separate parts by the 1911 dissolution decree of the Supreme Court, the Standard Oil Company of New Jersey is still by far the largest producer, marketer and refiner of oil in the United States. The gross revenues and profits of the company are exceeded only by those of United States Steel, American Telephone and Telegraph and General Motors. In spite of over-production, large surplus stocks of crude petroleum and refined products, and generally unsatisfactory prices, Standard Oil in 1929 earned $4.75 a share, against $4.43 in 1928, on a capital increased by 934,749 shares. The company paid its regular $1 dividend, together with extras totalling 87½ cents per share, while at last February's meeting the board declared the usual 25 cent quarterly regular rate, with a 25 cent extra payment.

(000's omitted.)	1926. $	1927. $	1928. $	1929. $

Common dividends	23,231	35,066	36,583	46,520
Carried forward	80,424	1,858	71,903	74,393

The company's production of crude oil last year was 101,100,098 barrels, an increase of 17.37 per cent. Of this output the company obtained 49,442,546 barrels from foreign fields, its own production accounting for 51.6 per cent. of the crude oil run through the stills. Its refinery production was 196,797,000 barrels, an increase of 15,000,000 barrels. The company's tanker fleet now includes 118 vessels, totalling 1,250,000 deadweight tons. On the completion of the tankers now

OTIS & CO.
Established 1899

Underwriters of Stocks and Bonds

Cleveland New York
Chicago Philadelphia

under construction, Standard Oil will own more than one-tenth of the world's tanker fleet. The company was especially active last year in developing its natural gas business, which is making an increasingly important contribution to its income account.

Copper Position.—The phenomenal buying of copper by consumers the world over during the first half of May—when after months of waiting the latter were able to cover their present and, in many cases, future requirements at about 13 cents per pound—was followed, not unnaturally, by a marked lull, writes a trade correspondent. The duration of this movement is difficult to foresee, since the metal-consuming industries are suffering, with most other trades, from severe depression. Contrary to expectations, the end of May witnessed a further increase in refined copper stocks, and the Custom smelters, nervous of accumulating metal with such huge reserves above ground, began cutting prices in the States. Copper Exporters Incorporated were compelled to fall into line, and reduced their price to 12 cents—which is equivalent to about £56 15s. 0d. c.i.f. English port manufacturers, however, are doing no more than cover their sales, and if buying on a big scale is to be encouraged, it is evident that a more attractive price must be forthcoming. The metal is now being talked down to 11 cents., or even lower. Statistically, copper is in a very unfavourable condition, for in addition to current production (which is certainly able to take care of present consumption), there are stocks in producers' hands of close on 600,000 short tons which must be reduced by at least a quarter of a million to restore equilibrium. This can be effected only by increased consumption, the sole means to this end being the maintenance of a low price for a prolonged period. By holding up the value at 18 cents for twelve months the producers did great harm to the consuming end of the trade, and as a combined—if not united—body they may be prone to repeat their previous error. A speedy return to untrammelled trading methods, it is generally agreed, would be in the best interests of all concerned.

Mexican and Canadian Eagle Dividends.—The increase in the production of the Mexican Eagle company last year, and the refining by Canadian Eagle at its new refinery in Aruba Island of increased quantities of crude oil purchased from the Venezuelan Oil Concessions, Ltd., prepared the market to expect good reports from these two companies, but the declaration of dividends on the ordinary as well as on the participating preference shares of both companies came distinctly as a surprise. The dividends, also, were not easy to decipher. When the old Mexican Eagle transferred its assets outside Mexico to the new Canadian Eagle, its shares were reduced from 10 to 4 Mexican pesos (1 peso equals 24½d.). Its first preference shares continued to rank for a cumulative 7 per cent., its participating preference shares next for a non-cumulative 8 per cent., its ordinary shares next for a non-cumulative 8 per cent. and thereafter the participating preference and ordinary shares ranked equally. The Canadian Eagle first 7 per cent. preference shares are of the denomination of three Canadian dollars, while the participating preference and ordinary shares are of no par value. After a cumulative 7 per cent. dividend is paid on the first preference, the participating preference rank for 23.88 Canadian cents, and the ordinary for a similar amount, after which they rank equally. The following table shows the actual dividends paid in respect of 1929 on the participating preference and ordinary shares, and the yields obtainable at current market prices:—

	1929 Divs.	Market Price.	Yield %
Mexican Eagle 8% Participating Preference $4 (Mex.)	8%	12/-	5·40
Mexican Eagle Ordinary, $4 (Mex.)	6%	12/1½	4·04
Canadian Eagle Participating Preference no par value	23·88 cents	12/6	7·80
Canadian Eagle Ordinary, no par value	12 cents	11/6	4·35

It would appear from the great dissimilarity in yields that the market has not yet adjusted itself to the new dividend rates or made up its mind about the relative prospects of the two companies.

Venezuelan Oil Concessions.—In an Investment Note in the *Economist* of June 7th, we referred to the merger of the V.O.C. Holding Company with the Venezuelan Oil Concessions and to the slight reduction in profits which the latter had suffered in 1929 in spite of an increased production of crude oil. The chairman, at the general meeting of the Venezuelan Oil Concessions, on June 12th, attributed this fact to the bad prices which ruled throughout the year for the heavy oil of the grade which the company's fields produce. This is primarily a "fuel oil," crude, and the average price of fuel oil in 1929 was lower than in any year since 1922. Moreover, production costs per barrel were not reduced as much as they might have been with an increased turnover, the gradual diversion of drilling from the shore to the interior having necessitated additional expenditure on roads and pipe-lines. Further heavier depreciation was allowed for on account of the sharp production declines of many of the wells—an unwelcome feature. The following table shows the remarkable increase in the company's output since 1924:—

(Metric tons.)

1924	391,134	1927	2,978,219
1925	692,485	1928	5,084,580
1926	1,802,943	1929	6,469,206

The bulk of this production is obtained from the "heavy" crude oil fields—La Rosa to Lagunillas—in the Bolivar district on the east side of Lake Maracaibo, but in December the light oil fields at La Concepcion and La Paz on the west side were opened up, producing 22,558 metric tons in that month. The financial results are shown in the next table:—

	1928. £	1929. £
Oil proceeds, &c.	4,449,993	4,888,021
Field expenses	1,985,107	2,240,129
General expenses, Venezuela	596,767	747,167
,, ,, London	216,718	81,502
Depreciation	444,971	733,556
Net profit	1,206,430	1,085,666
Per cent. earned	122·9	20·1†
Per cent. paid	111½%	20%†

† On new capital basis.

The 1928 dividend was paid on a capital of £1,000,000 and the 1929 dividend on £5,398,795, this being the amount of the V.O.C. Holding Company's capital at December 31, 1928, plus £448 subsequently issued. The balance sheet does not disclose a very liquid position, but the company has subsequently made an issue of 1,800,000 shares to shareholders for cash. As regards the future prospects of the company, Mr Agnew, who presided at the meeting, declared that it had sufficient drilling ground for a good many years, and that production should be maintained, and costs kept within reasonable bounds. He warned shareholders, however, that the heavier rate (15 per cent.) of amortisation now allowed would increase production expenses. The higher prices obtained for the oil now being produced from the west side of the lake should, however, offset this adverse factor to some extent. At the current level of 2½ the ordinary shares would yield 8 per cent. if the 20 per cent. distribution were maintained on the increased capital.

The Rand Midsummer Dividends.—A rather mixed showing is made, writes our mining correspondent, by the dividend declarations of the Witwatersrand gold-mining companies for the first half of this year. The most notable decrease is shown by the Brakpan, a decline of 3¾ per cent. as compared with the December and of 2½ per cent. as compared with the June rate last year, reflecting the shrinkage in profits resultant upon the less favourable developments of 1929. Substantial increases are shown by two of the "Johnnies" subsidiaries—the Langlaagte Estate and the Witwatersrand Gold; but a renewed decline occurs in the announcement of the Van Ryn Deep, which has passed its prime, as we took occasion to remark in our last annual article. A similar observation might now be made regarding the New Modderfontein. After progressive upward steps over a period of some seven years, this wonderful mine now records a small retrogression. Maintenance of its percentage by the Modder B is somewhat surprising in view of the trend of profits during the period; but the cash position, of course, is extremely strong. After an absence of eighteen months the Rose Deep re-enters the list, while the Geldenhuis increases its rate. These are short-lived properties. All hopes of a larger return from the Sub Nigel were disappointed, the requirements for capital expenditure doubtless impelling conservatism. Our usual table is given:—

Company.	Total, 1928	June, 1929	Dec., 1929	Total, 1929	June, 1930
	%	%	%	%	%

* Tax free. † Less tax.
This table does not include declarations made at dates other than June and December.

Quite recently a sharp fall has taken place in the shares of the Anglo-American Corporation and its associates on the fear that their commitments in diamond and Northern Rhodesian enterprises would entail a cut in, if not the passing of dividends. That these apprehensions were well grounded is indicated by the absence of any declarations by the New Era and Rand Selection undertakings. In reference to the latter, the board intimate that they consider it desirable to husband the resources of the company "pending the improvement in business conditions." The Johannesburg Consolidated Investment Company will again pay 7½ per cent. interim—subject, however, to tax instead of tax free as in so many past years.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Gresham Life Assurance, Royal Mail Steam Packet, Anglo-Persian Oil, Madras Electric Supply, British Electric Traction, Marks and Spencer, Callenders Cable and Construction, Indian Copper, Hovis, City Deep, and International Telephone and Telegraph. At the Royal Mail Steam Packet meeting Lord Kylsant said that the company still had under consideration the laying down of one, and possibly two, new fast passenger vessels for their South American mail service. While the plans for such a type of vessel had been carefully prepared, orders to proceed with the work of construction had not yet been given. A discussion of the main features of Lord Kylsant's speech appears on page 1394. The chairman of the Anglo-Persian Oil Company informed shareholders that rapid strides had been made in advancing their knowledge of the new field at Haft Kel, which lies 35 miles south-east of Masjid-i-Suleiman, and a structure exceeding nine miles in length by approximately two miles in width, with a vertical head of oil exceeding 1,600 feet, had already been proved. Discussing the past and future development of the company, Mr Simon Marks, presiding at the fourth annual meeting of Marks and Spencer, stated that during the past year they had built, equipped and opened eighteen new stores and had materially enlarged six others, while since the beginning of the present financial year, in April, they had opened five new stores and four large extensions of existing stores.

CAPITAL ISSUES.

After last week's heavy Reparation Loan operation the market enjoyed a brief respite. Only two new issues made their appearance, the proceeds in both being destined for employment in the brewery industry. The debentures of *Courage and Company*, covered 11 times by earnings and giving a flat yield of £5 12s. 3d. per cent., were regarded as a good industrial investment. The lists were quickly closed but the debentures were dealt in on the Stock Exchange at a small discount on Thursday. The "funding" of another brewery purchase was also the *raison d'être* of the *H. and G. Simonds* preference share issue. The shares are well covered, and give a moderate yield.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to June 14, 1930, £165,203,257.

Courage and Co.—Issue of £800,000 5½ per cent. Redeemable debenture stock, 1970, at £98 per cent. The stock will be redeemed on December 1, 1970, at par, but the company reserves the right to repay the whole on or after June 1, 1940, but not later than June 1, 1945, on six months' notice, at £105 per cent. and after June 1, 1945, at £103 per cent. The company also reserves power to purchase stock in the open market at or below par, plus accrued interest. Net profits of the company, after deduction of all prior charges, totalled £478,396 in 1929, covering interest on the present issue 11 times. The proceeds of the issue will be utilised for or towards repaying temporary bank advances obtained for completing the purchases of ordinary shares of Noakes and Company, Ltd., and for general development.

H. and G. Simonds.—Issue of 400,000 6½ per cent. Cumulative preference shares of £1 each at par. The brewery business was originally acquired by the company in 1885. Profits before deducting income tax averaged £92,295 for the past three years, covering dividends on preference shares, including the present issue, approximately 2·7 times. The object of the issue is to enable the company to repay part of the money borrowed from the company's bankers for the purpose of acquiring shares in Ashby's Staines Brewery, Ltd.

PENDING ISSUE.

Marks and Spencer, Ltd.—An issue will be made on Tuesday next of £1,000,000 6 per cent. first mortgage registered debenture stock at £102 per cent., and 1,000,000 7 per cent. cumulative preference shares of £1 each at 21s. per share, repayable in a winding-up at 22s. 6d., together with arrears of dividend, if any. The debenture stock will be redeemed by an annual cumulative redemption fund, commencing August 1, 1935, calculated to complete the redemption at 105 per cent. on or before August 1, 1970, to be applied in purchases in the market at or below 105 per cent., or by drawings at 105 per cent., with power to the company to repay the whole or a part at 105 per cent. on August 1, 1960, on six months' notice. The interest on the debenture stock is covered by the average net profits of the last three years over 4½ times, and by the net profits of the last year over six times. The dividend on the preference shares now to be issued is covered by the average available net profits of the last three years over 2½ times, and of the last year over 3¾ times.

[Other Stock Exchange information, including the latest profit and loss figures, shorter notices, summary of balance sheets and dividend announcements will be found on page 1419 under the heading "Company News."]

INTERNATIONAL TELEPHONE and TELEGRAPH CORPORATION.

ANNUAL REPORT, 1929.

The International Telephone and Telegraph Corporation was organized to co-operate and assist technically and financially in the general development of electrical communications in a broad international sense, and, with respect to the organization and development of national communications systems, it is the purpose of the International Telephone and Telegraph Corporation to develop truly national systems operated by the nationals of each country in which the International Corporation is or may become interested. The International Corporation was not organized with a single profit-making purpose to itself nor with the desire of imposing American practices in its foreign activities. There appeared to be a fruitful field of service to be rendered in bringing together under one general organization electrical communications systems, and the extension by the International Corporation to the Associated Companies of the technical and financial facilities and direction that might be needed for their intensive and efficient development. The best American practices have been suggested but never imposed. On the contrary, the International Corporation has always been ready and quick to adjust American practices to local conditions and to adopt such local practices as were conducive to the successful development of the various entities. The combined and co-ordinated effort of the Associated Companies of the International System is to-day justifying the plans and purposes of your Corporation.

To the STOCKHOLDERS:

May 28, 1930.

The year 1929 which this report covers has been notable for its achievements in the continued progress and expansion of your Corporation's world-wide activities in the field of communications, as well as in the acquisition of new and important manufacturing interests in foreign territories.

In order that the Stockholders of the Corporation, the number of whom increased during the year under review from 16,568 to 53,594, may be fully acquainted with the comprehensive and continued growth and progress realised in the various branches of electrical communications, your corporation's activities in this field will be referred to generally and briefly.

So that a better perspective may be had of the many accomplishments in which your Corporation has played an important part in the development of electrical communications in all its branches in 47 countries of the world, it is believed at this time that the following chronological history of the Corporation will be interesting especially to those who have recently become stockholders in the International Telephone and Telegraph Corporation:

1920–21.—International Telephone and Telegraph Corporation was incorporated and acquired a controlling interest in the Porto Rico Telephone Company and the Cuban Telephone Company together with a one-half interest in the Cuban American Telephone and Telegraph Company, which was organized to own and operate combined telephone and telegraph submarine cables connecting the lines of the Cuban Telephone Company with those of the Bell System, the remaining one-half interest being owned by the American Telephone and Telegraph Company.

1922.—Radio Corporation of Cuba and Radio Corporation of Porto Rico formed to operate radio broadcasting stations and to be prepared to take any position in the radio industry which subsequent developments in that industry might indicate was advisable.

1923.—International Telephone Securities Corporation formed to facilitate financial transactions incident to the development of the International Telephone and Telegraph Corporation.

1924.—Concession granted by the Spanish Government providing for the creation and operation of a general telephone service extending throughout continental Spain and its contiguous territories, and Compañía Telefónica Nacional de España, a Spanish corporation organized to develop the telephone system of Spain under this concession.

1924.—International Telephone and Telegraph Corporation (España) organized to assist technically and financially in the development of the Spanish Telephone System.

1925.—A substantial interest in the Compagnie des Téléphones Thomson-Houston, a company manufacturing telephone apparatus and supplies, acquired from the Compagnie Française pour l'Exploitation des Procédés Thomson-Houston.

1925.—International Western Electric Company, manufacturers and distributors of telephone apparatus and supplies and related electrical products, purchased from the Western Electric Company, Incorporated, and name changed to International Standard Electric Corporation. The Associated and Affiliated companies of the International Standard Electric Corporation at the time of acquisition were:

Bell Telephone Manufacturing Company (Belgium).
China Electric Company, Limited (China).
Compañía Standard Electric Argentina (Argentina).
Lé Matériel Téléphonique (France).
Nippon Denki Kabushiki Kaisha (Japan).
Standard Elettrica Italiana (Italy).
Standard Electric Aktieselskap (Norway).
Standard Telephones and Cables, Limited (England).
Standard Telephones and Cables (Australasia), Limited.
Teléfonos Bell S.A. (Spain).

1925—Controlling interest acquired in the Mexican Telephone and Telegraph Company, a company operating a general telephone system in Mexico.

1926—Controlling interest acquired in the Vereinigte Telephon- und Telegraphenfabriks Aktien-Gesellschaft Czoija, Nissl and Company (United Telephone and Telegraph Works), a company manufacturing telephone apparatus and supplies in Austria.

1926—Standard Eléctrica, S.A., organized to manufacture telephone apparatus and supplies in Spain and Teléfonos Bell, S.A., liquidated.

1927—Controlling interest acquired in All America Cables, Incorporated, operating telegraph cables between New York and Central and South America and the West Indies.

1927—Controlling interest acquired in the Montevideo Telephone Company, Ltd., and Sociedad Cooperativa Telefónica Nacional, both of which operate general telephone services in Uruguay.

1927—Controlling interest acquired in the Chili Telephone Company, Limited, which operates a general telephone service in Chile.

1927—Controlling interest acquired in the Companhia Telephonica Rio Grandense, which operates a telephone service in the State of Rio Grande do Sul, Brazil.

1927—Controlling interest acquired in the Compañía Telefónica Argentina, which operates a telephone service in the city of Buenos Aires.

1927—Standard Villamossági Részvény Társaság (Hungary), organized to take over the telephone manufacturing department of the United Incandescent Lamps and Electrical Company, Ltd.

1928—Postal Telegraph and Cable Corporation formed to acquire a controlling interest in the Mackay Companies, which operates, through its subsidiaries, a telegraph service throughout the United States, with connections to Canada and cable services to Europe and Asia.

1928—Following companies formed to operate radio telephone and telegraph in South American countries:

Compañía Internacional de Radio (Argentina).
Radio Internacional, Limitada (Brazil).
Compañía Internacional de Radio, S.A. (Chile).

1928—Controlling interest acquired in Creed and Company, Limited, manufacturing printer telegraph apparatus in Great Britain.

1929—Controlling interest acquired in Ferdinand Schuchhardt Berliner Fernsprech- und Telegraphenwerk Aktiengesellschaft, which manufactures telephone apparatus and supplies in Berlin, Germany.

1929—All America Cables, Incorporated, took over the operation of the United States and Hayti Telegraph and Cable Company's cable from New York to Cape Haytien and the cables of the French Antilles System connecting Cuba, Hayti, Santo Domingo, Porto Rico, St. Thomas, Curaçao and Venezuela.

1929—Radio Telephone and Telegraph concessions acquired by All America Cables, Incorporated, in Peru and Colombia.

1929—International Communications Laboratories, Inc., formed to carry on development and research work for the wire, cable and radio telegraph operating services in the United States, and International Telephone and Telegraph Laboratories, Incorporated, and Laboratoire International de Téléphonie et Télégraphie, Inc., formed to take over the communications development and research work formerly carried on by the International Standard Electric Corporation and its Associated Companies.

1929—International Standard Electric Corporation of Mexico organized as a subsidiary of the International Standard Electric Corporation.

1929—Controlling interest acquired in the United River Plate Telephone Company, Limited, which operates a general telephone service in Argentina.

1929—International Telephone and Telegraph Corporation, Sud, America organized to assist technically and financially in the operation of the telephone operating properties of the International Telephone and Telegraph Corporation in South America.

1929—The name of the Postal Telegraph Building Company changed to International Telephone Building Corporation, which owns and operates the International Telephone and Telegraph Corporation buildings in New York City.

1930—Controlling interest acquired in the Compañia Peruana de Teléfonos, Limitada, which owns and operates a telephone system in Peru.

1930—International Marine Radio Company, Limited, organized to handle radio electric communications between land and ships, land and aircraft, and ships and aircraft, as well as other forms of mobile services.

1930—Substantial interest acquired in the Constantinople Telephone Company, Limited, which owns and operates the telephone system in Constantinople.

1930—Creed Telegraphenapparate G.m.b.H. formed to manufacture and distribute Creed high-speed telegraph printer equipment in Germany.

1930—Controlling interest acquired in Osterreichische Telephon-Fabrik Aktiengesellschaft vormals J. Berliner, manufacturing telephone apparatus and supplies in Austria.

1930—Standard Elektrizitäts Gesellschaft, Berlin, organised with the following subsidiaries:

Ferdinand Schuchhardt Berliner Fernsprech- und Telegraphenwerk Aktiengesellschaft, Berlin.

Telephonfabrik Berliner Aktiengesellschaft, Berlin.

Mix & Genest Aktiengesellschaft, Berlin.

Suddeutsche Apparate Fabrik G.M.B.H., Nuremberg.

1930—Substantial interest acquired in C. Lorenz Aktiengesellschaft of Berlin, manufacturer of various types of electrical communications equipment.

The following data are given as an interesting complement to the above summary:—

	December 31, 1921.	December 31, 1929.
Total assets	$32,563,394·45	$535,203,588·65
Total number of employees	1,352	94,939
Total number of shareholders	846	53,594

TELEPHONE OPERATING COMPANIES.

During the year 1929 the United River Plate Telephone Company, Limited (Argentina) was added to the International group, and early in the present year the Compañía Peruana de Teléfonos, Limitada, (Peru), was also added and a substantial interest acquired in the Constantinople Telephone Company, Limited. The acquisition of the United River Plate Telephone Company, Limited, together with the improvements and extensions made to the other telephone operating companies resulted in an increase of 264,413 telephones operated by the International System Companies.

As recited in last year's Annual Report the United River Plate Telephone Company, Limited, which operates telephone systems in Buenos Aires and other principal cities of the Argentine, with connecting long-distance lines, became associated with the International Corporation as of January 1, 1929.

At the end of the year 1929 the United River Plate Telephone Company System served approximately 216,000 telephone stations. This total reflected a gain of 21,427 telephones, or about 11% for the first year of operation under this Corporation's management. The growth in stations and the increase in long-distance traffic necessitated a considerable amount of construction. Over 675 miles of long-distance lines and 2,100 miles of long-distance wire were added in 1929. Aerial and underground cables were installed which contained a total of more than 300,000,000 conductor feet, and 350,000 duct feet of conduits were placed in Buenos Aires and other important commercial centers. In Buenos Aires a new twelve story general office building which will also house the Avenida automatic exchange was opened.

A growth of 30,000 telephones is anticipated for the year 1930. This growth will involve the continuation of the heavy construction program of 1929. It is expected to put into service approximately 100 new telephone exchanges during this year, and further provision will be made for the relief and expansion of areas which are now congested. By the end of 1932 it is planned that all of the telephones of the company in Buenos Aires will be of the automatic type.

Ownership of the Compañia Peruana de Teléfonos, Limitada, was formally transferred to this company on January 3, 1930. It operates upwards of 10,000 stations located in the cities of Lima, Callao, La Punta, Miraflores, Barranco, Chorillos and Magdalena. The ultimate plans for this system contemplate its connection by means of radio telephony with the other South American units and with North America and Europe.

The Constantinople Telephone Company, Limited, in which the International Telephone and Telegraph Corporation recently acquired a substantial interest, operates under an exclusive concession granted by the Turkish Government in 1911 for a period of from 30 to 40 years. It renders a general telephone service to the three cities comprising what is known as Constantinople—Stamboul, Pera, and Scutari. With the affiliation of this Company, the International Corporation now operates telephones in nine countries, the others being Spain, Cuba, Mexico, Peru, Chile, Argentina, Uruguay, and Southern Brazil, as well as the island of Porto Rico.

In Chile, a comprehensive telephone concession was granted on January 16, 1930. The concession, which is granted for a period of 50 years, authorizes the establishment throughout the republic of local and long distance telephone service employing both wire and wireless construction with auxiliary and supplemental services and connections with foreign services. A proviso is included making the concession automatically self-perpetuating in periods of thirty years each, should the Government not exercise its right of purchase at the end of the 50-year period.

The concession gives to the Company the right to earn a return upon its net investment adequate to assure the financing of its necessary plant extensions, including the right to adjust its rates in order to provide such return.

A very satisfactory growth in business has been realized in Chile during the past year. The number of telephones installed showed an increase of over 4,000, making a total of more than 35,000 at the year's end. Long-distance business within the country during the year increased approximately 76%, and international long-distance traffic gained about 71% over the year 1928.

The Companhia Telephonica Rio Grandense, which operates in the State of Rio Grande do Sul, Brazil, continued to show an increase in the number of telephones served and in the revenue derived from the local and long-distance telephone service. This Company also furnishes a service for the transmission of written messages. This auxiliary service transmitted during the year 1929 more than 800,000 messages, exceeding by about 200,000 the number transmitted the previous year.

In Uruguay, pending the completion of negotiations for a new concession, no major reconstruction program has been undertaken and the activities of your Corporation are being directed toward reconditioning and maintaining the existing plant in order to render the best service possible with the facilities already in operation. In addition, development plans have been prepared for execution, should our application for a new concession be granted, which would permit of the installation of a complete automatic system in the City of Montevideo and the extension of modern telephone service throughout the Republic of Uruguay.

The outstanding feature of the year in the development of the Mexican Telephone and Telegraph Company was the conversion of the telephone system in Mexico City to full automatic on December 21, 1929. The growth of this company for the year amounted to 2,140 telephones, making the total in service at the end of the year 34,225. Exchange service revenues showed a gain of 26%, and long-distance revenues a gain of 60% over those of the previous year. Of particular interest was the signing of a contract in February, 1930, by the Mexican Telephone and Telegraph Company whereby it took over the private telephone system of the Federal District Government.

In Cuba, in spite of the depressed condition of business which prevailed during the year 1929, the Cuban Telephone Company showed a 4·3% gain in the number of telephones and a 5·1% increase in operating revenues. The total number of telephones in service at the end of the year was 75,432, of which 62,606 were of the automatic type. It is worthy of note that the telephones of the Cuban Telephone System have increased 38,622 since 1921.

The Cuban American Telephone and Telegraph Company, which is jointly owned by the American Telephone and Telegraph Company and the International Telephone and Telegraph Corporation, and operates the three Key West-Havana cables, showed for the year 1929 a continued satisfactory increase in telephone traffic. In order to meet the growing demand for this class of service, which has increased considerably during the past two years, more particularly during the tourist season, an order has been placed and the necessary plans made for laying another submarine telephone cable connecting the two countries. The cable, which will be approximately 110 nautical miles long, reaching between Key West and Havana, will be the first deep sea telephone cable of such a length to employ a wide range of frequencies up to about 30,000 cycles. It will be non-loaded and multiplexed by telephone carrier current, and initially will be equipped to provide three telephone circuits and one telegraph circuit. It is expected that the new cable will be in operation by the end of the present year.

The Porto Rico Telephone Company during the year 1929 has practically completed the repairs necessitated by the cyclone of 1928, but the after effects of that great storm are still being felt and are reflected in general business depression which has continued throughout the year. Until the economic situation in the Island is substantially improved it can hardly be expected that a normal growth in the Company's operations will be realized.

In Spain the initial five-year construction period specified in the contract between the Compañía Telefónica Nacional de España and the Spanish Government ended on August 29, 1929. Under the terms of the concession, provision was made for the completion during this initial period of an extensive construction and reconstruction program. It is gratifying to note that at the date of its termination the company had completed substantially more than was specified in the concession. At the end of last year 2,280 communities were enjoying service over the Spanish Telephone Company's system compared with 581 five years before, when the concession was granted, and it may be said that unquestionably Spain to-day has one of the most modern and efficient telephone systems in the world. A substantial growth in both exchange and toll service occurred during the year. Additional telephones to the number of 38,753 an increase of 28·5%, were added to the System and long-distance messages handled increased 37·7% These increases resulted in a gain of 35·4% in the gross revenues of the Company.

The Company's new building in Madrid was completed early in the year. It is a stately edifice, one of the finest in the city, and one of which the system may justly be proud.

The growth of the Company necessitated a large amount of new construction. During the year, 35,000 miles of long-distance circuit were added to the system, five new buildings were constructed, service was carried for the first time to 229 communities of which 63 have both long-distance and local service, and 166 have long-distance service only; 7 new automatic exchanges were put in service and a second submarine cable was laid from Spain to Morocco. At the end of the year 63% of the telephones installed in Spain were of the automatic type.

The rapid growth experienced in the business of the Spanish Telephone Company last year is expected to continue throughout 1930, during which it is anticipated that 50,000 more telephones will be added to the System. This is particularly gratifying because it serves to confirm one of the major premises upon which the International System was founded—that the demand for telephone service is largely stimulated by improvement in the grade and dependability of service rendered.

TELEGRAPH AND CABLE COMPANIES.

Telegraph and cable traffic showed substantial increases in the year 1929 as compared with the business done during 1928.

The year 1929 was outstanding in the history of the Postal Telegraph System and in the improvement of its plant, personnel and service. A comprehensive construction and reconstruction program was successfully carried out with particular and substantial progress toward the improvement and expansion of the plant. The entire personnel of 21,000 employees located throughout the country has been stimulated and directed toward higher achievements. Improvements in working conditions, wages and employee benefits were put into effect. Schools for the education of salesmen, operators and messengers were established.

Great strides were made during the year in the improvement of the service. Particular attention was given to improvements in the plant. New extensions were made only when definite advantage from a revenue or service standpoint could be foreseen. During the year, 173 new offices were added, of which 52 were in towns where the Company had not previously maintained offices. The most up-to-date telegraph operating rooms were installed in Chicago, together with a new public office of the counterless type. The counterless office is a recent development in telegraph service and it has been introduced by the Postal Company in order to promote the more rapid dispatch of business as well as the comfort and convenience of its customers. Similar offices were opened in Cleveland and Washington.

During the year, typing telegraph machines installed in the offices of customers increased from 300 to 2,074. At the same time rapid progress was made in changing the main and branch office operations from morse to typing telegraph, and at the close of 1929 over 70% of all traffic handled was by printer telegraph equipment.

In touching briefly on the above improvements we might add that the effect on the morale of the organization has been felt throughout the service. Morale has been further improved by the adoption of pension, benefit and group insurance plans and by the opportunity to purchase shares of the International Telephone and Telegraph Corporation stock on a partial payment plan.

It is gratifying to note that in spite of the general business depression which prevailed in the latter part of 1929 and which had a substantial repercussion on the telegraph business of the country, the commercial telegraph toll revenue of the Postal Telegraph System during the year exceeded by 8% that of the year 1928.

It is also a source of satisfaction to report that during the year 1929 the traffic over the Commercial Cable System continued to increase considerably. The total number of words handled was 75,463,329, as compared with 63,530,662 in 1928, an increase of 11,932,667 words, or over 18¾%. The increase would have been substantially larger had it not been for the interruption of some of the Company's cables due to a severe earthquake on November 18, 1929 which caused over twenty-four breaks south of Newfoundland in twelve of the submarine cables of the various transatlantic cable companies.

Four of the Company's cables, broken by the earthquake in November, remained interrupted for the balance of the year 1929, thus affecting the company's capacity for handling traffic during that period. The Company's full capacity was restored early in the present year.

The repairs of the breaks in the Company's cables, in some instances in depths of over two miles, were effected under the most severe winter conditions, and the officers and crew of the cableships *John W. Mackay* and *All America* are deserving of the highest commendation.

The Company's plant and equipment have been maintained in first-class condition, and its engineers, who are constantly working on the problem of increased efficiency in operation, have succeeded in getting effective further increase in carrying capacity.

All important events of international interest during the year, whether political, commercial or sporting, were fully covered by special facilities provided by The Commercial Cable Company, and the Company has in all cases maintained its reputation for rendering efficient service. Its close contact with its Associated Company, All America Cables, Incorporated, and the co-ordinated efforts of the two have resulted in providing an unexcelled service between Europe and all parts of the West Indies (including Cuba) and Central and South America.

The policy of providing more convenient facilities for the prompt exchange of cablegrams between the offices of its customers and the Company, by means of printers or private telephone installations, has been continued throughout the year.

An outstanding accomplishment of The Commercial Cable Company during the year was the expeditious transmission of the 30,000 word text of the Young Plan from Paris to New York. This was referred to by the United Press as one of the most remarkable feats of news transmission in the history of communications.

All America Cables, Incorporated, directly serving South America, Central America, the West Indies and North America, has during the year 1929 operated with increased efficiency, handling satisfactorily over 400,000 more messages than in 1928.

As announced in the Annual Report for the year 1928, an agreement was entered into with the Compagnie Française des Câbles Télégraphiques to operate for that company, for a period of twelve years, the cables of the United States and Hayti Telegraph and Cable Company and the Antilles Cable System, connecting Cuba, Hayti, Santo Domingo, Porto Rico, St. Thomas, Curaçao and Venezuela, and the consent of all the Governments concerned has been granted to All America Cables, Incorporated, to operate this system.

In addition to the authorization to operate the cables of the Compagnie Française des Câbles Télégraphiques, All America Cables, Incorporated, has been granted a concession from the Venezuelan Government which permits the laying of its own cables from La Guaira and Maracaibo to connect with other points of the Company's system.

With the purpose in mind of having the West Indian, Central and South American systems all operated by the All America Cables, Incorporated, The Commercial Cable Company of Cuba was taken over in October, 1929, and is now being operated as an integral part of All America Cables System.

The Government of Peru and All America Cables, Incorporated, signed a new contract on May 29, 1929, to supersede the old concession which had expired. The new concession, which is pending ratification by the Peruvian Congress, enlarges the scope of the Company's activities by authorizing the laying of telephone cables, primarily for international service, and the erection of radio telephone and radio telegraph stations for communication with other parts of Latin America, the United States and Europe.

It will be noted that both cable companies showed appreciable increases in traffic and net income in 1929 over 1928. The Commercial Cable Company handled 18·78% more traffic and showed a growth in net income of 25·59%. The corresponding figures for All America Cables were 13·88% and 9·27%, respectively.

Through the death of Mr W. Emlen Roosevelt on May 15, 1930 the Directors and Officers of the International Telephone and Telegraph Corporation lost an able and resourceful counselor.

For many years Mr Roosevelt successfully directed the activities of All America Cables, Incorporated. He continued as Chairman of All America Cables, Incorporated, when that Company became associated with the International Telephone and Telegraph Corporation, and was elected to the Board of Directors of the International Telephone and Telegraph Corporation on May 11, 1927.

It is with the deepest regret and sympathy that we record his death.

RADIO COMMUNICATIONS.

As you have been previously advised of the tentative plan of your Corporation to acquire the communications facilities of the Radio Corporation of America, it may be well to bring to your attention the latest developments in this connection.

Under the existing laws of the United States the merger or consolidation of companies furnishing written communications whether by land wire, cable or radio may not be effected if the result of any such merger or consolidation would be substantially to diminish competition. In connection with a bill introduced in the United States Senate designed to provide for the regulation of all electrical communications companies, certain of our officers appeared and testified before the Committee on Interstate Commerce of the United States Senate which has conducted extensive hearings in this matter. These officers urged that the laws of the United States should be so amended as to provide for the merger or consolidation of communications companies furnishing written communications, when found to be in the public interest, on the same basis as the laws now provide for the merger or consolidation of competing telephone companies. The co-ordination of facilities which could be brought about under such an amendment to the existing law, through the elimination of unnecessary duplication of plant and the attendant savings in operating expenses, should make possible the establishment of lower rates. Your Directors earnestly hope that both Congress and the public may eventually be convinced that legislation along these lines should be adopted.

The year 1929 witnessed several important developments in your Corporation's transoceanic, ship to shore, and point to point radio telephone and telegraph services. The first transoceanic radio telegraph circuit established by the International System was that between San Francisco and Honolulu on May 1, 1929. This service will be extended to other Pacific points.

Marine radio telegraph service was extended by the Mackay Radio and Telegraph Company at its newly-completed coastal station at West Palm Beach, Florida. This service includes the handling of ship to shore and shore to ship messages with coastwise, Central and South American and European vessels plying in the South Atlantic ocean.

On the Pacific coast additional facilities in the form of modern short wave equipment were installed at the shore to ship and point to point stations at Portland, Oregon, San Francisco and Los Angeles, California, considerably improving the service which these stations rendered. On the Atlantic Coast commercial marine radio service was opened at New York City and Sayville, Long Island.

Another step in the expansion of Mackay Radio's facilities will be the opening during 1930 of its new stations at Las Pinas, near Manila, Philippine Islands. The station has been completed and is in condition for experimental tests with San Francisco.

On December 11, 1929 under authorization contained in the old contract, direct radio telegraph service between the new station of All America Cables at Lima and the station of the Mackay Radio and Telegraph Company at Sayville, Long Island, was successfully opened and the event was celebrated by an exchange of friendly greetings between President Hoover and President Legula of Peru.

A new contract between the Colombian Government and All America Cables, Incorporated, was signed on June 3, 1929, under which the Company was authorized to construct radio telegraph and radio telephone stations for international service and to communicate with ships and aircraft.

On March 8, 1929, All America Cables, Incorporated, entered into a contract with the Government of Nicaragua under which the Company was authorized to connect Managua with San Juan del Sur by radio telegraph or radio telephone or by wire, and to build other radio stations in the Republic, if requested by the Government and with a guarantee against loss. Under the authorization contained in this contract radio telegraph stations are being erected at San Juan del Sur and Managua.

The Compañía Internacional de Radio, S.A. (Chile), which was organized to operate radio telegraph and telephone service, has received authority from the Chilean Government to proceed with the installation of the necessary equipment for the opening of radio telephone service in connection with our international radio telephone network. Wavelengths have already been granted for radio telephone service to Spain and the United States, and a group of wavelengths has been reserved for other foreign services. It is expected that the station will be completed this year.

Inauguration of radio telephone service by the Associated Companies of the International System between Spain, Argentina and Uruguay took place on October 12, 1929. The link-up between Uruguay and Spain was accomplished as follows: From Montevideo to Buenos Aires via the subfluvial cable, thence by wireless to Madrid and from Madrid to Sevilla by the land lines of the Compañía Telefónica Nacional de España (Spanish Telephone Company). High officials and other invited guests participated in this important event. At Sevilla, H.R.H. the Infante Don Carlos de Borbón presided over the ceremony. All those who attended the ceremony at Montevideo, Buenos Aires and Sevilla were most enthusiastic in their praise of the quality of the transmission.

An outstanding event in the progress of the International Telephone and Telegraph Corporation in the field of radio telephony and foremost in point of American public interest was the opening of radio telephone service over the first two-way circuit, linking the continents of North and South America.

This newly established circuit is maintained and operated by the Compañía Internacional de Radio (Argentina)—an Associated Company of the International Telephone and Telegraph Corporation—from its terminal near Buenos Aires, and by the American Telephone and Telegraph Company's terminal at Lawrenceville and Netcong (New Jersey). This service, which was officially inaugurated by an impressive exchange of cordial and friendly greetings between President Hoover and President Ibáñez of Chile and President Campisteguy of Uruguay, linked for the first time over a circuit covering 6,000 miles, over 270,000 telephones in Argentina, Chile and Uruguay with approximately 21,000,000 telephones in the United States, Canada, Cuba and Mexico. The circuit, which is radio as far as Buenos Aires, connects with the Transandean land lines operated by the International System from Buenos Aires to Chile. Throughout the official ceremonies the voices from South America came in as distinctly as on a local call. The conversations were broadcast by radio to Europe and Asia, as well as the Americas, so that the people of four continents were able to listen to the exchange of official greetings. An exchange of greetings took place a few days later between President Hoover and President Irigoyen of the Argentine Republic over this new circuit.

In South America the service is available to all subscribers of the United River Plate Telephone Company, Limited, and of the Compañía Telefónica Argentina in the Argentine and those of The Chili Telephone Company, Limited, and the Montevideo Telephone Company, Limited, in the cities of Santiago (Chile) and Montevideo (Uruguay) respectively. At the northern end of the circuits connection is made with the networks of the Bell System in the United States and the principal cities of Canada and also with the Cuban Telephone Company and the Mexican Telephone and Telegraph Company. Telephone subscribers in South America, Mexico and Cuba are able to make use of this new circuit, not from special telephone booths in cities where terminals exist, but, as in the United States, from every telephone of the companies concerned.

The opening of this extensive circuit is the newest page in the remarkable history of communications progress which is being made in Latin America by the United River Plate Telephone Company, Limited, the Compañía Telefónica Argentina, the Compañía Internacional de Radio (Argentina) in the Argentine, the Montevideo Telephone Company, Limited, the Sociedad Cooperativa Telefónica Nacional in Uruguay and The Chili Telephone Company, Limited, all members of the International System. In addition to improvements in the internal telephone systems in these three countries, Argentina, Chile and Uruguay, they have been connected in as short a time as three years by international circuits with each other, by radio telephone with Spain, and now through the opening of the North-South America service, they are connected with the United States, Canada, Cuba and Mexico.

Another special development in the field of radio communications, was the opening of regular commercial telephone service from ship to shore, when conversations were carried on between London and the White Star liner *Majestic* one thousand miles off the English coast. The service on the ships was opened by International Marine Radio Company, Limited, an Associated Company of the International Telephone and Telegraph Corporation. The steamship *Olympic* is now also provided with similar facilities and service for both liners has since been extended, via Great Britain, to include France, Belgium, Holland and Spain and, via the American Telephone and Telegraph Company radio terminal, to include the United States, Canada, Cuba and Mexico.

Radio telephone service between Spain and the Argentine was extended to Chile on April 11th of this year, thereby forging another link in the chain which already afforded the most extensive telephone connections in the Spanish speaking world. On this occasion an official exchange of greetings took place between His Majesty King Alfonso and His Excellency General Ibáñez, President of Chile, in the presence of a large gathering of officials and other guests assembled at Madrid and Santiago de Chile, respectively. Another impressive feature of this ceremony was a radio telephone conversation which was held between King Alfonso and the Captain of the s.s. *Olympic* then in mid-Atlantic.

It is of particular interest to note that of the three transatlantic liners which offer extended radio telephone service, two of the steamers, namely, s.s. *Majestic* and s.s. *Olympic* have been equipped by the International Marine Radio Company, Limited, an Associated Company of the International Telephone and Telegraph Corporation.

MANUFACTURING COMPANIES.

The manufacturing units of the International System include the Associated Companies of the International Standard Electric Corporation established throughout the world, the Compagnie des Téléphones Thomson-Houston (Paris). the Standard Elektrizitäts Gesellschaft, A.G. with its four Associated Companies in Germany, Creed and Company, Limited, of Croydon, England, which now has a newly organized Germany associate, and C. Lorenz Aktiengesellschaft of Berlin. All of these companies, with the exception of Creed and Company, Limited, manufacture and distribute a general line of telephone apparatus and supplies and related electrical equipment. Creed and Company, Limited, manufactures and supplies telegraph printer equipment.

The International System extended its position in the manufacturing field in Germany early in the present year through the organization of a holding company in co-operation with certain important banking interests and the Allgemeine Elektrizitäts-Gesellschaft and Felten and Guilleaume. This German holding company has obtained a controlling interest in several German companies manufacturing telephone and electrical equipment.

The International Standard Electric Corporation acquired control of the Osterreichische Telephon-Fabrik A.G. in Vienna during the present year, and the International Telephone and Telegraph Corporation, on May 7, 1930, acquired a substantial interest in C. Lorenz Aktiengesellschaft of Berlin.

The German companies now associated with the International Telephone and Telegraph Corporation have an outstanding position in that field. They handle a total of 30% of the Reichspost business and have a combined turnover of approximately $15,000,000 per year.

The gross sales of the manufacturing companies, not including the newly acquired German companies, amounted for the year 1929 to $55,730,000, as compared with $52,435,000 for 1928, and orders on hand at January 1, 1930, amounted to $36,323,000, as against $32,030,000 at January 1, 1929.

Some of the more important manufacturing activities of the year are referred to below. These major items, of course, are only part of the large volume of all kinds of telephone apparatus, cables, supplies and related equipment which was produced.

Standard Telephones and Cables (London) manufactured the greater portion of the radio telephone equipment used for the radio link between Spain and the Argentine, and the equipment used to establish permanent radio telephone service on the steamers *Majestic* and *Olympic*. This Company also manufactured the new automatic telephone equipment installed in the City of Dublin and that recently cut into service in the Temple Bar and Fulham exchanges in the City of London.

The Bell Telephone Manufacturing Company (Antwerp) installed and cut into service a total of 138,510 lines of rotary automatic equipment during 1929. The installations were made in 28 cities located in 10 different countries. At the end of the year the Antwerp Company had on hand sufficient orders to insure its continued activity for 1930.

Under the program for the complete conversion of the Paris telephone exchanges from manual to automatic service, Le Matériel Téléphonique installed, during the year 1929 and the first quarter of 1930, 48,000 lines of rotary automatic equipment. By the end of 1930 an additional 38,000 lines will have been cut into service. The French Government has expressed its entire satisfaction with the service rendered by the automatic exchanges already placed in service by this Company.

The Standard Eléctrica, S.A. (Madrid) has expanded its manufacturing activities to a point where it is now able to supply a greater part of the telephone equipment required by the Compañía Telefónica Nacional de España. Its cable factory at Santander has received large orders for lead-covered cable and is fully assured of capacity business for the year 1930.

The Standard Electric Aktieselskap (Oslo) received a number of very important orders during the year 1929 for installation of automatic equipment, toll-line equipment, carrier systems and radio-broadcasting equipment in Denmark, Finland, Norway and Sweden.

The Standard Villamossági Részvény Társaság (Budapest) has practically completed a 70,000-line rotary automatic installation for the City of Budapest and has received orders from the Hungarian Postal Administration for 28 positions of toll switchboard and 8,000 lines of rotary automatic equipment.

In spite of the unsettled conditions in China, the sales of the China Electric Company, Limited (Shanghai) established a record in 1929 over business done in 1928. Continued progress in the activities of this Company is looked for during the current year.

In August, 1929 the China Electric Company, Limited cut into service a rotary automatic exchange in Canton. This project included both the installation of central office equipment and the engineering and construction of the entire outside plant.

The Compagnie des Téléphones Thomson-Houston (Paris) showed both an increase in sales and in orders on hand at the end of the year compared with 1928.

During the first three months of 1930 orders have been received by Creed and Company, Limited, covering installations of printer telegraph equipment in Great Britain, France, Belgium, Russia, Denmark, Holland, South Africa, India, the Argentine and Australia. There appears to be a growing demand for this type of equipment, which it is anticipated will result in large future orders.

The introduction of rotary automatic telephone equipment, which is manufactured under patents controlled by the International System, is rapidly becoming more and more general. Already approximately 680,000 lines of this type of equipment are in operation and 440,000 more are on order, making a total installed and on order of over 1,100,000 lines.

Another example of the extensive penetration of rotary automatic equipment in telephone systems throughout the world was the contract concluded in February by the International Standard Electric Corporation with the Copenhagen Telephone Company. The contract provides for the supplying of from 40,000 to 80,000 lines of rotary equipment during the next seven years. At the present time the Copenhagen Company has six rotary exchanges with a total of 24,660 lines in service, while 15,400 lines are in process of manufacture.

Other orders received for rotary equipment since January 1, 1930 were for Zürich, Brussels and Liège, and for extensions to existing exchanges in Holland and New Zealand in addition to orders from the Spanish Telephone System.

There are at present over 77 cities with rotary telephone equipment in operation and 27 cities where this type of apparatus is now being installed, making a total of 104 cities including the following 14 capitals: Brussels (Belgium), Bucharest (Roumania), Budapest (Hungary), Cairo (Egypt), Copenhagen (Denmark), The Hague (Holland), Lima (Peru), Madrid (Spain), Mexico City (Mexico), Oslo (Norway), Paris (France), Rio de Janeiro (Brazil), Santo Domingo (Dominican Republic), Wellington (New Zealand).

Orders for step by step automatic equipment have also been placed with System Companies for exchanges in Great Britain, Australia, Argentina, and Chile.

An important order received by System manufacturing branches was for the new toll cable in Great Britain linking London and Liverpool. The order was placed early this year with Standard Telephones and Cables, Limited, by the British Post Office.

THE LABORATORY COMPANIES.

Three main laboratories, located respectively in New York, London and Paris, are engaged in research work. Among their scientists and engineers, 17 different nationalities are represented.

The primary efforts of the New York laboratories at present are concentrated on telegraph and cable problems. It is expected that work now in progress will lead to the development of methods for increasing the traffic capacity of both telegraph lines and cables.

The work of the London and Paris laboratories is mainly concerned with the solution of problems presented by the manufacturing companies. These laboratories handle the experimental work which

in past years was done at the various factories. During the course of the year they have conducted special studies on general telephone apparatus and equipment, including automatic equipment, toll cable, including its associated equipment, such as loading coils and repeaters, carrier equipment, public address systems, together with investigations into the nature and use of basic materials such as magnetic and insulating materials.

Extensive studies have been conducted in the field of radio communication as a result of which the laboratories have been able to render valuable assistance in connection with the installation and operation of several radio telephone and telegraph links and the installation of radio telephone service on ships at sea. Prior to the inauguration of the commercial ship to shore telephone services previously mentioned, successful two-way radio telephony between the land and a ship at sea was publicly demonstrated in July, 1929, when conversations were carried on between the s.s. *Berengaria* in mid-Atlantic and the experimental radio station of the International Laboratories at Trappes, near Paris. About 40 newspaper representatives listened in on the conversations at the Paris end, and the event was most favorably commented upon in the European Press.

GENERAL OFFICES IN NEW YORK.

During the year the building formerly occupied by The Mackay companies at 253 Broadway was sold to the Corn Exchange Bank, and The Commercial Cable building at 20 Broad Street was acquired by the New York Stock Exchange.

Early in the summer of 1929 the construction of an addition to the International Telephone building at 67 Broad Street, New York, was begun. This new addition will contain approximately the same area of floor space as the original structure and it is expected that shortly after the issue of this report the addition will be completed and ready for occupancy. The building as expanded, fronts on Broad Street and occupies the entire block between Beaver and South William Streets. It is one of the most modern edifices located in the downtown section of the City of New York. There are 33 floors having an aggregate office space of approximately 454,000 sq. ft. The architecture of the building is of Spanish design modified to conform to the requirements of the New York building code and it presents an outstanding feature of the skyline from New York harbor. The International Telephone Building will provide the executive offices of the International Telephone System, and also some of the operating rooms of the Associated Companies.

Appreciating that the success of the International Telephone and Telegraph Corporation depends primarily on the conscientious and intelligent effort of each employee in the daily performance of his or her duties, particular attention has been given in the construction and arrangements of this new building to the comfort and convenience of the personnel. The Medical and Dental Departments, with their adjoining rest room, an attractive library where employees may study or read, and a Club Restaurant where meals of good quality may be had at reasonable prices, all tend to give a sense of happy surroundings and pleasant associations in the atmosphere of an organisation in which a well-established *esprit de corps* prevails.

ORGANIZATION.

Great credit for what has been accomplished during the year is due to the concentrated attention to duty, loyalty and co-operation of the 95,000 employees distributed throughout practically all the countries of the world. It is felt that the spirit exhibited by the organization fully justifies the special benefits which the Corporation has extended to employees in the shape of the pension and benefit plan, the group insurance plan and the stock purchase plan which have been referred to in previous annual reports.

During the year an additional offer of shares for subscription by employees was made. Under this offer each employee in the service of the Corporation on July 1, 1929 became entitled to purchase one share of stock without par value for each $300 of annual salary at the price of $50 and to pay for such shares by deductions from salary at the rate of $2 per share per month. Approximately 26,000 employees took advantage of this offer and applied for a total of 102,864 shares.

FINANCIAL.

As stated in the last year's Report the Stockholders of the Corporation at a special meeting held on May 8, 1929 approved a change and increase of the authorized capital stock of the International Telephone and Telegraph Corporation from 2,500,000 shares of the par value of $100 each to a total of 15,000,000 shares without par value. On December 31, 1929 there were outstanding 5,858,984 shares without par value compared with 1,422,785 shares of the par value of $100 each on December 31, 1928.

The increase in the outstanding capital stock for the year amounted to 1,590,629 shares without par value. These shares were issued for the following specific purposes: 728,759 shares in connection with the acquisition of the United River Plate Telephone Company, Limited; 501,763 shares were issued to Stockholders under the offer of one additional share at $50 for each 10 outstanding, which expired on July 5, 1929, and 50,176 shares, being 10% of the amount offered to Stockholders, were issued at $50 per share to trustees and were set aside for future subscription by employees; 21,870 shares were issued in acquisition of common stock of the Postal Telegraph and Cable Corporation; 4 shares were issued to acquire common stock of All America Cables, Incorporated; and 288,057 shares in conversion of ten-year Convertible 4½% Gold Debenture Bonds of 1939 which were presented for conversion.

Since January 1, 1930, two major financial operations have occurred. On February 1st, $50,000,000 principal amount of twenty-five year 5% Gold Debenture Bonds were sold and the proceeds realized have been used principally in liquidating indebtedness contracted by the Corporation in financing its Associated Companies during the year 1929 and in financing the requirements of the early months of the current year. On March 13, 1930 your board authorized an offer of additional capital stock for subscription by Stockholders at the price of $50 per share and in the proportion of one share for each eight registered in their respective names at the close of business on March 21, 1930. Rights to subscribe under this offer expired on May 1st last. The proceeds of this issue will be used in the extension and improvement of the International System and for other corporate purposes.

The International Telephone and Telegraph Corporation registered a large increase in stockholders during the year 1929, from 16,568 on December 31, 1928, to 53,594 on December 31, 1929.

Consolidated telephone, telegraph, cable and radio operating revenues and gross profit on sales for the year 1929 amounted to $89,291,335.64 compared with $71,444,763.79 for the year 1928. The amounts for both years do not include the Compañía Telefónica Nacional de España since the accounts of that Company are not consolidated. Consolidated net income for the year not deducting $428,763.32 interest on bonds converted into stock during the year (which is charged to surplus), amounted to $17,732,158.89, an increase over the previous year of $3,135,821.98. The increases shown in these two items were of course due in large part to the acquisition of new properties during the year. However, as indicated elsewhere in the report, properties already owned showed a normal growth in both gross revenues and net income.

Regular dividends at the rate of $2 per year on each share of stock without par value were distributed quarterly.

The consolidated balance sheet and the consolidated statement of income and surplus account which are presented in this report reflect the many important extensions and acquisitions which have taken place in the International System during the past year. In particular the increase in the Plant and Property Account, amounting to more than $88,000,000 or 42%, furnishes a striking evidence of the growth realized by the system, in the acquisition of new properties and the expansion of existing properties.

The balance sheet contains an item of deferred charges which has not previously appeared on the Company's reports, namely, research and development expense, $3,995,072.66. The research and development expenditures which have been deferred to be charged against future operations have previously been classified under prepaid accounts and other deferred charges and amounted to $1,334,034.12 at the end of 1928. These expenditures are primarily expenditures by our three laboratories for research and development not applicable to completed work, as well as certain expenditures incurred in the development of new properties, which might be capitalized as intangible property, but which have been set up as deferred charges to be amortized.

The net earned surplus was increased at the end of the year by $6,583,029.69, and the total earned and capital surplus amounted to $76,465,576.16 at December 31, 1929.

The work which has been accomplished since the Company's last previous Annual Report constitutes a long stride in the further consolidation of the position of the International Telephone and Telegraph System.

In previous Annual Reports attention has repeatedly been directed to the fact that newly acquired companies generally will not demonstrate their potential earning power and consequently will not contribute their full share to the earnings of the System until they have completed a period of relatively heavy reconstruction and development. This period of reconstruction is being rapidly passed by the Associated and Affiliated Companies already comprised within the System. In addition, a vigorous campaign for the elimination of duplication has been instituted throughout the entire System, which has for its objective the introduction of all possible economies consistent with efficiency and the maintenance of International System standards.

In conclusion, it may be said that the International Telephone and Telegraph Corporation, with its diversified interests, in many countries, presents great promise for its continued and future development. Its lines of communication traversing the submerged mountains and valleys which form the floors of the Atlantic and Pacific and its land lines passing through a terrain as varied in its physical characteristics as that encountered between the two extremes of tropical jungles and snow-coated mountain peaks, with their connections and interconnections, stand ready at all times to facilitate the rapid and accurate interchange of ideas of peoples wherever located throughout the world.

Finally, we would be committing an injustice if the fullest credit were not given to the large International family, composed of loyal and enthusiastic nationals of so many countries, whose indefatigable work and co-operation have made comparatively easy a task which otherwise would have been almost impossible.

With the enthusiastic efforts and devotion of every one of our large body of workers we face with confidence the great work yet to be accomplished.

HERNAND BEHN, President.

Approved by the Board of Directors,

SOSTHENES BEHN, Chairman.

COMPANY MEETINGS, &c.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

A PROSPEROUS QUINQUENNIUM.
INCREASED BONUSES.

The eighty-first annual meeting of the Gresham Life Assurance Society, Ltd., was held, on the 12th instant, at the head offices, Fleet Street, London.

Sir Reginald MacLeod (of MacLeod), K.C.B. (the chairman), presided.

The Chairman, in moving the adoption of the report and accounts, said :—

In laying before you our eighty-first annual report I am pleased to be able to congratulate you upon the society's continued prosperity. The new sums assured for the past year amount to £2,354,156, with new premium income of £114,314. These figures are slightly less than in the previous year, although the number of policies issued was 5,753—an increase of 158 cases. The total premiums received amounted to £886,670, inclusive of single premiums of £4,499, being an increase of £29,614. Interest less tax amounted to £375,487, again showing an increase on the same item for the year 1928. The income of the society from all sources amounted to £1,272,196, showing an increase of £30,707.

The death claims with bonus additions required £247,500, being only 73 per cent. of the amount expected according to the table used in the valuation. This favourable rate is not only indicative of the great care exercised in the selection of our risks but also of the value of a widespread business which lessens the adverse effect of any epidemic in a particular country. The total assets of the society have increased during the year by £398,592, and amount to £8,152,334. The rate of interest earned on the funds was £4 19s. 9d. per cent. after deduction of income tax, which must be regarded as a very favourable figure. There was a slight reduction during the year in the expense ratio. This is very satisfactory.

DEATH DUTY POLICIES.

Before dealing with the results of the quinquennium, I should like to refer to a matter of great and general interest, viz., the Estate Duties. I trust it is not too much to hope that either the present Chancellor of the Exchequer or some future Chancellor will grant a concession long overdue and for which the public have been clamouring for years, viz., that the moneys of life policies taken out specifically to provide death duty payments should be exempted from such duty. Under the law as at present existing no encouragement whatever is given by the State to this form of foresight, as these policies are reckoned in the aggregate of a deceased's estate, with the result that not only is Death Duty payable thereon, but the effect may very well be to enhance the rate of that duty over the whole of the estate. There is a very strong case for the exemption of Death Duty insurances from the purview of the tax-gatherer on practical as well as on equitable grounds, as such policies would enable everyone with anything to leave to cover by instalments in his lifetime the burden of an impost which may wreck his estate, or his business, for his successors. Such concession would greatly mitigate individual hardships, and I do not think in the long run that the Exchequer would suffer thereby.

THE ACTUARY'S REPORT.

Turning to the actuary's report, it will be seen that the quinquennium just expired has been one of unexampled prosperity. The mortality experienced during the whole period has averaged only 65 per cent. of that expected according to the table employed in the valuation. The rate of interest earned upon the funds during the five years has been £5 0s. 3d. per cent. after deducting income tax. It will be seen from the report that although the valuation has been actually computed at an assumed rate of 3½ per cent. as in former years, an additional reserve has upon this occasion been made of a sum exceeding £300,000 which it is estimated is sufficient to place the valuation upon a 3 per cent. net basis.

The surplus shown in the valuation balance sheet is £770,620, out of which the directors have decided, in accordance with the actuary's recommendation, to divide the sum of £700,000 amongst the participating policyholders and shareholders of the society. Nine-tenths of this sum falls to the policyholders and will provide a bonus varying from £1 15s. per cent. per annum to £3 per cent. per annum on the sum assured according to the class and duration of the policy. The present rate therefore forms a very satisfactory increase upon the previous figures. It should also be borne in mind that the rates of premium charged by our society for participating assurances are distinctly below those required by most other British companies.

The resolution was carried unanimously.

ROYAL MAIL STEAM PACKET COMPANY.

FINANCIAL POSITION OF THE GROUP.
LORD KYLSANT'S REVIEW.

The annual general meeting of the Royal Mail Steam Packet Company was held, on the 18th instant, at the Cannon Street Hotel, London, E.C.

The Lord Kylsant, G.C.M.G. (chairman of the company), in the course of his address, said : Last autumn the company celebrated the ninetieth anniversary of its incorporation by Royal Charter in 1839.

The earnings for the first part of 1929 showed improvement over those for the previous year, but, owing to the accentuation of the universal depression in trade during the latter part of 1929, the results for the whole year were somewhat less favourable.

The balance for the year under review, including the amount brought forward from 1928, is £704,027, and after transferring £300,000 from the insurance fund, paying debenture interest for the year, dividends on preference stocks for the half-year ended June 30th, 1929, and all expenses, and providing £414,855 for depreciation, the balance remaining is £151,422, which we propose to carry forward.

The reserve fund amounts to £1,450,000 and the insurance fund now stands at £1,040,000, together totalling £2,490,000.

FLEET.

The Fleet of the Royal Mail Steam Packet Company, exclusive of the vessels owned by the R.M.S.P. Meat Transports, Ltd., cost over ten millions sterling and has been written down in the books to under £3,400,000, showing that in the matter of providing depreciation the court of directors has always followed a conservative policy.

The number of saloon passengers to and from South America did not vary much from those carried in the previous year, but there was a gratifying increase in the volume of emigrant business, notwithstanding the greater restrictions imposed by the Governments of some of the Central European States.

The two fine motor passenger vessels, "Alcantara" and "Asturias," and the other mail boats of the "A" class continue to be popular with the travelling public, as well as our "D" steamers which carry on a regular service between Liverpool and South American ports.

I mentioned last year that the Royal Mail Steam Packet Company had under consideration laying down one or possibly two new fast passenger vessels for our South American mail service. Whilst the plans for such a type of vessel have been carefully prepared, orders to proceed with the work of construction have not yet been given.

This company was one of the pioneers in providing pleasure cruises by ocean liners and during the past year our cruising programme has again been extended. We have brought into the cruising service the fine vessel "Atlantis," of 15,600 gross register tons, which has been specially fitted and is equipped with the latest facilities for the utmost comfort and enjoyment on an ocean pleasure cruise.

For several years past conditions as regards freight in the South American trade have been very difficult, owing to the extremely keen competition on this route. I am glad to be able to record that, as regards refrigerated cargo, our freight earnings in 1929 showed an increase over those for the previous year.

POSITION OF GROUP.

I will now deal with the position of what is commonly known as the Royal Mail Group of shipping companies.

The fleet of the Royal Mail Steam Packet Company and its subsidiary and allied shipping companies, which is the largest merchant fleet in the world, represents nearly one-seventh of the entire British mercantile marine.

When considering the financial position of the group, it is often overlooked that the large amounts of depreciation annually written off the book value of the vessels are available either in reduction of loans for shipbuilding or in payment otherwise for new vessels, or for strengthening the general position of the companies.

As at January 1, 1930, the total reserve funds of the Royal Mail group of shipping companies amounted to over £8,950,000, the insurance funds aggregated over £3,650,000, whilst other reserves and profit and loss account balances totalled over £2,650,000, making altogether over £15,250,000.

During the last four years the gross profits of the Royal Mail group of shipping companies, before charging interest or depreciation, have averaged even in these difficult times over five millions sterling per annum, viz. :—

For 1926	over £4,827,000
For 1927	over £5,697,000
For 1928	over £5,010,000
For 1929	about £4,900,000

In October, 1929, we applied to the Treasury and the Government of Northern Ireland for an extension of the dates of repayment of certain short-dated Trade Facilities Loans amounting to four and a half million pounds made to three shipping companies, as the term of these loans, viz. : five to seven years, was found to be too short to enable the companies to deal with them in these abnormal times.

The Secretary of the Trade Facilities Act Advisory Committee subsequently wrote asking what additional security could be given if the short-term loans were extended, and each of the three shipping companies concerned gave the extra security required.

In October, 1929, the court of directors instructed Messrs Price, Waterhouse and Company to make a full report on the position of the various groups of shipping companies. They made a comprehensive and detailed report, which was carefully considered by the directors and shown to the Trade Facilities Committee and the Government of Northern Ireland and to our bankers.

The court of directors then requested Messrs Price, Waterhouse and Company to prepare a scheme of rationalisation of the various shipping companies. This scheme received the careful consideration of the court, but as it was considered that it would take as least 6 or 12 months to put into effect, it was felt that the matter must be deferred until some definite arrangement had been come to with regard to the extension of the short-dated Trade Facilities Loans to which I have referred.

On May 19, 1930, we called a conference of our bankers and of representatives of the Trade Facilities Act Advisory Committee and the Government of Northern Ireland, when I placed before them full information as to the position of the group.

A COMMITTEE APPOINTED.

A small committee was appointed which, after going very fully into the whole position, reported to a further meeting of the conference of bankers held on June 10th, as the result of which a public announcement was, as you know, made to the effect that it had been arranged that this committee, consisting of Mr F. Hyde (managing director of the Midland Bank, Ltd.), Brig.-Gen. A. Maxwell (managing partner in Glyn Mills and Company), and Sir William McLintock, should confer with the court of directors of the Royal Mail Steam Packet Company and with the boards of directors of its various subsidiary and allied companies on matters relating to management, administration and finance, whilst the chairman of the Trade Facilities Act Advisory Committee (Sir William Plender) will come into consultation with the Committee.

In addition, an invitation was extended to the Right Hon. Walter Runciman, M.P., to join the boards of the various shipping companies.

As announced, this committee will retain office until December 31st next, unless that period is extended.

In the meantime, arrangements have been made with the Trade Facilities Act Advisory Committee and the Government of Northern Ireland to continue their facilities and with the banks and discount houses to continue the financial accommodation they have afforded to the group.

In view of the past record of this group of shipping companies, of which our country may justly be proud, I trust that before long the Treasury may see their way to extend these short-dated Trade Facilities Loans for a further five years.

We are very glad to welcome the Right Hon. Walter Runciman, M.P., as a director and deputy-chairman of the company.

GENERAL POSITION.

It is estimated that there are at present four-and-a-half to five million tons of shipping laid up in the ports of the world, owing to the fact that there is less cargo to be carried and rates of freight are practically the lowest on record.

This has come about at a time when many of the leading maritime nations other than Great Britain are encouraging their shipowners to increase their fleets and greatly assisting them to do so, thus accentuating world competition.

As you know I have never been a pessimist about British shipping, and provided we continue to receive the support of our friends, I feel certain that the Royal Mail Steam Packet Company and the group of shipping companies with which it is so closely associated, whose gross profits during the last four difficult years have, as already mentioned, averaged over five millions sterling per annum, will, sooner than many people anticipate, experience a return of prosperity.

After the chairman had replied to some questions, the report and accounts were adopted.

ANGLO-PERSIAN OIL COMPANY, LIMITED.

SUCCESSFUL YEAR—A RECORD PROFIT.

The twenty-first ordinary general meeting of the Anglo-Persian Oil Company, Ltd., was held, on the 17th instant, at Winchester House, Old Broad Street, London, E.C., Sir John Cadman, G.C.M.G., D.Sc. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The year under review has been one of ordered progress, and there is little subject for comment in the accounts. The net profit amounted to the record figure of £5,206,761, which more than justifies the forecast made by me on the occasion of the last meeting. The balance available has enabled us to recommend a final dividend on the ordinary shares of 15 per cent. (less tax), making 20 per cent. for the year, and leaving £687,064 to be carried forward.

PRODUCTION.

Persia.—The net production of oil from Masjid-i-Suleiman was approximately 5½ million tons—the rate of production differing but little from that of the preceding year. In reality, the actual crude output of the fields was in excess of this figure, but refinery operations at Abadan resulted in a temporary excess of residue and consequent storage congestion, which threatened to interrupt the continuity of refining. This excess was dealt with in a novel way. After some research and the fullest consideration of the many questions involved, and as a result of our unique knowledge of the reservoir conditions as Masjid-i-Suleiman, we decided to reverse the pumping in one of the pipe-lines, and, at little expense, we pumped this residue back to the fields and injected it into certain gas wells, connected only with the upper part of the oil structure.

Rapid strides have been made in advancing our knowledge of the new field at Haft Kel, which lies thirty-five miles south-east of Masjid-i-Suleiman. A structure exceeding nine miles in length by approximately two miles in width, with a vertical head of oil exceeding 1,600 feet, has already been proved. One well, when tested, produced oil at the rate of 5,400 tons per twenty-four hours, with a flow head pressure of 630 lb. per square inch.

Iraq.—Our investment in the Iraq Petroleum Company continues to increase with the inevitable additions to the capital required for proving and developing a modern oilfield.

Transport of oil to the coast will involve the laying of what is likely to prove one of the most costly pipe-lines yet constructed. This will mean an outlay of many millions of pounds, which can only prudently be made when reserves of oil are proved sufficient in volume not only to fill the pipe-line, but also to transport continuously through it a quantity of oil sufficient to meet pumping costs and the interest and amortisation charges on the huge expenditure anticipated. This proof is well in sight.

The petroleum industry as a whole is faced at times with very difficult problems, arising from the fact that the natural constituents of crude oil are by no means proportionate to the market demands for each and all of them. In pre-motor days petrol was practically a waste product, and was accordingly destroyed. To-day the situation is entirely reversed, and were it not for the immense advances made in the processes of distillation and refining, and, above all, in cracking heavy oils into lighter products, the world demand for petrol would automatically have involved the continuous production of large excesses of other products, and, besides wasteful earlier depletion of the crude, would have created a problem of the first dimension.

Our refinery programmes are under constant review with these considerations uppermost in mind. We are well abreast of the times, and the plant and equipment already completed, or now under construction, are capable of converting the crude oil into the constituents which the market most needs.

MARKETING.

Sales in all markets continued to show satisfactory expansion. Prices remained remarkably stable from March onwards, and no important changes have since occurred, notwithstanding the high freight rates ruling towards the end of the year.

I told you last year of the steps which we had been taking to enhance the quality of our motor spirit; I am glad to say that our new "B.P." spirit had a most satisfactory reception from the British motoring public and that its popularity continues. We can claim to have a spirit admirably adapted to the requirements of the modern engine and representative of a notable achievement in industrial research.

What are our prospects? The world demand for petroleum continues to expand. With it this company can look for a parallel expansion of its business, and, failing the intervention of unfavourable and unforeseen factors, all the causes I have named should contribute to another successful year.

The report was unanimously adopted.

INDIAN COPPER CORPORATION, LIMITED.

PROGRESS OF OPERATIONS.

The sixth ordinary general meeting of the shareholders of Indian Copper Corporation, Ltd., was held on the 16th instant, at Winchester House, Old Broad Street, London, Sir Godfrey B. H. Fell, K.C.I.E., C.S.I. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that net proceeds of copper, with stocks in hand, amounted to £143,134 10s. 6d., to which must be added sundry receipts £4,315 15s. 10d. and transfer fees £511 2s. 6d., making a total of £147,961 8s. 10d. After defraying operating costs £74,425 14s. 5d., mine administration and general expenses £15,969 9s. 9d., London office administration and general expenses £5,380 0s. 11d., directors' fees £2,216 13s. 4d., and interest £4,554 6s., there is a gross profit of £45,415 4s. 5d., which is taken to the balance sheet. Out of this falls to be met debenture interest for nine months from 1st April to 31st December, amounting to £16,779 10s. 7d., and after deducting this amount there remains a sum of £28,635 13s. 10d. to be disposed of. We propose to deal with this sum as follows: Firstly, by transferring to development redemption reserve the sum of £10,798 13s. 6d. Secondly, by writing off from mining development and general expenditure a sum of £8,077 6s. 9d.

The balance of £9,759 13s. 7d. it is proposed to carry forward to the next account.

I now propose to examine briefly the progress of the company's operations during the past year. You will recollect that the programme we set before us was the treatment of 100,000 short tons of ore in a full year. Actually the mine despatched to the mill 82,912 short dry tons of ore, of which 52,089 tons were despatched in the second six months of the year. For the first quarter of the current year the output was 31,783 short tons. The average grade of underground ore reserves has been re-estimated by your general manager at 3·38 per cent. The average grade of ore raised during the year was 2·72 per cent. While it would no doubt be practicable to supply the mill with higher-grade ore, by limiting the stoping widths, it would, in the opinion of the board's technical advisers, be a wrong policy to adopt, seeing that stoping has revealed much greater widths of payable ore than was at first thought to be the case. While, of course, a lower grade of ore requires the treatment of greater tonnage in order to attain the desired output of refined copper, the underground reserves are greatly increased and the life of the mine prolonged. In spite of the fact that development during the year was limited in the main to the sinking of three winzes below the 5th level and to the opening up of a larger number of working faces above the 5th level, the underground ore reserves at the close of the year showed an increase of 64,577 short tons, while 81,740 short tons were also broken in stopes during the year for transmission to the mill. You will notice from your general manager's report that the average value of the ore reserves shows a steady and most gratifying improvement in depth.

The operation of the mill was extremely satisfactory throughout the year.

The results obtained from the smelter are summarised in the extracts from your general manager's report, which are before you. Considering that labour had to be trained in every operation, I think that these results may be regarded as very satisfactory.

Before I conclude my remarks, I should like to give a very brief résumé of the progress achieved since the end of the year under review. At the mine, vigorous efforts have been made to increase the output of ore, which attained its highest monthly output to date in April. The grade is also improving. Good progress has been made with the driving of No. 3 Intermediate Level. The output of the refinery has amounted to 1,095 long tons in the first five months of the year, an average of 219 tons a month.

Excellent progress has been made with the rolling mill, to which I referred in my speech last year. It is practically completed in every respect, and trial runs should be made in the course of this month. Your directors attach the greatest importance to this addition to your plant.

The recent heavy fall in the world price of copper is a matter which, unfortunately, cannot be ignored. I do not propose to venture on prophecy as to the future trend of the price. We must accept the situation, and devote our energies to reducing our costs of production so as to counteract, as far as possible, the lower price obtained for our copper. Fortunately, the various improvements and additions to the plant which have been made should enable us to achieve this object. With the help of our friends, Messrs Gillanders, Arbuthnot and Co., of Calcutta, who, as managing agents of Anglo-Oriental India, attend to the marketing of our copper, and to whom we are grateful for the great interest which they have taken in this matter, we are hopeful of disposing of the whole of our increased output, either in the form of copper ingot or of sheet, at prices which are still remunerative, and which we may see improve before long.

The report and accounts were unanimously adopted.

MARKS AND SPENCER, LIMITED.

FURTHER SUBSTANTIAL INCREASE IN PROFITS.

SUCCESS OF MERCHANDISING AND EXPANSION POLICY.

IMPROVED VALUES AND SERVICE.

MUCH LARGER TURNOVER FOR CURRENT YEAR.

TERMS OF ISSUES OF NEW CAPITAL.

The fourth ordinary general meeting of Marks and Spencer, Ltd., was held on Tuesday last, the 17th instant, at the Cannon Street Hotel, London, E.C., Mr Simon Marks (chairman) presiding.

The secretary (Mr E. Berry, F.I.S.A., F.C.W.A.) read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his speech, said:—Ladies and gentlemen,—It is a great pleasure to submit a report which again shows a substantial increase in profits. The net profit for the past year amounts to £335,175, which is an increase of £100,059 on the previous year. A comparison with the previous years since 1928 shows profits on a like basis (*i.e.*, after providing for directors' fees, management remuneration, depreciation, and other charges, but before providing for income tax):—

	£
1928	167,243
1929	235,116
1930	335,175

As shareholders we have every reason to be gratified with the results, particularly when we take into consideration the difficulties and the unfavourable trading conditions of the past year. Despite the contraction of the spending power of the public, our sales have increased by a very large percentage. This, I venture to say, is due to the continuation of our merchandising and expansion policy, which I will discuss in greater detail later in my speech.

A pleasing feature is the continued increase in the volume of business transacted in our older stores. Our policy of giving better value merchandise to the public is gaining for us a customer satisfaction and goodwill, which is of inestimable value to our business.

Shareholders will derive even greater satisfaction from the figures presented to-day when they learn that many of the new stores were trading for part of the year only, and that, in addition, we have had to bear a considerable interest strain on expenditure which was, for the time being, unproductive. This year we shall have a full year's trading from all these stores and we are confident that they will contribute their due share to the profits of the company for this and succeeding years.

ALLOCATION OF PROFITS.

The net profit of £335,175, after deducting £36,586 for income tax, leaves a balance of £298,589, which, together with £37,022 brought forward from the previous year, makes a total of £335,611 available for distribution. The dividend on the 10 per cent. cumulative preference shares for the full year to March 31, 1930, amounting to £35,000, has been paid, leaving an available balance of £300,611, which the directors recommend should be appropriated as follows:—

	£	*Against.*
Preference share reserve fund	7,500	The same as before.
Properties contingency fund	10,000	Ditto.
General reserve fund	100,000	£60,000.
Payment of a dividend on the ordinary and "A" ordinary shares at the rate of 20 per cent. per annum for the year ended March 31, 1930.....	132,000	£78,802.
By carrying forward to next year's accounts..... (Which is £14,089 more than was brought in this year.)	51,111	

EXPENDITURE ON PROPERTIES.

On reference to the balance sheet, you will see that the expenditure on freehold properties acquired during the past year, together with additions and alterations, amounted to £569,667. The expenditure on leasehold and leased premises during the same period was £138,590. The increase in furniture and fixtures is £80,997, and is in respect of furnishing new stores.

It is interesting to note that in the past four years we have depreciated our assets, fixtures and fittings, etc., by no less a sum than £102,187, whilst we have spent on repairs and renewals for the upkeep of our older stores £49,733 9s.

I would like to take this opportunity of pointing out that the balance sheet contains no item for goodwill, and that out of slightly over £3,000,000 assets, £2,400,000 is invested in freehold and long leasehold properties.

MERCHANDISING POLICY.

The function of our business organisation is to correlate, in ever-increasing measure, mass production with mass distribution.

The rationalisation of production and distribution carried out on our principles brings retail prices down to a considerably lower level.

An examination of the value of our goods will prove, I believe, that we are working on right lines. The buying public is recognising the values and the service which we bring them, with the result that our business has been constantly expanding, not only by the addition of the new stores, but in those stores where we have been established some time.

Our policy is to concentrate as much as possible on the purchase of British-made goods, and it is gratifying to note that about 90 per cent. of our merchandise is manufactured in this country.

CONSTRUCTION PROGRAMME.

During the past year we have built, equipped and opened 18 new stores and have materially enlarged 6 others. Since the beginning of this financial year in April, we have opened for business 5 new stores and 4 large extensions of existing stores. Our immediate building programme comprises 15 new stores and 5 considerable enlargements of old stores. We contemplate, as opportunity arises, acquiring other sites, so that our extensions for the present year will show a satisfactory advance on those of 1929.

We are satisfied that, as a result of this year's efforts, providing nothing unforeseen occurs, the earning capacity of the company will be very largely augmented; in fact, we hope and believe that the increase in profits this year will show a satisfactory advance over that of last year.

I am glad to be able to report to you that since the beginning of this financial year—that is, about 10 weeks' trading—our turnover has increased very considerably over the corresponding period of last year.

FINANCE.

In considering the form of the finance which the company requires for its further development, your board has taken into account not only their present, but also their probable future capital requirements. The scheme that they have evolved, they believe, should enable the company to obtain the monies necessary to develop their business at the progressively increasing rate contemplated, and at the same time protect the rights of the various classes of shareholders. The scheme, briefly stated, is as follows:—

In order to satisfy our needs for the immediate future, we are asking you to authorise an issue of £1,000,000 debenture stock and £1,000,000 preference shares.

The debenture stock will bear interest at the rate of 6 per cent. per annum, payable half-yearly, and will be repayable at 105 per cent. by means of a cumulative sinking fund, which will redeem the loan by 1970. The right is reserved to repay the issue in whole or in part at any time during the preceding 10 years. We propose to issue this debenture stock at a price of 102 per cent.

The preference shares will be cumulative and bear interest at the rate of 7 per cent., payable half-yearly. They will be issued at 21s. and are repayable on liquidation at £1 2s. 6d. per £1 share.

THANKS TO OFFICERS AND STAFF.

I wish to take this opportunity of paying a warm tribute to the energy and enthusiasm which have characterised the work of the officers and staff during the past year.

DIVIDEND.

I will now propose that the report and accounts to March 31 1930, as submitted, be received and adopted, and that the cumulative dividend of 10 per cent. per annum, less tax, for the year to March 31, 1930, already paid to the preference shareholders, be and is hereby confirmed, and that the payment of the dividend at the rate of 20 per cent. per annum, less tax, on the ordinary and "A" ordinary shares for the year to March 31, 1930, be declared, and payable by warrant to be posted this evening to those members whose names appear in the register of members on this day.

I will ask Mr Sieff to second the resolution.

Mr I. N. Sieff, B.Com. (vice-chairman), seconded the resolution, which was carried unanimously.

The retiring director, Mr R. F. Norland, was re-elected; Messrs Edwin Guthrie and Company were appointed, jointly with Messrs Deloitte, Plender, Griffiths and Company, as auditors of the company.

ISSUE ON BONUS TERMS.

The secretary read out the resolution in connection with the capitalisation of £66,000, being part of the undivided profits of the company, for appropriation amongst the holders of the existing ordinary and "A" ordinary shares of the company, in the proportion of one "A" ordinary share for every 10 existing ordinary

and "A" ordinary shares held, which was unanimously approved and adopted.

The secretary read out the notices and resolutions at separate class meetings of the holders of the 10 per cent. cumulative preference shares and of the ordinary and "A" ordinary shares, and also at the combined extraordinary general meeting of the company.

The resolutions at all the meetings in connection with the alteration of the articles of association; the extinguishment of the preference share reserve fund; the creation of new 7 per cent. preference shares, and the alteration of the borrowing powers of the board, were unanimously approved and adopted.

On the proposition of Sir George May, K.B.E., seconded by Mr A. I. Belisha, a hearty vote of thanks was accorded to the chairman, directors and the staff, and the proceedings then terminated.

MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED.

YEAR OF PROGRESS.

The annual meeting of the Madras Electric Supply Corporation, Ltd., was held, on the 17th instant, at No. 1 Queen Victoria Street, London, Mr John G. B. Stone (chairman) presiding.

The Chairman said: The aggregate kilowatt hours sold during 1929 exceeded the previous year by 3·81 per cent. The kilowatt hours sold for lighting and fans showed an increase of 9·24 per cent. on 1928. The supply for street lighting was 6·9 per cent. greater than the previous year—notwithstanding that I explained last year that we could not look for much extension from this source as most of the principal streets are already lighted by electricity. The increase for power was 0·82 per cent. only. When I addressed you last year I said: "We foresee a marked increase in this direction, although events move slowly in Madras." I had then in view the completion of an agreement with the South Indian Railway Company for a supply of current to operate their lines in and around the City of Madras. The negotiations took longer than was anticipated, but an agreement is on the point of completion which will add materially to the demand for current. The average rate obtained for the complete supply for 1929 was As. 2·47 per kilowatt hour, compared with As. 2·44 for 1928.

Turning to the financial side of the accounts, a balance of £65,868 remains as net revenue for the year, to which has to be added £6,906 brought forward, making a total of £72,774. After deducting the dividend paid on the preference shares for nine months to September 30, 1929, and the interim dividend of 2½ per cent. (actual) paid free of income tax on the ordinary shares, there remains for distribution £47,463. The directors recommend that this be appropriated as follows: (1) Provision for three months' preference dividend accrued to December 31, 1929 £4,493; (2) payment of a final dividend of 5½ per cent. (actual) on the ordinary shares (making 8 per cent. for the year), free of income tax, £26,026; (3) transfer to reserve for contingencies, £1,500; and (4) transfer to general reserve fund, £8,000 (bringing that fund up to £110,000). These provisions make a total of £40,019, leaving to be carried forward to next year's accounts £7,444. The result of the tramway company's working for 1929 showed, after providing for debenture interest, £1,300 for sinking fund and £7,500 for depreciation and renewals, an available balance of £10,444, out of which the dividend of 6 per cent. on the preference shares was paid, and £4,444 carried forward.

The report was unanimously adopted.

Established 1889.

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LIMITED.

SUBSTANTIAL INCREASE IN PROFITS.

IMPORTANT CONTRACTS SECURED.

The thirty-fourth ordinary general meeting of this company was held, on the 19th instant, in London, Sir J. Fortescue Flannery, Bt., D.L., M.Inst.C.E. (the Chairman), presiding.

The Secretary (Mr Howard Foulds, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that the manufacture and supply of electric cable and appliances had fluctuated during 1929, because, especially during the early part of the year, one of the chief sources of demand, namely, what was known as the grid system, was suspended for a considerable time. The company had received a very important contract in connection with this system, but great delay, and consequent heavy loss, arose in the Electricity Board arranging the necessary wayleaves upon which the execution of the contracts depended. Advantage had been taken of the opportunity to develop the company's plant so as to reduce the cost of manufacture, and some £67,000 had been expended in this way. They were therefore ready in the fullest and most modernised sense for the improved demand in the latter part of the year, and the output as a whole had been satisfactory, the financial results showing a substantial increase as compared with previous years.

A year ago the shareholders were informed that the board had arranged the purchase of another old-established firm of cable makers, namely, Messrs. W. T. Glover and Company, and sufficient time had now elapsed to enable them to report that the result had been satisfactory and presented an encouraging outlook. The Anchor Cable Company, at Leigh in Lancashire, had been well occupied in the manufacture of special cable, and there was no reason to doubt that it would continue to be satisfactorily occupied.

THE PAST YEAR.

The past year had been a difficult one, and, like others engaged in world-wide trade, they had had to face severe competition, especially in their export business, but they were still widening their scope and pushing their operations in new fields. They were not always allowed to do so, for in Australia, for instance, the Dominion Government had forced them into a difficult position by the threat of a 35 per cent. tariff on electric wires and cables.

The management had devoted special attention to economies of production. Many improvements in process and handling at the factories had been effected, some of them large, some small, but all useful. The financial crisis in the United States last year had interfered with much of the work for which cables were required, and had delayed the expected advance in the Okonite-Callender business, but in spite of this, that company had finished the year with a substantial credit balance.

Dealing with the accounts, the chairman said that the profit available for distribution amounted to £403,911, and the directors recommended a final dividend of 10 per cent. (making 15 per cent. for the year) leaving £428,528 to be carried forward.

In conclusion, he said that the position of the company was thoroughly satisfactory, and he would draw attention to this very noticeable fact, that the reserve of £800,000 and the carry forward of £428,528, totalling £1,228,528, were considerably larger than the ordinary share capital. (Applause.)

SIR TOM CALLENDER'S REMARKS.

Sir Tom O. Callender, Kt., J.P. (deputy chairman and managing director), in seconding the motion, said that they had devoted much time and energy to economies in their production and in the disposal of their cables by improved machinery and methods.

They were ceaseless in their care of their overseas connections, which might be fairly described as world-wide. India was their oldest and one of their most important fields of operation, and, in spite of internal disputes and uprisings, of riot and commotion, the company was steadily pursuing its way, extending in old districts and opening up new areas. Their men had been singularly free from interference in their cable-laying and overhead erection. They were carrying out an important contract for the cable system to supply the South Indian Railway in Madras. They had nearly completed the distribution mains for the United Provinces Electricity Authorities. The Government of India, in co-operation with that of the Punjab, had placed with the company, the contract for the construction of the widespread network throughout the Punjab, and they were carrying out work in other towns and districts in India which were too numerous to mention.

The resolution was carried unanimously.

BRITISH ELECTRIC TRACTION COMPANY, LIMITED.

VALUE OF DEFERRED STOCK.

The thirty-fourth ordinary general meeting of the British Electric Traction Company, Ltd., was held, on the 16th instant, at Winchester House, London, E.C., Mr J. S. Austen (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profits during the past year had increased by £56,000. That figure had been arrived at after the deduction of income tax, which meant that they had really had to make £70,000, which, for a company which derived its income from dividends of a miscellaneous character, was a very considerable sum. He did not know what the shareholders had expected, but personally it was larger than he had anticipated.

Dealing with the position of the deferred stock, the Chairman said that the real object of its creation had been so that by that means the stockholders might recover the serious losses of capital which they had sustained. Therefore, they must not look for any increase in dividends on that stock, at any rate this year. So far, their present system had worked extremely well, but it could not go on for ever, and sooner or later they must see whether they could not form some other scheme by means of which they could extract from the company the very last ounce of capital value which was inherent in it. When that time came they would know a little better than they did to-day exactly how they stood. He would like to give them an indication of its present value based on the earning power of the company. In the first place, he had assumed a value of 1,500 per cent. Then he multiplied the present amount of stock by 15, and as a result they got £2,500,000 as being the capitalised value of that stock. To pay 6 per cent. on a sum of £2,500,000 took £150,000 a year. Comparing that with the income of the past year, by putting that income on a gross basis, that was before deduction of tax, he found they had £109,000, which left a deficiency of £41,000.

They must not be disappointed with that deficiency, because since the end of the year their subsidiary, the Birmingham and District Investment Trust, in which they held £847,000, had declared a bonus of 100 per cent. in 6 per cent. preference shares, which would bring them in a very comfortable £50,000 a year. Those figures, he thought, indicated that a value of 1,500 per cent. for the stock was justified, without taking into account the future possibilities of the company.

The report and accounts were adopted.

HOVIS, LIMITED.

ANOTHER SUCCESSFUL YEAR.

The ordinary general meeting of Hovis, Ltd., was held, on the 18th instant, at Denison House, Vauxhall Bridge Road, London.

Mr A. H. Dence (the Chairman) said that since they had last met the country had passed through long months of almost unprecedented slackness and depression in trade and finance generally, but Hovis had been one of the few bright spots amid the general gloom. The report presented was one which proved that they had faced all their difficulties with undaunted optimism and had steered their business through both successfully and profitably. During the year that had ended the wheat markets of the world had undergone considerable fluctuations. The crop of Canadian wheat had not been so heavy as in the two preceding harvests, but that had been offset by the large supplies from the 1929 Argentine harvest, and, speaking generally, the year had been one of cheap wheats, consequently of cheap flours and bread. The business of Marriage, Neave and Company, one of their subsidiaries, had proved entirely satisfactory, and Humphries and Bobbett, of Bristol, had maintained their past turnover and largely increased their output of Hovis.

Amongst the new steps they had embarked upon during the past year was that of providing Hovis in Paris, where there had been quite a useful start made. Another important addition to their output should be the arrangements they had entered into with Messrs Rowntree and their subsidiary companies to place biscuits made with Hovis flour in various forms on the market. That had been made possible by making a special flour for that purpose, ordinary Hovis flour not being of a suitable character to ensure good flavour in the biscuit.

The balance of the profit and loss account was the largest they had had, and taking into consideration the difficult times they had gone through, would, he was sure, meet with the shareholders' approval. They were recommending a final dividend of 5 per cent., making 10 per cent. for the year, together with a bonus of 5 per cent., making 15 per cent. for the year. That was the third year in succession that they had been able to pay that very handsome return.

The report and accounts were unanimously adopted.

CITY DEEP, LIMITED.

(INCORPORATED IN THE UNION OF SOUTH AFRICA.)

IMPROVED OUTLOOK.

MR J. MARTIN ON ORE RESERVES.

The twenty-ninth ordinary general meeting of City Deep, Ltd., was held in Johannesburg, on May 23rd.

The Chairman (Mr John Martin) said:—The past year was again a very difficult and anxious one for the City Deep. It is admittedly disappointing that the mine has not yet been re-established upon a profit-making basis, but the problems confronting us, and in the main the problem represented by the heavy and persistent decline in recent years both in the grade of ore mined and developed and in the percentage of payability—a decline the rapidity of which is without precedent in Central Rand mining—have proved more formidable even than had been anticipated. Much good and effective work has, however, been accomplished during the period under review and, although the situation still embraces a number of uncertain factors, it is now possible to say that the general outlook is more promising than it has been any time during the past two years.

The working loss for the year was £139,234, and the total loss, after adding the differences between sundry items detailed in the working expenditure and revenue account and in the appropriation account, amounted to £153,461. The net cash liability at the beginning of the year was £288,995, to which had to be added the total loss just mentioned, also a net expenditure (after allowing for receipts from sales of plant, material and freehold property) of £3,608 on capital account and the undermining rights annuity of £6,560. After deducting from these a decrease of £9,783 in cash assets, the net cash liability at the end of the year was £422,841, against which the company had £114,328, partly invested in shares and interests in co-operative and other concerns, and partly represented by stores and materials and by sundry debtors and payments in advance.

The Central Mining and Investment Corporation, Ltd., and the Rand Mines, Ltd., have continued to give invaluable financial assistance to the company and agreed to increase the limit of their joint loan to £400,000. This loan carries interest at the rate of 7 per cent. per annum.

The gross capital expenditure last year was £25,256. The capital expenditure for the current year is estimated at less than £30,000, which should amply cover the completion of the present programme. No further capital expenditure of any importance is anticipated for some time to come.

WORKING COSTS.

Working costs per ton milled were reduced from 27s. 9d. in 1928, to 25s. 10d. in 1929. The consulting engineer points out in his report that, in the early part of the past year, the proportion of small, scattered workings and of new stope faces continued to be unduly large, to the detriment of efficiencies and costs, and, although the reduction of working costs by 1s. 11d. per ton milled was, in the circumstances, satisfactory, the average costs for the year were still high and capable of further substantial reduction. Working costs during the first four months of the current year have, indeed, been lowered to an average of 22s. 10d. per ton milled, a figure which compares well with those of earlier years, when the workings were not so deep and the stope-width was considerably greater.

The favourable effect of the larger tonnage milled during the past year and of the reductions in working costs and in stoping width was unfortunately nullified by a further disappointing decrease in the average yield, which fell from 5·96 dwts. per ton in 1928 to 5·46 dwts. per ton in 1929. The average yield for the last quarter of 1929 was 5·27 dwts. and the average for the first four months of the current year was practically the same, at 5·22 dwts. This difficult question of the present low level of grade is intimately linked up with that of the unsatisfactory ore reserve position.

The development accomplished during the year amounted to 48,017 ft., or 1,493 ft. more than the corresponding figure for 1928. It is satisfactory to note that, despite this increase in footage, the total cost of development was reduced from £158,529, or 3s. 1·0d. per ton milled, in 1928, to £137,763, or 2s. 6·5d. per ton milled, in 1929.

ORE RESERVES.

The ore reserve, as recalculated at December 31, 1929, totalled 1,617,100 tons of an average value of 6·42 dwts. per ton over an estimated stoping width of 43·8 in. Deducting the tonnage in shaft and safety pillars which cannot at present be stoped, the available reserve amounted to 1,323,400 tons averaging 6·21 dwts. per ton over 42·8 in., showing, as compared with the position twelve months earlier, a decrease of 121,700 tons in quantity and an improvement of 0·1 dwt. per ton in average value, due largely to a reduction of 8·6 in. in the estimated width, consequent on the extended use of the resuing method of stoping.

BOARD'S DEVELOPMENT POLICY.

One of the difficult problems confronting the Board is to strike the correct balance between the demands of economy, enforced by our adverse financial position, and the obviously important claim for greater expenditure upon increased development. During the four months to April 30th, the monthly development has averaged 3,390 ft., as compared with 4,001 ft. for 1929 and 3,877 ft. for 1928. During the present month, we hope that the total development will again approach 4,000 ft. While it is most important that the rate of development should be increased, to such extent as is practicable, in order to augment the ore reserves, it is satisfactory that the work at present in hand is proportionately more productive of tonnage for stoping than hitherto.

It is anticipated that, if all goes well, the tonnage milled in May will exceed 100,000 tons, that working costs will be about 22s. 3d. per ton milled, and that any loss recorded will be nominal.

The strenuous efforts made during the past two years have resulted in the mine being placed on a stronger basis. The outlook, although still an anxious one, is, as I have already said, better than it has been at any time in the last two years, and there is now reason to anticipate that, given reasonable good fortune, we can look forward to profits instead of losses.

The reports and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 14, 1930 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	8,570	From Revenue	4,956
Interest, &c., on Debt	2,616	Increase in Debt	6,904
Sinking Fund	495		
Increase in Balances	179		
	11,860		11,860

The Ordinary Revenue for the week amounted to £4,955,800, as compared with £6,786,400 in the corresponding week last year. Income Tax was lower, at £450,000, against £685,000, and Surtax at £380,000, against £400,000. Estate Duties amounted to £1,010,000, as compared with £1,320,000, while Customs brought in £1,582,000, against £2,488,000, and Excise £815,000, against £1,472,000. The National Debt was increased by £6,904,000, as shown below :—

BULLION.

The following statistics of imports and exports of gold for week ended June 19, 1930, are issued by the Statistical Department of H.M. Customs and Excise :—

Imported into Great Britain and Northern Ireland	£
From—	
France	9,506
Brazil.....	52,765
British South Africa	668,887
Other countries	1,016
Total declared value of imports.....	732,174

Exported from Great Britain and Northern Ireland.	£
To—	
Poland	1,700
Germany.....	27,744
Netherlands	766
France.....	221,559
Switzerland	10,300
Austria	7,375
Egypt	17,000
British India	33,334
Other countries	1,690
Total declared value of exports	321,468

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows :—

1930. ARRIVALS.	£
June 13	Nil
June 14	Nil
June 16	Nil
June 17	12
June 18 Bars bought	
June 19 Sovs. released from set aside	250,000
Total	£250,012

WITHDRAWALS.	£
June 13 Bars sold	23,791
June 14 Bars sold	3,495
June 16 Sovs. set aside	20,833
June 17 Bars sold	3,493
June 18	Nil
June 19	Nil
Total	£51,612

Net arrivals, £198,400.

Messrs. Samuel Montagu and Company write on June 18, 1930, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £155,988,589 on the 11th instant (as compared with £156,261,457 on the previous Wednesday) and represents an increase of £10,301,373 since January 1st last. £668,000 of bar gold from South Africa was available in the open market yesterday. In view of the lowering of the gold export point to France occasioned by the events of last week, there was again a keen demand from French buyers, who secured £605,000 at the fixed price of 85s. per fine ounce. Home and Continental trade requirements absorbed £38,000 and India £25,000.

There was only a small withdrawal of gold from the Bank of England for France. The exchange being slightly more favourable to this country, further withdrawals were impracticable in view of the cost of refining standard gold to a fineness acceptable to the Bank of France.

Movements of gold at the Bank of England during the week resulted in a net influx of £346,983. Receipts consisted of £500,000 in sovereign "released," and withdrawals included £101,000 in bar gold for France and 20,833 sovereigns "set aside." With reference to our remarks last week concerning the change in the Bank of England's practice regarding the fineness of gold bars which it sells, we would point out that the Bank is not necessarily limited even to standard fineness, as the Gold Standard Act of 1925 makes no restrictions on the delivery of bars of lower quality. The Bank of England from time to time buys gold of lower than standard quality, particularly foreign gold coin of 900/1,000ths fine, and there is no legal reason to prevent its delivering bars melted from such coin should it desire to do so.

SILVER.

The recovery seen in prices last week was short lived and the market has since shown renewed weakness. The fall was due in large measure to an absence of support, although sharp declines in rates in China and India were reflected by further selling from these quarters. From 16 5/16d. and 16d. for cash and two months' delivery, quoted on the 12th instant, quotations moved quickly downwards until yet another low record was established when 15 11/16d. and 15 7/16d. were fixed on the 16th instant. Bear covering attracted by the low prices and a little Indian buying for shipment helped in a small recovery yesterday, quotations reacting to 15 11/16d. and 15 5/8d., but to-day, in the absence of further buying, were fixed ⅛d. lower at 15 11/16d. and 15½d.

America has both bought and sold moderately during the week. The demand for silver has been mostly for near delivery either to cover bear sales or for early shipment. This has served to maintain the premium on cash, which was ⅛d. on the 14th and 16th instant, and 3/16d. for the remainder of the week.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 7th instant to mid-day on the 16th instant :—

IMPORTS.	£
U.S.A.	14,419
Other countries	11,030
	£25,449

EXPORTS.	£
British India	97,470
Other countries	4,745
	£102,215

(c) Plus bonus of 2½%.

BURMA CORPORATION.—Final dividend of 4 annas per share, together with a bonus of 2 annas per share, free of Indian and British income taxes, payable August 15th, making a total distribution of 13 annas, free of tax, for the year ending June 30, 1930. Shareholders on the London register will be paid this dividend and bonus in sterling at an exchange of 1s. 6d. per rupee (equal to 6·75d. per share). For 1928–29 the total distribution was 16 annas per share.

CANADIAN EAGLE OIL.—Dividend in respect of 1929 of 23·88 Canadian cents per share will be paid on the participating preference shares, and of 12 Canadian cents per share on the ordinary shares; this on the capital issued is equal to 3 per cent. on the participating preference shares, and approximately 4 per cent. on the ordinary shares. No dividend was paid on these shares last year.

LEYLAND MOTORS.—The dividend on the six per cent. preference shares for the half-year ending June 30, 1930, will be paid on July 1. The dividend on the seven-and-a-half per cent. preference shares for the 2¼ years to June 30, 1930, will be paid on July 10. In July, 1929, two years' arrears of dividend on the seven-and-a-half per cent. cumulative preference shares were paid, and in January, 1930, five years' arrears were paid.

REPORTS AND NOTICES.

The directors of the London and Lancashire Insurance Company, Ltd., have appointed Mr F. J. Cottle and Mr G. A. Rutter, assistant secretaries of the company.

MISCELLANEOUS.

ANGLO-FOREIGN NEWSPAPERS, LIMITED, AND CARMELITE TRUST, LIMITED.—On June 13th, it was announced that Anglo-Foreign Newspapers, Ltd., has issued a writ against the Carmelite Trust, Ltd., claiming a very substantial sum from the Carmelite Trust, Ltd. In a circular to shareholders, dated June 18th, the Carmelite Trust state that their Board has been advised by counsel that Anglo-Foreign Newspapers, Ltd., has not any effective claims against the Carmelite Trust. The Board of the Carmelite Trust feel that no useful purpose would be served at this stage by discussing the merits of the claims made, but state that the interests of the company will be fully protected.

CROSSE AND BLACKWELL, LIMITED.—The tenth annual report and accounts shows a total income for the year ended December 31, 1929 (after charging depreciation and providing for preference dividends on the shares of subsidiary and associated companies not held), of £287,510 (last year, £272,612), sundry expenses and directors' fees absorb £33,011 (last year, £38,056), and interest £43,294 (last year, £32,475), leaving £211,205. Adding £60,070 brought forward, and deducting £84,375 preference share dividend to June 30, 1929, there is a balance of £186,899, from which the further six months' preference dividend has since been paid. The directors recommend that £50,000 be transferred to reserve account (last year, £25,000), leaving £52,524 to be carried forward. The report mentions developments during the year: (a) Acquisition of Champion and Slee, Ltd., and Sarsons, Ltd.; (b) acquisition of shares of Chocolat Tobler, Ltd., and rights to manufacture in Great Britain and Irish Free State; (c) acquisition of controlling interest in the Sweet Cake Flour Packing Co., Ltd., of Cape Town; (d) the fusion of the subsidiary in France with S.A. Rodel et Fils Frères and Dandicolle and Gaudin, S.A., is proceeding.

GAUMONT-BRITISH PICTURE CORPORATION.—The following statement by Lord Lee of Fareham relates to the control of the Gaumont-British Picture Corporation, Ltd.:—My attention has been drawn to various statements, to which considerable publicity has been given, to the effect that the control of the Gaumont-British Picture Corporation, Ltd., has passed into the hands of the Fox Film Corporation of America. There is no truth in this statement, which is sufficiently disproved by the fact that the Metropolis and Bradford Trust Company, Ltd., of which I am the permanent chairman, owns, in its right, over 3,000,000 out of the 5,000,000 ordinary shares of the Gaumont-British Picture Corporation and thus holds the control by a substantial voting majority. Moreover, the constitution of the Metropolis and Bradford Trust Company, and my appointment as its chairman, were specifically designed to ensure and preserve British control, and there is no intention of surrendering this control to any foreign interest.

THE ROYAL MAIL STEAM PACKET COMPANY.—At a special meeting of the court of directors of the Royal Mail Steam Packet Company, held June 16th, the Right Hon. Walter Runciman, M.P., LL.D., was appointed to be a director and the deputy-chairman of the company.

S. SMITH AND SONS (MOTOR ACCESSORIES), LIMITED.—We are officially informed by S. Smith and Sons (M.A.), Ltd., that they have sold to Messrs Joseph Lucas, Ltd., the electric lighting and starting and magneto portion of their business. The result of this sale will enable both companies to concentrate their efforts on those lines in which they have specialised for many years. S. Smith and Sons (M.A.), Ltd., point out that there is no question of any amalgamation between the two firms, but arrangements are being considered by which the servicing of Smith instruments will be carried out at the depots and service stations of Messrs Lucas throughout the country, as well as at the present Smith depots and service stations. Should it be possible to make this arrangement as to service, it would prove a great convenience to the motoring public. We are also informed by the chairman of S. Smith and Sons (M.A.), Ltd., that the demand for the new lines introduced by them last year, including the thermostatically controlled radiator shutter, will more than fill the loss in turnover created by the sale of their lighting and starting business.

SPIERS AND POND, LIMITED.—On December 31, 1930, the contracts for the catering over the Southern Railway (the principal part of which the company has held for over forty years) will be terminated. While the board regret the termination of an association extending over so many years, they think it is proper that the shareholders should be given an indication of the results under existing conditions. For the year ended December 31st last, the total takings under the contracts amounted to £606,201. The total sum paid to the Southern Railway by way of rental, amounted to £93,141, while the profit accruing to your company was £2,382. In arriving at this profit, however, no charge was included either for head office management and expenses, or for interest on the substantial capital invested in plant, &c. It will be seen, therefore, that apart from any departmental profit made in the stores departments of the business, the contracts under existing conditions involve the company in a substantial loss. This section of the company's business will cease at the end of this year, when the plant involved will, in accordance with the terms of the contract, be taken over at a fair market valuation, this capital thereby becoming available for further extension of the company's business in other directions. The remaining departments of the company's business have continued to make satisfactory progress.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Cereal crops in the United Kingdom are developing rapidly under a continued spell of warmth and sunshine, and similar conditions are reported from most Continental countries, so that harvest prospects are now much better than appeared possible a few weeks ago. There is not much improvement in demand for native wheat, but offerings were on a small scale, and sellers reluctant to grant concessions. A better demand, however, was dealt with on the import market, United Kingdom millers, in particular, booking fairly large quantities of Canadian at declining prices. Pressure to sell North American grades has become more pronounced under competition from Argentina and India as these shippers appear anxious to market surplus supplies. A sharp break occurred in the United States, where wheat is now below the dollar level, and subsequent liquidations were reflected by the weakness of Winnipeg cables. Large holdings in North America present a difficult problem, particularly in face of improved new crop prospects, and unless the present rate of export is materially increased, total supplies at the end of this season's harvest will prove very burdensome and difficult to finance. The policy of withholding wheat from the market adopted by Northern sellers for some considerable time past, under official support, has been successfully countered on the adoption by European importers of a restricted buying policy, and in consequence, large surplus stocks remain on hand. It appears likely that considerable efforts will be made to lighten these before the next harvest. Supplies of foreign wheat in Europe, however, are by no means large, and the recent sharp advance on German markets suggests a shortage of domestic reserves. Additional overseas purchases will be required, particularly by Italy, in view of reduced crop estimates, but the higher import duties imposed may restrict foreign buying to actual wants. Home milled flour sells steadily at easier prices, although the decline is less pronounced, owing to the small outlet for wheatfeed, even at the extremely low prices ruling. Best imported makes, however, are fairly maintained on scarcity of spot offerings. Feeding stuffs move off quietly, with prices ruling in buyers' favour.

WHEAT.—Easier in sympathy with the c.i.f. position. No. 1 Northern Manitoba, ex ship, 42s. 3d.; No. 2, ditto, 41s. 6d.; No. 3, 40s. 9d.; No. 4 Manitoba, 39s. 6d.; No. 5, ditto, 37s. 3d.; No. 6, 32s.; No. 2 hard Winter, 38s. 9d.; No. 2 mixed Durum, 34s. 9d.; Rosafe, 62 lbs., 38s. 9d.; Barusso, new crop, 62¾ lbs., ex ship to arrive, 38s. 3d.; Australian, 41s. 6d.; choice white Karachi, 39s. 3d. per 496 lbs.; English, 8s. 2d.-8s. 4d. per 112 lbs.

FLOUR.—Tends easier. London, straight run, 36s. per sack for country deliveries, and 35s. London area. Of imported, Manitoba patents, 32s. 6d.-35s. 6d.; Buffalo, 32s. 6d.-35s. 6d.; Australian, 30s.-30s. 6d. ex store. On c.i.f. terms, Manitoba top patents, June-July, 32s.-33s.; export, ditto, 29s. 6d.-29s. 9d.; Australian, 27s.-27s. 9d.; French, prompt, 24s. 6d.-25s. per 280 lbs.; Argentine, low grade, May, £5 15s. per ton.

MAIZE.—Occasionally easier. Plate, landed, new, 25s. 9d.; old, 25s. 3d.; new, ex ship, arrived, 24s. 6d.; old, to arrive, 24s.; new, May-June, 24s. 6d.; June-July and July-August, 23s. 6d.; August-September, 23s. 6d.; Bessarabian, 23s. 6d. per 480 lbs. Yellow maize meal, £7 10s. per ton, f.o.r. London. Yellow African, £5 12s. 6d. per ton ex ship.

BARLEY.—Dull. Californian, old, landed, 34s.-40s.; new, ex ship, 34s.-40s., as to sample; Chilian, brewing, 33s.-37s.; Chevalier, 34s.-40s.; Australian, 32s.-34s.; Smyrna, 34s.-36s. per 448 lbs. 38s.-44s.; Australian, f.a.q., 15s. 6d.; landed, 16s. 9d. Black Sea, ex ship to arrive, f.a.q., 15s. 6d.; landed, 16s. 9d. Persian, landed, 16s. per 400 lbs. English malting, 7s. 3d.-8s. 9d.; feed, 7s.-7s. 2d. per 112 lbs.

OATS.—Quietly steady. Plate, landed, 13s. 6d.; ex ship to arrive, 12s. 3d.; Chilian white, landed, 20s.; ditto, tawny, 15s. 3d. German, landed, 18s.; ex ship to arrive, 17s.; mixed Canadian feed, 12s. per 320 lbs.; English, 6s. 4d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929–30, 1928–29, 1927–28, 1926–27:—

	1929–1930.	1928–1929.	1927–1928.	1926–1927.
Estimated sales of home-grown wheat—

Chicago (No. 2 Winter)— Cents per 60 lb.	116⅜	109⅛	130⅞	105⅛	104⅛	96⅜

THE COAL TRADE.

Our Sheffield correspondent writes:—Demand for South Yorkshire coal continues unsatisfactory, and the holiday stoppage at the pits was longer than usual. Continental competition is keen for export trade and prices have again eased. Best steams are quoted at from 14s. 9d. to 15s. f.o.b. Large stocks of industrial fuel are on hand, especially smalls. The coke market goes from bad to worse and blast furnace sorts have been sold at as low as 11s. per ton. Consumption is down and users cannot be induced to place new business.

Our Cardiff correspondent writes:—The position in the South Wales coal trade is practically unchanged. Current inquiries continue very scarce and collieries in many districts are working irregularly. On Monday the Executive Committee of the Marketing Association considered the question of allocations for the September quarter and the authorised production in that period is to be on a reduced basis. The actual allocations have not been disclosed, but they are stated to be in the neighbourhood of one-fourth of the annual quota fixed when the scheme was inaugurated. Prices are at the minimum for practically all classes, but under the influence of contracts average values are better than last year, the Customs returns of declared prices giving an average for May of 18s. 9¾d. compared with 18s. 5¾d. per ton in April, and of 18s. 4d. in the corresponding month last year. Shipments from the South Wales ports last week totalled only 287,600 tons owing to the intervention of the Whitsun holidays. In the previous week they totalled 568,200 tons and in the corresponding full week last year 601,173 tons. The following are the current approximate quotations: Best Admiraltics, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 3d. to 12s. 9d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 40s. to 44s.; rubbly culm, 11s. 6d. to 12s. 3d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 20s. to 22s.; pitwood, ex ship, 26s. 3d. to 26s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The iron and steel trades have now entered upon the period of summer trading when business is normally quiet, but as business has been quiet for several weeks past, little change is noticeable in the state of the market. Comparatively few important contracts have been given out during the past month or two, and most British steel works are in the position of working off orders more quickly than new business is coming forward. The consuming trades generally appear to be experiencing a quiet demand for their products, and as a consequence the buyers of iron and steel are adhering to a conservative policy, and are placing orders only for their immediate requirements. Manufacturers complain that the orders now being given out are for such small tonnages, and comprise such varied specifications that the costs of production are considerably increased. In the pig iron department buying is sluggish, but prices generally are held. Orders for semi-finished steel are scarce, and in spite of the official Cartel quotation, Continental makers seem to be keenly competing with each other for any business in the British market. In fact the situation in the Continental markets would appear to be worse than in this country, and the Continental works are eagerly pressing for orders. The demand for finished steel materials is on a disappointing scale. Overseas markets are buying irregularly, and cabled offers are frequently limited to unacceptable prices.

Our Middlesbrough correspondent writes:—The position of Cleveland iron does not improve, and transactions continue to be of a hand-to-mouth nature. Consumers are looking for a reduction in prices, which they consider is justified by the reduced prices of raw materials, and refuse to enter into forward contracts at present figures. Makers, on the other hand, contend that there is no margin to allow of a reduction, and at Tuesday's weekly market reaffirmed the prices that have ruled for some time past, viz.:—No. 1, 70s.; No. 3, 67s. 6d.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s., f.o.b. or f.o.t. Very little business was done, purchases being confined to small lots by home consumers to cover early requirements. There was practically no demand for export. In hematite, home orders are restricted to lots of very moderate size, but there is just a little more doing in some departments of the export trade, where East Coast brands command a premium over Continental makes. Producers are anxious to reduce the stocks of iron on hand, and now quote 72s. for reasonable quantities of mixed numbers, although for small lots they are obtaining more. Shipments of pig iron are behind those of last month, the clearances to 17th inst. totalling only 8,348 tons, against 11,036 tons to May 17th. The steel trade is very quiet as regards new business, and it is difficult to keep all departments regularly employed. Prices under the rebate scheme for home consumption are so far unchanged, viz.:—plates, ⅜ in. and up, £8 15s.; joists, £8 10s.; and sections, £8 7s. 6d. Other materials are also unchanged, viz.:—Iron crown bars, £10 15s.; heavy steel rails, £8 10s.; 21-24-gauge black sheets £9 12s. 6d. and 24-gauge galvanised corrugated sheets, £11 17s. 6d., all for home use. No transactions are reported on the ore market. Best rubio is offering freely at 20s. c.i.f. for early delivery but consumers are overbought and unable to entertain additional purchases. The rate of freight Bilbao/Middlesbrough for early tonnage rules round 5s. 6d. Coke continues in abundant supply and good furnace qualities can now be obtained at 16s. 9d. delivered works.

Our Sheffield correspondent writes:—The lifeless conditions in all branches of iron and steel continue much as before, and there is still no sign of a break in the cloud of depression. Contraction of output is the rule in pig iron and part-manufactured steel, and all the finished departments report reduced turnovers. A feature of the situation is a marked decline in the call for steel parts and tools for the automobile industry, which for several years has been one of the most important sections of Sheffield's light steel trade. Cutlery makers are rather busier, following a general stoppage of production in Whit week. The silver and electro-plate branches are severely depressed. Best tool steels are selling fairly well in the home market, but exports tend to decline.

Our Glasgow correspondent writes:—It was announced at the beginning of this week that two of the new P. and O. liners are to be built at Clyde yards, although the names of the firms to be entrusted with the work have not been announced. It is also reported that Messrs. William Beardmore and Company, Ltd., Dalmuir, have secured a contract from the Clan Line for auxiliary steam turbines of the Bauer-Wach system, to be installed in seven of their vessels. These contracts will ensure employment for some months to a considerable number of men. Otherwise the position in the West of Scotland is unfortunately much the same as during recent months. At the steelworks makers are finding it increasingly difficult to keep the plants in operation fully occupied. The demand for semis is poor, and is so for practically all iron and steel products at the moment. In the sheet trade there is a steady business in both black and galvanised sheets for the home market, but the export business is not satisfactory. Prices show no change.

Our Cardiff correspondent writes:—The Welsh tinplate market remains comparatively quiet, but the most of the works are well sold up to the end of August, and prices are stationary at from 18s. to 18s. 3d. per basis box. Allocations of production for July are on the same basis as for June, but works may voluntarily curtail their output. The galvanised sheet trade is still depressed, but there has been no further fall in prices, which continue to be quoted at from £11 17s. 6d. to £12 per ton. Both native and foreign bars are unchanged.

FIGURES OF A.M.P. ASSURANCE

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are *low*, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £74,000,000. Annual Income £10,500,000. Full particulars on application.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY

73-76 King William St., London, E.C.4 Established 1849.

D. E. WALKER, Manager for the United Kingdom.

OTHER METALS.

TIN.—In the standard market a fair demand was dealt with, but prices further gave way under selling pressure, and weak foreign advices. The closing tone was firmer and sellers more reserved. Standard cash changed hands at £133 12s. 6d.-£132 7s. 6d. and £138 5s.; three months, £135 10s.-£133 10s. and £140. In the East, sales were reported at £136 7s. 6d.-£137 5s. and £135 10s. and £137 5s. per ton, c.i.f. terms.

COPPER disclosed a good deal of irregularity, and dealings were on a fairly liberal scale, but prices ruled easier on balance as offerings proved excessive, while also influenced by the weakness of American markets. Market closed firmer. Standard cash sold £47 2s. 6d. to £50 5s.; three months, £48-£47 and £50 10s.

LEAD market generally steady and sellers more reserved in face of a good demand. Good soft foreign pig, June, sold at £17 12s. 6d. to £17 17s. 6d.; July, £17 15s.-£17 17s. 6d.; August, £17 15s.-£17 17s. 6d. and £17 13s. 9d.; September, £17 12s. 6d. to £17 17s. 6d. per ton.

SPELTER dull, with prices showing irregularity and weakness, closing steadier. July sold £16 12s. 6d.-£16 8s. 9d. and £16 16s. 3d.; August, £16 15s.-£16 16s. 3d. and £16 15s. and £17 2s. 6d.; September, £17 1s. 3d. to £16 18s. 9d. and £17 3s. 9d. per ton.

ANTIMONY nominal, owing to an absence of offers from China. Chinese regulus, spot, £27 10s.; June-July, £23; Chinese, crude, June-July, £14 per ton c.i.f.

ANTIMONY OXIDE, June-July, £24 10s. to £25 ton c.i.f.

ANTIMONY ORE, 50 per cent., June-July, 3s. 6d.; ditto, 60 per cent., 4s. per unit c.i.f.

WOLFRAM dull and easier. Chinese, June-July, sold 19s. to 18s.; Burmese ditto quoted 17s. per unit c.i.f.

ALUMINIUM steady. Home trade, £95; export, £100 ton.

QUICKSILVER steady. Spot, £22 2s. 6d. per bottle.

TIN PLATES steady, with moderate dealings. I.C. coke prompt and forward, 18s. to 18s. 3d. per box, f.o.b. Swansea.

ZINC OXIDE dull and easier, at £26 to £32 as to quality, per ton delivered U.K.

THE COTTON TRADE.

LIVERPOOL: June 18th.

In common with other commodities cotton has shown a further fall, owing to poor trade conditions the world over and to brilliant crop accounts. At the moment the market looks like steadying a little on the covering of part of a "short" interest which undoubtedly exists. Spot sales for the week 12th to 18th (inclusive) are: 13,000 bales, of which 4,360 bales are American, 1,460 Brazilian, 550 Argentine, 2,150 Peruvian, 2,530 Egyptian, 1,300 African, 110 East Indian, and 540 sundries. Imports for the same period are: 47,251 bales, of which 9,740 are American, 631 Brazilian, 1,005 Argentine, 1,425 Peruvian, 9,041 Egyptian, 3,545 African, 21,247 East Indian, and 617 sundries. Quotations to-day are: American Middling, 7·52; Egyptian Sakel, 12·25; uppers, 8·81; Brazil Fair, 6·85; Peru G.F. Smooth, 7·85; West African Middling, 7·45; and East African G.F., 8·10.

MANCHESTER: June 18th.

The most interesting development has been the decline in raw material prices. American and Egyptian cotton have dropped about ½d. per lb. Traders have been slow to recover from the Whitsuntide holiday influences, and a very unsettled feeling has prevailed. Some spinners and manufacturers have experienced rather more inquiry, owing to a desire on the part of buyers to know the revision in rates. Most merchants still take a gloomy view of the outlook for piece goods for India, but, on the other hand, certain houses have received more cables during the last few days asking for prices to be wired out. Scattered sales have occurred, chiefly in light goods, for Calcutta and Madras. There has not been any move on the part of shippers to China, and the unsatisfactory exchange makes trade practically impossible. Retail quantities of bleaching and printing cloths have been sold for the Near East and South America. Varied reports have been received from the home trade. Quotations in American and Egyptian yarns have been very irregular when tested, and trading has been of limited dimensions. Curtailment of production continues on a large scale.

THE WOOL TRADE.

Our Bradford correspondent writes:—With the exception of the weaving overlookers, practically all sections of the operatives have returned to work, or rather have applied for work, but in many cases there is nothing for them to do, and this position will become more acute if the weaving overlookers do not soon make up their minds to fall into line with their fellow-workers. During the nine weeks of the partial stoppage, stocks were greatly reduced in tops and piece goods, but yarns tended to accumulate in the hands of spinners because so few manufacturers were in a position to take up deliveries. Now, with combs running and sorters working, the depleted stocks of tops will soon be made up, especially as the spinning section continues to be the "bottle-neck" of the industry. Perhaps it is because of the somewhat dreary outlook in this connection that business has again fallen off in all departments. Spinners show little or no interest in tops, and manufacturers are bound to be unresponsive to offers of yarns so long as they are unable to give particulars and accept deliveries. The raw material markets show no sign of weakening—indeed, foreign competition is still very keen—but the general state of trade in the home market and the aftermath of the strike have evidently had a most depressing effect upon users in the West Riding. Firm raw material markets and increasing activity in the Continental centres indicate that confidence in wool values has been restored abroad, but in the home trade there is little of an encouraging nature and quotations for tops and yarns show a sagging tendency in spite of the maintenance of wool prices.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

At the moment there seems to be far more confidence in the general stability of raw material values among Continental users than in the home trade, and when the situation here is weighed up carefully, this is not surprising. Since the close of the last London sales there has been some indication that a slight reaction in wool values was expected. Buyers are evidently satisfied with their recent purchases in Australia and New Zealand, and are not supporting overseas markets freely. What influences are working behind the scenes is a little difficult to say, but there is no doubt that the after-effects of the strike are beginning to be felt. The refusal of weaving overlookers, "twisters in" and warp dressers to go back to work is keeping thousands of looms standing, but the great majority of manufacturers state that there is no urgent need to start this machinery running because so very little new business is developing in piece goods. This is the real weakness of the situation to-day, so far as the industry in this country is concerned, and accounts for the more hesitant attitude recently seen among spinners and manufacturers. Meanwhile the news received from Sydney and Melbourne shows that there is still good competition for wool with values mostly on the firm side. The first winter sale of the season was held last Tuesday at Wellington, when the bulk of the offerings comprised crutchings. These called forth keen competition, and prices were slightly dearer in sympathy with the last London sales. Everything seems to indicate a general firmness of values. Already attention is being directed towards the opening of the next series of London sales, for which the quantity expected to be available is about 130,000 bales. The offerings should be good in both merinos and crossbreds, and there is every likelihood of Continental buyers being prepared to absorb a fair share. The signing of the new United States tariff by President Hoover is another step in the efforts of that country to make its users of wool independent of imports. The raising of the duty makes it next to impossible to import our domestic raw material, and is certain to induce developments among woollen manufacturers.

VEGETABLE OILS AND OILSEEDS.

The markets for oilseeds and their products are depressed and are feeling the unsettlement in other directions. Plate linseed is easier in sympathy with the weakness of Argentine options and has dropped to £17 on spot and £16 13s. 9d. has been accepted for June-July to Hull. Indian linseed is in fair request at the lower levels, June shipment of Calcutta for Hull having been done at £17 15s. and afloat at £18. Cotton seed is steady, with black Egyptian on Cut and afloat held for £6 15s., July and August being at a small 37s.-40s. m. The new Egyptian crop is now offering, but prices are 50s.; ligh d approximately £7 for September and October loadings 6d. November-December. Linseed oil is not so steady,

RUBBER. of raw oil for June delivery being £41 5s. per ton ill mill, and July-August £40. Demand is only

Market stea ton oils are in want of trade. Crude Egyptian offers near positions. ; and common edible at £30 10s. ex Hull. Palm July, 6½d. to 6 ther seed oils are quoted lower. Oilcakes continue December, 6⅝d. t June, 6⅞d. to 6 13/16d.

Total	67,436,598	51,012,184	308,848,942	262,005,950

to 6s. 2½d.; March, 7s. 6d. to 7s. 3¾d.; May, 7s. 8½d. to 7s. 6d. Cuban, 96 per cent., July, quoted 6s. 7½d. c.i.f. U.K. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending May 14th amounting to 134,416 tons, against 128,909. Cuban receipts last week amount to 46,746 tons, against 43,934 last year; exports, 68,077, against 91,996; stocks, 1,659,262, against 1,369,114. Centrals at work, 8, against 2.

COFFEE.—A rather featureless market resulted during the greater part of the week. *Fair quantities at auction were only partially* absorbed at prices manifested some irregularity. Demand for Brazilian varieties becomes lessened of late, and it sems that the Continent prefers mild liquoring descriptions in place of the bricky grades.

COCOA.—Spot market quiet, but prices about steady. Forward positions unsettled and trade conducted slowly. The depressed state of the market is difficult to explain, as given normal consumption, the article cannot be said to be over-produced, but consumption appears to be falling off in America. Accra, F/F, October-December, quoted 34s. f.o.b. Terminal, July, sold 35s. to 34s. 9d.; September, 34s. 9d.; December, 36s. to 34s. 7½d.

TEA.—Indian auctions during the week amounted to 50,942 packages. A fair general demand was evidence, and no material change occurred in prices. New season's Darjeelings were in request, especially leaf teas. Ceylon sales of 32,693 packages came to a somewhat quiet and irregular market. Some fine teas sold steadily, but generally prices ruled irregular, and frequently ½d. to 1d. down. Falling off in quality accounted for most of the decline. Export demand was found wanting. Java and Sumatra auctions quiet, and rates favoured the buyer.

RICE.—General demand still sluggish, and Spanish moves against the seller. Most other descriptions rendered more or less nominal. Two Stars, Rangoon, spot, London sellers, 12s. 10½d.; June, sellers, 11s. 10½d.; July, 12s. Spanish, oiled, May shipment to London, 14s. to 14s. 6d. Italian, 15s. to 15s. 3d. c.i.f. ith quiet trading in the London market for the all-favoured Java. ago flour dull, and June-July quoted 9s. 6d.; July-August, 9s. 7½d.; d August-September, 9s. 9d. c.i.f. Ginger quiet, but steadily held. nnamon steady. One circle, spot, London, 1s. 5d.; two, 1s. 4d.; ree, 1s. 3d.

FRUIT (Dried).—Currants: Market quiet, but prices generally aintained. Patras, quoted, 39s.-43s.; Zante, 38s.; Gulf, 40s.-2s.; Vostizza, 44s.-58s.; Australian, new crop, 40s.-62s. ultanas: Smyrna's in small supply, but Australian sell well. myrna, medium to fine, 44s.-55s.; Cretan, 42s.-60s.; Greek, 2s.-65s.; Australian, old, 34s.-35s.; new, 45s.-75s. Dates dull. allowie, spot, 15s.-17s.; Khadrowie, 14s.; Siar, 11s.-14s. Raisins ove off quietly. Valencias, quarter-boxes, at 36s.-38s. Figs: old, quiet, but there is some inquiry for new crop. Genuine, 18s.-0s.; good average, 16s.; September shipment, 18s. 6d. c.i.f.

EVAPORATED FRUITS.—Trade is slow to improve but general osition unaltered. The demand for plums still runs chiefly on arge sizes, with parcels to arrive obtainable on slightly easier erms. Apricots mostly cleared regarding lower qualities, but ears are available at reasonable rates. Peaches and fruit salad teady, while apple rings meet with better support. Plums: Californian, new crop, 30's-40's, 55s.; Royal, 50s.-112s. 6d.; Australian, 50s.-67s. 6d. Pears: Californian Lake County, fancy, 34s.; extra, 92s. 6d. Peaches: Californian, choice, 50s.-55s.; ancy, 57s. 6d.-62s.; South African, 1929 crop, 42s. 6d.-50s.; 1930 crop, 42s.-58s. Apples: Californian, spot, sliced, extra choice, 35s.-65s.; Canadian, 52s. Almonds firm. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 112s.; Majorcas, 105s.-122s. 6d.; Bitter-Jordan, 185s.-192s. 6d. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 35s. c.i.f.; sweet, spot, 70s. Hazel kernels: Kerasunde cleared; Barcelona, 155s. French (shelled) walnuts, 135s.-140s. ex wharf London. For shipment, 130s. cwt. f.o.b. Bordeaux.

CANNED GOODS.

CANNED FRUITS.—A spell of fine weather has stimulated demand, and most descriptions of Californian fruit move off more freely than of late. Sellers, however, were obliged to come into line with buyers' views in order to effect business. A few offers received so far for shipment parcels fail to attract much attention. Australian and English unaltered, and of the latter, only small supplies of old pack are available. Singapore pines in fair request on spot, but buyers still indifferent regarding shipment parcels.

CANNED FISH.—Market steady, with improved inquiries. Salmon: Alaska red talls, quoted, 48s. 6d.-49s. 6d.; pink talls, 24s.-26s.; and halves, 34s.-36s. Japanese crab, best quality, 87s. 6d.-90s. Lobsters: Halves range from 130s.-135s. Sardines: Portuguese clubs, quarters, 4s.; 1-lb., 12s. per dozen tins.

CANNED MEATS.—There was a good demand for all descriptions, due to a spell of fine weather, and prices were well maintained, especially for ham and tongues.

CONDENSED MILK AND MILK POWDERS.—The market is somewhat better and undertone firm, offers from condenseries being slightly harder. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 30s.; machine-skimmed ditto, 19s. 3d.; full cream, sweetened, 56-lb. drums, 50s.. English condensed milk, full cream, sweetened, 5-cwt. casks, 40s.; machine-skimmed ditto, 22s. Dutch full cream milk powders: 26 per cent. butterfat, roller process, 1-cwt. cases, 58s.; spray ditto, 2 by 56-lb. tins, crated, 78s. Dutch machine-skimmed milk powders: roller process, 1-cwt. cases, 26s. 6d.; spray ditto, 2 by 56-lb. tins, crated, 37s. 6d.; ditto, 1-cwt. kegs, 36s. 3d.; ditto, 1-cwt. cases, 36s.; all per cwt. English prices, basis carriage paid nearest station. Dutch prices are net, ex store, London-Hull or Goole, and cover prompt or gradual delivery to the end of July, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s. Minimum 1-ton lots. Smaller quantity, 6d. per cwt. extra. On the grocery side, full cream, sweetened, 18s. 6d.; machine-skimmed, sweetened, 8s. 3d. basis per cases, usual packing.

HONEY.—Demand has fallen off considerably and with increased arrivals stocks are accumulating. The quality of new crop this year is very satisfactory, with result that the supply of better grades is more plentiful than usual. Jamaica, white, 48s.-50s.; good amber to fine pale, 40s.-47s. 6d.; dark to fine amber, 36s.-40s. Cuban, pale, 40s.; light amber, 36s.; San Domingo, good to fine, 37s.-40s.; manufacturing, 35s-36s.; Mexican, 35s.; Californian, 50s.; light amber, 45s.; New Zealand, 65s.-95s. per cwt.

RUBBER.

Market steady but quiet, with chief attention given to near positions. Standard sheet, spot and June, sold, 6¼d. to 6d.; July, 6¼d. to 6d.; July-September, 6 3/16d. to 6 1/16d.; October-December, 6⅛d. to 6 5/16d.; January-March, 6⅛d. to 6 3/16d.; April-June, 6⅛d. to 6 13/16d. London stocks increased 488 tons on the week. Landings, 1,232; deliveries, 744; stocks, 78,104, against 31,142 last year. Liverpool stocks, 1,326 higher; landings, 1,583; deliveries, 257; stocks, 26,646, against 4,733 last year. American consumption last month, 40,000 tons, against 49,180 last year; arrivals, 40,740, against 49,000; quantity afloat, 68,160, against 55,400; and stocks, 146,200, against 97,190 same time last year.

GENERAL.

JUTE.—A quiet and easier market which still suffers from the meagre sale attaching to all jute-manufactured goods and prospects of a bumper coming crop. Firsts, June-July, Continent, sold, £22 10s.-£22 7s. 6d.; July-August, sellers, £22 7s. 6d.; new, August-September, sold, £23 2s. 6d. to £22 15s.; September-October,

£1,000,000 6 per cent. First Mortgage Registered Debenture Stock

at 102 per cent., Redeemable at 105 per cent.

AND

1,000,000 7 per cent. Cumulative Preference Shares of £1 each

at 21/- per Share, repayable in a winding-up at 22/6

SHARE CAPITAL:	Issued and fully paid or about to be issued.
Authorised.	
£350,000 in 10 per cent. Cumulative Preference Shares of £1 each	£350,000
£1,000,000 in 7 per cent. Cumulative Preference Shares of £1 each (now being issued)	£1,000,000
£600,000 in 1,200,000 Ordinary Shares of 10/- each	£600,000
£250,000 in 500,000 "A" Ordinary Shares of 10/- each	£126,000
£2,200,000	£2,076,000
DEBENTURE CAPITAL:	
£1,000,000 6 per cent. First Mortgage Registered Debenture Stock (now being issued)	£1,000,000

Directors:

SIMON MARKS (Chairman and Managing).
I. M. SIEFF (Vice-Chairman and Assistant Managing).
A. ISAACS (Assistant Managing).
J. L. GREEN. N. LASKI. R. F. NORLAND.

Trustees for the 6% Debenture Stockholders:

THE PRUDENTIAL ASSURANCE COMPANY, LTD., 142, Holborn Bars, E.C.1.

The Prospectus will show inter alia:—

1. The Company was founded over 40 years ago, and operates a chain of 131 large stores and shops in London, its suburbs, and many of the provincial towns of Great Britain. The current year's programme so far includes the building of 15 new stores, the sites for which have been acquired, and the extension of 5 existing stores.
2. The net assets as at 31st March, 1930, together with the net proceeds of the present issue, but excluding Goodwill, cover the Debenture Stock **over three times,** and the value at that date of the freehold and leasehold properties to be specifically mortgaged covers the Debenture Stock **more than twice,** whilst the interest on the Debenture Stock is covered by the average net profits of the last three years **over four-and-a-half times,** and by the net profits of the last year **over six times.**
3. The 7% Preference Shares now offered are covered by the net assets as at 31st March, 1930 (after allowing for the Debenture Stock and the 10% Preference Shares), together with the net proceeds of the present issue, but excluding Goodwill, **more than twice,** and the dividend on these shares is covered by the average available net profits of the last three years **over two-and-half times;** and of the last year **over three-and-three-quarters times.**

Copies of the Prospectus and Forms of Application will be available on Monday, 23rd June, from

HELBERT, WAGG & CO., LTD., 41, Threadneedle Street, E.C.2.
THE INDUSTRIAL FINANCE & INVESTMENT CORPORATION, LTD., 39/41, New Broad Street, E.C.2.
MIDLAND BANK LTD., Poultry, E.C.2, and Branches.
BELISHA & CO., 82, King William Street, E.C.4.
CAZENOVE & AKROYDS, 10, Old Broad Street, E.C.2, and from the **Registered Offices of the Company,** 35-6-7 Chiswell Street, E.C.1.

THE MONEY MARKET.

On Tuesday, June 24th, the market began its preparatory borrowing from the Bank of England in anticipation of the turn of the half-year on Monday next. This week's Bank return shows that up to midnight Wednesday approximately £8,800,000 had thus been borrowed, and

this expansion in the Discounts and Advances is reflected in the increase of £5,444,688 in Bankers' Deposits, which largely represent market resources. Thus at the moment there is a huge artificial surplus of funds, and while money into July commands 3-3½ per cent., day-to-day rates have fallen to 1½ per cent., which means that money is almost unlendable. In other words, the market is now in an abnormal condition, and will remain so until the Bank is finally repaid the sums borrowed over the half-year. Only then will it be possible to estimate the true position.

* * * *

Since last week a radical change has come over the discount market, for the three months' rate which previously had risen gradually until on June 19th it stood at $2\frac{7}{16}$-½ per cent., has since eased abruptly to $2\frac{1}{4}$-$\frac{5}{16}$ per cent., while it is reported that some institutions have bought bills for July delivery at as low as 2⅛ per cent. This decline has probably little connection with the present plethora of money, for, as stated, this is due solely to preparations for the end of the half-year. It is obvious that no one is going to borrow money from the Bank this week at 3½ per cent., knowing that they will need it next Monday, and then buy bills with it at rates of $2\frac{5}{16}$ per cent. or less. Hence other causes must be sought for the recent relapse in discount rates.

* * * *

The key to the change in the London market is probably to be found in the causes underlying the recent reductions in the New York and Berlin rediscount rates. In the United States, bad trade and the renewed weakness of stock prices have had the effect of making short money almost unemployable, and the reduction in the New York rate to 2½ per cent. has done no more than mark the Reserve Bank's sense of this fact, and bring the rate into better alignment with the current low rates obtainable for short money. The Berlin market, too, is at the moment over-supplied with funds, and Germany's power to absorb more foreign money is now very limited. Bad trade and weak stock markets are undoubtedly the explanation in Germany's case as well as that of the United States.

* * * *

Thus, during the last week or ten days, some American short money has undoubtedly come to London in search of unemployment, for the improvement in the sterling exchange from $4.85¾ to $4.86 is sufficient proof of this. Again the mark exchange has lately risen from 20.36½ to 20.39½, which suggests that Germany is ceasing to draw on foreign centres for short money and is very likely repaying some of her previous borrowings. Thus on balance London is probably now in possession of more short money than she was in the middle of the month, and it is the presence of this money and its need for finding employment that has driven down discount rates.

	June 5, 1930.	June 12, 1930.	June 19, 1930.	June 26, 1930.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	3	3	3	3	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount { Call	1	1	1	1	1½ (May 1, '30)
Houses { Notice	1½	1½	1¼	1½	1¾ (May 1, '30)
Market rate (3 months' bills)	2⅛-$\frac{5}{32}$	2 $\frac{5}{16}$	2 $\frac{7}{16}$-½	2¼	...

In many ways it is disappointing that just as bill rates had been pulled up, so that for the first time this year they were only the normal margin of ½ per cent. below Bank rate, an influx of foreign money should have depressed them once more. It also means that the outlook for the market remains a complex one, for there is no guarantee that this American money will not be withdrawn without warning, to finance crop movements or for other purposes. In short, so long as bill rates are kept low by the presence of foreign funds, it behoves buyers of bills to operate with caution.

NEW YORK.

Our New York correspondent cables:—Call money has been down on Thursday to 1½ per cent., the lowest level since 1917. The ease has been accentuated by the accumulation in New York of subscriptions to the $82,500,000 Reparation Loan. Open market discount rates average a weak 2 per cent. for three months', and $2\frac{3}{16}$ for six months', bills. The Reserve System's total credits outstanding are $26 millions down, and the ratio is 83.7 per cent., a reflection of the passing of "tax date" financing.

THE STOCK MARKETS.

In a market depressed by the week-end slump in Transatlantic security values, Gilt-edged stocks were the only really bright feature, following cheaper money rates, and an all-round advance occurred. Home Rails made a poor showing with the publication of a further unsatisfactory batch of traffics, but Undergrounds were firm. Brazilian shares proved weak, and Foreign Rails, especially Argentine, opened with further selling, though an improvement occurred subsequently. Industrials were irregular. Breweries were a strong feature and Carreras advanced, but the Royal Mail Preference Stocks fell heavily. Tea shares were lifeless, Oils improved somewhat, and Rubbers were irregular. Among Mining Shares the Northern Rhodesian counters fell sharply under the lead of Congo Borders.

THE COMMODITY MARKETS.

There is no general improvement in the coal position, but a big South American contract has been placed in South Wales. Transactions in iron and steel, except for a few expensive classes of specialties, are still on a very small scale. Last week's inquiries for cotton goods have not materialised into orders. The Bradford market is very weak, though world wool values are very firm. The Calcutta jute mills have at last agreed to curtail production, but there has been no improvement in the jute markets. The hides and leather markets are uneven, but, on the whole, the outlook appears better. The timber situation is satisfactory. Seeds and oils are quiet. The downward movment in wheat prices continued.

THE FOREIGN EXCHANGES.

Only moderate activity characterised the Foreign Exchange market, but the lowering of the Federal Reserve and Reichsbank rediscount rates gave sterling a firmer tendency. New York went from 4.85¾ to 4.86 as did also Montreal. Paris, after being 123.75 and 123.78, was one point worse at 123.77. Brussels gained a point at 34.82. Milan declined by the same margin to 92.77. Madrid was again very erratic, and fell away from 41.20 to 42.25 after some earlier buying. Amsterdam moved rather sharply in our favour to $12.09\frac{11}{16}$, while Berlin again fluctuated, and went from 20.36½ to 20.38⅛. Switzerland also fluctuated within narrow limits, but improved from 25.09½ to 25.07⅜. Of the Scandinavian exchanges, Oslo was better at 18.15, but Copenhagen lost ¼ at 18.16. The South American exchanges were again uncertain. Rio gained $\frac{1}{32}$d. at $5\frac{9}{16}$d.; but Buenos Aires after being 41½d. fell away to $40\frac{7}{16}$d. Montevideo lost a penny at 42½d. The rupee was very firm at 1s. $5\frac{27}{32}$d. The yen was unchanged at 2s. $0\frac{7}{16}$d. In the forward market New York went from $\frac{1}{16}$ and $\frac{3}{16}$ cent discount to $\frac{1}{16}$ cent and $\frac{3}{32}$ cent premium. Paris one month was unchanged, but the premium on three months rose two points to 6 centimes. Milan was less in demand at wider discounts of 13 and 33 centesimi for the two periods. Madrid was unchanged. Amsterdam was better for one month's delivery at a lowered discount of ½ cent, but the discount for three months advanced to 1⅛ cent. Berlin improved to ¾ and 1¼ pfennigs discount, against 1⅛ and 3 pfennigs last week. Silver established new low records during the week, but recovered a little towards the end to $15\frac{9}{16}$d. for spot and $15\frac{3}{8}$d. for forward as a result of small offers, and some speculative support, but the United States and China were both inclined to sell. The China silver exchanges were hesitant in sympathy, Hong Kong being unchanged on balance at 1s. 3¼d., while Shanghai lost ¼d. at 1s. 6d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moodys-Economist Services, 6, Bouverie Street, London, E.C.4.

TOWARDS A FEDERAL INDIA.

EVERYONE who carefully studied the first volume of the Indian Commission's Report must have been prepared for the fact that its recommendations would not follow the line of proposing for India as a whole a further instalment of democratic institutions of the type familiar in the West, but would propose something better suited to the peculiarly complicated conditions of the country. The only solution that in any way meets these difficulties is a federal one. The framers of the Montagu-Chelmsford reforms to some extent recognised this; but in the end the India Act of 1919 took the orthodox line, and a Central Legislative Assembly was set up, containing, in addition to nominated members, a certain number of representatives elected by small electorates scattered over fantastically large constituencies. This scheme has not worked well; it is entirely unsuited to the more backward parts of India, and is not one into which the Indian States could fit. It is safe to assume that it would never have been suggested for India—in spite of the example of European constitutions—if the makers of the constitution of 1919 had not been designing something which was to grow alongside an existing highly centralised government.

The Act of 1919, however, went a considerable way in the direction of decentralisation, and although during the intervening ten years the proceedings of the Centre have attracted most of the limelight, there has developed a quite active political life in the provinces. The reforms, in short, have to some extent fulfilled the expectation of the Montagu-Chelmsford Report by "breaking up the old structure before building the new." Thus, on the one hand, the main idea underlying the conclusions reached by the Indian Statutory Commission—"that the ultimate constitution of India must be federal"—follows a familiar line and is the natural consequence of what has gone before. On the other hand, in an important respect, the Commission's scheme opens a new era in India's political history; for it proposes to attain this Federal India by continuous evolution without the necessity of periodical inquiries and the radical overhauling of her constitution. It is not a scheme for the creation of the whole edifice at once, but it indicates the outlines of the whole and builds a substantial part of the structure for which the material is already prepared. In this idea of continuous development there should surely be a basis on which Indians who passionately desire that their country should take her place on an equal footing with other self-governing members of the Empire can co-operate with Great Britain.

Among a great variety of interesting suggestions three main features of the Commission's Report may be distinguished, namely, the grant of self-government to the provinces, the re-framing of the central organ of government on a federal basis with a view to the subsequent admission of the States, and the making of the defence of India an Imperial responsibility.

So far as the provinces are concerned, dyarchy is to be abolished and all subjects, including Law and Order, are to be placed under a unitary cabinet responsible to the Provincial Parliament. Experience in the provinces has not been uniform, and the Commission desire to permit variation in the precise form of government. The Governor may, if he chooses, select a Chief Minister, and consult with him as to the membership of the Cabinet. He may include a Service member and it is suggested that various parties and communities may be represented. These Indian provinces may, in fact, have to follow more closely the Continental example of coalition cabinets rather than the British model. But whatever may be done in this respect, the Commission insists that there must be joint cabinet responsibility. The official *bloc* is to disappear, and the Councils are to be enlarged and the franchise widened. To safeguard Ministers from pressure in regard to patronage, civil service appointments will be made by a Public Services Commission. Finally, as self-government can only be a success if the units concerned have adequate financial resources, proposals are made for giving the provinces some extended powers of taxation, for dividing among them a portion of the proceeds of the income tax, and for voting, through their representatives in the Federal Assembly, national excise revenues which will be divided among them on a *per capita* basis. The political independence of these Provincial Governments is limited only by the reserve powers of the Governor to intervene in the case of a breakdown in government, if the peace and tranquillity of the province are at stake, if the Governments impinge on the rights of other provinces or of minorities, concern themselves with matters which affect India's international obligations, or in other ways exceed their prescribed sphere of activity.

The Central Government is to be changed by substituting indirect election by the provincial parliaments for direct election to the Legislative Assembly, which is to be renamed the Federal Assembly. This body is to be enlarged, and instead of being largely nominated as at present it will have only a score of nominated members out of a total membership of from 250 to 280. No specific suggestion is put forward for the inclusion of representatives of the Indian States, but a Council is to be set up at once for the discussion of (as distinct from action upon) matters of common interest to India, including customs and national excises, communications, currency and banking, commerce, Indians overseas and matters arising from India's membership of the League of Nations. The constitution of the Federal Assembly would, however, be adjusted to permit representatives of the States to be included in it on any basis which may be subsequently agreed, if the Princes, after discussion, come to the conclusion that the representation of their States in it is desirable. The Commission, however, was not empowered to visit or to report upon the Indian States, and this part of the problem is very clearly one which must be discussed at the Round Table Conference. The Commission are clear that it would be a mistake to introduce dyarchy into the Central Government, nor do they think that in the present uncertainty as to the final form of the Centre the Governor-General's Council should be responsible to the Assembly. They do, however, express the view that it would be a desirable development if the Council were recruited from Indians who have taken a prominent part in the work of the Assembly. In the first volume the Commission pointed out that, though the present Assembly is not in control of the Executive, it exercises an influence over it. Clearly, the reduction of the official *bloc* to insignificant dimensions will immediately increase the power of the new parliament.

Moreover, acting in its capacity as a body representative of the provinces, the Federal Assembly will be given full power over the taxes which it is proposed should be collected centrally but distributed among the provinces on a *per capita* basis. The Commission clearly envisage this as a very important example of a method of collaboration among the provinces on matters which are of joint concern. It is by thus building up from a basis of provincial or State rights that the "Centre" will gradually assume the character of a truly federal organ and attain full responsibility.

The Commission had, however, first to dispose of the army question. This, they say, cannot yet be placed under an elected body representive of India. If the army is removed from the sphere of the Governor-General in Council and made an Imperial responsibility, combined possibly with a limitation of the charge which India is called upon to pay for defence, it would make the development of responsible government easier; would, if a good bargain were made by India, relieve the Indian taxpayer from a financial burden which is among the half-dozen or so most expensive military charges in the world, and

perhaps be the first step towards a new conception of Imperial defence. Indian Nationalists have endeavoured to maintain that India could quickly take over her own defence, and that meanwhile there is no reason why a free India should not hire the British Army to defend her. But this claim has never been made with any conviction, and Indian Moderates, who have been pressing for Dominion Status, have clearly had defence in mind as one of the problems to be dealt with during what they have described as the "interim period." The Commission's suggestion—associated, as it is, with the proposal that the Government of India, in co-operation with the Central Legislature, might organise certain military or naval forces of its own, independently paid for and controlled, which would contain no British element—is one way of removing this obstacle in the way of constitutional advance.

The Commission's recommendations, a fuller summary of which appears in a later column, will not appeal to those who think that a highly complicated problem can be solved by a phrase or a simple formula, and the Report has been received with a chorus of criticism in India because it has not defined Dominion Status or attempted to indicate the dates of subsequent developments. These criticisms contain many misrepresentations which can only be removed by the study of the Report itself. This will take time; but the more it is examined, the more it will be appreciated how far-reaching are its actual proposals. If its tone is that of a realism "closer to the ground" than is wholly satisfying to the aspirations of Indian sentiment, the "hard facts" of the sub-continent's vast problems, elaborated with no lack of sympathy or understanding in the first volume, provide a standard whereby to judge the magnitude of the changes proposed.

THE CONSERVATIVE DILEMMA.

THE Conservative Party meeting, summoned and addressed by Mr Baldwin on Tuesday, cleared the air in several respects, but it did little towards resolving the internal differences within the party on the crucial matter of fiscal policy. It revealed overwhelming support for Mr Baldwin's determination to offer uncompromising resistance to all attempts at dictatorship by the Press; but it revealed equally clearly both the unpopularity of the device of the Referendum for deciding the food tax issue and the cleavage in the party on that issue itself. Some of the smoke of the battle has been blown away, but the scene is one in which two opposing Conservative armies still face each other. The issue still hangs in the balance.

The task which faced Mr Baldwin was dual—to confute the Press Lords and to satisfy the rank and file as to the soundness of his policy. The first was comparatively easy, and was performed with a vigour and trenchancy which the Conservative leader is unwont to employ. His recital of the facts relating to his bargain with Lord Beaverbrook, which led up to the introduction of the Referendum for the sake of party peace, and of the subsequent actions and words of himself and the two Press Lords, carries to the impartial observer a conviction that Mr Baldwin has adhered more faithfully to the bargain than Lord Beaverbrook. With the tergiversations of Lord Rothermere the Conservative leader made effective play, but his trump card was kept till the close of the speech, when he revealed to an astonished meeting the length to which Lord Rothermere had pressed his claims to dictatorship. In a letter written to a Conservative member as recently as last month Lord Rothermere said:—

> "I cannot make it too abundantly clear that under no circumstances whatsoever will I support Mr Baldwin—and let me beg of you for Mr Baldwin to read the name of any other person who may be leading this Party—unless I know exactly what his policy is going to be, unless I have complete guarantees that such policy will be carried out if his Party achieves office, and *unless I am acquainted with the names of at least eight or ten of his most prominent colleagues in his next Ministry.*"

The italics are ours, and we make no apology for them. In spite of a disclaimer put out by his lordship, the plain man can only read that letter as a claim, if not to dictate, at least to approve or disapprove in advance the personnel for the main posts in the Cabinet. It is an unconstitutional claim and one that goes far beyond the limits of the tolerable; and in spurning such a claim, by whomsoever it is advanced, Mr Baldwin or any other party leader should have behind him not merely his own party but the overwhelming opinion of the country. Incidentally, Lord Rothermere's disclaimer does its author no good, for it puts forward the untenable theory that "the electorate have a right to know when they go to the poll not only who will be Prime Minister, but what Ministers are going to occupy certain key positions, if the party they are voting for is returned to power." That suggestion entails a very far-reaching innovation in present constitutional practice, in which we can see no advantage and many dangers, and for which, we imagine, little, if any, support will be forthcoming from any political quarter.

So, in the first round of the great fight against would-be dictators, Mr Baldwin has won decisively on points, and the verdict is not likely to be reversed. For dictatorship by the Press is abhorrent to the British mind, and in spite of all the forces working for it, it is not likely to be achieved. We are aware, of course, that the case of the part played by the late Lord Northcliffe in dethroning Mr Asquith will be quoted against us as an example of the decisive political potentialities of Press magnates and as a precedent which may possibly be repeated. But that incident was easily explicable by the fact that it occurred at a critical moment of the Great War, when public life was abnormal and the public temperature feverish. It will remain in British history, we believe, as the exception which proves the rule that the people and their elected representatives are not ready to accept dictation either from the Press or any other extra-constitutional force.

But that is only part of the story. The strength of Mr Baldwin's position against Press dictatorship contrasts vividly with the weakness of the position as regards policy into which he has been manœuvred in the unsuccessful pursuit of peace within his party. The truth about the Referendum is that it has no friends. It is a device which is alien to British constitutional needs and ideas, and is in any case a peculiarly unsuitable method for recording the popular will on complicated tariff schedules. In this issue Lord Beaverbrook and, since his recent conversion, Lord Rothermere, occupy the firmer ground. As readers of the *Economist* are well aware, we are equally strongly opposed, on grounds of national advantage, to that form of Protection advocated by Mr Baldwin under his scheme of "extended safeguarding" for industry, plus a subsidy for agriculture, and of that form of Protection, plus Preference, advocated by the Empire Crusaders under the misnomer of "Empire Free Trade." We shall not, therefore, be misunderstood when we say that, as between these two sections of the Conservative Party, the latter are on stronger ground, because they are definite in policy and have the courage to face the essential fact, enunciated long ago by Joseph Chamberlain, that you cannot have effective Imperial Preference without food taxes. On this issue, sooner or later, Mr Baldwin will have to declare himself. If the Conservative Party is to put Imperial Preference in the front of its programme it must accept the policy of food taxes. If it is convinced, as we are, that the country will not have food taxes, then it must realise that an extensive policy of Empire customs preference is ruled out. There is no magic loophole for escape, whether by a Referendum or by other device.

Mr Baldwin's position is, indeed, unenviable at present. His desire to achieve party unity has thrown him on the horns of a dilemma and has not achieved anything in the way of unity. Moreover, the country may rightly expect to know without undue delay what is the policy of the official Opposition party. Nevertheless, we are inclined to take the view, stated by Sir Robert Horne at Tuesday's meeting, namely, that events in the fiscal sphere will move rapidly, and that the passage of time may automatically resolve present Conservative difficulties. For big events are brewing in the fiscal sphere. In September the League Assembly will discuss M. Briand's plan for a European union, which, while it eschews the idea of a Zollverein, might produce important indirect influences on the fiscal policies of individual countries. The Imperial Conference is to be held in London in October. Then in the spring are due the European negotiations on tariffs arising out of the recent Tariff Truce discussions at Geneva. And in the intervening months the world in general, and Europe in particular, will be watching the reactions of America's heightened tariff.

Father Time, therefore, may mow down with his scythe some of the tangled undergrowth which now obscures the field of Conservative policy and enmeshes the feet of its actual and presumptive leaders. Such a consummation is devoutly to be wished. For, as Queen Victoria used to say, we are "neither edified nor amused" by the present spectacle of an acrimonious disunion which diverts attention from the pressing problems at home and abroad which should be absorbing the thoughts of the British public.

GERMAN BANKING PROGRESS.

(BY OUR BERLIN CORRESPONDENT.)

THE steady, quiet development that was characteristic of the German banks in the first years following the stabilisation of the German currency suffered an interruption in the last twelve months. Up to 1929 the deposits of the banks increased year by year, and their earnings also increased steadily, so that, in addition to the relatively small dividends declared, considerable reserves could be accumulated. In the banks' reports the year 1929 was described with justification as a critical year. In the first place the innumerable large and small bankruptcies in industry and trade affected the banks; a not inconsiderable part of their debtors disclosed themselves as "insolvent," and it was possible to save the situation only by cancellations. The large German banks also suffered considerable losses through certain suspensions of payments such as, for example, the collapse of the Frankfurter Allgemeine Versicherungs A/G. In addition to these losses, losses on stocks also played an important part. The banks endeavoured during the past year to check the fall of German stocks, and bought large blocks of them. Since the decline continued despite such intervention, substantial amounts had to be written off at the end of the year on these large holdings. And, finally, there were also reduced profits in 1929 in the deposit business. Loans from abroad, which the large German banks employ in considerable amounts, commanded abnormally high interest rates—much higher than in the preceding year—owing to the influence of the New York Bourse, and it was not possible to shift all this additional charge on to the shoulders of the depositors.

The unfavourable developments of 1929 are hardly reflected in the annual reports of the large banks. Only the smaller and medium-sized institutions in the provinces decided to reduce their dividends; the large Berlin banks without exception declared unchanged dividends for 1929, and at most refrained this time from increasing their "open" reserves to the same extent as in the preceding year. These larger banks felt that considerations of prestige compelled them to avoid a lowering of their dividends, and hence they employed reserves accumulated in former years, and not shown in the balance sheets, to cover their losses through insolvencies and stock transactions. The head of one large bank has rightly pointed out that the aim in accumulating reserves is precisely to assure a stability of dividends in unfavourable years.

The year 1929, which brought the heavy decline referred to in the earnings of the banks, also brought decisive alterations in the structure of German banking. Of the four "D" banks, among which no important differences of proportion existed, two were combined. Since the fusion effected in the autumn of 1929, the Deutsche Bank and the Disconto-Gesellschaft constitute by far the largest German financial institution. Measured by the amount of foreign money administered, the other "D" banks—Danat and Dresdner—follow at a considerable distance, and the fourth largest German bank, the Commerz- und Privatbank, which last year absorbed the Mitteldeutsche Creditbank, is not far behind the other two. All these banks have branches all over Germany, in contrast to two other large banks, whose business is concentrated in Berlin. These are the Berliner Handelsgesellschaft and the Reichs-Kredit-Gesellschaft, which as a rule do business only with large clients. There are in addition to the banks named numerous other small and medium-sized joint stock banks whose activities are in the main confined to limited districts of the country.

Of greater importance for the structure of German banking are the private bankers. A delimitation by fields of activity between joint stock banks and privately-owned banks in Germany is hardly possible. With the exception of mortgage business there is hardly any financial business in which the large banks do not engage; they devote themselves in equal measure to deposit, stock exchange, acceptance and issue business. The same is true of the larger private banks with the single exception that deposits of small clients play only a small part with them. The largest private bankers, such as Mendelssohn and Co., in Berlin, who are on the same footing in respect of strength as the "D" banks, and Warburg in Hamburg and Arnhold in Dresden, are the strongest competitors of the large banks both on the Bourse and in big issue and credit transactions. Unfortunately no statistics are available of the financial means at their disposal, and hence in estimating the German banking structure one must confine oneself to the joint stock banks. The capital, reserves and deposits of these latter are shown below:—

	Capital.	Reserves.	Deposits. Dec. 12, 1929.	Deposits. Apr. 30, 1930.
		(In Millions of Marks.)		
Deutsche Bank und Disconto	285	160	4,942	4,855
Dresdner Bank.....	100	34	2,363	2,341
Danatbank	60	60	2,473	2,461
Commerzbank	75	41	1,666	1,535
Reichs-Kredit-Ges. ...	40	20	626	663
Berliner Handelsges...	28	15	437	411

The concentration in the German banking world has made itself felt still more strongly in the last few months. Numerous small institutions and bankers in the provinces could no longer maintain themselves because of the unfavourable situation and heavy losses on the Bourse, and were compelled to take refuge with the large banks. In connection with this development the financial importance of the provinces has diminished; Berlin plays a steadily larger part in the German banking business.

The backbone of the German banks in 1929 was the deposit business. As a result of the complete stagnation of the German capital market, stock exchange and issue transactions produced only very small profits, and current expenses and profits had in the main to be gained from the margin between interest on debits and credits. In 1930, however, there has been a development which appears to menace this important branch of business as well. The extreme easiness of both the German and the international money market compelled the German banks to reduce their interest rates more and more, but brought them no adequate compensation in the shape of

an influx of cheap capital. As a rule the German banks charge their debtors a rate of interest 1 per cent. higher than the Reichsbank discount figure, and in addition thereto a commission of ½ per cent. a month. During the period in which the Reichsbank rate was 7½ per cent. —the greater part of the year 1929—the debtors therefore had to pay an average of 10½ per cent. per year. The present Reichsbank rate is 4½ per cent., and the average burden on the debtor has simultaneously dropped to 7½ per cent. a year. It is difficult for the banks to secure domestic savings accounts at correspondingly reduced rates, since first-class mortgage bonds and loans can still be had which give a yield of 8 per cent., and the savings banks, which in the main satisfy the requirements for mortgages and municipal credits, still pay from 5 per cent. to 7 per cent. for deposits. In contrast with the steadily increasing deposits in the savings banks, the deposits in the large banks have not increased in the last half-year.

The unfavourable effects of the lowering of interest rates referred to have recently occupied a large place in discussions of the developments in the German banking world, but they must not be over-estimated. Despite the lessened receipts of the last year, the large German banks have at their disposal substantial reserves, which enable them to meet all economic demands on them without loss to their stockholders.

THE HALF-YEAR'S NEW CAPITAL.

The total figures for new capital applications in the London market for the June quarter and for the half-year do not differ widely from the figures for the comparable periods of 1929. But the character of the issues in the two periods was very different. In 1929, whereas rising money rates checked the bond market, share market activities produced an avalanche of industrial, speculative and semi-speculative issues. In the half-year which is now closing, the progressive cheapening of money, coupled with trade depression and share market idleness, has brought share issues to a low ebb, and fixed-interest securities have provided a very large proportion of the total of new emissions. For the first half-year of 1929 the total of £174.4 millions included only £40 millions of issues by British, Colonial and foreign Governments and Corporations, whereas the figure of £169.7 millions for the first half of 1930 includes no less than £117 millions under these heads. Our figures throughout this survey take account only of new money, and exclude issues or parts of issues made for purely conversion or redemption purposes. If the latter were to be included, the aggregate for the total offered for subscription in the past half-year would amount to £245 millions as against £195 millions in the first half of 1929.

Our figure for British Government borrowings is made up of £37,060,000 of new cash, not directly required to meet maturities, raised by the February issue of 4½ per cent. Conversion Loan and £2,900,000 representing the net sales (margin of purchases over encashments) of National Savings Certificates. A very big drop will be noticed in the above table in the amount raised for financing home purposes other than those of the Government. The Foreign Government issues all fell in the June quarter, two-thirds of the total being accounted for by the German Reparations issue, details concerning which will be found in a later table. Below we give a classification of London borrowers for the full years 1923 to 1927 and for each quarter since then.

CLASSES OF BORROWERS.

Of all the statistics in this table perhaps the most interesting are the 1930 figures in the last column, which reveal the big decline compared with a year ago in the demands of British industry for new financing, and reflect the depth of the trade depression. A study of the items which go to make up the total heightens the interest, for it shows that the preponderance of such public industrial issues as were floated in the past half-year were in the form of debenture stock or preference shares, whereas a year ago the ordinary share (especially of small dimension) was at the height of its vogue.

The next table carries our analysis a stage further by sub-dividing the past half-year's issues into twenty-nine categories.

ANALYSIS OF NEW CAPITAL APPLICATIONS.

Total.....	174,393,600	87,732,500	81,923,100	169,655,600

The Government of India were twice in the market, in February and May, with issues on the first occasion of £6 millions and on the second occasion £7 millions short-dated 6 per cent. bonds at 99. Other Empire Government borrowers included South Africa, New Zealand, Queensland, Nigeria and Ceylon. Among foreign Governments, Japan and San Paulo were the only companions of Germany. In the class labelled "British Corporation, County and Public Board Loans," fourteen English and Welsh municipalities figure. Current industrial conditions are reflected in the complete absence of public issues for iron, coal, steel or engineering, while the change in the Stock Exchange scene doubtless accounts for most of the big drop recorded by financial and investment trust issues.

The following table shows some of the most important issues during the half year :—

Date of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, End June, 1930.
1930.		£		
January ...	Central Electricity Board 5% Stk., 1950–70	7,000,000	97½	101½

† Includes £55,740,000 for Conversions.
‡ All for Conversion Purposes.

It should be appreciated that the new capital issues included in our quarterly surveys take no account of Stock Exchange "introductions," an aspect of the capital market which was discussed fully in the *Economist* of July 27, 1929 (page 175). In the following table we show the total amounts involved in these "introductions" during the past five quarters. "Cash values" are calculated on the assumption that the whole of the nominal value of the stock "introduced" is taken up at the price at which dealings on the Stock Exchange open :—

There has been a notable falling off in introductions during the second quarter of 1930.

THE PRICE OF SILVER.

(BY A CORRESPONDENT.)

While the unprecedented decline which has recently taken place in the value of silver presents a grave aspect to those more intimately associated with the fortunes of the metal, the underlying causes of this depreciation are not obscure. Nations faced with the need for strict economy as a result of the war were not slow to realise that, with currencies once more established on a sound basis, subsidiary coinage was of comparatively small importance. New silver coinages were of much lower fineness than the old. Moreover, the new issues involved no fresh purchases of silver, since the metal derived from demonetised coins of higher quality not only provided material for the new issues, but also a large surplus, which found its way to the markets of the world. With an important outlet for silver thus converted into an additional source of supply, the steady fall in the value of the metal can be readily understood.

Under these circumstances, it soon became clear that the burden of supporting silver would rest almost entirely upon the East, particularly upon China, whose currency is still on a silver standard. Unfortunately, China's internal troubles have served further to shake the stability of the white metal. Well-informed authorities have expressed the opinion that, in spite of their huge volume, the stocks of silver now accumulated in China could be absorbed, given settled conditions under which the trade of the country could proceed unhindered. As it is, the silver amassed in the cities for reasons of safety has become, to a large extent, sterilised and acts in the nature of a depressing factor. Thus it is only natural that the dwindling gold value of silver should be viewed with alarm in China, and that the Chinese Government should be seeking a means of stabilising its currency. The Commission appointed to study the question, under the chairmanship of Dr. Kemmerer, whose report was commented upon in a recent issue of the *Economist*, advocated the establishment of a gold standard. To the outside observer, however, present conditions in China would appear to render the adoption of the Commission's schemes extremely remote. In the meantime, artificial palliatives, such as the prohibition of all silver imports into China, would add to the difficulties of the world position of silver. While it is true that such a measure might increase the internal value of the silver held in China, the external value might be further depressed by supplies seeking some other outlet. Moreover, a gold standard for Indo-China has now become an accomplished fact, and affords yet another instance of the movement to forsake silver as a standard for currency. Quantities of Saigon silver dollars, becoming redundant, have been exported to China and now form part of the stocks held in that country, a fact which may have had a great deal to do with the recent order prohibiting the import into China of foreign silver coin.

How far India can give support to the market is somewhat problematical. So far this year Indian demand has provided the principal outlet for supplies, but this may be accounted for by special circumstances. The demand during the early part of the year may have been due in some measure to the hastening forward of many marriages, before the passing of the new marriage laws, which became effective in April. In addition, there was a demand from speculators anticipating—correctly—that an import duty would be imposed on silver when the Indian Budget proposals were announced. But in India silver, besides being a luxury, is the medium chosen by a large proportion of the population for the investment of savings. Provided, therefore, that crops are satisfactory and trade conditions favourable, the absorption of the metal in that country is likely to continue. On the other hand, it must not be forgotten that an extension of banking facilities and the education of the masses in the benefits afforded by more profitable investment may tend gradually to diminish the demand, although an appreciable decline may be yet far off.

Perhaps the most interesting question as regards India in relation to silver is that of the stock of surplus silver

held by the Indian Government. That the Government is fully alive to the effect on a sensitive market of such large potential supplies, unless handled with great discrimination, was made apparent by its willingness, as expressed by the Indian Finance Member, to consult with silver producers on the matter should the latter consider it desirable. The wisdom of the Indian Government in surrounding its intentions as regards this stock with a certain amount of secrecy cannot be questioned, seeing that definite pronouncements might give rise to speculative movements to the detriment of interests concerned.

It might perhaps appear at first glance that the decline in silver prices will result in decreased production, but, if we may judge from past experience, it is by no means certain that this consequence will follow. Indeed, a study of the production and price figures for the last few years leads to a contrary conclusion:—

	World Production in fine ounces.	Average London Price of Silver per ounce standard. Cash Delivery. d.	Two Months' Delivery. d.
1920	173,300,000	61·485	60·894
1921	171,300,000	36·886	36·473
1922	209,800,000	34·438	34·278
1923	246,000,000	31·921	31·559
1924	239,500,000	33·987	33·918
1925	245,200,000	32·100	32·025
1926	253,800,000	28·678	28·664
1927	254,000,000	26·034	25·948
1928	257,300,000*	26·754	26·737
1929	254,000,000*	24·455	24·524

* Subject to revision.

The reason why, in the case of silver, prices have less effect on production than is the case with other metals, is simply that silver is produced mainly as a by-product of base metals. The output of silver is, therefore, affected more by the prices ruling for the base metals, in the gaining of which silver is incidentally obtained. There can be little question, however, that silver producers are faced with a serious situation, which is the more difficult in that the slump has the appearance of being more than a passing phase.

INDIAN STATUTORY COMMISSION REPORT—VOLUME II.

We print below in condensed form a summary of the main conclusions contained in the second volume of the Report of the Indian Statutory Commission. A summary of the Report by the Financial Assessor to the Commission, together with the Commission's recommendations relating to Indian Public Finance, will be published in our next issue.

THE Commissioners begin the second volume of their Report by referring to the need for a realisation of the facts of the situation, "those stubborn facts which no amount of rhetoric or appeal to abstract principles can alter," but whose existence "cannot in any way be allowed to invalidate the solemn pledge of the British people with regard to the progressive realisation of responsible government in British India." In the light of those facts, surveyed in Volume I, they "have come to certain general conclusions on matters of principle," which are set forth in the Report in advance of the detailed recommendations.

The first principle is that the new constitution should, as far as possible, contain within itself provision for its own development. It should not be based upon too rigid and uniform a plan, but should allow for natural growth and diversity. Constitutional progress should be the outcome of practical experience. Where further legislation is required it should result from the needs of the time, not from the arbitrary demands of a fixed time-table. The constitution, while contemplating and conforming to an ultimate objective, should not attempt to lay down the length or the number of the stages of the journey.

"The Preamble to the Government of India Act declares that progress in giving effect to the policy of the progressive realisation of responsible government in British India can only be achieved by successive stages; but there is no reason why the length of these successive stages should be defined in advance, or why every stage should be marked by a commission of enquiry. We are profoundly convinced that this method of enquiry at stated intervals has had a most injurious effect on the working of the reformed constitution and on Indian political life. Whatever may have been the merits or defects of the constitution proposed as the result of the Montagu-Chelmsford Report, the time limit of ten years gave it the character of a makeshift affair, and the working of a constitution under a time limit inevitably breeds certain evils."

The Commission declare that the object now to be aimed at is a reformed constitution which provides opportunities for natural development.

The Federal Solution.

Having regard to the ultimate goal of British policy in India pursuant to the Declaration of 1917, the Commission propound their second principle. This is that "any constitutional changes now recommended for British India must have regard to a future development when India as a whole, not merely British India, will take her place among the constituent States of the Commonwealth of Nations united under the Crown." Having described the geographical, political and economic unity of India, and having observed that there are few subjects within the sphere of central government which do not, in fact, interest also the Indian States, the Report refers to the increasing sense of Indian nationality, "a phenomenon which cannot be disregarded by the rulers either of British India or of the Indian States."

"But while we hold that the ultimate development of the Indian polity must lie in the direction of a solution embracing all India, it is absolutely clear that the States cannot be compelled to come into any closer relationship with British India than exists at the present time. Indian Rulers are naturally proud of their historic position and their rights have been repeatedly acknowledged. At the same time, we believe that they recognise more and more the need for adjusting their future relationship to the rest of India. We believe that they will only be ready to come into the larger whole when they can see that their rights and position will be safeguarded. The greater unity will come about when it is felt that it is to the mutual advantage of both sides to pursue it. We desire that the new constitution should provide an open door whereby, when it seems good to them, the Ruling Princes may enter on just and reasonable terms."

It follows, therefore, "that the ultimate constitution of India must be federal, for it is only in a federal constitution that units differing so widely in constitution as the provinces and the States can be brought together while retaining internal autonomy." Furthermore, there are other strong reasons for a reconstruction of the Indian constitution on a federal basis, since, if self-government is to be a reality, it must be applied to political units of a suitable size. A democracy of nearly 250 million people is unprecedented, and apart from the question of dimensions of area and population, "it is only in a federal structure that sufficient elasticity can be obtained for the union . . . of communities at very different stages of development and culture."

The concluding principle laid down is "the paramount necessity of securing that, throughout the period during which India is progressing on the road to complete self-government, there must be full provision made for the maintenance and efficiency of the fundamentals of government."

"While we are prepared to recommend a considerable advance towards self-government, and while we believe that the sense of responsibility can only be taught by making men responsible for the effects of their own actions, we desire to secure that experience is not bought too dearly. There must be in India a power which can step in and save the situation before it is too late. There must be provided, as far as may be, safeguards to ensure the maintenance of vital services. . . . We desire to give the fullest scope for self-government, but, if there is a breakdown, then an alternative authority must operate unhampered."

Starting from these general principles, the Commissioners proceed to work out in detail their application.

The Provinces.

The recommendations of the Commission with regard to the provinces are framed on the basis that their boundaries are those at present existing. In addition, however, to proposing that Burma should be entirely separated from India, the Commissioners recommend that a Provincial Boundaries Commission should be appointed to consider the advisability of an early readjustment of some frontiers and "the creation of proper provincial areas." Having

emphasised the advisability of constructing "a constitutional framework into which all the provinces can fit, but which . . . will enable the constitutional progress of provincial government to be secured by the healthy method of growth rather than by artificial statutory jumps," the Report makes the following recommendations:—

(1) Dyarchy should terminate; the boundary between departments of which Indian ministers may take charge and those hitherto "reserved" departments, from which they are excluded, should be removed.

(2) The conduct of provincial administration as a whole should rest with a provincial Cabinet, the members of which, whether elected members of the Legislature or not, should be chosen by the Governor, and should have joint responsibility for action and policy.

(3) On the administrative side, the Governor should be given statutory power to override his Ministry for the specific purposes of (*a*) preserving the safety and tranquillity of the province; (*b*) protecting minorities; (*c*) securing fulfilment of provincial liabilities in respect of non-votable expenditure; (*d*) securing the execution of orders from the Government of India or the Secretary of State; and (*e*) carrying out any duties statutorily imposed on the Governor personally, *e.g.*, responsibility for certain service questions and backward tracts. Apart from these powers normally to be vested in the Governor, the Provincial Ministry must accept the burden of its own responsibilities, including the important department of Law and Order.

"Self-government in the provinces can only become a reality when the Governor does not come in like a *deus ex machina* to make the wheels go round. The principle which we think ought to be insisted upon is that as long as the normal processes of responsible government are being pursued, the responsibility which properly attaches to government should be jointly borne by those who have the honour and the care of office. We are bound to make the provisions. . . . for the critical cases which may arise when the rights of minorities are put in jeopardy, or the peace and security of the province are put in serious peril, as well as for cases where vital interests not limited to the province are involved. But subject to this, responsibility in the face of the provincial legislature should rest where it constitutionally lies as long as normal constitutional government is being carried on."

(4) In the event of a breakdown in a provincial constitution occurring through such causes as inability to form or maintain in office any Ministry enjoying support from the Legislature, it is proposed that the Governor should have power to vest in himself all the powers normally possessed by the Governor and his Cabinet, but that these special powers should not remain in operation for more than twelve months without the approval of the Imperial Parliament. The Report is emphatic that the introduction into the constitution of these emergency powers "is no denial of self-government; it is an ultimate resource if self-government is repudiated."

(5) It is proposed that the provincial legislatures should be based upon a franchise extended to include 20 per cent. of the adult population, and that the determination of the appropriate modifications in voting qualifications should be referred in each province to a Franchise Committee. Until agreement can be reached upon a better method, the continuance of communal electorates is considered to be necessary for the protection of certain important minorities, and the depressed classes should be represented by some reservation of seats in non-Mohammedan constituencies.

(6) It is proposed that the normal statutory life of provincial legislatures should be extended from the existing maximum of three years to one of five years. The legislatures themselves should be enlarged and the constituencies reduced to a more manageable size. The official block should not be retained, but the Governor should have the power of nomination (more particularly for the purpose of ensuring the adequate representation of women and labour) in respect of not less than 5 and not more than 10 per cent. of the total fixed seats, and members of the Cabinet should be *ex officio* ministerial members of the legislature.

(7) Provincial legislatures should be empowered after a lapse of ten years to recast their own representative system subject to approval by the Governor and the Governor-General, so that each province may advance to self-government on lines which are found to be best suited for its individual needs, subject always to securing that the vote of the majority shall not introduce constitutional changes which prejudice minority rights.

(8) The fiscal needs of the provinces, which have hitherto been inadequate for the very important services assigned to them, are to be met by a revision of the existing allocation of sources of revenue, by giving additional powers of taxation to the provinces, and by providing for the setting up of a Provincial Fund fed by national taxes voted by the Federal Assembly. (*This scheme, which is designed to give them adequate revenues and, at the same time, provide for their fiscal autonomy, will be summarised in our next issue.*)

(9) In the North-West Frontier Province, whose administration cannot be separated from the question of frontier security, executive responsibilities should continue to rest with the Chief Commissioner, but a Legislative Council, partly elected and partly nominated, should be constituted with limited powers of legislation and interpolation, and both that province and Baluchistan should acquire the right to representation at the Centre.

The Centre.

The Report next deals with the Central Legislature and the position of the Governor-General in Council. It is proposed that in place of the present Legislative Assembly there should be constituted a "Federal Assembly," the members of which would not be directly elected by constituencies of voters, but would be mainly chosen by the provincial legislatures by the method of proportional representation; this would ensure that members representing minority communities would be included in sufficient numbers. The Assembly would consist of from 250 to 280 persons. It would include such members of the Governor-General's Council as sit in the Lower House, together with twelve other nominated officials.

With regard to indirect election, the Commission remark that, when the total area to be provided for is so huge, the appropriate solution is to be found through "election by the elected," a method which would have the additional advantage, from the point of view of developing the Central Government on federal lines, that the provinces as such would be represented at the Centre.

"If the hope of seeing the Indian States included, by their own choice, in such a federal union is ever to be realised, some such method of representing the units of federation in a central body, without dividing each of them up into a series of constituencies for central purposes, seems almost essential."

The Commissioners recommend that the Council of State should continue as an integral part of the Central Government, with its existing functions as a body partly of elected, partly of nominated, members chosen in the same proportions as at present. Seats in the Council of State should be allotted to federal units, and the elected members chosen by indirect election carried out by provincial Second Chambers, if such bodies are constituted—a question in which no positive recommendation is made—or, failing this, by the Provincial Councils.

The existing legislative and financial powers of the two Chambers of the Central Legislature should remain as at present, but the Federal Assembly should also have the special function of voting certain indirect taxes to be collected by a central agency, the proceeds of which should be distributed among the different federal units.

The Central Executive should continue to be the Governor-General in Council, but the Governor-General, and not the Secretary of State, should henceforward be the authority who will select and appoint his Executive Councillors. In this connection the Report states:—

"We lay down without hesitation the proposition that dyarchy at the Centre, or any system of divided responsibility resembling dyarchy, is quite impossible. Unity in the central executive must be preserved at all costs. . . . The situation that would arise if the method of dyarchy were introduced in the Central Executive would destroy this constitutional doctrine in a manner which would not only weaken Government but would put the Viceroy in a situation so embarrassing as to be almost intolerable. For he might constantly find that he had to choose between two sets of advisers all of whom were his colleagues, and that while the ultimate policy to be announced was in accordance with his judgment, the constitution permitted some members of his own Government to dissociate themselves from his decision."

Discussing the question of the future development of the Executive Government of India, the Commissioners say that, in their judgment, the Governor-General's Executive Council in the next stage of India's constitutional progress cannot be " responsible " to the Indian Legislature in the same sense that a British Cabinet is responsible to Parliament.

" Our own view is that, until the provinces of India have established themselves, by the working of unitary Governments, as self-governing units, the ultimate form which the Central Government of India will take cannot be finally determined. The question whether Indian States will contribute to the ultimate process has yet to be answered. Federal Executives do not assume a definite or final shape until the units of federation come naturally together. The utmost, therefore, that can be done now is to reduce, by such methods as we have outlined, the rigidity of the structure of the Central Executive, to make the best possible provision for the introduction of authoritative Indians into the Executive, and to recognise that the British system is not the only model, and, indeed, that there are many federal systems in the world which differ from the British model because they have been suitably developed according to the needs of their own areas and populations. It would, we are convinced, be a grave mistake to attempt to reconstruct the Central Government of India on the lines we have suggested for the provinces. At any rate, it would be premature to do so now."

Apart from the control exercised over Governors by the Governor-General, the Commissioners recommend that the superintendence, direction and control of the Governor-General in Council over a provincial Government should be exercisable only over a field defined by the following categories:—

(1) Safeguarding of administration of central subjects;
(2) Matters which may, in the opinion of the Governor-General, essentially affect the interests of any other part of India;
(3) Supply of information on any subject;
(4) Raising of loans;
(5) Employment of All-India Services in the province;
(6) Safeguarding of Imperial interests;
(7) Questions arising between India and other parts of the Empire;
(8) Implementing international obligations.

The Secretary of State, in the exercise of his general powers of superintendence, direction and control of the Governor-General in Council, would still be enabled to issue orders through that authority on provincial questions falling within the field indicated above.

The Army.

Proceeding to examine the constitutional issues involved in the problem of India's external defence and internal security, the Commissioners find no room for doubt that for a very long time to come it will be impossible for the army in India to dispense with a very considerable British element. The ultimate policy of building up an entirely Indian force should be steadily pursued, but in the meantime it would be impossible for the Imperial Government to relinquish, to Ministers responsible to any elected legislature, control over an army partly composed of British troops; nor would it be possible to contemplate the use of British troops to quell civil disturbances at the unrestricted bidding of Ministers popularly elected.

The recommendations which the Commission make with a view to getting over this " block on the line of constitutional advance " are that the protection of the frontiers of India should be recognised " as a matter of supreme concern to the whole Empire which can only be effectively organised and controlled by an Imperial agency. The solution based on this principle would follow these general lines:—The army in India would no longer be under the control of the Government of India, but under an Imperial authority, *viz.* the Governor-General acting in concert with the Commander-in-Chief, who would cease to hold a portfolio in the Government. In return for an annual contribution from Indian revenues (this contribution to be non-votable), the Imperial Government would assume the obligations of Indian defence. As regards internal security, the Commissioners contemplate the continuance unimpaired of the Imperial Parliament's ultimate responsibility for the maintenance of public peace. It is proposed, therefore, that Imperial troops for the purpose of quelling disturbances should be made available on demands made or endorsed by provincial Governors, safeguards against the excessive use of military forces as a substitute for police being provided by requiring a financial adjustment on that account between provincial and central revenues.

The Indian States.

As a first step towards what they term " the federation of Greater India "—a development expressive of India's essential unity, but one whose growth cannot be " artificially hastened "—the Report suggests that it would be valuable at this juncture to set up " some organ, however rudimentary, which will for some purposes, however limited, address itself to the treatment of matters which are of common concern to the whole of Greater India." They recommend accordingly that a schedule should be drawn up " in consultation and by agreement," defining " matters of common concern " to All-India, and that any future Government of India Act should place on record in its Preamble the desire to develop closer association between the Indian States and British India, and should provide in its operative clauses that it should be lawful for the Crown to create by proclamation a Council for Greater India whose function would be to consult on matters specified in the schedule aforesaid.

" The whole scheme for the Council, as we conceive it, is designed to make a beginning in the process which may one day lead to Indian Federation. What we are proposing is merely a throwing across the gap of the first strands which may in time mark the line of a solid and enduring bridge, and we feel convinced that the process must begin in organised consultation between the States and British India."

The Council, for example, would provide an opportunity for taking the Indian States into consultation about changes in the tariff.

The Services.

With regard to the future of civil service personnel, the Commissioners recommend that the Indian Civil Service and the Indian Police Service should continue to be recruited upon an All-India basis by the Secretary of State, who should have power to require Provincial Governments to employ these services in such numbers and in such appointments as he thinks necessary. The rates of recruitment as between Indians and Europeans for these services laid down by the Lee Commission of 1924 should for the present be maintained without change. It is further recommended that the right to retire on proportionate pension should be continued without limit of time, and, as a further safeguard for the existing service personnel, it is proposed that the existing position should be continued whereby changes in the status of the services can take place only with the consent of a majority of the Council of India. Finally, it is proposed that in addition to the existing Public Services Commission for the All-India and the higher central services, there should be established by statute similar bodies covering the provincial and subordinate services in all the provinces. In the view of the Commission, Ministers should be free from the technical work of recruitment and so be relieved from embarrassing demands from their supporters.

" The protection of the services from political influences is an essential condition of the constitutional advances we recommend."

Finally, the charges of all High Courts should be put upon central revenues and their administrative control exercised by the Governor of India, and not by the provincial governments.

India and the Imperial Government.

The Commissioners observe that their recommendations for expanding the responsibility of Indian legislatures for the government of British India involve a corresponding restriction of the control of the Imperial Parliament. The Governor-General in Council would remain in constitutional theory under the direction of the Secretary of State, who would, however, exercise no control over provincial governments, save in so far as he might do so through the special powers vested in the Governor. It is proposed that the Council of India should be reduced in size and its functions, other than those of an advisory nature, limited to control of service conditions and of non-votable Indian expenditure.

The Report concludes with the statement that the peaceful advance of India can only be achieved by co-operation between India and Britain.

" We have grown to understand something of the ideals which are inspiring the Indian national movement, and no man who has taken part in working the representative institutions of Britain can fail to sympathise with the desire of others to secure for their own land a similar development. But a constitution is something more than a generalisation; it has to present a constructive scheme. We submit our Report in the hope that it may furnish materials and suggest a plan by means of which Indian constitutional reconstruction may be peacefully and surely promoted."

In the future of India, say the Commissioners, Indian statesmanship has now a great part to play.

Notes of the Week.

The Government's Programme.—The Prime Minister announced in the House of Commons on Wednesday the Government's programme of business for the rest of the session, which, it is at present intended, is to close about the end of July. Normal and essential financial business will claim a large part of the available time, and a considerable jettisoning of cargo is necessary. Among the measures to be postponed to the autumn session are the Consumers' Council Bill, the Education Bill, and the Land Valuation Bill. Clearly it would have been physically impossible to hurry these measures through in the few free days available. The major measures to be proceeded with are the Coal Mines Bill, the Road Traffic Bill, the Housing (No. 2) Bill, the Housing (Scotland) Bill, and the Land Drainage (No. 2) Bill. Apart from these the programme will include nearly a dozen minor and non-contentious measures, and there is also the possibility that the need may arise for emergency legislation in connection with the projected new drive against unemployment. Altogether, even with this lightening of its burden, the House of Commons has a very busy month ahead of it. The most significant fact about the Government's programme was not mentioned specifically in Mr MacDonald's statement, and that is that the Trade Disputes Act Amendment Bill will not be introduced this session. This will cause restive dissatisfaction among a section of the Labour Party. We are inclined to read into this omission a definite policy of avoiding any measures which might jeopardise the Government's majority in the House or obstruct the progress of work on the unemployment problem. If that is the Prime Minister's aim, it is commendable. None of the great problems before the country to-day would advance towards solution through the revival of party controversies, and, least of all, through the heat and fury of an early general election.

The Coal Bill.—Prominent among the measures whose passage the Government desires to secure before the end of the session, is the Coal Mines Bill. On Tuesday the House of Lords had this Bill returned to them from the Commons, whose reasons for disagreeing with the chief amendments made by the Upper House their lordships were asked to consider. Despite a warning from Lord Parmoor that the Government would move to agree with the Commons in every clause, and that the whole Bill might be wrecked by disagreement, the Lords were not disposed to forego their rights as a revisory body. Certain amendments which they had previously carried, whose effect was to substitute the Board of Trade for the proposed Coal Mines Reorganisation Commission, were wisely dropped, though they insisted on an amendment providing that statutory guidance should be given to the Railway and Canal Commission in cases where they may have to ratify amalgamation schemes. The district levy was once more deleted from the Bill, and—a much more important matter—in connection with the " spread-over " of working hours, the original amendment, insistence on which would have given the Government no alternative but to accept, under protest, or lose the Bill altogether, was dropped, but a a new amendment was carried providing that, if an application is made jointly to the Board of Trade by the mine-owners and miners in any district, the Board of Trade shall be empowered to make an order enabling maximum hours to be calculated by the fortnight instead of by the day. The policy of the Government towards this amendment will probably depend largely on the attitude of the Miners' Federation. So far, the miners have shown little disposition to agree to any variation of the strict 7½-hour day, but the new form in which the permissive " spread-over " is now proposed seems to entail so much less risk than before of the miners in any district having forced upon them an arrangement to which they are opposed, that it is difficult to see why it should not be accepted. To abandon the Bill, whose reorganisation clauses do offer a real prospect of eventual betterment in the industry, would be a poor policy of defeatism.

New Naval Construction.—While the Naval Treaty still plods it way through heavy fields of Senatorial obstruction at Washington, the British Government has announced its immediate programme of naval construction. This programme would normally have been presented with the Estimates last March, but no building was then provided for pending the conclusion of the London Conference. On Wednesday the First Lord of the Admiralty informed the Commons that the 1930 programme would consist of three 6-in. gun cruisers, nine destroyers, three submarines, and certain minor vessels, all required for normal replacement purposes. The cost of this modest building project would be £9,000,000, spread over three years, but only £80,000 would be required in the financial year 1930-31, since the vessels would not be laid down until after next December. Mr Alexander emphasised the point that this programme of replacing obsolete vessels, required for " the current duties of the Navy in time of peace " had no relation to the building programmes of other Powers. Unless the programmes for 1931-33 are to be on a much more expansive scale—an unpleasant prospect for Mr Snowden or his successor—it looks as though the Government does not contemplate building up to the maximum cruiser strength permitted by the terms of the Treaty. Further light on this question will perhaps be thrown by the discussion in the Lords, announced for next week.

Government of Malta.—In meeting the emergency in Malta by a temporary suspension of the Constitution, the British Government have shown very sound judgment. It now appears that the report made by the Apostolic Delegate, Monsignor Pascal Robinson, which is reproduced almost *in extenso* in the Vatican White Book, is the original of the famous " résumé of an aide-mémoire addressed by eye-witnesses to the Holy See on the activities of Lord Strickland in Malta," which Cardinal Gaspari communicated on July 2, 1929, to the British diplomatic representative accredited to the Papal Court. This is a surprise, for the testimony of the Governor of Malta that he had found Monsignor Robinson a reasonable man, together with the non-publication of Monsignor Robinson's report in the first instance, had created the assumption that the Holy See, when it declared war on July 2nd, had acted contrary to the Apostolic Visitor's advice and over his head. What has made the situation so serious is the Holy See's public incitement of the Bishops of Malta and Gozo to put a spoke in the wheels of the constitutional Government of a British Dominion, and the public declaration that the Prime Minister of this Dominion is *persona non grata*. Whether Lord Strickland, in his conflict with the Roman Catholic Church in Malta, has been in the right or in the wrong, the proper procedure for dealing with the difficulty was a private triangular discussion between the Vatican, the British Imperial Government and the Maltese Ministry. In conferring " semi-Dominion Status " upon the people of Malta, the Imperial Government retained sufficient powers in its hands to deal with precisely this kind of contingency. We

are convinced that, if the Vatican had allowed the confidential negotiations to continue, an arrangement would have been worked out that would have satisfied all parties. But the Vatican, instead of leaving it to the Imperial Government to induce the Maltese Ministry to make their contribution towards a settlement, attempted to force the Imperial Government's hand by sabotaging constitutional government in Malta. In these circumstances a general election would be a farce, but the abolition of the Constitution would have been an unwarrantable confession of failure. The temporary suspension of the Constitution makes possible the continuance of government with all authority concentrated in the hands of the Governor, and the Cabinet retained in office in case the Governor cares to consult them, while yet ensuring that as soon as a more reasonable spirit is restored and the matters under contention have been satisfactorily talked out by the disputants, constitutional government will be restored without loss of time.

The Second Colonial Conference.—This week the second Colonial Conference met in London—a tribute to the success of the first Conference, which was convened by Mr Amery in 1927, and which has since maintained an unobtrusive but effective posthumous existence through the sub-committees which it left behind it. This new series of conferences brings together periodically representatives of all the non-self-governing colonies of the British Empire; and it is interesting to see a movement towards co-ordination and consolidation setting in in this part of the Empire when, in the self-governing Dominions and in India, the movement is all the other way—towards differentiation and self-determination. It may be added that the one tendency is as natural as the other, for while the world-wide progress of the political movement called nationalism has been making the self-governing Dominions and India conscious of their separate individualities, the contemporary world-wide process of standardisation and unification on the economic plane has made the new self-governing Colonies conscious of common interests of which they were not aware before. This Colonial Empire was the most haphazard product of the altogether haphazard growth of the British Dominions. Except for the vast continental tracts in Africa, which were the fruits of the " scramble " in the " eighties " and " nineties " of last century, this Colonial Empire is a galaxy of islands and peninsulas acquired by the chance of wars and peace-settlements during the past three centuries. Yet this far-flung archipelago has one common feature which it shares with the African land-masses. With the exception of Gibraltar, Malta, Cyprus and the Falkland Islands, it lies almost entirely in the Tropics; and the recent entry of the Tropics into the main current of the economic life of the world has created a specific group of tropical problems of administration in the technical and social fields. It is evident that the British Tropical Colonies—many of which are individually small in extent and limited in resources—are beginning to find it profitable to deal with these problems by joint endeavours. The interesting possibility suggests itself that this movement of co-operation may ultimately be extended beyond the usual and arbitrary limits of one national sovereignty. For the British Colonial Empire is only one of several domains into which the non-self-governing portions of the Tropics are divided. There are French and Belgian and Italian and Portuguese Colonial Empires in Tropical Africa, and a Dutch and an American Empire in Indonesia. It seems not wholly idle speculation to anticipate a day when all these Empires will be working together to administer the Tropics as a collective trust pending the time when the local peoples will have learnt how to stand by themselves. The way to such a development was opened by the inauguration of the mandatory system in 1919, but the Mandatory Powers will need much practice in the art of co-operation before they are ready to tread it.

A Mission to Australia.—At the end of last week Mr Scullin, the Australian Prime Minister, announced that a conference to discuss the Dominion's present economic difficulties was to be held between representatives of the Bank of England, the Australian Government, and the Commonwealth Bank, and that Sir Otto Niemeyer would visit Australia at an early date for that purpose. In reply to a question from the Leader of the Opposition, Mr Scullin stated that Sir Otto's visit was not related to Commonwealth Banking legislation, from which it may be inferred that the Central Reserve Bank Bill's progress will not be delayed. The points to be discussed at the conference are such matters as the provision of foreign exchange cover for Australian payments abroad, and Mr Scullin also said that the Australian Loan Council was already in contact with the banks on the same subject—presumably from its own special angle. In view of the extreme difficulty Australia has experienced in obtaining adequate exchange cover this year, it is satisfactory that " at an early date " means " as soon as possible," for Sir Otto Niemeyer has already set sail. This invitation extended to him has created a good impression in the City, and, indeed, suggests that Australia intends to use her own difficulties as a means of strengthening Imperial economic co-operation. Perhaps it was inevitable that the invitation should have been the cause of some passing misunderstandings in Australia, and that some quarters should have regarded Sir Otto's visit as an attempt by the Bank of England to direct Australian economic policy, possibly in the interests of British industrialists, who are suffering from the new Australian import restrictions, rather than in those of Australia herself. This was the view taken on Monday by the Melbourne *Age*, a newspaper of definitely Protectionist opinion; but it is satisfactory to note that, following a denial by Mr Scullin that Sir Otto's visit was in any way " intrusive," the *Age* published on Tuesday a complete recantation, pointing out that the Bank of England was not one of Australia's creditors, and that her action, therefore, was entirely disinterested and was a " gracious gesture " in letting Australia draw upon her for expert advice. The real significance of Sir Otto's journey is that it shows that if any member of the British Commonwealth finds herself faced with difficult problems to solve, she can feel that the other members of the Commonwealth will render her all the assistance within their power.

Trade Unions and Economic Policy.—As we go to press there comes before us the Report of the Economic Committee of the Trade Union Congress on the subject of economic development and Empire trade. We hope in a future issue to devote more space to an examination of this document, but for the moment we must content ourselves with noting one or two important points. One is that the question of tariffs was not discussed by the Committee. Another is that in some essential points the trade unionsts who framed the Report are thinking along the same lines as the industrialists who were responsible for the memorandum on this subject issued in February by the Federation of British Industries. Among the recommendations of the F.B.I. was one to the effect " that an Imperial Secretariat should be established to act as a permanent secretariat to the Imperial Conference." Now the T.U.C. advocates the same thing. It is a good omen that representative employers and workers' leaders should be concentrating on harmonious lines on the construction of practical machinery.

Miners' Hours at Geneva.—Procedure was made for man and not man for procedure. By permitting the reopening of discussion on a slightly revised version of the German motion for a 7¾ hours day, bank to bank, which had been rejected the day before, the Chairman of the Hours of Work in Mines Committee of the International Labour Conference in session at Geneva has enabled a deadlock to be resolved and work on the Draft Convention to proceed. Up to that point, every proposal, from the seven hours, bank to bank, of the workers' representatives to the eight hours of the colliery owners had been rejected; and it seemed impossible that a convention could be framed. The German proposal, as finally adopted, evolved out of a compromise suggestion previously put forward by the International Labour Office. Both the British Government representative, Mr Shinwell, and Mr Cook, withdrew their earlier opposition to it, on the very sound principle that a convention which gave the workers a quarter of an hour was better than none at all, and that, further, the hours adopted by the convention would constitute a maximum and would not prejudice British legislation for further reduction. The mineowners' representatives, however, withdrew from the Committee on this point of procedure, though they are prepared to take part in the discussion in full conference. Considering the advantage to the British coal industry which would accrue from the adoption as a maximum working-day of what is at present the European average, it is surprising that the employers' delegate thought it worth while to take a leading part in this protest against an unconventional method of attaining the object generally desired—that of having some draft to present as a basis of discussion in the full conference.

Egyptian Cotton Rationalisation.—Spinners of Egyptian cotton yarns in Lancashire have this week been considering a rationalisation scheme. It must be remembered, writes our Manchester correspondent, that the slack state of trade in the Egyptian branch of the spinning industry has been due to a falling off in world demand, along with certain changes in fashion, whereas the depression in the American section has been caused in great part by increased competition, chiefly from Eastern countries. The opinion is held, therefore, that if Egyptian spinners will put their house in order and eliminate internal competition, the situation can be improved. The meeting in Manchester last Tuesday consisted of members of the Bolton Master Cotton Spinners' Association and also spinners of Egyptian yarns in towns outside the Bolton area. After discussion, the Drafting Committee was empowered to go forward and prepare a complete scheme to be submitted to the trade at a later date. Mr. William Howarth, the managing director of the Fine Cotton Spinners' Association, explained that the proposals were based upon marginal cost on full-time running in order to secure that no losses shall be made if a mill was fully employed. The scheme provides for the payment into a pool by those members who run over the average time of the section and payment to those who run less than the proper proportion of time. Fuller details are contained in a booklet which has been sent to all firms affected. The scheme will not be put into operation until the owners of 90 per cent. of the 20,000,000 spindles using Egyptian cotton have joined the movement. All firms will be at liberty to run machinery as suits their purpose provided that selling prices maintain the marginal rates over the cost of cleaned cotton. The definite margin of cost for each count will be fixed at a figure which, added to the clean cotton price, will represent a price below which no rate must be made. This system obviates the necessity for grading yarns and permits the fullest latitude in maintaining the special qualities required by any firm's particular trade. The Committee has compiled from information supplied by a substantial number of firms the average full-time production costs of typical counts of yarn, exclusive of capital, interest charges and depreciation. To these production costs they have added a figure to cover interest and depreciation charges on a uniform basis. The uniform basis provides for 6 per cent. interest on an average capital invested of 30s. per spindle for cost of plant and 5s. per spindle for stock and working capital, and an average rate of depreciation of 1s. per spindle per annum. The combined figure thus arrived at will constitute the marginal figure to be added to the cost of clean cotton. Every firm, by joining the convention, will pledge itself not to sell below the marginal rates fixed. There will be no limitation of productive capacity fixed by the convention. Those mills which are able to secure business to run their spindles above the average of the whole of the spindles in the convention will pay into a pool on the excess at a specified rate, and those mills which run less than this average will receive at the same rate on the extent they fall short of the average. The scheme has been much discussed on the Manchester Royal Exchange this week. It is recognised that this movement is more ambitious than any other proposals put forward by the industry to meet the depression and the substantial money losses. In any case the scheme cannot be put into operation for some months though it is understood that tentative support has already been received from spinners owning 80 per cent. of the spindles affected. There is some difference of opinion as to how this marginal basis of costing will work out. The prices which can be taken by mills that have to meet heavy interest charges, as compared with mills that are free from debt, vary considerably, and some doubt is expressed as to whether the scheme will get over these difficulties. Another factor which cannot be overlooked is that if, as a result of this movement, prices are placed on an artificial basis, will not a development of this kind result in increased competition from other countries, and stimulate a larger production of Egyptian yarns in other quarters? Lancashire is still supreme throughout the world as a producer of fine cotton yarns, and it will be unfortunate if a combination of the kind suggested should result in providing an opening for competitors.

The Continental Iron and Steel Industries.—The Committee of the Economic Advisory Council which was appointed to consider the position and prospects of the iron and steel industries, sent a delegation to the Continent to report upon conditions there, and this report has now been published.* France, Belgium, Luxemburg, Germany and Czechoslovakia were visited, and in Germany alone were the industries found to present similar problems to those in Great Britain. In France, Belgium and Luxemburg the absence of collective agreements leaves the employer free to negotiate individual contracts with his workers, and in those countries there was found to be less disparity between the wages of different grades of workers and between those of corresponding grades of workers in the different departments. The purpose of this similarity of wages is to ensure the mobility of labour between different departments. In none of these three countries was there any unemployment in iron and steel, but rather a labour shortage, and in the Czechoslovakian metal industries unemployment was only about 5 per cent. All the countries studied were reported to have improved greatly the plant and equipment of their metallurgical industries, but in connection with a subsequent visit to representative British works the Delegation reported that " as regards efficiency and management, and the modernity and equipment of certain units of plant, they were equal to, and in some cases superior to, the iron and steel plants which had been seen on the Continent." In Germany the Delegation found a great degree of similarity to British conditions as regards workers' organisation and collective agreements. The percentage of unemployment was 14.1 wholly unemployed, and 16.1 per cent. on short time, and the industries were suffering severely from the competition of Belgium, France and Luxemburg. The difficulties were partly attributed to the high rates of interest on borrowed money. The report contains valuable comparative data on wages and hours, and the following table shows the normal average weekly earnings, inclusive of bonuses and social allowances paid in cash, of skilled, semi-skilled and unskilled workers:

AVERAGE WEEKLY EARNINGS.

	Skilled.	Semi-skilled.	Unskilled.
	s. d.	s. d.	s. d.
France	51 6	40 3	32 2
Belgium	53 9	38 10	30 10
Luxemburg	49 2	38 10	32 0
Germany‡	68 6	52 10	47 0
Czechoslovakia	58 5	32 11	23 2

‡ Men over 21 only.

Weekly hours of work in all five countries, with certain qualifications for Germany, are 56 at blastfurnaces, 48 in

* Cmd. 3601. H.M. Stationery Office. 9d. net.

rolling mills, and for steel melting shop, Bessemer converter and open hearth workers they range from 48 in Czechoslovakia to 52 in Belgium and Germany.

United States Tariff and Swiss Trade.—Our Geneva correspondent writes:—The adoption of the new Tariff Bill by the United States Congress is causing widespread discontent in Switzerland, whose exports, in particular those of the watch-making, silk, cotton and embroidery industries, will be hard hit by the new duties. The Swiss industrialists and Government did their very best to draw the attention of the United States Government to the serious consequences which the enforcing of the new duties would have on Swiss economic conditions, but it was in vain. The effects in Switzerland of the general economic slump will undoubtedly be aggravated by the raising of these duties. The question of boycotting United States products has been earnestly advocated here by several groups of industrialists and Chambers of Commerce, while the Swiss Government was at the same time urged to raise, by way of retaliation, all duties on United States goods, especially on motor-cars, typewriters, agricultural machines and implements and petrol; but Swiss Customs duties are already high, and it is difficult to raise them again. Not much seems to be being done here in regard to the organisation of a boycott of United States products, though an attempt is being made at doing without American oil and petrol, especially as the Anglo-Persian Oil Company is now in a position to supply all the needs of the Swiss market. There is, however, a general tendency towards reducing all purchases in the United States. This is clearly shown by the foreign trade returns for April and May. Imports from the United States, which were £760,635 in March, dropped to £757,232 in April and to £677,000 in May. Imports of United States petrol, which rose until last year, show a drop of about 380,000 lbs. compared with the 1929 average, whereas the total import of petrol was about 2 million lbs. higher in May, 1930, than in May, 1929. Persia, Irak, Roumania and Russia are benefiting from the reduction in United States imports. A similar but smaller drop is also recorded in the import of United States motor-cars, and European countries — Great Britain in particular—should seize that opportunity for developing their sales in Switzerland.

Business Position in Denmark.—Our Copenhagen correspondent writes:—The trade situation in Denmark is to some extent under the spell of the depression prevailing abroad, but various public statements appear to indicate that industrial conditions are not very serious. Pessimism has prevailed more particularly on the Stock Exchange, which is easily influenced by reports from abroad, and the constant decline of prices, in conjunction with reports of slumps on the leading exchanges, have not failed to tell. At the same time the very unsatisfactory state of the freight market has made a bad impression, and the tendency of the Copenhagen Stock Exchange is always very much dependent upon the market for shipping shares. Some encouragement has been provided by the good crop prospects, following upon two years with excellent returns, and, in addition, the price of butter has recovered somewhat. The number of unemployed is now 26,348, against 30,100 a year ago. Some export lines are perhaps hampered by the depression of foreign markets, but, on the other hand, it is reported that several of the biggest concerns are at present working well. According to the *Berlingske Tidende*, the big ship-construction and machine-factory concern of Burmeister and Wain, A/S, is not only fully employed for the present year, but has sufficient orders in hand to provide good employment for next year and some time into 1932. Under present conditions, however, it is more difficult to obtain orders in the shipbuilding line as new tonnage is not required. The electrotechnical industry is well employed, but orders are now coming in a little more slowly. The activity in building has provided increased employment, and the only important signs of depression have been the declining prices of metal, which indicate less employment abroad. Under present conditions the price index is naturally watched with particular interest Wholesale prices (1913=100) declined in May from 135 to 132, against 148 in May last year. While the Danish wholesale price index is now only 32 per cent. above pre-war figures, the cost-of-living index is still 67 per cent. above 1914 figures, and the slow movement of the latter figure is indicated by the decline last year of wholesale prices by 10.8 per cent., while the cost-of-living index is only 4 per cent. lower.

Gresham Fire and Accident Insurance Society, Ltd.—This company was formed in 1910 by the Gresham Life, which now holds two-thirds of the capital. For the first time since the company entered the dividend list payment was passed in respect of the year 1929. This apparently drastic step is due on closer inspection more to reasons of prudence than as a result of special losses suffered in that year. The premium income amounts to £330,000, almost equally divided between fire and general business. The world-wide increase in fire losses last year seems to have affected the Gresham account in a particularly marked degree, for the account closed with a loss equal to 11.7 per cent. of the premium income. In commenting on these results the chairman, at the annual meeting, made the interesting statement that in the United Kingdom the effect of the severe winter of 1928-29, followed as it was by a prolonged period of drought, showed itself not so much in an increased number of fires, but in their severity. The Gresham statistics on this point show that while the number of fires rose by 25 per cent. in 1929, the average cost per claim was double that of the preceding year. Fortunately for the company, the general account was exceptionally favourable, and the profit of 11.8 per cent. of the premiums is rather more than sufficient to counterbalance the losses of the fire department. Taking into account the items debited direct to profit and loss account, the net trading loss on the year works out to £3,736, compared with a profit in 1928 of £10,657. The interest earnings were ample to have permitted of the maintenance of the usual 7 per cent. dividend, but, as already stated, no dividend has been paid, with the result that the whole of the interest earnings amounting to £19,546 were available, after allowing for trading losses, to supplement free surplus assets. The other adverse feature of the year 1929 was, of course, the severe depreciation in Stock Exchange securities, the effect of which on the Gresham was to swallow up the investment reserve fund of £24,000 and a further £13,000 in addition. A statement appended to the balance sheet, however, indicates that the additional £13,000 depreciation had been recovered as at May 22nd last.

Victory Insurance Company, Ltd.—As its name suggests, this company was formed just after the war. Unfortunately it has had anything but a victorious career. A combination of causes, including heavy marine losses, culminated in a drastic reconstruction scheme in 1926, when £100,000 was applied to reduce the capital and to eliminate an adverse profit and loss balance. The business is now confined entirely to fire and general insurance, and a certain amount of progress has been achieved in the past four years, as a result of which a general reserve fund at the end of 1928 had been accumulated amounting to £20,000. The year 1929 brought with it a large accretion of premium income, the amount having risen from £250,000 to £332,000, but unfortunately there was a heavy underwriting deficit amounting to 7.8 per cent. of the premiums. This deficit was increased to a total net trading loss, after allowing for sundry items, of £26,762. The dividend has been maintained at 5 per cent., and, after deducting the balance of interest earnings not used for dividend purposes, there remains a sum of £19,217, representing the total net loss on the year's operations. In order to deal with this it has been necessary to utilise the whole of the general reserve fund. A year ago the shares of 16s., with 6s. per share paid up, stood at 7s. The present price is about 4s. 6d., and the yield on this price is 6⅔ per cent.

Trade Prospects — Foreign Trade — Tariff — Money Market — Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 17.

PESSIMISM in Wall Street has reached fresh depths within the past week on the volume of liquidation in the share market, and the failure of sustained rallies to develop. The fall during the past fortnight in industrial and railroad share prices has brought the markets to the lowest levels since shortly after the autumn break. Sober-minded observers feel that what has taken place is nothing more serious than the washing away of the price advances built up last winter and spring on hopes of an early trade recovery which failed to materialise. Others, who credit the share market with great barometric value, are fearful lest the current decline forecasts a considerable deepening of the trade recession later in the year.

While Wall Street people who are in closest touch with business conditions throughout the country will not venture to set an approximate date for a trade recovery, they are by no means discouraged over the outlook. Corporation earnings are lagging some distance behind those of last year, but are not really bad. Meanwhile a flood of rumours of an upsetting nature, most of which can be disregarded, has been released by the decline in shares. General wage reductions have been whispered about, but they are unlikely to take place. Another rumour is to the effect that some of the New York banks are loaded up with bad loans on securities. A thorough examination of the position has just been made by the Federal Reserve Bank, and nothing of the sort has been uncovered. Bad loans on stock or bond collateral are confined to comparatively few banks in other sections of the country, and are not a market menace.

The few bank failures which recently have occurred were due either to peculations of officers or employees, or to purely local conditions. Business failures are not running much in excess of normal for this time of year, but new enterprises are not being started. Trade developments of the past week, as indicated by Press reports, were rather unfavourable, but losses in most cases were no more than seasonal. Railroad traffic is still running at 1924 levels, and the steel industry is receding, but slowly. Motor manufacturers are curtailing production pending the introduction of new models. New types of cars are usually shown in late summer or autumn, but an early start is being made this year in the hope of stimulating buying. General Motors sales in May fell off about one-third from the same month of last year, and the situation of our makers, with the exception of Ford, is much worse. Textiles are depressed, and the fall in the price of raw cotton continues. Consumption of cotton in May was 194,633 bales below last year, and exports fell 104,207 bales. April consumption was 58,000 bales larger than May. Both consumption and exports were the lowest for any month in recent years.

The slump in foreign trade is growing worse. May exports of $322,000,000 and imports of $285,000,000 were the lowest for any month in the past seven years. Exports were $10,000,000 less than in April. The chief loss was in cotton shipments, which were $12,000,000 smaller than in the previous month. Falling prices are helping to bring down the trade figures, but there has been a loss in tonnage as well as in dollars. Trade with China and other parts of the Far East is stagnant, and South American business is suffering.

With our export trade declining and with no signs yet of a recovery in domestic business, the new tariff Bill has had a particularly unfavourable reception. Well-informed observers were not taken by surprise, either by the passage of the Bill through Congress or by the Presidential approval. Congress was far less concerned with the economic consequences of high tariff rates than with fulfilment of political pledges, and President Hoover had allowed himself to be jockeyed into a difficult position. Over-estimation of the importance of Senator Borah and other western political leaders led him to call a special session of Congress for tariff revision. It was, of course, idle from the beginning to expect any increases in farm products rates without bargains whereby eastern manufacturers would be given some advantages. Then it is probable that Mr Hoover promised approval of what he considered a bad Bill on the understanding that the flexible rate provision would be retained, and the export debenture plan for farm products eliminated. His conditions were complied with, and there was apparently no way out for him except courageously to flout his party leaders. No one expected him to go as far as that in view of his ardent desire for a re-nomination in 1932.

In his comment on the Bill the President made it clear that he dislikes the measure on the whole. He insisted that the flexible provision would enable him to temper high rates to the trade winds, but that assurance is giving no satisfaction to business men, who feel that trade is bound to suffer. The heavy selling in the share market which coincided with completion of work on the tariff was largely the culmination of a downward movement only indirectly related to tariff matters. Defeat of the measure would no doubt have brought at least a brief rally in stock prices, but too much emphasis should not be placed on the tariff as an immediate market factor.

Meanwhile the credit market is becoming still easier. In the past few days the second quarterly income tax collections have disturbed short-term rates to some extent, but the operation is virtually complete. The turnover yesterday was approximately $2,000,000,000, involving retirement of $550,000,000 in Treasury 4¼ per cent. notes, the sale of $400,000,000 new certificates, payment of $98,000,000 interest on Government securities, receipt of $117,141,000 from foreign governments on account of funded indebtedness to this country, principal and interest, and corporation dividend disbursements.

The Treasury overdraft at the Federal Reserve Bank amounted to a little over $100,000,000, and it brought call rate down to 2½ per cent. on the Stock Exchange, with the banks striving to place money at 2 per cent. outside. At the same time the Federal Reserve Bank has taken the initiative and dropped its buying rate on bankers' bills to 2⅛ per cent., forcing leading dealers to cut their rates to 2 per cent., the third reduction this month. Contrary to rumours, the fresh reduction in rates did not come as a result of investment in the bill market of the proceeds of the German loan. The Reserve Bank is trying to build up its rapidly falling portfolio, and had in mind cheapening of credit for crop moving and other business needs. This summer and autumn agriculture and industry will have the benefit of the largest supply of credit, and the lowest rates seen in a good many years.

Wholesale prices in May declined more sharply than in any recent month. The drop in the Bureau of Labour Statistics price index amounted to 1¼ per cent. to 89.1, compared with 90.7 in April. A decrease of 7 per cent. is shown from a year ago. Farm products fell off nearly 3 per cent., and were 9 per cent. below a year ago. Foods were nearly as weak, losing 2¼ per cent. Textile products were only slightly lower, as were fuel and metals. Building materials declined, and so did chemicals and drugs, but the decreases were less pronounced than those of the farm and food groups. Compared with a year ago, decreases have taken place in all the principal groups, ranging from one-half to over 10 per cent., the latter being in textile products.

Finance Minister's Resignation — Budget Difficulties — Wage Reduction Proposals — Money —Textile Amalgamation.

(FROM OUR CORRESPONDENT.)

BERLIN, June 24.

THE Finance Minister, Herr Moldenhauer, has resigned at the demand of his own party, which objected strongly to his programme. Chancellor Brüning is still trying to maintain his Cabinet in existence, and is endeavouring to find a new Minister of Finance, but his first attempt was unsuccessful. Herr Höpker-Aschoff, the Prussian Minister of Finance, who is rightly regarded as an exceptionally prudent and energetic politician in this department, refused after brief consideration to accept the portfolio, and now Herr Brüning is obliged to negotiate with less capable candidates, whose chief weakness is their lack of the authority required to carry through victoriously a sound financial programme against manifold opposition.

The difficulties in the way of the formation of a sound German financial policy are at the moment not so much due to the inherent difficulties of the task itself as to the lack of a political basis. The German People's Party will tolerate no further demands on income-tax payers; the Socialist's plan, which contains little that is new, demands a general super-tax on large incomes. The only sensible taxation idea—a productive raising of the duties on alcohol and tobacco—has thus far received little attention, yet only a programme proceeding from this idea can unite on one platform the Socialists and the German People's Party, both of which are indispensable for a future coalition.
