Despite the great uneasiness dominating public opinion, despite all political difficulties that have grown out of or threaten to grow out of the financial problem, the real gravity of the situation is still far from being comprehended in all circles. Two dangerous delusions in particular are still prevalent. One is the view held by many that all that is required to bring the finances into equilibrium at once, or at least materially to reduce the deficit, is merely a firm determination to cut down expenditure. For years little opposition has been made to the increase of public expenditure, and every single item in the Budget touches the interest of some group of the population. The Government must be obdurate if it is to curtail expenditure. But how can a Cabinet do this without a broad political basis, without enjoying any authority among the people? Of the round 8 milliard marks of the Budget, about 2 milliards are for reparations, 1.7 milliards for war pensions, and more than another milliard for service on debts. It is virtually impossible to make any reductions in any of these items. Neither can even the most energetic Minister of Finance suddenly eliminate gigantic sums from the other half of the Budget; to achieve any tangible saving requires time. The attempt is repeatedly made to ignore these decisive facts, and herein lies the danger of neglecting to provide for new expenditure through sound taxation.

Similar illusions exist in respect of the question of a wage reduction. The success of efforts to revivify economic life would naturally be the very best remedy for Germany's financial difficulties. It can also hardly be doubted that the wage level has become higher than is consonant with the prosperity of industry. It would have been a great benefit if a halt had been called here in time, but if an attempt is now to be made to reduce wages forcibly, the result will be a series of wage conflicts, which will effect the opposite of an improvement in the economic situation. This is already evident from the opposition of the workers to the attempt to reduce wages, at least in cases where such a reduction was publicly proclaimed as a programme, though unobstrusive reductions of wages that exceeded those fixed by agreement have been introduced in various places and on the whole have been accepted by the workers. The large reduction now recommended as a means of saving the economic situation would be possible only if the respective organisations of the employers and the labour unions reached an agreement—and such an attempt, which never promised success, has already failed—or, if a general law were enacted dissolving all existing wage agreements between employers' organisations and the unions and requiring the substitution of new contracts with lower wages, a course which is, in fact, being advocated in many economic circles. This, however, would mean that Germany would have to pass through a stage of most difficult political and social crises. Such a policy cannot be defended, for if all endeavours were now directed simply to preventing any rise in wages, and at the same time the formation of capital, and thus the reviving of economic life, were furthered through a rational alteration of the system of taxation, it might reasonably be hoped that productivity would soon be increased sufficiently to bear existing wages.

The German Railway Company has now also declared for a reduction of salaries and wages. In a letter to the Chancellor, Herr von Siemens, the chairman, has pointed out that in the first five months of the current year the company's receipts fell off 260 million marks as a result of the economic situation and the consequent reduction of traffic, so that a deficit of more than 500 millions is to be expected for the whole year. Herr von Siemens suggests that the Government take steps to free the railway company from the remaining restrictions in the way of a reduction of personnel expenditures. This would require a premature annulling of the wage agreement between the company and the workers, which runs until March 31, 1931, and an abolition of the legal provisions that prescribe for railway officials the same salaries as are paid officials of corresponding grade in the service of the Reich. Very serious misgivings, however, attend any legislative inteference with existing wage contracts. A reduction of officials' salaries could be defended, for the Reichsbahn was subjected like the other public enterprises to an exaggerated increase of these salaries in 1927. Above all, it is impossible to see any other way of making it possible for the company to preserve its financial equilibrium. Of its budget of 5 milliards, about 3 milliards are for personnel, of which 1.2 milliards go for officials' salaries, 1 milliard for labourers' wages, and the rest in part for pensions and in part for other personnel expenditure. The railway's expenditures for material cannot be reduced except at the expense of imperilling traffic safety. An increase of railway rates in the present economic situation, when the reduced prices of goods would make any increase of freight rates especially burdensome, would have fatal results. Hence a lowering of the expenditures for personnel is the only way out.

The Reichsbank, on June 20, again reduced its discount rate from 4½ to 4 per cent. This is the sixth reduction this year, and, in view of the situation in the German capital market, it is a much more astonishing phenomenon than were the reductions of the discount rates in the other great centres of capital. The difference between the Berlin and the London rate, which was 1½ per cent. at the beginning of the year, has thus been reduced to 1 per cent., and the difference between Berlin and New York from 2 to 1½ per cent. Nevertheless, the influx of foreign currency continues, and the mark still remains firm after this last reduction. At the same time, the banks are undoubtedly exercising the greatest reserve in taking in foreign money, for they find it difficult to place it here. The influx is due principally to the active balance of trade. The banks are now paying only 1½ per cent. for deposits withdrawable without notice. In Westphalia and the Rhineland, however, considerably higher rates are being paid, since the competition of the savings banks there is especially sharp. The cheapening of money is exercising no enlivening effect on business activities. The Bourse, in particular, shows new low records for quotations every day, with very small turnovers. The market for interest-bearing securities also exhibits no symptoms of recovery.

As the result of a long struggle for control between two great textile companies, a new textile trust is now being organised, under the leadership of the Deutsche Bank and the Berliner Handelsgesellschaft, which may become the nucleus of a far-reaching concentration in the German

textile industry. The concerns in question are the F. H. Hammersen Aktiengesellschaft and the Christian Dierig Aktiengesellschaft. Dierig has for a long time been the owner of the majority of the Hammersen shares, but the managing director of Hammersen has prevented Dierig from exercising its majority rights, and this has for years furnished the ground for innumerable lawsuits and for disputes in the general meetings. Now these conflicts are to be eliminated by both companies handing in their shares to a common parent company, the Deutsche Baumwoll-A.G. in Osnabrück (Debag), which will increase its former stock capital of 6 millions, all of which was held by Hammersen, to 39 millions, and receive in exchange the outstanding Hammersen and Dierig shares. Community of interest between the two groups is assured on the basis of parity not only financially, but also personally. The two groups complement each other in high degree. Hammersen owns and controls 500,000 spindles and 8,500 looms, Dierig only 60,000 spindles, but 7,000 looms. Dierig has heretofore been a big taker of Hammersen yarns, and, on the other hand, Dierig owns very large equipment concerns which Hammersen can very well use. In view of the severe crisis from which the German textile industry is now suffering, it may be assumed that other textile concerns will soon seek to join the new group.

SWEDEN.

Production — Foreign Trade — Money Market — Conversion Loan — Stock Exchange.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, June 10.

SWEDEN still occupies a surprisingly favourable position compared with most other countries, considering the present depression. The effects of this international depression are clearly visible, sometimes in an acute form, in various fields; but so far as the volume of production in the leading industries is concerned the effects have been remarkably slight. The latest published figures of production for the most important industries are extremely satisfactory. Despite the fact that Easter fell in April, the index number (1923-24 = 100) of *Svensk Finanstidning* remained at 149, the same record level as in March. This figure exceeds that of last year, which is the more remarkable since Easter then fell in March, so that last year production in April was undisturbed by holidays.

The average index number of production for January-April was 141. Even though the index is not an indication of the production of the country in general, it must be remembered that it shows, as regards the staple industries, an extraordinary power of resistance to the effects of the international depression. The explanation can only be found in the still large reserves of orders and in the confident expectation among exporters of an improvement in the situation in the near future. Whatever the explanation, it is clear that such a tempo of production cannot be continued during a prolonged depression. It is to be presumed, therefore, that the next months will show signs of the changed position. From this point of view it is very significant that all Swedish export industries, especially iron ore and pulp, have to an increased extent been pressed to postpone contract deliveries in consequence of the depression.

The deepening depression has influenced foreign trade just as little as production. In March, it is true, a certain setback seemed to appear, but April imports and exports surpassed those of previous years, except the abnormal year 1929. Moreover, as the level of prices is now considerably lower than a year ago, the quantitative increase is considerably greater than the value figures indicate. Imports in April were 149 million kronor and exports 120 million kronor. The excess of imports of 29 million kronor is quite normal for the season, and the same is true of the passive balance of 103 million kronor for the first four months of the year, during which imports amounted to 543 million kronor and exports to 440 million kronor. It should be remembered, however, that wholesale prices in April last year were 136, whereas this year they had fallen to 118, and fell further to 115 in May (1913 = 100).

The money and exchange markets have continued to afford great surprises. April was characterised by the realisation of Swedish investments abroad in consequence of the heavy fall in interest rates, whereas Swedish rates fell only very slowly and to nothing like the same extent. Instead of the normal decline in the balance of payment in April there was a marked advance of 68 million kronor. The net foreign claims of the banks have reached the record sum of 590 million kronor, whereas a year ago they were only 462 million kronor. It is evident that this is largely due to private realisations of foreign securities besides those of the commercial banks. Since at the same time the commercial banks before the turn of the month realised very considerable amounts to the Riksbank, the market was over-supplied with short money. The commercial banks were obliged to take steps to invest their funds abroad again, and this naturally had a decided influence on the Swedish exchange. The consequent depreciation of the Swedish krona ceased, however, in the middle of the month, when a sufficient reinvestment of the cash funds had been effected. Since then the Swedish krona has remained more or less unaltered, with a firm undertone. In consequence of this abundant supply of short money, rediscounting by the commercial banks at the Riksbank has steadily declined, and showed at the end of last month the same anomalous position as in the preceding month. Whereas normally there is a large expansion of rediscounting, almost half the market requirements were satisfied by the commercial banks drawing on their credit accounts with the Riksbank. At the turn of the month the rediscounts and advances of the Riksbank, less the current account credits, amounted to 137 million kronor, whilst the corresponding amount a year ago was 339 million kronor and two years ago 366 million kronor. At the same time the Riksbank foreign exchange portfolio was 358 million kronor, compared with only 183 million kronor a year earlier and 111 million kronor at the end of May, 1928. The connection between these figures is obvious.

The position on the money market has also been exploited for a long-expected conversion loan by the State. Thus in a relatively short period of time no less than three considerable conversions of State loans, amounting to 445 million kronor, have been effected. The first was the 1914 5 per cent. loan of 163 million kronor, which was converted for 1929 4½ per cent. loan at slightly under 99 per cent. There followed a conversion of the 1916-17 5 per cent. loan of 187 million kronor to the 1930 4½ per cent. loan at just under 99½ per cent. The operation just concluded affected the 1918 5 per cent. loan of 95 million kronor, which was converted to 1930 4½ per cent. at a rate of approximately 99¾ per cent. By these operations the State has reduced its annual interest charges by about 2¼ million kronor.

If the depression has thus had very advantageous effects on the money market, the same cannot be said of the Stock Exchange. The month began, it is true, dramatically enough with the unloading occasioned by the renewed collapse in New York. But the effects were unexpectedly transient, and the rest of the month remained flat and dull, reflecting very clearly the perspective of the situation.

ROUMANIA.

Political Situation — Agriculture — Agricultural Credit Bank — Concordat Préventif — Commercial Treaties.

(FROM OUR CORRESPONDENT.)

BUCHAREST, June 16, 1930.

As was to be expected, the return of Prince Carol to the throne of Roumania has had the most far-reaching effect on the internal political situation. With a restraint, the wisdom of which must be admired, Mr Maniu kept as much as possible in the background until all attempts at creating a Government of concentration had failed, and as a consequence, he has now been called back to power unconditionally. It means that his party has emerged with a considerably increased prestige. The Government is only new in name; all its members, with one exception, served in Mr Maniu's administration before political intrigues connected with the appointment of a new Regent forced certain changes upon him. As a matter of fact, the composition of the Cabinet is almost identical with that which confronted Parliament eighteen months ago, when the National Peasant Party had wrung the power from the hands of the Liberals.

The leaders of the Liberal Party on the other hand have shown by their attitude that they are curiously out of touch with the real feeling of the population which has so enthusiastically received Prince Carol as its King. Although they said ultimately that they would support the new order of things, if it should prove to be for the good of the country, their first declaration that in the constitutional question they would defend the legal order established by the act of late King Ferdinand, on January 4, 1926, which excluded Prince Carol from the succession and banished him from the country, produced a very bad effect. The inevitable occurred: a serious split in the party. Vintila Bratianu, the leader of the party, stands discredited before a large section of his former followers, who have rallied under the banners of his nephew Georges Bratianu, the son of Jon Bratianu, who was, as will be remembered, the predominant political figure after the war until his death a few years ago. Georges Bratianu accepts the situation, and is looked upon by many as the future leader of the party.

The glamour of the romantic return has struck popular imagination, and the people at large have received Prince Carol with enthusiastic manifestations of relief and joy, turning in extravagant hopes to the new King as the saviour from the severe trials through which the country has had to pass during recent years. This situation has its own inherent dangers. It is a difficult task to steer the ship of State through the troubled waters of the extreme economic depression which prevails at present. Progress can only be slow, false moves must have exaggerated effects, and reaction caused by disappointment will be the greater as hopes have been higher. Hence, while the position of Mr Maniu's administration is for the moment unassailable, its responsibilities are undoubtedly increased.

The events of last week have thrown into the background for the moment the economic problems which confront the country. On account of the low world prices the export of cereals has not come up to expectation. The following statements show the harvest of 1929, the amount necessary for internal consumption, the amount available for export, and the export up to December, 1929:—

IN WAGGONS OF 10,000 KGRS.

	Production.	Internal Consumption.	Available for Export.	Export up to Dec., 1929.
Wheat	250,000	250,000	...	...
Rye	33,000	21,000	12,000	...
Barley	255,000	70,000	185,000	75,000
Oats	134,000	74,000	60,000	10,000
Maize	576,000	342,000	234,000	10,000
Various	20,000	10,000	10,000	5,000
Total ...	1,268,000	767,000	501,000	100,000

From December, 1929, to the middle of May of this year the following quantities have been exported:—74,000 waggons of maize, 60,000 waggons of barley, and 42,000 waggons of various products, so that of a total of 500,000 waggons of exportable cereals there were 225,000 still to be exported at the middle of May.

The state of the fields promises a good harvest for the coming season, but unfortunately prices remain unsatisfactory and give the producers little possibility of relief from their present state of indebtedness. The endeavours of the Government, therefore, to arrange cheap credit facilities for the agriculturist are of the highest importance for the country. The creation of the agricultural Credit Bank, however, is encountering difficulties, as shown by a recent decision of the Court of Cassation, which declares unconstitutional certain paragraphs in the law authorising the establishment of this bank as they interfere with the vested rights of the existing Crédit Foncier Rural. What influence this decision will have on the attitude of the foreign financial interests, whose assistance for the creation of the bank will be required, remains to be seen. At any rate, now that the international loans of the Young Plan are placed, the time has come for Roumania's appeal to foreign finance as foreshadowed by ministerial utterances earlier in the year.

The Government has been well advised in hurrying the modification of the law of the *Concordat Préventif*. The new Bill was introduced at beginning of this month. It contains important provisions for the protection of the creditor, fixes the minimum payable at 60 per cent. of the unsecured debts, and makes the duration of the concordat to some extent dependent upon the amount which the debtor agrees to pay. Practice will show whether the concessions to the rights of the creditors are sufficiently far reaching. If they prove to be so, one of the principal obstacles to the amelioration of credit conditions will have been removed.

Recent events have naturally delayed the negotiations for the conclusion of commercial treaties. By a law passed at the beginning of this month, the Cabinet is authorised to continue the negotiations, if, on account of technical difficulties, it has not been possible to conclude the treaties in the time fixed by the Customs tariff of 1929. At the same time, in exceptional and abnormal circumstances, should Roumanian exportable products be submitted by a foreign country to measures likely to damage vital economic interests of Roumania, the Cabinet is authorised to apply to the goods of such country an exceptional tariff up to double the highest rates provided by the Roumanian Customs tariff and to take any steps for the prohibition or restriction of the import from such country. There is no doubt that this law is meant to strengthen the Government's hands in the difficult negotiations which are taking place at present with Germany.

ARGENTINA.

Business Prospects — Railways — Exchange — Crops — Banking — Politics.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, June 7th.

MAY has certainly been the quietest month in the present year, considered from a business standpoint. Yet the outlook in general is brighter than it has been at any time during the past twelve months, although actual improvement, in the shape of increased shipments and better quotations for the Argentine dollar, must not be looked for until August or September. From the standpoint of the British investor the most depressing factor in Argentine affairs is found in the heavy fall in freight receipts, at present characteristic of all the railways, with the exception of the Entre Rios and the Argentine North-Eastern systems. There is, of course, no hope of the reduction being corrected during the present year; at the same time, the local impression is not altogether in agreement with the pessimism of London as indicated by current Stock Exchange quotations. Provided always that Labour difficulties do not crop up in the near future, and that the nascent agitation for cheaper freights goes no further, the first quarter of 1931 should show a marked improvement.

The railway year ends on June 30th, and it is probably in view of this fact that the Stock Exchange has become so markedly downhearted where Argentine rails are concerned. What the dividends will be one cannot say, but shareholders ought not to be too unfavourably impressed by a state of affairs which, though unpleasant, is only temporary. It has to be remembered that the administration of the great Anglo-Argentine Railway Companies is both effective and economical, thanks to the international experience which has in the course of years been embodied in their system. That in addition to reduced freights they have been hard hit by the fall in the Argentine dollar is

too obvious to call for more than passing mention. But here also the prospects for the latter parts of the calendar year promise to be better.

Without regard to the frequent rumours regarding possible foreign loans, rumours emanating principally from New York, one may say that everything points to an important loan being issued shortly before the last quarter of the year opens. For without such an addition to its funds the National Government of Argentina will certainly find itself in serious financial straits. At the moment of writing the exchange market is in a state of suspended animation, with banks' cable drawing rate on London quoted at 42 9/16 and 106.20 on New York. There is, however, nothing doing on either side of the market. Remitters are holding back whenever they can, hoping for an improvement, while exporters have no paper to offer. The volume of exports for the first four months of the current year showed a drop of 2,300,000 tons, and the value a decline of $120,900,000 gold, as compared with the corresponding period of 1929. Moreover, the weather during May has been rainy and damp, thus making maize shipments unusually small, a fact which also explains why ocean freights fell at one time to 9s. per ton to United Kingdom/Continent, though this rate has since recovered, and is now in the neighbourhood of 12s. These very conditions, however, all promise well for the next harvest, and it is probable that the area sown for wheat and linseed will have suffered little if any reduction. Pastoral interests are all in an eminently satisfactory state, and the market for general produce, with the sole exception of hides, is looking up all round.

The banking position is also healthy. For though the demand for money is firm, with rates ruling at anything between 6½ and 8 per cent. per annum, there is no stringency, strictly speaking, and sound business can easily be accommodated. Possibly owing to the difference between rates ruling here and those prevailing in Europe and in the United States, a certain amount of business is being financed outside the country, and the fact that during May £300,000 was deposited to the order of the Argentine Embassy in London—the equivalent, some $3,500,000 Argentine paper, being taken from the Conversion Office here—seems to bear out this conclusion. The enigma of the moment lies in the Argentine Government. Customs receipts from all sources are at least $25,000,000 paper under last year's figures for the corresponding period. This shortage, combined with the comparatively large sums outstanding in unpaid bills, is somewhat seriously disorganising the internal trade of the Republic where imports are concerned. Congress, which ought by law to have met on May 1st, has not yet assembled, for a variety of reasons which in the last resort boil down to a matter of party politics. The sound common sense of H.E. President Irigoyen may, however, be counted upon to prevent these party dissensions from doing undue harm to the major interests of the nation. When he will take action is known only to himself, but everything points to the fact that radical measures of importance calculated to co-ordinate the wealth and magnitude of Argentina's trade with her complicated and ever-growing administrative needs will not be very long delayed.

IRISH FREE STATE.

Proposed Currency Bill — Housing Shortage — Emigration Problem — Shannon Scheme.

(FROM OUR CORRESPONDENT.)

DUBLIN, June 17.

THE Government is about to introduce a Bill designed to alter the backing of the currency note issue. The Report of the 1926 Banking Commission, over which Mr. Parker Willis presided, recommended that notes should be issued by the Currency Commission backed by gold, sterling notes or British Government securities. The Currency Act, 1927, as the result of amendments proposed by bankers' representatives in the Senate, provides that the British Government securities held must be repayable within twelve months. This provision limits the range of investments available and lowers the amount of profit obtained from the issue of notes, but it secures beyond any question of doubt the safety of the backing behind the notes. It is now proposed to extend the powers of the Currency Commission to invest in a wide range of British and American Government securities. The wisdom of this change is doubtful. While it naturally enables the profit from the note issue to be increased, it may quite conceivably in certain circumstances have the effect of reducing the value of the backing behind the notes and thus of shaking confidence in the issue.

Considerable attention has been given recently to the housing problem in the Free State. Mr Mulcahy, Minister for Local Government, addressing the Chamber of Commerce last week, gave an account of what the Government had already done in this matter. In 1922 there was an estimated shortage of 43,963 houses, and in that year a million pounds was granted for housing purposes. Two-thirds of the cost of each house was provided by the State and one-third was advanced to local authorities, who would strike a rate of one shilling in the pound for the purpose of repayment. Under this scheme 2,180 houses were built at a cost of £1,605,000. Under further schemes between 1924 and 1929 £1,350,000 was provided and 14,576 houses were built. Another £200,000 is being provided this year, and it is estimated that 31,000 houses are still required. It is obvious that the State cannot continue indefinitely to subsidise building, and Mr Mulcahy made it plain that he looks forward to the day when private enterprise will once more supply this vital social need. Building is at present discouraged by high labour costs, trade union rules, and the Rent Restriction Act. The evil effects of this Act are an eloquent demonstration of the dangers of price-fixing, which should cause some of our politicians to hesitate in their programme of fixing prices for wheat, flour and bread.

The emigration figures show an increase over last year, and the problem of keeping the population at home is again being actively discussed. It is generally recognised that no possible development of agriculture can succeed in giving much additional employment and that the only hope of stemming the tide of emigration is by industrial development. It is becoming equally clear, however, that the necessary industrial development can never be attained as the result of Protection alone. Mr McGilligan, Minister for Industry and Commerce, recently pointed out in the Dail that one half of the "tariffable imports"—that is, of the imports of articles that could conceivably be produced in the Free State—are already protected, and that the result is the employment of 15,000 hands (mostly women and girls). The price of the protected articles is not generally raised, except in the case of furniture, boots and shoes. If Protection were extended to the other half of "tariffable imports" the additional employment given would not exceed 10,000, and prices would certainly be materially raised. It appears from these figures that the utmost Protection could hope to achieve would be to provide employment for less than the number of emigrants in a single year. The problem is admittedly difficult, and all parties are generally anxious to reach a solution. The Opposition party, however, is not making things easier by its talk about repudiating land annuities, controlling the banks and discouraging international movements of capital.

The demand for current from the Shannon has proved larger than was expected, and it is now officially announced that the scheme will be self-supporting in two and a half years, instead of three years as previously estimated. Plans are already being made for the further development of the scheme by building additional embankments to increase the storage capacity of the Shannon lakes.

Books and Publications.

FORECASTING STOCK EXCHANGE MOVEMENTS.*

DURING every recession of share values, a disillusioned public calls aloud to heaven and its stockbroker for a sign. This treatise of Mr L. L. B. Angas on the "technique of trading in shares for profit" is the nearest approach to a text-book on the avoidance of losses that the British investor is likely to have for some time. The author bases his edifice of practical rules on the axiom that, while Stock Exchange *waves* are due usually to "internal" market factors (such as general sentiment, the banking position, available foreign funds, and total new issues), Stock Exchange *tides* reflect major cyclical movements in trade and industry. These usually cover periods of some years, and have definite stages which can be legislated for. The author, indeed, is neither a member of the Stock Exchange nor a professional investor, but a student of the trade cycle who regards major Stock Exchange movements as one of the many by-products of cyclical phenomena. His book, however, is severely practical, and though the writer repeats himself frequently, bears internal evidence of a good deal of self-denying compression of thought. It fails to make out a convincing case for short-term speculation, but its argument that the investor would be the gainer by the application of common-sense rules to a knowledge of industrial conditions is undoubtedly sound. The author's philosophy may be illustrated by the advice he gives to the investor never to do any of the following things: (1) to buy shares of a company whose last report showed a decline in earnings; (2) to buy into an industry where profits have been rising for more than four years; (3) to buy during Stock Exchange booms, or a fall in national profits, or (as regards ordinary shares) at a time when earnings are below 8 per cent. on the market price, or when Bank rate is over 5 per cent. All losses, the writer declares, should automatically be cut when they reach 20 per cent., and at least two-thirds of all "paper" profits taken when they reach 20 per cent. He condemns, in general, the practice of averaging, and has little difficulty in exposing the dangers of all so-called mathematical "systems" of speculation. The directors of trust companies will probably find much that is interesting, though less that is new, to them in this book. To the stockbroker, and even more to the individual investor, it will be a *vade mecum*, the mastering of whose principles will repay in hard cash many hours of study, and make the expenditure of twenty shillings on a book of under 200 pages not altogether a Quixotic proceeding.

* "Investment." By L. L. B. Angas. (London): Macmillan. 20s. net.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Federal Reserve System. By Paul M. Warburg. In two volumes. (London) Macmillan and Company, Ltd., St. Martin's Street. 50s. net.

A history of American banking reform from 1903, in the form of the memoirs of an active participant, supplemented by essays written by the author since 1906. These two substantial volumes form a most interesting and valuable contribution to banking history.

Agricultural Russia on the Eve of the Revolution. By George H. Pavlovsky. (London) George Routledge and Sons, Ltd., 67-74, Carter Lane. 15s. net.

A scholarly study of the evolution of Russian farming during the first sixteen years of the present century. The author is to be congratulated upon introducing into the mass of controversial literature upon Russian economics the leaven of a dispassionate account, not of opinions but of facts.

Northcliffe: An Intimate Biography. By Hamilton Fyfe. (London) George Allen and Unwin, Ltd., Museum Street. 16s. net.

Mr Fyfe has taken full advantage of the opportunities of vivid characterisation offered by his subject, and his biography is almost a novel.

Empire Tariff Preferences on Canadian Goods. By William Gilchrist. Second edition. (Ottawa) Department of Trade and Commerce, Commercial Intelligence Service. 25 cents.

A useful summary of the tariff provisions of various members of the British Commonwealth of Nations in so far as they affect Canadian goods.

Stock Exchanges Ten-Year Record of Prices and Dividends. Compiled by C. Mathieson and Sons. (London) F. C. Mathieson and Sons, 16, Copthall Avenue. 20s.

A unique reference book from which it is possible to see at a glance the highest and lowest prices and the dividends on any officially quoted stock in each of the last ten years.

Guide for the Company Secretary. By Arthur Coles. Third edition. Revised by W. Cecil Wood. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 6s. net.

A revised edition, provoked by the Companies Act, 1929, of a textbook which, while giving full attention to the legal aspects of the subject, specialises in attention to the ordinary requirements of everyday routine.

The Companies Act, 1929, as Affecting Accounts. By Russell Kettle. Second edition. (London) Gee and Company (Publishers), Ltd., 6, Kirby Street. 1s. 6d. net.

Reprint of a paper which discusses the difficulties and doubts likely to arise in the practical interpretation and application of the new requirements.

The Accounts and Audit Provisions of the Companies Act, 1929. By Harry C. King. (London) Gee and Co. (Publishers) Ltd., 6, Kirby Street. 2s. 6d. net.

A quick-reference précis.

The Working of a Cost System. By R. G. H. Smails. (London) Gee and Company (Publishers), Ltd., 6, Kirby Street. 6s. net.

A small, elementary text book, generously supplied with illustrative examples.

Cost Accounts. By L. Whittem Hawkins. Eighth edition. (London) Gee and Company (Publishers), Ltd., Kirby Street. 10s. 6d. net.

A convenient little textbook on cost accounting.

Vers la Liquidation de la Guerre. Traités de La Haye et de Paris. Exposé de M. Ed. Benes. (Prague) "Orbis," Fochova 62. Kc. 7.

A reprint of the speech in which the Czechoslovakian Minister of Foreign Affairs expounded the Hague Agreement before the Chamber of Deputies.

The Transfer of Stocks, Shares and Other Marketable Securities. By F. D. Head. Fourth Edition. (London) Sir Isaac Pitman, Parker Street, Kingsway. 7s. 6d. net.

A new edition, revised in the light of the Companies Act, 1929, of a very convenient handbook on the law and practice of transfers. A most comprehensive view is taken of the scope of the subject.

Building Societies. By Harold Bellman. (London) London General Press, 8, Bouverie Street. 1s.

A short, explanatory pamphlet.

Wheeler's Company Tables, 1930. (Leicester) Arthur Wheeler and Company, Town Hall Square.

A very useful volume containing tabulated particulars of each of the principal companies, including a summary of the balance sheets over a number of years. There are also extracts from some of the auditors reports.

The Bankers' Magazine, June, 1930. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

This number includes, *inter alia*, articles on "The Chancellor and the Bankers," "Banks and Industry in Germany" and "Extravagance in National Expenditure."

The Stock Exchange.

THE STOCK EXCHANGE HALF-YEAR.

Most stockbrokers would write down the past half-year as the worst in recent Stock Exchange history. This is saying a great deal, for the previous half-year contained two first-class disasters—the Hatry crash and the great slump in Wall Street. But the past six months have seen the development of the world-wide depression in trade of which the stock market disasters last autumn may be regarded as the forerunners. In spite of the lowering of official discount rates in the monetary centres of the world, commodity prices have continued to fall and the numbers of unemployed in this country have continued to rise. The London Stock Exchange did not even enjoy the mixed recovery in industrial share values which went on from January to April in New York on the mistaken assumption that the up-turn in American trade would be early rather than late. Except for a recovery in March—under the influence of cheap money—commercial and industrial shares on the London Stock Exchange have persistently declined. The fresh slump in the New York stock markets, which has followed upon the realisation by the American public of the truth about the state of American trade, has merely deepened the already profound depression. The index of the *Investors' Chronicle* shows that British "general business" shares are now back to 1924 levels. To find lower prices one has to go back to 1920-21.

Under these painful conditions business on the London Stock Exchange, outside the gilt-edged market, fell to a very low ebb. Even the gilt-edged market did not respond as much as it might have done to the influence of cheapening money. This may be attributable to the heavy increase in direct taxation which Mr Snowden imposed in his Budget, to Government conversion operations (the issue of 4½ per cent. Conversion Loan in February involving £60,800,000 cash subscriptions) and to heavy borrowings by the home corporations at somewhat dear rates. The reductions in Bank rate from 5 per cent. to 4½ per cent. on February 6th, to 4 per cent. on March 6th, and to 3½ per cent. on March 20th, had, of course, a stimulating effect upon the prices of British funds—a rise of 3½ to 5 points being scored on the long-dated securities—but the last reduction to 3 per cent. on May 1st appeared to make no further impression. Australian stocks came under selling pressure—the market being apprehensive at the economic situation in that country—but India stocks, with the help of reassuring official statements, showed some recovery. The following table gives the extent of the changes in market prices in the past six months in British and Colonial Government and home corporation stocks:—

x Ex dividend.

It will be seen that, apart from 5 per cent. War Loan and 5 per cent. Conversion Loan, British Government long-term credit is verging on a 4½ per cent. basis. If it were not for the increase in direct taxation and the dead-weight of the £2,000 million block of 5 per cent. War Loan, British funds, with Bank rate at 3 per cent. and the prospect of cheap money prevailing for a considerable time, might well be selling under a 4 per cent. yield basis.

It may also be contended that the effects of a reduction in Bank rate from 5 per cent. to 3 per cent. in the past six months have not yet been fully discounted in the market in other fixed-interest securities. Foreign Government bonds showed a fair rise, and would probably have risen further if it had not been for the economic and exchange difficulties of most of the South American republics, for the undigested issue of the £8,000,000 coffee loan for the San Paulo Government in May (which was dearly priced), and for the fact that a good deal of potential investment in foreign bonds was held back for the issue this month of the German Reparations loan. Other fixed-interest securities have not reflected the lowering of interest rates to any great extent. Indeed, the prior charges of commercial undertakings whose earnings either have declined (for example, Fine Cotton Spinners) or have been causing apprehension (for example, Cables and Wireless) have found lower levels:—

Perhaps the most disappointing of all Stock Exchange markets in the past six months has been that in railway stocks. Cheaper money has as yet had little influence upon railway fixed-interest stocks. As regards ordinary stocks, home railways have been sold on the decline in traffic receipts common to all systems except the London Underground and on the expected increase in operating expenditures occasioned by the ill-timed restoration of the 2½ per cent. cut in wages and salaries to which the four big groups were committed. Foreign railway stocks—particularly Argentine—have also been adversely affected by the decline in traffics following on the world trade depression. The defaulting of the United Railways of Havana in the payment of interest on certain of its debenture stocks was also a depressing influence. It will be appreciated from the next table—the yields in which are based on 1929 dividends—that the market is obviously

discounting a reduction in most railway common stock dividends this year:—

As regards other "equity" shares, a representative list of which is given in the next table, it will be found that British "industrials," in spite of the publication of reports which compared on the whole not unfavourably with those of 1928, suffered an almost unbroken decline. There were, however, some exceptions. For example, General Electric improved on account of its bigger profits and increase in dividends. On the other hand, the shares enjoying—or shall we say inflicted with—an active New York market—such as Columbia Graphophone, Gramophone, Brazil Traction, Ford Motors, Hydro Electric, International Nickel—have suffered to a much greater extent than "British" industrials, the present prices showing the scars of the latest Wall Street slump.

Speculative markets have borne the full brunt of the fall in commodity prices, and it is surprising that share values have not suffered more. Rubber has fallen in the past six months from 8d. to under 6d. per lb., and tin from £180 to £136 per ton. In spite of the fall in copper certain Rhodesian copper shares, where the market is limited and the prospects unbounded, are standing at higher levels than six months ago. Rhodesian Congo Borders have even enjoyed a sensational rise. South African gold shares are slightly lower on balance, but the market has lately seen signs of investment buying. After all, an industry which produces a metal whose money value is fixed should have some attraction for the speculative investor when the money values of all other commodities are falling. Investment interest in oil shares has been sustained by the maintenance of dividends on their increased share capital by Royal Dutch and Shell Transport, by the increase in dividends on Burmah Oil and Anglo-Persian ordinary shares, and by the maiden dividends declared on Mexican and Canadian Eagle participating preference and ordinary shares. Our next table sets out the fluctuations in prices of representative shares in these speculative markets:—

The outlook for ordinary shares now depends upon the turn in commodity prices and the prospects of a trade recovery in America. From the point of view of British industrials, the former is now more important than the latter. As soon as investors feel convinced that commodity prices have touched bottom—and they cannot be far off at the present time—they may be induced, under the stimulus of cheap money, to purchase the common shares of sound industrial undertakings which are now offering comparatively high yields on dividends and earnings. At the same time, we may expect to see a rise in the fixed-interest securities of these companies, which, by reason of the trade depression, have so far failed to reflect the lowering of interest rates.

THE WALL STREET SLUMP.

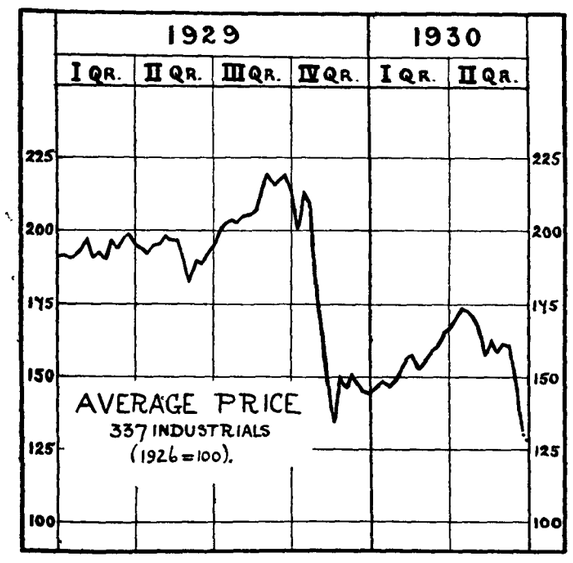
Faith in American industrial and economic prosperity has become so deep-rooted—the slogan that "you cannot go a 'bear' on the United States" has been so often repeated and believed—that the continued slump in the New York stock markets is causing no little amazement, and, among investors and speculators, something like despair. The present liquidation may be distinguished from the stock market crash in the autumn of last year in that it is orderly and more rational. It started in April

when the public began to be sceptical of the " certainty " of the 1930 trade revival on which the stock markets had been rising since December. The first bad " break " came on May 3rd and 4th, by which time the public had realised that the prophecies of better business in the autumn given out by bankers, industrial leaders and the Government spokesmen in Washington, were proving delusive. A short-lived recovery followed, but thereafter break after break in the market has occurred, the recoveries becoming less and less sustained, until average stock prices (except for utilities) are actually below the slump levels of the autumn crash. The following indices are those supplied by the Standard Statistics Company:

(1926 AVERAGE = 100.)

	Highest, 1929.	Lowest, 1929.	Apr. 17, 1930.	May 7, 1930.	June 4, 1930.	June 11, 1930.	June 26, 1930.
Group indices:							
337 Industrials	218·9	134·5	172·7	157·0	161·4	147·6	130·6
33 Rails	173·5	127·8	142·1	134·6	132·6	127·2	117·2
34 Utilities ...	330·4	177·6	266·0	243·2	253·9	231·7	202·8
Total, 404 stocks	228·1	140·3	182·7	167·1	171·5	157·6	139·8

The accompanying chart, representing the average price of 337 " industrials " as compiled by Standard Statistics for each quarter since the beginning of 1929, may enable readers to view the course of American stock markets in due perspective:



The persistent liquidation in the past few weeks has received fresh impetus from the continued fall in commodity prices—particularly wheat, cotton and copper—from " bearish " industrial news, in particular, the further decline in railroad earnings and car loadings, from dividend " cuts " by various corporations, and from the widely expressed fear that the new Tariff Bill threatens the American export trade, particularly in motor vehicles. That the market should have sunk below the panic levels of 1929 is not surprising, for the panic-mongers last autumn had nothing like the present trade depression in sight. Much of the liquidation is said to be coming up from country banks which are still " frozen up " with security loans as a result of the 1929 stock market crash. At the moment of writing there has been some recovery, and the report is current that big banking interests have come to the support of the market. Colonel Ayres, the economist of the Cleveland Trust Company, has expressed the opinion that the " bear " market's life is drawing to a close. If commodity prices were to stop falling, everyone would agree with Colonel Ayres.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. July 8.	ACCOUNT. July 10.

THE recrudescence of hope which spread through the " House " at the end of last week received a rude blow on Monday. Far from inaugurating an extension of business or giving new vitality to the markets, the new account opened in an atmosphere of nervous tension following news of a further sharp setback in Transatlantic shares. Reports during the week were not sufficiently reassuring to bring about any widespread revival, while a depressing list of traffics, a further decline in metal prices, and a feeling that the markets were beset with " weak spots," some of which later materialised, allowed only a very diffident recovery.

Gilt-edged stocks, exceptionally, were firm, with a fair amount of " loose money " available and discount rates lower. War Loan Fives improved $\frac{5}{16}$ to $102\frac{15}{16}$, while Funding advanced anew to $90\frac{1}{8}$ and Conversion Fives, New Consols and Treasury " A " bonds all took on a strong appearance. Corporation stocks attracted some attention, but India loans were almost entirely unaffected by the publication of Part II. of the Simon Report, the " House " preferring to await further developments.

In the Foreign market movements were irregular, the weakest feature being Brazilians, which however took on a slightly better tone following the publication of the President's message. The Reparations Loan fell to $2\frac{1}{4}$ discount on Tuesday, but advanced later to $1\frac{7}{8}$ discount. Chinese bonds were quietly steady after initial weakness, while a significant stir occurred in the Russian list on the better prospects of a debt settlement.

Home rails went from bad to worse, last week's poor traffics being followed by a further unsatisfactory list. On Monday " Brums " dropped to the record low point of $44\frac{1}{4}$, and returned thither after a mid-week improvement, while Berwick Preferred and Southern Deferred shared in the general unpopularity. A small recovery, however, occurred on Thursday. Undergrounds were the one bright spot throughout the list, and received renewed support following the publication of further good traffics.

Foreign rails opened despondently, and Argentine " Heavies " reflected the general uneasiness brought about by the latest crop reports. Later in the week, however, the tone noticeably improved, and despite a depressing set of returns Great Southerns rose 1 to $85\frac{1}{2}$, while Westerns and Centrals shared the rise and Cordobas added $1\frac{1}{2}$ to 18.

The industrial section was upset by New York selling, and though Transatlantic securities subsequently firmed up, the market was disposed to adopt a cautious attitude. Brewery shares continued to provide a good showing, and Guinness led a general advance, adding 1s. to 105s. 3d. Motors were out of favour, and forced selling from the provinces brought about an all-round deterioration. Waring and Gillow were a poor market, following the delay in the publication of their report. Carreras were the bright spot in the tobacco list, which was otherwise weak. General Electric advanced to 50s. after the meeting, but relapsed later. Patons and Baldwins were marked down on the report, while Courtaulds lost ground again. The Royal Mail shipping group suffered from the announcement that Royal Mail would have to meet its guarantee of White Star preference dividends, and the Preference shares of Royal Mail and White Star slumped heavily. Gramophones were active, but a see-saw movement left little change on balance. Guest, Keen added a fraction early, and Lyons in the catering list were strong. Kreuger and Toll and Swedish Match in the Swedish list were at first marked down sharply, but later made some recovery, United Mollasses evinced a marked improvement. Bank and insurance shares were dull, and changes were mostly downward.

The price of rubber improved somewhat to $6\frac{3}{32}$d., and the share market, which had created no disturbance during the week, took on a more cheerful appearance towards the close, and Rubber Trust led several advances, forging ahead to 30s. 9d. Tea shares were somewhat irregular, and the few movements which occurred showed no promise of any likely recovery. Oil shares opened with a fair demand for leading issues, and there were a number of improvements. V.O.C. were initially strong, but relapsed slightly after going ex dividend.

The mining share market again reflected to some extent the continual sagging in metal prices. The " Kaffir " boomlet was temporarily suspended, but several descriptions hardened after an irregular period in mid-week, and Sub Nigel advanced on Johannesburg support to $2\frac{25}{32}$, but Modderfontein, Brakpan and East Rand weakened on lack of interest. Northern issues were all weak, Congo Borders declining $\frac{7}{8}$ to $14\frac{1}{2}$, while Bwana M'Kubwa, Chartered and Roan Antelope were all marked down. Burma Corporation receded to 10s. 6d. on renewed silver weakness (discussed in an Investment Note on page 1454), tin shares sagged, following a further drop of £3 in the metal on Thursday.

FOREIGN STOCK EXCHANGES.

NEW YORK.

A better tone is developing in the security markets. Shares are finding investment support and " shorts " are covering. The market was helped by the resistance shown by United States Steel and other pivotal issues when prices approached the low levels touched last autumn, and, while there is no expectation of a sustained rise at this time, it is becoming evident that selling is losing vigour and that the technical position has been improved by the liquidation of weakly-held stock and the building up of a " short " interest. It is believed that investment trusts have done about an equal amount of selling and buying. The drop of $371 millions in brokers' loans on the week reflects the extent of real liquidation, and is perhaps partly attributable to the working off of unsold bonds from dealers' shelves. Loans are now only $88 millions above the low point reached last autumn. Railroad prices average the lowest level since 1927-28, but industrials and public utilities are still above last November. Bonds have been stagnant despite the extreme ease of money, but the gilt-edged section is now rising. Railroad earnings for May show a decline of more than 30 per cent., and are likely to be the same for June, with car loadings still running at the 1924 level. The steel industry is steadier, with a drop of only 1 per cent. in the rate of operation. Steel Corporation is running at 72 per cent. of capacity, equal to 105 per cent. on the old rating, and is likely to earn $6.60 per share for the first six months of 1930. General Motors' earnings for the six months will probably be $2.35 per share. There has been a sharp drop in bank shares on the decline in interest rates. The new capital market is at a standstill, but an Austrian loan of $20,000,000 is expected here shortly.

* 2-hour session.

CANADA.

The Canadian stock markets have experienced two sharp breaks during the past month, and the second, which came early this week, was the more severe of the two. Wednesday, June 11th, was the worst day of the slump, when the average price of twenty representative Canadian stocks reached the lowest point of the year at 40.18, as compared with the highest for the year of 48.17 attained in April. Both recessions were sympathetic reactions from breaks in New York, and the decline in Canada in both cases was proportionately less. No improvement, however, is expected here until the New York market turns definitely upward, and on this subject the Canadian view is not very optimistic. However, it is recognised that with the passage of the Smoot-Hawley Tariff Bill, and the flotation of the German international loan, two bearish factors have been, or are about to be, removed, and the feeling is that the technical condition of the Canadian market is ready to respond to either a bullish movement in New York or good business news in Canada. Yet many people think an improvement in the stock market situation will have to be deferred till the end of the summer, when the general election will be over, and there may be definite assurance of a good Western crop. During the slump International Nickel was very heavily sold, and declined to the low point reached in the panic days of last October. The street did not take a favourable view of the issuance of the new rights, and the fall in the price of copper also affected the stock. Brazilians had a setback, but on the whole held up fairly well. The newsprint stocks are still weak, as there has been a further decline in American advertising, which curtails the demand for newsprint, and the distillery stocks, although earnings are reported to be well maintained, are neglected. There has been no improvement in the mining market, and Noranda, which is regarded as the best of the gold-copper mines, slipped back heavily in sympathy with nickel. This week the Canadian dollar was at a premium in New York for the first time since 1928, and its rise is ascribed to the placing of an issue of $50,000,000 of bonds of the Canadian National Railways in New York last week. There seems also to be ample funds at home available for investment in bonds. Of the $293,000,000 new Canadian issues offered in the first five months of the present year, 75 per cent. was taken up in Canada as against 25 per cent. in the United States.

INVESTMENT NOTES.

Silver and the Share Markets.—The slump in the price of silver, which is discussed on page 1435 of this issue, is a cause of trouble to the Stock Exchange at many points. The upset caused to the trade of China and the Far East cannot fail to affect the earnings in some degree of trading companies such as the British American Tobacco and the Shell group, and, of course, the profits of the Hong Kong and Shanghai Bank. The China trade may constitute a minor proportion of the exports of British American Tobacco and Shell, but in the case of the Hong Kong and Shanghai Bank it may just decide the maintenance or dropping of the £1 bonus that is paid (in sterling) with the £6 sterling dividends. More directly, and more heavily, affected by the slump in silver are the silver-lead-zinc producing mines such as Burma Corporation, San Francisco Mines of Mexico and Santa Gertrudis, and to a lesser extent certain copper producers such as Anaconda. The present price of silver is about 45 per cent. below the average selling price (26.15d.) realised by Burma Corporation on its output of 7,376,841 ozs. of refined silver in the year to June, 1930. These companies are, of course, severely hit also by the fall in the prices of zinc and lead. In view of the depressed condition of the base metal market, the directors of San Francisco Mines of Mexico have decided to pass the interim dividend for the six months to March (15 per cent. having been paid in the previous year). Santa Gertrudis has so far maintained its interim dividends of 7½ per cent., but the directors have given "serious consideration to the record low prices for silver," an early recovery in which they do not regard as probable. Burma Corporation has reduced its dividends from 10 per cent. to 8⅛ per cent. tax free for the year. The March quarter's return showed a further contraction of both gross

and net revenue. The following table shows the results for the completed nine months:—

	Quarters ended Sept., 1929.	Dec., 1929.	Mar., 1930
Ore extracted (tons)	118,493	109,543	133,269
Refinery production—			
Lead (tons)	19,507	20,250	20,250
Silver (ozs.)	1,781,594	1,821,000	1,823,686
	£	£	£
Estimated gross revenue	885,045	833,827	765,225
Estimated net profits	235,606	204,120	150,278
Average price silver	24·09d.	22·66d.	20·06d.
Average price lead	£23/4/3	£22/2/4	£20/10/6

Taking a conservative estimate of probable earnings in the June quarter, with silver at 1s. 3d. and lead under £18 per ton, the net revenue for the full year will be approximately £700,000. Adding to this, say, £75,000 for interest, etc., it would appear that total earnings may be in the neighbourhood of £775,000. This is equivalent to 7.6 per cent., tax free, so that in paying 13 annas per share, or 8½ per cent., tax free, the directors have apparently drawn on reserves to a moderate extent. Such a course would be in accordance with the policy of the board as expressed at the last annual meeting. Having regard to the situation in the metal markets, the interest of shareholders naturally centres more on present earnings prospects than on the dividend already declared. In addition to silver and lead, zinc and copper are also produced, although to a much smaller extent. If the prices of the various metals remain at or near their present levels, a quarter's profit would be affected to the extent of £80,000-£90,000. On this basis, and after allowing a reasonable margin for lessened operating expenses and a reduced rate of taxation payment, net mine revenue would be less than £100,000 per quarter, or (expressed as a percentage on the issued capital) under 4 per cent. per annum.

Grocery Store Merger.—An agreement was reached this week for the amalgamation of Home and Colonial Stores, Liptons, Maypole Dairy, Meadow Dairy, Pearks Dairies and International Tea. A new company is to be formed to acquire the undertakings of these companies, other than Liptons, and the preference and ordinary shareholders will receive shares in the new company in exchange for their present holdings. The allotment of preference shares will take into account all preferential rights as to capital and dividends and the allotment of ordinary shares will be based on the respective earning capacities of the companies concerned. The preference and ordinary shareholders of Liptons will be given an opportunity of exchanging their holdings for shares in the new company, but it appears that the basis of the exchange in their case will be different on account of the past record of their company. This is an important merger which will bring under one control approximately 6,000 shops. It is not merely a grocery store deal; it is an alliance between large producers and distributors of foodstuffs under the ultimate control of the great Lever-Margarine trust. Its real meaning, in fact, is that Unilevers are proceeding with the rationalisation of their existing distributive combine and have succeeded in bringing within its fold the International Tea. It should be understood that they already had control of Home and Colonial Stores, which in 1924 had obtained a large interest in Maypole Dairy (including Maypole Margarine Works and Erith Oil Works). In 1929 Home and Colonial obtained a controlling interest in the Meadow Dairy, which in turn controlled Brough's, Neale's Tea Stores, Pearks Dairies and Sherry's Dairy, and in 1927 had become associated in the management of Liptons. Recently a private company, Allied Suppliers, had been formed to act as a central buying organisation for all these associated stores. The International Tea brings into the combine Kearley and Tonge, Ridgeways, James Pegram and the Star Tea, which it acquired in 1928. It is also buying agent and manager on a commission basis of John Quality. The total share capital of the "big five" and Star Tea is £11,551,124, in addition to which Liptons have a loan capital of £1,100,000 and Meadow Dairy of £151,690. The net profits last reported, after allowing for preference and fixed preferred ordinary dividends are shown in the following table:—

	Net Profits. £	Percentage of Total Profits.
Home and Colonial	509,182	30·56
Maypole	437,087	26·23
International Tea	450,636*	27·04
Meadow Dairies	194,165	11·65
Liptons	75,377	4·52
Total	1,666,447	100·00

* These are profits for year to April 30, 1929, and do not include Star Tea.

This table may give an approximate idea of the proportion of ordinary shares in the new company to be allotted to the ordinary or deferred ordinary shareholders of the "big five," but in the absence of up-to-date figures of the earnings of International Tea and Star Tea the percentages must be regarded with extreme caution. It is possible that the profits of International Tea for the year to April, 1930, will show a big increase. The present market prices of the shares are as follows:—

	Highest, 1920.	Present Price.	Divs.
Home and Colonial, 4s. ord.	17/10½	17/–	25%
Maypole, 2s. def.	5/9	5/7½	17½%
International Tea, 5s. ord.	25/–	24/–	30%
Liptons, 1s. ord.	5/4½	5/3	10%

Now that the management and buying for some 6,000 shops is to be centralised, large economies in operating and overhead expenditure should be realised from this grocery store merger. It is an outstanding example of that sound distributive rationalisation which Unilevers have been able to bring about by the control of the raw materials which they exercise. That the International Tea should have considered it prudent to enter the combine, in spite of its present prosperity, suggests that few independent multiple stores will survive in the provision trade.

The Inveresk Paper Transaction.—The recent announcement by the directors of the Inveresk Paper Company, that it is proposed to realise a large block of shares held in a foreign concern, has once more brought the affairs of the company into prominence. Negotiations have apparently been concluded for the sale, subject to contract, of the whole of the Inveresk Paper's 72½ per cent. interest in Koholyt A.G. to Feldmuehle Papier und Zellstoffwerke A.G. "for a substantial sum in cash," of which 50 per cent. is to be received shortly and the balance in two instalments, the payment of which is guaranteed. If, as is generally supposed, the price which has been obtained for the Koholyt shares is £1,000,000, the transaction will have involved Inveresk Paper in a capital loss of some half a million pounds on the purchase price, a depreciation which is, however, easily covered by the company's reserves, which on December 28th last stood at £1,848,971. Despite the fact that Mr B. H. Binder's

HARRIS, FORBES & COMPANY LTD
77 CORNHILL, LONDON, E.C. 3
GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

report stated in February last that the outlook for the Koholyt company was "improving," and though the directors had previously decided to "nurse" investments, the market in general would appear satisfied that on the basis of Koholyt's last net profit of £87,000 the shares are not under-valued at the suggested price, and Inveresk Paper quotations are little altered. Interesting repercussions are likely to follow the subsequent announcement that, though the transaction will "alleviate the financial position of the company," which, together with its subsidiaries, was last winter stated to be in debt to its bankers to the tune of £2½ millions, the directors regret that it is impossible for the company to resume dividend payments on the new first and second cumulative preference shares, which consequently will receive no dividend on July 1st. By Article 74 of the prospectus the preference shares were to carry not vote "unless the fixed cumulative dividend of 8 per cent. payable on the preference shares should be in arrear for six calendar months." (This clause was altered during the 1928 reorganisation by the deletion of the words "of 8 per cent. payable on the preference shares.") As a result of the present announcement, the preference shares will each acquire a vote. Seeing that under its present capitalisation, the preference shares of the company number 2,849,135, as against 1,300,000 ordinary shares, it follows that control of the company must pass into the hands of the preference shareholders. As Lord St. Davids, representing certain preference shareholders, has indicated, this change is likely to be followed by further action to put the finances of the group in order.

Elder Dempster.—The accounts of this subsidiary of the Royal Mail group for the year ended December 31st last fulfil the glowing predictions that were made. Gross profits, which for the last ten years have fluctuated between £500,000 and £580,000, have declined this year to £306,504, while net revenue, after deduction of all fixed charges, stands at £201,504, compared with £447,106 for 1928 and £425,294 for 1927. This sum is insufficient to cover even those preference dividends which the directors have decided to pay, and though the final dividend is passed on both the 6 per cent. and 6½ per cent. preference shares, it has been found necessary to draw on the carry-forward to the tune of £15,621. In the circumstances there is naturally no dividend for the ordinary shareholders, who received 4 per cent. in 1928.

	Years ending December 31, 1927. £	1928. £	1929. £
Net profit	425,294	447,106	201,504
Brought forward	127,418	139,527	142,838
Preference divid'nds	405,265	410,875	217,125
Ordinary capital:

Carried forward	139,527	142,838	127,217

The directors state that "the losses of subsidiary companies making losses have been charged against the carry-forwards of those companies where such are available, or against this company's investment reserve." As the latter does not appear in the balance sheet as a separate item, the information throws singularly little light on the extent to which subsidiaries may have proved to be a liability during the year. The form of the balance sheet has at last been subjected to considerable revision in the right direction, and the changes made should assist interpretation when the publication of next year's balance sheet makes comparison possible. Meanwhile, it is of interest to note that investments, which last year appeared with "shipping" and "plant" in one item, are now shown separately and account for £11,744,246 out of a fixed assets total of £12,263,000. These investments, many of which no doubt consist of holdings in other companies of the Kylsant group, are included in the balance sheet at their book values, which, according to the auditors' report, "are considerably in excess of their present values under existing conditions." Shareholders must call on their reserves of patience, pending the publication of more detailed information.

Globe Telegraph and Trust.—The report of the Globe Telegraph and Trust Company, which specialises in cable and telegraph investments, is interesting because of its large stake in Cables and Wireless, Ltd., acquired in exchange for its holdings in the Eastern cable group. The published list of investments shows that the company holds £4,823,359 5½ per cent. preference stock, £3,131,884 7½ per cent. "A" ordinary stock, and £378,926 "B" ordinary stock of Cables and Wireless. The balance-sheet value of these stocks is given as £2,859,763, out of a total of £4,135,452 for the whole of the company's investments. The present market price, of these Cables and Wireless holdings, even at the present low levels of 87 for the preference, 36 for the "A" ordinary, and 16½ for the "B" ordinary stocks, is £5,386,322. The directors explain that the enlarged powers of investment which the company now holds—enabling it to cover the electrical industries as well as communications—has led to certain changes in securities, and that the dividends credited are not the full amounts which will accrue in a normal year. The results for the past three years are as follows:—

	May, 1928. £	May, 1929. £	May, 1930. £
Net income (after tax)	343,288	347,390	259,439
Do., after net pref. divs.	256,347	260,449	173,177
Percentage earned	10·9	11·1	7·3
Percentage paid (free of tax)	10	10	10
Carried forward	52,322*	77,370	17,460†

* After appropriation to reserve of £20,000.
† Including income tax recovered, £2,313.

The reduction in profits may be explained partly by the fact that on its £3,131,884 7½ per cent. "A" ordinary stock in Cables and Wireless it has not yet received a dividend. The £10 ordinary shares of Globe Telegraph are quoted in the market at £18⅛, as compared with a high level of £29 1/16 last year and £23⅜ this year.

The Affairs of R. E. Jones.—At long last it would seem that the long dispute, in which the directors of this luckless company are involved, may be in sight of settlement. Following the announcement of the result of the poll taken at the extraordinary meeting held on April 17th, Mr Justice Clauson put forward the suggestion that in view of the unsatisfactory nature of the result a further extraordinary meeting should be called, prior to which each party to the dispute should issue one circular only. In pursuance of this advice a fresh meeting was fixed for June 25th, at which shareholders would have a final opportunity of expressing their wishes in unequivocal terms. Each party issued its circular, one being in the names of Mr A. Batchelor, Sir N. Grattan Doyle, Mr A. J. Howell, and Sir T. G. Jones, and the other appearing over the signatures of Messrs J. Moxon and T. Bickerton. In the former document the four directors proposed to invite Sir Francis Towle, of Gordon Hotels, Ltd., to take over the catering establishments of R. E. Jones, including the Piccadilly Hotel. Sir Francis, they declared, would be willing to rely for his remuneration upon an equitable share of any increased profits over and above the average profits of the company's catering establishments during the last three years. In addition, Gordon Hotels, Ltd., would guarantee the average profits of these catering establishments for the past three years, during the continuance of their management agreement. Neither Sir F. Towle nor any representative of his company would be on the board of R. E. Jones, his duties being confined solely to management. The signatories were apparently converted to the idea of a reduced board, and proposed a maximum of seven and minimum of five, instead of a maximum of twelve and minimum of seven directors. Meanwhile, in their counter circular, Messrs Moxon and Bickerton reiterated their previous condemnation of the alleged past inertia of the present board, and held fast to their proposal that Mr R. A. R. Field, of Slaters and Bodega, should be appointed chairman and managing director. The extra-ordinary general meeting duly took place on Wednesday, and all the resolutions of Messrs Moxon and Bickerton were carried on a show of hands by enormous majorities. As before, a poll was demanded, and it remains to be seen whether, in the event of the requisite three-fourths majority not being obtained, the present board will continue to remain in office in the face of this categorical verdict.

Drapery Trust, Ltd.—This company's earnings were detrimentally affected by the collapse of the Hatry group last autumn, considerable losses being incurred through the failure of Austin Friars Trust, Ltd. Gross revenue for the financial year ended May 31, 1930, is down by £20,643 at £381,336. The fact that this year interest absorbed £56,269, while last year no such payment was required, helped to depress the net profits still further, and the total was £59,452 lower at £285,795. After paying the preference dividend of 7 per cent. the directors recommend a payment of 7 per cent. on the ordinary shares, on which 7.4 per cent. was earned. This leaves £12,795 to be added to the amount carried forward, now standing at £147,265:—

	(Years ended May 31) 1928. £	1929. £	1930. £
Total receipts from dividends and interest (less income tax) and transfer fees	334,235	388,380*	381,336

Increase or decrease in carry-forward	−56,376	+ 3,247	+ 12,795

* After setting off £68,400 income tax recovered from dividends paid.

The investments of the company have decreased by £104,897 to £4,638,334, while debtors rose by £43,480 to £67,121, and loans to a subsidiary fell by £13,455 to £329. Loans outstanding reveal a decline of £20,000, while the bank overdraft is down by £36,252 to £3,243. At the same time, a loan from a subsidiary is £123,881 lower at £1,876. In their report the directors state that full provision has been made for the loss incurred through the failure of Austin Friars Trust, and though claims have been made against the company in respect of irregular certified transfers and transfer receipts, it is the belief of the company's legal advisers that these can be successfully resisted. The ordinary shares are not quoted.

Anglo-Argentine Tramways.—Unfavourable weather conditions, which were responsible for a substantial decrease in the wheat and linseed crops and for a loss of nearly 30 per cent. in the maize crop, are cited as a contributory cause of the lower profits earned by this South American company during 1929. A decline in passenger traffic is also to blame, however, since the number of passengers carried has fallen from 570 millions in 1928 to 556 millions for the current year, and passenger receipts from £4,637,194 to £4,520,572. Gross receipts for 1929 stand a £4,602,117, a drop of £117,063 on the total for the previous twelve months. Working expenses, at £3,574,596, amount to 75.17 per cent. of the receipts, whereas last year's figure of £3,693,048 represented only 73.50 per cent. of receipts. After deduction of debenture interest and all fixed charges, net revenue for the year registers a drop of £19,165 at £364,547. The dividend on the 5 per cent. preference shares takes £176,000, while that on the 6 per cent. preference shares absorbs a further £183,000, leaving £91,475 to be carried forward, against £85,928 brought in.

Year ends Dec. 31.	1927. £	1928. £	1929. £
Gross receipts	4,658,618	4,719,180	4,602,117
Working expenses	3,646,978	3,693,048	3,574,596
Interest, fees, etc.	30,841	26,044	5,890
Debenture interest, etc.	668,080	668,464	668,863
Net revenue	374,401	383,712	364,547
Brought forward	45,815	61,216	85,928
5% preference dividend	176,000	176,000	176,000
6% preference dividend	183,000	183,000	183,000
Carried forward	61,216	85,928	91,475

The company appears to be carrying a smaller burden of creditors this year, the item of £1,049,029 representing a drop of nearly a million on last year's figure, while a contingencies reserve of £774,040 has been created, bringing the total reserve account to £1,306,476. Cash at the bankers and in hand appears at the depleted figure of £28,801, compared with a previous amount of £461,470. Traffic conditions in the city of Buenos Aires and the competition of omnibuses are again blamed for the loss of traffic, though shareholders certainly appreciate by this time that these factors are likely to prove of a fairly permanent character. More hope may perhaps be entertained with regard to the proposed revision of tariffs, which, since the previous scheme was turned down by the local authorities, has been placed before the council in a new form.

Stanton Ironworks.—The improvement in the conditions of the iron industry in general, and of this Midland company in particular, envisaged in the last report of the directors, has to some extent materialised. Net profit for the year ended March 31st last totals £150,356, after deduction of all charges, including the usual £50,000 set aside for depreciation. This result represents an increase of £44,320 on last year's revenue, while it exceeds the figure for 1928 by a substantial amount. After deduction of preference dividend, the ordinary capital has earned £129,204, sufficient at last to cover the ordinary distribution of 10 per cent., tax free, which has been maintained

The balance sheet reveals several features of interest. The item of £235,000 which appeared last year as bank overdraft in connection with capital expenditure has now disappeared. Creditors are slightly down, though current liabilities are still not covered by available assets. Reserves are a strong feature, standing at nearly £750,000, or half the issued capital. This year, also, the omnibus item of £3,004,763, which appeared in the last balance sheet as fixed assets and shares in associated companies combined, has been divided into its component parts, which together reveal a small decrease. In a hopeful addendum to their report the directors state that the rebuilding of the company's blast-furnace plant is now practically complete, while the centrifugal plant for making iron pipes has been operating successfully throughout the year. Indeed, though the company continues to be favoured with a satisfactory demand for its products, the recent measures of rationalisation would seem to be chiefly responsible for the gratifying improvement of the past financial year.

Barclay Perkins and Company, Ltd.—Last year was the first period in which this large brewery showed the effect of its issue of new capital during 1928. Gross trading profit was £44,810 greater at £377,801, while interest on investments at £109,565 revealed an increase of £89,414. Other slight increases in revenue caused the net profit to be £95,980 higher at £305,740, after paying debenture interest, which accounted for £26,538 more than in 1929. After paying the preference dividend, the directors have declared a dividend of 11 per cent. on the ordinary capital, on which 12.9 per cent. was earned.

* Calculated on original capital. † On new capital.

During the year the capital was increased by £34,368 to £1,784,122 in the ordinary class and by £36,000 to £756,000 in the preference class. By the issue of £249,000 in 5 per cent. debentures, the bank loan has been lowered by £240,000 to £30,000. In the previous balance sheet "premises" and "plant" were shown together, but are now separate items, standing at £563,114 and £277,471 respectively, an aggregate increase of £33,885. The same applies to "properties" and "loans to publicans," which show a combined increase of £25,663 at £3,015,452 and £558,934 respectively. "Stocks" and "loose plant," standing respectively at £251,930 and £175,366, together reveal a decline of £72,863. As these assets were previously shown in pairs, it is impossible to state how the financial position compares with that of 1929, but on March 31st last there was a surplus of liquid assets over current liabilities of £307,418. Creditors dropped by £84,057 to £138,765, while debtors are down by £28,397 to £166,623. The ordinary capital is secured by net tangible assets of 30s. 4d. per £1 share fully paid, and at their present price of 27s. 6d. per share, the ordinary shares yield £8 8s. 7d. per cent.

Bechuanaland Exploration.—Our mining correspondent writes:—This finance enterprise, which has a very creditable dividend record, did not fare quite so well in the year ended March 31st last as in 1928-29. Still, the profits are sufficient to permit the payment of 7 per cent., the same as for 1926-27 and 1927-28, albeit comparing with 8 per cent. in respect of 1928-29. The shrinkage in net earnings from £37,200 to £26,200 occurred in face of a considerable reduction in the amount allowed for depreciation and development; it may doubtless be attributed to the less favourable market conditions which prevailed. Stocks and shares now figure at the enhanced total of £144,100. The great bulk have a quotation, the aggregate substantially exceeding the balance-sheet valuation. The financial position is quite good. The shares appear a reasonable speculative holding. They are priced at 9s., or 1s. below par value.

Aramayo of Bolivia.—In view of the fall both in tin and silver, it is a little surprising to find that the profits of 1929 exceeded those of the previous year, the net surplus being 6,253,000 Swiss francs against 4,801,100. Evidently the decline in prices of the products was more than offset by the increased output and—probably—saving in expenses. A bonus of 5 per cent. is now declared, making a total of 25 per cent. upon the 25,000,000 francs against 20 per cent. on 21,000,000 francs and 10 per cent. on 4,200,000. Twelve months ago 250,000 francs was placed to reserve, which on this occasion receives nothing. The company is restricting its output of tin, and no distributions have so far been made on account of 1930. For full details of the results the meeting must, as usual, be awaited.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Mexican Railway, Ottoman Bank, Bank of British West Africa, Bleachers' Association, British Empire Trust, General Electric, Telephone Rentals, J. Lyons and Company, Decca Records, Tanah Datar Rubber, Boots, Beecham's Pills, Shell Transport and Trading, Scribbans and Company, Wm. Cory and Son, and Taquah and Abosso Mines. At the annual meeting of the General Electric Company, the chairman, Sir Hugo Hirst, made an important announcement with regard to the company's Australian policy, the proposed change in

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"
6, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

.....

which may be regarded as the fruit of Sir Hugo's visit to Australia as a member of the Economic Mission. In view of the fact that Australia is desirous of setting up an electrical industry of her own, the General Electric Company is likely to establish itself in the Commonwealth. To meet the situation, a conference has been held with certain colleagues in the trade with a view to joint action, and a further announcement is likely to be made in the near future. Sir Hugo also expressed his assurance that shareholders would continue to support the board in their endeavour to preserve British control of the company. Presiding at the annual meeting of the Bleachers' Association, Sir Alan Sykes told shareholders that in India the improved seasonal demand for the company's goods in the first three months of 1929 gave place to a lower level of trade throughout the summer, and in the last quarter of the year following the cotton stoppage their exports to that market were only 75 per cent. of the volume in the corresponding period of 1928.

CAPITAL ISSUES.

There is as yet no sign of any general extension in the activities of the new capital market. The *Marks and Spencer* issue of debenture stock and cumulative preference shares, notice of which appeared in the *Economist* of June 21st, p. 1400, proved to be the sole offer of the week. Public interest in the fortunes of this prosperous company has increased of late, and both issues were largely oversubscribed.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to June 21, 1930, £167,435,573.

COMPANY MEETINGS, &c.

THE OTTOMAN BANK.

CONDITIONS IN TURKEY AND THE NEAR EAST.
BUDGETARY AND MONETARY SITUATION.
SIR HERBERT LAWRENCE'S REVIEW OF POSITION AND PROSPECTS.

The annual general meeting of the shareholders of The Ottoman Bank was held, on the 24th instant, at Winchester House, Old Broad Street, London, E.C.

General the Hon. Sir Herbert A. Lawrence, G.C.B., occupied the chair.

The Secretary (Mr W. P. Sheppard) read the notice convening the meeting.

The Chairman said: 'Ladies and gentlemen,—I have been informed that this meeting is properly constituted, and I presume that it is your pleasure that the report and balance sheet circulated among you should be taken as read. (Agreed.) I think it will be of interest to give you a short review of the conditions prevailing in the countries which constitute our field of action.

TURKEY'S EXPORTS AND IMPORTS.

In Turkey the past year has been difficult, although the various crops showed in quantity a general increase over those of the previous year. The production of wheat was 2,000,000 tons, against 1,600,000 in 1928; cotton, 130,000 bales, against 110,000 bales; and tobacco, 40,000,000 kilograms, which was a yield above the average. An exception, however, was the crop of nuts, which is ordinarily an important export, the harvest of which was almost entirely destroyed on the eve of maturity. This meant a loss of at least £1,000,000 to the credit side of the commercial balance of the country.

Two other factors exercised a depressing influence on Turkish exports. One factor was the world depression in agricultural prices, a serious matter for a country which is purely agricultural. The second factor, more particularly Turkish, was the increased competition which its exporters encountered on the world markets for products which had always been essentially associated with Anatolia. In the tobacco market Greece and Bulgaria, in the fruit market California and Australia, in the mohair market America and South Africa, in the carpet market Greece again, have all intensified their production of commodities for which Turkey was previously the prime market.

The results can be seen in the decrease in the value of Turkish exports. Statistics provided by the Customs show a fall from £T.192,000,000 in 1925 to £T.173,000,000 in 1928, and a further fall to £T.155,000,000 in 1929.

It is now recognised in Turkey that a serious effort is needed to encounter this tendency, by standardising the quality of its products. The results of this are seen already with regard to tobacco, thanks to the intelligent initiative of the administration of the monopoly.

With regard to imports, the year 1929 was also unfavourable, because, as we foreshadowed in our remarks last year, large quantities of wheat had to be imported. Further, to avoid the increase in the Customs duties which can into force during the year, there were excessive imports of manufactured goods resulting in an increase of £T.32,000,000 under this heading.

The effect was inevitable, leading to numerous failures, not only in Istanbul, but also in the country districts.

This situation has necessarily restricted the operations of the bank.

DEFICIT IN THE COMMERCIAL BALANCE.

The commercial balance of Turkey for the year shows a deficit of £T.100,000,000, as compared with £T.50,000,000 in 1928. But this is not all. Last year the Turkish Government began to provide in its Budget for the service of its share in the old Ottoman Public Debt, and had to provide the moneys for this service in currencies outside its own country. At the beginning of each month from June, 1929, it paid in to your establishment the provisions for the coupons due for payment on November 25, 1929, and May 25, 1930.

The Government had also to provide the annuity due on the purchase of the Anatolian Railway, and finally the railway programme which was actively carried out on the lines Angora-Sivas, Samsoun-Sivas, and four other railways entailed heavy payments abroad.

GOVERNMENT AND CURRENCY CRISIS.

These various elements produced, towards the end of last year, a sharp depreciation of the national currency. There was a moment of crisis, such as other countries with unstabilised currencies have experienced, but the Government took prompt steps to alleviate the situation. It imposed an economic limitation on exchange operations, and gave a good example by strict economy in administrative expenditure. At the same time, with the assistance of a consortium of banks, it formed a *masse de manœuvre* in order to protect the exchange.

To these remedial measures we contributed our share by extending the credit of £400,000 sterling, lent to the Government over and above our obligations under the Concession. The crisis was duly met without disturbance to the Budget and without seriously affecting internal prices, but it became clear that steps were urgently needed to end the instability of the Turkish pound, and to arrive at an equilibrium in the Budget. We had the honour to be consulted by the Minister of Finance, and we took the occasion of submitting to him the necessity of action on these lines. The Government, in addition to the measures already taken with regard to foreign exchange, studied the possibility of stabilising the currency and constituting a central bank of issue. At the same time it laid before the representatives of the bondholders the effect which the situation could not fail to produce on the External Debt Agreement signed in Paris on June 13, 1928.

A month ago we had the great satisfaction of learning that the Turkish Government, for the purpose of studying the different elements of the budgetary and monetary situation, had invited a study and report from a specialist of world-wide repute, M. Rist, whose advice has been responsible in a large measure for the monetary restoration of Europe.

POSITION IN EGYPT.

In Egypt the political situation has changed considerably since our last meeting. A new Government has been constituted and Parliament restored, but the result of the efforts of these two bodies cannot yet be tabulated. The Government hopes to obtain, by a considerable increase in Customs duties, an improvement in receipts of about £E.3,000,000 annually, to be utilised for the creation of national industries. During 1929 there was a steady fall in price of Egypt's principal product, cotton. The crop for 1928–29 exceeded 8,000,000 kantars, and it is estimated that the crop for 1929–30 will be even greater.

PALESTINE AND CYPRUS.

The branches of the Palestine and Transjordan group have, on the whole, progressed during the year, and the results have been satisfactory. The riots of August last have had, however, a disturbing effect on the commercial community. The improvement of the general economic situation in 1928 and early 1929 was not maintained, and though the orange and grain crops were above the average, prices wereu nsatisfactory and exporters suffered accordingly. Reports of the 1930 agricultural situation are satisfactory.

In Cyprus further economic progress was made. The total revenue of the colony rose from £806,553 to £849,675, and the surplus increased to £41,614.

From an agricultural point of view the year was satisfactory, but the external world conditions retarded exports, particularly of carobs and raisins.

The beneficial effects of the co-operative credit movement, financed by the Agricultural Bank of Cyprus, Ltd., in which we are largely interested, have steadily increased, through the lack of exports has temporarily affected the liquidity of the co-operative societies.

IRAQ, PERSIA AND THE LEVANT.

It had been hoped that trading conditions in Iraq during 1929 would have been better than during the previous year, but agriculture suffered from the flooding of the Euphrates, which damaged about 15 per cent. of the crops, and the cotton crop was also damaged by disease.

In Persia the trading conditions were satisfactory during the first half of the year, but during the latter part were affected by the fall in value of the kran and the substantial decrease in the American demand for carpets of Persian manufacture.

Important progress was made in the construction of the railway line linking up the north and south of Persia, but subsequent difficulties between the Government and the contractors resulted in a temporary suspension of operations.

In the Levant countries under French mandate, the year 1929 was marked by a very abundant harvest, in anticipation of which there was considerable commercial activity, but this was nullified by a fall in price and a restriction of markets which made the disposal of the harvest a matter of difficulty. Our filiale, the Banque de Syrie et du Grand Liban, nevertheless increased the volume of its operations, and the profits realised permitted the maintenance of a dividend of 11 per cent.

ECONOMIC CRISIS IN GREECE.

In Greece a serious economic crisis occurred, as a result of which commerce and industry generally suffered. Signs of improvement did not appear until the beginning of the present year. The British-French Discount Bank, Limited, which we established in Athens in 1928, was compelled under these circumstances to restrict its activities; thanks to a prudent policy, the bankruptices and failures only affected the results to a very moderate degree and a profit was realised, which was carried forward to the present year. I recall to you that this bank only began to function in May, 1928, and last year was its first complete year. The branch in the Piræus, which we opened in 1929, we believe to be promising.

The branches which our own establishment maintains in Salonica and Kavalla naturally felt the results of the stagnation which was prevalent on all the Greek markets.

CONTINUED ACTIVITY IN YUGOSLAVIA.

In Yugoslavia the reorganisation of the Banque Franco-Serbe, although its effects could only show themselves during part of the year, has already given excellent results; not only has our new filiale placed its assets on a sound basis, but it has displayed an activity which has led at the same time to an increase in its reserves and a corresponding development in the employment of its funds. Circumstances in general were in favour of the bank; Yugoslavia is essentially an agricultural country, and last year the wheat and maize crops were exceptional. The commercial balance, which showed a deficit in 1927 and 1928, showed last year a balance on the right side of 300,000,000 dinars. This resulted in a considerable increase in the reserves abroad of the National Bank and a continued stability of the dinar, the legal stabilisation of which is now approaching. The abundance of money has favoured continued business activity, by which our filiale has profited. Its accounts show a net profit, which has been carried forward. In October, 1929, it negotiated with the Administration of Monopolies a credit of 100,000,000 French francs to finance the tobacco crop.

As in preceding years, our offices in London and in Paris have contributed their share to the results obtained, although the cheapness of money has affected the conduct of their business. As you will notice, there has been a further development in the acceptances of the bank.

PROFIT AND ALLOCATIONS.

The balance sheet which we submit for your approval has been drawn up with all prudence. Those elements on the credit and debit side which the exigencies of our business compel us to maintain in currencies other than those of the balance sheet have been converted into pounds sterling at the rates ruling on December 31, 1929.

As drawn up the accounts show for the year 1929 an available balance of £229,069, approximately the same as last year. With a carry-forward of £23,248, the sum at our disposal amounts to £252,317.

We propose to you a division of this sum into two different parts, one for distribution to the shareholders, the other to reinforce our provision for contingencies, in continuation of the policy which has had your approval during recent years. If you are in accord with our recommendations a dividend of 5s. per share will be distributed, which in Paris will be paid free of tax. This dividend will be payable from June 30 next in Istanbul, London, and Paris. From the remaining amount of £127,318 a sum of £100,000 will be placed to provision for contingencies, and the balance of £27,318 will be carried forward.

As you will observe in the report, Viscount Goschen has been nominated, subject to your ratification, a member of the general committee. I am sure you will approve our decision in inviting our eminent colleague, as soon as he was free from his high office in India, to fill again the place which he vacated in 1923.

TRIBUTE TO STAFF.

I should not like, ladies and gentlemen, to end this speech without giving once more to our staff the thanks which are due for their continued loyalty and service to the bank. With this, I am sure, you will be glad to associate yourselves. (Hear, hear.)

Now, ladies and gentlemen, I beg to move: "That the report and accounts now read be received and adopted; that the dividend for the year ended December 31, 1929, be fixed at the rate of 5s, per share, and that this dividend be payable in Istanbul, London, and Paris on June 30, 1930." Before I put the resolution to the meeting I am at your disposal to answer any questions addressed to me. M. Raoul Mallet seconded the motion, which, in the absence of question or of comment, was put to the meeting and carried unanimously.

The Chairman next moved: "That Viscount Goschen be and he is hereby elected a member of the general committee."

The Earl of Bessborough, C.M.G., seconded the resolution, which was unanimously approved.

The Chairman also proposed: "That Sir Guy Granet, Sir Albert Stern, Monsieur Jean Boissonnas, Monsieur Félix Vernes, the Earl of Bessborough, and Mr A. C. Gladstone be and they are hereby re-elected members of the general committee."

Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., seconded the resolution, and it was carried unanimously.

Mr G. T. E. Cockerill proposed a vote of thanks to the chairman for the very able and clear way in which he had described the conditions which affected the bank, and to the committee of management and the staff, both at home and abroad, for their good work during the past year.

Mr A. Bradbery seconded the motion, which was unanimously accorded; and the Chairman having briefly acknowledged the compliment, the proceedings terminated.

TANAH DATAR RUBBER ESTATES, LIMITED.

SUCCESSFUL YEAR—INCREASED PROFIT.

The eighteenth annual general meeting of Tanah Datar Rubber Estate, Ltd., was held, on the 25th instant, at 7 Martin's Lane, London, Mr W. Arthur Addinsell, the chairman, presiding.

Mr J. Lewis, on behalf of the secretaries, Messrs Bright and Galbraith, Ltd., read the notice convening the meeting and the report of the auditors.

The Chairman said: The pleasure of the knowledge that the profit earned exceeded that of the previous year is to some extent overshadowed by the conditions now ruling, because, at existing market rates of rubber, there is no profit to the majority of producers. Your directors feel justified in recommending a dividend of 5 per cent. in view of the increased profit and we carry forward £4,369, subject to estate staff commission, as compared with £1,332 brought in from last year.

The profit was arrived at after charging £1,623 for depreciation of mature areas. Our property and development account has been written down by this process in recent years to the extent of £8,643. As a consequence the financial position of the company at the moment is quite sound.

The increase in the net profit resulted mainly from a higher output; also we were successful in securing a very satisfactory average price for our produce. The estate is being administered on economical lines, and is in good order throughout.

Last year I referred to the statistics of consumption for the then current year. I think my view of the increased ratio outside America was fulfilled. Unfortunately, the outlook in America took an unfavourable turn, and there has been no improvement to date. As a consequence, the world's consumptive power has been insufficient to take all the rubber produced, and surplus stocks have accumulated. Last week I referred to the possibility of intervention by the governing authorities in the East—primarily for the protection of local communities and incidentally to help the rubber industry. So far as I can see, it is only by regulating output by compulsory measures that there is any chance of adjusting the existing unhealthy state of affairs.

There are some who talk glibly about the survival of the fittest, but those speakers overlook the fact that, although some of the present owners of estates may not survive, the rubber trees would still be growing on the estate, to be acquired at bankrupt prices, and in the hands of new owners most probably forming a greater menace to the industry.

The report and accounts were unanimously adopted and the proposed dividend declared.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 6 *Bouverie Street, Fleet Street, London, E.C.*4.

BLEACHERS' ASSOCIATION, LIMITED.

RESULTS OF A DIFFICULT YEAR.

MANY ADVERSE FACTORS.

SIR ALAN SYKES REVIEWS THE POSITION AND PROSPECTS.

The thirty-first ordinary general meeting was held at Blackfriars House Assembly Rooms, Manchester, on Friday, June 20, 1930, at 12 noon. The Chairman, Sir Alan J. Sykes, Bart., in proposing the adoption of the report and accounts, said :—

Ladies and gentlemen,—Before I begin my speech I wish to refer to the loss which our association has sustained by the death of the chairman of our finance committee, Colonel George Hesketh. Colonel Hesketh had been a member of our finance committee for twenty-four years, and chairman of it for the last fourteen years. His wide experience in the cotton trade was always at our disposal, and by his death we have lost a trusted adviser and valued friend.

THE ACCOUNTS.

Turning to the accounts, you will find that these have been presented in a form which is somewhat different from that employed in previous years. The alterations have been necessitated by the passing of the Companies Act, 1929. A valuation of the assets of the company has been made, and the balance sheet has been remodelled in accordance with that Act.

In previous years the figures of the subsidiary companies of the association were incorporated in detail in relevant sections of the balance sheet, but this year these figures appear in the second and third items amongst the properties and assets of the association under the heading of shares in subsidiary companies and advances to subsidiary companies.

The first of these two items, which includes the value of the good-will and trade marks of the association, which are the properties of the subsidiary companies, amounts to £744,212, and this item was in previous years included in the large item of property and assets.

The second of these items, amounting to £1,303,854, represents advances to the subsidiary companies in the form of working capital, and consists of the debtors of those companies and the stock in hand less the creditors. Items appearing under these heads in the balance sheet are now correspondingly reduced.

The investments stand at approximately the same figure as a year ago. The reserve standing to the credit of the investments contingency fund of £57,635 is more than sufficient to meet the market depreciation.

Among the creditors it will be noticed that the amounts owing to our bankers have been reduced during the year by a sum of over £200,000, thereby improving the cash position by that amount.

During the year the general reserve fund has been increased by £15,813, being the premium on shares issued during the year, and the directors propose to ask the shareholders to increase this by a further sum of £59,187, which will bring the total of the general reserve fund to £1,050,000.

PROFIT AND ALLOCATIONS.

With regard to the profit and loss account, the net profit for the year shows a decrease of £133,716, and this reflects the difficulties that have been met with by the association during the past year, to which I shall again refer later in my speech. The available balance, including the amount brought forward from 1929, amounts to £749,209, showing a fall in the available balance of £148,971.

Before arriving at this figure you will see from the accounts that the sum of £464,964 has been spent on repairs, maintenance, and reorganisation of works, and the shareholders can be assured that this money has been spent in such a manner as to ensure that their property and assets have been kept in a high state of efficiency.

After deducting an interim dividend paid on the ordinary shares during the year of fourpence per share, the directors recommend that after providing for the preference dividend for the year to March 31, 1930, amounting to £136,613, a final dividend on the ordinary shares for the year be paid at the rate of one shilling (1s.) per share, making with the interim dividend a total of one shilling and fourpence (1s. 4d.) per share for the year.

Out of the balance remaining the directors propose to add £59,187 to the reserve fund (making it £1,050,000) and the sum of £19,413 to the superannuation fund (making it £400,000) and to carry forward a balance of £279,414 (as compared with £282,818 a year ago).

THE PAST YEAR.

In addressing you last year I permitted myself an expression of moderate optimism with respect to the future of our trade, basing my opinion largely upon the improvement in the trade in bleached goods in the first quarter of the year 1929, and upon the signs of a general improvement in British industry which were then apparent. At the same time I stressed the importance to us of the maintenance of the purchasing power of our consuming markets, and, on an earlier occasion, I had drawn attention to the paramount necessity of avoiding an appreciable increase in the value of gold in the interest of our exporting industries. It will, perhaps, be interesting if for a moment I briefly review the events affecting the results of our last financial year in the light of the expectations which we felt justified in holding a year ago.

In the year 1929-30 the total exports of bleached goods recorded by the Board of Trade were 1,244 million square yards, compared with 1,376 million square yards in 1928-29, a decrease of 132 millions. More than one-half of the decrease is accounted for by reduced exports to India, which were less by 79 million yards (13·5 per cent.). The decrease in exports to China amounted to 25 million yards (24·5 per cent.) and to the Dutch East Indies to 17 million yards (27·4 per cent.). The last two markets account for more than 30 per cent. of the decrease and with India account for more than 90 per cent. of the total reduction.

The improved demand which was manifest in the first quarter of 1929 continued, although slightly below the level of 1928, until the summer, but in the third quarter of the year a severe check was administered to our trade by the unfortunate stoppage in the spinning and weaving industry.

Of the decrease of 132 million yards in our exports of bleached goods, to which I have just referred, no less than 68 million yards occurred in the last quarter of 1929, and in the first quarter of 1930 we lost a further 52 million yards, making a decrease in the last half of our financial year of 120 millions out of the total decrease of 132 million.

ADVERSE FACTORS.

But there have been forces at work, other than the cotton stoppage of last August, which have been even more detrimental to the prosperity of the cotton trade than that ill-timed dispute.

There is no need for me to remind you of the unparalleled stock market boom in the United States of America which culminated in a crash in October and November last year—a cataclysm which it is now generally believed marks the end of a major business cycle—and which has accelerated in a marked degree that movement of world deflation which has been in operation for some years past.

The inevitable sequence to these events is to be seen in a world-wide reduction of purchasing power which, added to the already serious decline in the prices of agricultural produce and raw materials, has gravely impaired the ability of consumers to absorb the output of our industry. For it must be remembered that the great bulk of our production is taken by those whose means are strictly limited, and who are dependent upon agricultural pursuits for their livelihood.

CONDITIONS IN INDIA.

In India, the improved seasonal demand in the first three months of 1929 gave place to a lower level of trade throughout the summer, and in the last quarter of the year following the cotton stoppage our exports to that market were only 75 per cent. of the volume in the corresponding period of 1928. Trade in the first quarter of 1930 showed the usual seasonal expansion, but did not reach the level of the previous year by some 5 per cent. or 6 per cent.

Since the end of the financial year trade with India has gone from bad to worse. The disturbance to business, due to the uncertainties of tariff revision, has been succeeded by an outbreak of lawlessness, in which determined efforts are being made to prejudice the trade of this country by methods which ultimately must react to the detriment of the natives of India themselves.

Without expressing any opinion upon the political or other issues involved, I have no hesitation in saying that the situation is one that demands the utmost firmness on the part of the authorities, as much in the interest of India herself as in those of the countries who trade with her.

CHINA.

In China the boycott of Japanese cloth, which had assisted our trade in the latter half of the previous year, was removed after April, 1929, but the volume of our exports was well maintained throughout the first half of the past financial year. Since then our trade with this market has been seriously curtailed by the extraordinary fall in the price of silver and the consequent depreciation in exchange. The average spot price of silver which in March, 1929, was 26d. per oz., declined continuously throughout the year, but more rapidly since the autumn, to an average in March this year of 19 $\frac{15}{16}$d. and recently to less than 16d. The purchasing power of China has been effectively reduced by one-third by this decrease in the value of the monetary unit. Additional difficulties have been created by a recrudescence of hostilities, and throughout the second half of the financial year our exports of bleached goods to China have been less than 50 per cent. of the volume exported in the corresponding period of the previous year.

JAPAN.

Competition from Japan in the Far East should be somewhat less difficult to meet since the return of that country to the gold standard. The consequent appreciation of the yen must have reacted upon her competitive power, as also must the abolition of night work for women and children, but the steps taken by Japanese producers to obviate the effects of the latter and the recent substantial reduction of wages afford evidence of their determination to maintain the position which they have established in the world's markets.

ARGENTINE, BRAZIL, &C.

The conditions to which I have referred are world-wide in their reactions. In the Argentine the effect of the fall in wheat prices was not only reflected in consumption, but through its influence upon exchange rates, involved the suspension of gold payments and a temporary abandonment of the gold standard. In Brazil the decline in the prices of rubber and coffee has hindered business, and further difficulties have been created by tariff revisions. In Malaya the fall in the price of rubber and in that of tin have had important influences, and other Eastern markets than China have been prejudicially affected by the fall in the price of silver. Australia, New Zealand, and South Africa have suffered from the decline in the price of wool, and in Cuba and the West Indies difficulties have been caused by the low price of sugar. The results of tariff revision are to be seen not only in Brazil, but in India, China, Egypt, Turkey, and Australia.

The list of difficulties which I have summarised might be extended, but I have probably said enough to indicate that in the year which has just closed our trade has been confronted with serious obstacles.

WORLD-WIDE CONTRACTION IN DEMAND.

The contraction in world demand has been felt in all cotton manufacturing countries, and although there is no satisfaction to be derived from the contemplation of other people's troubles, it is somewhat reassuring to keep in mind the fact that our major difficulties are not of our own making. From all quarters the reports are the same—over-production, short-time working, unremunerative prices, and an unwillingness on the part of buyers to commit themselves in view of the uncertainty of the outlook.

The fall in the price of raw cotton has tended to discourage purchasing, and we have been witnessing a tug-of-war between the consumers of cotton on the one hand and the growers, backed by the United States Federal Farm Board and the Egyptian Government, on the other.

How far the latter may be successful in maintaining prices above the level dictated by the laws of supply and demand I will not attempt to say, but there is no doubt that within the past six months we have taken a long step on the road which we have been following for some years to lower values, and, if business is to be prosperous, it is necessary that costs of production should be brought into line with these lower values.

The effect of taxation and the cost of social services, which fall in the main upon industry, are important obstacles to this readjustment, and a solution of our difficulties is well-nigh impossible whilst the product of that industry has to bear the cost of maintaining a large section of the employable population in enforced idleness.

RATIONALISATION.

Evidence of the efforts which were being made to meet existing difficulties is to be found in the consolidations which are taking place in the cotton trade, and it will be remembered that the joint committee of the cotton trade organisations has recorded the opinion that large-scale amalgamations will materially assist in that direction.

These steps towards the rationalisation of the cotton trade should facilitate that co-operative action which is being carefully developed by the joint committee of cotton trade organisations, and which is essential if we are to meet foreign competition successfully. The recent formation of the British Cotton Textile Association is a reminder of the unobtrusive but valuable work which the joint committee is doing and in which, I need hardly say, they have our wholehearted support.

I may, perhaps, be forgiven if in referring to the present trend of reorganisation in the cotton trade, I remind you that the principles upon which that reorganisation is proceeding are the same as those that prompted the formation of this association nearly thirty years ago, and the methods of rationalisation, as they are understood to-day, are much the same as those that, with slight modification, have been applied in the management of this association throughout.

Were it otherwise, I am afraid that the accounts which we have laid before you to-day would reveal a very different picture. A result which shows a decrease of only £133,716 in net profit under conditions of reduced output and after substantial reductions in the price of certain classes of work has only been possible by enforcing the strictest economy, and by close investigation and control of costs at every stage of our processes.

It is in this direction that our efforts are being principally concentrated, as we fully realise that reductions in the cost of production must be effected at every stage if the cotton trade is to hold its own, but, as I have told you before, it is not an easy matter in a business where overhead costs form so large a proportion of the total cost and where labour is by far the largest item of expenditure which we incur.

These problems, inherent in our business, are gravely aggravated by the effect of the decline in output, but, however great the difficulties may be, you may rest assured that your directors will continue unremittingly their efforts to secure the maximum of economy compatible with efficiency and the adequate maintenance of your property.

THE OUTLOOK.

I shall not attempt in any way to forecast the future, but you must have realised from what I have already said that the present year has opened under far less favourable conditions than that which has just closed, and, unless there is a very marked improvement, it would seem to be inevitable that the profits of our business must show a further contraction.

For that improvement we must look not only to the dispersal of the clouds which overhang India and the removal of the hindrances to trade with China, but to a general enhancement of world prosperity. In this, a greater stability of the exchange values of commodities is by no means the least important factor. Signs are not lacking that the present depression has almost run its course, but the general consensus of opinion appears to be that recovery will be slow.

Before I conclude my remarks, I want to ask you to allow me to convey your thanks for and grateful appreciation of all the work that has been put in during the last year by all the members of our staff, and by all our employees. It is common knowledge that in bad times such as we have been passing through, the strain on everyone is greater than in good times. And this last year has been no exception to the general rule.

That our results are as good as they are is due to the hard work and loyal co-operation of everyone. The managing directors and headquarters staff have been backed up by the branch managers and all the employees, and I want them to know (and I am sure you do equally with me) that we realise all the hard work they have put in for the association and thank them for it.

With these remarks I now beg to move : "That the report of the directors and the statement of accounts to March 31, 1930, be and they are hereby approved, and the shareholders hereby declare a dividend at the rate of 5½ per cent. per annum on the preference shares to March 31, 1930, and at the rate of 1s. per share on the ordinary shares for the half-year ending March 31, 1930, making, with the interim dividend at the rate of 4d. per share paid in December, 1929, a total of 1s. 4d. per share for the year."

The resolution, which was seconded by Mr A. K. Davies, was adopted.

MR ARNOLD'S VIEWS.

Mr H. W. Arnold then moved : "That the following be and they are hereby re-elected directors of the association—James L. Cross, Arthur K. Davies, Andrew McNab, Alister Reid, Samuel H. Rothwell, John W. Slater, C.M.G., Sir Alan J. Sykes, Bart."

Mr H. W. Arnold said : The Lancashire cotton trade is still faced with the greatest difficulties it has encountered at any rate since the American War. It is being watched by the whole world, and with particular attention by the people of this country. Perhaps for the first time the whole country has realised the magnitude of the cotton trade, and its importance to the country, and the fact that even to-day its exports, which last year were of the value of

£135,000,000, are of far greater value than those of any other ndustry.

We in Lancashire are well aware that our affairs are the object of sympathetic interest to the business community of London and the whole country, and we believe that it is now realised as it has never been realised before, that the prosperity of the whole nation is closely bound up with the solution of our problems.

Such being the case, it is well that those who are so vitally affected and who are watching with every desire to help, and in particular the thousands of shareholders of the Bleachers' Association scattered over England, Scotland, Ireland and Wales, should know that some of those who have the responsibility of conducting the cotton trade are not allowing themselves to be overwhelmed by adverse conditions without a struggle, but that on the contrary they are doing, and have done, much to meet a position of unprecedented difficulty which has arisen from causes over which they have very little control.

SPLENDID WORK OF THE ASSOCIATION.

Few besides those engaged in the direction of the Association—and they are the last people to boast of their achievements—are aware of what the Bleachers' Association have succeeded in accomplishing in the improvement of their technical processes under the guidance of their Department of Scientific Research; in increasing the efficiency of their methods of production and by well directed economy reducing the cost of it—or to express it in other words, by putting into successful operation all that is best in the rationalisation which to-day is on everybody's lips, but which the directors of the association have had in practice and development for years past.

It is the simple truth to say that without these improvements combined with a prudent financial policy which alone has enabled them to be carried out, the results of recent years' workings would have been very different, and that this association also would have been among the lame ducks of the trade. It is not true to say that the association has taken advantage of its position to make exorbitant profits because an examination of the balance sheet shows that in its more prosperous year the return on the whole capital employed was 10·88 per cent., and last year 5·72 per cent. It would give a more accurate view of the position to point out that as the profits of the association over the past four years are on a lower scale than those of the previous four years, despite the amounts spent out of earnings on capital account, it would appear to be the case that the association have passed on to their customers the whole of the large reductions of cost which they are known to have effected.

At least it should be borne in mind by all those interested in the welfare of the cotton trade that if this association had not maintained its efficiency, Lancashire would have been less capable than she is of meeting the competition with which she is faced, and that by improved methods and quality the association is bearing its share in the grim struggle in which the whole of the Lancashire cotton trade is engaged.

Sir John Haslam seconded the resolution, which was agreed to.

Mr Percy Musgrave moved and Mr Percy B. Brown seconded the following resolution: "That Messrs Jones, Crewdson, and Youatt, and Messrs P. and J. Kevan be and they are hereby appointed joint auditors of the association at a fee of £200 per annum, in addition to the amounts paid by subsidiary companies.

The resolution was agreed to.

VOTE OF THANKS TO THE CHAIRMAN, DIRECTORS AND STAFF.

A vote of thanks to the chairman was moved by Mr D. Q Henriques, who said: I think we should be very ungrateful if we left this hall this morning without tendering to Sir Alan Sykes and the directors our very heartiest thanks for his clear and concise speech and for his conduct in the chair, and I think we should all like to join with these expressions of gratitude our thanks to all those, managing directors, the staff, employees, and to everyone who in this extremely difficult period have achieved the excellent results which have been put before us. I hope Sir Alan may long live to enjoy the position that he occupies, of which I think he should be justly proud. For it is, indeed, a proud position to be chairman of Bleachers' Association—perhaps more to-day than in its more prosperous times, for of all the concerns in Lancashire, this is one of the few which by its policy of concentration, by its pooling of good brains, by its economies, and by its financial policy in the past, in good times putting aside something for a rainy day, we have been able to arrive at the results which have been put before us at this meeting.

We have had such a plethora of oratory to-day that I do not intend to say very much.

I, too, remember the early days, when this association began, and I have always somehow or other connected a new epoch—a prosperous epoch—with this association when they bought the works of the late Mr Gartside at Etherow. I think they were truly fortunate in that decision, which brought in Sir William Clare Lees (then a young but not untried man) who has now risen to such a high position in their counsels and administration. They made at that time what I think is the real secret of rationalisation—they made rivals into colleagues.

After all, their record has been a wonderful one. Since the concern began the Bleachers' Association has made 28,000,000 sterling in profits—it has put aside over £11,000,000 for repairs and depreciation, and it has paid in dividends out of the profits nearly £9,000,000 to its shareholders, placing the balance to reserve, and we are getting the benefit of that in the working of the association to-day.

May I, before I sit down, say one word on your balance sheet. It appears under the new Act in a new guise; the old one gave us very little information—the new one, I think, gives us less. But after these results it would be invidious, I think, to pry into the secrets which your balance sheet so well conceals. There was once a witty Frenchman who made the remark that speech was invented for the concealment of thought. I don't know whether he was a holder of shares, but if so, I think he would have extended the scope of his aphorism a little further.

I hope you will disregard all uninformed criticism of the great profits that you make. We, here, will not quarrel with you about the size of your dividends. You, unlike Governments, have no unfortunate public you can tax. Your pension funds, your social services, the comfort and content of your employees are dependent on your profits, and it is their welfare as well as your shareholders', that you hold in your hands. We are quite content to leave it there, and I ask you to join with me in this vote of thanks.

The resolution, which was carried unanimously, was acknowledged by the chairman, and the proceedings then terminated.

BANK OF BRITISH WEST AFRICA, LIMITED.

WIDESPREAD DEPRESSION—POSSIBILITIES IN MOROCCO.

The thirty-sixth annual general meeting of the Bank of British West Africa was held, on the 25th instant, at the offices of the company, No. 37 Gracechurch Street, London.

The Right Hon. the Earl of Selborne, K.G., G.C.M.G., the chairman, in moving the adoption of the report and accounts, said that he had to chronicle a number of official changes since the last meeting.

Sir John Maxwell had retired after long service in West Africa, and had been succeeded by Mr H. S. Newlands. Sir Edward Denham, after a brief experience as Governor of the Gambia, had been transferred to British Guiana in succession to Sir Gordon Guggisberg. Mr H. R. Palmer, C.M.G., C.B.E., the well-known and highly esteemed Lieut.-Governor of Northern Nigeria, had been selected for the Governorship of the Gambia.

Turning to the accounts, he said that their current, deposit and other accounts showed a reduction of £324,000, and there were decreases of £87,000 in the outstanding drafts issued and of £364,000 in the bills for collection held at March 31st. Those were features which would be found in the balance sheets of other banks also, and were the necessary consequence of the deplorable depression of trade.

The profit and loss account showed a profit of £121,821, or £6,509 less; £25,000 had again been transferred to the contingency fund and £25,000 had been allocated against premises and furniture. The balance to be carried forward was practically the same as the amount brought in from last year. He had last year pointed out that the funds in which the bank did business could not escape from the influence of Europe or America, and that if there were a revival of international trade Africa would soon feel the effects and reap the benefit.

Unfortunately, instead of a revival there had been a further setback. Industrial conditions throughout the world were greatly depressed, and the regions in which the board operated had borne their full share of the depression. As an example, since the last meeting, when he alluded to the fall in value of some of the principal exports from West Africa, the downward movement had continued. He now had to record further reductions in the home prices approximating to £10 per ton for palm oil, £4 per ton for palm kernels, £4 per ton for ground nuts, £8 per ton for cocoa, and £62 per ton for tin.

The consequently greatly curtailed purchasing power of the West African Colonies had, of course, decreased the volume of manufactured goods imported from England and elsewhere, and it did not seem likely that the prices, either of raw materials or manufacturers would, within the near future, reach the high levels prevailing during recent years. If any party in the State showed a consciousness of the fact that to-day stringent retrenchments would be more to the advantage of every class in the nation than expenditure on any social or other objects, however excellent, there would be something on which a return of confidence could be based.

CAPITAL and INTEREST

are both lost if your investments fail.

This loss may be avoided by investing in "Globe" Life Assurance, a gilt-edged security not liable to depreciation.

A copy of our new comprehensive prospectus, featuring many attractive schemes, will be sent post free on your request.

THE

LIVERPOOL & LONDON & GLOBE

INSURANCE COMPANY, LTD.

Head Office: 1, Dale Street, Liverpool. | London: *Chief Office:* 1, Cornhill, E.C.3.

Notwithstanding the bad times railway and road construction was still going on in the Colonies, and those constantly increasing transport facilities would be at any rate a permanent asset to the Colonies concerned. New branches of the bank had been opened at Nkawkaw, Oda and Takoradi in the Gold Coast Colony, and at Gusau in Nigeria, where their new premises at Enugu had been completed, and they had now a total of 59 branches.

In Morocco great developments were taking place both in the French and the Spanish zones, and the board hoped that in the next few years they would see a considerable expansion in the trade of Morocco as a result. He regretted to say, however, that the British share in Moroccan trade still remained disappointing. Why that was so it was not easy to understand, as there were no hostile tariffs to bar the way to British manufactures.

The report and accounts were unanimously adopted.

BEECHAM'S PILLS, LIMITED.

"A BETTER SELLER THAN EVER."

The second ordinary general meeting of Beecham's Pills, Ltd., was held, on the 25th instant, at Hotel Victoria, Northumberland Avenue, London, Mr Philip E. Hill (chairman of the company) presiding.

Mr B. L. Hobrow, A.C.A., having read the notice convening the meeting and the report of the auditors,

The Chairman said: The profits for the year ended March 31, 1930, amount to £202,887 8s. 9d., which is about £2,000 less than the comparable figure for the previous year, and, under all the circumstances, can only be regarded as satisfactory.

When I had the pleasure of addressing you last year there seemed every prospect of 1929 showing us increased profits. Unfortunately, unforeseen occurrences entirely outside the control of your board have made this impossible—trade depression, reduced spending power of the public in this country and the difficulties which have arisen in India and Australia. These conditions are common to the majority of industrial businesses, but in addition we have had to contend with an unusually mild winter, with the result that the sales of winter seasonal remedies, in which we are interested, have fallen considerably below normal.

On the other hand, I am pleased to say that our main product—Beecham's Pills—has fully maintained its position, and in its eighty-ninth year of existence is certainly as good, if not a better seller than ever. We have been and still are in negotiation for the acquisition of other well-known products and an extension of our sales organisation. I had hoped before this meeting to have been able to make some definite announcement with regard to this, but regret that I am not yet in a position to do so—the matters being still under discussion. The trade outlook, as we all appreciate, is anything but satisfactory, and the maintenance of profits demands the closest possible attention of the board and management—which you may be assured it will have.

I now move the adoption of the report and accounts.

Mr Louis Nicholas seconded the resolution, and it was carried unanimously.

The dividends, as recommended, were approved: the retiring directors, Mr Philip Ernest Hill and Mr Henry Gregory, were re-elected: the auditors, Messrs Price, Waterhouse and Company, were reappointed; and the proceedings terminated with a vote of thanks to the chairman.

GENERAL ELECTRIC COMPANY, LIMITED.

FURTHER SUBSTANTIAL PROGRESS.

The annual general meeting of this company was held on the 25th instant, at Magnet House, Kingsway, London, Sir Hugo Hirst, Bt. (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that he was able to open the meeting with a note of satisfaction at the further substantial progress which the company had made. It was gratifying that in a year full of shocks the trading account of the company showed a profit of £1,179,000, an increase of over £90,000 compared with the previous year.

He was sure shareholders would be interested if he gave them a picture of some of their recent achievements. They had, for instance, in large turbo-alternators, successfully undertaken the manufacture of machines up to 30,000 k.w., having a speed of 3,000 r.p.m. The company was the first in the country to obtain an order for machines to run at that speed. Progress had been made in their oil-engine department at Erith. A number of engines have been supplied abroad, whilst the largest oil engine installation in this country is that of a London Power House employing their machines. The development of the grid scheme had called for considerable extensions at their switchgear works, and many noteworthy achievements stood to their credit. In transformers the new high-tension works at Witton had completely revolutionised their position.

ELECTRIC TRACTION.

Progress had also been rapid in electric traction. They had obtained a contract for the Manchester-Altrincham section of the L.M.S. and L.N.E.R. Railways which was the first order ever placed in this country for equipment for trains operating at 1,500 volts, the standard voltage fixed by the Ministry of Transport Committee, whereas previously the usual voltage for traction works was 600. Other contracts included equipments for the new tube railway on the Buenos Ayres Central Terminal system and Diesel electric locomotives for India. The company's position in the traction field was indicated by a contract for 1,000 motors which the London Electric Railway had placed with them.

There had been marked activity in the sphere of illuminating engineering, and many important installations had been carried out.

The year had been noteworthy also for their success in marine work, and there had been marked activity in the sphere of illuminating engineering. Progress in the development of projector lamps had resulted in the production of a number of successful British films for the first time in this country by means of gas-filled lamps. As regarded heating and cooking, a steady development had taken place on domestic cookers, and high-temperature furnaces had been developed for a multiplicity of purposes. Electric furnaces up to one-ton capacity for melting copper, aluminium and other non-ferrous metals have been included in the year's work.

A NOTEWORTHY DEVELOPMENT.

As regarded wires and cables, high-tension oil-filled cable ranked amongst the most noteworthy developments of the century, and he would refer to the contract which their Pirelli-General cable works had obtained—they were partners in that company to the extent of 50 per cent.—for the 132,000-volt oil-filled cable which linked up the north and south sections of the grid scheme in the London area. At their telephone works there had been a rapid growth in the development of their activities. A great amount of energy had been devoted to the development of "carrier current" systems, and their telephone works had also participated in the development of totalisators and had done much work on talking picture apparatus. In broadcasting sets they continued to hold a leading position in spite of ever-changing designs and great competition.

Their research laboratories have also carried out work on many other subjects.

Alongside this development work, they were committed to constant improvements in designs of thousands of electrical commodities included under the general phrase "domestic electrical supplies."

In the eyes of many the outlook was sad and things looked like getting worse. He was, however, not despondent. He realised the unhappy conditions existing in some of the older industries, the problem of unemployment, and the effect of taxation on industry, but all those were matters which by courage and great efforts might be combated.

The report and accounts were unanimously adopted, and a dividend of 10 per cent. and a bonus of 4 per cent., both less tax were declared.

MEXICAN RAILWAY COMPANY, LIMITED.

MR VINCENT YORKE ON HIS VISIT.

The 130th ordinary general meeting of the Mexican Railway Company, Ltd., was held, on the 25th instant, at Winchester House, Old Broad Street, E.C., Mr Vincent W. Yorke (the chairman) presiding.

The Chairman, in the course of his speech, said: At our last meeting I led you to expect that the net receipts for the half-year to December 31st would be in the neighbourhood of £80,000, and so it would have turned out if it had not been for the disastrous strike on the line which took place in December last. Our net receipts for the five months to the end of November were more than £70,000, but the railway was operated at a loss during the month of December, which reduced the total profits for the half-year to little more than £60,000.

The incidence of the strike has made any close comparison of the figures of the half-year with those of the corresponding half-year of 1928 impracticable, and I do not think that I need waste your time by going into them in detail. The amount of gross receipts is not really satisfactory, as it is about 10 per cent. less than the average of the ten preceding half-years. Passenger traffic is less by about 6 per cent. than that of the corresponding half-year, and I fear that the advent of new roads will bring about further decreases in the future. Goods traffic is very slightly greater than in the corresponding half-year, and while national goods have decreased by $139,000, foreign goods have increased by $143,000. Fruit traffic, of which we had good hopes at one time, only shows an insignificant increase. Although I led you to expect that we had reached the probable limit of savings in expenses, I am glad to say that the expenses are $58,000 less than in the corresponding half-year.

REDUCTION OF CERTIFICATES.

If it had not been for the strike we should have been able, I do not doubt, to make a small reduction in the large debit to net revenue account, but, as it is, we have to add to it to the extent of nearly £24,000. Nevertheless, owing to the comparative strength of our financial resources, we have decided to make a further reduction of 10 per cent. in our indebtedness to the holders of "A" certificates, and the total amount owing to holders of "A" and "B" certificates will be reduced as from July 1st next to about £326,000. This will make the fourth half-year in succession in which we shall have made a 10 per cent. reduction in the "A" certificates.

As regards the results of the current half-year, I am glad to say that gross receipts have been fairly satisfactory, both general traffic and fruit traffic having shown distinct signs of revival. Unfortunately, a very serious accident to a freight train in January last, which has probably cost us nearly £20,000, has seriously affected our expenses, and the net receipts to the end of April are less than those of the corresponding half-year by about £15,000. I hope, however, that the total net receipts for the current half-year will be not much less than £100,000.

CHAIRMAN'S VISIT TO MEXICO.

And now perhaps you would like to hear some of the impressions of my recent visit to Mexico, from which I only returned in the early part of this month. In the first place, let me say that I have paid now four visits to the country since 1920, the year in which the operation of the railway was restored to us, and that for the first time I found tranquillity prevailing in every part of the Republic.

The condition of the public finances may be considered all the more satisfactory in view of the depression in business which prevails all over the world and is, of course, affecting Mexico. It should be remembered in this connection that Mexico is by no means a one-crop or one-product country, like so many of the Central and South American States. In addition to oil, silver and lead, which are her principal productions for export, she produces many agricultural crops to which must now be added bananas. The production of oil has diminished very appreciably in the last few years; while in 1922 it amounted to 182 million barrels, this sank to 50 million in 1928, and in 1929 is estimated to have been only 42 million.

The price of silver, which has fallen to the altogether unprecedented price of 1s. 3d. per ounce, must also be affecting very seriously the operation of many of the silver mines; nevertheless, the largest mines in the country, situated at Pachuca, were still working full time as lately as April last. The price of lead has fortunately not yet fallen so heavily, while coffee again, owing to its better quality, has not suffered in price as that grown in many other countries. Still, the fact that the public revenue is coming in so well is good proof of the wealth and vitality of the country under peaceful conditions, and augurs well for increased prosperity, given a recovery in business conditions all over the world.

The import of foreign luxuries would seem to be increasing from the figures of foreign traffic given in the report, and the warehouses at Vera Cruz were full to overflowing at the time of m visit. In Mexico City itself business was reported to be slow, but the appearance of the shops, and of the public, and the number of motor-cars in daily use, could only suggest to me a fair measure of prosperity.

THE LABOUR PROBLEM.

The Labour problem was just emerging from a very difficult phase at the time of my visit. The Labour Law, about which I spoke at length and with much apprehension at our meeting last November, fortunately was not passed before Congress adjourned, and has not hitherto been revived. The publication of its provisions, and the support that it received in the highest quarters, led to the development of a spirit of unrest among our employees, and as a result of this, we were presented with a number of demands which appeared to us entirely unreasonable, and which we felt bound to resist to the uttermost. Much the same demands were presented, I believe, by the same Unions to the National Railways at the same time, and were being resisted by their management.

When the Unions saw that their ends could not be gained by negotiation, they resolved to resort to a fight and unfortunately selected our property as the battle ground, and called the strike on our railway, which I have already mentioned. The matters in dispute were then referred by agreement between us and the men to the arbitration of Señor Portes Gil, then acting as President of the Republic. His award, which was promptly given, was almost entirely in favour of the men's demands, and there was then nothing for us to do but to attempt to carry out loyally the terms of his award. This we have now done, and as you will hear from the general manager's telegram, contracts based on the award have now been agreed and signed with all the Unions concerned.

Let me now say that the questions in dispute have been far more questions of principle than questions of money. The immediate increase in expenses will not be great, but grave damage will have been done as regards our power of selection of suitable men for important posts, the system of promotion, and so forth, and, generally speaking, discipline and efficiency which are so desirable in any business will be much impaired. However, we have done our best in making these contracts to live up to the spirit of the award, and I believe the recent negotiations will have left no bad feeling in the minds of either of the parties. We must now wait and see what effect the new arrangements will have on the operation of the railway.

TELEGRAM FROM GENERAL MANAGER.

I will now read a telegram from the general manager: "There are indications of an increase in crops of cereals, potatoes, tobacco, coffee and sugar cane, and also additional output in textile products, and generally improved trade with good tourist travel from the United States. Labour situation improving slowly. All contracts finished. On the other hand, motor competition is active and silver falling in value. National Railways of Mexico situation being taken in hand vigorously."

I consider that a hopeful message. I am particularly glad to hear that tourist travel is good. It was not very good while I was in the country. In this connection you may like to know that important developments are about to be made by the Ward Line, who from August will add two fine new steamers to their service between New York and Vera Cruz. This service, which has recently been shortened to six days, ought to capture the lion's share of passenger travel from the East of the United States to Mexico, and may in time add substantially to our passenger receipts.

Tourist travel from the States to Mexico is now only a minute fraction of what it might become. Propaganda to foment it is much needed, but I believe that this will be forthcoming both from Mexico and New York. Mexico offers to the tourist attractions in the way of climate, scenery and antiquities such as few countries possess. They are absolutely unknown to a public of vast dimensions in the United States, and given a few years of peace and some skilful propaganda at work, there are hardly any limits to the tourist travel which might be developed.

It is again good news to hear that the National Railways' situation is being taken vigorously in hand. I have already told you how important it is for our interests that their administration shall be reorganised.

IMPRESSIONS SUMMARISED.

To summarise my impressions I may say that I came away from Mexico after a stay of six weeks in the country with the strong belief that general conditions had very distinctly improved in the two years which have elapsed since my last visit. In my opinion, in spite of the various setbacks which have recently occurred, the business is in smoother water to-day than for some long time past. Whether the progress we are making in restoring our fortunes, and we are making steady progress in that direction, can be quickened or not is a difficult question to answer, but if the country remains in its present peaceful condition I see no reason why our earnings should not improve.

The report and accounts were unanimously adopted.

J. LYONS AND COMPANY, LIMITED.

ANOTHER SUCCESSFUL YEAR.
PROFIT AGAIN A RECORD.
THIRTY-SIX YEARS OF RATIONALISATION.
THE GOVERNMENT AND COMMODITY PRICES.
MAJOR I. SALMON REVIEW'S COMPANY'S ACTIVITIES.

The thirty-sixth ordinary general meeting of J. Lyons and Company, Ltd., was held, on the 23rd instant, at the Trocadero Restaurant, Piccadilly Circus, London, W.

Major Isidore Salmon, C.B.E., D.L., J.P., M.P. (one of the managing directors), presided.

DIRECTORS' REPORT.

The report of the directors for the year ended March 31, 1930, states that:—

	£ s. d.	£ s. d.
The balance from trading account shows:—		
A profit of		935,870 13 1
Amount brought forward from last year	42,307 15 7	
Less Transferred to reserve ...	25,000 0 0	17,307 15 7
		£953,178 8 8

From this amount is to be deducted:—	£ s. d.
Dividend on 5 per Cent. Preference Shares paid to November 30, 1929, and proportion provided for period to March 31, 1930	32,353 5 0
Dividend on 7 per Cent. Preference Shares paid to March 31, 1930	280,000 0 0
Dividend on 8 per Cent. Preference Shares paid to March 31, 1930	80,000 0 0
Dividend on 6 per Cent. Preferred Ordinary Shares paid to September 30, 1929, and proportion provided for period to March 31, 1930	24,000 0 0
Interim Dividend (1s. 8d. per share) on Ordinary and "A" Ordinary Shares already paid for the half-year ended September 30, 1929	133,647 15 0
Interim Dividend (4d. per share) on Proportional and "B" Proportional Profit Shares already paid for the half-year ended September 30, 1929	15,833 6 8
And the Directors propose to deal with the balance as under:—	
To place to reserve (making a total of £1,300,000) ...	100,000 0 0
To pay a dividend of 2s. 10d. per share on the Ordinary Shares and "A" Ordinary Shares for the half-year ended March 31, 1930	227,201 3 6
To pay a dividend of 6·8d. per share on the Proportional and "B" Proportional Profit Shares for the half-year ended March 31, 1930	26,916 13 4
To carry forward to next account	33,226 5 2
	£953,178 8 8

During the financial year the following establishments have been opened:—

74 High Street, Southend.
14 Commercial Road, Bournemouth.
174 King Street, Yarmouth.
138 Rushey Green, Catford.
14 The Parade, Canterbury.
37 Duke Street, W.1.
177 High Street, Wandsworth.
4 Marble Arch, W.1.

Additional premises have been acquired and will be opened in due course, and negotiations for other premises are proceeding.

Messrs G. W. Booth and B. A. Salmon retire from the office of directors, and, being eligible, offer themselves for re-election.

Messrs G. A. Pollard and A. C. Watkins, employé directors, retire and are eligible for re-election.

Messrs Turquand, Youngs and Company, the auditors, retire and are eligible for re-election.

The dividends received from subsidiary companies have been included in the company's profits for the year. In the aggregate the profits of the subsidiary companies exceeded the declared dividends. Losses of subsidiary companies, so far as they concern this company, have been debited in this company's profit and loss account.

Mr H. H. G. Bennett (one of the joint-secretaries) having read the notice convening the meeting and the report of the auditors,

CHAIRMAN'S SPEECH.

The Chairman said:—Ladies and gentlemen,—In welcoming you to another annual meeting, at which we are recording the results of the company's thirty-sixth year, I am pleased to announce once again that the profit available for distribution has exceeded that of any previous year, amounting as it does to £935,870. The year has not been without its difficulties, for, although, fortunately, our business is that of providing the main necessities of life, we are naturally somewhat affected by the prosperity of the general public who are our customers. In times of general trade depression the public literally tightens its belt, so that its spending power tends to decrease; but that very tendency makes for more caution in spending and a closer seeking after true value.

Our policy has always been to concentrate on true value, which naturally brings us new customers and some increased trade to offset the decreased spending power. The increase in our profit which we are able to report in these circumstances testifies to the truth of our claim that we are supplying the public with what it wants at competitive prices and shows the wisdom of our policy. Every business has its difficult years, for it is affected by circumstances over which, whatever the ability of the directing force, it can have no control. For example, the present year has unfortunately seen the burden of taxation take an upward trend, the effect of which upon the country's trade has yet to be felt.

THE BALANCE SHEET.

Now, may I turn to the year's results and deal with them in a little more detail? As you know, the new Companies Act came into force in November last, and you will have observed a few changes in the balance sheet consequent upon the new provisions then enacted. Those changes in our case have really meant no more than a few slight alterations in the manner of presenting the account to you—in other words, in the form rather than in the matter. I will deal first with the changes, and then, without boring you by a long recital of the various items, comment briefly, as I did last year, on anything which I feel may be of special interest.

You will have noticed an additional paragraph in the report dealing with the profits and losses of subsidiary companies. As in previous years we have taken into our profits dividends which have been received from them, leaving the balance of profits in the various businesses with a view to the consolidation of their resources and their development. On the other hand, we have made provision in our accounts for the slight losses which arise mainly from the method of accounting in two of our subsidiaries who are trading with us.

In the balance sheet, on the liabilities side, there is a new item—namely, subsidiary companies, current accounts; this now appears separately in conformity with the new Act. It represents amounts due to those companies with which we ourselves are trading; previously it appeared in the general item "sundry creditors, &c." On the assets side under the heading "subsidiary companies," which also appears separately for the first time, the items "shares" and "current accounts" need, I think, no comment. The third item of loans represents necessary additional finance for their operations, the company in this case acting as banker. "Balance of loans to staff" shows the amount outstanding at March 31 of loans made to staff for their purchases of our shares. So much for the changes.

FURTHER ADDITIONS TO RESERVE.

As to the other figures, the profit from the year's trading I have already commented on. You will notice we have taken a sum of £25,000 from our last year's carry forward and placed it to the reserve, making that account as it stands in the balance sheet £1,200,000; to it we are again proposing to add a sum of £100,000 out of profits. The issued capital has increased by the "A" ordinary shares issued to managing directors last year. I may mention here that this privilege has been repeated, and 2,500 "A" ordinary shares have been allotted to each of them at par.

The property item on the assets side, freehold land, buildings, &c., is £55,000 less, but as it no longer includes the shareholdings in subsidiary companies, it is, on a true comparison, some £360,000 more—a quite normal growth. Sundry debtors, at £593,000

is some £250,000 less than last year, but the difference is more apparent than real since loans to, and current accounts with, subsidiary companies are not now included in this item.

BURDENS ON INDUSTRY.

I have already referred to the burdens imposed on industry in this country to-day. To devise a means of meeting them is a task which constantly confronts those who control great businesses. The latest theory for the remedying of our commercial ills is rationalisation, of which we hear a good deal just now and which seems to mean different things to different people. If, however, it means keeping your business up to date by availing yourselves of the latest discoveries, both scientific and mechanical, the utilisation to the utmost of the raw materials to be treated, the elimination of waste, whether of material or labour, the grouping of businesses which are related and which may be worked together with a gain in economy, in which the question of transport plays no small part, then I can say that our business has been conducted according to the theories of rationalisation from its commencement, with the effect of reducing prices, increasing wages and giving more employment. The number of our employees has steadily increased from year to year until it has reached the very respectable figure of over 30,000 persons maintained in regular employment—(Hear, hear)—and I must leave you to draw your own conclusions as to the value of a practice based on such a theory.

THANKS TO THE STAFF.

This mention of our staff leads me to say that our and your grateful thanks are due to them for their loyal and untiring efforts on the company's behalf. (Cheers.) Their devotion to the company's interests fully merits the attention to their welfare and happiness we endeavour to give. We have in the past told you something of their sports and social club, the Lyons Club, which is recognised as one of the largest organisations of its kind in existence, with a membership embracing fully 70 per cent. of our total staff. It is run by the members for the members; the company does not interfere or dictate; but it does contribute a substantial sum each year to supplement the members' own contributions and assist where any further extension of the club's activities and amenities is required.

We do not seek to interfere in the private lives of our staff, but we do take an interest in their welfare and by wise assistance and humane consideration of their troubles and difficulties endeavour to make them feel that not only are our interests theirs, but that their prosperity and happiness are ours. (Hear, hear.)

CONSUMERS' COUNCIL BILL.

I should like to say a word on two things which are at present occupying public attention—namely, the Consumers' Council Bill and licensing reform. The Bill, which is now before Parliament, proposes to give to a Council of seven—the number savours of mystic charms and rites of the Middle Ages—wide inquisitorial powers and the duty of reporting to the Board of Trade what they consider a fair price for almost any commodity in general use. It gives the Board of Trade power to fix a maximum price for any such commodity. The Bill ignores the experience gained from similar experiments throughout history; first, that a maximum price becomes a minimum price irrespective of quality and service; and, second, that the standard which is adopted in fixing a price is that of the less efficient, not of the more efficient. I fail to see how the consumer can benefit from that.

The result of such a scheme will be to diminish if not entirely to destroy the value of a goodwill built up on quality and service. It shows an entire disregard for that elasticity which is so necessary in the constantly varying conditions and ramifications of modern trade. How can such a Council or the Board of Trade say what is a reasonable profit when circumstances vary from day to day and from place to place? The basis of such a measure seems to me to be wrong, for it assumes, very improperly, that there is only one motive in business—buying cheap and selling dear—or, in other words, profiteering.

LICENSING REFORM.

I think you will be interested to know that recently the company was invited to give evidence before the Royal Commission on Licensing, and I had the privilege—that may not be quite the right word since it was naturally something of an ordeal—of presenting to that body some of our views. Incidentally, it is gratifying to know, and a fitting tribute to the position of this company, that we were the only individual corporation invited to give evidence, though of course many of the trade associations have done so.

There are many points in the present licensing system as it affects us which, in our opinion, call for reform; mainly, the need for the recognition of a distinction between public-house business and a business such as ours where the provision of food is the main consideration and where the sale of alcohol is ancillary and represents but a small portion of the total business. Another point of importance which arises from this, and is indeed part of it, is the need for a system whereby the conditions requisite for the grant of a licence to an establishment like a new Corner House would be fixed by statute.

THE "TROCADERO."

Before concluding I will mention one other matter which I think will be of interest to you. We have taken advantage during the year of the opportunity which occurred of purchasing on favourable terms the freehold of the remainder of the Trocadero, so that we now own the freehold of the whole of this building—(hear, hear)—which, together with the Coventry Street Corner House adjoining it and the other land fronting Rupert Street and Shaftesbury Avenue—totalling something over 1¼ acre—must be one of the most valuable properties in London. Whenever a favourable opportunity presents itself, it is our policy to acquire the freehold of our various properties, a policy which, I am sure you will agree, consolidates the value of this portion of our assets and serves to preserve the goodwill of our business, which is such an enormous asset, though it does not appear in figures on our balance sheet. (Hear, hear.)

CONFIDENCE IN THE FUTURE.

Well, ladies and gentlemen, this brings me to the end of my review of the company's activities during its thirty-sixth year. If I have called attention in these remarks to one or two of the difficulties which beset the trader in these times, I do not want you to think that we feel anything but a full confidence in the bright future of this business and a justifiable pride in its present achievement. Indeed, I am sure that from what you have seen in our report and balance sheet, supplemented by this brief account of our stewardship and our prospects and plans, you will feel, as we do, that the affairs of the company are as satisfactory and as full of promise for the future as human power can make them. (Cheers.)

Ladies and gentlemen, I will now propose:—"That the report of the directors and the balance sheet submitted to this meeting be and are hereby adopted; that the payment of interim dividends of 1s. 8d. per share on the issued ordinary and 'A' ordinary share capital of the company and 4d. per share on the proportional profit and 'B' proportional profit share capital of the company for the half-year ending September 30, 1929, be and are hereby confirmed; and that a dividend be paid for the half-year ending March 31, 1930, of 2s. 10d. per share to the holders of ordinary and 'A' ordinary shares of the company, and 6·8d. per share to the holders of proportional profit and 'B' proportional profit shares of the company who were on the registers on June 6, 1930." (Cheers.)

SIR ROBERT DONALD ON FACTORS OF SUCCESS.

Sir Robert Donald: Mr Chairman, ladies and gentlemen,—As an old friend of the founders of this great business, it gives me very much pleasure to second the adoption of the report. You have heard from your chairman an illuminating statement, in which he has clothed the dry figures—perhaps I ought to say the cheerfully refreshing figures—of the report with additional information which I think must have the effect of increasing your confidence in this business and in the statesmanlike manner in which it has been managed. The few observations I would like to make are of a rather general kind, as I have been a close observer of this business since its establishment. In these distressing and doleful days—with emphasis on the dole—(laughter)—the House of Lyons stands out as a beacon on the industrial horizon. As the profits indicate continual expansion, you may expect them to reach the million mark before long. (Hear, hear.)

As I have said, I have watched this business—one of the newest of the great businesses of this country—grow from small beginnings to its present gigantic proportions. To begin with, it was nurtured and tended with infinite care by the far-seeing men who founded it, and it has advanced every year without interruption. Its progress will continue to gather strength from its own momentum, from new developments and expansions which are inevitable and which the board are always watching to take advantage of, and because—indeed, most of all, because—of its good management.

There are no secrets about the success of Lyons. Its recipe is for every one to read and to copy if they can. You will find one item in the policy referred to by the chairman of giving the public the best possible service in the widest sense of that word at the lowest possible cost. Another element is the capacity of your directors to foresee needs just a little before they arrive and also ahead of other people. In this way they are thoroughly progressive, but they blend their progress with caution. You have heard how conservative is their policy in regard to finance and how that is one of the most substantial elements in the impregnability of this business.

EXPERIENCE AND ENTERPRISE IN THE MANAGEMENT.

A great factor in their success is that the directors know their jobs. Catering in one respect is something like journalism; it seems to have an attraction for people who know nothing about it. (Laughter.) Anyone without experience thinks he can run a restaurant, just as anyone without experience thinks he can run a newspaper. I do not know what has happened to those who have ventured into the catering world in a big way without experience, but in the newspaper world the ambitious man who did not know his job has gained a great deal of experience and lost a great deal of money. (Laughter.)

There are few businesses in this country in which the men at the head of them have risen from the humblest positions to the highest posts, as in the case of Lyons and Company. The managers of Lyons study the smallest details in order to improve the service. They search the world in the hope of finding something new, better, and cheaper. In this connection it is interesting to note that they are developing tea plantations in a new Colony which, by and by, with their help, will be one of the greatest producers of that favourite beverage.

Lyons and Company set more than one object-lesson to other firms. You have heard the chairman give an admirable definition of rationalisation. Lyons exemplifies in its best form what rationalisation means to those whom it serves and to those who serve it, and there is nothing new to be learned by Lyons and Company of this so-called new process of rationalisation.

Another thing that strikes me is that one of their great qualities is their capacity for salesmanship. The traders of this country, as you know, are somewhat perturbed that we have lost trade partly because we have not known how to go out and get it, and a Government Committee is now at work studying the best methods of salesmanship, by which our trade can be increased—particularly our export trade. There, again, Lyons and Company offer an object-lesson to other traders.

RESEARCH AS AN AID TO INDUSTRY.

Another extraordinary weakness which we have in this country is our failure to appreciate the value of research as an aid to industry. There is a big Government Department with a lot of money ready to help firms to undertake research, ready to give them 50 per cent. of the expenditure incurred, and, if you read their reports, you will find they express great regret that this offer is frequently not taken advantage of. Lyons did not require the stimulus of a Government Department for them to undertake research; they did it on their own initiative, and I do not know whether shareholders and the general public are aware that one of the finest research laboratories in this country is that founded and carried on by this company. Some people say, "What does a firm of caterers want with research?" It is, however, most essential. Lyons have a staff of chemists and other experts at work examining all the materials which they purchase and the food products which they make. The whole object of this system is to increase the purity and nutritious qualities of their products. That is one of the most valuable departments of Lyons and Company. You will not find it directly reflected in the dividend, but you will find the dividend, and you have the result in the greater purity of the food they supply and in the care which they take in all their departments in order that they may supply only the best quality food at the lowest possible price. (Cheers.)

"A SPLENDID HERITAGE."

I do not think I have anything further to say. I told you I had only some general observations to make, but these things have struck me for many years as the leading characteristics of this firm, and they show how well the founders built—that they built better than they knew. It is very gratifying to find that the second and third generations of the founders are now managing this great business and preserving and enriching the splendid heritage which they handed on. I have much pleasure in seconding the resolution. (Cheers.)

The resolution, in the absence of questions, was then put to the meeting and carried unanimously.

Mr Harry Salmon (a managing director) then proposed the re-election of Mr George W. Booth and Mr B. A. Salmon as directors of the company.

Mr Liverman seconded the motion, which was unanimously adopted, and Mr Booth briefly thanked the shareholders on behalf of his colleague and himself.

Major M. Gluckstein (a managing director) proposed that Mr G. A. Pollard and Mr A. C. Watkins be re-elected employee directors of the company.

Mr Shield seconded the motion, which was passed unanimously, and a suitable acknowledgment was made by Mr Watkins for Mr Pollard and himself.

On the proposition of Sir Richard Sennett, seconded by Mr T. A. Bullock, Messrs Turquand, Youngs and Company were reappointed auditors.

The Chairman then announced that the dividend warrants would be posted that evening.

SHAREHOLDERS' APPRECIATION.

Mr S. Ponder proposed a vote of thanks to the directors and the staff of the company, and particularly to the chairman for his excellent conduct of the meeting. In doing so, he remarked that the difficulties which the directors and the staff had passed through during the last twelve months must have been much greater than any of the shareholders imagined, having regard to the fluctuations in food commodity prices and the fact that they had had to meet requirements of people who had not as much money to spend as had been the case two or three years ago. They had, however, adhered to their policy of giving excellent value for money, so that, whatever happened, they would always attract new consumers. They were all hoping that times would improve, and that the company would continue to benefit by reason of the excellent work of the directors and staff in keeping everything in connection with the business so efficient and up to date. (Applause.)

The vote was seconded by Mrs Fisher and carried with acclamation.

The Chairman expressed the board's appreciation of the vote which had just been passed, and said that they would have pleasure in conveying it to the staff, who so well deserved it. (Hear, hear.)

The proceedings then terminated.

THE "SHELL" TRANSPORT AND TRADING COMPANY, LIMITED.

SUCCESSFUL RESULTS—INCREASED PROFITS.

WORLD PRODUCTION—POLICY OF CONSERVATION.

The annual general meeting of the Shell Transport and Trading Company, Ltd., was held, on the 23rd instant, at the Cannon Street Hotel, London.

The Right Hon. the Viscount Bearsted, M.C. (chairman), presided.

Mr E. A. Smith-Rewse (the secretary) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen, comparing the accounts with those of the previous year, the balance sheet totals have been increased by approximately five and three-quarter millions. This has been caused primarily by the issue of 3,983,754 ordinary shares allotted at par to the holders of ordinary shares as at January 1, 1929, being an issue at the rate of one new share in respect of every five old shares; and 150,000 ordinary shares issued and sold in Paris at a premium. There is further an increase in profits of £1,036,485, the remaining small difference being principally accounted for by an increase in creditors of £42,000. The premium, less expenses on the 150,000 ordinary shares issued during the year, which will be seen from the balance sheet to have amounted to £527,444, has been added to the reserve account, which now reaches the figure of £6,881,609. The profit and loss balance has increased by £1,036,484 and amounts to £6,720,990. This enables the directors to recommend a final dividend on the ordinary shares of 15 per cent., making with the interim dividend of 10 per cent. already paid, a total dividend for the year of 25 per cent. free of tax. This final distribution will absorb £3,618,204, whilst the interim dividend on the ordinary shares paid in January, 1930, and the dividends on the first and second preference shares already paid will have absorbed the sum of £2,862,136, thus leaving a balance to be carried forward to the next year of £240,650, against the balance brought in at the commencement of the year of £237,604. Notwithstanding the issue during the year of 4,133,754 ordinary shares, the directors have been able to recommend that the dividend for 1929—on the increased capital—shall be the same as that paid for the year 1928. No doubt you will all consider this an eminently satisfactory result. (Applause.)

WORLD PRODUCTION OF PETROLEUM.

Referring to the world production of petroleum, he went on to say: Again the total figures during the year show a very substantial increase. Unfortunately, also, this increase has been at a greater rate than that of the previous year, which was only 9,000,000 tons, whilst production in 1929, as compared with that of 1928, amounted to not less than 210,600,000 metric tons, against 187,600,000 metric tons for 1928, an increase of 23,000,000 metric tons. Of this increase the United States of America have been responsible for about 14,000,000 tons, and this notwithstanding the fact that real efforts have been made in that country to keep production within bounds in order that the industry might be put on a more satisfactory basis, and supplies of petroleum conserved for the future requirements of the

world. In Venezuela the production increased by about 5,000,000 tons, and here again definite steps have been taken in order to conserve supplies, and I trust that common sense will bring about a situation which will prevent the wastage which has been going on in these two countries, as unless tangible results are achieved in this direction more and more money will be spent unnecessarily, and the policy of leaving the future to look after itself will continue. The production in the other countries throughout the world has been more or less maintained at approximately 1928 level, and therefore it is to the United States of America and to Venezuela that we must look for an improvement in the present situation. I am glad to be able to report that there appears to be a distinct hope of common sense prevailing in this matter of wasteful production, as we are still endeavouring by friendly co-operation to conserve supplies, to produce as cheaply as possible, and to frame our production programme in a manner which will give to the consuming public the best possible advantage from the proved natural resources of petroleum. With regard to our group's production, this has increased from 22,000,000 tons in 1928 to 25,000,000 tons in 1929, the main increases being in Venezuela, where the output went from 7,000,100 tons in 1928 to 8,800,000 tons in 1929; and in Dutch East Indies, where there was an increase of about 750,000 tons.

POLICY OF CONSERVATION.

We are only too willing to bear our full share of any reasonable policy of conservation which may be decided upon throughout the industry, and as a result of the friendly negotiations previously mentioned I trust that our figures of production for the current year will reflect a measure of progress in the policy of conservation. This progress is desirable from two points of view: firstly, that of world conservation, to which I have already alluded; and, secondly, and unfortunately, because of the fact that as the general trade of the world is at present undergoing a period of acute depression, the demand for petroleum products may not show an increase in the same ratio as in the past. Looking at our industry from these two points of view, therefore, it becomes all the more desirable that those who are responsible for the policy and direction of petroleum companies should turn their minds more towards greater efficiency in producing, refining, shipping and marketing, rather than to the further unnecessary depletion of the oilfields throughout the world.

So far as the companies controlled by the "Shell" group are concerned, I am glad to say that we have progressed far along the lines of stimulating the use of petroleum products, not only in connection with those products which are so well known to everyone, but also in connection with special products which we have been able to manufacture from crude petroleum. During the past year we have placed on the market various new commodities manufactured from crude petroleum, and although many of these are still in the introductory stage, I am hoping that before long we shall have made definite progress in finding new outlets. In saying this I am sure that you will be glad to learn that in every case where a new commodity is marketed by us under the "Shell" name, it carries the guarantee of the "Shell" group, which is not given until the most searching and prolonged scientific investigation and commercial tests have demonstrated that it is in every way suitable and reliable for the purpose for which its use is recommended.

We have also introduced during the past year many new methods not only in connection with production, but also—and particularly—in connection with refining and manufacturing. Our technical staff throughout the world is second to none, and it is only by maintaining this condition that we are able to maintain our position in all matters pertaining to petroleum.

TRIBUTE TO THE STAFF.

During the year 1929 the market throughout the world for the primary petroleum products showed very little change compared with 1928. As is normal in the petroleum industry, we have had to meet severe competition, and in many parts of the world prices—because of this competition—were forced to an uneconomical level. That we were able to maintain our fair share of trade is due not only to the unvaried good quality of our products but also to our elaborate and efficient organisation, and to the unremitting loyalty and zeal of our staff in every country in which we do business. I think it is only right that shareholders should realise how great an asset we possess in the shape of our staff. It has been built up over many years by a careful selection of personnel, and this company may well be proud of those who work for it, just as the men and women who serve it are proud of the company for which they work.

Mr Andrew Agnew, C.B.E., seconded the resolution, which was carried unanimously, and the formal business having been transacted, a vote of thanks to the Chairman and his colleagues terminated the proceedings.

BRITISH EMPIRE TRUST COMPANY, LIMITED.

SUCCESSFUL RESULTS.

WEST GLOUCESTERSHIRE POWER COMPANY.

The twenty-ninth ordinary general meeting of the British Empire Trust Company, Ltd., was held, on the 24th instant, Mr J. Davidson (Chairman) presiding.

The Secretary (Mr. H. M. Cox) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that he was glad to be able to repeat the increased dividends of 7 per cent. on the preferred and 9 per cent. on the deferred shares, paid last year, and to show an amount of £23,285 carried forward as compared with £9,304 last year. Having regard to the exceptionally disturbed financial conditions which prevailed during the year under review, he regarded these results as eminently satisfactory. As shareholders were aware, the company's business interests and investments were largely in Canada. Canada, after a period of four or five years of unbroken prosperity, had suffered during the past year, alike with nearly every other country in the world, from an all-round fall in commodity values. General conditions, however, continued to be sound. The welfare of Canada did not depend upon any one branch of activity. Among the nations or dominions of the world, Canada enjoyed a highly diversified economic life, producing, from her own natural resources, a variety of vital commodities. She occupied a predominant position as a producer of the finest wheat, and her science of farming by machinery was the most advanced in the world. She was also the world's largest producer of pulp and paper, which was now her most important manufacturing industry. Her asbestos and nickel deposits were the world's largest sources of supply of these rare and useful minerals. She was now the third largest producer in the world of gold and silver, and the fourth largest of copper and lead. Last year Canada rose to second position in the manufacture of motor vehicles.

WEST GLOUCESTERSHIRE'S CURRENT SALES.

After referring to some of the more prominent Canadian companies with which the Trust had been long closely associated, the Chairman dealt with the West Gloucestershire Power Company, and said that during the first five months of the current year units sold were nearly twice the sales of the corresponding period of 1929, having increased from 5,139,506 to 10,145,964, an increase in units of 5,006,458, or 97·4 per cent. This was very gratifying, as it indicated the early wiping out of the remaining deficit on revenue account incurred during the earlier years of operations and also the establishment of a suitable depreciation reserve. Owing to the increasing demand upon the Company's plant, it had been found necessary to extend the boiler house and erect two additional boilers. This work was under contract to be completed in time to meet the greatly increased load which the company anticipated would have to be supplied next winter. The system of transmission mains now extended from Gloucester in the north to the borders of Bristol in the south, and from the borders of the county of Hereford on the west to beyond Stroud on the east. This territory embraced an area of approximately 679 square miles, and the company expected that extension work would be actively pursued for a long time to come. He was glad to say that the company's power station at Lydney was one of the "selected" stations from which the Central Electricity Board will purchase supplies. The company's station would, therefore, be called upon to supply, in addition to the company's own requirements, such further amounts of electricity as the Central Board might require for the purpose of its scheme. Under the provisions of the Electricity (Supply) Act, 1926, payments by the Central Electricity Board would be made on the basis of the cost of generation, plus an assured allowance for interest and depreciation on the capital expended on the works required to give such supplies. The "selection" of the company's Lydney power station for the national scheme would facilitate future development, and would ensure that the company's additional requirements for electricity would be obtained in the most economical manner. It also emphasises the importance of the company's position in the electrical industry. Finally, the Chairman said that the position of the Trust to-day was a very strong one. This was largely due to the conservative manner in which its affairs had been handled and to the fact that safety had not been risked for undue profit. He was satisfied that the success established would be continued and increased in the years to come.

Mr. T. Blundell Brown seconded the resolution, which was carried unanimously, and a cordial vote of thanks was accorded to the Chairman for his interesting speech and to the Chairman and directors for the excellent results shown for the past year.

DECCA RECORD COMPANY, LIMITED.

IMPROVED POSITION AND OUTLOOK.

The first annual general meeting of the Decca Record Company, Ltd., was held, on the 24th instant, at Winchester House, Old Broad Street, London, Sir Sigismund F. Mendl, K.B.E. (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said; The Decca Record Company was formed to purchase a modern record factory and to acquire the shares of the Decca Gramophone Company, which had then lately been launched as a public company, and which possessed a valuable goodwill and name, and also a successful selling organisation. When the company obtained effective possession of the Malden factory there was no reason to suppose the estimates provided by Mr Balfour would not be reached before the end of the first completed year of the company's trading. Shortly after the statutory meeting at the end of May, as the result of inquiries and examination, the board had reason to entertain the gravest misgivings as to the efficiency of the management and as to the probability of the sales of records being likely to amount to anything like what we had been led to believe.

A committee was set up, and the board lost no time acting in accordance with their advice. A new general manager was appointed in the person of Mr S. J. Avidon, and a few weeks afterwards a new sales manager and a new secretary were appointed. Two new directors, Mr J. W. England, a recognised authority in industrial organisation, and Mr C. F. Entwistle, who adds legal knowledge to considerable commercial experience, were appointed to the board in the latter part of 1929.

The board set up a works committee, and that committee went closely into all the items and details of manufacture and factory organisation. It is sufficient to say that it has succeeded firstly in reducing operating costs and overhead charges to an absolute minimum, and, secondly, almost immediately in increasing production and improving the quality of Decca records, so that it may fairly be claimed that to-day general opinion in the trade, and outside, as to those records, is almost uniformly favourable to them.

IMPROVED QUALITY OF RECORD.

During this period the quality of the record was so much improved that sales began rapidly to expand. At the same time production costs were reduced, while on the selling side the important factor was the withdrawal from circulation of the unsatisfactory records put out in July and August, just referred to. This created a most favourable impression in the trade. The other important factor was the marketing of Decca Records at 2s. I think we can fairly claim that these records are the best value on the market to-day, and sales should continue to increase. As you are aware, we have also recently placed on the market a new series of 12-inch records at 3s. 6d., and these have proved an instantaneous success. We are rapidly opening accounts with the dealers, large and small, in every part of the British Isles.

We attach the greatest importance in the future to our overseas trade, and it is our aim to sell Decca records wherever the Decca gramophone is sold, and that, I may say, is practically in every country in the world.

I should like to draw your attention to the strong financial position of the company's current assets, amounting to a total of £163,451, against current liabilities of £12,685. The company has, in fact, ample resources for the successful development of its business, and I may say here that the combined net liquid assets of the record company and the gramophone company amount to a sum of about £335,000, of which the sum of £129,000 is represented by cash and Government securities, which, I think you will agree with me, indicates a considerable financial strength.

GRAMOPHONE BUSINESS.

I now refer to the gramophone side of the business. We hold 369,790 out of 370,000 shares in the Decca Gramophone Company, and although the companies, from the point of view of their assets, are two separate entities, we must consider them as one enterprise. For various reasons it is convenient to keep the old Decca Gramophone Company alive, but from other points of view the two companies are one. The turnover of the Decca Gramophone Company for the year ending March 31, 1930, was the largest recorded in the history of the business. Our new portables are recognised as a great advance on anything even Decca has produced in the past, and I think we can fairly claim that from our most expensive radio electric gramophone retailed at £95, to our cheapest portable at £2 19s. 6d., we are selling the right goods at the right price. We are not prepared, however, to rest on our laurels, but are ever striving to improve our models, moving, if possible, ahead of the times.

The report and accounts were unanimously adopted.

BOOTS PURE DRUG COMPANY, LIMITED.

RECORD SALES AND CUSTOMERS.

The forty-second annual general ordinary meeting of Boots Pure Drug Company, Ltd., was held, on the 24th instant, at Station Street, Nottingham, the Hon. J. C. Boot, J.P., chairman of directors, presiding.

The Chairman, in moving the adoption of the report and accounts, said: Turning to the profit and loss account, you will notice that the balance, after deducting various charges, is £724,868, which is £25,284 less than last year.

After payment of all preference and preferred share dividends and after payment of four quarterly dividends of 6 per cent., less tax, on the ordinary shares, we have a balance from the year's profits of £268,118, which, together with the balance from last year, amounts to £494,828.

Your directors recommend the payment of a bonus of 1s. per share, free of income tax, on the ordinary shares, absorbing £75,000, and a transfer to the reserve fund of £190,000, leaving £229,828 to be carried forward to next year.

LARGE INCREASE IN CUSTOMERS.

On the whole I think the year was satisfactory. Our sales and number of customers were again a record, the latter being an increase of two and a half millions, and the profits have only been exceeded once, namely, last year, which, as you will remember, was an abnormal one both for cold weather and the amount of sickness, whereas this year there was neither cold weather nor an influenza epidemic. You must bear in mind, too, that there is great shortage of money in many parts of the country, so that it is not uncommon for the purchases of two or three consecutive customers to amount to only 1d. each.

During the year our research department has discovered a number of synthetic chemicals suitable for use in medicine. One of these substances, amyl-meta-cresol, has 250 times the antiseptic value of phenol and is of very low toxicity. We are actively investigating the possibility of extending its use in all those branches of medicine where antiseptics of this type are essential. We have already incorporated it as an ingredient of our new compound glycerin of thymol pastilles, which are having a phenomenal success. Many of our competitors have copied us in marketing a compound glycerin of thymol pastille, but our pastilles differ from all imitations in containing this new antiseptic, amyl-meta-cresol. This substance is also giving promising results as an intestinal and urinary antiseptic. Its discovery may be considered to be one of the biggest advances made in recent years in the search for the ideal antiseptic.

VITAMIN PRODUCTS.

We referred in our last report to our work on vitamins. In view of the importance of, and the public interest in these substances, we have greatly increased our facilities for vitamin testing both for research purposes and for the routine control of our products. Cod liver oil well maintains its prominent position as a source of Vitamins A and D, and we are able to test every delivery biologically to ensure that it complies with our high standard of vitamin content. Our preparation of malt and oil is recognised as being of outstanding merit, only British barley being used, and we also issue a number of preparations containing added Vitamin D, for which we have evolved a very good manufacturing process. In addition to "Vitamalt," we are now issuing "Olivita," or "Sunshine Olive Oil" and Reinforced Cod Liver Oil, both of which contain added Vitamin D.

As a further instance of the high standard of work carried out in the research department, we may mention that the results of some of our scientific investigations have been described in six contributions to the journals of learned societies in the course of the past twelve months.

Our retail companies have opened 41 new shops since our last report and have now 876. The work of renovating and refitting our older shops is carefully kept up, one of the most important alterations during the year being our new corner premises in Bond Street, London, next door to the shop where we have been for many years.

This is one of the most attractive shops in London. The extra room and convenience is greatly appreciated by our customers.

The number of our employees has risen by over 700 during the year, and now totals nearly 17,000, which is the highest figure in the history of the company, and shows that we are doing our part in helping to lessen the unemployment problem.

We have a loyal, enthusiastic and hard-working staff. Our stocks are in good condition and reasonable in amount, and we have sufficient funds to take advantage of any good business opening.

With these assets your directors look forward with confidence and hope to be able to place a satisfactory report before you next year.

Mr J. E. Greenwood, M.A., LL.B., seconded the resolution, which was carried unanimously.

TELEPHONE RENTALS, LIMITED.

SATISFACTORY PROGRESS.

SCOPE FOR INCREASED BUSINESS.

The first annual meeting of Telephone Rentals, Ltd., was held, on the 26th instant, at the Cannon Street Hotel, London, E.C.4.

Mr Fred. T. Jackson (the Chairman), in dealing with the accounts for the period ending May 31, 1930, said that the rentals receivable by the subsidiary companies controlled by the holding company amounted to £144,414 at the end of December. A sum of £43,766 had been appropriated for depreciation reserve, bringing the total amount to the credit of this reserve to £314,509, which was a direct offset to the installation account, amounting to £630,273. Taking the net figure of £315,764, it would be seen that the installations were only valued at about two years of the rentals receivable, which was a very conservative figure.

PROFIT AND DIVIDEND.

The profit earned by the subsidiary companies amounted to £68,019, out of which sum £65,375 gross had been received by the holding company in dividends. An interim dividend of 2½ per cent. had been paid on March 31, 1930, and the directors now recommended the payment on July 14, 1930, of a final dividend of 2½ per cent., making 5 per cent. for the year. He thought the shareholders would agree that the result for the year was quite satisfactory, especially in view of the fact that general trade conditions during the period under review had been so bad. The profit indicated that the business was not affected by trade depression to the same extent as most industrial concerns. The statement of comparative profits earned over a period of years, embodied in the directors' report, showed steady and satisfactory progress.

The principal reason for not recommending a higher final dividend was because there was a great deal of rental business on offer. This was an unusual state of affairs, considering the present position of industry in this country, and he was not able to give any valid reasons for the increase in the business, beyond the fact that a considerable amount of it was due to improvements in their organisation. However, the fact remained that in the first five months of this year there was an increase of 48·4 per cent. in the number of telephones rented out. The directors considered that it would be extremely foolish on their part to curtail any opportunity of strengthening the backbone of the business—by which he meant the annual rents.

In spite of this increase in business, they might have paid a higher final dividend, but to do so would have necessitated borrowing from the bank, which shareholders might justifiably think would only be a temporary loan; therefore it would be advisable to explain, as clearly as possible, the difference between the nature of the company's business and that of an ordinary manufacturing or trading concern.

FINANCING OF THE COMPANY'S BUSINESS.

The practice of the banks here was to keep their funds in as liquid a state as possible. He thought they were right in their view, and this opinion was arrived at after having had a considerable experience of bank advances. It was quite legitimate and good business, to borrower and lender, to get an advance from a bank for the financing of important contracts, payments for which might be made, according to the terms of the contract, at stated intervals over the period of manufacture or erection, and the balance on satisfactory completion. The company's business was however, a totally different one. They invested capital in the material and labour required for a telephone installation on a customer's premises, which was analogous, on a small scale, to the public telephone service, the laying down of a railroad or any similar enterprise which had an earning capacity in revenue as compared with something that was manufactured and sold outright. The effect, therefore, of investing their own surplus profits, further capital, or bank advances, was that such investments, became what bankers would term "frozen assets," as they only got their revenue in the form of a rental over periods up to ten or twelve years. Part of this rental had to be earmarked for sinking fund purposes in order that, when a contract expired, they had in hand for renewed investment the capital cost involved under the contract. It would be understood from this explanation that if the company borrowed money from a banker for the purpose of expanding their business in the form of additional installations, the sum borrowed would become a "frozen asset," and any sudden demand on the part of the bank for repayment might necessitate the raising of capital on an expensive basis. Usually a bank demanded repayment when money was tight. It followed that any additional finance the company might require should not take the form of permanent capital or bank loans, but instead short-term notes or a short-term debenture.

However, the board did feel that full advantage of any new business on offer should be taken, as it so much strengthened the position of the company, and because, as would be seen from the profit and loss account, their rental revenue was so high to-day that any addition they could make to it would carry a greater ratio of profit than business done in the past, simply because all ordinary overhead expenses were borne out of the existing revenue.

The report and accounts were adopted unanimously, and the payment of a final dividend of 2½ per cent. was approved.

TAQUAH AND ABOSSO MINES, LIMITED.

RECORD LOW COSTS.

The ordinary general meeting of this company was held, on June 26, at River Plate House, London.

Mr T. F. Dalglish (the chairman), in the course of his speech, said: The tonnage of ore treated was, for the reason stated in the report, 14,797 less than in the previous year, and the amount of gold recovery was £168,558, a reduction of £5,825. In the year 1928–29 the recovery was 30s. 2d. per ton, as compared with 33s. 5·3d. during the year now under review. On the other hand, the mine working costs, including development redemption, show a reduction of 1s. 1·6d. per ton. For the first two months of the current year, April and May, there is a further reduction of 2s. 11·1d. per ton. After deducting general expenditure, depreciation and other items, there is a credit balance of £2,760 carried to the balance sheet, from which is deducted the balance brought forward from the previous year, less the amount transferred to suspense account, leaving £267 to be brought into the current year's account.

Sinking of the internal shaft is proceeding to connect with No. 18 level now being opened from the bottom of the winze from No. 17 level. This connection will add materially to our reserves. Of equal importance, levels Nos. 16, 17 and 18 north are being pushed on in reef of good values. When the boreholes on No. 13 level north locates the reef, a large lateral development can be undertaken, the economical advantage of which is self-evident.

The benefit during the year of the introduction of jackhammers in large numbers into the mine and the conversion of our compressors to electric drive is reflected in the reduction of our costs. The difficulties at the start in finding a quality of steel for the bits suitable for our hard ore and the prejudice of the native workmen to anything new have been overcome, and we are now looking forward to maintaining a steady output of ore at about the present figures. During the months of April and May of the current financial year we have treated 9,400 tons and 9,600 tons respectively, and the estimated working profits, including development, have been £3,455 and £3,477. During the current month of June they will not be quite so much, as we had a stoppage of three days, due to a breakdown of the winding engine, which has since been put right. We, however, look forward to maintaining a fair average, month by month, during the current financial year. Now that the company is out of debt, these profits will be available for dividend and at present we see no reason why an interim dividend should not be paid before the end of 1930.

You will have observed that we have taken up an additional area north of the Cinnamon Bippo Concession which we hold. Part of the mine of the old Cinnamon Bippo Company, which is defunct, was situated in our concession of that name, and part of the workings extended beyond our border. As it would appear to us that a new era of possibilities has been opened on the Taquah Banket Reef by the use of jackhammers, we considered it advisable to secure a lease of this adjoining property, which would thus secure to us the whole of the ground opened up by the old Cinnamon Bippo Company and beyond. At the suggestion of Mr Campion, the records of that company have been submitted to a very experienced and well-known consulting engineer with considerable knowledge of the mining conditions of the Gold Coast Colony. He has examined these carefully and considers the proposition well worth serious consideration, having in view the geological knowledge obtained in the other mines working on this banket reef, and also the all-important reduction in working costs consequent upon the introduction of jackhammers. The records of the Mines Department show that between 1913 and 1918 a tonnage of 199,099 was crushed and £380,839 recovered, or an average of 38s. per ton. There should still remain 146,875 tons of ore, a good proportion of which could be stoped. Taquah and Abosso Mines, Ltd., can offer many advantages, particularly cheap power, for working this property.

In conclusion, I would repeat that you start the current year with a clean balance sheet. We are out of debt and our working costs have been reduced to the lowest figure experienced in the history of the company. Our ore reserves are at an adequate figure; the bottom of the mine is good and development generally is being pushed on.

The report and accounts were unanimously adopted.

SCRIBBANS AND COMPANY, LIMITED.

SATISFACTORY YEAR: PRODUCTS IN INCREASING DEMAND.

The third annual general meeting of Scribbans and Company, Ltd., was held, on the 26th instant, at the Hotel Victoria, London, W.C.

Mr Philip E. Hill (the chairman of the company) who presided, said that the profit for the year of £284,410, showed an increase over the previous year of £63,536. It was proposed to write off the balance of preliminary expenses amounting to £92,650, to place £35,000 to the credit of development account, and to pay final dividends on the ordinary shares and deferred shares, bringing the total distribution for the year to 7 per cent. and 19⅝ per cent. respectively, carrying forward £17,894. The new works in Ireland had been completed, and the business showed a satisfactory return, and the new biscuit works of the subsidiary would be in full working order before the end of the year.

Considerable cuts in the prices charged to the multiple shop companies to enable them successfully to combat competition, had reduced the profits of the company from that section of the business. The board had, however, increased the number of the company's lines, and had opened a large number of new accounts, and being satisfied that an increasing demand for their products existed, had decided to extend the present factory and plant. The biscuit business also undoubtedly possessed scope for expansion.

The allocation of the profits proposed indicated that as against a dividend distribution of £124,666, the sum of £109,264 was being retained in the business, and he might mention that during the past three years the sum of £185,000 had been written off in respect of preliminary expenses, in addition to creating the development account of £35,000 already referred to.

Generally, the business was in a much sounder condition to-day than a year ago; the linking of cakes and biscuits had proved a wise policy, and the decision to increase the number of the company's products should add additional strength. While the outlook was difficult, their business for the present year had so far been well maintained. Profitable expansion appeared possible, and as the company supplied the public with cheap and excellent food commodities, it was only reasonable to assume that they would do as well as most if not better than other people.

The report and accounts were unanimously adopted.

WILLIAM CORY AND SON, LIMITED.

STEADY PROGRESS DESPITE COAL TRADE TROUBLES.

The thirty-fourth annual general meeting of William Cory and Son, Ltd., was held, on the 24th instant, at the Cannon Street Hotel, London.

Sir A. C. Cory-Wright, Bart., the chairman, in moving the adoption of the report and accounts, said that the trading of the company had resulted in a profit of £733,687.

In spite of various adverse factors which they had had to encounter, and the difficulties and uncertainties that had arisen in the coal trade, brought about to a large extent in anticipation of the Coal Mines Bill, it was gratifying to be able to present a statement of accounts which reflected a very satisfactory position, and which showed that, although there was a slight decrease in the profits earned by the company, it still continued to maintain its record of steady progress.

The company's liquid assets were a source of great strength, enabling the board to take advantage of any favourable opportunity that might occur of extending the company's present trade and finding fresh outlets for profitable development, and during the last few years numerous occasions had presented themselves of making judicious investments in undertakings that had proved useful adjuncts to their business.

He was pleased to be able to report that in practically every branch of their trade they were able to show an increase in the tonnage handled, which, in view of the indifferent trading conditions that had prevailed, both in this country and in all those countries abroad where the company had an established business, was very satisfactory. With very few exceptions all the company's subsidiary companies had returned satisfactory dividends. In all their subsidiary companies the balance sheets were drawn up on the same conservative lines as the parent company, and in every case ample depreciation had been provided and large reserve funds were held.

In his opinion, the coal trade, if it had been left to itself, would have pulled through. It was, in fact, gradually emerging successfully from a long period of unparalleled difficulties, and at great financial cost to the collieries and much sacrifice the turning-point in their fortunes had definitely set in.

It was very pleasing to feel that, whatever might be the difficulties which the Coal Mines Bill would bring to their colliery friends in all districts, the very happy relations which had for so long existed between them and the company were not likely to be in any way disturbed.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 21, 1930:—

(000's omitted.)

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	5,550	From Revenue	15,039
Interest, &c., on Debt	15,261	Increase in Debt	7,168
Sinking Fund	1,319	Decrease in Balances	22
Sundries	99		
	22,229		22,229

Total ordinary revenue for the week ended June 21, 1930, amounted to £15,039,300, as compared with £12,325,300 for corresponding week a year ago. Estate, &c., duties yielded £3,830,000, against £1,960,000. Customs amounted to £2,500,000, as against £2,536,000. Excise produced £7,285,000, against £7,041,000. Receipts from Sundry Loans amounted to £1,550,000, against £175,000. Miscellaneous Receipts were £1,112,200, against £485,300.

The National Debt was increased by £7,167,400, as shown below:—

(000's omitted.)

	£		£
Bank of England Advances	− 8,750	5% Conversion Loan	+ 198
		Treasury Bills	+ 4,579

June 25		Nil	June 24		Nil
June 26		Nil	June 25		Nil
			June 26		Nil
Total		32	Total		12,446

Net withdrawals, £12,414.

Messrs Samuel Montagu and Company write on June 25, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £156,610,010 on the 18th instant (as compared with £156,261,457 on the previous Wednesday), and represents an increase of £10,649,926 since January 1st last. The bar gold from South Africa available in the open market yesterday amounted to about £298,000 only. Demand from India and the trade was small, being £5,000 and £18,000 respectively, and at the fixed price of 85s. 0½d. per fine ounce the balance of £275,000 was secured for France. Movements of gold at the Bank of England during the week resulted in a net influx of £237,586. Receipts included £250,000 in sovereigns "released" and withdrawals consisted of £10,446 in bar gold and £2,000 in sovereigns.

SILVER.

Although the week under review opened with a recovery of ¼d. and 3/16d. to 15 15/16d. for cash and two months' delivery respectively, this was more than outweighed by the falls which followed, still lower records having since been established. Support was again inadequate to offset the selling from China and America—the latter quarter offering with more freedom during the week—and by the 21st instant prices had fallen to the then record level of 15⅛d. and 15 1/16d. A slight reaction of ¼d. ensued, only to be followed by a setback of ⅜d. yesterday, when prices were fixed at 15 7/16d. for cash and 15½d. for two months'—the lowest yet recorded. Buying was still confined to bear covering operations and small Indian Bazaar orders for shipment, but the political situation in India still tends to hamper business with that quarter.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 16th instant to mid-day on the 23rd instant:—

IMPORTS.	£	EXPORTS.	£
U.S.A.	14,558	China (including Hong Kong)	31,250
Netherlands	7,600	British India	35,000
Belgium	5,420	France	6,376
Canada	5,452	Other countries	3,027
Australia	5,000		
France	2,919		
Other countries	446		
	£41,395		£75,653

Lloyds Bank, Ltd., announce that a sub-branch of the bank is now open at Barrack Road, Christchurch.

Barclays Bank, Ltd., announce the opening of a new branch at 37, King William Street, E.C.4.

Company News.

REPORTS AND NOTICES.

We are officially informed that Sir Edward M. Mountain, Bart. J.P., chairman and managing director of the Eagle Star and British Dominions Insurance Company, Ltd., has joined the board of Covent Garden Properties Company, Ltd., and that Mr P. Stanley May has resigned his seat on the board of this company and also his seat on the board of Olympia, Ltd.

We are informed that Mr C. Gerald Eve, of the firm of Gerald Eve and Company, chartered surveyors, 33, Chancery Lane, W.C. 2, and Mr Frank W. Terry, chairman of Joseph Terry and Sons, Ltd., York, have been elected to the head office board of the Yorkshire Insurance Company, Ltd.

Owing to continued ill-health, Mr E. Roger Owen has felt it necessary to tender his resignation as chairman of the board of the Ocean Accident and Guarantee Corporation, Ltd. Mr. Owen retains his seat upon the board. The Honourable Jasper N. Ridley has been appointed chairman. Mr Joseph Powell has been appointed a director of the corporation.

The offices of British Controlled Oilfields, Ltd., and Trinidad Petroleum Development Company, Ltd. will, on and after 23rd instant, be transferred from 5 Moorgate, E.C. 2, to River Plate House, Finsbury Circus, E.C. 2.

It is announced that Mr S. S. Taylor, C.M.G., D.S.O., has been unanimously elected a director of the Consolidated Mines Selection Company, Ltd.

Mr E. V. Reid, managing director of Dalgety and Company, Ltd. on retirement from active participation in the management of that company as from June 30th next, on the score of advancing years, will retain his seat on the board of directors and has been appointed deputy chairman of the company.

RAILWAYS.

CORDOBA CENTRAL RAILWAY COMPANY, LTD.—At the meeting of the holders of the company's 5 per cent. second debenture stock held June 24th to consider the board's proposal that the company should, as a temporary measure, be allowed twelve months within which to pay the interest falling due from time to time on that stock, Mr W. Sandford Poole, the chairman of the meeting, announced that the directors had agreed to amend the proposal so as to provide for the payment of interest at the rate of 5 per cent. per annum on the net amount of any instalments of interest so postponed for the period of the postponement. After a discussion, the resolution, as amended, was carried *nem. con.*

MISCELLANEOUS.

ALLIED IRONFOUNDERS.—The first annual report from the period of incorporation, March 21, 1929, to March 31, 1930, the directors of Allied Ironfounders shows that the dividends receivable from subsidiary companies (including £67,259 distributed from pre-merger reserves for reasons referred to below) after providing for income tax, amount to £160,362. The directors do not propose to pay an ordinary dividend, but they recommend a dividend on the 7 per cent. cumulative preference shares for the year, less income tax at 4s. 6d., requiring £53,931, leaving to be carried forward £4,247. The directors can definitely state that £62,028 represents the maximum financial loss incurred by the company and its subsidiaries arising out of their connection with Austin Friars Trust. Meeting, Winchester House, E.C., June 25th, at 12 noon.

THE AUSTIN MOTOR COMPANY, LTD.—This company makes the following announcement: 6½ per cent. first mortgage debenture stock, 6 months' interest to June 30, 1930, £42,790. Warrants will be despatched June 30, 1930; payable July 1, 1930. The warrants for the undermentioned payments will be despatched June 28, 1930: 7 per cent. preference and 6 per cent. "B" preference shares, 6 months' dividend to June 30, 1930, £47,460, payable June 30, 1930; 20 per cent. preferred ordinary shares, one year's dividend to December 31, 1929, £150,000, payable June 30, 1930; ordinary shares, one year's dividend, at the rate of 20 per cent., to December 31, 1929, £30,000, payable June 30, 1930; total, £270,250.

(c) Plus bonus of 5 per cent.

CANADIAN WALLPAPER MANUFACTURERS, LTD.—The directors of the Canadian Wallpaper Manufacturers, Ltd., announce the payment of a dividend of 10 per cent. on the common shares for the financial year ending April 30, 1930, as against 6 per cent. for the previous year. A balance of $231,000 is carried forward, as compared with $132,587 brought in from the previous year.

HARLAND AND WOLFF.—The directors state that the company is still engaged in carrying out a large programme of work and the dividend on the first preference shared for the half-year has been earned, but the company is finding difficulty in obtaining new work at remunerative prices. The board have decided to conserve cash resources in the meantime, and it is not proposed, therefore, to pay the dividend on the first preference shares on July 1. This dividend has previously been regularly paid, but the dividend on the "A" and "B" preference shares is in arrear from January, 1925.

MEXICAN EAGLE OIL COMPANY.—Dividend in respect of 1929 of 8 per cent. (16s. 4d. per 25 shares) will be paid on the preference shares, and of 6 per cent. (12s. 3d. per 25 shares) on the ordinary shares. No dividend was paid on the ordinary shares last year.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Continued fine weather over the United Kingdom has considerably enhanced agricultural prospects, all cereal crops responding well to warmth and sunshine, and there is now definite indications of full yields being obtained. Similar conditions have prevailed on the Continent, though in some instances preliminary estimates point to a crop reduction compared with last year. The market for native wheat remained dull, as prices are too dear compared with imported varieties for milling purposes. Supplies, however, are now in small compass, as is only to be expected at this advanced period of the year. The import market was depressed on a further sharp break in prices, buyers operating cautiously pending further developments in the situation. Selling pressure from the United States of new winter wheat now being harvested, together with liquidations of old stock, was the chief cause of the downward movement, and forced Canadian sellers to come into line in order to compete for European custom. In view of favourable new crop prospects, sellers are naturally anxious to reduce stocks as speedily as possible before additional supplies become available. The present situation was not unexpected, and is a sequel to the persistent withholding of the North American surplus under Governmental support over a prolonged period. European importers have always stubbornly resisted the attempt to force prices above international parity, and were materially assisted by bountiful domestic crops. Argentine growers appear anxious to dispose of their smaller surplus this season, offers being made on a lower basis; and, with India still shipping freely, consumers are assured of plentiful and cheap supplies of grist for some while ahead. Flour prices were reduced in sympathy with wheat, though not to the same extent owing to the low values ruling for offals, while best imported makes are still rather scarce on spot. All feeding stuffs encountered a slow demand, and price concessions were frequent in order to trade. Shipments of European maize are increasing, but the Plate movement is still restricted by unfavourable climatic conditions. Barley continues to sell at very low rates, down to 13s. 3d. per quarter being accepted for Persian parcels afloat to Bristol Channel. Oats continue difficult to vend, and prices further moved in buyers' favour.

WHEAT.—Declined sharply. No. 1 Northern Manitoba, ex ship, 39s.-39s. 3d.; No. 2 ditto, 38s.-38s. 6d.; No. 3, 37s.; No. 4 Manitoba, 35s. 6d.; No. 5 ditto, 34s.; No. 6, 29s. 9d.; No. 2, hard winter, 35s. 6d.; No. 2, mixed Durum, 32s. 6d.; Rosafe, 62 lbs., 36s. 9d.; Barusso, new crop, 62½ lbs., ex ship, to arrive, 36s. 3d.; Australian, 39s.; choice white Karachi, 37s. 6d. per 496 lbs. English, 8s.-8s. 3d. per 112 lbs.

FLOUR.—Dull and easier. London straight run, 34s. 6d. per sack for country deliveries and 33s. 6d. London area. Of imported, Manitoba patents, 31s.-33s.; Buffalo, 31s.-33s.; Australian, 29s. 6d.-30s. ex store. On c.i.f. terms, Manitoba top patents, June-July, 30s. 9d.-31s. 3d.; export ditto, 28s. 6d.-29s.; Australian, 26s. 6d.-27s. per 280 lbs.; Argentine, low grade, May, £5 12s. 6d. per ton.

MAIZE.—Steady for near, but distant tends easier. Plate, landed, new, 26s. 9d.; ex ship, to arrive, 25s. 3d. Old, to arrive, 24s. 3d.; new, May-June, 24s. 6d.; June-July, 23s. 6d.; July-August, 23s. 3d.; August-September, 23s. 3d.; Bessarabian, 23s. 3d.-23s. 6d. per 480 lbs. Yellow maize meal, £7 15s. per ton f.o.r. London. Yellow African, £5 12s. 6d. per ton ex ship.

BARLEY.—Slow. Californian, old, landed, 34s.-40s.; new, ex ship, 34s.-40s. as to sample; Chilian brewing, 33s.-37s.; Chevalier, 38s.-44s.; Australian, 32s.-34s.; Smyrna, 34s.-36s. per 448 lbs. Black Sea, ex ship, to arrive, f.a.q., 15s. 3d.; landed, 16s. 6d.-17s. 6d.; Persian, landed, 15s. 6d. per 400 lbs. English malting, 7s. 3d.-8s. 9d.; feed, 7s.-7s. 2d. per 112 lbs.

OATS.—Quiet. Plate, landed, 13s.; ex ship, to arrive, 12s.; Chilian, white, landed, 19s.; ditto, tawny, 15s.; German, landed, 18s.; ex ship, to arrive, 17s.; mixed Canadian feed, 12s. per 320 lbs. English, 6s. 4d.-6s. 8d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1929-30, 1928-29, 1927-28, 1926-27:—

	1929-1930.	1928-1929.	1927-1928.	1926-1927.
Estimated sales of home-grown wheat—				
1 week to June 21	Qrs. 111,621	Qrs. 71,440	Qrs. 148,160	Qrs. 114,225
42 weeks to June 21	9,081,605	9,408,372	10,460,318	11,357,467
Average price of English wheat per cwt.	s. d. 8 6	s. d. 9 7	s. d. 10 10	s. d. 12 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	Quantities Sold.			Average Price per Qwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Qrs.	Qrs.	Qrs.	s. d.	s. d.	s. d.
June 14	164,371	18,533	20,276	8 7	7 6	6 5
June 21	111,621	20,680	7,920	8 6	6 6	6 4

June 22, 1929	71,440	8,289	9,083	9 7	9 7	9 5

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

Nearest Future.	Jan. 2, 1929.	June 26, 1929.	Jan. 2, 1930.	June 11, 1930.	June 18, 1930.	June 25, 1930.
Winnipeg (No. 1 Manitoba)—Cents per 60 lb.	122	124½	148⅜	114⅜	101	94⅛
Chicago (No. 2 Winter)—Cents per 60 lb.	116⅜	113⅝	130⅞	104½	96⅝	88⅝

The visible supply of wheat in Canada shows an increase of 1,942,000 bushels on the week at 62,666,000 bushels, which compares with 63,674,000 bushels last year.

THE COAL TRADE.

Our Sheffield correspondent writes:—Exports of South Yorkshire coal are maintaining a substantial level, but the tonnage has shrunk and the business has been obtained only by cutting prices and has not been profitable. Quotations for best qualities are 14s. 6d. to 15s. f.o.b. The industrial demand is weak, and there is a glut of small fuels and coke. Blast-furnace coke has been sold at from 11s. to 12s. f.o.b. Business is weak in house coal.

Our Glasgow correspondent writes: Coal prices are still falling, and current quotations are now at about the lowest points of the year. Demands are still running on very quiet lines, both in the home and the shipping trades, and in spite of extensive short-time working, supplies are accumulating. Nuts are in a stronger position on the whole than round coal, scarcity of orders for which is causing considerable difficulty in negotiations for business in smalls. To-day's quotations are approximately as follows (f.o.b. district ports): LANARKSHIRE: Ell best, 13s. 3d.; splint best, 15s.; splint second, 14s.; navigation, 16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 11s.; pearls, 11s.; dross, 9s. 6d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 9d.; third-class steam, 10s. 3d.; trebles, 13s.-14s.; doubles, 11s. 6d.-12s.; singles, 11s.; pearls, 10s. 9d. LOTHIANS.—Prime steam, 11s. 6d.; secondary steam, 11s.; trebles, 13s.; doubles, 11s. 6d.; singles, 11s. 3d.; pearls, 10s. 6d. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s. 3d.; trebles, 12s. 6d.; doubles, 11s. 6d.; singles, 11s. 6d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—There has been a slight improvement this week in the undertone of the market, and a contract has been placed by the Compania Hispano-Americana de Electricidad, the owners of the largest power concern in Buenos Ayres, for the supply of between 450,000 and 500,000 tons of sized coals over 1931 and 1932. The requirements of the company over this period, as on previous occasions, have been divided between South Wales and German colliery companies. The contracts are on a c.i.f. basis, but although the actual figures have not been disclosed, it is stated that they are calculated on an average freight rate of between 14s. and 14s. 6d. per ton. There has been little or no expansion in the current volume of business, and prices for practically all grades are ruling at the minimum scheduled figures. Many collieries are working irregularly and the docks are only partially employed. At Swansea it has been found necessary to close the South Dock indefinitely for the shipment of coal. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 3d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. 3d. to 13s. 6d.; cargo smalls, 12s. 3d. to 12s. 9d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 40s. to 43s.; rubbly culm, 11s. 6d. to 12s. 6d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 20s. to 22s.; pitwood, ex ship, 26s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The approach of the holiday season, which usually synchronises with a lessening of trade activity, is scarcely noticeable in the quiet conditions which are ruling in the iron and steel markets. There is, of course, a steady business moving, but the volume is much less than for the corresponding periods of the past two or three years. In the pig-iron department the transactions reported consist principally of small tonnages for early delivery, and there is a noticeable disinclination on the part of consumers to renew contracts as they are completed. This is partly due to a lack of confidence in the price position as many buyers regard a reduction in quotations as possible. On the other hand, the producers claim that stocks have not yet reached an unwieldy level, and that present costs and the probability of further advances in the production charges prevent them from making concessions. Business in semi-finished steel is erratic. A few orders have gone to the Continent, but for the most part the buyers seem inclined to restrict their purchases to comparatively small quantities. The position in the finished steel department is causing some anxiety, as the export demand is still of small proportions. Some business is reported from South America, but buying from the important Eastern markets is indifferent and buyers frequently cable unacceptable limits as regards price.

Our Middlesbrough correspondent writes:—The market for Cleveland iron continues very depressed and there are no signs of an early improvement in the position. The buying that is being done is still confined to small lots for early requirements, and this policy is likely to be continued unless a tempting reduction in prices is made. Consumers appear to be quite indifferent about forward supplies, as they are finding orders for their products difficult to secure and do not see any inducement to buy pig iron forward at present figures There was an important inquiry on the market last week for Scotland and the local makers made a serious attempt to secure some of the business, but it is understood that the buying was postponed indefinitely. No changes in prices were made at the weekly market on Tuesday, and No. 1 remains at 70s.; No. 3, 67s. 6d.; No. 4 foundry, 66s. 6d.; and No. 4 forge, 66s. f.o.b. or f.o.t. Hematite is in poor demand. The fresh orders coming to hand are only for moderate quantities, which do not enable producers to get their stocks reduced; but, on the other hand, additions are being made to the large quantities already held, and this is causing considerable inconvenience. Prices are being cut in the hope of attracting more business for early delivery and makers are now willing to accept 71s. 6d. for reasonable quantities of mixed numbers and 72s. for small parcels. Merchants have a free hand for export and are shading these prices, but for home they are restricted as to destinations. Shipments of pig iron are on a very small scale, the clearances of all kinds to 24th inst being only 10,444 tons, against 13,614 tons to the same date in May. In the manufactured trades new business is very slack and orders are being worked off faster than new ones are coming to hand, with the result that irregularity of working increases. Prices are all unchanged from last week. The ore market is dead idle, and 20s. c.i.f. for best Bilbao rubio is purely a nominal figure. The freight Bilbao-Middlesbrough for early tonnage is about 5s. 6d. Coke for early delivery is much in excess of requirements and good furnace qualities can now be obtained at 16s. 6d. delivered works, but a higher price is asked for forward delivery. The number of furnaces in blast in the district is reduced to 32 by the damping down of one at Dimsdale Works.

Our Sheffield correspondent states that productive operations and trade generally are being disturbed by the half-yearly stock-taking. Preparations for this have tended to restrict buying for several weeks past, but there should be a substantial revival next week. The situation at the moment is very bad. Two blast furnaces are being stopped indefinitely at a Lincolnshire works next week. Stocks of pig iron have accumulated at a number of furnaces. Prices will be reconsidered next week and some concessions are possible. Fairly good business is being done in the more expensive kinds of special steels. Not many inquiries are about for heavy and crude steels generally. The home trade for various kinds of hand tools is steady, whereas the chief exports markets are almost stagnant. Engineers' small tools are also in demand from domestic sources. Production of open-hearth steel is still at a low ebb.

Our Glasgow correspondent writes:—Although the shipbuilding work placed and the prospects of further orders have somewhat brightened the outlook in West of Scotland trade circles, there is no material improvement in the situation at the steel works nor in the manufactured trades. At a great many of the West of Scotland concerns stock is being taken at the end of the present month, and this is invariably a quiet period of the year for home trade business. There has been no expansion in the export demand, and meantime the general impression seems to be that little improvement can be looked for till after the annual holidays. In the Falkirk district holidays commence at the end of this week, but in Glasgow and the Lanarkshire area generally the stoppage will not commence for about three weeks.

Our Cardiff correspondent writes:—The Welsh tinplate market continues quiet, but prices are being maintained and the upward tendency in tin is likely to stimulate the placing of new orders. Canada is reported to be inquiring for large quantities, and latterly business has been a little more active on Australian account. The sheet market is lifeless and fears are entertained that more mills may have to close down. Current quotations for tinplates are on the basis of 18s. to 18s. 3d. per box, and for galvanised sheets of £11 17s. 6d. to £12 10s. per ton. Welsh bars are easier at between £6 5s. and £6 10s. per ton, but foreign bars nominally unchanged at about £5 9s. per ton. Shipments last week were considerably below the average, and stocks have consequently increased to about 210,000 boxes.

OTHER METALS.

TIN.—Market opened dull at a material decline in prices due to lower foreign cable advices and pressing offers. Later, however, a recovery occurred on a better demand for forward positions, though dealings disclosed a good deal of irregularity. Standard cash changed hands at £133 15s. to £139 15s. and £138 10s.; three months, £136 to £141 5s. and £138 10s. In the East, sales were reported at £138 5s. to £143 5s. per ton, c.i.f. terms.

COPPER met with moderate support, and with sellers to the fore, values displayed irregularity and weakness. Dealings were mostly confined to forward positions, three months ranging from £48 8s. 9d. to £49 5s., with limited dealings in cash at £48 10s. to £49 5s.

LEAD quiet but fairly steady, as sellers refrained from pressing. Good soft foreign pig, June, sold, £17 18s. 9d. to £18; July, £17 18s. 9d. to £18; August, £17 17s. 6d. to £17 18s. 9d.; September, £17 17s. 6d. to £18; October, £17 18s. 9d. per ton.

SPELTER quiet and slightly easier on liberal offerings. July, sold £16 10s. to £16 5s.; August, £16 15s. to £16 10s.; September £16 18s. 9d. to £16 13s. 9d.; October, £17 to £17 2s. 6d. ton.

QUICKSILVER maintained. Spot, £22 2s. 6d. per bottle.

ZINC OXIDE dull, at £26 to £32 per ton, as to quality, delivered United Kingdom.

TIN PLATES in moderate demand. I.C. coke, prompt and forward, 18s. to 18s. 3d. per box f.o.b. Swansea.

ANTIMONY.—Quiet and easier. English regulus, £38 to £45; Chinese ditto, spot, £27 10s.; June-July, £22 to £22 10s.; crude, June-July, £14 per ton.

WOLFRAM.—Dull. Chinese, June-July, 16s.; Burmese, 15s. per unit.

ANTIMONY OXIDE.—June-July, £24 15s. per ton.

ANTIMONY ORE.—50 per cent., June-July, 3s. 6d.; 60 per cent. ditto, 4s. per unit.

THE COTTON TRADE.

LIVERPOOL, June 25th.

Business has been a little more animated during the past week, and some covering by shorts in the earlier part caused prices to advance some 25 points. This, however, has been lost, and quotations to-day are about 8 points lower than a week ago. Weather news continues to be very favourable, though the Central Belt could do with some rain. Weakness on the New York Stock Market has been reflected here. Sentiment continues to be bearish. Spot sales for the week 19th to 25th (inclusive) are 22,000 bales, of which 10,330 bales are American, 1,850 Brazil, 1,300 Argentine, 2,000 Peru, 3,100 Egyptian, 1,800 African, 1,000 East Indian, and 620 sundries. Imports for the same period are 26,080 bales, of which 5,629 bales are American, 3,607 Argentine, 5,494 Peru, 5,716 Egyptain, 3,473 African, 2,161 East Indian. Quotations to-day are: American, Middling, 7·47; Egyptian Sakel, 12·35, Uppers, 9·33; Brazil Fair, 6·77; Peru G.F. Smooth, 7·77; West African Middling, 7·37, and East African G.F., 8·02.

MANCHESTER, June 25th.

Conditions in the market continue very disappointing. Last week there was an improvement in inquiry and the hopes of spinners and manufacturers were raised, but this week business has not matured and very few buyers have been prepared to make definite offers. There is still much fear of lower prices for raw cotton, and the weakness now and again displayed in yarn and cloth quotations makes buyers nervous. Rumours are occasionally circulated of the boycott in India breaking down. The position in Madras is certainly easier and rather more contracts have been arranged. In the bigger ports, however, of Calcutta and Bombay the position is as bad as ever, and trade is quite out of the question. There is no probability of any freer buying for China just at present and silver has touched a fresh low level. A few more transactions have been mentioned in bleached shirtings for the Near East and scattered sales have occurred in printing and finishing styles for certain African outlets and South America. There has not been any general activity in home-trade goods. The sales in American and Egyptian yarns have been for restricted quantities, and to secure orders spinners have had to accept wretched prices. It is not expected that the scheme proposed for the Egyptian branch will be in operation for some time.

THE WOOL TRADE.

Our Bradford correspondent writes:—So far as the West Riding wages dispute is concerned, the trouble is narrowed down to the power-loom overlookers, all the other sections of operatives having returned to work. The overlookers, however, are apparently determined to resist the Macmillan scale to the bitter end, and in these circumstances it is impossible to settle down to normal production. True, many manufacturers are managing to carry on without the overlookers, but there is not that free movement of yarns which is essential to promote continuity of employment in all sections. The continued opposition of the overlookers, the loss of trade in recent weeks and, to some extent, financial pressure, combine to undermine confidence and restrict business. The market, indeed, is weaker than it has been for several weeks; the tone is subdued, and neither in tops nor in yarns is there any concerted buying movement. In these circumstances, and in spite of continued firmness in the primary markets, quotations for tops and yarns are inclined to sag, as sellers are willing to make concessions although prices quoted are well below replacement costs based on current prices of raw wool. Buyers are equally indifferent to bye-products in view of the increased production since the resumption of work in the mills. It would appear, therefore, that the West Riding industry is passing through another period of reconstruction, and that for the time being local conditions exercise more influence than world conditions. This appears to be borne out by the good foreign competition for wool in the primary markets, and by the increased machinery consumption in Continental centres, indicating that abroad users are not without confidence in current values.

COLONIAL WOOLS.

FROM A CORRESPONDENT.

Cables this week from Australia indicate that firm prices continue, and that both at Sydney and Perth there has been excellent competition, with values fully maintained. We are glad that selling brokers are meeting the market, for there is nothing at the moment to indicate that any higher prices are likely in the near future. It is cause for satisfaction that the different buyers are prepared to compete actively with each other for the wools that are being catalogued, and the good clearances which are being effected shows that users can still find an opening for what they are securing. The Joint Wool Council of Australia has estimated that the new clip will be 2,496,000 bales; 2,248,500 bales will be offered locally, and 1,200,000 bales will be catalogued by the end of the year, assuming that there will be a satisfactory call for the wool. This important authority also estimates a decrease of 112,000 bales in the forthcoming clip, at which some surprise has been expressed. This quantity of wool will not make a great deal of difference to marketing conditions, because all alike are satisfied that the forthcoming Australian clip will be fully equal to all requirements. The new clip should be very good in every respect. Generally, Australia has had a good winter, feed and water being adequate. With the heavy rains of last week coming just before shearing, a good deal of dust will have been washed out of the fleeces, and we fully expect that condition will be slightly better than in the clip of last year. This week Bradford has entertained a party of about twenty New Zealand pastoralists, a wool conference being held. Some important matters were talked over regarding the growing, selling and marketing of the clip, from which much good should result. New Zealand pastoralists were exceedingly pleased and more than satisfied with what they heard and saw as they went round the mills.

THE JUTE TRADE.

DUNDEE, June 25th.

With prices of raw jute and Calcutta goods declining, consumers of all products have shown little inclination to purchase. The Calcutta mills, just after having signed an agreement to work 54 hours per week as from June 30 instead of 60 as at present, are reported to be already considering that negotiations should be opened to restrict production to an even greater extent. It was generally anticipated that when the mills fixed up their agreement to work 54 hours, prices might at least be stabilised; but the immediate effect on the market was a sharp fall in prices, hessians dropping at least 2s. per 100 yards and heavy goods anything from 2s. to 4s. per 100 bags. Very large stocks of goods have accumulated at all consuming centres, and also in Calcutta, owing to the increased production of the mills during the past year, combined with the poor state of trade generally prevailing throughout the world. Dundee and Continental producers have been compelled to work short time and put off machinery to a very considerable extent, and the holiday period in Dundee this year, instead of one week as usual, will in many cases extend to three weeks. Bright prospects for the new crop of jute continue, and a bumper crop is expected, while the carry-over from the last crop is larger than usual. It is understood that the area is larger this year than last, owing to the fact that jute, though low in price, is proving a better proposition to the growers than rice. Best first marks have fallen to £26 15s. and best lightnings to £24 15s. for August-September shipment, while Daisee assortment has been sold by speculative sellers down to £22 and Tossa assortment offered at £24 10s. for September *October* and October-November shipment. Prices of yarns are more or less nominal in the absence of business to test them. Spinners are not quoting less than 2s. 8d. for common 8-lb. cops and 2s. 9d. for 8-lb. spools, and buyers are not offering to pay less. Twist is quiet at from 4⅞d. to 5d. for 3-ply 8 lb., and sacking yarns are about unchanged at from 3⅞d. to 3¾d. for 24-lb. weft and 4⅝d. to 4¾d. for 8-lb. chains. Rove is the firm item and business is passing at from £28 for 48 lb. and £18 10s. for 200-lb. Fine yarns continue firm and carpet qualities are nominal at from 4⅝d. to 4¾d. for 14-lb. warp. The cloth end of the trade is most disappointing, and only occasional orders of any consequence are being placed. For these the manufacturers are taking something less than their quotations of from 3¼d. for 10½-oz. 40-in. hessians and 2¼d. for 8 oz. Linoleum hessians are being bought in small quantities, and narrow tarpaulin is of some interest, but otherwise heavy goods are dull. Calcutta hessians were offered at 21s. 6d. for 10 oz. and 17s. 6d. for 8 oz., June shipment; 22s. and 18s. respectively, July-September; and 22s. 3d. and 18s. 3d. for October-December.

HIDE, LEATHER AND ALLIED TRADES.

Green hides and skins were steady to a slight advance at the auctions held in the North during the early part of the week, several weights in both clear and warbled ox and heifers making from ⅛d. to ¼d. per lb. more money at the Leeds sales. Calfskins were also a better market, and here again slight advances were recorded on certain weights. Business in connection with imported hides has been less active than of late and prices for most descriptions are inclined to be lower. The American Tariff Bill has been responsible for a certain amount of the inactivity in the South American market, where Argentine and Montevideo ox have declined to the equivalent of 7d., while cows have changed hands at 6¾d. In the Saladero market a few parcels of Rio Grande ox and cows have been sold at 6¼d. and 5¼d., but apart from this there is nothing of interest to report. Dry River Plates are also lower, sales of B.A. Americanos having been made at 7⅝d., Sierra Cordobas at 8¼d., and B.A. Inservibles at from 4⅜d. to 4½d. Cape hides have followed the downward tendency, drys now being quoted at 8¼d. and 7½d. for firsts and seconds, with dry-salted selling at 7⅜d. and 6¾d. While business in connection with sole leather is still chiefly confined to the sale of small parcels, there is a more optimistic tone prevailing, and the general impression seems to be that the outlook is brighter. Shoe manufacturers have shown more interest in the position, and although for the time being individual orders are kept to the smallest possible quantities, the aggregate turnover has accounted for quite an appreciable amount. Light dry hide bends in the medium to cheaper grades have been asked for for manufacturing purposes, while the repairing section have been interested in English and wet-salted in the better-class tannages. Shoulders have experienced a rather poor inquiry, and the only degree of activity experienced in connection with bellies has been in connection with pinned sorts. The upper leather market is steady, with a regular day-to-day inquiry for most kinds. Glacé kid in both black and brown is responsible for a considerable amount of the turnover, while a steady business is being done in box and willow calf. A fair trade is also experienced in connection with suède leather, as is also the case with reptile skins. Patent leather hangs fire, and the limited inquiry coming to hand is in connection with the lower grades. Semi-chrome leather also is quiet and is usually wanted at very low prices. Dressed kip leather is a slow sale and the lack of export business has been the cause of several firms considerably curtailing their working hours.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

It has been recognised for some months past that the import of European building and joinery timbers would be a large one this season. A good start was made in May when, according to an analysis of the Board of Trade returns, the increase in the receipts of sawn wood from all sources was 24,460 loads (of 50 cubic feet), and as many as 199,240 loads for the five months, compared with the corresponding periods of 1929. In spite of the early period for shipping, especially for Russia, that country almost doubled her exports to the United Kingdom last month compared with May, 1929, while for the five months this year the Soviet shipments reached 168,800 loads compared with 106,260 loads. So far as the initial stage of the timber shipping season is concerned, suggestions that the Russian "invasion" at "ruinous prices" would freeze out the United Kingdom timber business of the other leading shipping countries has not been justified by results, for so far this year larger quantities have come forward from Finland, Sweden and, especially, from Latvia, which latter includes the port of Riga, before the Russian revolution one of the most important wood shipping centres of its kind in the world. Poland also is sending a little more wood compared with 1929, but not nearly so much as in 1928, when she was the largest shipper to the United Kingdom for the first half of the year. Stocks of European timbers on the United Kingdom market generally are large, but the consumption so far has been well maintained. Prices, however, are weak generally,

and auction sale values denote that the market is depressed. The building trade returns for May (£8,310,100) show an advance of £2,295,200 on the previous month, and a surplus of £643,900 compared with May, 1929. Since our last month's notes were written the Russian-United Kingdom timber situation has taken a somewhat dramatic turn in which the Soviet timber authorities have given concessions in c.i.f. prices, making guarantees (on certain conditions) as to their stability throughout the season, and arranging that their customers do not sell below a certain price range. The success or otherwise of the scheme depends almost entirely upon whether United Kingdom consumption keeps up to supply, and whether the other principal shipping countries do not make some serious attempt to secure more business. Experience of past years shows that as summer wanes with the United Kingdom holding back, drastic concessions have had to be made by shippers on occasions to stimulate sales, and that may also be the case this year. There are two outstanding features of the European timber and United Kingdom spot market to-day: (1) This Russian competition is not a thing of the moment but is going to continue, and the other principal shipping countries must recognise that; (2) the United Kingdom spot market is faced with a likelihood of supplies well in excess of demand, and must adopt a system of marketing on modern and more "pulling" lines. The hardwood section of the trade remains dull, but prices generally, especially for logs, are firm, as stocks are in good hands. The weakest spot continues to be American lumber, imports of which are too heavy month by month, the low offers from the other side showing that the wood-consuming industries in the United States cannot be doing at all well. The low c.i.f. values are reflected on all competitive material, home, colonial and foreign. The fact of the more common building, joinery, and furniture woods being in such good supply at easy rates ought to give a stimulus to larger manufacture in the United Kingdom and help to decrease unemployment. An extensive course of building work might prove to be the first good start towards better times.

VEGETABLE OILS AND OILSEEDS.

Markets are subject to varying conditions. In sympathy with cheaper seed, and on poor demand, linseed oil is easier, current value, ex Hull, for June delivery being £41, and for July-August, £39 10s. Cotton oils are quiet and easier, with crude Egyptian, ex Hull, quoted £27 spot, while for July and August deliveries business is reported done at £25. Other seed oils are quiet and easy. In the oilseed section linseed has further declined, following the fall in grain, etc., in America. Plate having relapsed to £16 15s. per ton on spot at Hull, and £16 5s. for shipment. Some little business is taking place in Indian linseed, Calcutta to London having been done at £17 13s. 9d., July-August. The quantity of linseed on passage to Europe is now 115,000 tons, or 4,200 tons less than a week ago. Cottonseed has attracted more attention, and for old crop black Egyptian for shipment, August and September, £6 11s. 3d. has been paid. A little is also passing in new crop, £7 being conceded for September and £6 17s. 6d. November-January loadings. The demand for oilcakes and meals is extremely poor, and prices have been again revised in a downward direction.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—No change occurred in spot prices, and there is only a comparatively small business passing, both on grocery and manufacturing account. A rumour prevalent in the London market of a further extensive deal by Russia is mentioned in cables from New York, but confirmation is not forthcoming. Quantity indicated from the latter quarter, totals 300,000 tons. Raw refining sugars quiet, and the low price of 5s. c.i.f. London, accepted for 500 tons Brazilian, 80 per cent. July-August shipment. Terminal sections opened firmer, but assumed a quieter tone later. Of raw, August sold 5s. 9¾d. to 5s. 10½d.; December, 6s. 1½d. to 6s. 3d.; March, 7s. 3d. to 7s. 2¼d. and 7s. 3¾d.; May, 7s. 6d. to 7s. 5½d. Cuban European last week cabled 32,476 tons, against 50,278 last year; exports, 40,647, against 66,318; stocks, 1,650,910, against 1,371,317. Centrals at work, 3, against nil last year. Stocks of raw sugar in three chief ports of the United Kingdom for week ending June 21st totalled 134,308 tons, against 121,494 last year.

COFFEE.—There is no improvement to note in this market. In fact, affairs of late have become extremely quiet, and it seems that quantities offered in auction are quite beyond absorption powers of trade buyers. Quite a large proportion again bought, while buyers were favoured respecting any alteration in prices. Some fine bold Costa Rica sold 140s. Brazilian varieties dull and undertone still weak.

COCOA.—Spot sales partake of a retail character at about late rates. Forward positions slightly unsettled and general trade slow. Accra, F/F, mid crop, sold 29s. 6d., with guarantee; and October-December, 34s. f.o.b. terms. Bahia quoted 39s., and St. Thome 38s. 6d. c. and f. Terminal, July, sold 35s. 6d. to 35s.; December, 35s.

TEA.—Quantity of Indian brought to auction during the week totalled 50,517 packages. Competition was of a sustained character, especially for qualities up to 10d. per lb., and these cleared at very firm rates. A few really fine teas went well, but some final and semi-final invoices disclosed some irregularity. New season's Darjeelings, though somewhat plainer in character, received fair support. Of Southern Indian, quality of Travancore marked a falling off, and previous rates were not always maintained. 30,357 packages Ceylon came to quite a good steady market. Competition was sustained in most directions and satisfactory progress made. A feature proved strength of demand for good liquoring medium kinds, and these were frequently ½d. to ¾d. dearer. Java and Sumatra sales met a good reception, and a firm market mostly resulted. Quite a steady trade is doing in China qualities.

RICE.—A quiet and generally unchanged market. Two Stars Rangoon, spot, London, sellers 12s. 10½d.; June sellers, 11s. 9d.; July, 11s. 9d. Spanish, oiled, shipment to London, 14s. 6d. to 14s. 9d. Italian, 15s. to 15s. 6d. c.i.f. No. 3 Burma to Levant quoted 11s. 9d. c.i.f. double bags. American blue rose from 24s. to 25s. c.i.f. S.Q. to Cuba, 12s. 3d. Saigon No. 1 round grain, June-July, to Europe, 12s. 3d. Siam Super, June-July, 17s. 1½d.

BEANS quietly steady. Madagascar, spot, London, 32s. to 34s.; May-June, 32s. Ohtenashi, spot, 19s. Rangoon haricots, spot, London, 10s. 9d. to 11s. 3d.; October-November, 26s. Danubian H.P., spot, London, 18s. 9d. To Glasgow, North African, new, July-August, 7s. 9d. c.i.f. Chinese ditto, 7s. 1½d.

PEAS slow of sale. Japanese new crop, spot, London, 13s. 9d.; old, 12s. 3d.; afloat, 13s. to 13s. 6d.; June-July, 13s. 3d.; and new crop, September-October, 14s. 3d. c.i.f. Dutch marrowfats, prompt, 14s. 6d.; small hand-picked blues, 9s. 6d. to 10s. 6d. f.o.b. terms. Calcutta (per 504 lbs.), June-July, 43s. Karachi ditto, 41s. 6d. c.i.f. Maples: No. 1 New Zealand, new crop, June-July, 62s. 6d.; f.a.q. May-June, 58s. 6d. Tasmanian "A" grade, new, afloat, 64s.; June-July, 63s.

SPICE.—Pepper held steadily and a moderate inquiry prevailed. Lampong, April-June, quoted, 9¾d.; May-July, 9d.; August-October, 8¼d. Muntok, white, April-June, 11¼d.; May-July, 11d.; August-October, 10⅝d. Cloves idle. Sago flour, June-July, to the U.K., 9s. 7½d. c.i.f. Ginger quiet but steady. London stocks of black reduced 13 tons on the week to 955, against 1,658 same time last year, and white 33 tons down at 592, against 495.

FRUIT (Dried).—Currants: Market firm but business restricted. Patras, quoted, 39s.-43s.; Zante, 38s.; Gulf, 40s.-42s.; Vostizza, 44s.-58s.; Australian, new crop, 38s.-62s. Sultanas: Smyrna in small supply and market firm. Smyrna, medium to fine, 44s.-55s.; Cretan, 42s.-60s.; Greek, 42s.-65s.; Australian, old, 34s.-35s.; new, 45s.-75s. Dates dull. Hallowie, spot, 15s.-17s.; Khadrowie, 14s.; Siar, 11s.-14s. Raisins move off quietly. Valencias, quarter boxes at 36s.-38s.; Lexias, 38s.-42s. Figs in light supply. Genuine, 18s.-30s.; good average, 16s.; September shipment, 18s. 6d. c.i.f.

EVAPORATED FRUITS.—Market steady, with a fair business passing in most descriptions. Australian and South African apricots sell readily, while plums experience a better movement at the recent decline. Plums: Californian, new crop, 30's-40's, 55s.; 40's-50's, 52s.; Oregon, 30's-40's, 48s.; 40's-50's, 46s. Apricots: South African Royal, 50s.-112s. 6d.; Australian, 50s.-67s. 6d. Pears: Californian Lake County, fancy, 84s.; extra, 92s. 6d. Peaches: Californian, choice, 50s.-55s.; fancy, 57s. 6d.-62s.; South African, 1929 crop, 42s. 6d.-50s.; 1930 crop, 42s.-58s. Apples: Californian, spot, sliced, extra choice, 35s.-65s.; Canadian, 52s. Almonds firm. Mazagan, 100s.; Mogador, 97s. 6d.; P.G. Sicily, 112s.; Majorcas, 100s.-122s. 6d.; Bitter-Jordan, 185s.-192s. 6d. Apricot kernels: Indian, sweet, spot, 72s. 6d.; China, bitter, for shipment, 35s. c.i.f.; sweet, spot, 70s. Hazel kernels: Barcelona, 155s.; French (shelled) walnuts, 135s.-140s., ex wharf London; for shipment, 130s. cwt., f.o.b. Bordeaux.

CANNED GOODS.

CANNED FRUITS.—A better demand was dealt with for most varieties, consumption being stimulated by favourable climatic conditions, though plentiful supplies of fresh fruits militate against any increased trade expansion. Offers of new pack Californian are made at reasonable prices. Australian steady, but English old supplies are practically cleared. Singapore pines are now meeting with good support and rates tend firmer on spot, while buyers show more disposition to cover forward requirements. Italian tomatoes quiet of sale, with comparatively few offers of new pack available.

CANNED FISH.—Market generally steady with improved inquiries for salmon, but other varieties experience only a moderate movement. Salmon: Alaska, red talls, quoted, 48s. 6d.-49s. 6d.; pink talls, 23s. 6d.-25s. 6d., and halves, 32s.-35s. Japanese crab, best quality, 87s. 6d. Lobsters: Halves range from 130s.-135s. Sardines: Portuguese clubs, quarters, 4s.; 1 lb., 12s. per dozen tins.

CANNED MEATS.—A good demand continued for all descriptions and prices were fully steady, especially for ham and tongues.

CONDENSED MILK AND MILK POWDERS.—Market firmer and a good demand was reservedly met. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 32s.; machine-skimmed, ditto, 20s. 9d.; full cream, sweetened, 56-lb. drums, 50s. English condensed milk, full cream, sweetened, 5-cwt. casks, 42s.; machine-skimmed, ditto, 22s. 6d. Dutch full-cream milk powders, 26 per cent. butterfat, roller process, 1-cwt. cases, 61s. 6d.; spray, ditto, 2 by 56-lb. tins, crated, 82s. 6d. Dutch machine-skimmed milk powders, roller process, 1-cwt. cases, 28s.; spray, ditto, 2 by 56-lb. tins, crated, 38s. 6d.; ditto, 1-cwt. kegs, 37s. 3d.; ditto, 1-cwt. cases, 37s., all per cwt., English prices basis, carriage paid nearest station. Dutch prices are net, ex store, London-Hull or Goole, and cover prompt or gradual delivery to the end of July, 1930. Stocks available in Newcastle, 3d. per cwt. extra; Liverpool, 6d.; Manchester, 1s.; minimum, 1-ton lots; smaller quantity, 6d. per cwt. extra. On the grocery side, full cream, sweetened, 19s.; machine-skimmed, sweetened, 8s. 6d. basis per case, usual packing.

HONEY.—Market dull, with ample supplies available. Jamaica, white, 48s.-50s.; good amber to fine pale, 40s.-47s. 6d.; dark to

RUBBER.

Market fully steady and business again progressed with fair freedom. Standard sheet, spot and July, sold 6⅛d.; August, 6 1/16d. to 6⅛d.; September, 6⅛d. to 6 3/16d.; October-December, 6⅛d. to 6 1/16d.; January-March, 6⅛d. to 6 1/16d.; April-June, 6⅛d. to 6 1/16d. To New York, estate sheet, afloat, sold 5 15/16d.; July-August, 6 1/16d. c.i.f. London stocks 784 tons up on the week, landings being 2,220; deliveries, 1,436; stocks, 78,888, against 30,617 last year. Liverpool stocks 708 up; landings, 963; deliveries, 255; stocks, 27,354, against 4,515.

GENERAL.

JUTE.—Market still quiet and prices marked a further slight decline. Firsts, June-July and July-August, Continent, quoted, £21 15s.; new crop, August-September, sold, £22 to £21 15s.; September-October, £22 to £21 12s. 6d.; Lightnings, June-July, quoted, £20 5s.; August-September, £20 12s. 6d.; Hearts, June-July, £19 c.i.f.

HEMP.—A steadier market for Manila, with sellers adopting more reserve. Buyers decidedly more prominent, especially for near parcels. J, No. 2, July-September, quoted, £23 10s.; K, £23; L, No. 1, £22 10s.; L, No. 2, £20 5s.; M, No. 1, August-October, £20 15s.; M, No. 2, £20 10s.; streaky, one, £40; twos, £35; threes, £30; Cebu, No. 2, £20; ditto, No. 3, £17 10s. African sisal dull and No. 1, June-August, sold £24 10s. c.i.f. Mexican sisal reduced to 5½ cents f.o.b. Progreso. Manila receipts last week cabled 20,000 bales, against 28,000 last year and 28,000 in 1928. Estimate for next week 25,000, and week following 27,000. Manila shipments last week, 5,000 to the U.K.; 4,000, Continent; 15,000, U.S.A.; 8,000, Japan; and others, 2,000, making stocks 151,000 bales.

SHELLAC.—Spot steady. T.N., 115s.; fine Orange, 130s. to 230s.; A.C. Garnet, 130s.; R.L.I. Button Lac, quoted, 150s. Futures irregular. August, sold, 105s. to 99s.; October, 108s. to 102s.; to arrive, July-August, sellers, 98s.; September-October, 101s.

COPRA.—Steadiness characterised this market, moderate inquiries being reservedly met. Straits, F.M.S., July to Rotterdam, quoted, £18 17s. 6d.; Dutch East Indies, July, £18 12s. 6d.; Ceylon, July, £19 10s.; sun-dried, South Sea, £18 7s. 6d.; to Marseilles, mixed Dutch East Indies, July-August, £18 7s. 6d.; smoked, South Sea, £18 5s.

PALM KERNELS.—To Hamburg, June, £12 5s.; July-August £12 7s. 6d.; August-September, £12 10s.; September-October, £12 12s. 6d.; October-November, £12 17s. 6d. c.i.f.

MISCELLANEOUS.—Coconuts, quoted, 16s. to 24s. per 100. Coir yarn, Ceylon, £22 10s. to £36 10s.; Cochin, £24 to £43 10s.; Ceylon, bristle, £18 5s. to £24 15s.; cinnamon leaf oil, 5s. 6d.; for shipment, June-July, 3s. 10½d.; citronelle, Ceylon, 2s. 4d.; Java, 2s. 4d.

The Economist
MONTHLY SUPPLEMENT.

New Series. SATURDAY, JANUARY 25, 1930. No. 80.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

THE new year has opened with feelings of distinctly qualified optimism, and this sentiment was re-echoed at such bank meetings as have so far taken place. It is believed that the progress made during 1929 has fallen considerably short of anticipation, but insufficient allowance has possibly been made both for several factors which place current statistics in too unfavourable a light, and also for the effect upon trade of the many disturbing influences of the year. There is, however, no gainsaying the fact that the approaching budget and the general position of the national finances are viewed in industrial circles with considerable apprehension, and this is having a bad psychological effect upon trade.

Considering these points in succession, when comparing 1929 with 1928, too little regard is often paid to the all-important fact that the 1929 price-level was appreciably lower than that obtaining during 1928. Thus the year's foreign trade returns show that in value exports of British manufactured goods declined by 0.9 per cent., but the official calculations of the Board of Trade show that in volume there has been an increase of 1.3 per cent. Raw material exports have been increased in volume by 13 per cent., this improvement reflecting the recovery in the coal trade. Again, retained raw material imports have risen in value by 6½ per cent., but if allowance be made for the fall in prices, the increase in volume is the substantial one of 11.4 per cent. Considering such unsettling occurrences as last February's frosts, the May elections, and the monetary and stock market crises of the latter part of the year, the progress recorded by these figures, though partial in character, is as great as could be expected. The price factor also enters into the interpretation of such statistics as country and provincial bank clearings, and in general many statistics regarded in their uncorrected form place the position of to-day in an unduly unfavourable light.

Another point to be remembered is that the last few weeks included the Christmas holidays and the period of annual stock-taking. The fall in coal production between November and December is due to the holiday factor, and stock-taking makes January an unreliable month in which to test the position of many trades. A final factor is that of the weather. The mild conditions experienced during the present month have undoubtedly assisted agriculture, but the storms of both December and January have meant increases in unemployment in all other out-door occupations, and early last month these increases partially neutralised the extra employment temporarily available in connection with the Christmas trade.

Yet even allowing for all these factors, the present position of British trade is one of hesitancy. In addition to the seasonal decline in the building industry, unemployment grew worse during early December in mining, cement, pottery, glass, pig iron, leather, and confectionery and in most of the textile trades. Improvements in iron and steel (except pig iron), in shipbuilding, the distribution trades, hotel services and docks and harbours hardly form an adequate compensation for these setbacks.

The iron and steel industries find the opening to the new year somewhat disappointing. There is no improvement in the cotton industry, the woollen industry is still waiting for more stable prices, and the rayon industry is hesitant. The boot trade is variable with only occasional activity, and the freight market is characterised by unrelieved depression. On the other hand, the engineering industry is hopeful, and shipbuilding and marine engineering relatively active. The motor and cycle trades are busy, and the electrical industries are maintaining their activity. Viewing the country as a whole, it seems that most industries are waiting on the arrest of the downward trend of commodity prices, and on more information as to the Government's intentions as regards coal, unemployment, and—most important of all—finance. The lower level of money rates has not so far had much effect either on industry or the stock exchange, but the successful flotation this month of one or two new capital issues is a hopeful sign, whether regarded from the industrial or financial standpoint. Nevertheless, the forthcoming budget remains the dominating factor, and until Mr Snowden's intentions are known, it seems that progress will at the best be slow.

Empire news this month confirms previous reports of the Canadian setback, and unemployment has already become severe in the Western Provinces. Indian weather reports are on the whole satisfactory, and industrial development in South Africa is

* Average weekly figures. † Not available.

apparently business has not been unduly affected by the Wall Street collapse. European reports announce little change. The coal trade is active, but the iron and steel industries are not quite so prosperous as in recent years. Central European trade conditions remain difficult.

Argentine crop reports are to the effect that this season's harvest may be small. Industrial news from Chile is on the whole favourable, but conditions in Brazil remain depressed by the collapse in coffee prices. In the Far East the fall in the price of silver has seriously affected trade with China. Japan experienced easy conditions at the end of the year, and the 1929 returns show that the adverse trade balance has been cut in half since the preceding year.

HOME INDUSTRIES.

Coal.—Export trade is active, with prices firm, except in the West of Scotland. The house coal trade is below the average, this being due to the mild weather. Furnace coke is selling freely and output is increasing. Home demand for industrial fuel is on the quiet side.

Iron and Steel.—The New Year has opened in rather a disappointing fashion. There is a moderate demand for finished steel from the shipyards, but makers of semi-manufactured steel are once more feeling the effects of foreign competition. In the pig-iron section an additional hematite furnace has lately been reopened on the North-East Coast, but business is quiet and new orders are only coming forward slowly.

Engineering.—Prospects in the engineering trade seem fairly hopeful. The marine engineering section is maintaining its activity to a surprising degree, and there is some revival in the agricultural engineering section. Machine tool makers are suffering from intense competition, and business has declined slightly, while makers of prime movers are not doing quite as well as in January of last year. Constructional engineers are benefiting from the open weather, and locomotive manufacturers have now firmly established themselves in the world's markets. There is some room for improvement in the textile machinery branch.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Associations. An explanation of the manner in which it has been computed will be found in page 888 of the *Economist* of November 28, 1925.

INDEX of ACTIVITY in the ELECTRICITY INDUSTRY.

December	69	160	92	December	60	228	102

Export trade remains excellent, but except for the orders placed under the national scheme home demand is disappointing. Makers of generating plant, cables, transformers and switchgear are busy on orders for the national scheme, but the industrial motor branch of the industry is very depressed.

Motor Industry.—Private car manufacturers are fairly busy, although there is a falling off in exports as compared with last month. The commercial goods and passenger section remains satisfactory, and exports continue at a fair level. Cycle and motor-cycle manufacturers are meeting with a steady demand, both in the home market and from overseas.

Cotton.—Raw cotton exports from the United States continue to fall away, and Lancashire firms are using outside growths to an increasing extent. Cloth manufacturers have dealt with a larger inquiry. Political developments in India have not been so unfavourable as expected, and more contracts have been secured in light fabrics. Trade for China has again been checked by the fall in silver and low exchange rates. A little more activity has shown itself for the Near East, South America and certain African outlets, but makers have not met with much support from the Continent. Production in weaving towns remains very irregular. Although rather more buying has taken place in American and Egyptian yarns, the position of spinners has not improved.

Wool.—Bradford business remains restricted, and confidence in prices is still lacking. There is a moderate inquiry for merino tops, and some fairly good orders have been accepted for March delivery, but prices generally are too low to be practicable. Demand for yarns is poor, with prices still moving downwards, but considering the industry as a whole it seems likely that a considerable amount of business will come forward so soon as prices become stable.

Linen.—Spinners continue to be steady buyers of Irish and Continental flaxes. Controllers of Soviet and Baltic fibres have also sold bulk quantities. Prices remain without quotable change. Yarn quotations are in favour of purchasers, and well-assorted business has been done at limits that should allow linen goods to compete with other textiles. Damask and fancy linens are favoured.

Rayon.—Hesitancy has been still very noticeable during the past month. There has been a fair turnover in low-grade viscose yarns, but price cutting is still very serious. Hopes are expressed regarding an expansion of the better-class woven fabric trade during the next few weeks. The knitting trade has been rather quiet.

Boots and Shoes.—Some fresh orders have come forward since the New Year, but trade is variable and only a few factories have been really busy. January, however, is often a quiet month, and it by no means follows that the present inactivity will continue for long.

Pottery.—Although the conclusion of the Christmas trade brought with it a substantial increase in unemployment, business in the potteries remains fair. It is encouraging that many firms were able to work full time until a later date in December than is usually the case.

Chemical Industry.—The general tone of the markets during the past month has been quiet, being largely influenced by the holiday period, and business has hardly yet resumed its normal activity. December exports show a substantial increase when compared with those for 1929, ammonium sulphate being still responsible for the biggest advance among heavy chemicals. The only weak spot is coal tar products.

Building Trades.—Unemployment registered a further seasonal increase during December, and much time was lost owing to adverse weather conditions. Employment in the brick industry underwent little change in December.

Agriculture.—Some interference with winter sowing was caused by excessive rainfall, but outdoor work generally has not fallen unduly into arrears. Wheat, barley and oats have been sown on rather smaller areas than last year. Potatoes are keeping well, and root crops were secured and clamped in clean condition during December. The open weather has been favourable to cattle, and breeding ewes have done fairly well. Milk yields are about normal for the time of year.

Shipping.—The cargo freight market has been characterised throughout the month by unrelieved depression. Apart from a slight broadening of inquiry from the Pacific coast of North America, grain chartering has been inactive. A large surplus tonnage has been seeking employment, with the result that outward coal freights have weakened further.

Retail Trade.—The West End stores experienced fairly satisfactory conditions during December, and in contrast with November, trade seemed to have been better with them than in the suburbs of London. One important store adds that in spite of their being so close to Christmas January sales opened well, and sales in almost all departments exceeded expectations. Regarding the country in general, it is believed that the number of customers was higher than that of last year, but there was a falling off in the size of individual purchases.

BRITISH EMPIRE.

Canadian business conditions at the end of the year were very uneven. The general Christmas trade was satisfactory, but, as expected, there was a big shrinkage in the demand for luxury goods. In the industrial field there has been a gradual contraction of operations in many lines, and unemployment is severe in the West.

India weather reports are satisfactory as regards most parts of the country. The Central Provinces have lately benefited from rainfall. Cotton picking is progressing well there, and winter rice offers good prospects. Reports regarding crops are generally favourable, excepting in the Punjab, where there has been no improvement in the condition of unirrigated crops.

South African reports state that damage to the maize crops has been experienced in some districts, but that in spite of this

the yield may establish a new record. The output of gold for 1929 is valued at over £144,000,000, representing a slight increase over 1928. The production of platinum, copper and other base metals has also increased.

New Zealand reports 1929 to have been a year of general progress. The efforts of the Government in connection with public works and railway schemes effected a reduction in unemployment.

UNITED STATES OF AMERICA.

Business at the end of the year was slightly above the seasonal average. The steel industry operated at 60 per cent. of its capacity during December, and automobile production, which was low during the stocktaking period, has since shown a slight improvement. The distributive trades appear to have maintained their position fairly well in view of the autumn financial crisis.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London :—

* Preliminary estimates made by Messrs Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureaux of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices.

EUROPE.

The French coal trade remained active as regards industrial fuel, but demand for house coal was slow. Home demand for iron and steel was quiet, and exports irregular. Only a moderate trade is reported by the textile industries.

Activity in the Belgian coal trade is well maintained, but less regular conditions prevail among iron and steel makers. The textile trades are unsatisfactory, and the diamond industry, both in Belgium and Holland, has been seriously damaged by the Wall Street collapse.

The German house-coal trade has been retarded by the mild weather, but the sale of industrial fuel is keeping up well. Demand for steel products is generally limited, and the 10 per cent. restriction of production made by the International Steel Cartel only led to a temporary recovery in export trade. There has been a slight improvement in the textile industries, but the present position is still unsatisfactory.

In Scandinavia, Swedish production and trade have been assisted by the mild weather and the seasonal recession is less pronounced than usual. According to a Norwegian report home trade was rather more active than usual before the holidays. The revival in shipbuilding has also been maintained.

In Central Europe business conditions in Austria remain difficult and unemployment is more severe than it was a year ago. Crop reports at the end of December were favourable.

LATIN AMERICA.

The crop situation in Argentina has been characterised by further general rains over the maize districts. It is as yet too early to estimate the total yield, but it appears that hopes of a bumper crop may have to be modified. The yields of wheat, oats and linseed have been a little less per hectare than last year, and, while quality is good, there is certain to be a short crop, especially of linseed. A decree was signed on January 15th authorising, as in 1925, the issue of currency notes against gold deposits with the Argentine Legations abroad, so as to increase the supply of currency during the crop-moving season. The basic Chilean industries continue favourable and the output of nitrate of soda is maintained, but a slight commercial recession has recently been noted. Brazilian trade continues depressed by the unfavourable position in the coffee market, but some relaxation is reported in the credit stringency. Peruvian conditions have recently been characterised by somewhat severe restriction of credit, which has affected the exchange position. Advices from Colombia state that the River Magdalena is still in fair condition, but that movement of shipping is slow. General commerce in Ecuador, Guatemala, Nicaragua and Salvador continue quiet, these countries being largely dependent upon the coffee situation, but some improvement is observable in Venezuela.

FAR EAST.

The fall in the price of silver to a new record low level had a serious effect upon trade in China. The latest reports, however, are to the effect that demand for cotton goods from Shanghai has slightly improved, but prices obtainable at the auction remain below replacement values. Still, despite the exchange difficulty, some business is going forward.

Japan passed through the end of the year fairly easily. Quiet business and lower prices meant that money was less stringent than a year ago. The foreign trade balance from 1929 is still adverse at 70 million yen, but this compares with 140 million yen in 1928.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods :—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Ship-building, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

There was a distinct decline in activity for Britain as a whole, the areas accounting for the decline being the South-West Midlands, Sheffield, and West Lancashire. The average increase over the year is about normal, being 10 per cent.

INDICES OF BUSINESS ACTIVITY.

THE latest movements of our series of index numbers of business activity suggest that at the end of 1929 industry and commerce were inclined on the whole to pause a little in their stride. In the first place, the volume of employment, though maintained in "miscellaneous services" by the usual Christmas activity, underwent a definite recession in "general" industry. Secondly, apparent consumption of iron and steel, after the high level reached in November, fell back sharply; and the same was true of consumption of cotton. The seasonal decline in shipping traffic was balanced by a sharp rise—also reflecting seasonal influences—in provincial clearings, but exports of British manufactured goods dropped heavily.

On the other hand, retained imports of raw materials made a good showing, which affords some encouragement with regard to production in coming months. In the following table we give comparative quarterly figures in 1928 and 1929 for our indices of raw material imports retained, British manufactured exports, and foreign trade turnover—the last being an index (weighted) based on total net imports and exports:—

Average 1924 = 100.

		1st Qr.	2nd Qr.	3rd Qr.	4th Qr.
Net imports, raw materials...	*1928*	111	99	83·5	111
	1929	124	105	95	128
Exports, British manufactures	*1928*	108	103·5	108·5	111
	1929	109	106	112	110
Foreign trade turnover.....	*1928*	109	105	102·5	112
	1929	110·5	108·5	109	119

With the exception of the figure for manufactured exports in the last quarter of 1929, the picture presented by the foregoing table (due allowance being made for seasonal variation between quarters) is by no means disheartening.

Moreover, when we turn to the annual averages for 1929 and compare them with previous years we are afforded substantial crumbs of comfort. The expansion of British production and commerce may be as unduly slow, having regard to the needs of our population, as its absolute level, it may be contended, is inadequate. But some progress is unmistakably in evidence. The only index lower in 1929 than in the previous year is that of provincial bank clearings. In certain cases, *e.g.*, manufactured exports and volume of employment, the rate of increase is disappointingly small, but the trend, as disclosed by comparison both between the annual figures and those for the month of December in each year since 1924, is at least in an upward direction.

In the following table we summarise for purposes of ready comparison annual means of nine of the more important indices of the series:—

1924 = 100.

	1925.	1927.	1928.	1929.
Net Imports—				
Raw materials	107	113	101	113
Consumption—				
Cotton	116	113	103	106
Coal	93	106	99	106
Electricity	101	109	110	116
Total employment	101	105	105	107
Provincial clearings	102	102	100	99
Shipping movements	98	105	106	111
Manufactured exports	101	104	108	109
Foreign trade turnover	102	107	106	112
Average	102	107	104	109

The foregoing "crude" averages make no pretence of measuring precisely the amount of change in the rate of business activity. As an indication of *direction* of change, however, they are at once interesting and encouraging.

1924 = 100.

The Economist
MONTHLY SUPPLEMENT.

New Series. SATURDAY, MARCH 1, 1930. No. 81.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

To judge from current reports from the industrial areas, there is little doubt that the New Year has started badly. Too much weight need not be given to the January foreign trade returns (as pointed out in a recent issue of the *Economist*, January, 1929, was an unusually good month), but the steady downward trend of commodity prices, *the further increase in the unemployment figures*, the fact that the better January production figures in the heavy industries are not being balanced by the receipt of new orders, and finally the widespread lack of confidence in industrial circles, all provide a mass of evidence, whose gravamen it is impossible to ignore.

Unfortunately, there is good reason to believe that this setback in British trade is partly the reflection of a general world recession. It is always difficult to obtain from other countries an accurate picture of so important a matter as the extent of unemployment, but to judge from all accounts it is now severe in the United States, Canada, Germany and several other countries. The fall in commodity prices is a world-wide movement. Countries whose main activity lies in the production of staple foodstuffs and raw materials have already been involved in considerable difficulties, and there is a widespread feeling that the consequences of last year's collapse in Wall Street and other stock markets are now making their effect felt upon trade and industry.

It was unfortunate that the collapse of what after all was an unsound speculative movement should have come just at the time when the world was over-stocked with many staple commodities, and so should have had such a prejudicial effect upon production and employment. It must, however, be admitted that the stock market collapse was a *most important* contributory factor. Money to-day is easy—much easier than it was six months ago—and while in some countries such as Italy and the United States it is not over plentiful, elsewhere there is plenty available for financing, on short terms, at least, sound business. Yet although there has been no monetary deflation at all, in the ordinary sense of the word as denoting the supply of currency and credit, commodity prices have fallen heavily, and to judge from the latest index numbers are still falling. It is, therefore, difficult to resist the belief that past losses and present uncertainties have slowed down the rate at which money is circulating, and in short that people are showing a general reluctance to buy commodities or to invest capital.

In England there is to-day a special cause of uncertainty, and that is the position of the national finances, and Government policy with regard to the Budget, the coal industry, and unemployment. The political situation is admittedly intricate, and this has a peculiar bearing upon the final shape in which the Coal Bill reaches the statute book, and so upon the outlook both for the coal industry itself and also for those trades, such as iron and steel, which are heavy consumers of coal.

The Budget, however, is to-day the main cause of the industrial uncertainty. Apart from doubts as to the future of the McKenna and safeguarding duties, there is a widespread fear lest in his forthcoming Budget Mr Snowden may have to add to the burden of direct taxation. The *national accounts* for the financial year now drawing to its close do not look too promising, and, unless corresponding economies are effected elsewhere, the fresh commitments entered into by the Government will make it extremely difficult for the Budget to be balanced *upon the present basis of taxation.*

The question how far, if at all, heavy direct taxation should exercise a retarding influence upon trade is at the present juncture immaterial. The important fact to-day is that rightly or wrongly the industrial world is giving way to its Budget apprehensions, and is therefore holding back until the Budget is disclosed. So soon as the worst is known, it may be found that the new burden is a tolerable one if suitable readjustments are made in order to bear it, but meanwhile it seems that no progress can be expected until budget-day, now nearly seven weeks ahead. Even then much will depend upon the general course of world trade.

As already mentioned, the world situation has lately deteriorated. In the British Empire the further fall in wheat prices is causing difficulty in Canada, where unemployment is severe. Australia and South Africa have similar problems to face in the case of wool, while the

restricted purchasing power of the British market is making its effect felt on New Zealand growers of wheat, wool and dairy produce.

In foreign countries American business conditions are variable, but there is definite evidence of a wide, if moderate, recession. The most hopeful sign is the fact that the steel industry has improved its position since the end of last year. The motor industry has also gained a little ground, but is still working at far below capacity. The textile industries are very depressed.

On the Continent, the German situation is far from satisfactory, and the textile trades are still weak in most countries. As regards South America, prospects of a good maize crop have slightly improved the general tone in the Argentine, but Brazilian conditions are still depressed. In the Far East, Japan is sharing in the general depression in the textile trades, and the Chinese outlook is most uncertain.

HOME INDUSTRIES.

Coal.—Export trade, which began the year well, has since experienced a marked setback. Remembering their experience during the cold weather a year ago, Continental importers had built up heavy stocks, and this fact, in conjunction with this year's milder weather, has, at the moment, stifled Continental demand. The house-coal trade was inactive early in the month, but has since revived slightly with the colder weather. Home demand for industrial coal is irregular and restricted.

Iron and Steel.—Although the January output figures were relatively good, the industry is badly in need of fresh orders. The present outlook is most uncertain. The most favourable developments are the recent downward trend of coke prices and the increase from 2s. to 4s. per ton lately made by the European Steel Cartel in prices of certain descriptions. Still, even allowing for these factors, there is little doubt that new business is, at the moment, at a low ebb.

Engineering.—Here again a definite setback must be recorded since the opening of the New Year. There has possibly been some slight improvement in the agricultural machinery section, and British locomotive builders are maintaining their pre-eminence in the world's markets. The marine engineering branch has so far remained fairly well employed, but the deplorable position of the shipping industry renders the future more than doubtful. Elsewhere, the position is unfavourable, and, in general, there is little disposition to look for any material progress during the course of the current year.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Associations. An explanation of the manner in which it has been computed was given on page 888 of the *Economist* of November 28, 1925:—

INDEX of ACTIVITY in the ELECTRICITY INDUSTRY.
(1920 = 100.)

June	68	105	78	1930.			
July	71	80	74	January	68	220	107

There has been some slight recovery in home business, but apart from National Scheme contracts the heavy side of the industry still finds home demand below normal. Export business is active, notably in respect of work for Europe and South America, but there is a falling off in new orders.

Motor Industry.—In the private car section there is a slight improvement from the very low levels previously touched in the home market, but exports have dropped considerably as compared with last year. Commercial goods and passenger vehicle manufacturers are more favourably situated, and maintain a fair demand at home and overseas. Motor cycle and cycle manufacturers continue to be busy, with a steady increase in exports.

Cotton.—There are now indications of rather more stability in cotton prices after their recent heavy fall. No particular decrease in United States acreage is anticipated next season. Sales during the past fortnight improved slightly. A fair business has been done in light bleaching descriptions for India, and, following the New Year holidays, there was an improvement in prices and larger clearances at the Shanghai sales. The Continent, Egypt and the Near East are disappointing, but steady buying has taken place for certain African outlets, and finishing styles have been sold for South America. The home trade has improved. The spinning branch of the industry remains depressed, and there is some talk of curtailing production in the American branch.

Wool.—The decision of the Australian producers to spread the wool sales over until August caused a 5 per cent. hardening of prices during the course of the recent London sales; but, even so, the industry has still to recover its confidence in current values, and so there has been little revival.

Linen.—Russian flaxes of all descriptions are firmly held, but values of Irish material are somewhat easier than lower-grade qualities. Yarn business is restricted to immediate needs, with prices barely steady. New cloth orders have not been arranged to the extent usually done at this season of the year. American buyers are in evidence, but, generally speaking, have only purchased smallish parcels.

Rayon.—The market has remained dull owing to the uncertain position regarding the duties. Prices have been very poor. The trade in woven goods has been similarly affected, though there has been some improvement in business with the Dominions. The hosiery trade is quiet.

Boots and Shoes.—Despite the recent fall in hide prices, there are signs that an improvement in the boot and shoe industry is at last beginning. The revival is so far confined to the men's section, but it is hoped that the spring trade will prove fairly satisfactory.

Pottery.—At the moment business is slow, but some hopes are placed on results of the British Industries Fair, where numerous inquiries have been received.

Chemical Industry.—A month ago business was feeling the effects of the holidays and subsequent stocktaking, but since then heavy chemicals have regained their normal activity, and in this branch of the industry January exports exceeded those of the same period in 1929.

Building Trade.—Bad weather conditions and the normal seasonal decline were responsible for a further setback in employment during January. The brick industry shared in this adverse movement, with the exception of Peterborough, where employment continued good.

Agriculture.—On heavy soils and low-lying land field work was restricted during January, but given dry weather, cultivation should not be unduly in arrears. Owing to the absence of severe frosts, autumn-sown corn made good growth. Very little disease was apparent amongst potatoes. Breeding ewes as a rule maintained their condition, and cattle and sheep were in fair condition, with milk yields as a rule maintained.

Shipping.—Cargo shipping remains in the depths of the most acute depression since 1922. The continued slow movement of grain has gravely disorganised chartering; freights in all directions have fallen to fresh low levels, and despite the laying up of much tonnage, there are no signs of recovery.

Retail Trade.—In the West End of London the January sales were on the whole successful, but the month proved more favourable for medium and lower-class businesses than for the highest class. A leading store reports that an inevitable slight lull was noticeable at the beginning of February, and that so far the new season has hardly got into its normal stride. It adds, however, that the cold spell experienced in the middle of the month should prove beneficial to many departments. The experience of the London suburbs has been less favourable, and provincial reports are of a variable character.

BRITISH EMPIRE.

In Canada the recent course of wheat prices has been most disappointing to the wheat pool and other grain interests, and unemployment has grown worse during the current year. Industrial conditions are uneven. There has been a curtailment of production in the automobile and farm implement industries, and this has adversely affected the iron and steel trades.

The Australian wheat yield amounts to 12,000,000 bushels. A joint conference of the Australian Woolgrowers' Council and National Council of Woolselling Brokers decided to extend sales from June 13 to middle of August next, offerings to be spread as equally as possible over intervening period, and brokers to arrange with clients to ensure that prices will not fall below late levels.

The New Zealand meat, wool and dairy produce interests are feeling the effects of the economic depression in Great Britain. The summer has been comparatively wet, but primary production should not be seriously affected.

In India seasonable weather has been reported from most parts of the country. Even the Punjab, which has been rather unfortunate in this respect for some time past, experienced an improvement in weather. Recent rains in that province seem to have improved the prospects of unirrigated crops, which are now described as "average" instead of "below average," as before. Outturn of crops from other parts is generally expected to be fair to good.

In South Africa a special Government Committee has been set up to consider the situation of the wool industry. Fruit exports for the 1930 season shows a substantial advance over the preceding season. Hide prices have declined, and the depression in the maize market continues.

UNITED STATES OF AMERICA.

Recent reports are not too reassuring. The textile industries are depressed, and the declines in car loadings, building permits, iron and steel production and retail business shown since a year ago by the following table indicate that there has been a definite recession. Against this must be set the fact that during the past few weeks the steel industry has recovered to the point where it is now working at 75 per cent. of capacity, and there has also been a slight improvement in the automobile industry. This last, however, is still below capacity.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

AMERICAN TRADE STATISTICS—JANUARY, 1930.

EUROPE.

The French house coal trade is dull, but orders for industrial coal are of satisfactory dimensions. French steel works are well booked up, but the pig-iron trade is less satisfactory, and the textile trades show little improvement.

The Belgian coal trade has suffered a further set-back, but the iron and steel industries improved slightly during the past few weeks.

German industrial reports are in the main far from satisfactory, and unemployment is severe. Conditions in the cotton industry are uncertain, and recent developments in the iron and steel trades have on the whole been adverse.

In Scandinavia, Norwegian shipowners are affected by the general depression of the industry. The paper market is quiet. Swedish industries have lately experienced a slight set-back, due, it is believed, to general world conditions.

Italian trade has lately been passing through a period of seasonal slackness, but the announcement that the Fiat Works would operate at full capacity as from February 3rd created a good impression. Steady progress has been made in industrial rationalisation, but money has been stringent.

LATIN AMERICA.

Recent reports from the Argentine maize-growing areas have been fairly satisfactory. The monetary stringency has to some extent been relieved, and the general tone of the commercial markets has been favourably affected by the improved maize prospects.

Chilean commercial conditions are now beginning to reflect the progress and consolidation undertaken in both national finance and industry during the past few years. Retail sales have recently shown a considerable increase on those of a year ago, although some seasonal slackness has been apparent in the wholesale trades.

Brazilian conditions are still characterised by commercial depression, the difficulties of the coffee situation having not yet been resolved, although certain special measures have been adopted, such as the substitution of the finer grades of coffee for stocks of lower qualities and the recommencement of dealings at the official Santos Coffee Exchange.

Peruvian conditions continue to be dominated by the exchange position. The Government is pursuing its avowed object of stabilising the exchange at the equivalent of U.S. $4 to the Peruvian pound, but in the meantime the general commercial situation is dull.

Reports from the cocoa-producing centres of Ecuador continue to be very favourable, and this is reflected in an improvement in the general trade outlook.

FAR EAST.

Early February saw a slight recovery in the Japanese share market, but business in cotton goods and raw silk remains inactive, and even the decisions of the cotton factories to adopt short-time and of silk dealers to keep back part of their stock have not served to stimulate business.

The Chinese outlook is again most uncertain, but nevertheless there has been a very welcome improvement in Shanghai clearances of cotton goods.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods:—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The general index has failed to record any advance since December, as normally it should have done. The setback is mainly in the iron and steel, shipbuilding and textile areas.

INDICES OF BUSINESS ACTIVITY.

THE picture presented by the current figures of our series of index numbers of business activity is not wholly re-assuring. In the majority of cases the data relating to the month of January appear indicative of a fairly sharp recession, and next month, when the returns of November, a relatively much more satisfactory month, are displaced by February statistics in the three-monthly averages, it is to be feared that a declining tendency will be still more apparent.

Imports of raw materials, in the calculation of whose index no allowance is made for the strongly-marked seasonal trend of fluctuation, were much smaller in January than a year ago though approximately on a level with the returns of November and December, 1929. Non-ferrous metal imports continued at an encouraging rate, and the apparent internal consumption of iron and steel still ran high; but raw cotton "intake" declined, and rubber consumption seems to have suffered a severe set-back, though it is necessary, in the case of this index number, to bear in mind that changes in an unknown factor—maker's stocks—which cannot be allowed for, must be taken into consideration.

The indices of consumption of power, viewed in conjunction with each other, convey a favourable impression; but the course of the index of British manufactures is unsatisfactory, and the January returns (even with due allowance made for changes in the average price level) made a particularly poor showing in comparison with the results of a year ago. In this connection it will also be noted that, though the latest figure is fractionally higher than that for January, 1929, the index of shipping movements—discounting once more the seasonal trend—has recently lost nearly all its improvement as compared with last year.

London bank clearings continue at a high level, though the increase over January, 1929, is not so large as that recorded a year ago, and it is questionable whether the method provisionally adopted for making allowance in compiling this index for changes in wholesale and retail prices is not resulting in an exaggeration of real activity. In the case of provincial clearings, where the price-adjustment co-efficient is less open to question, the latest figure points to a volume of turn-over substantially smaller than at this period in either of the past two years.

Finally, the indices of volume of employment corroborate only too clearly the suggestion that industrial activity is slackening. Apart from "heavy" industry, unemployment worsened during January to a marked extent; and it is disquieting to note that in the group which we describe as "general industry," the numbers out of work are now larger than at any time since 1923, excluding the abnormal period of the 1926 coal stoppage. The contraction of employment throughout a wide range of manufacturing processes is too marked to be explained except in terms of reduced turnover.

There is no reason, however, as yet to draw conclusions of a wholly pessimistic nature from the present tendency of our series of index numbers. The evidence, to which reference is made in another column, of trade conditions in other countries suggests that a recession world-wide in extent is being witnessed. From the effects of that recession this country could not hope to be exempt, but the progress made last year, as measured by our indices, was sufficiently ample for a reaction to be faced without the need of talk of "national decline."

The Economist
MONTHLY SUPPLEMENT.

New Series. SATURDAY, MARCH 29, 1930. No. 82.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

THE year is now nearly three months old, and it is possible to see a little more clearly how it is going to shape. In many ways the position to-day is far from satisfactory. February witnessed a further increase in unemployment to a figure of 13.1 per cent., and the number of unemployed at the end of the month was 1,582,000. This increase occurred mainly in the textile industries, in engineering, shipbuilding and motors, and in the metal trades, furniture and wood-working, paper-making, glass bottles, dock and harbour services, and, finally, in the distributive trades. Improvements in iron and steel, pottery, brick and tile, clothing and lace were only a partial offset.

Similarly, the trade reports given on the next page are far from reassuring, and news from abroad confirms the view that the world is at the moment in the throes of a general set-back. The decline in commodity prices has not yet been arrested, and the most that can be said is that during the last week there have been signs of greater steadiness. The February trade returns for Great Britain were again disappointing, and there has been an appreciable decline in pig-iron production. Shipping freights have again weakened, and there is no improvement in railway receipts. In short, the staples industries of the country are passing through a period of recession and hesitancy, and there is some evidence that in the North of England at least this is spreading to the distributive trades.

So much for the present position, but in considering the curve of trade and business it is important to look at not only its absolute height at the moment, but still more closely at its probable slope in the near future. And here the omens are more favourable, so much so that it is possible to hope that we are now near the lowest point of the curve. In the first place, within three weeks from now the contents of the Budget will be known, and this will put an end to much of the uncertainty with which industry has lately allowed itself to become affected. It is true that it is difficult to see how resort to further taxation can be avoided, but even the certain knowledge of new burdens is likely to have less baneful effects than those arising from the average manufacturer's present frame of mind.

Next, the world-wide fall in money rates has made further progress, and Bank rate in London stands at the lowe figure, for post-war years, of 3½ per cent., with a distinct possibility of 3 per cent. in the near future. Even 3½ per cent. makes the interest obtainable on bank deposits virtually unremunerative, and the recent outbreak of activity in the gilt-edged market has shown that part of this money is already seeking more profitable employment. This revival in investment activity is already spreading to railway and industrial securities of a high-grade character, and before very long offers of sound industrial new capital issues should meet with a ready response.

This will prove of benefit to industry in two important ways. First, it should facilitate rationalisation schemes, which in some cases may have been held up during the past few months by the difficulty of raising fresh capital. Secondly, a revival in the new capital market will immediately assist those industries whose main function is to produce "capital" goods, such as buildings, plant and machinery. As these include the iron and steel and engineering trades, it is clear that important branches of British industry would be benefited by such a revival.

In short, there are signs that the usual sequence of events which attends the emergence from a period of depression is now beginning. The first stage is the return of life to the investment market, beginning with the highest grades of securities. This stage is already reached. The next stage is that of the arrest of the fall in commodity prices, with sporadic signs of returning confidence in industrial circles. This stage is not yet reached, but it seems to be imminent, and signs of approaching stability and confidence can be detected in the Australian wool market, in American industry, in Scandinavia, and even in Austria. Some improvement, too, is apparent in the Argentine credit situation and in the South American coffee market. The heavy wheat stocks in existence in Canada and the United States are still a source of anxiety, and if it prove impossible to continue holding them their release may precipitate a further fall in prices. Yet, on the whole, the air seems to be clearing, and the world's emergence from the trade depression to be in its preliminary stages.

It is, of course, one thing to hope that the world is reaching the end of the fall in the trade curve, but it by no means follows that the upward turn will come within the next few weeks. Recovery is often a slow process, and while reports from the British heavy industries take account of the benefits that may arise in the future from cheaper money, they hint that it may take time for these benefits to reach them. It may be that for a few months the business curve will remain level, and that there will be no real improvement before the autumn, or it may be that the first upward turn in the curve will be a temporary movement, and that the main recovery will be deferred to a later date. All that can be said at the moment is that there are signs that the decline has been arrested. If these are fulfilled, it is as much as can be expected in the immediate future.

HOME INDUSTRIES.

Coal.—Export business is still restricted owing to the heavy stocks in existence on the Continent. Cardiff shipments are less than those of early last year, and prices are easier. Sheffield, however, reports more export inquiry for South Yorkshire coal. The home trade is generally quiet.

Iron and Steel.—The main event of recent weeks was the reduction of 5s. per ton in Cleveland pig-iron prices. In order to avoid creating any uncertainty, producers decided to lower prices in a single stage, and now that the cut has been made buyers can rest assured that no further reduction will take place. Orders for steel are still of a hand-to-mouth character, and while benefit should ultimately result from the advent of cheaper money, at the moment business is on a restricted basis.

Engineering.—Activity remains restricted in all branches and no revival is expected until after the Budget. Should the fall in the Bank rate stimulate fresh capital issues of an industrial character the industry will benefit. In any case, if confidence returns after the Budget, there is still time for an improvement before the holidays. Meanwhile little progress is being made.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Associations. An explanation of the manner in which it has been computed was given on page 888 of the *Economist* of November 28, 1925:—

Export business remains very good, especially with South America, the West Indies and the Malay States. Some small orders are coming from Egypt and New Zealand. General home demand, apart from National Scheme orders, is bad.

Motor Industry.—In the private car section there is a falling off in activity, both in the home market and in exports. Commercial goods and passenger vehicle manufacturers are moderately busy, with a steady demand from overseas. Business in the motor-cycle and cycle section remains fairly good, with exports maintaining a satisfactory level.

Cotton.—The raw cotton situation has been very unsettled, but there are now indications of firmer prices. It is not believed that the reduction in the acreage for the new season will be important. Buying of piece-goods has been on a restricted scale, and most makers have lighter order lists than a month ago. Operations for India have been impeded by the revised import duties and the uncertain political situation. The trade position in China does not improve, and clearances at the auctions in Shanghai remain poor. Only a miscellaneous business has been done for the minor outlets, but a fair demand has been experienced for home trade goods. Demand for American yarns has continued very disappointing, and numerous firms have been compelled to curtail output still further. No particular improvement has shown itself in the offtake of Egyptian yarns.

Wool.—Opening prices at the London sales showed a decline of only 5 per cent. in the case of merino wools. This has steadied quotations of tops in Bradford, and has brought out some fresh business. Demand for dress goods, however, is slow, and this is affecting adversely all branches of the industry.

Linen.—Russian holders of flax have withdrawn from the market, and prices generally are firmer. Demand for yarns remains active, and both home and foreign buyers have been placing fresh contracts in consequence.

Rayon.—Demand for yarns remains restricted on account of the Budget uncertainty and the general stagnation in the textile industries. Despite substantial reductions in output, stocks are comparatively large, and competition is exceedingly keen. There has been a somewhat better demand for high-quality fabrics, but that for bulk lines is much below normal.

Boots and Shoes.—Trade is still uneven, and few factories are fully employed. The usual Easter demand, however, should shortly bring about an improvement.

Pottery.—Business is still pretty quiet, but there are some signs of improvement. Makers of tiles and sanitary ware are fairly well employed.

Chemical Industry.—Markets are still dull, but there has been a fair volume of business in heavy chemicals. In other sections of the industry sales have not been good.

Building Trades.—Weather conditions have been generally favourable for the time of year, and in certain districts employment has been fairly good. The industry, however, has not emerged from its seasonal inactivity, though employment has been appreciably less than during the prolonged frosts of a year ago. There is some improvement in the brick industry.

Agriculture.—Dry weather during February has enabled the slight arrears in cultivation to be overtaken, and good progress was made by autumn-sown crops. Livestock has also benefited from the drier weather, and milk yields were well maintained.

Shipping.—Freights during March have been steadier, but there have been as yet no signs of recovery from the extreme depression of the winter. Inquiry for tonnage to load grain has broadened slightly, but quotations of all routes both outward and homeward remain at a most unsatisfactory level, and the volume of idle tonnage has not been diminished.

Retail Trade.—Business benefited on the whole from the fine weather, and a leading London store reports that the spring season has opened fairly well, and that the dress parades and brighter weather are having a good effect on fashions. Suburban stores report good results on the whole, but in London generally there has been a decline in the sales of men's wear. Reports from Wales and the South of England are favourable, but business in the North is suffering from the general trade depression.

BRITISH EMPIRE.

Canada reports that the grain situation continues to cause anxiety, and business generally is being adversely affected by the cessation of orders from the Prairie Provinces.

The good summer rains that have taken place in Australia are thought to foreshadow a large wool clip. Meanwhile the wool market is steadier with more competition. Special efforts have been made to increase the area under wheat. Business is less active than a year ago, and unemployment is increasing, but the heavy subscription to the internal Commonwealth Loan gives evidence of public confidence.

Indian weather conditions remained favourable during February, and Punjab crops improved. The second wheat forecast for 1929-30 gives an acreage of 29,871,000 acres, as against 31,159,000 acres for the previous season.

In South Africa the general business recession continues, and the low level of agricultural prices precludes any immediate recovery.

UNITED STATES OF AMERICA.

Trade improved slightly during February, and the steel industry was operating at 80 per cent. of its capacity. More recently, however, there has been a set-back to 78 per cent. Automobile production has improved slightly, and trade generally responded to the seasonable weather. Car loadings, however, are below the level of a year ago, and building has been passing through its usual seasonal inactivity.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

* Preliminary estimates made by Messrs Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureaux of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices. § Partly estimated.

EUROPE.

Demand for coal in France, Belgium and Germany has lately fallen away, and in Belgium industrial fuel is to be reduced by from 5 to 10 francs a ton as from April 1. The textile industries of these countries are sharing in the general world recession, though the French woollen industry is perhaps not quite so seriously affected as that of other countries. Trade generally is affected by the downward trend of commodity prices.

In Scandinavia, Swedish shipbuilders are fairly well employed, but the paper market is only displaying normal activity. Swedish industries are being affected to some extent by the general trade depression, but despite this there is a fair amount of evidence of increased activity, notably in the iron and steel and engineering industries. In Denmark some difficulty has been caused by the fall in butter prices, but bacon prices have lately improved.

In Central Europe, the Austrian textile trades are passing through a severe crisis, but there are signs of improvement in the iron industry.

SOUTH AMERICA.

Trade prospects in Argentina are largely dependent upon the results attending the maize crop. After allowing for abandonments, it is calculated that harvesting is taking place over a net area of only 9,816,000 acres, and the official report states that a total production below normal is anticipated. Cereal prices in the Buenos Aires market have recently advanced. Monetary conditions have been rendered easier by the issue of additional currency notes by the Caja de Conversion against deposits of gold in the Argentine Legations abroad. In Brazil, there has been an appreciable improvement in market conditions for coffee. Prices are somewhat firmer and the amount coming forward from the interior has been increased. In Sao Paulo, it is hoped that the balance of the 1928-9 crop, estimated at 3,370,000 bags, will be cleared from the interior by about the middle of May. Recent estimates of the Brazilian 1930-31 crop of coffee place the total at rather less than 10,000,000 bags, which is considerably below the previous forecast. In Chile, progress is being made with the restriction of the production of nitrate of soda, and it is hoped that in the course of the next twelve months stocks and output will have been brought into line with demand. The Peruvian Congress has now approved the new Monetary Bill, and the relative Law has been promulgated, providing for the creation of the gold "Sol" and for the stabilisation of exchange on a basis equivalent to one Peruvian pound being equal to four United States dollars. Meanwhile, the commercial situation in Peru shows slightly more confidence. A slight improvement has taken place in conditions in the local coffee markets in Venezuela, Guatemala and Nicaragua. Prospects for the Ecuador cocoa crop are very favourable.

FAR EAST.

Trade in China remains restricted by the uncertain political situation, and only slight clearances have been effected at the Shanghai auctions.

In Japan, money rates have lately become firmer as a result of the inflow of taxes and silk prices have recovered slightly within the last few weeks after their previous relapse.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods:—

INDEX of PRODUCTION of ELECTRICITY.*

(Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The total index number for Great Britain has only recorded a very moderate advance, and the general picture is one of depression. The progress made by the general engineering and chemical index numbers is not so bad, though even here it is below the normal rate. Textiles and marine transport, however, are relatively unsatisfactory.

INDICES OF BUSINESS ACTIVITY.

THE anticipations expressed a month ago in this column, that the February figures of our series of Index Numbers of Business Activity would be still more strongly indicative of a general trade recession, have, unfortunately, been proved correct by the event. A cursory glance at the appended table will suffice for it to be seen that a definite and fairly steep decline in the curves of the series is in progress.

Bearing in mind that the employment of three-monthly averages necessarily imports a certain " time-lag " in the response of the indices to changes in the rate of production and trade, readers will observe that the rate of decline in the volume of employment was considerably accelerated in February. In " heavy industry " and in " miscellaneous services " there was no measurable alteration in the " corrected " figure, but employment in " general industry " dropped sharply; and though the total figure is still above that recorded a year ago, it must be remembered that the month of February, 1929, was notable for extremely severe weather which temporarily increased the numbers out of work.

Turning to other indices, it will be noted that, though the rate of consumption of coal fuel does not yet show a declining tendency, the February figure is just equal to that of a year ago, and much below that for February, 1928, while consumption of electricity is diminishing, and comparison with a year ago reveals a marked contrast with the steady expansion recorded annually in previous Februaries. Consumption of cotton also shows a downward trend, and internal absorption of iron and steel production is similarly falling off.

As compared with a year ago, even when due allowance is made for the effect of lower prices on the aggregate value of cheques, provincial bank clearings are heavily down. Net imports of non-ferrous metals are a satisfactory exception to the general reactionary tendency, and shipping movements, though lower on the month (seasonal fluctuation is a consideration in this case), are slightly above last year's level at this time, as a result chiefly of larger coal shipments. Postal traffic is also being well maintained, though London bank clearings are lower, but the fall in the index of exports of British manufactures is serious, and there is no indication of better times ahead in the movement of the index of net imports of raw materials. In this instance, the calculation of provisional figures is more than usually open to a margin of error in view of the violence of the decline in wholesale prices, but the trend is unquestionably downwards.

Altogether, the picture presented by our indices is rather depressing, and it would be over-optimistic to look for signs of very early recovery. A fall, such as has occurred during the past few months, in the price of primary products is bound to have repercussions on manufacturing employment and on " finished " trade for a considerable period. The time which must elapse before recovery sets in depends on two factors, neither of which is precisely calculable—the volume of stocks in the hands of manufacturers and distributors, and the rate at which the benefit of cheaper raw material is passed on to the ultimate consumer. On the whole, there seems to be reason to think that normal stocks in most kinds of semi-finished and finished goods in this country are lighter than was the custom before the war. For this reason an upward turn in activity may come sooner than expected, but if " finished " prices fail to move freely in conformity with the " primary " trend, recovery will be by so much the more tardy in arriving.

The Economist
MONTHLY SUPPLEMENT.

New Series. **SATURDAY, APRIL 26, 1930.** **No. 83.**

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics," 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

The reports from the different industries, given on a subsequent page, are not encouraging, though it must be remembered that they relate mainly to the weeks immediately preceding the Budget and the Easter holidays. General trade statistics are also in many respects disappointing. Unemployment rose in March to 14 per cent., or four points above the preceding year. Even when allowance is made for the effect of the 1929 Unemployment Insurance Act in bringing persons back to the registers, it is discouraging to note that recent increases of unemployment embrace coal mining, iron and steel, engineering and shipbuilding, the textile trades and, in short, most of the staple industries of the country. The only offset was a seasonal improvement in the building trades. The foreign trade figures for March were also disappointing, while railway traffic receipts are also below their level of the preceding year. Iron and steel production figures, however, appear more promising, though unfortunately there is reason to fear that March output may have been in excess of sales, and that stocks are beginning to accumulate.

Nevertheless, there is perhaps reason to hope that we are at the lowest point of the curve. This does not mean that any sudden or marked improvement is likely, or that industry will do more this year than hold its own, with perhaps a slow upward trend. Still there are one of two facts to-day which support the view that bottom has now been touched.

The first fact is that the contents of the Budget are now known, and, while many industrialists are depressed by the further increases in direct taxation, which was already exceedingly heavy, it is some gain that the worst is now known, and Mr Snowden's assurance that, under normal circumstances, no further increase in taxation need be feared next year, should help to clarify the outlook. The motor industry has responded to the decision to continue the McKenna duties for the present, though in the long run it might have proved better for the industry to have repealed the duties at once, and so put an end to all doubt.

Another important fact is that the fall in some commodity prices seems for the time being to have reached its end. Non-ferrous metals recently had a further break, but agricultural products are much steadier. Wool, in particular, displayed increasing firmness as the recent London sales progressed, and it is most unfortunate that the industry should have been disturbed by labour troubles just at the time when it was obtaining the promise of a more stable basis. The good effect of the check to the fall in cotton prices has also been partially offset, so far as Lancashire is concerned, by the recent boycott proclaimed in India against British goods.

Prices of wheat and other cereals are also more stable, and, partly because of this and partly because of fresh foreign loans, news from South American markets is a little better. Canada also reports steadier grain prices, and there is apparently some hope that the Australian surplus wool will be disposed of more easily than at one time seemed likely. In short, except for non-ferrous metals, the world's commodity markets are now displaying greater firmness, and this is causing some return of confidence, even though it is still of a partial and hesitant character.

There is, unfortunately, one cause of anxiety to be mentioned. If the world price-level is to remain stable, it is clear that a repetition of last year's heavy and abnormal gold movements must be avoided. Unfortunately, there are signs of a further outbreak of speculation on Wall Street, which is causing an increase in brokers' loans and a movement of the dollar exchange against London, while during the past fortnight the Paris exchange has fallen from par practically to the lower gold point. The causes of the fall in the Paris rate are apparently the same as operated last year, namely, a demand for francs in order to finance tax payments and tourist expenditure, leading, as before, to heavy drafts upon French foreign balances. This year there is also an additional factor at work, namely, preparations for the impending reparations bond issue. It would be extremely inconvenient if a further gold influx into France were allowed to develop, and it is to be hoped that the inauguration of the Bank for International Settlements has been used as the occasion to concert measures to prevent so unfavourable a development. One thing that is clear is that the French authorities do not in the least want to have more gold forced upon them.

Such is the general trade position. In certain important

HOME TRADE STATISTICS—MARCH, 1930.

respects it is clearer, and not without hope. On the other hand, there are one or two new grounds for anxiety, and it must be emphasised that the recent trade setback and fall in prices have left several countries, notably Australia, with very difficult problems to solve. At home the immediate situation is not bright, and, while an improvement seems more likely than a further recession, it will inevitably be slow. Little real progress, in fact, can be looked for during the present year, and 1931 must probably be awaited for any pronounced forward move.

HOME INDUSTRIES.

Coal.—Apart from some slight pressure immediately prior to the Easter holidays, business has remained restricted. Cardiff reports few export inquiries, and stocks are steadily growing. There has been a fair demand for house coal, but this is already beginning to fall away with the approach of summer. Demand for industrial fuel is no better.

Iron and Steel.—Although the March pig-iron production figures were fairly good, orders are slow in coming forward, and in some instances stocks are increasing. Demand for steel is also falling away, and while the output for March was surprisingly good, April is likely to register a decline.

Engineering.—No improvement is apparent, and the Budget and the Easter holidays have delayed any forward movement, though it is still too early to tell what effect the Budget will have on this industry. Some textile machinists are active, and there is a certain seasonal demand for agricultural machinery. Builders of locomotives and rolling-stock are fairly busy, as are makers of boilers and prime movers, and the latter class may experience a further improvement. Work in the shipyards is well maintained, considering the depression in shipping, but the yards are mainly engaged on motor ships and tankers. In general, the current year is not likely to prove so good for the engineering industry as did the last.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Associations. An explanation of the manner in which it has been computed was given on page 888 of the *Economist* of November 28, 1925:—

INDEX of ACTIVITY in the ELECTRICITY INDUSTRY.

(1920 = 100.)

1927.	Home.	Export.	Total.	1928.	Home.	Export.	Total.

July	71	80	74	February	69	240	112
August	74	86	78	March	71	236	113

March witnessed some increase in activity in the home market, mainly as a result of orders for generating plant from London and the Midlands. Apart from a revival in Russian demand, export trade in less active.

Motor Industry.—In the private car section trade is disappointing, there being little indication of the usual seasonal activity. There is, however, a recovery in exports, though these do not compare favourably with the corresponding month last year. Commercial vehicle manufacturers are not so affected, a moderate demand being maintained both in the home market and from overseas. The motor cycle and cycle section continues fairly satisfactory in both home and export trade.

Cotton.—Raw cotton prices have been firmer, but there is less likelihood of any big decrease in acreage. Demand for American cotton is still overshadowed by the buying of outside growths, especially Brazilian. Indian demand for piece-goods has been suddenly checked by the boycott movement, and shippers are anxious as to what will happen to goods at present on their way to India. News from China is disappointing with poor clearances at the Shanghai sales. There has been little activity as regards minor outlets, but home trade is better, and some manufacturers now have slightly heavier order books. There has been an improved turnover in yarn, but prices have not improved, and output is less than 75 per cent. of capacity.

Wool.—Production at Bradford is seriously affected by the stoppage, some combers having all their machinery standing. Prices of wool and tops, however, remain firm, and there is a general opinion that the recent London sales have cleared the air, and that prices are at last becoming stabilised.

Linen.—Flax prices remain very firm, and the destruction last week by fire at Riga of some 8,000 or 10,000 tons of Soviet flax is bound to have a far-reaching effect. Spinners are busy, and March witnessed a large increase in cloth shipments to outside markets.

Rayon.—Some improvement has occurred, and the Budget has clarified the situation. The leading viscose producers have made alterations in their yarn standardisation, and have reduced the prices of many of their standard yarns. Special cheap grade yarns are unaltered in price.

Boots and Shoes.—Easter trade has proved disappointing, while it is feared that the new Australian tariff will have a serious effect. Still some hopes are entertained that a recovery from the present depression is imminent.

Pottery.—Home trade remains quiet, but exports show some improvement over last year. Some anxiety is felt, however, as to the effect of the new Australian and American tariffs.

Chemical Industry.—Markets have been extremely quiet and business unsatisfactory. March exports were below those of last year, the only improvements being in ammonium sulphate, sulphuric acid and zinc oxide. Taking the first quarter of the year, heavy chemicals show a small advance, but this is more than offset by declines elsewhere.

Building Trades.—Apart from a marked seasonal improvement in painting and decorating, employment remained quiet during March. Little change is reported in the brick industry.

Agriculture.—The mild winter has enabled autumn-sown crops to make good progress, except in the north, where March frosts have in places caused some damage. Lambing this year is fully up to the average, and mortality no more than normal. Pastures have made but little growth, and live-stock have only maintained fair condition in those districts where winter keep has been adequate. Milk yields are about average.

Shipping.—Cargo freights during April have been steadier after the violent fall of the past five months, and there have been signs of a slightly more active inquiry for tonnage to load South American grain. Generally, however, "tramp" shipping has continued to suffer from dull trade.

Retail Trade.—A London store reports trade to have been fairly brisk for the time of year, but that Easter records were slightly spoilt by inclement weather.

BRITISH EMPIRE.

Some improvement occurred in Canada during March, and the fact that navigation on the St. Lawrence is likely to open this year at an unusually early date is also proving helpful. Wheat prices are now steadier, but the reduced purchasing power of the agricultural provinces is affecting general business.

Trade conditions in Australia remain depressed, and unemployment is increasing. Despite rain shortage in places, wheat crop prospects are normal. Wool awaiting sale amounts to 700,000 bales, as against 292,000 bales a year ago. The adverse trade balance for the past eight months is, including gold shipments, £15,000,000.

Business in South Africa remains quiet. A slight improvement has occurred in the wool market, but prices of hides and skins are still falling. Farming conditions remain satisfactory, and favourable climatic conditions prevail in the citrus-growing areas, where crop prospects are good. Tobacco reaping has begun in most districts. Sugar factories are now closed for the season, the final production being 299,000 tons.

Indian crop reports are on the whole good, but damage has been done by locusts to standing crops in the Punjab, and in some parts of Bihar and Orissa crops have suffered slightly from rain and hail storms. In Bengal, the sowing of jute and paddy is progressing satisfactorily, but more rain is needed.

UNITED STATES OF AMERICA.

The business curve turned upwards with the close of the first quarter of the year. Construction contracts registered a notable improvement in volume, and there was a moderate expansion in automobile production, which is now at the 1928 level. Steel mills are operating at 76 per cent. of capacity. Freight movements have undergone a seasonal increase, though still below the level of preceding years. Agricultural prices are recovering, and the distributive trades have improved.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

AMERICAN TRADE STATISTICS—MARCH, 1930.

EUROPE.

The French coal industry is experiencing a decline in demand, and the iron and steel trades are meeting with keen competition in export markets, and are tending to rely more upon home business. The textile industries are still inactive, but raw material prices are much firmer, and a revival is confidently expected.

The Belgian coal and iron industries are passing through a quiet period, and trade elsewhere is rather inactive. A hopeful sign is the recent slight improvement on the produce markets.

German industrial conditions grew more depressed during March, and in so far as the heavy industries are concerned, little improvement is apparent. Some seasonal improvement is expected in employment, but business is held back by the fact that many traders in all sections of business are operating on a hand-to-mouth basis.

As regards Scandinavia, Norwegian shipowners find business is still depressed, and the paper market remains quiet, while wood pulp prices have a downward trend. There has been no improvement in Swedish business. Demand for pig iron has fallen away, and timber prices have declined. The freight market remains weak.

Dutch industry remains depressed, though there is evidence that many of the leading concerns are standing up well against the trade setback of the last six months. Agricultural conditions are less satisfactory.

In Central Europe, the Austrian building trades are active, but business generally is being affected by severe credit stringency. Hungarian foreign trade figures for early 1930 are satisfactory.

SOUTH AMERICA.

The Argentine commercial situation is quiet. The total yield of this year's maize crop is estimated at 7,480,000 tons, which compares with 5,885,000 tons last year and 7,765,000 tons in the 1927-28 season. The Argentine Government has been successful in negotiating a short-term loan of $50,000,000 in the New York market, and the exchange is distinctly firmer than a month ago. The Brazilian outlook is brighter, a loan equivalent to £20,000,000 sterling having apparently been arranged with international banking houses in conjunction with a scheme to control coffee marketing arrangements. Chilean business shows little change. Imports at Santiago tend to increase, and the retail trade turnover is above that of last year. Business in Uruguay is quiet, and orders for imported goods are not being placed freely. A Law has been enacted authorising the Uruguayan Government to purchase over a period of five years the exportable surplus of wheat at a price of 5 pesos per 100 kilos. at port of embarkation for this year's crop. Business in Peru continues dull, but some improvement may take place with the recent stabilisation of the currency. Colombian trade is better. In Ecuador, latest advices regarding the 1930 cocoa crop, although somewhat less favourable, indicate that the harvest should be satisfactory. A steady improvement in business has taken place in Guatemala, where the outlook for the 1930-31 coffee crop is excellent.

FAR EAST.

Japanese business is very quiet, and has been affected to some extent by the restoration of the gold standard and subsequent gold losses. Nevertheless the commodity markets have remained very steady.

The Chinese position remains unsatisfactory, and clearances at the Shanghai auctions are of small dimensions.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods:—

INDEX of PRODUCTION of ELECTRICITY.*

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The decline in the March figures as compared with February is a seasonal movement, and allowing for this the March results are not discouraging. The textile areas remain the most depressed, and other areas are more active.

INDICES OF BUSINESS ACTIVITY.

THE general picture presented by the latest figures of our series of indices of business activity suggests that up to the end of March there were no signs of any recovery from the trade depression which began to develop in the autumn of last year. Indeed, a number of the curves point to a deepening rather than a lightening of the depression. The indices of the volume of employment, of the net imports of raw materials and non-ferrous metals, of the consumption of cotton, and of the exports of British manufacturers all show a further decline.

Certain qualifications, however, have to be borne in mind in considering several of these index numbers. In the first place, the usual quarterly estimate published by the Board of Trade, in which the volume of our imports and exports is ascertained by recalculating the figures of declared values in terms of 1924 prices, is unfortunately not available for this issue of the *Economist*. Hence, the index numbers both of British manufactured exports and of retained imports of raw materials probably under-state considerably the actual volume during the past three months. In the case of manufactured exports, the degree of under-statement may not be very substantial, but the decline in price of many primary products purchased from abroad has been so considerable since the last quarter of 1929 (whose price co-efficient forms provisionally the basis for the computation of the last three index figures) that it may be taken as certain that appreciably higher figures will have to be substituted for the raw material import indices during the first three months of 1930. Similarly, the apparent decline in the volume of employment is somewhat exaggerated by the effects of last year's Unemployment Insurance Acts, which have resulted in a fairly substantial number of persons being recorded as unemployed who did not previously figure on the registers. Until the revised totals of insured persons are published next autumn by the Ministry of Labour, in accordance with their usual practice, it is not possible to make allowance as between the different divisions of industrial employment for this special factor.

When due regard, however, is had for these considerations, the fact remains that the indices as a whole afford unmistakable evidence that the position of British industry and commerce is not very satisfactory. As compared with a year ago, the index of provincial bank clearings, which is computed in such a way as to allow for changes in the level of prices, suggests that there has been a definite setback in the activity of domestic trade turnover. The figure of the consumption of cotton index stands at a level eloquent of the depression in the textile industries—now aggravated by the partial stoppage in the wool textile trades; and even though, as already stated, price declines not yet fully allowed for exaggerate the shrinkage both in retained imports of raw materials and in the volume of manufactured goods exported, it is unlikely that these figures, when corrected, will fail even so to indicate a somewhat marked setback as compared with the corresponding figures for March, 1929.

On the other hand, it seems permissible to draw from the appended figures the consoling inference that the business reaction through which this country, in common with the rest of the world, has recently been passing, has not amounted to a particularly violent general slump. Shipping movements, it will be noted, are still higher than in any of the past six years at this time; the apparent consumption of iron and steel continues to be satisfactory; and though the indices of consumption of power do not reveal, in comparison with the figures for March, 1929, the same rate of expansion as was recorded by comparison for the previous twelve months, the percentage increase over the average for 1924 remains by no means discouraging. We discuss in another column the prospects for coming months. It may be some time before our indices of business activity show once more a positive upward movement; but though there can be no doubt that the curve of production and trade during the past quarter has "dipped," the downward fluctuation does not appear to have been quite so pronounced as pessimists would have us believe.

The Economist
MONTHLY SUPPLEMENT.

New Series. SATURDAY, JUNE 28, 1930. No. 85.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics." 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

No change for the better has taken place during the past month, and it cannot be said that any signs of improvement are yet in sight. It must be remembered that in previous and more fortunate years, a set-back in trade has usually occurred about May and lasted until the end of the summer. Thus it could hardly have been expected that home trade would have begun to emerge from its depression during the early summer months. Abroad, this seasonal factor does not apply to the same extent, but, even so, harvest uncertainties in many countries create a state of mind which is hardly conducive to recovery from one of the major trade recessions of the century.

Thus the summer months can probably be written off as a "total loss," and the main point of interest is whether or not the autumn will witness an improvement. A rapid recovery is pretty clearly out of the question, as the harm done by the depression is too deep to be overcome in a few weeks; but even a slight improvement of no more than the usual seasonal dimensions might suffice to raise the spirits of the industrial world and start the nation on the road to a genuine recovery.

The situation at the moment is only too patent. As the adjoining figures show, unemployment has risen during the past year from 9·7 to 15·3 per cent., while pig-iron production has fallen by 40,000 tons and steel production by 151,000 tons. Imports and exports have fallen heavily in value, no doubt in actual volume also. Railway receipts are £380,000 less than in May, 1929, and commodity prices and shipping freights have both fallen. The unfortunate wool dispute, now practically terminated, accounts for the colossal increase over last year in the number of working days lost through trade disputes.

Comparing May with April, unemployment has increased in coal-mining, shipbuilding, the motor trade, and many of the textile industries, including cotton and linen. There has been a seasonal improvement in building, while the silk and rayon, and also the clothing and boot and shoe industries provided more employment in May than they did in the previous month. Regarding the more important industries separately, the coal and steel industries show no signs of expansion, and the cotton industry has to face on the one hand a further fall in raw cotton prices and on the other hand the virtual closing of her two great overseas markets by the Indian boycott and the collapse of silver and hence of the Chinese exchanges. The woollen industry has yet to measure, as well as to recover from, the losses caused by the recent dispute, and though wool prices now command greater confidence, such a recovery is notoriously a slow process. Shipbuilding and marine engineering have definitely lost ground, and, to sum up the position, the few improvements enumerated in the preceding paragraph are far from sufficient to compensate for the month's set-backs in so many of our important industries. Abroad, the further break on Wall Street, the course of events in India and the Far East, and the depressed state of many European countries do not between them offer an encouraging prospect.

The autumn outlook depends to a large extent upon three factors, the course of commodity prices, the trend of money rates, and the results of the approaching harvests; and in judging the last-named regard must be had not only to the size of the crops but to the prices at which they can be marketed. Commodity prices are still falling, for June has repeated the experience of preceding months when, after it had appeared for a fortnight or so that the downward trend had at last been checked, a renewed decline began. At the same time it should be remembered that wholesale prices are less than 15 per cent. above the 1913 average, and it seems difficult to believe that they can fall much lower. Money rates, in London at least, seem likely to remain stable, and even if Bank rate rises to 4 per cent. in the autumn, this will be a seasonal increase and in any case will not inflict any appreciable burden upon industry. Besides, the recent reductions in the New York and Berlin rediscount rates suggest that the recent downward trend in money rates is only just reaching its end. While no one now expects a 2½ per cent. Bank rate in London, a 4 per cent. rate in the autumn may be avoided.

The harvest outlook is perhaps the most interesting point of all. In the United States there are prospects of a big cotton crop, and while much depends on weather conditions during the next two months, prices have already fallen in sympathy with the current outlook. Hence it seems likely that with the stocks already in the hands of the Federal Farm Board, the world will remain over-

supplied and that unremunerative prices will rule. In Canada, the heavy wheat stocks held by the Pools are now beginning to move, but here again harvest prospects seem sufficiently good to keep prices at a low level. Perhaps the most encouraging news comes from Australia, where it is stated that only a small amount of wool will be carried forward to next season; but in general it seems possible that once more the world will find itself in the paradoxical position of enjoying good harvests but having to dispose of them at unremunerative prices. If this is the case—and it must be emphasised that these are early days in which to reach such a conclusion—agricultural prices are likely to remain low, and so any autumn revival in trade will at the best be of an extremely limited character.

HOME INDUSTRIES.

Coal.—Export business remains very restricted, and South Wales reports unofficially that production is to be reduced in the September quarter of the year. Demand for industrial fuel is limited, while the house coal trade is experiencing its customary summer slackness.

Iron and Steel.—Business is still at a low ebb, as at present the effects of the general setback in trade are accentuated by the incidence of the normal summer slackness. Ten furnaces went out of blast in May, and a further two or three during early June. The recent German price reductions only affect the internal market, and so are not likely to influence the British situation.

Engineering.—The general situation is thought by some in the industry now to be a little clearer, and some hopes of a slight autumn revival are consequently entertained. The setback in shipbuilding has affected marine engineering, and there is no improvement in the machine-tool section. Locomotive builders remain active, and textile and agricultural machinists have experienced a slight improvement. Makers of boilers and power equipment are not too badly placed.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Associations. An explanation of the manner in which it has been computed was given on page 888 of the *Economist* of November 28, 1925 :—

INDEX of ACTIVITY in the ELECTRICITY INDUSTRY.

September	81	102	88	May	70	209	105

Few fresh orders on home account were received during the month, and trade is very depressed. Export business also is very disappointing.

Motor Industry.—There is a slight improvement in the private car section, with a small increase in exports as compared with last month, but hopes of the usual seasonal revival have not been fully realised. Commercial vehicle manufacturers are not so heavily affected by the general depression, and maintain a satisfactory level of business both in the home market and abroad. The motor cycle and cycle section is moderately active, but the demand from overseas is disappointing.

Cotton.—The new American crop appears to be making good progress, and there is a possibility of a big yield, though much depends on weather conditions during the next two months. The Indian boycott is still in force, but some authorities think that the position will shortly become easier. Chinese trade has been further curtailed by the decline in the price of silver. Business with other foreign markets has been limited, while variable reports have come from the home trade. As a result of these adverse conditions, production in Lancashire was further curtailed, and in most districts the Whitsun holidays were extended.

Wool.—The dispute is now practically over, and as raw material prices are now more stable and command greater confidence, the outlook is perhaps a little better. On the other hand, large stocks of yarns were accumulated during the dispute, and their existence, together with the general trade depression and the business lost through the dispute, is having a depressing influence.

Linen.—Demand for yarn and piece-goods is only of retail dimensions, and output has been slowed down. The Irish flax market has now closed for the season.

Rayon.—The market has improved and the autumn outlook is promising. Stocks of low quality yarn are still excessive, but certain special types, notably crepes, are difficult to obtain. Home trade fabrics have been in active request, but the coarser section of the export trade remains disappointing.

Boots and Shoes.—The approach of the holiday season has brought out some fresh business in women's fancy goods. In the men's section, only a few firms are well employed.

Pottery.—Trade remains very dull. Sales to Australia have been affected by the new import regulations and customs duties.

Chemical Industry.—Demand is restricted, and the depression seems likely to last for a considerable time. The May foreign trade returns revealed a decrease in exports of £411,505 below those of last year, heavy chemicals accounting for half of this deficit.

Building Trades.—May witnessed a further seasonal improvement, but employment was only moderate. The Peterborough brick industry remains relatively well placed.

Agriculture.—The condition of the corn crops was generally satisfactory, this being due to the rapid progress made during the latter part of May. A good crop of early potatoes is anticipated, but a month ago root crops were in need of more sun. Pastures are in good condition, stock showed some improvement, and milk yields have increased.

Shipping.—During June restricted grain movements have continued to be reflected in a general depression of whole-cargo freights. Towards the end of the month chartering from Canada showed signs of increasing a little in volume, and sugar moved more freely; but there was no diminution of the mass of tonnage laid up idle throughout the world.

Retail Trade.—Regarding the country as a whole, there is some evidence that business is being affected by the general trade depression and increase in unemployment. Higher-class shops are finding that the public are concentrating more on the cheaper qualities of goods, and other classes of shops report that in some cases the prevalence of unemployment is the cause of delays in paying hire-purchase instalments. In the West of London, a leading store reports that trade has slightly improved during the past few weeks, and if the fine weather continues a further expansion should take place. In the suburbs, stores are feeling the effects of local unemployment to an increasing degree, and are having difficulty in maintaining their turnover. Results in the North of England are not too discouraging, when due allowance is made for the wool textile dispute. Little change in turnover is reported from the Southern counties.

BRITISH EMPIRE.

Canada reports that the accumulated wheat stocks are at last beginning to be liquidated, and this is imparting greater confidence to farmers. The acreage under wheat promises to be greater than last year, and weather conditions are favourable. The tone of general business has responded to the better prospects for agriculture.

Australian trade remains depressed, but good rains have fallen in many areas, and wool is selling briskly at better prices. It is now believed that only small wool stocks will be carried forward to the new season.

South African business conditions are fair. The Transvaal maize crop is now assured, and the yield will probably be considerably above that of last year. Citrus crop prospects are satisfactory, and the wool market has improved.

In India the monsoon burst on June 10th, and rainfall has since been general and seasonable. Standing crops are in good condition, though some sporadic damage has been caused by locusts in the Punjab. The Bengal and Assam standing jute crops are satisfactory.

UNITED STATES OF AMERICA.

May witnessed a slight improvement in business. The steel mills operated at about 74 per cent. of capacity, and automobile production remained steady at 100,000 units per week, output consisting mainly of low-priced cars. Construction contracts and freight movements expanded slightly, and there was a seasonal improvement in wholesale and retail trade, but the textile mills curtailed operations. Money was abundant and cheap, and commodity prices were lower. It remains to be seen how seriously business will be affected by the fresh Wall Street break in early June.

EUROPE.

In the French coal industry there is a fair demand for house fuel. Home demand for steel is not very active, but prices are maintained. Export trade is dull. There is a slight improvement in the Roubaix wool trade, but other textile industries are not so well placed. Produce markets are dull.

Belgian news is not satisfactory. Apart from a moderate demand for domestic fuel, the coal and steel trades are dull, and coal stocks are growing. There is a slight improvement in the textile industries, but glass manufacturers have reduced their output.

Little real improvement has yet occurred in Germany, but the May foreign trade returns were better than those for April, and unemployment has been decreasing very slowly. It is hoped that the recent iron and steel price reductions in the home market will stimulate internal trade, but some consumers feel that the reductions are inadequate.

No change is reported from Holland, but industrial reports are beginning to have a more hopeful tone. Agriculture remains depressed.

In Scandinavia, some sections of the Norwegian trade are active, while Danish farmers have benefited from good weather and a slight recovery in prices.

In Central Europe, Austria reports a slight decrease in unemployment, but conditions there are still very unfavourable. There was no change in Czechoslovakia during May. Harvest prospects are good, but unemployment increased slightly.

SOUTH AMERICA.

During the past month further progress has been made with the scheme for "rationalising" the Chilean nitrate of soda industry, and discussions have also continued between the Chilean producers and the synthetic nitrogen interests with a view to finding, if possible, a basis for world-wide co-operation. Generally speaking, Chilean trade is somewhat quieter. The Argentine commercial situation remains adversely affected by the low level of world prices for cereals and other export products. A further fractional decline has occurred in the exchange value of Argentine currency, and conditions in the import markets are becoming even more competitive, although fundamentally the economic position is quite sound. In certain directions there are still indications of some slight improvement in the Brazilian situation, but the credit and exchange position remain difficult. Peru also has a problem in her exchange position, and it remains to be seen as to whether it will be decided to draw upon the surplus gold reserves, resulting from the revaluation of the currency, which have already been exported to New York, in order to maintain rates at around the new parity. As elsewhere, commercial conditions in Peru are depressed on account of the present adverse conditions in the markets for staple export products, such as cotton, sugar, wool, etc. Trade in Mexico continues quiet, whilst in Ecuador business generally is slow and credit stringent. Salvadorean conditions are improved, with shipments of coffee exceptionally heavy. The drought in Venezuela broke towards the end of April, and mail advices state that the outlook for the coffee crop there is very favourable. Trade in Guatemala is quiet.

FAR EAST.

The further fall in the price of silver to new record low levels has brought trade with China almost to a standstill, and the failures of several Chinese banks have added to traders' difficulties.

Conditions in Japan are not satisfactory. Unemployment has increased, and attempts to reduce wages in conformity with the fall in prices have been the cause of unrest. Raw silk stocks have increased, and prices are again lower. Cotton spinners have lost much ground owing to the temporary cessation of Indian buying and the fall in silver.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57–8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods :—

INDEX of PRODUCTION of ELECTRICITY.*

(Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The general index is again lower on the month, but the decline is less than that recorded in previous years. The chemical index is appreciably higher.

INDICES OF BUSINESS ACTIVITY.

WHEN allowance is made for the fact that the month of May did not suffer, as April did, from the interruption of a holiday week, the picture presented by the latest figures of our series of indices of business activity cannot be described as other than depressing. Certain features were distinctly less sombre than others. For example, the index number of apparent consumption of iron and steel underwent only a trifling reaction from its recent satisfactory level and, when seasonal trend is taken into account, the indices of consumption of power are not discouraging. Moreover, shipping movements did not fail to record their usual seasonal increase in the past month, and London bank clearings actually recorded an increase.

On the other hand, there was a serious decline in the volume of employment both in heavy industry and, to a less extent, in general industry. The index of employment in miscellaneous services—occupations naturally less susceptible to the influence of trade depression—showed no alteration, but the total index of employment in all branches showed a further significant decline. The adverse situation of the cotton textile industry is strikingly illustrated by the continued heavy fall in the index of apparent consumption of raw cotton; imports, both of raw materials, classified as such in the trade returns, and of non-ferrous metals, have declined; the downward trend of the index of provincial bank clearings points to a slowing up in the rate of turnover in the home trade; and the index of exports of British manufacturers, at 92, has fallen to the low level registered in May, 1926. Both this index, it should be appreciated, and that of net imports of raw materials are adjusted to compensate for changes in the prices of commodities, as estimated by the Board of Trade on the basis of declared values at ports of entry and of shipment, so that they reflect accurately the severe contraction that has taken place in the physical volume of our overseas trade.

While there is no doubt as to the reality of the present trade depression, whose symptoms are patent without reference to indices of this character, and whose probable duration is discussed in this Supplement in the light of factors affecting the autumn outlook, it is of interest to observe from the comparative figures for the month of May, printed at the foot of the appended table, how much more pronounced the reaction has been in some spheres than in others as compared with a year ago. Prominent among the indices showing heavy falls is that of British manufactured exports. The volume of raw-material imports has also contracted, but the fall is not so marked; the slump in cotton consumption has attained calamitous dimensions; and both the "heavy" and "general" employment indices are seriously down. A remarkable feature is the increase, as compared with May, 1929, in the consumption of iron and steel. In this case, however, a caveat should perhaps be entered that the method of calculating this index number takes no account of possible increases in stocks held by consumers—a not unimportant factor which probably affects also the index of apparent consumption of rubber. The maintenance at a high level of the rate of postal traffic is somewhat surprising, and the striking increase, as compared with a year ago, in the volume of London bank clearings is another unexpected feature. In the calculation of this index number, however, the actual values on which the index is based are corrected to allow for changes in the general price level by using as a coefficient the mean between the *Economist's* index number of wholesale prices and the Ministry of Labour's cost-of-living index. It is possible that during a violent downward movement of wholesale prices this method tends, over a short period, to exaggerate the apparent volume of bank clearings.

THE NATIONAL ACCOUNTS FOR 1929-30.

Last year's Budget closed with a deficit of £14,524,000, the third deficit realised on Mr Churchill's five budgets. The deficit was primarily due to over-estimating receipts from taxation, though under-estimates of expenditure in the last Budget were also partly responsible. The following table compares the realised results with the *Budget* estimates made last spring, after allowing for the effects of dropping certain minor proposals originally contained in the Budget speech. It should be noted that actual expenditure in the year, though £6,820,000 larger than the Budget estimates, was £6,126,000 smaller than the *final* estimates (after allowing for certain book-keeping changes). But for this fact, and for the heavy deficiency in anticipated payments to the New Sinking Fund (1928) the deficit would have amounted not to £14½ million but to over £23 million.

* Including Road Fund payments on both sides of the account.
† Including Corporation Profits Tax.

During the last financial year the net amount, after allowing for the deficit and excess interest on Savings Certificates, which was applied out of revenue for the redemption of debt, was £28,406,000. This sum is, of course, substantially smaller than the amount required to provide for the statutory sinking funds. During the year the Floating Debt was reduced by nearly £100 million. The principal capital changes reported up to date are shown in the following table:—

(£'s thousands.)

RECEIPTS.		ISSUES.

‡ Land Tax, Inhabited House Duty, Land Values Duties.
§ Including Munitions Levy.
‖ Including receipts from Fee and Patent stamps in 1913–14, 1924–25 and 1927–28. From 1928–29 onwards these receipts were applied as appropriations-in-aid of the Departments concerned.
¶ Total Post Office receipts *less* Post Office self-balancing Revenue.

In 1928-29 Mr Churchill changed the form in which the national accounts were presented, showing separately "Ordinary Revenue and and Expenditure" and "Self-balancing Revenue and Expenditure." The latter item comprises Post Office expenditure and the share of motor vehicle duties apportioned to the Road Fund. In addition, in the new form of accounts, the sinking fund is shown separately from "Ordinary" expenditure. There are very good reasons indeed for excluding Post Office expenditure from the total of national expenditure, for this is a payment mainly commercial in character; but the excess of Post Office receipts over expenditure must be included in any case as part of the national revenue. On the other hand, there is no very clear reason for separating payments to the Road Fund from other revenue and expenditure, for the motor vehicle duties are certainly a tax and Road Fund expenditure is as plainly an outlay as is, for example, the cost of education or of the navy. *Mutatis mutandis*, the same applies to the sinking fund. In the preceding table, therefore, the *total* receipts from the motor vehicles duties are shown as part of the tax revenue; but only *net* Post Office receipts are included in the non-tax revenue. On the other hand, in the final line Post Office self-balancing revenue has been included, and the totals are those found in the national accounts for earlier years. The figures in the table are comparable throughout.

Details of the various sources of revenue will not be available until the Finance Accounts are published in the summer. The summaries which follow, however, and which give the latest figures available, indicate the principal characteristics and chief variations of the main items of revenue in recent years.

Customs and Excise. — Exchequer receipts from Customs and Excise together amounted last year to £247,338,000, and were thus £3 million less than the Budget estimate. Last year's receipts compare with receipts of £252,972,000 in 1928-29, £250,820,000 in 1927-28. £234,472,000 in 1924-25, and £75,040,000 in 1913-14. Since the nominal amount in terms of money has substantially increased during the last six years, whereas prices have fallen heavily in the same period, it is plain that the real burden in terms of goods and services is correspondingly greater. As compared with pre-war, the increase is much more striking.

Exchequer receipts, because of variations in retained balances, always differ somewhat from net receipts as returned in the Report of the Commissioners of Customs and Excise, and it is net receipts which are shown in the following table, compiled mainly from the Commissioners' latest report for the year ended March 31, 1929. The areas referred to are the United Kingdom in 1913-14 and Great Britain and Northern Ireland since the war:—

CUSTOMS AND EXCISE DUTIES—NET RECEIPTS (000's omitted).

* The figures for 1913 relate to the United Kingdom; those for later years to Great Britain and Northern Ireland only.

Since 1924 a considerable number of changes have been made in Customs and Excise duties. In his first Budget Mr Snowden reduced all the breakfast table duties. The duties on tea, cocoa, coffee, chicory, coffee and chicory substitutes were halved, the tea duty being reduced to 4d. a lb. (against 5d. at the outbreak of war), and the coffee and chicory duties to their pre-war amounts (14s. and 13s. 3d. a cwt. respectively); while the cocoa duty, though also halved, was left substantially above its pre-war level (14s. a cwt. against 9s. 4d. pre-war). The sugar duty was reduced from 25s. 8d. a cwt. to 11s. 8d. (pre-war, 1s. 10d.), while the duty on home-grown sugar, which had been taken off in 1922, was reimposed. The duty on dried fruits was reduced from 10s. 6d. a cwt. to the pre-war level of 7s. a cwt. In addition to these changes, Mr Snowden repealed the war-time duty on sweetened table waters and herb beer, lowered the entertainments tax payable on the cheaper seats (up to seats costing 2s. apart from tax), and allowed the McKenna duties on motor cars, musical instruments, clocks and watches and cinema films to expire at the end of the ten-year term for which they had originally been imposed in 1915.

Mr Churchill's changes during his Chancellorship were even more extensive. Considering first the commodities on which duties existed before the war, he repealed the trifling Excise duty on chicory in 1926, raised the duties on imported wines and on tobacco in 1927, reduced the sugar duties in 1928, and repealed the tea duty in 1929. Even more remarkable were the changes he made in duties which did not exist before the war and the new duties which he imposed, many of them either purely and avowedly protective or else constructed with a definite protective twist. The purely protective duties include the reimposed McKenna duties, the duties on hops, lace, embroidery, cutlery, gloves and incandescent mantles, hose (all imposed in 1925); those on commercial motor vehicles and wrapping paper, together with increases in certain key industry duties (in 1926); the duty on motor tyres and the transluscent pottery duty (in 1927); and the duties on mechanical lighters, on buttons, and on wrought and enamelled hollow-ware (in 1928). In addition the silk and artificial silk duties (imposed in 1925) and the revised duties on matches (made in 1927) had

markedly protective characteristics; and a protective tinge was even given to the petrol duty imposed in 1928. In addition to all these changes, Mr Churchill also imposed various duties on betting in 1926, altering them again in 1928 and 1929; and duties on British wines (imposed in 1927 and increased in 1928). Finally, in 1929, he repealed the railway passenger duty.

The conclusion to which the tables in this section lead is that, so long as present consumption trends continue, the revenues from Customs and Excise will not show their former buoyancy. Both the Chancellor of the Exchequer and the Commissioners of Customs and Excise are now confronted with problems at once novel and disturbing.

Motor Vehicle Duties.—Gross Exchequer receipts (*i.e.*, including both the Exchequer share and the portion paid to the Road Fund) in respect of motor vehicle duties amounted last year to £26,802,000 and were £498,000 less than the estimates. The remarkable increase in the yield of these duties in recent years is shown in the following table:—

MOTOR VEHICLE DUTIES.
(000's omitted.)

	Exchequer Receipts. £		Exchequer Receipts. £
1920–21	7,073	1925–26	18,056
1921–22	11,096	1926–27	21,393
1922–23	12,321	1927–28	24,518
1923–24	14,691	1928–29*	25,357
1924–25	16,164	1929–30*	26,802

* Including both the Exchequer share and the amounts paid to the Road Fund, which are shown separately in the National Accounts for these years.

Although the table shows that the increase is still continuing, it is plainly at a lower rate than in earlier years; and the recent failure of these duties to reach the totals anticipated in the Budget statements is somewhat ominous. It suggests that motor taxation, which is now extremely heavy, is hampering further expansion. Since 1926-27 the Exchequer, instead of paying the entire yield to the Road Fund, has earmarked a portion for general purposes, the amounts so applied amounting to £4,020,000 in 1926-27, to £4,852,000 in 1927-28, to £4,226,000 in 1928-29, and to £4,920,000 in 1929-30.

Death Duties.—Last year Exchequer receipts from death duties totalled £79,770,000, or £1,230,000 less than the Budget estimate. The following table shows the Exchequer receipts from death duties in 1913-14 and for the years from 1920-21 onwards. For 1913-14, 1920-21 and 1921-22, the figures relate to Great Britain and Ireland; from 1922-23 onwards to Great Britain only:—

ESTATE, &c., DUTIES.
(In Million £'s.)

	Exchequer Receipts.		Exchequer Receipts.
1913–14	27·36	1924–25	59·45
		1925–26	61·20
1920–21	47·73	1926–27	67·32
1921–22	52·19	1927–28	77·31
1922–23	56·87	1928–29	80·57
1923–24	57·80	1929–30	79·77

Three death duties out of the seven on the Statute Book are applicable to deaths occurring to-day, the estate duty being by far the most important. Although on estates up to £12,500 the pre-war duties are still payable, the rates of estate duty, which the 1925 Budget increased by from 1 per cent. to 6 per cent. on estates exceeding a net principal value of £12,500 and not exceeding a net principal value of £1,000,000, are now much higher in the case of large estates than they were before the war, and their scaling up is more rapid.

The current distribution of fortunes, coupled with the extremely rapid scaling up of the rates of estate duty as the higher ranges of capital values are approached, accounts for the proportions of the total tax contributed by estates of various sizes. In 1928-29 the total number of estates liable to estate duty was 17,683; the net capital value of these estates was slightly more than £525 million; and the net receipts (as distinguished from the Exchequer receipts) from the duty was £72,230,000. Estates of a value not exceeding £10,000 numbered 109,595 (or 93.128 per cent.), represented a net capital value of £159,617,000 (or 30.39 per cent.) and accounted for £4,736,000 of the net receipts (or 6.56 per cent.). The remaining 93½ per cent. of the net receipts came in almost equal proportions from estates exceeding £10,000, but not exceeding £100,000, from those exceeding £100,000 but not exceeding £500,000, and from those exceeding £500,000. The first group—from £10,000 to £100,000—numbered 7,553 (or 6.418 per cent.), represented a net capital value of £203,313,000 (or 38.27 per cent.) and accounted for £22,599,000 of the net receipts (or 31.28 per cent.). The second group—from £100,000 to £500,000—numbered 477 (or 0.405 per cent.), represented a net capital value of £95,511,000 (or 18.19 per cent.), and accounted for £22,075,000 of the net receipts (or 30.56 per cent.). The last group of estates—those over £500,000—numbered 58 (or 0.049 per cent.), represented a net capital value of £66,692,000 (or 12.70 per cent.), and accounted for £22,826,000 of the net receipts (or 31.60 per cent.). Within this last group estates from £1 million to £3 million and those over £3 million numbered respectively 19 and 1; represented respectively net capital values of £26,579,000 and £13,277,000 (or 5.06 per cent. and 2.53 per cent.); and accounted respectively for £9,646,000 and £5,491,000 of the net receipts (or 13.35 per cent. and 7.60 per cent.).

Stamp Duties.—Exchequer receipts from stamp duties (excluding fee and patent stamps) amounted to £25,670,000 in 1929-30 and fell short of the Budget estimates by £5,330,000. The principal variable items in the revenue from stamps are the duties on Stock Exchange transactions and the company duty; and when the details for 1929-30 come to be published, there is no question but that the major part of the decline will be found in these classes of receipts, the natural consequence of the depression from which the Stock Exchange suffered during the last financial year. The next table shows the net receipts from the main heads of duty in recent years and in 1913-14.

STAMP DUTIES: NET RECEIPTS.
(In thousand £'s.)

Income Tax.—Exchequer receipts from income tax amounted last year to £237,426,000, and were £2,074,000 below the estimate.

The following table shows the Budget estimates and Exchequer receipts of income tax for 1913-14 and from 1920-21 onwards, together with the standard rates of tax for each year:—

INCOME TAX.*

	Exchequer Receipts.	Standard Rate of Tax in the £	Yield per Penny.		Exchequer Receipts.	Standard Rate of Tax in the £	Yield per Penny.
	£'s mlns.	s. d.	£'s mlns.		£'s mlns.	s. d.	£'s mlns
1913–14	43·9	1 2	3·11	1924–25	273·8	4 6	5·06
				1925–26	259·4	4 0	4·92
1920–21	338·9	6 0	4·91	1926–27	234·7	4 0	4·87

1923–24	269·3	4 6	4·87	1929–30	237·4	4 0	4·95

* For 1913–14, 1920–21 and 1921–22, the United Kingdom; from 1922–23 onwards, Great Britain and Northern Ireland only.

This table must be read in the light of the changes in income tax which have been made in recent years. The present system was instituted in 1920-21, and was maintained without change in 1921-22. In 1922-23 the standard rate was reduced by 1s., at a cost estimated at £23,500,000 in that year and at £52,000,000 in a full year. Certain other small changes were also made. In 1923-24 the standard rate was again reduced, this time by 6d., at cost estimated at £19,000,000 in that year and at £26,000,000 in a full year. In 1924-25 no change was made. In 1925-26 the standard rate was reduced by 6d. (estimated cost in 1925-26, £24 million; in a full year, £32 million; and the earned income allowance was increased from $\frac{1}{10}$ (with a maximum allowance of £200) to $\frac{1}{5}$ (with a maximum of £250), while at the same time a similar allowance was made on the investment incomes of persons aged 65 or over with incomes not exceeding £500 (estimated cost in 1925-26, £3,000,000; in a full year, £7,500,000). In 1926-27 the only change was one consequential upon an agreement with the Irish Free State respecting double income tax at a cost estimated in that year at £200,000 and in a full year at £300,000. In 1927-28 various minor changes were made, resulting in an estimated net increase in that year of £200,000 and in a full year of £350,000, while Schedule A income tax was collected in one instalment instead of two, with a resultant gain, for 1927-28 only, estimated at £14,800,000. In 1928-29 relief in respect of children was increased from £36 for the first child and £27 for each subsequent child to £60 and £50 respectively, at a cost estimated at £2,100,000 in that year and at £4,500,000 in a full year. In 1929-30 no change was made.

Surtax.—Exchequer receipts from surtax (formerly called super-tax) totalled £56,390,000 last year, and were £1,610,000 below the Budget estimate. This is the third consecutive year in which receipts from super-tax have failed to reach the Budget forecast.

The number of persons assessed to super-tax (as revised at April 30, 1929), the total chargeable income (including the first portion on which no super-tax is payable) and the Exchequer receipts in 1913-14 and since 1920-21 are shown in the following table:—

SUPER-TAX.
(1913-14 to 1921-22 United Kingdom; thereafter Great Britain and Northern Ireland.)

Year.	Incomes Exceeding which Super-Tax Becomes Chargeable.	Number of Persons Charged.	Total Income Chargeable, including First Portion on which no Super-Tax is Payable.	Exchequer Receipt.
	£		Million £'s.	Million £'s.
1913–14	5,000	14,008	176	3·32
1920–21	2,000	79,962	530	55·28
1921–22	2,000	93,273	590	61·73
1922–23	2,000	91,448	530	64·21
1923–24	2,000	93,133	538	60·64

1928–29	2,000	*	*	56·15
1929–30	2,000	*	*	56·39

* Not available.

The decline in numbers and in total chargeable income is disquieting. A detailed examination of the movements of different grades of incomes reveals that it is the higher ranges which show the largest fall, the total of incomes over £10,000 per annum having actually declined between 1924 and 1927 by nearly 10 per cent. Whether these changes reflect the post-war depression or the after-effects of the coal stoppage or the decline in prices and therefore in certain types of money incomes, they afford ground for anxiety. Will the downward movement continue, and if so, for how long? And are these changes in super-tax isolated phenomena or the precursors of similar changes in income tax? The next few reports of the Inland Revenue will supply the answers.

Excess Profits Duty and Corporation Profits Tax.—Since both these levies have been repealed, and only arrears are now being collected, it is not surprising that together they both yielded only £2,250,000 last year, though this amount was actually £550,000 greater than the Budget estimate.

Receipts from Sundry Loans.—Last year this source of revenue yielded £32,640,000, and was therefore £2,090,000 more than the Budget estimate. In recent years, as the following table shows, these receipts have provided a lucrative and growing yield. As compared with pre-war, when they averaged about £1½ million, the increase is enormous. The table shows the main heads under which payments have been received:—

RECEIPTS FROM SUNDRY LOANS.
(000's omitted.)

	1924–25.	*1925–26.*	1927–28.	1928–29.

Total	*11,941*	*14,944*	23,953	28,111

* See remarks in text below.

Receipts from France and Italy are, of course, under the debt funding agreements. The other Allied Powers who had funded their debts and were making payments in 1928-29 were Greece, Roumania, Portugal and Jugoslavia. The item "Relief, Reconstruction, etc., Loans," includes, *inter alia*, the loans to Austria, Belgium, Hungary, Estonia, Czechoslavakia, Poland and Latvia. In 1928-29 a not unimportant change in accounting practice was made, which apparently increased receipts in that year. In earlier years sums amounting, for example, to about £3,000,000 in 1927-28, had been received from Allies, Dominions, etc., in respect of war contributions and repayments of principal on war loans; but these receipts had been remitted direct to the National Debt Commissioners (who applied them to cancel debt) and therefore did not pass through the Exchequer in those years. In 1928-29, however, these items were brought into "Receipts from Sundry Loans" and paid into the Exchequer, thereby increasing *pro tanto* the revenues of the year and diminishing the funds available for the redemption of debt. This practice was continued last year. In order, therefore, to arrive at figures for 1928-29 and 1929-30, which are strictly comparable with those for earlier years, some £3 million must be deducted from the Exchequer Receipts.

Miscellaneous Ordinary and Special Receipts.—These two sources of revenue proved especially fruitful under Mr Churchill's Chancellorship. They include, *inter alia*, such items as £19 million from the 1926 and 1927 raids on the Road Fund; the Treasury's share (amounting to £2½ million in 1928-29) of surplus interest earned by Post Office and trustee savings banks over and above the amounts paid to their depositors; receipts from the Currency Notes Investment Reserve Account; the £13.4 million balance in the Currency Note Account, surrendered in 1928-29 when the note issues were amalgamated; and the like. They also include the important item of reparations receipts—totalling £19,950,000 in 1928-29, £14,500,000 in 1927-28, £9,608,000 in 1926-27, and £10,150,000 in 1925-26; as well as substantial capital sums—amounting in 1927-28 and 1928-29 taken together to not less than £15-£20 million—derived from the final liquidation of various war accounts. There can be little doubt that most of these nest-eggs have now been gathered, and that few, if any, remain against future times of pressing need.

DIRECT AND INDIRECT TAXATION.

Although there can be no cut-and-dried division between direct and indirect taxation, certain duties, such as the Customs and Excise duties, which are paid by one set of individuals but are then passed on to the consumer, obviously belong in the category of indirect taxes. It may likewise be assumed that stamp duties partake of

the nature of indirect taxes. Assuming that all other sources of revenue from taxation belong to the category of direct taxes, we find that the amounts and proportions of direct and indirect taxation have fluctuated as follows in recent years:—

	Direct Taxation.		Indirect Taxation.	
	In Mln. £	% of Total.	In Mln. £	% of Total.
1903–04	69	*48·5*	73	*51·5*
1913–14	78	*47·9*	85	*52·1*
1921–22	513	*59·9*	344	*40·1*
1922–23	472	*60·9*	302	*39·1*
1923–24	429	*59·7*	289	*40·3*
1924–25	433	*62·7*	257	*37·3*
1925–26	422	*61·6*	263	*38·4*
1926–27	399	*60·1*	265	*39·9*
1927–28	416	*59·9*	278	*40·1*
1928–29	402	*58·7*	283	*41·3*
1929–30	404	*59·7*	273	*40·3*

Though much higher than before the war, the recent slight fall in the proportion of direct to total taxation reflects, on the one hand, the reduction in the standard rate of income tax and various other concessions made to income-tax payers in Mr Churchill's Budgets, and, on the other hand, the growing yield of stamp duties and the increase in protective and so-called luxury taxes, such as the silk duties and the petrol tax.

THE BURDEN OF TAXATION.

The burden of taxation is still very heavy, and it promises to remain so. In the six years from 1924 to 1929 the tax revenues of the central Government amounted respectively to £690 million, £685 million, £664 million, £693 million, £685 million and £677 million. Sir Josiah Stamp and Professor Bowley, after an exhaustive inquiry, estimated the taxable national income at £4,230 million in 1924. Rounding this figure off to £4,250 million, and taking account of the various changes from year to year in prices on the one hand, and in the volume of physical production, the volume of employment and kindred factors on the other, the national income may be roughly estimated at £4,150 million in 1925, £3,800 million in 1926, £4,350 million in 1927, £4,250 million in 1928, and £4,400 million in 1929. On the basis of these figures it appears that the ratio of tax revenue to the national income was 16.2 per cent. in 1924, 16.5 per cent. in 1925, 17.5 per cent. in 1926, 15.9 per cent. in 1927, 16.1 per cent. in 1928, and 15.4 per cent. in 1929. Taking the national income in 1913 at £2,300 million and the central tax revenue at £163 million, the proportion in that year was 7.1 per cent. The present burden is more than double the pre-war burden, and, while substantially lighter than in the years immediately following 1920, is still excessively heavy. Moreover, there is no prospect of an immediate reduction in national expenditure or of early expansion in the national income in terms of money sufficiently large to reduce the existing burden materially.

Local Rates.—Imperial taxes are by no means the whole burden laid on the community. The nation also has to find a large total for local rates, amounting to £188 million a year in 1928-29 and 1927-28, to £180 million in 1926-27, £166 million in 1925-26, and £160 million in 1924-25. The 1913-14 figure was £79 million. The new rating relief scheme, while reducing the amount raised locally by about £25 million a year, transfers an equivalent sum to the Exchequer and to national taxation.

EXPENDITURE.

The national expenditure in 1913-14 and in the years since 1920-21 is shown in the next table. The altered form of the national accounts (as changed by Mr Churchill in 1928) has been adjusted so as to show the various items throughout on a comparable basis:—

Expenditure (£'s million).

	1913-14.	*1924-25.*	1927-28.	1928-29.	1929-30.
National Debt services	*24·5*	*357·2*	378·8	369·0*	355·0*
Other Consolidated Fund services	*12·8*	*36·4*	44·0	44·2†	44·0†
Total Consolidated Fund services	*37·3*	*393·6*	422·8	413·2*†	399·0
Navy, Army, Air	*77·2*	*114·7*	117·4	113·5	113·0
Civil services	*53·9*	*226·1*	229·9	222·5	} 258·6

Total expenditure without Post Office	*172·9*	*745·4*	781·8	760·8	770·6
Post Office	*24·6*	*50·4*	56·8	57·2	58·9
Grand total.....	*197·5*	*795·8*	838·6	818·0	829·5

* Including new Sinking Fund, 1928.
† Including payments to the Road Fund. These items, formerly included in the Consolidated Fund Services, are now shown separately in the accounts.

For 1930-31 the Defence Services are estimated at £110.1 million; the Civil Services at £295.7 million, a figure which includes £15 million formerly paid to Local Government Accounts out of the Consolidated Fund and now included in the new Exchequer grants to Local Revenues under the Rating Relief Scheme; and Customs and Excise and Inland Revenue at £12.1 million. The total estimated expenditure for the Supply Services (excluding the Post Office) is thus £417.9 million. Provided that the Budget makes no change in the provision for the National Debt, the Road Fund or the remaining Consolidated Fund Services, the total for the year may be about £803 million, excluding the Post Office. As the latter is estimated at £60.3 million, the grand total for 1930-31 may be about £863 million. The following sections give details about the main movements under the principal heads of expenditure.

Consolidated Fund Services.—The movements of the National Debt Services are discussed below in the section dealing with the National Debt. Other Consolidated Fund Services cost, roughly, 50 per cent. more to-day than they did at the close of the war. Most of the increase is due to the growth in payments to the Road Fund, which in 1920-21 (when the new arrangements started) amounted to only £8.9 million and in 1921-22 to only £10.8 million, but had risen by 1928-29 to £21.1 million and in 1929-30 totalled £21.9 million. Apart from the Road Fund, payments to Local Taxation Accounts increased from, roughly, £11 million in 1920-21 to, roughly, £13 million last year, most of the growth being due to increased payments under the Agricultural Rates Act of 1923, Under the Local Government Act, 1929, these payments are no longer made out of the Consolidated Fund, but have been transferred to the Civil Services and fused with the new grants in relief of local rates. The remaining items are payments to the Northern Ireland Exchequer (about £5 million), and a miscellaneous group, including, *e.g.*, the Civil List, interest on loans to the Unemployment Fund, and payments under the Trade Facilities Act and the 1925 Tithe Acts.

Fighting Services.—The expenditure on the fighting services has fallen very substantially since 1920-21. In that year the total was £292¼ million, which, of course, included very large sums for war terminal charges. By 1923-24 the total had fallen to £105,800,000, the lowest

figure attained since the war. The movement since 1924-25 is shown in the next table:—

Fighting Services Expenditure (Exchequer Issues).
(000's omitted.)

	Navy.	Army.	Air Force.	Total.
	£	£	£	£
1913–14	48,833	28,346	...	77,179
1924–25	55,625	44,765	14,310	114,700
1925–26	59,657	44,250	15,470	119,377
1926–27	57,600	43,600	15,530	116,730
1927–28	58,140	44,150	15,150	117,440
1928–29	56,920	40,500	16,050	113,470
1929–30	*a*	*a*	*a*	113,000
1930–31 (estimated) ...	51,739	40,500	17,850	110,089

a Not available.

The comparison with pre-war is not unfavourable, particularly when account is taken of non-effective charges. According to the 1913-14 estimates, effective charges for the Navy in that year were £43,332,000, as compared with £43,070,000 in 1930, whereas non-effective charges for pensions, etc., totalled £2,977,000 in the 1913 estimates, against £8,669,000 in 1930. For the Army, effective charges were estimated at £24,281,000 in 1913-14, as compared with £32,117,000 in 1930; while non-effective services were estimated at £3,939,000 in 1913, against £8,383,000 in 1930. Thus, for the two senior services, effective charges were estimated at £67,613,000 in 1913, against £75,187,000, this increase of 11 per cent. being entirely due to the larger cost of the Army, and, in any event, substantially less than the rise in prices and in the cost of living. The effective estimates for the Air Force for 1930 are £17,584,000; the non-effective estimates £266,000. Hence the total cost of effective defence services was £92,771,000 in the 1930 estimates, against £67,613,000 in the 1913 estimates, an increase of 37 per cent. Non-effective charges increased from £6,916,000 in 1913 to £17,318,000 (including the Air Force) in 1930, or by 150 per cent.; while the total cost of defence was £74,529,000 in the 1913 estimates and £110,089,000 in the 1930 estimates (the Army and Navy alone totalling £92,239,000 in 1930), an increase of 47½ per cent. in the total (and of 23½ per cent. in the Army and Navy alone).

The next table shows the strength (or establishment) of the three forces in 1913 and from 1924 onwards:—

	Navy. (*a*)	Army. (*b*)	Air Force. (*c*)
1913	142,960	185,600	...
1924	99,453	161,600	31,429
1925	100,284	160,600	32,642
1926	100,791	159,400	34,015
1927	101,916	166,500	30,035
1928	100,680	153,500	30,467
1929	99,800*(*d*)	150,500*	31,070
1930	97,050*(*d*)	148,900*	32,000*

* Estimate.
a Exclusive of Royal Marine Police.
b Establishment (exclusive of India); including in 1924 to 1928 small numbers of Indian troops in the Middle East administered by the Air Ministry; and in the years 1927 to 1930 10,000, 1,000, 500 and 200 respectively required temporarily to cover despatch of extra troops to China.
c Including (except in 1930) about 2,000 paid for by the Government of India.
d Maximum for year.

Navy.—The net estimate for the Navy for 1930-31 is £51,739,000, as against £55,865,000 in 1929-30. The reduction therefore amounts to £4,126,000. It is due mainly to the fact that the provision for new construction is reduced to £5,603,481, as compared with £8,621,626 in 1929. This year's provision for new construction is thus 35 per cent. less than last year's, and shows an even greater decline when compared with the sums provided in earlier years, viz., £9,629,857 in 1928-29, £9,983,446 in 1927-28, and £9,083,693 in 1926-27. The substantial decrease this year is due mainly to the reductions which the Government have felt justified in making in the shipbuilding programmes of 1928 and 1929. The First Lord of the Admiralty, in his statement accompanying the Navy estimates (Cmd. 3506 of 1930), observed that "if the full programmes of these two years had been put into effect, the new construction provision in the estimates must have risen by over £1,000,000 to the neighbourhood of £10,000,000, as compared with the provision of £8,621,626 in 1929 . . . The effect of the changes is, therefore, to reduce expenditure on new construction . . . by over £4,000,000." It must not be supposed, however, that the provision for new construction contained in the estimates will in no case be exceeded; for the First Lord states that while "the Government have decided not to formulate any proposals (as to future shipbuilding) until the results of the Naval Conference are known and have been fully considered," and while, therefore, no provision is made for commencing any further new construction in 1930, nevertheless he clearly intimates the possibility of supplementary estimates for this purpose. In presenting the Navy estimates to the House of Commons, the First Lord pointed out that the actual effective services of the Navy cost £43,070,000 to-day, compared with £48,541,000 (actual) in 1914. Reduced to pre-war values that shows a reduction of 46 per cent.

Army.—The Army estimates for 1930 total £40,500,000, as compared with estimates (including supplementary estimates) of £41,105,000 in 1929. The current estimates differ from those of the past four years in that they include provision for the excess cost of additional troops in China, hitherto met by supplementary estimates, and amounting to £950,000 in 1926, to £3,050,000 in 1927, to £565,000 in 1928, and to £263,000 in 1929. Two other new and special features are the loss of receipts in connection with the Army of Occupation on the Rhine (£950,000)—the loss of which for part of 1929 amounts to £560,000, provided in a recent supplementary estimate—and the omission of the contribution from the Government of Egypt towards the cost of maintenance of British troops in Egypt in consequence of the initiation of negotiations for a treaty with that country (£150,000). At the beginning of the financial year the strength of the British Army, inclusive of British troops in India, will be approximately 10,000 below establishment, due to the abnormal outflow in 1928 and 1929 and the small intake of recruits during the latter year.

Air Force.—The net total of the 1930 Air estimates is £17,850,000. This figure compares with total revised estimates for 1929 of £16,690,000. The memorandum accompanying the Air estimates states that the reduction has been effected by means of economies in the interval, "notwithstanding the increase in the strength of the Royal Air Force, the renewal of its equipment, the progress of civil aviation, and the numerous compelling claims of an advancing science and an adolescent service." The estimates allow, generally speaking, for a broad continuity of air policy and, in particular, the outlines of the Home Defence Scheme are not prejudiced.

Mr Montague, the Under-Secretary for Air, when presenting the Air estimates in the House of Commons, stressed the moderation and unprovocative character of British air policy and expenditure. If consideration is given to comparative air strengths and the trend of air expenditure of such Powers as France, Italy and the U.S.A., the facts emerge that our Air Force is substantially exceeded in terms of first line strength by these three other Powers, that on the basis of metropolitan strengths we have "considerably less than a half-Power standard compared with our nearest neighbour," and that our gross estimates show an actual reduction on the gross estimates of five years ago, the gross figures being the proper comparison when dealing with intentions and policy.

Civil Services.—The movement of the Civil Service estimates during the past two years is distinctly disquieting, even when allowance is made for certain purely book-keeping transactions which are counterbalanced by decreases elsewhere, but which raise the total of these estimates. For 1930 the estimates amount to no less than £295.7 million, against final estimates in 1929 (including supplementaries) of £249.5 million, and Budget estimates of £234.9 million.

Turning first to the increase of £14.6 million shown by the final estimates for 1929 as compared with the

Budget estimates, it appears that large items are due to under-estimating in the last Budget. In this category would fall the extra £1¼ million for the beet sugar subsidy, the substantial Irish ex-gratia grants, and the large excess over the Budget estimate in the provision for de-rating. Other items are due wholly to the account and policy of the present Government, the most important being an increase of £7.65 million in the Ministry of Labour vote in consequence of changes in unemployment insurance.

The Civil estimates for 1930 are £46,199,000 larger than the final estimates for 1929. They contain for the first time full provision for the permanent Exchequer grants to Local Revenues payable under the Local Government Act, 1929, and the Local Government (Scotland) Act, 1929. The provision in 1929 for expenditure under these Acts totalled £15,660,000. The net increase over this sum in the present estimates attributable to these Acts is £30,023,000, of which approximately £15 million represents an additional charge on the Exchequer and approximately £15 million is counterbalanced by the cessation of payments under Consolidated Fund Services to the Local Taxation Accounts. It should be added that these former payments out of the Local Taxation Accounts do not all appear under Class X (Exchequer Contributions to Local Revenues), but are distributed between several classes, notably Class III (Home Department, Law and Justice) and Class V (Education), and account for some of the apparent nominal increases in expenditure under such heads.

The principal other changes in the main classes of Civil Estimates only are summarised in the following paragraphs.

Class II. Imperial and Foreign.—This class, which includes the Foreign, Dominions, India and Colonial Offices, the charge for the League of Nations, and similar services, accounts for £5,890,000 in the 1930 estimates, as compared with £6,186,000 in the revised 1929 estimates, £9,581,000 actual expenditure in 1924-25, and £1,552,000 in 1913-14. As far as can be judged from the summary accounts, by far the greater part of the increase is due to the taking on of new services. Thus whereas the Foreign and Colonial Offices (including the Dominions Office in 1930), and the Diplomatic, Consular, Dominion and Colonial Services cost £1,552,000 in 1913, £2,709,000 in 1924, and are estimated at £2,778,000 in 1930, entirely new services, non-existent before the war, cost £6,872,000 in 1924, and are estimated at £3,112,000 in 1930. The reduction of £3,780,000 between 1924 and 1930 is partly real, but in part it is only apparent, votes which were formerly borne on Class II of the Civil estimates having subsequently been transferred to the estimates for the Fighting Services. The decrease of £295,000 betwen 1929 and 1930 is mainly due to the omission in 1930 of the ex-gratia Irish compensation grants (costing £797,500 in 1929) and to the reduction in the cost of Overseas Settlement. But for these reductions Class II estimates would have shown an increase in 1929 of over £1¼ million. In 1930 Empire Marketing is put at £550,000, against the same amount in 1929 and nil in 1924. Overseas Settlement is estimated at £833,000 in 1930, against £1,880,000 in 1929 and £395,000 in 1924. The new Colonial Development Fund, which embodies part of Mr Thomas's unemployment policy, is estimated at £812,000 in 1930, against £62,000 in 1929 and nil in 1924.

Class III. Home Department, Law and Justice.—These estimates total £15,896,000 in 1930 against £12,415,000 in 1929. The increase is thus apparently nearly £3½ million, though, in fact, the greater part of this figure represents a mere book-keeping change. The largest items on these estimates are the charges for the police in England and Wales and in Scotland, amounting respectively to £10,405,000 and £1,066,000. It is not practicable to compare these estimates with 1913 because of administrative and financial changes which have taken place in the intervals, the most important alterations being the revision of the scales of pay of the police force, and the grant of widows' pensions, etc., in consequence of the recommendations of the Desborough Committee in 1919 and 1920, and the concurrent increase, both absolute and proportionate, in the Central Government's contribution to the total cost of the police. The fact that the authorised strength of the police in England and Wales has only increased from 54,552 in 1913 to 57,436 in 1928, whereas the total non-loan expenditure (including the Exchequer grant) on the police by English and Welsh local authorities has increased from roughly £7.7 million in 1913-14 to roughly £21 million in 1926-27, sufficiently indicates the improvement that has been made. Just as comparison cannot be made between these estimates in 1930 and 1913 because of the intervening changes, so also comparison between 1930 and 1929 is vitiated by the transfer to the present supply estimates of the substantial grants which were formerly paid out of the Consolidated Fund. This change, which has been made by the Local Government Act, 1929, accounts for the greater part of the nominal increase already referred to.

Class IV. Education.—The 1930 estimates show a total outlay of £55,138,000, an increase of £5,028,000 on the preceding year. The two largest items in this total are the expenditure of the Board of Education—responsible for elementary and secondary education in England and Wales, and a total expenditure of £45,496,000, and the cost of public education in Scotland, which aggregates £7,197,422. Universities throughout Great Britain receive £1,830,000 additional to these amounts. The remaining items are all small.

The Board of Education's estimate for 1930 shows an increase of £3,810,000 over 1929. Of this sum £2,124,000 is the amount actually due to the development and normal growth of the education services, and the remaining £1,686,000 is attributable to changes in financial arrangements brought about by the Local Government Act of 1929.

Class V. Health, Labour and Insurance.—The estimates for 1930 total £96,996,000, after adjustments for transfers under the Local Government and the Local Government (Scotland) Acts, 1929, which if borne on this class in 1930 would raise the total to about £101½ million; but it is with this gross figure that last year's gross total estimates of £86,948,000, and actual expenditure of £62,428,000 in 1924 and (adjusting for book-keeping changes) of roughly £18¼ million in 1913 should be compared. The very substantial increase of £14½ million between 1929 and 1930 is mainly accounted for under six heads. Health Insurance grants absorb £6,730,000 this year as compared with £6,241,000 last year, an increase of £489,000; Housing grants total £13,703,000, against £12,876,000, an increase of £827,000; non-contributory Old-Age Pensions require £36½ million, against £35½ million, an increase of £1 million; Widows', etc., Pensions require £9 million, against £4 million, an increase of £5 million; contributions to the Unemployment (Insurance) Fund total £26,470,000, against £19,498,000, an increase of £6,972,000; and grants in respect of employment schemes under Mr Thomas's policy total £2,250,000, against £2,015,000, an increase of £235,000. The totals of these six items are £94,653,000 this year, against £80,130,000 last year, an increase of £14,523,000. Disregarding the sum of roughly £4½ million included in 1929 but now transferred to Class X (and *not* included in the figure of £96.99 million given above), the balance of expenditure under this class totals roughly £2,300,000 in both years and is due primarily to the cost of administration.

Class VI. Trade and Industry.—This is a large and growing class of expenditure for which the 1930 estimates provide £12,320,000, against £10,634,000 in the revised 1929 estimates, and actual expenditure of £5,126,000 in 1924 and £1,218,000 in 1913. As compared with pre-war the growth is partly due to entirely new services; as compared with 1924, it is mainly due to the beet sugar subsidy. The Board of Trade itself requires £206,700 this year as compared with £207,100 in 1929, £267,600 in 1924 and £359,900 in 1913, when, however, the Board included various departments for which there now are separate votes. The Department of Overseas Trade, which was threatened with extinction a couple of years ago, now accounts for £503,000 as compared with £379,000 in 1929. The beet sugar subsidy again proves a highly costly item, totalling £5.4 million this year, against £4.25 million a year in 1929 and 1928, £4.3 million in 1927, £3.2 million in 1926, and £1.1 million in 1925. In 1924 its cost was small and was included in the Ministry of Agriculture's vote. The Ministry requires £2,312,000 this year against £2,954,000 in 1929. The decline in the 1930 estimates as compared with 1929 is entirely due to a reduction of £918,000 in small holdings grants and an increase of £152,000 in appropriations in aid; but for these items the estimates would have shown an increase of about £500,000. Both agricultural education and research and fishery research receive substantially more this year than in 1929.

Class VIII. Non-Effective Charges (Pensions).—These estimates total £54,244,000 for 1930, against £56,357,000 in 1929, £71,901,000 actual expenditure in 1924 and £784,000 in 1913; but the bulk of current expenditure, which includes war pensions and merchant seamen's war pensions (£373,000 in 1930) did not exist before the war. War pensions, which are estimated at £51,604,000 in 1930, against £53,724,000 in 1929, constitute almost the only class of expenditure which has fallen regularly and largely in recent years. Compared with 1921-22, expenditure on war pensions has fallen about 46 per cent., while even since 1924-25 it has fallen by over a quarter.

Class X. Exchequer Contributions to Local Revenues.—These contributions under the Rating Relief scheme and the Local Government and Local Government (Scotland) Acts, 1929, are estimated at £44,507,000 in this, the first full year, against £15,660,000 last year when, however, the scheme was only partly in operation. This year's total consists of £25,800,000 in respect of loss of rates, £18,370,000 in respect of discontinued grants (*i.e.*, apart from discontinued grants replaced by additional votes in other classes of the Civil estimates), and £7,572,000 new money, a total of £51,742,000. Of this sum £2,811,000 will not be payable in the current financial year, while appropriations in aid from the Road Fund total £5,224,000. Hence the net total is £43,707,000. The remaining £800,000 required to make up this year's total is in respect of Scottish rates relieved last year.

Revenue Departments.—The cost of the revenue departments in recent years is given in the following table, which shows a deplorable upward tendency in recent years:—

REVENUE DEPARTMENTS EXPENDITURE.*
(£'s thousands.)

	1913–14.	*1924–25.*	1928–29.	1929–30. Estimates.	1930–31. Estimates.
Customs and Excise	*2 431*	*4,640*	4,855	4,958	5,080
Inland Revenue	*2,052*	*6,316*	6,782	6,640	7,055
Total	*4,483*	*10,956*	11,637	11,598	12,135

* Exchequer issues to 1928–29; 1929–30, Estimates including supplementaries; 1930–31 Estimates.

Post Office.—The following table shows Post Office expenditure in recent years:—

POST OFFICE EXPENDITURE.
(£'s millions.)

1913–14.	*1924–25.*	1928–29.	1929–30.	1930–31.
24·6	*50·4*	57·2	58·9	60·3

This expenditure is, of course, met by receipts of an essentially commercial character. The table excludes capital expenditure out of loans.

Local Expenditure.—Very large sums are disbursed by local authorities, and the greater part of local expenditure is additional to expenditure by the central Government. Including Scottish authorities, local expenditure to-day probably totals about £575 million, of which about £90-£100 million comes from parliamentary grants, £190 million from rates, and the balance from fees and from the income yielded by trading services. The following table gives details for England and Wales:—

EXPENDITURE OF LOCAL AUTHORITIES IN ENGLAND AND WALES.
(£'s millions.)

Service.	*1913–14.*	1926–27.			
	Total.	Total.	Of which met by: Fees, &c.	Exchequer Grants.	Rates, &c.
Education (Elementary and Higher)	*31·8*	76·0	*3·6*	*39·8*	*32·6*

Total	376·0	89·4	177·1	112·5	379·0	...

* These figures relate to the Pensions Account and the Pensions (Scotland) Account, surpluses and deficits on which are dealt with by transfers to and from the Treasury Pensions Account, into which an annual contribution (amounting to £4,000,000 in the year in question) is paid by the Exchequer.

† Including reformatory and industrial schools, hospitals for the treatment of certain diseases, maternity and child welfare, and lunacy and mental deficiency.

(*a*) Persons may benefit under more than one head in the above table and hence may be counted twice or oftener in this column.

THE NATIONAL DEBT.

The service of the National Debt is the largest item of expenditure in the Budget. How serious is the problem of the debt as a whole is shown by the fact that the net total of the deadweight debt is 11½-fold the pre-war total, the service of the debt is fifteen times the pre-war service, the sinking fund is roughly eleven times as large, and the interest charge sixteen times as great; and that whereas in 1913-14 the service of the National Debt amounted to one-eighth of our total expenditure, to-day it amounts to roughly four-ninths of the total. These figures give a rough measure of the magnitude of the problem of the National Debt, a problem which burdens the present and overshadows the future of the national finances.

The course of interest and sinking fund charges, and the net total of the deadweight debt itself are shown in the next table:—

NATIONAL DEBT (£'s millions).

Financial Year.	Net* nominal total dead-weight debt outstanding at *end* of Financial Year.	Interest, Manage-ment, etc.	Sinking Fund.	Total National Debt Services.
1913-14 ...	649·8†	19·3	5·2	24·5
1923-24 ...	7,641·0	307·3	40·0	347·3
1924-25 ...	7,597·8	312·1	45·0	357·2
1925-26 ...	7,558·6	308·2	50·0‡	358·2
1926-27 ...	7,554·6	318·6	60·0‡	378·6
1927-28 ...	7,527·8	313·8	65·0	378·8
1928-29 ...	7,500·3	311·5	57·5	369·0
1929-30 ...	...	307·3	47·7‡	355·0

* *I.e.*, after deducting the nominal total of Funding Loan and Victory Bonds surrendered in payment of death duties and held by the National Debt Commissioners. For these amounts, see large table below.

† Debt at *beginning* of year.

‡ These are gross amounts; the net amounts, after deducting the deficit on the Budget, were £35,962,000 in 1925-26 and £23,306,000 in 1926-27. In 1929-30 the net amount, after deducting the deficit and excess interest on National Savings Certificates, was £28,406,000.

Between 1923-24 and 1927-28 the total National Debt charge was steadily increasing, while the charge for interest and management alone was growing down to 1926-27. During the past six years the cost of interest and management has been consistently under-estimated in the Budget, and the actual outlay has exceeded the Budget forecast by substantial sums. Thus in 1924-25 the actual outlay was £7,161,000 greater than the Budget estimate; in 1925-26 it was £3,229,000 greater; in 1926-27 it was £14,584,000 greater; in 1927-28 it was £8,816,000 greater; in 1928-29 it was £7,491,000 greater; and in 1929-30 it was £2.652,000 greater.

The preceding gross figures of interest do not show the relative importance of the principal fluctuating items. This is brought out in the following table:—

NATIONAL DEBT INTEREST (£'s millions).

	Treasury Bills.	Savings Certifi-cates.	Total of (1) & (2)	Other Interest Charges.	Manage-ment and Ex-penses.	Total Interest, Manage-ment, etc. ((3) to (5)).
	(1)	(2)	(3)	(4)	(5)	(6)
1923-24	17·4	7·2	24·6	281·2	1·5	307·3
1924-25	20·8	7·1	27·9	281·3	2·9	312·1
1925-26	25·3	7·1	32·4	274·6	1·2	308·2
1926-27	28·0	12·3	40·3	276·1	2·2	318·6
1927-28	25·3	15·0	40·3	271·7	1·8	313·8
1928-29	26·2	17·9	44·1	265·9	1·4	311·4

Thus in recent years the rise in the total cost of interest on the debt has been caused first by the high, though fluctuating, charge for Treasury bills, and secondly the steady increase in interest payments on Savings Certificates. The varying cost of management and expenses is due to the variable item of expenses, which includes the cost of certain conversions and cash payments connected with them. The management charge alone is stabilised at about £1 million.

The Sinking Fund.—The sinking fund arrangements are complicated. Until 1923 no satisfactory provision had been made for dealing with the vast burden of the post-war debt. In that year the position was reviewed and the new sinking fund was established, providing £40 million in 1923-24, £45 million in 1924-25, and £50 million thereafter. Because of the deficits caused by the coal subsidy and the coal stoppage, Mr Churchill provided an extra £10 million in 1926-27 and an extra £15 million in 1927-28. In 1928 he discontinued the arrangements which had been made in 1923 and set up a new fixed charge of £355 million a year for both interest and sinking fund—the latter theoretically increasing automatically as interest charges decline; and he added, as a special provision for 1928-29 only, an additional sum of £15 million. The actual sinking fund payments amounted to £40 million in 1923-24, £45 million in 1924-25, £65 million in 1927-28, £57½ million in 1928-29. In 1925-26 and in 1926-27, however, the statutory position was not realised, for though the sums provided in the Budget were actually applied the Budget deficits of those years had to be met by borrowing, and the true reduction of debt effected by net sinking fund payments was only £35,962,000 in 1925-26 (instead of £50 million) and £23,306,000 in 1926-27 (instead of £60 million). In 1929-30 the fixed charge provided only £28,406,000 for the sinking fund, after allowing for excess interest on National Savings Certificates. This remarkable shortfall is due to the fact that the estimated sinking fund (put at £50.4 million in the Budget) was reduced by £2,652,000 owing to excess interest charges, by a further £14,524,000 owing to the deficit, and, finally, by £4,819,000 excess interest on Savings Certificates not met out of the permanent debt charge but paid for by borrowing.

Not all the sinking fund is "free." On the contrary, as the following table shows, most of it is earmarked for the service of specific loans; and in the result the "free" balance fluctuates very widely:—

SINKING FUND.

(000's omitted.)

	1924-25.	1925-26.	1926-27.	1927-28.	1928-29.

* The net reduction of debt, after allowing for the deficits in these years, was £14,038,000 less than the sinking fund provision in 1925-26 and £36,694,000 less in 1926-27.

Two further changes made by Mr Churchill in the sinking fund arrangements must be described. Prior to 1928-29 no provision was made for the increase in the accrued interest on National Savings Certificates. This item has become important in recent years. Thus, whereas the accrued interest on outstanding certificates totalled about £90 million on March 31, 1925, it had increased to about £122 million on March 31, 1929. As the Colwyn Committee pointed out, the *increase* in this

NOMINAL VALUE OF NATIONAL DEBT AT 31ST MARCH (£'s millions).

* Including Funding Loan and Victory Bonds which have been tendered for Death Duties and are being held by the National Debt Commissioners until drawn or paid off. The amount so held in each year is shown in the last line but one.

† Including small amounts of National Savings Bonds from 1927 onwards.

liability represents a *pro tanto* reduction in the sinking fund; and Mr Churchill stated in his 1928 Budget speech that the actual reduction in any year equals the difference between the amount actually provided for interest during the year and £20,000,000, which would represent a fair provision for this charge *ab initio*. In 1928-29 this difference amounted to some £2 million. On the other hand, certain sums, paid regularly to the National Debt Commissioners prior to 1928-29, have constituted an additional though invisible sinking fund. These items comprise (*a*) repayments of principal on war, etc., loans from Dominions and Allies, and (*b*) interest on Victory Bonds and Funding Loan surrendered in payment of death duties and held by the National Debt Commissioners. The former item was not counted as revenue prior to 1928-29; the latter item appeared in the Finance Accounts first as part of the interest charge on the National Debt and then as applied to debt redemption. In 1928 Mr Churchill changed these arrangements. On the one hand, he nominally made full provision for interest on National Savings Certificates; on the other hand, he brought repayments of War, etc., Loan principal (item (*a*) above) *into* Exchequer receipts, and he stopped payment of Victory Bond and Funding Loan interest to the National Debt Commissioners (item (*b*) above). The *nominal* increase in sinking fund provision due to the change in Savings Certificates was about £2 million in 1928-29; the *actual* decline in the amount available for debt redemption because of the other changes was about £7 million (half of which came from (*a*) and half from (*b*) above). Hence the net *loss* to debt redemption (and the net gain to Mr Churchill's revenue in 1928-29) was about £5 million. While this arrangement stands the loss to debt redemption in subsequent years will not be less, and will probably be greater.

The second change is at once more conspicuous and more harmful. As is shown above, part of the revenue for the rating relief scheme is derived from the surpluses achieved in 1927-28 and 1928-29. Previously the usual practice was to apply Budget surpluses to the redemption of debt. Mr Churchill's departure from this practice is the more unfortunate since it not merely robs the total sinking fund but complicates the national accounts and the national finances by carrying sums over from year to year and establishes as well a bad and unsound precedent to which needy future Chancellors may have recourse.

Changes in the National Debt.—Since 1920 some £893 million have been applied out of revenue to the repayment of debt, £434 million representing the total of Budget surpluses prior to 1925-26 and £359 million the net provision out of sinking funds. In addition, as the Colwyn Committee pointed out, a further £87 million in cash, derived from various sources and mostly due to non-recurrent transactions, were applied to debt reduction between 1920-21 and 1925-26. Such extra moneys may have totalled £95-100 million by the end of the last financial year.

In spite of the provision of these huge cash amounts for debt redemption, the net nominal total of the dead-weight debt has been reduced by only about £300 million between the beginning of 1920 and the present time. The cause of the discrepancy is, of course, conversions effected below par, which, though in some cases reducing the annual interest charge, increase *pro tanto* the nominal amount of the debt. These conversions, and the changes in the composition of the debt owing to other rearrangements, have been very large, as is shown in the big table above.

LOCAL LOAN DEBT.

In addition to the National Debt there are the outstanding debts of local authorities. At March 31, 1929 the loan debt of local authorities in England and Wales

totalled £1,027.9 million, and that of Scottish authorities totalled rather more than £100 million. The increase since 1914, and the principal purposes for which the debt was incurred, are shown in the following table:—

LOAN DEBT OF LOCAL AUTHORITIES IN ENGLAND AND WALES at March 31st (£'s millions).

	1914.	1921.	1924.	1927.
1. Education (Elementary and Higher)	52·1	45·8	42·6	46·0
2. Sewers and Sewage Disposal	44·1	39·6	46·2	55·2
3. Housing and Town-planning	12·5	92·8	199·5	319·8
4. Highways and Bridges	61·7	62·3	73·6	91·9
5. Waterworks	131·1	137·4	144·8	155·7
6. Gas Works	22·5	21·9	24·7	27·5
7. Electricity Undertakings	30·8	41·0	58·7	79·3
8. Tramways, etc.	37·7	35·8	36·8	39·3
9. Harbours, Docks, etc.	79·6	86·3	87·9	92·8
10. Other Undertakings	90·5	94·8	105·5	120·4
11. Total	562·6	657·7	820·3	1,027·9

Items (5) to (9) are, of course, trading services; and item (10) included in 1927 a further £16.7 million for the debt of other trading services. Sinking funds totalled £35.7 in 1914, £62.3 in 1921, and £61.8 in 1924 and £67.8 in 1927.

A SHORT LIST OF REFERENCES.

OFFICIAL PUBLICATIONS.

The number of official papers dealing with the national finances, and published every year, is large, and the following list, which is not comprehensive, is intended merely to be a guide to the most important.

The two essential summaries are (1) the "Financial Statement" accompanying the Budget, and (2) the "Finance Accounts," published in the summer, and giving details for the year just closed.

Details for the current financial year appear in the estimates—one each for the Navy, the Army, and the Air Force; the Civil estimates in ten parts, and the estimates for the Revenue Departments (including the Post Office)—and in the memoranda (which accompany the estimates) by the First Lord of the Admiralty, the Secretary of State for War, the Secretary of State for Air, the Financial Secretary to the Treasury, and the Board of Education.

Actual expenditure in past years is detailed in the appropriation accounts—for the Navy, the Army, the Air Force, the Civil Services and the Revenue Departments; while the Post Office and Trading Services are dealt with in the "Post Office Commercial Accounts" and the "Trading Accounts and Balance Sheets."

Details about the revenue are contained in the annual reports of the Inland Revenue Commissioners and the Commissioners of Customs and Excise, and (for the motor vehicle duties) in the yearly "Report on the Administration of the Road Fund."

Information in regard to the National Debt is contained in two white papers, (1) "National Debt. Return Showing the Aggregate Gross Liabilities of the State, and the Gross and Net Expenditure charged annually against the Public Revenue"; and (2) "National Debt Return, showing Dead Weight Debt, Other Capital Liabilities and Aggregate Gross Liabilities of the State."

Local taxation and expenditure are dealt with in the "Local Taxation Returns, England and Wales," parts 1, 2 and 3.

Amongst other important official documents dealing with Finance may be mentioned the "Report of the Royal Commission on the Income Tax" and the Report of the Colwyn Committee (Cmd. 2800, 1927).

All the above may be obtained from H.M.'s Stationery Office, Adastral House, Kingsway, W.C. 2.

THE PAST YEAR.

WHATEVER may be said of 1929 it cannot be described as an uneventful year. Writing of the prospects a year ago, we called attention to certain favourable omens. The Government's de-rating scheme had been designed to lighten some of the burdens, particularly those on the more depressed of our industries, and the tendency of comparative costs was gradually changing somewhat in favour of British producers. But, looking at the year in retrospect, we are inclined to describe it as one in which these hopeful expectations were disappointed. A salient fact is that the unemployment figures were as high at the end of the year as they were at the beginning. The outstanding influence in bringing about this result has been the monetary situation. The phenomenal Stock Exchange boom in America drew such large amounts of money to New York that Bank rate and other money market rates were pushed up to a high level and maintained there throughout the spring and summer; and, though the situation was radically changed by the Stock Exchange collapse in America in October and November, the reaction was so abrupt and so severe that the immediate advantage of cheaper money was more than outweighed by uncertainty as to the effect of the slump upon purchasing power and employment.

These, however, are the more spectacular features. If we look below the surface there are impressions of a different kind. The index of production given in a chart on a later page shows not only a definitely rising tendency, but a substantially higher level for the year than for 1928. Moreover, this trend is not due merely to the newer industries, as has been so often the case in recent years, but reflects also a definite improvement in two of the depressed industries, namely, coal and iron and steel. At the end of the year shipbuilding also showed some improvement, though the difficulties of the cotton trade do not appear as yet to have been materially lessened by the formation of the Lancashire Textile Corporation. At the close of 1929 the woollen industry was also affected prejudicially by a sharp fall in the price of wool, a drop which has also been experienced in many other important raw materials and foodstuffs. Indeed, the wholesale price index of commodities was very much lower at the end of 1929 than at any time since the war. It is, however, something gained that certain of the depressed trades are in a better competitive position.

In this connection the year has seen many steps forward in the direction of the rationalisation of industry. New combines have been formed in the iron and steel trade on the North-East Coast, in Scotland and in Wales, and further changes are in contemplation. As an offset to this, the Royal Mail shipping group—the largest shipping combine in the world—encountered financial difficulties and has slowed down its programme of new construction. At the end of the year an effort was made to speed up industrial reorganisation by the formation of the Securities Management Trust by the Bank of England, followed by a declaration at Manchester by Mr J. H. Thomas that the City was prepared to back financially well-considered schemes of reorganisation.

A study of the graph to which we have already referred shows an interesting contrast between the increase of production and the increase of the volume of employment. The employment curve, it is true, has steadily risen, for though no impression has been made on the volume of the unemployed, the increasing adult population has, in fact, been absorbed over the last two years. But the increase in the production curve is much more rapid, which is perhaps some indication of increased efficiency. This, it is hardly necessary to add, is an essential condition of our ability to maintain our industrial status. Meanwhile, the large volume of unemployment remains. This problem became the dominating theme at the General Election in May, and, when the Labour Government came into power, the Lord Privy Seal was entrusted with special authority for dealing with it. The idea prevalent at the time of the election, however, that emergency measures could be taken to put into operation schemes of public work has not, in fact, been carried into effect. The Lord Privy Seal has, indeed, endeavoured to promote such schemes, but there have been administrative and Parliamentary delays, with the result that little has, in fact, been done to alter the situation during the current winter. It has, therefore, been necessary for Parliament to overhaul the unemployment insurance scheme and to finance the growing debt of the fund. For this winter, once again, the bulk of the unemployed who cannot be provided with work have had to be supported in idleness.

Apart from the insistent question of unemployment, the chief events of the Parliamentary year were the passage of the late Government's De-rating Act, a Budget remarkable chiefly for optimism as to the future yield of existing taxation, and the introduction shortly before Christmas of the Coal Mines Bill. In international politics, with the exception of civil dissensions in China—complicated by sporadic hostilities with Russia in connection with the Eastern Manchurian Railway—the year was tranquil, and progress towards the maintenance of the world's peace was marked by the adoption of the Young Plan for reparations payments, the British evacuation of the Rhineland, and the decision, reached after Mr MacDonald's visit to the United States, that the Five Power Naval Conference now in session should be convened. An interesting experiment, arising out of the Young Plan, was the agreement to set up the Bank for International Settlements.

The reviews, which follow, of various aspects of British and world commerce during 1929 make up a picture not wholly unfavourable. The monetary storms, already referred to, could not fail to set their mark on the year, and the Stock Exchange had to bear a considerable strain of liquidation, intensified by the Hatry crisis, while the new issue market during the latter half of 1929 had its operations reduced to a minimum. It is satisfactory, however, to note that our foreign trade was well maintained, a decline in textile exports being balanced by larger shipments of coal and iron and steel manufactures.

Prospects for 1930 are somewhat mixed. On the one hand, trade should gradually respond to the influence of cheap money. On the other hand, confidence in this country is being checked to some extent by fears of an increase in the burden of taxes, while the recent drastic fall in the value of a number of important commodities, such as cereals, cotton and wool, is likely to have adverse repercussions for a time on the world's aggregate purchasing power. Tariffs and other trade barriers remain a formidable obstacle to the expansion of international commerce, and much depends on the results which follow from the forthcoming conference on the project of the British Government that the States members of the League should agree to a tariff truce as a first step towards the achievement of greater freedom of trade.

PRODUCTION AND TRADE.

BRITISH INDUSTRY.

After a somewhat slow opening, as a result of the abnormal frost of the later months of winter, industrial activity in 1929 gained momentum steadily during the spring and suffered rather less than the normal amount of seasonal slackening in summer. The usual autumn recovery in the rate of production, however, was retarded to some extent by the influence of dear money and the beginning of a fresh severe decline in the level of commodity prices.

In the following table we have grouped together a number of indices and other data of output and trade for the past three years:—

PRODUCTION AND BUSINESS.

	1927.	1928.	1929.
Indices of production—			
London and Cambridge Economic Service	108·1	102·5	110·6
Board of Trade	106·8	105·5	(a)
Output of—			
Saleable coal (Mn. tons)	251	238	255
Pig iron (Mn. tons)	7·3	6·6	7·6
Steel (Mn. tons)	9·1	8·5	9·7
Rayon yarn and waste (Mn. lbs.)	40·2	54·2	56·9
Indices (*Economist*) of Business Activity (1924 = 100)—			
Net imports, raw materials	113(b)	101	113
Exports, British manufactures	104·5	108	109
Total foreign trade turnover	107·5	106	112
Consumption of—			
Iron and steel	133	88	103·5
Cotton	113	103	106
Coal	106	99	106
Electricity	109	110	116
Provincial clearings	102	100·5	99
Volume of employment	105	105	107

(a) For the first nine months of 1929 the figure was 110·8, as compared with 104·3 in the corresponding period of 1928.
(b) Excluding coal imports.

The increase in production recorded by the Board of Trade's and the London and Cambridge Economic Service's indices reflects predominantly the improvement in the output of "heavy industry." Larger coal exports also played a prominent part in the rise in the *Economist's* index of total foreign trade turnover. Shipbuilding and certain sections of engineering were better employed than in 1928; and the higher figures of consumption of coal and electricity point to a fairly widespread expansion of manufacturing activity, reflected also in a rise of nearly 2 per cent. in the volume of employment. On the other hand, the textile trades, both cotton and wool, had an unfavourable year, the rate of expansion of rayon production was checked, and the fractional fall in the index of provincial bank clearings is significant of a slower rate of commercial turnover in several directions. The course during the past five years of the London and Cambridge Economic Service's index of production, and the *Economist's* indices of foreign trade turnover and volume of employment is plotted in the diagram on the next page.

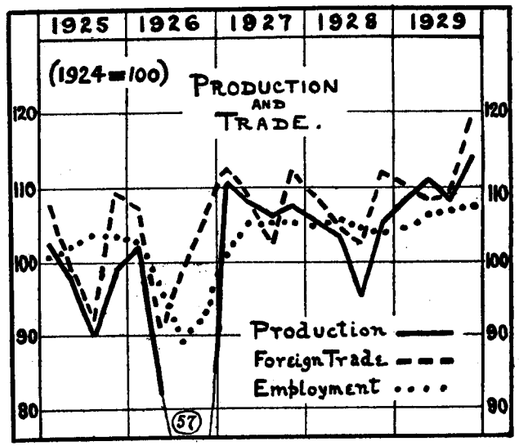
Freight trade traffic increased during the first ten months of the year by 7.6 per cent., as compared with a decline of 7.3 per cent. a year ago. As will be seen from the following table, the bulk of the increase took

place under the head of fuel and minerals, further evidence of the tendency of improvement in 1929 to be confined to the "heavy" industries:—

Description.	Great Britain. (All Standard-Gauge Railways.)		
	Aggregate, Jan.–Oct., 1929.	Inc. (+) or Dec. (–), compared with the corresponding period of 1928.	
Freight train traffic (excluding free-hauled):	Tons.	Units. Tons.	Per Cent.
Merchandise	49,607,631	+ 483,999	+ 0·99
Minerals and merchandise	54,692,077	+ 2,906,421	+ 5·61
Coal, coke and patent fuel	170,566,500	+16,267,120	+10·54
Live stock	2,040,372	– 95,468	– 4·47
Total	276,906,580	+19,562,072	+ 7·60

The aggregate revenue received by the four home railways showed an improvement of £1,290,000 over the "slump" figures of 1928, but was three millions short of the "standard" figure. The fall of £2,168,000 in the passenger receipts was shared by each company, as was the case in the increased receipts of £3,458,000 in goods traffic. The total revenue of the London and North Eastern was £1,355,000 higher, while the growth of £635,000 in Great Western's revenue just failed to offset the declines of

BRITISH INDUSTRY.



The index of production is that compiled by the London and Cambridge Economic Service. The *Economist* index of total foreign trade turnover is a "weighted" figure of retained imports and British exports. The index of employment is based on the aggregate numbers of insured persons, less those recorded as unemployed.

£616,000 and £84,000 in those of London, Midland and Scottish, and the Southern railways respectively. The depressed conditions in Lancashire affected particularly the London, Midland and Scottish, goods receipts being derived mainly from high-grade traffic.

Shipping traffic, as a result largely of increased exports of coal, was well maintained during the first nine months of the year, but during the last quarter demand for cargo tonnage was adversely affected by the fall in grain prices produced by good European harvests and heavy carry-overs in North America. From September onwards freights slumped violently, and at the end of the year the *Economist's* index of whole-cargo charter rates stood at 86.2 (1913 = 100), as compared with 113.2 a year ago. Competition between regular liner services on all routes was again severe.

AGRICULTURE.

In respect of both climatic and market conditions the year 1929 was unusual. The exceptionally severe frosts of the opening months, the later prolonged drought over the greater part of the country, and the excessive rains towards the close were all exceptional. In many ways 1929 was even more favourable for cultivation and cropping than its satisfactory predecessor. The soil was never in better condition for cultivation than after the severe frosts, and although the drought caused some anxiety this proved groundless in regard to most crops, except turnips and swedes and hay. Though there was a further reduction of 161,000 acres (1.6 per cent.) in the total acreage of arable land the acreage actually under crops in 1929 was rather higher than in the previous year. Land returned as bare fallow showed a reduction of over 30 per cent. There was a further shrinkage in the wheat and barley acreages of 66,000 (4.7 per cent.) and 63,000 acres (5.3 per cent.) respectively. There was, however, a marked increase in the acreage of oats and mixed corn which reflects the increasing use of home-grown grain for feeding purposes as an economy in farm management. The sugar beet acreage, over 30 per cent. larger than in 1928, was the largest yet recorded.

Productively, the year 1929 was in many respects better than 1928. All corn crops, except beans, yielded more per acre than in 1928, and well above the ten years' average, and notwithstanding decreases in acreage in some instances the total production of the principal crops was in most cases either greater than, or very little short of, that of 1928. The exceptions were turnips and swedes and hay, the latter being below average by about 20 per cent. The quality of the hay crop, however, was excellent, and this, combined with the mild winter experienced so far, will somewhat ease the problem of winter keep which would otherwise have become serious. Potatoes were an over-average crop of good quality, and fruit crops generally were satisfactory.

There was a further reduction in all kinds of livestock, although the reduction was very much less than in 1928, except in the case of pigs. Cattle were less by 70,400 (1.2 per cent.) and sheep by 296,200 (1.8 per cent.).

The market proved, on the whole, very disappointing. The monthly general index figure of prices of agricultural produce moved within slightly narrower limits than in 1928, but while the minimum at 140 as compared with 100 for the base years 1911-13 was one point higher, the maximum at 152 was one point lower, and the index number for the whole year at 144 was three points lower than in 1928.

The principal indices are as follows:—

1911–1913 = 100.

	1928.	1929.		1928.	1929.
Wheat	132	130	Poultry	149	152
Barley	139	125	Eggs	146	159
Oats	147	125	Fruit	183	159
Fat cattle	138	133	Vegetables	176	164
Fat sheep	167	157	Potatoes	171	117
Bacon Pigs	135	160	Wool	176	126
Milk	161	169	Hops	126	51
Butter	151	152	Hay	111	125
Cheese	173	158	Feeding stuffs	139	139

The relation of imports of agricultural products to home production has received considerable attention during the past year, and there has been much agitation, especially in regard to the effect on the cereal market of imports from Germany of cereals exported under a system of import bonds. It is true that this system does enable cereals to be exported from Germany at a price below that ruling in Germany and possibly below the world price. It is also true that German wheat is similar to the British product and therefore a more damaging competitor in British markets than hard wheats from other sources. How much the influence of German wheat has been exaggerated will, however, be apparent from the fact that during the last four months of 1929 (the first four months of the current cereal year) German wheat amounted to only one per cent. of the total wheat imported, whereas the amount received from Argentina (also a soft wheat) was over 51 per cent. A factor in the competition of foreign produce is that it is often not only cheaper but also marketed in better condition, having been standardised, graded and packed. In this connection the activities of the Ministry of Agriculture in the development of its marketing schemes may be regarded as one of the most important features of

the agricultural year. Somewhat more spectacular, perhaps, but less far reaching in its effect on the farmers' financial position, is the de-rating of agricultural land, which came into operation during the year.

OVERSEAS TRADE.

A modest but definite improvement on the previous year was maintained on the whole throughout 1929, but though the detailed figures contain several points of encouragement, the totals, shown below, were a little disappointing:—

CALENDAR YEAR.
(000's omitted.)

	1929.	Inc. or dec. on 1928.		Inc. or dec. on 1927.	
	£	£	%	£	%
Imports	1,221,591	+ 25,993	+ 2·1	+ 3,250	+ 0·3
British exports	729,555	+ 5,976	+ 0·8	+ 20,474	+ 2·9
Re-exports	109,742	− 10,542	− 8·8	− 13,211	− 11·0
Total exports	839,297	− 4,566	− 0·5	+ 7,263	+ 0·9
Excess of imports over total exports	382,294	+ 29,134	+ 8·5	− 4,013	− 1·0

The rise of nearly £26 million in imports was very widely spread over all groups of commodities, and the only conspicuous exceptions were raw cotton, hides and skins, and leather manufactures. It was accompanied by a small, but definite, improvement in domestic exports, and a decline of £10½ million in re-exports, of which over £7½ million was due to diminished re-exports of rubber. Total exports were over £4½ million lower than in 1928, but it must be borne in mind that wholesale prices averaged nearly 6 per cent. less in 1929 than in 1928, so that the physical volume of exports, according to the Board of Trade, was about 3½ per cent. greater in 1929 than in the previous year. The table below shows the Board of Trade index of the quarterly variations in the volume of trade (average 1924 = 100):—

	Imports.	Re-Exports.	Retained Imports.	British Exports.
1928:				
First quarter	109·3	94·5	111·1	105·1
Second quarter	106·2	98·2	107·2	100·5
Third quarter	96·9	71·6	100·0	103·3
Fourth quarter	110·4	87·3	113·2	109·7
Year	105·6	88·0	107·8	104·7
1929:				
First quarter	110·8	89·1	113·5	106·7
Second quarter	108·0	93·1	109·8	106·5
Third quarter	105·8	76·6	109·4	109·1
Fourth quarter	119·2	80·6	124·0	111·0
Year	110·9	84·8	114·1	108·3

The next table compares retained imports and exports, by economic classes, with those of 1924 and 1928:—

	1924.		1928.		1929.	
	Retained Imports.	Exports.	Retained Imports.	Exports.	Retained Imports.	Exports.
	£ million.	£ million.	£ million.	£ million.	£ million.	£ million.
Food, drink and tobacco	541·2	57·0	503·4	54·3	510·2	55·7
Raw materials and articles mainly unmanufactured	323·8	106·5	268·2	70·1	285·3	79·1
Articles wholly or mainly manufactured	266·0	618·9	291·8	578·9	305·5	573·8

The rise in the figure of retained imports of manufactured goods is fairly evenly distributed and is substantial in iron and steel, non-ferrous metal manufactures, electrical goods, machinery, chemicals, oils and fats, leather and vehicles. In considering this increase, however, it should always be borne in mind that many imported articles returned as in the category of "manufactures" are, in fact, materials destined to be worked up in British factories. Moreover, when the influence of the 20 per cent. fall in prices which has occurred since 1924 is eliminated, the results appear in a more satisfactory light, as is illustrated by the following index numbers, which show changes in the volume and average price of our retained imports and domestic exports of iron and steel and coal:—

1924 = 100.

	Retained Imports.				British Exports.			
	Price per Ton.		Quantities.		Price per Ton.		Quantities.	
	1928.	1929.	1928.	1929.	1928.	1929.	1928.	1929.
Coal	...	...	...	...	67·4	70·1	80·4	96·3
Iron and steel	78·4	80·1	132·8	138·6	79·8	79·3	112·8	115·7

This shows that our exports of coal have recovered during the year from nearly 20 per cent. below the 1924 level to within 4 per cent. of it, and that this increase has coincided with an improvement in values. Iron and steel exports improved during the year and are now nearly 16 per cent. above the 1924 level. The volume of imports, though a shade lower than in 1928, is still very much higher than in 1924. It should, however, be borne in mind—a fact which supports our contention that many of our so-called "manufactured" imports are destined for use as the materials of industry—that the value per ton of our exports of iron and steel in 1929 was over 1¾ times as great as that of our imports of those commodities.

Some of our more important exports are shown below:—

SOME LEADING EXPORTS.
Quantity (000's omitted).

	1924.	1925.	1927.	1928.	1929.
Coal ..... tons	61,651	50,817	51,149	50,052	60,267
Pig-iron and ferro-alloys tons	600	559	331	455	545
Railway material ..... tons	370	421	729	610	487
Total iron and steel manufactures ..... tons	3,851	3,731	4,196	4,261	4,379
Textile machinery ..... tons	104	123	119	125	127
Total machinery ..... tons	463	516	512	566	562
Cotton yarns ..... lbs.	163,056	189,532	200,465	169,207	166,637
Cotton piece-goods ... sq. yds.	4,443,959	4,435,618	4,116,883	3,866,500	3,671,687
Wool tops ..... centals	411	320	420	344	327
Woollen tissues ..... sq. yds.	164,740	132,174	130,914	128,339	108,185
Worsted tissues ..... sq. yds.	56,843	47,302	39,980	42,111	47,281
Linen piece-goods ... sq. yds.	110,786	83,694	73,911	66,135	71,540
Boots and shoes ... doz. pairs	998	986	990	1,079	1,006
Leather ..... cwts.	327	316	433	403	366
Paper and cardboard ... cwts.	4,757	4,989	4,317	4,539	5,047
Locomotives ..... tons	24	30	27	41	40
Motor cars and chassis ... No.	15	29	36	33	43

The improvement in coal, iron and steel, already noted, is the most important development. Except for worsted tissues, all the principal cotton and wool exports showed a decline, but linen piece-goods recovered much of the ground lost in 1928. Leather and boots and shoes have not made a very good showing on the year, but both paper and motor-car exports were considerably greater than at any time during the last five years. Exports of chemicals, which do not admit of inclusion in the above table, increased in value. These results are not capable of pat summarisation, as our most important trades, the heavy industries, on the one hand, and textiles on the other, moved in opposite directions, but they suggest, on the whole, that a certain cautious degree of progress was made.

INDUSTRIAL PROFITS.

Our statistics of the profits of joint-stock industrial companies suggest, at first sight, that the rising trend of earnings was brought to a halt last year, when the accounts of 1,770 industrial concerns showed a negligible rise in profits:—

NET PROFIT (AFTER PAYMENT OF DEBENTURE INTEREST, &C).

	Number of Companies.	Reports Published in		Increase (+) or Decrease (−).	
		1928.	1929.		
		£	£	£	%
First quarter	454	58,965,712	59,869,638	+ 903,926	+ 1·5
Second quarter	639	78,662,794	78,079,238	− 583,556	− 0·7
Third quarter	257	24,039,327	23,327,747	− 711,580	− 3·0
Fourth quarter	420	32,948,898	33,404,593	+ 455,695	+ 1·4
	1,770	194,616,731	194,681,216	+ 64,485	+ 0·0

Lest disappointment be thereby occasioned, in view of the rise in industrial productivity shown by the

Board of Trade's quarterly indices, it should be pointed out, firstly, that part of the latter increase should duly be reflected in company reports published during the next few months; and, secondly, that losses sustained by a small number of companies, in abnormal circumstances, have had a disproportionate effect on the aggregate earnings shown above. For example, the net loss of £2,063,682 shown in the last accounts of British Cement Products and Finance can scarcely be regarded as reflecting the trend of British industrial earnings as a whole. Were the results of this one company omitted from our calculations, the figures for the fourth quarter of 1929 would show a rise of 8.5 per cent. and those for the whole year a rise of 1.2 per cent., as compared with those of the corresponding periods of 1928. The worst showing, on the whole, was made by the textile companies, other "depressed" industrial groups, such as coal, iron and steel, showing a small increase in earnings, though these were insufficient in many cases to permit of the payment of ordinary dividends. The food, drink and tobacco companies continued to show a high rate of earnings. The average ratio of profits to total ordinary and preference capital was 10.5 per cent. last year, as compared with 11.1 per cent. in 1928, 10.5 per cent. in 1927, and 11.8 per cent. in 1926. The average rate of dividend, however, again showed a fractional decline:—

PROFITS AND DIVIDENDS.

	Ratio of Profits to Pref. and Ord.	Average Dividend on Preference Capital.	Average Dividend on Ordinary Capital.
	%	%	%
1909	7·4	4·3	6·3
1910	8·2	4·5	7·0
1911	9·9	4·9	8·5
1912	10·2	5·2	8·5
1913	11·7	5·1	10·2
1920	15·2	5·0	12·6
1921	10·3	5·2	10·2
1922	7·0	5·2	8·4
1923	9·8	5·3	9·3
1924	10·3	5·4	9·8
1925	10·9	5·5	10·3
1926	11·3	5·4	11·1
1927	10·5	5·3	10·8
1928	11·1	5·4	10·6
1929	10·5	5·5	10·5

The average rate of interest paid on debenture capital was 5.15 per cent., as compared with 5.02 per cent. in 1928, while the ratio to total ordinary and preference capital of the amounts carried to reserve was lower at 1.9 per cent., against 2.5 per cent. in the previous year.

COMMODITY PRICES.

Following a fall of 2 per cent. in 1928 and 4 per cent. in 1927, the average level of wholesale prices in 1929 was nearly 6 per cent. lower than in the previous year. During the first quarter of the year, prices remained comparatively stable on balance, but, apart from an upward fluctuation in grain prices towards midsummer, the last nine months of the year witnessed a general downward movement, led by textiles, and accelerated during the autumn by a heavy fall in cereal and non-ferrous metal values. The following table shows the course of our index number throughout the past year, together with the annual geometric averages since 1924. Between the end of 1928 and December 31, 1929, "cereals and meat" fell by 5.4 per cent., other foods by 7.8 per cent., and textiles by approximately 19 per cent. The declines in the case of minerals and the "miscellaneous" group were relatively trifling, but the net result of the large falls in the first three groups was a drop of about 7 per cent. in the complete index figure during the course of the year.

1927 = 100.

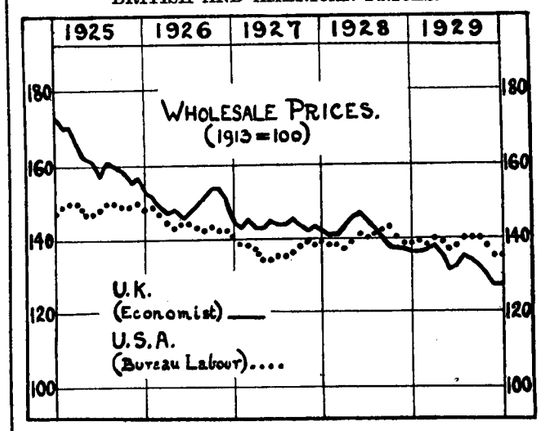
Average, 1929	96·9	85·8	92·2	95·6	90·5	92·4

The fluctuations in the price of individual commodities during the year are shown in detail on pages 67-69. When the position at the end of the year is compared with that on December 31, 1928, it will be noted that increases occurred on balance in the price of imported wheat, pig iron, petrol and linseed oil, while meat prices (except for Argentine beef) were

BRITISH AND AMERICAN PRICES.



on the whole well maintained, and the coal market was also firmer. On the other hand, there were heavy declines in the case of potatoes, tea, cotton, wool, jute and tin, while copper, spelter, hides and leather were also all lower. In most cases the bulk of the decline occurred during the latter half of the year.

In the next table we give the figures of our index number converted to a percentage of the average level of the last pre-war year:—

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1925	168·4	204·2	194·6	139·8	126·2	160·9
,, 1926	151·7	195·3	152·6	149·8	120·7	149·4
,, 1927	147·6	202·2	157·0	125·1	116·1	143·7
,, 1928	152·9	189·7	165·0	115·2	111·2	140·9
End June, 1928	166·4	187·3	172·3	114·2	111·3	144·5
,, Dec., 1928	144·0	182·4	159·6	117·7	106·1	136·5
,, June, 1929	140·3	170·1	145·5	120·4	103·6	131·7
,, Dec., 1929	136·2	169·1	129·6	115·6	103·5	126·9
Average, 1929	143·0	173·5	144·7	119·6	105·0	132·8

It will be seen that a great disparity continues to exist between the indices of the "other foods" and "miscellaneous" groups and the complete index

number, the miscellaneous group being affected largely by the alteration since 1913 in the value of rubber. On the other hand, the index of textile prices is now considerably nearer the general average than was the case a year ago.

In the final table we show the annual changes which have occurred in each group of prices since 1924:—

YEARLY AVERAGES (1924 = 100).

	1925.	1926.	1927.	1928.	1929.
Cereals and meat	99·9	90·0	87·5	90·7	84·8
Other foods ...	94·7	90·6	93·8	87·9	80·5
Textiles	90·6	71·1	73·1	76·8	67·4
Minerals	93·6	100·3	83·7	77·1	80·0
Miscellaneous ...	102·9	98·4	94·7	90·7	85·7
Complete index	96·8	89·9	86·4	84·8	79·9

It will be observed that, whereas "cereals and meat" have cheapened since 1924 by only 15 per cent., the decline in the case of textiles has amounted in the same period to nearly 33 per cent. The average rate of decline in the complete index has been 4 per cent. per annum.

Retail prices once again failed to reflect fully the decline in the wholesale price-level. The following table shows the average percentage increase, as compared with July, 1914, for all the items included in the Ministry of Labour's cost-of-living figure for the past nine years:—

AVERAGE PERCENTAGE INCREASE SINCE JULY, 1914.—All items (Food, Rent, Clothing, Fuel and Light, &c.).

Month (beginning of).	1921	1922	1923	1924	1925	1926	1927	1928	1929
	%	%	%	%	%	%	%	%	%
January	165	92	78	77	80	75	75	68	67
February	151	88	77	79	79	73	72	66	65
March	141	86	76	78	79	72	71	64	66
April	133	82	74	73	75	68	65	64	62
May	128	81	70	71	73	67	64	64	61
June	119	80	69	69	72	68	63	65	60
July	119	84	69	70	73	70	66	65	61
August	122	81	71	71	73	70	64	65	63
September	120	79	73	72	74	72	65	65	64
October	110	78	75	76	76	74	67	66	65
November	103	80	75	80	76	79	69	67	67
December.....	99	80	77	81	77	79	69	68	67

Last year, it will be seen, the normal seasonal tendency to decline in summer was more strongly marked than in 1928, the index figure for retail food reaching 47 on June 1st. At the end of the year, however, "food" stood at 57, as compared with 59 a year ago.

MONEY AND EXCHANGES.

MONEY MARKET.

In contrast with the preceding year, 1929 witnessed no fewer than five changes in Bank rate. In other important respects, too, it was, in monetary history, one of the most eventful years since the war. It saw the Bank lose £23.0 million of its gold during the first nine months, and recover about £16 million of its losses during the final quarter. On the Continent it witnessed the steady repatriation of French foreign balances, accompanied by heavy and prolonged French gold imports, first from London and then from New York. On the other side of the Atlantic it saw the Wall Street boom rise to its culminating point in early September, only to end a few weeks later in catastrophic collapse.

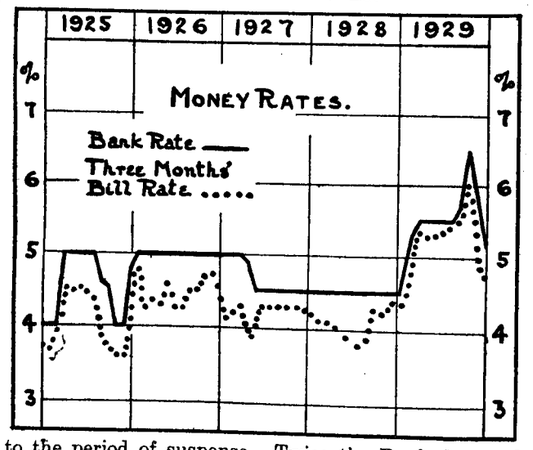
January opened with London experiencing relatively easy conditions after the gold efflux of the preceding autumn. For a few weeks it looked as if the period of strain had come to an end, but in February the gold drain to America was renewed, and in the first week of the month the Bank lost £3,000,000. At once it raised its rate to 5½ per cent.

There followed several weeks of extreme anxiety. Call rate in New York was up to 10 per cent. and even higher, and with the Wall Street magnet proving almost irresistible it seemed likely that a further increase in the Bank rate would be required. Fortunately April witnessed easier conditions. The American banks began to place obstacles in the way of foreign short money seeking to invade Wall Street, while the increases in the Dutch and German Bank rates came as valuable reinforcements to the Bank of England in its stand against New York. The result was an easing of London discount rates, and a slow, but steady, increase in the Bank's gold stocks. At the time of the February rise in Bank rate, the Bank's gold holdings were just under £150 million. By the middle of June they had recovered to £164.2 million, the highest point of the year.

The end of June brought this time of ease to an end. The dollar and mark exchanges fell to the lower gold point, and during the last three weeks of the month the Bank lost £8,500,000 of gold. In July began the most serious drain of all, the efflux of gold to France, which lasted for the rest of the year and showed itself in no way amenable to discount rates.

There followed three months of suspense, during which discount rates were practically coincident with Bank rate, a most unusual development which was clear evidence of the market's sense of strain. The Wall Street boom continued with call money at 8 per cent., and, on August 7th, the New York rediscount rate was raised from 5 to 6 per cent. Paris was taking gold from London in July at the rate of several millions a week. The Bank was severely criticised for not raising its rate immediately, and so putting an end

THE MONEY MARKET.



to the period of suspense. Twice the Bank departed from its traditional policy of silence, and on the occasion of the New York rate increase let it be known that no immediate rise in its own rate was to be apprehended. The Bank clearly felt that a 6½ per cent. rate would not check the outflow of gold to France, and that it would kill all chances of an autumn trade revival.

It was questionable whether the suspense the Bank's inaction inflicted on the country did not do as much harm as an increase in Bank rate would have done, and when, as was inevitable, the increase to 6½ per cent. came at the end of September, it unfortunately coincided with the Hatry crisis on the Stock Exchange. In early October the monetary and financial outlook seemed very dark, but, as events showed, relief was soon to come. At the end of the month came the spectacular Wall Street crash, and the huge supplies of short money accumulated in New York were suddenly released. The 6½ per cent. Bank rate had done its work by showing the world that London was not prepared to tolerate the concentration of all the world's floating money in supporting the Wall Street boom.

The effect on London was instantaneous, and the pound rose in October from the export gold point of $4.85 almost to the import gold point of $4.88. The movement continued, and in December a London bank imported gold from New York. More important still, the depreciation in the dollar diverted the French gold demands from London to New York.

This reversal of the international monetary position in London's favour explains the three reductions, each of ½ per cent., in the Bank rate that occurred in the last two months of the year, though a contributory factor to the final reduction to 5 per cent. on December 12th was the cessation of gold shipments to Paris. This cessation was to prove but temporary, for Paris has continued to take small amounts of gold from London right into the New Year, but in December London was gaining gold from several quarters, and the 5 per cent. rate is fully justified. We append our usual tables of money rates:—

In 1928 the Bank of England average rate was 4½ per cent., the New York rate 4½ per cent., and the Berlin rate 7 per cent.

BANK CLEARINGS.

The total of bank clearings for 1929, shown in the table below, constituted a record for any single year:—

(000's omitted.)

	1929.	Increase in comparison with 1928.		Increase in 1928 in comparison with 1927.	
	£	£	%	£	%
Town clearing	39,935,924	+624,807	1·6	+2,491,435	6·7
Metropolitan clearing	1,881,789	+ 27,599	1·5	+ 96,158	5·4
Grand total.....	44,896,477	+691,751	1·6	+2,654,188	6·3
Country cheque clearing	3,078,764	+ 39,342	1·3	+ 66,595	2·2

The expansion in aggregate town clearings is ascribed mainly to the increasing daily turnover of money in the short loan market. Country clearings, which are rightly accepted as a better index to the course of trade, have risen since 1928 by £39.3 million, which is equivalent to 1.2 per cent. As the general price-level averaged 5.8 per cent. less in 1929 than in the preceding year, this increase in country clearings suggests an expansion in the volume of trade of 7.5 per cent. Unfortunately this optimistic view is not borne out by the provincial clearing figures. Only three of the eleven centres, namely, Leeds, Newcastle and Sheffield, recorded increases, and such important cities as Birmingham, Bradford, Bristol, Liverpool, Manchester and Nottingham were numbered among the declines. The shrinkage in the case of Bradford was as much as 13.3 per cent., which is a significant commentary on the state of the wool textile industry. The new record achieved by the aggregate London figures is by no means adequate compensation for the shortcomings of provincial clearings. Their aggregate, expressed as an index (1924=100) adjusted so as to make allowance for changes in the wholesale price level, works out at 99 for last year, against 100.5 a year ago.

FOREIGN EXCHANGES.

The gold standard, for the first time since the war practically universal among the chief trading countries of the world, was put to a severe test during 1929, nowhere more typically than in London. In consequence of this strain, the gold standard itself received several set backs. The *de facto* prohibition of gold exports from Canada was followed, early in December, by the suspension of gold payments by the Argentine Conversion Office; meanwhile in Australia the Commonwealth Bank Bill was being passed with its provisions that, under certain circumstances, gold exports may be banned. On the other hand, Czechoslovakia stabilised *de jure* on a gold basis, Switzerland formally adhered to the gold standard, and late in the year the Japanese Government announced that the gold export ban would be shortly removed. But the fortunes of the gold standard were quite obscured by the movements which resulted from abnormal fluctuations of credit, the principal cause being the high level of short-term money rates in New York. Early in the year this country was a gainer of gold, but with the tremendous attraction of funds which the Wall Street boom exerted, the dollar appreciated till it stood at one time at 4.84 9/16, or well beyond gold export point. London meanwhile had to replace New York as a supplier of funds to Germany, and the mark, after weakening to 20.58 on a report that the Young Committee had broken down, stiffened until Berlin was taking gold from London. But the most serious demand for gold came from Paris, which for a number of reasons drew heavily on its balances here. Throughout the summer the franc stood almost consistently below gold export point, and even fell as low as 123.81 francs. Successive gold losses had very slight effect on the exchange rate. The Wall Street break restored the balance; the drain of gold was arrested and the American exchange rose to a maximum of $4.88 7/16. Nevertheless, the strength of the franc continued and the rate at the end of the year, 123.87 francs, was again below export point. The peseta remained the chief speculative counter, and the efforts of the Spanish Government did not prevent its depreciation from 29.75 pesetas to 36.50 pesetas in the course of the year. The principal South American exchanges, thanks largely to the poor prices current for their exports, depreciated during the year, Buenos Ayres from 47 3/8d. to 45 11/16d., Monte Video from 51d. to 46½d., and Rio from 5 23/32d. to 5 13/32d. The fall of the price of silver to the record low level of 21 5/16d. was reflected in the depreciation of the tael and the Hong Kong dollar, but the efforts of the Japanese Government were rewarded by the improvement of the yen from 1s. 10½d. to 2s. 0⅛d.

The following table is extracted from statistics published by Messrs Samuel Montagu and Company:—

RATE OF EXCHANGE AS COMPARED WITH PRE-WAR PARITY OF THE £ STERLING.

	Pre-war Par Value.	Dec. 31, 1928. *Middle* Rate.	Dec. 31, 1929. *Middle* Rate.	Compared with its Pre-war Par Value the £ Sterling is at a Premium of		Present quotation of the £ Sterling as compared with its Pre-war Value

Comparisons cannot be made with pre-war parity for Poland and Austria, as the currency in these countries has been altered in the interval.

GOLD MOVEMENTS.

The estimated gold production of 1929 is identical with that of the preceding year, an increase of £300,000 for the Transvaal being exactly equalled by contractions elsewhere. Details are given in the following table, compiled by Mr. Joseph Kitchin:—

(In Millions of pounds at 84s. 11½d. per fine oz.)

Year.	Trans-vaal.	The Rest of the Empire.	British Empire.	Foreign Countries.	World.
1914	35·7	20·8	56·5	33·9	90·4
1915	38·6	22·0	60·6	35·8	96·6
1916	39·5	20·0	59·5	34·0	93·5
1917	38·3	17·8	56·1	30·2	86·3
1918	35·8	15·2	51·0	28·0	79·0
1919	35·4	14·7	50·1	24·9	75·0
1920	34·7	13·4	48·1	20·9	69·0
1921	34·5	12·9	47·4	20·6	68·0
1922	29·8*	14·8	44·6	20·9	65·5
1923	38·9	14·5	53·4	22·1	75·5
1924	40·7	15·3	56·0	25·0	81·0
1925	40·8	15·3	56·1	24·9	81·0
1926	42·3	15·3	57·5	24·5	82·0
1927	43·0	15·6	58·6	23·9	82·5
1928	44·0	15·4	59·4	24·1	83·5
1929 (est.)	44·3	15·3	59·6	23·9	83·5

* Output temporarily reduced by strike of white miners.

The main gold movements during the year were five in number. First came the outflow to America of £80.2 million during the first three quarters of the year, with a back-flow of £24.9 million in the last quarter as a result of the departure of foreign short money due to the September increase in the Bank of England's rate and the October break on Wall Street. Next came the huge French imports, totalling £78 million, which occurred mainly in the second half of the year. Germany lost £20.8 million net during the year, but all this and more went at the time of the temporary collapse of the mark exchange in the spring, and during the remainder of the year she was, on the whole, gaining gold. Another major movement consisted of the losses by the chief crop-producing countries. These, which occurred mainly at the end of the year and which were the direct result of adverse trade balances, in themselves the consequence of low crop prices, amounted to £4.0 million for Australia (Commonwealth Bank alone) and to £33.5 million for the Argentine. Finally came the fluctuations in the Bank of England's gold stocks, which, owing to London's pivotal position in international finance, were to some extent the resultant of the above movements. During the first three quarters of the year the Bank of England lost £23.0 million, while during the last quarter £15.8 million were regained.

NEW CAPITAL ISSUES.

The wave of new issues which flooded the Stock Exchange in 1928 receded swiftly in the summer of 1929, when Wall Street was attracting money otherwise available for investment in London, and when high money rates rendered borrowing very expensive; indeed, during the third quarter of the year the new issue market was left very nearly high and dry. The total of new issues fell from the high level of £369 million in 1928 to only £285 million, of which the third quarter's contribution was less than £19 million. British Government borrowing, representing the proportion of cash subscriptions to the 5 per cent. Conversion Loan which would be available for reductions of Floating Debt after providing for short-term maturities, less the excess of encashments over sales of Saving Certificates, amounted to £65 million, compared with £84 million in 1928. Domestic issues, other than Government, fell by £47 million to £133 million, issues for the Dominions and Colonies by £2 million to £61 million, and those for foreign countries by £16 million to £26 million. The reduction in the amounts destined for overseas, as compared with 1928, is due to a great falling off in Government borrowing. Indeed, non-governmental issues for the Empire actually increased by £12 millions. Foreign governments practically ceased borrowing. British corporation issues dropped from £14.9 million to £8.3 million, and Colonial corporation issues from £7.3 million to £8.9 million; foreign corporation loans fell away from a total of over £4 million in 1928 to a single issue of less than £500,000 for the City of Abo.

Among the flotations for companies, the decline was very general. Overseas railways provided a notable exception; Colonial railways, which did not borrow at all in London during 1928, called for £10,200,000, namely, a single issue to shareholders of the Canadian Pacific Railway. Three Argentine railways borrowed £7,835,000 between them, compared with only £3,070,000 raised for foreign railways in the previous year. Mines, other than South African and Australasian, also raised more than twice as much in 1929 than in 1928, thanks to the boom in the Rhodesian copper share market and to an issue of £2,500,000 for the Rio Tinto Mining Company. South African mines showed a small rise. The only other groups to increase their issues as compared with 1928 were estate and land companies and iron and steel companies; in each case a single large issue was responsible, for Messrs Lysaght and the Hudson Bay Company respectively. Conspicuous falls, on the other hand, were recorded by the exploration and investment trust group, which slackened its unprecedented activity as soon as the upward movement of Stock Exchange prices was arrested, three-quarters of the year's total for this group being issued in the first three months of the year; and by the hotels and entertainments section, which reacted sharply to the misfortunes of the previous year's cinema flotations. It is significant also that practically the whole of the total for "patent and proprietary articles" was raised in the first quarter of the year. The "manufacturing and miscellaneous" group, which is the largest of all, British Government excepted, showed only a comparatively slight fall from £62½ million to £57 million. Over £10 million was raised by Imperial Chemical Industries, and £6 million by the British American Tobacco Company; in each case the issue was offered to shareholders only. Tables of new issue statistics will be found in an appendix.

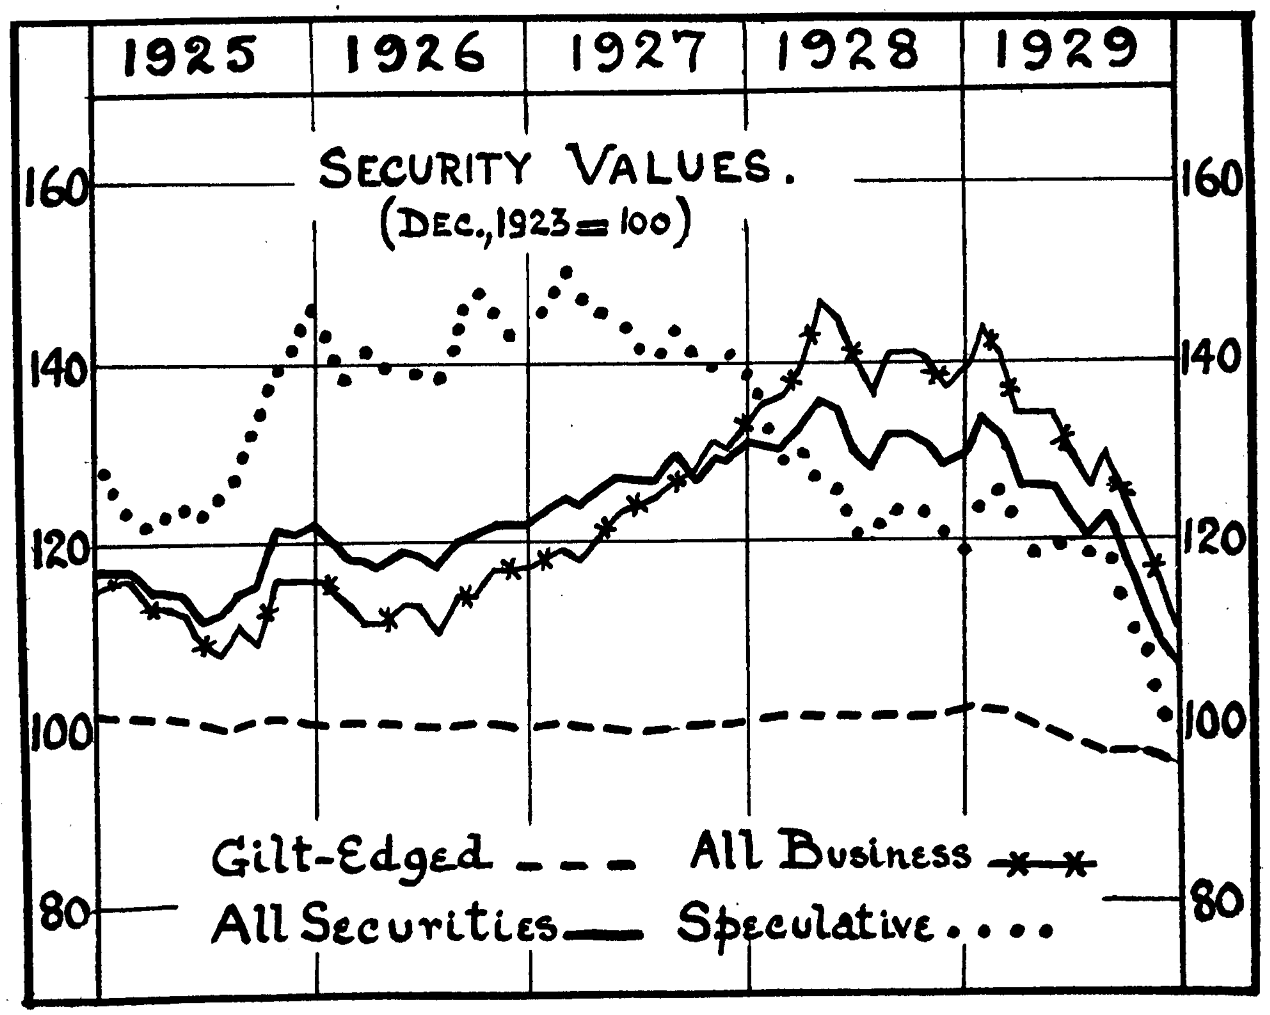
THE STOCK EXCHANGE.

The year 1929 proved in many ways remarkable. The February increase in Bank rate resulted in a sudden check to the rise in prices, and while New York prices were rising at an alarming speed London share values were on the downward trend. The money market was dull, new issues being very few, especially in the last quarter of the year after the Wall Street crisis. During this latter crisis London was called upon to absorb large quantities of unwanted stocks from both sides of the Atlantic. Later, when money became easier, the Bank rate dropped, by gradual degrees, from 6½ to 5 per cent., but the position was affected by the liquidation of unsound concerns and the Hatry "revelations." Consequently the year's lowest prices were realised during December, and 1930 was ushered in under unpromising conditions.

Between 1926 and September, 1929, industrial stocks in America more than doubled in value—in one group, public utility stocks, values were actually more than trebled. After the Wall Street slump industrial prices averaged no more than 50 per cent. above the levels of 1926. In both countries "fixed-interest" securities remained practically constant in price, movements being chiefly confined to industrials and "business" stocks. In London the boom was not the spectacular affair that it was in America, rubber, mining and other so-called speculative stocks being actually on the downward trend. The really sharp rises were confined to new flotations, while in America the boom applied much more noticeably to the stocks of sound and well-established concerns. The bursting of the bubble in Great Britain, however, adversely affected the sounder stocks.

In times such as are described above, the general tendency is to transfer from speculative to gilt-edged stock, but this tendency was affected by the issue of a major Conversion Loan on terms which suggested 5 per cent. to be a reasonable return for British Government stock. Few Dominion or Foreign Government stocks finished the year with a net gain in price. Brazilians were particularly weak on fears regarding the coffee position. The fall in six representative British stocks averaged 4.96 per cent., in four Dominion stocks 4.45 per cent., and in five foreign Government stocks 4.82 per cent. The average fall in the price of five representative Corporation stocks was 3.18 per cent. Industrial preference shares inevitably showed a larger decline, the most noteworthy example being Royal Mail preference, which dropped from 96½ to 42 on fears regarding the position of this important shipping group. Other declines reflected sales made to cover losses by holders of more speculative stocks. Increased freight traffic, especially from the carriage of coal, offset the decrease in the number of passengers carried in two of the four Home railways. Harvests abroad were much less abundant than in 1928, a fact reflected in the quotations of the Canadian Pacific and the Argentine railways.

SECURITY VALUES ("INVESTORS' CHRONICLE" INDEX).



"Gilt-edged" includes British, Dominion and Colonial, and Corporation issues.
"All business" comprises Railway, Banking and Insurance stocks, and representative ordinary shares from eleven industrial groups.
"Speculative" includes representative ordinary shares of gold mining, land, nitrate, oil, rubber, tea, and tin companies.

During 1929 there was an increase in the number of British stocks listed in New York, but despite the publicity given to the abortive " British only " share issue of General Electric Company, business in British securities in Wall Street was not very considerable. The American crisis, however, naturally affected British share quotations; of twenty-four British stocks quoted in Wall Street only three had a higher price at the end than at the beginning of the year, while one was unchanged. The average drop in the value of the other twenty was 27.58 per cent. Even banks, insurance and trust companies were affected by the London slump, an appreciable fall in share values being evident. Shipping shares showed a general falling off, the weakest features being Royal Mail, for reasons already mentioned. The average fall in value among thirteen representative " General Industrial and Commercial " securities was 21½ per cent. Newspaper shares declined on forced selling; artificial silk prosperity was checked; and brewery shares were lower, despite the maintenance of satisfactory profits.

The most remarkable fall in values was revealed by the shares of new concerns which failed to bear out prospectus prophecies or were liquidated after their shares had risen to dizzy heights. Shares in " speculative " concerns producing primary commodities slumped, partly through the atmosphere of markets generally and partly owing to the downward trend of many commodity prices. Measures were discussed, and in some cases put into force, to restrict output in the oil, tin, copper, diamonds, rubber and tea industries. Copper-mining enterprises in Rhodesia enjoyed a boom, based mainly on the discovery of rich deposits. Large professional interests were concerned, but with the depression in other markets it was impossible to maintain prices at their maximum. Kaffirs had a very dull year.

As a whole, the year was the most depressing period on the London Stock Exchange since the slump of 1920-21, but the completion of the postponed " Hatry " settlement on February 13th should remove an incubus from the markets and clear the way for more healthy conditions after the " shake-out " of 1929.

LABOUR CONDITIONS.

Industrial peace received something of a set back in 1929. The number of disputes begun was greater than in any of the three preceding years, and the number of days lost by them exceeded that of any year, 1926 apart, since 1923. The Ministry of Labour's figures are given below:—

Year.	Number of Disputes Beginning in Year.	Number of Workpeople Involved in Disputes Beginning in Year.		Aggregate Duration in Working Days of All Disputes in Progress during Year.
		Directly.	Indirectly.	
1919	1,352	2,401,000	190,000	34,970,000
1920	1,607	1,779,000	153,000	26,570,000
1921	763	1,770,000	31,000	85,870,000
1922	576	512,000	40,000	19,850,000
1923	628	343,000	62,000	10,670,000
1924	710	558,000	55,000	6,420,000
1925	603	401,000	40,000	7,950,000
1926	323	2,724,000	10,000	162,230,000
1927	308	90,000	18,000	1,170,000
1928	302	80,000	44,000	1,390,000
1929	420	492,000	40,000	8,280,000

Even when last summer's cotton dispute is eliminated the year's figures remain higher than in 1928. Employment, on the other hand, was rather better, and reached an estimated figure, for insured persons aged 16 to 64 of 10,191,000, as compared with 10,007,000 in 1928 and 10,003,000 in 1927. Unemployment averaged 10.5, as compared with 10.8 in the preceding year. The monthly figures of numbers unemployed are as follows:—

NUMBERS (INSURED AND UNINSURED) REGISTERED AT EMPLOYMENT EXCHANGES, &C.

(At date of Ministry of Labour Monthly Returns.)
(000's omitted.)

	1928.	1929.		1928.	1929.
January	1,199	1,434	July	1,354	1,188
February	1,139	1,430	August	1,367	1,190
March	1,071	1,168	September ...	1,384	1,217
April	1,171	1,198	October.....	1,421	1,270
May	1,143	1,165	November.....	1,439	1,323
June	1,239	1,176	December	1,312	1,341

Improvement was marked in the coal mining industry, and occurred to a less extent in shipbuilding and ship repairing, but in the cotton industry unemployment was worse, averaging 13.2, as compared with 12.0 in 1928. The following table shows the movements of the unemployment percentage in recent years:—

PERCENTAGE UNEMPLOYED AMONG INSURED WORKPEOPLE IN GREAT BRITAIN AND NORTHERN IRELAND.

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

According to the Ministry of Labour, there was again very little movement in wage rates. Changes, in the industries and services covered by the available statistics, resulted, for 915,500 workpeople, in an aggregate net decrease of about £91,650 in weekly full time rates, and for 137,500 people in a net increase of £12,150. Of the resultant net decrease of about £79,500, over £59,000 occurred in the cotton industry. The average decrease for all industries combined amounted to less than ½ per cent. of the wage rates in operation at the beginning of the year. The Ministry states that when account is taken of all the information in its possession, including that relating to agricultural wages, which are not included in the figures just given, the average increase, between July, 1914, and December, 1929, in the weekly full-time wage rates of the workpeople covered is estimated at between 70 and 75 per cent. Owing to the general reduction in hours since 1914 this implies a greater increase in hourly rates. During 1929, hours of labour underwent little change. According to a preliminary estimate, 4,000 people had their hours increased and 1,000 had theirs reduced. The aggregate net increase was 8,800 hours per week.

A.—EUROPE.

FRANCE.

General.—The year 1929 was devoted to vigorous measures for the adaptation of the country to the new conditions set up by the legal stabilisation of the franc. The work was continued under the leadership of M. Poincaré until July, and subsequently by M. Briand—under whom M. Chéron continued in office as Finance Minister. The year was marked by almost unbroken industrial peace, a virtual absence of unemployment, exceptionally abundant crops, increased production in practically all industries, abundant available capital, a general lowering of the cost of money, the launching of a widespread programme for improving the economic equipment of the country, a record volume of new capital issues, and a steady increase in public confidence.

Trade and Production.—French exports in 1929 totalled 50,072,348,000 francs (39,888,775 tons), against 51,374,729,000 francs (41,125,930 tons) in 1928, 54,925,759,000 francs in 1927 and 59,677,930,000 francs in 1926. Forty per cent. of the decline in export value was in respect of raw materials, which also accounted for practically the whole decline in export tonnage. Exports of manufactured goods, although nearly 2 per cent. less in value, were 1 per cent. larger in quantity. Imports totalled 58,284,624,000 francs (59,447,195 tons), against 53,448,265,000 francs (49,106,307 tons) in 1928 and 53,049,878,000 francs (49,369,840 tons) in 1927. The increase in imports of raw materials and of manufactured goods in 1929 was over 2,000,000,000 francs in each case. Eighty-five per cent. of the increased import tonnage consisted of raw materials, and less than 1 per cent. of manufactured products. Coal production totalled 55,000,000 tons in 1929, against 52,429,000 tons in 1928, 52,845,000 tons in 1927 (Alsace-Lorraine included) and 40,840,000 tons in 1913. Iron production totalled 10,290,000 tons in 1929 (provisional figures), against 9,821,000 tons in 1928, and 5,126,000 tons in 1913. The total output of steel was 9,525,000 tons (provisional), against 9,348,000 tons in 1928 and 6,976,000 tons (Lorraine plants included) in 1913. The index figure for metallurgical production was returned as 133 in November (1913 = 100). The French iron and steel plants worked to capacity throughout 1929. A production cut of 10 per cent., binding on all countries in the European Steel Cartel, came into effect in November, and is still maintained, mainly in order to keep export prices steady. The monthly index figures for production in the principal industries placed rubber manufactures at the head of the list, with figures rising from 684 in January to 957 in November, against a mean of 587 during 1928. The motor-car industry came next, with an average figure for the eleven months of 660, against a mean of 610 in 1928. The only leading industry that fell off seriously during the year was textiles, the mean figure for which was 99 during 1928 and 92 for the first eleven months of 1929. Railway receipts totalled 15,462,267,000 francs in 1929, against 14,748,691,000 francs in 1928, or an increase of 4·58 per cent. There has been no increase of railway rates since March 1, 1928, when goods rates were theoretically brought to 370 per cent. of their pre-war level. During the year the base rates for foodstuffs and other categories were reduced variously by 5-10 per cent. The number of trucks loaded was 23,776,701, against 23,174,105 in 1928, the index (1913=100) rising from 132 to 134. Both inward and outward shipping tonnage also went to higher levels. Bankruptcies averaged 726 per month, against 684 in 1928.

Labour.—Shortage of labour was experienced in several leading industries, and particularly in agriculture and mining, for which the necessary quotas were recruited from Spain, Italy, Poland, Belgium and other countries.

Crops.—Ministry of Agriculture experts estimated the 1929 wheat crop at rather over 87,000,000 quintals (as against 76,554,000 quintals in 1928 and 63,077,000 quintals in 1927), to meet normal estimated consumption of about 91,000,000 quintals. The 1929 crop was obtained from about 13,000,000 acres, or about 2,000,000 acres less than before the war. The average yield in 1929 was 16·87 quintals per hectare, the largest ever obtained in this country and 2·27 quintals more than in 1928 (by reason of more scientific methods of culture). The sugar beet crop was sufficient to yield 744,376 tons of refined sugar (against 745,677 tons in 1928). The wine, potato and fruit crops were also well above the average.

Commodity Prices.—The mean general index figure representing wholesale prices during 1929 was 638 (based on 100 as representing corresponding prices in 1913), the monthly figure returned having steadily declined from 644 at the end of January to 588 at the end of December. The mean figure in 1928 was 633, and in 1927, 628 as against the high record figure of 854 in July, 1926. The outstanding feature during the year was the reversal of the ratio between the figure representing wholesale prices of native French products and that for imported products, which stood respectively at 639 and 651 in January and at 621 and 530 at the end of December. The figure representing retail prices in Paris at the end of 1929 (13 articles) was returned as 614, as against an average monthly figure of 549 in 1928, 599 at the end of 1926 and 389 in 1924. The figure representing the cost of living by a Paris workman's family of four persons at the end of November, 1929, was 565 (based on 100 for 1914), against an average figure of 519 during 1928, 514 for 1927, and 517 for 1926.

Money and Stocks.—The year 1929, like its predecessor, was marked by an abnormal abundance of unemployed capital, an exceptional penury of opportunities for short-term investments, and record issues of additional capital by banks and other established concerns, to compensate for the wiping out of four-fifths of the real value of their issues under the stabilisation law. The Bank of France discount rate, which had been brought down to 3½ per cent. on January 19, 1928, remained at that figure throughout 1929, and the rate for advances against securities remained similarly unchanged at 5½ per cent. The rate of interest paid by the Caisse d'Amortissement on National Defence Bonds, which had been reduced progressively in earlier years from 6 per cent. to 4 per cent., was reduced to 3½ per cent. on December 20, 1929. Total offers of new capital in 1929 amounted to 15,084,000,000 francs, of which 14,000,000,000 francs, about 93 per cent., represented increases of capital by old companies (6,796,000,000 francs in bonds and 7,278,000,000 francs in shares), new companies' share

capital being 1,010,000,000 francs, or about 7 per cent. of the total. The average rate of interest offered on new bond issues, which was 6.03 per cent. in 1928, had fallen to 4.80 per cent. in October, 5.25 per cent. in November, and 5 per cent. in December. The index figure representing Bourse quotations (300 French issues of variable yield) at the end of December was 463 (base 100 in 1913), against a mean of 415 during 1928. The general figure covering the quotations at the end of December of 35 standard 3 per cent. and 4 per cent. issues (3 per cent. Rentes and 3 per cent. and 4 per cent. Credit Foncier, railway and industrial bonds) stood at 91.6, against a mean of 80.8 during 1928. Six of the eleven issues of Rentes stood at from 5 to 30 points above par on December 24 last, as compared with three at the end of 1928, Irredeemable 3's having improved 18 points to 84 during the year.

Public Finance.—The total revenue for the year, recovered under the General Budget, was 47,780,000,000 francs (against 43,687,000,000 francs in 1928, 41,246,467,000 francs in 1927 and 35,610,000,000 francs in 1926), or 6,605,000,000 francs in excess of Budget Estimates (against a provisional realised surplus of 3,368 millions in 1928). A further sum of 7,812,000,000 francs was received by the Caisse d'Amortissement from the tobacco monopoly and the special taxes allocated to debt extinction purposes, bringing the total raised from taxation (exclusive of posts, telegraphs and telephones, now covered by an independent Budget) to 55,592,874,000 francs, or 5,192,890,000 francs more than in 1928. A large part of the year's surplus was absorbed in taxation relief, and supplementary expenditure in July and December. The Treasury balance at the Bank on December 27 stood at 7,582,000,000 francs and that of the Caisse d'Amortissement at 4,155,000,000 francs. The only direct Government issue of the year was a 4½ per cent. loan offered (at 93½) through the Caisse d'Amortissement in February, for the purpose of converting the outstanding balance of 2,400,000,000 francs of its 6 per cent. "Tobacco" Bonds and as many Defence Bonds as possible. The amount of Defence Bonds offered in exchange for the new loan was 5,352,000,000 francs, which was so largely in excess of the 4,000,000,000 francs of these issues that the Caisse desired to convert that the lists were closed immediately after opening. The amount of "Tobacco" Bonds exchanged was 2,164,000,000 francs, or 93 per cent. of the oustanding balance. During the year, and including this conversion operation, the total Defence Bonds in circulation were reduced from 35,487,000,000 francs to around 28,200,000,000 francs, as compared with a total of 48,000,000,000 francs in 1926. Most of the Defence Bonds extinguished have, of course, been transformed into new Rentes, nevertheless the total debt extinction effected represented for 1929 about 2,500,000,000 francs, with a reduction of the annual interest burden by about 330,000,000 francs; in addition, the extinction of Rentes, by buying in on the Bourse, represented a capital value of over 5,500,000,000 francs and an annual interest charge of 275,000,000 francs.

GERMANY.

Foreign Trade.—In 1929 there was a small export surplus of 47.6 million marks, as against an import surplus of 1,204 million marks in 1928. Exports, excluding precious metals, reached nearly 13,500 million marks, the highest figure since the war. The increase was mainly in manufactured goods, especially iron goods and machinery, but coal and agricultural products also reached higher export figures. There was only a slight decrease in imports, which occurred mainly in foodstuffs. Imports of industrial raw materials were almost unchanged and those of coal, iron ore, copper and cotton even increased. At the end of the year, however, imports fell off sharply and exports also showed a downward tendency.

FOREIGN TRADE (excluding precious metals).
(000,000's omitted.)

	1927.	1928.	1929.
Imports	13,802	13,650	13,435
Exports	10,376	11,783	12,683
Reparations in kind	579	663	799
Balance	− 2,847	− 1,204	+ 47

Currency and Credit.—After a year of violent fluctuations, the monetary position again became more stable. The combined circulation of Reichsbank and Rentenbank notes at the end of 1929 was slightly lower than a year before at 5,441 million marks, as against 5,460 million marks. The Reichsbank gold reserve dropped from 2,729 million marks to 2,283 million marks. The gold stock fluctuated sharply, and in April touched the low level of 1,765 million marks. Foreign exchange legally admitted as currency reserve increased from 155.3 to 402.6 million marks. The reserve ratio (gold and exchange) to circulation decreased from 58.5 per cent. to 53.3 per cent., but this is still considerably higher than the ratio of two years before (47 per cent.). The Reichsbank discount rate generally followed the world tendency, and was reduced from 7 to 6½ per cent. on January 12th, increased to 7½ per cent. on April 25th, and lowered again to 7 per cent. on November 2nd. Market rates, however, were continuously far above the official figure. Partly in consequence of this fact, partly on account of the sure though slow progress of trade, combined discounts and advances rose from 2,803 to 3,100 million marks during the year.

The capital market was very depressed, and loans and share issues both dropped sharply. The total amount of home loans, including mortgage bonds and municipal debentures, which had been over 3,000 million marks in 1928, was about 2,300 million marks, of which a considerable part again was taken up by other countries. German issues abroad amounted to only 587 million marks, as against 1,573 million marks in 1928. Home share issues decreased by nearly two-thirds, from 1,134 million marks to about 460 million marks. The influx of foreign credits, though still large, decreased considerably; the net capital import was estimated by the Reichskreditbank at 1,720, as against 2,910 million marks in 1928. The last two figures are disputed, but other estimates show a similar proportion of decrease. Savings continued to rise, but the increase on 1928 was less by 10 per cent. than that year's increase on 1927. Savings bank deposits were 9,070 million marks at the end of 1929, compared with 6,990 million marks at the end of 1928.

The Stock Exchange was depressed throughout the year. The official index of share quotations on the Berlin Bourse (1924-6 equals 100) steadily declined from 150.6 at the end of 1928 to 115.6 at the end of 1929. The turnover in securities on the German bourses, in round figures, fell from 57,500 million marks in 1928 to 37,500 million marks in 1929—*i.e.*, by almost 35 per cent. The number of failures increased from 11,000 in 1928 to about 15,000 in 1929. The largest failure was that of the Frankfurt Insurance Company, which involved losses of approximately fifty million marks.

Public Finance.—The Treasury encountered extraordinary difficulties; on two occasions the State was only just saved from having to defer payment of salaries and wages. In May, an emergency loan was offered to the public, but only 180 millions of the nominal 300 million marks was underwritten. An American credit of $50 million, for one year, only temporarily eased the tension. In December, the Treasury had to apply to the banks for a nine months' credit of 350 million marks to cover current liabilities. Revenue receipts for the first eight months of the financial year (April to November) were, in the circumstances, satisfactory at 6,247 million marks, as against 6,253 million marks during the same period in

1928. In proportion to estimates, however, receipts were only 66 per cent. in 1929, as against 70 per cent. in the previous year. Reparation payments, which were partly responsible for the exigencies of public finance, rose (excluding deliveries in kind) from 1,837 in 1928 to 2,150 million marks in 1929. Municipal finance came to a turning point in November, when a compulsory consolidation of the 2,000 million marks floating debt was decided upon and future expenditure made subject to severe limitation.

Industry.—Industrial production was considerably higher than in 1928. The output of pig iron rose from 11,804,000 metric tons to 13,200,000 metric tons; output of steel ingots rose from 14,517,000 to 16,300,000 metric tons. This rise was slightly in excess of the rate of world increase under each of the two heads. Other production figures in the heavy industries are (January-November):—

(Thousand metric tons.)

	1927.	1928.	1929.
Rolling-mill products	11,782	10,699	11,555
Coal	140,359	139,057	149,785
Lignite	136,673	152,119	160,648

In the Ruhr coal district activity was particularly intense, and coal output increased during the year by 23 per cent., coke and briquette output by about 50 per cent. The engineering industry maintained a high level of production as rising exports made up in quantity—if not in profits—for the diminishing home demand. The electro-technical industry had a dull year, the falling off in demand for its products reflecting the general trade depression; exports, however, were satisfactory. The Rohstahlgemeinschaft (Ingot Steel Syndicate) agreement came up for renewal and, after strenuous discussion, was extended for ten years. No important new amalgamations are reported, but it is thought that the merger of the two largest banks will stimulate further industrial concentration by removing elements of rivalry among the financial interests. In this connection, rumours are afloat concerning a possible merger in the shipping world. Unemployment was comparatively low during the first half of the year, but rose above the previous year's level from October. The monthly average of unemployed in receipt of relief was 1,775,000 in December, 1929, as against 1,702,000 in December, 1928.

Prices and Wages.—The official index of wholesale prices in December, 1929, was 134.3, as against 139.9 in December, 1928 (1913 equals 100). The decrease was mainly in foodstuffs and in raw and semi-manufactured materials, while prices of manufactured goods decreased less. The official cost-of-living index remained almost unchanged:—December, 1929, 152.6; December, 1928, 152.7 (1913 equals 100). The upward trend of wages continued. On the average, the weekly tariff wages of skilled labour increased by 4.8 per cent., those for unskilled labour by 4.3 per cent. during the year. A calculation published by the *Institut für Konjunkturforschung* puts the total yearly incomes of all employees, including civil servants, as follows:—

1927	40,000,000,000
1928	45,000,000,000
1929	46,000,000,000

This means a 2 per cent. rise in the average standard of living during the past year.

Tariffs and Commercial Agreements.—Agricultural import duties were raised in June after the existing commercial agreements with Sweden, Switzerland, France and Finland had been amended. At the end of the year, a further rise in agricultural duties was under discussion with a special provision for sliding scales. The industrial tariff of 1925, which terminated at the end of 1929, was extended without material reductions and the Government is now contemplating additions and increases.

Agriculture.—Favourable crops led to an increase in exports of farm products, while imports were further reduced. Since 1927 agricultural exports have risen by about 260 million marks and imports declined by about 500 million marks.

(Millions of marks.)

	Imports.	Exports.
1925	4,023	520
1926	3,571	504
1927	4,326	441
1928	4,203	631
1929	3,817	701

The prominent feature of the agricultural situation was the rising tide of indebtedness which neither increased duties nor State aid could materially reduce. A thorough official inquiry showed, however, that the financial stringency is most marked in the large estates of the east, while west and south of the Elbe agriculture is tolerably prosperous.

ITALY.

Foreign Trade.—The corrected figures of the Central Institute of Statistics for 1929 and previous years were as follows (precious metals and reparation deliveries excluded):—

(In Millions.)

	Imports.	Exports.	Excess of Imports over Exports.	
	Paper Lire.	Paper Lire.	Paper Lire.	Present stabilised Lire.*
1910-13	3,496	2,528	968	3,553
1920	18,105	8,742	9,363	11,190
1921	17,227	9,300	7,927	7,384
1922	15,765	10,698	5,067	4,551
1923	17,189	12,757	4,432	3,872
1924	19,381	16,529	2,852	2,360
1925	26,200	21,015	5,185	3,931
1926	25,879	21,175	4,704	3,446
1927	20,375	15,632	7,743	4,602
1928	22,042	14,529	7,513	7,513
1929†‡	21,353	14,886	6,467	6,467

* For the sake of comparison the paper lire are converted into old gold lire at the appropriate rate of exchange, and these are in their turn converted into present stabilised lire at the rate of 1 to 3·67.

† Provisional figures.

‡ When expressed in lire of pre-war purchasing power the excess of imports in 1929 amounts to 1,504 millions as compared with the average of 968 millions in 1910-13.

The decrease in the import balance in 1929 is wholly attributable to the second half of the year. In the first half the excess of imports increased from 4,750 to 4,897 million lire. The heavy imports were due to coal, gasoline, corn and broken iron and steel. In the second half of the year, however, owing to lesser imports of wheat (354,000, against 946,000 tons), and of corn (244,000, against 466,000 tons), imports were lower at 8,801 million lire, against 9,251 million lire in 1928; and as the exports were unchanged (6,512, against 6,489 million lire), the excess of imports went down from 2,763 to 1,570 million lire. The hoped-for increase of exports has failed to materialise during the past year, as rationalisation and reduction of costs in industry have not yet produced sufficient result, though in agriculture the wheat campaign has met with better success.

The improvement in the balance of trade becomes almost negligible when expressed in terms of lire of pre-war purchasing power. To the deficit we must add the deliveries on reparation accounts, which are true paid imports, as Italy has to pay over to Great Britain and United States practically the whole amount received by Germany. The most important item in this account is coal, of which we imported 1,727,861 tons in 1925, 2,891,381 tons in 1926, 3,088,906 tons in 1927, 3,539,231 tons in 1928 and 1,927,000 tons in the first eight months of 1929.

Crops.—Agricultural yields generally were better in 1929 than in 1928. Comparative figures for several years are given in the following table.

(Thousands of Tons.)

	1909-14. (average)	1921-25. (average)	1927.	1928.	1929.
Wheat	4,927·3	5,397·1	5,329·1	6,221·5	7,094·4
Maize	2,468·8	2,322·3	2,132·1	1,587·6	2,408·3
Rice	486·7	535·4	696·1	631·5	673·4
Potatoes.....	1,656·2	1,835·1	1,945·3	1,489·8	2,011·1
Sugar beet...	1,723·8	2,400·3	2,015·4	2,861·3	...
Olives.....	1,076·9	1,181·4	1,007·3	1,413·9	...
Raisins	7,047·2	6,695·1	5,795·8	7,503·1	6,347·4
Cocoons* ...	40·8	...	50·7	52·5	53·3
Hemp*	83·5	...	83·0	85·7	87·3

* Average, 1909-13.

Industry.—The production of electric power increased from 6,784.7 million kilowatts in the first ten months of 1928 to 7,317.8 in the corresponding months of 1928. In general, 1929 was not a good year; the effects of the revaluation of the lira were still felt. Goods carried by State railways, which were 63.2 million tons in 1924-25, increased to 65.3 million in 1925-26, but were only 64.5 in 1928-29. The number of passengers carried by State railways fell from 115.7 million passengers in 1927 to 112.2 in 1928, and to 99.2 in the first ten months of 1929, the probable yearly total being but slightly higher than in 1927. The process of liquidation of unsound firms is continuing; failures averaged 944 monthly in the first 11 months of the year, against 933 in 1928, 886 in 1927, 654 in 1926 and 617 in 1913. Transactions passing through the 11 clearing houses fell from 710.1 milliard lire in the first eleven months of 1928 to 678.4 in the corresponding months of 1929, and the decrease was especially felt in end-of-the-month Stock Exchange clearings. The highest level of unemployment was 489,437 in February, as compared with 439,211 in January, 1928; the minimum was 193,325 in June, as compared with 234,210 in July, 1928. In December, 1929, there were 408,748 persons wholly unemployed, as compared with 363,551 in the corresponding month of 1928. From December, 1928, to December, 1929, the greatest relative increases took place in the iron and steel and other metal, textile and chemical industries.

General Economic Indexes.—The following half-year average indices, taken from Mortara's Prospective Economiche for 1930 are useful for an estimate of the present economic trend:—

	Bank Notes Issued.	Paper Price of Gold.	Wholesale Prices.		Cost of Living.	Wages.
			In Paper Current Lire.	In Gold Lire.		
1913	100	100	100	100	100	100
1921—						
1st half-yr.	749	460	551	120	560	589
2nd half-yr.	737	455	525	115	522	567
1922—						
1st half-yr.	728	389	517	133	503	561
2nd half-yr.	728	430	542	126	498	550
1923—						
1st half-yr.	694	401	539	134	495	523
2nd half-yr.	705	442	531	120	493	519
1924—						
1st half-yr.	691	443	545	123	517	517
2nd half-yr.	725	444	562	127	536	530
1925—						
1st half-yr.	725	476	622	131	594	559
2nd half-yr.	760	496	671	135	628	594
1926—						
1st half-yr.	728	491	648	132	653	609
2nd half-yr.	725	510	661	130	653	637
1927—						
1st half-yr.	694	402	568	142	639	...
2nd half-yr.	681	355	486	137	539	...
1928—						
1st half-yr.	636	366	492	135	530	545
2nd half-yr.	628	368	491	133	529	539
1929—						
1st half-yr.	594	368	492	134	547	532
2nd half-yr.	610	368	470	127	543	534

These indices show very clearly that something is still out of joint in the economic mechanism. Gold wholesale prices at 134 and 127 for the two half-years, and 131 for the whole year, seem low in comparison with a 139 level for the United States, 137 for Great Britain, and 140 for France. Cost of living has increased, while wholesale prices decreased; and as money wages were diminishing, real wages have suffered during 1929.

Savings and New Issues.—Deposits in postal saving banks, which, after having risen to 504.4 at the end of 1926 (from the 100 basis of 1913) had sunk to 460 in October, 1927, continued in 1929 to recover the lost ground, reaching 535 in October. Deposits in ordinary saving banks similarly advanced from 475 in June, 1927, to 583.8 in December, 1928, and 591.4 in October, 1929. Deposits in the six largest ordinary banks rose from 542.3 in March, 1927, to 650.8 in December, 1928, and 664.1 in October; but those of people's banks, which had risen from 654.8 in March, 1927, to 696.4 in December, 1928, decreased to 678.3 in June, 1929. The total of remittances from Italian emigrants decreased from 3,757.9 million lire at the end of 1926 to 3,241.5 at the end of 1927, to 2,963.7 at the end of 1928 and 2,731.6 at the end of October, 1929. The net increase in the issued capital of joint-stock companies amounted to 4,605.3 million lire in the first eleven months of 1929, compared with 2,698.1 million in 1928 (whole year) and 1,840.5 in 1927.

Money and Stocks.—The official rate of discount, which was raised from 5.50 to 6 per cent. at January 7, 1929, was again raised to 7 per cent. on March 14th, and remained there during the rest of the year. The market rate of discount for first-rate bills, therefore, increased also from 5.75-6 to 6.75-7 per cent., and prolongation rates from 6.50-6.75 per cent. to 7.25-7.50 per cent. The Bourse was stagnant: the Bachi index number increased at first from 141.3 at the end of 1928 to 143.5 at the end of February, and then fell progressively to 129.2 at the end of November.

Public Finance.—The financial year closed for the fifth time with a surplus. The provisional figure of 382 million lire will probably increase to over 500 million lire in the final accounts. The first six months (July-December) of the current year 1929-30 show a deficit of 218.3 milion lire, owing mainly to a decrease in the yield of the wheat duty, in consequence of the good 1929 crops and the resulting diminution in imports. State internal debt increased further to 87,689 million lire at December 31, 1929.

RUSSIA.

The year 1929 was dominated by the ideas of the so-called Five Years' Plan of National Development and by the attempt to introduce on a big scale collective forms of agriculture. The enormous capital outlays it involved seriously affected every branch of national economy.

Currency and Credit.—The increase of currency circulation was the biggest for the six years since the inauguration of the New Economic Policy. From 1,971 million roubles it rose to 2,642 million roubles, of which Tchervonetz currency increased from 1,090 million roubles to 1,466 million roubles, and Treasury notes from 711 million roubles to 933 million roubles. By December 1st a further rise brought the currency up to 2,872 million roubles. There was again a steady expansion of credit, but, in contrast to the distribution in previous years, heavy industries and agriculture received the biggest share.

Finance.—1929 was the first year of the execution of the Five Years' Plan, which assumes a total expenditure during the five years of 86,000 million roubles, that is to say, the whole of the national income for two and a half years. Such colossal sums obviously cannot be obtained through the channels of the budget system alone. In fact, nearly half this expenditure is expected to come from State domains, nationalised industries, banks, credit and trade. The total resources of the "Finance Plan," "mobilised" during 1929, exceed the estimates by nearly 2,000 million roubles. The estimates for 1930 are fixed at 17,600 instead of 14,000 million roubles, as provided by the Five Years' Plan. These figures tend to show either that the realisation of the Plan is likely to swallow up a much bigger proportion of the national income than was expected, or that the national income is growing at higher speed than that estimated by the Plan.

Agriculture.—The land was again the centre of interest; in the first place because it was the first year of extensive experiments with collective farming and mechanisation of agriculture on a big scale; and secondly because the application of new methods of grain collecting (chiefly "contracting" the grain in the previous winter, giving the peasants selected seeds, implements and monetary advances), enabled the Government to secure a record quantity of grain, over 850 million poods, as compared with 600 million poods for the last two years. Crops were only slightly better than in 1928, but their geographical distribution was more favourable, as the harvest was fair and even good in the grain exporting areas such as the Ukraine, the Lower Volga and the Northern Caucasus. The areas under cultivation underwent considerable changes, the main and most important of which were the deliberate diminution of area by the more prosperous peasants (kulaks), and the extension of cultivated areas by the State farms and the Colhos or collective peasant farms. The total increase of the cultivated area by nearly 5 per cent. on last year is a proof that the so-called "socialised sector of agriculture" is making considerable headway. According to official statistics, there were by October 1st 75,000 Colhos, embracing 1,500,000 peasant holdings, with a total area of over 7,000,000 hectares, under cultivation.

Industry.—The industrial development of 1929 was of the utmost significance. The value of the entire output of industry—that is to say, both of the socialised and privately owned—was 16.8 per cent. above that of 1928, but the significant point to notice is that the output of privately owned industry actually decreased by 8.9 per cent., while that of the State owned increased by 23.7 per cent. This tendency is now so marked that the disappearance of private traders and privately owned industries is clearly foreshadowed. The increase in industrial capital, which amounts to 3,075 million roubles, was derived from the following sources: 1,670 million roubles (54.3 per cent.) profits on industry itself; 471 million roubles (15.3 per cent.), credits, including foreign, and 934 million roubles, allocated by the State Budget. For 1930 the corresponding figures are 2,980 million roubles profits of industry, 544 million roubles credits, and 1,692 million roubles State Budget.

POLAND.

Agriculture and Industry.—The year 1929 was characterised by a deep trade depression. The number of unemployed, which at the end of 1928 amounted to 94,000, reached 175,000 in December, 1929. Nearly all branches of industry are passing through a severe crisis. In 1928 iron production had nearly reached the pre-war level. For steel the index (1913=100) amounted to 93.8, for rolled products to 94.4. The year 1929 brought a set back; the production declined to 75 per cent. of the output in 1913. In the cotton industry the trade depression was very acute. The number of employed decreased from 66,700 at the end of November, 1928, to 55,000 at the end of the same month in 1929. While in 1928 81.8 per cent. of these workmen were employed six days a week, the proportion in 1929 had decreased to 11.5 per cent.—more than two-thirds are working less than four days. Agriculture, the timber trade, the sugar industry, and other branches of the economic activity of the country are suffering very much from the downward tendency of prices on the world markets. In agriculture the losses supported by the producer have entailed a great decrease in the use of fertilisers. The only industry which can look back on the year 1929 as a period of improvement is the coal trade. The average monthly production of coal, which was 3,383,000 million tons in 1928, reached nearly four million tons during the last months of 1929. The total production for 1929 can be estimated at more than 45 million tons, as compared with 40.5 millions in 1928.

Finance.—The revenue in 1929 increased less rapidly than during the previous years, as may be seen from the figures below:—

First Six Months of the Budgetary Years (April to October).

(Million zlotys.)

	1927-28.	1928-29.	1929-30.
Revenue	1,419.6	1,634.7	1,705.1
Expenditure	1,253.9	1,574.5	1,686.1
Surplus of revenue...	165.7	60.2	19.0

The Government now has to face the difficult task of maintaining the revenues in equilibrium with the growing expenditure. When the great reserves possessed by the Treasury are taken into account, the situation appears, on the whole, satisfactory. The position of the Bank of Poland has been much strengthened in 1929 as far as the gold reserve is concerned. The amount of gold held by the Bank increased from 621 millions at the end of 1928 to 700 millions at the end of 1929. The total reserve of gold and of foreign currencies amounted to 1,119 millions on December 31, 1929, as compared with 1,148 millions one year ago. The statutory cover of gold and foreign currencies at the end of 1929 was more than 61 per cent. of notes in circulation and deposits.

Foreign Trade.—Imports amounted to 3,112 million zlotys, exports to 2,813 millions, so that the deficit of the trade balance was nearly 300 millions. This is a great improvement on the preceding year, when the passive balance was 853.8 million zlotys. This change is due both to a diminution in imports and to an increase in exports. Since July the trade balance has been favourable. The excess of exports during the second half of the year amounted to 278 millions. Exports, not only of agricultural, but also of industrial goods, showed a marked increase as compared with the figures of 1928.

HOLLAND.

The development of economic conditions in Holland during the past year was favourable, except for a small set back in the last month after the Stock Exchange crisis.

Foreign Trade and Prices.—For the year 1929 imports and exports, in comparison with those of previous years, were as follows:—

	Quantity (in 1,000,000 Kg.)		Value (in Million Guilders).		
	Imports.	Exports.	Imports.	Exports.	Balance.
1926...	28,346	15,822	2,441·9	1,749·2	692·7
1927...	28,619	14,338	2,548·9	1,899·7	649·2
1928...	29,821	15,725	2,684·0	1,986·0	697·7
1929...	30,989	16,302	2,752	1,989	762·8

Index figures of wholesale prices for the year, in comparison with former years were:—

	General Index Figure. (1913 = 100.)	Foodstuffs Only. (1913 = 100.)
1922	160	160
1923	151	143
1924	156	156
1925	155	155
1926	145	144
1927	148	153
1928	149	157
1929	142	149

Public Finance.—Receipts from direct taxes amounted to 511,223,274 florins, as against 492,305,000 florins for 1928. The higher amount of the dividend and tantièmes taxes has contributed to this rise. The tax on Stock Exchange transactions also yielded a larger amount.

Money and Stocks.—The quotation for prolongations moved between monthly averages of 5.8750 and 4.4758. The average for the year was 4.9003, against 4.1613 in 1928. Bank rate rose from 4½ per cent. to

5½ per cent. on March 23, 1929, and fell to 5 per cent. on October 31, and to 4½ per cent. on November 15th. Issues of new capital amounted to 468 million florins, against 669 million florins in 1928. Of the 1929 total 136 millions or 29.1 per cent. of the total, was raised on foreign account, as against 309 millions, or 46 per cent., in 1928. The private discount rate varied between the average of 4.19 for January and 5.38 for June. The average for November was 4.24. Business on the stock market during the year was very lively. Prices rose sharply at first, especially for industrials, and fell sharply in October. The wild fluctuations caused an active business, which is reflected in the yield from the tax on Stock Exchange transactions, which rose to 8,530,575 florins, against 7,459,000 florins in 1928. The total Stock Exchange index for December, 1929, was 100, against 118 in the previous year. Shipping shares fell from 96 to 61, Colonial shares from 143 to 120, industrials from 115 to 99. The average rate of interest from four groups of bonds rose to 4.75 per cent. in December, 1929, from 4.62 per cent. in 1928.

Shipping.—During 1929 the harbour traffic of the port of Amsterdam totalled 3,974 ships of a tonnage of 9,523,409, as against 3,870 ships of a tonnage of 9,217,128 in 1928. For the port of Rotterdam harbour traffic for 1929 totalled 12,635 ships, with a tonnage of 21,316,853, as against 12,291 ships, with a tonnage of 20,456,343 tons in 1928. There is also a considerable increase mainly due to larger shipments of iron ore.

Bankruptcies.—The number of public bankruptcies during the eleven months of 1929 was 2,523, against 2,976 during the same period of 1928.

BELGIUM.

Production, Prices and Traffic.—Industrial activity progressed till the middle of the summer, and the great demand for labour caused a considerable increase in wages. But, since August, a slight slackening appeared in metallurgy and, a little later, in constructional engineering. The Steel Cartel decided in November and December to curtail the quotas 10 per cent. Activity remained strenuous in the coal industry and prices were firm right to the end of the year, though the general position has been a little less strikingly good. Here, as everywhere, the situation of the textile industry has been unsettled. Unemployment has been practically unknown, though more labour is at present available and the manufacturers are less at a loss to find workpeople. The upward movement of wages has come to a standstill, but the successive increments already granted have been so considerable that many observers doubt whether our ability to compete on foreign markets will be maintained. Wholesale prices increased during the first part of the year; afterwards the index number of wholesale prices declined owing to the fall in raw materials on the leading markets. This index, which stood at 855 (123, if expressed in gold) in December, 1928, dropped to 823 (119 in gold) at the end of December, 1929. Retail prices, supported by a severe winter and a dry summer, continued to advance towards the world level, but this movement slackened at the end of the year. The index rose from 852 (123 in gold) in December, 1928, to 897 (129 in gold) in December, 1929.

PRODUCTION.

(Thousands of metric tons.)

	Coal.	Pig-iron.	Steel.
1913	22,842	2,485	2,467
1926	25,320	3,399	3,339
1927	27,574	3,751	3,605
1928	27,543	3,905	3,820
1929	26,932	4,096	4,012

FOREIGN TRADE (BELGO-LUXEMBURG CUSTOMS UNION).

(In millions of francs.)

	1928.	1929.
Imports	31,564	35,510
Exports	30,145	32,234
Excess of imports over exports	1,419	3,276

Sea-going vessels entered at Antwerp harbour were 24,330,000 tons, against 23,604,000 in 1928 and 14,139,000 in 1913. During the first ten months the railways worked 7,006 million ton-kilometres, against 6,468 for the same period of 1928, while passenger traffic scheduled 5,433 million passenger-kilometres, against 5,229 in 1928.

Money, Exchange and Stocks.—Money has been a little less easy in 1929, though there has been no real tightening. The discount rate of the National Bank stood at 4 per cent., till July 31st, when it was raised to 5 per cent.; it was reduced to 4½ per cent. on November 13th, and to 3½ per cent. on December 31st. Call money varied practically between 2 and 3 per cent.; it was seldom above 4 per cent. and never less than 1½ per cent. The balance sheets of the National Bank record a similar trend to that of last year, an increase in holdings of sterling and dollars, and, on the other hand, a greater demand for credit from the home market. Its reserve has been strengthened by purchases of gold from Berlin and New York, as well as by an increase of holdings of gold-securities. The number of notes in circulation has greatly increased, while the total gold and gold-exchange cover has also been extended a little; metallic cover is noticeably greater.

NATIONAL BANK OF BELGIUM.

(In millions of francs.)

	Jan. 3, 1929.	Jan. 2, 1930.
Reserve: (i) Gold	4,517	5,876
(ii) Gold bills	3,075	3,066
Discount	3,361	4,347
Notes in circulation	11,965	13,933
Ratio of reserve to notes and deposits	58·8%	59·10%
Ratio of gold to notes and deposits	34·9%	38·8%

The Belgian exchange stood at a premium during the year 1929. The average rate was 7.186 belgas for the dollar (par of exchange 7.192) and 34.90 for sterling (par of exchange 35.00).

After an actual improvement in February and March, the Stock market was involved in a very acute crisis; from 108, quoted in January, 1929, the share index dropped in December to 75. Colonials were weakest and fell from 100 to 54. Stagnation led to insolvency in a certain number of minor instances, but this had no serious effect on the market. Government securities and bonds have been rising on account of purchases for the Sinking Fund and of a sounder public estimate of their value. Their index rose from 108 to 113. At the Caisse d'Epargne (Savings bank guaranteed by the State) the excess of deposits over withdrawals will reach about 1,100 millions, against 590 in 1928.

New issues have been very considerable, and attained 14,366 millions, against 12,262 millions in 1928 and 6,328 millions in 1927. In recent months, owing to the Stock Exchange crisis, there has been a substantial decline in the amount of new issues. The amount of dividends disbursed by joint-stock companies reached 3,480 millions, against 2,900 millions for 1928.

Public Finance.—Fiscal receipts attained 9,836 millions, against 9,261 millions in 1928. Non-taxation income showed a remarkable increase, on account, *inter alia*, of the growth in the revenue from the State's reserves (foreign portfolio); moreover the share of the State in the profits of the National Bank was 216 millions, against 153 in 1928. In spite of the increase in public expenditure, the financial year 1929 will leave, after the redemption of 1,500 million francs of public debt, a surplus of about 400 million, according to the latest accounts.

On December 31st, 1929, the Belgian Public Debt totalled 54,625 millions, against 56,125 millions at the end of 1928.

SPAIN.

Economically, Spain continues to progress slowly, but surely. Population is increasing at a high rate; emigration is very limited; the means of transport are improving; the number of motor cars in use is very high;

security issues are numerous and the amount of private savings is larger every day. Even the fall of the peseta during the second half of the year 1929 has not been able to stop the growth of imports, and this development reflects unfavourably on the exchange. The most important problem is the conflict between the slow progress of the country and the extraordinary expansion of public expenditures during recent years. Not only the Government, but public corporations and other organisations endorsed by the Government, show eagerness in the undertaking of public works. This is very creditable, but it is doubtful whether it can safely continue as producers are beginning to show signs of lassitude under the burden of heavy taxes and social charges, and it is generally thought that, to normalise monetary conditions, it is necessary to initiate an energetic policy of reduction in public expenditure. The Barcelona and Seville Exhibitions have proved to be a wonderful display of vitality, but they involved an increase in the burden of taxation, which should be taken into account. The Government seems to be of the same opinion, and the execution of some public works, especially the construction of warships, has been postponed.

Production and Trade.—Although 1929 has not been an excellent year with reference to agricultural crops, it represents an improvement on the last two years, as the cereals harvest has been plentiful and the wheat gathered will be sufficient for the needs of consumption. Mining activities during the first eight months show an increase over the same period of the previous year; the figures for the extraction of ores are as follow:—Iron, 3,701,000 tons (against 2,962,000 in 1928); copper, 2,406,000 (2,241,000 in 1928); coal, 4,847,000 (3,787,000 in 1928); lead, 95,130 (83,630 in 1928); zinc, 66,926 (81,903 in 1928). The iron and steel industries also increased their production during the first eight months to 479,929 tons of pig iron (against 318,894 in 1928) and 625,812 tons of steel (against 392,717 in 1928); most other industries remain stationary, but there is an expansion in some, including public services. Spanish external trade has been constantly increasing for the last few years; imports have grown more rapidly than exports, and the index number of imports with reference to 1913 was 110.5 in 1926, 120.4 in 1927, and 139.8 in 1928, whereas the index number of imports was 83.5 in 1926, 88.6 in 1927 and 98.4 in 1928. There are no official data on external trade for 1929, but, according to foreign statistics, the total Spanish imports from Great Britain, the United States, France and Germany amounted to £39,300,000 during the first nine months (£37,500,000 in the same period of 1928), and Spanish exports to those countries amounted to £36,700,000 (against £38,500,000 in 1928).

Finance, Prices and Exchange.—The Minister of Finance has made every effort to balance revenue and expenditure, a result which had never been attained as yet, as, although the ordinary Budget in 1928 and 1929 showed a surplus, the expenditure of the extraordinary Budget remained as a deficit; this has, for the most part, been included in the ordinary Budget for 1930. The revenue increases every year; it amounted to 3,525 million pesetas in 1928 and 3,726 million pesetas in 1929. The total expenditure of the ordinary and extraordinary Budgets amounted to 3,784 millions in 1928 and to 3,861 in 1929, not including the extraordinary expenditure for December, 1929. The Government issued debentures for 500 million pesetas, besides another 500 millions in railroad bonds. In 1929 securities were issued for a total amount of 2,497 millions, against 1,604 millions in 1928, this being the highest figure on record since 1921. Stock Exchange activity declined towards the middle of the year, and, after the New York crisis, heavy falls in the quotations resulted in a reduction of business, which lasted until the end of the year. The mean index number for wholesale prices during the first ten months was 171.5, against 166.3 for the same period of the previous year. The rate of exchange for the peseta has suffered a heavy fall during the year 1929, as in the last months of 1928 the pound was worth less than 30 pesetas, whereas the mean rate during 1929 was 33.13 pesetas to a pound, the lowest quotation being that of 35.43, registered in December.

SWITZERLAND.

Trade and industry in Switzerland were less active than in 1928, as the general economic situation was strongly influenced by the financial crisis in the United States. Conditions were, however, good for banking and hotels, all railway receipts showed an increase, unemployment was smaller, and Federal, Cantonal and Municipal finances improved. There was a surplus of 23,760,000 francs in the Federal accounts for 1928. The Budget of the Confederation for 1929 showed estimated expenditure at 350,930,000 francs, and revenue at 352,800,000 francs, leaving a surplus of 1,880,000 francs. The Budget for 1930 estimates expenditure at 382,900,000 francs, and revenue at 383,000,000 francs, thus leaving a surplus of 100,000 francs. The Public Debt, which total 2,152,664,000 francs at the end of 1928, was reduced by about 30 millions in 1929. Traffic receipts further improved, thanks partly to a reduction in goods transport rates, and partly to the increasing number of tourists during the summer and winter seasons. Receipts of the Federal Railways totalled 429 millions, against 418 millions in 1928, expenditure reached 263 millions, compared with 254 millions in 1928, thus leaving a surplus of 166 millions as against 164 millions the year before. The Railways Board has decided to electrify within the coming seven years another 298 miles of secondary lines at a cost of 82 million francs.

The official discount rate was unchanged at 3½ per cent., while unofficial rates ranged from 3 to 3½ per cent. The sterling exchange opened at 25.18 in January, rose to 25.23 in February and March, and dropped to 25.10 in December. Activity on the Swiss Bourses was very great until the New York slump, when heavy losses were recorded; the average value of 110 industrial securities in the Swiss market dropped from 254.05 per cent. in January to 242.43 per cent. in August, and to 212.43 in November, while that of 12 securities of the Swiss Federal Government dropped from 95.24 per cent. in January to 93.45 per cent. in October, but rose to 95.05 per cent. in November. Crops were, as a whole, very satisfactory, owing to the fine summer and magnificent autumn, and the total value of agricultural production was about 1,470 million francs, compared with 1,456 millions in 1928. Exports aggregated roughly 2,104 millions as against 2,134 millions in 1928, while imports totalled 2,783 millions, compared with 2,744 millions the year before. The adverse balance was therefore 679 millions, against 610 millions in 1928. The number of unemployed fell from 16,284 in January to 4,399 in June, but it rose again to about 9,000 in December owing to seasonal causes. The index number of wholesale prices (July, 1913=100) was 142 in January, 139 in May, 140 in December; that of retail prices (July, 1913=100) was 161 in January and 163 in December. Prospects for the year 1930 are, nevertheless, good, and there is more activity in trade and industry.

SOUTH-EASTERN EUROPE.

AUSTRIA.

One of the most disappointing years since the creation of the Republic has just been completed. The efforts to launch the big investment loan were all in vain. Apart from minor transactions no shares or bonds were issued either abroad or at home. The short-term credits available in Austria diminished. Heavy losses were sustained on the stock and share market, and the general level of share values fell by

about 25 per cent. The difficulties under which the Bodencredit-Anstalt had been labouring for a considerable time, led to the fusion of that bank with the Credit-Anstalt, whereby the shareholders of the Bodencredit-Anstalt suffered heavy losses. The export of finished goods rose somewhat, and the deficit on foreign trade in agricultural products was reduced. Nevertheless, the balance of foreign trade closed with a deficit for the year of about 1.1 milliard schillings. Progress can be recorded in one direction, namely, that the Tenants' Protection Act, which had created quite intolerable conditions and had led to the loss of practically all rights of houseowners, was modified slightly. Private enterprise in building is, however, still stagnant and it is planned to stimulate it in the present year by means of legislative measures and the issue of a housing loan. Compulsory compositions with creditors decreased from 2,080 to 1,988, while bankruptcies remained at about the old level of 583. The National Bank extended substantial credits and there were times during the year when the bill portfolio was as much as 150 per cent. higher than in the previous year. The foreign currency cover of the banknotes in circulation was retained at the same high level. The reform of the constitution, introduced last year, is an important landmark, for it strengthened State authority and checked political quarrelling. The heavy industries, which were fairly busy during the greater part of the year, suffered in the last months from increased German competition and difficulty in exporting. For this reason, the unemployment figures underwent a serious increase.

Czechoslovakia.

On the whole, 1929 was less prosperous than 1928, but the country has shown a remarkable power of resistance to the economic depression which seems to be spreading over most European countries. The textile industry, sugar production, the leather industry and the timber trade all showed further signs of falling off; the linen trade especially suffered badly. On the other hand, some other industries, notably glass, iron and coal, have increased their production and exports. In 1929 Czechoslovakia attained the first place among the countries of the world in the export of glass. Compared with 1928, the output of pit coal increased by 7½ per cent., lignite by 7 per cent., coke by 20 per cent., pig iron by 6 per cent., and raw steel by 12 per cent. In 1929 seventeen blast furnaces were in operation out of the total of 23. The activity of the building trades in 1929 did not quite reach that of the boom year 1928, but was still very considerable, and this had a beneficial influence on a great many industries. The number of unemployed during the year remained very much the same as in the previous year. The fact that it never exceeded 35,000, is evidence that conditions were not so bad as some pessimists would have us believe.

The wholesale price index number was 876 in December, 1929, as compared with 955 in December, 1928; the index of retail prices also fell slightly and was 880 on November 15th.

The hopes placed by agriculture in the import duties on cereals have not been realised. These duties did not afford the protection to home production which was expected. In 1929 the harvest of most crops was a little lower than in 1928, but the general situation of the farmers was adversely affected by the slump in the international cereals market and by the crisis in the sugar industry. The resulting decrease in the purchasing power of the country population is having some influence on trade and industry in general.

Perhaps the most notable achievement of the year was the final introduction of the gold standard, or, rather, the passing of a law to continue the state of affairs which already existed. In this connection it should be pointed out that the effect of the liberation of the money market, or rather of the free export of gold and foreign currency was to raise the cost of money and credit for home industry. Before this measure was adopted, Czechoslovak industry enjoyed very cheap credit, since the proceeds of the large foreign trade had to be kept within the boundaries of the country. Now, when the frontiers have been opened, capital finds more remunerative employment in neighbouring countries, where money is still scarce and profits high. The consequence is that, although the official bank rate (5 per cent.) remained unchanged in 1929, and this in spite of the financial upheavals in the international money markets, the rate of interest charged by the banks to trade and industry was higher and money rather scarce. Nevertheless new capital issues (including increases of capital) amounted to some 350 million Czechoslovakian crowns, *i.e.*, 80 millions more than in 1928.

Foreign trade in 1929 no longer shows such a large favourable balance as in previous years: 497 millions, as against 2,033 million crowns in 1928. However, this need not be considered a bad sign. Exports of manufactured goods were maintained at the same high level as before. Imports have increased by 700 million crowns as compared with 1928. (Imports of raw materials alone show an increase of 1,000 millions.) Rather should this be interpreted as a proof that the purchasing power of the country as a whole has increased and, further, that the proceeds of foreign trade were no longer so urgently needed to repurchase Czechoslovak stock abroad and to pay interest and dividends on foreign capital invested in Czechoslovakia.

There was a General Election in Czechoslovakia in the autumn of 1929, as a result of which a new Coalition Government was formed. This new coalition includes the Czech and German Agrarian parties, the Czech and German Socialist groups and a few other parties. Dr. Englis again became the Minister of Finance in the new Government. As a consequence of the General Election the Budget for 1930 was only laid before Parliament at the beginning of January, 1930. It is constructed on similar lines as in 1928 and 1929. The total estimate of expenditure is given as 9,367 million crowns, against a total revenue of 9,420 million crowns, thus showing a surplus of 53 million crowns.

Hungary.

A year of economic and financial crises, 1929 was the most trying period since the operation of the League of Nations reconstruction scheme began in 1924. The crisis was due to three principal causes: the scarcity of money, the low level of the world export prices of agricultural products and last, but not least, to the uncertainty and nervousness brought about by the non-German reparation parleys. The year began under normal monetary conditions, but the upward trend of money rates abroad soon compelled the National Bank to raise its discount rate from 7 to 8 per cent. in April. With the improvement of the international monetary position after the New York Stock Exchange crash the National Bank reduced its rate to 7½ per cent. in November, but up to the end of the year money was scarce and dear. Hungary, as a borrowing nation, has suffered from the uneasiness of London and New York, as it was impossible to float the necessary long-term loans on these markets. Public finance shows a less satisfactory state than in previous years, as the first half of the fiscal year 1929-30 brought a deficit of 28 million pengös (£1,000,000), against a surplus in former years. The change is due both to increased expenditure and to diminished revenue. The falling off of the revenue is due to the economic depression and, in a lesser degree, to tax remissions granted in the past. Crops were, on the whole, satisfactory, but prices on the world market were so low that exports were often made at a loss. Therefore the diminution in the passive balance cannot be taken as a very satisfactory index, as it might appear at first sight. In the first ten months of 1929 exports increased to 797.8 million pengös, as against 652.8 in the same period of 1928; and imports decreased to 897 millions from 973 millions in 1928. Thus the adverse balance of trade decreased from 320.2 million to 90.2 million pengös. Considering that the adverse trade balance is the biggest passive item of the Hungarian balance of payments, it is certain that its deficit will be considerably smaller than last year, when it totalled 500 million pengös. The decreasing deficit of foreign trade is due to the diminished purchasing power of the population, as the necessary foreign credits were not available. The state of trade was not satisfactory. Although some sheltered industries show increased profits, their prosperity has adversely affected the agricultural population. The great discrepancy between industrial and agricultural prices caused the Government to appoint a Commission to inquire into the tariff system of the country, but nothing further has yet been done, although a downward revision of tariffs is repeatedly asked for by the farmers. Domestic trade has been slack. Insolvencies totalled more than 2,000 in 1929, as against 1,560 in 1928. Some of the commercial banks have published their balance sheets, which show slightly increased profits against last year. The position of the banks is strong and last year's dividends will be maintained. The Stock Exchange was weak throughout the year, and quotations have fallen about 30 per cent. in 1929.

Roumania.

The first seven months of 1929 were characterised by an intense legislative activity. The first and most important measure was the law introducing the legal stabilisation of the currency based on the foreign loan of the newly created Monopoly Institute, which also provided funds to cover the most pressing debts of the State. It was followed by many other laws, culminating in the new Customs Tariff. These measures laid the foundation of the reorganisation of the country's resources after the disastrous effects of the war and the subsequent bad administrations. There has not yet been time for them to produce a decided effect on the economic situation. The harvest last year was fairly abundant. Unfortunately, prices have so far been disappointing. Ultimate results, however, will greatly depend on the prices obtainable next spring. It may be asserted already that nothing like the originally estimated value of the production will be realised. The oil industry has had an unprofitable year owing to the low world prices, although production has been active. Prospects appear better since the agreement for sales in the interior was concluded towards the end of the year. The whole country has been suffering severely from the economic crisis. Protested bills, failures and moratoria reached unprecedented proportions. The depression resulted in a severe decrease in Treasury receipts, which necessitated a very unwelcome increase in taxation. There are, however, signs of recovery. Stabilisation seems assured; the foreign trade balance during the last few months has been active after a long interval of unfavourable returns; foreign capital is being gradually attracted. But it is only by the strictest economy and hard work that Roumania will succeed in striking the road to prosperity, and then only if the political situation remains undisturbed.

Jugoslavia.

The year 1929 has been an excellent year for Jugoslavia, although it began under the worst auspices. Political strife, bad harvests, a severe winter, and an adverse trade balance for 1928 of 1,390 million dinars, did not augur well for the New Year. The tide was turned by a bumper harvest, maize yielding a record of 40 million quintals and wheat 26.4 million quintals. At the end of November the trade balance was active by 148 million dinars, exports being 7,143, imports, 6,995 millions. Foreign capital, encouraged by the cessation of political strife, the improvement in administration and the reform of economic legislation, flowed in unprecedented amounts into mining and industry. The stocks of the National Bank grew to the record figure of 1,767 million dinars, current accounts to nearly 1,300 millions, savings deposits increased correspondingly, while circulation rose only from 5,528 to 5,718 million dinars. Optimism became observable in all directions. Besides mining, the textile, timber, electrical, chemical, cement and paper industries had excellent years, some paying as high dividends as 16 per cent. Banks maintained their dividends of 8-10 per cent., while interest rates fell from 10-16 per cent. to 9-14 per cent. The foundation of the Privileged Agrarian Mortgage Bank (capital 700 millions) will enable peasants to obtain credit at 10 per cent. instead of the 24 per cent. customary in the country. Increased State receipts and the settlement of the war debt to France have improved Government finance. Administratively, the division of Jugoslavia into nine provinces (banovinas), with large powers of self-government, is of first-class importance.

Bulgaria.

Foreign trade was intensely active in 1929, with imports heavily in excess almost throughout the year. The final adverse balance of nearly Leva 2.000 million had unfavourable effects on the monetary and credit position. Scarcity of money, higher rates and curtailment of credit have prevailed everywhere in the country. Owing to reduced consumption and to falling prices of agricultural produce, business activity has suffered considerable reduction in both turnover and profits. Local industries have equally felt the strain and experienced serious difficulties in their sales, especially as the prices of several raw materials have been steadily falling. This state of affairs has much accelerated the readjustment of trade, industry and credit to the real needs and possibilities of the local market, and there is reason to believe that business and credit will work on a sounder basis in 1930. The position of the Treasury has been satisfactory, receipts coming in regularly and slightly in excess of expenditure.

Greece.

Economic conditions were far from satisfactory in Greece during 1929. The country is feeling the effects of the monetary and credit inflation created during and after the war. The economic burden of the refugees and an abnormal growth of the town population are additional handicaps. Particularly difficult is the situation of industrial enterprises established during the boom in a haphazard way and with large immobilisations of capital. The authorities, with the assistance chiefly of the Bank of Greece and the National Bank of Greece, are endeavouring to make the process of liquidation as smooth as possible. To help industry and reorganise it on a sounder basis the Government has decided to grant loans of more than £400,000 from Treasury funds. Assistance has also been given to various banks, especially new institutions, which were in distress. Compulsory or voluntary winding-up and amalgamations are taking place. The prices of stocks in the Athens Stock Exchange have been steadily falling during the past year, partly in consequence of the excessive issue of Government bonds on advantageous terms for the holders and partly as a reflection of the difficulties in the general economic situation. The number of commercial failures has grown and unemployment has been increasing. Agriculture is suffering from over-production of the two principal articles of export, currants and tobacco, the prices of which have consequently declined. There is, however, a hope that the new Agrarian Bank will further the development of agriculture. Industrial output is also smaller, but, happily, the adverse balance of trade is showing a tendency to decrease, and the state of public finance is entirely satisfactory. A surplus, the third in succession, is anticipated for 1930-1931. Thanks to these good results the Government was able to allow some slight tax reductions. On the other hand, public expenditure has been increasing. To finance the execution of various public productive works, a loan of £4,000,0000 was issued in London in December, 1928, and, as soon as the situation of the international markets will allow it, a new loan will be floated abroad. Negotiations have lately taken place with a view to resuming the participation of French capital in Greek

financing, and Italian capital has begun to show an interest in Greece by the establishment of an affiliate of the Banca Commerciale Italiana, and, recently, by the granting of a credit to the Greek Electric Company, in whose administration representatives of the lenders will participate.

SCANDINAVIA.

Denmark.

The Official Danish wholesale price index was 151 in January, 1929, and 146 in both June and December. Concurrently with this slightly declining tendency, the prices of export goods have shown a considerable improvement, and the wholesale index for these was 144 in January, 144 in June, and 156 in December. At the same time the prices of import goods declined from 148 in January to 144 in June and 142 in December. The rise in the prices of export goods was due to the improvement of agricultural prices, especially that of bacon, a development of great importance to our leading trade, which further profited by good crops. In 1929 the exports of bacon aggregated 249,000,000 kilos, against 272,000,000 kilos in 1928, while the exports of butter in casks were 159,000,000 kilos and 147,000,000 kilos respectively. The exports of eggs totalled about 39,000,000 scores in each year. The value statistics improved, as the figures below show:—

Exports of Danish Produce.

	1928. Kr.	1929. Kr.
Live cattle	85,000,000	88,000,000
Bacon, meat, etc.	482,000,000	513,000,000
Butter, cream, milk and cheese	507,000,000	526,000,000
Eggs	84,000,000	84,000,000
	1,158,000,000	1,211,000,000

In 1929 Danish foreign trade comprised imports to the value of 1,792,000,000 kroner and exports aggregating 1,707,000,000 kroner, and there was thus an excess of imports for the year of 85,000,000 kroner. In 1928 the imports aggregated 1,736,000,000 kroner and the exports 1,657,000,000 kroner. The manufacturing trades also showed improvement in the course of the year, and this is reflected in the unemployment records. In December, 1928, the percentage of unemployed was 28.4, and in December, 1929, it was only 19.9. The gross earnings of the mercantile marine in foreign trade are estimated at 205,000,000 kroner in 1929, against 186,000,000 kroner the year before.

Norway.

Stringency prevailed in the money market during the greater part of the past year. The Bank rate remained at 5½ per cent. until September 27th, when it was raised to 6 per cent., after which it was reduced by stages to 5 per cent. at the turn of the year. The movements of the discount rate have been dictated more by the conditions in the international markets than by the position of the Norges Bank, which continued strong throughout the year. The banks have been able to work under quiet conditions and with satisfactory results as far as can be seen from statements hitherto published. Only two banks now remain under public administration. The foreign trade returns indicate a larger turnover than in 1928, and the excess of imports over exports up to November 30th amounted to 292 million kroner, compared with 295·5 million kroner in 1928. Domestic trade was less brisk than had been anticipated at the beginning of the year, but the number of failures and compositions was lower than in 1928. Conditions in the labour market were quiet. Industry worked under favourable conditions during the first half of the year, while developments during the latter months were less favourable. Unemployment diminished by about 20 per cent. compared with 1928, and the general price index remained practically unchanged. The fisheries received lower prices than in 1928, but they gave better results as regards quantities, and the expansion in the whaling industry continued. As a result of the tightness of the money market, the turnover on the Bourse was less than it has been for many years.

Sweden.

From the economic point of view 1929 was the most satisfactory year since the war. Since the crisis which followed the peace there has been a slow but steady expansion, due in the main to abundance of raw materials—timber and iron ore—but perhaps also in a high degree to the financial and organising capacity of certain leaders, who by means of effective rationalisation and wise capital accumulation have succeeded in introducing a number of Swedish enterprises into the international markets. This development, which had assumed important proportions as early as 1927, was interrupted in 1928 by prolonged and comprehensive labour conflicts. But the interruption was only temporary, and the year 1929 constituted a record, thanks to the almost complete absence of labour trouble and to generally favourable conditions. Both production and the volume of trade showed an unparalleled increase, and with the exception of a reaction on the Stock Exchange, there was no reflection in Sweden of the stagnation and setback after the collapse in the United States. This economic progress is the more remarkable in that it took place during a period of pronounced and almost uninterrupted fall in prices, shown by an average index number of 144 for 1928 and 134 for 1929, according to *Svensk Finanstidning*. In the branches of industry included in Svensk Finanstidning's index of production the most important industries of the country, the volume of production for January-November is 135 (1923-24 = 100), whereas in the years 1925-28 the figure rose slowly from 105 to 108 and 113 for 1926 and 1927, and fell, owing to labour disputes, to 106 in 1928. This increased production applies to practically all the major export commodities, though it was most pronounced in iron ore, pulp, paper, and iron and steel. It is, therefore, evident that foreign trade was of large dimensions. It has, indeed, established a record, even though the year of inflation showed larger value figures. The value of foreign trade was probably not much less than Kr. 3,600 million, against Kr. 3,300 million in 1928 and about 3,200 millions in 1927. Whereas the balance of trade in 1928, principally owing to labour disputes, was passive to the extent of Kr. 133 million, we can safely count on an export surplus for 1929, probably somewhat larger than that of 1927, which was Kr. 32 million. Shipments of iron ore amounted to 9.5 million tons, as against 4.2 in 1928 and 9.7 in 1927; pulp amounted to 1.87 million tons (1.33 in 1928 and 1.45 in 1927); timber amounted to 6.3 million cubic metres (5.9 in 1928 and 5.7 in 1927); paper reached 469,000 tons (392,000 in 1928 and 406,000 in 1927). In mechanical engineering there was no similar expansion, but the position was in most instances maintained. There was a decline in electrical machinery and separators, while ball-bearings, motors and telephones showed a continued increase. The money market has been fairly easy throughout the year, not least owing to the ample supply of foreign bills resulting from the pronounced active balance of payments. This, in its turn, was due in part to the discouragement to the export of capital which resulted from the uncertainty of the international money and stock markets. The raising of the discount rate from 4½ to 5½ per cent. in September was due to the fear of the Riksbank of stimulating capital exports of the latter part of the year; when the State 6 per cent. dollar loan of 1919 was redeemed, for which purpose about Kr. 54 million in foreign holdings were required. In the middle of December the rate was again lowered to 5 per cent. and at the turn of the year to 4½ per cent. During the year the amount held abroad by Swedish banks rose from Kr. 515 million to Kr. 584 million during the year. The Stock Exchange could not escape some reaction from the collapse of the Stock Exchange boom in New York, but the only Swedish shares which suffered were those which are quoted abroad. The great majority of domestic stocks were remarkably steady. The value of "A" list shares fell during the year by Kr. 583 million, but as the value of Kreuger stock alone fell by Kr. 676 million, the remainder in fact rose by Kr. 93 million.

Finland.

When the period of vigorous economic advance ceased in the middle of 1928 in consequence of a shortage of capital, economic life in Finland entered upon a phase of less rapid progress, but of steady domestic consolidation. There was a money shortage throughout the whole of 1929 which affected all spheres of economic life. Agriculture, however, enjoyed a satisfactory harvest, its value being estimated at 5,000 million marks, compared with 4,778 millions for the year before. Industrial output suffered from the poor market for the most important articles of export, while the reduced purchasing power in the country had a detrimental effect on the textile, leather and other branches of industry. Notwithstanding this, the gross production of industry is calculated to be about 14,000 million marks, as against 13,721 millions in 1928. In spite of the bad state of the timber market 1,206,800 standards were exported, in comparison with 1,146,500 in the previous year, chiefly owing to several sawmills having worked up their entire stock of logs in order to be able to shut down. Some other branches of industry also increased their exports, for instance, the chemical pulp industry by 2.3 per cent., the cardboard industry by 15.4 per cent., the mechanical pulp industry by 16.8 per cent., and the plywood industry by 17.8 per cent. Altogether exports increased, in spite of falling prices, by 2.9 per cent. to 6,427 million marks, which constitutes a record. Simultaneously imports dropped from the previous year's exceptionally high level by 12.7 per cent. to 6,996 million marks. The surplus of imports that had amounted to 1,768 millions in 1928, fell again to 570 million marks. Building continued during the first part of the year with great liveliness, but then fell off rapidly owing to the difficulty of obtaining credits. As deposits in the banks, savings banks and other financial institutions were fairly small, the banks experienced some difficulty in satisfying the requirements of credit. Rates of interest were, therefore, unchanged at a high level throughout the year. However, in general the banks withstood the pressure of the hard times well and showed approximately as good results as for 1928. The position of the Bank of Finland improved appreciably, the proportion of the cover having risen from 51.7 per cent. at the beginning of the year to 60.8 per cent. at its end. Only three small bond loans were taken up abroad, the Finland Steamship Company's loan of 4 million Swedish crowns at 7 per cent., the Mortgage Society of Finland's loan of 10 million Swedish crowns at 6½ per cent., and the Abo Municipal loan of £500,000 at 6½ per cent. On the other hand some hundreds of millions of marks of foreign capital must have come into the country in other ways.

THE NEW BALTIC STATES.

Estonia, Lithuania and Latvia, which are all primarily agricultural, were all affected in their varying degree by the general bad harvest of 1928, from which Lithuania suffered least, as the southern portion of the country escaped the abnormally prolonged wet spell which had such disastrous effects elsewhere. All three States enjoyed a good harvest in 1929, but as this was shared with all their neighbours, and, indeed, with the world at large, no great material benefit resulted. Actually the fall in world prices for many of their principal products such as flax, cereals, timber, dairy produce and wood products reduced profit margins to such an extent that farmers and others were in many cases unable to pay off interest on their loans, and the various Governments were forced to introduce special measures to alleviate the position. On the whole then the year 1929 has been not without its difficulties and anxieties for all of them, but they have been partly overcome, especially in Lithuania, with foresight and application. Considerable leeway has, however, to be made up in the other two States. The great need in most cases is foreign capital, without which the expansion of agriculture and industry on a sufficient scale is not possible, as home resources are inadequate.

Estonia.

The year opened badly with prolonged and abnormal wintry weather, which dislocated shipping and trade by keeping the Baltic icebound, and this added to the critical difficulties created by the failure of the 1928 harvest. Increasing internal consumption, with a consequent expansion of imports, prevailed at this time, and, as a result, stringent conditions and limited credit have hampered the money market during most of 1929. The farmers have not recovered in spite of the good harvest, owing to the fall in world prices of grain and other agricultural produce, with the result that the Government was compelled to come to their aid by the provision, in the Budget of 1929-30, of special facilities for agricultural loans at low rates of interest. Industry continues to expand and has made rapid progress since the war, in spite of the reduced purchasing power of a large proportion of the population. The returns of shipping and railway traffic show an increase over the same period in 1928. The cost of living index, which averaged 116 in 1928 (1913 = 100), touched 122 in March, but fell to 115 by September of this year. Foreign trade has increased considerably in volume since 1927, but about the end of 1928 the balance became unfavourable and has continued so up to the date of the latest returns. The figures for the past few years were as follows:—

(Million kronas.)

	Imports.	Exports.	Surplus (+) or Deficit (−)
1927	96·4	105·8	+ 9·4
1928	131·5	127·1	− 4·4
1929 (nine months)	94·3	87·0	− 7·3

Increased imports of cereals and foodstuffs in part account for these results, but there has also been a considerable increase in the import of machinery and semi-finished products required for the expansion of home industry, so that the outlook is less unfavourable than might at first sight appear. A new trade treaty with Germany is expected to give satisfactory results. Money market conditions showed considerable stringency, which led to an outflow of funds from the Bank of Estonia. Discount rate was raised on October 3rd from 7½ per cent. to 8 per cent. Some improvement resulted, but the reserve held against the note circulation shows a decline as against 1928. The banking position is satisfactory and the Central Bank of Issue has functioned on approved up-to-date lines since the stabilisation of the currency. The extent of the crisis through which the country has passed may be measured by the number of protested bills, which rose to 61,367, value 14,666,000 kronas, during January-September, 1929, as against 30,876, value 7,256,000, for the whole of 1928. The Government finances are sound, and revenue has exceeded expenditure regularly for several years. The surplus in 1928-29 was the seventh in succession and, although less than anticipated, totalled 1,500,000. The Budget for 1929-30 is balanced at 95,000,000 kronas, against 80,000,000 last year.

Lithuania.

Lithuania opened the year with discouraging prospects as a result of the bad harvest of 1928, but rather less so than her neighbours, as the southern portion of her territory escaped the abnormally prolonged wet spell which prevailed throughout the Baltic States. The abnormal winter added to her difficulties, which were not lessened by the tendency to overtrading in the previous year and the reduced purchasing power of the greater part of the population. By the end of the past year, however, many of the obstacles to economic pro-

gress had been surmounted and the outlook is not unpromising. The harvest of 1929 was good, but did little to reduce the farmers' debts to the Government, estimated at 150,000,000 lits, owing to the fall in world prices of cereals and farming produce. Crop production in the past three years in thousands of tons was as shown below:—

	1927.	1928.	1929.
Rye	540	480	560
Oats	550	370	430
Barley	190	150	260
Wheat	140	170	240
Potatoes	1,260	960	...
Other roots	700	330	...
Flax	35	35	39

Dairy farming and stock breeding have grown considerably since the war and now constitute an important branch of the native agricultural industry. This growth is apparent from the following table:—

	1913.	1926.	1927.	1928.
Horned cattle	766,000	1,397,000	1,128,000	1,199,000
Sheep	577,000	1,573,000	1,410,000	1,467,000
Pigs	458,000	1,441,000	1,010,000	1,060,000
Horses	373,000	535,000	617,000	611,000

The failure of the root crop, however, in 1928 and the severe cold in the spring of 1929, with the consequent rise in the price of feed, checked operations, and as a result several dairy farms closed down. In spite of this, owing to better methods, butter production increased, and exports amounted to 1,153 tons in the first half of 1929, as against 932 tons in the whole year 1925. The amount of timber cut has increased, and the annual quota for cutting has been increased from 7,000 to 8,500 hectares. The percentage of semi-manufactured and manufactured wood products to total timber exports increased during 1929, and this to a large degree offset the fall in prices.

Industry other than agriculture is comparatively unimportant. Recovery from war effects is slow and development is checked by a lack of mineral resources. Foreign trade has expanded steadily. In 1928, however, imports increased rapidly and there was a large adverse balance. This rise in imports was largely due to heavy purchases of semi-manufactured goods and machinery, not in itself an unhealthy sign, and this is borne out by the fact that the visible balance of trade tended during 1929 to become increasingly favourable. The improved position in 1929 was largely due to increased shipments of timber and its products, linseed, livestock, meat, furs and hides. The comparative figures of foreign trade in the last three years were as follows:—

(In Millions of Lits.)

	Imports.	Exports.	Surplus (+) or Deficit (−).
1927	265·7	245·9	− 19·8
1928	291·5	257·2	− 34·3
1929	306·4	329·8	+ 23·4

The money market may now be said to be almost normal. The returns of the Bank of Lithuania show an increasingly satisfactory position, especially in the holdings of gold and foreign currencies. The Budget for 1929 balanced at 260 million lits, and for the first nine months revenue stood at 200 millions and expenditure at 178 millions. An eventual surplus is anticipated in spite of unfavourable conditions early in the year. This compares with a revenue of 281.4 million lits and expenditure of 280.5 million in 1928. In the political sphere there is no evidence of factors likely to lead to any greater trouble than the sudden upset of an Administration or a change of President. Externally, however, matters are less satisfactory. The continuance of the disagreement, to use a mild expression, with Poland, in spite of the efforts of the League of Nations to liquidate it, cannot but be a hindrance to the economic development of Lithuania in every sense, and more especially her foreign and transit trade.

Latvia.

Very similar conditions prevailed in Latvia during 1929 as those in Estonia and Lithuania. Internal trade fell off, small traders became involved in difficulties, and the numbers of protested bills and bankruptcies rose in reflection of the stringency in credit and monetary conditions. Foreign trade, however, improved, but the recent raising by Germany, her largest customer, of the import dues on butter may restrict exports in the near future. Cereal production showed an increase over that of 1928, but this was offset by the fall in world prices. As compared with previous years the figures in 1,000's of tons were as follows, values being shown in millions of lats:—

	Rye.		Wheat.	
	1,000 tons.	Value.	1,000 tons.	Value.
1927	53·5	13·9	46·0	16·2
1928	82·7	21·0	58·0	17·4
1929 (10 months)	105·4	23·2	63·9	18·0

All crops showed a far higher production than before the war, and wheat and potatoes were twice as large; but although 1929 was a record crop year it was also a record food import year owing to the crop failure of 1928. Stock breeding showed but little change as compared with previous years. Butter export figures for the first ten months amounted to 12,149 tons, valued at 47.6 million lats, as compared with 13,006 tons (52.5 million lats) in the whole year 1928.

Industry developed favourably, and 501 new undertakings were set up in pottery, metal and machinery, chemicals, leather, textiles and woodworking. The total of all industrial undertakings rose from 2,887 at the end of 1928 to 3,388 at the end of 1929. The numbers employed remained at about 58,000, but the value of their production increased from 306.87 million lats in 1926 to 392.05 million lats in 1928. Shipping advanced satisfactorily, and the tonnage of native bottoms increased by 20 ships of 45,000 tons, as against an increase of only six ships of 28,000 tons in 1928. The total is now 145 ships of 175,000 tons. The banking position is satisfactory, as are the note circulation and cover reserve. The exchange has been practically stable throughout, revenue for the first eight months of 1929 being 111.2 million lats, as against 111.6 million in the same period in 1928 and 106.0 millions in 1927, while expenditure in these respective periods was 11.07 millions, 107.2 millions and 103.3 millions. The figures of foreign trade for the past three years were as follows, January to November only for purposes of comparison:—

	1927.	1928. (Millions of Lats.)	1929.
Imports	221·1	282·3	334·7
Exports	200·5	241·4	253·7
Surplus (+) or deficit (−)	−21·6	−40·9	−81·0

Transit trade increased from 761 tons in the first eleven months of 1928 to 800 in the same period of 1929. The stringency of internal trade conditions is indicated by the number of protested bills, which in

eleven months rose to 162,900, as against 139,504 in 1928, though their value was rather less. Bankruptcies totalled 114 in 1929, as against 90 in the preceding year, but the sums involved here were also rather less.

B.—BRITISH EMPIRE.

CANADA.

The year opened with very auspicious prospects for business, as the West had reaped the largest crop in its history the previous autumn and the purchasing power of the farmers was large. As a result there was a continuous expansion of business during the first half of the year, and in many lines of production new records were attained. The momentum thus secured continued through the third quarter of the year, but the pace of business gained slowed down, and certain adverse factors made their appearance. A drought of unprecedented severity, which lasted almost without interruption throughout July, wrought tremendous havoc, and the aggregate volume of the Western wheat crop was only half as large as in the previous year. As prices had not risen, this short crop inevitably foreboded a recession in business in the West, and the firms with business connections in this region found themselves compelled to curtail their commitments. Then, at the end of October, came the great stock market debacle which caused heavy financial losses to a large section of the Canadian public. In consequence, the demand for such luxury goods as motor-cars and radios dropped sharply. Another disturbing element was the determination of the Western wheat pools and their allies to pursue a policy of holding back their stocks of wheat until European buyers were prepared to pay a satisfactory price. This policy had adverse repercussions in many directions.

Transport, Industry, Mining.—The revenues of all the transportation companies, land and water, suffered severely from the policy of the wheat pools, and a great deal of unemployment was created. During the navigation season of the St. Lawrence shipments of grain from Montreal were only about 90 million bushels, as compared with 211 millions in the previous year. The railways have perhaps been the chief sufferers, and the returns of both the Canadian Pacific and the Canadian National for last year are seriously down. The newsprint industry has also continued to labour under the difficulties of over-production, and attempts to increase the price have been successfully resisted by the American and Canadian newspaper publishers. Most of the mills are operating at about 80 per cent. of capacity, but earnings are unsatisfactory, and the stock markets reflect the lack of confidence of the public in the immediate future of the industry. There has been during the year some expansion of the output of the mining industry, but on the whole the results of the branch of it which is devoted to the precious minerals have been inadequate. A great deal of oil drilling has been done in Southern Alberta, and a hectic boom was worked up in the stocks of companies operating in the Turner valley; but the results have not been commensurate with the efforts expended on this field. General business has, however, been on the whole good, and a large proportion of the manufacturing and distributing firms will be able to show satisfactory balance sheets for the year. There was a very large programme of new building construction. The fishermen of the Atlantic coast had a good catch, which was sold at better prices, and the Maritime Provinces have had a substantial recovery from their economic troubles. Great progress has also been made with opening up the Northern hinterland, and the tourist traffic from the United States was a more profitable asset than ever. Canadians therefore have no reason to be discouraged by the results of the past year, and have entered its successor with undiminished confidence, but the more intelligent

BANCA COMMERCIALE ITALIANA

(Limited Company incorporated in Italy.)

Established in 1894. Head Office: MILAN. Capital: 700 million Lire. Reserves 560 millions.

Branches in every centre of commercial and industrial importance in Italy, and in most of the best known tourist resorts; also in London, New York, Constantinople and Smyrna.

Affiliated and Auxiliary Institutions in France (Paris and Riviera), Switzerland, Czecho-Slovakia, Poland, Yugoslavia, Austria, Hungary, Bulgaria, Roumania, Greece, Egypt, Morocco, U.S.A., Brazil, Argentina, Chile, Uruguay, Peru, Colombia, Ecuador, etc. Representative in Berlin.

ALL OF WHOM TRANSACT BANKING BUSINESS IN ALL BRANCHES.

TRAVELLERS' CHEQUES ISSUED in Pounds Sterling, Dollars, Lire and Francs, payable in all parts of the world.

London Office:

32, Threadneedle St., E.C. 2

A. JOEL, Manager.

Correspondents to the Italian Treasury.

elements realise that there may be a temporary pause in the expansion which the last three years have witnessed.

Foreign Trade.—The foreign trade returns are much less satisfactory than for any recent year, and the subjoined figures covering the twelve-month period ending November 30, 1929, show that rising imports have been accompanied by a sharp decline in exports:—

TWELVE MONTHS ENDING NOVEMBER 30.

	1928. $	1929. $
Imports	1,210,959,686	1,309,248,462
Domestic exports	1,349,297,173	1,224,738,381
Re-exports	23,893,368	26,387,048
Total exports	1,373,190,541	1,251,125,429

A favourable balance of trade amounting to 162 million dollars has thus been transformed into an adverse one of 58 millions. But the drop of 125½ million dollars in domestic exports is more than accounted for by the fall of 193 million dollars in the value of grain products exports, and this same factor also brought down exports to Britain from 459 to 309 million dollars. But Britain had a disappointing share of the increase in imports, for her exports to Canada only rose from 190 to 196½ million dollars, and American exports jumped from 815 to 933 million dollars. In trade with foreign countries the most notable gain was in exports to China, which rose from 14½ to 29 millions.

Finance.—The banking system of Canada has successfully withstood the strain of a somewhat difficult year. In the early part a great deal of credit was diverted to speculative purposes, and the banks were compelled to check this tendency by rigid restrictions. This situation has now been eased by the stock market slump, and, although a large amount of money is still tied up in the unsold crop, the credit situation has been easier in the last quarter. The least satisfactory feature of the banking situation is a substantial decline in savings deposits, which on November 30th were 70 million dollars below the figure of November 30, 1928. The Federal revenues have shown remarkable buoyancy and for the first eight months of the fiscal year ending December 31st amounted to 354 million dollars, a gain of 7 millions, but in the same period expenditure had risen from 268½ to 287½ millions. On December 31st the net national debt amounted to $2,159,214,730, as compared with $2,218,603,484 on December 31, 1928.

Crops.—The crop yield of the Dominion showed a decline in 1928, and the Bureau of Statistics estimates the value of the principal field crops of the Dominion at $986,896,000, as compared with the value of $1,125,000,000 in 1928 and of $1,173,133,000 in 1927, the details being as follows:—

	1928. $	1929. $
Wheat	451,235,000	345,480,000
Oats	210,956,000	169,951,000
Barley	76,112,000	62,448,000
Rye	11,491,000	11,235,000
Flaxseed	5,748,000	4,795,000
Other grains	52,630,000	51,933,000
Potatoes	40,874,000	69,963,000
Hay, clover alfalfa	194,363,000	202,992,000
Root and fodder crops	81,584,000	67,929,000

Prices sagged in the first half of the year, but lately there has been an improvement, and hopes are still entertained that the policy of holding wheat will justify itself. Crops in Ontario were below the average, with the exception of winter wheat, hay and clover; Quebec had average crops, and the Maritime Provinces above the average. There was a good crop of apples, that of Nova Scotia being unusually large and fully 80 per cent. above the previous five-year average, and the fruit crop of British Columbia was also satisfactory. Low prices for the tobacco crop of 1928 caused a reduction of the area planted in 1929, with a resulting decrease of about one-third in production.

Prices.—Commodity prices showed very little change during the year, and the Bureau of Statistics wholesale index (1926=100), which was 94.5 for January 1, 1929, was 96.2 on December 1, 1929. In no single month was there a gain of more than four points, and the range of fluctuation was between 92.4 for May 1st and 98.1 for August 1st. Stock market prices showed great fluctuations. On January 1st the "Investors' Index" of the Bureau of Statistics (base 1926=100) was 207.4. By June it had fallen to 185.6, but thereafter it rose to a peak of 217.1 in September. By October it had fallen to 186.4, and the great debacle caused a drop of nearly 32 points to 154.7 on November 1st. Since then there has been a slight recovery, and the index for December 1st is 156.5.

AUSTRALIA.

Production.—The year ending June 30, 1929, has been very satisfactory as regards the quantity of primary produce yielded, though lower prices have for the most part prevailed. The wool clip totalled 2,863,000 bales (950,000,000 lb.), compared with 2,673,000 bales for 1927-28. Prices were considerably lower, and, up to November last, averaged 11.89d. per lb. for greasy, and 20.38d. for scoured, compared with 16.64d. and 30.71d. respectively for the same period of 1928. The current season's clip is estimated at 925,000,000 lb. The area under wheat for the 1928-29 season was 14,823,000 acres, and the final estimate of the yield is 159,752,095 bushels, compared with 118,199,775 bushels in 1927-28. This season's crop is not expected to exceed 112,000,000 bushels from an area of 14,500,000 acres. The production of butter was estimated at 287,656,032 lb.; and that of wine at 18,399,000 gallons, compared with 17,302,000 gallons last year.

Overseas Trade.—The total overseas trade during 1928-29 amounted to £288,408,208, a decrease of £2,749,832 on the previous year. Of this total, imports were valued at £143,628,033, and exports at £144,780,175; an excess of exports of £1,152,142, compared with last year's excess of imports of £4,731,900. Imports from Great Britain were valued at £55,981,675, compared with £63,098,037 in 1927-28. For the United States of America the figures were £34,958,592 and £35,005,786 respectively. The value of motor chassis imported increased by £2,000,000 to £9,204,871. Imports of apparel and textiles decreased by £1,785,000 to £36,704,000. The drop was principally noticeable in cotton, linen and woollen piece-goods, furs, socks and stockings. The chief countries to which Australian produce was exported were: Great Britain, £54,818,000; France, £15,111,000; Japan, £11,519,000; Germany, £9,677,000; and U.S.A., £5,831,000. The value of exports to Great Britain was £538,300 greater than in 1927-28; for the other countries mentioned the figures were all smaller. The principal items of export are shown in the following table:—

Commodity.	1927–28.		1928–29.		% of Exports to Gt. Britain.
	Lb.	£	Lb.	£	
Wool	742,695,300	66,095,901	810,540,500	61,612,995	29·1
Wheat	3,187,541,400	14,629,899	4,913,774,700	20,336,199	16·5
Flour	867,590,000	5,229,463	1,127,606,600	5,998,600	10·3
Butter	99,164,900	6,905,933	102,442,800	7,545,430	85·6
Frozen Meat	215,457,700	3,566,297	274,019,600	5,054,330	65·3

Finance.—The accounts of the Commonwealth and States for the year ending June 30, 1929, are set out in the following table:—

State.	Revenue.	Ordinary Expenditure.	Loan Expenditure.	Gross Public Debt.
	£	£	£	£
N.S.W.	*20,703,940	*20,110,771	16,092,936	256,791,944
Victoria	26,887,500	26,852,748	7,225,703	160,740,187
Queensland	16,736,188	16,902,145	3,248,429	113,002,049
South Aust.	10,840,914	11,771,772	3,528,212	92,653,531
West. Aust.	9,947,951	10,223,919	4,372,269	69,355,449
Tasmania	2,766,434	2,855,976	348,818	23,324,630
Six States	87,882,927	88,717,331	34,816,367	715,867,790
Commonw'lth	78,984,442	81,343,417	†8,231,147	541,986,111
Total	166,867,369	170,060,748	43,047,514	‡1,257,853,901

* Excluding business undertakings.
† This figure represents loan expenditure on public works, and war and repatriation services. It does not include loans to the States, which amounted to £26,436,799.
‡ After deducting £164,364,539 for debts twice counted, the total gross public debt is £1,093,489,362.

When the Commonwealth Labour Government came into office the Treasurer introduced a supplementary Budget, in which he estimated an additional expenditure of £737,340, and a decrease in the late Government's estimated revenue of £1,694,000; leaving, after allowing for the late Government's estimated surplus, a deficit of £2,070,442. To cover this amount a revised Customs Tariff was put into force in December last, and a super-tax of varying rate has been imposed on all taxable incomes of £201 and over. The tariff is expected to yield an additional £1,200,000, and the super tax £885,000, giving a surplus of £14,558 on the year's transactions.

The Commonwealth raised seven loans during the financial year, totalling £89,201,455. Two loans raised in London amounted to £15,000,000, of which £8,287,674 was devoted to Commonwealth public works, and the remainder to the States, for public works and migration. A third loan was raised in London for the conversion of £12,403,734 Queensland Government securities. Of the four loans raised in Australia, two, amounting to £23,806,040, were solely for conversion and redemption purposes; and two were for the States—one of £7,637,430, mainly for public works, and one of £30,354,251, mainly for the conversion and redemption of State securities.

During 1928-29 the amount applied to Commonwealth debt redemption totalled £6,230,708. State debt redemptions amounted to £4,661,161, of which the Commonwealth contributed £1,752,000. The payments on the combined Commonwealth and State debts amounted to £6,657,795 in Australia and £8,396,502 oversea. The public debt of Australia per head is £172.6.

Banking.—The net profits of the Commonwealth Bank were £745,584 for the half-year and £1,433,475 for the year ending June 30, 1929. Of these amounts £240,356 and £458,623 respectively accrued from purely banking business. For the Commonwealth Savings Bank the profits were £111,920 and £342,235 respectively. The reserve funds amount to £618,584 for the Commonwealth Bank and £1,285,913 for the Commonwealth Savings Bank.

NEW ZEALAND.

In New Zealand the remarkable increase in production of the previous year was maintained during 1929. This increase was not evident in the periodical results because of lower prices for some of the commodities, particularly wool. The total export value was slightly lower than 1928, and imports were about £4 million higher. There was a favourable trade balance of £6,781,086:—

FOREIGN TRADE OF NEW ZEALAND.
(Million £'s.)

	1925.	1926.	1927.	1928.	1929.
Imports	52·6	49·8	44·7	44·8	48·7
Exports	55·2	45·2	48·4	56·1	55·5

Public Finance.—The following is a condensed statement of the national balance sheet for the past two financial years, and only the principal items of revenue and expenditure and the respective total amounts are shown:—

(000's omitted.)

Revenue.	Year ended March 31st. 1928.	1929.	Expenditure.	Year ended March 31st. 1928.	1929.
	£	£		£	£
Customs	7,942	7,954	Interest	8,397	8,675
Beer duty	609	611	Sinking fund and funded debt reduction	1,360	1,435
Stamp and death duty	3,504	3,575	Pensions	2,511	2,656
Post and telegraphs	3,323	...	Post and telegraph expenses	2,297	...
Income and land tax	4,328	4,461	Education	3,756	3,092
Railways (interest on capital liability)	2,130	2,331			

The gross debt of the Dominion at March 31, 1929, was £264,191,983.

Production.—There was a satisfactory increase in all export lines, particularly in dairy produce. The application of artificial manures to the soil has given greater pastoral yields, and farmers are keenly pursuing this method of improving their holdings. The present year opens with very good prospects. The following are the values of the principal exports for the past two calendar years, the slight fall in wool and meat values being due to lower prices ruling last year:—

	1928. £	1929. £
Wool	16,679,098	15,359,206
Butter	11,302,667	13,227,917
Cheese	6,693,951	7,017,463
Frozen meat	9,631,017	9,111,123

Now Ready.

TARIFF WALLS

A EUROPEAN CRUSADE

By Sir CLIVE MORRISON-BELL
Bart., M.P.

Preface by VISCOUNT D'ABERNON, G.C.B., K.C.M.G

BY means of a map, showing each country in Europe furnished with a little wall, the author has given life to this difficult question which, all the chief Authorities agree, is of grave import to the welfare of post-war Europe. This map has been shown by request in many European cities, and Sir Clive tells the story of its adventures and travels in an informing manner and not without humour.

Illustrated **7s. 6d.** net.

JOHN MURRAY,
ALBEMARLE ST., LONDON, W.1

INDIA.

The preliminary figures of India's overseas trade during the calendar year 1929, as compared with 1928, run as follows, in lakhs of rupees:—

	1928.	1929.
Imports of private merchandise	248,08	248,62
Exports, including re-exports	338,04	328,90
Net imports of treasure	35,67	27,99

Imports were, therefore, approximately on the same level as in 1928, and exports lower by 9.1 crores of rupees. The weather was not very favourable during the year, but crop yields were fair. Prices showed a slight downward tendency. During the eight months April-November, 1929, India's imports from the United Kingdom were valued at 69.01 crores, against 75.55 crores in the corresponding months in 1928; while her imports from all foreign countries during the same months totalled 77.63 crores, against 78.25 crores. Imports from Japan (15.50 crores, compared with 10.99 crores) showed the largest increase. Concurrently India's exports to the United Kingdom totalled 47.89, against 47.65 crores (to all parts of the British Empire 77.86 crores, against 78.28 crores), while exports to foreign countries totalled 131.27, against 136.62 crores. In the import trade the most striking feature has been the further very considerable increase in the imports of Japanese cotton goods, contributory factors including the Japanese effort to increase all exports in connection with the removal of the embargo on gold, apprehensions of higher import duties on cotton goods entering India, and the failure of the Bombay mills to organise more effectively to combat Japanese competition by emulating Japanese technical and commercial efficiency. As noted in the Hardy report, the most obvious features of the cotton import trade are " the predominance of imports from the United Kingdom before the war, their subsequent decline and the rapid growth of imports from Japan. The import totals during the April-November period illustrate this:—

(In thousands of yards.)

	1927.	1928.	1929.

From United Kingdom	470,031	361,591	319,278
Japan.....	147,328	140,066	256,086
Other Countries	7,972	4,067	7,720
Total greys.....	625,331	505,724	583,084
Coloured, printed or dyed:			
From United Kingdom	226,983	239,825	192,078
Japan.....	75,905	73,158	98,060
Other Countries	34,466	46,734	34,998
Totals	337,354	359,717	325,136

Industry.—Supported by the Bombay Government, the British Chamber, and the British newspapers in Bombay, the Bombay mills have renewed their appeals for State aid, including higher import duties, to restore confidence and re-establish credit. The following comment in the leading Bombay newspaper epitomises the facts:—" There has been prepared, under the supervision of a firm of accountants of the highest repute, a statement showing the financial position of the Bombay cotton mills. This demonstrates that from the year 1923 to the end of 1928 they worked at a heavy loss. The aggregate of these losses is 11½ crores of rupees, and the number of mills in operation has been reduced from 81 to 73. This is only part of the tale of disaster. Taking the mills which have written down their capital, experienced the pangs of liquidation, and have either been reconstructed or sold to new concerns in the past four years, the total amount of capital lost to the public is approximately 6 crores of rupees. There are also 4 mills in liquidation with a combined capital of a crore of rupees." " The textile industry is the life-blood of the city. Take it away and, although Bombay will remain a first-class port, it must decay into a second-rate city." It appears advisable to add that no assistance Government can render will avail to avert the migration of a considerable percentage of the Bombay cotton-mill companies to centres inland, where costs of production are more favourable to profitable manufacture.

On July 1, 1929, the associated jute mills in Calcutta started to work 60 hours per week, against 54 during the years 1921-29, with the object of retaining for India trade which was passing to mills overseas. The outlook for the coal industry is brighter than for many years past, but tea is suffering from over-production, necessitating restriction of output to reduce stocks and stabilise prices at more profitable levels. The engineering industries are suffering from the drastic curtailment of Government orders due to reduced capital outlay on railways; and the considerable reduction in exports of Indian pig iron is bringing to the front the question of establishing new steelworks to absorb the surplus output. An extension of the duration of the present steel tariff would, however, be an essential preliminary to the raising of capital for this purpose. An interesting development was the inauguration in December of the first internal State Air Mail service, carrying the inward mails from Karachi to Delhi.

Public Finance.—Sir George Schuster's second Budget, which will be submitted to the Central Legislature shortly, is expected to reveal a deficit, necessitating new taxation, which, it is anticipated in India, will take the form of higher import duties on various products, including cotton goods. The outlook for new Government loans, either in India or Great Britain, is considered so unfavourable that some of the Indian Chambers of Commerce are urging recourse to New York. The incidence of the 1s. 6d. exchange ratio continues to engage public attention, and, although the Finance Member maintains the attitude that any further change would be disastrous, Indian commercial organisations are almost unanimously in favour of reverting to 1s. 4d.

SOUTH AFRICA.

Despite a fall in the prices of the principal agricultural exports during 1929, and the more recent setback in the diamond market as a result of the collapse of share prices on the New York Stock Exchange, the hard times which have been foreshadowed in ministerial speeches have not yet arrived.

Public Finance.—Once again the financial year closed with a substantial surplus of £1,620,000, receipts on revenue account reaching £30,490,000, of which £11,400,000, or 37.5 per cent., accrued from Customs and Excise. The prospects for 1929-30 encouraged the Minister to tempt the electorate with a continuance of the rebate of 20 per cent. to income tax payers and increased children's allowances, and when the Government was returned to power the promise was duly redeemed. The latest Exchequer returns suggest that, if imports are maintained at a moderate level for the last three months, the current financial year will again yield a surplus not far short of £1,000,000.

Government Railways.—The net surplus for 1928-29 was £766,500. For the first six months of the current financial year, revenue and expenditure are substantially in accordance with estimates, but there is a fall in passenger earnings, due to the constantly improving facilities for road transport, and the railways are being left more and more with the bulky, low-rated agricultural produce, which is both costly to move and productive of little revenue.

Production.—The most cheering mining result is the new record of gold production which the Transvaal mines have set up in 1929 in the face of increased shortage of native labour. When the December figures are announced, the year's production should approximate to 10,400,000 ounces, as compared with last year's record of 10,359,000. The diamond production for the first six months of 1929 was 1,903,126 carats, of which 758,716 were alluvial (the production of the West Transvaal gradually declining). The coal export and bunker trade has shown some improvement. Industrial activity has fallen below normal in most centres in the second half of the year. The National Wage Board and the Industrial Councils are not working smoothly, and amending legislation is to be expected next session. The fall in wool prices of 30 per cent. is the outstanding feature of farming developments. The official estimate of wool exports (July, 1929-June, 1930) is 302 million bales, as compared with 284 million for the previous period, the quality remaining steady. The increase in production by no means offsets the fall in prices. The maize crop in 1929 was finally estimated at 18½ million bags (19.2 million in 1928). Exports have been slower than last year, and the recent fall in prices does not augur well for the disposal of the remaining 3 to 4 million bags. The local wheat and oats harvests have been exceptionally good.

Overseas Trade.—Tentative estimates place total exports in the neighbourhood of £9¾ million and imports as high as £86 million. In normal years, exports exceed imports by approximately £15 million, and since the export figures for current months are bound to be depressed by world prices of South African produce, it appears inevitable that equilibrium must be restored by a fall in imports during 1930. The value of imports has, in fact, been maintained up to the present only by the very liberal advance policy of the commercial banks, which have lent in the Union large resources deposited overseas and have, to some extent, also liquidated their investments outside the Union in order to increase their advances in South Africa. The Reserve Bank has also, since July, liquidated a large part of its holdings of foreign bills and increased its discounts of domestic bills and of Union Treasury bills. A readjustment will have, however, to be made sooner or later. The Reserve Bank has raised its discount rate, and twice within recent months the commercial banks have increased their interest rates on time deposits in an effort to avoid too drastic a curtailment of advances. A downward adjustment of land values is already taking place in those parts of the country in which inflated tobacco and wool prices have been responsible for ill-advised speculation. Prosperity in 1930 will depend upon very good harvests and careful bank management. The Treasury may also find an import tariff as uncertain a revenue-producing instrument as it is burdensome to the primary industries.

IRISH FREE STATE.

The year 1929 was one of steady, if uneventful, progress in the Irish Free State. The crop and live stock statistics show that, on June 1st, the total area of ploughed land had declined by one-half per cent. from the level of 1928, the area under barley had increased by 2.7 per cent., the number of cattle had increased by 12,332, or 0.3 per cent., the number of sheep by 112,241, or 3.4 per cent., the number of poultry by 374,187, or 1.7 per cent., and the number of pigs had declined by 237,575, or 20.1 per cent. The exports for the twelve months ending in September were slightly lower than in the corresponding period last year, in spite of increases in the exports of cattle, bacon, ham and eggs. The exports of butter showed a slight decrease. This is rather disappointing in view of the great improvements that have taken place both in the manufacture and marketing of butter. The Irish Associated Creameries, Ltd., the central selling organisation of the co-operative creameries, which now handles four-fifths of the creamery butter exported, has attained great economies in transport and has introduced a certain amount of " orderly marketing." The price of Irish butter now compares very much more favourably with that of Danish and New Zealand butter than it has ever done in the past. There is an encouraging increase in the export of manufactured articles. Tractors and tractor parts amounting in value to £938,000 were exported from the Ford works at Cork, principally to Russia. The exports of Guinness's stout have also substantially increased, doubtless as the result of the advertising campaign in Great Britain. Imports, during the same period, show a slight increase, so that the adverse trade balance promises to be rather greater than in 1928. Large increases are shown in the imports of motor cars and machinery, a considerable part of the latter being connected with the final stages of the construction of the electric network of the Shannon scheme. Transmission poles are now a common feature in the Irish landscape, and the whole country is being rapidly linked up with the central power station. The manufacture of electricity has already begun, and the current will soon be sold in Dublin at prices less than those charged by the existing power stations. Much interest is taken in this great project, which is by far the most ambitious undertaking in which the Free State Government has engaged. Slight declines are shown in the imports of articles that have been protected. It is calculated that the result of the tariff has been to provide 15,000 people with employment, and it is roughly estimated that the cost of this increase in employment is represented by an increase in the outgoings of the average farmer amounting to about ten pounds a year. Agricultural interests are naturally alarmed at this increased burden, and the inevitable cry for countervailing protection for farm products is being loudly raised. Such assistance, however, is out of the question owing to the dependence of the Irish farmer on export markets. Dissatisfaction is also felt by the farming class at the failure of the Government to adopt some scheme of derating similar to that in force in Northern Ireland, and the whole question of local taxation is being investigated by a very representative commission. The general industrial situation appears healthy; unemployment is decreasing, and the volume of emigration is slowing down. The reduced American quota was not filled in 1929.

The receipts of the Great Southern Railways showed a decrease of £149,720 compared with those of the previous year. The transport situation has been eased by the merger with the railways of the principal bus companies, as a result of which unreasonable competition has been ended. The cut-throat competition for road traffic in Dublin still continues, and the Dublin Tramway Company is passing through a serious crisis in its history. An attempt to reduce the wages of the employees resulted in a strike in which the men were completely successful.

Dublin bank clearings were £247,752,800, as compared with £251,630,500 in 1928. The Agricultural Credit Corporation is doing good work in providing capital and credit facilities for farmers. The Corporation has issued 4,337 loans, amounting to £526,108, or an average of £121. These figures show that the Bank is catering, as it is meant to do, principally for the smaller farmers. During the nine months ending December 31st the public revenue amounted to £16,657,962, an increase of £232,759 over the corresponding period in 1928, and expenditure amounted to £18,044,599, a decrease of £308,463.

C.—OTHER COUNTRIES.

UNITED STATES OF AMERICA.

The past year in American business and finance has been one of sharply contrasting colours. It brought the highest interest rates and the greatest expansion in credit since 1920; share market prices reached heights never before attained, followed by the most severe decline in the history of the New York Stock Exchange; industrial production reached the largest volume of any peace-time year, and the decline in activity in the closing three months was as pronounced as it has ever been in any but a year of severe business depression. Industrial and railroad corporations as a whole earned larger profits and transacted a greater gross volume of business than ever before. These

developments were accompanied withal by gradually declining commodity prices and the greatest issues of new capital by corporations in the history of the country.

Banking and Money.—Credit expansion and high interest rates made 1929 a very profitable year for the commercial banks, although those institutions which operate subsidiary companies dealing in securities had to write off losses of varying amounts as a result of the share market collapse in the autumn. For the Reserve Banks the year was marked by a constant effort to secure reduction in member bank borrowing, a large expansion of credit through increased discounts, and finally the rise in discount rates. The New York Bank rate rose as high as 6 per cent. in August, only to drop to 4½ per cent. before the close of the year, as stock market liquidation enabled the member banks to cut down their borrowings.

The main movements during the year in the Federal Reserve position were an increase of $269,000,000 in the Reserve Banks' gold stocks, due to the heavy inflow of gold during the first ten months of the year; a decrease of $519,000,000 in rediscounts, which occurred mainly at end of the year; and a decrease of $96,000,000 in bills bought in the open market, which was more than offset by an increase in Government securities amounting to $267,000,000. These last figures illustrate both the assistance given by the Reserve Banks at the time of the Wall Street crash and the extent to which this break has enabled member banks to reduce their own commitments. Brokers' loans increased from $5,395 million on January 16th to $6,804 million on October 2nd, after which they declined to $3,424 million on December 31st. The ratio of reserve to deposits and Federal Reserve note liabilities rose from 61.9 on January 2nd to 69.6 on December 31st. Bank clearings amounted to $727,739 million, as against $633,872 million in 1928.

Public Capital Issues.—New financing was the outstanding feature of the past year. The grand total of new corporate issues, exceeding all previous records, amounted to $10,036,361,000, according to the Commercial and Financial Chronicle tabulation (inclusive of $1,386,922,000 of refunding operations). Of this $2,223,730,000 was for the account of investment trusts and trading corporations.

Production and Trade.—Steel ingot production in 1929 set a new record at 54,164,348 tons, compared with 49,865,185 tons in the previous year, according to the American Iron and Steel Institute. Operations for the year averaged 88.81 per cent. of the capacity. Pig-iron production was 42,285,769 tons, setting a new peace-time record, and was 5.5 per cent. higher than the previous record of 1923 and 11.7 per cent. higher than in 1928. Public utilities again amounted to more than one-fifth of the total, at $2,442,769,000, against $2,562,288,000 in 1928. Motors and accessories were again low at $87,643,000, compared with $107,153,000 in 1928, while rubbers were almost doubled at $115,234,000, against $64,425,000. Stock sales were 1,124,991,490 shares, against 919,661,825 in the preceding year. The index of stock values reached a maximum of 253.5 on September 7th, and fell to the lowest of the year at 140.3 on November 13th. Bonds were 99.9 on January 22nd and 96.3 on September 25th.

Motor car and truck output attained a new high total of 5,358,361, against 4,358,759 vehicles in 1928, according to Department of Commerce figures. Railroad car loadings were 52,789,789, against 51,589,887 in the preceding year. Exports totalled $5,248,483,000 during the year, as compared with $5,128,356,000 in 1928. Imports also increased from $4,091,444,000 to $4,400,634,000, giving the country a favourable balance of trade for 1929 of $847,849,000, as contrasted with a balance in 1928 of $1,036,912,000. Exports of gold during 1929 totalled $116,583,000, as compared with $560,760,000 in 1928. Imports of gold increased from $168,897,000 to $291,649,000.

Public Finance.—Gross public debt of the United States, less balance in the general fund, was $912,279,744 less on December 31, 1929, than on the same date in 1928. The Government closed the first half of the 1930 fiscal year with an excess of $91,644,655 of receipts over expenditure, according to the Treasury Department. At the end of 1928 the Treasury reported an excess of $168,475,696 of expenditure over receipts. This apparent greater strength of the Treasury is lessened somewhat by the fact that the amount expended to retire the public debt for the first six months of the 1930 fiscal year amounted to only $384,805,403, while during the last half of 1928 a total of $467,036,750 was diverted to this purpose. The third Liberty Loan came due last year and the financing of this obligation made necessary the placing of the larger amount. Customs receipts for the last half of 1929 totalled $302,214,137, against $301,778,637 for the corresponding period of 1928. For the last six months of 1929 income tax receipts amounted to $1,185,317,860, while during the corresponding period in 1928 they reached $1,012,795,591. There were gains also in the total of receipts of principal on foreign obligations, which for the last six months of 1929 amounted to $40,858,179, compared with $28,562,640 for the corresponding six months of 1928. The receipts from interest on these foreign obligations for both periods was in round numbers $80,000,000.

ARGENTINE.

Finance.—During the first quarter of 1929 Argentina's hopes for a markedly prosperous year ran high, and with reason. Politically, the country was tranquil; financially, its position was unquestionably sound; commercially, its exports promised to exceed average totals and to realise normal prices. The close of the year finds these hopes modified by a series of circumstances which, if not easily foreseen in January-February, became latently possible by June, and were almost unavoidable when, on December 16, 1929, the Executive Power decreed the closure of the Conversion Office, thereby aggravating an exchange situation already sufficiently adverse to the Argentine peso. From 47½d., the cable rate for banks' drawings on London in January, 1929, sterling quotations had fallen to 43¼ on December 17, and this weakness continues at the moment of writing. Gold in the Conversion Office on the same date was $419,643,387 gold, as against $490,602,233 gold at the corresponding date in 1928. Insistence on the far-reaching gravity of this step is needless. Officially, the view was held that extraction of gold was chiefly due to speculation, whereas in banking and commercial circles it was plainly recognised that specie shipments were not merely permissible but even advisable, having regard to the unfavourable trade balance resulting from heavy imports of merchandise and sluggish sales of wool and cereals, two of Argentina's principal exports. Immediately following the closure of the Conversion Office came the proposed rediscount of $200,000,000 paper and the loan of £5,000,000 to the Argentine Government in the form of a discount, at 5¾ per cent. per annum, of Treasury bills made out and issued in London, and repayable on December 31, 1930, by means of remittance of minted gold if so desired. This is the first foreign loan transaction negotiated by the Argentine National Government since the accession of H.E. President Irigoyen in October, 1928. The Province of Buenos Aires has, however, accepted an offer for an external loan of $8,000,000 U.S. authorised by Law No. 3,941, American bankers taking the bonds, which carry 6½ per cent. interest and 1 per cent. amortisation, at 90 per cent. The Budget for 1930, which should have been discussed in Congress, has not as yet come forward. It is proposed by the Executive to work on the basis of the 1929 figures, showing a cash expenditure of $704,728,847 paper and issues of Argentine Internal Credit Bonds for $158,000,000. Subsidies and bounties, which are met by special duties, lotteries, etc., are

fixed at an additional $28,812,249 paper. It has also been proposed that the capital in cedulas (mortgage bonds) of the National Mortgage Bank be increased from 1,500 millions to 2,000 millions paper.

Foreign Trade.—Quantitatively exports in 1929 were satisfactory, as the following comparative figures will show:—

	1928.	1929.
Wheat .....tons	5,373,000	6,689,000
Maize .....tons	6,455,500	5,070,800
Linseed.....tons	2,033,000	1,682,000
Oats .....tons	314,500	443,400
Canned meats .....cases	3,107,700	3,258,967
Wool.....bales	315,100	324,500
Frozen beef .....quarters	1,057,000	1,060,000
Chilled beef .....quarters	5,437,000	5,449,500
Mutton and lamb .....carcases	3,369,600	3,884,700

Linseed and meat excepted, prices, however, showed a decided drop, while much of the wheat shipped is reported unsold in Europe at the year-end. Business in the import trade opened briskly, and remained active until the middle of the year. Sales then became difficult, while buyers showed great reluctance to place orders for the 1929-30 season, while commercial failures increased, total liabilities to November 30, 1929, being $147,898,002 paper, as against $129,102,832 paper for the corresponding eleven months of 1928. The local money market was easy down to the end of September, 1929, at 5½ per cent. for first-class trade acceptances, but rose sharply during the last quarter of the year, to touch 7½ per cent., with firm demand and marked competition among banks for deposit funds. Exchange at the year-end was weak, sight drawing rates being quoted as follows:—London, 45 13/16; Paris, 23.55; Swiss, 4.78; Belgium, 6.64; Italy, 17.72; Spain, 6.94; New York, 107.55. In this connection one may point out that these rates show a marked recovery from the set-back experienced on December 17th, a recovery which was not subsequently maintained. Politically, the year ended as it began, in complete tranquillity, and it was generally recognised that the attempted assassination of H.E. President Irigoyen, happily unsuccessful, was but the individual act of a madman, without any ulterior significance.

BRAZIL.

The past twelve months have been a period of somewhat severe commercial depression in Brazil. Difficulties arose in both the financial and commercial situations in mid-December, 1929, and severe credit stringency was experienced. The underlying cause of these difficulties has been the accumulation of large stocks of coffee in the interior, accompanied by a succession of heavy coffee crops. Prices of coffee in overseas markets declined, and the Sao Paulo Coffee Institute, the principal organisation concerned in arranging for the control of marketing of the Brazilian output, experienced difficulty in providing adequate finance. In fact, further loan negotiations were undertaken in overseas markets, and ultimately a comparatively small credit of £2,000,000 was arranged in London. At the time of writing, the general tone of the Brazilian commercial markets shows no appreciable improvement, but conditions in the local money market in both Rio de Janeiro and Sao Paulo are somewhat easier.

The Federal Budget estimates for 1930 provide for a surplus of roughly Rs. 24,881,479$360 (paper), or about £560,000 sterling. This result compares with an estimated surplus in the Budget for 1929 of Rs. 55,033,743$837 (paper) and a balanced Budget for 1928. It is to be noted that the revenue estimates for 1930 provide for a greater total of receipts than in 1929, which appears somewhat optimistic in view of the prolonged depression in the commercial situation. The Decree, estimating revenue, authorises the Government to issue, in anticipation of revenue, Treasury Bills up to a total of 50,000 contos, redeemable during 1930.

NEW YORK LIVERPOOL PARIS BRUSSELS HAVRE ANTWERP

Dull trade conditions were in evidence in all the important trade centres of Brazil throughout the year 1929, and dealers in imported textile goods in Sao Paulo found themselves overstocked. This situation resulted from the haste with which imports were made towards the end of 1928 and during the earlier part of 1929, in order to secure the arrival of shipments before the application of the new Customs duties. In consequence, negotiations of fresh sales became extremely difficult, so that, even if the difficulties arising from the credit stringency could have been overcome, a long period would have been required before the native industries could have derived benefit from the protective duties. The total number of cotton spinning and weaving factories in the Republic in 1928 was 347, of which 97 were situated in the State of Sao Paulo, 91 in Minas Geraes, 26 in Rio de Janeiro, and 23 in the Federal District. The total value of products was placed at Rs. 929,348:067 $000, of which Rs. 368,900:514 $000 came from Sao Paulo, Rs. 68,542:882 $000 to Rio de Janeiro, and Rs. 161,067:529 $000 to the Federal District.

The presidential elections are due to take place during the next few months, the candidates being Dr. Julio Prestes, a native of the State of Sao Paulo, and Dr. Getulio Vargas, of the State of Rio Grande do Sul, The new President will take office on March 1st next, and thereafter it is hoped that some revival of general trading conditions will take place, especially if by then the coffee position is more clarified.

CHILE.

A favourable political development affecting conditions in both Chile and Peru during the past year was the settlement of the long-standing Tacna-Arica question, by the ratification of the relevant Treaty on July 28th. This statesmanlike settlement will undoubtedly redound to the benefit of both countries—not the least in their commercial relations. In the Chilean nitrate of soda industry, production is maintained at a satisfactory level, and proposals are under consideration for limiting the output from oficinas where costs of production are heavy, in favour of the more cheaply producing oficinas. In August, 1928, the nitrate producers formed a corporation to centralise their sales on lines approved by the Chilean Government. At a meeting of the Association in March last, however, the Statutes were amended to provide for the embodiment in the Association of the selling corporation, so that thenceforth all the interests of the producers would be in the hands of the Association, the life of which was, at the same time, extended until June 30, 1939. At this meeting also the Chilean Government took the opportunity of reiterating its intention to spare no efforts to help the nitrate industry under the ample powers given it under the Nitrate Law, and negotiations during the earlier part of 1929 between the Chilean Minister of Finance and the two largest producers of synthetic nitrogen in Europe resulted in the conclusion of a price agreement between the parties concerned.

In other directions, the Chilean Government remains active in developing and diversifying the sources of national wealth. Thus, agriculture continues to be encouraged by the Government, and they are wisely extending the principle of establishing demonstration farms and encouraging co-operation among farmers. The production of copper is also becoming of increasing importance in the national economy. By means of subsidies, protective tariffs, etc., the Government is endeavouring to foster national manufacturing industries, while, at the same time, the official programme of public works is having the effect of increasing general trade activity, and, indeed, has considerably modified the supply of labour to other industries. The progress in the commercial and industrial activity of Chile is amply demonstrated by official returns. Statistics of the foreign trade of the Republic for 1928—the latest complete year available—showed considerable increases in both imports and exports, particularly in the latter, as will be seen from the following comparative table:—

(thousands of pesos.)

	Imports.	*Exports.*	*Export Surplus.*
1927	1,072,991	1,689,667	616,676
1928	1,169,654	1,965,944	796,290

During 1928, there was a marked increase in the import of automobiles, and substantial advances also occurred in imports of sacks, sugar, comestible oils, and petroleum. Exports of both nitrate of soda and bar copper were decidedly higher.

Even greater activity during 1929 in practically all lines of commerce was indicated by the provisional official figures of foreign trade of the Republic for January-September, 1929, during which period imports were valued at 1,125,800,000 pesos, against 805,700,000 pesos in the first nine months of 1928, while exports also showed considerable expansion at 1,768,700,000 pesos, against 1,412,200,000 pesos. The surplus of merchandise exports for the period was thus 642,900,000 pesos, against 606,500,000 pesos. The aggregate value of textile imports during the first nine months of 1929 was 269,406,000 pesos, and machinery, tools and equipment, etc., were valued at 127,006,000 pesos, while machinery and plant, etc., required for transport services amounted to 130,651,000 pesos. Exports of nitrate during the period were valued at 696,960,000 pesos, those of copper bars at 672,963,000 pesos, and iodine at 67,486,000 pesos. Shipments of raw wool leaving the country were valued at 64,667,000 pesos, and those of copper ore at 40,481,000 pesos.

The Government continues to maintain the national finances in a satisfactory position, and the ordinary Budget estimates for 1930 indicate a total estimated revenue of 1,214,650,000 pesos, including the amount of 45,000,000 pesos brought forward from the 1929 Budget, against which the ordinary expenditure is calculated at 1,159,323,798 pesos, the estimated surplus being, therefore, 55,326,202 pesos. The course of the operations in the financial markets in Chile has continued to emphasise fully the great change in credit conditions which has been effected since the establishment of the Central Bank of Issue, a period of steady and low monetary rates having contrasted sharply with the erratic movements and frequently high levels customary in the years prior to 1926. The total gold held at home and abroad by the Banco Central de Chile amounts to 459,230,000 pesos, representing a gold reserve as high as 97 per cent. of the deposit and note liabilities, and the Republic continues to enjoy the benefits of an extremely stable currency. The maintenance of interest rates at low levels has naturally continued to assist the State in its issues of internal bonds under the large scheme of public works, and the issue of such bonds for a further total of 50,000,000 pesos was successfully made early in 1929. Further external borrowings which have been made under the Extraordinary Budget Law have included issues in New York and London, as well as in Switzerland and Holland. The total external and internal debt at the end of 1928 aggregated 2,395,397,442 pesos—about £60,000,000 sterling—and this figure probably increased during 1929 owing to loan operations on account of the schemes of public works of national economic importance.

OTHER LATIN-AMERICAN STATES.

Colombia.

The general economic situation in Colombia was affected last year by financial stringency, which prevented any general revival of public works activity and expansion in commerce. At the same time, the international financial situation was not propitious for the raising of external loans, and trade in the Republic evinced a general tendency towards dullness, imports being restricted to a minimum. The Banco de la Republica, the Colombian central bank, again carried out with marked success its functions of controlling the credit situation and the currency note issue. The latest available statement of the bank shows an exceedingly strong position, the gold holding representing cover for the total note circulation of over 100 per cent., while exchange rates have been maintained at a slight premium over both sterling and United States dollars. According to a provisional statement of the Controller-General, relating to the year 1928, national revenue for that year amounted to 75,514,381 pesos, and expenditure to 80,087,087 pesos, there being thus a deficit of 4,572,706 pesos. The total deficit was then stated to be 11,274,848 pesos, but, in this connection, it must be borne in mind that the aggregate sum spent on Colombian public works during the past few years has been very substantial, while the Government has apparently made every endeavour in recent months to effect economies in public administration. The production of coffee is a matter of importance in the economic life of Colombia, as in that of other Central American countries, and the fall in market prices for that commodity has therefore been an adverse influence. The coffee-growing interests are carefully watching the Brazilian situation.

Ecuador.

Stable economic conditions have been maintained in Ecuador during the past year, but general trade has been quiet, owing to the poor demand for the country's two principal products, cocoa and coffee. Latterly, however, the cocoa market has been more active, and prices have shown a tendency to recover. The latest reports to hand from the cocoa-producing centres in regard to the interim harvest are of a favourable nature. Exports of cocoa have also been fairly satisfactory. A favourable market has been found in Colombia for Ecuadorian rice, the export of which is a new development. There has been some over-production of sugar, but this also is finding an outlet in Colombia. The production of petroleum continues to increase, and some progress has been made with railway construction. Local manufacturing industries continue to develop; the textile mills are making steady progress and are importing new machinery to extend production. A normal political situation has been maintained.

Peru.

Commercial activity in Peru during 1929 showed on the whole some improvement on the previous year, but, generally speaking, trade has been depressed of late owing to the weak tone of the export markets. During the early part of 1929, serious drought was experienced in practically all the cotton-growing valleys, and conservative estimates placed the total of the 1928-29 crop at 1,081,000 quintals, as against 1,184,000 quintals in 1927-28. Cotton prices at the opening of the season were good, but have since been declining gradually. The next crop, however, may show considerable expansion, as, in view of the low prices ruling for sugar, a large number of planters decided to grind their sugar cane and prepare their land for cotton. The Peruvian Presidential Message to Congress was delivered on October 12, 1929, and included a statement of revenue and expenditure of the Republic for the year 1928. According to the Budget Law for that year, the two items were estimated to balance at £P.11,113,650. The revenue actually received, however, totalled £P.12,198,107, while expenditure also exceeded the estimates, aggregating £P.12,061,163. There was thus a surplus of revenue for the fiscal year 1927 of £P.136,944. The outstanding circumstance in Peruvian conditions last year was the severe financial stringency experienced during the closing months, which affected the exchange to such an extent that dealing became a matter of negotiation and rates nominal. In this connection, it is currently reported that the Government are contemplating legislation which would decree the stabilisation of the Peruvian pound at the exchange equivalent of about U.S. $4, but nothing definite has yet been announced in this connection. Presumably with reference to this proposal, the Government has already issued certain Decrees, among which may be mentioned that of December 14th, providing that contracts, sales and commercial operations contracted in Peru or having effect therein, shall be made out in Peruvian currency. So far as concerns the latter Decree, the difficulties attendant thereupon have already been ventilated by the commercial and industrial interests, and, as the method of application of the measure has not yet been made clear, it is generally anticipated that the Government will shortly issue an amending or explanatory Decree. Meanwhile, there is a natural tendency to restrict commercial commitments.

Uruguay.

The Uruguayan national finances are maintained on a sound basis. The Budget for the financial period 1928-29 was made applicable to the year 1929-30, a small deficit being allowed for, although it is anticipated that actually a small surplus will be realised. The official returns of the foreign trade of the Republic for the first six months of 1929 showed a surplus of exports of 6,430,737 pesos, against 10,657,474 pesos, imports being valued on the Customs basis and exports at market prices. Uruguay was visited in September last year by the British Economic Mission. Discussions took place between the Uruguayan President and industrial interests and the members of the Mission as to the possibilities of encouraging the interchange of export products between Uruguay and Great Britain. The gold holding of the Banco de la Republica represents a proportion of 101 per cent. of the currency note circulation, while the latest available total of the public debt is 219,314,000 pesos, against 215,839,000 pesos at the end of December, 1928. The country has no doubt been affected by the low prices ruling for wool and cereals in overseas markets, and in February last year the exchange value of the peso depreciated.

THE MEANING OF MONEY
FIFTH EDITION THOROUGHLY REVISED AND RESET.

The recent struggle between the new United States Federal Reserve system and the New York Stock Exchange; the vagaries performed by the Bank of France and the Reichsbank, have resulted in the whole monetary problem being altered. It has therefore been necessary for Mr. Hartley Withers thoroughly to revise this standard work and bring it up to date. 6s. net

A description of the Money Market. By WALTER BAGEHOT.

JOHN MURRAY, Albemarle Street, LONDON, W.1

A recovery ensued, but, with the qualified restriction of gold exports at present in force, there are no ready means available of supporting the peso.

Bolivia.

There has been some improvement in trading conditions. The conversion of the Banco de la Nacion Boliviana into a central bank of issue has been brought into effect and the new bank—the Banco Central de Bolivia—has opened. Exchange has been steadily maintained, but the frontier dispute with Paraguay remains a disturbing element. During the latter part of the year the severe decline in prices of tin in the consuming markets adversely affected all business.

Paraguay.

Not until the last quarter of 1929 did indications appear of returning confidence in trading circles. The effects of the boundary dispute with Bolivia had a depressing effect on overseas trade. In the first nine months imports amounted to 9,642,696 Argentine gold pesos, against 10,792,285 pesos in 1928; and exports to 10,714,318 Argentine gold pesos, against 12,367,911 pesos. Business is now better than at any time since 1928, but it is reported that many merchants are overstocked. Weather conditions have recently been favourable, but prices are declining.

Venezuela.

The production of petroleum, which, during the calendar year 1928, reached the level of 105,522,733 barrels, against 62,817,000 barrels for 1927, and 36,926,000 in 1926, is estimated for 1929 at some 130,000,000 barrels. The 1928-29 coffee crop was very favourable, realising about 1,000,000 bags of 46 kilos. each. The next coffee crop is expected to be superior. The cocoa crop did not come up to expectations, but the outlook for the next harvest has been reported to be more satisfactory.

Mexico.

Considerable progress has been made in Mexico during the past year in the Government's programme for the building of roads, whilst the success of the authorities in suppressing the revolution in March last, as well as the subsequent settlement of the religious question, have caused a favourable impression in the Republic. The output of petroleum in Mexico has continued to show a reduction, and it is considered improbable that the oil companies will do anything to check a further decrease in output, taking into consideration the present over-production throughout the world; on the other hand, the mining industry has again been more actively employed and the Government has assisted it by removing restrictions. The recent heavy fall in the price of silver must, however, influence the earning capacity of the mines, as the Republic is the world's leading producer of the metal. Notwithstanding that Mexico should be agriculturally self-supporting, quantities of wheat and other foodstuffs have had to be imported, but during the past few years, the Government has invested approximately 50,000,000 pesos in irrigation works, which are expected to increase the total area of arable land by 30 per cent. National production is much lower than in former years, owing to the past political disturbances and other causes, and the purchasing power of the people has declined, while some of the best workers have emigrated, and cotton, woollen and shoe factories, have been compelled to work below capacity. Nevertheless, generally speaking, the outlook is much better than it was twelve months ago, and there has been a slight improvement in general commercial conditions during the past few months. The regulation prohibiting any supplementary expenditure not authorised by Congress, and the drastic reductions already made in expenditure, resulted in a surplus in the national accounts for 1928 of 16,000,000 pesos. The estimates for 1929 provided for revenue amounting to 288,000,000 pesos and expenditure of 287,850,000 pesos, and, notwithstanding the extraordinary expenses incurred by the military campaign, it is anticipated that the final balance will show a small surplus for the fiscal year 1929. The improved position of the Treasury has been achieved at the expense of the national debt, for which no payments on account of interest or amortisation have been made since January, 1928.

West Indies and Central America.

In the West Indies, Cuba, Costa Rica, Panama and Haiti the general commercial situation has been depressed owing to the poor conditions ruling in the consuming markets for the various export products. Financial stringency has been in evidence, while there are indications of the importing houses being fully stocked. In Jamaica and Trinidad, however, business conditions are above average. Trade in Panama has been quiet, the banana farms having been affected by a local crop disease, but cocoa exports have increased. In Cuba, the chief influence has been the low prices ruling for sugar, but a reduced output is expected from the next crop. Costa Rica and Haiti have been especially affected by the coffee situation. The situation in Nicaragua has improved. Guatemala has a problem in the marketing of her coffee, and has also been affected by poor maize harvests, which have necessitated the continuance of imports. El Salvador is particularly dependent upon coffee, and is paying special attention to the reduction of producing costs.

MALAYA.

British trade with the Malay Peninsula showed some improvement last year. Trade conditions in the Peninsula have been satisfactory in spite of some uncertainty as to the future of the Singapore base. Tin prices showed a steady decline during the latter half of the year. The question of the depletion of the potential tin resources of the Peninsular has been engaging the attention of the authorities, and it has been decided that no advantage will be gained by increasing the rate of depletion. No application for mining land or for the conversion of agricultural land into mining land outside the existing mining areas will be entertained in future. In existing mining areas alienation or conversion will only be approved, exceptional circumstances apart, when necessary for the development of existing undertakings. Wide support has been accorded in Malaya to the restriction scheme proposed by the Tin Producers' Association. Rubber has been freed from export restriction for fourteen months, and the price has averaged about 8d.-9d. per lb. There was a marked drop in the price towards the end of November, and the publication of the Report of the Committee of the Rubber Growers' Association on Co-operative Selling failed to arouse any enthusiasm in Malaya, where the proposals are considered impracticable. Shipments of rubber from Malaya were higher last year than for some years past. In spite of the cosmopolitan nature of the population there has been little evidence of unrest to disturb the economic peace of the country, and Sir Cecil Clementi, who succeeds Sir Hugh Clifford as Governor and High Commissioner, comes to a land of contentment, with few prospects of political trouble. Financially the country remains sound, and the revenue is found easily enough without unduly stringent duties, though slight increases in the Excise Duties were made last year. A feature of Malayan life is the growth of co-operative societies, which have increased from 19 in 1923 to 123 at June 30, 1929, while the capital has increased from $73,461 to $1,940,232 in that period.

JAPAN.

During last year trade and finance were overshadowed by uncertainty as to the restoration of an effective gold standard until it was eventually decided upon towards the end of November. The money market passed through another year of excessive ease. Home business was extremely depressed, but foreign trade showed an exceedingly satisfactory record. Production in several staple industries was fairly well maintained. With poor crops of rice and wheat and low cocoon prices the agricultural situation was far from reassuring.

Public Finance.—The revised Budget for 1929-30 estimated expenditure at 1,682,310,000 yen, a saving of 91.2 millions on the original estimates and a decrease of 38.7 millions upon the preceding year. The national accounts for the first seven months ended on October 31st last disclosed revenue amounting to 513,629,000 yen and expenditure to 708,204,000 yen, as compared with 860,120,000 yen and 737,241,000 yen respectively for the corresponding period of 1928. The heavy decline in revenue is chiefly accounted for by the transfer of the preceding year's surplus, new loan and receipts from Government enterprises and property. Tax revenue, however, shows a fairly large increase of 12.7 millions. The Budget estimates for 1930-31 show an estimated expenditure of 1,608,776,000 yen, against an estimated revenue of 1,576,073,000 yen, with a deficit of 32.7 millions to be met from the preceding year's surplus. No new loan is budgeted for the year. It is many years since Japan has had a balanced Budget without recourse to borrowing. The national debt rose by 83.9 million to 5,883,463,000 yen during the first eleven months of 1929.

Money.—Monetary ease continued throughout the year. Funds were plentiful and short loans could sometimes be obtained at as low as 2½ per cent. Though Bank rate remained unchanged, banks' deposit rates were lowered by one half of 1 per cent. in February. The note circulation did not rise far above the average level of 1,200 million yen, except during month-ends. The new capital market was less active than in 1928, the new issue for the first eleven months totalling 1,589 millions, as against 2,289.5 millions. Since the latter half of the year the yen exchange moved higher and was within a measurable distance of parity by the close of the year. The dollar was quoted at 49c. and sterling at 2s. 0 1/16d. on December 21, 1929, as compared with 46c. and 1s. 0½d. at the same date in 1928.

Trade.—From January 1st to December 20th imports were valued at approximately 2,159,869,000 yen and exports at 2,096,184,000 yen. As compared with the corresponding period of 1928, imports and exports expanded respectively by 39.3 and 186.4 millions, the apparent adverse balance being 147 millions lower at 63.6 millions. For the first eleven months imports of raw cotton rose by 55 millions, machinery by 29 millions, ammonium sulphate by 10 millions, beans by 10 millions, and iron and steel by 9.7 millions, while sugar fell by 31 millions, woollen yarns and manufactures by 22.9 millions, timber by 17 millions, and oil-cake by 11 millions. Exports of raw silk rose by 66 millions, cotton yarns and manufactures by 55 millions, silk fabrics by 13 millions, the only appreciable decline was one of 7 millions in sugar.

Production and Prices.—The rice crop is officially estimated at 58,372,000 koku, a decrease of 1,930,000 koku on the actual yields of the preceding year and 602,000 koku below the five years' average. The wheat crop is placed at 20,763,000 koku against 21,120,000 koku in 1928. The output of cocoons totalled 99,163,000 kamme, an increase of 5,304,000 kamme upon the preceding year . The Bank of Japan's index of wholesale prices (July, 1914, = 100) was 167.86 for November last, as against 182.16 a year ago.

THE DUTCH EAST INDIES.

The policy of placing the control of affairs more and more in native hands is being continued by the Dutch authorities in the Netherlands East Indies. This is automatically having the effect of weakening the authority and prestige of the European population and,

PAYING LOSSES

is, of course, the main function of "GLOBE" MOTOR INSURANCE.

£1,250,000

was paid in Motor Claims alone last year by The Liverpool & London & Globe.

But there is something else which goes freely with every "Globe" Motor Policy —"GLOBE" SERVICE, which extends practically from Land's End to John O'Groat's.

May we tell you more about this service and insurance, which has behind it funds exceeding

£23,000,000

and a 93 years' record for prompt claim payments of more than

£147,500,000.

HEAD OFFICE: 1, DALE STREET, LIVERPOOL.

Without obligation, please send particulars of the "Globe" policy for the class of insurance marked below.

(*a*) Private Motor Car; (*b*) Motor Cycle; (*c*) Commercial Vehicle.

Name..... *Address*.....

in the opinion of many, the work of emancipating the native is being carried too far and at a too rapid pace. This considered policy of the authorities may well account for much of the political unrest of the past few years. Deliberations have been taking place in Holland on rubber problems, and an Anglo-Dutch Committee has been formed to explore the difficulties which beset the industry. In the meantime, the problem of heavy native tapping with the production of large quantities of "wet" rubber is presenting considerable difficulty. Twelve years of research have led to a claim by a Dutch ex-rubber planter that he has evolved a new tapping method which will increase the volume of latex and the life of the trees. The system involves the use of a special knife and a new time table for tapping. European-controlled plantations, as a whole, have prospered during the past year in spite of the low price of the commodity. The trading position of the Dutch East Indies is enviable indeed, and, once again, in 1928, there was a substantial favourable trade balance—higher than in 1927, but lower than in 1925 and 1926. Figures for 1929 are not yet available. Considerable extensions continue to be made in the oil palm industry, and the area under this cultivation grows rapidly on the East Coast of Sumatra, where the output this year should exceed 20,000 tons. Tea, the culture of which is confined to Java and Sumatra, is also making good headway, and over a third of the capital invested in this is British. Netherlands Indian teas are extremely popular in Australia and New Zealand. Sugar, tobacco, cinchona, coffee and cassava are other crops which have done well. The financial position of the Netherlands East Indies improves each year. Though there is still a deficit in the estimates, this is being steadily reduced, and there is little question as to the financial soundness of the islands. The work of developing this extensive territory is necessarily costly, and there is still much to be done.

CHINA.

The year 1929 in China has been one of disappointment, except for the single fact that the so-called National Government at Nanking is still in office, purporting to control and speak for a united country. Its chief executive agents, Chiang Kai-shek, the Chairman of the State Council, C. T. Wang, the Foreign Minister, and T. V. Soong, the Minister of Finance, although, possibly, by dint of threatening resignation from time to time, have ridden out successive storms, and the year's developments may be summarised by the study of the activities of these three leaders.

At the Disbandment Conference, in January, limits were assigned to specified military commands, and the reduction of the total national army to 700,000 of all ranks was resolved upon. Moreover, it was wisely agreed that all military expenditure should be under the control of the Finance Ministry. Events have, however, shown that no one of these reforms is yet capable of being carried into effect. On the other hand it redounds to Chiang's credit that he has suppressed a revolt in the South on the part of the Kwangsi generals, quelled a mutiny on the Yangtsze, negotiated a truce with Feng Yu-hsiang, and reached a settlement with the Soviet of a railway problem which at one time bid fair to make war with Russia inevitable.

In foreign affairs China's national aptitude for negotiation has had full play. Treaties with the principal foreign Powers, cancelling all provisions in earlier treaties which limited China's right to settle her Customs tariff, have been ratified. In March an agreement was reached with Japan on the much vexed Tsinan affair, the two Governments declaring themselves "ready to dismiss from their minds all discordant feelings attending the incident." The evacuation of Japanese troops from Shantung followed in May. With regard to the question of Extraterritoriality, the British, French, American and Japanese Governments have declared readiness to discuss means for ultimate abolition. No definite progress had been made at the close of the year, whereupon the Government issued a Mandate declaring that from January 1, 1930, "foreign nationals enjoying extra-territorial privileges shall abide by the laws, ordinances and regulations, promulgated by the Central and Local Governments of China." This apparent act of uncompromising defiance was obviously intended for home consumption, and has been explained as meaning no more than that from January 1st the Ministry for Foreign Affairs would only be concerned with ways and means of transferring jurisdiction back to the Chinese Government, which would require further negotiations with foreign Powers.

With an inflated army maintained throughout the year on a war footing, no organisation of national finance has been possible. In the Department of Customs the administrative changes effected at the end of 1928 have caused a return to the Hart *régime*. The new Inspector-General, no longer handicapped by the concerns of the Customs Surplus and its attendant responsibilities assumed under Government Mandate in 1923, has won the confidence of all parties in the political arena. The usual annual statement that the services of all foreign loans secured on the Customs Revenue have been met at due dates adds that the revenue in silver is 88 per cent. higher than that of the preceding year. The new tariff introduced in February is, of course, responsible for this great increase, but, in the absence of details of the collection, no deductions as to the trend of trade derived from Customs Returns are feasible. In Salt affairs, what appeared to be the complete breakdown of the collectorate as organised under provision of the Reorganisation Loan Agreement has proved in effect a re-settlement of this revenue as a national asset. Mr Soong has fulfilled the promises contained in his public statement of November, 1928; he has made a large inroad into the arrears of dependent loan service, and is confident that the loans secured on this revenue will, before long, be brought up to date. The tactics of the Chinese Minister in recovering and retaining control of these two reliable sources of revenue have been subjected to unfair protest and criticism, but the clear aim underlying each step that Mr Soong has taken, coupled with his assurance of full acknowledgment of foreign obligations under hypothecation, are among the evidences of his sagacity and statesmanship.

The condition of Chinese railways shows little sign of improvement. The Northern Railway and the Nanking and Ningpo lines continue to meet their specific obligations, but the overwhelming mass of debt, comprising loan service in arrears and unpaid equipment accounts, is augmented by further arrears and interest, and now amounts to over £6,000,000. It would appear that the Government's control of the Peking-Mukden Railway is of a shadowy nature, the actual direction being in the hands of the Mukden Authorities, who levy a serious distraint upon the railway revenues. The Tientsin-Pukow Railway resumed through-traffic in February, but the control of the line has not yet been assumed by the Ministry of Railways, and its revenues, largely reduced as they are by years of lawlessness and pillage, are still deflected to military use. With the whole national railway system in urgent need of re-habilitation, and with much new construction work awaiting the necessary finance, the practice of treating a railway line as if it were a milch cow is greatly to be deplored. The problem confronting Mr Sun Fo, the Minister, and his assistants is not enviable. So high, however, is the peace-time percentage of profit on all Chinese railways that the problem need not be regarded as insoluble.

HOME PRODUCE.

I.—THE CORN TRADE.

High quality has characterised all the harvests of 1929 in the North Temperate Zone, and quantity has been affected in very strict relation to rainfall, and the standard of agriculture. Thus, the 2.33-inch fall in England, July 1st-September 30th, did not reduce the wheat and barley yields, and it only reduced that of oats by less than 10 per cent. A less severe drought in Canada cut wheat down to a twelve-bushel yield, and both barley and oats were meagre crops from Vancouver to Quebec. The drought told against United States production of all cereals. On the Continent the crops proved above the mean in bulk.

Production of Wheat.

That the production of wheat in 1929 fell below the world total for 1928 is due to the reduced yield per acre in North America (July-September), which was the more important by reason of the smaller yields, also due to drought, in the Antipodes (December). The great rise in the trade influence of Buenos Aires and Rosario, of Melbourne and Sydney, has resulted in making February and not October the pivotal date for the operators' plan of campaign. The cereal year at Mark Lane still begins September 1st, but until the great December harvests of Argentina and Australia are secured world production cannot be estimated.

To-day all wheat markets would be much dearer if the crop equation of 1929 yields, including those of the Antipodes, were the sole element determining prices, but quantities of unsuitable 1928 wheat have been thrust on millers, and their refusal to buy for the loaf what was not fit for the loaf has resulted in an unprecedented accumulation in warehouse of unsold 1928 wheat. This accumulation is in the New World, but very low freights make it a standing menace. The eight chief countries in the wheat trade show the following production in millions of cwt.:—

	1914.	1924.	1925.	1926.	1927.	1928.	1929.
British Isles	33·4	27·0	26·0	27·6	29·9	26·0	23·0
U.S.A.	427·3	471·5	366·2	453·6	457·0	480·0	556·0
Canada	86·0	147·0	227·2	219·1	243·0	268·0	160·0
India	171·2	197·0	175·5	174·6	175·0	160·0	173·0
Argentina	85·6	112·9	119·0	117·0	120·0	140·0	112·0
Australia	20·0	83·2	65·0	90·0	68·0	80·0	72·0
Germany	77·4	50·4	59·0	60·0	70·0	75·0	59·4
France	154·8	153·0	177·3	135·0	152·0	160·0	192·0
	1,095·7	1,242·1	1,215·7	1,276·9	1,316·3	1,389·0	1,347·4

British production shows a net decline owing to a fall in area alone. Quantity was a full average, and more than the usual percentage reached a really good milling standard. The United States farmers grumble lustily but continue to increase their wheat area. The group of lesser countries to which last year we assigned a total yield of 332,000,000 cwts., must this year be credited with fully 10 per cent. increase, for Italy has made an even greater net advance, and Roumania, owing to the favourable season, had a 25 per cent. greater yield per acre. The area sown in the autumn of 1928 was exceedingly small; the information from Soviet Russia has centred in news of a determined effort to "break" the more well-to-do cultivators and to establish State "bonanzas," but Nature has worked indifferently for all parties, and the total yield is almost certainly about 10 per cent. above the meagre and barely sufficient yield of 1928. Allowing for about 120,000,000 cwt. for surplus poor wheat in North America, the figures of wheat in the world on December 31st of each of the last six years work out as follows:—

	Thousand cwt.		Thousand cwt.
1924	1,641,100	1927	1,816,300
1925	1,750,700	1928	1,881,000
1926	1,776,900	1929	2,028,600

The depression of the wheat markets is due almost entirely to one cause, the endeavour to escape the 25 per cent. loss involved in selling the 1928 wheat surplus of poor or, as the trade term is, "poultry" corn. The consumers' danger is of having it mixed with the fine 1929 wheat, and this is the cause of the once trusted grades being now challenged. "Fair average quality Canadian" wheat should have a fixed meaning, but No. 3 grade Manitoba, 1928, is not the same thing as No. 3 Manitoba, 1929. Demand per head has risen *per capita* on the year, and confidence seems now to be returning.

Supplies of Breadstuffs.

Our estimate last year that a million tons of home-grown wheat are used annually for human food has proved near the mark. Imports have risen, but lesser uses have taken much of the three lower grades of Canadian imported, and of ordinary American red.

Imports. (Thousands of tons.)

	1925.	1926.	1927.	1928.	1929.
January	409	578	466	382	456
February	321	308	427	416	386
March	451	435	524	644	502
April	421	420	538	521	547
May	455	331	523	468	526
June	442	501	654	476	420
July	512	516	475	494	487
August	393	570	565	506	530
September	405	480	535	397	660
October	440	400	410	380	650
November	407	402	519	460	535
December	609	456	431	662	369
Total	5,265	5,396	6,067	5,696	6,068

With the million tons of home-grown grain we get a grand total of 7,068,000 tons, against one of 6,696,000 for 1928. The imports of France and Italy will prove smaller than for 1928, and this has increased the eagerness of the chief exporting countries to sell to Great Britain. It is probable that between six and seven million cwts. have been exported from Germany and between 34 and 35 millions imported.

The Production of Spring Corn.

Maize production does not increase. Great Britain in 1929 imported 1,746,000 tons, which at present-day low prices still represent over thirteen millions sterling. The maize problem seems likely to increase in importance, but the crop ripening in Argentina is of promise, and may secure for us moderate prices for 1930. Barley enjoyed a highly favourable season in Europe, and the home crop showed an unusual percentage of malting quality. This at 12s. to 15s. per cwt. pays the grower. The very dry summer reduced the yield per acre, and especially on porous soils. The United States and Canada do not give barley the good tilth that it asks, with the result that it wilts badly with a spell of trying drought. The result was a far greater falling off in yield than in Great Britain. Very heavy thunder-rains appear to have rendered extremely timely aid to the oats crop in France and Germany.

Production (in millions of cwts.).

	Maize.			Barley.			Oats.		
	1927.	1928.	1929.	1927.	1928.	1929.	1927.	1928.	1929.
British Isles	None	None	None	21·0	24·0	19·0	54·0	56·0	50·0
United States	1,237·5	1,361·0	1,224·9	115·5	148·0	138·8	324·0	415·0	365·0
Canada	2·4	2·2	2·0	42·7	62·0	48·2	121·5	143·0	107·0
Australia	4·8	5·0	5·2	1·7	2·5	3·0	2·9	3·0	2·5
Argentina	162·0	200·0	175·0	10·5	14·0	15·4	35·5	30·0	35·0
Germany	None	None	None	43·0	48·0	60·0	137·3	150·0	158·0
France	10·7	12·0	14·0	25·0	27·0	29·7	115·0	112·0	117·6
Total	1,417·4	1,580·2	1,421·1	259·4	325·5	314·1	790·2	909·0	835·1

A fine crop of maize is assigned to Roumania, Jugoslavia and the Balkans, but no really safe returns are available. Of barley 27,000,000 cwts. are assigned to Poland, 39,000,000 to Roumania, and 33,000,000 to Spain, the oats assigned to these three countries being 56,000,000, 27,000,000 and 11,000,000 cwts.

Market Prices.

Low prices have not been an unbroken calamity to the farmer who buys freely of maize, oats, oilseeds and oil-cake. Latterly flour has been rather out of touch with both wheat and bread. Press prices ex mill are no indication of what the small baker pays. Bread is dear in proportion to English wheat, cheap in proportion to Canadian, and the miller holds the balance. Feeding rice and feeding sugar are both cheaper on the year.

Mark Lane Prices per Cwt. at the Beginning of Years Named.

Potatoes alone have reverted to pre-war price, and they are exempt from substantial competition. The imports are of luxuries, interfering with profits in a few districts for two or three months. Oats are more affected by foreign competition than either wheat or barley, but the imports of oats have fallen to 353,000 tons. It is maize which undersells, says the trade, yet the price is only 6d. below oats to-day, and it was 1s. 6d. lower in 1914.

The following table shows the quantity and value of our imports of wheat, etc., in 1913, 1928 and 1929:—

	Quantity.			Value.

FRUIT AND VEGETABLES.

The year as a whole has been favourable, crops of fruit generally were satisfactory, and only black currants, which were a good crop, returned seriously disappointing prices. Even tomatoes commanded better prices than in 1928. The steady position of fruit and vegetable growing is indicated by the acreage returns for 1929, which reveal an increase of 200 acres in "small fruit" set off by a decrease amounting to a similar area of orchards. Orchards in 1929 were returned at 248,000 acres, as against 239,477 acres in 1924. Most vegetables were grown on increased acreages, the most notable exceptions being sprouts and celery. Cabbage for human consumption was more widely grown in most counties. An increase in the potato acreage was accompanied by heavy production, 3,588,000 tons in England and Wales and 1,155,000 tons in Scotland. The result has been an over-supply in markets, and, in the absence of orderly marketing, a serious loss to growers. The progress in the canning of English fruit and vegetables which the last two years have shown suggests that this industry bids fair to become a considerable national asset.—*The Fruit Grower.*

The following table shows the area and yield of potatoes in the last three seasons for this country and some of the largest of the world's producing areas, as estimated by the International Institute of Agriculture:—

	Area (Thousand Acres).			Yield (Thousand Centals of 100 Lbs.).

LIVESTOCK.

By the courtesy of the Ministry of Agriculture we are able to give the following advance table, showing the numbers of livestock in England and Wales halfway through 1927, 1928 and 1929 respectively, as compared with the average for the years 1918 to 1927. The figures are collected annually as on June 4th:—

	Average 1918-27.	1927.	1928.	1929.
Horses—	No.	No.	No.	No.
Horses used for agriculture (a)	791,401	746,208	732,510	706,765
Stallions being used for service	5,646	3,174	2,995	2,845
Unbroken horses:				
One year and above	186,952	103,711	93,291	89,274
Under one year	72,476	40,214	38,161	37,583
Other horses on agricultural holdings	217,245	183,914	171,503	162,806
Total of horses	1,273,720	1,077,221	1,038,460	999,273
Cattle—				
Cows and heifers in milk	1,962,505	2,096,387	2,066,483	2,054,073
Cows in calf, but not in milk	286,273	307,059	301,774	293,715
Heifers in calf	355,100	387,257	355,231	364,763
Bulls being used for service	1,044,900	88,405	82,112	80,271
Other cattle:				
Two years and above		971,470	925,980	918,878
One year and under two	1,159,768	1,226,498	1,174,956	1,143,640
Under one year	1,150,473	1,198,164	1,119,897	1,102,254
Total of cattle	5,959,019	6,275,240	6,026,433	5,957,594
Sheep—				
Ewes kept for breeding	5,973,711	6,962,142	6,836,712	6,717,258
Rams and ram lambs to be used for service	2,854,149	196,351	191,491	187,209
Other sheep:				
One year and above		2,625,282	2,379,277	2,266,762
Under one year	6,255,758	7,288,500	6,981,930	6,934,224
Total of sheep	15,083,618	17,072,275	16,389,610	16,105,453
Pigs—				
Sows kept for breeding	331,557	392,934	380,063	307,144
Boars being used for service	2,035,411	25,524	26,222	21,925
Other pigs		2,273,056	2,564,758	2,037,474
Total of pigs	2,366,968	2,691,514	2,971,043	2,366,543

(a) Figures for 1927 and 1928 include mares kept for breeding.

Pedigree Cattle.—The past year saw a great number of sales of pure-bred livestock, and a regrettable feature was the relinquishment of their herds by a number of breeders. The trade, however, has been well maintained, and numerous exports have been made, although individual prices have been lower. Australasia will now accept stock through the London Quarantine Station, but at the time of writing North America and Canada remain closed owing to the outbreaks of foot-and-mouth disease in Scotland. The Russian Government made many purchases of Herefords and shorthorns in the autumn, and the home demand, especially during the latter part of the year, has been well maintained. There was a steady trade in shorthorns; average prices at the various sales ranged from £30 to £87. Prices for British Friesians fell substantially, and at few sales was an average price reached of over £40. South Devons and Guernseys remained in good demand, and Jerseys experienced a better year. Prices for Welsh Black, Aberdeen-Angus and Highland cattle were lower. Several herds of Red Polls were dispersed during the year.

Horses.—The trade has differed little from that of 1928. Demand for the heavy draught horse has improved, as many firms are finding the horse-drawn vehicle more economical for town use than mechanical traction. Trade

in Shires has been slow, but at steady prices. The best price for a stallion was 800 guineas, but few others reached over 200 guineas. Prices of Clydesdales were slightly lower than in 1928, and those of Suffolk Punches scarcely changed. Hunters and polo ponies met with a good demand.

Pigs.—There was undoubtedly a slight improvement during the past year, but it is a question whether the small advantage is of much benefit to the breeder. Large whites have maintained their popularity, and many first-class animals have been exported. The demand generally from overseas for other old-established breeds has been good, a large consignment of Berkshires being sent to Australia in the autumn. A large number of public sales have taken place, but high prices have been few and far between. Trade in large whites and middle whites has been active and prices better than in 1928, and there has been some improvement in the prices of large blacks. There have been few sales of Berkshires.

Sheep.—The trade in pure-bred sheep showed a considerable improvement on that of 1928. At the various sales, prices were maintained at a satisfactory level, and though in the majority of breeds fancy prices were not reached, a very steady demand was experienced. There has been a great demand, both from North America and Canada, for good stud stock, and had it not been for the outbreak of foot-and-mouth disease near Glasgow last September, a record number of sheep would have been sent across the Atlantic. The Kent and Romney Marsh sale at Ashford was the outstanding event of the year, over two hundred head being purchased, many at very high prices, for export to South America. There has been little change in the demand for Oxford Downs. Suffolks, Ryelands, Leicesters, Romney Marsh, Dartmoor, Black-faced Mountain and Cheviots all experienced a satisfactory season, and demand from the Soviet Government and from South America caused an advance in the price of Lincolns. Southdown, Wensleydales and Exmoor Horn commanded rather lower prices than in 1928.—*Mr Harry Brown in "The Farmers' Red Book."*

Fat Stock.—Prices of fat cattle varied less than in 1928. Over the year 1929 the average for second quality cattle was 1s. 6d. per live cwt. less than in the previous year, and the index was five points lower at 33 per cent. above the pre-war level. Fat sheep averaged about ½d. per lb. less than in 1928, and the index fell ten points to 57. In both cases the net decline was due to the fact that prices rose less in spring and early summer than they had in 1928. During the last quarter of 1929 prices were higher than in the corresponding period of the preceding year. Bacon and pork pig prices advanced sharply in the first five months, then fell about 1s. per stone. Prices of pork pigs more than recovered their loss in the autumn, and averaged 13s. 6d. per stone (second quality) in December. Bacon pig prices did not rise again until November and December, and remained below spring level. The following table, based on figures in the *Agricultural Market Report*, shows the percentage increase in prices, as compared with the average, 1911-13:—

	1923.	1924.	1925.	1926.	1927.	1928.	1929.
Fat Cattle	51	53	51	41	27	38	33
Fat Sheep	87	87	83	57	50	67	57
Pigs, Baconers	57	33	63	80	44	35	60
Pigs, Porkers	71	39	64	84	55	38	65

POULTRY.

The following information is obtained from an annual review by Dr. Edward Brown, of the National Poultry Council:—

The severe atmospheric conditions which prevailed in the earlier months of 1929 delayed hatching and rearing generally, but the gain from postponement of hatching to the natural period probably balanced the loss. Otherwise the year was one of the best which breeders and producers have experienced. Prices and profits have been excellent. Egg farming on specialist lines, as distinct from farm poultry keeping, is no longer a doubtful proposition. The census taken on June 4, 1929, records that there was an increase of adult fowls of 5,207,459 or 24.4 per cent., as compared with 1924; of geese of 81,362 or 15.2 per cent.; and of turkeys of 58,366 or 9.1 per cent. These returns only apply to farms of an acre and upwards. If smaller holdings of all grades were included the increase of fowls would be much greater. Increased production has been accompanied by some enhancement of consumption of home supplies as a result of grading and marketing regulations, the establishment of packing stations to deal with British eggs, and the marking of imported eggs. Marking has not yielded all that its advocates hoped, owing to the fact that

"STANDARD" QUOTATIONS

Would'st thou both eat thy cake and have it?
—HERBERT.

This desirable state of affairs would seem to be almost reached in some Standard Policies, where the bonus actually exceeds the premium.

EXAMPLE:
Whole of Life, £1,000 Sum Assured, With Profits.
Annual Premium for age 28 at entry £23 0 0
Tax rebate, at present 2s. in the £ ... 2 6 0
Net annual cost £20 14 0

At the Standard's present bonus of 42s. per cent. annual and compound, the amounts added to the £1,000 Sum Assured would be:

At end of year	Bonus	Premium cost
1 ...	£21 ...	£20 14 0
21 ...	£547 ...	£434 14 0
41 ...	£1,345 ...	£848 14 0

(Tax rebate taken at 2s.)

The supreme financial strength of the Standard gives every indication that the present rate of bonus will be maintained.

Write to-day for "With Profit" prospectus "A.J. 14."

deficiencies in home supplies have been made more manifest. Had it not been that grading and the national mark were introduced at about the same time the effect might have been disastrous. With the advance of poultry husbandry on specialist lines laying trials are steadily advancing in importance and number, and the dissemination of pedigree stock is doing much to promote greater success. Attention must, however, be given to the decrease in size of body and of eggs as a result of enhanced fecundity. The chief complaint on the part of traders is the small size of British eggs as compared with those imported. Imports of eggs in shell at 24,961,808 great hundreds in 1929 were 5.6 per cent. less than in 1928. Heavy decreases in imports from France, Italy, Egypt, Russia, the United States and Canada were not balanced by the substantial growth in imports from China, Australia and the Netherlands, and the relatively smaller increase in those from Denmark and Belgium. Empire supplies, except those from the Irish Free State, remain a very small proportion of the total. The declared value of this total at £17,855,625 exceeded that of the preceding year by £79,411. Imports of dried and liquid eggs were as follows:—

	Quantities. Cwts.	Values. £	Per cwt. s.	d.
1927	640,028	3,066,344	95	9
1928	583,680	2,718,792	95	4
1929	680,086	3,103,403	92	6

Nearly 99 per cent. came from China, including Hong Kong.

Poultry Imports and Exports.

The imports of live and dead poultry into Great Britain and Northern Ireland in 1929 were:—

Country.	Quantities. No.	Values. £
Alive—		
Irish Free State	1,072,820	208,551
Other countries	131,905	14,163
Total alive	1,204,725	222,714
Dead—	Cwts.	£
Latvia	43,504	193,466
France	65,145	423,595
Austria	34,843	170,465
Hungary	44,428	211,335
U.S. America	9,742	72,907
Irish Free State	126,882	746,141
Other countries	229,666	1,141,808
Total dead	554,210	2,959,717
Less re-exports	20,623	121,308
Net total dead	533,587	2,838,409
Gross total poultry		£3,061,123

There was an increase in 1929 over 1928 of quantities by 64,773 cwts. or 15.9 per cent., and in total values of £271,288 or 9.5 per cent.

Estimates based upon Census returns and average values of eggs and poultry for 1929 are:—

	£
Estimated production in England and Wales	24,709,600
Estimated production in Scotland	3,286,000
Estimated production in Northern Ireland	3,869,000
Total production in Britain and Northern Ireland	31,864,600
Imports of eggs and poultry, inclusive of dried and liquid eggs, less re-exports	23,994,335
Total wholesale consumption	55,858,935

The corresponding estimates for 1928 were:—Production, £31,436,995; retained imports, £23,249,342; consumption, £54,686,337.

FISH.

Taking into consideration the fact that more firms than ever are handling their supplies outside the market proper, the figures of which are not included in the official list, it may be estimated that Billingsgate has dealt with a greater bulk of fish of home and foreign origin this year than any previous year in its existence. The official figures, giving the total weight of fish handled at Billingsgate up to the end of November show the arrival of 174,804 tons, of which 20,317 tons arrived by water. The figures for the corresponding period of 1928 were 171,148 tons and 21,311 tons respectively. Working on the average prevailing during the first two weeks of this month, the grand total for the year should not fall far short of 200,000 tons. Supplies of prime fish have fallen compared with those of the previous year. Other classes of fish have been well in evidence, but in both grades, home-caught fish have shown a considerable decline. Offal grades have met a much better market. Foreign supplies have been the mainstay of the trade. Danish fish has been the greatest feature of this section.

Supplies of fresh salmon have shown a slight decline, while values generally have also fallen. The demand for Scotch, English and Irish salmon has been extremely good, and there has been an enormous increase in the frozen salmon trade. Grimsby has had a record year in the total landings of 3¾ million cwts., valued at £4¾ million. Hull has added thirty new trawlers to its fleet, and has made progress in other directions during the year. All the principal ports except Aberdeen have done a very satisfactory year's business.—*Fish Trades Gazette.*

The Board of Trade returns of the landings of sea fish of British taking in 1928 and 1929 include the following:—

Twelve Months ended December 31st.

Kinds of Fish (England and Wales).	Quantity. 1928.	Quantity. 1929.	Value. 1928.	Value. 1929.

* Including other items not given above. † Fish of all kinds.

II.—COLONIAL AND FOREIGN PRODUCE.

TEA.

The course of the market during the year has been almost consistently downwards except for fine tea. In January the market price of common tea was 1s. 2d., but very soon the price of this quality began to fall, until it reached about 8d. per lb. in November, since when there has been some slight recovery. The most noticeable feature of the market, however, has been a very marked difference in price between good tea and low tea, with the poorest demand of all for the lower grades of medium, which have now become merged with the common grades.

Growing conditions have been universally favourable, and the world's production for the year will show an increase of 54 million lbs., India (North and South) accounting for 34 millions, Ceylon 15 millions and the Netherland East Indies 5 millions. But the weakest feature is the disappointing demand from out markets, direct shipments from Calcutta showing a fall of 7 millions during the year; Colombo 1½ millions and Java and Sumatra 10 millions. The following tables give the exports from India:—

Exports from N. India to all Countries.
April 1st to December 30th.

	Season 1928-9. Lbs.	Season 1929-30. Lbs.
U.K. (Calcutta and Chittagong)	229,743,955	247,260,265
All other places	47,195,834	44,713,188
Total (lbs.)	276,939,789	291,973,453
Bombay by Rail	4,576,722	3,913,630
Bombay by Sea	3,381,653	5,702,080
Indian Ports	947,039	1,322,639
Burma	2,387,196	2,392,757
Total (lbs.)	288,232,399	305,304,559
From Southern India:—		
United Kingdom	30,833,676	33,331,516
Colombo	2,476,333	2,950,652
All other places	497,426	629,929
Total (lbs.)	33,807,435	36,912,097

As is to be expected with rapid growth, the quality of the crop has again been most disappointing.

The following table gives the exports from Ceylon from January 1st to November 30th:—

	1928. Lbs.	1929. Lbs.
United Kingdom	129,140,744	143,744,186
Continent	7,781,307	6,617,032
America	23,445,086	23,491,670
Australia	27,423,299	29,661,221
China	2,064,556	392,012
All other Countries	27,830,503	26,225,389
Total (lbs.)	217,685,495	230,131,510

Ceylon is in a stronger position than the other growing countries owing to the special character of the produce. There have been signs, however, that quality has been sacrificed to quantity by some concerns. Within the British

Empire, tea is also grown in Nyassaland, Kenya and quite lately planting has started in Tanganyika. Tea is also being planted, to a small extent, in Malaya and Burma.

The following tables give exports from the Netherlands East Indies from January 1st to November 30th:—

From Java:

	1928. Lbs.	1929. Lbs.
Holland	25,943,691	22,808,095
Great Britain	50,276,081	60,036,867
Australia	20,663,520	17,362,396
U.S.A.	4,224,743	4,682,176
Canada	401,977	238,641
Singapore	623,229	696,502
British India	4,673,533	3,801,882
British South Africa	725,727	516,054
South America	1,960,831	1,180,753
China	1,529,592	593,703
Russia	1,347,243	2,289,208
Mesopotamia	2,976,255	2,984,333
Continent	699,969	531,117
Other Ports	4,586,971	4,310,341
Total (in lbs.)	120,633,362	122,032,068

From Sumatra:

	1928. Lbs.	1929. Lbs.
Holland	7,593,969	7,607,026
Great Britain	7,454,335	11,951,489
U.S.A.	326,445	64,638
Australia	1,523,390	440,462
Other Ports	405,346	372,680
Total (in lbs.)	17,303,485	20,436,295

The abolition of the Empire preference on tea has attracted rather more Java and Sumatra tea to London, and unfortunately a great deal of it of very inferior quality. Market prices must be below cost, so that we may reasonably expect these shipments to ease considerably.

The following tables give the exports of China tea—black and green—from the commencement of the season:—

From Shanghai to November 16th:—

	1928. Black Lbs.	1928. Green Lbs.	1929. Black Lbs.	1929. Green Lbs.

output of Brazilian coffee, but to regulate the flow to the markets strictly in accordance with the world's needs. In the past the funds needed for financing the surplus have been obtained by means of foreign loans. Much of this money has become locked up in the large unsold stocks in Brazil, and, with the big 1929-30 crop, and the difficulty of raising further adequate foreign loans, the problem of finance became acute in the autumn of last year and raised doubts as to the ability of Brazil to maintain control of the situation. These developments had a serious effect on the market, and prices, which had been slowly weakening since March, declined sharply in October and November, and by the end of the year had reached the lowest level recorded for nearly six years. In the 12 months, values were reduced by about half, the price of Rio No. 7 coffee in Brazil on December 31st last being 14$975 per 10 kilos., against 28$875 at the beginning of the year. The outlook remains very uncertain, and much will depend on the future policy of the Defence Institute, which is stated to be considering a scheme for the gradual liquidation of the large stocks in the interior of Brazil. According to current statistics, the world's consumption of coffee in 1929 was slightly less than in 1928, the total being about 22,000,000 bags.

Some reduction of the volume of trade in coffee in this country last year was indicated in the Board of Trade returns. The following are the figures for the past three years:—

	1927. Cwts.	1928. Cwts.	1929. Cwts.
Imports	681,669	656,270	574,385
Re-exports	275,507	324,097	245,832
Home consumption	333,861	325,205	321,828
Stocks in bond	181,000	179,000	191,000

—*Times Annual Commercial Review.*

COCOA.

During recent years the world's supply of cocoa has increased in a remarkable degree, and, although the consumption of cocoa has shown healthy expansion, it has not generally kept pace with the production, so that prices have tended to become cheaper. In 1928 there was a rather sharp drop in values, but in the past year market conditions showed some improvement, and prices moved within narrower limits. The following table shows spot quotations in London:—

	African West Coast.	Trinidad good to fine.	Ceylon good to sup.
December 31, 1925	43/0 to 45/0	66/0 to 73/0	90/0 to 100/0
December 31, 1926	70/0 to 71/0	78/0 to 80/0	80/0 to 87/0
December 31, 1927	62/0 to 65/0	74/0 to 77/0	85/0 to 93/0
December 31, 1928	48/0 to 52/0	61/0 to 65/0	95/0 to 114/0
March 31, 1329	49/0 to 52/0	65/0 to 70/0	90/0 to 110/0
June 30, 1929	46/0 to 50/0	62/0 to 63/0	80/0 to 90/0
September 30, 1929	46/6 to 49/0	62/0 to 65/0	85/0 to 90/0
December 31, 1929	43/0 to 48/0	62/0 to 65/0	85/0 to 96/0

The drop in prices of Ceylon cocoa last year represents a return to normal production, prices having risen in the preceding year owing to a short crop. The world production of cocoa in 1929 is estimated at about 527,000 tons, against 513,000 tons in 1928. Of the 1929 total the Gold Coast provided about 235,000 tons, against 220,000 tons in the preceding year; Nigeria, 55,000 tons, against 50,000 tons; Trinidad, 26,000 tons (about the same quantity as in the preceding year); and Bahia, 62,000 tons, against 72,000 tons. World consumption in the past year is estimated to have increased by about 50,000 tons compared with 1928, the total being placed at 500,000 tons. The greater part of the increase was due to expansion in the United States, which is estimated to have absorbed 200,000 tons, against 164,000 tons in 1928. Some increase in consumption was recorded in the United Kingdom, as will be gathered from the following figures from the Board of Trade returns:—

Raw Cocoa.	1926. Tons.	1927. Tons.	1928. Tons.	1929. Tons.
Imports	59,461	64,057	63,329	77,406
Home consumption	56,409	55,847	55,566	57,496
Re-exports	9,314	4,490	7,224	10,685
Stocks in bond on December 31, 1929	17,950	20,950	21,600	31,750

An interesting development during 1929 was the formation of the London Cocoa Trade Association, the chief objects of which are to encourage the consumption of cocoa and to co-operate with scientific effort to improve the quality of cocoa. It also proposes to establish uniformity in regard to contracts and to create machinery for arbitration and the settlement of disputes.—*Times Annual Commercial Review.*

The Board of Trade returns for 1913, 1928 and 1929 are as follows:—

IMPORTS, CONSUMPTION, AND STOCKS.

SUGAR.

Prices at the beginning of 1929 were at such low levels that it seemed unlikely that a further prolonged decline would continue, say Messrs Wessels, Kulenkampff and Company. In January, prices for the spot month ranged from 1.99 to 2.05. A fair recovery occurred in February-March, due to scarcity of supplies and greater interest by refiners. The general trade and operators were also buyers in view of a prospective tariff increase before Congress, and under these influences prices advanced to 2.26. As it became evident that Cuban production would exceed 51 million tons, offerings were free, and prices again began to decline. May liquidation brought prices down to 1.65 by June 11. July futures were selling at 1.59. Renewed tariff activity caused a complete change in the sentiment, and a sharp recovery followed, aided by rumours of the establishment of a Single Seller in Cuba. This organisation was finally authorised by a decree of July 26th. Strong interests, including a Cuban Consortum, took delivery of over 20,000 tons in tenders during September liquidation, as a consequence of which prices advanced to 2.31 for September and 2.35 for December, the highest prices of the year. With further postponement of the tariff issue at Washington, prices from this point declined gradually, and under December liquidation went down to 1.83. The Cuban market Single Seller Agency has maintained a firm attitude, and was able to dispose of the larger part of the 400,000 tons of old crop under its control at full prices.

The raw sugar market followed the trend of the futures market. The lowest price for spot sugar was recorded on June 11th at 1.6875c. c. and f., equal to 3.46c. duty paid. In the subsequent recovery raw sugar sold up to 2.3125c., or 4.08c. duty paid, at various times during July-October. Subsequently, offers of Cuban sugars not under the control of the Single Seller and duty free brought prices down again in November to 3.71c. duty paid, equal to 1,937.5c. c. and f. On December 31st last, sales were made at 3.80 to 3.83 for duty-free sugar, parity of 2 1/32 to 2 1/16c. c. and f. New York.

Consumption in the United States rose from 5,542,636 tons refined value in 1928 to a record level of 5,810,980 tons in 1929. World consumption, in thousands of tons raw value was estimated at 26,259 in 1928-29, against 25,548 in the previous year. The total was composed of: United States, 6,113; Europe, 7,053, and non-statistical countries, 13,093.

Licht's latest estimates of European crops are as follows:—

	1927-28. Tons.	1928-29. Tons.	1929-30. Tons.
Germany	1,664,412	1,851,263	1,965,000

Grand total, Europe	8,025,996	8,467,327	8,339,000

* Including 10,000 tons of sugar from Dutch beets.
† Excluding 10,000 tons of sugar from beets exported to France.

Visible supplies at December 31, 1929, were 5,473,000 tons, as compared with 4,349,000 tons a year before. According to Messrs C. Czarnikow, Ltd., the preliminary result shows the cane crop of 1928-29 at 19,051,000 tons raw value and the beet crop at 9,593,000 metric tons, against 17,470,000 and 9,155,000 metric tons in the preceding season. The following figures, taken from the Board of Trade returns, show imports of unrefined sugar into the United Kingdom during the last three years:—

IMPORTS OF UNREFINED SUGAR.
(In thousand tons.)

From	1927.	1928.	1929.
Cuba	7,123	14,088	13,633
San Domingo	2,755	4,179	3,949
Java	205	162	3,377
Peru	2,670	2,006	2,516
Other foreign countries	2,535	2,695	3,428
South Africa	878	1,430	1,928
Mauritius	3,851	3,681	5,444
Australia	1,667	3,029	4,464
British West Indies, etc.	1,846	2,768	1,838
Other British Countries	8	145	528
Total	23,538	34,183	41,105

Exports of refined sugar, including candy, were 1,693,032 tons in 1927; 1,495,338 in 1928; and 3,333,144 tons, valued at £2,745,719, in 1929.

FROZEN MEAT TRADE.

The following table, showing the quantity of beef, mutton and lamb imports over the past three years and the total value of meat imports, has been compiled from the Board of Trade returns:—

TOBACCO.

The following information is extracted from the *Tobacco Trade Review*:—The schemes being put into operation to prevent price-cutting in tobacco and cigarettes are having their effect, and cutters' shops are having increasing difficulty in obtaining supplies. The Budget estimate of 141 million lbs. clearances was slightly exceeded in 1928-29, but consumption is believed to have been about 141 million lbs. More factories changed from working in bond to paying duty on the raw material and receiving drawback on their exports of finished goods. Net receipts were £213,000 short of the estimate, partly owing to larger clearances of Empire tobacco at the preferential rate. The quantity of Empire unmanufactured tobacco consumed in 1928-29 was 23.6 million lbs., or nearly 17 per cent. of the total. The following tables, compiled from the Board

COMPOUND BONUSES AGAIN INCREASED

Preliminary investigations indicate that the results of the Valuation now in progress should justify a further increase in the rates of Compound Bonuses.

The anticipated annual rates per £100 assured range from
£2. 1. 0 to £2. 5. 0
according to class, on recent Policies, to
£4. 12. 0 to £6. 0. 0
on Policies of long duration.

* December shipments estimated.
† Excluding about 2,500 tons of rubber shipped in latex form.

All estimates, including our own, of production and consumption during 1929 have been so greatly exceeded that they have been worse than useless. Although Malaya had been under restriction, more or less, for seven years no one expected that the trees could increase their yield of latex to such an extent and continue to do so for such a long period. Some estates in Malaya have given as much as 550 to 600 lbs. per acre, and no one can tell how long this will continue. The native area in Malaya has also greatly increased its output, and there is no doubt that the natives are tapping heavily. Shipments from British Malaya are about 455,000 tons; this makes the production 36 per cent. above the last reduced standard production figure of 320,000 tons. European estates have not increased in so great a proportion as the native holdings, where the low price has no doubt stimulated heavy tapping. The Netherlands East Indies have not increased their output to any considerable extent. The total shipments of rubber from all parts are about 860,000 tons, including 25,000 tons wild rubber. Our estimate for 1929 production at the beginning of the year was 700,000 tons, so that, subtracting the surplus of 30,000 tons from 860,000 tons, we have a production of 830,000 tons, which is 130,000 tons greater than our estimate.

Consumption has shown almost as great an expansion. That of the United States has increased from 441,000 tons in 1928 to 470,000 tons. After the tremendous increase of 70,000 tons in 1928 this year's excess of 30,000 tons is most gratifying. That of the rest of the world has increased from 235,000 tons in 1928 to 325,000 tons, a considerably larger percentage. No doubt manufacturers allowed their stocks to fall to a low level a year ago, but the expansion has been most marked, particularly in France and Japan. Many countries so far apart as South Europe and Manchuria have taken to the use of rubber-soled footwear to a very large extent. The total consumption has reached 795,000 tons, which is 120,000 tons more than was consumed in 1928. As will be seen, this leaves us with an excess of rubber during the year of 65,000 tons, the shipments being 860,000 tons, which include the 30,000 tons surplus shipped this year. The heavy quantities "afloat" at the end of 1928 have been taken into the world's stocks. At the end of 1929 stocks had increased here from 22,606 to 73,235 tons; in America they are 105,138 tons, about the same as at the beginning of 1928, but 40,000 tons more than at the end of that year; dealers' stocks in Penang and Singapore are 33,157 tons, as against 32,905 tons at the end of 1928. Stocks here and in the United States together are rather more than 2½ months' normal consumption.

The following estimate of production in 1930 is based on a price of 8d. for standard rubber:—

Malaya	435,000 tons.
Ceylon	75,000 ,,
Dutch	265,000 ,,
Rest	46,000 ,,
Wild	25,000 ,,
	846,000 tons.

We estimate the consumption of the principal countries as follows:—

	1927. Tons.	1928. Tons.	1929. Tons.	1930. Tons.
America	371,000	441,000	470,000	450,000
England.....	45,000	48,400	68,000	...
France	36,000	38,000	60,000	...
Germany	39,000	39,000	50,000	...
Belgium	6,500	8,000	10,000	...
Canada.....	27,000	31,000	35,000	...
Japan.....	19,000	26,000	34,000	...
Russia	12,000	7,000	10,000	...
Australia	10,000	9,000	15,000	...
Italy	11,300	12,000	16,000	...
World	586,000	675,000	795,000	830,000

There was a general "bull" movement in the early part of the year, brought about by the large consumption in the United States. Speculators and some dealers bought largely and lost money, unless they took the opportunity of selling during the advance in the spring. At the opening of the year the price was 8 7/16d. for spot standard, advancing to 11¼d. by the end of January, and to 1s. 0⅜d. in March, which was the highest price of the year. The market declined in April to 9⅝d., fluctuating up to 11⅛d. in May, but generally remained quiet round about 10d. and 11d. up to the end of September. For October there was a slight rally on the news of the Dutch growers' meeting to consider a scheme for restriction or central selling, but the market quickly fell away when it was evident that nothing could be done, and the price declined to 7¾d. on November 12th, the lowest for the year and the lowest price since 1922, when it touched 6¾d. During a good part of the year there has been some premium for thin pale crepe, and sole crepe has met a much better demand. The old stocks were worked off by the middle of the year, and fine quality has sold steadily round about 1s. 3d. and 1s. 4d. The shipments have probably increased by 2,000 tons, and are now about 8,000 tons, which are being consumed. The receipts in Para have again fallen off, and show a decrease of about 2,000 tons as compared with 1928. The price of Para rubber has fallen in sympathy with plantation, and there has only been a very small market business, with no speculative interest. We close with the price of hard cure fine and soft cure quoted at 8d. per lb., and caucho ball 4½d. per lb. There have been practically no new imports of other wild rubbers, and there is very little demand for them even at the low prices.

UNITED KINGDOM STATISTICS, 1929.

	Plantation—London and Liverpool. Imports. Tons.	Deliveries. Tons.	Stock. Tons.

THE OIL INDUSTRY.

Last year's surplus was the most serious since the slump of 1921-1923. Such a record would have broken the back of most industries, but the oil industry has been saved by the most remarkable progressive annual increase in the consumption of oil products. No doubt the continual expectation that demand will catch up with supply has been responsible for the excess of zeal on the part of the producers. The increase in stocks since 1919 takes on an alarming appearance, but, reckoned in terms of months' supply, the stocks position is no worse than it was seven years ago. The table which follows of the United States' production and imports, as compared with consumption and exports (accounting for about 75 per cent. of the world's oil trade),

gives the statistical record of the oil industry year by year since 1919:—

SUPPLY AND DEMAND OF ALL OILS (Figures of American Petroleum Institute). (In thousands of U.S. Barrels.)

	U.S. Production and Imports.	U.S. Consumption and Exports.	Original % Increase in Consumption.	Excess of Supply.	Stocks at end of Year.	Stocks in terms of Months' Supply.
1919 ...	432,528	425,761	...	6,767	192,046	5·41
1920 ...	551,723	522,309	22·67	29,414	221,460	5·09
1921 ...	600,959	519,301	...	81,658	285,277	6·59
1922 ...	693,478	593,338	14·26	100,140	385,418	7·79
1923 ...	832,015	730,228	23·07	101,787	472,858	7·77

* Deficiency.

The year began with a daily average crude-oil production over the whole of the United States of 2,419,800 barrels. The development of the deep sands in the Santa Fé Springs field in California caused the output of the country to rise to 2,650,000 barrels by the end of April. In the following month a temporary shortage of light crude oil developed in the Mid-Continent districts and crude-oil prices were advanced. At this signal the restriction of output, which the producers in Oklahoma and West Texas had been maintaining, broke down completely. By the end of August the daily average output of the United States had reached 2,973,000 barrels, the highest level ever obtained. In September restriction of output was suddenly reimposed in certain fields of Oklahoma, and in October a drastic cut was made in the crude-oil prices in California, which was followed by an agreement among the producers to curtail the output of that State by 145,000 barrels a day. This was the beginning of the decline in the American production. By the end of the year the daily average output had fallen to 2,607,700 barrels. The course of crude-oil prices is shown in the following table:—

U.S.A. CRUDE OIL PRICES.
(Dollars per Barrel.)

Gasoline prices were weak in the first two months. The price of U.S. motor grade of gasoline ex Oklahoma refineries declined from 8½c. per U.S. gallon to 6¾c. at the end of February. The market gradually improved until the end of May, when the price touched 9c. per U.S. gallon, but for the rest of the year, in spite of a decrease in stocks in the period from April to October, the market gradually weakened, until at the end of the year the price was no better than 7c. per U.S. gallon. Consumers outside the American market did not, however, obtain the benefit of cheaper petrol. The export prices at American ports of refined oil products are determined by the American Oil Exporters' Association, which has not altered its schedule since February, 1929, when it fixed the price of U.S. motor grade of gasoline at 8½c. This price, which was well above the real market rate, caused a crisis in Great Britain. The Anglo-American Oil Company, the marketing subsidiary in Great Britain of the Standard Oil Company of New Jersey, had to buy its petrol at prices fixed by the American Oil Exporters' Association, and found it was selling in Great Britain at a loss. But the problem was how to advance British petrol prices without giving a greater share of the petrol trade to the Russian Oil Products, who were undercutting the market price. The Anglo-American wisely entered into negotiations with the Soviet Government and secured an agreement limiting the Russian Oil Products' share of the British petrol trade to approximately 60,000,000 gallons, an amount at that time greater than the Russian Oil Products turnover. The price of petrol in Great Britain was thereupon advanced in March by 2¼d. per gallon by an

agreement between the Anglo-American, Shell, British Petroleum (Anglo-Persian), and National Benzole Companies. In view of the public criticism of this advance Mr Baldwin's Government asked for an explanation, and the Anglo-American Oil Company had no difficulty in showing that, if the advance had not been made, it would have been selling petrol at a loss. This advance added materially to the prosperity of the Shell and Anglo-Persian marketing subsidiaries, especially as the petrol trade in Great Britain during the year, as the following table will show, reached record proportions:—

U.K. PETROL TRADE.

(In thousands of Imperial gallons.)

	1928.	1929.
Imports	734,737	810,203
Refined from crude (estimated)	158,450	151,000
	893,187	961,203
Less exports and re-exports	69,528	107,793
	823,659	853,410

The following estimates of world production have been prepared by Mr Garfias, of the foreign oil department of Henry L. Doherty and Company:—

WORLD CRUDE OIL PRODUCTION.

	Barrels, 1928.	Barrels, 1929 est. (000's omitted.)	Per Cent. Inc.
United States	901,474	1,010,000	12·04
Venezuela	106,000	135,000	27·35

	1,322,370	1,467,000	10·9

III.—BEER, WINES AND SPIRITS.

Beer.—The year was one of disappointment, as the Licensing (Amendment) Bill made no progress, and Mr Snowden announced that the proposal for increased licence duties on brewers, distillers and tobacco manufacturers, though dropped for the time being on the defeat of the Conservative Government, would be considered again in the next Budget. Royal Commissions on the Licensing Laws were appointed in July for England and Wales and Scotland respectively. English Hop Growers, Ltd., dissolved itself in August, as the membership had declined to about 80 per cent. and there was great divergence of opinion as to the usefulness of the association. The number of barrels brewed in 1929 is the lowest since 1923, but the specific gravity has continued its steady upward movement, as the following table shows:—

Year to Mar. 31.	Duty. s.	d.	Standard Barrels.	Bulk Barrels.	Average Gravity.
			Great Britain and all Ireland.		
1914	7	9	36,057,913	37,558,767	1,052·80
1920	70	0	25,115,196	35,047,947	1,039·41
1921	100	0	26,729,883	34,504,570	1,042·61
1922	100	0	23,513,774	30,178,731	1,042·88
			Great Britain and N. Ireland.		
1923	*100	0	18,564,212	23,948,651	1,042·72
1924	*100	0	19,890,033	25,425,017	1,043·04
1925	*100	0	20,954,392	26,734,825	1,043·12
1926	*100	0	21,034,419	26,765,610	1,043·23
1927	*100	0	19,745,199	25,100,461	1,043·28
1928	*100	0	19,962,997	25,359,754	1,043·31
1929	*100	0	19,253,000	24,530,155	1,043·33

* Less a rebate of 20/- per bulk barrel.

The yield of beer duty in 1929 was £75,824,000, as compared with £83,318,692 in 1928. The acreage, estimated yield and average price of hops in recent years have been as follows:—

Year.	Acreage.	Produce. Cwts.	Yield per Acre. Cwts.	Average Price. £ s.	d.
1900	51,308	347,894	6·7	5 18	8
1914	33,661	507,258	13·8	4 3	9
1920*	21,002	258,042	11·7	19 10	0
1921*	25,133	236,172	9·3	19 10	0
1922*	26,452	312,000	11·4	12 0	0
1923*	24,893	229,000	9·2	14 10	0

1928	28,800	242,100	10·2	11 16	0
1929	23,900	359,100	15·0	...	

* Hop Controller's figures.

The quality of the 1929 crop was good, and the quantity, 74,000 cwts., above the average of the preceding ten years. —*Messrs White, Tomkins and Courage, Ltd.*

Wines and Spirits.—According to *Ridley's Wine and Spirit Trade Circular*, there was more activity in the wine and spirit trades in 1929 than during the previous year. Business in wines has been steady, and general consumption is being gradually stimulated. Much interest was shown in the 1927 vintage ports. Christmas trade was comparatively brisk. Imports of all wines during the year amounted to 15,316,571 gallons, compared with 13,644,256 gallons in 1928 and 18,526,222 gallons in 1927. The quantity of foreign and colonial wines on which duty was paid was 14,423,824 gallons, against 13,499,424 gallons in 1928 and 16,947,550 gallons in 1927. Of wine cleared from foreign and Empire sources, Portuguese, Spanish white, Rhenish and Australian showed increases compared with 1928, while French, Spanish red, Madeira and Italian declined. The total cleared of wines of Empire origin is 271,439 gallons higher, about two-thirds of this increase coming from Australia. The foreign and colonial spirits market has shown little change. Home consumption figures show an increase of 25,115 gallons on 1928, but imports were 1,161,142 gallons less at 3,192,340 gallons. The home consumption of British spirits, which was 10,984,368 in 1928, is not yet known, but an estimate places the probable increase in 1929 at 80,647 proof gallons. Exports of British and Northern Irish spirits continue to appreciate, an increase of 86,390 gallons being shown on the 1928 total. Re-exports of spirits have also risen, the comparative amounts being, in 1929, 864,928 gallons and in 1928 844,578 gallons. The export trade in wines has fallen away somewhat, only 703,148 gallons being shipped last year, as against 761,550 gallons in 1928. The following table, derived from the same source, shows the imports and clearances for the past two years of wines and spirits:—

	1928. Imports. Gallons.	1928. Clearances. Gallons.	1929. Imports. Gallons.	1929. Clearances. Gallons.

Consumption of French still wines, though better than in 1928, has not recovered its earlier level, and there was a decline in the consumption of champagne. The consumption of port also was unsatisfactory, but wines from Germany and the Empire were in increased demand.

IV.—RAW MATERIALS.

COTTON.

The year opened with fair promise, but from February onwards, with little interruption, apathy characterised all sections of the trade. The wages dispute, the October rise in Bank rate, and the New York Stock Exchange crash all helped to check such signs of recovery as from time to time manifested themselves. The difference between the highest and lowest price of Middling American spot cotton this year has been 1.92d. per lb., as against 2.81d. per lb. in 1928, say Messrs. Robert Barbour and Brothers, Limited, of Manchester. Simultaneously the margin in Egyptian has been 5.65d. per lb., compared with 5.35d. last year. The American growth started at 10.59, and in March reached the highest point of the year—11.14. It was just under 10d. on May 1st, and was never very much above that figure until the latter part of July, when it stood at 10.70. A further period of steadiness followed up to the middle of October, but by the end of that month it was down again to 9.88. On November 7th, following the crash in New York, the quotation fell to 9.47, to be followed a few days later by 9.22, which proved to be the lowest point of the year. Fluctuations covering a range of §d. per lb. took place during the ensuing seven weeks, the final quotation standing at 9.42. In the August Bureau report the condition was notified as 69.6, with an estimated yield of 15,543,000 bales. This was larger than had been expected, but subsequent weather conditions soon made good the initial decline, and by the end of the month the recovery had become complete. The surprise of the second report was the poor response it elicited to the unfavourable news disclosed concerning the progress of the crop. A deterioration on the month of 14.2 per cent. in the condition index and a decline in the indicated production of 718,000 bales would have been more than sufficient under ordinary circumstances to have given bullish

operators a strong lead, but the lack of speculative interest which, so far as cotton is concerned, has been very marked all through the year and has rendered the raw material more susceptible to declines than advances, had a steadying influence, and effectually barred the way to a higher level of values. The preliminary final estimate indicated a yield of 14,919,000 bales, with 12,858,000 bales ginned up to November 30th. The crop figures were rather larger than expected, but no developments occurred. Indeed, the world's probable consumption seems likely to be the more important factor in determining prices for some time to come. The 1928-29 crop was 14,478,000 bales, as against the first estimate of 14,291,000 and the final one of 14,373,000. The 1927-28 crop was 12,955,000, and that of 1926-27 17,977,000 bales.

From first to last Egyptian cotton has, with spasmodic bursts of recovery, steadily declined. F.G.F. Sakellaridis was 19.35 when the year opened, and only for a short period in March, when it touched 91.60, was it ever over that figure. Towards the end of June it was down to 15.75, two months later it had risen to 17.30, two months later again showed a fall to 15.20, and at the close of the year the quotation stands at 14.15, after marking 13.95—the lowest point of all—ten days previously. Demand has been very moderate throughout the entire twelve months, and the lack of business has been accompanied so far as spinners are concerned by a further shrinkage in margins.

American Cotton.—The following table shows the production and consumption of American cotton during a number of years, and is based on the annual statements of the Liverpool Cotton Association, Ltd.:—

	Total Crop.†	Total Deliveries.	American Consumption. North.	American Consumption. South.	Exports to— Great Britain.	France.	North Europe.	Other Countries.	Total Exports.
1885-86	6,550	6,509	1,825	340	2,620	410	968	345	4,344

† Including linters.

International Cotton Statistics.—The International Federation of Master Cotton Spinners reports the world consumption of American cotton in 1928-29 at 15,076,000 bales, as compared with 15,407,000 bales in 1927-28. Total world's mill stocks of American cotton were, at July 31, 1929, 2,129,000 bales, as against 2,112,000 bales in the preceding years. Of all kinds of cotton, stocks were 4,863,000 bales, as compared with 4,787,000 bales at July 31, 1928. Probable consumption in 1929-30 has been estimated at 14,600,000 bales.

The following table shows the Board of Trade figures of total imports of raw cotton and the value thereof, during the years 1913, 1928 and 1929:—

Cotton, Raw (except Linters).	Quantity. 1913.	Quantity. 1928.	Quantity. 1929.	Value. 1913.	Value. 1928.	Value. 1929.

WOOL.

The annual report of Messrs Schwartze, Buchanan and Company runs, in part, as follows:—The year under review had many features in common with 1928: the same accumulation of tops in July, the same break in September, the same slight recovery in November. At the beginning of the season a basis seemed to have been established, but in November a strike in the Australian shipping world caused anxiety as to supplies and prices were forced above the remunerative level. This was the beginning of the lack of confidence in values which gathered momentum as the year progressed, until in September, and prices touched pre-war levels for some wools.

At the opening series, in spite of a good demand from the home trade both for merinos and crossbreds, prices, in buyers' favour at the opening, declined quite 5 per cent. The March series, following on a dull interval in both home and Continental centres, proved to be better than was expected for merinos. Several important failures on the Continent and considerable anxiety with regard to the report of the safeguarding of industry inquiry, both at home and abroad, tended to strangle the increase of confidence at birth. In June the result of the election showed manufacturers at home that they need expect no help from the Government in meeting foreign competition. Trade was universally bad, and there was a continuous depreciation in the value of tops. When the July series opened, therefore, a fall was inevitable. At the lower level established, however, there was some demand, though withdrawals were considerable owing to the general reluctance to accept the losses entailed. The Antwerp Futures market reopened in July, and later in the year, when more transactions were registered, the low quotations in this market had a depressing effect on the already sufficiently difficult position. The stocks of tops on the Continent, which had been gradually accumulating, also reached their highest point about this time. The position of topmakers and merchants was serious, but the excellent demand for noils went some way towards mitigating the heavy losses. These losses caused buyers to operate with hesitation at the opening of the overseas markets, which were, in consequence, weak. Influenced by this weakness,

BANK OF NEW SOUTH WALES.

ESTABLISHED 1817.

Incorporated in New South Wales with Limited Liability.

With Branches and Agencies (588) in all the Australian States, New Zealand, Fiji, Papua and Mandated Territory of New Guinea

PAID-UP CAPITAL - - - - - - - - £7,500,000
RESERVE FUND - - - - - - - - 6,150,000
RESERVE LIABILITY OF PROPRIETORS 7,500,000
£21,150,000

Aggregate Assets to 30th September, 1929 £90,806,297 : 7 : 10

Head Office: SYDNEY, NEW SOUTH WALES.

General Manager: A. C. DAVIDSON.

LONDON DIRECTORS:

H. L. M. TRITTON., ESQ., *Chairman.* I. C. GEDDES, ESQ. OSCAR LINES, ESQ., *Hon. Director.*

J. S. CAMPBELL, *Manager.* D. GEDDIE, *Assistant Manager.* A. L. KENNEDY, *Secretary.* G. S. KETT, *Accountant.*

The Bank issues drafts on demand on its Head Office (Sydney, N.S.W.) and all Branches. Makes Mail and Cable Transfers. Negotiates and Collects Bills of Exchange. Arranges Wool and other Produce Credits. Receives Deposits for Fixed Periods on terms which may be known on application, and transacts every description of Australasian Banking Business.

London Office: 29 THREADNEEDLE STREET, E.C.2.

prices at the opening of the September series showed a sharp decline. At first it seemed that this new level might be maintained, but further depressing news from overseas, the desire of holders to liquidate and the rise in the Bank rate, due to the fever of speculation in America, forced prices to pre-war level for topmaking wools. It was decided by the authorities in Australia to reduce the offerings up to Christmas by 33 per cent., and this had the effect of arresting the slump and was undoubtedly beneficial at the time. Almost immediately after the close of the series the low prices had their effect and considerable business was done in all centres. The stocks of tops on the Continent were reduced and an apparently sounder position created. Demand began to slacken, however, before the opening of the November series, and the close hardly maintained the promise of the opening. Since the sales, values for tops have again declined, and the hope that a renewed activity was at hand has gradually dwindled. The American tariff has again been shelved. The sudden news of the amended Australian tariff, which almost closes the door to some of our manufacturers, did not tend to hearten the trade. Thus, the year closes with most of the regain of November lost and the trade once again without bulk orders, for which it has been waiting so long.

Compared to last year, spinner wools are 25, topmaking 30 to 35, pieces 30, fine crossbreds 30 to 35, medium crossbreds 25, coarse crossbreds 20 per cent. lower, and, compared with July, 1914, spinner wools are about 15, topmaking wools par to 5, pieces 5 per cent. above the rates then ruling. Fine crossbreds are, however, 5 per cent. cheaper, but medium and coarse crossbreds 10 to 15 per cent. dearer.

We give below our usual statement of the value per lb. clean of a few representative descriptions in July, 1914, and in December in recent years:—

	N.S.W. Good	Q'land. Good	Victorian Good	South Aust. Average	Cape Short Welsng.	Australian & N.Z. Crossbred.			
						Fine (Super)	Fairly Fine	Med.	Coarse
	d.	d.	d.	d	d.	d.	d.	d.	d.
July, 1914	32	30	31	29	23½	27	25	17	15½
Dec., 1919	135	110	138	108	68	95	70	40	29
,, 1921	46	39	45	33	23	35	21	10½	8½
,, 1923	65	63	65	58	48	52	42	23	19
,, 1924	82	78	80	68	60	65	58	37	33

,, 1928	50	49	48	43	34	41	35	25	22½
,, 1929	35	34	34	27	27	27	23½	19½	18

Average value of the Colonial bale:—1914, £17; 1920, £52; 1921, £18; 1922, £22; 1923, £28; 1924, £39; 1925, £29; 1926, £26; 1927, £27; 1928, £30; 1929, £23.

According to Messrs Charles Balme and Company, the quantities of wool catalogued in the London market during 1929 compare with the figures for 1928 as follows:—

	1928. Bales.	1929. Bales.
New South Wales	127,441	103,740
Queensland	66,079	65,728
Victorian	66,419	83,149
South Australian	22,890	28,478
West Australian	45,935	44,646
Tasmanian	2,546	3,829
New Zealand	221,135	227,323
Cape	29,367	17,906
Punta Arenas and Falkland Islands	68,561	95,047
River Plate	11,217	3,155
Sundries	23,269	13,652
Total	684,859	686,653

The following table, compiled by *The Weekly Wool Chart*, shows the amount of wool retained in the United Kingdom in the years stated, the figures for 1929 being for the twelve months ending November:—

(In million lb.).

	1913.	1927.	1928.	1929
Imports, foreign and colonial wool	801	822	779	789
Re-exports, ditto	307	346	339	326
Retained	494	476	440	463
British clip retained	95	57	72	63
Total retained by trade	589	533	512	526

The quantity of wool retained in 1929 did not differ materially from the average of the previous three years. It is estimated that he consumption in 1929 would be about 515 million lb (excluding wool from sheepskins), so that stocks increased slightly during the year. The estimated consumption in previous years has been:—1928, 525 million lb.; 1927, 555 million lb.; 1926, 515 million lb.; 1925, 460 million lb.; pre-war averages, 575 million lb. The consumption of re-worked wool is much less than before the war. Figures are difficult to obtain.

FLAX, HEMP AND JUTE.

A notable development in the fibre market is the increase in the consumption of hard at the expense of soft fibres. Little money has been earned in the soft fibre section. The volume of the jute crop is maintained but the quality is steadily deteriorating.

Italian Hemp.—The market for North Italian hemp displayed no great activity during 1929; and, with the exception of the first three months of the year, when values were stationary, there was a gradual but steady fall in price, which, at the close of the year, at £54 for PC/SB, is only 22 per cent. over pre-war level.

Russian Hemp.—The value of good, medium Siretz in January was £45 per ton, and in April there was an advance of £3 per ton on account of the protracted closing of navigation in Riga and the scarcity of supplies in warehouse on the Continent. Later prices receded to £45, and remained there during the summer months. Later in the year prices again gave way and medium-quality Siretz is now quoted at £40 c.i.f. U.K.

East Indian Hemp.—The Philibit crop was excellent and was virtually exhausted by midsummer. Prices for Central Province hemps are at a small discount for old crop. Dressed Calcutta hemps and tows have remained relatively dear and tows have made as much as £30 per ton for best marks.

Flax.—In January the price of BKKO was £95 basis I, and of Livonian flax £102 basis R. From then onwards prices fell throughout the year, with the exception of a slight firmness in July, when BKKO had reached a level of £83 and Livonian £79. This improvement in the situation proved to be temporary, and prices again gave way, and continued weak until the end of the year, when BKKO was quoted at £65 and Livonion at £65 10s. per ton c.i.f. The Russian crop is expected to yield, roughly, 250,000 tons, with 60,000 to 70,000 tons available for export. Latvia has 15,000 tons of flax for export, the Lithuanian crop is stated to be 30,000 tons, and the Estonian 10,000 tons. In Poland the flax crop is estimated at 60,000 tons, and the quality is decidedly superior to that of the previous year. In October a delegation from the Irish and Scottish linen industry visited the United States and Canada to make an intensive study of conditions in these two important markets.

Jute.—In the early months of the year undue optimism sent the price of first marks soaring to £36 per ton, but owing partly to heavy stocks there was a persistent decline since February. Early reports on the new crop were very favourable, prices eventually touched £28 10s. per ton for first marks. On the publication of the acreage forecast at 3,319,500, comparing with 3,166,200 acres last year, the market advanced, and the steadier tone continued until September prices recovered to £32 per ton. Although the forecast indicated 9,767,270 bales, against 9,916,000 bales last year, the market failed to respond, and the advance was lost. Trade remained very poor everywhere, and the price of firsts fell to £26 per ton—the lowest point since 1924—since which there has been some recovery in value.

Manila.—The most important event was the steady increase in the visible supply, which, at 1,559,000 bales, constitutes a record. The year finished with prices slightly above their lowest, J2 having touched £34 closed at £35 10s. The finer grades depreciated £22 per ton, "E" grade falling from £76 to £54 per ton. Medium fell, roughly, £10 to £14 per ton, and the lower grades about £6 per ton. Trading conditions show little improvement, competition remaining fierce with the margin of profit insignificant.

SILK.

The hopes based a year ago on the fact that prices were low and that consumption was keeping pace with production have not been fulfilled. The silk industry, although it has been active and favoured by fashion, has left no profit. The primary markets cannot be held responsible for that situation; their stocks have never been heavy nor their offers pressing. They were victims in the end of the policy of intense production which too many manufacturers have adopted, especially in the United States. That so-called progressive policy is a source of profit for those who start first, but it soon becomes a source of universal deception when it is universally adopted. The result is an atmosphere of caution which is unfavourable to forward contracts all along the line, from the cocoon to the woven article. These conditions prevailed almost throughout 1929, and the crisis on the Stock Exchange made matters worse. We may congratulate ourselves that it has not caught the silk trade in an optimistic mood, or the blow would have been more severe.

* Estimates.

There was a short-lived revival in August, but from December onwards the silk market has been depressed by both internal and external causes. It must, however, be borne in mind that more natural silk was sold in 1929 than in any previous year, and that the present very low prices may be expected to act as a stimulus to consumption. Fluctuations on the Stock Exchanges or difficulties in the

MIDLAND BANK
LIMITED

Extracted from the annual review of Messrs Chabrières, Morel et Cie., Lyons.

HIDE AND LEATHER TRADES.

Prices had reached reasonable levels by the beginning of 1929, and it seemed probable that further reductions would not occur; yet during the first three-quarters of the year the demand was insufficient to absorb even the reduced production which most of our tanners had adopted. Pressure to sell both hides and leather was persistent, so that by the last quarter hide prices were on average down to pre-war level, though, owing to the increased cost of production, leather and shoes had not fallen to the same extent.

The chief reason for the ability of the market to withstand this reduced production has been the widespread use of substitutes for sole leather. The comparatively poor demand for hides is thus accounted for. In short, world supplies of hides have been ample for all requirements, and, though naturally the lower range of values tends to restrict quantities brought to market from distant sources or unremunerative collection there seems no reason to fear any shortage of hides or increase in values until the consumption of leather increases considerably. In the meantime, tanners act with great caution, as there seems to be little reason to expect any large increase in the consumption at present, especially as still greater efforts are now being made by makers of substitutes to place on the market material more suitable in substance and flexibility, so that competition from this source will still have to be reckoned with.

There is a tendency to suppose that, because shoe shops earn good profits, manufacturers must also be doing well, but the fact is that, owing to vagaries of fashion, distributors dare not carry big stocks of fancy sorts, and, in order to cope with any possible demand, manufacturers have now to take that risk. Overhead charges in shoe factories always tend to increase, especially those connected with the production of new designs, and thus the manufacturing is much less profitable than the distribution. Competition is intense and tends to cut down the price of shoes more rapidly than any fall in materials justifies. On the whole, factories have been fairly well employed, although the proportion of export trade is still far below pre-war. Owing, however, to persistent exploration and cultivation of various overseas markets there is a small, gradual improvement noticeable. In spite of some failures and retirements, the capacity of the factories is still very considerably in excess of the demand. The trading results of the year have been generally unsatisfactory. There have been considerable losses on stocks of hides and leather and the difficulty of maintaining turnover has resulted in overhead charges absorbing too large a share of earnings.

The discussion of tariffs in America has influenced markets to a considerable extent during the year, and the outcome is still uncertain. America has imported considerable quantities of certain sorts in anticipation of imposition of duties, and, if the tariff party can establish its ground, quieter world markets may result for a period. A new departure in the trade was the opening in June of an exchange in New York for dealing in hide futures. Tanning is already too speculative by nature owing to the length of time between the purchase of hides at origin and the sale of the leather to the dealer or consumer. The chief desire of tanners is to reduce this risk, and, although the argument is that hedging on the exchange is some protection, it really means professional interest and an additional speculation, so that it is extremely doubtful whether this exchange is a benefit to the trade.

The following is a statement of imports and exports of hides and leather during 1913, 1928 and 1929:—

† Under the designation of "Leather" are comprised the following articles, viz.: Hides, tanned, tawed, curried or in any way dressed; Goatskins, tanned or dressed as leather; Sheepskins, tanned or dressed as leather.

CHEMICALS.

In the early months of 1929 the satisfactory state of trade was maintained, but, unfortunately, there has been a falling off, and the year as a whole shows a marked increase in imports and only a very slight increase in exports. A decline in exports occurred only in certain sections, of which the most important is coal-tar products. One explanation of this is the increased American production of creosote and also the extending use of steel for railway sleepers, which is eliminating one of the main outlets for creosote. On the other hand, there have been increased exports of sulphuric acid, sulphate of ammonia, and dyestuffs. The increase in dye exports is considerable, but large quantities of special dyes are still imported. Marked progress has been made in the development of low-temperature carbonisation processes. The year has seen several important mergers, and the tendency towards the elimination of competition in purchase of raw materials is exemplified by the fusion of Lever Brothers and the Margarine Union, and by the Mount Lyell Cuming Smith and Wischer Company fertiliser merger in Australia.

The aim at price-fixing and allocation of sales areas to definite producers is typified in the arrangement by which the I.G. Sandoz and the Society of Chemical Industry at Basle have divided up their territory to effect more economical sales arrangements. A very important agreement is that between the I.G., the I.C.I. and the Chilean Nitrates, while there is every possibility of an international benzol agreement. Possibly the field of greatest activity all over the world has been that of fertiliser manufacture. On the whole, the year has been very productive in research, discovery, development, and consolidation. The trading figures are not good for the whole year, but the last two months showed some improvement. The chemical trade has not suffered any more than other trades in a rather depressed period, and much work has been done which will bear abundant fruit in the future.—*Manchester Guardian Commercial Annual Review.*

Nitrates.—The necessity of a substantial restriction of production until consumption has expanded and can be more closely gauged is now becoming more generally recognised, according to Messrs Aikman, Ltd. A centralisation selling scheme for Europe and Egypt was initiated at the beginning of July, and its sales to date have amounted to about one million tons. A scheme for restricting production has been inaugurated to operate from February 1, 1930. Its object is to achieve a maximum reduction of about 20 per cent. per annum by the voluntary cessation of production in those oficinas where the cost is high. The reduction envisaged will bring production more into line with estimated consumption, and already producers representing about 13 per cent. of the present output are understood to have signified their intention to suspend production. The following is a comparison of the figures for the six months ending December 31, 1926, 1927, 1928 and 1929, and the nitrate years ending June 30, 1927, 1928, 1929 and 1930:—

Visible Supply for United States	192,000	130,500	206,000	275,000*
Visible Supply for other Countries	25,000	43,000	54,000	39,000*
Stocks in Chile at December 31st	1,274,000	519,000	874,000	1,150,000*
Total Supply in sight at December 31st	1,819,000	1,495,500	2,090,500	2,554,500*

* Estimating production in December at 260,000 tons, and shipments at 150,000 tons to Europe and Egypt, 60,000 tons to the United States, and 10,000 tons to other Countries.

Messrs Aikman forecast the world production of pure nitrogen in 1929-30 at 2,365,000 tons, but state that it is unusually difficult to form an estimate of the prospects of consumption for nitrate of soda during the next six months. The deliveries in all countries have increased as compared with last year, except in the United Kingdom and Spain. The total increased deliveries for Europe and Egypt amount to 42,000 tons. As regards the United States, smaller deliveries July-December are due to a decreased demand from industrial consumers, possibly explained by dear money.

We have examined the Accounts of the Bank and the above Balance Sheet, and in accordance with the Companies (Consolidation) Act, 1908, we report that:—

We have obtained all the information and explanations we have required.

We have ascertained the correctness of the cash and bills on hand at the Head Office and in Dublin, and of the money at call and short notice and have inspected the securities representing the investments of the Bank, and find them to be in order.

We have also examined the above Balance Sheet in detail with the Books at the Head Office, and with the certified returns from each Branch, and in our opinion it is properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the Books.

ULSTER BANK LIMITED,
Belfast, 12th December, 1929.

HARMOOD BANNER & SON
Chartered Accountants.

JUTE TRADE.

Circumstances combined to bring about poor results in the jute trade and make 1929 the most unprofitable year for a very long time, according to the *Glasgow Herald*. Raw material for the first six months was dearest, when, in view of the volume of supply, it should have been cheapest. Much of it was bought under a fear, which afterwards proved groundless, that the supply was likely to prove smaller than expected. When wants were secured prices began to fall, and there proved to have been no grounds for the fear of a shortage. The extension of working hours by the Calcutta mills as from July was also the means of raising the price of jute and inducing spinners to purchase over a period when it would have been greatly to their advantage to wait. All this was accompanied by a steady falling-off in trade, leaving spinners with dear stocks of jute and rapidly falling prices for their products.

The highest price during the year of best first marks was £39 and the lowest £30; the top price for Daisee 2/3 was £34 and the bottom £24 10s. Trade has been very slow, even at unremunerative prices, and for the greater part yarns and cloth have been sold at under the raw material equivalent. Even at the end of November, when jute touched the lowest for some years, the yarn and cloth producing sections of the trade were still unprofitable. In December, under firmer raw jute influence, better results were recorded, and a favourable amount of business done in yarn and cloth for January-March delivery; still, however, leaving the prices paid considerably short of raw material cost. The profitable course during the latter half of 1929 was by "bearing" the market, and few had the courage to take the risk.

VEGETABLE OILS AND OILSEEDS.

The oilseed crushing industry of the United Kingdom had a mixed experience in 1929. In the first half of the year, conditions were stable. Prices of raw materials were at a reasonable level and free from wide fluctuations, so that a good business in the products was possible at a fair margin of profit. In the second half an unexpected shortage of linseed, and a prolonged drought in Argentina affecting the growth of the new crop, were unsettling factors in influencing prices generally, and were followed by an acute depression arising out of financial troubles in the United States and on the Continent. Nevertheless, the quantity of oilseeds, nuts and kernels imported and going into the mills was only slightly less than in 1928 and well up to the average of recent years. Gross imports of oilseeds were 1,160,272 tons and of nuts and kernels 385,737 tons, as against 1,206,546 tons and 348,992 tons in 1928. The re-export amounted to only one quarter per cent. in the case of oilseeds and 7.1 per cent. in the case of nuts and kernels (principally copra), showing little change from the previous year. Imports of linseed at 285,408 tons showed a shrinkage of nearly 63,000 tons, and were below usual requirements. Cotton seed at 569,438 tons was 5,000 tons down, but constituted more than one-third of the total imports. Soya beans at 210,931 tons were over 19,000 tons advance. Rape seed and castor seed, as well as palm kernels, were some way behind, but copra, ground nuts and sesamum seed each recorded an increase. Supplies, with the possible exception of linseed, were ample and came fully up to expectations. World shipments of linseed were approximately 2,034,000 tons, as against 2,150,000 tons in 1928, of which 1,750,000 tons were shipped from South America, as against around two million tons. Shipments from India were 253,000 tons and from the Baltic 30,000 tons. The quantity destined for Europe was 1,410,175 tons, against 1,751,675 tons—a reduction of 341,000 tons. On the other hand, the United States accounted for a much increased quantity, viz., 560,000 tons against 382,000 tons—all from Argentina—to supplement an attenuated domestic yield. Prices remained steady up to the end of June at about £15 12s. 6d. for Plate and £17 15s. for Calcutta. As it became known that the Plate crop was below estimates the market advanced sharply from July onwards. The highest figure for Plate was £24 5s. and for Calcutta £24 10s. on spot at Hull, though much higher figures were asked and refused. Values receded in December, when new crop Plate was dealt in at £19, but this was not maintained in the succeeding weeks, notwithstanding official reports indicating an exportable surplus from Argentina of only 1,200,000 tons. Cotton seed started at a low level and advanced to £12, paid in August and September for black Egyptian. Then financial trouble in the United States and on the Continent reacted severely in the grain markets, and the price dropped to £8 below the previous lowest post-war figure. Indian cotton seed, however, fell only 30s. below the highest. The average price of raw linseed oil, naked, ex Hull mill, prompt, in the first half of the year when markets were stable and trade good, was £28 7s. 3d., and in the second half £40 12s. 6d., the average for the whole year being £34 13s. Crude Egyptian cotton opened at £29, but fell to £26 10s. in April, May and June, and later advanced to £35 in September, subsequently declining to £27 in November. Soya and other seed oils were fairly steady and not subject to wide fluctuations. Shipments of palm kernel oil in bulk are slightly below the 1928 total, and there were decreased exports of soya, rape and linseed oils, but much larger shipments of cotton oil, both refined and unrefined. The United States was again a good buyer of both palm kernel and soya oils. More than 50 per cent. of the imports from abroad consisted of coconut, palm and olive oils, which are not produced in this country. Imports of linseed oil amounted to 31,000 tons. Less soya oil but more rape and castor oil was imported. Generally the export trade in vegetable oils produce or manufacture of the United Kingdom was about the same as in 1928, though much of it was done in the face of very keen competition. The following is a summary of the Board of Trade returns of exports:—

	1926. Tons.	1927. Tons.	1928. Tons.	1929. Tons.
Unrefined oils	104,304	90,024	96,193	93,463
Refined oils	19,906	16,645	16,370	20,480

The production of the mills of the United Kingdom, estimated from the commercial yield of oil from the net imports of oilseeds, nuts and kernels was 414,496 tons, or 13,899 tons more than in 1928, but a long way behind 1924, when 519,374 tons was recorded. The comparative figures are as under:—

	1926. Tons.	1927. Tons.	1928. Tons.	1929. Tons.
Linseed oil	119,367	117,388	115,774	94,992
Cottonseed oil	89,471	89,441	95,576	94,906
Other seed oils	23,089	31,758	44,549	60,844
Palm kernel oil	96,872	82,593	72,186	67,883
Ground nut oil.....	38,655	18,626	47,908	52,734
Coconut, &c.	37,103	22,375	24,424	41,137
Total	404,557	362,181	400,597	414,496

Imports of vegetable oils showed a substantial increase of 33,559 tons net. The approximate position of Great Britain's vegetable oil supply is indicated by the following summary:—

	1926. Tons.	1927. Tons.	1928. Tons.	1929. Tons.
Home production	404,557	362,181	400,597	414,496
Deduct British exports	124,210	106,669	112,923	113,943
Net remaining	280,347	255,512	287,674	300,553
Add net imports	214,673	224,588	208,080	241,639
Total remaining in U.K.	495,020	480,100	495,754	542,192

British exports of oilcakes and meals at 105,108 tons compared with 128,389 tons in 1928. At the same time, imports of foreign-made oilcakes substantially increased, being 494,264 tons, against 381,781 tons. The supply of oilcakes for the United Kingdom is estimated at 1,475,000 tons, as against 1,350,000 tons in 1928. The c.i.f. value of the gross imports of oilseeds, nuts and kernels, vegetable oils and oilcakes was £35,419,924, against £33,851,923 in 1928, and the f.o.b. value of British exports of oils and cakes £5,548,151, against £5,893,270. Re-exports of all kinds had a value of £978,973, against £971,072, or less than 3 per cent. of the gross imports.

TIMBER.

The year had barely begun when there took place an event of prime importance, namely, the formation of a group to take over the buying of the whole of the Russian exports of red and white sawn wood to this country. The syndicate bought the Russian stocks at guaranteed prices. In order that importers outside the scheme should not reap benefit, minimum reselling prices were fixed and guaranteed throughout the year, and all concerned, whether in the syndicate or not, have honoured their pledges.

With the removal of the Russian bogey of former years, trading conditions in 1929 became favourable. There has been no great price fluctuation nor any particularly large business. Stocks carried over from 1928 were considerably less than in the preceding twelvemonth. Another favourable factor was the fact that the extremely severe weather experienced in Northern Europe in February and March delayed winter shipments from those Baltic ports which are usually kept open all the year round, thereby enabling stockholders in Great Britain to hold out for the value of their wood. On the whole, the spot market has been pretty steady throughout, and it was only in the last few weeks that signs of weakness were displayed. A disturbing feature of the season was the rapid rise in freights. Although some improvement was shown on the previous year, disappointment is felt in hardwood circles at the restricted trade done. At no time was there any real activity in the demand. A noteworthy feature was the continued limitation in the use of mahogany. In plywood and veneers, trade fluctuated remarkably. Prices soared in the first six months, as demand was exceptionally good, but about June consumption began to decline seriously. Stocks at the end of December last showed a big increase on the corresponding month in 1928.

From the statistics below, which are taken from the Board of Trade Returns, it will be seen that the total wood imports last year were up on 1928 by about £3½ million, though well below the figure of 1927:—

* Exclusive of those who ceased work on account of the dispute which commenced on May 1, 1926.
† Trade union figures. ‡ Coal strike.
(a) May–December figures entirely unrepresentative.

The following information is extracted from the *Iron and Coal Trades Review*:—The extent of the progress made in 1929 is reflected in the total saleable output, which reached approximately 255½ million tons, as compared with 237,471,931 tons in 1928. The commercially disposable output in 1929 was 237 million tons, as compared with 219,300,000 tons in 1928. Progress was also reflected in exports, which in 1929 amounted to 60,266,000 tons, as against 50,051,000 tons for the preceding year. It will also be found that the proceeds will show a substantial increase, though the figures for the year are not yet available.

Although conversations and negotiations with a view to the formation of selling organisations within the trade have been proceeding for some years, it is only recently that any real experience of the effect of such arrangements has become available. Arising out of the discussions and negotiations there were three main bodies of opinion, firstly, those who considered that no artificial restrictions could cure the trouble and that natural conditions should be allowed play; secondly, those who considered that the fixing of a minimum price, below which no coal was to be sold, would prevent at least the losses which were taking place; and, thirdly, those who took the view that, overproduction being the cause of the trouble, it should be corrected by regulation of output, so that it might correspond to the demand. There were some who favoured a scheme embodying the principles of minimum prices and regulation of output. The year 1929 has seen the operation of schemes embodying all these points of view, but probably it will be agreed that the experience so far gained does not lead to any very definite conclusion. The system of fixing minimum prices is open to very great objections. In the first place, the fixing of a fair schedule of prices of a large range of different quality coals is an extremely difficult task; in the second place, the purchaser of very large quantities is put upon the same terms as the purchaser of very small lots; thirdly, if there is no regulation of output, minimum prices soon become maximum prices. The regulation of output being the one scheme which aims at correcting the real cause of the trouble, is that which more generally commends itself to those who have studied the problem.

In looking for new outlets for British coal one naturally turns to the possibilities of pulverised fuel. In so far as it is used on land there seems no reason to believe that in the near future the pulverising of coal will cause a substantially increased demand; but for marine purposes the situation is more encouraging. Though the day when the luxury passenger liner will return to coal-firing may be distant, it is the opinion of many shipowners that for cargo-carrying ships, even at the present stage of development, those operated by pulverised-fuel-fired marine boilers can be operated considerably more cheaply than those driven by internal-combustion engines. In these circumstances there appears to be a reasonable prospect that in the near future we may see the proportion of coal-burning ships to oil-burning ships revert to that which existed before the rapid development of the Diesel engine. There are evident signs that the cheapening in the cost of producing electric power, caused by greater economy in coal consumption, has had the effect of stimulating the use of electric power, and, judging by the large increases which are taking place in the power stations all over the world, the benefit of the economy is already being felt, and in this respect again the outlook for an increase in the use of coal is encouraging. The cost of production has been gradually decreasing since 1926. This reduction is probably brought about by improved organisation and by the strict economy necessary under present depressed conditions. Unfortunately, during such times of depression there are no profits available out of which re-equipment and improvement of plant can take place, while under such conditions it is impossible to attract new capital into the industry.

The following district reports are from the same source:—

South Wales.—There was a substantial revival during 1929. Though collieries were still being worked at a loss over most of the year, the loss averaged a few pence per ton, compared with 1s. 8¾d. in 1928. Several great enterprises, however, met disaster and passed into new hands. The stabilisation scheme of the previous year was revised, and has been voluntarily agreed to by owners representing 84 per cent. of the output. The principal amalgamation of Welsh colliery enterprises during the year was the formation of Associated Welsh Collieries, Ltd., with a share capital of about £8,500,000 and debentures for £2,000,000 to merge the large coal-exporting firm of Guéret, Llewellyn and Merrett, Ltd., with about a dozen colliery concerns owning 60 pits capable of producing about one-fifth of the output of the Welsh coalfield. This combine, by share exchange, acquired the colliery interests of Guest, Keen and Nettlefolds, Ltd., the collieries of the Cambrian Combine, D. Davis and Sons, Ltd., Llewellyn (Nixon), Ltd., Llewellyn

The Bank conducts every description of Banking Business, both British and Foreign. Letters of Credit issued. Home and Foreign Credits established. Executorships and Trusteeships undertaken.

(Cyfarthfa), Ltd., Llewellyn (Plymouth), Ltd., and several others.

Northumberland.—Conditions are better than they have been for several years and the volume of trade and employment have steadily improved. There are definite indications that foreign competition is being steadily overcome and that there is an adequate market for Northumberland coal in the future.

Durham.—From the beginning of the year orders have steadily increased in volume and prices advanced rapidly, though owing to the fact that many long-term contracts at low prices only expired at the end of the year the average received has remained comparatively low.

South Yorkshire.—The experience of the last year may be regarded as a severe test of the success of the marketing proposals contained in what is known as the Five Counties Scheme. The returns show that a considerable recovery of the foreign trade has been secured by this district, although, at intervals, there has been a considerably reduced working time as a result of the regulated output.

The following tables, compiled from figures published by the Mines Department of the Board of Trade, covering about 96 per cent. of the industry, show output, costs and proceeds for the first three quarters of 1929, as compared with recent periods:—

Great Britain.	1928.	1929.		
	First Quarter.	First Quarter.	Second Quarter.	Third Quarter.
Tonnage disposable ..... tons	56,829,836	59,063,619	55,076,924	56,205,905
Wages .....£	27,416,352	26,617,131	25,527,357	26,062,829
Stores and timber .....£	4,674,845	4,432,450	4,322,948	4,372,710

* End of year. † Whole industry: Pig-iron and steel branches not separately classified before 1923.

The following information is based on an article in the *Iron and Coal Trades Review*:—The total production of steel in 1929, at 9,654,700 tons, was 60,000 tons less than in the record year 1917, but over a million tons more than in 1928. This increase involved an expansion in pig-iron production to 7,579,500 tons, the highest figure recorded since 1920, and exports of iron and steel at 4,379,400 tons were the highest since the war. The peak of production, of both iron and steel, was reached in October. In spite of this substantial

increase in output, a clear indication that all is not well with the industry is given by the Stock Exchange quotations of several of the leading companies. From these it is clear that, in the opinion of the market, the profit-earning capacity of the industry has not improved. The explanation of this is that the cost of raw materials has increased during the year more rapidly than that of the finished product. Coke prices, for example, increased by about 6s. 6d. per ton, and though about 24 cwt. of coke are used in the production of one ton of pig iron, prices of pig iron only rose by 6s. The price of iron ore has also risen during the year. Further, the expansion in production of pig iron was checked by a lack of adequate supplies of coke. During the past years of depression in the coke industry, due largely to the depression of the pig-iron industry, coking plants have been allowed to go out of repair, or have become obsolete, and have not been adequately replaced with new plant. Another reason for dissatisfaction is the fact that the improved production figures do not indicate improvement in the competitive power of the industry. The steelmakers' rebate scheme is partly responsible for the fact that most of the improved shipbuilding demand was met from British sources, and an important influence in keeping Continental makers from increasing their exports to this country was exercised by the keen demand on the Continent. Already this situation is being reversed.

The movement in the direction of amalgamations has continued, culminating in mergers between such outstanding companies as Dorman, Long and Bolckow, Vaughan, and more recently in proposals for amalgamating the heavy branches of Guest, Keen and Nettlefold and Baldwins. In addition to the amalgamation of individual companies, the co-operation of producers within the industry has developed still further by the formation of the British Steelwork Association and the British Steel Export Association. The former has been formed "to promote and develop the production and use of structural steel and steelwork, etc." The British Steel Export Association is a development of the British Export Committee, which had been in existence for about eighteen months, and has as its object the centralising of the selling of plates, sections and joists in the export markets.

The following tables are also taken from the *Iron and Coal Trades Review*:—

SILVER.

The year has been noteworthy for the almost monotonous regularity with which prices have declined, and for the establishment of the lowest quotations ever recorded hitherto. The ease with which supplies, augmented by large quantities of silver derived from demonetised coin, were disposed of was the great feature of the market during 1928. Just as it was then due to the ability of China to absorb an abnormal quantity of silver that the market was so well maintained, it is mainly owing to the continued saturation of that country that caused the white metal to become somewhat of a drug in the market. Stocks have tended to accumulate. Those in Shanghai, which amounted to about 108,000,000 ozs. at the beginning of 1928, had increased by the end of that year to about 150,000,000 ozs., and at present amount to about 192,000,000. An accumulation such as this could not but depress the market. Silver required for coinage purposes has made little demand on the market, supplies being already available from old coin in process of demonetisation. The market has also had largely in view the quantity of silver at the disposal of the Indian Government, from which source sales have been made periodically, a fact which has also tended to restrict buying by the Indian Bazaars. Supply has exceded demand, and it is remarkable that the decline was so long delayed.

The highest prices of the year were 26 7/16d. for cash and 26½d. for two months' delivery, which were quoted on four days in January, and the lowest 21 5/16d. and 21⅜d. for the respective deliveries touched on December 30th. The following table shows the movement of prices for the last ten years:—

	Cash Delivery.	Two Months' Delivery.
1920	50⅛d.	48⅞d.
1921	12⅝d.	13d.
1922	7d.	7 7/16d.
1923	3 7/16d.	2⅝d.
1924	4 7/16d.	4 7/16d.
1925	2⅝d.	2⅝d.
1926	7 11/16d.	7⅞d.
1927	3⅛d.	3⅛d.
1928	2 13/16d.	2 13/16d.
1929	5⅛d.	5⅛d.

During the first three months of the year prices were fairly well maintained in the neighbourhood of 26d., and the principal features during this period were the disturbances in Bombay and the revolutionary outbreak in Mexico. The situation in Mexico caused some apprehension, but the slight bullish feeling at first manifest was soon dispelled as it became apparent that the trouble was unlikely to assume the magnitude of similar happenings in the past. Prices during April ruled at a slightly lower level, the average being approximately 25⅜d., and in the following month the weakness of the market became apparent. Support grew less, and reports that in Japan a movement was on foot towards the removal of the embargo on the export of gold caused activity on the part of Chinese speculators to purchase yen exchange. The sales of silver as the counterpart of these operations helped further to depress prices. By the first of May the quotations had receded to 25 5/16d., but during that month the fall was more rapid and on June 4th the price of cash silver had declined to 24d. The average prices of June, July and August, varying by only a small fraction of a penny, fairly indicate the placid state of the market for those three months. The market presented a still weaker appearance as the year progressed, and by the end of September prices had declined to 23 3/16d. and 23¼d. for cash and two months' delivery respectively. With China more inclined to sell than to buy, and the Indian Bazaars operators being content to acquire merely their bare needs, outlet was restricted, quotations still sagged and November saw prices quoted below 23d. By the latter half of December enquiry was practically limited to the Indian Bazaars and prices were forced down to a level at which they were willing to give support. From the highest quotation of the month—22 11/16d. for both deliveries on December 7th—there was a rapid decline until on the 30th the lowest prices hitherto recorded for silver were established, viz., 21 5/16d., the figure quoted for cash delivery with two months' delivery at 21⅜d. Till then the lowest quotation had been 21 11/16d., touched in November, 1902, and January, 1903. The year closed with quotations level at 21 7/16d.

It was officially announced in July that the Master of His Majesty's Mint in Bombay was prepared provisionally to accept silver from the public for refining, and it was about the same time that the Bombay Bullion Exchange decided to remove, with effect from the October 22nd settlement, the discount of 8 annas per 100 tolas which was imposed last year on silver refined at the Bombay Mint.

Sales of silver by the Indian Government have continued, but no official figures have been made available as to the amounts actually sold. It was agreed that the abolition of the discount on Bombay Mint refined silver removed the handicap on the Government selling such silver in India, and the hope was expressed that the fine silver produced in Bombay Refinery would find its place in the Indian market. Early in the following month arrangements were made through London whereby Indian Government refined silver would be delivered in Bombay, against silver purchased in the London market for shipment to India, and delivery in Bombay commenced with about 2,000,000 ozs. of silver bars refined at the Bombay Mint. The Indian Government silver exported has all been in the form of unrefined silver, and the amount imported into the United Kingdom this year was about 20,400,000 ozs. The decision in October to re-establish the currency of Hong Kong on a silver basis led to demand for British silver dollars, and coinage orders were placed with the Royal Mint in London, while at the same time the Bombay Mint intimated that they were prepared to entertain tenders for the purchase of Indian Government silver for minting into dollars. Purchases were made in the London market for the purpose, but the London Mint was also able to furnish some of the required silver from the demonetised British coin of the old standard. Although, therefore, substantial orders were placed for mintage both in London and Bombay, to an estimated total of about 14,000,000 ozs., the market experienced little effect, the demand for new silver for the purpose being comparatively small.

The accumulation of stocks, to which we have already referred, tended, as the year advanced, to render the market sluggish, with the result that for most of the year silver for cash delivery has been quoted at a discount. Following the arrival in this market of substantial shipments of silver from Mexico and the cost of carrying stocks owing to high money rates, the discount reached 3/16d. in October, whilst on several days in November it was ¼d. Cash silver commanded a premium on only two days of the year, on February 1st and May 15th, on which dates the quotations for cash were, however, only 1/16d. higher than those for two months' delivery. Supplies have again been amplified by further demonetisation of silver coin, though to a lesser degree than last year. Nevertheless, the amounts made available to the market from this source are of considerable importance. To arrive at an estimate is a matter of some difficulty, but it is likely that Indian Government silver has provided about 32,000,000 ozs. and French silver coin about 9,000,000 ozs., besides a further quantity of possibly 9,000,000 ozs. derived from British coin. The fact must be considered that the use of some of this silver for re-coinage, such as for Hong Kong dollars, to which reference has already been made, has possibly been instrumental in absorbing silver which might otherwise have come into the market.

The following is an estimate of the production of silver in 1929 compared with that of the preceding years:—

SILVER PRODUCTION (in millions of fine ounces).

	Mexico.	United States.	Canada.	Elsewhere.	World.
1912*	75	64	32	60	231

COPPER.

The world's mining production (as distinct from smelter or refinery production) during 1929 amounted to about 1,840,000 tons, again establishing a high record. During the last years of the war production has averaged about 1,450,000 tons, and, after this figure was again reached in 1925, each succeeding year has established a high record for production as well as consumption, as the following tables show:—

WORLD'S MINING PRODUCTION OF COPPER.
(Thousands of Long Tons.)

	1900.	1913.	1920.	1928.	1929.

Total*	503	1,052	977	1,750	1,893

* Including countries not specified above.

Substantial progress has been made in the development of the big South American and Canadian properties. A fair increase in Canadian production may be expected during next year, but really large tonnages from Canada or South Africa will probably not come on the market for another two or three years. It is estimated that by 1933 some 250,000 to 300,000 tons of new production will be available from the properties now under development, the ore reserves of which exceed in magnitude those of all the older large mines with the sole exception of the Chile Copper Company, who claim an ore reserve of almost 700,000,000 tons, containing over 12,000,000 tons of recoverable copper. At the present rate of consumption the world's ore reserves so far developed are sufficient to guarantee the world's requirements for about thirty years. Large additions are being made to the world's refining capacity. The Nichols Copper Company have finished the construction of their new refinery at El Paso, and two refineries will be erected in Canada to deal with the production from the Noranda Mine and that of the Froode Mine, owned by the International Nickel Company, which latter property is expected to rank amongst the world's leading copper producers. A new refinery is also being built in Germany. These new plants will have a capacity of some 250,000 tons per annum. Prices advanced steadily in the early part of the year, but got out of hand in February, and thereafter prices rose, largely under the influence of one group, to 24c. in April, fell to 18c. within a few days, and remained at about that level for the rest of the year. Copper has entirely ceased to be a free market, and is entirely subject to the policies of the Copper Export Association, who control practically all the available supply of electrolytic and refined copper. The widening margin between standard and electro copper reflect the world's opinion that the present level is artificial.—*Messrs Brandeis, Goldschmidt and Company.*

LEAD.

Values of lead showed some improvement during 1929, though they fell to a very low level towards the close. The demand expanded slightly in the United Kingdom, as the apparent consumption from January to October inclusive amounted to 208,049 tons, against 195,082 tons in the same period last year. Production, however, was evidently in excess of requirements, but the position was well under control owing to the agreement among producers. Under this agreement all supplies coming to London from North America, Australia, Burma, Mexico, Spain and Canada are regulated and controlled. Russia bought liberally from time to time and good quantities were absorbed by the Continent.

Extreme prices were as follows:—

	Opening.	Highest.	Lowest.	Closing.
Soft, foreign—	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Near dates, 1929	22 5 0	28 13 9	20 17 6	21 6 3
,, 1928	22 8 9	22 8 9	19 7 6	21 15 0

The demand during the closing weeks of the year fell off considerably. Meanwhile, producers maintained their prices without effecting sales of any importance either in this country or on the Continent. The outlook was not promising at the close, as in several directions it was felt that prices should be more in keeping with the position of supply and demand, the market being considered an artificial one. Imports of lead, pig and sheet for the eleven months ending November 30, 1929, amounted to 268,365 tons, against 238,512 tons in the same period in 1928 and 264,008 tons in 1927.—*Glasgow Herald.*

Prices rose in an orderly manner until March, when there was an outburst of speculative buying; prices for June shipment touched £30. Conditions became quieter in the early summer, and later the market slowly declined to £23 12s. 6d. in August. It was no doubt due to the sagging trend of the market that the principal producers of lead agreed in August to pool their sales. From this time onwards, shipments of Canadian, Mexican and American lead were disposed of in conjunction with those from Australia and Burma, and for the moment the price was practically fixed at £23 12s. 6d. Business on the London Metal Exchange was very much reduced through the fact that it thereby ceased to be an entirely free market. The agreement between producers seems, however, to be somewhat less rigid than that of the copper exporters. There was very little alteration in consumption as against the previous year, the principal change being an increase in the apparent consumption of Great Britain of some 25,000

SPELTER.

The spelter situation became steadily worse during the year, and the metal stood at £7 a ton lower in December than in January. The year opened with the price at £26 15s., and after weakness in February rose to £29 in March, chiefly on the rumour that some means of American co-operation with the European cartel had been secured. This rise synchronised with the considerable rise in copper that took place in March, and was undoubtedly influenced thereby to a certain extent, but fundamentally it was based on the expectation of a stronger cartel and strict control. When these expectations were not fulfilled, the price fell away rapidly to about the level at which it stood at the beginning of the year. The latter half of the period under review showed a steady decline to the December level of £19 12s. 6d. The total production for 1929 is estimated at 1,440,000 tons, an increase of about 37,500 tons on 1928. Stocks at the end of 1929 are estimated to have increased to 66,000 tons in the United States, 45,000 tons in Europe, and 4,440 tons in England. Apparent consumption in Great Britain in 1929 was 187,283 tons.—*Messrs Brandeis, Goldschmidt and Company.*

TIN.

As a result of increased production in the absence of a correspondingly higher consumption, the price of tin declined, with minor fluctuations, throughout the year, except for a temporary check in June, July and August, when efforts were made to raise prices by withdrawing large supplies from the market. The highest price, £230 for three months, was reached in February, and the lowest, £177 10s., in December. In June, leading tin-producing companies agitated for a common understanding and a united policy to regulate the rate of supplies. In the following month the formation of an Association of Tin Producers was agreed upon, but it was not until the end of November that a united policy of restricting the supply of the metal was formulated and carried by members of the Association. The agreement as yet is only a gentleman's agreement which some of the bigger mines have promised to support. Production during 1929 continued to expand, and shows an increase of about 12,000 tons compared with the previous year. With the exception of the shipments of Banca tin, which have again fallen off slightly, the output from the other sources have all contributed to the increase. Shipments of Straits tin—at over 101,000 tons—advanced by 4,000 tons, and the production of tin from the Chinese mines expanded by nearly 2,000 tons. A steady growth in the output from the Nigerian mines has taken place. The development in these tin-bearing areas continued to make good progress, and unless the price of the metal drops to an uneconomic level a further steady expansion of production from this source is to be expected. Shipments from Bolivia for the eleven months to November have surpassed those for the same period of the preceding year by nearly 3,000 tons. The recorded stocks show an increase of 5,000 tons, but as several thousand tons which have appeared in the statistics as deliveries are generally understood to have been hidden away by the group of operators already referred to, the true stocks cannot be accurately determined. It is estimated, however, that production exceeded consumption by 10,000 to 12,000 tons.—*Messrs Brandeis, Goldschmidt and Company.*

Tinplate.—The comparatively promising position of this industry is principally due to the American agreement, but it is felt in some quarters that in the long run this policy may prove unwise, as it is a cause of dissatisfaction among former foreign customers of the trade, who are now starting production for themselves. This is encouraged by the high prices of Welsh tinplate, and the primary need of the industry is the reduction of costs. It is expected that an agreement with German producers, on the lines of the American Pact, will shortly be completed.

Another factor accounting for the larger output of tinplates in this country, says the *Iron and Coal Trades Review*, has been the general improvement in the demand owing to the increased consumption throughout the world, to the greater care taken by the leading manufacturers to improve the quality, to more careful assorting and packing, and to the competitive prices quoted. The capacity of the mills has, in recent years, been greatly increased, and Welsh makers again turned their attention to the formation of a more satisfactory scheme for the restriction of output. Whether credit should be claimed by the American Pact or by the pool, or by both, the fact remains that, whereas at the beginning of 1929 the tinplate works were operating at under 70 per cent. of the capacity, and the price of tinplates per standard box was 18s., by December these figures had increased to 80 per cent. capacity, and the price obtainable was 18s. 9d. per standard box. Another important contribution to the improvement in the home demand for tinplates has been the success of the National Food Canning Council in promoting and developing the fruit and vegetable canning industry of this country. In labour policy this year has seen a complete innovation in the shape of a new sliding-scale agreement, under which the wages of the tinplate employees will be governed by the ascertained selling price of tinplates after eliminating the respective costs of tin and sheet bars.

Prices.—The year opened with a price of 18s., which varied little until April and May, when the quotation was 18s. 4½d.-18s. 5½d. In June-August the market was weaker, with price in the neighbourhood of 18s. 3d. September saw a recovery to 18s. 7d., and the highest monthly average of 18s. 10½d. was reached in October, after which there was a slight decline to 18s. 9d. in December.

Bars.—From a price of £6 in January for Siemens tinplate bars there was a steady rise to £6 7s. 6d. in May-July. In the next four months the price was steady about £6 5s., but fell in December to £6 1s. 10½d.

§ Average for four quarters. ‡ According to "Fairplay."

The total tonnage launched in the world last year amounted to 2,793,210 tons gross, of which 1,522,623 tons were built in Great Britain and Ireland, and 1,270,587 tons abroad. In comparison with 1928, the British figure shows an increase of 77,000, and the foreign an increase of 17,000 tons. In British yards the year opened with a satisfactory volume of new work, as a result of the large number of orders for new cargo tonnage placed during the last quarter of 1928, and between January 1st and March 31st the tonnage under construction increased by nearly 100,000 tons. In the second and third quarters of the year the quantity of work commenced fell much below the rate of launching, and in the late summer the industry's prospects were not encouraging, unemployment having risen between June and August from 22.5 to 24 per cent. During September and October, however, heavy orders were placed for tanker tonnage, and at the end of the year work in hand had risen to 1,560,254 tons, a figure 317,000 tons higher than that of December 31, 1928.

The output of the industry both in this country and abroad was higher last year than in any year since 1921. In the following table production during the past three years is compared with that in 1922-25 and in the quinquennium immediately preceding the war:—

TONNAGE OUTPUT.

Period.	Tons Launched (000's). U.K.	Abroad.	World.	British. Percentage.	Output as per Cent. of 1909-13. British.	Foreign.	World.
Average—							
1909-13	1,522	967	2,489	61	100	100	100
1922-25	1,050	1,087	2,137	49	69	112	86
1927	1,226	1,060	2,286	54	80	110	92
1928	1,446	1,253	2,699	54	95	130	108
1929	1,523	1,271	2,793	54·5	100	131	112

It will be seen that in 1929 British output almost exactly equalled the average for 1909-13, whereas foreign production showed an increase in comparison with that period of 31 per cent. Despite the improvement in the industry's activity last year, the problem of redundant berths in British yards has remained acute. It is estimated that at no time in 1929 were more than 55 per cent. of the berths available occupied by vessels under construction, and the curtailment of naval shipbuilding has been a serious contributory factor in augmenting surplus capacity. The process of rationalising the industry by the concentration of production in fewer berths requires to be pressed forward before shipbuilding can be re-established on a sound and remunerative basis. Prices throughout last year were again cut to the narrowest margin over costs under pressure of competition, and, though from October 1st the industry began to receive the benefit of the De-rating Act, savings through relief from rates will be counter-balanced by the increased wages granted to some classes of shipyard workers under the new national standard schemes operative from January 1, 1930, and by the increase in steel prices.

Lloyd's Register's annual summary shows that further progress was made last year in the gradual conversion of shipbuilding from steam to motor systems of propulsion. This development, as the next table indicates, was particularly marked in foreign yards:—

MOTOR TONNAGE OUTPUT (in Thousands).

	U.K.	Per Cent. of Total Output.	Abroad.†	Per Cent. of Total Output
1923	87	13	135	14
1924	237	16	262	32
1925	267	25	575	52
1926	202	32	500	48
1927	356	29	506	48
1928	428	30	753	60
1929	464	30	802	63

† Omitting wooden vessels.

Of the total steam tonnage—1,504,000 tons, as compared with 1,289,000 tons of motor vessels—built in 1929, 410,000 tons were designed for burning oil fuel under boilers, so that the tonnage dependent exclusively on coal for propulsion represented only 39 per cent. of the world output. During the past year, however, considerable progress has been made with experiments in the use of pulverised coal as fuel, and though certain difficulties remain to be overcome, the technique of pulverisation for marine use has been greatly improved.

Turning to foreign countries, it will be seen from the following figures of production that the problem of surplus shipbuilding capacity is not confined to this country:—

TONNAGE LAUNCHED ABROAD ('000 Tons).

	High Record since 1920.	1927.	1928.	1929.
Denmark	139	72	139	111
France	211	44	81	82
Germany	526	290	376	249
Holland	232	120	167	187
Italy	220	101	59	71
Japan	227	42	104	164
Sweden	107	67	107	107
U.S.A. (coast)	995	124	86	101

Production showed a large increase in Japan, and was well maintained in Holland, Italy and Sweden, though in the case of Italy the discrepancy between current and maximum output is marked. German output, and the production of Danish yards, recorded large declines. The concluding table compares the figures of work in hand at the end of recent years:—

WORK IN HAND DECEMBER 31.

	1925.	1927.	1928.	1929.
United Kingdom	885	1,580	1,243	1,448

Branches and Agencies in:
INDIA, CEYLON, BURMA, SIAM, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.
The Bank buys and sells Bills of Exchange, issues Letters of Credit, and conducts every description of Banking Business both at Home and Abroad.
FIXED DEPOSIT RATES will be quoted upon application.
EXECUTORSHIPS and TRUSTEESHIPS accepted.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on Daily Balances, provided accrued interest for the half-year amounts to £1.
JAMES STEUART, *Chief Manager.*

Tonnage building in the United States increased, largely as the result of the loans granted under the Jones-White Act, from 48,000 tons at December 31, 1928, to 179,000 tons at the end of last year.

With regard to the future, the outlook is rendered doubtful by the recent acute slump in cargo shipping freights. The competitive position of the British shipbuilding industry is stronger than a year ago, thanks largely to increased costs abroad, and the year has begun with a good volume of work in hand; but since the beginning of December there has been a distinct dearth of new orders.

* This figure, being based, in part, on averages for May to November, when no coal freights were obtainable, and homeward freights consequently at an abnorma level, is not comparable with the figures for preceding years.

There is no question that the handicap of high interest rates restricted to some extent during the past year the flow of international commerce on which shipping depends for its livelihood. But, none the less, the volume of seaborne trade, despite monetary difficulties, showed during the first half of 1929 a remarkable resilience; and the influence responsible for the extreme weakness of freights in the later months of the year was the abundance of the European grain harvest and the consequent paralysis of the movement of crops from overseas markets. The trade returns indicate that, at least during the first three quarters of 1929, sea-borne commerce showed a distinct improvement in comparison with the previous year, and the returns of laid-up tonnage and of United Kingdom port traffic also demonstrate that the movement of shipping was considerably more active than in 1928:—

	—Thousand tons net.—		
	Average.		
Laid up on—	1924-27.	1928.	1929
January 1.....	473	372	330
April 1	351	363	236
July 1	632	496	381
October 1.....	388	415	266

Cargo freights, however, with few exceptions, yielded in 1929 a lower average figure than in 1928, and in many homeward routes the declines in gross revenue were appreciable. During January grain movements were heavy, and the Plate absorbed a satisfactory volume of tonnage. In February the Plate market continued the mainstay of "tramp" shipping, but as the spring wore on the somewhat unhealthy concentration of the market on the Plate became accentuated, competition from liners resulting in a veritable collapse of freights from Australia, and North American shippers taking up a very restricted volume of whole-cargo tonnage. Following a severe fall of nearly 4½ per cent. in the average freight level during June, July brought temporarily a mild revival in homeward inquiry; but as the autumn proceeded the new tonnage which had been launched during the first nine months of the year, supplemented by the substantial quantity of laid-up tonnage re-commissioned between July and September, completely broke the homeward freight market.

Rates for outward coal cargoes were, in most instances, somewhat less unremunerative in 1929 than in the previous year. In Europe, the dislocation of transport caused on the Continent by the abnormally severe weather in February and March gave a stimulus to British coal exports from which shipping enjoyed appreciable benefit, and though rates reacted in the Near Trades from the peak reached in March, there continued to be a steady demand for tonnage, and in the autumn values again moved upwards. For Mediterranean discharge, coal freights were maintained, with little fluctuation, at a fairly satisfactory level up to the end of August, after which they sagged heavily as the result of freer offering of tonnage consequent on the more attractive prospects of return employment from the Danube. As regards South America, during the first seven months of the year freights were relatively stable on a low level, after which the slump in homeward quotations had its usual repercussion in producing a sharp upward movement of outward rates.—*Mr Aylmer Vallance, Secretary of the National Maritime Board, in Lloyd's List Annual Review.*

* End of year. † Whole industry not classified separately before 1923.

Last year was more satisfactory for manufacturers of special lines, and in the traditional and staple branches of engineering the effects of rationalisation began to make themselves felt in some instances. Though employment was still quiet it was better than in 1928, while wage rates remained virtually unchanged. Exports, though still higher than in any other year since 1922, were slightly below the 1928 level.

General Engineering.—Home demand for railway material has been rather better this year, but exports fell off as compared with 1928. Machine tool makers had a better year, and, in spite of a decline, in some cases, in November, the prospects for this branch of the trade are definitely better than they were a year ago. Exports of textile machinery improved slightly, but this branch of the trade suffered from the depression in the textile industries. For similar reasons the agricultural machinery section did badly, though there was a fairly active demand for small oil and petrol engines and for food-preparing machines. The export trade in agricultural machinery is more and more dominated by American producers.

Electrical Engineering.—This industry enjoyed continued activity and development. Substantial orders for heavy generating plant, transformers and switchgear were placed with British manufacturers, and electric furnaces of British make found a ready sale abroad. The Central Electricity Board, which has already placed contracts to the amount of £10 million with British firms, expects to spend ten times this amount within the next five years. A further 38,000 h.p. of electric motors were installed in the mines during the year. The export trade showed considerable improvement.

The following is an index of activity in the electrical industry of Great Britain, and is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association:—

(1920 = 100.)

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

Motor Vehicle Manufacture.—Makers of touring cars have suffered to some extent from the keenness of competition in their limited home market together with the sluggish movement of second-hand cars. Exports, on the other hand, have shown an encouraging expansion from 18,192 in 1928 to 24,197 in 1929, and a steady advance has been made in the improvement of marketing methods. Makers of commercial vehicles had a reasonably good year. The increase in recent years of omnibus and other large passenger vehicle traffic stimulated the production of appropriate chassis. Exports rose from 1,437 to 2,636. The home trade in motor cycles was disappointing, but exports made further progress, and reached a value of £4,015,233, compared with £3,785,799 in 1928.

Marine Engineering.—The year has been marked by steady technical progress, according to *Fairplay*. High-pressure, high-temperature steam has found greater favour as the early difficulties in connection with its employment have been overcome; the water-tube boiler has played a larger part; the efficiency of oil-burning apparatus has been improved; and an appreciable advance has been made in the application to ships of the principle of powdered coal burning. In the domain of internal combustion engineering, the progress has been no less striking. Large double-acting engines of both the four-stroke and the two-stroke type have been produced, and are serving well in ocean-going ships; motors of the trunk piston type have been successfully applied to the propulsion of British cross-Channel packets, and the practice of supercharging has been extended with strikingly successful results. Turbo-electric propulsion has established itself as a suitable system for large passenger ships, and good judges believe that Diesel-electric ships will before long be much in the public eye.

BUILDING TRADES.

The building trade may be reckoned among the more fortunate industries in so far as its percentage of unemployment during the past year has been lower than in many others. Because of the brighter prospects that the trade now affords, many operatives are being attracted back to the building trade, which, during recent years, they had left to work in some other industry. As in the previous year, housing has continued to be the most important element in the building trade. The returns for 1929 show an advance on the number of completed houses included in the 1928 figures—as regards both subsidy and non-subsidy houses. The comparative figures for the two years are as follows:—

SUBSIDY HOUSES.

Number completed in 1929	127,645
" " 1928	101,436

NON-SUBSIDY HOUSES.

Number completed in 1929	71,083
" " 1928	64,624

London and the suburbs continue to enjoy what may be said to amount to a boom in commercial and industrial building, and although every centre is not so busy with building work as the City of London, there has been during the past few years a gradual and fairly general increase in industrial building. It is calculated that there has been about a 7½ per cent. improvement in this class of work during the past four years, but exceptions are to be found in those parts of the country where trade conditions generally are not good. This is exemplified by the variations in the prices of materials which have obtained in various districts during the year—the demand largely regulating the price. Thus, in July last, in some districts common bricks had risen 7s. 6d. per 1,000 as compared with the price in June of the previous year, while in other districts the increase had been no more than 1s. and 1s. 6d. In other localities, again, prices had fallen by amounts varying from 2s. 9d. to 13s. 11d. per 1,000. Throughout the year there has been a pronounced shortage of British-made bricks.—*Chamber of Commerce Journal.*

The London Office is prepared to transact every description of Banking Business, including:—
CURRENT ACCOUNTS opened.
FIXED DEPOSITS received for periods of one month and upwards at rates of interest ascertainable on application.
ADVANCES MADE on approved Securities, and against shipments of all kinds of marketable produce and merchandise.
MAIL AND TELEGRAPHIC remittances made to all parts of the world.
DRAFTS issued at current rates of exchange.
FOREIGN or other Bills negotiated or collected.
The issue of LETTERS OF CREDIT, Circular or Commercial.

For the convenience of its Customers the Bank has special arrangements, where not directly represented, with other Bankers throughout Australasia, New Zealand, the United Kingdom, the Far East and elsewhere, whereby it is able to carry out all requirements with promptitude and to best advantage.

SOAP AND GLYCERINE.

The British soap industry, in the face of severe world competition, especially from the United States, finds increasing difficulty in maintaining its position. The 1929 export figures, both for quantity and value, show a rather serious decline as compared with the two previous years. The total weight of exports for the year was 1,513,576 cwts., valued at £3,511,121, as compared with 1,638,132 cwts., valued at £3,798,224, in 1928. The imports, on the other hand, show a slight increase.

Of the exports of hard soaps in bars or tablets—excluding toilet, shaving and abrasive soaps—about one-third go to foreign countries outside the British Empire and two-thirds to British oversea dominions. British West Africa, India and the Straits Settlements are large and valuable markets. Among the foreign non-British countries the Dutch East Indies is the largest importer and China among the smallest. A great deal has been said about the almost infinite possibilities of expansion in the soap demand in countries like China and Russia, whose *per capita* consumption of soap is about the lowest of any in the world and their population the largest, but little progress appears to have been made in inducing these teeming millions to take more kindly to soap. There is no doubt that British soaps, in order to maintain their position in the world's markets, have to be cut in price to the lowest possible point; and but for their superior quality—the reputation for which is still well upheld—they would have to be sold at yet lower prices. The time seems to be opportune for a further reduction of prices in the home market, with possibly less expenditure on advertising to counterbalance the temporary loss. It is at least arguable that sales would be better stimulated by a slight fall in price than by maintaining the advertising allocation on quite such an excessive scale as at present.

The glycerine trade does not show much improvement, despite the drastic cuts in price the last year or two. Exports of crude show a considerable increase over preceding years, but the aggregate value was not greatly augmented. Exports of distilled showed a slight increase in quantity, but a remarkable fall in value. On the import side, the amount of crude sent into this country showed an extraordinary decline in quantity and a still larger one in value, for whilst the average price for the year of imported crude in 1928 was about 44s. per cwt. —the lowest known for years—it fell still further in 1929, down to an average price for the year of 35s.

Generally, it may be concluded that the soap industry has not had a particularly brilliant year, and the glycerine side of it, on which it has hitherto depended for quite a large share of its profits, has proved, the last year or two, a veritable broken reed, with small prospect of becoming any stronger. Meantime research is being vigorously prosecuted in many directions, though nothing of a startling or revolutionary character has lately marked the course of soap technology, and research programmes do not strike out in new fields.

* Million linear yards. a End of year. † Beginning of each month.
‡ Trade Union figure; other figures are Unemployment Insurance returns.

During the first two or three months of 1929 business proceeded quite well on the whole, but the extension of spinning trade difficulties to the finer section of the trade became apparent in February, when masters in the Egyptian sections decided to curtail production by one-third. In March an attempt was made to curtail production in the section spinning American cotton, but sufficient support was not forthcoming. Many mills closed down more or less indefinitely during the year, and many curtailed production in one way or another. Exports of cotton yarns to some of the markets, notably France, Italy, China, the Argentine, Madras, and Australia, were considerably larger than in 1928, but spinners of both coarse and fine counts found less support from some of their other foreign outlets.

After the first four or five months of the year everything seemed to go wrong. Spinning and manufacturing employers began in June to press for a wage cut, and when at last the operatives' resistance led to a general stoppage of the mills for three weeks at the end of July, business was brought virtually to a standstill. For four or five weeks after the resumption of work a considerable amount of business was placed for nearly all the foreign markets. During the last three months of the year, however, except for occasional spurts of moderate buying, mainly for India, business was again of the hand-to-mouth variety. The scales were heavily weighted against Lancashire's trade with many of her markets, especially during the second half of the year. The fall in the price of silver and of many staple commodities reduced purchasing power in China, some South American States, and West Africa; higher tariffs were raised in China, Brazil and Turkey. In spite of this the export returns for the year show some encouraging features.

The year's results, however, showed clearly Lancashire's fundamental need to recover the lost trade in bulk lines of low-quality goods. It also showed that our competitors are preparing to join battle in the finer cloths as well as in the coarse ones, and, moreover, that severe competition is not confined to lines which Far Eastern and Continental producers can turn out economically by mass-production methods. Another feature of the year has been the greater attention attracted by the competition of foreign goods in Lancashire's domestic market. There can be justifiable satisfaction with the efforts which are being put forward to improve the financial condition of the industry and its competitive power abroad. The acute depression at Bolton at the beginning of the year, for example, produced another large combine in the fine spinning trade, which is likely to increase in size as time goes on, while in the American

section of the trade the year has seen the gradual progress of the Lancashire Cotton Corporation. Moreover, other efforts at rationalisation along vertical lines are now going forward, and schemes are virtually completed by which Lancashire bulk lines can be offered on competitive terms in foreign markets.

The following table gives cotton and yarn prices for the year:—

1929.	Cotton Middling American.	American Yarns. 32's Twist.	American Yarns. 40's Weft.	Cotton F.G. Fair Sakellaridis Egyptian.	Egyptian Yarn. 60's Twist.

* Queensland scoured, super combing. † End of year. a Thousand linear yards.

The difficulties which have beset the wool-textile industry of this country in recent years were accentuated rather than alleviated during 1929. It must have been for the majority a year of substantial losses. Prices fell almost continuously, apart from a temporary recovery in the finer grades during October, and the consequent depreciation of stocks in all sections of the industry was very serious. The importance of raw material being brought down to a really reasonable basis, having regard to diminished purchasing power throughout the world, was fully appreciated, and from that point of view there was a hopeful side in the restoration of values to somewhere near a pre-war level, but the process of getting there was costly. One of the fundamental problems which had to be faced was created by lack of sufficient business to provide profitable employment for machinery. Profit

depended mainly on successful speculative buying of wool, tops, or yarns, rather than on normal margins between cost of production and selling prices. Attempts were made to secure a remedy either by reducing wages or by a policy of safeguarding. The wages reduction movement was for a time side-tracked by the safeguarding application, but when all hopes of import duties were abandoned there was a renewed campaign for lower wages. It was, however, found to be well-nigh impossible to arrive at a general agreement covering the whole of the industry. Many firms by individual action brought about reductions, mostly in the woollen section, and at the end of the year there was the anomaly of widely-varying rates operating amongst competing firms.

The Raw Material Position.

The trend of events in the raw material markets during the year has been of more than ordinary interest. At the beginning of the year the demand for wool throughout the world was about keeping pace with supply, and nobody could have foreseen the great change to-day in comparison with a year ago. From the highest point in January to the lowest point in October the price of a 64's average fell 16d., and although there was then a sharp recovery, it did not hold, and has now almost been written off. Medium and low cross-breds were comparatively steady, and it was not until the last month that there was any sign of a real break. Then there was a sharp decline of twopence within a week or two, which left 40's prepared tops about fivepence below the January level.

The United States Department of Agriculture, in a survey of the production of wool in eight countries (representing seven-tenths of the world's clips, excluding Russia and China) puts the production for the season 1929-30 at 2,317 million lb., as compared with 2,326 million lb. for the season 1928-29 and 2,208 million lb. for the season 1927-28. The figures do not suggest that the supply of wool is excessive, nor does experience in the principal wool consuming countries point to any such conclusion. Out of total receipts into store of 2,690,500 bales in Australia last season, there was a carry-forward of only 44,300 bales at the end of June. What has happened during the past year suggests that wool values, after ruling for some years rather above the level of commodity values generally, have now resumed a more normal relation.

The following table shows the prices of tops on the dates given:—

* Per gross.

The export and import figures in 1929 bore witness to the reduced turnover. Imports of tissues were the lowest since 1925; on the other hand, imports of yarns were slightly larger than in 1928. Exports of tops and yarns showed a slight recovery in the second half of the year, but were down on the twelve months; whilst exports of tissues reached the lowest level since 1921. The chief feature in the exports of tissues was a further drop in trade with China and Japan, which was very poor. Exports to Australia were again down, and there was some falling off in Canada. On the other hand, the European market kept up well. The United States took more than in 1928. South and Central America were slightly down.—*Extracted from the Annual Review of the Weekly Wool Chart, Bradford.*

THE RAYON INDUSTRY.

While consumption and production have substantially increased during 1929, the year has seen intense competition and underselling in yarns, and many of the smaller companies are now in a very unenviable position. After the price reduction at the end of 1928 the leading producers went very cautiously during the first quarter, and as two of the smaller plants had been closed down owing to the liquidation of the companies, the total output was rather small. In the second quarter demand increased considerably for both viscose and acetate yarns, and though production reached record figures it was practically all consumed. The position in the third quarter was even more satisfactory from both the standpoint of production and consumption. During the last few months of the year demand for yarns fell away for various reasons, and resulted in the introduction of cheaper yarns by the leading viscose and acetate rayon producers. An interesting development has been the division of demand into two main classes, viz., low-grade yarns and special quality yarns, while the medium or standard quality yarns have fallen from favour. This position has largely resulted from price-cutting in poor-grade yarns by the smaller companies in order to clear stocks, and it has been found by the weavers and knitters that for many purposes these poorer yarns could be used successfully. Thus towards the end of the year, to cater for this trade in low-grade viscose yarns, the largest producing company introduced a new yarn which sold at 3s. 9d. on pirn for 150 denier, which was much cheaper than other similar yarns.

There is not much margin for profits in yarns selling under 3s. 6d. per lb. unless production is on a very large scale, and the position of the smaller companies during the closing months of the year was very bad. Efforts have been made to form a working agreement between the smaller companies, but so far these have proved unsuccessful. Meanwhile demand for special quality yarns has continued to expand, especially for those in multifilament viscose, which have successfully competed with both acetate and cuprammonium. A feature of the export trade in cotton and rayon mixtures has been serious competition from Japan, and this has resulted in a substantial decline in shipments to the Eastern markets. The largest British company has continued to play a leading part in the international affairs of the industry, where further important cartelisation developments have taken place, and good progress has been made towards the establishment of international rayon standards.

LINEN TRADE.

During 1929 the landed price of imported flax was some £8¼ per ton cheaper than in 1928, but at rather over £91¼ per ton it was still a long way above the pre-war price of about £50. The main handicap of the linen trade thus continued to be formidable, and it is a relief to find that traders maintained their oversea business so well as the following table shows them to have done:—

EXPORTS AND IMPORTS OF LINEN MANUFACTURES.
(Not including Yarns.)

	1913.	1925.	1926.	1927.	1928.	1929.

* Not recorded. † Linear yards in 1913. ‡ Linen-lace, and embroidery has been added to imports in 1920 and after. § Included in "All Other Goods. || Not in the piece.

The recovery in shipments of piece-goods from 66 million to 71½ million square yards is gratifying, but this figure is still seriously short of the quantities recorded in previous years. A good rise occurred in handkerchiefs, too, the quantity at 5,045,000 dozens being only slightly behind the "record" shipments of 5,061,000 dozens in 1927. Other lines of exports kept up fairly well. Imports were only at the normal level established in recent years. Indeed, it is notable that the contrast between exports and net imports has been more favourable to us during the last five years than it was in the pre-war year 1913. Cheaper flax would probably enable us to make it still more favourable.

APPENDIX.

(A) WHOLESALE PRICES OF COMMODITIES.—31 DECEMBER, 1924-1928; AND MONTHLY, 1929.

NOTE.—The following tables give the variations in prices of the commodities on which the *Economist* Index number is based.

GUNZE SEISHI
Kabushiki Kaisha
(Gunze Raw Silk Mfg. Co., Ltd.)
Ayabe, Kyoto Prefecture
Japan
One of the Largest Silk Filatures in the World
PRESIDENT:
Mr. SABUROBEI ENDO

Truth
"Truth lies at the bottom of a well," said a philosopher, but this is only half a truth.
Truth may be a living thing both in our ordinary and business life, for a sincere attachment to truth, modern and scientific, is a sure bulwark for the mind.
The habit of truth makes a man exact in all his relations with his fellow men. His word is his bond. It means that in business the thing he sells is exactly what he says it is without equivocation.
The Chatwood Security stands for truth. It is exactly what we say it is. It is not offered on a price competitive basis, but to those who desire to have the best. We refuse business offered at a price which would require us to lower our standard of craftsmanship.
J.E.S.
THE CHATWOOD SECURITY
THE CHATWOOD SAFE Co., Limited, Bankers' Engineers, SHREWSBURY, England.

WHOLESALE PRICES.

6, 7 & 8, TOKENHOUSE YARD,
LONDON, E.C.2. *Also at:*
MANCHESTER:
36, Charlotte St.
BRADFORD:
33, Hustlergate.

When *Tradition* is allied to *Vision*

There results an organisation that, firmly founded on pioneer experience, is yet not only abreast but slightly in advance of the times. An organisation possessing a deep-rooted, convincing capacity for interpreting correctly the trend of the intricate influences and complicated conditions that together comprise the Latin-American Markets of to-day.

This organisation—The Bank of London & South America, with Branches and Sub-Branches at every strategical point throughout South America; in France, Belgium, Portugal and U.S.A.; in London, Manchester and Bradford—is singularly well equipped to provide modern Banking facilities of every description. Status reports on South American Firms are supplied on request. A Monthly Review of Market Information is issued free on application.

			Bank Premises at not more than cost, less amounts written off	6,848,590·98	
			Deposit with the Minister of Finance for the purposes of the circulation fund	503,965·18	
			Other assets not included in the foregoing	200,162·32	
					137,410,957·67
		$274,241,373·00			$274,241,373·00

S. J. MOORE, President. J. A. McLEOD, General Manager.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have examined the above General Statement of Liabilities and Assets as at December 31st, 1929, and compared it with the books at the Chief Office and with the certified returns from the Branches. The Bank's investments and cash on hand at the Chief Office and at the Toronto and Montreal Branches were verified by us at the close of business on December 31st, 1929. We have obtained all the information and explanations that we have required, and in our opinion the transactions of the Bank which have come under our notice have been within the powers of the Bank.

We certify that in our opinion the above statement discloses the true condition of the Bank and is as shown by the books of the Bank.

TORONTO, CANADA, 15th January, 1930.

D. McK. McCLELLAND, F.C.A., of Price, Waterhouse & Co.
A. B. SHEPHERD, C.A., of Peat, Marwick, Mitchell & Co. } Auditors.

LONDON OFFICE: 108, OLD BROAD STREET, E.C. 2. E. C. MACLEOD, Manager.

The Bank of Nova Scotia conducts a general banking business. Fully equipped for Exchange, Collection and Letter of Credit Transactions with all parts of the world. Particular attention is devoted to business with Canada, Newfoundland and the West Indies, where Branches of the Bank have long been established—329 Branches.

THE PAST TWELVE MONTHS.

THE past twelve months have been one of the most eventful banking years since the war. They included the summer and early autumn of 1929, a time during which the Wall Street boom rose to its climax, and London was losing gold first to America and Germany, and then to France. They saw these events first drive the New York rediscount rate up to 6 per cent. in August (with the Bank of England taking the unusual step of announcing that no change in its own rate was imminent) and then force the Bank of England's rate to 6½ per cent. six weeks later. They witnessed the Hatry collapse in London, and the Wall Street crash in New York. Later in the period came the rapid and continued fall in commodity prices all over the world, accentuating the difficulties of countries such as Australia and the Argentine, whose chief business is the production of primary foodstuffs and materials. These late autumn and winter months were also the period when, the Wall Street tension relaxed, money rates fell right through the whole scale from stringency to ease. Finally, in London, the year witnessed a determined and successful attempt on the part of the Government to reduce the size of the floating debt.

The period was thus one of especial difficulty for the banks. There is no need to labour the lessons of the Hatry débacle, or to enlarge upon the direct losses these frauds inflicted upon the banks, for it is to be trusted that this was an isolated affair and that the banks have learned the inadvisability of granting large loans to people with similar records engaged in business of a peculiarly complex nature. Still, each of the remaining events enumerated above presented the banking world with its special problem, and none of these problems proved easy to solve.

Considering first the effects of the autumn rise in Bank rate, there is a disposition to believe that dear money means larger profits for the banks. Up to a point this is true, for it is common knowledge that approximately half the banks' resources consist of money lodged on current account, which is not subject to interest at all. For this reason, the banks stand to gain more from a rise in discount and advance rates (caused by a higher Bank rate) than they lose from the simultaneous rise in deposit rate. Against this, however, must be set several vital facts. One is that dear money causes gilt-edged stocks to depreciate, with the result that the banks have to make extra provision for writing-down their investments. The same applies to bills bought before a rise in Bank rate, if they fail to mature until some time after the rise has taken effect. Again, dear money drives business away from the banks. Less credits are opened in London, less bills come forward for acceptance, and last, but not least, everyone who can pays off his loans from the banks, leaving them only with those unsatisfactory advances which to-day are characterised as "frozen." All these factors were present in the situation which the events of last autumn created for the banks.

The winter and spring set them quite a different kind of problem. During that period money rates were rapidly falling, and gold was flowing into the Bank of England. But, in contradiction to these favourable factors the events of the autumn had largely destroyed confidence, not only on the Stock Exchanges of the world, but also on the commodity markets. One result of this was that in London, at least, Stock Exchange business was stagnant, and the banks were therefore without the normal demand for loans from the Stock Exchange. This helped to produce the easy money conditions that prevailed, for much of the banks' short money usually goes to the Stock Exchange, while the fall in commodity prices had even more untoward effects. It cannot have assisted in the solution of the problem of frozen loans, and it has notoriously discouraged enterprise, been the cause of business losses and unemployment, and has led to a contraction in the supply of commercial bills, which form one of the main sources of income of the financial world.

There must also be taken into account the effects of the spring reduction in the floating debt. Of late years the banks have grown accustomed to look upon their holdings of Treasury bills in much the same light as their call and short loans, namely, as an early line of defence to be expanded or contracted as fluctuations in their resources and other demands upon them warrant. The big reduction in the volume of Treasury bills caused more disturbance in the money market than it did to the banks, but even if it did not force them to modify their practice it meant that they had to pay more for such bills as they required.

The following table, giving the position of the nine English clearing banks, shows that between January and March of this year there has been a substantial contraction in the volume of bills held by the banks and in their deposits:—

	January, 1929. £ Mn.	March, 1929. £ Mn.	October, 1929. £ Mn.	January, 1930. £ Mn.	March, 1930. £ Mn.
Deposits	1,809·6	1,739·3	1,764·7	1,767·5	1,682·0
Acceptances	232·4	222·1	203·2	164·4	159·5
Cash	255·1	239·5	247·1	248·0	235·3
Call money ...	145·1	131·3	144·9	139·9	130·6
Bills	274·2	214·3	226·9	242·9	181·5
Investments	274·3	268·9	265·5	259·6	251·8
Advances ...	956·1	980·3	974·0	969·1	974·7

Comparing January, 1930, with March, 1930, deposits have fallen by £85.5 million and bills by £61.4 million. Cash is £12.7 million and call money £9.3 million lower. Thus, during that period there has been a marked reduction in the volume of banking credit, though if the year ending last March be judged as a whole it is far less than would account for the year's fall of 13.5 per cent. in commodity prices.

These figures only cover the nine English clearing banks, and the next step is to give in greater detail comparative statistics for all British banks. The next table deals with capital and reserves. It and the remaining tables are necessarily based upon the annual accounts relating in most cases to the end of each calendar year, and so do not take account of the events of the past four months:—

CAPITAL and RESERVES.

	1928.	1929.	Incr. or Dec.
	£	£	£
English joint-stock { Capital	77,714,092	78,070,092	+ 356,000
English joint-stock { Reserves	63,802,413	63,523,453	− 278,960
English private (Capital and Reserves)	3,300,000	3,450,000	+ 150,000
Scottish { Capital	11,491,000	12,041,000	+ 550,000
Scottish { Reserves	14,393,288	15,725,320	+1,332,032
Northern Irish. { Capital	2,200,000	2,200,000	...
Northern Irish. { Reserves ...	2,300,000	2,350,000	+ 50,000
	175,200,793	177,359,865	+2,159,072

The increase in capital represents the new shares issued by the Midland Bank, while the decrease in reserves mainly reflects the decision of Williams Deacon's Bank to transfer £300,000 from reserve to contingencies fund. It was stated at that bank's annual meeting that this step was taken in order to provide for future losses arising out of rationalisation schemes, and the sacrifices thus imposed upon all parties.

The next table deals with current and deposit accounts:—

CURRENT and DEPOSIT ACCOUNTS.

	1928.	% of Liabilities.	1929.	% of Liabilities.	Inc. or Dec.	
	£		£		£	%
English joint-stock	1,951,477,697	83·5	1,911,007,360	85·4	−40,470,337	−2·1
Private	31,004,479	77·2	29,182,776	73·9	− 1,821,703	−5·9
Scottish	248,800,247	81·0	250,853,396	80·5	+ 2,053,149	+0·8
Northern Irish	49,649,399	82·5	49,469,682	82·5	− 179,717	−0·4
	2,280,931,822	83·0	2,240,513,214	84·4	−40,418,608	−1·8

The contraction noted for the nine English clearing banks in a previous table occurs again here, even though a slightly different period is covered.

The next table shows the banks' holdings of cash and call money. Here again there has been a slight decline during the year covered by the statistics, except in the case of the private banks, which have added to their holdings:—

CASH in HAND and at BANK of ENGLAND, and MONEY at CALL and SHORT NOTICE.

	1928.	% of Assets.	1929.	% of Assets.	Inc. or Dec.	
	£		£		£	%
English joint-stock banks	493,841,201	21·1	481,341,704	21·5	−12,499,497	− 2·5
Private banks	4,072,927	9·8	4,263,007	10·7	+ 190,080	+ 4·7
Scottish banks	63,322,077	20·5	62,307,357	20·0	− 1,014,720	− 1·6
Northern Irish banks	7,306,211	12·1	6,227,146	10·4	− 1,079,065	−14·8
	568,542,416	20·7	554,139,214	20·9	−14,403,202	− 2·5

Coming to the chief earning assets of the banks, investments, in the aggregate, have declined by only 2.1 per cent., though the private banks have made substantial reductions. During the period covered by this table there was a fall of some 4 per cent. in the average price of gilt-edged stocks, and so the reduction in the banks' holding of investments is not surprising. It is not clear, however, why the private banks have realised so huge a proportion of their investments, though a comparison between the absolute shrinkage in their investments and deposits shows that the one contraction has balanced the other.

INVESTMENTS.

	1928.	% of Assets.	1929.	% of Assets.	Increase or Decrease.	
	£		£		£	%
English joint-stock banks	293,156,061	12·5	285,176,223	12·7	−7,979,838	− 2·7
Private banks	5,820,754	13·9	4,194,537	10·6	−1,626,217	−38·8
Scottish banks	83,378,785	27·1	83,657,183	26·9	+ 278,398	+ 0·3
Northern Irish banks	19,638,930	32·6	20,471,667	34·2	+ 832,737	+ 4·2
	401,994,530	14·6	393,499,610	14·8	−8,494,920	− 2·1

Discounts and advances, unfortunately, have to be shown together, as some of the banks do not separate them in their accounts. The following table shows that, except for the Scottish banks, there has been a slight decrease in the two together:—

DISCOUNTS and ADVANCES.

	1928.	% of Assets.	1929.	% of Assets.	Increase or Decrease.	
	£		£		£	%
English joint-stock banks	1,268,803,457	54·2	1,250,763,477	55·8	− 18,039,980	−1·4
Private banks	24,169,112	57·7	23,970,437	60·4	− 198,675	−0·8
Scottish banks	149,622,489	48·6	154,134,948	49·5	+ 4,512,459	+3·0
Northern Irish banks	32,653,916	54·2	32,605,519	54·4	− 48,397	−0·1
	1,475,248,974	53·6	1,461,474,381	55·0	− 13,774,593	−0·9

To interpret this result the figures for the English joint-stock banks must be considered alone, for these institutions make the necessary distinction:—

ENGLISH JOINT-STOCK BANKS.

	1928.	1929.	Increase or Decrease.	
	£	£	£	%
Discounts	259,250,704	224,303,820	− 34,946,884	− 13·5
Advances	1,009,552,753	1,026,459,657	+ 16,906,904	+ 1·7
Total	1,268,803,457	1,250,763,477	− 18,039,980	− 1·4

Here the lessons of the first table covering the year ending March, 1930, are borne out, though naturally the reduction in discounts is not so big, as the main shrinkage occurred in the first quarter of the current year. The expansion in advances is not wholly satisfactory. Trade declined in volume during 1929, and it is to be feared, therefore, that the increase in advances may have been in part due to the gradual accumulation of frozen loans.

The next table summarises the aggregate net profits and appropriations of the three geographical groups of banks for each year since 1908:—

ENGLISH.

Year	Profits.	Per Cent. of Resources.	Dividends.	Per Cent. of Profits.	Investments Depreciation.	Reserve Funds.	Premises.	Staff.	Movement of Carry Forward.

* Three banks of Northern Ireland.

It will be seen that, both absolutely and relatively to resources, net profits for 1929 show an increase over the preceding year, and in view of the difficulties of the past year this is a striking testimony to those responsible for the operations of the banks. It is, however, only fair to add that "net profits" and "reserve funds," as shown in this table, only present a partial picture. "Reserve funds" include both "general reserve" and "contingencies" (this being due to the fact that many banks do not make the necessary distinction in their own accounts), and in several cases it is known that last year several banks made special provision for current emergencies either by abnormally large transfers from profits to contingencies or in one case (noted above) by a special transfer from general reserve to contingencies. Such operations are marked in the table, which therefore presents the position in rather too favourable a light. Still, even allowing for this, the fact that the ratio of dividends to profits is maintained at 75 per cent. shows that the banks have been able to take last year's events in their stride. With one exception, the dividend rates shown in the table at the foot of the page are the same as last year, even though in some cases the capital has been increased.

From this survey of the past year it will be seen that the banking world has had some difficult problems to solve, many of which were not of its own creation. Matters of internal policy, such as the appointment of the Committee on Banking and Finance and the recent activities of the Bank of England, are dealt with elsewhere, as are the questions of the supply of sterling bills and the creation of the Bank for International Settlements. If this institution had been in existence during the past year, it may confidently be asserted that it would have prevented many of the anxieties that have been experienced in most markets of the world, and thereby have helped to maintain confidence—a state of mind without which economic activity becomes uncertain and tends to fade away. It will also be greatly concerned with that key question of the monetary situation—the world's gold supply and its distribution. During the year the Financial Committee of the League of Nations commenced its investigation of this question. This investigation is still in train, and when the Committee's recommendations are forthcoming, their adoption will depend upon the co-operation of banks, and especially of central banks, all over the world. The foundation of the Bank for International Settlements, with its provision of a common meeting ground for central bankers, will go a long way to make such co-operation a practical proposition.

BANKING AND INDUSTRY.

The official views of the Labour Party on the desirability of nationalising the banking system of the country and also of imposing some sort of direct public control upon the policy and operations of the Bank of England, as expressed in "Labour and the Banks," suggested that when a Labour Government was returned to office some tentative steps would be taken towards these objectives. The result of the election made it certain that these steps would be indeed tentative, for Labour, though "in office," was not "in power," and the most that could be done was to explore some of the ground defined in general terms in the Liberal Yellow Book. Nevertheless, bearing in mind the uneasiness felt in industrial circles at the policy pursued by the Bank of England—even though that policy was forced upon the Bank by events in New York—it was clear that the new Government was likely to take a closer interest in banking than the last.

The first incident in this connection occurred in July, when, in a speech at the Mansion House, delivered at a time when the principal exchanges were adverse, and gold in large quantities was leaving the country almost daily, Mr. Snowden took the unusual step for a Chancellor of the Exchequer of expressing in public the hope that the Bank of England would not find it necessary to raise the Bank rate. A few weeks later, when the New York rediscount rate went from 5 to 6 per cent., the Bank reciprocated by stating, also in public, that a rise in its own rate was not imminent. These two statements showed that at least the Bank and the Government were at one in their outlook, even if no change had occurred in the somewhat loosely defined relation between them.

In October, immediately after the Hatry crisis and the increase of Bank rate to 6½ per cent., but before the Wall Street break and the first reduction in Bank rate, the annual Labour Party Conference was held. It was obvious that banking questions would be a matter for consideration at the Conference, and the City felt some interest if not anxiety as to what views might be expressed. Mr Thomas, who not unnaturally was anxious as to the effect recent financial events might have upon the fruition of his unemployment schemes, launched a somewhat violent criticism upon the Bank of England, but Mr Snowden, who spoke the following day, placed matters in a more reasonable perspective. While making it clear to the Conference that the Government had no responsibility for determining Bank rate, which belonged to the Bank alone, he nevertheless accepted the view that in consequence of the continued loss of gold, the coming of the autumn drain, and the difficult situation in New York, the Bank could do no other than raise its rate. At the same time, he announced that, in order to explore the whole position, a Committee on Finance and Industry would be appointed

> "to inquire into banking, finance and credit, paying regard to the factors, both internal and inter-national, which govern their operation, and to make recommendations calculated to enable these agencies to promote the development of trade and commerce and the employment of labour."

The Committee, whose names were subsequently announced, is presided over by Lord Macmillan, and consists of Sir Thomas Allen, Vice-Chairman of the Co-Operative Wholesale Society; Mr. Ernest Bevan, General Secretary of the Transport and General Workers' Union; the Right Hon. Lord Bradbury, Permanent Secretary to the Treasury from 1913-1919; the Hon. R. H. Brand, Managing Director of Messrs. Lazard Brothers; Professor T. E. Gregory; Sir E. Cassel, Professor of Banking in London University; Mr J. M. Keynes, the well-known economist; Mr Lennox B. Lee, President of the Federation of British Industries; Mr Cecil Lubbock, a Director, and formerly Deputy-Governor of the Bank of England; the Right Hon. Reginald McKenna, Chairman of the Midland Bank, Ltd.; Mr J. T. Walton Newbold, Editor of the *Social-Democrat;* Sir Walter Raine, Managing Director of J. Raine and Son, Ltd., and Deputy-President of the Association of British Chambers of Commerce; Mr J. Frater Taylor, Director of Sir W. G. Armstrong, Whitworth and Company, Ltd.; and Mr A. A. G. Tulloch, Deputy-Chairman of the District Bank, Ltd. The Committee is thus representative of banking, industry, commerce and labour, as well as of economic theory. The Committee quickly got to work and is still engaged on its task. Unfortunately, it decided to hold its meetings in private, and the public, therefore, knows nothing of the evidence that is being submitted on this important matter. But the appointment of the Committee had the effect of placating both labour and industrial opinion, and with the coming of cheap money, banking policy has for the present ceased to be an important political question.

Meanwhile developments have occurred in regard to the financing of industry and the relations of the banks to this problem. In November last, there was registered unobtrusively a subsidiary of the Bank of England, called the Securities Management Trust. The Bank, too, continued its policy of recent years of recruiting from outside its walls a team of economists of world-wide repute, to assist it on matters of high policy, and, in particular, appointed Professor Henry Clay as economic adviser to its new subsidiary, while its liaison with the United States was continued through the replacement of Mr W. W. Stewart, on his retirement, by Professor O. M. W. Sprague, of Harvard. The Bank by this time had also become committed to taking the leading part in several outstanding industrial rationalisation schemes, including the Armstrong-Vickers merger, Beardmore's reconstruction, and, possibly most important of all, the foundation of the Lancashire Textile Corporation.

It was thus apparent that the Bank of England was beginning to take an active interest in the process of what has come to be known as rationalisation. The matter came to a head in a speech delivered by Mr Thomas in Manchester early in the present year, in the course of which he made the folowing statement:—

> "In considering the steps that might be taken to produce a better employment position by improving the organisation and equipment of British industries, I have found that a feeling exists that manufacturers are handicapped in bringing about the necessary reorganisation and re-equipment by the fact that the long-continued trade depression has pushed them to the limits of the credit which they can reasonably expect to obtain from their bankers or which the bankers can reasonably be expected to provide. As a result of consultations which I have had, I am now in a position to state that the City is deeply interested in placing industry upon a broad and sound basis and ready to support any plans that in its opinion lead to this end. Those in the City who have been studying this matter are convinced that a number of our important industries must be fundamentally reorganised and modernised in order to be able to produce at prices which will enable them to compete with the world. Industries which propose schemes that, in the opinion of those advising the City, conform to this requirement will receive the most sympathetic consideration and the co-operation of the City in working out plans and finding the necessary finance. In the case of individual undertakings the City will be similarly ready to help, provided that the scheme under discussion fits in as part of the general plans for the industry in question as a whole and gives reasonable promise that the changes will enable the undertaking to become an effective unit in combination and co-operation with other similar undertakings."

It was soon made clear that this undertaking had been given by the Bank of England, in consultation with the other banks, and it became evident that the Bank's new subsidiary, the Securities Management Trust, had for its primary object the examination of schemes of rationalisation in British industry.

The chairmen of the joint-stock banks, in their annual addresses, delivered a few days later, gave a qualified but cordial welcome to these developments, though they were careful to restate the limitations their duties to their customers imposed upon them. Mr Thomas, however, stated in the House that prior to his Manchester speech he had been in touch with the joint-stock banks, and it could be inferred that he could count upon their co-operation within the limit of their powers. Meanwhile successive reductions of Bank rate were being made at intervals of a few weeks, and it was obvious that the Bank was taking every possible advantage of the change in the international monetary situation, brought about by the Wall Street break, to give industry as quickly as possible the benefits of cheap money.

Early in April of this year one further step was taken. This was the registration of a new company called the Bankers' Industrial Development Company, with a nominal capital of £6 million, divided into forty-five "A" shares and fifteen "B" shares of £100,000 each. The "A" shares have been subscribed by practically every home bank and issuing house of first-rate importance, while the "B" shares have been subscribed by Securities Management Trust. As the "B" shares have three times the voting rights of the "A" shares, the Bank of England will control 50 per cent. of the voting strength. The object of this company is to advise and assist definite industries or sections of a particular industry in their preparation of reorganisation schemes, so that they may take a form which the new company can recommend to the City as worthy of its careful consideration. The new company will not make loans itself, nor will it advise individual firms, but its purpose apparently is to give its hallmark to approved schemes, and once this is forthcoming it is reasonable to suppose that the necessary capital will be made available through existing channels.

The significance of this chain of events is clear. British banks have often been accused of being of less help to industry than banks in other countries, and, though the joint-stock banks do make a very large part of the advances to British industry, there is no doubt that the fact that the proportion of Britain's activities concerned with commerce rather than industry is greater than in other countries has led to the development of our banking system on special lines. The banks have not, in fact, taken nearly so direct an interest in industry as they have done in both Germany and America. Moreover, partly as a result of this, it has been found difficult for the banks to act together in regard to schemes of industrial reconstruction. The present scheme is not an attempt to create a new organ for financing industry, but rather to smooth over the difficulties that have hitherto existed, whether on the industrial side or as a result of the lack of co-ordination between those who are financially interested in an industry, to ensure that schemes for bringing industry into larger units are well thought out, and by associating the chief City firms in this enterprise to ensure that, if a scheme gets a clean bill, it will be financially supported.

It has been questioned whether it is an appropriate function for a central bank to take the initiative in any such matter, the more particularly since the exercise of discretion in regard to who shall or shall not be included is a very delicate matter in which the central bank is in a position to exercise autocratic powers. It has, however, been essential that some means should be taken to bring City interests together in this matter, and, if the institutions other than the Bank of England which are concerned in this enterprise will take their appropriate part, the Bank of England will doubtless revert in this matter to its natural *rôle* of adviser, rather than that of initiator.

THE BANK FOR INTERNATIONAL SETTLEMENTS.

THE first meeting of the nominated directors of the Bank for International Settlements was held at Basle on the 22nd and 23rd of last month. As expected, Mr McGarrah was elected President, and Sir Charles Addis and Dr Melchior Vice-Chairmen. Of the appointments to the staff, subject to confirmation at the first official meeting of the board, that of Monsieur Quesnay as Director-General and that of Dr Hülse as Deputy-Director-General and head of the banking department have already been noted in the *Economist*. The Secretary-General will be an Italian, Signor Pilotti; Monsieur Marcel van Zeeland will be head of the department of deposits and investments; and a Japanese will take charge of the department of foreign exchange.

After the first issue of the shares of the bank has been made in the markets of the principal countries, it is probable that the question of making a further issue in other centres at a subsequent date will be considered by the board. The election of additional members of the board will also be a matter for early consideration. In principle the remaining seats on the board should be filled as soon as possible in order that the fundamental defects of the board's composition may be mitigated as far as possible and the bank be given a complexion less suggestive of the Reparation Commission and more indicative of central bank co-operation. Yet a little delay may not be amiss, as it will afford time for members of the board to get to know each other well. The most important of all objectives before the bank is to establish an atmosphere of mutual trust, and this may be more easily secured at first in a board that is relatively small.

A matter which will have to be given immediate attention is the form in which the bank's accounts are to be published. The Statutes (Article 51) lay down that the bank shall issue an annual report, and, at least once a month, a statement of account in such form as the board may prescribe. It is essential that this statement should be as full and informative as possible. Proposals have been made that it should be drawn up in a money of account, say, a gramme of gold. It is doubtful whether this would be even theoretically preferable to the use of a particular currency based on the gold standard. A return drawn up in Swiss francs would be much more intelligible to most people than one made out in grammes, but it would be well to publish the statement not only in Swiss francs, but in several other of the principal gold currencies, converted at parity.

The first business of the bank will be the arrangement of a loan to raise $300 million, $200 million representing the mobilisation of German annuities and the balance being for the benefit of Germany; the whole to be issued before October 1st next. The first *tranche* of the combined loan is expected to be offered about the end of May. This issue will not be made by the bank itself; when, however, the loan has been subscribed the proceeds will be distributed through the bank, one-third going to the German Government and two-thirds to the creditor countries in various proportions. The bank may also act as trustees for the bondholders.

The bank's potentialities, however, are not limited to its Reparation functions, which will tend to become a matter of routine; and, if public expectations are to be realised, its work in other spheres will be of still greater importance. The B.I.S., as the Governor of the Bank of England has recently suggested, is largely a fulfilment of the policy laid down at Genoa in 1922. The Conference of Central Banks which was then recommended never took place, and events have led the public to think that the informal meetings of central bank governors have not been a sufficient substitute. The B.I.S. will be expected to give some evidence within the next few years that the more systematic co-operation between central banks which it makes possible is capable of conferring further benefits on the world.

It is difficult to foresee to what specific task requiring such co-operation the B.I.S. will first turn. If for one reason or another the task is not entrusted to the League, its services may be called upon for the stabilisation of some of the few currencies not yet based on the gold standard. It might even be asked to assist in the introduction of a gold bullion standard into India and a gold exchange standard into China. In such tasks it will be merely continuing work which has hitherto been performed by the League or by groups of central banks, or both; and it is evident that even more important functions await it in the future, as regards which no concerted effort has as yet been made. It will have to try to stop any future "scramble for gold" and educate gold standard countries into the belief that they need no more gold and/or foreign exchange reserves than the maximum amount they may have to surrender before the normal operation of gold standard weapons reverses the outward flow. The gold standard countries must learn to play the gold standard game—perhaps under improved rules; the controlled use of the gold exchange standard under the influence of the B.I.S. may, for example, be found to be of permanent advantage.

Then there is the problem of the short loan fund. Since the war the gold exchange standard, the increased facilities which exist for transferring funds, the high rates obtainable in the short loan market, especially in New York, the enormous holdings of short balances by France, etc., have meant that unprecedentedly large sums have moved from market to market, with disturbing effects upon exchange rates and Bank rates. The central banks doubtless have not been offenders. But in so far as the short loan fund is in the possession of or can be controlled by central banks, the board of the International Bank may be able to arrive at a concerted policy, whereby these funds may be distributed and moved according to the requirements of the moment and in the general interest.

It is to be hoped that the central banks represented on the board may at once give a lead to the other central banks by making considerable deposits with the International Bank in order that the financial strength of the bank may thus be reinforced. For the operations referred to above could presumably be undertaken only with the free funds of the bank, as they would tend to diminish its profits. The bank will not, however, any more than the central banks, regard the making of profits as its chief objective, nor will it need to worry over much on this score as suitable arrangements for its remuneration have been made.

But it is not only that the movements over the exchanges of a large volume of short money often have ill effects; there is the additional difficulty that the fund itself, however distributed, is unduly large. It consists to a considerable extent of money which has been lent long and borrowed short (reconstruction loans), or of Reparation payments by Germany, and it therefore largely represents savings which may be regarded as being artificially withheld from their proper destination, industry. No wonder the world is short of capital when one central bank alone holds £200 million of short money. The B.I.S. should direct its energies towards getting a part of the short loan fund invested in industry and commerce, and in this way fulfil an aspiration of the Young Committee that it should "promote the increase of world trade."

The control and diminution of the short loan fund must precede an endeavour to stabilise within reasonable limits the value of gold in terms either of commodities or, as some economists now consider preferable, in terms of human effort. If an improvement on the pre-war state of affairs is attainable it can probably only be carried out through the agency of the International Bank.

In embarking upon these entirely new tasks, which must entail considerable research work, the Bank will undoubtedly need the services of a first-class economist. It is not enough that some of the central banks, notably the American Reserve System, and, more recently, the Bank of England, should have economists attached to their staffs, and that many European banks have statistical departments. Much of the work of these departments should now be centralised in an information department at the B.I.S. But much more essential is it that an economist of standing (if possible one with central banking experience) should give the bank his whole-time services. He could undertake no more useful task.

The policies of the bank must have an international outlook and a reasoned basis; they must not consist of experimental compromises between conflicting national aspirations, as may happen if the bank is insufficiently provided with expert guidance. A tendency to do nothing, on the other hand, may be made difficult if proposals supported by informed and relatively disinterested arguments are pressed upon the board from below.

AMERICAN BANKS AND THE PANIC OF 1929.

(BY A NEW YORK CORRESPONDENT.)

IT is natural that students of the American banking system should regard the events of 1929 as a first-rate test of its capacity and stability, and that they should inquire how far the banks have "stood up" under the onset of panic conditions. It was not possible to give any answer to this question at the time, particularly in view of the extraneous influences that were then making themselves felt. Even as yet enough time has hardly elapsed to permit the making of any very positive judgment with regard to the subject, so far as details go. But some general conclusions of fundamental importance are possible and should be carefully analysed.

Probably the outstanding aspect of American banking, as viewed from the standpoint of the panic, is that it did not, on the surface, result in any very great increase of bank failures. It is quite true that the monthly bank failure record kept by the Federal Reserve Board did show a tremendous expansion, numerically speaking, and the total failures rose from about fifteen during the month preceding the panic (September, 1929) to about four times that figure in the month following it. These, however, were all small bank failures, representing merely the collapse of weak institutions of low capitalisation, which were ready to give way almost at a moment's notice. It is, of course, true that the full effects of the panic and the business recession have not as yet made themselves fully felt in the banking world. But there have been, at any rate, none of the unexpected and disastrous collapses that have often been characteristic of American banking in times of panic.

As for relief of panic conditions, there are many different opinions and considerable differences of experience. The New York banks, and those of some of the larger cities outside of New York, had long expected the panic to develop, and were in at least a fair degree of readiness for it when it did come. This enabled that group of banks to absorb the vast volume of brokers' loans which was transferred to them as the result of the retirement of the "others" who had been making such advances, but who sought to get out of them at the time of the panic in order to use their funds in actually buying securities at bargain prices. These banks were able satisfactorily to take care of their customers. Nevertheless, the rank and file of the banks

London Representative: L. S. CHANLER, Jr., *Vice-Pres.*, 4 Adams Court, E.C.2

throughout the country were anything but liberal to their own customers. In many cases, naturally, they were not able to sell out their clients and compel them to retire from the market, but found it necessary to carry them along until conditions were better. In others, however, they insisted upon prompt payment or larger margins, or in other ways sought to force the customer to come to terms at a time when he could least afford it. Because of the fact that the panic had been so long and so widely predicted before it actually made its appearance, it had been possible for banks to raise the loan margins of customers up to a point which protected them pretty well, and so made it unnecessary to ask for further margin when the panic appeared. This, however, did not supply actual fluid cash.

The close of the panic, accordingly, found banks throughout the country heavily overburdened with securities, those away from the financial centres being probably in the worst condition. The first bank statements put out after the panic depicted the banks as being in an extraordinarily " frozen " condition. This was as might have been expected. There naturally followed an effort to bring about liquidation and to cut down the frozen loans, but every such effort has been unsuccessful, save for a very short time during the early weeks immediately after the breakdown. During those weeks the accounts that were most dangerous were closed out, and the banks' position correspondingly improved. This change, however, had to be carried on very slowly and cautiously, and by the end of February it had completely come to an end. From that time forward until the middle of April improving conditions in the stock market encouraged the belief on the part of bankers that their situation has been decidedly improved. Nevertheless, there had been no real liquidation as compared with a year ago—a fact which is illustrated by the following figures reflecting the condition of about six hundred representative banks as contrasted with their position at the corresponding date in 1929. The statement is the official one issued by the Federal Reserve Board :—

	April 16, 1930.		Increase or decrease on Week.		Year.
	$		$		$
Loans and investments—					
Total	22,592,000,000	+	32,000,000	+	252,000,000
Loans—Total	16,845,000,000	+	16,000,000	+	414,000,000

Government deposits	141,000,000	−	32,000,000	−	24,000,000
Due from banks	1,194,000,000	+	64,000,000	+	56,000,000
Due to banks	2,961,000,000	+	7,000,000	+	236,000,000
Borrowings from Federal Reserve Banks	65,000,000	−	10,000,000	−	664,000,000

+ Increase. − Decrease.

This absence of real liquidation is the significant factor in the case. If there had been real liquidation, the resumption of an upward movement in loans on securities would not be especially alarming. But, to put the case in plain language, the banks are now starting in just about where they left off, or, in other words, are beginning to let their loan accounts grow again from somewhat the same level at which they had been checked by the panic. The hazardousness of this renewed growth is obvious when we remember that the gold in the banks of the United States is now decidedly less than 6 per cent. of the outstanding deposit liabilities which it is intended to sustain.

While it is thus necessary to take a rather pessimistic view of the management of the speculative and financial situation by the banks—looking at the matter from a strict banking viewpoint—one is further obliged to adopt an even more critical and less complaisant point of view with respect to the question of new securities issues. It was generally admitted before the autumn panic that one important factor tending to bring on that disaster was the constant over-issue of new securities. This over-issue had been very general, and the effects of it were so obvious that, since the close of the panic, not merely critics, but practically all persons conversant with the situation had regarded the over-issues as a major cause of difficulty. It is perhaps sufficient to say in this connection that even Mr E. H. H. Simmons, the President of the Stock Exchange for several years past, in a recent public address at Philadelphia, has taken that view of the matter. Assuming that that is the case, the question arises whether something ought not to be done to prevent recurrence of the evil of over-issue. The Investment Bankers' Association has from time to time discussed this matter, but has done nothing, and to-day the evil is reappearing, perhaps in an aggravated form. Issue houses concerned with the flotation of new loans, both foreign and domestic, have been so anxious to get their securities into the hands of the public, that they have shown a very decided disposition to overwork the domestic market since January 1st. Indeed, for the first quarter of the year, the total of new issues has been fully $2,000,000,000, of which probably about $1,300,000,000 has been in bonds. There was no such free margin of buying power in the community, so that the banks have fallen into their old habit of allowing unsuccessful issue houses to carry the unsold portion of their offerings on loans until such time as they could get rid of them. Estimates of the totals of loans so carried are, of course, conjecture, but probably amount to at least $300,000,000.

This must be esteemed a very grave blunder on the part of American banks, particularly when it is remembered at the same time that the rank and file of the smaller banks have ceased liquidation, as has already been explained, and have begun to lend more heavily upon securities, as well as (in some cases) to buy more largely of outstanding investment offerings. The banking mechanism, in its present somewhat depleted condition so far as liquid credit goes, might manage to endure the onset of another attack of excessive speculation, but certainly cannot add to that burden the extra shock caused by renewed over-issue of securities which cannot be fully absorbed and, hence, have to be carried by means of bank credit. Taken together, if they are allowed to go much further, these two factors necessarily put the banking mechanism into a decidedly embarrassing situation.

No review of the temporary and post-panic banking conditions would be adequate, without a brief glance at the Federal Reserve System. It has been a striking and interesting commentary upon the situation of the system that, within the past month, four chairmen of reserve banks (New York, Chicago, Philadelphia, and Cleveland) have plainly stated, in their official reports covering the year 1929, that they had all, for months before the panic of 1929, urged upon the Reserve Board the raising of their discount rates, but had not received the assent of the board until the summer was far advanced. Even when the rates were thus increased, there was no strenuous effort at the reduction of market accommodation, and the speculative movement was then maintaining so high a speed that a mere advance in discount rates had little effect one way or the other. The reductions in rates, which were almost instantaneously ordered when the panic had become a reality, have been followed by subsequent reductions and by many cuts in acceptance charges, as well as by the adoption of extraordinarily liberal open-market buying policies. Indeed, it is only in that way that the remarkable rejuvenation of security prices that occurred in the first quarter of 1930 could have been effected. The danger, however, is that this reversion to the pre-panic low-rate policy may encourage renewal of the forward movement in speculation and security prices, notwithstanding that no effective liquidation (as already explained) has taken place. That these conditions should furnish serious grounds for apprehension about the continued stability of the American, and particularly of the New York market, is not surprising. They are already viewed with great apprehension by conservative observers, both in and out of the Reserve System.

RECENT DEVELOPMENTS IN THE PARIS MONEY MARKET.

(BY A CORRESPONDENT.)

During the last few months a vigorous campaign has been in progress in France in favour of the adoption of a policy of investment abroad. The Bank of France and the private banks have appealed to the Government to take steps in this direction. The Government was reluctant at first, and has only recently become bold enough to agree to the reforms asked for by banking circles.

The imports of gold during the second half of 1929 gave rise to an incipient inflation. To check the rise in prices the Government sought to counteract the extraordinary abundance of capital in France, and with the co-operation of the Bank of France it set to work to find means of encouraging the export of capital. This is the crux of the whole problem. The French people are naturally thrifty and each year there is a considerable surplus of savings for investment. But tax restrictions used to make the issue of foreign loans in Paris difficult and this surplus, remaining in the home market, tended to depress the value of money until such time as the banks were ready and willing to exchange it into British, American, or German short-term securities. Since, however, the banks have to meet their engagements in francs they must not hold too large a part of their assets in foreign currencies, and since they must maintain a certain rough proportion between the respective items in their balance sheets, their foreign holdings cannot be unlimited. That is why the surplus of French capital could not be drained away abroad.

To alleviate this condition the Bank of France had already urged the private banks to develop on behalf of foreign traders the acceptance business which, for nearly a century, had been in the hands of the City of London. Accepting bills payable in francs they would run no risk on the exchange, and since they were rediscountable at the Bank of France the bills would be an ideally liquid security. The private banks took the advice, and a special company, " La Banque Française d'Acceptations," was formed. But this new venture failed to reduce the superabundance of money because of the serious embarrassment to the acceptance business which, until last April, was caused by the stamp duties. The duty on bills was 0.15 per cent., which, with bills of three months' currency, meant that credit was burdened with a tax at the excessive rate of 0.60 per cent. per annum. The Government has now submitted to the pressure brought to bear on it and has just reduced the stamp duty from 0.15 per cent. to 0.025 per cent., or from 0.60 per cent. per annum to 0.10 per cent. per annum.

This great decrease in stamp duty will undubitably lead to increased acceptance business in francs; for the price of loans in Paris will be exceptionally cheap. Nevertheless, inordinate expectations must not be founded on the power of this reform. Although, naturally, cheap credit plays a great part in the building up of an active acceptance market like that of London, it must not be forgotten that the pre-eminence of the City of London is not due only to its excellent banking facilities. It is due largely to the part played by Britain in international trade, the extent of her foreign commerce, the strength of her mercantile marine, and the fact that she is an island, easily accessible from both America and Europe.

The Paris money market, indeed, is much better placed to undertake long-term than short-term finance. The French nation is not only accustomed to invest its savings in home and foreign bonds, but is eager for

such investments. Recently, however, it has had to be content with French issues, since excessively high taxation has prevented the raising of foreign loans in Paris. For several years the totals of the taxes on dividend coupons and the stamp duty on foreign bonds have been 25 per cent. and 4 per cent. respectively of their nominal value. But in this connection the Government has just taken some important steps. It has lowered the stamp duty to 1 per cent. and the taxes on dividends from 25 per cent. to 18 per cent. This reduction in the cost of loans will mean that French bankers will henceforth be able to compete successfully with English and American bankers, so that it may be expected that before long a foreign issues market will develop in Paris, and that a proportion of French capital will consequently find its way abroad.

This foreign business will include both the direct issue of foreign bonds and the introduction of foreign securities on the Bourse. Both will give rise to demands for foreign exchange which, in order that excessive exports of gold may be avoided, will probably be met partly by the sale, on the part of the Bank of France, of some its foreign bills, and partly by the realisation by the private banks of some of their considerable holdings of dollars, sterling and marks.

The money markets of London and New York are seriously affected by the way the French banks employ their foreign holdings. For as soon as there is a slight stringency in the French market the big French firms sell their dollar and their sterling holdings for francs; francs rise in terms of dollars or sterling and the English and American markets are upset. For the big financial companies dislike rediscounting their bills with the Bank of France, preferring to sell part of their holdings rather than to borrow from the central bank. It is no use disguising the fact that, as long as they keep large holdings of foreign currencies they will be tempted to obtain credits by selling exchange, and so cause rises in the franc and imports of gold. This was why the franc was so exceptionally strong during the second half of 1929, when the Bank of France imported five milliards of gold francs.

The Bank of France has taken steps to make the working of the Paris money market more flexible, and, like the Bank of England, it now lends money at seven days. This type of loan eases the difficulties of the end of the month, and avoids violent fluctuations in the rates for day to day money, but, though the system has not yet been sufficiently tested for a judgment on this point to be possible, it seems hardly likely that it will prevent the banks selling their exchange holdings during periods of prolonged stringency. Foreign markets will not really be freed from the danger of a sudden sale of their exchange holdings on the part of the French banks until the latter have ceased to keep large credits abroad; in other words, until France has disbursed her surplus funds on the other markets.

It is questionable, as we have said, whether France has a great future in the acceptance business. On the other hand she can now take a great part in long-term finance. She can now develop her international financial business, thanks to the remission of duty granted by Parliament, and make a considerable reduction in her holdings of exchange. This is the real matter for congratulation in the last tax reductions. Nevertheless, it will probably be some years before the reserves of currency which have accumulated in France fall to a more normal level. From 1927-29 the only foreign outlet for French capital for short-term investment has been in London and New York. To-day it has new outlets in the purchase of foreign bonds and the acceptance of bills of exchange. But the foreign balances acquired during the last three years cannot be immediately withdrawn; their gradual replacement by credits in francs must be a matter of time.

THE SUPPLY OF BILLS IN THE LONDON MONEY MARKET.

(BY A CORRESPONDENT.)

THE heavy reduction in outstanding Treasury bills has called attention recently to the adequacy and composition of the supply of bills in the discount market. The Treasury bills outstanding on January 13, 1930, totalled £757,700,000, and by April 12th the volume had been reduced to £570,945,000. Part of this reduction represents a seasonal movement during the first three months of the year, floating debt being repaid out of the collection of revenue. In the first quarter of the past four years, however, this seasonal reduction has averaged £100,000,000, so that £87,000,000 of this year's decline may be regarded as abnormal.

The importance of such a large additional reduction is easily seen. Discounted approved bills form a necessary part of the investments of the commercial banks of the country, and are in addition the stock-in-trade of the discount market. Owing to the demand nature of their deposits, the commercial banks are forced to keep their assets in a more or less liquid form. Part of the more liquid assets consists of discounted bills. The proportion of such assets to total assets for the joint-stock banks is, roughly, 12 per cent., so that the importance of an adequate supply of bills is evident.

How far does the volume of Treasury bills outstanding affect the total supply of bills? Before the war Treasury bills formed only a small proportion of the total supply. The war, however, saw bank deposits doubled owing to currency inflation, while the volume of commercial bills, in the nature of events, did not grow in proportion. Even at present it is doubtful whether commercial bills are greater in value than their pre-war amount, although with the higher prices ruling they should be greater to a considerable degree.

The banks have thus been faced with the problem of finding profitable use for deposits greatly swollen in amount, whilst maintaining and finding liquid forms of investment. If they had had to rely solely on the volume of commercial bills to take up part of the additional deposits the supply would have been inadequate. Actually they were furnished with a similar investment, which took up their additional deposits, in the increase in volume of Treasury bills from the modest amount of £13,000,000 in 1914 to the present figure of £570,000,000.

Treasury bills, in fact, have become the dominating factor, and now largely overshadow the commercial variety. Their importance is illustrated by the fact that three of the large joint-stock banks showed in their balance sheets for 1929 that 45 per cent. of their bill portfolio consisted of Treasury bills. The percentage for all banks is probably higher than this, while the chairman of one of the big discount companies has stated that his firm has relied largely for its business on Treasury bills.

In view of these facts the recent reduction in the volume of such bills causes inquiry to be made as to the effects of such reductions. Ought there to be a reduction in view of the needs of the market for such security? Again, will there be a sufficient growth in commercial bills (including, of course, bank acceptances) to counterbalance any reduction in Treasury bills, or will the discount market have permanently to work under conditions different from those of pre-war days?

The effects of the recent reduction of Treasury bills in issue have coincided with effects due to other causes,

and have, in consequence, been exaggerated. The smaller supply of bills has certainly helped to bring down discount rates and so render the official rate repeatedly ineffective. The whole fall in rates cannot, however, be attributed to this one cause, since an era of cheap money was probably due in any case after the collapse in Wall Street and would, in addition, be the natural corollary of the stagnant condition of our own Stock Exchange and trade and the world fall in prices. Nor is there much weight in the argument that there is bound to be a contraction of credit merely because the Floating Debt is being reduced. Substitution of a long-dated security for a constantly renewed short-dated one does not necessarily affect the volume of assets eligible to be used as the basis of credit.

In the near future further reductions are unlikely. Recent repayments were effected out of Conversion Loan subscriptions and incoming revenue. The latter source no longer supplies money to any extent, while the final Conversion payment this month is not sufficient to meet redemptions to be made. Moreover, on June 1st, the Treasury has to provide for payment of War Loan interest. Finally, French funds are still being withdrawn from the market, and this is likely to continue as French foreign lending grows. All told, therefore, the present reduction in bills is probably finished, and as the supplies of money may be contracted by the French withdrawals, the market may find the supply of bills becoming sufficient for its current needs. Present low discount rates may in part be artificial owing to the efforts of the authorities to prepare the way for the Reparations loan.

On the longer view the problem has to be faced, however, that the Government is likely to seek further reductions in the outstanding volume of Treasury bills. Even for the present financial year, the Chancellor has estimated the Floating Debt cost at a figure presuming either a very low interest charge or else a reduction in the capital amount of the debt. Logically, there can be no obligation on the part of the Treasury to provide the discount market with a supply of bills unless to do so coincides with its own interest as a borrower.

Sir Otto Niemeyer pointed out to the Colwyn Committee that he regarded the high volume of Floating Debt as undesirable, both because of its fluctuating interest cost and also because in time of crisis many holders of Treasury bills would certainly leave the Treasury in difficulties by refusing to renew their bills. The discount market must, therefore, look forward to the prospect of a steady effort to reduce Treasury bills in issue, with the needs of itself but a secondary consideration at most modifying the rate of reduction. If no further deflation takes place, as is to be hoped with industry in its present state, then the market will be faced with the task of finding employment for its resources with a lesser volume of bills.

Some of its difficulty will doubtless be overcome by the growth that is likely to occur in the volume of commercial bills which, as a result of the present state of trade, are unduly low in amount and are likely to be increased by the growth of acceptance business with lower interest rates. Moreover, the central authority itself would be unlikely to witness passively the continuance of competition for bills making its own rate ineffective and causing, ultimately, a loss of part of its gold reserve through the consequent unfavourable exchanges created by the low discount rates. Some help will thus probably come to the market from this quarter by the Bank of England selling some of its bills and replacing them by longer-dated securities. But if commercial bills are not encouraged by cheaper rates and by trade expansion, the market may face a real shortage necessitating a changed outlook. Banks will have to face the prospect of less bills available for investment and less call money loans, while discount brokers may find their business curtailed. New forms of bills—possibly those arising out of hire-purchase agreements—or equivalent investments may then have to be found.

THE BANKS AND ACCOUNTING BY MACHINE METHODS.

(BY A CORRESPONDENT.)

ONE of the most remarkable features of the past year is the extent to which the banks in this country have proceeded in the direction of "mechanisation," or, as it should more properly be called, "accounting by machine methods." The "Big Five," and all the other joint stock banks, except one, are now engaged in the installation of machines to cope with the ever-increasing volume of the figures that have to be dealt with and proved day by day. Machines for listing and adding have been used for many years in the larger offices. The present development goes much further, and embraces not only the customers' ledgers and pass-books, and the recording by machine of particulars of cheques paid in by customers, but in the case of one bank, at any rate, the whole of the work from the counter to the personal and general ledgers.

This change in accounting methods is the more remarkable in view of the traditional conservatism of the English banks and their senior officials, and the fact that the introduction of machines necessitates the substitution of loose-leaf records for the bound books which for so long have been considered by them as essential even for records of minor importance. It would seem as though the keen competition among the banks, coupled with increasing demands from the public for services on cheaper and cheaper terms, and a narrowing margin between credit and debit interest rates among other causes, had led the banks with one accord to endeavour to reduce overhead costs by the employment of modern methods.

It is essential for success that those responsible for drawing up the system of accounting by machine methods to be applied in any bank, should have, not only a knowledge of the fundamental principles of accountancy, but also a complete comprehension of the various machines available, and of their application to the various accounting problems, combined with a grasp of the principles of machine methods that have been adopted with acknowledged success in all large manufacturing organisations. From such information as it has been possible to glean, it seems questionable whether all the banks in this country have approached the problem with the foregoing essentials clearly in mind. The evidence available points to the fact that most of them have been primarily concerned in obtaining a machine which will enable them to keep as closely as possible to their existing handwritten systems and organisations without regard to, or a scientific study of, the possibilities of a new system that would exploit to

the full the advantages of the various machines and equipment that are to be obtained.

That they will effect savings is probable, if only by the substitution of women clerks to operate the machines in place of men, but as Schnackell and Long say in the preface to their book *Accounting by Machine Methods*:—"The best accounting machine is rendered ineffective if applied incorrectly, and practically useless if the accounting routine is improperly organised." Those banks which have attacked the problem from the other angle have not considered the question from the point of view of what has always been the handwritten practice, but have looked at the results and information desired, and having a knowledge of the essentials mentioned earlier, have evolved, or are in course of evolving, systems which will enable the work to be handled with a minimum of effort and greater accuracy than was previously possible. These banks have realised that the subject can be divided into the following sections:—

1. A system or systems specially devised for accounting by machine methods.
2. Organisation, both pre-installation and post-installation.
3. Machines and equipment.

The order above may be regarded as indicating the relative importance of the three sub-divisions. People who have not an intimate knowledge of the problems involved in "mechanisation" always think and talk about the "machines," whereas those who really know the subject when they foregather discuss "systems" or "organisation," and only mention "machines" casually. It is a mistake to think that all that is necessary for machine work is to show a sheet of paper to the machine and it will do the rest.

Although machines come third in the order of relative importance, it is, as mentioned earlier, essential that their possibilities be completely realised before the system is compiled. It, therefore, seems appropriate to mention here the various makes of accounting machines on the market in this country for the class of work envisaged in this article. They can be divided into two main groups:—

(*a*) Machines which print totals and balances by the depression of one key.
Burroughs machines of various types specially designed for different classes of work.
Burroughs typewriter adding machines (Moon Hopkins).
N.C.R. (Ellis) accounting machines.

(*b*) Machines which do not permit of totals and balances being printed automatically, the individual figures having to be typed from registers or cross-footers.
Elliott Fisher machines.
Mercedes Ad-Electra.
Remington accounting machines.
Underwood accounting machines.
They are all typewriter machines.

It would be inappropriate to discuss here the relative merits and demerits of the various types; but a few of the points that should be borne in mind by those responsible for drafting systems of accounting by machine methods may be mentioned:—

(1) Descriptive matter should be reduced to a minimum consistent with the keeping of proper records. Not only does the typing of detail take time, but the necessity for tabulation reduces the output. Use should be made of the facilities offered by machines for the taking of carbon copies. In this connection the draftsman should carefully distinguish between information that is in fact essential and information that was recorded under pen methods because, although it was not indispensable, the percentage increase in the time occupied was immaterial, and the details were occasionally of some use.

(2) As far as possible the work should be so organised that the machine operator should have little else to think about but the correct manipulation of the machine. In this way not only will greater speed of output be obtained, but the percentage of errors will be decreased. Work should be arranged so that tabulation is reduced to a minimum, while there should be a constant flow of work to the machines.

(3) The system should be so constructed that the labour of looking for errors is reduced to an extent not possible in hand work. This can be accomplished by working in batches of a few hundred entries, so rendering it possible to localise mistakes.

(4) In order that the transfer from pen to machine methods may be carried through with a minimum of difficulty, it is essential that all concerned in the change be thoroughly trained in the new system before transfer. Every little detail must be thought out and provided for. The new stationery must be delivered well ahead of zero hour and all arrangements made for such alterations to premises, lighting and power as may be necessary to be carried out without disturbance to the ordinary work of the office. Those responsible for the change from one system to the other should be in charge of the transfer, and responsible for keeping the work right. This necessitates the subordination of the ordinary executive officers to the installation officer for a few days until the new system is running.

In this article an attempt has been made to bring out certain fundamental points connected with the adoption by banks of machine methods of accounting which, although common knowledge in those countries which have experience of such matters, in this country are appreciated by only a few of the higher bank officials.

NATIONAL PROVINCIAL BANK LIMITED.

Member of London Clearing.

Established in 1833 as the National Provincial Bank of England, and registered as limited in 1880; the Union of London and Smiths Bank was established in 1839, and registered as limited in 1882. Amalgamation took place under title of National Provincial and Union Bank of England, Limited, as from December 31, 1917, and on February 15, 1924, name changed as above. As from December 31, 1917, the Bradford District Bank, Limited, as from December 31, 1918, the Sheffield Banking Company, Limited, and as from December 31, 1919, the Northamptonshire Union Bank, Limited, were acquired. From January 1, 1920, Messrs. Coutts and Co. became affiliated, December 31, 1919, Messrs Richards and Co., Llangollen, and June 30, 1920, Messrs. Shilson, Coode and Co., St. Austell, and as from June 30, 1921, Messrs. Dingley and Co., of Launceston, and Messrs. Dingley, Pearse and Co., of Okehampton, were acquired. December 31, 1923, the Guernsey Banking Co., Limited, and the business of Messrs. Grindlay and Co., December 31, 1923, were acquired, the latter undertaking being continued as a private limited company.

LIFE ASSURANCE BY MONTHLY PAYMENTS

CAN YOU SAVE £1 A MONTH?

£1 a Month will secure with THE STANDARD LIFE

£549 for a Man age 25 } Payable
£484 ,, ,, ,, 30 } at
£421 ,, ,, ,, 35 } Death

and in addition an annually increasing Bonus under the Standard's Annual Compound Bonus Plan. At the present rate of Bonus, viz. 42/-%, a Policy for £1,000 becomes:

£1,231 in 10 years
£1,515 ,, 20 ,,
£1,865 ,, 30 ,,
£2,027 ,, 34 ,,

Thus a Policy more than doubles itself in 34 years.

By means of a Banker's Order the Premiums are paid automatically without any trouble to the policy-holder. You will find the scheme very simple and attractive.

Bank officials can be Agents for no better Company, for they can be confident they are recommending to their clients an Office whose strength is supreme, whose premiums are moderate, and whose bonus prospects are second to none.

THE STANDARD HAS SPECIAL SCHEMES OFFERING PARTICULAR ADVANTAGES TO THE STAFFS OF BANKS.

Write to-day for explanatory leaflet "A.J. 20" to:

Personal Steel Protection in Fifteenth Century

THE CHATWOOD SAFE

Has a strong, deep hold upon Bankers and those with treasure to protect.

It gives a feeling of confidence that only work of quality can give.

The protection lies in the strength of the defence. The design embodies the experience of the past and the knowledge of the present.

What The Chatwood Safe has it holds, for delivery only to the keeper of the key.

It is the cheapest Safe that can be bought having regard to the contented security offered. J.E.S.

THE CHATWOOD SECURITY

GILLETT BROTHERS DISCOUNT CO., LIMITED.

BALANCE-SHEET—JANUARY 31, 1930.

LIABILITIES.	£
Capital issued, fully paid—20,000 "A" shares of £5 each, £100,000: 10,000 "B" shares of £10 each, 100,000	200,000
Reserve fund	120,000
Deposits, loans, bills re-discounted and sundry accounts, including rebate on bills, investments reserve fund and balance of profit and loss account	11,899,124
	12,219,124

ASSETS.	£
Cash at bankers and in hand	94,773
British Government securities (maturing 1930-1935)	516,700
Bills discounted (including re-discounts)	11,434,495
Loans on security and sundry accounts	173,156
	12,219,124

Note.—Assets of the face value of £11,801,238 5s. 1d. are held by depositors and others as cover for liabilities per contra.

Receive £1,000 more than you pay!

A whole-life Policy for £1,000, with profits, at age 30 next Birthday, premiums ceasing at age 65,

will cost annually 25 16 4
less rebate of Income Tax at 2/- in the £ 2 11 7
Net Cost £23 4 9

Assuming that the current rate of Bonus is maintained, the sum assured will be increased by £24 each year—an amount in excess of the annual net cost, as above!

Consequently, no matter when a claim occurs, a sum of about £1,000 in excess of the premium payments will become payable.

Write for particulars suitable to your age.

WESLEYAN & GENERAL ASSURANCE SOCIETY
Chief Offices : : Birmingham

The Young to-day are the Old to-morrow—Save to-day for Leisure to-morrow.

At age 24, £13 13s. 3d. yearly, which is equivalent to little over 5s. a week, will provide £1,000 at age 60, assuming present rates of bonus and tax abatement.

Sum payable at age 60 - £1,000
Total payments - - - 492
Profit - £508

The profit of £508 is in addition to an assurance at death of £547 upwards.

THE WAY TO A LARGER INCOME

A WELL-SELECTED ANNUITY will mean a larger and a guaranteed income, with freedom from anxiety, for the rest of your days. The Prudential Assurance Company, with assets exceeding £228,000,000, is now offering new and better rates which provide larger life incomes to annuitants of all ages. At age 65, for example,

NEARLY £11 A YEAR CAN BE SECURED FOR EVERY £100 INVESTED.

Favourable terms are also offered to husbands and wives for joint-life and survivorship annuities. Contracts can be arranged under which the return of the original capital is certain, whether the annuitant lives or dies.

An exact quotation—without any obligation to purchase—will be supplied on application to

The PRUDENTIAL ASSURANCE COMPANY LTD.

LATEST BALANCE SHEETS OF DOMINION BANKS HAVING LONDON OFFICES.

IRISH FREE STATE BANKS.

BANK OF IRELAND.

The report for the year ended December 31, 1929, is as follows:—The net profits of the bank for the year ended December 31, 1929, after meeting all charges and providing for bad and doubtful debts, interest due on deposits, and rebate on bills not at maturity, amount to £542,089, to which must be added a sum of £86,093 brought forward from December, 1928, making a total of £628,182. Out of this total an interim dividend of 8½ per cent., less income tax, absorbed £200,077. The governors and directors having transferred £130,000 to the rest, now recommend that a final dividend of 9 per cent., less income tax, be declared for the year ended December 31, 1929, which will absorb £211,846, making, together with the dividend paid on August 1, 1929, a distribution of 17½ per cent., less income tax, for the year, leaving a surplus of £86,259 to be carried forward.

BANK OF AUSTRALASIA.

The report for the year ended October 14th last states that, after providing for rebate on bills current, for British, Australian and New Zealand rates and taxes, and making provision for bad and doubtful debts and other contingencies, the net profit for the year amounted to £677,183. To this has to be added £139,760 brought forward from the previous year's account, making a total of £816,943. From this £315,000 was paid as an interim dividend on October 4th last, and the directors have now appropriated a further sum of £315,000 to pay a final dividend of 7s. per share, making in all £630,000, equal to 14s. per share, and representing for the year a distribution at the rate of 14 per cent., free of income tax. The directors have also transferred £25,000 to bank premises account. There will remain £161,943 to be carried forward to the next account.

BALANCE SHEET—October 14, 1929.

	1,163,479		1,163,479

BANK OF NEW ZEALAND.

The report for the year ended March 31, 1929, states that the profits, after providing for expenses of management, all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the provident fund, also for bonus to staff, are £934,153. From this has to be deducted interest on guaranteed stock, £21,199—leaving balance of profit for the year, £912,954. To this has to be added provision previously made for certain doubtful advances not now required, and recoveries, £212,005, and the balance brought forward from last year, £582,525, making a total of £1,707,484. From this has been paid dividend on preference "A" shares, £50,000; interim dividend on "C" long-term mortgage shares, £6,152; interim dividend on "D" long-term mortgage shares, £15,381; interim dividend on preference "B" shares, £41,667; interim dividend on ordinary shares, £250,000—amounting to £363,200—leaving available to distribution £1,344,284. The directors proposed to dispose of this as follows:—Dividend on "C" long-term mortgage shares of 7½ per cent. per annum, £7,031; dividend on "D" long-term mortgage shares at 7½ per cent. per annum, £17,578; dividend on preference "B" shares (making £162,500 for the year), £120,833; bonus on preference "B" shares, £18,750; dividend of 1s. 4d. per share on ordinary shares (making £500,000 for the year, equal to 2s. 8d. per share), £250,000; bonus of 1 per cent. on ordinary shares, £37,500; transfer to reserve (making £3,425,000), £275,000; leaving £617,591 to be carried forward.

MERCANTILE BANK OF INDIA, LTD.

The report for the year ending December 31, 1929, states that the net profits for the year, after providing for bad and doubtful debts, and including £162,047 brought forward from last account, amount to £419,506. From this sum has to be deducted £84,000, being the interim dividend of 8 per cent., less income tax, on the "A," "B" and "G" shares paid in September last. The directors have added £30,000 to the reserve fund, £15,000 to the officers' pension fund, and written £40,000 off freehold banking premises. They now recommend a final dividend on the "A," "B" and "C" shares of 8 per cent., less income tax (making 16 per cent. for the year), leaving a balance of £166,506 to be carried forward.

BALANCE SHEET—December 31, 1929.

The Anglo-Czechoslovakian Bank has amalgamated with the Prague Credit Bank and the Bohemian Commercial Bank. For this purpose the capital of the Anglo-Czechoslovakian Bank was increased to 235 million Kc. The new title is the Anglo-Czechoslovakian and Prague Credit Bank, and the fusion took effect from January 1, 1929. The latest available balance sheet is shown below.

THE ANGLO-FRENCH BANKING CORPORATION, LTD.

The report of the directors submitted at the ordinary annual general meeting on January 16, 1930, stated that the year 1929 represented the first full working year of the bank. The profit for the year, after making full provision for all expenses, rebate of discount and commission, bad and doubtful debts, amounts to £65,846, to which is to be added the balance carried forward from last account, £2,133—£67,979; from this is to be deducted directors' fees and remuneration of management committee, £7,686, leaving a balance of £60,293. At this early stage of the bank's existence the directors consider it advisable to apply the whole of the profit to writing off all preliminary expenses, and to the formation of reserves. Accordingly it is proposed to appropriate the available balance as follows:—In writing off all preliminary expenses, £32,607; in writing off cost of installation, furniture, etc., £3,864; to provide for taxation, £11,632; to carry to reserve, £10,000; leaving a net balance to be carried forward to next year of £2,190.

Westminster Bank, Ltd.
Midland Bank, Ltd.
National Provincial Bank, Ltd.

The report submitted at the meeting held on Friday, February 28, 1930, covers the year ended December 31, 1929. In spite of exceptional difficulties the period under review, it is stated, has been one of substantial progress. The profits for the year amount to £117,695, to which must be added the balance brought forward from the previous year's accounts, £20,532, making an available balance of £138,227, from which it is proposed to place £10,000 to premises amortisation and £100,000 to contingency reserve, leaving a balance to be carried forward of £28,227.

ANGLO-SOUTH AMERICAN BANK, LTD.

The report presented to the shareholders at the meeting held on Tuesday, October 15, 1929, states that the net profit, after making provision for all charges, rebate, etc., amounts to £480,716, which, together with £506,901 brought forward, makes a total of £987,617, of which £174,693 was absorbed by the interim dividend paid on April 29th. There is now an available balance of £812,924, of which the directors recommend that £174,693 be applied to the payment of a final dividend of 5s. per share, less income tax, making a total distribution for the year of 10 per cent.; £25,329 be placed to legal reserves in Chile, Colombia and Ecuador; £30,000 be added to the staff pension fund; £75,000 be placed to reserve fund, and that the balance of £507,901 be carried forward.

BALANCE SHEET—June 30, 1929.

BANK OF LONDON AND SOUTH AMERICA, LTD.

The report for the year ended September 30, 1929, states that the net profit, after making ample allowance for bad and doubtful debts, income tax and rebate of interest on bills not due, amounts to £435,144, to which has to be added £208,828 brought forward from last year, making a total of £643,972, out of which an interim dividend of 4 per cent., paid in June last, amounted to £141,600. From the unappropriated balance, viz., £502,372, the directors recommend the following distribution:—To dividend of 7 per cent., payable December 23, 1929, making 11 per cent. for the year, subject to income tax, £247,800; to contingency reserve account, £45,000; to profit and loss carried forward, £209,572—£643,972.

NATIONAL BANK OF EGYPT.

The report presented at the meeting held in Cairo on March 20, 1930, states that the gross profit for the year ended December 31, 1929, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for doubtful debts, amounts to £1,099,870; after deducting from this sum: for directors' fees £13,833, for current expenses £464,351—£478,184—there remains £621,686. In conformity with Article 49 of the bank's statutes, a dividend of 4 per cent. is payable on the share capital, £120,000; after this distribution there remains £501,686; adding to this the balance brought forward from last year, £221,795, the amount available is £723,481. The directors consider it prudent to allocate to special reserve for contingencies a sum of £75,000, which leaves £648,481. From this amount the directors recommend the payment of an additional dividend of 14 per cent. on the share capital, which will absorb £420,000, and to carry forward the balance of£228,481. The total dividend for the year will thus be at the rate of 18 per cent., equivalent to £1 16s. per share.

BALANCE SHEET—December 31, 1929.

SWISS BANK CORPORATION.

After deduction of expenses and taxes, making provision for bad and doubtful debts, etc., the net profit for the year ended December 31, 1929, amounts to £695,732. The board propose to allocate to pension fund £20,000, to the reserve fund for the extension of the head office premises in Basle £40,000; to pay a dividend of 5 per cent. on the paid-up capital (according to Art. 36 of the Articles of Association), £320,000—£380,000; leaving a balance of £315,732. After deduction of the statutory participation of directors, £31,573, the remainder, £284,159, together with the amount carried forward from last year, £28,611, viz., in all, £312,770 is at the disposal of the general meeting. The board propose to pay a further dividend of 3 per cent. (making in all 8 per cent. for the year 1929), which will absorb £192,000; to place to reserve fund £80,000—£272,000, and to carry forward £40,770.

YOKOHAMA SPECIE BANK, LTD.

The report for the half-year ended December 31, 1929, states that the net profit of the bank, after providing for all bad and doubtful debts, rebate on bills, etc., shows 17,731,848 yen, inclusive of 10,420,920 yen brought forward from last account. The directors propose that 3,000,000 yen be added to the reserve fund, and 500,000 yen be set aside to a staff bonus in recognition of the semi-centenary. They also recommend a dividend at the rate of 10 per cent. per annum, and a special semi-centenary bonus of 3 yen per share, which will absorb 8,000,000 yen. The balance, 6,231,848 yen, will be carried forward to the credit of next account.

BALANCE SHEET—December 31, 1929.

Liabilities.	Yen.	Assets.	Yen.
Capital	100,000,000	Cash account — in hand, 24,910,216 Y; at bankers, 84,436,489 Y	109,346,705

WILLIAMS DEACON'S BANK LTD

Minimise your business risks

THE prevailing trade conditions make it imperative for business executives to be fully aware of the factors governing any transaction which may be entered into either at home or abroad.

Questions as to the financial standing of companies or individuals in different parts of the world; the state of trade and economics in any particular country, and also the regulations governing Tariffs and Customs, Freight and Warehousing Charges, and Commercial Documents, and Trade Customs, are factors which, being known, help considerably in trade development. Let your Bank help you by supplying any required information.

Williams Deacon's Bank, Ltd., have Special Intelligence Departments which are always willing and prepared to give up-to-date data on such questions to customers of the Bank.
